Looking at Makhno's memoirs a somewhat different picture appears. Firstly, Makhno states that there were "*four such agricultural communes within a three- or four-mile radius of Hulyai-Pole,*" but in the whole district "*there were many*" in 1918 (the period being discussed in his memoirs). Makhno recounts how each "*commune consisted of ten families of peasants and workers, totalling a hundred, two hundred or three hundred members*" and the "*management of each commune was conducted by a general meeting of all its members.*" He does state that "*the mass of people did not go over to it*" but, significantly, he argues that this was because of "*the advance of the German and Austrian armies, their own lack of organisation, and their inability to defend this order against the new 'revolutionary' and counter-revolutionary authorities. For this reason the toiling population of the district limited their real revolutionary activity to supporting in every way those bold spirits among them who had settled on the old estates [of the landlords] and organised their personal and economic life on free communal lines.*" [quoted by Paul Avrich, **The Anarchists in the Russian Revolution**, pp. 130-2]

Of course, failing to mention the time period Makhno was recounting does distort the success of the communes. The Bolsheviks were evacuating the Ukraine as part of their treaty with German and

Austrian Imperialism when the communes were being set up. This left them in a dangerous position, needless to say. By July, 1918, the area was occupied by Austrian troops and it was early 1919 before the situation was stable enough to allow their reintroduction. One commune was named "*Rosa Luxemburg*" (after the Marxist revolutionary martyr) and was mostly destroyed by the Bolsheviks in June 1919 and completely destroyed by the Whites a few days later. In such circumstances, can it be surprising that only a minority of peasants got involved in them? Rather than praise the Makhnovists for positive social experimentation in difficult circumstances, Rees shows his ignorance of the objective conditions facing the revolution. Perhaps if the peasants did not have to worry about the Bolsheviks as well as the Whites, they would have had more members?

All in all, Rees account of Makhnovist ideas on the peasant economy are, to put it mildly, incorrect. They paint a radically different picture of the reality of both Makhnovist ideas and practice as regards the peasantry. Ironically, the soundness of Makhnovist policy in this area can be seen from the fact that the Bolsheviks changed their land policy to bring it into line with it. Not, of course, that you would know that from Rees' account. Nor would you know what the facts of the Bolsheviks' land policy were either. Indeed, Rees uses Michael Palij's book to create a picture of events which is the exact opposite of that contained in it! Very impressive!

Intent on driving the final nail into the coffin, he tries to apply "class analysis" to the Makhnovists. Rees actually states that "*given this social base [i.e the Makhnovists' peasant base] . . . much of Makhno's libertarianism amounted to little more than paper decrees.*" [Op. Cit., p. 60]

Ironically enough, the list of "*paper decrees*" Rees presents (when not false or distorted) are also failings associated with the Bolsheviks (and taken to even more extreme measures by the Bolsheviks)! As such, his lambasting of the Makhnovists seems deeply hypocritical. Moreover, his attempt to ground the few deviations that exist between Makhnovist practice and Makhnovist theory in the peasant base of the army seems an abuse of class analysis. After all, these deviations were also shared by the Bolsheviks. As such, how can Rees justify the Bolshevik deviations from socialist theory in terms of "*objective factors*" yet blame Makhnovist ones on their "*social base*"? Do "*objective factors*" only afflict Leninists?

Take for example his first "*paper*" decree, namely the election of commanders. He states that "*in practice the most senior commanders were appointed by Makhno.*" In other words, the Makhnovists applied this principle extensively but not completely. The Bolsheviks abolished it by decree (and did not blame it on "*exceptional circumstances*" nor consider it as a "*retreat*", as Rees asserts). Now, if Rees' "class analysis" of the limitations of the Makhnovists were true, does this mean that an army of a regime with a proletarian base (as he considers the Bolshevik regime) cannot have elected commanders? This is the logical conclusion of his argument.

Equally, his attempt to "*give a flavour of the movement*" by quoting one of the resolutions adopted by a mass meeting of partisans also backfires (namely, "*to obey the orders of the commanders if the commanders are sober enough to give them*"). Firstly, it should be noted that this was, originally, from a Red Army source. Secondly, drunkenness was a big problem during the civil war (as in any war). It was

one of the easiest ways of forgetting reality at a time when life was often unpleasant and sometimes short. As such, the "*objective factor*" of civil war explains this resolution rather than the social base of the movement! Thirdly, Rees himself quotes a Central Committee member's comment to the Eighth Party Congress that there were so many "*horrifying facts about drunkenness, debauchery, corruption, robbery and irresponsible behaviour of many party members that one's hair stands on end.*" [Op. Cit., p. 66] The Eighth Congress was in 1919. Does this comment give a "*flavour*" of the Bolshevik regime under Lenin? Obviously not, as Rees defends it and blames this list of horrors on the objective factors facing the Bolsheviks. Why does the drunkenness of the Makhnovists come from their "*social base*" while that of the Bolsheviks from "*objective factors*"? Simply put, Rees is insulting the intelligence of his readers.

The Makhnovist resolution was passed by a mass assembly of partisans, suggesting a fundamentally democratic organisation. Rees argues that the civil war resulted in the Bolshevik vices becoming institutionalised in the power of the bureaucracy. However, as can be seen, the Makhnovists practised democracy during the civil war, suggesting that the objective factors Rees tries to blame for the Bolshevik vices simply cannot explain everything. As such, his own example (yet again) backfires on his argument.

Rees claims that "*Makhno held elections, but no parties were allowed to participate in them.*" [Op. Cit., p. 60] This is probably derived from Palij's comment that the free soviets would "*carry out the will and orders of their constituents*" and "[o]nly working people, not representatives of political parties, might join the soviets." [Op. Cit., p. 151] This, in turn, derives from a Makhnovist proclamation from January 1920 which stated:

"Only labourers who are contributing work necessary to the social economy should participate in the soviets. Representatives of political organisations have no place in worker-peasant soviets, since their participation in a workers' soviet will transform the latter into deputies of the party and can lead to the downfall of the soviet system." [contained in Peter Arshinov's **History of the Makhnovist Movement**, p. 266]

Rees' comments indicate that he is not familiar with the make-up of the Russian Soviets of 1917. Unlike the soviets from the 1905 revolution, those in 1917 allowed "*various parties and other organisations to acquire voting representation in the soviet executive committees.*" Indeed, this was "*often how high party leaders became voting delegates to*" such bodies. It should "*be underlined that these party delegates were selected by the leadership of each political organisation, and not by the soviet assembly itself. In other words, these executive committee members were not directly elected by the representatives of the producers*" (never mind by the producers themselves). [Samuel Farber, **Before Stalinism**, p. 31]

In addition, Russian Anarchists had often attacked the use of "*party lists*" in soviet elections, which turned the soviets from working-class organs into talking-shops. [Paul Avrich, **The Russian Anarchists**, p. 190] This use of party lists meant that soviet delegates could be anyone. For example, the leading left-

wing Menshevik Martov recounts that in early 1920 a chemical factory "*put up Lenin against me as a candidate [to the Moscow soviet]. I received seventy-six votes he-eight (in an open vote).*" [quoted by Israel Getzler, **Martov**, p. 202] How would either of these two intellectuals actually know and reflect the concerns and interests of the workers they would be "delegates" of? If the soviets were meant to be the delegates of working people, then why should non-working class members of political parties be elected to a soviet?

Given that the people elected to the free soviets would be **delegates** and **not** representatives, this would mean that they would reflect the wishes of their workmates rather than the decisions of the party's central committee. As such, if a worker who was a member of a political party could convince their workmates of their ideas, the delegate would reflect the decisions of the mass assembly. As such, the input of political parties would not be undermined in any way (although their domination would be!).

As such, the Makhnovist ideas on soviets did not, in fact, mean that workers and peasants could **not** elect or send delegates who were members of political parties. They had no problems as such with delegates who happened to be working- class party members. They did have problems with delegates representing only political parties, delegates who were not workers and soviets being mere ciphers covering party rule.

That this was the case can be seen from a few facts. Firstly, the February 1919 congress resolution "*was written by the anarchists, left Socialist Revolutionaries, and the chairman.*" [Palij, **Op. Cit.**, p. 155] Similarly, the Makhnovist Revolutionary Military Soviet created at the Aleksandrovsk congress in late 1919 had three Communists elected to it. There were 18 delegates from workers at that congress, six were Mensheviks and the remaining 12 included Communists [Malet, **Op. Cit.**, p. 111, p. 124] Clearly, members of political parties were elected to both the congresses and the Revolutionary Military Soviet. As such, the idea that free soviets excluded members of political parties is false -- they simply were not dominated by them (for example, having executives made up of members of a single party or delegating their power to a government as per the national soviet in Russia). This could, of course, change. In the words of the Makhnovist reply to Bolshevik attempts to ban one of their congresses:

"The Revolutionary Military Council . . . holds itself above the pressure and influence of all parties and only recognises the people who elected it. Its duty is to accomplish what the people have instructed it to do, and to create no obstacles to any left socialist party in the propagation of ideas. Consequently, if one day the Bolshevik idea succeeds among the workers, the Revolutionary Military Council . . . will necessarily be replaced by another organisation, 'more revolutionary' and more Bolshevik." [quoted by Arshinov, **Op. Cit.**, pp. 103-4]

As such, the Makhnovists supported the right of working- class self-determination, as expressed by one delegate to Hulyai Pole conference in February 1919:

"No party has a right to usurp governmental power into its hands . . . We want life, all

problems, to be decided locally, not by order from any authority above; and all peasants and workers should decide their own fate, while those elected should only carry out the toilers' wish." [quoted by Palij, **Op. Cit.**, p. 154]

Thus, Rees fails to present an accurate account of Makhnovist theory and practice as regards "*free soviets*." Rather than oppose party participation within their soviets and congresses, the Makhnovists opposed the domination of soviets and congresses by political parties, a radically different concept. Like the Kronstadt rebels, they argued for all power to the soviets and not to parties.

Lastly, Rees attacks the Makhnovists for having two security forces, the Cheka-like **razvedka** and the Punitive Commission. How this is an expression of the Makhnovist "*social base*" is hard to explain, as both the Bolsheviks and Whites also had their security forces and counter-intelligence agencies.

While Rees quotes Footman's statement that "*we can safely assume [!] these services were responsible for frequent injustices and atrocities*," he fails to mention that Footman does not provide any examples (hence his comment that we can "*assume*" they occurred!). Footman himself notes that "*[o]f the Makhnovite security services . . . we know very little.*" [David Footman, **Op. Cit.**, p. 288] Rees himself only lists one, namely the summary shooting of a Bolshevik cell discovered in the Army. Given the bloody record of the Bolshevik Cheka (which, again, Rees defends as necessary to defend against the Whites!), this suggests that the crimes of the Makhnovist counter-intelligence pale in comparison.

Rees also quotes the historian Chamberlin that "*Makhno's private Cheka . . . quickly disposed of anyone who was suspected of plotting against his life.*" [**Op. Cit.**, 60] Strangely enough, Rees fails to mention the Bolshevik attempts to assassinate Makhno, including the one in the latter part of May 1919 when, it should be noted, the Makhnovists and Bolsheviks were meant to be in alliance. Nor does he mention that the Cheka "*would hunt out and hang all active Makhnovites.*" [David Footman, **Civil War in Russia**, p. 271 and p. 293]

As regards the last conflict with the Red Army, it should be noted that while "*generalised accusations of Makhnovist atrocities are common*" the facts are it was "*the Makhnovists who stood to gain by liberating prisoners, the Bolsheviks by shooting them.*" This was because "*the Red Army soldiers had been conscripted from elsewhere to do work they neither liked nor understood*" and the "*insurgents had their own homes to defend.*" [Malet, **Op. Cit.**, p. 130] Thus, while Rees quotes Footman's opinion that "*Makhno's later campaigns [were] among the most bloody and vindictive*," these facts suggest that we **cannot** "*safely assume that these [security] services were responsible for frequent injustices and atrocities.*" Clearly, if the Makhnovists were releasing Red Army prisoners (and many of whom were joining Makhno), the picture of an atrocity inflicting army can hardly be a valid picture.

And it should be stressed that Bolshevik terror and violence against the Makhnovists is strangely absent from Rees's account.

Rees presents just **one** concrete example of Makhnovist "*Cheka-like*" violence, namely, the execution of

a Bolshevik cell in December, 1919. It should be noted that the Bolsheviks had been explicitly arguing for Party dictatorship for some time by then. The reason why the Bolsheviks had been "*denied an open trial*" was because they had already been shot. Unfortunately, Makhno gave two contradictory reasons why the Bolsheviks had been killed. This led to the Makhnovist Revolutionary Military Soviet setting up a commission of three to investigate the issue. Perhaps unsurprisingly, the commission exonerated Makhno although Voline, out of the members, seemed to have been genuinely embarrassed by the affair. [Malet, **Op. Cit.**, pp. 51-2] Needless to say, Rees fails to comment on the Bolshevik summary killing of Makhnovist staff in June 1919 or, indeed, any other summary executions conducted by the Bolsheviks against the Makhnovists (including the shooting of prisoners).

Given the summary justice handed out by the Bolshevik Cheka, it seems strange that Rees dismisses the Makhnovist movement on assumptions and one event, yet he does. Obviously, the large-scale and continuous Bolshevik killings of political enemies (including Makhnovists) is irrelevant compared to this one event.

All in all, Rees' attempts to blame the few deviations the Makhnovists had from anarchist theory on the "*social base*" of the movement are a joke. While justifying the far more extreme deviations of Bolshevik theory and practice in terms of "*objective factors*," he refuses to consider this possibility for the Makhnovists. The hypocrisy is clear, if not unexpected.

One last point. Taking Rees' "class analysis" of the Makhnovists seriously, the logical conclusion of his argument is clear. For Rees, a movement which compromises slightly with its principles in the face of extreme "*objective factors*" is "*petty bourgeois*." However, a movement which compromises totally (indeed introduces and justifies the exact opposite of its original claims) in face of the same "*objective factors*" is "*proletarian*." As such, his pathetic attempt at "class analysis" of the Makhnovists simply shows up the dictatorial nature of the Bolsheviks. If trying to live up to libertarian/democratic ideals but not totally succeeding signifies being "*petty-bourgeois*" while dismissing those ideals totally in favour of top-down, autocratic hierarchies is "*proletarian*" then sane people would happily be labelled "*petty-bourgeois*"!

And Rees states that "[n]either Makhno's social programme nor his political regime could provide an alternative to the Bolsheviks"! [Op. Cit., p. 60] Little wonder he distorts that social programme and political regime -- an honest account of both would see that Rees is wrong. The Makhnovist movement clearly shows that not only did Bolshevik policies have a decisive impact on the development of the Russian Revolution, there was a clear alternative to Bolshevik authoritarianism and party dictatorship.

In summary, Rees' attack on the Makhnovists fails. It can be faulted on both factual and logical grounds. His article is so riddled with errors, selective quoting and downright lies that it is factually unreliable. Similarly, his attempt to attack the Makhnovist political theory and practice is equally factually incorrect. His attempt to explain the deviations of Makhnovist practice from its theory in terms of the "*social base*" is simply an insult to the intelligence of the reader and an abuse of class analysis.

A far more compelling analysis would recognise that the Makhnovists were not a perfect social movement but that the deviations of its practice from its theory can be explained by the objective factors it faced. Equally, the example of the Makhnovists shows the weakness of Rees' main argument, namely that the objective factors that Bolshevism faced can solely explain its authoritarian politics. That the Makhnovists, facing the same objective factors, did not act in the same manner as the Bolsheviks shows that Bolshevik ideology played a key role in the failure of the revolution. This explains Rees' clumsy attempts to rewrite the history and theory of the Makhnovshchina.

16 What lessons can be learned from the Makhnovists?

The Makhnovist movement was one of the most important events of the Russian Revolution. It was a mass movement of working people who tried and succeeded to implement libertarian ideas in extremely difficult circumstances.

As such, the most important lesson gained from the experience of the Makhno movement is simply that "*objective factors*" cannot and do not explain the degeneration of the Russian Revolution or Bolshevik authoritarianism. Here was a movement which faced the same terrible circumstances as the Bolsheviks faced (White counter-revolution, economic disruption, and so on) and yet did not act in the same manner as the Bolsheviks. Where the Bolsheviks completely abolished army democracy, the Makhnovists extensively applied it. Where the Bolsheviks implemented party dictatorship **over** the soviets, the Makhnovists encouraged and practised soviet self-management. While the Bolsheviks eliminated freedom of speech, press, assembly, the Makhnovists defended and implemented them. The list is endless (see [section 14](#)).

This means that one of the key defences of the Bolshevik Myth, namely that the Bolsheviks had no choice but to act as they did due to "*objective factors*" or "*circumstances*" is totally undermined. As such, it points to the obvious conclusion: Bolshevik ideology influenced the practice of the party, as did their position within the "*workers' state*," and so influenced the outcome of the Revolution. This means that to play down Bolshevik ideology or practice in favour of "*objective factors*", one fails to understand that the actions and ideas generated during the revolution were not "objectively" determined but were **themselves** important and sometimes decisive factors in the outcome.

Take, for example, the Bolshevik decision to betray the Makhnovists in 1920. Neither betrayal was "objectively determined" before-hand. However, it did make perfect sense from a perspective which equated the revolution with the "*dictatorship of the party*." That the first betrayal undoubtedly extended the length of the Civil War by allowing the Whites the space to reorganise under Wrangel also had its impact on Bolshevik theory and practice as well as the "*objective factors*" it had to face.

As such, the Makhnovists give a counter-example to the common pro-Bolshevik argument that the horrors of the Civil War were responsible for the degeneration of the Bolshevik Party and the revolution. In the words of one historian:

"[The] Insurgent Army . . . was organised on a voluntary basis and respected the principle of election of commanders and staff. The regulations governing conduct were drawn up by commissions of soldiers and approved by general meetings of the units concerned. In other words, it embodied the principles of the soldiers' movement of 1917, principles rejected by the Bolsheviks when they set up the Red Army, supposedly because of their harmful effects on fighting efficiency, a characteristic of them discovered by the Bolsheviks only after they had come to power on the basis of promoting them. But the Insurgent Army, given its size and equipment, was very effective. Some have even credited it with greater responsibility than the Red Army for the defeat of Denikin. It took enormous efforts by the Bolsheviks, including the arrest or shooting of thousands of people, in order to pacify the region . . . even after the Insurgent Army was militarily broken, it took six months to mop up the remnants. . . Within its area of operations, which consisted of only two to three per cent of the total population of European Russia, the Insurgent Army was undoubtedly highly effective. While one can never know how history might have turned out had things been different, the Insurgent Army gives plenty of grounds for thinking that a people's revolutionary war of the kind it represented might have been at least as effective on a national scale with nationwide resources at its disposal as Trotsky and the Red Army's ruthless centralisation. It would not, however, have been compatible with the imposition from above of the Bolshevik leadership's vision of revolution. When the Insurgent Army drove the enemy out of an area they encouraged the local population to solve their own problems. Where the Red Army took over, the Cheka quickly followed. The Bolsheviks themselves were energetically snuffing out the ideals of 1917.

*"Given such considerations it may be, though it cannot be logically proven one way or the other, that the Bolsheviks' deeply rooted authoritarianism rather than the civil war itself led to the construction of a highly centralised system that aimed at 'complete control' over political and many other aspects of social life. It could even be argued, though it is equally unprovable, that the tendency to authoritarianism, far from ensuring victory, nearly led to catastrophe. For one thing, it helped alienate many workers who felt cheated by the outcome of the revolution, and support for the regime was . . . far from even in this core group . . . [It] may, indeed, have been becoming more alienated as a result of Bolshevik measures depriving it of the means of expression of its growing catalogue of grievances. . . Far from being 'necessary' or even functional, the Bolshevik leadership's obsession with externally imposed discipline and authority might even have made the task of victory in the war more difficult and more costly. If the counter-example of Makhno is anything to go by then it certainly did." [Christopher Read, **From Tsar to Soviets**, pp. 264-5]*

As such, another key lesson to be learned from the Makhno movement is the importance of practising during a revolution the ideas you preach before it. Means and ends are linked, with the means shaping the ends and the ends inspiring the means. As such, if you argue for working-class power and freedom, you cannot dump these aims during a revolution without ensuring that they are never applied after it. As

the Makhnovist movement showed, even the most difficult situations need not hinder the application of revolutionary ideas.

The importance of encouraging working-class autonomy also shines through the Makhnovist experience. The problems facing a social revolution are many, as are the problems involved in constructing a new society. The solutions to these problems cannot be found without the active and full participation of the working class. As the Makhnovist congresses and soviets show, free debate and meaningful meetings are the only means, firstly, to ensure that working-class people are "*the masters of their own lives*," that "*they themselves are making the revolution*," that they "*have gained freedom*." "*Take that faith away*," stressed Alexander Berkman, "*deprive the people of power by setting up some authority over them, be it a political party or military organisation, and you have dealt a fatal blow to the revolution. You will have robbed it of its main source of strength, the masses*." [ABC of Anarchism, p. 82]

Secondly, it allows the participation of all in solving the problems of the revolution and of constructing the new society. Without this input, **real** socialism cannot be created and, at best, some form of oppressive state capitalist regime would be created (as Bolshevism shows). A new society needs the freedom of experimentation, to adapt freely to the problems it faces, to adjust to the needs and hopes of those making it. Without working-class freedom and autonomy, public life becomes impoverished, miserable and rigid as the affairs of all are handed over to a few leaders at the top of a social hierarchy, who cannot possibly understand, let alone solve, the problems affecting society. Freedom allows the working class to take an active part in the revolution. Restricting working-class freedom means the bureaucratisation of the revolution as a few party leaders cannot hope to direct and rule the lives of millions without a strong state apparatus. Simply put, the emancipation of the working class is the task of the working class itself. Either working class people create socialism (and that needs workers' autonomy and freedom as its basis), or some clique will and the result will not be a socialist society.

As the experience of the Makhnovist movement shows, working-class freedom can be applied during a revolution and when it is faced with the danger of counter-revolution.

Another key lesson from the Makhnovist movement is that of the need for effective anarchist organisation. The Makhnovists did not become anarchist-influenced by chance. The hard effort by the local anarchists in Hulyai Pole before and during 1917 paid off in terms of political influence afterwards. Therefore, anarchists need to take a leading role in the struggles of working people (as we indicated in [section I.8.2](#), this was how the Spanish anarchists gained influence as well). As Voline noted, one of the advantages the Makhnovist movement had was "*the activity of . . . libertarian elements in the region . . . [and the] rapidity with which the peasant masses and the insurgents, despite unfavourable circumstances, became acquainted with libertarian ideas and sought to apply them*." [Op. Cit., p. 570]

Arshinov expands on this issue in a chapter of his history ("*The Makhnovshchina and Anarchism*"), arguing that many Russian anarchists "*suffered from the disease of disorganisation*," which led to "*impoverished ideas and futile practice*." Moreover, most did not join the Makhnovist movement, "*remained in their circles and slept through a mass movement of paramount importance*." [Op. Cit., p.

244 and p. 242]

Indeed, it was only in May 1919 that the "*Nabat*" Ukrainian anarchist confederation was organised. This federation worked closely with the Makhnovists and gained influence in the villages, towns and cities within and around the Makhnovist region. In such circumstances, the anarchists were at a disadvantage compared to the Bolsheviks, Mensheviks and Socialist-Revolutionaries, who had been organised far longer and so had more influence within the urban workers.

While many anarchists did participate effectively and organisationally within many areas of Russia and the Ukraine (gaining influence in Moscow and Petrograd, for example), they were much weaker than the Bolsheviks. This meant that the Bolshevik idea of revolution gained influence (by, it should be noted, appropriating anarchist slogans and tactics). Once in power, the Bolsheviks turned against their rivals, using state repression to effectively destroy the anarchist movement in Russia in April 1918 (see [section 24](#) of the appendix "[What happened during the Russian Revolution?](#)" for details). This, incidentally, led to many anarchists coming to the Ukraine to escape repression and many joined the Makhnovists. As Arshinov notes, the Bolsheviks "*knew perfectly well that . . . anarchism in Russia, lacking any contact with a mass movement as important as the Makhnovshchina, did not have a base and could not threaten nor endanger them.*" [Op. Cit., p. 248] Waiting till **after** a revolution starts to build such a base is a dangerous tactic, as the experience of the Russian anarchists shows. As the experience of the Moscow anarchists active in the bakers' union shows, organised working-class support can be an effective deterrent to state repression (the Moscow bakers' union continued to have anarchists active in it until 1921).

It should be noted that this lesson was recognised by the main anarchists associated with the Makhnovists. In exile, Voline argued for the need to build a "*synthesis*" anarchist federation (see [section J.3.2](#)) while Arshinov and Makhno both associated themselves with the Platform (see [section J.3.3](#)).

Another key lesson is the need to combine rural and urban organisation. As Voline argued, the "*absence of a vigorous organised workers' movement which could support that of the peasant insurgents*" was a major disadvantage for the Makhno movement. [Voline, Op. Cit., p. 571] If there had been a workers' movement influenced by anarchist or syndicalist ideas within the Ukrainian towns during the Russian Revolution, the possibilities of constructive work would have been increased immensely. Take the example of when the Makhnovists liberated Aleksandrovsk and organised two workers' conferences. It was only at the insurgents' insistence that the unions agreed to send delegates, but for information only. This was undoubtedly due to the fact that Mensheviks had some influence in the unions and Bolshevik influence was increasing. Both parties may have preferred the Makhnovists to the Whites, but neither accepted anarchist ideas of workers' self-management and so constructive work was limited to the railway workers. In contrast, when Katerinoslav was liberated, the bakers set themselves to preparing the socialisation of their industry and drawing up plans to feed both the army and the civilian population. Unsurprisingly, the bakers had long been under anarcho-syndicalist influence. [Malet, Op. Cit., p. 123 and p. 124]

As the Makhnovists themselves realised, their movement had to be complemented by urban working-class self-activity and self-organisations. While they did all they could to encourage it, they lacked a base within the workers' movement and so their ideas had to overcome the twin barriers of workers' unfamiliarity with both them and their ideas and Marxist influence. With a strong working-class movement influenced by anarchist ideas, the possibilities for constructive work between city and village would have been helped immensely (this can be seen from the example of the Spanish Revolution of 1936, where rural and urban collectives and unions made direct links with each other).

Lastly, there is the lesson to be gained from Makhnovist co-operation with the Bolsheviks. Simply put, the experience shows the importance of being wary towards Bolshevism. As Voline put it, another disadvantage of the Makhnovists was a "*certain casualness, a lack of necessary distrust, towards the Communists.*" [Op. Cit., p. 571] The Makhnovists were betrayed three times by the Bolsheviks, who continually placed maintaining their own power above the needs of the revolution. The anarchists were simply used as cannon fodder against the Whites and once their utility had ended, the Bolsheviks turned their guns on them.

Thus a lesson to be learned is that co-operation between anarchists and Bolsheviks is fraught with danger. As many activists are aware, modern-day supporters of Bolshevism constantly urge everyone to unite "*against the common enemy*" and not to be "*sectarian*" (although, somehow this appeal to non-sectarianism does not stop them printing lying accounts of anarchism!). The Makhnovists took them at their word in early 1919 and soon found out that "*unity*" meant "*follow our orders.*" When the Makhnovists continued to apply their ideas of working-class self-management, the Bolsheviks turned on them. Similarly, in early 1920 the Bolsheviks outlawed the Makhnovists in order to break their influence in the Ukraine. The Makhnovist contribution to the defeat of Denikin (the common enemy) was ignored. Lastly, in mid-1920 the Makhnovists placed the need of the revolution first and suggested an alliance to defeat the common enemy of Wrangel. Once Wrangel had been defeated, the Bolsheviks ripped up the agreement they had signed and, yet again, turned on the Makhnovists. Simply put, the Bolsheviks continually placed their own interests before that of the revolution and their allies. This is to be expected from an ideology based on vanguardism (see [section H.5](#) for further discussion).

This does not mean that anarchists and Leninists should not work together. In some circumstances and in some social movements, this may be essential. However, it would be wise to learn from history and not ignore it and, as such, modern activists should be wary when conducting such co-operation. Ultimately, for Leninists, social movements are simply a means to their end (the seizing of state power by them on behalf of the working class) and anarchists should never forget it.

Thus the lessons of the Makhnovist movement are exceedingly rich. Simply put, the Makhnovshchina show that anarchism is a viable form of revolutionary ideas and can be applied successfully in extremely difficult circumstances. They show that social revolutions need not consist of changing one set of bosses for another. The Makhnovist movement clearly shows that libertarian ideas can be successfully applied in a revolutionary situation.

Why does the Makhnovist movement show there is an alternative to Bolshevism?

H.3 What are the myths of state socialism?

Ask most people what socialism means and they will point to the former Soviet Union, China, Cuba and a host of other authoritarian, centralised and oppressive party dictatorships. These regimes have in common two things. Firstly, the claim that their rulers are Marxists or socialists. Secondly, that they have successfully alienated millions of working class people from the very idea of socialism. Indeed, the supporters of capitalism simply had to describe the "socialist paradises" as they really were in order to put people off socialism. Moreover, the Stalinist regimes (and their various apologists and even "opponents", like the Trotskyists, who defended them as "*degenerated workers' states*") let the bourgeoisie have an easy time in dismissing all working-class demands and struggles as so many attempts to set up similar party dictatorships.

The association of "*socialism*" or "*communism*" with these dictatorships has often made anarchists wary of calling themselves socialists or communists in case our ideas are associated with them. As Errico Malatesta argued in 1924:

"I foresee the possibility that the communist anarchists will gradually abandon the term 'communist': it is growing in ambivalence and falling into disrepute as a result of Russian 'communist' despotism. If the term is eventually abandoned this will be a repetition of what happened with the word 'socialist.' We who, in Italy at least, were the first champions of socialism and maintained and still maintain that we are the true socialists in the broad and human sense of the word, ended by abandoning the term to avoid confusion with the many and various authoritarian and bourgeois deviations of socialism. Thus too we may have to abandon the term 'communist' for fear that our ideal of free human solidarity will be confused with the avaricious despotism which has for some time triumphed in Russia and which one party, inspired by the Russian example, seeks to impose worldwide." [**The Anarchist Revolution**, p. 20]

That, to a large degree happened, with anarchists simply calling themselves by that name, without adjectives, to avoid confusion. This, sadly, resulted in two problems. Firstly, it gave Marxists even more potential to portray anarchism as being primarily against the state and not as equally opposed to capitalism, hierarchy and inequality (as we argue in [section H.2.4](#), anarchists have opposed the state as just one aspect of class society). Secondly, extreme right-wingers tried to appropriate the names "*libertarian*" and "*anarchist*" to describe their vision of extreme capitalism as "*anarchism*," they claimed, was simply "*anti-government*" (see [section F](#) for discussion on why "anarcho"-capitalism is not anarchist). To counter these distortions of anarchist ideas, many anarchists have recently re-appropriated the use of the words "*socialist*" and "*communist*," although always in combination with the words "*anarchist*" and "*libertarian*."

Such combination of words is essential as the problem Malatesta predicted still remains. If one thing can

be claimed for the 20th century, it is that it has seen the word "*socialism*" become narrowed and restricted into what anarchists call "*state socialism*" -- socialism created and run from above, by the state (i.e. by the state bureaucracy). This restriction of "socialism" has been supported by both Stalinist and Capitalist ruling elites, for their own reasons (the former to secure their own power and gain support by associating themselves with socialist ideals, the latter by discrediting those ideas by associating them with the horror of Stalinism).

This means that anarchists and other libertarian socialists have a major task on their hands -- to reclaim the promise of socialism from the distortions inflicted upon it by both its enemies (Stalinists and capitalists) and its erstwhile and self-proclaimed supporters (Social Democracy and its various offspring like the Bolsheviks and its progeny like the Trotskyists). A key aspect of this process is a critique of both the practice and ideology of Marxism and its various offshoots. Only by doing this can anarchists prove, to quote Rocker, that "*Socialism will be free, or it will not be at all.*" [**Anarcho-Syndicalism**, p. 20]

Such a critique raises the problem of which forms of "*Marxism*" to discuss. There is an extremely diverse range of Marxist viewpoints and groups in existence. Indeed, the different groups spend a lot of time indicating why all the others are not "*real*" Marxists (or Marxist-Leninists, or Trotskyists, and so on) and are just "*sects*" without "*real*" Marxist theory or ideas. This "diversity" is, of course, a major problem (and somewhat ironic, given that some Marxists like to insult anarchists by stating there are as many forms of anarchism as anarchists!). Equally, many Marxists go further than dismissing specific groups. Some even totally reject other branches of their movement as being non-Marxist (for example, some Marxists dismiss Leninism as having little, or nothing, to do with what they consider the "*real*" Marxist tradition to be). This means that discussing Marxism can be difficult as Marxists can argue that our FAQ does not address the arguments of this or that Marxist thinker, group or tendency.

With this in mind, this section of the FAQ will concentrate on the works of Marx and Engels (and so the movement they generated, namely Social Democracy) as well as the Bolshevik tradition started by Lenin and continued (by and large) by Trotsky. These are the core ideas (and the recognised authorities) of most Marxists and so latter derivations of these tendencies can be ignored (for example Maoism, Castroism and so on). It should also be noted that even this grouping will produce dissent as some Marxists argue that the Bolshevik tradition is not part of Marxism. This perspective can be seen in the "*impossiblist*" tradition of Marxism (e.g. the Socialist Party of Great Britain and its sister parties) as well as in the left/council communist tradition (e.g. in the work of such Marxists as Anton Pannekoek and Paul Mattick). The arguments for their positions are strong and well worth reading (indeed, any honest analysis of Marxism and Leninism cannot help but show important differences between the two). However, as the vast majority of Marxists today are also Leninists, we have to reflect this in our FAQ (and, in general, we do so by referring to "mainstream Marxists" as opposed to the small minority of libertarian Marxists).

Another problem arises when we consider the differences not only between Marxist tendencies, but also within a specific tendency before and after its representatives seize power. For example, "*there are . . . very different strains of Leninism . . . there's the Lenin of 1917, the Lenin of the 'April Theses' and State*

and Revolution. *That's one Lenin. And then there's the Lenin who took power and acted in ways that are unrecognisable . . . compared with, say, the doctrines of 'State and Revolution.'* . . . *this [is] not very hard to explain. There's a big difference between the libertarian doctrines of a person who is trying to associate himself with a mass popular movement to acquire power and the authoritarian power of somebody who's taken power and is trying to consolidate it. . . that is true of Marx also. There are competing strains in Marx.*" [Noam Chomsky, **Language and Politics**, p. 177]

As such, this section of our FAQ will try and draw out the contradictions within Marxism and indicate what aspects of the doctrine aided the development of the "second" Lenin. The seeds from which authoritarianism grew post-October 1917 existed from the start. Anarchists agree with Noam Chomsky when he stated that he considered it *"characteristic and unfortunate that the lesson that was drawn from Marx and Lenin for the later period was the authoritarian lesson. That is, it's the authoritarian power of the vanguard party and destruction of all popular forums in the interests of the masses. That's the Lenin who became known to later generations. Again, not very surprisingly, because that's what Leninism really was in practice."* [Ibid.]

Ironically, given Marx's own comments on the subject, a key hindrance to such an evaluation is the whole idea and history of Marxism itself. While, as Murray Bookchin noted *"to his lasting credit,"* Marx tried (to some degree) *"to create a movement that looks to the future instead of to the past,"* his followers have not done so. *"Once again,"* Bookchin argues, *"the dead are walking in our midst -- ironically, draped in the name of Marx, the man who tried to bury the dead of the nineteenth century. So the revolution of our own day can do nothing better than parody, in turn, the October Revolution of 1918 and the civil war of 1918-1920 . . . The complete, all-sided revolution of our own day . . . follows the partial, the incomplete, the one-sided revolutions of the past, which merely changed the form of the 'social question,' replacing one system of domination and hierarchy by another."* [**Post-Scarcity Anarchism**, p. 174 and p. 175] In Marx's words, the *"tradition of all the dead generations weighs down like a nightmare on the brain of the living."* Marx's own work, and the movements it inspired, now add to this dead-weight. In order to ensure, as Marx put it, the social revolution draws its poetry from the future rather than the past, Marxism itself must be transcended.

Which, of course, means evaluating both the theory **and** practice of Marxism. For anarchists, it seems strange that for a body of work whose followers stress is revolutionary and liberating, its results have been so bad. If Marxism is so obviously revolutionary and democratic, then why have so few of the people who read it drawn those conclusions? How could it be transmuted so easily into Stalinism? Why are there so few **libertarian** Marxists, if it was Lenin (or Social Democracy) which *"misinterpreted"* Marx and Engels? So when Marxists argue that the problem is in the interpretation of the message not in the message itself, anarchists reply that the reason these numerous, allegedly false, interpretations exist at all simply suggests that there are limitations within Marxism **as such** rather than the readings it has been subjected to. When something repeatedly fails (and produces such terrible results), then there has to be a fundamental flaw somewhere.

Thus Cornelius Castoriadis:

"Marx was, in fact, the first to stress that the significance of a theory cannot be grasped independently of the historical and social practice it inspires and initiates, to which it gives rise, in which it prolongs itself and under cover of which a given practice seeks to justify itself.

*"Who, today, would dare proclaim that the only significance of Christianity for history is to be found in reading unaltered versions of the Gospels or that the historical practice of various Churches over a period of some 2,000 years can teach us nothing fundamental about the significance of this religious movement? A 'faithfulness to Marx' which would see the historical fate of Marxism as something unimportant would be just as laughable. It would in fact be quite ridiculous. Whereas for the Christian the revelations of the Gospels have a transcendental kernel and an intemporal validity, no theory could ever have such qualities in the eyes of a Marxist. To seek to discover the meaning of Marxism only in what Marx wrote (while keeping quiet about what the doctrine has become in history) is to pretend -- in flagrant contradiction with the central ideas of that doctrine -- that real history doesn't count and that the truth of a theory is always and exclusively to be found 'further on.' It finally comes to replacing revolution by revelation and the understanding of events by the exegesis of texts." ["The Fate of Marxism," pp. 75-84 **The Anarchist Papers**, Dimitrios Roussopoulos (ed.), p. 77]*

This does not mean forsaking the work of Marx and Engels. It means rejecting once and for all the idea that two people, writing over a period of decades over a hundred years ago have all the answers. As should be obvious! Ultimately, anarchists think we have to **build** upon the legacy of the past, not squeeze current events into it. We should stand on the shoulders of giants, not at their feet.

Thus this section of our FAQ will attempt to explain the various myths of Marxism and provide an anarchist critique of Marxism and its offshoots. Of course, the ultimate myth of Marxism is what Alexander Berkman called *"The Bolshevik Myth,"* namely the idea that the Russian Revolution was a success. However, as we discuss this revolution in the appendix on ["What happened during the Russian Revolution?"](#) we will not do so here except when it provides useful empirical evidence for our critique. Our discussion here will concentrate for the most part on Marxist theory, showing its inadequacies, its problems, where it appropriated anarchist ideas and how anarchism and Marxism differ. This is a big task and this section of the FAQ can only be a small contribution to it.

As noted above, there are minority trends in Marxism which are libertarian in nature (i.e. close to anarchism). As such, it would be simplistic to say that anarchists are *"anti-Marxist"* and we generally do differentiate between the (minority) libertarian element and the authoritarian mainstream of Marxism (i. e. Social-Democracy and Leninism in its many forms). Without doubt, Marx contributed immensely to the enrichment of socialist ideas and analysis (as acknowledged by Bakunin, for example). His influence, as to be expected, was both positive and negative. For this reason he must be read and discussed critically. This FAQ is a contribution to this task of transcending the work of Marx. As with anarchist thinkers, we must take what is useful from Marx and reject the rubbish. But never forget that

anarchists are anarchists precisely because we think that anarchist thinkers have got more right than wrong and we reject the idea of tying our politics to the name of a long dead thinker.

H.3.1 Do Anarchists and Marxists want the same thing?

Ultimately, the greatest myth of Marxism is the idea that anarchists and most Marxists want the same thing. Indeed, it could be argued that it is anarchist criticism of Marxism which has made them stress the similarity of long term goals with anarchism. *"Our polemics against them [the Marxists],"* Bakunin argued, *"have forced them to recognise that freedom, or anarchy -- that is, the voluntary organisation of the workers from below upward -- is the ultimate goal of social development."* He continued by stressing that the means to this apparently similar end were different. The Marxists, he argues, *"say that [a] state yoke, [a] dictatorship, is a necessary transitional device for achieving the total liberation of the people: anarchy, or freedom, is the goal, and the state, or dictatorship, is the means . . . We reply that no dictatorship can have any other objective than to perpetuate itself, and that it can engender and nurture only slavery in the people who endure it. Liberty can be created only by liberty, by an insurrection of all the people and the voluntary organisation of the workers from below upwards."* [**Statism and Anarchy**, p. 179]

As such, it is commonly taken for granted that the ends of both Marxists and Anarchists are the same, we just disagree over the means. However, within this general agreement over the ultimate end (a classless and stateless society), the details of such a society are somewhat different. This, perhaps, is to be expected given the differences in means. As is obvious from Bakunin's argument, anarchists stress the unity of means and goals, that the means which are used affect the goal reached. This unity between means and ends is expressed well by Martin Buber's observation that *"[o]ne cannot in the nature of things expect a little tree that has been turned into a club to put forth leaves."* [**Paths in Utopia**, p. 127] In summary, we cannot expect to reach our end destination if we take a path going in the opposite direction. As such, the agreement on ends may not be as close as often imagined.

So when it is stated that anarchists and state socialists want the same thing, the following should be borne in mind. Firstly, there are key differences on the question of current tactics. Secondly, there is the question of the immediate aims of a revolution. Thirdly, there is the long term goals of such a revolution. These three aspects form a coherent whole, with each one logically following on from the last. As we will show, the anarchist and Marxist vision of each aspect are distinctly different, so suggesting that the short, medium **and** long term goals of each theory are, in fact, different. We will discuss each aspect in turn.

Firstly, the question of the nature of the revolutionary movement. Here anarchists and most Marxists have distinctly opposing ideas. The former argue that both the revolutionary organisation (i.e. an anarchist federation) and the wider labour movement should be organised in line with the vision of society which inspires us. This means that it should be a federation of self-managed groups based on the direct participation of its membership in the decision making process. Power, therefore, is decentralised and there is no division between those who make the decisions and those who execute them. We reject

the idea of others acting on our behalf or on behalf of the people and so urge the use of direct action and solidarity, based upon working class self-organisation, self-management and autonomy. Thus, anarchists apply their ideas in the struggle against the current system, arguing what is "efficient" from a hierarchical or class position is deeply inefficient from a revolutionary perspective.

Marxists disagree. Most Marxists are also Leninists. They argue that we must form "*vanguard*" parties based on the principles of "*democratic centralism*" complete with institutionalised leaderships. They argue that how we organise today is independent of the kind of society we seek and that the party should aim to become the recognised leadership of the working class. Every thing they do is subordinated to this end, meaning that no struggle is seen as an end in itself but rather as a means to gaining membership and influence for the party until such time as it gather enough support to seize power. As this is a key point of contention between anarchists and Leninists, we discuss this in some detail in [section H.5](#) and its related sections and so not do so here.

Obviously, in the short term anarchists and Leninists cannot be said to want the same thing. While we seek a revolutionary movement based on libertarian (i.e. revolutionary) principles, the Leninists seek a party based on distinctly bourgeois principles of centralisation, delegation of power and representative over direct democracy. Both, of course, argue that only their system of organisation is effective and efficient (see [section H.5.8](#) on a discussion why anarchists argue that the Leninist model is not effective from a revolutionary perspective). The anarchist perspective is to see the revolutionary organisation as part of the working class, encouraging and helping those in struggle to clarify the ideas they draw from their own experiences and its role is to provide a lead rather than a new set of leaders to be followed (see [section J.3.6](#) for more on this). The Leninist perspective is to see the revolutionary party as the leadership of the working class, introducing socialist consciousness into a class which cannot generate itself (see [section H.5.1](#)).

Given the Leninist preference for centralisation and a leadership role by hierarchical organisation, it will come as no surprise that their ideas on the nature of post-revolutionary society are distinctly different from anarchists. While there is a tendency for Leninists to deny that anarchists have a clear idea of what will immediately be created by a revolution (see [section H.1.4](#)), we do have concrete ideas on the kind of society a revolution will immediately create. This vision is in almost every way different from that proposed by most Marxists.

Firstly, there is the question of the state. Anarchists, unsurprisingly enough, seek to destroy it. Simply put, while anarchists want a stateless and classless society and advocate the means appropriate to those ends, most Marxists argue that in order to reach a stateless society we need a new "*workers*" state, a state, moreover, in which their party will be in charge. Trotsky, writing in 1906, made this clear when he argued that "*[e]very political party deserving of the name aims at seizing governmental power and thus putting the state at the service of the class whose interests it represents.*" [quoted by Israel Getzler, "*Marxist Revolutionaries and the Dilemma of Power*", pp. 88-112, **Revolution and Politics in Russia**, Alexander and Janet Rabinowitch and Ladis K.D. Kristof (eds.), p. 105] This fits in with Marx's 1852 comments that "*Universal Suffrage is the equivalent of political power for the working class of England,*

where the proletariat forms the large majority of the population . . . Its inevitable result, here, is **the political supremacy of the working class.**" [Collected Works, vol. 11, pp. 335-6] In other words, "political power" simply means the ability to nominate a government. Thus Engels:

"In every struggle of class against class, the next end fought for is political power; the ruling class defends its political supremacy, that is to say its safe majority in the Legislature; the inferior class fights for, first a share, then the whole of that power, in order to become enabled to change existing laws in conformity with their own interests and requirements. Thus the working class of Great Britain for years fought ardently and even violently for the People's Charter [which demanded universal suffrage and yearly general elections], which was to give it that political power." [Collected Works, vol. 24, p. 386]

While Marxists like to portray this new government as *"the dictatorship of the proletariat,"* anarchists argue that, in fact, it will be the dictatorship **over** the proletariat. This is because if the working class **is** the ruling class (as Marxists claim) then, anarchists argue, how can they delegate their power to a government and remain so? Either the working class directly manages its own affairs (and so society) or the government does. We discuss this issue in [section H.3.7](#) any state is simply rule by a few and so is incompatible with socialism. The obvious implication of this is that Marxism seeks party rule, not working class direct management of society (as we discuss in [section H.3.8](#), the Leninist tradition is extremely clear on this matter).

Then there is the question of the building blocks of socialism. Yet again, there is a clear difference between anarchism and Marxism. Anarchists have always argued that the basis of socialism is working class organisations, created in the struggle against capitalism and the state (see [section H.1.4](#) for details). This applies to both the social and economic structure of a post-revolutionary society. For most forms of Marxism, a radically different picture has been the dominant one. As we discuss in [section H.3.10](#), Marxists only reached a similar vision for the political structure of socialism in 1917 when Lenin supported the soviets as he framework of his workers' state. However, as we prove in [section H.3.11](#), he did so for instrumental purposes only, namely as the best means of assuring Bolshevik power. If the soviets clashed with the party, it was the latter which took precedence. Unsurprisingly, the Bolshevik mainstream moved from *"All Power to the Soviets"* to *"dictatorship of the party"* rather quickly. Thus, unlike anarchism, most forms of Marxism aim for party power, a "revolutionary" government above the organs of working class self-management.

Economically, there are also clear differences. Anarchists have consistently argued that the workers *"ought to be the real managers of industries."* [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 157] To achieve this, we have pointed to various organisations over time, such as factory committees and labour unions as the *"medium which Socialist forms of life could find . . . realisation."* Thus they would *"not only [be] an instrument for the improvement of the conditions of labour, but also of [were capable of] becoming an organisation which might . . . take into its hands the management of production."* [Kropotkin, **The Conquest of Bread**, pp. 22-3]

As we discuss in more detail in [section H.3.12](#), Lenin, in contrast, saw socialism as being constructed on the basis of structures and techniques (including management ones) developed under capitalism. Rather than see socialism as being built around new, working class organisations, Lenin saw it being constructed on the basis of developments in capitalist organisation. *"The Leninist road to socialism,"* notes one expert on Lenin, *"emphatically ran through the terrain of monopoly capitalism. It would, according to Lenin, abolish neither its advanced technological base nor its institutionalised means for allocating resources or structuring industry. . . The institutionalised framework of advanced capitalism could, to put it shortly, be utilised for realisation of specifically socialist goals. They were to become, indeed, the principal (almost exclusive) instruments of socialist transformation."* [Neil Harding, **Leninism**, p.145] As Lenin explained, socialism is *"nothing but the next step forward from state capitalist monopoly. In other words, Socialism is nothing but state capitalist monopoly made to benefit the whole people; by this token it ceases to be capitalist monopoly."* [**The Threatening Catastrophe and how to avoid it**, p. 37]

The role of workers' in this vision was basically unchanged. Rather than demand, like anarchists, workers' self-management of production in 1917, Lenin raised the demand for *"universal, all-embracing workers' control over the capitalists."* [**Will the Bolsheviks Maintain Power**, p. 52] Once the Bolsheviks were in power, the workers' own organs (the factory committees) were integrated into a system of state control, losing whatever power they once held at the point of production. Lenin then modified this vision by raising *"one-man management"* over the workers (see [section H.3.14](#)). In other words, a form of **state** capitalism in which workers would still be wage slaves under bosses appointed by the state. Unsurprisingly, the *"control"* workers exercised over their bosses (i.e. those with **real** power in production) proved to be as elusive in production as it was in the state. In this, Lenin undoubtedly followed the lead of the **Communist Manifesto** which stressed state ownership of the means of production without a word about workers' self-management of production. As we discuss in [section H.3.13](#), state "socialism" cannot help being *"state capitalism"* by its very nature.

Needless to say, as far as means go, few anarchists and syndicalists are complete pacifists. As syndicalist Emile Pouget argued, *"[h]istory teaches that the privileged have never surrendered their privileges without having been compelled so to do and forced into it by their rebellious victims. It is unlikely that the bourgeoisie is blessed with an exceptional greatness of soul and will abdicate voluntarily."* This meant that *"[r]ecourse to force . . . will be required."* [**The Party Of Labour**] This does not mean that libertarians glorify violence or argue that all forms of violence are acceptable (quite the reverse!), it simply means that for self-defence against violent opponents violence is, unfortunately, sometimes required.

The way an anarchist revolution would defend itself also shows a key difference between anarchism and Marxism. As we discussed in [section H.2.1](#), anarchists (regardless of Marxist claims) have always argued that a revolution needs to defend itself. This would be organised in a federal, bottom-up way as the social structure of a free society. It would be based on voluntary working class militias. As Bakunin put it, *"the peasants, like the industrial city workers, should unite by federating the fighting battalions,*

district by district, this assuring a common co-ordinated defence against internal and external enemies." [**Bakunin on Anarchism**, p. 190] This model of working class self-defence was applied successfully in both the Spanish and Ukrainian revolutions (by the CNT-FAI and the Makhnovists, respectively). In contrast, the Bolshevik method of defending a revolution was the top-down, hierarchical and centralised "Red Army" (see [section 14](#) of the appendix on "[What happened during the Russian Revolution?](#)" for details). As the example of the Makhnovists (see the appendix on "[Why does the Makhnovist movement show there is an alternative to Bolshevism?](#)") showed, the "Red Army" was not the only way the Russian Revolution could have been defended although it was the only way Bolshevik power could be.

So while Anarchists have consistently argued that socialism must be based on working class self-management of production and society based on working class organisations, the Leninist tradition has not supported this vision (although it has appropriated some of its imagery to gain popular support). Clearly, in terms of the immediate aftermath of a revolution, anarchists and Leninists do not seek the same thing. The former want a free society organised and run from below-upwards by the working class based on workers self-management of production while the latter seek party power in a new state structure which would preside over an essentially state capitalist economy.

Lastly, there is the question of the long term goal. Even in this vision of a classless and stateless society there is very little in common between anarchist communism and Marxist communism, beyond the similar terminology used to describe it. This is blurred by the differences in terminology used by both theories. Marx and Engels had raised in the 1840s the (long term) goal of "*an association, in which the free development of each is the condition for the free development of all*" replacing "*the old bourgeois society, with its classes and class antagonisms,*" in the **Communist Manifesto**. Before this "*vast association of the whole nation*" was possible, the proletariat would be "*raise[d] . . . to the position of ruling class*" and "*all capital*" would be "*centralise[d] . . . in the hands of the State, i.e. of the proletariat organised as the ruling class.*" As economic classes would no longer exist, "the public power would lose its political character" as political power "*is merely the organised power of one class for oppressing another.*" [**Manifesto of the Communist Party**, p. 53]

It was this, the means to the end, which was the focus of much debate (see [section H.1.1](#) for details). However, it cannot be assumed that the ends desired by Marxists and anarchists are identical. The argument that the "*public power*" could stop being "*political*" (i.e. a state) is a tautology, and a particularly unconvincing one at that. After all, if "*political power*" is defined as being an instrument of class rule it automatically follows that a classless society would have a non-political "*public power*" and so be without a state! This does not imply that a "*public power*" would no longer exist as a structure within (or, more correctly, over) society, it just implies that its role would no longer be "*political*" (i.e. an instrument of class rule). Given that, according to the Manifesto, the state would centralise the means of production, credit and transportation and then organise it "*in accordance with a common plan*" using "*industrial armies, especially for agriculture*" this would suggest that the state structure would remain even after its "*political*" aspects had, to use Engels term, "*withered away.*" [Marx and Engels, **Op. Cit.**, pp. 52-3]

From this perspective, the difference between anarchist communism and Marxist-communism is clear. *"While both,"* notes John Clark, *"foresee the disappearance of the state, the achievement of social management of the economy, the end of class rule, and the attainment of human equality, to mention a few common goals, significant differences in ends still remain. Marxist thought has inherited a vision which looks to high development of technology with a corresponding degree of centralisation of social institutions which will continue even after the coming of the social revolution. . . . The anarchist vision sees the human scale as essential, both in the techniques which are used for production, and for the institutions which arise from the new modes of association . . . In addition, the anarchist ideal has a strong hedonistic element which has seen Germanic socialism as ascetic and Puritanical."* [**The Anarchist Moment**, p. 68]

Moreover, it is unlikely that such a centralised system could become stateless and classless in actuality. As Bakunin argued, in the Marxist state *"there will be no privileged class. Everybody will be equal, not only from the judicial and political but also from the economic standpoint. This is the promise at any rate . . . So there will be no more class, but a government, and, please note, an extremely complicated government which, not content with governing and administering the masses politically . . . will also administer them economically, by taking over the production and **fair** sharing of wealth, agriculture, the establishment and development of factories, the organisation and control of trade, and lastly the injection of capital into production by a single banker, the State."* Such a system would be, in fact, *"the reign of the **scientific mind**, the most aristocratic, despotic, arrogant and contemptuous of all regimes"* based on *"a new class, a new hierarchy of real or bogus learning, and the world will be divided into a dominant, science-based minority and a vast, ignorant majority."* [**Michael Bakunin: Selected Writings**, p. 266]

George Barrett's words also seem appropriate:

"The modern Socialist . . . have steadily worked for centralisation, and complete and perfect organisation and control by those in authority above the people. The anarchist, on the other hand, believes in the abolition of that central power, and expects the free society to grow into existence from below, starting with those organisations and free agreements among the people themselves. It is difficult to see how, by making a central power control everything, we can be making a step towards the abolition of that power." [**Objections to Anarchism**]

As Brain Morris notes, *"Bakunin's fears that under Marx's kind of socialism the workers would continue to labour under a regimented, mechanised, hierarchical system of production, without direct control over their labour, has been more than confirmed by the realities of the Bolshevik system. Thus, Bakunin's critique of Marxism has taken on an increasing relevance in the age of bureaucratic State capitalism."* [**Bakunin: The Philosophy of Freedom**, p. 132]

Therefore, anarchists are not convinced that a highly centralised structure (as a state is) managing the economic life of society can be part of a truly classless society. While economic class as defined in

terms of property may not exist, social classes (defined in terms of inequality of power and wealth) will continue simply because the state is designed to create and protect minority rule (see [section H.3.7](#)). As Bolshevik and Stalinist Russia showed, nationalising the means of production does not end class society. As Malatesta argued:

*"When F. Engels, perhaps to counter anarchist criticisms, said that once classes disappear the State as such has no **raison d'etre** and transforms itself from a government of men into an administration of things, he was merely playing with words. Whoever has power over things has power over men; whoever governs production also governs the producers; who determines consumption is master over the consumer.*

"This is the question; either things are administered on the basis of free agreement of the interested parties, and this is anarchy; or they are administered according to laws made by administrators and this is government, it is the State, and inevitably it turns out to be tyrannical.

"It is not a question of the good intentions or the good will of this or that man, but of the inevitability of the situation, and of the tendencies which man generally develops in given circumstances." [Life and Ideas, p. 145]

The anarchist vision of the future society, therefore, does not exactly match the state communist vision, as much as the latter would like to suggest it does. The difference between the two is authority, which cannot be anything but the largest difference possible. Anarchist economic and organisational theories are built around an anti-authoritarian core and this informs both our means and aims. For anarchists, the Leninist vision of socialism is unattractive. Lenin continually stressed that his conception of socialism and "state capitalism" were basically identical. Even in **State and Revolution**, allegedly Lenin's most libertarian work, we discover this particularly unvisionary and uninspiring vision of "socialism":

*"All citizens are transformed into the salaried employees of the state . . . All citizens become employees and workers of a **single** national state 'syndicate' . . . The whole of society will have become a single office and a single factory with equality of work and equality of pay." [Essential Works of Lenin, p. 348]*

To which, anarchists point to Engels and his comments on the tyrannical and authoritarian character of the modern factory (as we discuss in [section H.4.4](#)). Engels, let us not forget, had argued against the anarchists that large-scale industry (or, indeed, any form of organisation) meant that "authority" was required (organisation meant that "the will of a single individual will always have to subordinate itself, which means that questions are settled in an authoritarian way."). He (like the factory owner he was) stated that factories should have "*Lasciate ogni autonomia, voi che entrate*" ("Leave, ye that enter in, all autonomy behind") written above their doors. This obedience, Engels argued, was necessary even under socialism, as applying the "forces of nature" meant "a veritable despotism independent of all social organisation." This meant that "[w]anting to abolish authority in large-scale industry is tantamount to

wanting to abolish industry itself." [Marx-Engels Reader, p. 731] Clearly, Lenin's idea of turning the world into one big factory takes on an extremely frightening nature given Engels lovely vision of the lack of freedom in industry.

For these reasons anarchists reject the simplistic Marxist analysis of inequality being rooted simply in economic class. Such an analysis, as the comments of Lenin and Engels prove, show that social inequality can be smuggled in by the backdoor of a proposed classless and stateless society. Thus Bookchin:

*"Basic to anti-authoritarian Socialism ---specifically, to Anarchist Communism -- is the notion that hierarchy and domination cannot be subsumed by class rule and economic exploitation, indeed, that they are more fundamental to an understanding of the modern revolutionary project. Before 'man' began to exploit 'man,' he began to dominate woman . . . Power of human over human long antedates **the very formation of classes and economic modes of social oppression.** . . . This much is clear: it will no longer do to insist that a classless society, freed from material exploitation, will necessarily be a liberated society. There is nothing in the social future to suggest that bureaucracy is incompatible with a classless society, the domination of women, the young, ethnic groups or even professional strata."* [Toward an Ecological Society, pp. 208-9]

Ultimately, anarchists see that *"there is a realm of domination that is broader than the realm of material exploitation. The tragedy of the socialist movement is that, steeped in the past, it uses the methods of domination to try to 'liberate' us from material exploitation."* Needless to say, this is doomed to failure. Socialism *"will simply mire us in a world we are trying to overcome. A non-hierarchical society, self-managed and free of domination in all its forms, stands on the agenda today, not a hierarchical system draped in a red flag."* [Murray Bookchin, **Op. Cit.**, p. 272 and pp. 273-4]

In summary, it cannot be said that anarchists and most Marxists want the same thing. While they often use the same terms, these terms often hide radically different concepts. Just because, say, anarchists and mainstream Marxists talk about *"social revolution," "socialism," "all power to the soviets"* and so on, it does not mean that we mean the same thing by them. For example, the phrase *"all power to the soviets"* for anarchists means exactly that (i.e. that the revolution must be directly managed by working class organs). Leninists mean *"all power to a central government elected by a national soviet congress."* Similarly with other similar phrases (which shows the importance of looking at the details of any political theory and its history).

We have shown that discussion over ends is as important as discussion over means as they are related. As Kropotkin once pointed out, those who downplay the importance of discussing the *"order of things which . . . should emerge from the coming revolution"* in favour of concentrating on *"practical things"* are being less than honest as *"far from making light of such theories, they propagate them, and all that they do now is a logical extension of their ideas. In the end those words 'Let us not discuss theoretical questions' really mean: 'Do not subject our theory to discussion, but help us to put it into*

execution." [Words of a Rebel, p. 200]

Hence the need to critically evaluate both ends and means. This shows the weakness of the common argument that anarchists and Leftists share some common visions and so we should work with them to achieve those common things. Who knows what happens after that? As can be seen, this is not the case. Many aspects of anarchism and Marxism are in opposition and cannot be considered similar (for example, what a Leninist considers as socialism is extremely different to what an anarchist thinks it is). If you consider "*socialism*" as being a "*workers' state*" presided over by a "*revolutionary*" government, then how can this be reconciled with the anarchist vision of a federation of self-managed communes and workers' associations? As the Russian Revolution shows, only by the armed might of the "*revolutionary*" government crushing the anarchist vision.

The only thing we truly share with these groups is a mutual opposition to existing capitalism. Having a common enemy does not make someone friends. Hence anarchists, while willing to work on certain mutual struggles, are well aware there is substantial differences in both terms of means and goals. The lessons of revolution in the 20th Century is that once in power, Leninists will repress anarchists, their current allies against the capitalist system. This is does not occur by accident, it flows from the differences in vision between the two movements, both in terms of means and goals.

H.3.2 Is Marxism "*socialism from below*"?

Some Marxists, such as the **International Socialist Tendency**, like to portray their tradition as being "*socialism from below*." Under "*socialism from below*," they place the ideas of Marx, Engels, Lenin and Trotsky, arguing that they and they alone have continued this, the true, ideal of socialism (Hal Draper's essay "*The Two Souls of Socialism*" seems to have been the first to argue along these lines). They contrast this idea of "*democratic*" socialism "*from below*" with "*socialism from above*," in which they place reformist socialism (social democracy, Labourism, etc.), elitist socialism (Lassalle and others who wanted educated and liberal members of the middle classes to liberate the working class) and Stalinism (bureaucratic dictatorship over the working class).

For those who uphold this idea, "*Socialism from below*" is simply the self-emancipation of the working class by its own efforts. To anarchist ears, the claim that Marxism (and in particular Leninism) is socialism "*from below*" sounds paradoxical, indeed laughable. This is because anarchists from Proudhon onwards have used the imagery of socialism being created and run from below upwards. They have been doing so for far longer than Marxists have. As such, "*socialism from below*" simply sums up the ***anarchist*** ideal!

Thus we find Proudhon in 1848 talking about being a "*revolutionary from below*" and that every "*serious and lasting Revolution*" was "*made from below, by the people*." A "*Revolution from above*" was "*pure governmentalism, the negation of collective activity, of popular spontaneity*" and is "*the oppression of the wills of those below*." [quoted by George Woodcock, **Pierre-Joseph Proudhon**, p. 143] For Proudhon, the means of this revolution "*from below*" would be working class associations for

both credit (mutual banks) and production (workers' associations or co-operatives). The workers, *"organised among themselves, without the assistance of the capitalist"* would march by *"Work to the conquest of the world"* by the *"force of principle."* Thus capitalism would be reformed away by the actions of the workers themselves. The *"problem of association,"* Proudhon argues, *"consists in organising . . . the **producers**, and by this subjecting capital subordinating power. Such is the war of liberty against authority, a war of the producer against the non-producer; a war of equality against privilege . . . An agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave."* [quoted by K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 148 and p. 157]

Similarly, Bakunin saw an anarchist revolution as coming *"from below."* As he put it, *"liberty can be created only by liberty, by an insurrection of all the people and the voluntary organisation of the workers from below upward."* [**Statism and Anarchy**, p. 179] Elsewhere he writes that *"popular revolution"* would *"create its own organisation from the bottom upwards and from the circumference inwards, in accordance with the principle of liberty, and not from the top downwards and from the centre outwards, as in the way of authority."* [**Michael Bakunin: Selected Writings**, p. 170] His vision of revolution and revolutionary self-organisation and construction from below was a core aspect of his anarchist ideas, arguing repeatedly for *"the free organisation of the people's lives in accordance with their needs -- not from the top down, as we have it in the State, but from the bottom up, an organisation formed by the people themselves . . . a free union of associations of agricultural and factory workers, of communes, regions, and nations."* He stressed that *"the politics of the Social Revolution"* was *"the abolition of the State"* and *"the economic, altogether free organisation of the people, an organisation from below upward, by means of federation."* [**The Political Philosophy of Bakunin**, pp. 297-8]

While Proudhon wanted to revolutionise society, he rejected revolutionary means to do so (i.e. collective struggle, strikes, insurrection, etc.). Bakunin, however, was a revolutionary in this, the popular, sense of the word. Yet he shared with Proudhon the idea of socialism being created by the working class itself. As he put it, in *"a social revolution, which in everything is diametrically opposed to a political revolution, the actions of individuals hardly count at all, whereas the spontaneous action of the masses is everything. All that individuals can do is clarify, propagate and work out the ideas corresponding to the popular instinct, and, what is more, to contribute their incessant efforts to revolutionary organisation of the natural power of the masses -- but nothing else beyond that; the rest can and should be done by the people themselves . . . revolution can be waged and brought to its full development only through the spontaneous and continued mass action of groups and associations of the people."* [**Op. Cit.**, pp. 298-9]

Therefore, the idea of *"socialism from below"* is a distinctly anarchist notion, one found in the works of Proudhon and Bakunin and repeated by anarchists ever since. As such, to hear Marxists appropriate this obviously anarchist terminology and imagery appears to many anarchists as opportunistic and attempt to cover the authoritarian reality of mainstream Marxism with anarchist rhetoric. However, there are "libertarian" strains of Marxism which are close to anarchism. Does this mean that there are no elements of a *"socialism from below"* to be found in Marx and Engels?

If we look at Marx, we get contradictory impressions. On the one hand, he argued that freedom *"consists in converting the state from an organ superimposed upon society into one completely subordinate to it."* Combine this with his comments on the Paris Commune (see his *"The Civil War in France"*), we can say that there are clearly elements of *"socialism from below"* in Marx's work. On the other hand, he often stresses the need for strict centralisation of power. In 1850, for example, he argued that the workers must *"not only strive for a single and indivisible German republic, but also within this republic for the most determined centralisation of power in the hands of the state authority."* This was because *"the path of revolutionary activity" can "proceed only from the centre."* This meant that the workers must be opposed to the *"federative republic"* planned by the democrats and *"must not allow themselves to be misguided by the democratic talk of freedom for the communities, of self-government, etc."* This centralisation of power was essential to overcome local autonomy, which would allow *"every village, every town and every province"* to put *"a new obstacle in the path"* the revolution due to *"local and provincial obstinacy."* Decades later, Marx dismisses Bakunin's vision of *"the free organisation of the worker masses from bottom to top"* as *"nonsense."* [Marx-Engels Reader, p. 537, p. 509 and p. 547]

Thus we have a contradiction. While arguing that the state must become subordinate to society, we have a central power imposing its will on *"local and provincial obstinacy."* This implies a vision of revolution in which the centre (indeed, *"the state authority"*) forces its will on the population, which (by necessity) means that the centre power is *"superimposed upon society"* rather than *"subordinate"* to it. Given his dismissal of the idea of organisation from bottom to top, we cannot argue that by this he meant simply the co-ordination of local initiatives. Rather, we are struck by the *"top-down"* picture of revolution Marx presents. Indeed, his argument from 1850 suggests that Marx favoured centralism not only in order to prevent the masses from creating obstacles to the revolutionary activity of the *"centre,"* but also to prevent them from interfering with their own liberation.

Looking at Engels, we discover him writing that *"[a]s soon as our Party is in possession of political power it has simply to expropriate the big landed proprietors just like the manufacturers in industry . . . thus restored to the community [they] are to be turned over by us to the rural workers who are already cultivating them and are to be organised into co-operatives."* He even states that this expropriation may *"be compensated,"* depending on *"the circumstances which we obtain power, and particularly by the attitude adopted by these gentry."* [Marx-Engels Selected Writings, pp. 638-9] Thus we have the party taking power, then expropriating the means of life **for the workers** and, lastly, *"turning over"* these to them. While this fits into the general scheme of the **Communist Manifesto**, it cannot be said to be *"socialism from below"* which can only signify the direct expropriation of the means of production by the workers themselves, organising themselves into free producer associations to do so.

This vision of revolution as the party coming to power can be seen from Engels' warning that the *"worse thing that can befall the leader of an extreme party is to be compelled to assume power at a time when the movement is not yet ripe for the domination of the class he represents and for the measures this domination implies."* [Collected Works, vol. 10, p. 469] Needless to say, such a vision is hard to equate with *"socialism from below"* which implies the active participation of the working class in the direct management of society from the bottom-up. If the leaders *"assume power"* then **they** have the real power, not the class they claim to *"represent."* Equally, it seems strange that socialism can be equated

with a vision which equates "*domination*" of a class being achieved by the fact a leader "*represents*" it. Can the working class really be said to be the ruling class if its role in society is to select those who exercise power on its behalf (i.e. to select representatives)? Bakunin quite rightly answered in the negative. While representative democracy may be acceptable to ensure bourgeois rule, it cannot be assumed that it be utilised to create a socialist society. It was designed to defend class society and its centralised and top-down nature reflects this role.

Moreover, Marx and Engels had argued in **The Holy Family** that the "*question is not what this or that proletarian, or even the whole of the proletariat at the moment considers as its aim. The question is what the proletariat is, and what, consequent on that being, it will be compelled to do.*" [quoted by Murray Bookchin, **The Spanish Anarchists**, p. 280] As Murray Bookchin argues:

"These lines and others like them in Marx's writings were to provide the rationale for asserting the authority of Marxist parties and their armed detachments over and even against the proletariat. Claiming a deeper and more informed comprehension of the situation than 'even the whole of the proletariat at the given moment,' Marxist parties went on to dissolve such revolutionary forms of proletarian organisation as factory committees and ultimately to totally regiment the proletariat according to lines established by the party leadership." [Op. Cit., p. 289]

Thus the ideological underpinning of a "*socialism from above*" is expounded, one which dismisses what the members of the working class actually want or desire at a given point (a position which Trotsky, for one, explicitly argued). A few years later, they argued in **The Communist Manifesto** that "*a portion of the bourgeois goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.*" They also noted that the Communists are "*the most advanced and resolute section of the working-class parties . . . [and] they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the general results of the proletarian movement.*" [Selected Works, p. 44 and p. 46] This gives a privileged place to the party (particularly the "*bourgeois ideologists*" who join it), a privileged place which their followers had no problem abusing in favour of party power and hierarchical leadership from above. As we discuss in [section H.5](#), Lenin was just expressing orthodox Social-Democratic (i.e. Marxist) policy when he argued that socialist consciousness was created by bourgeois intellectuals and introduced into the working class from outside. Against this, we have to note that the Manifesto states that the proletarian movement was "*the self-conscious, independent movement of the immense majority, in the interests of the immense majority*" (although, as discussed in [section H.1.1](#), when they wrote this the proletariat was a **minority** in all countries bar Britain). [Op. Cit., p. 45]

Looking at the tactics advocated by Marx and Engels, we see a strong support for "*political action*" in the sense of participating in elections. This support undoubtedly flows from Engel's comments that universal suffrage "*in an England two-thirds of whose inhabitants are industrial proletarians means the exclusive political rule of the working class with all the revolutionary changes in social conditions*

which are inseparable from it." [Collected Works, vol. 10, p. 298 Marx argued along identical lines. [Op. Cit., vol. 11, pp. 335-6] However, how could an entire class, the proletariat organised as a "movement" exercise its power under such a system? While the atomised voting to nominate representatives (who, in reality, held the real power in society) may be more than adequate to ensure bourgeois, i.e. minority, power, could it be used for proletarian, i.e. majority, power?

This is because such institutions are designed to place policy-making in the hands of representatives and do not (indeed, cannot) constitute a *"proletariat organised as a ruling class."* If public policy, as distinguished from administrative activities, is not made by the people themselves, in federations of self-managed assemblies, then a movement of the vast majority in the precise sense of the term cannot exist. For people to acquire real power over their lives and society, they must establish institutions organised and run, as Bakunin constantly stressed, from below. This would necessitate that they themselves directly manage their own affairs, communities and workplaces and, for co-ordination, mandate federal assemblies of revocable and strictly controllable delegates, who will execute their decisions. Only in this sense can a majority class, especially one committed to the abolition of all classes, organise as a class to manage society.

As such, Marx and Engels tactics are at odds with any idea of *"socialism from below."* While, correctly, supporting strikes and other forms of working class direct action (although, significantly, Engels dismissed the general strike) they placed that support within a general political strategy which emphasised electioneering and representative forms. This, however, is a form of struggle which can only really be carried out by means of leaders. The role of the masses is minor, that of voters. The focus of the struggle is at the top, in parliament, where the duly elected leaders are. As Luigi Galleani argued, this form of action involved the *"ceding of power by all to someone, the delegate, the representative, individual or group."* This meant that rather than the anarchist tactic of *"direct pressure put against the ruling classes by the masses,"* the Socialist Party *"substituted representation and the rigid discipline of the parliamentary socialists,"* the inevitably resulted in it *"adopt[ing] class collaboration in the legislative arena, without which all reforms would remain a vain hope."* It also resulted in the socialists needing *"authoritarian organisations"*, i.e. ones which are centralised and disciplined from above down. [The End of Anarchism?, p. 14, p. 12 and p. 14] The end result was the encouragement of a viewpoint that reforms (indeed, the revolution) would be the work of leaders acting on behalf of the masses whose role would be that of voters and followers, not active participants in the struggle (see [section J.2](#) for a discussion on direct action and why anarchists reject electioneering).

By the 1890s, the top-down and essentially reformist nature of these tactics had made their mark in both Engels politics and the practical activities of the Social-Democratic parties. Engels *"introduction"* to Marx's **The Class Struggles in France** indicated how far Marxism had progressed. Engels, undoubtedly influenced by the rise of Social-Democracy as an electoral power, stressed the use of the ballot box as the ideal way, if not the only way, for the party to take power. He notes that *"[w]e, the 'revolutionists', the 'overthrowers'"* were *"thriving far better on legal methods than on illegal methods and overthrow"* and the bourgeoisie *"cry despairingly . . . legality is the death of us"* and were *"much more afraid of the legal than of the illegal action of the workers' party, of the results of elections than of those of rebellion."* He argued that it was essential *"not to fitter away this daily increasing shock force [of party*

voters] in vanguard skirmishes, but to keep it intact until the decisive day." [Selected Writings, p. 656, p. 650 and p. 655]

The net effect of this would simply be keeping the class struggle within the bounds decided upon by the party leaders, so placing the emphasis on the activities and decisions of those at the top rather than the struggle and decisions of the mass of working class people themselves. As we noted in [section H.1.1](#), when the party was racked by the "revisionism" controversy after Engels death, it was fundamentally a conflict between those who wanted the party's rhetoric to reflect its reformist tactics and those who sought the illusion of radical words to cover the reformist practice. The decision of the Party to support their state in the First World War simply proved that radical words cannot defeat reformist tactics.

Needless to say, from this contradictory inheritance, Marxists had two ways of proceeding. Either they become explicitly anti-state (and so approach anarchism) or become explicitly in favour of party and state power and so, by necessity, "revolution from above." The council communists and other libertarian Marxists followed the first path, the Bolsheviks and their followers the second. As we discuss in the [next section](#), Lenin explicitly dismissed the idea that Marxism proceeded "only from below," stating that this was an anarchist principle. Nor was he shy in equating party power with working class power. Indeed, this vision of socialism as involving party power was not alien to the mainstream social-democracy Leninism split from. The leading left-wing Menshevik Martov argued as follows:

"In a class struggle which has entered the phase of civil war, there are bound to be times when the advance guard of the revolutionary class, representing the interests of the broad masses but ahead of them in political consciousness, is obliged to exercise state power by means of a dictatorship of the revolutionary minority. Only a short-sighted and doctrinaire viewpoint would reject this prospect as such. The real question at stake is whether this dictatorship, which is unavoidable at a certain stage of any revolution, is exercised in such a way as to consolidate itself and create a system of institutions enabling it to become a permanent feature, or whether, on the contrary, it is replaced as soon as possible by the organised initiative and autonomy of the revolutionary class or classes as a whole. The second of these methods is that of the revolutionary Marxists who, for this reason, style themselves Social Democrats; the first is that of the Communists." [The Mensheviks in the Russian Revolution, Abraham Ascher (Ed.), p. 119]

All this is to be expected, given the weakness of the Marxist theory of the state. As we discuss in [section H.3.7](#), Marxists have always had an a-historic perspective on the state, considering it as purely an instrument of class rule rather than what it is, an instrument of **minority** class rule. For anarchists, the "State is the minority government, from the top downward, of a vast quantity of men." This automatically means that a socialism, like Marx's, which aims for a socialist government and a workers' state automatically becomes, against the wishes of its best activists, "socialism from above." As Bakunin argued, Marxists are "worshippers of State power, and necessarily also prophets of political and social discipline and champions of order established from the top downwards, always in the name of universal

suffrage and the sovereignty of the masses, for whom they save the honour and privilege of obeying leaders, elected masters." [Michael Bakunin: Selected Writings, p. 265 and pp. 237-8]

For this reason anarchists from Bakunin onwards have argued for a bottom-up federation of workers' councils as the basis of revolution and the means of managing society after capitalism and the state have been abolished. If these organs of workers' self-management are co-opted into a state structure (as happened in Russia) then their power will be handed over to the real power in any state -- the government and its bureaucracy. The state is the delegation of power -- as such, it means that the idea of a "workers' state" expressing "workers' power" is a logical impossibility. If workers are running society then power rests in their hands. If a state exists then power rests in the hands of the handful of people at the top, not in the hands of all. The state was designed for minority rule. No state can be an organ of working class (i.e. majority) self-management due to its basic nature, structure and design.

So, while there are elements of "*socialism from below*" in the works of Marx and Engels they are placed within a distinctly centralised and authoritarian context which undermines them. As John Clark summarises, "*in the context of Marx's consistent advocacy of centralist programmes, and the part these programmes play in his theory of social development, the attempt to construct a libertarian Marxism by citing Marx's own proposals for social change would seem to present insuperable difficulties.*" [Op. Cit., p. 93]

H.3.3 Is Leninism "*socialism from below*"?

As discussed in the [last section](#), Marx and Engels left their followers with an ambiguous legacy. On the one hand, there **are** elements of "*socialism from below*" in their politics (most explicitly in Marx's comments on the libertarian influenced Paris Commune). On the other, there are distinctly centralist and statist themes in their work.

From this legacy, Leninism took the statist themes. Which explains why anarchists think the idea of Leninism being "*socialism from below*" is incredible. Simply put, the actual comments and actions of Lenin and his followers show that they had no commitment to a "*socialism from below*." As we will indicate, Lenin disassociated himself repeatedly from the idea of politics "*from below*," considering it (quite rightly) an anarchist idea. In contrast, he stressed the importance of a politics which somehow combined action "*from above*" and "*from below*." For those Leninists who maintain that their tradition is "*socialism from below*" (indeed, the only "*real*" socialism "*from below*"), this is a major problem and, unsurprisingly, they generally fail to mention it.

So what was Lenin's position on "*from below*"? In 1904, during the debate over the party split into Bolsheviks and Mensheviks, Lenin stated that the argument "[b]ureaucracy **versus** democracy is in fact centralism **versus** autonomism; it is the organisational principle of revolutionary Social-Democracy as opposed to the organisational principle of opportunist Social-Democracy. The latter strives to proceed from the bottom upward, and, therefore, wherever possible . . . upholds autonomism and 'democracy,' carried (by the overzealous) to the point of anarchism. The former strives to proceed from the top

downward. . ." [**Collected Works**, vol. 7, pp. 396-7] Thus it is the non-Bolshevik ("*opportunist*") wing of Marxism which bases itself on the "*organisational principle*" of "*from the bottom upward*," not the Bolshevik tradition (as we note in [section H.5.5](#), Lenin also rejected the "*primitive democracy*" of mass assemblies as the basis of the labour and revolutionary movements). Moreover, this vision of a party run from the top down was enshrined in the Bolshevik ideal of "*democratic centralism*" (see [section H.5.5](#)). How you can have "*socialism from below*" when your "*organisational principle*" is "*from the top downward*" is not explained by Leninist exponents of "*socialism from below*."

Lenin repeated this argument in his discussion on the right tactics to apply during the near revolution of 1905. He mocked the Mensheviks for only wanting "*pressure from below*" which was "*pressure by the citizens on the revolutionary government*." Instead, he argued for "*pressure . . . from above as well as from below*," where "*pressure from above*" was "*pressure by the revolutionary government on the citizens*." He notes that Engels "*appreciated the importance of action from above*" and that he saw the need for "*the utilisation of the revolutionary governmental power*." Lenin summarised his position (which he considered as being in line with that of orthodox Marxism) by stating that "*[l]imitation, in principle, of revolutionary action to pressure from below and renunciation of pressure also from above is anarchism*." [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, pp. 189-90, p. 193, p. 195 and p. 196] This seems to have been a common Bolshevik position at the time, with Stalin stressing in the same year that "*action only from 'below'*" was "*an anarchist principle, which does, indeed, fundamentally contradict Social-Democratic tactics*." [**Collected Works**, vol. 1, p. 149]

It is in this context of "*above and below*" in which we must place Lenin's comments in 1917 that socialism was "*democracy from below, without a police, without a standing army, voluntary social duty by a militia formed from a universally armed people*." [**Collected Works**, vol. 24, p. 170] Given that Lenin had rejected the idea of "*only from below*" as an anarchist principle (which it is), we need to bear in mind that this "*democracy from below*" was **always** placed in the context of a Bolshevik government. Lenin always stressed that the **Bolsheviks** would "*take over full state power*," that they "*can and must take state power into their own hands*." His "*democracy from below*" always meant representative government, **not** popular power or self-management. The role of the working class was that of voters and so the Bolsheviks' first task was "*to convince the majority of the people that its programme and tactics are correct*." The second task "*that confronted our Party was to capture political power*." The third task was for "the Bolshevik Party" to "**administer Russia**." [**Selected Works**, vol. 2, p. 352, p. 328 and p. 589] Thus Bolshevik power was equated with working class power.

Towards the end of 1917, he stressed this vision of a Bolshevik run "*democracy from below*" by arguing that "*[a]fter the 1905 revolution Russia was ruled by 130,000 landowners . . . yet they tell us that Russia will not be able to be governed by the 240,000 members of the Bolshevik party*." He even equated rule by the party with rule by the class -- "*the power of the Bolsheviks -- that is, the power of the proletariat*," while admitting that the proletariat could not actually govern itself. As he put it, "*[w]e know that just any labourer or any cook would be incapable of taking over immediately the administration of the State . . . We demand that the teaching of the business of government be conducted by the class-conscious workers and soldiers*." The "*conscious workers must be in control, but they can attract to the*

actual work of management the real labouring and oppressed masses." Ironically, he calls this system "*real popular self-administration*" and "*teaching the people to manage their own affairs.*" He also indicated that once in power, the Bolsheviks "*shall be fully and unreservedly for a strong government and centralism.*" [**Will the Bolsheviks Maintain Power**, pp. 61-2, p. 66, p. 69 and p. 75]

Clearly, Lenin's position had not changed. The goal of the revolution was simply a Bolshevik government, which, if it was to be effective, had to have the real power in society. Thus, socialism would be implemented from above, by the "*strong*" government of the "*conscious workers*" who would be "*in control.*" While, eventually, the "*labouring*" masses would take part in the administration of state decisions, the initial role of the workers could be the same as under capitalism. And, we must note, there is a difference between making policy and taking part in administration (i.e. between the "*work of management*" and management itself), a difference Lenin obscures.

All of which, perhaps, explains the famous leaflet addressed to the workers of Petrograd immediately after the October Revolution, informing that "*the revolution has won.*" The workers were called upon to "*show . . . **the greatest firmness and endurance**, in order to facilitate the execution of all the aims of the new People's Government.*" They were asked to "*cease immediately all economic and political strikes, to take up your work, and do it in perfect order . . . All to your places.*" It stated that the "*best way to support the new Government of Soviets in these days*" was "*by doing your job.*" [cited by John Read, **Ten Days that Shook the World**, pp. 341-2] Which smacks far more of "*socialism from above*" than "*socialism from below*"!

The implications of Lenin's position became clearer after the Bolsheviks had taken power in 1917. In that situation, it was not a case of "*dealing with the general question of principle, whether in the epoch of the democratic revolution it is **admissible** to pass from pressure from below to pressure from above.*" [Lenin, **Collected Works**, vol. 24, p. 190] Rather, it was the concrete situation of a "revolutionary" government exercising power "*from above*" onto the very class it claimed to represent. Thus we have a power over the working class which was quite happy to exercise coercion to ensure its position. As Lenin explained to his political police, the Cheka, in 1920:

"Without revolutionary coercion directed against the avowed enemies of the workers and peasants, it is impossible to break down the resistance of these exploiters. On the other hand, revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves." [**Collected Works**, vol. 42, p. 170]

It could be argued that this position was forced on Lenin by the problems facing the Bolsheviks in the Civil War, but such an argument is flawed. This is for two reasons. Firstly, according to Lenin himself civil war was inevitable and so, unsurprisingly, Lenin considered his comments as universally applicable. Secondly, this position fits in well with the idea of pressure "*from above*" exercised by the "*revolutionary*" government against the masses (and nothing to do with any sort of "*socialism from below*"). Indeed, "*wavering*" and "*unstable*" elements is just another way of saying "*pressure from below*," the attempts by those subject to the "*revolutionary*" government to influence its policies. As we

noted in [section H.1.2](#), it was in this period (1919 and 1920) that the Bolsheviks openly argued that the "*dictatorship of the proletariat*" was, in fact, the "*dictatorship of the party*" (see [section H.3.8](#) on how the Bolsheviks modified the Marxist theory of the state in line with this). Rather than the result of the problems facing Russia at the time, Lenin's comments simply reflect the unfolding of certain aspects of his ideology when his party held power (as we make clear in the appendix on "[How did Bolshevik ideology contribute to the failure of the Revolution?](#)", the ideology of the ruling party and the ideas held by the masses are also factors in history).

To show that Lenin's comments were not caused by circumstantial factors, we can turn to his infamous work **Left-Wing Communism**. In this 1920 tract, written for the Second Congress of the Communist International, Lenin lambasted those Marxists who argued for direct working class power against the idea of party rule (i.e. the various council communists around Europe). We have already noted in [section H.1.2](#) that Lenin had argued in that work that it was "*ridiculously absurd and stupid*" to "*a contrast in general between the dictatorship of the masses and the dictatorship of the leaders.*" [p. 25] Here we provide his description of the "*top-down*" nature of Bolshevik rule:

"The interrelations between leaders-Party-class-masses . . . now present themselves concretely in Russia in the following form. The dictatorship is exercised by the proletariat which is organised in the Soviets and is led by the Communist Party . . . The Party, which holds annual congresses . . . is directed by a Central Committee of nineteen elected at the congress, while the current work in Moscow [the capital] had to be carried on by [two] still smaller bodies . . . which are elected at the plenary sessions of the Central Committee, five members of the Central Committee in each bureau. This, then, looks like a real 'oligarchy.' Not a single important political or organisational question is decided by any State institution in our republic [sic!] without the guiding instructions of the Central Committee of the Party.

*"In its work the Party relies directly on the **trade unions** . . . In reality, all the controlling bodies of the overwhelming majority of the unions . . . consists of Communists, who secure the carrying out of all the instructions of the Party. Thus . . . we have a . . . very powerful proletarian apparatus, by means of which the Party is closely linked up with the **class** and with **the masses**, and by means of which, under the leadership of the Party, the **class dictatorship** of the class is realised." [Left-Wing Communism, pp. 31-2]*

Combined with "*non-Party workers' and peasants' conferences*" and Soviet Congresses, this was "*the general mechanism of the proletarian state power viewed 'from above,' from the standpoint of the practical realisation of the dictatorship*" and so "*all talk about 'from above' or 'from below,' about 'the dictatorship of leaders' or 'the dictatorship of the masses,' cannot but appear to be ridiculous, childish nonsense.*" [Op. Cit., p. 33] Perhaps this explains why he did not bother to view "*proletarian*" state power "*from below*," from the viewpoint of the proletariat? If he did, perhaps he would have recounted the numerous strikes and protests broken by the Cheka under martial law, the gerrymandering and disbanding of soviets, the imposition of "*one-man management*" onto the workers in production, the

turning of the unions into agents of the state/party and the elimination of working class freedom by party power? After all, **if** the congresses of soviets were *"more democratic"* than anything in the *"best democratic republics of the bourgeois world,"* the Bolsheviks would have no need for non-Party conferences *"to be able to watch the mood of the masses, to come closer to them, to respond to their demands."* [Op. Cit., p. 33 and p. 32] How the Bolsheviks *"responded"* to these conferences and their demands is extremely significant. They disbanded them. This was because *"[d]uring the disturbances"* of late 1920, *"they provided an effective platform for criticism of Bolshevik policies."* Their frequency was decreased and they *"were discontinued soon afterward."* [Richard Sakwa, **Soviet Communists in Power**, p. 203]

At the Comintern congress itself, Zinoviev announced that *"the dictatorship of the proletariat is at the same time the dictatorship of the Communist Party."* [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 152] Trotsky, for his part, also universalised Lenin's argument when he pondered the important decisions of the revolution and who would make them in his reply to the anarchist delegate from the Spanish anarcho-syndicalist union the CNT:

"Who decides this question [and others like it]? We have the Council of People's Commissars but it has to be subject to some supervision. Whose supervision? That of the working class as an amorphous, chaotic mass? No. The Central Committee of the party is convened to discuss . . . and to decide . . . Who will solve these questions in Spain? The Communist Party of Spain." [Op. Cit., p. 174]

As is obvious, Trotsky was drawing general lessons for the international revolutionary movement. Needless to say, he still argued that the *"working class, represented and led by the Communist Party, [was] in power here"* in spite of it being *"an amorphous, chaotic mass"* which did not make any decisions on important questions affecting the revolution!

Incidentally, his and Lenin's comments of 1920 disprove Trotsky's later assertion that it was *"[o]nly after the conquest of power, the end of the civil war, and the establishment of a stable regime"* when *"the Central Committee little by little begin to concentrate the leadership of Soviet activity in its hands. Then would come Stalin's turn."* [**Stalin**, vol. 1, p. 328] While it was definitely the *"conquest of power"* by the Bolsheviks which lead to the marginalisation of the soviets, this event cannot be shunted to after the civil war as Trotsky would like (particularly as Trotsky admitted that *"[a]fter eight months of inertia and of democratic chaos, came the dictatorship of the Bolsheviks."* [Op. Cit., vol. 2, p. 242]). We must note (see sections [H.1.2](#) or [H.3.8](#)) Trotsky argued for the *"objective necessity"* of the *"revolutionary dictatorship of a proletarian party"* until his death.

Clearly, the claim that Leninism (and its various off-shoots like Trotskyism) is *"socialism from below"* is hard to take seriously. As proven above, the Leninist tradition is explicitly against the idea of *"only from below,"* with Lenin explicitly stating that it was an *"anarchist stand"* to be for *"'action only from below', not 'from below and from above'"* which was the position of Marxism. [**Collected Works**, vol. 9, p. 77] Once in power, Lenin and the Bolsheviks implemented this vision of *"from below and from above,"* with

the highly unsurprising result that *"from above"* quickly repressed *"from below"* (which was dismissed as *"wavering"* by the masses). This was to be expected, for a government to enforce its laws, it has to have power over its citizens and so socialism *"from above"* is a necessary side-effect of Leninist theory.

Ironically, Lenin's argument in **State and Revolution** comes back to haunt him. In that work he had argued that the *"dictatorship of the proletariat"* meant *"democracy for the people"* which *"imposes a series of restrictions on the freedom of the oppressors, the exploiters, the capitalists."* These must be crushed *"in order to free humanity from wage-slavery; their resistance must be broken by force; it is clear that where there is suppression there is also violence, there is no freedom, no democracy."* [Essential Works of Lenin, pp. 337-8] If the working class itself is being subject to *"suppression"* then, clearly, there is *"no freedom, no democracy"* for that class -- and the people *"will feel no better if the stick with which they are being beaten is labelled 'the people's stick'."* [Bakunin, **Bakunin on Anarchism**, p. 338]

Thus, when Leninists argue that they stand for the *"principles of socialism from below"* and state that this means the direct and democratic control of society by the working class then, clearly, they are being less than honest. Looking at the tradition they place themselves, the obvious conclusion which must be reached is that Leninism is **not** based on *"socialism from below"* in the sense of working class self-management of society (i.e. the only condition when the majority can *"rule"* and decisions truly flow from below upwards). At best, they subscribe to the distinctly bourgeois vision of *"democracy"* as being simply the majority designating (and trying to control) its rulers. At worse, they defend politics which have eliminated even this form of democracy in favour of party dictatorship and *"one-man management"* armed with *"dictatorial"* powers in industry (most members of such parties do not know how the Bolsheviks gerrymandered and disbanded soviets to maintain power, raised the dictatorship of the party to an ideological truism and wholeheartedly advocated *"one-man management"* rather than workers' self-management of production). As we discuss in [section H.5](#), this latter position flows easily from the underlying assumptions of vanguardism which Leninism is based on.

So, Lenin, Trotsky and so on simply cannot be considered as exponents of *"socialism from below."* Any one who makes such a claim is either ignorant of the actual ideas and practice of Bolshevism or they seek to deceive. For anarchists, *"socialism from below"* can only be another name, like libertarian socialism, for anarchism (as Lenin, ironically enough, acknowledged). This does not mean that *"socialism from below,"* like *"libertarian socialism,"* is identical to anarchism, it simply means that libertarian Marxists and other socialists are far closer to anarchism than mainstream Marxism.

H.3.4 Don't anarchists just quote Marxists selectively?

No, far from it. While it is impossible to quote everything a person or an ideology says, it is possible to summarise those aspects of a theory which influenced the way it developed in practice. As such, **any** account is *"selective"* in some sense, the question is whether this results in a critique rooted in the ideology and its practice or whether it presents a picture at odds with both. As Maurice Brinton puts it in the introduction to his classic account of workers' control in the Russian Revolution:

"Other charges will also be made. The quotations from Lenin and Trotsky will not be denied but it will be stated that they are 'selective' and that 'other things, too' were said. Again, we plead guilty. But we would stress that there are hagiographers enough in the trade whose 'objectivity' . . . is but a cloak for sophisticated apologetics . . . It therefore seems more relevant to quote those statements of the Bolsheviks leaders of 1917 which helped determine Russia's evolution [towards Stalinism] rather those other statements which, like the May Day speeches of Labour leaders, were for ever to remain of rhetoric." [**The Bolsheviks and Workers' Control**, p. xv]

Hence the need to discuss all aspects of Marxism rather than take what its adherents like to claim for it as granted. In this, we agree with Marx himself who argued that we cannot judge people by what they say about themselves but rather what they do. Unfortunately while many self-proclaimed Marxists (like Trotsky) may quote these comments, fewer apply them to their own ideology or actions (again, like Trotsky).

This can be seen from the almost ritualistic way many Marxists response to anarchist (or other) criticisms of their ideas. When they complain that anarchists "*selectively*" quote from the leading proponents of Marxism, they are usually at pains to point people to some document which they have selected as being more "*representative*" of their tradition. Leninists usually point to Lenin's **State and Revolution**, for example, for a vision of what Lenin "*really*" wanted. To this anarchists reply by, as we discussed in section H.1.7 ([Haven't you read Lenin's "State and Revolution"?](#)), pointing out that much of that passes for 'Marxism' in **State and Revolution** is anarchist and, equally important, it was not applied in practice. This explains an apparent contradiction. Leninists point to the Russian Revolution as evidence for the democratic nature of their politics. Anarchists point to it as evidence of Leninism's authoritarian nature. Both can do this because there is a substantial difference between Bolshevism before it took power and afterwards. While the Leninists ask you to judge them by their manifesto, anarchists say judge them by their record!

Simply put, Marxists quote selectively from their own tradition, ignoring those aspects of it which would be unappealing to potential recruits. While the leaders may know their tradition has skeletons in its closet, they try their best to ensure no one else gets to know. Which, of course, explains their hostility to anarchists doing so! That there is a deep divide between aspects of Marxist rhetoric and its practice and that even its rhetoric is not consistent we will now prove. By so doing, we can show that anarchists do not, in fact, quote Marxist's "*selectively*."

As an example, we can point to the leading Bolshevik Grigorii Zinoviev. In 1920, as head of the Communist International he wrote a letter to the Industrial Workers of the World, a revolutionary labour union, which stated that the "*Russian Soviet Republic. . . is the most highly centralised government that exists. It is also the most democratic government in history. For all the organs of government are in constant touch with the working masses, and constantly sensitive to their will.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 2, p. 928] The same year, he explained in a Communist journal that "*soviet rule in Russia could not have been maintained for three years -- not even three weeks*

-- *without the iron dictatorship of the Communist Party. Any class conscious worker must understand that the dictatorship of the working class can be achieved only by the dictatorship of its vanguard, i.e., by the Communist Party . . . All questions . . . , on which the fate of the proletarian revolution depends absolutely, are decided . . . in the framework of the party organisations.*" [quoted by Oskar Anweiler, **The Soviets**, pp. 239-40] It seems redundant to note that the second quote is the accurate one, the one which matches the reality of Bolshevik Russia. Therefore it is hardly "*selective*" to quote the latter and not the former, rather it expresses what was actually happening.

This duality and the divergence between practice and rhetoric comes to the fore when Trotskyists discuss Stalinism and try to counter pose the Leninist tradition to it. For example, we find the British SWP's Chris Harman arguing that the "*whole experience of the workers' movement internationally teaches that only by regular elections, combined with the right of recall by shop-floor meetings can rank-and-file delegates be made really responsible to those who elect them.*" [**Bureaucracy and Revolution in Eastern Europe**, pp. 238-9] Significantly, Harman does not mention that both Lenin and Trotsky rejected this experience (see [section H.3.8](#) for a full discussion on how Leninism argues for state power explicitly to eliminate such control from below). How can Trotsky's comment that the "*revolutionary dictatorship of a proletarian party is . . . an objective necessity*" be reconciled with it? And what of the claim that the "*revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution*"? [**Writings 1936-37**, pp. 513-4] Or his similar argument sixteen years earlier that the Party was "*entitled to assert its dictatorship even if that dictatorship clashed with the passing moods of the workers' democracy*"? [quoted by Maurice Brinton, **Op. Cit.**, p. 78]

The ironies do not stop there, of course. Harman correctly notes that under Stalinism, the "*bureaucracy is characterised, like the private capitalist class in the West, by its control over the means of production.*" [**Op. Cit.**, p. 147] However, he fails to note that it was **Lenin**, in early 1918, who had raised and then implemented such "*control*" in the form of "*one-man management.*" As he put it: "*Obedience, and unquestioning obedience at that, during work to the one-man decisions of Soviet directors, of the dictators elected or appointed by Soviet institutions, vested with dictatorial powers.*" [**Six Theses on the Immediate Tasks of the Soviet Government**, p. 44] To **fail** to note this link between Lenin and the Stalinist bureaucracy on this issue is quoting "*selectively.*"

The contradictions pile up. He argues that "*people who seriously believe that workers at the height of revolution need a police guard to stop them handing their factories over to capitalists certainly have no real faith in the possibilities of a socialist future.*" [**Op. Cit.**, p. 144] Yet this does not stop him praising the regime of Lenin and Trotsky and contrasting it with Stalinism, in spite of the fact that this was precisely what the Bolsheviks **did** from 1918 onwards! Indeed this tyrannical practice played a role in provoking the strikes in Petrograd which preceded the Kronstadt revolt in 1921, when "*the workers wanted the special squads of armed Bolsheviks, who carried out a purely police function, withdrawn from the factories.*" Paul Avrich, **Kronstadt 1921**, p. 42] It seems equally strange that Harman denounces the Stalinist suppression of the Hungarian revolution for workers' democracy and socialism while he defends the Bolshevik suppression of the Kronstadt revolt for the same goals (and as we discuss in "[What was the Kronstadt Rebellion?](#)", the rationales both regimes used to justify their actions

were akin).

Similarly, when Harman argues that if by "*political party*" it is "*meant a party of the usual sort, in which a few leaders give orders and the masses merely obey . . . then certainly such organisations added nothing to the Hungarian revolution.*" However, as we discuss in [section H.5](#), such a party was **precisely** what Leninism argued for and applied in practice. Simply put, the Bolsheviks were never a party "*that stood for the councils taking power.*" [**Op. Cit.**, p. 186 and p. 187] As Lenin repeatedly stressed, its aim was for the Bolshevik party to take power **through** the councils (see [section H.3.11](#)).

This confusion between what was promised and what was done is a common feature of Leninism. Felix Morrow, for example, wrote what is usually considered the definitive Trotskyist work on the Spanish Revolution (in spite of it being, as we discuss in the appendix "[Marxists and Spanish Anarchism](#)," deeply flawed). In that work he states that the "*essential points of a revolutionary program [are] all power to the working class, and democratic organs of the workers, peasants and combatants, as the expression of the workers' power.*" [**Revolution and Counter-Revolution in Spain**, p. 133] How this can be reconciled with Trotsky's comment, written in the same year, that "*a revolutionary party, even after seizing power . . . is still by no means the sovereign ruler of society.*"? Or the opinion that it was "*only thanks to the party dictatorship [that] were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat*"? [**Stalinism and Bolshevism**] Or Lenin's opinion that "*an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship*" and that it "*can be exercised only by a vanguard*"? [**Collected Works**, vol. 32, p. 21] How can the working class "*have all power*" if power is held by a vanguard party? Particularly when this party has power specifically to enable it "*overcom[e] the vacillation of the masses themselves.*" [Trotsky, **The Moralists and Sycophants**, p. 59]

Given all this, who is quoting who "*selectively*"? The Marxists who ignore what the Bolsheviks did when in power and repeatedly point to Lenin's **State and Revolution** or the anarchists who link what they did with what they said outside of that holy text? Considering this absolutely contradictory inheritance, anarchists feel entitled to ask the question "*Will the real Leninist please stand up?*" What is it to be, popular democracy or party rule? If we look at Bolshevik practice, the answer is the latter. As we discuss in [section H.3.8](#), the likes of Lenin and Trotsky concur, incorporating the necessity of party power into their ideology as a lesson of the revolution. As such, anarchists do not feel they are quoting Leninism "*selectively*" when they argue that it is based on party power, not working class self-management. That Leninists often publicly deny this aspect of their own ideology or, at best, try to rationalise and justify it, suggests that when push comes to shove (as it does in every revolution) they will make the same decisions and act in the same way!

In addition there is the question of what could be called the "*social context.*" Marxists often accuse anarchists of failing to place the quotations and actions of, say, the Bolsheviks into the circumstances which generated them. By this they mean that Bolshevik authoritarianism can be explained purely in terms of the massive problems facing them (i.e. the rigours of the Civil War, the economic collapse and chaos in Russia and so on). As we discuss this question in "[What caused the degeneration of the Russian](#)

["Revolution?"](#), we will simply summarise the anarchist reply by noting that this argument has three major problems with it. Firstly, there is the problem that Bolshevik authoritarianism started **before** the start of the Civil War (as we discuss in the appendix on ["What happened during the Russian Revolution?"](#)) and, moreover, continued **after** its ends. As such, the Civil War cannot be blamed. The second problem is simply that Lenin continually stressed that civil war and economic chaos was inevitable during a revolution. If Leninist politics cannot handle the inevitable then they are to be avoided. Equally, if Leninists blame what they should **know** is inevitable for the degeneration of the Bolshevik revolution it would suggest their understanding of what revolution entails is deeply flawed. The last problem is simply that the Bolsheviks did not care. As Samuel Farber notes, *"there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [**Before Stalinism**, p. 44] Hence the continuation (indeed, intensification) of Bolshevik authoritarianism after their victory in the civil war. Given this, it is significant that many of the quotes from Trotsky given above date from the late 1930s. To argue, therefore, that *"social context"* explains the politics and actions of the Bolsheviks seems incredulous.

Lastly, it seems ironic that Marxists accuse anarchists of quoting *"selectively."* After all, as proven in [section H.2](#), this is **exactly** what Marxists do to anarchism! Indeed, anarchists often make good propaganda out of such activity by showing how selective their accounts are and how at odds they are with what anarchism actually stands for and what anarchists actually do (see the appendix of our FAQ on ["Anarchism and Marxism"](#)).

In summary, rather than quote *"selectively"* from the works and practice of Marxism, anarchists summarise those tendencies of both which, we argue, contribute to its continual failure in practice as a revolutionary theory. Moreover, Marxists themselves are equally as *"selective"* as anarchists in this respect. Firstly, as regards anarchist theory and practice and, secondly, as regards their own.

H.3.5 Has Marxist appropriation of anarchist ideas changed it?

As is obvious in any account of the history of socialism, Marxists (of various schools) have appropriated key anarchist ideas and (often) present them as if Marxists thought of them first.

For example, as we discuss in [section H.3.10](#), it was anarchists who first raised the idea of smashing the bourgeois state and replacing it with the fighting organisations of the working class (such as unions, workers' councils, etc.). It was only in 1917, decades after anarchists had first raised the idea, that Marxists started to argue these ideas but, of course, with a twist. While anarchists meant that working class organisations would be the basis of a free society, Lenin saw these organs as the best means of achieving Bolshevik party power.

Similarly with the libertarian idea of the *"militant minority."* By this, anarchists and syndicalists meant groups of workers who gave an example by their direct action which their fellow workers could imitate

(for example by leading wildcat strikes which would use flying pickets to get other workers to join in). This "militant minority" would be at the forefront of social struggle and would show, by example, practice and discussion, that their ideas and tactics were the correct ones. After the Russian Revolution of 1917, Bolsheviki argued that this idea was similar to their idea of a vanguard party. This ignored two key differences. Firstly that the libertarian "*militant minority*" did not aim to take power on behalf of the working class but rather to encourage it, by example, to manage its own struggles and affairs (and, ultimately, society). Secondly, that "*vanguard parties*" are organised in hierarchical ways alien to the spirit of anarchism. While both the "*militant minority*" and "*vanguard party*" approaches are based on an appreciation of the uneven development of ideas within the working class, vanguardism transforms this into a justification for party rule **over** the working class by a so-called "*advanced*" minority (see [section H.5](#) for a full discussion). Other concepts, such as "*workers' control*," direct action, and so on have suffered a similar fate.

As such, while Marxists have appropriated certain anarchist concepts, it does not mean that they mean exactly the same thing by them. Rather, as history shows, radically different concepts can be hidden behind similar sounding rhetoric. As Murray Bookchin argued, many Marxist tendencies "*attach basically alien ideas to the withering conceptual framework of Marxism -- not to say anything new but to preserve something old with ideological formaldehyde -- to the detriment of any intellectual growth that the distinctions are designed to foster. This is mystification at its worst, for it not only corrupts ideas but the very capacity of the mind to deal with them. If Marx's work can be rescued for our time, it will be by dealing with it as an invaluable part of the development of ideas, not as pastiche that is legitimated as a 'method' or continually 'updated' by concepts that come from an alien zone of ideas.*" [Toward an Ecological Society, p. 242f]

This is not some academic point. The ramifications of Marxists appropriating such "*alien ideas*" (or, more correctly, the rhetoric associated with those ideas) has had negative impacts on actual revolutionary movements. For example, Lenin's definition of "*workers' control*" was radically different than that current in the factory committee movement during the Russian Revolution (which had more in common with anarchist and syndicalist use of the term). The similarities in rhetoric, allowed the factory committee movement to put its weight behind the Bolsheviki. Once in power, Lenin's position was implemented while that of the factory committees was ignored. Ultimately, Lenin's position was a key factor in creating state capitalism rather than socialism in Russia (see [section H.3.14](#) for more details).

This, of course, does not stop modern day Leninists appropriating the term workers' control "*without bating an eyelid. Seeking to capitalise on the confusion of now rampant in the movement, these people talk of 'workers' control' as if a) they meant by those words what the politically unsophisticated mean (i. e. that working people should themselves decide about the fundamental matters relating to production) and b) as if they -- and the Leninist doctrine to which they claim to adhere -- had always supported demands of this kind, or as if Leninism had always seen in workers' control the universally valid foundation of a new social order, rather than just a slogan to be used for manipulatory purposes in specific and very limited historical contexts.*" [Maurice Brinton, **The Bolsheviki and Workers' Control**, p. iv] [Section H.3.14](#) discusses this further.

Thus the fact that Leninists have appropriated libertarian (and working class) ideas and demands does not, in fact, mean that we aim for the same thing (as we discuss in [section H.3.1](#), this is far from the case). The use of anarchist/popular rhetoric and slogans means little and we need to look at the content of the ideas proposed. Given the legacy of the appropriation of libertarian terminology to popularise authoritarian parties and its subsequent jettison in favour of authoritarian policies once the party is in power, anarchists have strong grounds to take Leninist claims with a large pinch of salt!

Equally with examples of actual revolutions. As Martin Buber notes, while *"Lenin praises Marx for having 'not yet, in 1852, put the concrete question as to what should be set up in place of the State machinery after it had been abolished,'" Lenin argued that "it was only the Paris Commune that taught Marx this."* However, as Buber correctly points out, the Paris Commune *"was the realisation of the thoughts of people who had put this question very concretely indeed . . . the historical experience of the Commune became possible only because in the hearts of passionate revolutionaries there lived the picture of a decentralised, very much 'de-States' society, which picture they undertook to translate into reality. The spiritual fathers of the Commune had such that ideal aiming at decentralisation which Marx and Engels did not have, and the leaders of the Revolution of 1871 tried, albeit with inadequate powers, to begin the realisation of that idea in the midst of revolution."* [**Paths in Utopia**, pp. 103-4] Thus, while the Paris Commune and other working class revolts are praised, their obvious anarchistic elements (as predicted by anarchist thinkers) are not mentioned. This results in some strange dichotomies. For example, Bakunin's vision of revolution is based on a federation of workers' councils, predating Marxist support for such bodies by decades, yet Marxists argue that Bakunin's ideas have nothing to teach us. Or, the Paris Commune being praised by Marxists as the first *"dictatorship of the proletariat"* when it implements federalism, delegates being subjected to mandates and recall and raises the vision of a socialism of associations while anarchism is labelled "petit-bourgeois" in spite of the fact that these ideas can be found in works of Proudhon and Bakunin which predate the 1871 revolt!

From this, we can draw two facts. Firstly, anarchism has successfully predicted certain aspects of working class revolution. Anarchist K.J. Kenafick stated the obvious when he argues that any *"comparison will show that the programme set out [by the Paris Commune] is . . . the system of Federalism, which Bakunin had been advocating for years, and which had first been enunciated by Proudhon. The Proudhonists . . . exercised considerable influence in the Commune. This 'political form' was therefore not 'at last' discovered; it had been discovered years ago; and now it was proven to be correct by the very fact that in the crisis the Paris workers adopted it almost automatically, under the pressure of circumstance, rather than as the result of theory, as being the form most suitable to express working class aspirations."* [**Michael Bakunin and Karl Marx**, pp. 212-3] Thus, rather than being somehow alien to the working class and its struggle for freedom, anarchism in fact bases itself on the class struggle. This means that it should come as no surprise when the ideas of anarchism are developed and applied by those in struggle, for those ideas are just generalisations derived from past working class struggles! If anarchism ideas are applied spontaneously by those in struggle, it is because those involved are themselves drawing similar conclusions from their own experiences.

The other fact is that while mainstream Marxism often appropriated certain aspects of libertarian theory

and practice, it does so selectively and places them into an authoritarian context which undermines their libertarian nature. Hence anarchist support for workers councils becomes transformed into a means to ensure party power (i.e. state authority) rather than working class power or self-management (i.e. no authority). Similarly, anarchist support for leading by example becomes transformed into support for party rule (and often dictatorship). Ultimately, the practice of mainstream Marxism shows that libertarian ideas cannot be transplanted selectively into an authoritarian ideology and be expected to blossom. Significantly, those Marxists who **do** apply anarchist ideas honestly are usually labelled by their orthodox comrades as "*anarchists*."

As an example of Marxists appropriating libertarian ideas honestly, we can point to the council communist and currents within autonomist Marxism. The council communists broke with the Bolsheviks over the question of whether the party would exercise power or whether the workers' councils would. Needless to say, Lenin labelled them an "*anarchist deviation*." Currents within Autonomist Marxism have built upon the council communist tradition, stressing the importance of focusing analysis on working class struggle as the key dynamic in capitalist society.

In this they go against the mainstream Marxist orthodoxy and embrace a libertarian perspective. As libertarian socialist Cornelius Castoriadis argued, "*the economic theory expounded [by Marx] in **Capital** is based on the postulate that capitalism has managed completely and effectively to transform the worker -- who only appears there only as labour power -- into a commodity; therefore the use value of labour power -- the use the capitalist makes of it -- is, as for any commodity, completely determined by the use, since its exchange value -- wages -- is determined solely by the laws of the market . . . This postulate is necessary for there to be a 'science of economics' along the physico-mathematical model Marx followed . . . But he contradicts the most essential fact of capitalism, namely, that the use value and exchange value of labour power are objectively indeterminate; they are determined rather by the struggle between labour and capital both in production and in society. Here is the ultimate root of the 'objective' contradictions of capitalism . . . The paradox is that Marx, the 'inventor' of class struggle, wrote a monumental work on phenomena determined by this struggle in which the struggle itself was entirely absent.*" [**Political and Social Writings**, vol. 2, p. 203] Castoriadis explained the limitations of Marx's vision most famously in his "*Modern Capitalism and Revolution*." [**Op. Cit.**, pp. 226-343]

By rejecting this heritage which mainstream Marxism bases itself on and stressing the role of class struggle, Autonomist Marxism breaks decisively with the Marxist mainstream and embraces a position previously associated with anarchists and other libertarian socialists. The key role of class struggle in invalidating all deterministic economic "*laws*" was expressed by French syndicalists at the start of the twentieth century. This insight predated the work of Castoriadis and the development of Autonomist Marxism by over 50 years and is worth quoting at length:

"the keystone of socialism [. . .] proclaimed that 'as a general rule, the average wage would be no more than what the worker strictly required for survival'. And it was said: 'That figure is governed by capitalist pressure alone and this can even push it below the minimum necessary for the working man's subsistence . . . The only rule with regard to wage levels is the plentiful or scarce supply of man-power . . .'

"By way of evidence of the relentless operation of this law of wages, comparisons were made between the worker and a commodity: if there is a glut of potatoes on the market, they are cheap; if they are scarce, the price rises . . . It is the same with the working man, it was said: his wages fluctuate in accordance with the plentiful supply or dearth of labour!

"No voice was raised against the relentless arguments of this absurd reasoning: so the law of wages may be taken as right . . . for as long as the working man [or woman] is content to be a commodity! For as long as, like a sack of potatoes, she remains passive and inert and endures the fluctuations of the market . . . For as long as he bends his back and puts up with all of the bosses' snubs, . . . the law of wages obtains.

*"But things take a different turn the moment that a glimmer of consciousness stirs this worker-potato into life. When, instead of dooming himself to inertia, spinelessness, resignation and passivity, the worker wakes up to his worth as a human being and the spirit of revolt washes over him: when he bestirs himself, energetic, wilful and active . . . [and] once the labour bloc comes to life and bestirs itself . . . then, the laughable equilibrium of the law of wages is undone." [Emile Pouget, **Direct Action**]*

And Marx, indeed, had compared the worker to a commodity, stating that labour power *"is a commodity, neither more nor less than sugar. The former is measured by the clock, the latter by the scale."* [**Marx-Engels Selected Works**, p. 72] However, as Castoridas argued, unlike sugar the extraction of the use value of labour power *"is not a technical operation; it is a process of bitter struggle in which half the time, so to speak, the capitalists turn out to be losers."* [**Op. Cit.**, p. 248] A fact which Pouget stressed in his critique of the mainstream socialist position:

"A novel factor has appeared on the labour market: the will of the worker! And this factor, not pertinent when it comes to setting the price of a bushel of potatoes, has a bearing upon the setting of wages; its impact may be large or small, according to the degree of tension of the labour force which is a product of the accord of individual wills beating in unison -- but, whether it be strong or weak, there is no denying it.

"Thus, worker cohesion conjures up against capitalist might a might capable of standing up to it. The inequality between the two adversaries -- which cannot be denied when the exploiter is confronted only by the working man on his own -- is redressed in proportion with the degree of cohesion achieved by the labour bloc. From then on, proletarian resistance, be it latent or acute, is an everyday phenomenon: disputes between labour and capital quicken and become more acute. Labour does not always emerge victorious from these partial struggles: however, even when defeated, the struggle workers still reap some benefit: resistance from them has obstructed pressure from the employers and often forced the employer to grant some of the demands put." [Op. Cit.]

The best currents of autonomist Marxism share this anarchist stress on the power of working people to transform society and to impact on how capitalism operates. Unsurprisingly, most autonomist Marxists reject the idea of the vanguard party and instead, like the council communists, stress the need for **autonomist** working class self-organisation and self-activity (hence the name!). They agree with Pouget when he argued that *"Direct action spells liberation for the masses of humanity . . . [It] puts paid to the age of miracles -- miracles from Heaven, miracles from the State -- and, in contraposition to hopes vested in 'providence' (no matter what they may be) it announces that it will act upon the maxim: salvation lies within ourselves!"* [Op. Cit.] As such, they draw upon anarchistic ideas and rhetoric (for many, undoubtedly unknowingly) and draw anarchistic conclusions. This can be seen from the works of the leading US Autonomist Marxist Harry Cleaver. His excellent essay *"Kropotkin, Self-Valorisation and the Crisis of Marxism"* is by far the best Marxist account of Kropotkin's ideas and shows the similarities between communist-anarchism and autonomist Marxism. [Anarchist Studies, vol.2 , no. 2, pp. 119-36] Both, he points out, share a *"common perception and sympathy for the power of workers to act autonomously"* regardless of the *"substantial differences"* on other issues. [Reading Capital Politically, p. 15]

As such, the links between the best Marxists and anarchism can be substantial. This means that some Marxists have taken on board many anarchist ideas and have forged a version of Marxism which is basically libertarian in nature. Unfortunately, such forms of Marxism have always been a minority current within it. Most cases have seen the appropriation of anarchist ideas by Marxists simply as part of an attempt to make mainstream, authoritarian Marxism more appealing and such borrowings have been quickly forgotten once power has been seized.

Therefore appropriation of rhetoric and labels should not be confused with similarity of goals and ideas. The list of groupings which have used inappropriate labels to associate their ideas with other, more appealing, ones is lengthy. Content is what counts. If libertarian sounding ideas **are** being raised, the question becomes one of whether they are being used simply to gain influence or whether they signify a change of heart. As Bookchin argues:

"Ultimately, a line will have to be drawn that, by definition, excludes any project that can tip decentralisation to the side of centralisation, direct democracy to the side of delegated power, libertarian institutions to the side of bureaucracy, and spontaneity to the side of authority. Such a line, like a physical barrier, must irrevocably separate a libertarian zone of theory and practice from the hybridised socialisms that tend to denature it. This zone must build its anti-authoritarian, utopian, and revolutionary commitments into the very recognition it has of itself, in short, into the very way it defines itself. . . . to admit of domination is to cross the line that separates the libertarian zone from the [state] socialist." [Op. Cit., pp. 223-4]

Unless we know exactly what we aim for, how to get there and who our **real** allies are we will get a nasty surprise once our self-proclaimed "allies" take power. As such, any attempt to appropriate anarchist rhetoric into an authoritarian ideology will simply fail and become little more than a mask

obscuring the real aims of the party in question. As history shows.

H.3.6 Is Marxism the only revolutionary politics which have worked?

Some Marxists will dismiss our arguments, and anarchism, out of hand. This is because anarchism has not lead a "*successful*" revolution while Marxism has. The fact, they assert, that there has never been a serious anarchist revolutionary movement, let alone an anarchist revolution, in the whole of history proves that Marxism works. For some Marxists, practice determines validity. Whether something is true or not is not decided intellectually in wordy publications and debates, but in reality.

For Anarchists, such arguments simply show the ideological nature of most forms of Marxism. The fact is, of course, that there has been many anarchistic revolutions which, while ultimately defeated, show the validity of anarchist theory (the ones in Spain and in the Ukraine being the most significant). Moreover, there have been serious revolutionary anarchist movements across the world, the majority of them crushed by state repression (usually fascist or communist based). However, this is not the most important issue, which is the fate of these "*successful*" Marxist movements and revolution. The fact that there has never been a "Marxist" revolution which has not become a party dictatorship proves the need to critique Marxism.

So, given that Marxists argue that Marxism is **the** revolutionary working class political theory, its actual track record has been appalling. After all, while many Marxist parties have taken part in revolutions and even seized power, the net effect of their "success" have been societies bearing little or no relationship to socialism. Rather, the net effect of these revolutions has been to discredit socialism by associating it with one-party states presiding over state capitalist economies.

Equally, the role of Marxism in the labour movement has also been less than successful. Looking at the first Marxist movement, social democracy, it ended by becoming reformist, betraying socialist ideas by (almost always) supporting their own state during the First World War and going so far as crushing the German revolution and betraying the Italian factory occupations in 1920. Indeed, Trotsky stated that the Bolshevik party was "*the only revolutionary*" section of the Second International, which is a damning indictment of Marxism. [Stalin, vol. 1, p. 248] Just as damning is the fact that neither Lenin or Trotsky noticed it! Indeed, Lenin praised the "*fundamentals of parliamentary tactics*" of German and International Social Democracy, expressing the opinion that they were "*at the same time implacable on questions of principle and always directed to the accomplishment of the final aim*" in his obituary of August Bebel in 1913! [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 248] For those that way inclined, some amusement can be gathered comparing Engels glowing predictions for these parties and their actual performance (in the case of Spain and Italy, his comments seem particularly ironic).

As regards Bolshevism itself, the one "revolutionary" party in the world, it avoided the fate of its sister parties simply because there no question of applying social democratic tactics within bourgeois

institutions as these did not exist. Moreover, the net result of its seizure of power was, first, a party dictatorship and state capitalism under Lenin, then the creation of Stalinism and a host of Trotskyist sects who spend a considerable amount of time justifying and rationalising the ideology and actions of the Bolsheviks which helped create the Stalinism (see the appendix on ["What happened during the Russian Revolution?"](#) for a discussion).

Clearly, a key myth of Marxism is the idea that it has been a successful movement. In reality, its failures have been consistent and devastating so suggesting its time to re-evaluate the whole ideology and embrace a revolutionary theory like anarchism. Indeed, it would be no exaggeration to argue that every "success" of Marxism has, in fact, proved that the anarchist critique of Marxism was correct. Thus, as Bakunin predicted, the Social-Democratic parties became reformist and the "dictatorship of the proletariat" became the "dictatorship *over* the proletariat." With "victories" like these, Marxism does not need failures! Thus Murray Bookchin:

"A theory which is so readily 'vulgarised,' 'betrayed,' or, more sinisterly, institutionalised into bureaucratic power by nearly all its adherents may well be one that lends itself to such 'vulgarisations,' 'betrayals,' and bureaucratic forms as a normal condition of its existence. What may seem to be 'vulgarisations,' 'betrayals,' and bureaucratic manifestations of its tenets in the heated light of doctrinal disputes may prove to be the fulfilment of its tenets in the cold light of historical development." [**Toward an Ecological Society**, p. 196]

Hence the overwhelming need to critically evaluate Marxist ideas and history (such as the Russian Revolution -- see the appendix on ["The Russian Revolution"](#)). Unless we honestly discuss and evaluate all aspects of revolutionary ideas, we will never be able to build a positive and constructive revolutionary movement. By seeking the roots of Marxism's problems, we can enrich anarchism by avoiding possible pitfalls and recognising and building upon its strengths (i.e. where anarchists have identified, however incompletely, problems in Marxism which bear on revolutionary ideas, practice and transformation).

If this is done, anarchists are sure that Marxist claims that Marxism is **the** revolutionary theory will be exposed for the baseless rhetoric they are.

H.3.7 What is wrong with the Marxist theory of the state?

For anarchists, the idea that a state (any state) can be used for socialist ends is simply ridiculous. This is because of the nature of the state as an instrument of minority class rule. As such, it precludes the mass participation required for socialism and would create a new form of class society.

As we discussed in [section B.2](#), the state is defined by certain characteristics (most importantly, the centralisation of power into the hands of a few). Thus, for anarchists, "the word 'State' . . . should be

reserved for those societies with the hierarchical system and centralisation." [Peter Kropotkin, **Ethics**, p. 317f] This defining feature of the state has not come about by chance. As Kropotkin argued in his classic history of the state, *"a social institution cannot lend itself to all the desired goals, since, as with every organ, [the state] developed according to the function it performed, in a definite direction and not in all possible directions."* This means, by *"seeing the State as it has been in history, and as it is in essence today"* the conclusion anarchists *"arrive at is for the abolition of the State."* Thus the state has *"developed in the history of human societies to prevent the direct association among men [and women] to shackle the development of local and individual initiative, to crush existing liberties, to prevent their new blossoming -- all this in order to subject the masses to the will of minorities."* [**The State: Its Historic Role**, p. 56]

So if the state, as Kropotkin stresses, is defined by *"the existence of a power situated above society, but also of a territorial concentration as well as the concentration in the hands of a few of many functions in the life of societies"* then such a structure has not evolved by chance. Therefore *"the pyramidal organisation which is the essence of the State"* simply *"cannot lend itself to a function opposed to the one for which it was developed in the course of history,"* such as the popular participation from below required by social revolution and socialism. [**Op. Cit.**, p. 10, p. 59 and p. 56] Based on this evolutionary analysis of the state, Kropotkin, like all anarchists, drew the conclusion *"that the State organisation, having been the force to which the minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges."* [**Evolution and Environment**, p. 82]

This does **not** mean that anarchists dismiss differences between types of state, think the state has not changed over time or refuse to see that different states exist to defend different ruling minorities. Far from it. Anarchists argue that *"[e]very economic phase has a political phase corresponding to it, and it would be impossible to touch private property unless a new mode of political life be found at the same time."* *"A society founded on serfdom,"* Kropotkin explained, *"is in keeping with absolute monarchy; a society based on the wage system, and the exploitation of the masses by the capitalists finds its political expression in parliamentarianism."* As such, the state form changes and evolves, but its basic function (defender of minority rule) and structure (delegated power into the hands of a few) remains. Which means that *"a free society regaining possession of the common inheritance must seek, in free groups and free federations of groups, a new organisation, in harmony with the new economic phase of history."* [**The Conquest of Bread**, p. 54]

So, as with any social structure, the state has evolved to ensure that it carries out its function. In other words, the state is centralised because it is an instrument of minority domination and oppression. Insofar as a social system is based on decentralisation of power, popular self-management and participation and free federation from below upwards, it is not a state. If a social system is, however, marked by delegated power and centralisation it is a state and cannot be, therefore, a instrument of social liberation. Rather it will become, slowly but surely, *"whatever title it adopts and whatever its origin and organisation may be"* what the state has always been, a instrument for *"oppressing and exploiting the masses, of defending the oppressors and the exploiters."* [**Anarchy**, p. 20] Which, for obvious reasons, is why anarchists argue for the destruction of the state by a free federation of self-managed communes and workers'

councils (see sections [I.5](#) and [H.1.4](#) for further discussion).

This explains why anarchists reject the Marxist definition and theory of the state. For Marxists, *"the state is nothing but a machine for the oppression of one class by another."* While it has been true that, historically, it is *"the state of the most powerful, economically dominant class, which, through the medium of the state, becomes also the politically dominant class, and this acquires the means of holding down and exploiting the oppressed class,"* this need not always be the case. The state is *"at best an evil inherited by the proletariat after its victorious struggle for class supremacy,"* although it *"cannot avoid having to lop off at once as much as possible"* of it *"until such time as a generation reared in new, free social conditions is able to throw the entire lumber of the state on the scrap heap."* This new state, often called the *"dictatorship of the proletariat,"* would slowly *"wither away"* (or *"dies out"*) as classes disappear and the state *"at last . . . becomes the real representative of the whole of society"* and so *"renders itself unnecessary."* Engels is at pains to differentiate this position from that of the anarchists, who demand *"the abolition of the state out of hand."* [Engels, **Marx-Engels Selected Works**, p. 258, pp. 577-8, p. 528 and p. 424]

For anarchists, this argument has deep flaws. Simply put, unlike the anarchist one, this is not an empirically based theory of the state. Rather, we find such a theory mixed up with a metaphysical, non-empirical, a-historic definition which is based not on what the state **is** but rather what is **could** be. Thus the argument that the state *"is nothing but a machine for the oppression of one class by another"* is trying to draw out an abstract *"essence"* of the state rather than ground what the state is on empirical evidence and analysis. This perspective, anarchists argue, simply confuses two very different things, namely the state and popular social organisation, with potentially disastrous results. By calling the popular self-organisation required by a social revolution the same name as a hierarchical and centralised body constructed for, and evolved to ensure, minority rule, the door is wide open to confuse popular power with party power, to confuse rule by the representatives of the working class with working class self-management of the revolution and society.

As we discussed in [section H.2.1](#), anarchist opposition to the idea of a *"dictatorship of the proletariat"* should not be confused with idea that anarchists do not think that a social revolution needs to be defended. Rather, our opposition to the concept rests on the confusion which inevitably occurs when you mix up scientific analysis with metaphysical concepts. By drawing out an a-historic definition of the state, Engels helped ensure that the *"dictatorship of the proletariat"* became the *"dictatorship over the proletariat"* by implying that centralisation and delegated power into the hands of the few can be considered as an expression of popular power.

To explain why, we need only to study the works of Engels himself. Engels, in his famous account of the **Origin of the Family, Private Property and the State**, defined the state as follows:

"The state is . . . by no means a power forced on society from without . . . Rather, it is a product of society at a certain stage of development; it is an admission . . . that it has split into irreconcilable antagonisms . . . in order that these antagonisms and classes with

conflicting economic interests might not consume themselves and society in fruitless struggle, it became necessary to have power seemingly standing above society that would alleviate the conflict . . . this power, arisen out of society but placing itself above it, and alienating itself more and more from it, is the state." [Marx-Engels: Selected Writings, p. 576]

The state has two distinguishing features, firstly (and least importantly) it *"divides its subjects according to territory."* The second *"is the establishment of a public power which no longer directly coincides with the population organising itself as an armed force. This special public power is necessary because a self-acting armed organisation of the population has become impossible since the split into classes . . . This public power exists in every state; it consists not merely of armed men but also of material adjuncts, prisons and institutions of coercion of all kinds."* Thus *"an essential feature of the state is a public power distinct from the mass of the people."* [Op. Cit., pp. 576-7 and pp. 535-6]

In this, as can be seen, the Marxist position concurs with the anarchist. He discusses the development of numerous ancient societies to prove his point. Talking of Greek society, he argues that it was based on a popular assembly which was *"sovereign"* plus a council. This social system was not a state because *"when every adult male member of the tribe was a warrior, there was as yet no public authority separated from the people that could have been set up against it. Primitive democracy was still in full bloom, and this must remain the point of departure in judging power and the status of the council."* [Op. Cit., pp. 525-6]

Discussing the descent of this society into classes, he argues that this required *"an institution that would perpetuate, not only the newly-rising class division of society, but the right of the possessing class to exploit the non-possessing class and the rule of the former over the latter."* Unsurprisingly, *"this institution arrived. The state was invented."* The original communal organs of society were *"superseded by real governmental authorities"* and the defence of society (*"the actual 'people in arms'"*) was *"taken by an armed 'public power' at the service of these authorities and, therefore, also available against the people."* With the rise of the state, the communal council was *"transformed into a senate."* [Op. Cit., p. 528 and p. 525] Thus the state arises specifically to exclude popular self-government, replacing it with minority rule conducted via a centralised, hierarchical top-down structure (*"government . . . is the natural protector of capitalism and other exploiters of popular labour."* [Bakunin, Michael Bakunin: Selected Writings, p. 239]).

This account of the rise of the state is at direct odds with Engels argument that the state is simply an instrument of class rule. For the *"dictatorship of the proletariat"* to be a state, it would have to constitute a power above society, be different from the people armed, and so be *"a public power distinct from the mass of the people."* However, Marx and Engels are at pains to stress that the *"dictatorship of the proletariat"* will not be such a regime. However, how can you have something (namely *"a public power distinct from the mass of the people"*) you consider as *"an essential feature"* of a state missing in an institution you call the same name? It is a bit like calling a mammal a *"new kind of reptile"* in spite of the former not being cold-blooded, something you consider as *"an essential feature"* of the latter!

This contradiction helps explain Engels' comments that "[w]e would therefore propose to replace *state everywhere* by *Gemeinwesen*, a good old German word which can very well convey the meaning of the French word '*commune*'" He even states that the Paris Commune "was no longer a state in the proper sense of the word." However, this comment does not mean that Engels sought to remove any possible confusion on the matter, for he still talked of "the state" as "only a transitional institution which is used in the struggle, in the revolution, to hold down one's adversaries by force . . . so long as the proletariat still *uses* the state, it does not use it in the interests of freedom but in order to hold down its adversaries, and as soon as it becomes possible to speak of freedom the state as such ceases to exist." [Op. Cit., p. 335] Thus the state would still exist and, furthermore, is **not** identified with the working class as a whole ("a self-acting armed organisation of the population"), rather it is an institution standing apart from the "people armed" which is used, by the proletariat, to crush its enemies.

(As an aside, we must stress that to state that it only becomes possible to "speak of freedom" after the state and classes cease to exist is a serious theoretical error. Firstly, it means to talk about "freedom" in the abstract, ignoring the reality of class and hierarchical society. To state the obvious, in class society working class people have their freedom restricted by the state, wage labour and other forms of social hierarchy. The aim of social revolution is the conquest of liberty by the working class by overthrowing hierarchical rule. Freedom for the working class, by definition, means stopping any attempts to restrict that freedom by its adversaries. To state the obvious, it is not a "restriction" of the freedom of would-be bosses to resist their attempts to impose their rule! As such, Engels, yet again, fails to consider revolution from a working class perspective -- see [section H.4.7](#) for another example of this flaw.

Moreover his comments have been used to justify restrictions on working class freedom, power and political rights by Marxist parties once they have seized power. "Whatever power the State gains," correctly argues Bookchin, "it always does so at the expense of popular power. Conversely, whatever power the people gain, they always acquire at the expense of the State. To legitimate State power, in effect, is to delegitimize popular power." [Remaking Society, p. 160])

Elsewhere, we have Engels arguing that "the characteristic attribute of the former state" is that while society "had created its own organs to look after its own special interests" in the course of time "these organs, at whose head was the state power, transformed themselves from the servants of society into the masters of society." [Op. Cit., p. 257] Ignoring the obvious contradiction with his earlier claims that the state and communal organs were different, with the former destroying the latter, we are struck yet again by the idea of the state as being defined as an institution above society. Thus, if the post revolutionary society is marked by "the state" being dissolved into society, placed under its control, then it is not a state. To call it a "new and truly democratic" form of "state power" makes as little sense as calling a motorcar a "new" form of bicycle. As such, when Engels argues that the Paris Commune "was no longer a state in the proper sense of the word" or that when the proletariat seizes political power it "abolishes the state as state" we may be entitled to ask what it is, a state or not a state. [Op. Cit., p. 335 and p. 424] It cannot be both, it cannot be a "public power distinct from the mass of the people" **and** "a self-acting armed organisation of the population." If it is the latter, then it does not have what Engels considered as "an essential feature of the state" and cannot be considered one. If it is the former, then any claim that such a regime is the rule of the working class is automatically invalidated. That Engels mocked the anarchists for seeking a revolution "without a provisional government and in the total absence of any

state or state-like institution, which are to be destroyed" we can safely say that it is the former. [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 156] Given that "*primitive democracy*," as Engels noted, defended itself against its adversaries without such an institution shows that to equate the defence of working class freedom with the state is not only unnecessary, it simply leads to confusion. For this reason anarchists do not confuse the necessary task of defending and organising a social revolution with creating a state.

Thus, the problem for Marxism is that the empirical definition of the state collides with the metaphysical, the actual state with its Marxist essence. As Italian Anarchist Camillo Berneri argued, "*The Proletariat' which seizes the state, bestowing on it the complete ownership of the means of production and destroying itself as proletariat and the state 'as the state' is a metaphysical fantasy, a political hypotaxis of social abstractions.*" [*The Abolition and Extinction of the State*," **Cienfuegos Press Anarchist Review**, no. 4, p. 50]

This is no academic point, as we explain in the [next section](#) this confusion has been exploited to justify party power **over** the proletariat. Thus, as Berneri argues, Marxists "*do not propose the armed conquest of the commune by the whole proletariat, but they propose the conquest of the State by the party which imagines it represents the proletariat. The Anarchists allow the use of direct power by the proletariat, but they understand by the organ of this power to be formed by the entire corpus of systems of communist administration -- corporate organisations [i.e. industrial unions], communal institutions, both regional and national -- freely constituted outside and in opposition to all political monopoly by parties and endeavouring to a minimum administrative centralisation.*" Thus "*the Anarchists desire the destruction of the classes by means of a social revolution which eliminates, with the classes, the State.*" [*Dictatorship of the Proletariat and State Socialism*", **Op. Cit.**, p. 52] Anarchists are opposed to the state because it is not neutral, it cannot be made to serve our interests. The structures of the state are only necessary when a minority seeks to rule over the majority. We argue that the working class can create our own structures, organised and run from below upwards, to ensure the efficient running of everyday life.

By confusing two radically different things, Marxism ensures that popular power is consumed and destroyed by the state, by a new ruling elite. In the words Murray Bookchin:

"Marx, in his analysis of the Paris Commune of 1871, has done radical social theory a considerable disservice. The Commune's combination of delegated policy-making with the execution of policy by its own administrators, a feature of the Commune which Marx celebrated, is a major failing of that body. Rousseau quite rightly emphasised that popular power cannot be delegated without being destroyed. One either has a fully empowered popular assembly or power belongs to the State." [*Theses on Libertarian Municipalism*", pp. 9-22, **The Anarchist Papers**, Dimitrios Roussopoulos (ed.), p. 14]

If power belongs to the state, then the state is a public body distinct from the population and, therefore, not an instrument of working class power. Rather, as an institution designed to ensure minority rule, it

would ensure its position within society and become either the ruling class itself or create a new class which instrument it would be. As we discuss in section H.3.9 ("[*Is the state simply an agent of economic power?*](#)") the state cannot be considered as a neutral instrument of class rule, it has specific interests in itself which can and does mean it can play an oppressive and exploitative role in society independently of a ruling class.

Which brings us to the crux of the issue whether this "new" state will, in fact, be unlike any other state that has ever existed. Insofar as this "new" state is based on popular self-management and self-organisation, anarchists argue that such an organisation cannot be called a state as it is **not** based on delegated power. "As long as," as Bookchin stresses, "*the institutions of power consisted of armed workers and peasants as distinguished from a professional bureaucracy, police force, army, and cabal of politicians and judges, they were no[t] a State . . . These institutions, in fact comprised a revolutionary people in arms . . . not a professional apparatus that could be regarded as a State in any meaningful sense of the term.*" ["Looking Back at Spain," pp. 53-96, **The Radical Papers**, p. 86]

This was why Bakunin was at pains to emphasize that a "*federal organisation, from below upward, of workers' associations, groups, communes, districts, and ultimately, regions and nations*" could not be considered as the same as "*centralised states*" and "*contrary to their essence.*" [**Statism and Anarchy**, p. 13] So when Lenin argues in **State and Revolution** that in the "*dictatorship of the proletariat*" the "*organ of suppression is now the majority of the population, and not the minority*" and that "*since the majority of the people **itself** suppresses its oppressors, a 'special force' for the suppression [of the bourgeoisie] is **no longer necessary***" he is confusing two fundamentally different things. As Engels made clear, such a social system of "*primitive democracy*" is not a state. However, when Lenin argues that "*the more the functions of state power devolve upon the people generally, the less need is there for the existence of this power,*" he is implicitly arguing that there would be, in fact, a "*public power distinct from mass of the people*" and so a state in the normal sense of the word based on delegated power, "*special forces*" separate from the armed people and so on. [**Essential Works of Lenin**, p. 301]

That such a regime would not "*wither away*" has been proven by history. The state machine does not (indeed, **cannot**) represent the interests of the working classes due to its centralised, hierarchical and elitist nature -- all it can do is represent the interests of the party in power, its own bureaucratic needs and privileges and slowly, but surely, remove itself from popular control. This, as anarchists have constantly stressed, is why the state is based on the delegation of power, on hierarchy and centralisation. The state is organised in this way to facilitate minority rule by excluding the mass of people from taking part in the decision making processes within society. If the masses actually did manage society directly, it would be impossible for a minority class to dominate it. Hence the need for a state. Which shows the central fallacy of the Marxist theory of the state, namely it argues that the rule of the proletariat will be conducted by a structure, the state, which is designed to exclude the popular participation such a concept demands!

Considered another way, "*political power*" (the state) is simply the power of minorities to enforce their wills. This means that a social revolution which aims to create socialism cannot use it to further its aims.

After all, if the state (i.e. "*political power*") has been created to further minority class rule (as Marxists and anarchists agree) then, surely, this function has determined how the organ which exercises it has developed. Therefore, we would expect organ and function to be related and impossible to separate.

So when Marx argued that the "*conquest of political power becomes the great duty of the proletariat*" because "*the lords of the land and of capital always make use of their political privileges to defend and perpetuate their economic monopolies and enslave labour,*" he drew the wrong conclusion. [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 85] Building on a historically based (and so evolutionary) understanding of the state, anarchists concluded that it was necessary not to seize political power (which could only be exercised by a minority within any state) but rather to destroy it, to dissipate power into the hands of the working class, the majority. By ending the regime of the powerful by destroying their instrument of rule, the power which was concentrated into their hands automatically falls back into the hands of society. Thus, working class power can only be concrete once "*political power*" is shattered and replaced by the social power of the working class based on its own class organisations (such as factory committees, workers' councils, unions, neighbourhood assemblies and so on). As Murray Bookchin put it:

"the slogan 'Power to the people' can only be put into practice when the power exercised by social elites is dissolved into the people. Each individual can then take control of his [or her] daily life. If 'Power to the people' means nothing more than power to the 'leaders' of the people, then the people remain an undifferentiated, manipulated mass, as powerless after the revolution as they were before." [**Post-Scarcity Anarchism**, p. 20f]

In practice, this means that any valid social revolution needs to break the new state and **not** replace it with another one. This is because, in order to be a state, any state structure must be based on delegated power, hierarchy and centralisation ("*every State, even the most Republican and the most democratic . . . are in essence only machine governing the masses from above*" and "[i]f there is a State, there must necessarily be domination, and therefore slavery; a State without slavery, overt or concealed, is unthinkable -- and that is why we are enemies of the State." [Bakunin, **The Political Philosophy of Bakunin**, p. 211 and p. 287]). This means that if power is devolved to the working class then the state no longer exists as its "*essential feature*" (of delegated power) is absent. What you have is a new form of the "*primitive democracy*" which existed before the rise of the state. While this new, modern, form of self-management will have to defend itself against those seeking to recreate minority power, this does not mean that it becomes a state. After all, "*primitive democracy*" had to defend itself against its adversaries and so that, in itself, does not (as Engels acknowledges) mean it is a state. Thus defence of a revolution, as anarchists have constantly stressed, does not equate to a state as it fails to address the key issue, namely who has **power** in the system -- the masses or their leaders.

This issue is fudged by Marx. In his comments on Bakunin's question in "*Statism and Anarchy*" about "*Will the entire proletariat head the government?*", Marx argues in response:

"Does in a trade union, for instance, the whole union constitute the executive committee?"

Will all division of labour in a factory disappear and also the various functions arising from it? And will everybody be at the top in Bakunin's construction built from the bottom upwards? There will in fact be no below then. Will all members of the commune also administer the common affairs of the region? In that case there will be no difference between commune and region. 'The Germans [says Bakunin] number nearly 40 million. Will, for example, all 40 million be members of the government?' Certainly, for the thing begins with the self-government of the commune." [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, pp. 150-1]

As Alan Carter argues, *"this might have seemed to Marx [over] a century ago to be satisfactory rejoinder, but it can hardly do today. In the infancy of the trade unions, which is all Marx knew, the possibility of the executives of a trade union becoming divorced from the ordinary members may not have seemed to him to be a likely outcome, We, however, have behind us a long history of union leaders 'selling out' and being out of touch with their members. Time has ably demonstrated that to reject Bakunin's fears on the basis of the practice of trade union officials constitutes a woeful complacency with regard to power and privilege -- a complacency that was born ample fruit in the form of present Marxist parties and 'communist' societies . . . [His] dispute with Bakunin shows quite clearly that Marx did not stress the continued control of the revolution by the mass of the people as a prerequisite for the transcendence of all significant social antagonisms."* [Marx: A Radical Critique, pp. 217-8]

As we discussed in [section H.3.1](#), Marx's "Address to the Communist League," with its stress on "the most determined centralisation of power in the hands of the state authority" and that "the path of revolutionary activity . . . can only proceed with full force from the centre," suggests that Bakunin's fears were valid and Marx's answer simply inadequate. [Marx-Engels Reader, p. 509] Simply put, if, as Engels argues, the "an essential feature of the state is a public power distinct from the mass of the people," then, clearly Marx's argument of 1850 (and others like it) signifies a state in the usual sense of the word, one which has to be "distinct" from the mass of the population in order to ensure that the masses are prevented from interfering with their own revolution.

Ultimately, the question, of course, is one of power. Does the "executive committee" have the fundamental decision making power in society, or does that power lie in the mass assemblies upon which a federal socialist society is built? If the former, we have rule by a few party leaders and the inevitable bureaucratisation of the society and a state in the accepted sense of the word. If the latter, we have a basic structure of a free and equal society and a new organisation of popular self-management which eliminates, by self-management, the existence of a public power above society. This is not playing with words. It signifies the key issue of social transformation, an issue which Marxism tends to ignore or confuse matters about when discussing. Bookchin clarifies what is at stake:

*"To some neo-Marxists who see centralisation and decentralisation merely as difference of degree, the word 'centralisation' may merely be an awkward way of denoting means for **co-ordinating** the decisions made by decentralised bodies. Marx, it is worth noting, greatly confused this distinction when he praised the Paris Commune as a 'working, not a*

parliamentary body, executive and legislative at the same time.' In point of fact, the consolidation of 'executive and legislative' functions in a single body was regressive. It simply identified the process of policy-making, a function that rightly should belong to the people in assembly, with the technical execution of these policies, a function that should be left to strictly administrative bodies subject to rotation, recall, limitations of tenure . . . Accordingly, the melding of policy formation with administration placed the institutional emphasis of classical [Marxist] socialism on centralised bodies, indeed, by an ironical twist of historical events, bestowing the privilege of formulating policy on the 'higher bodies' of socialist hierarchies and their execution precisely on the more popular 'revolutionary committees' below." [Toward an Ecological Society, pp. 215-6]

By confusing co-ordination with the state (i.e. with delegation of power), Marxism opens the door wide open to the "dictatorship of the proletariat" being a state "in the proper sense." Not only does Marxism open that door, it even invites the state "in the proper sense" of the word in! This can be seen from Engels comment that just as "each political party sets out to establish its rule in the state, so the German Social-Democratic Workers' Party is striving to establish its rule, the rule of the working class." [Marx, Engels and Lenin, **Anarchism and Anarcho-syndicalism**, p. 94] By confusing rule by the party "in the state" with "rule of the working class," Engels is confusing party power and popular power. For the party to "establish its rule," the state in the normal sense (i.e. a structure based on the delegation of power) has to be maintained. As such, the "dictatorship of the proletariat" signifies the delegation of power by the proletariat into the hands of the party and that implies a "public power distinct from the mass of the people" and so minority rule. This aspect of Marxism, as we argue in the [next section](#), was developed under the Bolsheviks and became "the dictatorship of the party" (i.e. the dictatorship **over** the proletariat).

It is for this reason why anarchists are extremely critical of Marxist ideas of social revolution. As Alan Carter argues:

*"It is to argue not against revolution, but against 'revolutionary' praxis employing central authority. It is to argue that any revolution must remain in the hands of the mass of people and that they must be aware of the dangers of allowing power to fall into the hands of a minority in the course of the revolution. Latent within Marxist theory . . . is the tacit condoning of political inequality in the course and aftermath of revolutionary praxis. Only when such inequality is openly and widely rejected can there be any hope of a libertarian communist revolution. The lesson to learn is that we must oppose not revolutionary practice, but **authoritarian** 'revolutionary' practice. Such authoritarian practice will continue to prevail in revolutionary circles as long as the Marxist theory of the state and the corresponding theory of power remain above criticism within them." [Marx: A Radical Critique, p. 231]*

In summary, the Marxist theory of the state is simply a-historic and postulates some kind of state "essence" which exists independently of actual states and their role in society. To confuse the organ

required by a minority class to execute and maintain its rule and that required by a majority class to manage society is to make a theoretical error of great magnitude. It opens the door to the idea of party power and even party dictatorship. As such, the Marxism of Marx and Engels is confused on the issue of the state. Their comments fluctuate between the anarchist definition of the state (based, as it is, on generalisations from historical examples) and the a-historic definition (based not on historical example but rather derived from a supra-historical analysis). Trying to combine the metaphysical with the scientific, the authoritarian with the libertarian, can only leave their followers with a confused legacy and that is what we find.

Since the death of the founding fathers of Marxism, their followers have diverged into two camps. The majority have embraced the metaphysical and authoritarian concept of the state and proclaimed their support for a "*workers' state*." This is represented by social-democracy and its radical offshoot, Leninism. As we discuss in the [next section](#), this school has used the Marxist conception of the state to allow for rule over the working class by the "*revolutionary*" party. The minority has become increasingly and explicitly anti-state, recognising that the Marxist legacy is contradictory and that for the proletariat to directly manage society then there can be no power above them. To this camp belongs the libertarian Marxists of the council communist, Situationist and other schools of thought which are close to anarchism.

H.3.8 What is wrong with the Leninist theory of the state?

As discussed in the [last section](#), there is a contradiction at the heart of the Marxist theory of the state. On the one hand, it acknowledges that the state, historically, has always been an instrument of minority rule and is structured to ensure this. On the other, it argues that you can have a state (the "*dictatorship of the proletariat*") which transcends this historical reality to express an abstract essence of the state as an "*instrument of class rule*." This means that Marxism usually confuses two very different concepts, namely the state (a structure based on centralisation and delegated power) and the popular self-management and self-organisation required to create and defend a socialist society.

This confusion between two fundamentally different concepts proved to be disastrous when the Russian Revolution broke out. Confusing party power with working class power, the Bolsheviks aimed to create a "workers' state" in which their party would be in power (see [section 5](#) of the appendix on "[What happened during the Russian Revolution?](#)"). As the state was an instrument of class rule, it did not matter if the new "workers' state" was centralised, hierarchical and top-down like the old state as the structure of the state was considered irrelevant in evaluating its role in society. Thus, while Lenin seemed to promise a radical democracy in which the working class would directly manage its own affairs in his **State and Revolution**, in practice implemented a "*dictatorship of the proletariat*" which was, in fact, "*the organisation of the vanguard of the oppressed as the ruling class*." [**Essential Works of Lenin**, p. 337] In other words, the vanguard party in the position of head of the state, governing on behalf of the working class which, as we argued in the [last section](#), meant that the new "workers' state" was fundamentally a state in the usual sense of the word. This quickly led to a dictatorship **over**, not of, the proletariat (as Bakunin had predicted).

This development did not come as a surprise to anarchists, who long argued that a state is an instrument of minority rule and cannot change its nature. To use the state to affect socialist change is impossible, simply because it is not designed for such a task. As we argued in [section B.2](#), the state is based on centralisation of power explicitly to ensure minority rule and for this reason has to be abolished during a social revolution.

Ironically, the theoretical lessons Leninists gained from the experience of the Russian Revolution confirm the anarchist analysis that the state structure exists to facilitate minority rule and marginalise and disempower the majority to achieve that rule. This can be seen from the significant revision of the Marxist position which occurred once the Bolshevik party became the ruling party. Simply put, after 1917 leading representatives of Leninism stressed that the idea that state power was **not** required to repress resistance by the ex-ruling class as such, but, in fact, was necessitated by the divisions within the working class. In other words, state power was required because the working class was not able to govern itself and so required a grouping (the party) above it to ensure the success of the revolution and overcome any "*wavering*" within the masses themselves.

While we have discussed this position in [section H.1.2](#) and so will be repeating ourselves to some degree, it is worth summarising again the arguments put forward to justify this revision. This is because they confirm what anarchists have always argued, namely that the state is an instrument of minority rule and **not** one by which working class people can manage their own affairs directly. As the quotations from leading Leninists make clear, it is **precisely** this feature of the state which recommends it for party (i.e. minority) power. In other words, the contradiction at the heart of the Marxist theory of the state we pointed out in the [last section](#) has been resolved in Leninism. It supports the state precisely because it is "*a public power distinct from the mass of the people,*" rather than an instrument of working class self-management of society.

Needless to say, latter day followers of Leninism point to Lenin's apparently democratic, even libertarian sounding, 1917 work, **The State and Revolution** when asked about the Leninist theory of the state. As our discussion of the Russian revolution in the appendix ["What happened during the Russian Revolution?"](#) proves, the ideas expounded in his pamphlet were rarely, if at all, applied in practice by the Bolsheviks. Moreover, it was written before the seizure of power. In order to see the validity of his argument we must compare it to his and his fellow Bolshevik leaders opinions once the revolution had "succeeded." What lessons did they generalise from their experiences and how did these lessons relate to **State and Revolution**?

This change can be seen from Trotsky, who argued quite explicitly that "*the proletariat can take power only through its vanguard*" and that "*the necessity for state power arises from an insufficient cultural level of the masses and their heterogeneity.*" Only with "*support of the vanguard by the class*" can there be the "*conquest of power*" and it was in "*this sense the proletarian revolution and dictatorship are the work of the whole class, but only under the leadership of the vanguard.*" Thus, rather than the working class as a whole seizing power, it is the "*vanguard*" which takes power -- "*a revolutionary party, even*

after seizing power . . . is still by no means the sovereign ruler of society." [**Stalinism and Bolshevism**]

Thus state power is required to **govern the masses**, who cannot exercise power themselves. As Trotsky put it, "[t]hose who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." [Trotsky, **Op. Cit.**] Clearly, the state is envisioned as an instrument existing **above** society, above the working class, and its "necessity" is not driven by the need to defend the revolution, but rather in the "insufficient cultural level of the masses." Indeed, "party dictatorship" is required to create "the state form of the proletariat."

This idea that state power was required due to the limitations within the working class is reiterated a few years later in 1939:

"The very same masses are at different times inspired by different moods and objectives. It is just for this reason that a centralised organisation of the vanguard is indispensable. Only a party, wielding the authority it has won, is capable of overcoming the vacillation of the masses themselves . . . if the dictatorship of the proletariat means anything at all, then it means that the vanguard of the proletariat is armed with the resources of the state in order to repel dangers, including those emanating from the backward layers of the proletariat itself." [**The Moralists and Sycophants**, p. 59]

Needless to say, **by definition** everyone is "backward" when compared to the "vanguard of the proletariat." Moreover, as it is this "vanguard" which is "armed with the resources of the state" and **not** the proletariat as a whole we are left with one obvious conclusion, namely party dictatorship rather than working class democracy. How Trotsky's position is compatible with the idea of the working class as the "ruling class" is not explained. However, it fits in well with the anarchist analysis of the state as an instrument designed to ensure minority rule. Other, equally elitist arguments were expressed by Trotsky twenty years earlier when he held the reins of power.

In 1920, he argued that while the Bolsheviks have "more than once been accused of having substituted for the dictatorship of the Soviets the dictatorship of the party," in fact "it can be said with complete justice that the dictatorship of the Soviets became possible only by means of the dictatorship of the party." This, just to state the obvious, was his argument seventeen years later. "In this 'substitution' of the power of the party for the power of the working class," Trotsky added, "there is nothing accidental, and in reality there is no substitution at all. The Communists express the fundamental interests of the working class." [**Terrorism and Communism**, p. 109] In early 1921, he argued again for Party dictatorship at the Tenth Party Congress. His comments made there against the **Workers' Opposition** within the Communist Party make his position clear:

"The Workers' Opposition has come out with dangerous slogans, making a fetish of democratic principles! They place the workers' right to elect representatives above the Party, as if the party were not entitled to assert its dictatorship even if that dictatorship

temporarily clashed with the passing moods of the workers' democracy. It is necessary to create amongst us the awareness of the revolutionary birthright of the party, which is obliged to maintain its dictatorship, regardless of temporary wavering even in the working classes. This awareness is for us the indispensable element. The dictatorship does not base itself at every given moment on the formal principle of a workers' democracy." [quoted by Samuel Farber, **Before Stalinism**, p. 209]

The similarities with his arguments of 1939 are obvious. Unsurprisingly, he maintained this position in the intervening years. He stated in 1922 that *"we maintain the dictatorship of our party!"* [**The First Five Years of the Communist International**, vol. 2, p. 255] The next year saw him arguing that *"[i]f there is one question which basically not only does not require revision but does not so much as admit the thought of revision, it is the question of the dictatorship of the Party."* He stressed that *"[o]ur party is the ruling party"* and that *"[t]o allow any changes whatever in this field"* meant *"bring[ing] into question all the achievements of the revolution and its future."* He indicated the fate of those who **did** question the party's "leading role": *"Whoever makes an attempt on the party's leading role will, I hope, be unanimously dumped by all of us on the other side of the barricade."* [**Leon Trotsky Speaks**, p. 158 and p. 160]

By 1927, when Trotsky was in the process of being "dumped" on the "other side of the barricade" by the ruling bureaucracy, he **still** argued for Party dictatorship. The **Platform of the Opposition** includes *"the Leninist principle, inviolable for every Bolshevnik, that the dictatorship of the proletariat is and can be realised only through the dictatorship of the party."* The document stresses the *"dictatorship of the proletariat [sic!] demands as its very core a single proletarian party,"* that *"the dictatorship of the proletariat demands a single and united proletarian party as the leader of the working masses and the poor peasantry."*

Ten years later, he explicitly argued that the *"revolutionary dictatorship of a proletarian party"* was *"an objective necessity imposed upon us by the social realities -- the class struggle, the heterogeneity of the revolutionary class, the necessity for a selected vanguard in order to assure the victory."* This *"dictatorship of a party"* was essential and *"we can not jump over this chapter"* of human history. He stressed that the *"revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution"* and argued that *"the party dictatorship"* could **not** be replaced by *"the 'dictatorship' of the whole toiling people without any party."* This was because the *"level of political development among the masses"* was not "high" enough as *"capitalism does not permit the material and the moral development of the masses."* [Trotsky, **Writings 1936-37**, pp. 513-4]

Thus, for Trotsky over a twenty year period, the *"dictatorship of the proletariat"* was fundamentally a *"dictatorship of the party."* While the working class may be allowed some level of democracy, the rule of the party was repeatedly given precedence. While the party may be placed into power by a mass revolution, once there the party would maintain its position of power and dismiss attempts by the working class to replace it as *"wavering"* or *"vacillation"* due to the *"insufficient cultural level of the masses and their heterogeneity."* In other words, the party dictatorship was required to protect working class people from themselves, their tendency to change their minds based on debates between difference

political ideas and positions, make their own decisions, reject what is in their best interests (as determined by the party), and so on. Thus the underlying rationale for democracy (namely that it reflects the changing will of the voters, their "*passing moods*" so to speak) is used to justify party dictatorship!

As noted in [section H.1.2](#), Trotsky on this matter was simply following Lenin's lead, who had admitted at the end of 1920 that while "*the dictatorship of the proletariat*" was "*inevitable*" in the "*transition of socialism*," it is "*not exercised by an organisation which takes in all industrial workers*." The reason, he states, "*is given in the theses of the Second Congress of the Communist International on the role of political parties*" (more on which later). This means that "*the Party, shall we say, absorbs the vanguard of the proletariat, and this vanguard exercises the dictatorship of the proletariat*." This was required because "*in all capitalist countries . . . the proletariat is still so divided, so degraded, and so corrupted in parts*." Therefore, it "*can be exercised only by a vanguard*." [**Collected Works**, vol. 32, p. 20 and p. 21] As we pointed out in [section H.3.3](#), Lenin argued that "*revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves*." [**Op. Cit.**, vol. 42, p. 170] Needless to say, Lenin failed to mention this aspect of his system in **The State and Revolution** (a failure usually repeated by his followers). It is, however, a striking confirmation of Bakunin's comments "*the State cannot be sure of its own self-preservation without an armed force to defend it against its own **internal enemies**, against the discontent of its own people*." [**Michael Bakunin: Selected Writings**, p. 265]

Looking at the lessons leading leaders of Leninism gained from the experience of the Russian Revolution, we have to admit that the Leninist "*workers' state*" will not be, in fact, a "*new*" kind of state, a "*semi-state*," or, to quote Lenin, a "*new state*" which "*is **no longer** a state in the proper sense of the word*." If, as Lenin argued in early 1917, the state "*in the proper sense of the term is domination over the people by contingents of armed men divorced from the people*," then Bolshevism in power quickly saw the need for a state "*in the proper sense*." [**Selected Works**, vol. 2, p. 60] While this state "*in the proper sense*" had existed from the start of Bolshevik rule (see "[What happened during the Russian Revolution?](#)"), it was only from 1919 onwards (at the latest) that the leaders of Bolshevism had openly brought what they said into line with what they did. It was only by being a "*state in the proper sense*" could the Bolshevik party rule and exercise "*the dictatorship of the party*" over the "*wavering*" working class.

So when Lenin states that "*Marxism differs from anarchism in that it recognises **the need for a state** for the purpose of the transition to socialism*," anarchists agree. Insofar as "Marxism" aims for, to quote Lenin, the party to "*take state power into [its] own hands*," to become "*the governing party*" and considers one of its key tasks for "*our Party to capture political power*" and to "*administer*" a country, then we can safely say that the state needed is a state "*in the proper sense*," based on the centralisation and delegation of power into the hands of a few. [**Op. Cit.**, p. 60, p. 589, p. 328 and p. 589]

This recreation of the state "*in the proper sense*" did not come about by chance or simply because of the "*will to power*" of the leaders of Bolshevism. Rather, there are strong institutional pressures at work within any state structure (even a "*semi-state*") to turn it back into a "*proper*" state. We discuss this in

more detail in [section H.3.9](#). However, we should not ignore that many of the roots of Bolshevik tyranny can be found in the contradictions of the Marxist theory of the state. As noted in the [last section](#), for Engels, the seizure of power by the party meant that the working class was in power. The Leninist tradition builds on this confusion between party and class power. It is clear that the "*dictatorship of the proletariat*" is, in fact, rule by the party. In Lenin's words:

"Engels speaks of a government that is required for the domination of a class . . . Applied to the proletariat, it consequently means a government that is required for the domination of the proletariat, i.e. the dictatorship of the proletariat for the effectuation of the socialist revolution." [**Collected Works**, vol. 8, p. 279]

The role of the working class in this state was also indicated, as "*only a revolutionary dictatorship supported by the vast majority of the people can be at all durable.*" [**Op. Cit.**, p. 291] In other words the "*revolutionary government*" has the power, not the working class in whose name it governs. In 1921 he made this explicit: "*To govern you need an army of steeled revolutionary Communists. We have it, and it is called the Party.*" The "*Party is the leader, the vanguard of the proletariat, which rules directly.*" For Lenin, as "*long as we, the Party's Central Committee and the whole Party, continue to run things, that is govern we shall never -- we cannot -- dispense with . . . removals, transfers, appointments, dismissals, etc.*" [**Op. Cit.**, vol. 32, p. 62, p. 98 and p. 99] So much for "*workers' power*," "*socialism from below*" and other such rhetoric.

This vision of "socialism" being rooted in party power over the working class was the basis of the Communist International's resolution of the role of the party. This resolution is, therefore, important and worth discussing.

It argues that the Communist Party "*is part of the working class,*" namely its "*most advanced, most class-conscious, and therefore most revolutionary part.*" It is "*distinguished from the working class as a whole in that it grasps the whole historic path of the working class in its entirety and at every bend in that road endeavours to defend not the interests of individual groups or occupations but the interests of the working class as a whole.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 191] However, in response it can be argued that this simply means the "*interests of the party*" as only it can understand what "*the interests of the working class as a whole*" actually are. Thus we have the possibility of the party substituting its will for that of the working class simply because of what Leninists term the "*uneven development*" of the working class. As Alan Carter argues, these "*conceptions of revolutionary organisation maintain political and ideological domination by retaining supervisory roles and notions of privileged access to knowledge . . . the term 'class consciousness' is employed to facilitate such domination over the workers. It is not what the workers think, but what the party leaders think they ought to think that constitutes the revolutionary consciousness imputed to the workers.*" The ideological basis for a new class structure is created as the "*Leninist revolutionary praxis . . . is carried forward to post-revolutionary institutions,*" [**Marx: A Radical Critique**, p. 175]

The resolution stresses that before the revolution, the party "*will encompass . . . only a minority of the*

workers." Even after the "seizure of power," it will still "not be able to unite them all into its ranks organisationally." It is only after the "final defeat of the bourgeois order" will "all or almost all workers begin to join" it. Thus the party is a **minority** of the working class. The resolution then goes on to state that "[e]very class struggle is a political struggle. This struggle, which inevitably becomes transformed into civil war, has as its goal the conquest of political power. Political power cannot be seized, organised, and directed other than by some kind of political party." [Op. Cit., p. 192, p. 193] And as the party is a "part" of the working class which cannot "unite" all workers "into its ranks," this means that political power can only be "seized, organised, and directed" by a **minority**.

Thus we have minority rule, with the party (or more correctly its leaders) exercising political power. The idea that the party "must **dissolve** into the councils, that the councils can **replace** the Communist Party" is "fundamentally wrong and reactionary." This is because, to "enable the soviets to fulfil their historic tasks, there must . . . be a strong Communist Party, one that does not simply 'adapt' to the soviets but is able to make them renounce 'adaptation' to the bourgeoisie." [Op. Cit., p. 196] Thus rather than the workers' councils exercising power, their role is simply that of allowing the Communist Party to seize political party.

The underlying assumptions behind this resolution and its implications were clear by Zinoviev during his introductory speech to the congress meeting on the role of the party which finally agreed the resolution:

"Today, people like Kautsky come along and say that in Russia you do not have the dictatorship of the working class but the dictatorship of the party. They think this is a reproach against us. Not in the least! We have a dictatorship of the working class and that is precisely why we also have a dictatorship of the Communist Party. The dictatorship of the Communist Party is only a function, an attribute, an expression of the dictatorship of the working class . . . [T]he dictatorship of the proletariat is at the same time the dictatorship of the Communist Party." [Op. Cit., pp. 151-2]

Little wonder that Bertrand Russell, on his return from Lenin's Russia in 1920, wrote that "[f]riends of Russia here [in Britain] think of the dictatorship of the proletariat as merely a new form of representative government, in which only working men and women have votes, and the constituencies are partly occupational, not geographical. They think that 'proletariat' means 'proletariat,' but 'dictatorship' does not quote mean 'dictatorship.' This is the opposite of the truth. When a Russian Communist speak of a dictatorship, he means the word literally, but when he speaks of the proletariat, he means the word in a Pickwickian sense. He means the 'class-conscious' part of the proletariat, i.e. the Communist Party. He includes people by no means proletarian (such as Lenin and Tchicherin) who have the right opinions, and he excludes such wage-earners as have not the right opinions, whom he classifies as lackeys of the **bourgeoisie**." Significantly, Russell pointed, like Lenin, to the Comintern resolution on the role of the Communist Party. In addition, Russell notes the reason why this party dictatorship was required: "No conceivable system of free elections would give majorities to the Communists, either in the town or country." [The Practice and Theory of Bolshevism, pp. 26-27 and pp. 40-1]

Nor are followers of Bolshevism shy in repeating its elitist conclusions. Tony Cliff, for example, showed his lack of commitment to working class democracy when he opined that the *"actual level of democracy, as well as centralism, [during a revolution] depends on three basic factors: 1. the strength of the proletariat; 2. the material and cultural legacy left to it by the old regime; and 3. the strength of capitalist resistance. The level of democracy feasible must be indirect proportion to the first two factors, and in inverse proportion to the third. The captain of an ocean liner can allow football to be played on his vessel; on a tiny raft in a stormy sea the level of tolerance is far lower."* [Lenin, vol. 3, p. 179] That Cliff compares working class democracy to "football" says it all. Rather than seeing it as the core gain of a revolution, he relegates it to the level of a **game**, which may or may not be "tolerated"!

And need we speculate who the paternalistic "captain" in charge of the ship of the state would be would be? Replacing Cliff's revealing analogies we get the following: *"The party in charge of a workers' state can allow democracy when the capitalist class is not resisting; when it is resisting strongly, the level of tolerance is far lower."* So, democracy will be "tolerated" in the extremely unlikely situation that the capitalist class will not resist a revolution! That the party has no right to "tolerate" democracy or not is not even entertained by Cliff, its right to negate the basic rights of the working class is taken as a given. Clearly the key factor is that the party is in power. It **may** "tolerate" democracy, but ultimately his analogy shows that Bolshevism considers it as an added extra whose (lack of) existence in no way determines the nature of the "workers' state." Perhaps, therefore, we may add another "basic factor" to Cliff's three; namely *"4. the strength of working class support for the party."* The level of democracy feasible must be in direct proportion to this factor, as the Bolsheviks made clear. As long as the workers vote the party, then democracy is wonderful. If they do not, then their "wavering" and "passing moods" cannot be "tolerated" and democracy is replaced by the dictatorship of the party. Which is no democracy at all.

Obviously, then, if, as Engels argued, *"an essential feature of the state is a public power distinct from the mass of the people"* then the regime advocated by Bolshevism is not a "semi-state" but, in fact, a normal state. Trotsky and Lenin are equally clear that said state exists to ensure that the "mass of the people" do not participate in public power, which is exercised by a minority, the party (or, more correctly, the rulers of the party). One of the key aims of this new state is to repress the "backward" or "wavering" sections of the working class (although, by definition, all sections of the working class are "backward" in relation to the "vanguard"). Hence the need for a *"public power distinct from the people"* (as the suppression of the strike wave and Kronstadt in 1921 shows, elite troops are always needed to stop the army siding with their fellow workers). And as proven by Trotsky's comments after he was squeezed out of power, this perspective was **not** considered as a product of "exceptional circumstances." Rather it was considered a basic lesson of the revolution, a position which was applicable to all future revolutions. In this, Lenin and other leading Bolsheviks concurred.

The irony (and tragedy) of all this should not be lost. In his 1905 diatribe against anarchism, Stalin had denied that Marxists aimed for party dictatorship. He stressed that there was *"a dictatorship of the minority, the dictatorship of a small group . . . which is directed against the people . . . Marxists are the enemies of such a dictatorship, and they fight such a dictatorship far more stubbornly and self-*

sacrificingly than do our noisy Anarchists." The practice of Bolshevism and the ideological revisions it generated easily refutes Stalin's claims. The practice of Bolshevism shows that his claims that "[a]t the head" of the "dictatorship of the proletarian majority . . . stand the masses" stand in sharp contradiction with Bolshevik support for "revolutionary" governments. Either you have (to use Stalin's expression) "the dictatorship of the streets, of the masses, a dictatorship directed against all oppressors" or you have party power **in the name of the street, of the masses**. The fundamental flaw in Leninism is that it confuses the two and so lays the group for the very result anarchists predicted and Stalin denied.

[**Collected Works**, vol. 1, p. 371-2]

While anarchists are well aware of the need to defend a revolution (see [section H.2.1](#)), we do not make the mistake of equating this with a state. Ultimately, the state cannot be used as an instrument of liberation -- it is not designed for it. Which, incidentally, is why we have not discussed the impact of the Russian Civil War on the development of Bolshevik ideology. Simply put, the "workers' state" is proposed, by Leninists, as the means to defend a revolution. As such, you cannot blame what it is meant to be designed to withstand (counter-revolution and civil war) for its "degeneration." If the "workers' state" cannot handle what its advocates claim it exists for, then its time to look for an alternative and dump the concept in the dustbin of history. We discuss this in the appendix on "[The Russian Revolution](#)".

In summary, Bolshevism is based on a substantial revision of the Marxist theory of the state. While Marx and Engels were at pains to stress the accountability of their new state to the population under it, Leninism has made a virtue of the fact that the state has evolved to exclude that mass participation in order to ensure minority rule. Leninism has done so explicitly to allow the party to overcome the "wavering" of the working class, the very class it claims is the "ruling class" under socialism! In doing this, the Leninist tradition exploited the confused nature of the state theory of traditional Marxism (see [last section](#)). The Leninist theory of the state is flawed simply because it is based on creating a "state in the proper sense of the word," with a public power distinct from the mass of the people. This was the major lesson gained by the leading Bolsheviks (including Lenin and Trotsky) and has its roots in the common Marxist error of confusing party power with working class power. So when Leninists point to Lenin's **State and Revolution** as the definitive Leninist theory of the state, anarchists simply point to the lessons Lenin himself gained from actually conducting a revolution. Once we do, the slippery slope to the Leninist solution to the contradictions inherent in the Marxist theory of the state can be seen, understood and combated.

H.3.9 Is the state simply an agent of economic power?

As we discussed in [section H.3.7](#), the Marxist theory of the state confuses an empirical analysis of the state with a metaphysical one. While Engels is aware that the state developed to ensure minority class rule and, as befits its task, evolved specific characteristics to execute that role, he also raised the idea that the state ("as a rule") is "the state of the most powerful, economically dominant class" and "through the medium of the state, becomes also the politically dominant class." Thus the state can be considered,

in essence, as *"nothing but a machine for the oppression of one class by another."* [**Marx-Engels Selected Works**, pp. 577-8 and p. 258]

The clear implication is that the state is simply an instrument, without special interests of its own. If this is the case, the use of a state by the proletariat is, therefore, unproblematic (and so the confusion between working class self-organisation and the state we have discussed in various sections above is irrelevant). This argument can lead to simplistic conclusions, such as once a "revolutionary" government is in power in a "workers state" we need not worry about abuses of power or even civil liberties (this position was commonplace in Bolshevik ranks during the Russian Civil War, for example). It also is at the heart of Trotsky's contortions with regards to Stalinism, refusing to see the state bureaucracy as a new ruling class simply because the state, by definition, could not play such a role.

For anarchists, this position is a fundamental weakness of Marxism, a sign that the mainstream Marxist position significantly misunderstands the nature of society and the needs of social revolution. However, we must stress that anarchists would agree that state generally does serve the interests of the economically dominant classes. Bakunin, for example, argued that the State *"is authority, domination, and forced, organised by the property-owning and so-called enlightened classes against the masses."* He saw the social revolution as destroying capitalism and the state at the same time, that is *"to overturn the State's domination, and that of the privileged classes whom it solely represents."* [**The Basic Bakunin**, p. 140]

However, anarchists do not reduce our analysis and understanding of the state to this simplistic Marxist level. While being well aware that the state is the means of ensuring the domination of an economic elite, anarchists recognise that the state machine also has interests of its own. The state, for anarchists, is the delegation of power into the hands of a few. This creates, by its very nature, a privileged position for those at the top of the hierarchy:

"A government [or state], that is a group of people entrusted with making the laws and empowered to use the collective force to oblige each individual to obey them, is already a privileged class and cut off from the people. As any constituted body would do, it will instinctively seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to its special interests. Having been put in a privileged position, the government is already at odds with the people whose strength it disposes of." [Malatesta, **Anarchy**, p. 34]

Thus, while Malatesta was under no doubts that under capitalism the state was essentially *"the bourgeoisie's servant and gendarme,"* it did not mean that it did not have interests of its own. As he put it, *"the government, though springing from the bourgeoisie and its servant and protector, tends, as with every servant and protector, to achieve its own emancipation and to dominate whoever it protects."* [**Op. Cit.**, p. 20 and p. 22]

Why this would happen is not hard to discover. Given that the state is a highly centralised, top-down

structure it is unsurprising that it develops around itself a privileged class, a bureaucracy, around it. The inequality in power implied by the state is a source of privilege and oppression independent of property and economic class. Those in charge of the state's institutions would aim to protect (and expand) their area of operation, ensuring that they select individuals who share their perspectives and who they can pass on their positions. By controlling the flow of information, of personnel and resources, the members of the state's higher circles can ensure its, and their own, survival and prosperity. As such, politicians who are elected are at a disadvantage. The state is the permanent collection of institutions that have entrenched power structures and interests. The politicians come and go while the power in the state lies in its institutions due to their permanence. It is to be expected that such institutions would have their own interests and would pursue them whenever they can.

This would not fundamentally change in a new "workers' state" if it is, like all states, based on the delegation and centralisation of power into a few hands. Any "workers' government" would need a new apparatus to enforce its laws and decrees. It would need effective means of gathering and collating information. It would thus create *"an entirely new ladder of administration to extend its rule and make itself obeyed."* While a social revolution needs mass participation, the state limits initiative to the few who are in power and *"it will be impossible for one or even a number of individuals to elaborate the social forms"* required, which *"can only be the collective work of the masses . . . Any kind of external authority will merely be an obstacle, a hindrance to the organic work that has to be accomplished; it will be no better than a source of discord and of hatreds."* [Kropotkin, **Words of a Rebel**, p. 169 and pp. 176-7]

Rather than "withering away," any "workers' state" would tend to grow in terms of administration and so the government creates around itself a class of bureaucrats whose position is different from the rest of society. This would apply to production as well. Being unable to manage everything, the state would have to re-introduce hierarchical management in order to ensure its orders are met and that a suitable surplus is extracted from the workers to feed the needs of the state machine. By creating an economically powerful class which it can rely on to discipline the workforce, it would simply recreate capitalism anew in the form of *"state capitalism"* (this is precisely what happened during the Russian Revolution). To enforce its will onto the people it claims to represent, specialised bodies of armed people (police, army) would be required and soon created. All of which is to be expected, as state socialism *"entrusts to a few the management of social life and [so] leads to the exploitation and oppression of the masses by the few."* [Malatesta, **Op. Cit.**, p. 46]

This process does not happen instantly, it takes time. However, the tendency for government to escape from popular control and to generate privileged and powerful institutions around it can be seen in all revolutions, including the Paris Commune and the Russian Revolution. In the former, the Communal Council was *"largely ignored . . . after it was installed. The insurrection, the actual management of the city's affairs and finally the fighting against the Versailles, were undertaken mainly by popular clubs, the neighbourhood vigilance committees, and the battalions of the National Guard. Had the Paris Commune (the Municipal Council) survived, it is extremely doubtful that it could have avoided conflict with these loosely formed street and militia formations. Indeed, by the end of April, some six weeks after the insurrection, the Commune constituted an 'all-powerful' Committee of Public Safety, a body redolent*

with memories of the Jacobin dictatorship and the Terror, which suppressed not only the right in the Great [French] Revolution of a century earlier, but also the left." [Murray Bookchin, **Post-Scarcity Anarchism**, pp. 148-9] A minority of council members (essentially those active in the International) stated that "*the Paris Commune has surrendered its authority to a dictatorship*" and it was "*hiding behind a dictatorship that the electorate have not authorised us to accept or to recognise.*" [**The Paris Commune of 1871: The View from the Left**, Eugene Schulkind (ed.), p. 187] The Commune was crushed before this process could fully unfold, but the omens were there (although it would have undoubtedly been hindered by small-scale of the institutions involved). As we discuss in the appendix on "[What happened during the Russian Revolution?](#)", a similar process of a "revolutionary" government escaping from popular control occurred right from the start of the Russian Revolution. The fact the Bolshevik regime lasted longer and was more centralised (and covered a larger area) ensured that this process developed fully, with the "revolutionary" government creating around itself the institutions (the bureaucracy) which finally subjected the politicians and party leaders to its influence and then domination.

Simply put, the vision of the state as merely an instrument of class rule blinds its supporters to the dangers of **political** inequality in terms of power, the dangers inherent in giving a small group of people power over everyone else. The state has certain properties **because it is a state** and one of these is that it creates a bureaucratic class around it due to its centralised, hierarchical nature. Within capitalism, the state bureaucracy is (generally) under the control of the capitalist class. However, to generalise from this specific case is wrong as the state bureaucracy is a class in itself -- and so trying to abolish classes without abolishing the state is doomed to failure:

"The State has always been the patrimony of some privileged class: the sacerdotal class, the nobility, the bourgeoisie -- and finally, when all the other classes have exhausted themselves, the class of the bureaucracy enters upon the stage and then the State falls, or rises, if you please to the position of a machine." [Bakunin, **The Political Philosophy of Bakunin**, p. 208]

Thus the state cannot simply be considered as an instrument of rule by economic classes. It can be quite an effective parasitical force in its own right, as both anthropological and historical evidence suggest. The former raises the possibility that the state arose before the classes and that its roots are in inequalities in power (i.e. hierarchy) within society, not inequalities of wealth. The latter points to examples of societies in which the state was not, in fact, an instrument of (economic) class rule but rather pursued an interest of its own.

As regards anthropology, Michael Taylor summarises that the "*evidence does not give [the Marxist] proposition [that the rise in classes caused the creation of the state] a great deal of support. Much of the evidence which has been offered in support of it shows only that the primary states, not long after their emergence, were economically stratified. But this is of course consistent also with the simultaneous rise . . . of political and economic stratification, or with the **prior** development of the state -- i.e. of **political** stratification -- and the creation of economic stratification by the ruling class.*" [**Community**,

Anarchy and Liberty, p. 132] He quotes Elman Service on this:

"In all of the archaic civilisations and historically known chiefdoms and primitive states the 'stratification' was . . . mainly of two classes, the governors and the governed -- political strata, not strata of ownership groups." [quoted by Taylor, **Op. Cit.**, p. 133]

Talyor argues that it the *"weakening of community and the development of gross inequalities are the concomitants and consequences of state formation."* He points to the *"germ of state formation"* being in the informal social hierarchies which exist in tribal societies. [**Op. Cit.**, p. 133 and p. 134] Thus the state is not, initially, a product of economic classes but rather an independent development based on inequalities of social power. Harold Barclay, an anarchist who has studied anthropological evidence on this matter, concurs:

"In Marxist theory power derives primarily, if not exclusively, from control of the means of production and distribution of wealth, that is, from economic factors. Yet, it is evident that power derived from knowledge -- and usually 'religious' style knowledge -- is often highly significant, at least in the social dynamics of small societies. . . Economic factors are hardly the only source of power. Indeed, we see this in modern society as well, where the capitalist owner does not wield total power. Rather technicians and other specialists command it as well, not because of their economic wealth, but because of their knowledge." [quoted by Alan Carter, **Marx: A Radical Critique**, p. 191]

If, as Bookchin summarises, *"hierarchies precede classes"* then trying to use a hierarchical structure like the state to abolish them is simply wishful thinking.

As regards more recent human history, there have been numerous examples of the state existing without being an instrument of class rule. Rather, the state **was** the *"ruling class."* While the most obvious example is the Stalinist regimes where the state bureaucracy ruled over a state capitalist regime, there have been plenty of others, as Murray Bookchin points out:

*"Each State is not necessarily an institutionalised system of violence in the interests of a specific ruling class, as Marxism would have us believe. There are many examples of States that **were** the 'ruling class' and whose own interests existed quite apart from -- even in antagonism to -- privileged, presumably 'ruling' classes in a given society. The ancient world bears witness to distinctly capitalistic classes, often highly privileged and exploitative, that were bilked by the State, circumscribed by it, and ultimately devoured by it -- which is in part why a capitalist society never emerged out of the ancient world. Nor did the State 'represent' other class interests, such as landed nobles, merchants, craftsmen, and the like. The Ptolemaic State in Hellenistic Egypt was an interest in its own right and 'represented' no other interest than its own. The same is true of the Aztec and the Inca States until they were replaced by Spanish invaders. Under the Emperor Domitian, the Roman State became the principal 'interest' in the empire, superseding the interests of*

even the landed aristocracy which held such primacy in Mediterranean society. . .

"Near-Eastern State, like the Egyptian, Babylonian, and Persian, were virtually extended households of individual monarchs . . . Pharaohs, kings, and emperors nominally held the land (often co-jointly with the priesthood) in the trust of the deities, who were either embodied in the monarch or were represented by him. The empires of Asian and North African kings were 'households' and the population was seen as 'servants of the palace' . . .

"These 'states,' in effect, were not simply engines of exploitation or control in the interests of a privileged 'class.' . . . The Egyptian State was very real but it 'represented' nothing other than itself." [Remaking Society, pp. 67-8]

Bakunin pointed to Turkish Serbia, where economically dominant classes *"do not even exist -- there is only a bureaucratic class. Thus, the Serbian state will crush the Serbian people for the sole purpose of enabling Serbian bureaucrats to live a fatter life."* [Statism and Anarchy, p. 54] Leninist Tony Cliff, in his attempt to prove that Stalinist Russia was state capitalist and its bureaucracy a ruling class, pointed to various societies in which *"had deep class differentiation, based not on private property but on state property. Such systems existed in Pharaonic Egypt, Moslem Egypt, Iraq, Persia and India."* He discusses the example of Arab feudalism in more detail, where *"the feudal lord had no permanent domain of his own, but a member of a class which collectively controlled the land and had the right to appropriate rent."* This was *"ownership of the land by the state"* rather than by individuals. [State Capitalism in Russia, pp. 316-8] As such, the idea that the state is simply an instrument of class rule seems unsupported. As Gaston Leval argued, *"the State, by its nature, tends to have a life of its own."* [quoted by Sam Dolgoff, A Critique of Marxism, p. 10]

Alan Carter summarises the obvious conclusion:

"By focusing too much attention on the economic structure of society and insufficient attention on the problems of political power, Marx has left a legacy we would do better not to inherit. The perceived need for authoritarian and centralised revolutionary organisation is sanctioned by Marx's theory because his theoretical subordination of political power to economic classes apparently renders post-revolutionary political power unproblematic." [Marx: A Radical Critique, p. 231]

Given this blindness of orthodox Marxism to this issue, it seems ironic that one of the people responsible for it also provides anarchists with evidence to back up our argument that the state is not simply an instrument of class rule but rather has interests of its own. Thus we find Engels arguing that proletariat, *"in order not to lose again its only just conquered supremacy,"* would have *"to safeguard itself against its own deputies and officials, by declaring them all, without exception, subject to recall at any moment."* [Marx-Engels Selected Works, p. 257] Yet, if the state was simply an instrument of class rule such precautions would not be necessary. As such, this shows an awareness that the state can have

interests of its own, that it is not simply an machine of class rule.

Aware of the obvious contradiction, he argues that the state *"is, as a rule, the state of the most powerful, economically dominant class which, through the medium of the state, becomes the politically dominant class . . . By way of exception, however, periods occur in which the warring classes balance each other, so nearly that the state power, as ostensible mediator, acquires, for the moment, a certain degree of independence of both."* And points to *"the Bonapartism of the First, and still more of the Second French Empire."* [Op. Cit., pp. 577-8] But if the state can become *"independent"* of economic classes, then that implies that it is no mere machine, no mere *"instrument"* of class rule. It implies the anarchist argument that the state has interests of its own, generated by its essential features and so, therefore, cannot be used by a majority class as part of its struggle for liberation is correct. Simply put, Anarchists have long *"realised -- feared -- that any State structure, whether or not socialist or based on universal suffrage, has a certain independence from society, and so may serve the interests of those within State institutions rather than the people as a whole or the proletariat."* [Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 134]

Ironically, arguments and warnings about the *"independence"* of the state by Marxists imply that the state has interests of its own and cannot be considered simply as an instrument of class rule. Rather, it suggests that the anarchist analysis of the state is correct, namely that any structure based on delegated power, centralisation and hierarchy must, inevitably, have a privileged class in charge of it, a class whose position enables it to not only exploit and oppress the rest of society but also to effectively escape from popular control and accountability. This is no accident. The state is structured to enforce minority rule and exclude the majority.

H.3.10 Has Marxism always supported the idea of workers' councils?

One of the most widespread myths associated with Marxism is the idea that Marxism has consistently aimed to smash the current (bourgeois) state and replace it by a *"workers' state"* based on working class organisations created during a revolution.

This myth is sometimes expressed by those who should know better (i.e. Marxists). According to John Rees (of the British Socialist Workers Party) it has been a *"cornerstone of revolutionary theory"* that *"the soviet is a superior form of democracy because it unifies political and economic power."* This *"cornerstone"* has, apparently, existed *"since Marx's writings on the Paris Commune."* [*"In Defence of October,"* International Socialism, no. 52, p. 25] In fact, nothing could be further from the truth, as Marx's writings on the Paris Commune prove beyond doubt.

The Paris Commune, as Marx himself noted, was *"formed of the municipal councillors, chosen by universal suffrage in the various wards of the town."* [*"The Civil War in France", Selected Works*, p. 287] As Marx made clear, it was definitely **not** based on delegates from workplaces and so could **not** unify political and economic power. Indeed, to state that the Paris Commune was a soviet is simply a

joke, as is the claim that Marxists supported soviets as revolutionary organs to smash and replace the state from 1871. In fact Marxists did not subscribe to this "*cornerstone of revolutionary theory*" until 1917 when Lenin argued that the Soviets would be the best means of ensuring a Bolshevik government. Which explains why Lenin's use of the slogan "*All Power to the Soviets*" and call for the destruction of the bourgeois state came as such a shock to his fellow Marxists. Unsurprisingly, given the long legacy of anarchist calls to smash the state and their vision of a socialist society built from below by workers councils, many Marxists called Lenin an anarchist! Therefore, the idea that Marxists have always supported workers councils' is untrue and any attempt to push this support back to 1871 simply a farcical.

Before 1917, when Lenin claimed to have discovered what had eluded all the previous followers of Marx and Engels (including himself!), it was only anarchists (or those close to them such as the Russian SR-Maximalists) who argued that the future socialist society would be structurally based around the organs working class people themselves created in the process of the class struggle and revolution (see sections [H.1.4](#) and [I.2.3](#)). To re-quote Bakunin:

"The future social organisation must be made solely from the bottom up, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal." [**Michael Bakunin: Selected Writings**, pp. 170-2]

So, ironically, the idea of the superiority of workers' councils has existed from around the time of the Paris Commune, but in only in Bakunin's writings and others in the libertarian wing of the First International!

Not all Marxists are as ignorant of their political tradition as Rees. As his fellow party member Chris Harman recognised, "*[e]ven the 1905 [Russian] revolution gave only the most embryonic expression of how a workers' state would in fact be organised. The fundamental forms of workers' power -- the soviets (workers' councils) -- were not recognised.*" It was "*[n]ot until the February revolution [of 1917 that] soviets became central in Lenin's writings and thought.*" [**Party and Class**, p. 18 and p. 19]

Before continuing it should be noted that Harman's summary is correct only if we are talking about the Marxist movement. Looking at the wider revolutionary movement, two groups definitely "*recognised*" the importance of the soviets as a form of working class power. These were the anarchists and the Social-Revolutionary Maximalists, both of whom "*espoused views that corresponded almost word for word with Lenin's April 1917 program of 'All power to the soviets.'*" The "*aims of the revolutionary far left in 1905 . . . Lenin combined in his call for soviet power [in 1917], when he apparently assimilated the anarchist program to secure the support of the masses for the Bolsheviks.*" [Oskar Anweiler, **The Soviets**, p. 94 and p. 96] Unsurprisingly, both the anarchists and Maximalists were extremely influential in that paradigm of soviet power and democracy, the Kronstadt commune (see "[What was the Kronstadt Uprising](#)" for more details).

Thus, in anarchist circles, the soviets were must definitely "*recognised*" as the practical confirmation of anarchist ideas of working class self-organisation as being the framework of a socialist society. For example, the syndicalists "*regarded the soviets . . . as admirable versions of the **bourses du travail**, but with a revolutionary function added to suit Russian conditions. Open to all leftist workers regardless of specific political affiliation, the soviets were to act as nonpartisan labour councils improvised 'from below' . . . with the aim of bringing down the old regime.*" The anarchists of **Khleb i Volia** "*also likened the 1905 Petersburg Soviet -- as a nonparty mass organisation -- to the central committee of the Paris Commune of 1871.*" [Paul Avrich, **The Russian Anarchists**, pp. 80-1] Kropotkin argued that anarchists should take part in the soviets as long as they "*are organs of the struggle against the bourgeoisie and the state, and not organs of authority.*" [quoted by Graham Purchase, **Evolution and Revolution**, p. 30]

So, if Marxists did not support workers' councils until 1917, what **did** Marxists argue should be the framework of a socialist society before this date? To discover this, we must look to Marx and Engels. Once we do, we discover that their works suggest that their vision of socialist transformation was fundamentally based on the bourgeois state, suitably modified and democratised to achieve this task. As such, rather than present the true account of the Marxist theory of the state Lenin interpreted various inexact and ambiguous statements by Marx and Engels (particularly from Marx's defence of the Paris Commune) to justify his own actions in 1917. Whether his 1917 revision of Marxism in favour of workers' councils as the framework of socialism is in keeping with the **spirit** of Marx is another matter of course. Given that libertarian Marxists (like the council communists) embraced the idea of workers' councils and broke with the Bolsheviki over the issue of whether the councils or the party had power, we can say that perhaps it is not. In this, they express the best in Marx. When faced with the Paris Commune and its libertarian influences he embraced it, distancing himself (for a while at least) with many of his previous ideas.

So what was the original (orthodox) Marxist position? It can be seen from Lenin who, as late December 1916 argued that "*Socialists are in favour of utilising the present state and its institutions in the struggle for the emancipation of the working class, maintaining also that the state should be used for a specific form of transition from capitalism to socialism.*" Lenin attacked Bukharin for "*erroneously ascribing this [the anarchist] view to the socialist*" when he had stated socialists wanted to "*abolish*" the state or "*blow it up.*" He called this "*transitional form*" the dictatorship of the proletariat, "*which is **also** a state.*" [**Collected Works**, vol. 23, p. 165] In other words, the socialist party would aim to seize power within the existing state and, after making suitable modifications to it, use it to create socialism. This conquest of state power would be achieved either by insurrection or by the ballot box, the latter being used for political education and struggle under capitalism.

That this position was the orthodox one is hardly surprising, given the actual comments of both Marx and Engels. For example, Engels argued in 1886 while he and Marx saw "*the gradual dissolution and ultimate disappearance of that political organisation called **the State***" as "***one** of the final results of the future revolution,*" they "*at the same time . . . have always held that . . . the proletarian class will first have to possess itself of the organised political force of the State and with its aid stamp out the resistance of the Capitalist class and re-organise society.*" The idea that the proletariat needs to "*possess*" the existing state is made clear when he argues while the anarchists "*reverse the matter*" by

arguing that the revolution "*has to **begin** by abolishing the political organisation of the State,*" for Marxists "*the only organisation the victorious working class finds ready-made for use, is that of the State. It may require adaptation to the new functions. But to destroy that at such a moment, would be to destroy the only organism by means of which the working class can exert its newly conquered power.*" [**Collected Works**, vol. 47, p. 10]

Obviously the only institution which the working class "*finds ready-made for use*" is the bourgeois state, although, as Engels stresses, it "*may require adaptation.*" This schema is repeated five years later, in Engels introduction to Marx's "*The Civil War in France.*" Arguing that the state "*is nothing but a machine for the oppression of one class by another*" he notes that it is "*at best an evil inherited by the proletariat after its victorious struggle for class supremacy, whose worst sides the victorious proletariat, just like the Commune, cannot avoid having to lop off at once as much as possible.*" [**Marx-Engels Selected Works**, p. 258] Simply put, if the proletariat creates a **new** state system to replace the bourgeois one, then how can it be "*an evil inherited*" by it? If, as Lenin argued, Marx and Engels thought that the working class had to smash the bourgeois state and replace it with a new one, why would it have "*to lop off at once as much as possible*" from the state it had just "*inherited*"?

In the same year, Engels repeats this argument in his critique of the draft of the Erfurt program of the German Social Democrats:

"If one thing is certain it is that our Party and the working class can only come to power under the form of a democratic republic. This is even the specific form for the dictatorship of the proletariat, as the Great French Revolution has already shown." [quoted by David W. Lovell, **From Marx to Lenin**, p. 81]

Clearly Engels does not speak of a "commune-republic" or anything close to a soviet republic, as expressed in Bakunin's work or the libertarian wing of the First International with their ideas of a "trade-union republic" or a free federation of workers' associations. Clearly and explicitly he speaks of the democratic republic, the current state ("*an evil inherited by the proletariat*") which is to be seized and transformed as in the Paris Commune. Unsurprisingly, when Lenin comes to quote this passage in **State and Revolution** he immediately tries to obscure its meaning. "*Engels,*" he says, "*repeats here in a particularly striking manner the fundamental idea which runs like a red thread through all of Marx's work, namely, that the democratic republic is the nearest approach to the dictatorship of the proletariat.*" [**Essential Works of Lenin**, p. 324] However, clearly Engels does not speak of the political form which "*is the nearest approach*" to the dictatorship, rather he speaks only of "*the specific form*" of the dictatorship, the "*only*" form in which "*our Party*" can come to power.

This explains Engels 1887 comments that in the USA the workers "*next step towards their deliverance*" was "*the formation of a political workingmen's party, with a platform of its own, and the conquest of the Capitol and the White House for its goal.*" This new party "*like all political parties everywhere . . . aspires to the conquest of political power.*" Engels then discusses the "*electoral battle*" going on in America. [Marx & Engels, **Basic Writings on Politics and Philosophy**, pp. 527-8 and p. 529] Six years

previously he had argued along the same lines as regards England, "*where the industrial and agricultural working class forms the immense majority of the people, democracy means the dominion of the working class, neither more nor less. Let, then, that working class prepare itself for the task in store for it -- the ruling of this great Empire . . . And the best way to do this is to use the power already in their hands, the actual majority they possess . . . to send to Parliament men of their own order.*" In case this was not clear enough, he lamented that "[e]verywhere the labourer struggles for political power, for direct representation of his class in the legislature -- everywhere but in Great Britain." [**Collected Works**, vol. 24, p. 405]

All of which, of course, fits into Marx's account of the Paris Commune. In that work he stresses that the Commune was formed by elections, by universal suffrage in a democratic republic. Once voted into office, the Commune then smashes the state machine inherited by it from the old state, recognising that "*the working class cannot simply lay hold of the ready-made state machinery, and wield it for its own purposes.*" The "*first decree of the Commune . . . was the suppression of the standing army, and the substitution for it of the armed people.*" Thus the Commune lops off one of the "*ubiquitous organs*" associated with the "*centralised State power*" once it had inherited the state via elections. [**Marx-Engels Selected Works**, p. 285, p. 287 and p. 285]

It is, of course true, that Marx expresses in his defence of the Commune the opinion that new "*Communal Constitution*" was to become a "*reality by the destruction of the State power*" yet he immediately argues that "*the merely repressive organs of the old government power were to be amputated*" and "*its legitimate functions were to be wrestles from*" it and "*restored to the responsible agents of society.*" [**Op. Cit.**, pp. 288-9] This corresponds to Engels arguments about removing aspects from the state inherited by the proletariat and signifies the "*destruction*" of the state machinery (its bureaucratic-military aspects) rather than the state itself.

The source of Lenin's restatement of the Marxist theory of the state which came as such a shock to so many Marxists can be found in the nature of the Paris Commune. After all, the major influence in terms of "*political vision*" of the Commune was anarchism. The "*rough sketch of national organisation which the Commune had no time to develop*" which Marx praises but does not quote was written by a follower of Proudhon. [**Marx, Op. Cit.**, p. 288] It expounded a clearly **federalist** and "bottom-up" organisational structure. It clearly implied "*the destruction of the State power*" rather than seeking to "*inherit*" it. Based on this libertarian revolt, it is unsurprising that Marx's defence of it took on a libertarian twist. As noted by Bakunin, who argues that its "*general effect was so striking that the Marxists themselves, who saw their ideas upset by the uprising, found themselves compelled to take their hats off to it. They went further, and proclaimed that its programme and purpose were their own, in face of the simplest logic . . . This was a truly farcical change of costume, but they were bound to make it, for fear of being overtaken and left behind in the wave of feeling which the rising produced throughout the world.*" [**Michael Bakunin: Selected Writings**, p. 261]

This opinion was shared by almost all Marxists before 1917 (including Lenin). As Franz Mehring (considered by many as the best student and commentator of Marx in pre-world war social democracy and a extreme left-winger) argued, the "*opinions of **The Communist Manifesto** could not be reconciled*

with the praise lavished . . . on the Paris Commune for the vigorous fashion in which it had begun to exterminate the parasitic State." He notes that "both Marx and Engels were well aware of the contradiction" and in the June 1872 preface to their work "they revised their opinions . . . declaring that the workers could not simply lay hold of the ready-made State machinery and wield it for their own purposes. At a later date, and after the death of Marx, Engels was compelled to engage in a struggle against the anarchist tendencies in the working-class movement, and he let this proviso drop and once again took his stand on the basis of the Manifesto." [Karl Marx, p. 453]

The fact that Marx did not mention anything about abolishing the existing state and replacing it with a new one in his contribution to the *"Program of the French Workers Party"* in 1880 is significant. It said that the that *"collective appropriation" of the means of production "can only proceed from a revolutionary action of the class of producers -- the proletariat -- organised in an independent political party." This would be "pursued by all the means the proletariat has at its disposal including universal suffrage which will thus be transformed from the instrument of deception that it has been until now into an instrument of emancipation." [Collected Works, vol. 24, p. 340]* There is nothing about overthrowing the existing state and replacing it with a new state, rather the obvious conclusion which is to be drawn is that universal suffrage was the tool by which the workers would achieve socialism. It does fit in, however, with Marx's comments in 1852 that *"Universal Suffrage is the equivalent of political power for the working class of England, where the proletariat forms the large majority of the population . . . Its inevitable result, here, is the political supremacy of the working class." [Op. Cit., vol. 11, pp. 335-6]* Or, indeed, Engels similar comments from 1881 quoted above.

It is for this reason that orthodox Marxism up until 1917 held the position that the socialist revolution would be commenced by seizing the existing state (usually by the ballot box, or by insurrection if that was impossible). Martov, the leading left-Menshevik, in his discussion of Lenin's "discovery" of the "real" Marxist theory on the state (in **State and Revolution**) stresses that the idea that the state should be smashed by the workers who would then *"transplant into the structure of society the forms of their own combat organisations"* was a libertarian idea, alien to Marx and Engels. While acknowledging that *"in our time, working people take to 'the idea of the soviets' after knowing them as combat organisations formed in the process of the class struggle at a sharp revolutionary stage,"* he distances Marx and Engels quite successfully from such a position. As such, he makes a valid contribution to Marxism and presents a necessary counter-argument to Lenin's claims in **State and Revolution** (at which point, we are sure, nine out of ten Leninists will dismiss our argument!). [**The State and Socialist Revolution**, p. 42]

All this may seem a bit academic to many. Does it matter? After all, most Marxists today subscribe to some variation of Lenin's position and so, in some aspects, what Marx and Engels really thought is irrelevant. Indeed, it is likely that Marx, faced with workers' councils as he was with the Commune, would have embraced them (perhaps not, as he was dismissive of similar ideas expressed in the libertarian wing of the First International). What is important is that the idea that Marxists have always subscribed to the idea that a social revolution would be based on the workers' own combat organisations (be they unions, soviets or whatever) is a relatively new one to the ideology. While Bakunin and other anarchists argued for such a revolution, Marx and Engels did not. Given this, the shock which met

Lenin's arguments in 1917 can be easily understood.

Rather than being rooted in the Marxist vision of revolution, as it has been in anarchism since the 1860s, workers councils have played, rhetoric aside, the role of fig-leaf for party power (libertarian Marxism being a notable exception). They have been embraced by its Leninist wing purely as a means of ensuring party power. Rather than being seen as the most important gain of a revolution as they allow mass participation, workers' councils have been seen, and used, simply as a means by which the party can seize power. Once this is achieved, the soviets can be marginalised and ignored without affecting the "proletarian" nature of the revolution in the eyes of the party:

"while it is true that Lenin recognised the different functions and democratic raison d'etre for both the soviets and his party, in the last analysis it was the party that was more important than the soviets. In other words, the party was the final repository of working-class sovereignty. Thus, Lenin did not seem to have been reflected on or have been particularly perturbed by the decline of the soviets after 1918." [Samuel Farber, **Before Stalinism**, p. 212]

This perspective can be traced back to the lack of interest Marx and Engels expressed in the forms which a proletarian revolution would take, as exemplified by Engels comments on having to "lop off" aspects of the state "inherited" by the working class. The idea that the organisations people create in their struggle for freedom may help determine the outcome of the revolution is missing. Rather, the idea that any structure can be appropriated and (after suitable modification) used to rebuild society is clear. This perspective cannot help take emphasis away from the mass working class organisations required to rebuild society in a socialist manner and place it on the group who will "inherit" the state and "lop off" its negative aspects, namely the party and the leaders in charge of both it and the new "workers' state."

This focus towards the party became, under Lenin (and the Bolsheviks in general) a purely instrumental perspective on workers' councils and other organisations. They were of use purely in so far as they allowed the Bolshevik party to take power (indeed Lenin constantly identified workers' power and soviet power with Bolshevik power and as Martin Buber noted, for Lenin "**All power to the Soviets!**" meant, at bottom, "**All power to the Party through the Soviets!**"). It can, therefore, be argued that his book **State and Revolution** was a means to use Marx and Engels to support his new found idea of the soviets as being the basis of creating a Bolshevik government rather than a principled defence of workers' councils as the framework of a socialist revolution. We discuss this issue in the [next section](#).

H.3.11 Does Marxism aim to place power into the hands of workers organisations?

The short answer depends on which branch of Marxism you mean.

If you are talking about libertarian Marxists such as council communists, Situationists and so on, then

the answer is a resounding "yes." Like anarchists, these Marxists see a social revolution as being based on working class self-management and, indeed, criticised (and broke with) Bolshevism precisely on this question (as can be seen from Lenin's comments in *Left-wing Communism: An Infantile Disorder* on the question of class or party dictatorship). However, if we look at the mainstream Marxist tradition (namely Bolshevism), the answer has to be an empathic "no."

As we noted in [section H.1.4](#), anarchists have long argued that the organisations created by the working class in struggle would be the initial framework of a free society. These organs, created to resist capitalism and the state, would be the means to overthrow both as well as extending and defending the revolution (such bodies have included the "soviets" and "factory committees" of the Russian Revolution, the collectives in the Spanish revolution, popular assemblies as in the current Argentine revolt and the French Revolution, revolutionary unions and so on). Thus working class self-management is at the core of the anarchist vision and so we stress the importance (and autonomy) of working class organisations in the revolutionary movement and the revolution itself. Anarchists work within such bodies at the base, in the mass assemblies, and do not seek to replace their power with that of their own organisation (see [section J.3.6](#)).

Leninists, in contrast, have a different perspective on such bodies. Rather than placing them at the heart of the revolution, Leninism views them purely in instrumental terms -- namely, as a means of achieving party power. Writing in 1907, Lenin argued that *"Social-Democratic Party organisations may, in case of necessity, participate in inter-party Soviets of Workers' Delegates . . . and in congresses . . . of these organisations, and may organise such institutions, provided this is done on strict Party lines for the purpose of developing and strengthening the Social-Democratic Labour Party."* The party would *"utilise"* such organs *"for the purpose of developing the Social-Democratic movement."* Significantly, given the fate of the soviets post-1917, Lenin notes that the party *"must bear in mind that if Social-Democratic activities among the proletarian masses are properly, effectively and widely organised, such institutions may actually become superfluous."* [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 210] Thus the means by which working class can manage their own affairs would become *"superfluous"* once the party was in power. How the working class could be considered the "ruling class" in such a society is hard to understand.

As Oscar Anweiler summarises in his account of the soviets during the two Russian Revolutions:

*"The drawback of the new 'soviet democracy' hailed by Lenin in 1906 is that he could envisage the soviets only as **controlled** organisations; for him they were instruments by which the party controlled the working masses, rather than true forms of a workers democracy. The basic contradiction of the Bolshevik soviet system -- which purports to be a democracy of all working people but in reality recognises only the rule of one party -- is already contained in Lenin's interpretation of the soviets during the first Russian revolution."* [**The Soviets**, p. 85]

Thirteen years later, Lenin repeated this same vision of party power as the goal of revolution. In his

infamous diatribe against "Left-wing" Communism (i.e. those Marxists close to anarchism), Lenin argued that *"the correct understanding of a Communist of his tasks" lies in "correctly gauging the conditions and the moment when the vanguard of the proletariat can successfully seize power, when it will be able during and after this seizure of power to obtain support from sufficiently broad strata of the working class and of the non-proletarian toiling masses, and when, thereafter, it will be able to maintain, consolidate, and extend its rule, educating, training and attracting ever broader masses of the toilers."* He stressed that *"to go so far . . . as to draw a contrast in general between the dictatorship of the masses and the dictatorship of the leaders, is ridiculously absurd and stupid."* [**Left-Wing Communism: An Infantile Disorder**, p. 35 and p. 27] As we noted in [section H.1.2](#), the Bolsheviks had this stage explicitly argued for party dictatorship and considered it a truism that (to re-quote Lenin) *"an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship. It can be exercised only by a vanguard . . . the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation."* [**Collected Works**, vol. 32, p. 21]

Therefore, rather than seeing revolution being based upon the empowerment of working class organisation and the socialist society being based on this, Leninists see workers organisations in purely instrumental terms as the means of achieving a Leninist government:

"With all the idealised glorification of the soviets as a new, higher, and more democratic type of state, Lenin's principal aim was revolutionary-strategic rather than social-structural . . . The slogan of the soviets was primarily tactical in nature; the soviets were in theory organs of mass democracy, but in practice tools for the Bolshevik Party. In 1917 Lenin outlined his transitional utopia without naming the definitive factor: the party. To understand the soviets' true place in Bolshevism, it is not enough, therefore, to accept the idealised picture in Lenin's state theory. Only an examination of the actual give-and-take between Bolsheviks and soviets during the revolution allows a correct understanding of their relationship." [Oscar Anweiler, **Op. Cit.**, pp. 160-1]

Simply put, Leninism confuses the party power and workers' power. An example of this "confusion" can be found in most Leninist works. For example, John Rees argues that *"the essence of the Bolsheviks' strategy . . . was to take power from the Provisional government and put it in the hands of popular organs of working class power -- a point later made explicit by Trotsky in his **Lessons of October**."* ["*In Defence of October*," **International Socialism**, no. 52, p. 73] However, in reality, as noted in [section H.3.3](#), Lenin had always been clear that the essence of the Bolsheviks' strategy was the taking of power by the Bolshevik party **itself**. He explicitly argued for Bolshevik power during 1917, considering the soviets as the best means of achieving this. He constantly equated Bolshevik rule with working class rule. Once in power, this identification did not change. As such, rather than argue for power to be placed into *"the hands of popular organs of working class power"* Lenin argued this only insofar as he was sure that these organs would then **immediately** pass that power into the hands of a Bolshevik government.

This explains his turn against the soviets after July 1917 when he considered it impossible for the Bolsheviks to gain a majority in them. It can be seen when the Bolshevik party's Central Committee

opposed the idea of a coalition government immediately after the overthrow of the Provisional Government in October 1917. As it explained, "*a purely Bolshevik government*" was "*impossible to refuse*" since "*a majority at the Second All-Russian Congress of Soviets . . . handed power over to this government.*" [quoted by Robert V. Daniels, **A Documentary History of Communism**, pp. 127-8] A mere ten days after the October Revolution the Left Social Revolutionaries charged that the Bolshevik government was ignoring the Central Executive Committee of the Soviets, established by the second Congress of Soviets as the supreme organ in society. Lenin dismissed their charges, stating that "*the new power could not take into account, in its activity, all the rigmarole which would set it on the road of the meticulous observation of all the formalities.*" [quoted by Frederick I. Kaplan, **Bolshevik Ideology and the Ethics of Soviet Labour**, p. 124] Clearly, the soviets did not have "*All Power*," they promptly handed it over to a Bolshevik government (and Lenin implies that he was not bound in any way to the supreme organ of the soviets in whose name he ruled). All of which places Rees' assertions into the proper context and shows that the slogan "*All Power to the Soviets*" is used by Leninists in a radically different way than most people would understand by it! It also explains why soviets were disbanded if the opposition won majorities in them in early 1918:

"Menshevik newspapers and activists in the trade unions, the Soviets, and the factories had made a considerable impact on a working class which was becoming increasingly disillusioned with the Bolshevik regime, so much so that in many places the Bolsheviks felt constrained to dissolve Soviets or prevent re-elections where Mensheviks and Socialist Revolutionaries had gained majorities." [Israel Getzler, **Martov**, p. 179]

Thus the Bolsheviks expelled the Mensheviks in the context of political losses **before** the Civil War. The Civil War gave the Bolsheviks an excuse and they "*drove them underground, just on the eve of the elections to the Fifth Congress of Soviets in which the Mensheviks were expected to make significant gains*" and while the Bolsheviks "*offered some formidable fictions to justify the expulsions*" there was "*of course no substance in the charge that the Mensheviks had been mixed in counter-revolutionary activities on the Don, in the Urals, in Siberia, with the Czechoslovaks, or that they had joined the worst Black Hundreds.*" [Getzler, **Op. Cit.**, p. 181]

While we will discuss this in more detail in [section 6](#) of the appendix on "[What happened during the Russian Revolution?](#)", we can state here that the facts are that the Bolsheviks only supported "*Soviet power*" when the soviets were Bolshevik. As recognised by Martov, who argued that the Bolsheviks loved Soviets only when they were "*in the hands of the Bolshevik party.*" [quoted by Getzler, **Op. Cit.**, p. 174] Which, perhaps, explains Lenin's comment that "*[o]nly the development of this war [Kornilov's counter-revolutionary rebellion in August 1917] can bring us to power but we must **speak** of this as little as possible in our agitation (remembering very well that even tomorrow events may put us in power and then we will not let it go).*" [quoted by Neil Harding, **Leninism**, p. 253]

All this can be confirmed, unsurprisingly enough, by looking at the essay Rees references. When studying Trotsky's **Lessons of October** we find the same instrumentalist approach to the question of the "*popular organs of working class power.*" This is stated quite clearly by Trotsky in his essay when he

argued that the *"essential aspect"* of Bolshevism was the *"training, tempering, and organisation of the proletarian vanguard as enables the latter to seize power, arms in hand."* As such, the vanguard seizes power, **not** *"popular organs of working class power."* Indeed, the idea that the working class can seize power itself is raised and dismissed:

"But the events have proved that without a party capable of directing the proletarian revolution, the revolution itself is rendered impossible. The proletariat cannot seize power by a spontaneous uprising . . . there is nothing else that can serve the proletariat as a substitute for its own party."

Hence *"popular organs of working class power"* are not considered as the *"essence"* of Bolshevism, rather the *"fundamental instrument of proletarian revolution is the party."* Popular organs are seen purely in instrumental terms, always discussing such organs of *"workers' power"* in terms of the strategy and program of the party, not in terms of the value that such organs have as forms of working class self-management of society.

This can be clearly seen from Trotsky's discussion of the "October Revolution" of 1917 in **Lessons of October**. Commenting on the Bolshevik Party conference of April 1917, he states that the *"whole of . . . [the] Conference was devoted to the following fundamental question: Are we heading toward the conquest of power in the name of the socialist revolution or are we helping (anybody and everybody) to complete the democratic revolution? . . . Lenin's position was this: . . . the capture of the soviet majority; the overthrow of the Provisional Government; the seizure of power through the soviets."* Note, **through** the soviets not **by** the soviets, thus indicating the fact the Party would hold the real power, not the soviets of workers' delegates. This is confirmed when Trotsky states that *"to prepare the insurrection and to carry it out under cover of preparing for the Second Soviet Congress and under the slogan of defending it, was of inestimable advantage to us"* and that it was *"one thing to prepare an armed insurrection under the naked slogan of the seizure of power by the party, and quite another thing to prepare and then carry out an insurrection under the slogan of defending the rights of the Congress of Soviets."* The Soviet Congress just provided *"the legal cover"* for the Bolshevik plans rather than a desire to see the Soviets actually start managing society. [**The Lessons of October**]

Thus we have the *"seizure of power through the soviets"* with *"an armed insurrection under the naked slogan of the seizure of power by the party"* being hidden by *"the slogan"* (*"the legal cover"*) of defending the Soviets! Hardly a case of placing power in the hands of working class organisations. Trotsky **does** note that in 1917 the *"soviets had to either disappear entirely or take real power into their hands."* However, he immediately adds that *"they could take power . . . only as the dictatorship of the proletariat directed by a single party."* Clearly, the *"single party"* has the real power, **not** the soviets. Unsurprisingly, in practice, the rule of *"a single party"* also amounted to the soviets effectively disappearing as they quickly became mere ciphers for party rule. Soon the *"direction"* by *"a single party"* became the dictatorship of that party **over** the soviets, which (it should be noted) Trotsky defended wholeheartedly until his death (see [section H.3.8](#)).

This cannot be considered as a one-off. Trotsky repeated this analysis in his **History of the Russian Revolution**, when he stated that the *"question, what mass organisations were to serve the party for leadership in the insurrection, did not permit an a priori, much less a categorical, answer."* Thus the *"mass organisations"* serve the party, not vice versa. This instrumentalist perspective can be seen when Trotsky notes that when *"the Bolsheviks got a majority in the Petrograd Soviet, and afterward a number of others,"* the *"phrase 'Power to the Soviets' was not, therefore, again removed from the order of the day, but received a new meaning: All power to the Bolshevik soviets."* This meant that the *"party was launched on the road of armed insurrection through the soviets and in the name of the soviets."* As he put it in his discussion of the July days in 1917, the army *"was far from ready to raise an insurrection in order to give power to the Bolshevik Party."* Ultimately, *"the state of popular consciousness . . . made impossible the seizure of power by the Bolsheviks in July."* [vol. 2, p. 303, p. 307, p. 78 and p. 81] So much for *"all power to the Soviets"!* He even quotes Lenin: *"The Bolsheviks have no right to await the Congress of Soviets. They ought to seize the power right now."* Ultimately, the *"Central Committee adopted the motion of Lenin as the only thinkable one: to form a government of the Bolsheviks only."* [vol. 3, pp. 131-2 and p. 299]

In case anyone is in doubt what Trotsky meant, he clarified it in the book he was writing when he was assassinated: *"After eight months of inertia and of democratic chaos, came the dictatorship of the Bolsheviks."* [Stalin, vol. 2, p. 242] This is confirmed by other sources:

"Within six weeks of the October revolution, Gorky's newspaper Novaya Zhizn lamented the rapidity with which life had run out of the Soviet movement: 'The slogan "All power to the Soviets," it concluded, 'had actually been transformed into the slogan "All power to the few Bolsheviks" . . . The Soviets decay, become enervated, and from day to day lose more of their prestige in the ranks of democracy.' The initial heroic stage -- the stage of mass involvement and unsullied dreams -- was already over." [Neil Harding,, **Leninism**, p. 253]

So where does this leave Rees' assertion that the Bolsheviks aimed to put power into the hands of working class organisations? Clearly, Rees' summary of both Trotsky's essay and the *"essence"* of Bolshevism leave a lot to be desired. As can be seen, the *"essence"* of Trotsky's essay and of Bolshevism is the importance of party power, not workers' power (as recognised by other members of the SWP: *"The masses needed to be profoundly convinced that there was no alternative to Bolshevik power."* [Tony Cliff, **Lenin**, vol. 2, p. 265]). Trotsky even provides us with an analogy which effectively and simply refutes Rees' claims. *"Just as the blacksmith cannot seize the red hot iron in his naked hand,"* Trotsky asserts, *"so the proletariat cannot directly seize power; it has to have an organisation accommodated to this task."* While paying lip service to the soviets as the organisation *"by means of which the proletariat can both overthrow the old power and replace it,"* he adds that *"the soviets by themselves do not settle the question"* as they may *"serve different goals according to the programme and leadership. The soviets receive their programme from the party . . . the revolutionary party represents the brain of the class. The problem of conquering the power can be solved only by a definite combination of party with soviets."* [**The History of the Russian Revolution**, vol. 3, pp. 160-1 and p. 163]

Thus the key organisation was the party, **not** the mass organisations of the working class. Indeed, as we discussed in [section H.3.8](#), Trotsky was quite explicit that such organisations could only become the state form of the proletariat under the party dictatorship. Significantly, Trotsky fails to indicate what would happen when these two powers clash. Certainly Trotsky's role in the Russian revolution tells us that the power of the party was more important to him than democratic control by workers through mass bodies (see the appendices on "[What happened during the Russian Revolution?](#)" and "[What was the Kronstadt Rebellion?](#)"). Indeed, as we have shown in [section H.3.8](#), Trotsky explicitly argued that a state was required to overcome the "wavering" in the working class which could be expressed by democratic decision making.

Given this legacy of viewing workers' organisations in purely instrumental terms, the opinion of Martov (the leading left-Menshevik during the Russian Revolution) seems appropriate. He argued that "*[a]t the moment when the revolutionary masses expressed their emancipation from the centuries old yoke of the old State by forming 'autonomous republics of Kronstadt' and trying Anarchist experiments such as 'workers' control,' etc. -- at that moment, the 'dictatorship of the proletariat and the poorest peasantry' (said to be incarnated in the real dictatorship of the opposed 'true' interpreters of the proletariat and the poorest peasantry: the chosen of Bolshevist Communism) could only consolidate itself by first dressing itself in such Anarchist and anti-State ideology.*" [**The State and Socialist Revolution**, p. 47] As can be seen, Martov has a point. As the text used as evidence that the Bolsheviks aimed to give power to workers organisations shows, this was **not** an aim of the Bolshevik party. Rather, such workers organs were seen purely as a means to the end of party power.

It is for this reason that anarchists argue for direct working class self-management of society. When we argue that working class organisations must be the framework of a free society they mean it. We do not equate party power with working class power or think that "*All power to the Soviets*" is possible if they immediately delegate that power to the leaders of the party. This is for obvious reasons:

*"If the revolutionary means are out of their hands, if they are in the hands of a techno-bureaucratic elite, then such an elite will be in a position to direct to their own benefit not only the course of the revolution, but the future society as well. If the proletariat are to **ensure** that an elite will not control the future society, they must prevent them from controlling the course of the revolution."* [Alan Carter, **Marx: A Radical Critique**, p. 165]

Thus the slogan "*All power to the Soviets*" for anarchists means exactly that -- organs for the working class to run society directly, based on mandated, recallable delegates. As such, this slogan fitted perfectly with our ideas, as anarchists had been arguing since the 1860's that such workers' councils were both a weapon of class struggle against capitalism and the framework of the future libertarian society. For the Bolshevik tradition, that slogan simply means that a Bolshevik government will be formed over and above the soviets. The difference is important, "*for the Anarchists declared, if 'power' really should belong to the soviets, it could not belong to the Bolshevik party, and if it should belong to that Party, as the Bolsheviks envisaged, it could not belong to the soviets.*" [Voline, **The Unknown**

Revolution, p. 213] Reducing the soviets to simply executing the decrees of the central (Bolshevik) government and having their All-Russian Congress be able to recall the government (i.e. those with **real** power) does not equal "*all power*," quite the reverse -- the soviets will simply be a fig-leaf for party power.

In summary, rather than aim to place power into the hands of workers' organisations, most Marxists do not. Their aim is to place power into the hands of the party. Workers' organisations are simply means to this end and, as the Bolshevik regime showed, if they clash with that goal, they will be simply be disbanded. However, we must stress that not all Marxist tendencies subscribe to this. The council communists, for example, broke with the Bolsheviks precisely over this issue, the difference between party and class power.

H.3.12 Is big business the precondition for socialism?

A key idea in most forms of Marxism is that the evolution of capitalism itself will create the preconditions for socialism. This is because capitalism tends to result in big business and, correspondingly, increased numbers of workers subject to the "*socialised*" production process within the workplace. The conflict between the socialised means of production and their private ownership is at the heart of the Marxist case for socialism. Engels writes:

*"Then came the concentration of the means of production and of the producers in large workshops and manufacturies, their transformation into actual socialised means of production and socialised producers. But the socialised producers and means of production and their products were still treated, after this change, just as they had been before . . . the owner of the instruments of labour . . . appropriated to himself . . . exclusively the product of the **labour of others**. Thus, the product now produced socially were not appropriated by those who actually set in motion the means of production and actually produced the commodities, but by the **capitalists**. . . The mode of production is subjected to this [individual or private] form of appropriation, although it abolishes the conditions upon which the latter rests.*

"This contradiction, which gives to the new mode of production its capitalistic character, contains the germ of the whole of the social antagonisms of today." [Marx-Engels Reader, p. 704]

It is the economic crises of capitalism which show this contradiction between socialised production and capitalist appropriation the best. Indeed, the "*fact that the socialised organisation of production within the factory has developed so far that it has become incompatible with the anarchy of production in society, which exists side by side with and dominates it, is brought home to the capitalists themselves by the violent concentration of capital that occurs during crises.*" The pressures of socialised production results in capitalists merging their properties "*in a particular branch of industry in a particular country*" into "*a trust, a union for the purpose of regulating production.*" In this way, "*the production of*

*capitalistic society capitulates to the production upon a definite plan of the invading socialistic society." This "transformation" can take the form of "joint-stock companies and trusts, or into state ownership." Even state ownership does not change the "capitalist relation" although this does have "concealed within it" the "technical conditions that form the elements of that solution." This "shows itself the way to accomplishing this revolution. **The proletariat seizes political power and turns the means of production into state property.**" [Op. Cit., p. 709, p. 710, p. 711, p. 712 and p. 713]*

Thus the centralisation and concentration of production into bigger and bigger units, into big business, is seen as the evidence of the need for socialism. It provides the objective grounding for socialism, and, in fact, this analysis is what makes Marxism "*scientific socialism*." This process explains how human society develops through time:

"In the social production of their life, men enter into definite relations that are indispensable and independent of their will, relations of production which correspond to a definite stage of development of their material productive forces. The sum total of these relations of production constitutes the economic structure of society, the real foundation, on which rises a legal and political superstructure and to which correspond definite forms of social consciousness. . . At a certain stage of their development, the material productive forces come in conflict with the existing relations of production or -- what is but a legal expression for the same thing -- with the property relations within which they have been at work hitherto. From forms of development of the productive forces these relations turn into their fetters. Then begins an epoch of social revolution. With the change of the economic foundation the entire immense superstructure is more or less rapidly transformed." [Marx, **Op. Cit.**, pp. 4-5]

The obvious conclusion to be drawn from this is that socialism will come about due to tendencies inherent within the development of capitalism. The "*socialisation*" of labour implied by collective labour within a firm grows steadily as capitalist companies grow larger and larger. The objective need for socialism is therefore created and so, for most Marxists, "**big is beautiful**." Indeed, some Leninists have invented terminology to describe these aspects of the "*invading socialistic society*" associated with the rise of big business. They contrast the "*law of planning*" associated with the conscious planning of economic activity on a wider and wider scale by large companies to the "*law of value*" which operates in the market. In other words, that the increased size of capital means that more and more of the economy is subject to the despotism of the owners and managers of capital and so the "*anarchy*" of the market is slowly replaced with the conscious planning of resources. Marxists sometimes call this the "*objective socialisation of labour*" (to use Mandel's term).

Therefore, there is a tendency for Marxists to see the increased size and power of big business as providing objective evidence for socialism, which will bring these socialistic tendencies within capitalism to full light and full development. Needless to say, most will argue that socialism, while developing planning fully, will replace the autocratic and hierarchical planning of big business with democratic, society-wide planning.

This position, for anarchists, has certain problems associated with it. One key drawback, as we discuss in the [next section](#), is it focuses attention away from the internal organisation within the workplace and industry onto ownership and links between economic units. It ends up confusing capitalism with the market relations between firms rather than identifying it with its essence, the labour market and the wage slavery this generates. This meant that many Marxists considered that the basis of a socialist economy was guaranteed once property was nationalised. The anarchist critique that this simply replaced a multitude of bosses with one, the state, was (and is) ignored.

The other key problem is that such a perspective tends to dismiss as irrelevant the way production is managed. Rather than seeing socialism as being dependent on workers' management of production, this position ends up seeing socialism as being dependent on organisational links between workplaces, as exemplified by big business under capitalism. Thus the "*relations of production*" which matter are **not** those associated with wage labour but rather those associated with the market. This can be seen from the famous comment in **The Manifesto of the Communist Party**. The bourgeoisie, it argues "*cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society.*" [Marx-Engels Reader, p. 476] But the one relation of production it **cannot** revolutionise is the one generated by the wage labour at the heart of capitalism, the hierarchical relations at the point of production. As such, it is clear that by "*relations of production*" Marx and Engels meant something else than wage slavery, the internal organisation of what they term "*socialised production.*"

Capitalism is, in general, as dynamic as Marx and Engels stressed. It transforms the means of production, the structure of industry and the links between workplaces constantly. Yet it only modifies the form of the organisation of labour, not its content. No matter how it transforms machinery and the internal structure of companies, the workers are still wage slaves. At best, it simply transforms much of the hierarchy which governs the workforce into hired managers. This does not transform the fundamental social relationship of capitalism, however. Thus the "*relations of production*" which prefigure socialism is, precisely, those associated with the "*socialisation of the labour process*" which occurs **within** capitalism and are no way antagonistic to it.

This is confirmed when Marx, in his polemic against Proudhon, argues that social relations "*are closely bound up with productive forces. In acquiring new productive forces men change their mode of production; and in changing their mode of production, in changing the way of earning their living, they change their social relations. The hand-mill gives you society with the feudal lord; the steam-mill, society with the industrial capitalist.*" [Collected Works, vol. 6, p. 166] On the face of it, this had better **not** be true. After all, the aim of socialism is to expropriate the property of the industrial capitalist. If the social relationships **are** dependent on the productive forces then, clearly, socialism is impossible as it will have to be based, initially, on the legacy of capitalism. Fortunately, the way a workplace is managed is not predetermined by the technological base of society. As is obvious, a steam-mill can be operated by a co-operative, so making the industrial capitalist redundant. The claim that a given technological-level implies a specific social structure is, therefore, wrong. However, it does suggest that our comments that, for Marx and Engels, the new "*social relationships*" which develop under capitalism which imply

socialism are relations between workplaces, **not** those between individuals and classes are correct. The implications of this position became clear during the Russian revolution.

Later Marxists built upon this "scientific" groundwork. Lenin, for example, argued that *"the difference between a socialist revolution and a bourgeois revolution is that in the latter case there are ready made forms of capitalist relationships; Soviet power [in Russia] does not inherit such ready made relationships, if we leave out of account the most developed forms of capitalism, which, strictly speaking, extended to a small top layer of industry and hardly touched agriculture."* [**Collected Works**, vol. 27, p. 90] Thus, for Lenin, "socialist" relationships are generated within big business, relationships "socialism" would "inherit" and universalise. As such, his comments fit in with the analysis of Marx and Engels we have presented above. However, his comments also reveal that Lenin had no idea that socialism meant the transformation of the relations of production, i.e. workers managing their own activity. This, undoubtedly, explains the systematic undermining of the factory committee movement by the Bolsheviks in favour of state control we discuss in [section 10](#) of the appendix on ["What happened during the Russian Revolution?"](#).

The idea that socialism involved simply taking over the state and nationalising the *"objectively socialised"* means of production can be seen in both mainstream social-democracy and its Leninist child. Hilferding, for example, wrote **Finance Capital** which argued that capitalism was evolving into a highly centralised economy, run by big banks and big firms. All that was required to turn this into socialism would be its nationalisation:

"Once finance capital has brought the most important branches of production under its control, it is enough for society, through its conscious executive organ -- the state conquered by the working class -- to seize finance capital in order to gain immediate control of these branches of production. . . taking possession of six large Berlin banks would . . . greatly facilitate the initial phases of socialist policy during the transition period, when capitalist accounting might still prove useful." [pp. 367-8]

Lenin basically disagreed with this only in-so-far as the party of the proletariat would take power via revolution rather than by election (*"the state conquered by the working class"* equals the election of a socialist party). Lenin took it for granted that the difference between Marxists and anarchists is that *"the former stand for centralised, large-scale communist production, while the latter stand for disconnected small production."* The obvious implication of this is that anarchist views *"express, not the future of bourgeois society, which is striving with irresistible force towards the socialisation of labour, but the present and even the past of that society, the domination of blind chance over the scattered and isolated small producer."* [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 261 and p. 205]

As we discuss in more detail in [section 8](#) of the appendix on ["What happened during the Russian Revolution?"](#), Lenin applied this perspective during the Russian Revolution. For example, he argued in 1917 that his immediate aim was for a *"state capitalist"* economy, this being a necessary stage to socialism. As he put it, *"socialism is merely the next step forward from state-capitalist monopoly . . ."*

*socialism is merely state-capitalist monopoly which is made to serve the interests of the whole people and has to that extent **ceased** to be capitalist monopoly.*" [Selected Works, vol. 2, p. 211]

The Bolshevik road to "socialism" ran through the terrain of state capitalism and, in fact, simply built upon its institutionalised means of allocating resources and structuring industry. As Lenin put it, *"the modern state possesses an apparatus which has extremely close connections with the banks and syndicates, an apparatus which performs an enormous amount of accounting and registration work . . . This apparatus must not, and should not, be smashed. It must be wrestled from the control of the capitalists,"* it *"must be subordinated to the proletarian Soviets"* and *"it must be expanded, made more comprehensive, and nation-wide."* This meant that the Bolsheviks would *"not invent the organisational form of work, but take it ready-made from capitalism"* and *"borrow the best models furnished by the advanced countries."* [Op. Cit., p. 365 and p. 369]

The institutional framework of capitalism would be utilised as the principal (almost exclusive) instruments of "socialist" transformation. *"Without big banks Socialism would be impossible,"* argued Lenin, as they *"are the 'state apparatus' which we need to bring about socialism, and which we **take ready-made** from capitalism; our task here is merely to **lop off** what capitalistically mutilates this excellent apparatus, to make it **even bigger**, even more democratic, even more comprehensive. A single State Bank, the biggest of the big . . . will constitute as much as nine-tenths of the **socialist** apparatus. This will be country-wide book-keeping, country-wide accounting of the production and distribution of goods."* While this is *"not fully a state apparatus under capitalism,"* it *"will be so with us, under socialism."* For Lenin, building socialism was easy. This *"nine-tenths of the socialist apparatus"* would be created *"at one stroke, by a single decree."* [Op. Cit., p. 365]

Once in power, the Bolsheviks implemented this vision of socialism being built upon the institutions created by monopoly capitalism. Moreover, Lenin quickly started to advocate and implement the most sophisticated capitalist methods of organising labour, including *"one-man management"* of production, piece-rates and Taylorism (*"scientific management"*). This was not done accidentally or because no alternative existed (as we discuss in [section 12](#) of the appendix on ["What happened during the Russian Revolution?"](#)). As Gustav Landauer commented, when mainstream Marxists *"call the capitalist factory system a social production . . . we know the real implications of their socialist forms of labour."* [For **Socialism**, p. 70] As can be seen, this glorification of large-scale, state-capitalist structures can be traced back to Marx and Engels, while Lenin's support for capitalist production techniques can be explained by mainstream Marxism's lack of focus on the social relationships at the point of production.

For anarchists, the idea that socialism can be built on the framework provided to us by capitalism is simply ridiculous. Capitalism has developed industry and technology to further the ends of those with power, namely capitalists and managers. Why should they use that power to develop technology and industrial structures which leads to workers' self-management and power rather than technologies and structures which enhance their own position vis-à-vis their workers and society as a whole? As such, technological and industrial development is not *"neutral"* or just the *"application of science."* They are shaped by class struggle and class interest and cannot be used for different ends. Simply put, socialism

will need to develop **new** forms of economic organisation based on socialist principles. As such, the concept that monopoly capitalism paves the way for socialist society is rooted in the false assumption that the forms of social organisation accompanying capital concentration are identical with the socialisation of production, that the structures associated with collective labour under capitalism are the same as those required under socialism to achieve **genuine** socialisation. This false assumption, as can be seen, goes back to Engels and was shared by both Social-Democracy and Leninism despite their other differences.

While anarchists are inspired by a vision of a non-capitalist, decentralised, diverse society based on appropriate technology and appropriate scale, mainstream Marxism is not. Rather, it sees the problem with capitalism is that its institutions are not centralised and big enough. As Alexander Berkman correctly argues:

"The role of industrial decentralisation in the revolution is unfortunately too little appreciated. . . Most people are still in the thrall of the Marxian dogma that centralisation is 'more efficient and economical.' They close their eyes to the fact that the alleged 'economy' is achieved at the cost of the workers' limb and life, that the 'efficiency' degrades him to a mere industrial cog, deadens his soul, kills his body. Furthermore, in a system of centralisation the administration of industry becomes constantly merged in fewer hands, producing a powerful bureaucracy of industrial overlords. It would indeed be the sheerest irony if the revolution were to aim at such a result. It would mean the creation of a new master class." [The ABC of Anarchism, pp. 80-1]

That mainstream Marxism is soaked in capitalist ideology can be seen from Lenin's comments that when *"the separate establishments are amalgamated into a single syndicate, this economy [of production] can attain tremendous proportions, as economic science teaches us."* [Op. Cit., p. 200] Yes, **capitalist** economic science, based on **capitalist** definitions of efficiency and economy and on **capitalist** criteria! That Bolshevism bases itself on centralised, large scale industry because it is more "efficient" and "economic" suggests nothing less than that its "socialism" will be based on the same priorities of capitalism. This can be seen from Lenin's idea that Russia had to learn from the advanced capitalist countries, that there was only one way to develop production and that was by adopting capitalist methods of "rationalisation" and management. In the words of Luigi Fabbri:

"Marxist communists, especially Russian ones, are beguiled by the distant mirage of big industry in the West or America and mistake for a system of production what is only a typically capitalist means of speculation, a means of exercising oppression all the more securely; and they do not appreciate that that sort of centralisation, far from fulfilling the real needs of production, is, on the contrary, precisely what restricts it, obstructs it and applies a brake to it in the interests of capital."

"Whenever [they] talk about 'necessity of production' they make no distinction between those necessities upon which hinge the procurement of a greater quantity and higher

quality of products -- this being all that matters from the social and communist point of view -- and the necessities inherent in the bourgeois regime, the capitalists' necessity to make more profit even should it mean producing less to do so. If capitalism tends to centralise its operations, it does so not for the sake of production, but only for the sake of making and accumulating more money." ["Anarchy and 'Scientific' Communism", in **The Poverty of Statism**, pp. 13-49, Albert Meltzer (ed.), pp. 21-22]

Efficiency, in other words, does not exist independently of a given society or economy. What is considered "efficient" under capitalism may be the worse form of inefficiency in a free society. The idea that socialism may have **different** priorities, need **different** methods of organising production, have **different** visions of how an economy was structured than capitalism, is absent in mainstream Marxism. Lenin thought that the institutions of bourgeois economic power, industrial structure and capitalist technology and techniques could be "captured" and used for other ends. Ultimately, though, capitalist means and organisations can only generate capitalist ends. It is significant that the "*one-man management*," piece-work, Taylorism, etc. advocated and implemented under Lenin are usually listed by his followers as evils of Stalinism and as proof of its anti-socialist nature.

Equally, it can be argued that part of the reason why large capitalist firms can "plan" production on a large scale is because they reduce the decision making criteria to a few variables, the most significant being profit and loss. That such simplification of input data may result in decisions which harm people and the environment goes without a saying. "*The lack of context and particularity*," James C. Scott correctly notes, "*is not an oversight; it is the necessary first premise of any large-scale planning exercise. To the degree that the subjects can be treated as standardised units, the power of resolution in the planning exercise is enhanced. Questions posed within these strict confines can have definitive, quantitative answers. The same logic applies to the transformation of the natural world. Questions about the volume of commercial wood or the yield of wheat in bushels permit more precise calculations than questions about, say, the quality of the soil, the versatility and taste of the grain, or the well-being of the community. The discipline of economics achieves its formidable resolving power by transforming what might otherwise be considered qualitative matters into quantitative issues with a single metric and, as it were, a bottom line: profit or loss.*" [**Seeing like a State**, p. 346] Whether a socialist society could factor in all the important inputs which capitalism ignores within an even more centralised planning structure is an important question. This does not mean that anarchists argue for "small-scale" production as many Marxists, like Lenin, assert (as we prove in [section I.3.8](#), anarchists have always argued for **appropriate** levels of production and scale). It is simply to raise the possibility of what works under capitalism may be undesirable from a perspective which values people and planet instead of power and profit.

As should be obvious, anarchism is based on critical evaluation of technology and industrial structure, rejecting the whole capitalist notion of "progress" which has always been part of justifying the inhumanities of the status quo. Just because something is rewarded by capitalism it does not mean that it makes sense from a human or ecological perspective. This informs our vision of a free society and the current struggle. We have long argued that that capitalist methods cannot be used for socialist ends. In our battle to democratise and socialise the workplace, in our awareness of the importance of collective

initiatives by the direct producers in transforming their work situation, we show that factories are not merely sites of production, but also of reproduction -- the reproduction of a certain structure of social relations based on the division between those who give orders and those who take them, between those who direct and those who execute.

It goes without saying that anarchists recognise that a social revolution will have to start with the industry and technology which is left to it by capitalism and that this will have to be expropriated by the working class (this expropriation will, of course, involve transforming it and, in all likelihood, rejecting of numerous technologies, techniques and practices considered as "efficient" under capitalism). This is **not** the issue. The issue is who expropriates it and what happens to it next. For anarchists, the means of life are expropriated directly by society, for most Marxists they are expropriated by the state. For anarchists, such expropriation is based workers' self-management and so the fundamental capitalist "*relation of production*" (wage labour) is abolished. For most Marxists, state ownership of production is considered sufficient to ensure the end of capitalism (with, if we are lucky, some form of "*workers' control*" over those state officials who do management production -- see [section H.3.14](#)).

In contrast to the mainstream Marxist vision of socialism being based around the institutions inherited from capitalism, anarchists have raised the idea that the "*free commune*" would be the "*medium in which the ideas of modern Socialism may come to realisation.*" These "*communes would federate*" into wider groupings. Labour unions (or other working class organs created in the class struggle such as factory committees) were "*not only an instrument for the improvement of the conditions of labour, but also of becoming an organisation which might . . . take into its hands the management of production.*" Large labour associations would "*come into existence for the inter-communal service[s].*" Such communes and workers' organisations as the basis of "*Socialist forms of life could find a much easier realisation*" than the "*seizure of all industrial property by the State, and the State organisation of agriculture and industry.*" Thus railway network "*could be much better handled by a Federated Union of railway employees, than by a State organisation.*" Combined with co-operation "*both for production and for distribution, both in industry and agriculture,*" workers' self-management of production would create "*samples of the bricks*" of the future society ("*even samples of some of its rooms*"). [Kropotkin, **The Conquest of Bread**, pp. 21-23]

This means that anarchists also root our arguments for socialism in a scientific analysis of tendencies within capitalism. However, in opposition to the analysis of mainstream Marxism which focuses on the objective tendencies within capitalist development, anarchists emphasis the **oppositional** nature of socialism to capitalism. Both the "*law of value*" and the "*law of planning*" are tendencies **within** capitalism, that is aspects of capitalism. Anarchists encourage class struggle, the direct conflict of working class people against the workings of all capitalism's "laws". This struggle produces **mutual aid** and the awareness that we can care best for our own welfare if we **unite** with others -- what we can loosely term the "*law of co-operation*". This law, in contrast to the Marxian "*law of planning*" is based on working class subjectively and develops within society only in **opposition** to capitalism. As such, it provides the necessary understanding of where socialism will come from, from **below**, in the spontaneous self-activity of the oppressed fighting for their freedom.

This means that the basic structures of socialism will be the organs created by working class people in their struggles against exploitation and oppress (see sections [H.1.4](#) and [I.2.3](#) for more details). Gustav Landauer's basic insight is correct (if his means were not totally so) when he wrote that "*Socialism will not grow out of capitalism but away from it*" [**Op. Cit.**, p. 140] In other words, tendencies **opposed** to capitalism rather than ones which are part and parcel of it.

Anarchism's recognition of the importance of these tendencies towards mutual aid within capitalism is a key to understanding what anarchists do in the here and now, as will be discussed in [section J](#). In addition, it also laid the foundation of understanding the nature of an anarchist society and what creates the framework of such a society in the here and now. Anarchists do not abstractly place a better society (anarchy) against the current, oppressive one. Instead, we analysis what tendencies exist within current society and encourage those which empower and liberate people. Based on these tendencies, anarchists propose a society which develops them to their logical conclusion. Therefore an anarchist society is created not through the developments within capitalism, but in social activity against it. [Section I](#) indicates what such a society would be like and where its framework comes from.

H.3.13 Why is state socialism just state capitalism?

For anarchists, the idea that socialism can be achieved via state ownership is simply ridiculous. For reasons which will become abundantly clear, anarchists argue that any such "*socialist*" system would simply be a form of "*state capitalism*." Such a regime would not fundamentally change the position of the working class, whose members would simply be wage slaves to the state bureaucracy rather than to the capitalist class.

However, before beginning our discussion of why anarchists think this we need to clarify our terminology. This is because the expression "*state capitalism*" has three distinct, if related, meanings in socialist (particularly Marxist) thought. Firstly, "*state capitalism*" was/is used to describe the current system of big business subject to extensive state control (particularly if, as in war, the capitalist state accrues **extensive** powers over industry). Secondly, it was used by Lenin to describe his immediate aims after the October Revolution, namely a regime in which the capitalists would remain but would be subject to a system of state control inherited by the new "*proletarian*" state from the old capitalist one (see [section 10](#) of the appendix on "[What happened during the Russian Revolution?](#)" for details). The third use of the term is to signify a regime in which the state **replaces** the capitalist class **totally** via nationalisation of the means of production. In such a regime, the state would own, manage and accumulate capital rather than individual capitalists.

Anarchists are opposed to all three systems described by the term "*state capitalism*." Here we concentrate on the third definition, arguing that state socialism would be better described as "*state capitalism*" as state ownership of the means of life does not get to the heart of capitalism, namely wage labour. Rather it simply replaces private bosses with the state and changes the form of property (from private to state property) rather than getting rid of it.

The idea that socialism simply equals state ownership (nationalisation) is easy to find in the works of Marxism. The **Communist Manifesto**, for example, states that the "*proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production into the hands of the State.*" This meant the "[c]entralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly," plus the "[c]entralisation of the means of communication and transport in the hands of the State," "[e]xtension of factories and instruments of production owned by the State" and the "[e]stablishment of industrial armies, especially for agriculture." [**Marx-Engels Selected Works**, pp. 52-3]

Engels repeats this formula thirty-two years later in *Socialism: Utopian and Scientific* by asserting that capitalism itself "*forces on more and more the transformation of the vast means of production, already socialised, into state property. The proletariat seizes political power and turns the means of production into state property.*" Socialism is **not** equated with state ownership of productive forces by a capitalist state, "*but concealed within it are the technical conditions that form the elements of that solution*" to the social problem. It simply "*shows itself the way to accomplishing this revolution. The proletariat seizes political power and turns the means of production into state property.*" Thus state ownership **after** the proletariat seizes power is the basis of socialism, when by this "*first act*" of the revolution the state "*really constitutes itself as the representative of the whole of society.*" [**Marx-Engels Reader**, p. 713, p. 712 and p. 713]

What is significant from these programmatic statements on the first steps of socialism is the total non-discussion of what is happening at the point of production, the non-discussion of the social relations in the workplace. Rather we are subjected to discussion of "*the contradiction between socialised production and capitalist appropriation*" and claims that while there is "*socialised organisation of production within the factory,*" this has become "*incompatible with the anarchy of production in society.*" The obvious conclusion to be drawn is that "socialism" will inherit, without change, the "*socialised*" workplace of capitalism and that the fundamental change is that of ownership: "*The proletariat seized the public power, and by means of this transforms the socialised means of production . . . into public property. By this act, the proletariat frees the means of production from the character of capital they have thus far borne.*" [**Op. Cit.**, p. 709 and p. 717]

That the Marxist movement came to see state ownership rather than workers' management of production as the key issue is hardly surprising. Thus we find leading Social-Democrats arguing that socialism basically meant the state, under Social-Democratic control of course, acquiring the means of production and nationalising them. Hilferding presented what was Marxist orthodoxy at the time when he argued that in "*a communist society*" production "*is consciously determined by the social central organ,*" which would decide "*what is to be produced and how much, where and by whom.*" While this information is determined by the market forces under capitalism, in socialism it "*is given to the members of the socialist society by their authorities . . . we must derive the undisturbed progress of the socialist economy from the laws, ordinances and regulations of socialist authorities.*" [quoted by Nikolai Bukharin, **Economy Theory of the Leisure Class**, p. 157] As we discuss in the appendix on "[What happened during the Russian Revolution?](#)", the Bolsheviks inherited this concept of "socialism" and

implemented it.

This vision of society in which the lives of the population are controlled by "authorities" in a "social central organ" which tell the workers what to do, while in line with the **Communist Manifesto**, seems less that appealing. It also shows why state socialism is not socialism at all. Thus George Barrett:

"If instead of the present capitalist class there were a set of officials appointed by the Government and set in a position to control our factories, it would bring about no revolutionary change. The officials would have to be paid, and we may depend that, in their privileged positions, they would expect good remuneration. The politicians would have to be paid, and we already know their tastes. You would, in fact, have a non-productive class dictating to the producers the conditions upon which they were allowed to use the means of production. As this is exactly what is wrong with the present system of society, we can see that State control would be no remedy, while it would bring with it a host of new troubles . . . under a governmental system of society, whether it is the capitalism of today or a more a perfected Government control of the Socialist State, the essential relationship between the governed and the governing, the worker and the controller, will be the same; and this relationship so long as it lasts can be maintained only by the bloody brutality of the policeman's bludgeon and the soldier's rifle." [The Anarchist Revolution, pp. 8-9]

The key to seeing why state socialism is simply state capitalism can be found in the lack of change in the social relationships at the point of production. The workers are still wage slaves, employed by the state and subject to its orders. As Lenin stressed in **State and Revolution**, under Marxist Socialism "[a]ll citizens are transformed into hired employees of the state . . . All citizens become employees and workers of a single country-wide state 'syndicate' . . . The whole of society will have become a single office and a single factory, with equality of labour and pay." [Lenin, **Selected Works**, vol. 2, p. 312] Given that Engels had argued, against anarchism, that a factory required subordination, authority, lack of freedom and "a veritable despotism independent of all social organisation," Lenin's idea of turning the world into one big factory takes on an extremely frightening nature. [Marx-Engels Reader, p. 731] A reality which one anarchist described in 1923 as being the case in Lenin's Russia:

*"The nationalisation of industry, removing the workers from the hands of individual capitalists, delivered them to the yet more rapacious hands of a single, ever-present capitalist boss, the State. The relations between the workers and this new boss are the same as earlier relations between labour and capital, with the sole difference that the Communist boss, the State, not only exploits the workers, but also punishes them himself . . . Wage labour has remained what it was before, except that it has taken on the character of an obligation to the State . . . It is clear that in all this we are dealing with a simple substitution of State capitalism for private capitalism." [Peter Arshinov, **History of the Makhnovist Movement**, p. 71]*

All of which makes Bakunin's comments seem justified (as well as stunningly accurate):

*"Labour financed by the State -- such is the fundamental principle of **authoritarian Communism**, of State Socialism. The State, **having become the sole proprietor . . . will have become sole capitalist, banker, money-lender, organiser, director of all national work, and the distributor of its profits.**" [The Political Philosophy of Bakunin, p. 293]*

Such a system, based on those countries "where modern capitalist development has reached its highest point of development" would see "the gradual or violent expropriation of the present landlords and capitalists, or of the appropriation of all land and capital by the State. In order to be able to carry out its great economic and social mission, this State will have to be very far-reaching, very powerful and highly centralised. It will administer and supervise agriculture by means of its appointed managers, who will command armies of rural workers organised and disciplined for that purpose. At the same time, it will set up a single bank on the ruins of all existing banks." Such a system, Bakunin correctly predicted, would be "a barracks regime for the proletariat, in which a standardised mass of men and women workers would wake, sleep, work and live by rote; a regime of privilege for the able and the clever." [Michael Bakunin: Selected Writings, p. 258 and p. 259]

Proudhon, likewise was well aware that state ownership did not mean the end of private property, rather it meant a change in who ordered the working class about. "We do not want," he stated, "to see the State confiscate the mines, canals and railways; that would be to add to monarchy, and more wage slavery. We want the mines, canals, railways handed over to democratically organised workers' associations" which would be the start of a "vast federation of companies and societies woven into the common cloth of the democratic social Republic." He contrasted workers' associations run by and for their members to those "subsidised, commanded and directed by the State," which would crush "all liberty and all wealth, precisely as the great limited companies are doing." [No Gods, No Masters, vol. 1, p. 62 and p. 105]

Simply put, if workers did not directly manage their own work then it matters little who formally owns the workplaces in which they toil. As Maurice Brinton argues, libertarian socialists "hold that the 'relations of production' -- the relations which individuals or groups enter into with one another in the process of producing wealth -- are the essential foundations of any society. A certain pattern of relations of production is the common denominator of all class societies. This pattern is one in which the producer does not dominate the means of production but on the contrary both is 'separated from them' and from the products of his [or her] own labour. In all class societies the producer is in a position of subordination to those who manage the productive process. Workers' management of production -- implying as it does the total domination of the producer over the productive process - is not for us a marginal matter. It is the core of our politics. It is the only means whereby authoritarian (order-giving, order-taking) relations in production can be transcended and a free, communist or anarchist, society introduced." He goes on to note that "the means of production may change hands (passing for instance from private hands into those of a bureaucracy, collectively owning them) with out this revolutionising the relations of production. Under such circumstances -- and whatever the formal status of property -- the society is still a class society for production is still managed by an agency other than the producers themselves. Property relations, in other words, do not necessarily reflect the relations of production.

They may serve to mask them -- and in fact they often have." [**The Bolsheviks and Workers' Control**, pp. vii-vii]

As such, for anarchists (and libertarian Marxists) the idea that state ownership of the means of life (the land, workplaces, factories, etc.) is the basis of socialism is simply wrong. Therefore, *"Anarchism cannot look upon the coming revolution as a mere substitution . . . of the State as the universal capitalist for the present capitalists."* [Kropotkin, **Evolution and Environment**, p. 106] Given that the *"State organisation having always been . . . the instrument for establishing monopolies in favour of the ruling minorities, [it] cannot be made to work for the destruction of these monopolies. The anarchists consider, therefore, that to hand over to the State all the main sources of economic life -- the land, the mines, the railways, banking, insurance, and so on -- as also the management of all the main branches of industry . . . would mean to create a new instrument of tyranny. State capitalism would only increase the powers of bureaucracy and capitalism."* [**Kropotkin's Revolutionary Pamphlets**, p. 286] Needless to say, a society which was not democratic in the workplace would not remain democratic politically either. Either democracy would become as formal as it is within any capitalist republic or it would be replaced by dictatorship. So, without a firm base in the direct management of production, any "socialist" society would see working class social power ("*political power*") and liberty wither and die, just like a flower ripped out of the soil.

Unsurprisingly, given all this, we discover throughout history the co-existence of private and state property. Indeed, the nationalisation of key services and industries has been implemented under all kinds of capitalist governments and within all kinds of capitalist states (which proves the non-socialist nature of state ownership). Moreover, anarchists can point to specific events where the capitalist class has used nationalisation to undermine revolutionary gains by the working class. The best example by far is in the Spanish Revolution, when the Catalan government used nationalisation against the wave of spontaneous, anarchist inspired, collectivisation which had placed most of industry into the hand direct hands of the workers (see [section I.8](#)). The government, under the guise of legalising the gains of the workers, placed them under state ownership to stop their development, ensure hierarchical control and so class society.

A similar process occurred during the Russian Revolution under the Bolsheviks. Significantly, *"many managers, at least those who remained, appear to have preferred nationalisation (state control) to workers' control and co-operated with Bolshevik commissars to introduce it. Their motives are not too difficult to understand . . . The issue of who runs the plants -- who makes decisions -- is, and probably always will be, the crucial question for managers in any industrial relations system."* [Jay B. Sorenson, **The Life and Death of Soviet Trade Unionism**, pp. 67-8] As we discuss in the [next section](#), the managers and capitalists were not the only ones who disliked "*workers' control*," the Bolsheviks did so as well, who ensured that it was marginalised within a centralised system of state control based on nationalisation.

As such, anarchists think that a utterly false dichotomy has been built up in discussions of socialism, one which has served the interests of both capitalists and state bureaucrats. This dichotomy is simply that the economic choices available to humanity are "private" ownership of productive means (capitalism), or

state ownership of productive means (usually defined as "socialism"). In this manner, capitalist nations used the Soviet Union, and continue to use autocracies like North Korea, China, and Cuba as examples of the evils of "public" ownership of productive assets.

Anarchists see little distinction between "private" ownership of the means of life and "state" ownership. This is because the state is a highly centralised structure specifically designed to exclude mass participation and so, therefore, necessarily composed of a ruling administrative body. As such, the "public" cannot actually "own" the property the state claims to hold in its name. The ownership and thus control of the productive means is then in the hands of a ruling elite, the state administration (i.e. bureaucracy). Thus, the means of production and land of a state "socialist" regime are **not** publicly owned -- rather, they are owned by a bureaucratic elite, **in the name of the people**, a subtle but important distinction.

In this fashion, decisions about the allocation and use of the productive assets is not made by the people themselves, but by the administration, by economic planners. Similarly, in "private" capitalist economies, economic decisions are made by a coterie of managers. In both cases the managers make decisions which reflect their own interests and the interests of the owners (be it shareholders or the state bureaucracy) and **not** the workers involved or society as a whole. In both cases, economic decision-making is top-down in nature, made by an elite of administrators -- bureaucrats in the state socialist economy, capitalists or managers in the "private" capitalist economy. The much-lauded distinction of capitalism is that unlike the monolithic, centralised state socialist bureaucracy it has a **choice** of bosses (and choosing a master is not freedom). And given the similarities in the relations of production between capitalism and state "socialism," the obvious inequalities in wealth in so-called "socialist" states are easily explained. The relations of production and the relations of distribution are inter-linked and so inequality in terms of power in production means inequality in control of the social product, which will be reflected in inequality in terms of wealth.

In other words, private property exists if some individuals (or groups) control/own things which are used by other people. This means, unsurprising, that state ownership is just a form of property rather than the negation of it. If you have a highly centralised structure (as the state is) which plans and decides about all things within production, then this central administrative would be the real owner because it has the exclusive right to decide how things are used, **not** those using them. The existence of this central administrative strata excludes the abolition of property, replacing socialism or communism with state owned "property," i.e. **state** capitalism. As such, state ownership does **not** end wage labour and, therefore, social inequalities in terms of wealth and access to resources. Workers are still order-takers under state ownership (whose bureaucrats control the product of their labour and determine who gets what). The only difference between workers under private property and state property is the person telling them what to do. Simply put, the capitalist or company appointed manager is replaced by a state appointed one.

As anarcho-syndicalist Tom Brown stresses, when *"the many control the means whereby they live, they will do so by abolishing private ownership and establishing common ownership of the means of production, with workers' control of industry."* However, this is *"not to be confused with nationalisation*

and state control" as "ownership is, in theory, said to be vested in the people" but, in fact "control is in the hands of a small class of bureaucrats." Then "common ownership does not exist, but the labour market and wage labour go on, the worker remaining a wage slave to State capitalism." Simply put, common ownership "demands common control. This is possible only in a condition of industrial democracy by workers' control." [Syndicalism, p. 94] In summary:

"Nationalisation is not Socialisation, but State Capitalism . . . Socialisation . . . is not State ownership, but the common, social ownership of the means of production, and social ownership implies control by the producers, not by new bosses. It implies Workers' Control of Industry -- and that is Syndicalism." [Op. Cit., p. 111]

However, many Marxists (in particular Leninists) state they are in favour of both state ownership **and** "workers' control." As we discuss in more depth in [next section](#), while they mean the same thing as anarchists do by the first term, they have a radically different meaning for the second (it is for this reason modern-day anarchists generally use the term "workers' self-management"). To anarchist ears, the combination of nationalisation (state ownership) and "workers' control" (and even more so, self-management) simply expresses political confusion, a mishmash of contradictory ideas which simply hides the reality that state ownership, by its very nature, precludes workers' control. As such, anarchists reject such contradictory rhetoric in favour of "socialisation" and "workers' self-management of production." History shows that nationalisation will always undermine workers' control at the point of production and such rhetoric always paves the way for state capitalism.

Therefore, anarchists are against both nationalisation **and** privatisation, recognising both as forms of capitalism, of wage slavery. We believe in genuine public ownership of productive assets, rather than corporate/private or state/bureaucratic control. Only in this manner can the public address their own economic needs. Thus, we see a third way that is distinct from the popular "either/or" options forwarded by capitalists and state socialists, a way that is entirely more democratic. This is workers' self-management of production, based on social ownership of the means of life by federations of self-managed syndicates and communes.

For further discussion, see Kropotkin's discussion of "*The collectivist Wages System*" in **The Conquest of Bread** and selections from the British Anarchist Journal **Freedom** about the wide-scale nationalisation which took place after the end of the Second World War entitled **Neither Nationalisation Nor Privatisation: An Anarchist Approach**.

H.3.14 Don't Marxists believe in workers' control?

As we discussed in the [last section](#), anarchists consider the usual association of state ownership with socialism to be false. We argue that it is just another form of the wages system, of capitalism, albeit with the state replacing the capitalist. As such, state ownership, for anarchists, is simply state capitalism. Instead we urge socialisation based on workers' self-management of production. Libertarian Marxists concur.

Some mainstream Marxists, however, say they seek to combine state ownership with *"workers' control."* This can be seen from Trotsky, for example, who argued in 1938 for *"workers' control . . . the penetration of the workers' eye into all open and concealed springs of capitalist economy . . . workers' control becomes a school for planned economy. On the basis of the experience of control, the proletariat will prepare itself for direct management of nationalised industry when the hour for that eventuality strikes."* Modern day Leninists are often heard voicing support for what anarchists consider an oxymoron, namely *"nationalisation under worker' control."* This, it will be argued, proves that nationalisation (state control) is not *"state capitalism"* as we argued in the [last section](#), rather *"control is the first step along the road to the socialist guidance of economy."* [**The Death Agony of Capitalism and the Tasks of the Fourth International**, p. 73 and p. 74]

Anarchists are not convinced. This is because of two reasons. Firstly, because by *"workers' control"* anarchists and Leninists mean two radically different things. Secondly, when in **power** Trotsky advocated radically different ideas. Based on these reasons, anarchists view Leninist calls for *"workers' control"* simply as a means of gaining popular support, calls which will be ignored once the real aim, party power, has been achieved: it is an example of Trotsky's comment that *"[s]logans as well as organisational forms should be subordinated to the indices of the movement."* [**Op. Cit.**, p. 72] In other words, rather than express a commitment to the ideas of worker's control of production, mainstream Marxist use of the term *"workers' control"* is simply an opportunistic technique aiming at securing support for the party's seizure of power and once this is achieved it will be cast aside in favour of the first part of the demands, namely state ownership and so control. In making this claim anarchists feel they have more than enough evidence, evidence which many members of Leninist parties simply know nothing about.

We will look first at the question of terminology. Anarchists traditionally used the term *"workers' control"* to mean workers' full and direct control over their workplaces, and their work. However, after the Russian Revolution a certain ambiguity arose in using that term. This is because specific demands which were raised during that revolution were translated into English as *"workers' control"* when, in fact, the Russian meaning of the word (**kontroliia**) was far closer to *"supervision"* or *"steering."* Thus the term *"workers' control"* is used to describe two radically different concepts.

This can be seen from Trotsky when he argued that the workers should *"demand resumption, as public utilities, of work in private businesses closed as a result of the crisis. Workers' control in such case would be replaced by direct workers' management."* [**Op. Cit.**, p. 73] Why workers' employed in open capitalist firms were not considered suitable for *"direct workers' management"* is not explained, but the fact remains Trotsky clearly differentiated between management and control. For him, *"workers' control"* meant *"workers supervision"* over the capitalist who retained power. In other words, a system of *"dual power"* at the point of production (and, like all forms of dual power, essentially and inevitably unstable).

This vision of *"workers' control"* as simply supervision of the capitalist managers can be found in Lenin.

Rather than seeing "*workers' control*" as workers managing production directly, he always saw it in terms of workers' "*controlling*" those who did. It simply meant "*the country-wide, all-embracing, omnipresent, most precise and most conscientious **accounting** of the production and distribution of goods.*" He clarified what he meant, arguing for "*country-wide, all-embracing workers' control over the capitalists*" who would still manage production. Significantly, he considered that "*as much as nine-tenths of the **socialist** apparatus*" required for this "*country-wide **book-keeping**, country-wide **accounting** of the production and distribution of goods*" would be achieved by nationalising the "*big banks,*" which "*are the 'state apparatus' which we **need** to bring about socialism*" (indeed, this was considered "*something in the nature of the **skeleton** of socialist society*"). Over time, this system would move towards full socialism. [**Selected Works**, vol. 2, pp. 364-5, p. 366 and p. 365]

Thus, what Leninists mean by "*workers' control*" is radically different than what anarchists traditionally meant by that term (indeed, it was radically different from the workers' definition, as can be seen from a resolution of the Bolshevik dominated First Trade Union Congress which complained that "*the workers misunderstand and falsely interpret workers' control.*" [quoted by M. Brinton, **The Bolsheviks and Workers' Control**, p. 32]). It is for this reason that from the 1960s English speaking anarchists and other libertarian socialists have been explicit and have used the term "*workers' self-management*" rather than "*workers' control*" to describe their aims. Mainstream Marxists, however have continued to use the latter slogan, undoubtedly, as we note in [section H.3.5](#), to gain members from the confusion in meanings.

Secondly, there is the example of the Russian Revolution itself. Indeed, Trotsky is simply repeating the slogans used by the Bolsheviks in 1917. As historian S.A. Smith correctly summarises, the "*factory committees launched the slogan of workers' control of production quite independently of the Bolshevik party. It was not until May that the party began to take it up.*" However, Lenin used "*the term ['workers' control'] in a very different sense from that of the factory committees.*" In fact Lenin's "*proposals . . . [were] thoroughly statist and centralist in character, whereas the practice of the factory committees was essentially local and autonomous.*" [**Red Petrograd**, p. 154]

This is not all, this "*workers' control*" was always placed in a statist context and it would be exercised not by workers' organisations but rather by state capitalist institutions. In May 1917, Lenin was arguing for the "*establishment of state control over all banks, and their amalgamation into a single central bank; also control over the insurance agencies and big capitalist syndicates.*" He reiterated this framework later that year, arguing that "*the new means of control have been created not by us, but by capitalism in its military-imperialist stage*" and so "*the proletariat takes its weapons from capitalism and does not 'invent' or 'create them out of nothing.'*" [**Op. Cit.**, p. 112, p. 367 and p. 599] The factory committees were added to this "*state capitalist*" system but they played only a very minor role in it. Indeed, this system of state control was designed to limit the power of the factory committees:

"One of the first decrees issues by the Bolshevik Government was the Decree on Workers' Control of 27 November 1917. By this decree workers' control was institutionalised . . . Workers' control implied the persistence of private ownership of the means of production,

though with a 'diminished' right of disposal. The organs of workers' control, the factory committees, were not supposed to evolve into workers' management organs after the nationalisation of the factories. The hierarchical structure of factory work was not questioned by Lenin . . . To the Bolshevik leadership the transfer of power to the working class meant power to its leadership, i.e. to the party. Central control was the main goal of the Bolshevik leadership. The hasty creation of the VSNKh (the Supreme Council of the National Economy) on 1 December 1917, with precise tasks in the economic field, was a significant indication of fact that decentralised management was not among the projects of the party, and that the Bolsheviks intended to counterpose central direction of the economy to the possible evolution of workers' control toward self-management." [Silvana Malle, **The Economic Organisation of War Communism, 1918-1921**, p. 47]

Once in power, the Bolsheviks soon turned away from even this limited vision of workers' control and in favour of *"one-man management."* Lenin raised this idea in late April 1918 and it involved granting state appointed *"individual executives dictatorial powers (or 'unlimited' powers)."* Large-scale industry required *"thousands subordinating their will to the will of one,"* and so the revolution *"demands"* that *"the people unquestioningly obey the single will of the leaders of labour."* Lenin's *"superior forms of labour discipline"* were simply hyper-developed capitalist forms. The role of workers in production was the same, but with a novel twist, namely *"unquestioning obedience to the orders of individual representatives of the Soviet government during the work."* This support for wage slavery was combined with support for capitalist management techniques. *"We must raise the question of piece-work and apply and test it in practice,"* argued Lenin, *"we must raise the question of applying much of what is scientific and progressive in the Taylor system; we must make wages correspond to the total amount of goods turned out."* [Lenin, **Op. Cit.**, p. 610, p. 611, p. 612 and pp. 602-3]

This vision had already been applied in practice, with the *"first decree on the management of nationalised enterprises in March 1918"* which had *"established two directors at the head of each enterprise . . . Both directors were appointed by the central administrators."* An *"economic and administrative council"* was also created in the workplace, but this *"did not reflect a syndicalist concept of management."* Rather it included representatives of the employees, employers, engineers, trade unions, the local soviets, co-operatives, the local economic councils and peasants. This composition *"weakened the impact of the factory workers on decision-making . . . The workers' control organs [the factory committees] remained in a subordinate position with respect to the council."* Once the Civil War broke out in May 1918, this process was accelerated. By 1920, most workplaces were under one-man management and the Communist Party at its Ninth Congress had *"promoted one-man management as the most suitable form of management."* [Silvana Malle, **Op. Cit.**, p. 111, p. 112, p. 141 and p. 128] In other words, the manner in which Lenin organised industry had handed it over entirely into the hands of the bureaucracy.

Trotsky, as to be expected, did not disagree with all this. In fact, quite the reverse. He wholeheartedly defended the imposing of *"one-man management"* in his justly infamous book **Terrorism and Communism**. As he put it, *"our Party Congress . . . expressed itself in favour of the principle of one-man management in the administration of industry . . . It would be the greatest possible mistake,*

however, to consider this decision as a blow to the independence of the working class. The independence of the workers is determined and measured not by whether three workers or one are placed at the head of a factory." As such, it "would consequently be a most crying error to confuse the question as to the supremacy of the proletariat with the question of boards of workers at the head of factories. The dictatorship of the proletariat is expressed in the abolition of private property in the means of production, in the supremacy over the whole Soviet mechanism of the collective will of the workers, and not at all in the form in which individual economic enterprises are administered." [**Terrorism and Communism**, p. 162] The term "collective will of the workers" is simply a euphemism for the Party which Trotsky had admitted had "substituted" its dictatorship for that of the Soviets (indeed, "there is nothing accidental" in this "'substitution' of the power of the party for the power of the working class" and "in reality there is no substitution at all." The "dictatorship of the Soviets became possible only by means of the dictatorship of the party." [**Op. Cit.**, p. 109]). The unions "should discipline the workers and teach them to place the interests of production above their own needs and demands." He even argued that "the only solution to economic difficulties from the point of view of both principle and of practice is to treat the population of the whole country as the reservoir of the necessary labour power . . . and to introduce strict order into the work of its registration, mobilisation and utilisation." [**Op. Cit.**, p. 143 and p. 135]

Trotsky did not consider this a result of the Civil War. Again, the opposite was the case: "I consider if the civil war had not plundered our economic organs of all that was strongest, most independent, most endowed with initiative, we should undoubtedly have entered the path of one-man management in the sphere of economic administration much sooner and much less painfully." [**Op. Cit.**, pp. 162-3]

Significantly, discussing developments in Russia since the N.E.P, Trotsky argued that it was "necessary for each state-owned factory, with its technical director and with its commercial director, to be subjected not only to control from the top -- by the state organs -- but also from below, by the market which will remain the regulator of the state economy for a long time to come." Workers' control, as can be seen, was not even mentioned, nor considered as an essential aspect of control "from below." As Trotsky also stated that "[u]nder socialism economic life will be directed in a centralised manner," our discussion of the state capitalist nature of mainstream Marxism we presented in the [last section](#) is confirmed. [**The First Five Years of the Communist International**, vol. 2, p. 237 and p. 229]

The contrast between what Trotsky did when he was in power and what he argued for after he had been expelled is obvious. Indeed, the arguments of 1938 and 1920 are in direct contradiction to each other. Needless to say, Leninists and Trotskyists today are fonder of quoting Trotsky and Lenin when they did not have state power rather than when they did. Rather than compare what they said to what they did, they simply repeat ambiguous slogans which meant radically different things to Lenin and Trotsky than to the workers' who thrust them into power. For obvious reasons, we feel. Given the opportunity for latter day Leninists to exercise power, we wonder if a similar process would occur again? Who would be willing to take that chance?

As such, the claim that Marxists stand for "workers' control" can be refuted on two counts. Firstly, by

that term they simply mean workers' supervision of those who do have real power in production (either the capitalists or state appointed managers). It does **not** mean workers' self-management of production. Secondly, when they had the chance they did not implement it. In fact, they imposed capitalist style hierarchical management and did not consider this as anything to be worried about. And as this policy was advocated **before** the start of the Civil War, it cannot be said to have been forced upon them by necessity. As such, any claim that mainstream Marxism considers "*workers' control*" as an essential feature of its politics is simply nonsense.

For a comprehensive discussion of "*workers' control*" during the Russian Revolution Maurice Brinton's **The Bolsheviks and Workers' Control** cannot be bettered.

The roots of this confusion can be found in Marx and Engels. In the struggle between authentic socialism (i.e. workers' self-management) and state capitalism (i.e. state ownership) there **are** elements of the correct solution to be found in their ideas. This is their support for co-operatives. For example, Marx praised the efforts made within the Paris Commune to create co-operatives, so "*transforming the means of production, land and capital . . . into mere instruments of free and associated labour.*" He argued that "*[i]f co-operative production is not to remain a shame and a snare; if it is to supersede the Capitalist system; if united co-operative societies are to regulate national production upon a common plan, thus taking it under their own control, and putting an end to the constant anarchy and periodical convulsions which are the fatality of Capitalist production -- what else . . . would it be but Communism, 'possible' Communism?*" [Op. Cit., pp. 290-1] Engels, continuing this theme, argued for "*the transfer -- initially on lease -- of large estates to autonomous co-operatives under state management and effected in such a way that the State retains ownership of the land.*" He stated that neither he nor Marx "*ever doubted that, in the course of transition to a wholly communist economy, widespread use would have to be made of co-operative management as an intermediate stage. Only it will mean so organising things that society, i.e. initially the State, retains ownership of the means of production and thus prevents the particular interests of the co-operatives from taking precedence over those of society as a whole.*" [Marx-Engels Collected Works, vol. 47, p. 389]

However, Engels comments simply bring home the impossibilities of trying to reconcile state ownership and workers' self-management. While the advocacy of co-operatives is a positive step forward from the statist arguments of the Communist Manifesto, Engels squeezes these libertarian forms of organising production into typically statist structures. How "*autonomous co-operatives*" can co-exist with (and under!) "*state management*" and "*ownership*" is not explained, plus the fatal confusion of socialisation with nationalisation.

In addition, the differences between the comments of Marx and Engels are obvious. While Marx talks of "*united co-operative societies*," Engels talks of "*the State*." The former implies a free federation of co-operatives, the latter a centralised structure which the co-operatives are squeezed into and under. The former is socialism, the latter is state capitalist. From Engels argument, it is obvious that the stress is on state ownership and management rather than self-management. This confusion became a source of tragedy during the Russian Revolution when the workers, like their comrades during the Commune, started to form a federation of factory committees while the Bolsheviks squeezed these bodies into a

system of state control which was designed to marginalise them (see the appendix on ["What happened during the Russian Revolution?"](#) for full details).

Moreover, the aims of the Paris workers were at odds with the vision of the **Communist Manifesto** and in line with anarchism. Proudhon, for example, had argued in 1848 against state ownership and for "*democratically organised workers' associations*" which would be "*models for agriculture, industry and trade, the pioneering core of that vast federation of companies and societies*" which would make up "*the democratic social Republic*." [No Gods, No Masters, vol. 1, p. 62] In his **Principle of Federation** he called this idea an "*agro-industrial federation*." Thus the idea of co-operative production is a clear expression of what Proudhon explicitly called "*industrial democracy*," a "*reorganisation of industry, under the jurisdiction of all those who compose it*." [quoted by K. Steven Vincent, Pierre-Joseph Proudhon and the Rise of French Republican Socialism, p. 225] Bakunin and later anarchists simply developed these ideas to their logical conclusion (see [section I.3](#) for example).

Marx, to his credit, supported these libertarian visions when applied in practice by the Paris workers during the Commune and promptly revised his ideas. This fact has been obscured somewhat by Engels' historical revisionism in this matter. He argued, for example, that the "*economic measures*" of the Commune were driven not by "*principles*" but by "*simple, practical needs*." This meant that "*the confiscation of shut-down factories and workshops and handing them over to workers' associations*" were "*not at all in accordance with the spirit of Proudhonism but certainly in accordance with the spirit of German scientific socialism*." [Marx, Engels, Lenin, **Anarchism and Anarcho-Syndicalism**, p. 92] This distortion of Proudhon's ideas is also present in Engels' 1891 introduction to Marx's "*The Civil War in France*." He painted a picture of Proudhon being opposed to association (except for large-scale industry). He stresses that "*to combine all these associations in one great union*" was "*the direct opposite of the Proudhon doctrine*" and so "*the Commune was the grave of the Proudhon doctrine*." [Marx-Engels Selected Works, p. 256]

However, as noted, this is nonsense. The forming of workers' associations was a key aspect of Proudhon's ideas and so the Communards were obviously acting in his spirit. Given that the **Communist Manifesto** stressed state ownership and failed to mention co-operatives at all, the claim that the Commune acted in its spirit seems a tad optimistic. Particularly since Marx had commented in 1866 that in France the workers ("*particularly those of Paris!*") "*are strongly attached, without knowing it [!], to the old rubbish*" and that the "*Parisian gentlemen had their heads full of the emptiest Proudhonist phrases*." [Marx, Engels and Lenin, **Op. Cit.**, p. 46 and p. 45]

What did this "*old rubbish*" consist of? Well, in 1869 the delegate of the Parisian Construction Workers' Trade Union argued that "*[a]ssociation of the different corporations [labour unions/associations] on the basis of town or country . . . leads to the commune of the future . . . Government is replaced by the assembled councils of the trade bodies, and by a committee of their respective delegates*." In addition, "*a local grouping which allows the workers in the same area to liase on a day to day basis*" and "*a linking up of the various localities, fields, regions, etc.*" (i.e. international trade or industrial union federations) would ensure that "*labour organises for present and future by doing away with wage slavery*." This

"mode of organisation leads to the labour representation of the future." [No Gods, No Masters, vol. 1, p. 184]

To state the obvious, this had clear links with both Proudhon's ideas **and** what the Commune did in practice. Rather than being the *"grave"* of Proudhon's ideas on workers' associations, the Commune saw their birth, i.e. their application. Rather than the Parisian workers becoming Marxists *"without knowing it,"* Marx had become a follower of Proudhon! Thus the idea of socialism being based on a federation of workers' associations was not buried with the Paris Commune. It was integrated into all forms of social anarchism (including communist-anarchism and anarcho-syndicalism) and recreated every time there is a social revolution.

In ending when must note that anarchists are well aware that individual workplaces could pursue aims at odds with the rest of society (to use Engels expression, their *"particular interests"*). This is often termed *"localism."* Anarchists, however, argue that the mainstream Marxist solution is worse than the problem. By placing self-managed workplaces under state control (or ownership) they become subject to even worse *"particular interests,"* namely those of the state bureaucracy who will use their power to further their own interests. In contrast, anarchists advocate federations of self-managed workplaces to solve this problem (see [section I.3](#) for more).

In summary, the problem of *"localism"* and any other problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly and that implies self-managed organising from the bottom up (i.e. anarchism) rather than delegating power to a minority at the top, to a "revolutionary" party or state. This applies economically, socially and politically. As Bakunin argued, the *"revolution should not only be made for the people's sake; it should also be made by the people."* [No Gods, No Masters, vol. 1, p. 141]

H.3.15 Can objective factors explain the failure of the Russian Revolution?

The greatest myth of Marxism must surely be the idea that the Russian Revolution failed solely due to the impact objective factors. For Leninist, the failure of the revolution was the product of such things as civil war, foreign intervention, economic collapse and the isolation and backwardness of Russia and **not** Bolshevik ideology. Anarchists are not impressed by this argument.

Leninist John Rees recounts the standard argument, namely that the objective conditions in Russia meant that the *"subjective factor"* of Bolshevik ideology *"was reduced to a choice between capitulation to the Whites or defending the revolution with whatever means were at hands. Within these limits Bolshevik policy was decisive. But it could not wish away the limits and start with a clean sheet."* From this perspective, the key factor was the *"vice-like pressure of the civil war"* which *"transformed the state"* as well as the *"Bolshevik Party itself."* For the Bolsheviks had *"survived three years of civil war and wars*

of intervention, but only at the cost of reducing the working class to an atomised, individualised mass, a fraction of its former size, and unable to exercise the collective power it had done in 1917." Industry was "reduced . . . to rubble" and the "bureaucracy of the workers' state was left suspended in mid-air, its class based eroded and demoralised." ["In Defence of October," pp. 3-82, **International Socialism**, no. 52, p. 30, p. 70, p. 66 and p. 65] Due to these factors, argue Leninists, the Bolsheviks became dictators **over** the working class and **not** due to their political ideas.

Anarchists are not convinced by this analysis, arguing that is factually and logically flawed. Needless to say, it would be near impossible to discuss these issues in any real depth in just one section. As such, we need to summarise the major facts, issues and points. For those interested in a fuller discussion as well as the necessary documentation, we would recommend reading the appendix on "[The Russian Revolution](#)." With that caveat, we now turn to summarising the problems with the Leninist approach. These fall into four main categories.

The first problem is factual. Bolshevik authoritarianism started **before** the start of the civil war and major economic collapse. Whether it is soviet democracy, workers' economic self-management, democracy in the armed forces or working class power and freedom generally, the fact is the Bolsheviks had systematically attacked and undermined it from the start. They also repressed working class protests and strikes along with opposition groups and parties. As such, it is difficult to blame something which had not started yet for causing Bolshevik policies.

Although the Bolsheviks had seized power under the slogan "*All Power to the Soviets*," as we noted in [section H.3.11](#) the facts are the Bolsheviks aimed for party power and only supported soviets when they controlled them. To maintain party power, they had to undermine the soviets and they did. This onslaught on the soviets started quickly, a mere four days after the seizure of power by the Bolsheviks when their Council of People's Commissars unilaterally took for itself legislative power simply by issuing a decree to this effect. "*This was, effectively, a Bolshevik coup d'etat that made clear the government's (and party's) pre-eminence over the soviets and their executive organ.*" [Neil Harding, **Leninism**, p. 253] The highest organ of soviet power, the Central Executive Committee (VTsIK) was turned into little more than a rubber stamp, with its Bolshevik dominated presidium using its power to control the body and maintain Bolshevik power by, for example, awarding representations to groups and factions which supported the Bolsheviks and circumventing general meetings.

At the grassroots, a similar process was at work with power moving increasingly to the Bolshevik dominated soviet executives who used it to maintain a Bolshevik majority by any means possible. One such technique used to postpone new soviet elections, another was to gerrymander the soviets to ensure their majority. For example, when workplace soviet elections were finally held in Petrograd, their results were irrelevant because more than half of the projected 700-plus deputies in the new soviet were selected by Bolshevik dominated organisations. The Bolsheviks had secured themselves a solid majority even before factory voting began. When postponing and gerrymandering failed, the Bolsheviks turned to state repression to remain in power. For all the provincial soviet elections in the spring and summer of 1918 for which data is available, Bolshevik armed force not only overthrew the election results, it also

suppressed the working class protest against such actions. [Vladimir Brovkin, *"The Mensheviks' Political Comeback: The Elections to the Provincial City Soviets in Spring 1918"*, **The Russian Review**, vol. 42, pp. 1-50]

When the opposition parties raised such issues at the VTsIK, it had no impact. In April 1918, one deputy *"protested that non-Bolshevik controlled soviets were being dispersed by armed force, and wanted to discuss the issue."* The chairman *"refus[ed] to include it in the agenda because of lack of supporting material"* and such information be submitted to the presidium of the soviet. The majority (i.e. the Bolsheviks) *"supported their chairman"* and the facts were *"submitted . . . to the presidium, where they apparently remained."* [Charles Duval, *"Yakov M. Sverdlov and the All-Russian Central Executive Committee of Soviets (VTsIK)"*, pp. 3-22, **Soviet Studies**, vol. XXXI, no. 1, pp. 13-14] Given that the VTsIK was meant to be the highest soviet body between congresses, the lack of concern for state repression against soviets and opposition groups clearly shows the Bolshevik contempt for soviet democracy.

Unsurprisingly, the same contempt was expressed at the fifth All-Russian Soviet Congress in July 1918 when the Bolshevik gerrymandered it to maintain their majority. With the Mensheviks and Right-SRs banned from the soviets, popular disenchantment with Bolshevik rule was expressed by voting Left-SR. The Bolsheviks ensured their majority in the congress and, therefore, a Bolshevik government, when the Bolshevik credentials committee allowed the Committees of Poor Peasants, which were only supported by the Bolsheviks, to be represented. *"This blatant gerrymandering ensured a Bolshevik majority . . . Deprived of their democratic majority the Left SRs resorted to terror and assassinated the German ambassador Mirbach."* [Geoffrey Swain, **The Origins of the Russian Civil War**, p. 176] The Bolsheviks falsely labelled this an uprising against the soviets and the Left-SRs joined the Mensheviks and Right-SRs in being made illegal. It should also be mentioned that the Bolsheviks had attacked the anarchist movement in April, 1918. So before the start of the civil war all opposition groups had suffered some form of state repression by the hands of the Bolshevik regime (within six weeks of it starting, every opposition group had been effectively excluded from the soviets).

A similar authoritarian agenda was aimed at the armed forces and industry. Trotsky simply abolished the soldier's committees and elected officers, stating that *"the principle of election is politically purposeless and technically inexpedient, and it has been, in practice, abolished by decree."* [**Work, Order, Discipline**] The death penalty for disobedience was restored, along with, more gradually, saluting, special forms of address, separate living quarters and other privileges for officers. In industry, Lenin, as we discussed in [section H.3.14](#), started to champion one-man management armed with *"dictatorial"* powers in April, 1918. This simply replaced private capitalism with state capitalism, taking control of the economy out of the hands of the workers and placing it into the hands of the state bureaucracy.

As well as repressing working class self-management, the Bolsheviks also used state repression against rebel workers. *"By the early summer of 1918,"* records one historian, *"there were widespread anti-Bolshevik protests. Armed clashes occurred in the factory districts of Petrograd and other industrial centres."* [William Rosenberg, **Russian labour and Bolshevik Power**, p. 107] Thus the early months of

Bolshevik rule were marked by *"worker protests, which then precipitated violent repressions against hostile workers. Such treatment further intensified the disenchantment of significant segments of Petrograd labour with Bolshevik-dominated Soviet rule."* [Alexander Rabinowitch, **Early Disenchantment with Bolshevik Rule**, p. 37]

Clearly, whether it is in regards to soviet, workplace or army democracy or the right of workers to strike or organise, the facts are the Bolsheviks had systematically eliminated them **before** the start of the civil war. So when Trotsky asserted that *"[i]n the beginning, the party had wished and hoped to preserve freedom of political struggle within the framework of the Soviets"* but that it was civil war which *"introduced stern amendments into this calculation,"* he was wrong. Rather than being *"regarded not as a principle, but as an episodic act of self-defence"* the opposite is the case. As we note in [section H.3.8](#) from roughly October 1918 onwards, the Bolsheviks **did** raise party dictatorship to a *"principle"* and did not care that this was *"obviously in conflict with the spirit of Soviet democracy."* [**The Revolution Betrayed**] As Samuel Farber notes, *"there is no evidence indicating that Lenin or any of the mainstream Bolshevik leaders lamented the loss of workers' control or of democracy in the soviets, or at least referred to these losses as a retreat, as Lenin declared with the replacement of War Communism by NEP in 1921."* [**Before Stalinism**, p. 44]

For more details see the appendix on ["What happened during the Russian Revolution?"](#) as well as [section 3](#) of the appendix on ["What caused the degeneration of the Russian Revolution?"](#)

Secondly, it cannot be maintained that the Russian working class was incapable of collective action. Throughout the civil war period, as well as before and after, the Russian workers proved themselves quite capable of taking collective action -- against the Bolshevik state. Simply put, an *"atomised, individualised mass"* does not need extensive state repression to control it. So while the working class **was** *"a fraction of its former size"* it **was** able *"to exercise the collective power it had done in 1917."* Significantly, rather than decrease over the civil war period, the mass protests **grew** in size and militancy. By 1921 these protests and strikes were threatening the very existence of the Bolshevik dictatorship, forcing it to abandon key aspects of its economic policies.

This indicates a key flaw in the standard Leninist account, as Russian workers were more than capable of collective action throughout the Civil War period and after. In the Moscow area, following the lull after the defeat of the workers' conference movement in mid-1918 *"each wave of unrest was more powerful than the last, culminating in the mass movement from late 1920."* [Richard Sakwa, **Soviet Communists in Power**, p. 94] This collective struggle was not limited to Moscow. *"Strike action remained endemic in the first nine months of 1920."* In Petrograd province, soviet figures indicate that strikes involving more than half the workforce took place in both 1919 and 1920. In early 1921 *"industrial unrest broke out in a nation-wide wave of discontent"* which included general strikes. [J. Aves, **Op. Cit.**, p. 69, p. 109, and p. 120] As Russian anarchist Ida Mett succinctly put it:

"And if the proletariat was that exhausted how come it was still capable of waging virtually total general strikes in the largest and most heavily industrialised cities?" [**The**

Kronstadt Rebellion, p. 81]

An *"atomised"* and powerless working class does not need martial law, lockouts, mass arrests and the purging of the workforce to control it. So, clearly, the Leninist argument can be faulted. Nor is it particularly original, as it dates back to Lenin and was first formulated *"to justify a political clamp-down."* Indeed, this argument was developed in response to rising working class protest rather than its lack: *"As discontent amongst workers became more and more difficult to ignore, Lenin . . . began to argue that the consciousness of the working class had deteriorated . . . workers had become 'declassed.'" However, there "is little evidence to suggest that the demands that workers made at the end of 1920 . . . represented a fundamental change in aspirations since 1917."* [J. Aves, **Op. Cit.**, p. 18, p. 90 and p. 91.] So while the *"working class had decreased in size and changed in composition,. . . the protest movement from late 1920 made clear that it was not a negligible force and that in an inchoate way it retained a vision of socialism which was not identified entirely with Bolshevik power . . . Lenin's arguments on the declassing of the proletariat was more a way of avoiding this unpleasant truth than a real reflection of what remained, in Moscow at least, a substantial physical and ideological force."* [Sakwa, **Op. Cit.**, p. 261]

Then there is the logical problem. Leninists say that they are revolutionaries. As we noted in [section H.2.1](#), they inaccurately mock anarchists for not believing that a revolution needs to defend itself. Yet, ironically, their whole defence of Bolshevism rests on the *"exceptional circumstances"* produced by the civil war they claim is inevitable. If Leninism cannot handle the problems associated with actually conducting a revolution then, surely, it should be avoided at all costs. This is particularly the case as leading Bolsheviks all argued that the specific problems their latter day followers blame for their authoritarianism were natural results of any revolution and, consequently, unavoidable. Lenin, for example, stressed in 1917 that any revolution would face exceptionally complicated circumstances as well as civil war. Once in power, he continually reiterated this point as well as noting that revolution in an advanced capitalist nations far more devastating and ruinous than in Russia.

Moreover, anarchists had long argued that a revolution would be associated with economic disruption, isolation and civil war and, consequently, had developed their ideas to take these into account. It should also be noted that every revolution has confirmed the anarchist analysis. For example, the German Revolution of 1918 faced an economic collapse which was, relatively, just as bad as that facing Russia the year before. However, no Leninist argues that the German Revolution was impossible or doomed to failure. Similarly, no Leninist denies that a socialist revolution was possible during the depths of the Great Depression of the 1930s. Consequently, it is not hard to conclude that for Leninists difficult objective circumstances place socialism off the agenda only when they are holding power. So even if we ignore the extensive evidence that Bolshevik authoritarianism started before the civil war, the logic of the Leninist argument is hardly convincing.

We discuss these issues in more detail in the appendix on ["What caused the degeneration of the Russian Revolution?"](#)

Finally, there is a counter-example which, anarchists argue, show the impact of Bolshevik ideology on the fate of the revolution. This is the anarchist influenced Makhnovist movement. Defending the revolution in the Ukraine against all groups aiming to impose their will on the masses, the Makhnovists were operating in the same objective conditions facing the Bolsheviks -- civil war, economic disruption, isolation and so forth. However, the policies the Makhnovists implemented were radically different than those of the Bolsheviks. While the Makhnovists called soviet congresses, the Bolsheviks disbanded them. The former encouraged free speech and organisation, the latter crushed both. While the Bolsheviks raised party dictatorship and one-man management to ideological truisms, the Makhnovists they stood for and implemented workplace, army, village and soviet self-management. This shows the failure of Bolshevism cannot be put down to purely objective factors like the civil war, the politics of Marxism played their part.

For more information on the Makhnovists, see the appendix ["Why does the Makhnovist movement show there is an alternative to Bolshevism?"](#)

Therefore, anarchists have good reason to argue that one of the greatest myths of state socialism is the idea that Bolshevik ideology played no role in the fate of the Russian Revolution. Obviously, if the "objective" factors do not explain Bolshevik authoritarianism we are left with the question of which aspects of Bolshevik ideology impacted negatively on the revolution. We turn to this in the [next section](#).

H.3.16 Did Bolshevik ideology influence the outcome of the Russian Revolution?

As we discussed in the last section, anarchists have good reason to reject the Leninist argument that the failure of Bolshevism in the Russian Revolution can be blamed purely on the difficult objective circumstances they faces. As Noam Chomsky summarises:

*"In the stages leading up to the Bolshevik coup in October 1917, there **were** incipient socialist institutions developing in Russia -- workers' councils, collectives, things like that. And they survived to an extent once the Bolsheviks took over -- but not for very long; Lenin and Trotsky pretty much eliminated them as they consolidated their power. I mean, you can argue about the **justification** for eliminating them, but the fact is that the socialist initiatives were pretty quickly eliminated.*

*"Now, people who want to justify it say, 'The Bolsheviks had to do it' -- that's the standard justification: Lenin and Trotsky had to do it, because of the contingencies of the civil war, for survival, there wouldn't have been food otherwise, this and that. Well, obviously the question is, was that true. To answer that, you've got to look at the historical facts: I don't think it was true. In fact, I think the incipient socialist structures in Russia were dismantles **before** the really dire conditions arose . . . But reading their own writings, my feeling is that Lenin and Trotsky knew what they were doing, it was conscious and*

understandable." [**Understanding Power**, p. 226]

Chomsky is right on both counts. The attack on the basic building blocks of genuine socialism started before the civil war. Moreover, it did not happen by accident. The attacks were rooted in the Bolshevik vision of socialism. As Maurice Brinton notes:

"there is a clear-cut and incontrovertible link between what happened under Lenin and Trotsky and the later practices of Stalinism . . . The more one unearths about this period the more difficult it becomes to define -- or even to see -- the 'gulf' allegedly separating what happened in Lenin's time from what happened later. Real knowledge of the facts also makes it impossible to accept . . . that the whole course of events was 'historically inevitable' and 'objectively determined'. Bolshevik ideology and practice were themselves important and sometimes decisive factors in the equation, at every critical stage of this critical period." [**The Bolsheviks and Workers' Control**, p. 84]

A key issue is the Bolsheviks support for centralisation. Long before the revolution, Lenin had argued that within the party it was a case of *"the transformation of the power of ideas into the power of authority, the subordination of lower Party bodies to higher ones."* [**Collected Works**, vol. 7, p. 367] Such visions of centralised organisation were the model for the revolutionary state and, once in power, they did not disappoint.

However, by its very nature centralism places power into a few hands and effectively eliminates the popular participation required for any successful revolution to develop. The power placed into the hands of the nineteen members of the Bolshevik party's central committee was automatically no longer in the hands of the working class. As such, when Leninists argue that "objective" circumstances forced the Bolsheviks to substitute their power for that of the masses, anarchists reply that this substitution had occurred the moment the Bolsheviks centralised power and placed it into their own hands. As a result, popular participation and institutions became to wither and die. Moreover, once in power, the Bolsheviks were shaped by their new position and the social relationships it created and, consequently, implemented policies influenced and constrained by the hierarchical and centralised structures they had created.

This was not the only negative impact of Bolshevik centralism. It also spawned a bureaucracy. The rise of a state bureaucracy started immediately with the seizure of power. Instead of the state starting to wither away *"a new bureaucratic and centralised system emerged with extraordinary rapidity . . . As the functions of the state expanded so did the bureaucracy."* [Richard Sakwa, *"The Commune State in Moscow in 1918,"* pp. 429-449, **Slavic Review**, vol. 46, no. 3/4, pp. 437-8] This was a striking confirmation of the anarchist analysis which argued that a new bureaucratic class develops around the centralised bodies created by the governing party. This body would soon become riddled with personal influences and favours, so ensuring that members could be sheltered from popular control while, at the same time, exploiting its power to feather its own nest.

Another problem was the Bolshevik vision of (centralised) democracy looked like. Trotsky is typical. In April 1918 he argued that the key factor in democracy was that the central power was elected by the masses, meaning that functional democracy from below could be replaced by appointments from above. Once elected the government was to be given total power to make decisions and appoint people as required as it is *"better able to judge in the matter than"* the masses. The sovereign people were expected to simply obey their public servants until such time as they *"dismiss that government and appoint another."* Trotsky raised the question of whether it was possible for the government to act *"against the interests of the labouring and peasant masses?"* And answered no! Yet it is obvious that Trotsky's claim that *"there can be no antagonism between the government and the mass of the workers, just as there is no antagonism between the administration of the union and the general assembly of its members"* is just nonsense. [**Leon Trotsky Speaks**, p. 113] The history of trade unionism is full of examples of committees betraying their membership. Needless to say, the subsequent history Lenin's government shows that there can be *"antagonism"* between rulers and ruled and that appointments are always a key way to further elite interests.

This vision of top-down "democracy" can, of course, be traced back to Marx's arguments of 1850 and Lenin's comments that the *"organisational principle of revolutionary Social-Democracy"* was *"to proceed from the top downward."* (see sections [H.3.2](#) and [H.3.3](#)). By equating centralised, top-down decision making by an elected government with "democracy," the Bolsheviks had the ideological justification to eliminate the functional democracy associated with the soviets, factory committees and soldiers committees. The Bolshevik vision of democracy became the means by which real democracy was eliminated in area after area of Russian working class life. Needless to say, a state which eliminates functional democracy in the grassroots will not stay democratic in any meaningful sense for long.

Nor does it come as too great a surprise to discover that a government which considers itself as *"better able to judge"* things than the people finally decides to annul any election results it dislikes. As we discuss in [section H.5](#), this perspective is at the heart of vanguardism, for in Bolshevik ideology the party, not the class, is in the final analysis the repository of class consciousness. This means that once in power it has a built-in tendency to override the decisions of the masses it claimed to represent and justify this in terms of the advanced position of the party. Combine this with a vision of "democracy" which is highly centralised and which undermines local participation then we have the necessary foundations for the turning of party power into party dictatorship.

Which brings us to the next issue, namely the Bolshevik idea that the party should seize power, not the working class as a whole (see [section H.3.11](#)). Lenin in 1917 continually repeating the basic idea that the Bolsheviks *"can and must take state power into their own hands."* [**Selected Works**, vol. 2, p. 329] He equated party power with popular power and argued that Russia would be governed by the Bolshevik party. The question instantly arises of what happens if the masses turn against the party? The destruction of soviet democracy in the spring and summer of 1918 answers that question (see last section). It is not a great step to party dictatorship **over** the proletariat from the premises of Bolshevism. In a clash between soviet democracy and party power, the Bolsheviks consistently favoured the latter -- as would be expected given their ideology.

Then there is the Bolshevik vision of socialism. As we discussed in [section H.3.12](#), the Bolsheviks saw the socialist economy as being built upon the centralised organisations created by capitalism. They confused state capitalism with socialism. "*State capitalism*," Lenin wrote in May 1917, "*is a complete **material** preparation for socialism, the threshold of socialism*" and so socialism "*is nothing but the next step forward from state capitalist monopoly.*" It is "*merely state capitalist monopoly **made to benefit the whole people**; by this token it **ceases** to be capitalist monopoly.*" [**The Threatening Catastrophe and how to avoid it**, p. 38 and p. 37] A few months later, he was talking about how the institutions of state capitalism could be taken over and used to create socialism. Unsurprisingly, when defending the need for state capitalism in the spring of 1918 against the "Left Communists," Lenin stressed that he gave his "*high' appreciation of state capitalism*" "*before the Bolsheviks seized power.*" [**Selected Works**, vol. 2, p. 636] And, as Lenin noted, his praise for state capitalism can be found in his **State and Revolution**.

Given this perspective, it is unsurprising that workers' control was not given a high priority once the Bolsheviks seized power. While in order to gain support the Bolsheviks **had** paid lip-service to the idea of workers' control, as we noted in [section H.3.14](#) the party had always given that slogan a radically different interpretation than the factory committees had. While the factory committees had seen workers' control as being exercised directly by the workers and their class organisations, the Bolshevik leadership saw it in terms of state control in which the factory committees would play, at best, a minor role. It is unsurprising to discover which vision of socialism was actually introduced:

*"On three occasions in the first months of Soviet power, the [factory] committee leaders sought to bring their model into being. At each point the party leadership overruled them. The result was to vest both managerial **and** control powers in organs of the state which were subordinate to the central authorities, and formed by them."* [Thomas F. Remington, **Building Socialism in Bolshevik Russia**, p. 38]

Given his vision of socialism, Lenin's rejection of the factory committee's model comes as no surprise. The Bolsheviks, as Lenin had promised, built from the top-down their system of unified administration based on the Tsarist system of central bodies which governed and regulated certain industries during the war (and, moreover, systematically stopped the factory committee organising together). [Brinton, **Op. Cit.**, p. 36 and pp. 18-9] This was very centralised and very inefficient:

*"it seems apparent that many workers themselves . . . had now come to believe . . . that confusion and anarchy [sic!] **at the top** were the major causes of their difficulties, and with some justification. The fact was that Bolshevik administration was chaotic . . . Scores of competitive and conflicting Bolshevik and Soviet authorities issued contradictory orders, often brought to factories by armed Chekists. The Supreme Economic Council. . . issu[ed] dozens of orders and pass[ed] countless directives with virtually no real knowledge of affairs."* [William G. Rosenberg, **Russian Labour and Bolshevik Power**, p. 116]

Faced with the chaos that their own politics, in part, had created, the Bolsheviks turned to one-

management in April, 1918. This was applied first on the railway workers. Like all bosses, the Bolsheviks blamed the workers for the failings of their own policies. The abolishing the workers' committees resulted in *"a terrifying proliferation of competitive and contradictory Bolshevik authorities, each with a claim of life or death importance . . . Railroad journals argued plaintively about the correlation between failing labour productivity and the proliferation of competing Bolshevik authorities."* Rather than improving things, Lenin's one-man management did the opposite, *"leading in many places . . . to a greater degree of confusion and indecision" and "this problem of contradictory authorities clearly intensified, rather than lessened."* Indeed, the *"result of replacing workers' committees with one man rule . . . on the railways . . . was not directiveness, but distance, and increasing inability to make decisions appropriate to local conditions. Despite coercion, orders on the railroads were often ignored as unworkable."* It got so bad that *"a number of local Bolshevik officials . . . began in the fall of 1918 to call for the restoration of workers' control, not for ideological reasons, but because workers themselves knew best how to run the line efficiently, and might obey their own central committee's directives if they were not being constantly countermanded."* [William G. Rosenberg, **Workers' Control on the Railroads**, p. D1208, p. D1207, p. D1213 and pp. D1208-9]

That it was Bolshevik policies and not workers' control which was to blame for the state of the railways can be seen from what happened **after** Lenin's one-man management was imposed. The centralised Bolshevik economic system quickly demonstrated how to **really** mismanage an economy. The Bolshevik onslaught against workers' control in favour of a centralised, top-down economic regime ensured that the economy was handicapped by an unresponsive system which wasted the local knowledge in the grassroots in favour of orders from above which were issued in ignorance of local conditions. This led to unused stock coexisting with acute scarcity and the centre unable to determine the correct proportions required at the base. Unfinished products were transferred to other regions while local factories were shut down, wasted both time and resources (and given the state of the transport network, this was a doubly inefficient). The inefficiency of central financing seriously jeopardised local activity and the centre had displayed a great deal of conservatism and routine thinking. In spite of the complaints from below, the Communist leadership continued on its policy of centralisation (in fact, the ideology of centralisation was reinforced). [Silvana Malle, **The Economic Organisation of War Communism 1918-1921**, p. 232-3 and pp. 269-75]

A clearer example of the impact of Bolshevik ideology on the fate of the revolution would be hard to find. Simply put, while the situation was pretty chaotic in early 1918, this does not prove that the factory committee's socialism was not the most efficient way of running things under the (difficult) circumstances. After all, rates of *"output and productivity began to climb steadily after" January 1918 and "[i]n some factories, production doubled or tripled in the early months of 1918 . . . Many of the reports explicitly credited the factory committees for these increases."* [Carmen Sirianni, **Workers' Control and Socialist Democracy**, p. 109] Unless of course, like the Bolsheviks, you have a dogmatic belief that centralism is always more efficient. Needless to say, Lenin never wavered in his support for one-man management nor in his belief in the efficiency of centralism to solve all problems, particularly the problems it itself created in abundance. Nor did his explicit call to reproduce capitalist social relations in production cause him any concern for, in Lenin's eyes, if the primary issue was property and not who **manages** the means of production, then factory committees are irrelevant in determining the

socialist nature of the economy.

Post-October Bolshevik policy is a striking confirmation of the anarchist argument that a centralised structure would stifle the initiative of the masses and their own organs of self-management. Not only was it disastrous from a revolutionary perspective, it was hopelessly inefficient. The constructive self-activity of the people was replaced by the bureaucratic machinery of the state. The Bolshevik onslaught on workers' control, like their attacks on soviet democracy and workers' protest, undoubtedly engendered apathy and cynicism in the workforce, alienating even more the positive participation required for building socialism which the Bolshevik mania for centralism had already marginalised.

The pre-revolution Bolshevik vision of a socialist system was fundamentally centralised and, consequently, top-down. This was what was implemented post-October, with disastrous results. At each turning point, the Bolsheviks tended to implement policies which reflected their prejudices in favour of centralism, nationalisation and party power. Unsurprisingly, this also undermined the genuine socialist tendencies which existed at the time. Simply put, the Bolshevik vision of socialism and democracy played a key role in the failure of the revolution. Therefore, the Leninist idea that politics of the Bolsheviks had no influence on the outcome of the revolution, that their policies during the revolution were a product purely of objective forces, is unconvincing.

For further discussion of these and other issues, see the appendices on ["How did Bolshevik ideology contribute to the failure of the Revolution?"](#) and ["What happened during the Russian Revolution?"](#)

Section F - Is "anarcho"-capitalism a type of anarchism?

Introduction

F.1 Are "anarcho"-capitalists really anarchists?

F.1.1 Why is the failure to renounce hierarchy the Achilles Heel of right-wing libertarianism and "anarcho"-capitalism?

F.1.2 How libertarian is right-Libertarian theory?

F.1.3 Is right-Libertarian theory scientific in nature?

F.2 What do "anarcho"-capitalists mean by "freedom?"

F.2.1 What are the implications of defining liberty in terms of (property) rights?

F.2.2 How does private property affect freedom?

F.2.3 Can "anarcho"-capitalist theory justify the state?

F.2.4 But surely transactions on the market are voluntary?

F.2.5 But surely circumstances are the result of liberty and so cannot be objected to?

F.2.6 Do Libertarian-capitalists support slavery?

F.2.7 But surely abolishing capitalism would restrict liberty?

F.2.8 Why should we reject the "anarcho"-capitalist definitions of freedom and justice?

F.3 Why do "anarcho"-capitalists generally place little or no value on "equality," and what do they mean by that term?

F.3.1 Why is this disregard for equality important?

F.3.2 But what about "anarcho"-capitalist support for charity?

F.4 What is the right-libertarian position on private property?

F.4.1 What is wrong with a "homesteading" theory of property?

F.4.2 Why is the "Lockean Proviso" important?

F.4.3 How does private property affect individualism?

F.4.4 How does private property affect relationships?

F.4.5 Does private property co-ordinate without hierarchy?

F.5 Will privatising "the commons" increase liberty?

F.6 Is "anarcho" capitalism against the state?

F.6.1 What's wrong with this "free market" justice?

F.6.2 What are the social consequences of such a system?

F.6.3 But surely Market Forces will stop abuse by the rich?

F.6.4 Why are these "defence associations" states?

F.6.5 What other effects would "free market" justice have?

F.7 What is the myth of "Natural Law"?

F.7.1 Why "Natural Law" in the first place?

F.7.2 But "Natural Law" provides protection for individual rights from violation by the State. Those against Natural Law desire total rule by the state.

F.7.3 Why is "Natural Law" authoritarian?

F.7.4 Does "Natural Law" actually provides protection for individual liberty?

F.7.5 But Natural Law was discovered, not invented!

F.7.6 Why is the notion of "discovery" contradictory?

F.8 What role did the state take in the creation of capitalism?

F.8.1 What social forces lay behind the rise of capitalism?

F.8.2 What was the social context of the statement "laissez-faire"?

F.8.3 What other forms did state intervention in creating capitalism take?

F.8.4 Aren't the enclosures a socialist myth?

F.8.5 What about the lack of enclosures in the Americas?

F.8.6 How did working people view the rise of capitalism?

F.8.7 Why is the history of capitalism important?

F.9 Is Medieval Iceland an example of "anarcho"-capitalism working in practice?

F.10 Would laissez-faire capitalism be stable?

F.10.1 Would privatising banking make capitalism stable?

F.10.2 How does the labour market effect capitalism?

F.10.3 Was laissez-faire capitalism stable?

G.1 Are individualist anarchists anti-capitalist?

Yes, for two reasons.

Firstly, the Individualist Anarchists opposed profits, interest and rent as forms of exploitation (they termed these non-labour incomes "*usury*"). To use the words of Ezra Heywood, the Individualist Anarchists thought "*Interest is theft, Rent Robbery, and Profit Only Another Name for Plunder.*" [quoted by Martin Blatt, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 29] Their vision of the good society was one in which "*the usurer, the receiver of interest, rent and profit*" would not exist and labour would "*secure its natural wage, its entire product.*" [Benjamin Tucker, **The Individualist Anarchists**, p. 82 and p. 85] As communist-anarchist Alexander Berkman noted, "*[i]f labour owned the wealth it produced, there would be no capitalism.*" [**What is Communist Anarchism?**, p. 37] Thus the Individualist Anarchists, like the social anarchists, opposed the exploitation of labour and desired to see the end of capitalism by ensuring that labour would own what it produced.

Secondly, the individualist anarchists desired a society in which there would no longer be capitalists and workers, only workers. The worker would receive the full product of his/her labour, so ending the exploitation of labour by capital. In Tucker's words, a free society would see "*each man reaping the fruits of his labour and no man able to live in idleness on an income from capital*" and so society would "*become a great hive of Anarchistic workers, prosperous and free individuals*" combining "*to carry on their production and distribution on the cost principle.*" [**The Individualist Anarchists**, p. 276] Moreover, such an aim logically implies a society based upon artisan, not wage, labour and workers would, therefore, not be separated from the ownership and control of the means of production they used and so sell the product of their labour, not the labour power itself.

For these two, interrelated, reasons, the Individualist Anarchists are clearly anti-capitalist. While an Individualist Anarchy would be a market system, it would not be a capitalist one. As Tucker argued, the anarchists realised "*the fact that one class of men are dependent for their living upon the sale of their labour, while another class of men are relieved of the necessity of labour by being legally privileged to sell something that is not labour. . . . And to such a state of things I am as much opposed as any one. But the minute you remove privilege. . . every man will be a labourer exchanging with fellow-labourers . . . What Anarchistic-Socialism aims to abolish is usury . . . it wants to deprive capital of its reward.*" [Benjamin Tucker, **Instead of a Book**, p. 404] As noted above, the term "*usury*," for Tucker, was a synonym for "*the exploitation of labour*" [**Ibid.**, p. 396] and included capitalist profits as well as interest, rent, and royalties. Little wonder Tucker translated Proudhon's **What is Property?** and subscribed to its conclusion that "*property is robbery*" (or theft).

Such opposition to exploitation of labour was a common thread in Individualist Anarchist thought, as it was in the social anarchist movement. Moreover, as in the writings of Proudhon, Bakunin and Kropotkin opposition to wage slavery was also a common thread within the individualist anarchist tradition --

indeed, given its regular appearance, we can say it is almost a **defining** aspect of the tradition (and, as we argue in the [next section](#), it has to be for Individualist Anarchism to be logically consistent). For example, taking Josiah Warren (the "father" of individualist anarchism) we find that "[t]o men like [him] . . . chattel slavery was merely one side of a brutal situation, and although sympathetic with its opponents, refused to take part in the struggle [against slavery] unless it was extended to a wholesale attack on what they termed 'wage slavery' in the states where Negro slavery no longer existed." [James J. Martin, **Men Against the State**, p. 81] Such a view, we may add, was commonplace in radical working class journals and movements of the time. Thus we find George Henry Evans (who heavily influence Individualist Anarchists like Warren and Ingalls with the ideas of land reform based on "occupancy and use") writing:

"I was formally, like yourself, sir, a very warm advocate of the abolition of (black) slavery. This was before I saw that there was white slavery. Since I saw this, I have materially changed my views as to the means of abolishing Negro slavery. I now see clearly, I think, that to give the landless black the privilege of changing masters now possessed by the landless white, would hardly be a benefit to him in exchange for his surety of support in sickness and old age, although he is in a favourable climate." [quoted by Kenneth R. Gegg, Jr., **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 113]

Similarly, William Greene (whose pamphlet **Mutual Banking** had a great impact on Tucker) pronounced that "[t]here is no device of the political economists so infernal as the one which ranks labour as a commodity, varying in value according to supply and demand." [**Mutual Banking** quoted by Martin, **Op. Cit.**, p. 130] In the same work he also noted that "[t]o speak of labour as merchandise is treason; for such speech denies the true dignity of man. . . . Where labour is merchandise in fact . . . there man is merchandise also, whether in England or South Carolina." [quoted by Rudolf Rocker, **Pioneers of American Freedom**, p. 112] Here we see a similar opposition to the commodification of labour (and so labourers) within capitalism that also marks social anarchist thought (as Rocker notes, Greene "rejected . . . the designation of labour as a **commodity**." [**Op. Cit.**, pp. 111-2]). Moreover, we discover Greene had a "strong sympathy for the **principle of association**. In fact, the theory of Mutualism is nothing less than co-operative labour based on the cost principle." [Rudolf Rocker, **Op. Cit.**, p. 109] Martin also indicates Greene's support for co-operation and associative labour:

"Coming at a time when the labour and consumer groups were experimenting with 'associated workshops' and 'protective union stores,' Greene suggested that the mutual bank be incorporated into the movement, forming what he called 'complementary units of production, consumption, and exchange . . . the triple formula of practical mutualism.'" [Op. Cit., pp. 134-5]

This support for producers' associations alongside mutual banks is identical to Proudhon's ideas -- which is unsurprising as Greene was a declared follower of the French anarchist's ideas.

Looking at Lysander Spooner, we discover a similar opposition to wage labour. Spooner argued that it was state restrictions on credit and money (the "*money monopoly*" based on banks requiring specie to operate) as the reason why people sell themselves to others on the labour market. As he put it, "*a monopoly of money . . . put[s] it wholly out of the power of the great body of wealth-producers to hire the capital needed for their industries; and thus compel them . . . -- by the alternative of starvation -- to sell their labour to the monopolists of money . . . [who] plunder all the producing classes in the prices of their labour.*" [A Letter to Grover Cleveland, p. 20] Spooner was well aware that it was capitalists who ran the state ("*the employers of wage labour . . . are also the monopolists of money.*" [Op. Cit., p. 48]). In his ideal society, the "*amount of money capable of being furnished . . . is so great that every man, woman, and child. . . could get it, and go into business for himself, or herself -- either singly, or in partnerships -- and be under no necessity to act as a servant, or sell his or her labour to others. All the great establishments, of every kind, now in the hands of a few proprietors, but employing a great number of wage labourers, would be broken up; for few, or no persons, who could hire capital, and do business for themselves, would consent to labour for wages for another.*" [Op. Cit., p. 41] In other words, a society without wage labour and, instead, based upon peasant, artisan and associated/co-operative labour (as in Proudhon's vision). In other words, a **non**-capitalist society or, more positively, a (libertarian) socialist one as the workers' own and control the means of production they use.

The individualist anarchists opposed capitalism (like social anarchists) because they saw that profit, rent and interest were all forms of exploitation. They thought that liberty meant that the worker was entitled to "*all the fruits of his own labour*" (Spooner) and recognised that working for a boss makes this impossible as a portion is diverted into the employer's pockets. [Martin, Op. Cit., p. 172] Like social anarchists they opposed usury, to have to pay purely for access/use for a resource (a "*slice of their daily labour us taken from them [the workers] for the privilege of using these factories*" [Alexander Berkman, **What is Communist Anarchism?**, p. 6]).

This opposition to profits, rent and interest as forms of exploitation, wage labour as a form of slavery and property as a form of theft clearly makes individualist anarchism anti-capitalist and a form of (libertarian) socialism. In addition, it also indicates well the common ground between the two threads of anarchism, in particular their common position to capitalism. The social anarchist Rudolf Rocker indicates well this common position when he argues:

"it is difficult to reconcile personal freedom with the existing economic system. Without doubt the present inequality of economic interests and the ruling class conflicts in society are a continual danger to the freedom of the individual. . . One cannot be free either politically or personally so long as one is in economic servitude of another and cannot escape from this condition. This was recognised by men like Godwin, Warren, Proudhon, Bakunin, [and women like Goldman and de Cleyre, we must add!] and many others who subsequently reached the conviction that the domination of man over man will not disappear until there is an end of the exploitation of man by man." [Nationalism and Culture, p. 167]

In addition to this opposition to capitalist usury, the individualist anarchists also expressed opposition to

capitalist ideas on property (particularly property in land). J.K. Ingalls, for example, considered that to reduce land to the status of a commodity was an act of "*usurpation*." Indeed, "*the private domination of the land*" originated in "*usurpation only, whether of the camp, the court or the market. Whenever such a domination excludes or deprives a single human being of his equal opportunity, it is a violation, not only of the public right, and of the social duty, but of the very principle of law and morals upon which property itself is based. . .*" [**Social Wealth**, quoted by Martin, **Op. Cit.**, p. 148f]

These ideas are identical to Proudhon's and Ingalls continues in this Proudhonian "*occupancy and use*" vein when he argues that possession "*remains possession, and can never become property, in the sense of absolute dominion, except by positive statue [i.e. state action]. Labour can only claim occupancy, and can lay no claim to more than the usufruct.*" [**Ibid.**, p. 149] In other words, capitalist property was created by "*forceful and fraudulent taking*" of land, which "*could give no justification to the system*" [**Ibid.**] (as we argued in [section B.3.4](#)) and was protected by the state. And like Warren and Greene he opposed wage labour, and "*considered the only 'intelligent' strike [by workers as] one which would be directed against wage work altogether.*" [**Ibid.**, p. 153]

Therefore we see that the individualist anarchists, like social anarchists, opposed capitalist exploitation, wage slavery and property rights. Instead of capitalism, they maintained that workers should own what they produced or its equivalent (rather than what they were paid in wages). Such a position necessarily implies that they should own and control the means of production they use, thus ensuring the "*abolition of the proletariat*" (to use Proudhon's term) and so the end of capitalism as society would no longer be divided into two classes, those who worked and those who owned. In an individualist anarchy, "*there should be no more proletaires*" as "*everybody*" would be "*proprietor*." This would result in "*The land to the cultivator. The mine to the miner. The tool to the labourer. The product to the producer.*" [Ernest Lesigne quoted approvingly by Tucker at the end of his essay "*State Socialism and Anarchism*" in **Instead of a Book**, p. 17, p. 18] Ernest Lesigne considered "*co-operative production*" as "*a solution to the great problem of social economy, -- the delivery of products to the consumer at cost*" and as a means of producers to "*receive the value of your product, of your effort, without having to deal with a mass of hucksters and exploiters.*" [**The Individualist Anarchists**, p. 123] As Charles A. Dana put it (in a work published by Tucker and described by him as "*a really intelligent, forceful, and sympathetic exposition of mutual banking*"), "*[b]y introducing mutualism into exchanges and credit we introduce it everywhere, and labour will assume a new aspect and become truly democratic.*" [**Proudhon and His "Bank of the People"**, p. 45] In other words, a classless socialist society of self-employed workers without exploitation and oppression.

As Wm. Gary Kline correctly summarises:

"Their proposals were designed to establish true equality of opportunity . . . and they expected this to result in a society without great wealth or poverty. In the absence of monopolistic factors which would distort competition, they expected a society of largely self-employed workmen with no significant disparity of wealth between any of them since all would be required to live at their own expense and not at the expense of exploited

fellow human beings." [**The Individualist Anarchists: A Critique of Liberalism**, pp. 103-4]

Thus Individualist anarchy would "[m]ake capital free by organising credit on a mutual plan, and then these vacant lands will come into use . . . operatives will be able to buy axes and rakes and hoes, and then they will be independent of their employers, and then the labour problem will be solved." This would result in the "emancipation of the workingman from his present slavery to capital." [Tucker, **Instead of a Book**, p. 321 and p. 323]

Moreover, like the social anarchists, the Individualist Anarchists were aware that the state was not some neutral machine or one that exploited society purely for its own ends. They were aware that it was a vehicle of **class rule**, namely the rule of the capitalist class over the working class. As noted above, Spooner thought that that "holders of this monopoly [the money monopoly] now rule and rob this nation; and the government, in all its branches, is simply their tool" and that "the employers of wage labour . . . are also the monopolists of money." [Spooner, **Op. Cit.**, p. 42 and p. 48] Tucker recognised that "capital had so manipulated legislation" that they gained an advantage on the capitalist market which allowed them to exploit labour. [**The Individualist Anarchists**, pp. 82-3] He was quite clear that the state was a **capitalist** state, with "Capitalists hav[ing] placed and kept on the statute books all sorts of prohibitions and taxes" to ensure a "free market" skewed in favour of themselves. [quoted by Don Werkheiser, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 218] A.H. Simpson argued that the Individualist Anarchist "knows very well that the present State . . . is simply the tool of the property-owning class." [**Op. Cit.**, p. 92] Thus both wings of the anarchist movement were united in their opposition to capitalist exploitation and their common recognition that the state was a tool of the capitalist class used to allow them to exploit the working class.

In addition, as a means of social change, the individualists suggested that activists start "inducing the people to steadily refuse the payment of rents and taxes." [**Instead of a Book** pp. 299-300] This non-payment of rent included rented accommodation as "tenants would not be forced to pay [landlords] rent, nor would [landlords] be allowed to seize their [the tenants] property." [**The Individualist Anarchists**, p. 162] These are hardly statements with which capitalists would agree. Tucker, as noted, also opposed interest, considering it usury (exploitation and a "crime") pure and simple and one of the means by which workers were denied the full fruits of their labour. Indeed, he looked forward to the day when "any person who charges more than cost for any product [will] . . . be regarded very much as we now regard a pickpocket." This "attitude of hostility to usury, in any form" hardly fits into the capitalist mentality or belief system. [**Op. Cit.**, p. 155] Similarly, Ezra Heywood considered profit-taking "an injustice which ranked second only to legalising titles to absolute ownership of land or raw-materials." [James J. Martin, **Op. Cit.**, p. 111] Opposition to profits, rent or interest is hardly capitalistic -- indeed, the reverse.

As regards equality, we discover that the Individualist Anarchist's saw their ideas as resulting in more equality. Thus we find Tucker arguing that that the "happiness possible in any society that does not improve upon the present in the matter of distribution of wealth, can hardly be described as beatific." He was clearly opposed to "the inequitable distribution of wealth" under capitalism and equally clearly

saw his proposals as a means of reducing it substantially. ["*Why I am an Anarchist*", p. 135, contained in **Man!**, M. Graham (ed.), pp. 132-6] John Beverley Robinson agreed:

"When privilege is abolished, and the worker retains all that he produces, then will come the powerful trend toward equality of material reward for labour that will produce substantial financial and social equality, instead of the mere political equality that now exists." [**Patterns of Anarchy**, pp. 278-9]

As did Lysander Spooner, who argued that under his system *"fortunes could hardly be represented by a wheel; for it would present on such height, no such depth, no such irregularity of motion as now. It should rather be represented by an extended surface, varied somewhat by inequalities, but still exhibiting a general level, affording a safe position for all, and creating no necessity, for either force or fraud, on the part of anyone to secure his standing."* Thus Individualist anarchism would create a condition *"neither of poverty, nor riches; but of moderate competency -- such as will neither enervate him by luxury, nor disable him by destitution; but which will at once give him and opportunity to labour, (both mentally and physically) and stimulate him by offering him all the fruits of his labours."* [quoted by Stephan L. Newman, **Liberalism at Wit's End**, p. 72 and p. 73]

Hence, like social anarchists, the Individualist Anarchists saw their ideas as a means towards equality. By eliminating exploitation, inequality would soon decrease as wealth would no longer accumulate in the hands of the few (the owners). Rather, it would flow back into the hands of those who produced it (i. e. the workers). Until this occurred, society would see *"[o]n one side a dependent class of wage-workers and on the other a privileged class of wealth-monopolisers, each become more and more distinct from the other as capitalism advances."* This has *"resulted in a grouping and consolidation of wealth which grows apace by attracting all property, no matter by whom produced, into the hands of the privileged, and hence property becomes a social power, an economic force destructive of rights, a fertile source of injustice, a means of enslaving the dispossessed."* [William Ballie, **The Individualist Anarchists**, p. 121]

Tucker, like other individualist anarchists, also supported labour unions, and although he opposed violence during strikes, he recognised that it was caused by frustration due to an unjust system. Indeed, like social anarchists, he considered *"the labourer in these days [as] a soldier. . . His employer is . . . a member of an opposing army. The whole industrial and commercial world is in a state of internecine war, in which the proletaires are massed on one side and the proprietors on the other."* [**Instead of a Book**, p. 460] The cause of strikes rested in the fact that *"before. . . strikers violated the equal liberty of others, their own right to equality of liberty had been wantonly and continuously violated"* by the capitalists using the state, for the *"capitalists . . . in denying [a free market] to [the workers] are guilty of criminal invasion."* [**Ibid.**, p. 454] He agreed with Ezra Heywood when he *"scoffed at supporters of the status quo, who saw no evidence of the tyranny on the part of capital, and who brought up the matter of free contract with reference to labourers. This argument was no longer valid. Capital controlled land, machinery, steam power, waterfalls, ships, railways, and above all, money and public opinion, and was in a position to wait out recalcitrancy at its leisure."* [James J. Martin, **Men Against the State**, p. 107] Likewise, Tucker advocated and supported many other forms of non-violent direct action such as

boycotts and rent strikes, seeing them as important means of radicalising the working class and creating an anarchist society. However, like social anarchists the Individualist Anarchists did not consider labour struggle as an end in itself -- they considered reforms (and discussion of a "*fair wage*" and "*harmony between capital and labour*") as essentially "*conservative*" and would be satisfied with no less than "*the abolition of the monopoly privileges of capital and interest-taking, and the return to labour of the full value of its production.*" [Victor Yarros, quoted by James J. Martin, **Op. Cit.**, p. 206f]

However, while Tucker believed in direct action, he opposed the "forceful" expropriation of social capital by the working class, instead favouring the creation of a mutualist system to replace capitalist companies with co-operative ones. Tucker was therefore fundamentally a **reformist**, thinking that anarchy would evolve from capitalism as mutual banks spread across society, increasing the bargaining power of labour. This idea of reforming capitalism over time (and, by implication, tolerating boss's control during that time) was primarily due to the influence of Herbert Spencer and not Max Stirner. Little wonder that Peter Kropotkin termed Tucker's doctrine "*no force*" and considered such a reformist position to be similar to Spencer's and so little more than "*an excuse for supporting landlord and capitalist domination.*" [**Act For Yourselves**, p. 98]

Be that as it may, it is clear that both social and Individualist Anarchists share much in common, including an opposition to capitalism. In other words, Individualist Anarchism is, indeed, opposed to capitalism. As Carole Pateman points out, "*[t]here has always been a strong radical individualist tradition in the USA. Its adherents have been divided between those who drew anarchist, egalitarian conclusions, and those who reduced political life to the capitalist economy writ large, to a series of exchanges between unequally situated individuals.*" [**The Problem of Political Obligation**, p. 205] As can be seen, what right-libertarians do is to confuse these two traditions. The Individualist Anarchists may have been in favour of free exchange but between equally situated individuals. Only given a context of equality can free exchange benefit both parties equally and not generate growing inequalities which benefit the stronger of the parties involved which, in turn, skews the bargaining position of those involved in favour of the stronger (also see [section F.3](#)).

G.1.1 Why is the social context important in evaluating Individualist Anarchism?

When reading the work of people like Tucker and Warren, we must remember the social context of their ideas, namely the transformation of America from a pre-capitalist to a capitalist society (see Eunice Minette Schuster, **Native American Anarchism**, pp. 135-137). The individualist anarchists viewed with horror the rise of capitalism and its imposition on an unsuspecting American population, supported and encouraged by state action (in the form of protection of private property in land, restricting money issuing to state approved banks using specie, government orders supporting capitalist industry, tariffs and so on).

The non-capitalist nature of the early USA can be seen from the early dominance of self-employment

(artisan production). At the beginning of the 19th century, around 80% of the occupied population were self-employed. The great majority of Americans during this time were farmers working their own land, primarily for their own needs. Most of the rest were self-employed artisans, merchants, traders, and professionals. Other classes -- employees/wage workers and employers/capitalists in the North, slaves and planters in the South -- were relatively small. The great majority of Americans were independent and free from anybody's command. They controlled they owned and controlled their means of production. Thus early America was, essentially, a pre-capitalist society. However, by 1880, the year before Tucker started **Liberty**, the number of self-employed had fallen to approximately 33% of the working population. Now it is less than 10% [Samuel Bowles and Herbert Gintis, **Schooling in Capitalist America**, p. 59]. It is **only** in this context that we can understand individualist anarchism, namely as a revolt against the destruction of working-class independence and the growth of wage-labour, accompanied by the growth of two opposing classes, capitalists and proletarians.

Given the commonplace awareness in the population of artisan production and its advantages, it is hardly surprising that the individualists supported "free market" solutions to social problems. For, given the era, this solution implied workers' control and the selling of the product of labour, not the labourer him/herself. As Tucker argues, individualist anarchism desires "*[n]ot to abolish wages, but to make every man dependent upon wages and to secure every man his whole wages*" [**Instead of a Book**, p. 404] and this, logically, can only occur under workers control (i.e. when the tool belonged to the worker, etc. -- see [section G.2](#)).

Indeed, the Individualist Anarchists were part of a wider movement seeking to stop the transformation of America. As Bowles and Ginitis note, this "*process has been far from placid. Rather, it has involved extended struggles with sections of U.S. labour trying to counter and temper the effects of their reduction to the status of wage labour.*" They continue by noting that "*with the rise of entrepreneurial capital, groups of formerly independent workers were increasingly drawn into the wage-labour system. Working people's organisations advocated alternatives to this system; land reform, thought to allow all to become an independent producer, was a common demand. Worker co-operatives were a widespread and influential part of the labour movement as early as the 1840s . . . but failed because sufficient capital could not be raised. . .*" [**Op. Cit.**, p. 59 and p. 62] It is no coincidence that the issues raised by the Individualist Anarchists (land reform via "*occupancy-and-use*", increasing the supply of money via mutual banks and so on) reflect these alternatives raised by working class people and their organisations. Little wonder Tucker argued that:

"Make capital free by organising credit on a mutual plan, and then these vacant lands will come into use . . . operatives will be able to buy axes and rakes and hoes, and then they will be independent of their employers, and then the labour problem will solved." [**Instead of a Book**, p. 321]

Thus the Individualist Anarchists reflect the aspirations of working people facing the transformation of an society from a pre-capitalist state into a capitalist one. As Morgan Edwards notes:

*"The greatest part [of **Liberty's** readers] proves to be of the professional/intellectual class: the remainder includes independent manufacturers and merchants, artisans and skilled workers . . . The anarchists' hard-core supporters were the socio-economic equivalents of Jefferson's yeoman-farmers and craftworkers: a freeholder-artisan-independent merchant class allied with freethinking professionals and intellectuals. These groups -- in Europe as well as in America -- had socio-economic independence, and through their desire to maintain and improve their relatively free positions, had also the incentive to oppose the growing encroachments of the capitalist State."* [**Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 85]

This transformation of society by the rise of capitalism explains the development of **both** schools of anarchism, social and individualist. *"American anarchism,"* Frank H. Brooks argues, *"like its European counterpart, is best seen as a nineteenth century development, an ideology that, like socialism generally, responded to the growth of industrial capitalism, republican government, and nationalism. Although this is clearest in the more collectivistic anarchist theories and movements of the late nineteenth century (Bakunin, Kropotkin, Malatesta, communist anarchism, anarcho-syndicalism), it also helps to explain anarchists of early- to midcentury such as Proudhon, Stirner and, in America, Warren. For all of these theorists, a primary concern was the 'labour problem' -- the increasing dependence and immiseration of manual workers in industrialising economies."* [**The Individualist Anarchists**, p. 4]

Changing social conditions also explains why Individualist Anarchism must be considered socialistic. As Murray Bookchin notes:

*"Th[e] growing shift from artisanal to an industrial economy gave rise to a gradual but major shift in socialism itself. For the artisan, socialism meant producers' co-operatives composed of men who worked together in small shared collectivist associations, although for master craftsmen it meant mutual aid societies that acknowledged their autonomy as private producers. For the industrial proletarian, by contrast, socialism came to mean the formation of a mass organisation that gave factory workers the collective power to expropriate a plant that no single worker could properly own. These distinctions led to two different interpretations of the 'social question' . . . The more progressive craftsmen of the nineteenth century had tried to form networks of co-operatives, based on individually or collectively owned shops, and a market knitted together by a moral agreement to sell commodities according to a 'just price' or the amount of labour that was necessary to produce them. Presumably such small-scale ownership and shared moral precepts would abolish exploitation and greedy profit-taking. The class-conscious proletarian . . . thought in terms of the complete socialisation of the means of production, including land, and even of abolishing the market **as such**, distributing goods according to needs rather than labour . . . They advocated **public** ownership of the means of production, whether by the state or by the working class organised in trade unions."* [**The Third Revolution**, vol. 2, p. 262]

So, in this evolution of socialism we can place the various brands of anarchism. Individualist anarchism

is clearly a form of artisanal socialism (which reflects its American roots) while communist anarchism and anarcho-syndicalism are forms of industrial (or proletarian) socialism (which reflects its roots in Europe). Proudhon's mutualism bridges these extremes, advocating as it does artisan socialism for small-scale industry and agriculture and co-operative associations for large-scale industry (which reflects the state of the French economy in the 1840s to 1860s). Hence Individualist Anarchist support for "*the cost principle*" (or "*cost the limit of price*") and artisanal production ("*The land to the cultivator. The mine to the miner. The tool to the labourer. The product to the producer*"), complemented by "*the principle of association*" and mutual banking.

In other words, there have been many schools of socialism, all influenced by the changing society around them. In the words of Proudhon "[m]odern Socialism was not founded as a sect or church; it has seen a number of different schools." [**Selected Writings of Pierre-Joseph Proudhon**, p. 177] As Frank H. Brooks notes, "*before Marxists monopolised the term, socialism, was a broad concept, as indeed Marx's critique of the 'unscientific' varieties of socialism in the Communist Manifesto indicated. Thus, when Tucker claimed that the individualist anarchism advocated in the pages of Liberty was socialist, he was not engaged in obfuscation or rhetorical bravado.*" [**The Individualist Anarchists**, p. 75] Looking at the society in which their ideas developed (rather than a-historically projecting modern ideas backward) we can see the socialist core of Individualist Anarchism. It was, in other words, an un-Marxian form of socialism (as was communist-anarchism).

Thus, to look at the Individualist Anarchists from the perspective of "modern socialism" (say, communist-anarchism or Marxism) means to miss the point. The social conditions which produced Individualist Anarchism were substantially different from those existing today and what was a possible solution to the "*social problem*" **then** may not be one suitable **now** (and, indeed, point to a different kind of socialism than that which developed later). Moreover, Europe in the 1870s was distinctly different than America (although, of course, the USA **was** catching up). For example, there was still vast tracks of unclaimed land (once the Native Americans had been removed, of course) available to workers (which explains the various acts the US state to control land access -- see [section F.8.5](#)). In the towns and cities, artisan production "*remained important . . . into the 1880s*" [David Montgomery, **The Fall of the House of Labour**, p. 52] Until the 1880s, the possibility of self-employment was a real one for many workers, a possibility being hindered by state action (for example, by forcing people to buy land via Homestead Acts, restricting banking to those with specie, and so on). Little wonder that Individualist Anarchism was considered a real solution to the problems generated by the creation of capitalism in the USA and that, by the 1880s, Communist Anarchist (and later anarcho-syndicalism) became the dominant forms of anarchism. By the 1880s, the transformation of America was nearing completion and self-employment was no longer a real solution for the majority of workers.

As Peter Sabatini points out:

"The chronology of anarchism within the United States corresponds to what transpired in Europe and other locations. An organised anarchist movement imbued with a revolutionary collectivist, then communist, orientation came to fruition in the late 1870s.

At that time, Chicago was a primary centre of anarchist activity within the USA, due in part to its large immigrant population. . .

The Proudhonist anarchy that Tucker represented was largely superseded in Europe by revolutionary collectivism and anarcho-communism. The same changeover occurred in the US, although mainly among subgroups of working class immigrants who were settling in urban areas. For these recent immigrants caught up in tenuous circumstances within the vortex of emerging corporate capitalism, a revolutionary anarchy had greater relevancy than go slow mutualism." [Libertarianism: Bogus Anarchy]

Murray Bookchin argues that the development of communist-anarchism "made it possible for anarchists to adapt themselves to the new working class, the industrial proletariat, . . . This adaptation was all the more necessary because capitalism was now transforming not only European [and American] society but the very nature of the European [and American] labour movement itself." [Op. Cit., p. 259] With the changing social conditions in the US, the anarchist movement changed to. Hence the rise of communist-anarchism in addition to the more native individualist tradition and the change in Individualist Anarchism itself:

*"Green emphasised more strongly the **principle of association** than did Josiah Warren and more so than Spooner had done. Here too Proudhon's influence asserts itself. . . In principle there is essentially no difference between Warren and Proudhon. The difference between them arises from a dissimilarity of their respective environments. Proudhon lived in a country where the sub-division of labour made co-operation in social production essential, while Warren had to deal with predominantly small individual producers. For this reason Proudhon emphasised the **principle of association** far more than Warren and his followers did, although Warren was by no means opposed to this view." [Rudolf Rocker, **Pioneers of American Freedom**, p. 108]*

This social context is essential for understanding the thought of people like Greene, Spooner and Tucker. For example, as Stephen L. Newman points out, Spooner "argues that every man ought to be his own employer, and he envisions a world of yeoman farmers and independent entrepreneurs." [Liberalism at Wit's End, p. 72] This sort of society was in the process of being destroyed when Spooner was writing. However, the Individualist Anarchists did not think this transformation was unstoppable and proposed, like other sections of US labour, various solutions to problems society faced. Moreover, they adjusted their own ideas to changing social circumstances as well, as can be seen by Greene's support for co-operatives ("*the principle of association*") as the only means of ending exploitation of labour by capital.

Therefore Rocker was correct when he argued that Individualist Anarchism was "*above all . . . rooted in the peculiar social conditions of America which differed fundamentally from those of Europe.*" [Op. Cit., p. 155] As these conditions changed, the viability of Individualist Anarchism's solution to the social problem decreased. Individualist Anarchism, argues Morgan Edwards, "*appears to have dwindled into political insignificance largely because of the erosion of its political-economic base, rather than*

*from a simple failure of strategy. With the impetus of the Civil War, capitalism and the State had too great a head start on the centralisation of economic and political life for the anarchists to catch up. This centralisation reduced the independence of the intellectual/professional and merchant artisan group that were the mainstay of the **Liberty** circle." [Op. Cit., pp. 85-6]*

By not taking into account these conditions, the ideas of the likes of Tucker and Spooner will be distorted beyond recognition. Similarly, by ignoring the changing nature of socialism in the face of a changing society and economy, the obvious socialistic aspects of their ideas will be lost. Ultimately, to analyse the Individualist Anarchists in an a-historic manner means to distort their ideas and ideals. Moreover, to apply those ideas in a non-artisan economy without the intention of radically transforming the socio-economic nature of that society towards one based on artisan production one would mean to create a society distinctly different than one they envisioned (see [section G.3](#)).

G.2 Why does individualist anarchism imply socialism?

Here we present a short summary of why individualist anarchism implies socialism and not capitalism. While it is true that people like Tucker and Warren placed "property" at the heart of their vision of anarchy, this does not make them supporters of capitalism (see sections [G.2.1](#) and [G.2.2](#)). Unlike capitalists, the individualist anarchists identified "property" with simple "possession," or "*occupancy and use*" and considered profit, rent and interest as exploitation. Indeed, Tucker explicitly stated that "*all property rests on a labour title, and no other property do I favour.*" [**Instead of a Book**, p. 400] Because of this and their explicit opposition to usury (profits, rent and interest) and capitalist property, they could and did consider themselves as part of the wider socialist movement, the libertarian wing as opposed to the statist Marxist wing.

Individualist anarchists like Tucker strongly believed that a truly free (i.e. non-capitalist) market would ensure that the worker would receive the "*full product*" of his or her labour. Nevertheless, in order to claim Tucker as a proto-"anarcho"-capitalist, "anarcho"-capitalists may argue that capitalism pays the "market price" of labour power, and that this price **does** reflect the "*full product*" (or value) of the worker's labour.

As Tucker supported the Labour Theory of Value we doubt that he would have agreed with the "anarcho"-capitalist argument that market price of labour reflected the value it produced (see [Section C](#)). He, like the other individualist anarchists, was well aware that labour produces the "surplus wealth" which was appropriated in the name of interest, rent and profit. In other words, he very forcibly rejected the idea that the market price of labour reflects the value of that labour, considering "*the natural wage of labour is its product*" and "*that this wage, or product, is the only just source of income.*" [**Instead of a Book**, p. 6]

However, assuming that we accept the capitalist economic apologetics at their face value, such an argument fails to place Individualist Anarchism in the capitalist tradition. This is because the argument ignores the need to replace and improve upon existing capital. In the context of a market economy, the replacement and improvement of capital is important, as accumulation allows the reduction of labour costs (either directly or indirectly) by investing in new machinery or processes and so improving market position. In addition, capital investments are required in order to offer new services to the customer (for example, in banking, a network of auto-tellers). Either way, new capital is required. But new capital comes from value created by labour and realised as profits. And this means that in order to ensure that labour receives its due, companies **must** be co-operatives so that workers will have a say in how the profits they create are used, otherwise they do not get their "*natural wage.*" In addition, the ability to influence one's own destiny by having a voice in investment decisions is certainly another "value" that one's labour can produce beyond the exchange value to be invested. We might call it "self-determination value," which individualist anarchists certainly regarded as a benefit of the artisan/co-operative labour

they favoured (and their system implies). But workers will not be able to realise the full self-determination value of their labour nor receive its "*full product*" if investment decisions are not in their hands. Logically, therefore, individualist anarchism **must** tend towards co-operative, not capitalist, labour in order for them to receive the full value of their labour.

In addition, while it is true that in an economy with a very low degree of monopoly within industries prices **do** tend towards the production cost of a commodity, this cannot be said to occur instantaneously. This means that in an economy without oligopolies and without interest or rent, prices would tend, in the long run, towards Tucker's their "*labour cost of production*" this cannot be said to occur in the short run. Given that in the long run "*we are all dead*" (to use Keynes' words) -- i.e. that we may never see it -- any form of wage labour can lead to usury being recreated as workers would not receive their entire product back. That is, due to short term changes in price workers market wage may not equal what they produce. They **only** solution to this problem is workers' ownership and control as this ensures workers remain control of the product of their labour at all times (as well as the labour itself). **If**, as Tucker argued, "*the object of Anarchism . . . [is] to let every man [or woman] 'control self and the results of self-exertion'*" then this is only possible under workers' self-management and ownership. [**Occupancy and Use versus the Single Tax**] This, we must note, was Proudhon's argument and part of the reason he supported workers' co-operatives (we will discuss the problem of natural barriers to competition in [section G.4](#) along with the dangers associated with a lack of workers' control in a free society).

More importantly, wage labour violates two key aspects of Individualist Anarchist thought, namely its support for "*occupancy and use*" and its opposition to the state. We will discuss each in turn.

Obviously wage labour violates the idea that those who use something automatically own it. In the case of land and housing, the Individualist Anarchists argued that the person who lives or works on it (even under lease) would be regarded "*as the occupant and user of the land on which the house stands, and as the owner of the house itself,*" that is they become "*the owner of both land and house as soon as he becomes the occupant.*" [**Ibid.**] Now, to take a concrete example from Tucker's time, the 3 800 workers locked out by Carnegie at Homestead in 1892 definitely occupied and used the works from which they were barred entry by the owners. The owners, obviously, did not use the workplace themselves -- they hired **others** to occupy and use it **for** them. Now, why should "*occupancy and use*" be acceptable for land and housing but not for workplaces? There is no reason and so wage labour, logically, violates "*occupancy and use*" -- for under wage labour, those who occupy and use a workplace do not own or control it. Hence "*occupancy and use*" logically implies workers' control and ownership.

The reason why wage labour violates Individualist Anarchist opposition to the state for a related reason. If the workers who use a workplace do not own it, then someone else will (i.e. the owner). This in turn means that the owner can tell those who use the resource what to do, how to do it and when. That is, they are the sole authority over the workplace and those who use it. However, according to Tucker, the state can be defined (in part) as "*the assumption of sole authority over a given area and all within it.*" Tucker considered this element as "*common to all States.*" [**The Individualist Anarchists.** p. 24] Thus wage labour creates a situation which is similar to the state, namely the assumption of sole authority

over a given area and those who use it. Hence opposition to the state logically implies support for workers' control and ownership for only in this case can people govern themselves during the working day.

Therefore, as far as the employer/employee social relationship goes, it does not fit in well with Tucker's statement that *"if the individual has the right to govern himself, all external government is tyranny."* [**The Anarchist Reader**, p. 151] As we have argued in Section B.4 ([How does capitalism affect liberty?](#)), wage labour produces a very specific form of *"external government"* in the workplace, namely hierarchical management structures. Therefore, logically, Individualist Anarchism (like Social Anarchism) must oppose all forms of wage labour in favour of self-government in production (i.e. co-operative, not wage, labour).

That this the case can be seen from Proudhon's argument in **The General Idea of the Revolution in the Nineteenth Century**. There he argues that employees are *"subordinated, exploited"* and their *"permanent condition is one of obedience,"* a *"slave."* [p. 216] Indeed, capitalist companies *"plunder the bodies and souls of wage workers"* and they are *"an outrage upon human dignity and personality."* [p. 218] However, in a co-operative the situation changes and the worker is an *"associate"* and *"forms a part of the producing organisation . . . [and] forms a part of the sovereign power, of which he was before but the subject."* [p. 216] Without co-operation and association, *"the workers . . . would remain related as subordinates and superiors, and there would ensue two industrial castes of masters and wage-workers, which is repugnant to a free and democratic society."* [p. 216] As Robert Graham notes, *"Proudhon's market socialism is indissolubly linked to his notions of industry democracy and workers' self-management."* [*"Introduction"*, **General Idea of the Revolution**, p. xxxii]

And we must add that John Stuart Mill (who agreed with the Warrenite slogan *"Individual Sovereignty"*) faced with the same problem that wage labour made a mockery of individual liberty came to the same conclusion. He thought that if *"mankind is to continue to improve"* (and it can only improve within liberty, we must add) then in the end one form of association will predominate, *"not that which can exist between a capitalist as chief, and workpeople without a voice in management, but the association of the labourers themselves on terms of equality, collectively owning the capital with which they carry on their operations, and working under managers elected and removable by themselves."* [quoted by Carole Pateman, **Participation and Democratic Theory**, p. 34]

Therefore, logically, individualist anarchism must support co-operatives and self-employment in order to ensure the maximum individual self-government and labour's *"natural wage."* That this is the case can be seen from Tucker's quoting Ernest Lesigne that anarchistic socialism aims for *"The land to the cultivator. The mine to the miner. The tool to the labourer. The product to the producer."*

It can also be seen from Tucker's description of what would replace the current system of statism (and note he calls it *"scientific socialism"* thus squarely placing his ideas in the anti-capitalist camp):

"we have something very tangible to offer , . . We offer non-compulsive organisation. We

offer associative combination. We offer every possible method of voluntary social union by which men and women may act together for the furtherance of well-being. In short, we offer voluntary scientific socialism in place of the present compulsory, unscientific organisation which characterises the State and all of its ramifications. . ." [quoted in Martin, **Op. Cit.**, p. 218]

Tucker himself pointed out that *"the essence of government is control. . . He who attempts to control another is a governor, an aggressor, an invader."* [**Instead of a Book**, p. 23] However, in places in **Instead of a Book** Tucker suggests that (non-exploitative, and so non-capitalist) wage labour could exist in individualist anarchy. Unlike wage labour under capitalism, workers would employ other workers and all workers would receive the full product of their labour. As such, this relationship is **non-capitalist** as it does not involve usury. Be that as it may, such relationships are not libertarian and so contradict Tucker's own theories on individual liberty (as Proudhon and Mill recognised with their own, similar, positions). Wage labour is based on the control of the worker by the employer; hence Tucker's contract theory can lead to a form of "voluntary" and "private" government within the workplace. This means that, while outside of a contract an individual is free, within it he or she is governed. This violates Tucker's concept of *"equality of liberty,"* since the boss has obviously more liberty than the worker during working hours.

This result, as noted in [section A.3](#), could **only** be avoided by workers' control, which is in fact the logical implication of Tucker's and other individualists' proposals (as we have proven above, and can be seen from Tucker's famous essay *"State Socialism and Anarchism"* for example). This is hardly a surprising implication, since as we've seen, artisan production was commonplace in 19th-century America and its benefits were extolled by the individualists. Without workers' control, individualist anarchism would soon become a form of capitalism and so statism -- a highly unlikely intention of individualists like Tucker, who hated both.

Therefore, given the assumptions of individualist anarchism in both their economic and political aspects, it is forced along the path of co-operative, not wage, labour. In other words, individualist anarchism is a form of socialism as workers receive the full product of their labour (i.e. there is no non-labour income) and this, in turn, logically implies a society in which self-managed firms compete against each other on the free market, with workers selling the product of their labour and not the labour itself. As this unites workers with the means of production they use, it is **not** capitalism and instead a form of socialism based upon worker ownership and control of the places they work.

For individualist anarchists not to support co-operatives results in a contradiction, namely that the individualist anarchism which aims to secure the worker's *"natural wage"* cannot in fact do so, while dividing society into a class of order givers and order takers (which violates individual self-government). It is this contradiction within Tucker's thought which the self-styled "anarcho"-capitalists take advantage of in order to maintain that individualist anarchism in fact implies capitalism (and so private-statism), not workers' control. In order to reach this implausible conclusion, a few individualist anarchist ideas are ripped from their social context and applied in a way that makes a mockery of them. That it was never

Tucker's intention to deny workers' control can be inferred from his argument that mutualism would give workers the bargaining power to obtain equality in the workplace, which clearly points to the end of capitalist authority relations, as will be explained further in [section G.5](#).

However, due to problems inherent in the nature of a market economy, even the assumption of workers' control may not be enough to ensure that individualistic anarchism does not become a new form of archy, as will be discussed in section G.4 (["Why do social anarchists reject individualist anarchism ideas?"](#)).

G.2.1 What about their support of the free market?

Many, particularly on the libertarian right, would dismiss claims that the Individualist Anarchists were socialists. By their support of the "free market" the Individualist Anarchists, they would claim, show them as really supporters of capitalism. Most, if not all, anarchists would reject this claim. Why is this the case?

This because such claims show an amazing ignorance of socialist ideas and history. The socialist movement has had a many schools, many of which, but not all, opposed the market and private property. Given that the right-libertarians who make such claims are not well informed of the ideas they oppose (i. e. of socialism, particularly **libertarian** socialism) it is unsurprising they claim that the Individualist Anarchists are not socialists (of course the fact that many Individualist Anarchists argued they **were** socialists is ignored). Coming from a different tradition, it is unsurprising they are not aware of the fact that socialism is not monolithic. Hence we discover right-libertarian guru von Mises claiming that the *"essence of socialism is the entire elimination of the market."* [**Human Action**, p. 702] This would have come as something of a surprise to, say, Proudhon, who argued that *"[t]o suppress competition is to suppress liberty itself."* [**The General Idea of the Revolution**, p. 50] Similarly, it would have surprised Tucker, who called himself a socialist while supporting a freer market than von Mises ever dreamt of.

Part of the problem, of course, is that the same word often means different things to different people. Both Kropotkin and Lenin said they were "communists" and aimed for "communism." However, it does not mean that the society Kropotkin aimed for was the same as that desired by Lenin. Kropotkin's communism was decentralised, created and run from the bottom-up while Lenin's was fundamentally centralised. Similarly, both Tucker and the Social-Democrat (and leading Marxist) Karl Kautsky called themselves a "socialist" yet their ideas on what a socialist society would be like were extremely different. As J.W. Baker notes, *"Tucker considered himself a socialist . . . as the result of his struggle against 'usury and capitalism,' but anything that smelled of 'state socialism' was thoroughly rejected."* [*"Native American Anarchism,"* **The Raven**, pp. 43-62, vol. 10, no. 1, p. 60] This, of course, does not stop many "anarcho"-capitalists talking about "socialist" goals as if all socialists were Stalinists (or, at best, social democrats). In fact, "socialist anarchism" has included (and continues to include) advocates of truly free markets as well as advocates of a non-market socialism which has absolutely nothing in common with the state capitalist tyranny of Stalinism. Similarly, they accept a completely ahistorical definition of "capitalism," so ignoring the massive state violence and support by which that

system was created and is maintained.

The same with terms like "property" and the "free market," which by the "anarcho"-capitalist assumes the individualist anarchist means the same thing as they do. We can take land as an example. The individualist anarchists argued for an "*occupancy and use*" system of "property" (see [section G.2.2](#)). Thus in their "free market," land would not be a commodity as it is under capitalism. Thus, under individualist anarchism, absentee landlords would be considered as aggressors (and under capitalism, using state coercion to back up their collection of rent against the actual occupiers of property). Tucker argued that local defence associations should treat the occupier and user as the rightful owner, and defend them against the aggression of an absentee landlord who attempted to collect rent. An "anarcho"-capitalist would consider this as aggression **against** the landlord and a violation of "free market" principles. Similarly, if we apply the mutualist understanding of land to the workplace, we would treat the workers in a factory as the rightful owners, on the basis of occupation and use; at the same time, we could treat the share owners and capitalists as aggressors for attempting to force their representatives as managers on those actually occupying and using the premises. Again, such a system of "occupancy and use" would involve massive violations of what is considered normal in a capitalist "free market."

In other words, an individualist anarchist would consider an "anarcho"-capitalist "free market" as nothing of the kind and vice versa. For the "anarcho"-capitalist, the individualist anarchist position on "property" would be considered as forms of regulation and restrictions on private property and so the "free market." The individualist anarchist would consider the "anarcho"-capitalist "free market" as another system of legally maintained privilege, with the free market distorted in favour of the wealthy.

Therefore it should be remembered that "anarcho"-capitalists at best agree with Tucker, Spooner, et al on fairly vague notions like the "free market." They do not bother to find out what the individualist anarchists meant by that term. Indeed, the "anarcho"-capitalist embrace of different economic theories means that they actually reject the reasoning that leads up to these nominal "agreements." It is the "anarcho"-capitalists who, by rejecting the underlying economics of the mutualists, are forced to take any "agreements" out of context. It also means that when faced with obviously anti-capitalist arguments and conclusions of the individualist anarchists, the "anarcho"-capitalist cannot explain them and are reduced to arguing that the anti-capitalist concepts and opinions expressed by the likes of Tucker are somehow "out of context." In contrast, the anarchist can explain these so-called "out of context" concepts by placing them into the context of the ideas of the individualist anarchists and the society which shaped them.

The "anarcho"-capitalist usually admits that they totally disagree with many of the essential premises of Spooner's and Tucker's analyses. The most basic difference is that the individualist anarchists rooted their ideas in the labour theory of value while the "anarcho"-capitalists favour the subjective theory. It does not take much thought to realise that advocates of labour theories and those of subjective theories of value will naturally develop differing notions of what is and what should be happening within a given economic system. One difference that **has** in fact arisen is that the notion of what constitutes a "free market" has differed according to the theory of value applied. Many things can be attributed to the

workings of a "free" market under a subjective analysis that would be considered symptoms of economic unfreedom under most labour-theory driven analyses.

This can be seen if you look closely at the case of Tucker's comments that anarchism was simply "consistent Manchesterianism." If this is done then a simple example of this potential confusion can be found. Tucker argued that anarchists "*accused*" the Manchester men "*of being inconsistent,*" that while being in favour of laissez faire for "*the labourer in order to reduce his wages*" they did not believe "*in liberty to compete with the capitalist in order to reduce his usury.*" [**The Individualist Anarchists**, p. 83] To be consistent in this case is to be something other -- and more demanding in terms of what is accepted as "freedom" -- than the average Manchesterian (i.e. a supporter of "free market" capitalism). Partisans of the subjective theory see things differently, of course, feeling justified in calling many things "free" that anarchists would not accept, and seeing "constraint" in what they simply thought of as "consistency."

Therefore it should be pretty clear that a "free market" will look somewhat different depending on your economic presuppositions. Ironically, therefore, "anarcho"-capitalists admit they do not agree with the likes of Spooner and Tucker on key premises, but then claim -- despite all that -- that it is anarchists who "reject" them. Moreover, the "anarcho"-capitalist simply dismisses all the reasoning that got Tucker there -- that is like trying to justify a law citing Leviticus but then saying "but of course all that God stuff is just absurd." You cannot have it both ways. And, of course, the "anarcho"-capitalist support for non-labour based economics allow them to side-step (and so ignore) much of what anarchists -- communists, collectivists, individualists, mutualists and syndicalists alike -- consider authoritarian and coercive about "actually existing" capitalism. But the difference in value theories is critical. No matter what they are called, it is pretty clear that individualist anarchist standards for the freedom of markets are far more demanding than those associated with even the freest capitalist market system.

In summary, the "free market" as sought by (say) Tucker would not be classed as a "free market" by right-wing "libertarians." So the term "free market" (and, of course, "socialism") can mean different things to different people. As such, it would be correct to state that **all** anarchists oppose the "free market" by definition as all anarchists oppose the **capitalist** "free market." And, just as correctly, "anarcho"-capitalists would oppose the mutualist "free market," arguing that it would be no such thing as it would be restrictive of property rights (**capitalist** property rights of course). For example, the question of resource use in a mutualist society is totally different than in a capitalist "free market" as landlordism would not exist. This is a restriction on capitalist property rights and a violation of a capitalist "free market." So a mutualist "free market" would not be considered so by right-wing "libertarians" due to the substantial differences in the rights on which it would be based (with no right to capitalist private property being the most important).

All this means that to go on and on about Tucker's (or Spooner's et al) feelings about a free market simply misses the point. No one denies that Tucker (or Spooner) was in favour of the "free market" but he did not mean the same kind of "free market" desired by "anarcho"-capitalism or that has existed under capitalism. For example, as we note in [section G.4](#), Tucker was well aware of the impact of

inequalities in wealth in the economy. In 1911 he argued that economic inequality was so large that it meant individualist anarchism was impossible. If, as "anarcho"-capitalists claim, Tucker supported the "free market" above all else then he would not have argued this point. Clearly, then, Tucker's support for the "free market" cannot be abstracted from his fundamental principles nor can it be equated with a "free market" based on capitalist property rights and massive inequalities in wealth (and so economic power). Thus individualist anarchist support for the free market does not mean support for a **capitalist** "free market."

Little wonder, then, that the likes of Tucker considered themselves socialists and stated numerous times that they were.

It could be argued that these self-proclaimed socialists did not, in fact, understand what socialism "really meant." For this to be the case, **other**, more obviously socialist, writers and thinkers would dismiss them as socialists. This, however, is not the case. Thus we find Karl Marx, for example, writing of *"the socialism of Proudhon."* [**Capital**, vol. 1, p. 161f] Engels talked about Proudhon being *"the Socialist of the small peasant and master-craftsman"* and of *"the Proudhon school of Socialism."* [Marx and Engels, **Selected Works**, p. 254 and p. 255] Bakunin talked about Proudhon's *"socialism, based on individual and collective liberty and upon the spontaneous action of free associations."* [**Michael Bakunin: Selected Writings**, p. 100] These renown socialists did not consider Proudhon's position to be in any way anti-socialist.

Looking at Tucker and the Individualist anarchists we discover that other socialists considered them socialists. Looking at Rudolf Rocker we discover him arguing that *"it is not difficult to discover certain fundamental principles which are common to all of them and which divide them from all other varieties of socialism. They all agree on the point that man be given the full reward of his labour and recognise in this right the economic basis of all personal liberty. They all regard the free competition of individual and social forces as something inherent in human nature . . . They answered the socialists of other schools who saw in **free competition** one of the destructive elements of capitalist society that the evil lies in the fact we have too little rather than too much competition, since the power of monopoly has made competition impossible."* [**Pioneers of American Freedom**, p. 160]

Adolph Fischer, one of the Haymarket Martyrs and contemporary of Tucker, argued that *"every anarchist is a socialist, but every socialist is not necessarily an anarchist. The anarchists are divided into two factions: the communistic anarchists and the Proudhon or middle-class anarchists . . ."* The former *"advocate the communistic or co-operative method of production"* while the latter *"do not advocate the co-operative system of production [i.e. communism], and the common ownership of the means of production, the products and the land."* [**The Autobiographies of the Haymarket Martyrs**, p. 81] However, while not being communists (i.e. aiming to eliminate the market), he obviously recognised the Individualists Anarchists as fellow socialists (we should point out that Proudhon **did** support co-operatives, as did the Individualist Anarchists, but they did not carry this to communism as do most social anarchists -- as is clear, Fischer means communism by the term *"co-operative system of production"* rather than co-operatives as they exist today and Proudhon supported).

Thus claims that the Individualist Anarchists were not "really" socialists because they support competition are false. The simple fact is that those who make this claim are ignorant of the socialist movement, its ideas and its history (or desire, like many Marxists, to write out of history competing socialist theories). As Tucker argued, *"the fact that State Socialism . . . has overshadowed other forms of Socialism gives it no right to a monopoly of the Socialistic idea."* [**Instead of a Book**, pp. 363-4] It is no surprise that the authoritarian left and "libertarian" right have united to define socialism in such a way as to eliminate anarchism from its ranks -- they both have an interest in removing a theory which exposes the inadequacies of their dogmas, which explains how we can have both liberty **and** equality, have freedom in work **and** outside it and have a decent, free and just society.

So why is Individualist Anarchism and Proudhon's mutualism socialist? Simply because they opposed the exploitation of labour by capital and proposed a means of ending it. Therefore, if socialism is, to quote Kropotkin, *"understood in its wide, generic, and true sense"* as *"an effort to abolish the exploitation of labour by capital"* [**Kropotkin's Revolutionary Pamphlets**, p. 169] then the Individualist Anarchists and Proudhon must be considered socialists (of course **libertarian** socialists) due to their opposition to usury. It is for this reason we discover Rudolf Rocker arguing that Stephan P. Andrews was *"one of the most versatile and significant exponents of libertarian socialism"* in the USA in spite of his belief that *"the specific cause of the economic evil [of capitalism] is founded not on the existence of the wage system"* but, rather, on the exploitation of labour, *"on the unjust compensation of the worker"* and the usury that *"deprives him of a part of his labour."* [**Pioneers of American Freedom**, p. 85 and pp. 77-8] His opposition to exploitation meant he was a socialist, an opposition which individualist anarchism was rooted in from its earliest days and the ideas of Josiah Warren:

"The aim was to circumvent the exploitation inherent in capitalism, which Warren characterised as a sort of 'civilised cannibalism,' by exchanging goods on co-operative rather than supply and demand principles." [J.W. Baker, *"Native American Anarchism,"* **The Raven**, pp. 43-62, vol. 10, no. 1, p. 51]

The individualist anarchists considered it as a truism that in their society the exploitation of labour could not exist. Thus even if some workers did sell their liberty, they would still receive the full product of their labour. Thus accumulation of capital would be non-existent, so a general equality would prevail and so economic power would not undermine liberty. Remove this underlying assumption, assume that profits could be made and capital accumulated, assume that land can be monopolised by landlords (as the "anarcho"-capitalists do) and a radically different society is produced. One in which economic power means that the vast majority have to sell themselves to get access to the means of life. A condition of "free markets" may exist, but as Tucker argued in 1911, it would not be anarchism. The *deus ex machina* of invisible hands takes a beating in the age of monopolies.

G.2.2 What about their support of "private property"?

The notion that because the Individualist Anarchists supported "property" they supported capitalism is distinctly wrong. This is for two reasons. Firstly, private property is not the distinctive aspect of

capitalism -- exploitation and wage labour is. Thus support of private property does not indicate a support for capitalism. Even use of John Locke's arguments in favour of private property could be used against capitalism. As Murray Bookchin makes clear regarding early American society:

"Unknown in the 1640s, the non-bourgeois aspects of Locke's theories were very much in the air a century and a half later . . . [In an artisan/peasant society] a Lockean argument could be used as effectively against the merchants . . . to whom the farmers were indebted, as it could against the King [or the State]. Nor did the small proprietors of America ever quite lose sight of the view that attempts to seize their farmsteads and possessions for unpaid debts were a violation of their 'natural rights,' and from the 1770s until as late as the 1930s they took up arms to keep merchants and bankers from dispossessing them from land they or their ancestors had wrestled from 'nature' by virtue of their own labour. The notion that property was sacred was thus highly elastic: it could be used as effectively by pre-capitalist strata to hold on to their property as it could by capitalists strata to expand their holdings." [**The Third Revolution**, vol. 1, pp. 187-8]

What right-libertarians do is to confuse two very different kinds of "property," one of which rests on the labour of the producer themselves and the other on the exploitation of the labour of others. They do not analyse the social relationships between people which the property generates and, instead, concentrate on **things** (i.e. property). Thus, rather than being interested in people and the relationships they create between themselves, the right-libertarian focuses on property (and, more often than not, just the word rather than what the word describes). This is a strange position for someone seeking liberty to take, as liberty is a product of social interaction (i.e. the relations we have and create with others) and not a product of things (property is not freedom as freedom is a relationship between people, not things). In effect, they confuse property with possession (and vice versa).

And if quoting Karl Marx is not **too** out of place, we discover that he did not consider property as being identical with capitalism. *"The historical conditions of [Capital's] existence are by no means given with the mere circulation of money and commodities. It arises only when the owner of the means of production and subsistence finds the free worker available on the market, as the seller of his own labour-power."* This wage-labour is the necessary pre-condition for capitalism, **not** "private property" as such. Thus artisan/peasant production is not capitalism as *"the means of production and subsistence, while they remain the property of the immediate producer, are not capital. They only become capital under circumstances in which they serve at the same time as means of exploitation of, and domination over, the worker."* [**Capital**, vol. 1, p. 264 and p. 938] We quote Marx simply because as authorities on socialism go, he is one that right-libertarians (or Marxists, for that matter) cannot ignore or dismiss. Needless to say, he is essentially repeating Proudhon's distinction between property and possession. The former is theft and despotism, the latter is liberty. In other words, for anarchists, "property" is a **social relation** and that a key element of anarchist thinking (both social and individualist) was the need to redefine that relation in accord with standards of liberty and justice.

Thus artisan production is not capitalist. It does not generate relationships of exploitation and domination as the worker owns and controls their own means of production. It is, in effect, a form of

socialism (a "*petit bourgeois*" form of socialism, to use the typical Marxist phrase). Thus support for "private property" need not mean support for capitalism (as shown, for example, by the Individualist Anarchists). To claim otherwise is to ignore the essential insight of socialism and totally distort the socialist case against capitalism.

Secondly, and more importantly, what the Individualist Anarchists meant by "private property" (or "property") was distinctly different than what is meant by theorists on the libertarian right. Basically, the libertarian right exploit, for their own ends, the confusion generated by the use of the word "property" by the likes of Tucker to describe a situation of "possession." Proudhon recognised this danger. He argued that "*it is proper to call different things by different names, if we keep the name 'property' for the former [individual possession], we must call the latter [the domain of property] robbery, repine, brigandage. If, on the contrary, we reserve the name 'property' for the latter, we must designate the former by the term **possession** or some other equivalent; otherwise we should be troubled with an unpleasant synonym.*" [What is Property?, p. 373] Unfortunately Tucker, who translated this work, did not heed Proudhon's words of wisdom and called possession in an anarchist society by the word "property."

Looking at Tucker's arguments, it is clear that the last thing Tucker supported was capitalist property rights. For example, he argued that "*property, in the sense of individual possession, is liberty*" and contrasted this with capitalist property. [Instead of a Book, p. 394] That his ideas on "property" were somewhat different than that associated with right-libertarian thinkers is most clearly seen with regards to land. Here we discover him advocating "*occupancy and use*" and rejecting the "right" of land owners to bar the landless from any land they owned but did not **personally** use. Rent was "*due to that denial of liberty which takes the shape of land monopoly, vesting titles to land in individuals and associations which do not use it, and thereby compelling the non-owning users to pay tribute to the non-using owners as a condition of admission to the competitive market.*" Anarchist opposition of rent did "*not mean simply the freeing of unoccupied land. It means the freeing of all land not occupied by the owner. In other words, it means land ownership limited by occupancy and use.*" [Tucker, **The Individualist Anarchists**, p. 130 and p. 155] This would result in a "*system of occupying ownership . . . accompanied by no legal power to collect rent.*" [Instead of a Book, p. 325]

A similar position was held by John Beverley Robinson. He argued that there "*are two kinds of land ownership, proprietorship or property, by which the owner is absolute lord of the land, to use it or to hold it out of use, as it may please him; and possession, by which he is secure in the tenure of land which he uses and occupies, but has no claim upon it at all of he ceases to use it.*" Moreover, "*[a]ll that is necessary to do away with Rent is to away with absolute property in land.*" [Patterns of Anarchy, p. 272]

Thus the Individualist Anarchists definition of "property" differed considerably from that of the capitalist definition. As they themselves acknowledge. Robinson argued that "*the only real remedy is a change of heart, through which land using will be recognised as proper and legitimate, but land holding will be regarded as robbery and piracy.*" [Op. Cit., p. 273] Tucker, likewise, indicated that his ideas on "property" were not the same as existing ones when he argued that "*the present system of land tenure should be changed to one of occupancy and use*" and that "*no advocate of occupancy-and-use tenure of*

land believes that it can be put in force, until as a theory it has been as generally . . . seen and accepted as is the prevailing theory of ordinary private property." [**Occupancy and Use verses the Single Tax**]

Hence to claim that the Individualist Anarchists supported capitalist property rights is false. As can be seen, they advocated a system which differed significantly to the current system, indeed they urged the restriction of property rights to a form of possession. Unfortunately, by generally using the term "property" to describe this new system of possession they generated exactly the confusion that Proudhon foretold. Sadly, right-libertarians use this confusion to promote the idea that the likes of Tucker supported capitalist property rights and so capitalism.

For these two reasons it is clear that just because the Individualist Anarchists supported (a form of) "property" does not mean they are capitalists. Indeed, Kropotkin argued that a communist-anarchist revolution would **not** expropriate the tools of self-employed workers who exploited no-one (see his **Act for Yourselves** pp. 104-5). Malatesta argued that in a free society *"the peasant [is free] to cultivate his piece of land, alone if he wishes; free is the shoe maker to remain at his last or the blacksmith in his small forge."* Thus these two very famous communist-anarchists also "supported" "property" but they are recognised as obviously socialists. This apparent contradiction is resolved when it is understood that for communist-anarchists (like all anarchists) the abolition of property does not mean the end of possession and so *"would not harm the independent worker whose real title is possession and the work done"* unlike capitalist property. [Malatesta, **Life and Ideas**, p. 103] In other words, **all** anarchists (as we argue in [section B.3](#)) oppose private property but support possession.

That many of the Individualist Anarchists used the term "property" to describe a system of possession (or *"occupancy-and-use"*) should not blind us to the anti-capitalist nature of that "property." Once we move beyond looking at the words they used to what they meant by those words we clearly see that their ideas are distinctly different from those of supporters of capitalism.

Section C - What are the myths of capitalist economics?

Introduction

C.1 What determines prices within capitalism?

C.1.1 What is wrong with this theory?

C.1.2 So what does determine prices?

C.1.3 What else affects price levels?

C.2 Where do profits come from?

C.2.1 Why does this surplus exist?

C.2.2 Are capitalists justified in appropriating a portion of surplus value for themselves (i.e. making a profit)?

C.2.3 Why does innovation occur and how does it affect profits?

C.2.4 Wouldn't workers' control stifle innovation?

C.2.5 Aren't executives workers and so create value?

C.2.6 Is interest not the reward for waiting, and so isn't capitalism just?

C.2.7 But wouldn't the "time value" of money justify charging interest in a more egalitarian capitalism?

C.3 What determines the distribution between profits and wages within companies?

C.4 Why does the market become dominated by Big Business?

C.4.1 How extensive is Big Business?

C.4.2 What are the effects of Big Business on society?

C.4.3 What does the existence of Big Business mean for economic theory and wage labour?

C.5 Why does Big Business get a bigger slice of profits?

C.5.1 Aren't the super-profits of Big Business due to its higher efficiency?

C.6 Can market dominance by Big Business change?

C.7 What causes the capitalist business cycle?

C.7.1 What role does class struggle play in the business cycle?

C.7.2 What role does the market play in the business cycle?

C.7.3 What else affects the business cycle?

C.8 Is state control of money the cause of the business cycle?

C.8.1 Does this mean that Keynesianism works?

C.8.2 What happened to Keynesianism in the 1970s?

C.8.3 How did capitalism adjust to the crisis in Keynesianism?

C.9 Would laissez-faire policies reduce unemployment, as supporters of "free market" capitalism claim?

C.9.1 Would cutting wages reduce unemployment?

C.9.2 Is unemployment caused by wages being too high?

C.9.3 Are "flexible" labour markets the answer to unemployment?

C.9.4 Is unemployment voluntary?

C.10 Will "free market" capitalism benefit everyone, especially the poor?

C.11 Doesn't Chile prove that the free market benefits everyone?

C.11.1 But didn't Pinochet's Chile prove that "economic freedom is an indispensable means toward the achievement of political freedom"?

C.12 Doesn't Hong Kong show the potentials of "free market" capitalism?

Section C - What are the myths of capitalist economics?

Within capitalism, economics plays an important ideological role. Economics has been used to construct a theory from which exploitation and oppression are excluded, by definition. We will attempt here to explain why capitalism is deeply exploitative. Elsewhere, in [section B](#), we have indicated why capitalism is oppressive and will not repeat ourselves here.

In many ways economics plays the role within capitalism that religion played in the Middle Ages, namely to provide justification for the dominant social system and hierarchies (indeed, one neo-classical economist said that "[u]ntil the econometricians have the answer for us, placing reliance upon neo-classical economic theory is a matter of faith," which, of course, he had [C.E. Ferguson, **The Neo-classical Theory of Production and Distribution**, p. xvii]). Like religion, its basis in science is usually lacking and its theories more based upon "leaps of faith" than empirical fact. In the process of our discussion in this section we will often expose the ideological apologetics that capitalist economics create to defend the status quo and the system of oppression and exploitation it produces.

Indeed, the weakness of economics is even acknowledged by a few within the profession itself. According to Paul Ormerod, *"orthodox economics is in many ways an empty box. Its understanding of the world is similar to that of the physical sciences in the Middle Ages. A few insights have been obtained which stand the test of time, but they are very few indeed, and the whole basis of conventional economics is deeply flawed."* Moreover, he notes the *"overwhelming empirical evidence against the validity of its theories."* [**The Death of Economics**, p. ix, p. 67]

It is rare to see an economist be so honest. The majority of economists seem happy to go on with their theories, trying to squeeze life into the Procrustean bed of their models. And, like the priests of old, make it hard for non-academics to question their dogmas. As Ormerod notes, *"economics is often intimidating. Its practitioners. . . have erected around the discipline a barrier of jargon and mathematics which makes the subject difficult to penetrate for the non-initiated."* [**Op. Cit.**, p. ix]

So here we try to get to the heart of modern capitalism, cutting through the ideological myths that supporters of the system have created around it. Here we expose the apologetics for what they are, expose the ideological role of economics as a means to justify, indeed ignore, exploitation and oppression. As an example, let us take a workers wage.

For most capitalist economics, a given wage is supposed to be equal to the "marginal contribution" that an individual makes to a given company. Are we **really** expected to believe this? Common sense (and empirical evidence) suggests otherwise. Consider Mr. Rand Araskog, the CEO of ITT, who in 1990 was paid a salary of \$7 million. Is it conceivable that an ITT accountant calculated that, all else being the same, ITT's \$20.4 billion in revenues that year would have been \$7 million less without Mr. Araskog --

hence determining his marginal contribution to be \$7 million?

In 1979 the average CEO in the US received 29 times more income than the average manufacturing worker; by 1985 the ratio had risen to 40 times more, and by 1988 it had risen to 93 times more. This disturbing trend led even conservative **Business Week** to opine that the excesses of corporate leaders might finally be getting out of hand (Kevin Phillips, **The Politics of Rich and Poor: Wealth and the American Electorate in the Reagan Aftermath**, p. 180). The warning apparently went unheeded, however, because by 1990 the average American CEO was earning about 100 times more than the average factory worker (Tom Athanasiou, "After the Summit," **Socialist Review** 92/4 (October-December, 1992)). Yet during the same period, workers' real wages remained flat. Are we to believe that during the 1980s, the marginal contribution of CEOs more than tripled whereas workers' marginal contributions remained stagnant?

Taking another example, if workers create only the equivalent of what they are paid, how can that explain why, in a recent ACM study of wages in the computer fields, it was found that black workers get paid less (on average) than white ones doing the same job (even in the same workplace)? Does having white skin increase a worker's creative ability when producing the same goods? And it seems a strange coincidence that the people with power in a company, when working out who contributes most to a product, decide it's themselves!

So what is the reason for this extreme wage difference? Simply put, it's due to the totalitarian nature of capitalist firms. Those at the bottom of the company have no say in what happens within it; so as long as the share-owners are happy, wage differentials will rise and rise (particularly when top management own large amounts of shares!). (The totalitarian nature of private property has been discussed earlier -- see [section B.4](#)).

A good manager is one who reduces the power of the company's employees, allowing an increased share of the wealth produced by those employees to go to those on top. Yet without the creativity and energy of the engineers, the shop floor workers, the administrative staff, etc., the company would have literally **nothing** to sell.

It is capitalist property relations that allow this monopolisation of wealth by those who own (or boss) but do not produce. The workers do not get the full value of what they produce, nor do they have a say in how the surplus value produced by their labour gets used (e.g. investment decisions). Others have monopolised both the wealth produced by workers and the decision-making power within the company. This is a private form of taxation without representation, just as the company is a private form of statism.

Of course, it could be argued that the owning class provide the capital without which the worker could not produce. But where does capital come from? From profits, which represent the unpaid labour of past generations. And before that? From the tribute of serfs to their feudal masters. And before that? The right of conquest which imposed feudalism on the peasants. And before that? Well, the point is made.

Every generation of property owners gets a "free lunch" due to the obvious fact that we inherit the ideas and constructions of past generations, such as our current notion of property rights. Capitalism places the dead hand of the past on living generations, strangling the individuality of the many for the privilege of the few. Whether we break free of this burden and take a new direction depends on the individuals who are alive **now**.

In the sections that follow, the exploitative nature of capitalism is explained in greater detail. We would like to point out that for anarchists, exploitation is not more important than domination. Anarchists are opposed to both equally and consider them to be two sides of the same coin. You cannot have domination without exploitation nor exploitation without domination. As Emma Goldman pointed out, under capitalism:

"Man is being robbed not merely of the products of his labour, but of the power of free initiative, of originality, and the interest in, or desire for, the things he is making." [**Red Emma Speaks**, p. 53]

J.6 What methods of child rearing do anarchists advocate?

Anarchists have long been aware of the importance of child rearing and education. As such, we are aware that child rearing should aim to develop "*a well-rounded individuality*" and not "*a patient work slave, professional automaton, tax-paying citizen, or righteous moralist.*" [Emma Goldman, **Red Emma Speaks**, p. 108] In this section of the FAQ we will discuss anarchist approaches to child rearing bearing in mind "*that it is through the channel of the child that the development of the mature man must go, and that the present ideas of. . . educating or training. . . are such as to stifle the natural growth of the child.*" [**Ibid.**, p. 107]

If one accepts the thesis that the authoritarian family is the breeding ground for both individual psychological problems and political reaction, it follows that anarchists should try to develop ways of raising children that will not psychologically cripple them but instead enable them to accept freedom and responsibility while developing natural self-regulation. We will refer to children raised in such a way as "*free children.*"

Work in this field is still in its infancy (no pun intended). Wilhelm Reich is again the main pioneer in this field (an excellent, short introduction to his ideas can be found in Maurice Brinton's **The Irrational in Politics**). In **Children of the Future**, Reich made numerous suggestions, based on his research and clinical experience, for parents, psychologists, and educators striving to develop libertarian methods of child rearing. (He did not use the term "libertarian," but that is what his methods are.)

Hence, in this and the following sections we will summarise Reich's main ideas as well as those of other libertarian psychologists and educators who have been influenced by him, such as A.S. Neill and Alexander Lowen. Section [J.6.1](#) will examine the theoretical principles involved in raising free children, while subsequent sections will illustrate their practical application with concrete examples. Finally, in section [J.6.8](#), we will examine the anarchist approach to the problems of adolescence.

Such an approach to child rearing is based upon the insight that children "*do not constitute anyone's property: they are neither the property of the parents nor even of society. They belong only to their own future freedom.*" [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 327] As such, what happens to a child when it is growing up **shapes** the person they become and the society they live in. The key question for people interested in freedom is whether "*the child [is] to be considered as an individuality, or as an object to be moulded according to the whims and fancies of those about it?*" [Emma Goldman, **Op. Cit.**, p. 107] Libertarian child rearing is the means by which the individuality of the child is respected and developed.

This is in stark contrast to standard capitalist (and individualist anarchist we should note) claim that

children are the **property** of their parents. If we accept that children **are** the property of their parents then we are implicitly stating that a child's formative years are spent in slavery, hardly a relationship which will promote the individuality and freedom of the child or the wider society. Little wonder that most anarchists reject such assertions. Instead they argue that the *"rights of the parents shall be confined to loving their children and exercising over them . . . authority [that] does not run counter to their morality, their mental development, or their future freedom."* [Bakunin, **Op. Cit.**, p. 327] Being someone's property (i.e. slave) runs counter to all these and *"it follows that society, the whole future of which depends upon adequate education and upbringing of children. . . , has not only the right but also the duty to watch over them..."* [**Ibid.**, p. 327]

Hence child rearing is **part** of society, a communal process by which children learn what it means to be an individual by being respected as one by others. In Bakunin's words, *"real freedom - that is, the full awareness and the realisation thereof in every individual, pre-eminently based upon a feeling of one's dignity and upon the genuine respect for someone else's freedom and dignity, i.e. upon justice - such freedom can develop in children only through the rational development of their minds, character and will."* [**Op. Cit.**, p. 327]

We wish to point out at the beginning that a great deal of work remains to be done in this field. Therefore our comments should be regarded merely as tentative bases for further reflection and research by those involved with raising and educating children. There is, and cannot be, any "rule book" for raising free children, because to follow an inflexible rule book is to ignore the fact that each child and its environment is unique and therefore demands unique responses from its parents. Hence the "principles" of libertarian child rearing to which we will refer should not be thought of as rules, but rather, as experimental hypotheses to be tested by parents within their own situation by applying their intelligence and deriving their own individual conclusions.

Bringing up children must be like education, and based on similar principles, namely *"upon the free growth and development of the innate forces and tendencies of the child. In this way alone can we hope for the free individual and eventually also for a free community, which shall make interference and coercion of human growth impossible."* [Goldman, **Op. Cit.**, p. 115] Indeed, child rearing and education **cannot** be separated as life itself is an education and so must share the same principles and viewed as a process of *"development and exploration, rather than as one of repressing a child's instincts and inculcating obedience and discipline."* [Martha A. Ackelsberg, **Free Women of Spain**, p. 132]

Moreover, the role of parental example is very important to raising free children. Children often learn by mimicking their parents - children do what their parents do, not as they say. If their mother and father lie to each other, scream, fight and so on, then the child will probably do so as well. Children's behaviour does not come out thin air, they are a product of the environment they are brought up in (partly by, initially at least, copying the parent). Children can only be encouraged by example, not by threats and commands. How parents act can be an obstacle to the development of a free child. Parents must, therefore, be aware that they must do more than just **say** the right things, but also act as anarchists in order to produce free children.

The sad fact is that most modern people have lost the ability to raise free children, and regaining this ability will be a long process of trial and error and parent education in which it is to be hoped that each succeeding generation will learn from the failures and successes of their predecessors, and so improve. In the best-case scenario, over the course of a few generations the number of progressive parents will continue to grow and raise ever freer children, who in turn will become even more progressive parents themselves, thus gradually changing mass psychology in a libertarian direction. Such changes **can** come about very fast, as can be seen from various communes all over the world and especially in the Israel-Palestine kibbutz where society is organised according to libertarian principles, and children are mainly growing in their collective homes. As Reich puts it:

"We have learned that instead of a jump into the realm of the Children of the Future, we can hope for no more than a steady advance, in which the healthy new overlaps the sick old structure, with the new slowly outgrowing the old." [**Children of the Future**, pp. 38-39]

By means of freedom-based child rearing and education, along with other methods of consciousness raising, as well as encouraging resistance to the existing social order anarchists hope to prepare the psychological foundation for a social paradigm shift, from authoritarian to libertarian institutions and values. And indeed, a gradual cultural evolution toward increasing freedom does seem to exist. For example, as A.S. Neill writes in **Summerhill**, *"There is a slow trend to freedom, sexual and otherwise. In my boyhood, a woman went bathing wearing stockings and a long dress. Today, women show legs and bodies. Children are getting more freedom with every generation. Today, only a few lunatics put cayenne pepper on a baby's thumb to stop sucking. Today, only a few countries beat their children in school."* [p. 115]

Most anarchists believe that, just as charity begins at home, so does the anarchist revolution. As some anarchists raise their own children in capitalist society and/or are involved in the raising and education of the children of other parents, they can practice in part libertarian principles even before the revolution. Hence we think it is important to discuss libertarian child rearing in some detail.

J.6.1 What are the main principles of raising free children and the main obstacles to implementing those principles?

Let's consider the obstacles first. As Reich points out, the biggest one is the training and character of most parents, physicians, and educators. Based on his clinical experience, Reich maintained that virtually all adults in our society have some degree of psychological problems, which is manifested somatically as a rigid muscular *"armour"*: chronic muscular tensions and spasms in various regions of the body. One of the main functions of this armour is to inhibit the pleasurable sensations of life-energy that naturally *"stream"* or flow through an unarmoured body. Reich postulated that there is one basic bioenergy (*"orgone"*) in the body, identical with what Freud called *"libido,"* which, besides animating the tissues and organs is also the energy of sex and the emotions (we should note that most anarchists do

not subscribe to Reich's idea of "orgone" - the existence of which, we may note, has not been proved. However, the idea of character armour, by which individuals within a hierarchical society create psychological walls/defences around themselves is one most anarchists accept. Such walls will obviously have an effect both on the mental and physical state of the individual, and their capacity for living a free life and experiencing pleasure). This means that the pleasurable "streamings" of this bioenergy, which can be felt when the muscular armour is relaxed, have an erotic or "libidinous" quality. Thus an unarmoured organism (such as a new-born infant) automatically experiences pleasure with every breath, a pleasure derived from perception of the natural bioenergetic processes within its body. Such a mode of being in the world makes life intrinsically worth living and renders superfluous all questions about its "meaning" or "purpose" -- questions that occur only to armoured people, who have lost contact with their bioenergetic core of bodily sensations (or it is distorted, and so is changed from a source of pleasures to a source of suffering) and thus restricts their capacity to fully enjoy life.

It is important for those involved in child rearing and education to understand how armouring develops in the new-born child. Reich points out that under the influence of a compulsive, pleasure-denying morality, children are taught to inhibit the spontaneous flow of life-energy in the body. Similarly, they are taught to disregard most bodily sensations. Due to Oedipal conflicts in the patriarchal family (see below), parents usually take the most severely repressive disciplinary measures against sexual expressions of life-energy in children. Thus, all erotic feelings, including the erotically-tinged "streaming" sensations, come to be regarded as "bad," "animalistic," etc., and so their perception begins to arouse anxiety, which leads, among other bad results, to chronic muscular tensions as a way of cutting off or defending against such perceptions and their attendant anxiety. Shallow breathing, for example, reduces the amount of life-energy available to flow into excitation and emotion; tightening the muscles of the pelvic floor and abdomen reduces sexual feelings, and so on. As these tensions become chronic and unconscious, piling up in layer after layer of muscular armour, the person is eventually left with a feeling of inner emptiness or "deadness" and -- not surprisingly -- a lack of joy in life.

For those who fail to build a stable physical and psychological armour around themselves to suppress these feelings and sensation, they just twist them and are flooded again and again with intense unpleasant feelings and sensations.

Muscular armouring has its most profound effect on back pains and various respiration problems. Reich found that the "normal" man or woman in our society **cannot** spontaneously take full, deep, natural breaths, which involves both the chest and abdomen. Instead, most people (except when making a conscious effort) restrict their breathing through unconscious tensing of various muscles. Since the natural response to any restriction in the ability to breathe is anxiety, people growing up in repressive cultures such as ours are plagued by a tendency toward chronic anxiety. As a defence against this anxiety, they develop further layers of muscular armouring, which further restricts their ability to breathe, and so on, in a vicious circle. In other words, it is **literally** true that, as Max Stirner said, one cannot "*take breath*" in our authoritarian society with its life-denying atmosphere based on punishments, threats, and fear.

Of course sex is not the only expression of life-energy that parents try to stifle in children. There are

also, for example, the child's natural vocal expressions (shouting, screaming, bellowing, crying, etc.) and natural body motility. As Reich notes,

"Small children go through a phase of development characterised by vigorous activity of the voice musculature. The joy the infant derives from loud noises (crying, shrieking, and forming a variety of sounds) is regarded by many parents as pathological aggressiveness. The children are accordingly admonished not to scream, to be 'still,' etc. The impulses of the voice apparatus are inhibited, its musculature becomes chronically contracted, and the child becomes quiet, 'well-brought-up,' and withdrawn. The effect of such mistreatment is soon manifested in eating disturbances, general apathy, pallor of the face, etc. Speech disturbances and retardation of speech development are presumably caused in this manner. In the adult we see the effects of such mistreatment in the form of spasms of the throat. The automatic constrictions of the glottis and the deep throat musculature, with subsequent inhibition of the aggressive impulses of the head and neck, seems to be particularly characteristic." [Op. Cit., p. 128]

(And we must add, that the suppression of the urge to move all children have is most destructive to the 15% or so of "Hyper-active" children, whose urge to move is hard to suppress.)

"Clinical experience has taught us," Reich concludes, *"that small children must be allowed to 'shout themselves out' when the shouting is inspired by pleasure. This might be disagreeable to some parents, but questions of education must be decided **exclusively in the interests of the child**, not in those of the adults."* [Ibid.]

Besides deadening the pleasurable streamings of life energy in the body, muscular armouring also functions to inhibit the anxiety generated by the presence of anti-social, cruel, and perverse impulses within the psyche (impulses referred to by Reich as "*secondary*" drives) -- for example, destructiveness, sadism, greed, power hunger, brutality, rape fantasies, etc. Ironically, these secondary drives result from the **suppression of the primary drives** (e.g. for sex, physical activity, vocal expression, etc.) and the sensations of pleasure associated with them. The secondary drives develop because, when muscular armouring sets in and a person loses touch with his or her bioenergetic core and other emotional urges, the only emotional expressions that can get through the thick, hard wall of armour are distorted, harsh, and/or mechanical. Thus, for example, a heavily armoured person who tries to express love may find that the emotion is shredded by the wall of armour and comes out in distorted form as an impulse to hurt the person loved (sadism) -- an impulse that causes anxiety and then has to be repressed. In other words, compulsive morality (i.e. acting according to externally imposed rules) becomes necessary to control the secondary drives **which compulsion itself creates**. By such processes, authoritarian child-rearing becomes self-justifying. Thus:

"Psychoanalysts have failed to distinguish between primary natural and secondary perverse, cruel drives, and they are continuously killing nature in the new-born while they try to extinguish the 'brutish little animal.' They are completely ignorant of the fact that it

is exactly this killing of the natural principle which creates the secondary perverse and cruel nature, human nature so called, and that these artificial cultural creations in turn make compulsive moralism and brutal laws necessary" [Ibid., p. 17-18].

Moralism, however, can never get at the root of the problem of secondary drives, but in fact only increases the pressure of crime and guilt. The real solution is to let children develop what Reich calls **natural self-regulation**. This can be done only by not subjecting them to punishment, coercion, threats, moralistic lectures and admonitions, withdrawal of love, etc. in an attempt to inhibit their spontaneous expression of natural life-impulses. The systematic development of the emphatic tendencies of the young infant is the best way to "socialise" and restrict activities that are harmful to the others. As A.S. Neill points out, *"self-regulation implies a belief in the goodness of human nature; a belief that there is not, and never was, original sin."* [Op. Cit., p. 103]

According to Neill, children who are given freedom from birth and not forced to conform to parental expectations spontaneously learn how to keep themselves clean and develop social qualities like courtesy, common sense, an interest in learning, respect for the rights of others, and so forth (see [next section](#)). However, once the child has been armoured through authoritarian methods intended to **force** it to develop such qualities, it becomes what Reich calls *"biopathic"* -- out of touch with its living core and therefore no longer able to develop self-regulation. In this stage it becomes harder and harder for the pro-social emotions to shape the developing mode of life of the new member of society. At that point, when the secondary drives develop, parental authoritarianism becomes a **necessity**. As Reich puts it:

"This close interrelation between biopathic behaviour and authoritarian countermeasures seems to be automatic. Self-regulation appears to have no place in and no influence upon emotions which do not come from the living core directly but only as if through a thick hard wall. Moreover, one has the impression that secondary drives cannot stand self-regulatory conditions of existence. They force sharp discipline on the part of the educator or parent. It is as if a child with an essentially secondary-drive structure feels that it cannot function or exist without disciplinary guidance. This is paralleled by the interlacing of self-regulation in the healthy child with self-regulation in the environment. Here the child cannot function unless it has freedom of decision and movement. It cannot tolerate discipline any more than the armoured child can tolerate freedom."

This inability to tolerate freedom, which the vast majority of people develop **automatically** from the way they are raised, is what makes the whole subject of armouring and its prevention of crucial importance to anarchists. Reich concludes that if parents do not suppress nature in the first place, then no anti-social drives will be created and no authoritarianism will be required to suppress them: *"What you so desperately and vainly try to achieve by way of compulsion and admonition is there in the new-born infant ready to live and function. Let it grow as nature requires, and change our institutions accordingly"* [Ibid., p. 47, emphasis in original].

As Alexander Lowen points out in **Fear of Life**, parents are particularly anxious to suppress the sexual

expressions of life energy in their children because of unresolved Oedipal conflicts within themselves.

Hence, in order to raise psychologically healthy children, parents need to acquire self-knowledge, particularly of how Oedipal conflicts, sibling rivalry, and other internal conflicts develop in family relationships, and to free themselves as much as possible from neurotic forms of armouring. The difficulty of parents acquiring such self-knowledge and sufficiently de-conditioning themselves is obviously another obstacle to raising self-regulated children.

However, the greatest obstacle is the fact that armouring and other twisting mechanisms set in so very early in life, i.e. soon after birth. Reich emphasises that **with the first armour blockings, the infant's self-regulatory powers begin to wane.** *"They become steadily weaker as the armouring spreads over the whole organism, and they **must** be replaced by compulsive, moral principles if the child is to exist and survive in its given environment."* [Ibid., pp. 44-45] Hence it is important for parents to obtain a thorough knowledge of what armouring and other rigid suppressions are and how they function, so that from the beginning they can prevent (or at least decrease) them from forming in their children. Some practical examples of how this can be done will be discussed in the [next section](#).

Finally, Reich cautions that it is crucial to avoid any mixing of concepts. *"One cannot mix a bit of self-regulation with a bit of moral demand. Either we trust nature as basically decent and self-regulatory or we do not, and then there is only one way, that of training by compulsion. It is essential to grasp the fact that the two ways of upbringing do not go together."* [Ibid., p. 46]

J.6.2. What are some examples of libertarian child-rearing methods applied to the care of new-born infants?

According to Reich, the problems of parenting a free child actually begin before conception, with the need for a prospective mother to free herself as much as possible from chronic muscular tensions, especially in the pelvic area, which may inhibit the optimal development of a foetus. As Reich points out, the mother's body provides the environment for the child from the moment the embryo is formed until the moment of birth, and strong muscular armouring in her pelvis as a result of sexual repression or other emotional problems is very detrimental. Such a mother will have a bioenergetically "dead" and possibly spastic uterus, which can traumatise an infant even before it is born by reducing the circulation of blood and body fluids and making the energy metabolism inefficient, thus damaging the child's vitality.

Moreover, it has been found in many studies that not only the physical health of the mother can influence the foetus. Various psychological stresses influence the chemical and hormonal environment, affecting the foetus. Even short ones, when acute, can have significant effects on it.

Immediately after birth, it is important for the mother to establish contact with her child. This means, basically, constant loving attention to the baby, expressed by plenty of holding, cuddling, playing, etc.,

and especially by breast feeding. By such "*orgonotic*" contact (to use Reich's term), the mother is able to establish the initial emotional bonding with the new born, and a non-verbal understanding of the child's needs. This is only possible, however, if she is in touch with her own internal processes - emotional and cognitive - and bioenergetic core, i.e. is not too neurotically armoured (in Reich's terminology). Thus:

*"The orgonotic sense of contact, a function of the . . . energy field of both the mother and the child, is unknown to most specialists; however, the old country doctor knew it well. . . . **Orgonotic contact is the most essential experiential and emotional element in the interrelationship between mother and child, particularly prenatally and during the first days and weeks of life. The future fate of the child depends on it. It seems to be the core of the new-born infant's emotional development.**" [Ibid. p. 99]*

It is less crucial but still important for the father to establish orgonotic contact as well, although since fathers lack the primary means of establishing it -- namely the ability to breast feed -- their contact can never be as close as the mother's (see below).

A new-born child has only one way of expressing its needs: through crying. Crying has many nuances and can convey much more than the level of distress of the child. If a mother is unable to establish contact at the most basic emotional ("*bioenergetic*," according to Reich) level, she will be unable to understand intuitively what needs the child is expressing through its crying. Any unmet needs will in turn be felt by the child as a deprivation, to which it will respond with a wide array of negative emotions and deleterious physiological processes and emotional tension. If continued for long, such tensions can become chronic and thus the beginning of "*armouring*" and adaptation to a "cruel" reality.

The most important factor in the establishment of bonding is the tender physical contact between mother and infant is undoubtedly breast feeding. Thus:

*"The most salient place of contact in the infant's body is the bioenergetically highly charged mouth and throat. This body organ reaches out immediately for gratification. **If the nipple of the mother reacts to the infant's sucking movements in a biophysically normal manner with sensations of pleasure, it will become strongly erect and the orgonotic excitation of the nipple will become one with that of the infant's mouth, just as in the orastically gratifying sexual act, in which the male and female genitals luminate and fuse orgonotically.** There is nothing 'abnormal' or 'disgusting' in this. Every healthy mother experiences the sucking as pleasure and yields to it. . . . However, about 80 percent of all women suffer from vaginal anaesthesia and frigidity. Their nipples are correspondingly anorgonotic, i.e. 'dead.' The mother may develop anxiety or loathing in response to what would naturally be a sensation of pleasure aroused in the breast by the infant's sucking. This is why so many mothers do not want to nurse their babies." [pp. 115-116]*

Reich and other libertarian psychologists therefore maintain that the practice of bottle feeding is

harmful, particularly if it completely replaces breast feeding from the day of birth, because it eliminates one of the most important forms of establishing bioenergetic contact between mother and child. This lack of contact can then contribute in later life to "oral" forms of neurotic character structure or traits. (For more on these, see Alexander Lowen, **Physical Dynamics of Character Structure**, Chapter 9, *"The Oral Character"*). Lowen believes that the practice of breast feeding should be continued for about three years, as it usually is among "primitive" peoples, and that weaning before this time is experienced as a major trauma. *"[I]f the breast is available to a child for about three years, which I believe to be the time required to fulfil a child's oral needs, weaning causes very little trauma, since the loss of this pleasure is offset by the many other pleasures the child can then have."* [**Depression and the Body**, p. 133]

Another harmful practice in infant care is the compulsive-neurotic method of feeding children on schedule, invented by Pirquet in Vienna, which *"was devastatingly wrong and harmful to countless children."* Frustration of oral needs through this practice (which is fortunately less in vogue now than it was fifty years ago), is guaranteed to produce neurotic armouring in infants.

As Reich puts it, *"As long as parents, doctors, and educators approach infants with false, unbending behaviour, inflexible opinions, condescension, and officiousness, instead of with orgonotic contact, infants will continue to be quiet, withdrawn, apathetic, 'autistic,' 'peculiar,' and, later, 'little wild animals,' whom the cultivated feel they have to 'tame.'"* [**Op. Cit.** p. 124]

Another harmful practice is allowing the baby to "cry itself out." Thus: *"Parking a baby in a baby carriage in the garden, perhaps for hours at a time, is a dangerous practice. No one can know what agonising feelings of fear and loneliness a baby can experience on waking up suddenly to find himself alone in a strange place. Those who have heard a baby's screams on such occasions have some idea of the cruelty of this stupid custom."* [Neill, **Summerhill**, p. 336] Indeed, in **The Physical Dynamics of Character Structure**, Lowen has traced specific neuroses, particularly depression, to this practice. Hospitals also have been guilty of psychologically damaging sick infants by isolating them from their mothers, a practice that has undoubtedly produced untold numbers of neurotics and psychopaths.

Also, as Reich notes, *"the sadistic habit of circumcision will soon be recognised as the senseless, fanatical cruelty it truly is."* [**Op. Cit.**, p. 68] He remarks that he has observed infants who took over two weeks to "recover" from the trauma of circumcision, a "recovery" that left permanent psychological scars in the form of chronic muscular tensions in the pelvic floor. These tensions form the first layer of pelvic armouring, to which sexual repression and other inhibitions (especially those acquired during toilet training) later add.

The diaphragm, however, is perhaps the most important area to protect from early armouring. After observing infants for several years in a research setting, Reich concluded that armouring in babies usually appears first as a blocking of free respiration, expressed as harsh, rough, uneven, or laboured breathing, which may lead to colds, coughs, bronchitis, etc.

"The early blocking of respiration seemed to gain importance rapidly as more children were observed. Somehow the diaphragmatic region appeared to respond first and most severely to emotional, bioenergetic discomfort." [Ibid., p. 110] Hence the infant's breathing is a key indicator of its emotional health, and any disturbance is a signal that something is wrong. Or, as Neill puts it, *"The sign of a well-reared child is his free, uninhibited breathing. It shows that he is not afraid of life."* [Op. Cit., p. 131]

Neill sums up the libertarian attitude toward the care of infants as follows: *"Self-regulation means the right of a baby to live freely without outside authority in things psychic and somatic. It means that the baby feeds when it is hungry; that it becomes clean in habits only when it wants to; that it is never stormed at nor spanked; that it is always loved and protected."* [Op. Cit. p. 105]

Obviously self-regulation doesn't mean leaving the baby alone when it heads toward a cliff or starts playing with an electrical socket. Anarchists do not advocate a lack of common sense. We recognise that adults must override an infant's will when it is a question of protecting its physical safety. As Neill writes, *"Only a fool in charge of young children would allow unbarred bedroom windows or an unprotected fire in the nursery. Yet, too often, young enthusiasts for self-regulation come to my school as visitors, and exclaim at our lack of freedom in locking poison in a lab closet, or our prohibition about playing on the fire escape. The whole freedom movement is marred and despised because so many advocates of freedom have not got their feet on the ground."* [Ibid., p. 106]

Nevertheless, the libertarian position does not imply that a child should be **punished** for getting into a dangerous situation. Nor is the best thing to do in such a case to shout in alarm (unless that is the only way to warn the child before it is too late), but simply to remove the danger without any fuss. As Neill says, *"Unless a child is mentally defective, he will soon discover what interests him. Left free from excited cries and angry voices, he will be unbelievably sensible in his dealing with material of all kinds."* [Ibid., p. 108] Provided, of course, that he or she has been allowed self-regulation from the beginning, and thus has not developed any irrational, secondary drives.

J.6.3 What are some examples of libertarian child-rearing methods applied to the care of young children?

The way to raise a free child becomes clear when one considers how an **unfree** child is raised. Thus imagine the typical infant, John Smith, whose upbringing A.S. Neill describes:

*"His natural functions were left alone during the diaper period. But when he began to crawl and perform on the floor, words like **naughty** and **dirty** began to float about the house, and a grim beginning was made in teaching him to be clean.*

"Before this, his hand had been taken away every time it touched his genitals; and he soon came to associate the genital prohibition with the acquired disgust about faeces. Thus, years later, when he became a travelling salesman, his story repertoire consisted of a

balanced number of sex and toilet jokes.

*"Much of his training was conditioned by relatives and neighbours. Mother and father were most anxious to be correct -- to do the proper thing -- so that when relatives or next-door neighbours came, John had to show himself as a well-trained child. He had to say **Thank you** when Auntie gave him a piece of chocolate; and he had to be most careful about his table manners; and especially, he had to refrain from speaking when adults were speaking." [Summerhill, p. 97]*

When he was little older, things got worse for John. *"All his curiosity about the origins of life were met with clumsy lies, lies so effective that his curiosity about life and birth disappeared. The lies about life became combined with fears when at the age of five his mother found him having genital play with his sister of four and the girl next door. The severe spanking that followed (Father added to it when he came home from work) forever conveyed to John the lesson that sex is filthy and sinful, something one must not even think of." [Ibid.]*

Of course, parents' ways of imparting negative messages about sex are not necessarily this severe, especially in our allegedly enlightened age. However, it is not necessary for a child to be spanked or even scolded or lectured in order to acquire a sex-negative attitude. Children are very intuitive and will receive the message "sex is bad" from subtle parental cues like facial expressions, tone of voice, embarrassed silence, avoidance of certain topics, etc. Mere "toleration" of sexual curiosity and play is far different in its psychological effects from positive affirmation.

Based on the findings of clinical psychiatry, Reich postulated a "*first puberty*" in children, from the ages of about 3 to 6, when the child's attention shifts from the satisfaction of oral needs to an interest in its sexuality -- a stage characterised by genital play of all kinds. The parents' task at this stage is not only to allow children to engage in such play, but to encourage it. *"In the child, before the age of four or five, genitality has not yet fully developed. The task here plainly consists of removing the obstacles in the way of natural development toward full genitality. To fulfil this task, we must agree that a first puberty in children exists; that genital games are the peak of its development; that lack of genital activity is a sign of sickness and not of health, as previously assumed; and that healthy children play genital games of all kinds, which should be encouraged and not hindered." [Children of the Future, p. 66]*

Along the same lines, to prevent the formation of sex-negative attitudes means that nakedness should never be discouraged. *"The baby should see its parents naked from the beginning. However, the child should be told when he is ready to understand that some people don't like to see children naked and that, in the presence of such people, he should wear clothes." [Neill, Summerhill, p. 229]*

Neill maintains that not only should parents never spank or punish a child for genital play, but that spanking and other forms of punishment should never be used in **any** circumstances, because they instil fear, turning children into cowards and often leading to phobias. *"Fear must be entirely eliminated -- fear of adults, fear of punishment, fear of disapproval, fear of God. Only hate can flourish in an*

atmosphere of fear." [**Ibid.**, p. 124]

Punishment also turns children into sadists. *"The cruelty of many children springs from the cruelty that has been practised on them by adults. You cannot be beaten without wishing to beat someone else. . . Every beating makes a child sadistic in desire or practice."* [**Ibid.**, p. 269, 271] This is obviously an important consideration to anarchists, as sadistic drives provide the psychological ground for militarism, war, police brutality, and so on. Such drives are undoubtedly also part of the desire to exercise hierarchical authority, with its possibilities for using negative sanctions against subordinates as an outlet for sadistic impulses.

Child beating is particularly cowardly because it is a way for adults to vent their hatred, frustration, and sadism on those who are unable to defend themselves. Such cruelty is, of course, always rationalised with excuse like "it hurts me more than it does you," etc., or explained in moral terms, like "I don't want my boy to be soft" or "I want him to prepare him for a harsh world" or "I spank my children because my parents spanked me, and it did me a hell of a lot of good." But despite such rationalisations, the fact remains that punishment is always an act of hate. To this hate, the child responds in kind by hating the parents, followed by fantasy, guilt, and repression. For example, the child may fantasise the father's death, which immediately causes guilt, and so is repressed. Often the hatred induced by punishment emerges in fantasies that are seemingly remote from the parents, such as stories of giant killing -- always popular with children because the giant represents the father. Obviously, the sense of guilt produced by such fantasies is very advantageous to organised religions that promise redemption from "sin." It is surely no coincidence that such religions are enthusiastic promoters of the sex-negative morality and disciplinarian child rearing practices that keep supplying them with recruits.

What is worse, however, is that punishment actually **creates** "problem children." This is so because the parent arouses more and more hatred (and diminishing trust in other human beings) in the child with each spanking, which is expressed in still worse behaviour, calling for more spankings, and so on, in a vicious circle. In contrast, *"The self-regulated child does not need any punishment,"* Neill argues, *"and he does not go through this hate cycle. He is never punished and he does not need to behave badly. He has no use for lying and for breaking things. His body has never been called filthy or wicked. He has not needed to rebel against authority or to fear his parents. Tantrums he will usually have, but they will be short-lived and not tend toward neurosis."* [**Ibid.**, p. 166]

We could cite many further examples of how libertarian principles of child-rearing can be applied in practice, but we must limit ourselves to these few. The basic principles can be summed up as follows: Get rid of authority, moralism, and the desire to "improve" and "civilise" children. Allow them to be themselves, without pushing them around, bribing, threatening, admonishing, lecturing, or otherwise forcing them to do anything. Refrain from action unless the child, by expressing their "freedom" restricts the freedom of others and **explain** what is wrong about such actions and never mechanically punish.

This is, of course, a radical philosophy, which few parents are willing to follow. It is quite amazing how people who call themselves libertarians in political and economic matters draw the line when it comes to

their behaviour within the family -- as if such behaviour had no wider social consequences! Hence, the opponents of children's freedom are legion, as are their objections to libertarian child rearing. In the next few sections we will examine some of the most common of these objections.

J.6.4 If children have nothing to fear, how can they be good?

Obedience that is based on fear of punishment, this-worldly or otherworldly, is not really goodness, it is merely cowardice. True morality (i.e. respect for others and one-self) comes from inner conviction based on experience, it cannot be imposed from without by fear. Nor can it be inspired by hope of reward, such as praise or the promise of heaven, which is simply bribery. As noted in the [previous section](#), if children are given as much freedom as possible from the day of birth and not forced to conform to parental expectations, they will spontaneously learn the basic principles of social behaviour, such as cleanliness, courtesy, and so forth. But they must be allowed to develop them **at their own speed**, at the natural stage of their growth, not when parents think they should develop them. And what is "natural" timing must be discovered by observation, not by defining it a priori based on one's own expectations.

Can a child really be taught to keep itself clean without being punished for getting dirty? According to many psychologists, it is not only possible but **vitaly important** for the child's mental health to do so, since punishment will give the child a fixed and repressed interest in his bodily functions. As Reich and Lowen have shown, for example, various forms of compulsive and obsessive neuroses can be traced back to the punishments used in toilet training. Dogs, cats, horses, and cows have no complexes about excrement. Complexes in human children come from the manner of their instruction.

As Neill observes, *"When the mother says **naughty** or **dirty** or even **tut tut**, the element of right and wrong arises. The question becomes a **moral** one -- when it should remain a **physical** one."* He suggests that the **wrong** way to deal with a child who likes to play with faeces is to tell him he is being dirty. *"The right way is to allow him to live out his interest in excrement by providing him with mud or clay. In this way, he will sublimate his interest without repression. He will live through his interest; and in doing so, kill it."* [Summerhill, p. 174]

Similarly, sceptics will probably question how children can be induced to eat a healthy diet without threats of punishment. The answer can be discovered by a simple experiment: set out on the table all kinds of foods, from candy and ice cream to whole wheat bread, lettuce, sprouts, and so on, and allow the child complete freedom to choose what is desired or to eat nothing at all if he or she is not hungry. Parents will find that the average child will begin choosing a balanced diet after about a week, after the desire for prohibited or restricted foods has been satisfied. This is an example of what can be called "trusting nature." That the question of how to "train" a child to eat properly should even be an issue says volumes about how little the concept of freedom for children is accepted or even understood, in our society. Unfortunately, the concept of "training" still holds the field in this and most other areas.

The disciplinarian argument that that children must be **forced** to respect property is also defective, because it always requires some sacrifice of a child's play life (and childhood should be devoted to play,

not to "preparing for adulthood," because playing is what children spontaneously do). The libertarian view is that a child should arrive at a sense of value out of his or her own free choice. This means not scolding or punishing them for breaking or damaging things. As they grow out of the stage of preadolescent indifference to property, they learn to respect it naturally.

"But shouldn't a child at least be punished for stealing?" it will be asked. Once again, the answer lies in the idea of trusting nature. The concept of "mine" and "yours" is adult, and children naturally develop it as they become mature, but not before. This means that normal children will "steal" -- though that is not how they regard it. They are simply trying to satisfy their acquisitive impulses; or, if they are with friends, their desire for adventure. In a society so thoroughly steeping in the idea of respect for property as ours, it is no doubt difficult for parents to resist societal pressure to punish children for "stealing." The reward for such trust, however, will be a child who grows into a healthy adolescent who respects the possessions of others, not out of a cowardly fear of punishment but from his or her own self-nature.

J.6.5 But how can children learn *ethics* if they are not given punishments, prohibitions, and religious instruction?

Most parents believe that, besides taking care of their child's physical needs, the teaching of ethical/moral values is their main responsibility and that without such teaching the child will grow up to be a "little wild animal" who acts on every whim, with no consideration for others. This idea arises mainly from the fact that most people in our society believe, at least passively, that human beings are naturally bad and that unless they are "trained" to be good they will be lazy, mean, violent, or even murderous. This, of course, is essentially the idea of "original sin." Because of its widespread acceptance, nearly all adults believe that it is their job to "improve" children.

According to libertarian psychologists, however, there is no original sin. In fact, it would be more accurate to say that there is "original virtue." As we have seen, Reich found that externally imposed, compulsive morality actually **causes** immoral behaviour by creating cruel and perverse "*secondary drives*." Neill puts it this way: "*I find that when I smash the moral instruction a bad boy has received, he becomes a good boy.*" [**Summerhill**, p. 250]

Unconscious acceptance of some form of the idea of original sin is, as mentioned previously, the main recruiting tool of organised religions, as people who believe they are born "sinners" feel a strong sense of guilt and need for redemption. Therefore Neill advises parents to "eliminate any need for redemption, by telling the child that he is born good -- not born bad." This will help keep them from falling under the influence of life-denying religions, which are inimical to the growth of a healthy character structure.

As Reich points out, "*The Church, because of its influence on the sexuality of youth, is an institution that exerts an extremely damaging effect on health.*" [**Children of the Future**, p. 217] Citing ethnological studies, he notes the following:

"Among those primitive peoples who lead satisfactory, unimpaired sexual lives, there is no sexual crime, no sexual perversion, no sexual brutality between man and woman; rape is unthinkable because it is unnecessary in their society. Their sexual activity flows in normal, well-ordered channels which would fill any cleric with indignation and fear, because the pale, ascetic youth and the gossiping, child-beating woman do not exist in these primitive societies. They love the human body and take pleasure in their sexuality. They do not understand why young men and women should not enjoy their sexuality. But when their lives are invaded by the ascetic, hypocritical morass and by the Church, which bring them 'culture' along with exploitation, alcohol, and syphilis, they begin to suffer the same wretchedness as ourselves. They begin to lead 'moral' lives, i.e. to suppress their sexuality, and from then on they decline more and more into a state of sexual distress, which is the result of sexual suppression. At the same time, they become sexually dangerous; murders of spouses, sexual diseases, and crimes of all sorts start to appear." [Ibid., p. 193]

Such crimes in our society would be greatly reduced if libertarian child rearing practices were widely followed. These are obviously important considerations for anarchists, who are frequently asked to explain how crime can be prevented in an anarchist society. The answer is that if people are not suppressed during childhood there will be far less crime, because the secondary-drive structure that leads to anti-social behaviour of all kinds will not be created in the first place. In other words, the solution to the so-called crime problem is not more police, more laws, or a return to the disciplinarianism of "traditional family values," as conservatives claim, but depends mainly on **getting rid** of such values.

There are other problems as well with the moralism taught by organised religions. One danger is making the child a hater. *"If a child is taught that certain things are sinful, his love of life must be changed to hate. When children are free, they never think of another child as being a sinner."* [Neill, **Op. Cit.**, p. 245] From the idea that certain people are sinners, it is a short step to the idea that certain classes or races of people are more "sinful" than others, leading to prejudice, discrimination, and persecution of minorities as an outlet for repressed anger and sadistic drives -- drives that are created in the first place by moralistic training during early childhood. Once again, the relevance for anarchism is obvious.

A further danger of religious instruction is the development of a fear of life. *"Religion to a child most always means only fear. God is a mighty man with holes in his eyelids: He can see you wherever you are. To a child, this often means that God can see what is being done under the bedclothes. And to introduce fear into a child's life is the worst of all crimes. Forever the child says nay to life; forever he is an inferior; forever a coward."* [Ibid., p. 246] People who have been threatened with fear of an afterlife in hell can never be entirely free of neurotic anxiety about security in **this** life. In turn, such people become easy targets of ruling-class propaganda that plays upon their material insecurity, e.g. the rationalisation of imperialistic wars as necessary to "preserve jobs" (cited, for example, by US Secretary of State James Baker as one rationale for the Gulf War).

J.6.6 But how will a free child ever learn unselfishness?

Another common objection to self-regulation is that children can only be taught to be **unselfish** through punishment and admonition. Again, however, such a view comes from a distrust of nature and is part of the common attitude that nature is mere "raw material" to be shaped by human beings according to their own wishes. The libertarian attitude is that unselfishness develops at the proper time -- which is **not** during childhood. Children are primarily egoists, generally until the beginning of puberty, and until then they usually don't have the ability to identify with others. Thus:

*"To ask a child to be unselfish is wrong. Every child is an egoist and the world belongs to him. When he has an apple, his one wish is to eat that apple. The chief result of mother's encouraging him to share it with his little brother is to make him hate the little brother. Altruism comes later -- comes naturally -- **if the child is not taught to be unselfish**. It probably never comes at all if the child has been forced to be unselfish. By suppressing the child's selfishness, the mother is fixing that selfishness forever."* [Neill, **Op. Cit.**, pp. 250-251]

Unfulfilled wishes (like all "unfinished business") live on in the unconscious. Hence children who are pressured too hard - "taught" - to be unselfish will, while conforming outwardly with parental demands, unconsciously repress part of their real, selfish wishes, and these repressed infantile desires will make the person selfish (and possibly neurotic) throughout life. Moreover, telling children that what they want to do is "wrong" or "bad" is equivalent to teaching them to hate themselves, and it is a well-known principle of psychology that people who do not love themselves cannot love others. Thus moral instruction, although it aims to develop altruism and love for others, is actually self-defeating, having just the opposite result.

Moreover, such attempts to produce "unselfish" children (and so adults) actually works **against** developing the individuality of the child and their abilities to develop their own abilities (in particular their ability of critical thought). As Erich Fromm puts it, "*[n]ot to be selfish implies not to do what one wishes, to give up one's own wishes for the sake of those in authority. . . . Aside from its obvious implication, it means 'don't love yourself,' 'don't be yourself,' but submit yourself to something more important than yourself, to an outside power or its internalisation, 'duty.'* 'Don't be selfish' becomes one of the most powerful ideological tools in suppressing spontaneity and the free development of personality. Under the pressure of this slogan one is asked for every sacrifice and for complete submission: only those acts are 'unselfish' which do not serve the individual but somebody or something outside himself." [Man for Himself, p. 127]

While such "unselfishness" is ideal for creating "model citizens" and willing wage slaves, it is not conducive for creating anarchists or even developing individuality. Little wonder Bakunin celebrated the urge to rebel and saw it as the key to human progress! Fromm goes on to note that selfishness and self-love, "*far from being identical, are actually opposites*" and that "*selfish persons are incapable of loving others. . . . [or] loving themselves...*" [Op. Cit., p. 131] Individuals who do not love themselves, and so others, will be more willing to submit themselves to hierarchy than those who do love themselves and are concerned for their own, and others, welfare. Thus the contradictory nature of capitalism, with its

contradictory appeals to selfish and unselfish behaviour, can be understood as being based upon lack of self-love, a lack which is promoted in childhood and one which libertarians should be aware of and combat.

Indeed, much of the urge to "teach children unselfishness" is actually an expression of adults' will to power. Whenever parents feel the urge to impose directives on their children, they would be wise to ask themselves whether the impulse comes from their own power drive or their own selfishness. For, since our culture strongly conditions us to seek power over others, what could be more convenient than having a small, weak person at hand who cannot resist one's will to power? Instead of issuing directives, libertarians believe in letting social behaviour develop naturally, which it will do after other people's opinions becomes important **to the child**. As Neill points out, *"Everyone seeks the good opinion of his neighbours. Unless other forces push him into unsocial behaviour, a child will naturally want to do that which will cause him to be well-regarded, but this desire to please others develops at a certain stage in his growth. The attempt by parents and teachers to artificially accelerate this stage does the child irreparable damage."* [Neill, **Op. Cit.**, p. 256]

Therefore, parents should allow children to be "selfish" and "ungiving", free to follow their own childish interests throughout their childhood. And when their individual interests clash with social interests (e.g. the opinion of the neighbours), the individual interests should take precedence. Every interpersonal conflict of interest should be grounds for a lesson in dignity on one side and consideration on the other. Only by this process can a child develop their individuality. By so doing they will come to recognise the individuality of others and this is the first step in developing ethical concepts (which rest upon mutual respect for others and their individuality).

J.6.7 Isn't what you call "libertarian child-rearing" just another name for spoiling the child?

No. This objection confuses the distinction between freedom and license. To raise a child in freedom does not mean letting him or her walk all over you; it does not mean never saying "no." It is true that free children are not subjected to punishment, irrational authority, or moralistic admonitions, but they are not "free" to violate the rights of others. As Neill puts it, *"in the disciplined home, the children have **no** rights. In the spoiled home, they have **all** the rights. The proper home is one in which children and adults have equal rights."* Or again, *"To let a child have his own way, or do what he wants to **at another's expense**, is bad for the child. It creates a spoiled child, and the spoiled child is a bad citizen."* [Summerhill, p. 107, 167]

There will inevitably be conflicts of will between parents and children, and the healthy way to resolve them is to come to some sort of a compromise agreement. The unhealthy ways are either to resort to authoritarian discipline or to spoil the child by allowing it to have all the social rights. Libertarian psychologists argue that no harm is done to children by insisting on one's individual rights, but that the harm comes from moralism, i.e. when one introduces the concepts of right and wrong or words like "naughty," "bad," or "dirty," which produce guilt.

Therefore it should not be thought that free children are free to "do as they please." Freedom means doing what one likes so long as it doesn't infringe on the freedom of others. Thus there is a big difference between compelling a child to stop throwing stones at others and compelling him or her to learn geometry. Throwing stones infringes on others' rights, but learning geometry involves only the child. The same goes for forcing children to eat with a fork instead of their fingers; to say "please" and "thank you;" to tidy up their rooms, and so on. Bad manners and untidiness may be annoying to adults, but they are not a violation of adults' rights. One could, of course, define an adult "right" to be free of annoyance from **anything** one's child does, but this would simply be a license for authoritarianism, emptying the concept of children's rights of all content.

As mentioned, giving children freedom does not mean allowing them to endanger themselves physically. For example, a sick child should not be asked to decide whether he wants to go outdoors or take his prescribed medicine, nor a run-down and overtired child whether she wants to go to bed. But the imposition of such forms of necessary authority is compatible with the idea that children should be given as much responsibility as they can handle at their particular age. For only in this way can they develop self-assurance. And again, it is important for parents to examine their own motives when deciding how much responsibility to give their child. Parents who insist on choosing their children's clothes for them, for example, are generally worried that little Tommy might select clothes that would reflect badly on his parents' social standing.

As for those who equate "discipline" in the home with "obedience," the latter is usually required of a child to satisfy the adults' desire for power. Self-regulation means that there are no power games being played with children, no loud voice saying "You'll do it because I say so, or else!" But, although this irrational, power-seeking kind of authority is absent in the libertarian home, there still remains what can be called a kind of "authority," namely adult protection, care, and responsibility, as well as the insistence on one's own rights. As Neill observes, *"Such authority sometimes demands obedience but at other times gives obedience. Thus I can say to my daughter, 'You can't bring that mud and water into our parlour.' That's no more than her saying to me, 'Get out of my room, Daddy. I don't want you here now,' a wish that I, of course, obey without a word"* [Op. Cit., p. 156]. Therefore there will still be "discipline" in the libertarian home, but it will be of the kind that protects the individual rights of each family member.

Raising children in freedom also does not imply giving them a lot of toys, money, and so on. Reichians have argued that children should not be given everything they ask for and that it is better to give them too little than too much. Under constant bombardment by commercial advertising campaigns, parents today generally tend to give their children far too much, with the result that the children stop appreciating gifts and rarely value any of their possessions. This same applies to money, which, if given in excess, can be detrimental to children's creativity and play life. If children are not given too many toys, they will derive creative joy out of making their own toys out of whatever free materials are at hand -- a joy of which they are robbed by overindulgence. Psychologists point out that parents who give too many presents are often trying to compensate for giving too little love.

There is less danger in rewarding children than there is in punishing them, but rewards can still undermine a child's morale. This is because, firstly, rewards are superfluous and in fact often **decrease** motivation and creativity, as several psychological studies have shown (see section [I.4.10](#)). Creative people work for the pleasure of creating; monetary interests are not central (or necessary) to the creative process. Secondly, rewards send the wrong message, namely, that doing the deed for which the reward is offered is not worth doing for its own sake and the pleasure associated with productive, creative activity. And thirdly, rewards tend to reinforce the worst aspects of the competitive system, leading to the attitude that money is the only thing which can motivate people to do the work that needs doing in society.

These are just a few of the considerations that enter into the distinction between spoiling children and raising them in freedom. In reality, it is the punishment and fear of a disciplinarian home that **spoils** children in the most literal sense, by destroying their childhood happiness and creating warped personalities. As adults, the victims of disciplinarianism will generally be burdened with one or more anti-social secondary drives such as sadism, destructive urges, greed, sexual perversions, etc., as well as repressed rage and fear. The presence of such impulses just below the surface of consciousness causes anxiety, which is automatically defended against by layers of rigid muscular armouring, which leaves the person stiff, frustrated, bitter, and burdened with feelings of inner emptiness. In such a condition, people easily fall victim to the capitalist gospel of super-consumption, which promises that money will enable them to fill the inner void by purchasing commodities -- a promise that, of course, is hollow.

The neurotically armoured person also tends to look for scapegoats on whom to blame his or her frustration and anxiety and against whom repressed rage can be vented. Reactionary politicians know very well how to direct such impulses against minorities or "hostile nations" with propaganda designed to serve the interests of the ruling elite. Most importantly, however, the respect for authority combined with sadistic impulses which is acquired from a disciplinarian upbringing typically produces a submissive/authoritarian personality -- a man or woman who blindly follows the orders of "superiors" while at the same time desiring to exercise authority on "subordinates," whether in the family, the state bureaucracy, or the corporation. In this way, the "traditional" (e.g., authoritarian, disciplinarian, patriarchal) family is the necessary foundation for authoritarian civilisation, reproducing it and its attendant social evils from generation to generation. Irving Staub's **Roots of Evil** includes interviews of imprisoned SS men, who, in the course of extensive interviews (meant to determine how ostensibly "normal" people could perform acts of untold ruthlessness and violence) revealed that they overwhelmingly came from authoritarian, disciplinarian homes.

J.6.8 What is the anarchist position on teenage sexual liberation?

One of the biggest problems of adolescence is sexual suppression by parents and society in general. The teenage years are the time when sexual energy is at its height. Why, then, the absurd demand that teenagers "wait until marriage," or at least until leaving home, before becoming sexually active? Why are there laws on the books in "advanced" countries like the United States that allow a 19-year-old "boy" who makes love with his 17-year-old girlfriend, with her full consent, to be **arrested** by the girl's parents

(!) for "statutory rape?"

To answer such questions, let us recall that the ruling class is not interested in encouraging mass tendencies toward democracy and independence and pleasure not derived from commodities but instead supports whatever contributes to mass submissiveness, docility, dependence, helplessness, and respect for authority -- traits that perpetuate the hierarchies on which ruling-class power and privileges depend.

We have noted earlier that, because sex is the most intense form of pleasure (one of the most prominent contributors for intimacy and bonding people) and involves the bioenergy of the body and emotions, repression of sexuality is the most powerful means of psychologically crippling people and giving them a submissive/authoritarian character structure (as well as alienating people from each other). As Reich observes, such a character is composed of a mixture of *"sexual impotence, helplessness, a need for attachments, a nostalgia for a leader, fear of authority, timidity, and mysticism."* As he also points out, *"people structured in this manner are **incapable of democracy**. All attempts to build up or maintain genuine democratically directed organisations come to grief when they encounter these character structures. They form the psychological soil of the masses in which dictatorial strivings and bureaucratic tendencies of democratically elected leaders can develop. . . . [Sexual suppression] produces the authority-fearing, life-fearing vassal, and thus constantly creates new possibilities whereby a handful of men in power can rule the masses."* [**The Sexual Revolution: Toward a Self-Regulating Character Structure**, p. 82, emphasis added]

No doubt most members of the ruling elite are not fully conscious that their own power and privileges depend on the mass perpetuation of sex-negative attitudes. Nevertheless, they unconsciously sense it. Sexual freedom is the most basic and powerful kind, and every conservative or reactionary instinctively shudders at the thought of the "social chaos" it would unleash -- that is, the rebellious, authority-defying type of character it would nourish. This is why "family values," and "religion" (i.e. discipline and compulsive sexual morality) are the mainstays of the conservative/reactionary agenda. Thus it is crucially important for anarchists to address every aspect of sexual suppression in society. And this means affirming the right of adolescents to an unrestricted sex life.

There are numerous arguments for teenage sexual liberation. For example, many teen suicides could be prevented by removing the restrictions on adolescent sexuality. This becomes clear from ethnological studies of sexually unrepressive "primitive" peoples. Thus:

"All reports, whether by missionaries or scholars, with or without the proper indignation about the 'moral depravity' of 'savages,' state that the puberty rites of adolescents lead them immediately into a sexual life; that some of these primitive societies lay great emphasis on sexual pleasure; that the puberty rite is an important social event; that some primitive peoples not only do not hinder the sexual life of adolescents but encourage it in every way, as, for instance, by arranging for community houses in which the adolescents settle at the start of puberty in order to be able to enjoy sexual intercourse. Even in those primitive societies in which the institution of strict monogamous marriage exists,

adolescents are given complete freedom to enjoy sexual intercourse from the beginning of puberty to marriage. None of these reports contains any indication of sexual misery or suicide by adolescents suffering from unrequited love (although the latter does of course occur). The contradiction between sexual maturity and the absence of genital sexual gratification is non-existent." [Ibid., p. 85]

Teenage sexual repression is also closely connected with crime. If there are hundreds of teenagers in a neighbourhood who have no place to pursue intimate sexual relationships, they will do it in dark corners, in cars or vans, etc., always on the alert and anxious lest someone discover them. Under such conditions, full gratification is impossible, leading to a build-up of tension, frustration and stagnation of bioenergy (sexual stasis). Thus they feel unsatisfied, disturb each other, become jealous and angry, get into fights, turn to drugs as a substitute for a satisfying sex life, vandalise property to let off "steam" (repressed rage), or even murder someone. As Reich notes, *"juvenile delinquency is the visible expression of the subterranean sexual crisis in the lives of children and adolescents. And it may be predicted that no society will ever succeed in solving this problem, the problem of juvenile psychopathology, unless that society can muster the courage and acquire the knowledge to regulate the sexual life of its children and adolescents in a sex-affirmative manner."* [Ibid., p. 271]

For these reasons, it is clear that a solution to the "gang problem" also depends on adolescent sexual liberation. We are not suggesting, of course, that gangs themselves suppress sexual activity. Indeed, one of their main attractions to teens is undoubtedly the hope of more opportunities for sex as a gang member. However, gangs' typical obsessiveness with the promiscuous, pornographic, sadistic, and other "dark" aspects of sex shows that by the time children reach the gang age they have already developed unhealthy secondary drives due to the generally sex-negative and repressive environment in which they have grown up. The expression of such drives is **not** what anarchists mean by "sexual freedom." Rather, anarchist proposals for teenage liberation are based on the premise that unrestricted sexuality in early childhood is the necessary condition for a **healthy** sexual freedom in adolescence.

Applying these insights to our own society, it is clear that teenagers should not only have ample access to a private room where they can be undisturbed with their sexual partners, but that parents should actively **encourage** such behaviour for the sake of their child's health and happiness (while, of course, encouraging the knowledge and use of contraceptives and safe sex in general as well as respect for the other person involved in the relationship). This last point (of respecting others) is essential. As Maurice Brinton points out, attempts at sexual liberation will encounter two kinds of responses from established society - direct opposition and attempts at recuperation. The second response takes the form of *"first alienating and reifying sexuality, and then of frenetically exploiting this empty shell for commercial ends. As modern youth breaks out of the dual stranglehold of the authoritarian patriarchal family it encounters a projected image of free sexuality which is in fact a manipulatory distortion of it."* This can be seen from the use of sex in advertising to the successful development of sex into a major consumer industry.

However, such a development is the opposite of the healthy sexuality desired by anarchists. This is because *"sex is presented as something to be consumed. But the sexual instinct differs from certain other*

instincts... [as it can be satisfied only by] another human being, capable of thinking, acting, suffering. The alienation of sexuality under the conditions of modern capitalism is very much part of the general alienating process, in which people are converted into objects (in this case, objects of sexual consumption) and relationships are drained of human content. Undiscriminating, compulsive sexual activity, is not sexual freedom - although it may sometimes be a preparation for it (which repressive morality can never be). The illusion that alienated sex is sexual freedom constitutes yet another obstacle on the road to total emancipation. Sexual freedom implies a realisation and understanding of the autonomy of others." [The Irrational in Politics, p. 60, p. 61]

Therefore, anarchists see teenage sexual liberation as a means of developing free individuals **as well as** reducing the evil effects of sexual repression (which, we must note, also helps dehumanise individuals by encouraging the objectification of others, and in a patriarchal society, particularly of women).

J.6.9 But isn't this concern with teenage sexual liberation just a distraction from issues that should be of more concern to anarchists, like restructuring the economy?

It would be insulting to teenagers to suggest that sexual freedom is, or should be, their **only** concern. Many teens have a well-developed social conscience and are keenly interested in problems of economic exploitation, poverty, social breakdown, environmental degradation, and the like.

However, it is essential for anarchists to guard against the attitude typically found in Marxist-Leninist parties that spontaneous discussions about the sexual problems of youth are a "diversion from the class struggle." Such an attitude is economistic (not to mention covertly ascetic), because it is based on the premise that the economy must be the focus of all revolutionary efforts toward social change. No doubt restructuring the economy is important, but without mass sexual liberation no working class revolution be complete. In a so called free society, there will not be enough people around with the character structures necessary to create a **lasting** worker-controlled economy -- i.e. people who are capable of accepting freedom with responsibility. Instead, the attempt to force the creation of such an economy without preparing the necessary psychological soil for its growth will lead to a quick reversion to some new form of hierarchy and exploitation.

Moreover, for most teenagers, breaking free from the sexual suppression that threatens to cripple them psychologically is a major issue in their lives. For this reason, not many of them are likely to be attracted to the anarchist "freedom" movement if its exponents limit themselves to dry discussions of surplus value, alienated labour, and so forth. Instead, addressing sexual questions and problems must be integrated into a multi-faceted attack on the total system of domination. Teens should feel confident that anarchists are on the side of sexual pleasure and are not revolutionary ascetics demanding self-denial for the "sake of the revolution." Rather, it should be stressed that the capacity for full sexual enjoyment is the an essential part of the revolution. Indeed, *"incessant questioning and challenge to authority on the subject of sex and of the compulsive family can only complement the questioning and challenge to*

authority in other areas (for instance on the subject of who is to dominate the work process - or the purpose of work itself). Both challenges stress the autonomy of individuals and their domination of over important aspects of their lives. Both expose the alienated concepts which pass for rationality and which govern so much of our thinking and behaviour. The task of the conscious revolutionary is to make both challenges explicit, to point out their deeply subversive content, and to explain their inter-relation." [Maurice Brinton, **Op. Cit.**, p. 62]

We noted previously that in pre-patriarchal society, which rests on the social order of primitive communism, children have complete sexual freedom and that the idea of childhood asceticism develops as matricentric clan societies turn toward patriarchy in the economy and social structure (see section [B.1.5](#)). This sea-change in social attitudes toward childhood sexuality allows the authority-oriented character structure to develop instead of the formerly non-authoritarian ones. Ethnological research has shown that in pre-patriarchal societies, the general nature of work life in the collective corresponds with the free sexuality of children and adolescents -- that is, there are no rules coercing children and adolescents into specific forms of sexual life, and this creates the psychological basis for voluntary integration into the collective and voluntary discipline in work. This historical fact supports the premise that widespread sex-positive attitudes are a necessary condition of a viable libertarian socialism.

Psychology also clearly shows that every impediment to infantile and adolescent sexuality by parents, teachers, or administrative authorities must be stopped. As anarchists, our preferred way of doing so is by direct action. Thus we should encourage teens to feel that they have every chance of building their own lives. This will certainly not be an obstacle to or a distraction from their involvement in the anarchist movement. On the contrary, if they can gradually solve the problem of (e.g.) private rooms themselves, they will work on other social projects with greatly increased pleasure and concentration. For, contrary to Freud, Reichian psychologists argue that beyond a certain point, excess sexual energy cannot be sublimated in work or any other purposeful activity but actually disturbs work by making the person restless and prone to fantasies, thus hindering concentration.

Besides engaging in direct action, anarchists can also support legal protection of infantile and adolescent sexuality (repeal of the insane statutory rape laws would be one example), just as they support legislation that protects workers' right to strike, family leave, and so forth. However, as Reich observes, "*under no circumstances will the new order of sexual life be established by the decree of a central authority.*" [**Ibid.**, p. 279] That was a Leninist illusion. Rather, it will be established from the bottom up, by the gradual process of ever more widespread dissemination of knowledge about the adverse personal and social effects of sexual suppression, which will lead to mass acceptance of libertarian child-rearing and educational methods.

A society in which people are capable of sexual happiness will be one where they prefer to "*make love, not war,*" and so will provide the best guarantee for the general security. Then the anarchist project of restructuring the economic and political systems will proceed spontaneously, based on a spirit of joy rather than hatred and revenge. Only then can it be defended against reactionary threats, because the majority will be on the side of freedom and capable of using it responsibly, rather than unconsciously

longing for an authoritarian father-figure to tell them what to do.

Therefore, concern and action upon teenage sexual liberation (or child rearing in general or libertarian education) is a **key** part of social struggle and change. In no way can it be considered a "distraction" from "important" political and economic issues as some "serious" revolutionaries like to claim. As Martha A. Ackelsberg notes (in relation to the practical work done by the *Mujeres Libres* group during the Spanish Revolution):

"Respecting children and educating them well was vitally important to the process of revolutionary change. Ignorance made people particularly vulnerable to oppression and suffering. More importantly, education prepared people for social life. Authoritarian schools (or families), based upon fear, prepared people to be submissive to an authoritarian government [or within a capitalist workplace]. Different schools and families would be necessary to prepare people to live in a society without domination." [**Free Women of Spain**, p. 133]

I.3 What could the economic structure of anarchy look like?

Here we will examine possible frameworks of a libertarian-socialist economy. We stress that it is **frameworks** rather than framework because it is likely that any anarchist society will see a diverse number of economic systems co-existing in different areas, depending on what people in those areas want. *"In each locality,"* argued Spanish anarchist Diego Abad de Santillan, *"the degree of communism, collectivism or mutualism will depend on the conditions prevailing. Why dictate rules? We who make freedom our banner, cannot deny it in economy. Therefore there must be free experimentation, free show of initiative and suggestions, as well as the freedom of organisation."* [**After the Revolution**, p. 97]

In general we will highlight and discuss the four major schools of anarchist economic thought: Individualist anarchism, mutualism, collectivism and communism. It is up to the reader to evaluate which school best maximises individual liberty and the good life. There may, of course, be other economic practices but these may not be libertarian. In Malatesta's words:

"Admitted the basic principle of anarchism -- which is that no-one should wish or have the opportunity to reduce others to a state of subjection and oblige them to work for him -- it is clear that all, and only, those ways of life which respect freedom, and recognise that each individual has an equal right to the means of production and to the full enjoyment of the product of his own labour, have anything in common with anarchism." [**Life and Ideas**, p. 33]

In addition, it should be kept in mind that in practice it is impossible to separate the economic realm from the social and political realms, as there are numerous interconnections between them. Indeed, as we will see, anarchist thinkers like Bakunin argued that the *"political"* institutions of a free society would be based upon workplace associations while Kropotkin placed the commune at the heart of his vision of a communist-anarchist economy and society. Thus the division between social and economic forms is not clear cut in anarchist theory -- as it should be as society is not, and cannot be, considered as separate from or inferior to the economy. An anarchist society will try to integrate the social and economic, embedding the latter in the former in order to stop any harmful externalities associated economic activity being passed onto society. As Karl Polanyi argued, capitalism *"means no less than the running of society as an adjunct to the market. Instead of the economy being embedded in social relations, social relations are embedded in the economic system."* [**The Great Transformation**, p. 57] Given the negative effects of such an arrangement, little wonder that anarchism seeks to reverse it.

Also, by discussing the economy first we are not implying that dealing with economic domination or exploitation is more important than dealing with other aspects of the total system of domination, e.g. social hierarchies, patriarchal values, racism, etc. We follow this order of exposition because of the need to present one thing at a time, but it would have been equally easy to start with the social and political

structure of anarchy. However, Rudolf Rocker is correct to argue that an economic transformation in the economy is an essential aspect of a social revolution. In his words:

"[A] social development in this direction [i.e. a stateless society] was not possible without a fundamental revolution in existing economic arrangements; for tyranny and exploitation grow on the same tree and are inseparably bound together. The freedom of the individual is secure only when it rests on the economic and social well-being of all . . . The personality of the individual stands the higher, the more deeply it is rooted in the community, from which arise the richest sources of its moral strength. Only in freedom does there arise in man the consciousness of responsibility for his acts and regard for the rights of others; only in freedom can there unfold in its full strength that most precious of social instinct: man's sympathy for the joys and sorrows of his fellow men and the resultant impulse toward mutual aid and in which are rooted all social ethics, all ideas of social justice." [Nationalism and Culture, pp. 147-8]

The aim of any anarchist society would be to maximise freedom and so creative work. In the words of Noam Chomsky:

"If it is correct, as I believe it is, that a fundamental element of human nature is the need for creative work or creative inquiry, for free creation without the arbitrary limiting effects of coercive institutions, then of course it will follow that a decent society should maximise the possibilities for this fundamental human characteristic to be realised. Now, a federated, decentralised system of free associations incorporating economic as well as social institutions would be what I refer to as anarcho-syndicalism. And it seems to me that it is the appropriate form of social organisation for an advanced technological society, in which human beings do not have to be forced into the position of tools, of cogs in a machine."

So, as one might expect, since the essence of anarchism is opposition to hierarchical authority, anarchists totally oppose the way the current economy is organised. This is because authority in the economic sphere is embodied in centralised, hierarchical workplaces that give an elite class (capitalists) dictatorial control over privately owned means of production, turning the majority of the population into order takers (i.e. wage slaves). In contrast, the libertarian-socialist "economy" will be based on decentralised, egalitarian workplaces ("syndicates") in which workers democratically self-manage **socially** owned means of production. Let us begin with the concept of syndicates.

The key principles of libertarian socialism are decentralisation, self-management by direct democracy, voluntary association, and federation. These principles determine the form and function of both the economic and political systems. In this section we will consider just the economic system. Bakunin gives an excellent overview of such an economy when he writes:

"The land belongs to only those who cultivate it with their own hands; to the agricultural

communes. The capital and all the tools of production belong to the workers; to the workers' associations . . . The future political organisation should be a free federation of workers." [Bakunin on Anarchy, p. 247]

The essential economic concept for libertarian socialists is **workers' self-management** (sometimes termed workers' control). This is essential to ensure "*a society of equals, who will not be compelled to sell their hands and their brains to those who choose to employ them . . . but who will be able to apply their knowledge and capacities to production, in an organism so constructed as to combine all the efforts for procuring the greatest possible well-being for all, while full, free scope will be left for every individual initiative.*" [Kropotkin, **Kropotkin: Selections from his Writings**, pp. 113-4]

However, this concept of self-management needs careful explanation, because, like the terms "*anarchist*" and "*libertarian*," "workers' control" is also being co-opted by capitalists to describe schemes in which workers' have more say in how their workplaces are run while maintaining wage slavery (i.e. capitalist ownership, power and ultimate control). Needless to say, such schemes are phoney as they never place **real** power in the hands of workers. In the end, the owners and their managers have the final say (and so hierarchy remains) and, of course, profits are still extracted from the workforce.

As anarchists use the term, workers' self-management/control means collective worker ownership, control and self-management of all aspects of production and distribution. This is achieved through participatory-democratic workers' assemblies, councils and federations, in both agriculture and industry. These bodies would perform all the functions formerly reserved for capitalist owners, managers, executives and financiers where these activities actually related to productive activity rather than the needs to maximise minority profits and power. These workplace assemblies will be complemented by people's financial institutions or federations of syndicates which perform all functions formerly reserved for capitalist owners, executives, and financiers in terms of allocating investment funds or resources.

This means that an anarchist society is based on "**workers' ownership**" of the means of production.

"*Workers' ownership*" in its most limited sense refers merely to the ownership of individual firms by their workers. In such firms, surpluses (profits) would be either equally divided between all full-time members of the co-operative or divided unequally on the basis of the type of work done, with the percentages allotted to each type being decided by democratic vote, on the principle of one worker, one vote. However, such a limited form of workers' ownership is rejected by most anarchists. Social anarchists argue that this is but a step in the right direction and the ultimate aim is **social** ownership of all the means of life. This is because of the limitations of firms being owned solely by their workers (as in a modern co-operative).

Worker co-operatives of this type do have the virtue of preventing the exploitation and oppression of labour by capital, since workers are not hired for wages but, in effect, become partners in the firm. This means that the workers control both the product of their labour (so that the value-added that they produce is not appropriated by a privileged elite) and the work process itself (and so they no longer sell

their liberty to others). However, this does not mean that all forms of economic domination and exploitation would be eliminated if worker ownership were confined merely to individual firms. In fact, most social anarchists believe this type of system would degenerate into a kind of "*petit-bourgeois co-operativism*" in which worker-owned firms would act as collective "*capitalists*" and compete against each other in the market as ferociously as the real capitalists used to. This would also lead to a situation where market forces ensured that the workers involved made irrational decisions (from both a social and individual point of view) in order to survive in the market. As these problems were highlighted in section I.1.3 ("[What's wrong with markets anyway?](#)"), we will not repeat ourselves here.

For individualist anarchists, this "*irrationality of rationality*" is the price to be paid for a free market and any attempt to overcome this problem holds numerous dangers to freedom. Social anarchists disagree. They think co-operation between workplaces can increase, not reduce, freedom. Social anarchists' proposed solution is **society-wide** ownership of the major means of production and distribution, based on the anarchist principle of voluntary federation, with confederal bodies or co-ordinating councils at two levels: first, between all firms in a particular industry; and second, between all industries, agricultural syndicates, and people's financial institutions throughout the society. As Berkman put it:

"Actual use will be considered the only title [in communist anarchism] -- not to ownership but to possession. The organisation of the coal miners, for example, will be in charge of the coal mines, not as owners but as the operating agency. Similarly will the railroad brotherhoods run the railroads, and so on. Collective possession, co-operatively managed in the interests of the community, will take the place of personal ownership privately conducted for profit." [ABC of Anarchism, p. 69]

While, for many anarcho-syndicalists, this structure is seen as enough, most communist-anarchists consider that the economic federation should be held accountable to society as a whole (i.e. the economy must be communalised). This is because not everyone in society is a worker (e.g. the young, the old and infirm) nor will everyone belong to a syndicate (e.g. the self-employed), but as they also have to live with the results of economic decisions, they should have a say in what happens. In other words, in communist-anarchism, workers make the day-to-day decisions concerning their work and workplaces, while the social criteria behind these decisions are made by everyone.

In this type of economic system, workers' assemblies and councils would be the focal point, formulating policies for their individual workplaces and deliberating on industry-wide or economy-wide issues through general meetings of the whole workforce in which everyone would participate in decision making. Voting in the councils would be direct, whereas in larger confederal bodies, voting would be carried out by temporary, unpaid, mandated, and instantly recallable delegates, who would resume their status as ordinary workers as soon as their mandate had been carried out.

"Mandated" here means that the delegates from workers' assemblies and councils to meetings of higher confederal bodies would be instructed, at every level of confederation, by the workers who elected them on how to deal with any issue. The delegates would be given imperative mandates (binding instructions)

that committed them to a framework of policies within which they would have to act, and they could be recalled and their decisions revoked at any time for failing to carry out the mandates they were given (this support for mandated delegates has existed in anarchist theory since at least 1848, when Proudhon argued that it was *"a consequence of universal suffrage"* to ensure that *"the people . . . do not . . . abjure their sovereignty."* [**No Gods, No Masters**, vol. 1, p. 63]). Because of this right of mandating and recalling their delegates, workers' councils would be the source of and final authority over policy for all higher levels of confederal co-ordination of the economy.

A society-wide economic federation of this sort is clearly not the same thing as a centralised state agency, as in the concept of nationalised or state-owned industry. As Emma Goldman argued, there is a clear difference between socialisation and nationalisation. *"The first requirement of Communism,"* she argued, *"is the socialisation of the land and of the machinery of production and distribution. Socialised land and machinery belong to the people, to be settled upon and used by individuals and groups according to their needs."* Nationalisation, on the other hand, means that a resource *"belongs to the state; that is, the government has control of it and may dispose of it according to its wishes and views."* She stressed that *"when a thing is socialised, every individual has free access to it and may use it without interference from anyone."* When the state owned property, *"[s]uch a state of affairs may be called state capitalism, but it would be fantastic to consider it in any sense communistic."* [**Red Emma Speaks**, pp.360-1]

Clearly, an anarchist society is based on free access and a resource is controlled by those who use it. It is a decentralised, participatory-democratic (i.e. self-managed) organisation whose members can secede at any time and in which all power and initiative arises from and flows back to the grassroots level (see [section I.6](#) for a discussion on how social ownership would work in practice). Anarchists reject the Leninist idea that state property means the end of capitalism as simplistic and confused. Ownership is a juridical relationship. The **real** issue is one of management. Do the users of a resource manage it? If so, then we have a real (i.e. libertarian) socialist society. If not, we have some form of class society (for example, in the Soviet Union the state replaced the capitalist class but workers still had no official control over their labour or the product of that labour).

A social anarchist society combines free association, federalism and self-management with communalised ownership. Free labour is its basis and socialisation exists to complement and protect it.

Regardless of the kind of anarchy desired, anarchists all agree on the importance of decentralisation, free agreement and free association. Kropotkin's summary of what anarchy would look like gives an excellent feel of what sort of society anarchists desire:

"harmony in such a society being obtained, not by submission to law, or by obedience to any authority, but by free agreements concluded between the various groups, territorial and professional, freely constituted for the sake of production and consumption, as also for the satisfaction of the infinite variety of needs and aspirations of a civilised being."

"In a society developed on these lines . . . voluntary associations . . . would represent an interwoven network, composed of an infinite variety of groups and federations of all sizes and degrees, local, regional, national and international temporary or more or less permanent -- for all possible purposes: production, consumption and exchange, communications, sanitary arrangements, education, mutual protection, defence of the territory, and so on; and, on the other side, for the satisfaction of an ever-increasing number of scientific, artistic, literary and sociable needs.

"Moreover, such a society would represent nothing immutable. On the contrary -- as is seen in organic life at large - harmony would (it is contended) result from an ever-changing adjustment and readjustment of equilibrium between the multitudes of forces and influences, and this adjustment would be the easier to obtain as none of the forces would enjoy a special protection from the State." [Kropotkin's **Revolutionary Pamphlets**, p. 284]

If this type of system sounds *"utopian"* it should be kept in mind that it was actually implemented and worked quite well in the collectivist economy organised during the Spanish Revolution of 1936, despite the enormous obstacles presented by an ongoing civil war as well as the relentless (and eventually successful) efforts of Republicans, Stalinists and Fascists to crush it (see Sam Dolgoff's **The Anarchist Collectives: Workers' Self-management in the Spanish Revolution, 1936-1939** for an excellent introduction).

As well as this (and other) examples of *"anarchy in action"* there have been other libertarian socialist economic systems described in writing. All share the common features of workers' self-management, co-operation and so on we discuss here and in [section I.4](#). These texts include **Syndicalism** by Tom Brown, **The Program of Anarcho-Syndicalism** by G.P. Maximoff, **Guild Socialism Restated** by G.D.H. Cole, **After the Revolution** by Diago Abad de Santillan, **Anarchist Economics and Principles of Libertarian Economy** by Abraham Guillen, **Workers Councils and the Economics of a Self-Managed Society** by Cornelius Castoriadis among others. A short summary of Spanish Anarchist visions of the free society can be found in chapter 3 of Robert Alexander's **The Anarchists in the Spanish Civil War** (vol. 1). Also worth reading are **The Political Economy of Participatory Economics** and **Looking Forward: Participatory Economics for the Twenty First Century** by Michael Albert and Robin Hahnel which contain some useful ideas.

Fictional accounts include William Morris' **News from Nowhere**, **The Dispossessed** by Ursula Le Guin, **Women on the Edge of Time** by Marge Piercy and **The Last Capitalist** by Steve Cullen.

I.3.1 What is a *"syndicate"*?

As we will use the term, a *"syndicate"* (often called a *"producer co-operative,"* or *"co-operative"* for short, sometimes *"collective"* or *"producers' commune"* or *"association of producers"* or *"guild factory"* or *"guild workplace"*) is a democratically self-managed productive enterprise whose productive assets

are either owned by its workers or by society as a whole. It is a useful generic term to describe the situation aimed at by anarchists where *"associations of men and women who . . . work on the land, in the factories, in the mines, and so on, [are] themselves the managers of production."* [Peter Kropotkin, **Evolution and Environment**, p. 78]

It is important to note that individuals who do not wish to join syndicates will be able to work for themselves. There is no *"forced collectivisation"* under **any** form of libertarian socialism, because coercing people is incompatible with the basic principles of anarchism. Those who wish to be self-employed will have free access to the productive assets they need, provided that they neither attempt to monopolise more of those assets than they and their families can use by themselves nor attempt to employ others for wages (see [section I.3.7](#)).

In many ways a syndicate is similar to a co-operative under capitalism. Indeed, Bakunin argued that anarchists are *"convinced that the co-operative will be the preponderant form of social organisation in the future, in every branch of labour and science."* [**Basic Bakunin**, p. 153] Therefore, even from the limited examples of co-operatives functioning in the capitalist market, the essential features of a libertarian socialist economy can be seen. The basic economic element, the workplace, will be a free association of individuals, who will organise their joint work co-operatively. To quote Bakunin again, *"[o]nly associated labour, that is, labour organised upon the principles of reciprocity and co-operation, is adequate to the task of maintaining . . . civilised society."* [**The Political Philosophy of Bakunin**, p. 341]

"Co-operation" in this context means that the policy decisions related to their association will be based on the principle of "one member, one vote," with "managers" and other administrative staff elected and held accountable to the workplace as a whole. Workplace self-management does not mean, as many apologists of capitalism suggest, that knowledge and skill will be ignored and **all** decisions made by everyone. This is an obvious fallacy, since engineers, for example, have a greater understanding of their work than non-engineers and under workers' self-management will control it directly. As G.D.H. Cole argues:

*"we must understand clearly wherein this Guild democracy consists, and especially how it bears on relations between different classes of workers included in a single Guild. For since a Guild includes **all** the workers by hand and brain engaged in a common service, it is clear that there will be among its members very wide divergences of function, of technical skill, and of administrative authority. Neither the Guild as a whole nor the Guild factory can determine all issues by the expedient of the mass vote, nor can Guild democracy mean that, on all questions, each member is to count as one and none more than one. A mass vote on a matter of technique understood only by a few experts would be a manifest absurdity, and, even if the element of technique is left out of account, a factory administered by constant mass votes would be neither efficient nor at all a pleasant place to work in. There will be in the Guilds technicians occupying special positions by virtue of their knowledge, and there will be administrators possessing special authority by virtue*

both of skill an ability and of personal qualifications." [G.D.H. Cole, **Guild Socialism Restated**, pp. 50-51]

The fact that some decision-making has been delegated in this manner sometimes leads people to ask whether a syndicate would not just be another form of hierarchy. The answer is that it would not be hierarchical because the workers' assemblies and their councils, open to all workers, would decide what types of decision-making to delegate, thus ensuring that ultimate power rests at the mass base. Moreover, **power** would not be delegated. Malatesta clearly indicates the difference between administrative decisions and policy decisions:

*"Of course in every large collective undertaking, a division of labour, technical management, administration, etc. is necessary. But authoritarians clumsily play on words to produce a **raison d'etre** for government out of the very real need for the organisation of work. Government, it is well to repeat, is the concourse of individuals who have had, or seized, the right and the means to make laws and to oblige people to obey; the administrator, the engineer, etc., instead are people who are appointed or assume the responsibility to carry out a particular job and so on. Government means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few; administration means the delegation of work, that is tasks given and received, free exchange of services based on free agreement . . . Let one not confuse the function of government with that of an administration, for they are essentially different, and if today the two are often confused, it is only because of economic and political privilege."* [**Anarchy**, pp. 39-40]

Given that power remains in the hands of the workplace assembly, it is clear that the organisation required for every collective endeavour cannot be equated with government. Also, never forget that administrative staff are elected by and accountable to the rest of an association. If, for example, it turned out that a certain type of delegated decision-making activity was being abused, it could be revoked by the whole workforce. Because of this grassroots control, there is every reason to think that crucial types of decision-making activity which could become a source of power (and so with the potential for seriously affecting all workers' lives) would not be delegated but would remain with the workers' assemblies. For example, powers that are now exercised in an authoritarian manner by managers under capitalism, such as those of hiring and firing, introducing new production methods or technologies, changing product lines, relocating production facilities, determining the nature, pace and rhythm of productive activity and so on would remain in the hands of the associated producers and **not** be delegated to anyone.

New syndicates will be created upon the initiative of individuals within communities. These may be the initiative of workers in an existing syndicate who desire to expand production, or members of the local community who see that the current syndicates are not providing adequately in a specific area of life. Either way, the syndicate will be a voluntary association for producing useful goods or services and would spring up and disappear as required. Therefore, an anarchist society would see syndicates developing spontaneously as individuals freely associate to meet their needs, with both local and

confederal initiatives taking place. (The criteria for investment decisions is discussed in [section I.4.8](#)).

What about entry into a syndicate? In the words of Cole, workers syndicates are *"open associations which any man [or woman] may join"* but *"this does not mean, of course, that any person will be able to claim admission, as an absolute right, into the guild of his choice."* [**Op. Cit.**, p. 75] This means that there may be training requirements (for example) and obviously *"a man [or woman] clearly cannot get into a Guild [i.e. syndicate] unless it needs fresh recruits for its work. [The worker] will have free choice, but only of the available openings."* [**Ibid.**] Obviously, as in any society, an individual may not be able to pursue the work they are most interested (although given the nature of an anarchist society they would have the free time to pursue it as a hobby). However, we can imagine that an anarchist society would take an interest in ensuring a fair distribution of work and so would try to arrange work sharing if a given work placement is popular.

Of course there may be the danger of a syndicate or guild trying to restrict entry from an ulterior motive. The ulterior motive would, of course, be the exploitation of monopoly power vis-a-vis other groups in society. However, in an anarchist society individuals would be free to form their own syndicates and this would ensure that such activity is self-defeating. In addition, in a non-mutualist anarchist system, syndicates would be part of a confederation (see [section I.3.4](#)). It is a responsibility of the inter-syndicate congresses to assure that membership and employment in the syndicates is not restricted in any anti-social way. If an individual or group of individuals felt that they had been unfairly excluded from a syndicate then an investigation into the case would be organised at the congress. In this way any attempts to restrict entry would be reduced (assuming they occurred to begin with). And, of course, individuals are free to form new syndicates or leave the confederation if they so desire (see [section I.4.13](#) on the question of who will do unpleasant work, and for more on work allocation generally, in an anarchist society).

To sum up, syndicates are voluntary associations of workers who manage their workplace and their own work. Within the syndicate, the decisions which affect how the workplace develops and changes are in the hands of those who work there. In addition, it means that each section of the workforce manages its own activity and sections and that all workers placed in administration tasks (i.e. *"management"*) are subject to election and recall by those who are affected by their decisions. (Workers' self-management is discussed further in section I.3.2 -- ["What is workers' self-management?"](#)).

I.3.2 What is workers' self-management?

Quite simply, workers' self-management (sometimes called *"workers' control"*) means that all workers affected by a decision have an equal voice in making it, on the principle of *"one worker, one vote."* That is, workers *"ought to be the real managers of industries."* [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 157] As noted earlier, however, we need to be careful when using the term *"workers' control,"* as the concept is currently being co-opted by the ruling elite, which is to say that it is becoming popular among sociologists, industrial managers, and social-democratic union leaders, and so

is taking on an entirely different meaning from the one intended by anarchists (who originated the term).

In the hands of capitalists, "*workers' control*" is now referred to by such terms as "*participation*," "*democratisation*," "*co-determination*," "*consensus*," "*empowerment*," "*Japanese-style management*," etc. As Sam Dolgoff notes, "*[f]or those whose function it is solve the new problems of boredom and alienation in the workplace in advanced industrial capitalism, workers' control is seen as a hopeful solution. . . . a solution in which workers are given a modicum of influence, a strictly limited area of decision-making power, a voice at best secondary in the control of conditions of the workplace. Workers' control, in a limited form sanctioned by the capitalists, is held to be the answer to the growing non-economic demands of the workers.*" ["*Workers' Control*" in **The Anarchist Collectives**, p. 81]

The new managerial fad of "*quality circles*" -- meetings where workers are encouraged to contribute their ideas on how to improve the company's product and increase the efficiency with which it is made -- is an example of "*workers' control*" as conceived by capitalists. However, when it comes to questions such as what products to make, where to make them, and (especially) how revenues from sales should be divided among the workforce and invested, capitalists and managers don't ask for or listen to workers' "input." So much for "*democratisation*," "*empowerment*," and "*participation!*" In reality, capitalistic "*workers control*" is merely another insidious attempt to make workers more willing and "co-operative" partners in their own exploitation.

Hence we prefer the term "***workers' self-management***" -- a concept which refers to the exercise of workers' power through collectivisation and federation (see below). Self-management in this sense "*is not a new form of mediation between the workers and their capitalist bosses, but instead refers to the very process by which the workers themselves overthrow their managers and take on their own management and the management of production in their own workplace. Self-management means the organisation of all workers . . . into a workers' council or factory committee (or agricultural syndicate), which makes all the decisions formerly made by the owners and managers.*" [Dolgoff, **Op. Cit.**, p. 81] As such, it means "*a transition from private to collective ownership*" which, in turn, "*call[s] for new relationships among the members of the working community.*" [Abel Paz, **The Spanish Civil War**, p. 55] Self-management means the end of hierarchy and authoritarian social relationships in workplace and their replacement by free agreement, collective decision-making, direct democracy, social equality and libertarian social relationships.

Therefore workers' self-management is based around general meetings of the whole workforce, held regularly in every industrial or agricultural syndicate. These are the source of and final authority over decisions affecting policy within the workplace as well as relations with other syndicates. These meetings elect workplace councils whose job is to implement the decisions of these assemblies and to make the day to day administration decisions that will crop up. These councils are directly accountable to the workforce and its members subject to re-election and instant recall. It is also likely that membership of these councils will be rotated between all members of the syndicate to ensure that no one monopolises an administrative position. In addition, smaller councils and assemblies would be organised for divisions, units and work teams as circumstances dictate.

In this way, workers would manage their own collective affairs together, as free and equal individuals. They would associate together to co-operate without subjecting themselves to an authority over themselves. Their collective decisions would remain under their control and power. This means that self-management creates *"an organisation so constituted that by affording everyone the fullest enjoyment of his [or her] liberty, it does not permit anyone to rise above the others nor dominate them in any way but through the natural influence of the intellectual and moral qualities which he [or she] possesses, without this influence ever being imposed as a right and without leaning upon any political institution whatever."* [The Political Philosophy of Bakunin, p. 271] Only by convincing your fellow associates of the soundness of your ideas can those ideas become the agreed plan of the syndicate. No one is in a position to impose their ideas simply because of the post they hold or the work they do.

Most anarchists think that it is likely that purely administrative tasks and decisions would be delegated to elected individuals in this way, freeing workers and assemblies to concentrate on important activities and decisions rather than being bogged down in trivial details. As Bakunin put it:

"Is not administrative work just as necessary to production as is manual labour -- if not more so? Of course, production would be badly crippled, if not altogether suspended, without efficient and intelligent management. But from the standpoint of elementary justice and even efficiency, the management of production need not be exclusively monopolised by one or several individuals. And managers are not at all entitled to more pay. The co-operative workers associations have demonstrated that the workers themselves, choosing administrators from their own ranks, receiving the same pay, can efficiency control and operate industry. The monopoly of administration, far from promoting the efficiency of production, on the contrary only enhances the power and privileges of the owners and their managers." [Bakunin on Anarchism, p. 424]

What is important is that what is considered as important or trivial, policy or administration rests with the people affected by the decisions and subject to their continual approval. Anarchists do not make a fetish of direct democracy and recognise that there is more important things in life than meetings and voting! While workers' assemblies play the key role in self-management, it is not the focal point of **all** decisions. Rather it is the place where all the important policy decisions are made, administrative decisions are ratified or rejected and what counts as a major decision determined. Needless to say, what is considered as important issues will be decided upon by the workers themselves in their assemblies.

A self-managed workplace, like a self-managed society in general, does not mean that specialised knowledge (where it is meaningful) will be neglected or not taken into account. Quite the opposite. Specialists (i.e. workers who are interested in a given area of work and gain an extensive understanding of it) are part of the assembly of the workplace, just like other workers. They can and have to be listened to, like anyone else, and their expert advice included in the decision making process. Anarchists do not reject the idea of expertise nor the rational authority associated with it. As we indicated in [section B.1](#), anarchists recognise the difference between being *an* authority (i.e. having knowledge of a given subject) and being *in* authority (i.e. having power over someone else). We reject the latter and respect

the former:

*"Does it follow that I reject all authority? Far from me such a thought. In the matter of boots, I refer to the authority of the bootmaker; concerning houses, canals, or railroads, I consult that of architect or engineer. For such or such special knowledge I apply to such or such a **savant**. But I allow neither the bootmaker nor the architect nor the **savant** to impose his authority upon me. I listen to them freely and with all the respect merited by their intelligence, their character, their knowledge, reserving always my incontestable right of criticism and censure. . . If I bow before the authority of specialists and avow a readiness to follow, to a certain extent and as long as may seem to me necessary, their indications and even their directions, it is because their authority is imposed upon me by no one, neither men nor by God . . . I bow before the authority of special men [and women] because it is imposed upon me by my own reason."* [Bakunin, **God and the State**, pp. 32-3]

However, specialisation does not imply the end of self-management, but rather the opposite. *"The greatest intelligence,"* Bakunin argued, *"would not be equal to a comprehension of the whole. Thence results, for science as well as industry, the necessity of the division and association of labour."* [**Op. Cit.**, p. 33] Thus specialised knowledge is part of the associated workers and not placed above them in positions of power. The other workers in a syndicate can compliment the knowledge of the specialists with the knowledge of the work process they have gained by working and so enrich the decision. Knowledge is distributed throughout society and only a society of free individuals associated as equals and managing their own activity can ensure that it is applied effectively (part of the inefficiency of capitalism results from the barriers to knowledge and information flow created by the hierarchical workplace).

A workplace assembly is perfectly able to listen to an engineer, for example, who suggests various ways of reaching various goals (i.e. if you want X, you would have to do A or B. If you do A, then C, D and E is required. If B is decided upon, then F, G, H and I are entailed). But it is the assembly, **not** the engineer, that decides what goals and methods to be implemented. As Cornelius Castoriadis puts it, *"[w]e are not saying: people will have to decide **what** to do, and then technicians will tell them **how** to do it. We say: after listening to technicians, people will decide what to do **and** how to do it. For the **how** is not neutral -- and the **what** is not disembodied. What and how are neither **identical**, nor **external** to each other. A 'neutral' technique is, of course, an illusion. A conveyor belt is linked to a type of product **and** a type of producer -- and vice versa."* [**Social and PPolitical Writings**, vol. 3, p. 265]

However, we must stress that while an anarchist society would "inherit" a diverse level of expertise and specialisation from class society, it would not take this as unchangeable. Anarchists argue for "**all-round**" (or integral) education as a means of ensuring that everyone has a basic knowledge or understanding of science, engineering and other specialised tasks. As Bakunin argued, *"in the interests of both labour and science . . . there should no longer be either workers or scholars but only human beings."* Education must *"prepare every child of each sex for the life of thought as well as for the life of labour."* [**The Basic Bakunin**, p. 116 and p. 119] This does not imply the end of all specialisation

(individuals will, of course, express their individuality and know more about certain subjects than others) but it does imply the end of the artificial specialisation developed under capitalism which tries to deskill and disempower the wage worker by concentrating knowledge into hands of management.

And, just to state the obvious, self-management does not imply that the mass of workers decide on the application of specialised tasks. Self-management implies the autonomy of those who do the work as well as collective decision making on collective issues. For example, in a self-managed hospital the cleaning staff would not have a say in the doctors' treatment of patients just as the doctors would not tell the cleaners how to do their work (of course, it is likely that an anarchist society will **not** have people whose work is simply to clean and nothing else, we just use this as an example people will understand). All members of a syndicate would have a say in what happens in the workplace as it affects them collectively, but individual workers and groups of workers would manage their own activity within that collective.

Needless to say, self-management abolishes the division of labour inherent in capitalism between order takers and order givers. It integrates (to use Kropotkin's words) brain work and manual work by ensuring that those who do the work also manage it and that a workplace is managed by those who use it. Such an integration of labour will, undoubtedly, have a massive impact in terms of productivity, innovation and efficiency. As Kropotkin argued, the capitalist firm has a negative impact on those subject to its hierarchical and alienating structures:

"The worker whose task has been specialised by the permanent division of labour has lost the intellectual interest in his [or her] labour, and it is especially so in the great industries; he has lost his inventive powers. Formerly, he [or she] invented very much . . . But since the great factory has been enthroned, the worker, depressed by the monotony of his [or her] work, invents no more." [Fields, **Factories and Workshops Tomorrow**, p. 171]

Must all the skills, experience and intelligence that very one has be swept away or crushed by hierarchy? Or could it not become a new fertile source of progress under a better organisation of production? Self-management would ensure that the independence, initiative and inventiveness of workers (which disappears under wage slavery) comes to the fore and is applied. Combined with the principles of "*all-round*" (or integral) education (see [section J.5.13](#)) who can deny that working people could transform the current economic system to ensure "*well-being for all*"? And we must stress that by "*well-being*" we mean well-being in terms of meaningful, productive activity in humane surroundings and using appropriate technology, in terms of goods of utility and beauty to help create strong, healthy bodies and in terms of surroundings which are inspiring to live in and ecologically integrated.

Little wonder Kropotkin argued that self-management and the "*erasing [of] the present distinction between the brain workers and manual worker*" would see "*social benefits*" arising from "*the concordance of interest and harmony so much wanted in our times of social struggles*" and "*the fullness of life which would result for each separate individual, if he [or she] were enabled to enjoy the use of*

both . . . mental and bodily powers." This is in addition to the *"increase of wealth which would result from having . . . educated and well-trained producers."* [**Fields, Factories and Workshops Tomorrow**, p. 180]

It is the face-to-face meetings that bring workers directly into the management process and give them power over the economic decisions that affect their lives. In social anarchism, since the means of production are owned by society as a whole, decisions on matters like how to apportion the existing means of production among the syndicates, how to distribute and reinvest the surpluses, etc. will be made by the grassroots **social** units, i.e. the community assemblies (see [section I.5.2](#)), not by the workers' councils. This does not mean that workers will have no voice in decisions about such matters, but only that they will vote on them as "citizens" in their local community assemblies, not as workers in their local syndicates. As mentioned before, this is because not everyone will belong to a syndicate, yet everyone will still be affected by economic decisions of the above type. This is an example of how the social/political and economic structures of social anarchy are intertwined.

Lastly, the introduction of workers' self-management will be a product of two processes.

Firstly, the class struggle will help workers gain experience of managing their own affairs. Struggles to resist oppression and exploitation in the workplace will mean that workers will have to organise themselves to manage those struggles. This will be an important means of accustoming them to make their own decisions. By participating in the structures created to conduct the class war, they will gain the skills and experience needed to go beyond class society. The process of struggle will ensure we can manage our own working time when we take over the means of life and abolish wage slavery.

Secondly, today workers **do** manage their own working time to a considerable extent. As we have argued before, the capitalist may buy a hour of a workers' time but they have to ensure that the worker follows their orders during that time. Workers resist this imposition and this results in considerable shop-floor conflict. Frederick Talyor, for example, introduced his system of *"scientific management"* in part to try and stop workers managing their own working activity. As David Noble notes, workers *"paced themselves for many reason: to keep time for themselves, to avoid exhaustion, to exercise authority over their work, to avoid killing so-called gravy piece-rate jobs by overproducing and risking a pay cut, to stretch out available work for fear of layoffs, to exercise their creativity, and, last but not least, to express their solidarity and their hostility to management."* These were *"[c]oupled with collective co-operation with their fellows on the floor"* and *"labour-prescribed norms of behaviour"* to achieve *"shop floor control over production."* [**Forces of Production**, p. 33] In other words, workers naturally tend towards self-management anyway and it is this natural movement towards liberty during work hours which is combated by bosses (who wins, of course, depends on objective and subjective pressures which swing the balance of power towards labour or capital).

Self-management will built upon this already existing unofficial workers control over production and, of course, our knowledge of the working process which actually doing it creates. The conflict over who controls the shop floor -- either those who do the work or those who give the orders -- creates two

processes that not only show that self-management is **possible** but also show how it can come about.

I.3.3 What role do syndicates play in the "economy"?

As we have seen, private ownership of the means of production is the lynchpin of capitalism, because it is the means by which capitalists are able to exploit workers by appropriating surplus value from them. To eliminate such exploitation, social anarchists propose that social capital -- productive assets such as factories and farmland -- be owned by society as a whole and shared out among syndicates and self-employed individuals by directly democratic methods, through face-to-face voting of the whole community in local neighbourhood and confederal assemblies, which will be linked together through voluntary federations. It does **not** mean that the state owns the means of production, as under Marxism-Leninism or social democracy, because there is no state under libertarian socialism. (For more on neighbourhood and community assemblies, see sections [I.5.1](#) and [I.5.2](#)).

Production for use rather than profit/money is the key concept that distinguishes collectivist and communist forms of anarchism from market socialism or from the competitive forms of mutualism advocated by Proudhon and the Individualist Anarchists. Under mutualism, workers organise themselves into syndicates, but ownership of a syndicate's capital is limited to its workers rather than resting with the whole society. The workers' in each co-operative/syndicate share in the gains and losses of workplace. There is no profit as such, for in *"the labour-managed firm there is no profit, only income to be divided among members. Without employees the labour-managed firm does not have a wage bill, and labour costs are not counted among the expenses to be subtracted from profit, as they are in the capitalist firm. . . [T]he labour-managed firm does not hire labour. It is a collective of workers that hires capital and necessary materials."* [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, pp. 41-2]

Thus mutualism eliminates wage labour and unites workers with the means of production they use. Such a system is socialist as it is based on self-management and workers' control/ownership of the means of production. However, social anarchists argue that such a system is little more than *"petit-bourgeois co-operativism"* in which the worker-owners of the co-operatives compete in the marketplace with other co-operatives for customers, profits, raw materials, etc. -- a situation that could result in many of the same problems that arise under capitalism (see [section I.3](#)). Moreover, social anarchists argue, such a system can easily degenerate back into capitalism as any inequalities that exist between co-operatives would be increased by competition, forcing weaker co-operatives to fail and so creating a pool of workers with nothing to sell but their labour. The successful co-operatives could then hire those workers and so re-introduce wage labour.

Some Mutualists recognise this danger. Proudhon, for example, argued for an *"agro-industrial federation"* which would *"provide reciprocal security in commerce and industry"* and *"protect the citizens . . . from capitalist and financial exploitation."* In this way, the *"agro-industrial federation. . . will tend to foster increasing equality . . . through mutualism in credit and insurance . . . guaranteeing the right to work and to education, and an organisation of work which allows each labourer to become a*

skilled worker and an artist, each wage-earner to become his own master." Thus mutualism sees *"all industries guaranteeing one another mutually"* and *"the conditions of common prosperity."* [**The Principle of Federation**, p. 70, p. 71 and p. 72] It seems likely that this agro-industrial federation would be the body which would fix *"after amicable discussion of a maximum and minimum profit margin"* and *"the organising of regulating societies. . . to regulate the market."* [**Selected Writings of Pierre-Joseph Proudhon**, p. 70]

Thus, some Mutualists are aware of the dangers associated with even a self-managed, socialistic market and create support structures to defend workers' self-management. Moreover, it is likely that industrial syndicates would be linked to mutual banks (a credit syndicate). Such syndicates would exist to provide interest-free credit for self-management, new syndicate expansion and so on. And if the experience of capitalism is anything to go by, mutual banks will also reduce the Business cycle as its effects as *"[c]ountries like Japan and Germany that are usually classified as bank-centred -- because banks provide more outside finance than markets, and because more firms have long-term relationships with their banks -- show greater growth in and stability of investment over time than the market-centred ones, like the US and Britain. . . Further, studies comparing German and Japanese firms with tight bank ties to those without them also show that firms with bank ties exhibit greater stability in investment over the business cycle."* [Doug Henwood, **Wall Street**, pp. 174-5]

In addition, supporters of mutualism can point to the fact that existing co-operatives rarely fire their members and are far more egalitarian in nature than corresponding capitalist firms. This they argue will ensure that mutualism will remain socialist, with easy credit available to those who are made unemployed to start their own businesses again.

In contrast, within anarcho-collectivism and anarcho-communism, society as a whole owns the social capital, which allows for the elimination of both competition for survival and the tendency for workers to develop a proprietary interest in the enterprises in which they work. As Kropotkin argued, *"[t]here is no reason why the factory . . . should not belong to the community. . . It is evident that now, under the capitalist system, the factory is the curse of the village, as it comes to overwork children and to make paupers of its male inhabitants; and it is quite natural that it should be opposed by all means by the workers. . . But under a more rational social organisation, the factory would find no such obstacles; it would be a boon to the village."* Needless to say, such a workplace would be based on workers' self-management, as *"the workers . . . ought to be the real managers of industries."* [**Fields, Factories and Workshops Tomorrow**, p. 152 and p. 157] This *"socially organised industrial production"* (to use Kropotkin's term) would ensure a decent standard of living without the problems associated with a market, even a non-capitalist one. It would enable goods to be either sold at their production prices (or labour-cost) so as to reduce their cost to consumers or distributed in accordance with communist principles (namely free); it facilitates efficiency gains through the consolidation of formerly competing enterprises; and it eliminates the many problems due to the predatory nature of competition, including the destruction of the environment through the *"grow or die"* principle, the development of oligopolies from capital concentration and centralisation, and the business cycle, with its periodic recessions and depressions, and the turning of free people into potential wage slaves.

For social anarchists, therefore, libertarian socialism is based on decentralised decision making within the framework of communally-owned but independently-run and worker-self-managed syndicates (or co-operatives):

"[T]he land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, on other words, by the agricultural and industrial associations." [Bakunin, **Michael Bakunin: Selected Writings**, p. 174]

In other words, the economy is communalised, with land and the means of production being turned into communal "*property*." The community determines the social and ecological framework for production while the workforce makes the day-to-day decisions about what to produce and how to do it. This is because a system based purely on workplace assemblies effectively disenfranchises those individuals who do not work but live with the effects of production (e.g., ecological disruption). In Howard Harkins' words, "*the difference between workplace and community assemblies is that the internal dynamic of direct democracy in communities gives a hearing to solutions that bring out the common ground and, when there is not consensus, an equal vote to every member of the community.*" ["*Community Control, Workers' Control and the Co-operative Commonwealth*", pp. 55-83, **Society and Nature** No. 3, p. 69]

This means that when a workplace joins a confederation, that workplace is communalised as well as confederated. In this way, workers' control is placed within the broader context of the community, becoming an aspect of community control. This does not mean that workers' do not control what they do or how they do it. Rather, it means that the framework within which they make their decisions is determined by the community. For example, the local community may decide that production should maximise recycling and minimise pollution, and workers informed of this decision make investment and production decisions accordingly. In addition, consumer groups and co-operatives may be given a voice in the confederal congresses of syndicates or even in the individual workplaces (although it would be up to local communities to decide whether this would be practical or not). In these ways, consumers could have a say in the administration of production and the type and quality of the product, adding their voice and interests in the creation as well as the consumption of a product.

Given the general principle of social ownership and the absence of a state, there is considerable leeway regarding the specific forms that collectivisation might take -- for example, in regard to methods of surplus distribution, the use or non-use of money, etc. -- as can be seen by the different systems worked out in various areas of Spain during the Revolution of 1936-39 (as described, for example, in Sam Dolgoff's **The Anarchist Collectives**).

Nevertheless, democracy is undermined when some communities are poor while others are wealthy. Therefore the method of surplus distribution must insure that all communities have an adequate share of pooled revenues and resources held at higher levels of confederation as well as guaranteed minimum levels of public services and provisions to meet basic human needs.

I.3.4 What relations would exist between individual syndicates?

Just as individuals associate together to work on and overcome common problems, so would syndicates. Few, if any, workplaces are totally independent of others. They require raw materials as inputs and consumers for their products. Therefore there will be links between different syndicates. These links are twofold: firstly, free agreements between individual syndicates, and secondly, confederations of syndicates (within branches of industry and regionally). Let's consider free agreement first.

Anarchists recognise the importance of letting people organise their own lives. This means that they reject central planning and instead urge direct links between workers' associations. In the words of Kropotkin, "*[f]ree workers would require a free organisation, and this cannot have any other basis than free agreement and free co-operation, without sacrificing the autonomy of the individual.*" [**Kropotkin's Revolutionary Pamphlets**, p. 52] Those directly involved in production (and in consumption) know their needs far better than any bureaucrat. Thus voluntary agreement is the basis of a free economy, such agreements being "*entered by free consent, as a free choice between different courses equally open to each of the agreeing parties.*" [Peter Kropotkin, **Anarchism and Anarchist Communism**, p. 52] Without the concentration of wealth and power associated with capitalism, free agreement will become real and no longer a mask for hierarchy. So anarchists think that "*[i]n the same way that each free individual has associated with his brothers [and sisters!] to produce . . . all that was necessary for life, driven by no other force than his desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with others because by so doing it extends its own possibilities.*" [George Barrett, **The Anarchist Revolution**, p. 18] An example of one such agreement would be orders for products and services.

This suggests a decentralised economy -- even more decentralised than capitalism (which is "*decentralised*" only in capitalist mythology, as shown by big business and transnational corporations, for example) -- one "*growing ever more closely bound together and interwoven by free and mutual agreements.*" [**Ibid.**, p. 18] For social anarchists, this would take the form of "*free exchange without the medium of money and without profit, on the basis of requirement and the supply at hand.*" [Alexander Berkman, **ABC of Anarchism**, p. 69]

Therefore, an anarchist economy would be based on spontaneous order as workers practised mutual aid and free association. The anarchist economy "*starts from below, not from above. Like an organism, this free society grows into being from the simple unit up to the complex structure. The need for . . . the individual struggle for life . . . is . . . sufficient to set the whole complex social machinery in motion. Society is the result of the individual struggle for existence; it is not, as many suppose, opposed to it.*" [George Barrett, **Op. Cit.**, p. 18]

In other words, "*[t]his factory of ours is, then, to the fullest extent consistent with the character of its service, a self-governing unit, managing its own productive operations, and free to experiment to the heart's content in new methods, to develop new styles and products. . . This autonomy of the factory is the safeguard. . . against the dead level of mediocrity, the more than adequate substitute for the variety*

which the competitive motive was once supposed to stimulate, the guarantee of liveliness, and of individual work and workmanship." [G.D.H. Cole, **Guild Socialism Restated**, p. 59]

This brings us to the second form of relationships between syndicates, namely confederations of syndicates. If individual or syndicate activities spread beyond their initial locality, they would probably reach a scale at which they would need to constitute a confederation. At this scale, industrial confederations of syndicates are necessary to aid communication between workplaces who produce for a large area. No syndicate exists in isolation, and so there is a real need for a means by which syndicates can meet together to discuss common interests and act on them. Thus confederations are complementary to free agreement. Bakunin's comments are very applicable here:

"[A] truly popular organisation begins from below, from the association, from the commune. Thus starting out with the organisation of the lowest nucleus and proceeding upward, federalism becomes a political institution of socialism, the free and spontaneous organisation of popular life." [**The Political Philosophy of Bakunin**, pp. 273-4]

Given that Bakunin, like many anarchists, considered that *"the federative Alliance of all working men's [sic!] associations . . . [would] constitute the Commune,"* the political institutions of anarchy would be similar to its economic institutions. Indeed, Bakunin argued for a *"free federation of agricultural and industrial associations . . . organised from the bottom upwards"* to be the basis of a revolution (in 1905 and in 1917, revolutionary workers and peasants did exactly that, we should note, when they created **soviets** -- Russian for councils -- during their revolutions). Hence Bakunin's comments on *"political"* institutions and federalism are applicable to a discussion of economic institutions. [**Michael Bakunin: Selected Writings**, p. 170 and p. 172]

A confederation of syndicates (called a *"guild"* by some libertarian socialists, or *"industrial union"* by others) works on two levels: within an industry and across industries. The basic operating principle of these confederations is the same as that of the syndicate itself -- voluntary co-operation between equals in order to meet common needs. In other words, each syndicate in the confederation is linked by horizontal agreements with the others, and none owe any obligations to a separate entity above the group (see section A.2.11, [*"Why are anarchists in favour of direct democracy?"*](#) for more on the nature of anarchist confederation).

Kropotkin's comments on federalism between communes indicate this (a syndicate can be considered as a producers' commune):

"The Commune of tomorrow will know that it cannot admit any higher authority; above it there can only be the interests of the Federation, freely accepted by itself as well as other communes. . ." [**Words of a Rebel**, p. 83]

Nor need federalism conflict with autonomy, as each member would have extensive freedom of action within its boundaries:

"The Commune will be absolutely free to adopt all the institutions it wishes and to make all the reforms and revolutions it finds necessary." [Op. Cit., p. 83]

Moreover, these federations would be diverse and functional. Economic federation would produce a complex inter-networking between associations and federations. In Kropotkin's words:

"Our needs are in fact so various, and they emerge with such rapidity, that soon a single federation will not be sufficient to satisfy them all. The Commune will then feel the need to contract other alliances, to enter into other federations. Belonging to one group for the acquisition of food supplies, it will have to join a second group to obtain other goods, such as metals, and then a third and a fourth group for textiles and works of art." [Op. Cit., p. 87]

As such, the confederations reflect anarchist ideas of free association and decentralised organisation as well as concern for practical needs:

"Anarchists are strenuously opposed to the authoritarian, centralist spirit . . . So they picture a future social life in the basis of federalism, from the individual to the municipality, to the commune, to the region, to the nation, to the international, on the basis of solidarity and free agreement. And it is natural that this ideal should be reflected also in the organisation of production, giving preference as far as possible, to a decentralised sort of organisation; but this does not take the form of an absolute rule to be applied in every instance. A libertarian order would be in itself, on the other hand, rule out the possibility of imposing such a unilateral solution." [Luigi Fabbri, "Anarchy and 'Scientific Communism'", pp. 13-49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 23]

Therefore, a confederation of syndicates would be adaptive to its members needs. As Tom Brown argued, the *"syndicalist mode of organisation is extremely elastic, therein is its chief strength, and the regional confederations can be formed, modified, added to or reformed according to local conditions and changing circumstances."* [**Syndicalism**, p. 58]

As would be imagined, these confederations are voluntary associations and *"[j]ust as factory autonomy is vital in order to keep the Guild system alive and vigorous, the existence of varying democratic types of factories in independence of the National Guilds may also be a means of valuable experiment and fruitful initiative of individual minds. In insistently refusing to carry their theory to its last 'logical' conclusion, the Guildsmen [and anarchists] are true to their love of freedom and varied social enterprise."* [G.D.H. Cole, **Op. Cit.**, p. 65]

As we noted, in the [last section](#), inter-workplace federations are not limited to collectivist, syndicalist and communist anarchists. Proudhon, for example, suggested an *"agro-industrial federation"* as the structural support organisation for his system of self-managed co-operatives. As the example many

isolated co-operatives have shown, support networks are essential for co-operatives to survive under capitalism. It is no coincidence that the Mondragon co-operative complex in the Basque region of Spain has a credit union and mutual support networks between its co-operatives and is by far the most successful co-operative system in the world.

If a workplace agrees to confederate, then it gets to share in the resources of the confederation and so gains the benefits of mutual aid. In return for the benefits of confederal co-operation, the syndicate's tools of production become the "*property*" of society, to be used but not owned by those who work in them. This does not mean centralised control from the top, for "*when we say that ownership of the tools of production, including the factory itself, should revert to the corporation [i.e. confederation] we do not mean that the workers in the individual workshops will be ruled by any kind of industrial government having power to do what it pleases with [them]. . . . No, the workers. . . [will not] hand over their hard-won control. . . to a superior power. . . . What they will do is. . . to guarantee reciprocal use of their tools of production and accord their fellow workers in other factories the right to share their facilities [and vice versa]. . . with [all] whom they have contracted the pact of solidarity.*" [James Guillaume, **Bakunin on Anarchism**, pp. 363-364]

Facilitating this type of co-operation is the major role of inter-industry confederations, which also ensure that when the members of a syndicate change work to another syndicate in another (or the same) branch of industry, they have the same rights as the members of their new syndicate. In other words, by being part of the confederation, a worker ensures that s/he has the same rights and an equal say in whatever workplace is joined. This is essential to ensure that a co-operative society remains co-operative, as the system is based on the principle of "*one person, one vote*" by all those involved the work process.

So, beyond this reciprocal sharing, what other roles does the confederation play? Basically, there are two. Firstly, the sharing and co-ordination of information produced by the syndicates (as will be discussed in [section I.3.5](#)), and, secondly, determining the response to the changes in production and consumption indicated by this information. As the "*vertical*" links between syndicates are non-hierarchical, each syndicate remains self-governing. This ensures decentralisation of power and direct control, initiative, and experimentation by those involved in doing the work. Hence, "*the internal organisation [of one syndicate] . . . need not be identical [to others]: Organisational forms and procedures will vary greatly according to the preferences of the associated workers.*" [**Ibid.**, p. 361] In practice, this would probably mean that each syndicate gets its own orders and determines the best way to satisfy them (i.e. manages its own work and working conditions).

As indicated above, free agreement will ensure that customers would be able to choose their own suppliers, meaning that production units would know whether they were producing what their customers wanted, i.e., whether they were meeting social need as expressed through demand. If they were not, customers would go elsewhere, to other production units within the same branch of production. We should stress that in addition to this negative check (i.e. "*exit*" by consumers) it is likely, via consumer groups and co-operatives as well as communes, that workplaces will be subject to positive checks on what they produced. Consumer groups, by formulating and communicating needs to producer groups,

will have a key role in ensuring the quality of production and goods and that it satisfies their needs (see [section I.4.7](#) for more details of this).

However, while production will be based on autonomous networking, the investment response to consumer actions would, to some degree, be co-ordinated by a confederation of syndicates in that branch of production. By such means, the confederation can ensure that resources are not wasted by individual syndicates over-producing goods or over-investing in response to changes in production (see the [next section](#)).

I.3.5 What would confederations of syndicates do?

Voluntary confederation among syndicates is required in order to decide on the policies governing relations between syndicates and to co-ordinate their activities. There are two basic kinds of confederation: within all workplaces of a certain type, and within the whole economy (the federation of all syndicates). Both would operate at different levels, meaning there would be confederations for both industrial and inter-industrial associations at the local and regional levels and beyond. The basic aim of this inter-industry and cross-industry networking is to ensure that the relevant information is spread across the various elemental parts of the economy so that each can effectively co-ordinate its plans with the others. By communicating across workplaces, people can overcome the barriers to co-ordinating their plans which one finds in market systems (see [section C.7.2](#)) and so avoid the economic and social disruptions associated with capitalism.

However, it is essential to remember that each syndicate within the confederation is autonomous. The confederations seek to co-ordinate activities of joint interest (in particular investment decisions for new plant and the rationalisation of existing plant in light of reduced demand). They do not determine what work a syndicate does or how they do it. As Kropotkin argued (based on his firsthand experience of Russia under Lenin):

"No government would be able to organise production if the workers themselves through their unions did not do it in each branch of industry; for in all production there arise daily thousands of difficulties which no government can solve or foresee. It is certainly impossible to foresee everything. Only the efforts of thousands of intelligences working on the problems can co-operate in the development of a new social system and find the best solutions for the thousands of local needs." [**Kropotkin's Revolutionary Pamphlets**, pp. 76-77]

Thus Cole's statement:

"With the factory thus largely conducting its own concerns, the duties of the larger Guild organisations [i.e. confederations] would be mainly those of co-ordination, or regulation, and of representing the Guild in its external relations. They would, where it was

necessary, co-ordinate the production of various factories, so as to make supply coincide with demand. . . they would organise research . . . This large Guild organisation. . . must be based directly on the various factories included in the Guild." [**Guild Socialism Restated**, pp. 59-60]

So it is important to note that the lowest units of confederation -- the workers' councils -- will control the higher levels, through their power to elect mandated and recallable delegates to meetings of higher confederal units. "**Mandated**" means that the delegates will go to the meeting of the higher confederal body with specific instructions on how to vote on a particular issue, and if they do not vote according to that mandate they will be recalled and the results of the vote nullified. Delegates will be ordinary workers rather than paid representatives or union leaders, and they will return to their usual jobs as soon as the mandate for which they have been elected has been carried out. In this way, decision-making power remains with the workers' councils and does not become concentrated at the top of a bureaucratic hierarchy in an elite class of professional administrators or union leaders. For the workers' councils will have the final say on **all** policy decisions, being able to revoke policies made by those with delegated decision-making power and to recall those who made them:

*"When it comes to the material and technical method of production, anarchists have no preconceived solutions or absolute prescriptions, and bow to what experience and conditions in a free society recommend and prescribe. What matters is that, whatever the type of production adopted, it should be the free choice of the producers themselves, and cannot possibly be imposed, any more than any form is possible of exploitations of another's labour. . . Anarchists do not **a priori** exclude any practical solution and likewise concede that there may be a number of different solutions at different times."* [Luigi Fabbri, "Anarchy and 'Scientific' Communism", pp. 13-49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 22]

Confederations (negotiated-co-ordination bodies) would, therefore, be responsible for clearly defined branches of production, and in general, production units would operate in only one branch of production. These confederations would have direct links to other confederations and the relevant communal confederations, which supply the syndicates with guidelines for decision making (as will be discussed in [section I.4.4](#)) and ensure that common problems can be highlighted and discussed. These confederations exist to ensure that information is spread between workplaces and to ensure that the industry responds to changes in social demand. In other words, these confederations exist to co-ordinate major new investment decisions (i.e. if demand exceeds supply) and to determine how to respond if there is excess capacity (i.e. if supply exceeds demand).

It should be pointed out that these confederated investment decisions will exist along with the investments associated with the creation of new syndicates, plus internal syndicate investment decisions. We are not suggesting that **every** investment decision is to be made by the confederations. (This would be particularly impossible for **new** industries, for which a confederation would not exist!) Therefore, in addition to co-ordinated production units, an anarchist society would see numerous small-scale, local

activities which would ensure creativity, diversity, and flexibility. Only after these activities had spread across society would confederal co-ordination become necessary.

Thus, major investment decisions would be made at congresses and plenums of the industry's syndicates, by a process of horizontal, negotiated co-ordination. This model combines "*planning*" with decentralisation. Major investment decisions are co-ordinated at an appropriate level, with each unit in the confederation being autonomous, deciding what to do with its own productive capacity in order to meet social demand. Thus we have self-governing production units co-ordinated by confederations (horizontal negotiation), which ensures local initiative (a vital source of flexibility, creativity, and diversity) and a rational response to changes in social demand.

It should be noted that during the Spanish Revolution syndicates organised themselves very successfully as town-wide industrial confederations of syndicates. These were based on the town-level industrial confederation getting orders for products for its industry and allocating work between individual workplaces (as opposed to each syndicate receiving orders for itself). Gaston Leval noted that this form of organisation (with increased responsibilities for the confederation) did not harm the libertarian nature of anarchist self-management:

"Everything was controlled by the syndicates. But it must not therefore be assumed that everything was decided by a few higher bureaucratic committees without consulting the rank and file members of the union. Here libertarian democracy was practised. As in the C.N.T. there was a reciprocal double structure; from the grass roots at the base . . . upwards, and in the other direction a reciprocal influence from the federation of these same local units at all levels downwards, from the source back to the source." [**The Anarchist Collectives**, p. 105]

Such a solution, or similar ones, may be more practical in some situations than having each syndicate receive its own orders and so anarchists do not reject such confederal responsibilities out of hand (although the general prejudice is for decentralisation). This is because we "*prefer decentralised management; but ultimately, in practical and technical problems, we defer to free experience.*" [Luigi Fabbri, **Op. Cit.**, p. 24] The specific form of organisation will obviously vary as required from industry to industry, area to area, but the underlying ideas of self-management and free association will be the same. Moreover, in the words of G.D.H Cole, the "*essential thing . . . is that its [the confederation or guild] function should be kept down to the minimum possible for each industry.*" [**Op. Cit.**, p. 61]

In this way, the periodic crises of capitalism based on over-investment and over-production (followed by depression) and their resulting social problems can be avoided and resources efficiently and effectively utilised. In addition, production (and so the producers) can be freed from the centralised control of both capitalist and state hierarchies.

Another important role for inter-syndicate federations is to even out natural inequalities. After all, each commune will not be identical in terms of natural resources, quality of land, situation, accessibility, and

so on. Simply put, social anarchists *"believe that because of natural differences in fertility, health and location of the soil it would be impossible to ensure that every individual enjoyed equal working conditions."* Under such circumstances, it would be *"impossible to achieve a state of equality from the beginning"* and so *"justice and equity are, for natural reasons, impossible to achieve . . . and that freedom would thus also be unachievable."* [Malatesta, **The Anarchist Revolution**, p. 16 and p. 21] By federating together, workers can ensure that *"the earth will . . . be an economic domain available to everyone, the riches of which will be enjoyed by all human beings."* [Malatesta, **Life and Ideas**, p. 93] Local deficiencies of raw materials, in the quality of land, and, therefore, supplies would be compensated from outside, by the socialisation of production and consumption. This would allow all of humanity to share and benefit from economic activity, so ensuring that well-being for all is possible.

Federation would eliminate the possibility of rich and poor collectives and syndicates co-existing side by side. As Kropotkin argued, *"[c]ommon possession of the necessities for production implies the common enjoyment of the fruits of common production . . . when everybody, contributing for the common well-being to the full extent of his [or her] capacities, shall enjoy also from the common stock of society to the fullest possible extent of his [or her] needs."* [**Kropotkin's Revolutionary Pamphlets**, p. 59]

Hence we find the CNT, arguing in its 1936 resolution on libertarian communism, that *"[a]s far as the interchange of produce between communes is concerned, the communal councils are to liaise with the regional federations of communes and with the confederal council of production and distribution, applying for whatever they may need and [giving] any available surplus stocks."* [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 107] This clearly followed Kropotkin's comments that the *"socialising of production, consumption, and exchange"* would be based on workplaces *"belong[ing] to federated Communes."* [**The Conquest of Bread**, p. 136]

The legacy of capitalism, with its rich and poor areas, its rich and poor workplaces, will be a problem any revolution will face. The inequalities produced by centuries will take time to change. This is one of the tasks of the federation, to ensure the socialisation of both production and consumption so that people are not penalised for the accidents of history and that each commune can develop itself to an adequate level. In the words of the CNT during the Spanish Revolution:

"Many arguments are used against the idea of socialisation; one of these -- the most delightful -- says that by socialising an industry we simply take it over and run it with the consequence that we have flourishing industries where the workers are privileged, and unfortunate industries where the workers get less benefits but have to work harder than workers elsewhere . . . There are differences between the workers in prosperous industries and those which barely survive. . . Such anomalies, which we don't deny exist, are attributed to the attempts at socialisation. We firmly assert that the opposite is true; such anomalies are the logical result of the absence of socialisation.

"The socialisation which we propose will resolve these problems which are used to attack it. Were Catalan industry socialised, everything would be organically linked -- industry,

agriculture, and the trade union organisations, in accordance with the council for the economy. They would become normalised, the working day would become more equal or what comes to the same thing, the differences between workers of different activities would end . . .

"Socialisation is -- and let its detractors hear it -- the genuine authentic organisation of the economy. Undoubtedly the economy has to be organised; but not according to the old methods, which are precisely those which we are destroying, but in accordance with new norms which will make our people become an example to the world proletariat." [Solidaridad Obrera, 30 April 1937, p. 12]

However, it could again be argued that these confederations are still centralised and that workers would still be following orders coming from above. This is incorrect, for any decisions concerning an industry or plant are under the direct control of those involved. For example, the steel industry confederation may decide to rationalise itself at one of its congresses. Murray Bookchin sketches the response to this situation as follows:

*"[L]et us suppose that a board of highly qualified technicians is established [by this congress] to propose changes in the steel industry. This board. . . advances proposals to rationalise the industry by closing down some plants and expanding the operation of others . . . Is this a 'centralised' body or not? The answer is both yes and no. Yes, only in the sense that the board is dealing with problems that concern the country as a whole; no, because it can make no decision that **must** be executed for the country as a whole. The board's plan must be examined by all the workers in the plants [that are affected]. . . . The board itself has no power to enforce 'decisions'; it merely makes recommendations. Additionally, its personnel are controlled by the plant in which they work and the locality in which they live." [Post Scarcity Anarchism, p. 267]*

Therefore, confederations would not be in positions of power over the individual syndicates. As Bookchin points out, "[t]hey would have no decision-making powers. The adoption, modification or rejection of their plans would rest entirely with the communities involved." [Op. Cit., p. 267] No attempt is made to determine which plants produce which steel for which customers in which manner. Thus, the confederations of syndicates ensure a decentralised, spontaneous economic order without the negative side-effects of capitalism (namely power concentrations within firms and in the market, periodic crises, etc.).

It should be pointed out that these confederated investment decisions will exist along with the investments associated with the creation of new syndicates, plus internal syndicate investment decisions. We are not suggesting that **every** investment decision is to be made by the confederations. (This would be particularly impossible for **new** industries, for which a confederation would not exist!) Therefore, in addition to co-ordinated production units, an anarchist society would see numerous small-scale, local activities which would ensure creativity, diversity, and flexibility. Only after these activities had spread

across society would confederal co-ordination become necessary.

As one can imagine, an essential feature of these confederations will be the collection and processing of information in order to determine how an industry is developing. This does not imply bureaucracy or centralised control at the top. Taking the issue of centralisation first, the confederation is run by delegate assemblies, meaning that any officers elected at a congress only implement the decisions made by the delegates of the relevant syndicates. It is in the congresses and plenums of the confederation that new investment decisions, for example, are made. The key point to remember is that the confederation exists purely to co-ordinate joint activity and share information, it does not take an interest in how a workplace is run or what orders from consumers it fills. (Of course, if a given workplace introduces policies which other syndicates disapprove of, it can be expelled). As the delegates to these congresses and plenums are mandated and their decisions subject to rejection and modification by each productive unit, the confederation is not centralised.

As far as bureaucracy goes, the collecting and processing of information does necessitate an administrative staff to do the work. However, this problem affects capitalist firms as well; and since syndicates are based on bottom-up decision making, its clear that, unlike a centralised capitalist corporation, administration would be smaller.

In fact, it is likely that a fixed administration staff for the confederation would not exist in the first place! At the regular congresses, a particular syndicate may be selected to do the confederation's information processing, with this job being rotated regularly around different syndicates. In this way, a specific administrative body and equipment can be avoided and the task of collating information placed directly in the hands of ordinary workers. Further, it prevents the development of a bureaucratic elite by ensuring that **all** participants are versed in information-processing procedures.

Lastly, what information would be collected? That depends on the context. Individual syndicates would record inputs and outputs, producing summary sheets of information. For example, total energy input, in kilowatts and by type, raw material inputs, labour hours spent, orders received, orders accepted, output, and so forth. This information can be processed into energy use and labour time per product (for example), in order to give an idea of how efficient production is and how it is changing over time. For confederations, the output of individual syndicates can be aggregated and local and other averages can be calculated. In addition, changes in demand can be identified by this aggregation process and used to identify when investment will be needed or plants closed down. In this way the chronic slumps and booms of capitalism can be avoided without creating a system which is even more centralised than capitalism.

I.3.6 What about competition between syndicates?

This is a common question, particularly from defenders of capitalism. They argue that syndicates will not co-operate together unless forced to do so, but will compete against each other for raw materials, skilled workers, and so on. The result of this process, it is claimed, will be rich and poor syndicates,

inequality within society and within the workplace, and (possibly) a class of unemployed workers from unsuccessful syndicates who are hired by successful ones. In other words, they argue that libertarian socialism will need to become authoritarian to prevent competition, and that if it does not do so it will become capitalist very quickly.

For individualist anarchists and mutualists, competition is not viewed as a problem. They think that competition, based around co-operatives and mutual banks, would minimise economic inequality, as the new economic structure based around free credit and co-operation would eliminate non-labour (i.e. unearned) income such as profit, interest and rent and give workers enough bargaining power to eliminate exploitation. For these anarchists it is a case of capitalism perverting competition and so are not against competition itself (see Proudhon's **General Idea of the Revolution**, pages 50-1 for example). Other anarchists think that whatever gains might accrue from competition (assuming there are, in fact, any) would be more than offset by its negative effects, which are outlined in [section I.1.3](#). It is to these anarchists that the question is usually asked.

Before continuing, we would like to point out that individuals trying to improve their lot in life is not against anarchist principles. How could it be? What **is** against anarchist principles is centralised power, oppression, and exploitation, all of which flow from large inequalities of income. This is the source of anarchist concern about equality -- concern that is not based on some sort of "*politics of envy*." Anarchists oppose inequality because it soon leads to the few oppressing the many (a relationship which distorts the individuality and liberty of all involved as well as the health and very lives of the oppressed).

Anarchists desire to create a society in which such relationships are impossible, believing that the most effective way to do this is by empowering all, by creating an egoistic concern for liberty and equality among the oppressed, and by developing social organisations which encourage self-management. As for individuals' trying to improve their lot, anarchists maintain that co-operation is the best means to do so, **not** competition. And there is substantial evidence to support this claim (see, for example, Alfie Kohn's **No Contest: The Case Against Competition**).

Robert Axelrod, in his book, **The Evolution of Co-operation** agrees and presents abundant evidence that co-operation is in our long term interests (i.e. it provides better results than short term competition). This suggests that, as Kropotkin argued, mutual aid, not mutual struggle, will be in an individual's self-interest and so competition in a free, sane society would be minimised and reduced to sports and other individual pastimes. As Stirner argued, co-operation is just as egoistic as competition (a fact sometimes lost on many due to the obvious ethical superiority of co-operation):

"But should competition some day disappear, because concerted effort will have been acknowledged as more beneficial than isolation, then will not every single individual inside the associations be equally egoistic and out for his own interests?" [**No Gods, No Masters**, vol. 1, p. 22]

Now to the "*competition*" objection, which we'll begin to answer by noting that it ignores a few key

points. Firstly, the assumption that libertarian socialism would "*become capitalist*" in the absence of a **state** is obviously false. If competition did occur between collectives and did lead to massive wealth inequalities, then the newly rich would have to create a state to protect their private property (means of production) against the dispossessed. So inequality, not equality, leads to the creation of states. It is no co-incidence that the anarchic communities that existed for millennia were also egalitarian.

Secondly, as noted in [section A.2.5](#), anarchists do not consider "*equal*" to mean "*identical*." Therefore, to claim that wage differences mean inequality makes sense only if one thinks that "*equality*" means everyone getting **exactly** equal shares. As anarchists do not hold such an idea, wage differences in an otherwise anarchistically organised syndicate do not indicate a lack of equality. How the syndicate is **run** is of far more importance, because the most pernicious type of inequality from the anarchist standpoint is inequality of **power**, i.e. unequal influence on political and economic decision making.

Under capitalism, wealth inequality translates into such an inequality of power, and vice versa, because wealth can buy private property (and state protection of it), which gives owners authority over that property and those hired to produce with it; but under libertarian socialism, minor or even moderate differences in income among otherwise equal workers would not lead to this kind of power inequality, because direct democracy, social ownership of capital, and the absence of a state severs the link between wealth and power (see further below). Empirical evidence supports anarchist claims as co-operatives have a more egalitarian wage structure than corresponding capitalist firms.

Thirdly, anarchists do not pretend that an anarchist society will be "*perfect*." Hence there may be periods, particularly just after capitalism has been replaced by self-management, when differences in skill, etc., leads to a few people exploiting their fellow workers and getting more wages, better hours and conditions, and so forth. This problem existed in the industrial collectives in the Spanish Revolution. As Kropotkin pointed out, "*[b]ut, when all is said and done, some inequalities, some inevitable injustice, undoubtedly will remain. There are individuals in our societies whom no great crisis can lift out of the deep mire of egoism in which they are sunk. The question, however, is not whether there will be injustices or no, but rather how to limit the number of them.*" [**The Conquest of Bread**, p. 94]

In other words, these problems will exist, but there are a number of things that anarchists can do to minimise their impact. Primarily there must be a "*gestation period*" before the birth of an anarchist society, in which social struggle, new forms of education and child-rearing, and other methods of consciousness-raising increase the number of anarchists and decrease the number of authoritarians.

The most important element in this gestation period is social struggle. Such self-activity will have a major impact on those involved in it (see [section J.2](#)). By direct action and solidarity, those involved develop bounds of friendship and support with others, develop new forms of ethics and new ideas and ideal. This radicalisation process will help to ensure that any differences in education and skill do not develop into differences in power in an anarchist society.

In addition, education within the anarchist movement should aim, among other things, to give its

members familiarity with technological skills so that they are not dependent on "*experts*" and can thus increase the pool of skilled workers who will be happy working in conditions of liberty and equality. This will ensure that differentials between workers can be minimised.

In the long run, however, popularisation of non-authoritarian methods of child-rearing and education are particularly important because, as we have seen, secondary drives such as greed and the desire to exercise power over others are products of authoritarian upbringing based on punishments and fear (See sections B.1.5, "[*What is the mass-psychological basis for authoritarian civilisation?*](#)" and J.6, "[*What methods of child rearing do anarchists advocate?*](#)"). Only if the prevalence of such drives is reduced among the general population can we be sure that an anarchist revolution will not degenerate into some new form of domination and exploitation.

However, there are other reasons why economic inequality -- say, in differences of income levels or working conditions, which may arise from competition for "*better*" workers -- would be far less severe under any form of anarchist society than it is under capitalism. Firstly, the syndicates would be democratically managed. This would result in much smaller wage differentials, because there is no board of wealthy directors setting wage levels for their own gain and who think nothing of hierarchy and having elites. The decentralisation of power in an anarchist society will ensure that there would no longer be wealthy elites paying each other vast amounts of money. This can be seen from the experience of the Mondragon co-operatives, where the wage difference between the highest paid and lowest paid worker was 4 to 1. This was only increased recently when they had to compete with large capitalist companies, and even then the new ratio of 9 to 1 is **far** smaller than those in American or British companies (in America, for example, the ratio is even as high as 200 to 1 and beyond!). Thus, even under capitalism "*[t]here is evidence that the methods of distribution chosen by worker-controlled or self-managed firms are more egalitarian than distribution according to market precepts.*" [Christopher Eaton Gunn, **Workers' Self-Management in the United States**, p. 45] Given that market precepts fail to take into account power differences, this is unsurprising. Thus we can predict that a fully self-managed economy would be just, if not, more egalitarian as differences in power would be eliminated, as would unemployment (James K. Galbraith, in his book **Created Unequal**, has presented extensive evidence that unemployment increases inequality, as would be expected).

It is a common myth that managers, executives and so on are "*rugged individuals*" and are paid so highly because of their unique abilities. Actually, they are so highly paid because they are bureaucrats in command of large hierarchical institutions. It is the hierarchical nature of the capitalist firm that ensures inequality, **not** exceptional skills. Even enthusiastic supporters of capitalism provide evidence to support this claim. Peter Drucker (in **Concept of the Corporation**) brushed away the claim that corporate organisation brings managers with exceptional ability to the top when he noted that "*[n]o institution can possibly survive if it needs geniuses or supermen to manage it. It must be organised in such a way as to be able to get along under a leadership of average human beings.*" [p. 35] For Drucker, "*the things that really count are not the individual members but the relations of command and responsibility among them.*" [p. 34]

Anarchists argue that high wage differences are the result of how capitalism is organised and that capitalist economics exists to justify these results by assuming company hierarchy and capitalist ownership evolved naturally (as opposed to being created by state action and protection). The end of capitalist hierarchy would also see the end of vast differences of income because decision making power would be decentralised back into the hands of those affected by those decisions.

Secondly, corporations would not exist. A network of workplaces co-ordinated by confederal committees would not have the resources available to pay exorbitant wages. Unlike a capitalist company, power is decentralised in a confederation of syndicates and wealth does not flow to the top. This means that there is no elite of executives who control the surplus made from the company's workers and can use that surplus to pay themselves high wages while ensuring that the major shareholders receive high enough dividends not to question their activities (or their pay).

Thirdly, management positions would be rotated, ensuring that everyone gets experience of the work, thus reducing the artificial scarcity created by the division of labour. Also, education would be extensive, ensuring that engineers, doctors, and other skilled workers would do the work because they **enjoyed** doing it and not for financial reward. And lastly, we should like to point out that people work for many reasons, not just for high wages. Feelings of solidarity, empathy, friendship with their fellow workers would also help reduce competition between syndicates for workers. Of course, having no means of unearned income (such as rent and interest), social anarchism will reduce income differentials even more.

Of course, the "*competition*" objection assumes that syndicates and members of syndicates will place financial considerations above all else. This is not the case, and few individuals are the economic robots assumed in capitalist dogma. Indeed, the evidence from co-operatives refutes such claims (ignoring, for the moment, the vast evidence of our own senses and experiences with real people rather than the insane "*economic man*" of capitalist economic ideology). Neo-classical economic theory, deducting from its basic assumptions, argues that members of co-operatives will aim to maximise profit per worker and so, perversely, fire their members during good times. Reality contradicts these claims, with the "*empirical evidence*" showing that there "*has been no tendency for workers to lay-off co-workers when times are good, neither in Mondragon nor in [the former] Yugoslavia. Even in bad times, layoffs are rare.*" [David Schweickart, **Against Capitalism**, p. 92] The experience of self-managed collectives during the Spanish Revolution also confirms this, with collectives sharing work equitably in order to avoid laying people off during the harsh economic conditions caused by the Civil War. In other words, the underlying assumption that people are economic robots cannot be maintained -- there is extensive evidence pointing to the fact that different forms of social organisation produce different considerations and people who are motivated by different considerations.

Also, we must remember that the syndicates are **not** competing for market share, and so it is likely that new techniques would be shared between workplaces and skilled workers might decide to rotate their work between syndicates in order to maximise the effectiveness of their working time until such time as the general skill level in society increases.

So, while recognising that competition for skilled workers could exist, anarchists think there are plenty of reasons not to worry about massive economic inequality being created, which in turn would re-create the state. The apologists for capitalism who put forward this argument forget that the pursuit of self-interest is universal, meaning that everyone would be interested in maximising his or her liberty, and so would be unlikely to allow inequalities to develop which threatened that liberty.

As for competition for scarce resources, it is clear that it would be in the interests of communes and syndicates which have them to share them with others instead of charging high prices for them. This is for two reasons. Firstly, they may find themselves boycotted by others, and so they would be denied the advantages of social co-operation. Secondly, they may be subject to such activities themselves at a future date and so it would wise for them to remember to *"treat others as you would like them to treat you under similar circumstances."* As anarchism will never come about unless people desire it and start to organise their own lives, it's clear that an anarchist society would be inhabited by individuals who followed that ethical principle.

So it is doubtful that people inspired by anarchist ideas would start to charge each other high prices, particularly since the syndicates and community assemblies are likely to vote for a wide basis of surplus distribution, precisely to avoid this problem and to ensure that production will be for use rather than profit (see section I.4.10, ["*What would be the advantage of a wide basis of surplus distribution?*"](#)). In addition, as other communities and syndicates would likely boycott any syndicate or commune that was acting in non-co-operative ways, it is likely that social pressure would soon result in those willing to exploit others rethinking their position. Co-operation does not imply a willingness to tolerate those who desire to take advantage of you.

Moreover, given the experience of the period between the 1960s and 1990s (with rising inequality marked by falling growth, lower wage growth, rising unemployment and increased economic instability) the impact of increased competition and inequality harms the vast majority. It is doubtful that people aware of these tendencies (and that, as we argued in [section F.3](#), *"free exchange"* in an unequal society tends to **increase**, not decrease, inequality) would create such a regime.

Examples of anarchism in action show that there is frequently a spontaneous tendency towards charging cost prices for goods, as well as attempts to work together to reduce the dangers of isolation and competition. One thing to remember is that anarchy will not be created *"overnight,"* and so potential problems will be worked out over time. Underlying all these kinds of objections is the assumption that co-operation will **not** be more beneficial to all involved than competition. However, in terms of quality of life, co-operation will soon be seen to be the better system, even by the most highly paid workers. There is far more to life than the size of one's pay packet, and anarchism exists in order to ensure that life is far more than the weekly grind of boring work and the few hours of hectic consumption in which people attempt to fill the *"spiritual hole"* created by a way of life which places profits above people.

I.3.7 What about people who do not want to join a syndicate?

In this case, they are free to work alone, by their own labour. Anarchists have no desire to force people to join a syndicate. As Kropotkin argued:

"Communist organisations . . . must be the work of all, a natural growth, a product of the constructive genius of the great mass. Communism cannot be imposed from above; it could not live even for a few months if the constant and daily co-operation of all did not uphold it. It must be free." [Kropotkin's **Revolutionary Pamphlets**, p. 140]

Therefore, the decision to join a commune will be a free one, with the potential for living outside it guaranteed for non-exploitative and non-oppressive individuals and groups. Malatesta stressed this when he argued that in an anarchist revolution *"what has to be destroyed at once . . . is **capitalistic property**, that is, the fact that a few control the natural wealth and the instruments of production and can thus oblige others to work for them . . . [but one must have a] right and the possibility to live in a different regime, collectivist, mutualist, individualist -- as one wishes, always on the condition that there is no oppression or exploitation of others."* [Malatesta: **Life and Ideas**, p. 102]

In other words, different forms of social life will be experimented with, depending on what people desire. Of course some people (particularly right-wing "*libertarians*") ask how anarchists can reconcile individual freedom with expropriation of capital. All we can say is that these critics subscribe to the idea that one should not interfere with the "*individual freedom*" of those in positions of authority to oppress others, and that this premise turns the concept of individual freedom on its head, making oppression a "*right*" and the denial of freedom a form of it!

However, right-wing "*libertarians*" do raise a valid question when they ask if anarchism would result in self-employed people being forced into co-operatives, syndicates or collectives as the result of a popular movement. The answer is no. This is because the destruction of title deeds would not harm the independent worker, whose real title is possession and the work done. What anarchists want to eliminate is not possessions but capitalist *property*.

As Peter Kropotkin made clear:

"when we see a peasant, who is in possession of just amount of land he can cultivate, we do not think it reasonable to turn him off his little farm. He exploits nobody, and nobody would have the right to interfere with his work. . . [W]hen we see a family inhabiting a house which affords them just as much space as . . . are considered necessary for that number of people, why should we interfere with that family and turn them out their house? . . . And finally, when we see a . . . cutler, or a . . . clothier working with their own tools or handloom, we see no use in taking the tools or handloom to give to another workers. The clothier or cutler exploit nobody." [Act for Yourselves, pp. 104-5]

This means that independent producers will still exist within an anarchist society, and some workplaces -- perhaps whole areas -- will not be part of a confederation. This is natural in a free society, for different

people have different ideas and ideals. Nor does such independent producers imply a contradiction with libertarian socialism, for "[w]hat we concerned with is the destruction of the titles of proprietors who exploit the labour of others and, above all, of expropriating them in fact in order to put . . . all the means of production at the disposal of those who do the work." [Malatesta, **Op. Cit.**, p. 103]

Of course, some people may desire to become capitalists, and they may offer to employ people and pay them wages. However, such a situation would be unlikely. Simply put, why would anyone desire to work for the would-be employer? Malatesta makes this point as follows:

"It remains to be seen whether not being able to obtain assistance or people to exploit -- and he [the would-be capitalist] would find none because nobody, having a right to the means of production and being free to work on his own or as an equal with others in the large organisations of production would want to be exploited by a small employer -- . . . it remains to be seen whether these isolated workers would not find it more convenient to combine with others and voluntarily join one of the existing communities." [Op. Cit., pp. 102-103]

So where would the capitalist wannabe find people to work for him? As Kropotkin argued:

"Everywhere you will find that the wealth of the wealthy springs from the poverty of the poor. That is why an anarchist society need not fear the advent of a Rothschild [or any other millionaire] who would settle in its midst. If every member of the community knows that after a few hours of productive toil he [or she] will have a right to all the pleasures that civilisation procures, and to those deeper sources of enjoyment which art and science offer to all who seek them, he [or she] will not sell his strength . . . No one will volunteer to work for the enrichment of your Rothschild." [Op. Cit., p. 61]

And, assuming that he did find someone willing to work for him (and so be governed by him), the would-be capitalist would have to provide such excellent conditions and pay such good wages as to reduce his profits to near zero. Moreover, he would have to face workers whose neighbours would be encouraging them to form a union and strike for even **better** conditions and pay, including workers' control and so on. Such a militant workforce would be the last thing a capitalist would desire.

However, let us suppose there is a self-employed inventor, Ferguson, who comes up with a new innovation without the help of the co-operative sector. Would anarchists steal his idea? Not at all. The co-operatives, which by hypothesis have been organised by people who believe in giving producers the full value of their product, would pay Ferguson an equitable amount for his idea, which would then become common across society. However, if he refused to sell his invention and instead tried to claim a patent monopoly on it in order to gather a group of wage slaves to exploit, no one would agree to work for him unless they got the full control over both the product of their labour and the labour process itself.

In addition, we would imagine they would also refuse to work for someone unless they also got the

capital they used at the end of their contract (i.e. a system of "hire-purchase" on the means of production used). In other words, by removing the statist supports of capitalism, would-be capitalists would find it hard to "compete" with the co-operative sector and would not be in a position to exploit others' labour.

With a system of communal production (in social anarchism) and mutual banks (in individualist anarchism), "usury" -- i.e. charging a use-fee for a monopolised item, of which patents are an instance -- would no longer be possible and the inventor would be like any other worker, exchanging the product of his or her labour. As Ben Tucker argued, *"the patent monopoly . . . consists in protecting inventors and authors against competition for a period of time long enough for them to extort from the people a reward enormously in excess of the labour measure of their services -- in other words, in giving certain people a right of property for a term of years in laws and facts of nature, and the power to extract tribute from others for the use of this natural wealth, which should be open to all. The abolition of this monopoly would fill its beneficiaries with a wholesome fear of competition which should cause them to be satisfied with pay for their services equal to that which other labourers get for theirs, and secure it by placing their products and works on the market at the outset at prices so low that their lines of business would be no more tempting to competitors than any other lines."* [**The Anarchist Reader**, pp. 150-1]

So, if someone has labour to sell then they deserve a free society to do it in -- as Tucker once pointed out. Such an environment would make the numbers seeking employment so low as to ensure that the rate of exploitation would be zero. Little wonder that, when faced with a self-employed, artisan workforce, capitalists have continually turned to the state to create the "correct" market forces (see [section F.8](#)).

Thus while the idea that people will happily become wage slaves may be somewhat common place (particularly with supporters of capitalism) the evidence of history is that people, given a choice, will prefer self-employment and **resist** wage labour (often to the death). As E. P. Thompson notes, for workers at the end of the 18th and beginning of the 19th centuries, the *"gap in status between a 'servant,' a hired wage-labourer subject to the orders and discipline of the master, and an artisan, who might 'come and go' as he pleased, was wide enough for men to shed blood rather than allow themselves to be pushed from one side to the other. And, in the value system of the community, those who resisted degradation were in the right."* [**The Making of the English Working Class**, p. 599] Over one hundred years later, the rural working class of Aragon showed the same dislike of wage slavery. After Communist troops destroyed their self-managed collectives, the *"[d]ispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour."* [Jose Peirats, **Anarchists in the Spanish Revolution**, p. 258] The rural economy collapsed (see [section I.8.7](#) for more details).

Therefore, any perception that people will become wage-labourers through choice in a free society is based on the assumption what people accept through necessity under capitalism will pass over, without change, into a free one. This assumption is unfounded and anarchists expect that once people struggle for freedom and taste the pleasures of freedom they will not freely accept a degradation back to having a master -- and as history shows, we have some evidence to support our argument.

In other words, with the end of capitalism and statism, a free society has no fear of capitalist firms being created or growing again because it rejects the idea that everyone must be in a syndicate. Few, if any, people would desire to have bosses when they have the choice of being free (to use an analogy, few people prefer dictatorship to democracy once the former has been overthrown). Also, without statism to back up various class-based monopolies of capitalist privilege, capitalism could not become dominant. In addition, the advantages of co-operation between syndicates would exceed whatever temporary advantages existed for syndicates to practice commodity exchange in a mutualist market.

I.3.8 Do anarchists seek "*small autonomous communities, devoted to small scale production*"?

As we indicated at the start of this section, anarchists see a free society's productive activity centred around federations of syndicates. This shows that anarchism rejects the idea of isolated communes. Rather, we argue that communes and syndicates would work together in a federal structure. This would, as we argue in [section I.3.5](#), necessitate confederations to help co-ordinate economic activity and, as indicated in [section I.3.4](#), involve extensive links between productive syndicates and the communes they are part of.

The idea that anarchism aims for small, self-sufficient, communes is a Leninist slander. They misrepresent anarchist ideas on this matter, suggesting that anarchists seriously want society based on "*small autonomous communities, devoted to small scale production.*" In particular, they point to Kropotkin, arguing that he "*looked backwards for change*" and "*witnessed such communities among Siberian peasants and watchmakers in the Swiss mountains.*" [Pat Stack, "*Anarchy in the UK?*", **Socialist Review**, no. 246, November 2000]

While it may be better to cover this issue in section H.2 ("[What parts of anarchist theory do Marxists particularly misrepresent?](#)") we discuss it here simply because, firstly, it seems to be a depressingly common assertion and, secondly, it relates directly to what an anarchist society could look like. Hence our discussion of these assertions in this section of the FAQ. Also, it allows us to fill in more of the picture of what a free society could look like.

So what do anarchists make of the assertion that we aim for "*small autonomous communities, devoted to small scale production*"? Simply put, we think it is nonsense (as would be quickly obvious from reading anarchist theory). Indeed, it is hard to know where this particular anarchist "*vision*" comes from. As Luigi Fabbri noted, in his reply to an identical assertion by the leading Bolshevnik Nikolai Bukharin, "*[i]t would be interesting to learn in what anarchist book, pamphlet or programme such an 'ideal' is set out, or even such a hard and fast rule!*" ["*Anarchy and 'Scientific' Communism*", pp. 13-49, **The Poverty of Statism**, Albert Meltzer (ed.), p. 21]

If we look at, say, Proudhon, we soon see no such argument for "*small scale*" production. He argued for "*the mines, canals, railways [to be] handed over to democratically organised workers' associations . . .*

We want these associations to be models for agriculture, industry and trade, the pioneering core of that vast federation of companies and societies woven into the common cloth of the democratic social Republic." [No Gods, No Masters, vol. 1, p. 62] Similarly, rather than dismiss the idea of large-scale industry Proudhon argued that "[l]arge industry . . . come to us by big monopoly and big property: it is necessary in the future to make them rise from the [labour] association." [quoted by K. Steven Vincent, **Proudhon and the Rise of French Republican Socialism**, p. 156] As Vincent correctly summarises:

"On this issue, it is necessary to emphasise that, contrary to the general image given on the secondary literature, Proudhon was not hostile to large industry. Clearly, he objected to many aspects of what these large enterprises had introduced into society. For example, Proudhon strenuously opposed the degrading character of . . . work which required an individual to repeat one minor function continuously. But he was not opposed in principle to large-scale production. What he desired was to humanise such production, to socialise it so that the worker would not be the mere appendage to a machine. Such a humanisation of large industries would result, according to Proudhon, from the introduction of strong workers' associations. These associations would enable the workers to determine jointly by election how the enterprise was to be directed and operated on a day-to-day basis." [Op. Cit., p. 156]

Moreover, Proudhon did not see an anarchist society as one of isolated communities or workplaces. Instead, he saw the need for workplace and community federations to co-ordinate joint activities and interests. Economically, there would be an *"agro-industrial federation"* would *"tend to foster increasing equality, by organising all public services in an economical fashion and in hands other than the state's, through mutualism in credit and insurance . . . guaranteeing the right to work and to education, and an organisation of work which allows each labourer to become a skilled worker and an artist, each wage-earner to become his own master."* This would end *"industrial and financial feudalism"* and *"wage-labour or economic servitude."* [**The Principle of Federation**, pp. 70-1]

The need for economic federation was also required due to differences in raw materials, quality of land and so on. Proudhon argued that a portion of income from agricultural produce be paid into a central fund which would be used to make equalisation payments to compensate farmers with less favourably situated or less fertile land. As he put it, economic rent *"in agriculture has no other cause than the inequality in the quality of land . . . if anyone has a claim on account of this inequality . . . [it is] the other land workers who hold inferior land. That is why in our scheme for liquidation [of capitalism] we stipulated that every variety of cultivation should pay a proportional contribution, destined to accomplish a balancing of returns among farm workers and an assurance of products."* [**The General Idea of the Revolution**, p. 209]

This vision of a federation of workplaces can also be found in Bakunin's writings. As he put it, the *"future organisation of society must proceed from the bottom up only, through free association or federations of the workers, into their associations to begin with, then into communes, regions, nations and, finally, into a great international and universal federation."* [No Gods, No Masters, vol. 1, p. 176] Bakunin, like Proudhon, considered that *"[i]ntelligent free labour will necessarily be associated labour"*

as under capitalism the worker *"works for others"* and her labour is *"bereft of liberty, leisure and intelligence."* Under anarchism, *"the free productive associations"* would become *"their own masters and the owners of the necessary capital"* and *"amalgamate among themselves"* and *"sooner or later"* will *"expand beyond national frontiers"* and *"form one vast economic federation."* [**Michael Bakunin: Selected Writings**, pp. 81-3]

Neither can such a vision be attributed to Kropotkin. While, of course, supporting decentralisation of power and decision making as did Proudhon and Bakunin, he did not reject the necessity of federations to co-ordinate activity. As he put it, the *"commune of tomorrow will know that it cannot admit any higher authority; above it there can only be the interests of the Federation, freely accepted by itself as well as the other communes . . . The Commune will know that it must break the State and replace it by the Federation."* For anarchists the commune *"no longer means a territorial agglomeration; it is rather a generic name, a synonym for the grouping of equals which knows neither frontiers nor walls . . . Each group in the Commune will necessarily be drawn towards similar groups in other communes; they will come together and the links that federate them will be as solid as those that attach them to their fellow citizens."* [**Words of a Rebel**, p. 83 and p. 88]

Nor did he see an anarchist society as one with an economy based purely around the small commune or community. He took the basic unit of a free society as one *"large enough to dispose of a certain variety of natural resources -- it may be a nation, or rather a region -- produces and itself consumes most of its own agricultural and manufactured produce."* Such a region would *"find the best means of combining agriculture with manufacture -- the work in the field with a decentralised industry."* Moreover, he recognised that the *"geographical distribution of industries in a given country depends . . . to a great extent upon a complexus of natural conditions; it is obvious that there are spots which are best suited for the development of certain industries . . . The[se] industries always find some advantages in being grouped, to some extent, according to the natural features of separate regions."* [**Fields, Factories and Workshops Tomorrow**, p. 26, p. 27 and pp. 154-5]

Kropotkin stressed that agriculture *"cannot develop without the aid of machinery and the use of a perfect machinery cannot be generalised without industrial surroundings. . . . The village smith would not do."* Thus he supported the integration of agriculture and industry, with *"the factory and workshop at the gates of your fields and gardens."* These factories would be *"airy and hygienic, and consequently economical, factories in which human life is of more account than machinery and the making of extra profits."* A *"variety of agricultural, industrial and intellectual pursuits are combined in each community"* to ensure *"the greatest sum total of well-being."* He thought that *"large establishments"* would still exist, but these would be *"better placed at certain spots indicated by Nature."* He stressed that it *"would be a great mistake to imagine industry ought to return to its hand-work stage in order to be combined with agriculture. Whenever a saving of human labour can be obtained by means of a machine, the machine is welcome and will be resorted to; and there is hardly one single branch of industry into which machinery work could not be introduced with great advantage, at least at some of the stages of the manufacture . . . The machine will supersede hand-work in the manufacture of plain goods. But at the same time, hand-work very probably will extend its domain in the artistic finishing of many things which are now made entirely in the factory."* [**Op. Cit.**, p. 156, p. 197, p. 18, pp. 154-5 and

pp. 151-2]

Clearly Kropotkin was **not** opposed to large-scale industry as such. As he put it, *"if we analyse the modern industries, we soon discover that for some of them the co-operation of hundred, even thousands, of workers gathered at the same spot is really necessary. The great iron works and mining enterprises decidedly belong to that category; oceanic steamers cannot be built in village factories."* However, he stressed that this objective necessity was not the case in many other industries and centralised production existed in these purely to allow capitalists *"to hold command of the market."* Once we consider the *"moral and physical advantages which man would derive from dividing his work between field and the workshop"* we must automatically evaluate the structure of modern industry with the criteria of what is best for the worker (and society and the environment) rather than what was best for capitalist profits and power. [Op. Cit., p. 153]

Clearly, Leninist summaries of Kropotkin's ideas on this subject are nonsense. Rather than seeing *"small-scale"* production as the basis of his vision of a free society, he saw production as being geared around the economic unit of a nation or region (*"Each region will become its own producer and its own consumer of manufactured goods . . . [and] its own producer and consumer of agricultural produce."* [Op. Cit., p. 40]). Industry would come to the village *"not in its present shape of a capitalist factory"* but *"in the shape of a socially organised industrial production, with the full aid of machinery and technical knowledge."* [Op. Cit., p. 151]

Industry would be decentralised and integrated with agriculture and based around communes, but these communes would be part of a federation and so production would be based around meeting the needs of these federations. A system of rational decentralisation would be the basis of Kropotkin's communist-anarchism, with productive activity and a free society's workplaces geared to the appropriate level. For those forms of industry which would be best organised on a large-scale would continue to be so organised, but for those whose current (i.e. capitalist) structure had no objective need to be centralised would be broken up to allow the transformation of work for the benefit of both workers and society.

Thus we would see a system of workplaces geared to local and district needs complementing larger factories which would meet regional and wider needs. Kropotkin was at pains to show that such a system would be economical, stressing that *"[t]his is why the 'concentration' so much spoken of is often nothing but an amalgamation of capitalists for the purpose of **dominating the market**, not for cheapening the technical process."* [Op. Cit., p. 154] In other words, that the structure of modern industry was skewed by the needs of capitalist profit and power and so it cannot be assumed that what is *"efficient"* under a capitalist criteria is necessarily the best for a free society.

Kropotkin was well aware that modern industry was shaped *"to suit the temporary interests of the few -- by no means those of the nation."* [Op. Cit., p. 147] Therefore he made a clear division between economic tendencies which existed to aid the capitalist to dominate the market and enhance their profits and power and those which indicated a different kind of future. He placed the tendency of industry to spread across the world, to decentralise itself into all nations and regions, as a tendency of the second

kind (one often swallowed up by the first, of course). As such, he looked at and analysed existing society and its tendencies. Therefore it cannot be said that Kropotkin based this analysis on "*look[ing] backwards for change.*" Indeed, the opposite was obviously the case. He continually stressed that "*the present tendency of humanity is to have the greatest possible variety of industries gathering in each country.*" [Op. Cit., pp. 25-6]

Kropotkin backed this claim, as all the claims in his work, with extensive empirical evidence and research. In other words, he clearly looked to the present for change, charting tendencies within modern society which pointed in a libertarian direction and backing up his arguments with extensive and recent research. To state otherwise simply shows an unfamiliarity with Kropotkin's work.

The obvious implication of Leninist comments arguments against anarchist ideas on industrial transformation after a revolution is that they think that a socialist society will basically be the same as capitalism, using the technology, industrial structure and industry developed under class society without change. After all, did Lenin not argue that "*Socialism is nothing but the next step forward from state capitalist monopoly . . . Socialism is merely state capitalist monopoly **made to benefit the whole people***"? [The Threatening Catastrophe and how to avoid it, p. 37] Needless to say, capitalist industry, as Kropotkin was aware, has not developed neutrally nor purely because of technical needs. Rather it has been distorted by the twin requirements to maintain capitalist profits and power. The one of the first tasks of a social revolution will be to transform the industrial structure, not keep it as it is. You cannot use capitalist means for socialist ends. As Alexander Berkman correctly argued:

"The role of industrial decentralisation in the revolution is unfortunately too little appreciated. . . Most people are still in the thralldom of the Marxian dogma that centralisation is 'more efficient and economical.' They close their eyes to the fact that the alleged 'economy' is achieved at the cost of the workers' limb and life, that the 'efficiency' degrades him to a mere industrial cog, deadens his soul, kills his body. Furthermore, in a system of centralisation the administration of industry becomes constantly merged in fewer hands, producing a powerful bureaucracy of industrial overlords. It would indeed be the sheerest irony if the revolution were to aim at such a result. It would mean the creation of a new master class." [The ABC of Anarchism, pp. 80-1]

In other words, it would be a new bureaucracy exploiting and oppressing those who do the actual work -- as in private capitalism -- simply because capitalist economic structures are designed to empower the few over the many. Like the capitalist state, they cannot be used by the working class to achieve their liberation (they are not created for the mass participation that real socialism requires, quite the reverse in fact!). While we will "inherit" an industrial structure from capitalism it would be the greatest possible error to leave it unchanged and an even worse one to accelerate the processes by which capitalists maintain and increase their power (i.e. centralisation and concentration) in the name of "socialism."

One last factor should be mentioned with regards to the issue of decentralising production. Kropotkin, as well as thinking that "*a country with no large factories to bring steel to a finished condition is doomed*

to be backward in all other industries," also saw that a society in revolution would be thrust back on its own resources as "*[i]nternational commerce will come to a standstill*" and the economy would be "*paralysed.*" This would force a revolutionary people if "*cut off from the world for a year or two by the supporters of middle-class rule*" to "*provide for itself, and to reorganise its production, so as satisfy its own needs. If it fails to do so, it is death. If it succeeds, it will revolutionise the economic life of the country.*" This would involve "*the necessity of cultivating the soil, of combining agricultural production with industrial production in the suburbs of [cities] and its environs.*" Thus the danger of the initial isolation of a revolution was a factor in Kropotkin's ideas on this issue. [**The Conquest of Bread**, p. 190, p. 191, p. 192 and p. 191]

We are sorry to have laboured this point, but this issue is one which arises with depressing frequency in Marxist accounts of anarchism. It is best that we indicate that those who make the claim that anarchists seek "*small scale*" production geared for "*small autonomous communities*" simply show their ignorance of the source material. In actually, anarchists see production as being geared to whatever makes most social, economic and ecological sense. Some production and workplaces will be geared to the local commune, some will be geared to the district federation, some to the regional federation, and so on. It is for this reason anarchists support the federation of workers' associations as the means of combining local autonomy with the needs for co-ordination and joint activity. To claim otherwise is simply to misrepresent anarchist theory.

I.1 Isn't libertarian socialism an oxymoron?

In a word, no. This question is often asked by those who have come across the so-called "libertarian" right. As discussed in [section A.1.3](#), the word "*libertarian*" has been used by anarchists for far longer than the pro-free market right have been using it. Indeed, outside of North America "*libertarian*" is still essentially used as an equivalent of "*anarchist*" and as a shortened version of "*libertarian socialist*."

This in itself does not, of course, prove that the term "*libertarian socialist*" is free of contradiction. However, as we will show below, the claim that the term is self-contradictory rests on the assumption that socialism requires the state in order to exist and that socialism is incompatible with liberty (and the equally fallacious claim that capitalism is libertarian and does not need the state). This assumption, as is often true of many objections to socialism, is based on a misconception of what socialism is, a misconception that many authoritarian socialists and the state capitalism of Soviet Russia have helped to foster. In reality it is the term "*state socialism*" which is the true oxymoron.

Sadly many people take for granted the assertion of many on the right and left that socialism equals Leninism or Marxism and ignore the rich and diverse history of socialist ideas, ideas that spread from communist and individualist-anarchism to Leninism. As Benjamin Tucker once noted, "*the fact that State Socialism . . . has overshadowed other forms of Socialism gives it no right to a monopoly of the Socialistic idea.*" [**Instead of a Book**, pp. 363-4] Unfortunately, many on the left combine with the right to do exactly that. Indeed, the right (and, of course, many on the left) consider that, by definition, "*socialism*" is state ownership and control of the means of production, along with centrally planned determination of the national economy (and so social life). This definition has become common because many Social Democrats, Leninists, and other statists **call** themselves socialists. However, the fact that certain people call themselves socialists does not imply that the system they advocate is really socialism (Hitler, for example, called himself a "*National Socialist*" while, in practice, ensuring and enhancing the power and profits of capitalists). We need to analyse and understand the systems in question, by applying critical, scientific thought, in order to determine whether their claims to the socialist label are justified. As we will see, to accept the above definition one has to ignore the overall history of the socialist movement and consider only certain trends within it as representing the movement as a whole.

Even a quick glance at the history of the socialist movement indicates that the identification of socialism with state ownership and control is not common. For example, Anarchists, many Guild Socialists, council communists (and other libertarian Marxists), as well as followers of Robert Owen, all rejected state ownership. Indeed, anarchists recognised that the means of production did not change their form as capital when the state took over their ownership nor did wage-labour change its nature when it is the state employing labour (for example, Proudhon argued that if the "*State confiscate[d] the mines, canals and railways*" it would only "*add to monarchy, and [create] more wage slavery.*" [**No Gods, No Masters**, vol. 1, p. 62]). For anarchists state ownership of capital is not socialistic in the slightest but rather a tendency **within**, not **opposed** to, capitalism just as the growth of larger and larger companies does not imply in any way a tendency to socialism (regardless of what Lenin or Marx argued -- see

[section H.3.12](#) for more on this). Indeed, as Tucker was well aware, state ownership turned **everyone** into a proletarian (bar the state bureaucracy) -- hardly a desirable thing for a political theory aiming for the end of wage slavery!

So what **does** socialism mean? And is it compatible with libertarian ideals? What do the words "*libertarian*" and "*socialism*" actually mean? It is tempting to use dictionary definitions as a starting point, although we should stress that such a method holds problems as different dictionaries have different definitions and the fact that dictionaries are rarely politically sophisticated. Use one definition, and someone else will counter with one more to their liking. For example, "*socialism*" is often defined as "*state ownership of wealth*" and "*anarchy*" as "*disorder*." Neither of these definitions are useful when discussing political ideas. Therefore, the use of dictionaries is not the end of a discussion and often misleading when applied to politics.

With that warning, what do we find?

Webster's New International Dictionary defines a libertarian as "*one who holds to the doctrine of free will; also, one who upholds the principles of liberty, esp. individual liberty of thought and action.*" As we discussed earlier (see [section B.1](#), for example), capitalism denies liberty of thought and action within the workplace (unless one is the boss, of course). Therefore, **real** libertarian ideas **must** be based on workers self-management, i.e. workers must control and manage the work they do, determining where and how they do it and what happens to the fruit of their labour, which in turn means the elimination of wage labour. The elimination of wage labour is the common theme of socialism (in theory at least, anarchist argue that state socialism does not eliminate wage labour, rather it universalises it). Or, to use Proudhon's words, the "*abolition of the proletariat.*" [**Selected Writings of Pierre-Joseph Proudhon**, p. 179] It implies a classless and anti-authoritarian (i.e. libertarian) society in which people manage their own affairs, either as individuals or as part of a group (depending on the situation). In other words, it implies self-management in all aspects of life -- including work. It has always struck anarchists as somewhat strange and paradoxical (to say the least) that a system of "*natural*" liberty (Adam Smith's term, misappropriated by supporters of capitalism) involves the vast majority having to sell that liberty in order to survive.

According to the **American Heritage Dictionary** "*socialism*" is "*a social system in which the producers possess both political power and the means of producing and distributing goods.*" This definition fits neatly with the implications of the word "*libertarian*" indicated above. In fact, it shows that socialism is **necessarily** libertarian, not statist. For if the state owns the workplace, then the producers do not, and so they will not be at liberty to manage their own work but will instead be subject to the state as the boss. Moreover, replacing the capitalist owning class by state officials in no way eliminates wage labour; in fact it makes it worse in many cases. Therefore "*socialists*" who argue for nationalisation of the means of production are **not** socialists (which means that the Soviet Union and the other 'socialist' countries are **not** socialist nor are parties which advocate nationalisation socialist).

Indeed, attempts to associate socialism with the state misunderstands the nature of socialism. It is an

essential principle of socialism that (social) inequalities between individuals must be abolished to ensure liberty for all (**natural** inequalities cannot be abolished, nor do anarchists desire to do so). Socialism, as Proudhon put it, "*is egalitarian above all else.*" [**No Gods, No Masters**, vol. 1, p. 57] This applies to inequalities of power as well, especially to **political** power. And any hierarchical system (particularly the state) is marked by inequalities of power -- those at the top (elected or not) have more power than those at the bottom. Hence the following comments provoked by the expulsion of anarchists from the social democratic Second International:

"It could be argued. . . that we [anarchists] are the most logical and most complete socialists, since we demand for every person not just his entire measure of wealth of society, but also his portion of social power, which is to say, the real ability to make his influence felt, along with that of everybody else, in the administration of public affairs." [**No Gods, No Masters**, vol. 2, p.20]

The election of someone to administer public affairs **for you** is not having a portion of social power. It is, to use of words of Emile Pouget (a leading French anarcho-syndicalist) "*an act of abdication,*" the delegating of power into the hands of a few. [**Op. Cit.**, p. 67] This means that "*[a]ll political power inevitably creates a privileged situation for the men who exercise it. Thus it violates, from the beginning, the equalitarian principle.*" [Voline, **The Unknown Revolution**, p. 249]

From this short discussion we see the links between libertarian and socialism. To be a true libertarian requires you to support workers' control otherwise you support authoritarian social relationships. To support workers' control, by necessity, means that you must ensure that the producers own (and so control) the means of producing and distributing the goods they create (i.e. they must own/control what they use to produce goods). Without ownership, they cannot truly control their own activity or the product of their labour. The situation where workers possess the means of producing and distributing goods is socialism. Thus to be a true libertarian requires you to be a socialist.

Similarly, a true socialist must also support individual liberty of thought and action, otherwise the producers "possess" the means of production and distribution in name only. If the state owns the means of life, then the producers do not and so are in no position to manage their own activity. As the experience of Russia under Lenin shows, state ownership soon produces state control and the creation of a bureaucratic class which exploits and oppresses the workers even more so than their old bosses. Since it is an essential principle of socialism that inequalities between people must be abolished in order to ensure liberty, it makes no sense for a genuine socialist to support any institution based on inequalities of power. And as we discussed in [section B.2](#), the state is just such an institution. To oppose inequality and not extend that opposition to inequalities in power, especially **political** power, suggests a lack of clear thinking. Thus to be a true socialist requires you to be a libertarian, to be for individual liberty and opposed to inequalities of power which restrict that liberty.

Therefore, rather than being an oxymoron, "*libertarian socialism*" indicates that true socialism must be libertarian and that a libertarian who is not a socialist is a phoney. As true socialists oppose wage labour,

they must also oppose the state for the same reasons. Similarly, libertarians must oppose wage labour for the same reasons they must oppose the state.

So, libertarian socialism rejects the idea of state ownership and control of the economy, along with the state as such. Through workers' self-management it proposes to bring an end to authority, exploitation, and hierarchy in production. This in itself will increase, not reduce, liberty. Those who argue otherwise rarely claim that political democracy results in less freedom than political dictatorship.

One last point. It could be argued that many social anarchists smuggle the state back in via communal ownership of the means of life. This, however, is not the case. To argue so confuses society with the state. The communal ownership advocated by collectivist and communist anarchists is not the same as state ownership. This is because it is based on horizontal relationships between the actual workers and the "owners" of social capital (i.e. the federated communities as a whole, which includes the workers themselves we must stress), not vertical ones as in nationalisation (which are between state bureaucracies and its "citizens"). Also, such communal ownership is based upon letting workers manage their own work and workplaces. This means that it is based upon, and does not replace, workers' self-management. In addition, all the members of a participatory anarchist community fall into one of three categories:

- (1) producers (i.e. members of a collective or self-employed artisans);
- (2) those unable to work (i.e. the old, sick and so on, who **were** producers); or
- (3) the young (i.e. those who **will be** producers).

Therefore, workers' self-management within a framework of communal ownership is entirely compatible with libertarian and socialist ideas concerning the possession of the means of producing and distributing goods by the producers themselves.

Hence, far from there being any contradiction between libertarianism and socialism, libertarian ideals imply socialist ones, and vice versa. As Bakunin argued in 1867:

"We are convinced that freedom without Socialism is privilege and injustice, and that Socialism without freedom is slavery and brutality." [**Bakunin on Anarchism**, p. 127]

History has proven him correct.

I.1.1 Didn't Ludwig von Mises's "*calculation argument*" prove that socialism can not work?

In 1920, the right-wing economist Ludwig von Mises declared socialism to be impossible. A leading member of the "*Austrian*" school of economics, he argued this on the grounds that without private ownership of the means of production, there cannot be a competitive market for production goods and

without a market for production goods, it is impossible to determine their values. Without knowing their values, economic rationality is impossible and so a socialist economy would simply be chaos -- *"the absurd output of a senseless apparatus."* [*"Economic Calculation in the Socialist Commonwealth"*, in **Collectivist Economic Planning**, F.A von Hayek (ed.), p.104] While applying his *"calculation argument"* to Marxist ideas of a future socialist society, his argument, it is claimed, is applicable to **all** schools of socialist thought, including libertarian ones. It is on the basis of his arguments that many right-wingers claim that libertarian (or any other kind of) socialism is impossible in principle.

As David Schweickart observes *"[i]t has long been recognised that von Mises's argument is logically defective. Even without a market in production goods, their monetary values can be determined."* [**Against Capitalism**, p. 88] In other words, economic calculation based on prices is perfectly possible in a libertarian socialist system. After all, to build a workplace requires so many tonnes of steel, of many bricks, so many hours of work and so on. If we assume a mutualist (i.e. market socialist/co-operative) libertarian socialist society, then the prices of these goods can be easily found as the co-operatives in question would be offer their services on the market. These commodities would be the inputs for the construction of production goods and so the latter's monetary values can be found (this does not address whether monetary values accurately reflect real costs, an issue we will discuss in the [next section](#)).

Ironically enough, von Mises **did** mention the idea of such a mutualist system in his initial essay. He wrote of a system in which *"the 'coal [miners'] syndicate' provides the 'iron [workers'] syndicate"* with goods and argued that *"no price can be formed, except when both syndicates are the owners of the means of production employed in their business"* (which may come as a surprise to transnational companies whose different workplaces sell each other their products!) Such a system is dismissed: *"This would not be socialisation but workers' capitalism and syndicalism."* [**Op. Cit.**, p. 112]

However, his logic is flawed. Firstly, as we noted, modern capitalism shows that workplaces owned by the same body (in this case, a large company) can exchange goods via the price form. That von Mises makes such a statement indicates well the firm basis of his argument in reality. Secondly, such a system may be, as von Mises states, *"syndicalism"* (at least a form of syndicalism, as most syndicalists were and still are in favour of libertarian communism, a simple fact apparently unknown to von Mises) but it is not capitalist as there is no wage labour involved as workers' own and control their own means of production. Indeed, von Mises ignorance of syndicalist thought is striking. In **Human Action** he asserts that the *"market is a consumers' democracy. The syndicalists want to transform it into a producers' democracy."* [p. 809] Most syndicalists, however, aim to **abolish** the market and **all** aim for workers' control of production to **complement** (not replace) consumer choice. Syndicalists, like other anarchists, do not aim for workers' control of consumption as von Mises asserts. Given that von Mises asserts that the market, in which one person can have a thousand votes and another one, is a *"democracy"* his ignorance of syndicalist ideas is perhaps only one aspect of a general ignorance of reality.

Indeed, such an economy also strikes at the heart of von Mises' claims that socialism was *"impossible."* Given that von Mises accepted that there may be markets, and hence market prices, for consumer goods

in a socialist economy his claims of the impossibility of socialism seems unfounded. For von Mises, the problem for socialism is that *"because no production-good will ever become the object of exchange, it will be impossible to determine its monetary value."* [Op. Cit., p. 92] The flaw in his argument is clear. Taking, for example, coal, we find that it is both a means of production and of consumption. If a market in consumer goods is possible for a socialist system, then competitive prices for production goods is also possible as syndicates producing production-goods would also sell the product of their labour to other syndicates or communes. Thus, when deciding upon a new workplace, railway or house, the designers in question do have access to competitive prices with which to make their decisions. Nor does his argument work against communal ownership in such a system as the commune would be buying products from syndicates in the same way as one part of a multi-national company can buy products from another part of the same company under capitalism. That goods produced by self-managed syndicates have prices does not imply capitalism, regardless of von Mises' claims.

Thus economic calculation based on competitive market prices is possible under a socialist system. Indeed, we see examples of this even under capitalism. For example, the Mondragon co-operative complex in the Basque Country indicate that a libertarian socialist economy can exist and flourish. There is no need for capital markets in a system based on mutual banks and networks of co-operatives (indeed, as we argue at the end of [section I.4.8](#), capital markets **hinder** economic efficiency by generating a perverse set of incentives and misleading information flows and so their abolition would actually **aid** production and productive efficiency). Unfortunately, the state socialists who replied to Mises did not have such a libertarian economy in mind.

In response to von Mises initial challenge, a number of economists pointed out that Pareto's disciple, Enrico Barone, had already, 13 years earlier, demonstrated the theoretical possibility of a *"market-simulated socialism."* However, the principal attack on von Mises's argument came from Fred Taylor and Oscar Lange (for a collection of their main papers, see **On the Economic Theory of Socialism**, Benjamin Lippincott (ed.), University of Minnesota, 1938). In light of their work, Frederick von Hayek shifted the question from theoretical impossibility to whether the theoretical solution could be approximated in practice. Thus even von Hayek, a major free-market capitalist guru, seemed to think that von Mises's argument could not be defended.

Moreover, it should be noted that both sides of the argument accepted the idea of central planning of some kind or another. This means that many of von Mises's and von Hayek's arguments did not apply to libertarian socialism, which rejects central planning along with every other form of centralisation. This is a key point, as most members of the right seem to assume that "socialists" all agree with each other in supporting a centralised economic system. In other words, they ignore a large segment of socialist thought and history in order to concentrate on Social Democracy and Leninism. The idea of a network of *"people's banks"* and co-operatives working together to meet their common interests is ignored, although it has been a common feature in socialist thought since the time of Robert Owen.

Nor was Taylor and Lange's response particularly convincing in the first place. This was because it was based far more on neo-classical capitalist economic theory than on an appreciation of reality. In place of

the Walsrian "*Auctioneer*" (the "*god in the machine*" of general equilibrium theory which ensures that all markets clear) Taylor and Lange presented the Planning Authority (the "*Central Planning Board*"), whose job it was to adjust prices so that all markets cleared. Neo-classical economists who are inclined to accept Walrasian theory as an adequate account of a working capitalist economy will be forced to accept the validity of Taylor and Lange's version of "*socialism*." Little wonder Taylor and Lange were considered, at the time, the victors in the "*socialist calculation*" debate by most of the economics profession (with the collapse of the Soviet Union, this decision has been revised somewhat -- although we must point out that Taylor and Lange's model was not the same as the Soviet system, a fact conveniently ignored by commentators).

Unfortunately, given that Walrasian theory has little bearing to reality, we must also come to the conclusion that the Taylor-Lange "solution" has about the same relevance (even ignoring its non-libertarian aspects, such as its basis in state-ownership, its centralisation, its lack of workers' self-management and so on). Many people consider Taylor and Lange as fore-runners of "*market socialism*." This is incorrect -- rather than being market socialists, they are in fact "neo-classical" socialists, building a "socialist" system which mimics capitalist economic **theory** rather than its **reality**. Replacing Walrus's mythical creation of the "*Auctioneer*" with a planning board does not really get to the heart of the problem! Nor does their vision of "socialism" have much appeal -- a re-production of capitalism with a planning board and a more equal distribution of money income. Anarchists reject such "socialism" as little more than a nicer version of capitalism, if that.

With the collapse of the Soviet Union, it has been fashionable to argue that "*von Mises was right*" and that socialism is impossible (of course, **during** the cold war such claims were ignored as the Soviet threat had to be boosted and used as a means of social control and to justify state aid to capitalist industry). Nothing could be further from the truth. As we have argued in the [previous section](#) and elsewhere, these countries were not socialist at all and did not even approximate the (libertarian) socialist idea (which is the only true form of socialism). Obviously the Soviet Union and Eastern European countries had authoritarian "*command economies*" with central bureaucratic planning, and so their failure cannot be taken as proof that a decentralised, libertarian socialism cannot work. Nor can von Mises' and von Hayek's arguments against Taylor and Lange be used against a libertarian mutualist or collectivist system as such a system is decentralised and dynamic (unlike the "neo-classical" socialist model they proposed). Libertarian socialism of this kind did, in fact, work remarkably well during the Spanish Revolution in the face of amazing difficulties, with increased productivity and output in many workplaces as well as increased equality and liberty (see Sam Dolgoff, **The Anarchist Collectives** or Gaston Leval's **Collectives in the Spanish Revolution** as well as [section I.8](#) of this FAQ).

Thus von Mises "*calculation argument*" does not prove that socialism is impossible. The theoretical work of such socialists as David Schweickart (see his **Against Capitalism** for an extensive discussion of a dynamic, decentralised market socialist system) and others on market socialism shows that von Mises was wrong in asserting that "*a socialist system with a market and market prices is as self-contradictory as is the notion of a triangular square*." Indeed, by suppressing capital markets in favour of simple commodity production, a mutualist system will improve upon capitalism by removing an important

source of perverse incentives which hinder long term investment and social responsibility (see [section I.4.8](#)) in addition to reducing inequalities, increasing freedom and improving general economic performance.

So far, most models of market socialism have not been fully libertarian, but instead involve the idea of workers' control within a framework of state ownership of capital (Engler in **Apostles of Greed** is an exception to this, supporting community ownership). However, libertarian forms of market socialism are indeed possible and would be similar to Proudhon's mutualism. As anarchist Robert Graham points out, *"Market socialism is but one of the ideas defended by Proudhon which is both timely and controversial. . . Proudhon's market socialism is indissolubly linked with his notions of industrial democracy and workers' self-management."* ["Introduction", P-J Proudhon, **General Idea of the Revolution**, p. xxxii] His system of agro-industrial federations can be seen as a non-statist way of protecting self-management, liberty and equality in the face of market forces (as he argued in **The Principle of Federation**, *"[h]owever impeccable in its basic logic the federal principle may be. . . it will not survive if economic factors tend persistently to dissolve it. In other words, political right requires to be buttressed by economic right"* and *"in an economic context, confederation may be intended to provide reciprocal security in commerce and industry. . . The purpose of such specific federal arrangements is to protect the citizens. . . from capitalist and financial exploitation. . . in their aggregate they form . . . an agro-industrial federation"* [**The Principle of Federation**, p. 67 and p. 70]).

Indeed, some Leninist Marxists recognise the links between Proudhon and market socialism. For example, the unorthodox Trotskyite Hillel Ticktin argues that Proudhon, *"the anarchist and inveterate foe of Karl Marx. . . put forward a conception of society, which is probably the first detailed exposition of a 'socialist market.'" ["The Problem is Market Socialism", in **Market Socialism: The Debate Among Socialists**, edited by Bertell Ollman, p. 56]* In addition, see **Against the Market** in which the author, Dave McNally, correctly argues that Proudhon was a precursor of the current market socialists. Needless to say, these Leninists reject the idea of market socialism as contradictory and, basically, not socialist (while, strangely enough, acknowledging that the transition to Marxist-communism under the workers' state would use the market!).

Thus it is possible for a socialist economy to allocate resources using a competitive market. However, does von Mises's argument mean that a socialism that abolishes the market (such as libertarian communism) is impossible? Given that the vast majority of anarchists seek a libertarian communist society, this is an important question. We address it in the [next section](#).

I.1.2 Does Mises' argument mean libertarian communism is impossible?

In a word, no. While the *"calculation argument"* is often used by right-libertarian's as **the** "scientific" basis for the argument that communism (a moneyless society) is impossible, it is based on certain false ideas of what money does and how an anarchist society would function without it. This is hardly

surprising, as Mises based his theory on the "subjective" theory of value and the Marxist social-democratic (and so Leninist) ideas of what a "socialist" economy would look like. As Libertarian Marxist Paul Mattick correctly argued:

"However divided the old [social-democratic] labour movement may be by disagreements on various topics, on the question of socialism it stands united. Hilferding's abstract 'General-Cartel', Lenin's admiration for the German war socialism and the German postal service. Kautsky's eternalisation of the value-price-money economy (desiring to do consciously what in capitalism is performed by blind market forces). Trotsky's war communism equipped with supply and demand features, and Stalin's institutional economics -- all these concepts have at their base the continuation of the existing conditions of production. As a matter of fact, they are mere reflections of what is actually going on in capitalist society. Indeed, such 'socialism' is discussed today by famous bourgeois economists like Pigou, Hayek, Robbins, Keynes, to mention only a few, and has created a considerable literature to which the socialists now turn for their material." [**Anti-Bolshevik Communism**, pp. 80-1]

Therefore, there has been little discussion of what a true (i.e. libertarian) communist society would be like, one that utterly transformed the existing conditions of production by workers' self-management and the abolition of both the wages system and money. However, it is useful here to indicate exactly why a moneyless (i.e. truly communist) "economy" would work and why the "*calculation argument*" is flawed as an objection to it.

Mises argued that without money there was no way a socialist economy would make "*rational*" production decisions. Not even von Mises denied that a moneyless society could estimate what is likely to be needed over a given period of time (as expressed as physical quantities of definite types and sorts of objects). As he argued, "*calculation in natura in an economy without exchange can embrace consumption-goods only.*" [**Collectivist Economic Planning**, F.A. Von Hayek (ed.), p. 104] Mises' argument is that the next step, working out which productive methods to employ, would not be possible, or at least would not be able to be done "*rationally*," i.e. avoiding waste and inefficiency. As he argues, the evaluation of producer goods "*can only be done with some kind of economic calculation. The human mind cannot orient itself properly among the bewildering mass of intermediate products and potentialities without such aid. It would simply stand perplexed before the problems of management and location.*" [**Op. Cit.**, p. 103] Mises' claimed that monetary calculation based on market prices is the only solution.

This argument is not without its force. How can a producer be expected to know if tin is a better use of resources than iron when creating a product if all they know is that iron and tin are available and suitable for their purpose? Or, if we have a consumer good which can be made with $A + 2B$ or $2A + B$ (where A and B are both input factors such as steel, oil electricity, etc.) how can we tell which method is more efficient (i.e. which one used least resources and so left the most over for other uses)? With market prices, Mises' argued, it is simple. If the iron cost \$5 and tin \$4, then tin should be used. Similarly, if A cost \$10 and B \$5, then clearly method one would be the most efficient (\$20 versus \$25). Without the

market, von Mises argued, such a decision would be impossible and so every decision would be a "*leap in the dark.*"

However, Mises' argument is based on a number of flawed assumptions.

Firstly, he assumes a centralised, planned economy. While this was a common idea in Marxian social democracy (and the Leninism that came from it), it is rejected by anarchism. No small body of people can be expected to know what happens in society ("*No single brain nor any bureau of brains can see to this organisation,*" in the words of Issac Puente [**Libertarian Communism**, p. 29]). As Bakunin argued, it would lead in practice to "*an extremely complex government. This government will not content itself with administering and governing the masses politically . . . it will also administer the masses economically, concentrating in the hands of the State [all economic and social activity] . . . All that will demand an immense knowledge and many heads 'overflowing with brains' in this government. It will be the reign of **scientific intelligence**, the most aristocratic, despotic, arrogant, and elitist of all regimes. There will be a new class, a new hierarchy . . . Such a regime will not fail to arouse very considerable discontent in the masses of the people, and in order to keep them in check . . . [a] considerable armed force [would be required].*" [**Bakunin on Anarchism**, p. 319] Hence anarchists can agree with Mises: central planning cannot work in practice. However, socialist ideas are not limited to Marxian Social Democracy, and so von Mises ignores far more socialistic ideas than he attacks.

His next assumption is equally flawed. This is that without the market, no information is passed between producers beyond the final outcome of production. In other words, he assumes that the final product is all that counts in evaluating its use. Needless to say, it is true that without more information than the name of a given product, it is impossible to determine whether using it would be an efficient utilisation of resources. But von Mises misunderstands the basic concept of use-value, namely the utility of a good to the consumer of it. As Adam Buick and John Crump point out, "*at the level of the individual production unit or industry, the only calculations that would be necessary in socialism would be calculations in kind. On the one side would be recorded the resources (materials, energy, equipment, labour) used up in production and on the other the amount of good produced, together with any by-products. . . . Socialist production is simply the production of use values from use values, and nothing more.*" [**State Capitalism: The Wages System Under New Management**, p. 137]

The generation and communication of such information implies a decentralised, horizontal network between producers and consumers. This is because what counts as a use-value can only be determined by those directly using it. Thus the production of use-values from use-values cannot be achieved via central planning, as the central planners have no notion of the use-value of the goods being used or produced. Such knowledge lies in many hands, dispersed throughout society, and so socialist production implies decentralisation. Capitalist ideologues claim that the market allows the utilisation of such dispersed knowledge, but as John O'Neil notes, "*the market may be **one** way in which dispersed knowledge can be put to good effect. It is not . . . the only way.*" [**Ecology, Policy and Politics**, p. 118]

So, in order to determine if a specific good is useful to a person, that person needs to know its "*cost.*"

Under capitalism, the notion of cost has been so associated with **price** that we have to put the word "*cost*" in quotation marks. However, the real cost of, say, writing a book, is not a sum of money but so much paper, so much energy, so much ink, so much human labour. In order to make a rational decision on whether a given good is better for meeting a given need than another, the would-be consumer requires this information. However, under capitalism this information is **hidden** by the price.

Moreover, a purely market-based system leaves out information on which to base rational resource allocations (or, at the very least, hides it). The reason for this is that a market system measures, at best, preferences of **individual** buyers among the **available** options. This assumes that all the pertinent use-values that are to be outcomes of production are things that are to be consumed by the individual, rather than use-values that are collectively enjoyed (like clean air). Prices in the market do not measure social costs or externalities, meaning that such costs are not reflected in the price and so you cannot have a rational price system. Similarly, if the market measures only preferences amongst things that can be monopolised and sold to individuals, as distinguished from values that are enjoyed collectively, then it follows that information necessary for rational decision-making in production is not provided by the market.

In other words, prices hide the actual costs that production involved for the individual, society, and the environment, and instead boils everything down into **one** factor, namely price. There is a lack of dialogue and information between producer and consumer. As John O'Neil argues, "*the market distributes a little information and . . . blocks the distribution of a great deal [more]. . . The educative dialogue exists not through the market, but alongside of it.*" [**Ecology, Policy and Politics**, p. 143]

In the words of Joan Robinson:

"In what industry, in what line of business, are the true social costs of the activity registered in its accounts? Where is the pricing system that offers the consumer a fair choice between air to breath and motor cars to drive about in?" [**Contribution to Modern Economics**, p. 10]

Indeed, prices often **mis**-value goods as companies can gain a competitive advantage by passing costs onto society (in the form of pollution, for example, or de-skilling workers, increasing job insecurity, and so on). This externalisation of costs is actually rewarded in the market as consumers seek the lowest prices, unaware of the reasons **why** it is lower (such information cannot be gathered from looking at the price). Even if we assume that such activity is penalised by fines later, the damage is still done and cannot be undone. Indeed, the company may be able to weather the fines due to the profits it originally made by externalising costs.

And do prices **actually** reflect costs, even assuming that they accurately reflect social costs and externalities? The question of profit, the reward for owning capital and allowing others to use it, is hardly a cost in the same way as labour, resources and so on (attempts to explain profits as an equivalent sacrifice as labour have always been ridiculous and quickly dropped). When looking at prices to

evaluate efficient use for goods, you cannot actually tell by the price if this is so. Two goods may have the same price, but profit levels (perhaps under the influence of market power) may be such that one has a higher cost price than another. The price mechanism fails to indicate which uses least resources as it is influenced by market power. Indeed, as Takis Fotopoulos notes, "[i]f . . . both central planning and the market economy inevitably lead to concentrations of power, then neither the former nor the latter can produce the sort of information flows and incentives which are necessary for the best functioning of any economic system." [Towards an Inclusive Democracy, p. 252] Moreover, a good produced under a authoritarian state which represses its workforce would have a lower price than one produced in a country which allowed unions to organise and had basic human rights. The repression would force down the cost of labour, so making the good in question appear as a more "efficient" use of resources. In other words, the market can mask inhumanity as "efficiency" and actually reward that behaviour by market share.

Simply put, prices cannot be taken to reflect real costs any more that they can reflect the social expression of the valuation of goods. They are the result of a conflict waged over these goods and those that acted as their inputs (including, of course, labour). Market and social power, much more than need or resource usage, decides the issue. The inequality in the means of purchasers, in the market power of firms and in the bargaining position of labour and capital all play their part, so distorting any relationship a price may have to its costs in terms of resource use. Prices are misshapen. Little wonder Kropotkin asked whether "are we not yet bound to analyse that compound result we call price rather than to accept it as a supreme and blind ruler of our actions?" [Fields, Factories and Workshops Tomorrow, p. 71]

Von Mises argued that anyone "who wished to make calculations in regard to a complicated process of production will immediately notice whether he has worked more economically than others or not; if he finds, from reference to the exchange values obtaining in the market, that he will not be able to produce profitably, this shows that others understand how to make better use of the higher-order goods in question." [Op. Cit., pp. 97-8] However, this only shows whether someone has worked more profitably than others, not whether it is more economical. Market power automatically muddles this issue, as does the possibility of reducing the monetary cost of production by recklessly exploiting natural resources and labour, polluting, or otherwise passing costs onto others. Similarly, the issue of wealth inequality is important, for if the production of luxury goods proves more profitable than basic essentials for the poor does this show that producing the former is a better use of resources? And, of course, the key issue of the relative strength of market power between workers and capitalists plays a key role in determining "profitably."

Therefore, the claim that prices reflect real costs and so efficiency can be faulted on two levels. Moreover, without using another means of cost accounting instead of prices how can supporters of capitalism know there is a correlation between actual and price costs? One can determine whether such a correlation exists by measuring one against the other. If this cannot be done, then the claim that prices measure costs is a tautology (in that a price represents a cost and we know that it is a cost because it has a price). If it can be done, then we can calculate costs in some other sense than in market prices and so that argument that only market prices represent costs falls.

Similarly, von Mises assumes that capitalism can accurately estimate the costs of investing. Using the example of a new railroad, he asks "*[s]hould it be built at all, and if so, which out of the number of conceivable roads should be built? In a competitive and monetary economy, this question would be answered by monetary calculation. The new road will render less expensive the transport of some goods, and it may be possible to calculate whether this reduction of expense transcends that involved in the building and upkeep of the new line.*" [Op. Cit., pp. 108-9] However, this is **not** the case. An investment decision is made based on estimating **possible** future events. The new line **may** reduce transportation costs but the expected reduction may be relatively less than predicted, so causing the investment to fail. Moreover, an investment may fail while it meets a social need simply because people may need the product but cannot afford to pay for it. In other words, von Mises' example hardly shows the superiority of monetary calculation as the decision to invest under capitalism is as much a leap in the dark as it would be in a socialist system (the future is uncertain, in other words).

Lastly, Mises assumes that the market is a rational system. As O'Neil points out, "*Von Mises' earlier arguments against socialist planning turned on an assumption about commensurability. His central argument was that rational economic decision-making required a single measure on the basis of which the worth of alternative states of affairs could be calculated and compared.*" [Op. Cit., p. 115] This central assumption was unchallenged by Taylor and Lange in their defence of "socialism", meaning that from the start the debate against von Mises was defensive and based on the argument that socialist planning could mimic the market and produce results which were efficient from a capitalist point of view. Thus, no one challenged Mises' assumptions either about the centrally planned nature of socialism or about the market being a rational system. Little wonder that the debate put the state socialists on the defensive. As their system was little more than state capitalism, it is unlikely they would attack the fundamentals of capitalism (namely wage labour and centralisation).

So, is capitalism rational? Well, it does exist, but that does not prove that it is rational. The Catholic Church exists, but that shows nothing about the rationality of the institution. To answer the question, we must return to our earlier point that using prices means basing all decision making on one criterion and ignoring all others. This has seriously irrational effects, because the managers of capitalist enterprises are obliged to choose technical means of production which produce the cheapest results. All other considerations are subordinate, in particular the health and welfare of the producers and the effects on the environment. The harmful effects resulting from "*rational*" capitalist production methods have long been pointed out. For example, speed-ups, pain, stress, accidents, boredom, overwork, long hours and so on all harm the physical and mental health of those involved, while pollution, the destruction of the environment, and the exhaustion of non-renewable resources all have serious effects on both the planet and those who live on it. As E. F. Schumacher argued:

*"But what does it mean when we say that something is uneconomic? . . . [S]omething is uneconomic when it fails to earn an adequate profit in terms of money. The method of economics does not, and cannot, produce any other meaning. . . The judgement of economics . . . is an extremely **fragmentary** judgement; out of the large number of aspects which in real life have to be seen and judged together before a decision can be taken,*

economics supplies only one -- whether a money profit accrues to those who undertake it or not. [Small is Beautiful, pp. 27-8]

Schumacher stressed that *"about the fragmentary nature of the judgements of economics there can be no doubt whatever. Even with the narrow compass of the economic calculus, these judgements are necessarily and methodically narrow. For one thing, they give vastly more weight to the short than to the long term. . . [S]econd, they are based on a definition of cost which excludes all 'free goods' . . . [such as the] environment, except for those parts that have been privately appropriated. This means that an activity can be economic although it plays hell with the environment, and that a competing activity, if at some cost it protects and conserves the environment, will be uneconomic."* Moreover, *"[d]o not overlook the words 'to those who undertake it.' It is a great error to assume, for instance, that the methodology of economics is normally applied to determine whether an activity carried out by a group within society yields a profit to society as a whole."* [Op. Cit., p. 29]

To claim that prices include all these *"externalities"* is nonsense. If they did, we would not see capital moving to third-world countries with few or no anti-pollution or labour laws. At best, the *"cost"* of pollution would only be included in a price if the company was sued successfully in court for damages -- in other words, once the damage is done. Ultimately, companies have a strong interest in buying inputs with the lowest prices, regardless of **how** they are produced. As Noam Chomsky points out, *"[i]n a true capitalist society, . . . socially responsible behaviour would be penalised quickly in that competitors, lacking such social responsibility, would supplant anyone so misguided as to be concerned with something other than private benefit."* [Language and Politics, p. 301] It is reductionist accounting and its accompanying *"ethics of mathematics"* that produces the *"irrationality of rationality"* which plagues capitalism's exclusive reliance on prices (i.e. profits) to measure *"efficiency."* Moreover, the critique we have just sketched ignores the periodic crises that hit capitalist industry and economies to produce massive unemployment and social disruption -- crises that are due to subjective and objective pressures on the operation of the price mechanism (see [section C.7](#) for details).

Ironically enough, von Mises also pointed to the irrational nature of the price mechanism. He states (correctly) that there are *"extra-economic"* elements which *"monetary calculation cannot embrace"* because of *"its very nature."* He acknowledges that these *"considerations themselves can scarcely be termed irrational"* and, as examples, lists *"[i]n any place where men regard as significant the beauty of a neighbourhood or a building, the health, happiness and contentment of mankind, the honour of individuals or nations."* He states that *"they are just as much motive forces of rational conduct as are economic factors"* but they *"do not enter into exchange relationships."* [von Mises, Op. Cit., p. 99] How rational is an economic system which ignores the *"health, happiness and contentment"* of people? Or the beauty of their surroundings? Which, moreover, penalises those who take these factors into consideration? For anarchists, von Mises comments indicate well the inverted logic of capitalism. That von Mises can support a system which ignores the needs of individuals, their happiness, health, surroundings, environment and so on by *"its very nature"* says a lot (his suggestion that we assign monetary values to such dimensions [p. 100] begs the question and has plausibility only if it assumes what it is supposed to prove. Indeed, the person who would put a price on friendship simply would have no friends. They simply do not understand what friendship is and are thereby excluded from much which

is best in human life. Likewise for other "*extra-economic*" goods that individual's value, such as beautiful places, happiness, the environment and so on).

Under communist-anarchism, the decision-making system used to determine the best use of resources is not more or less "*efficient*" than market allocation, because it goes beyond the market-based concept of "*efficiency*." It does not seek to mimic the market but to do what the market fails to do. This is important, because the market is not the rational system its defenders often claim. While reducing all decisions to one common factor is, without a doubt, an easy method of decision making, it also has serious side-effects **because** of its reductionistic basis (as discussed further in the [next section](#)). As Einstein once pointed out, things should be made as simple as possible but not simplistic. The market makes decision making simplistic and generates a host of irrationalities and dehumanising effects.

Sections [I.4.4](#) and [I.4.5](#) discusses one possible framework for a communist economic decision-making process. Such a framework is necessary because "*an appeal to a necessary role for practical judgements in decision making is **not** to deny any role to general principles. Neither . . . does it deny any place for the use of technical rules and algorithmic procedures . . . Moreover, there is a necessary role for rules of thumb, standard procedures, the default procedures and institutional arrangements that can be followed unreflectively and which **reduce** the scope for **explicit** judgements comparing different states of affairs. There are limits in time, efficient use of resources and the dispersal of knowledge which require rules and institutions. Such rules and institutions can free us for space and time for reflective judgements where they matter most.*" [John O'Neil, **Op. Cit.**, pp. 117-8]

While these algorithmic procedures and guidelines can, and indeed should be, able to be calculated by hand, it is likely that computers will be extensively used to take input data and process it into a suitable format. Indeed, many capitalist companies have software which records raw material inputs and finished product into databases and spreadsheets. Such software could be the basis of a libertarian communist decision making algorithm. Of course, currently such data is submerged beneath money and does not take into account externalities and the nature of the work involved (as would be the case in an anarchist society). However, this does not limit their potential or deny that communist use of such software can be used to inform decisions.

This, we must note, indicates that communist society would use various "*aids to the mind*" to help individuals and groups to make economic decisions. This would reduce the complexity of economic decision making, by allowing different options and resources to be compared to each other. Hence the complexity of economic decision making in an economy with a multitude of goods can be reduced by the use of rational algorithmic procedures and methods to aid the process. Such tools would aid decision making, not dominate it as these decisions affect humans and the planet and should never be made automatically.

It is useful to remember that von Mises argued that it is the **complexity** of a modern economy that ensures money is required. As he put it, "*[w]ithin the narrow confines of household economy, for instance, where the father can supervise the entire economic management, it is possible to determine the*

significance of changes in the processes of production, without such aids to the mind [as monetary calculation], and yet with more or less of accuracy." However, "the mind of one man alone -- be it ever so cunning, is too weak to grasp the importance of any single one among the countless many goods of higher order. No single man can ever master all the possibilities of production, innumerable as they are, as to be in a position to make straightway evident judgements of value without the aid of some system of computation." [Op. Cit., p. 102]

That being the case, a libertarian communist society would quickly develop the means of comparing the real impact of specific *"higher order"* goods in terms of their real costs (i.e. the amount of labour, energy and raw materials used plus any social and ecological costs). As we noted above, this essential decision making information would have to be recorded and communicated in a communist society and used to evaluate different options using an agreed methods of comparison. This methods of comparison differs drastically from the price mechanism as it recognises that mindless, automatic calculation is impossible in social choices. Such choices have an unavoidable ethical and political dimension simply because they involve other human beings and the environment. As von Mises himself acknowledges, monetary calculation does not capture such dimensions. We, therefore, need to employ practical judgement in making choices aided by a full understanding of the **real** social and ecological costs involved using, of course, the appropriate *"aids to the mind."*

In addition, a decentralised system will by necessity have to compare less alternatives as local knowledge will eliminate many of the options available. As von Mises acknowledged, a *"household economy"* **can** make economic decisions without money. Being more decentralised than capitalism, a libertarian communist economy will, therefore, be able to do so as well, particularly when it uses the appropriate *"aids to the mind"* to evaluate external resources versus locally produced ones. Given that an anarchist society would be complex and integrated, such aids would be essential but, due to its decentralised nature, it need not embrace the price mechanism. It can evaluate the efficiency of its decisions by looking at the **real** costs involved to society rather than embrace the distorted system of costing explicit in the price mechanism (as Kropotkin once put it, *"if we analyse **price**"* we must *"make a distinction between its different elements"* in order to make rationale allocation and investment decisions [Op. Cit., p. 72]).

Thus, anarchists argue that von Mises' claims were wrong. Communism is viable, but only if it is libertarian communism. Economic decision making in a moneyless *"economy"* is possible. Indeed, it could be argued that von Mises' argument exposes difficulties for capitalism rather than for anarchism. Capitalist *"efficiency"* is hardly rational and for a fully human and ecological efficiency, libertarian communism is required. As two libertarian socialists point out, *"socialist society still has to be concerned with using resources efficiently and rationally, but the criteria of 'efficiency' and 'rationality' are not the same as they are under capitalism."* [Buick and Crump, Op. Cit., p. 137]

So, to claim that communism will be *"more"* efficient than capitalism or vice versa misses the point. Libertarian communism will be *"efficient"* in a totally different way and people will act in ways considered *"irrational"* only under the logic of capitalism.

I.1.3 What is wrong with markets anyway?

A lot. Markets soon result in what are termed "*market forces*," "*impersonal*" forces which ensure that the people in the economy do what is required of them in order for the economy to function. The market system, in capitalist apologetics, is presented to appear as a regime of freedom where no one forces anyone to do anything, where we "*freely*" exchange with others as we see fit. However, the facts of the matter are somewhat different, since the market often ensures that people act in ways **opposite** to what they desire or forces them to accept "*free agreements*" which they may not actually desire. Wage labour is the most obvious example of this, for, as we indicated in [section B.4](#), most people have little option but to agree to work for others.

We must stress here that not all anarchists are opposed to the market. Individualist anarchists favour it while Proudhon wanted to modify it while retaining competition. For many, the market equals capitalism. However, this is not the case as it ignores the fundamental issue of (economic) class, namely who owns the means of production. Capitalism is unique in that it is based on wage labour, i.e. a market for labour as workers do not own their own means of production and have to sell themselves to those who do. Thus it is entirely possible for a market to exist within a society and for that society **not** to be capitalist. For example, a society of independent artisans and peasants selling their product on the market would not be capitalist as workers would own and control their means of production and so wage labour (and so capitalism) would not exist. Similarly, Proudhon's competitive system of self-managed co-operatives and mutual banks would be non-capitalist (and socialist) for the same reason. Anarchists object to capitalism due to the quality of the social relationships it generates between people (i.e. it generates authoritarian ones). If these relationships are eliminated then the kinds of ownership which do so are anarchistic. Thus the issue of ownership matters only in-so-far it generates relationships of the desired kind (i.e. those based on liberty, equality and solidarity). To concentrate purely on "*markets*" or "*property*" means to ignore social relationships and the key aspect of capitalism, namely wage labour. That right-wingers do this is understandable (to hide the authoritarian core of capitalism) but why (libertarian or other) socialists should do so is less clear.

In this section of the FAQ we discuss anarchist objections to the market **as such** rather than the capitalist market. The workings of the market do have problems with them which are independent of, or made worse by, the existence of wage-labour. It is these problems which make most anarchists hostile to the market and so desire a communist-anarchist society.

So, even if we assume a mutualist or market-socialist system of competing self-managed workplaces, it's clear that market forces would soon result in many irrationalities occurring. Most obviously, operating in a market means submitting to the profit criterion. This means that however much workers might want to employ social criteria, they cannot. To ignore profitability would cause their firm to go bankrupt. Markets therefore create conditions that compel workers and consumers to decide things which are not be in their interest, for example introducing deskilling or polluting technology, longer hours, and so on. We could also point to the numerous industrial deaths and accidents which are due to market forces making it unprofitable to introduce adequate safety equipment or working conditions, (conservative

estimates for industrial deaths in the USA are between 14 000 and 25 000 per year plus over 2 million disabled), or to increased pollution and stress levels which shorten life spans.

In addition, a market-based system can result in what we have termed "*the ethics of mathematics*," where things (particularly money) become more important than people. This can have a de-humanising effect, with people becoming cold-hearted calculators who put profits before people. This can be seen in capitalism, where economic decisions are far more important than ethical ones. And such an inhuman mentality can be rewarded on the market. Merit does not "*necessarily*" breed success, and the successful do not "*necessarily*" have merit. The truth is that, in the words of Noam Chomsky, "*wealth and power tend to accrue to those who are ruthless, cunning, avaricious, self-seeking, lacking in sympathy and compassion, subservient to authority and willing to abandon principle for material gain, and so on. . . Such qualities might be just the valuable ones for a war of all against all.*" [For Reasons of State, pp. 139-140] Thorstein Veblen elaborated at length on this theme in **The Leisure Class**, a classic analysis of capitalist psychology. Needless to be said, if the market does reward such people with success it can hardly be considered as a **good** thing. A system which elevates making money to the position of the most important individual activity will obviously result in the degrading of human values and an increase in neurotic and psychotic behaviour.

Little wonder, as Alfie Kohn has argued, competition can have serious negative effects on us outside of work, with it damaging both our personal psychology and our interpersonal relationships (see his excellent book **No Contest** for details). The market can impoverish us as individuals, sabotaging self-esteem, promoting conformity, ruining relationships and making use less than what we could be. This is a problem of markets as such, not only capitalist ones.

Any market system is also marked by a continuing need to expand production and consumption. This means that market forces ensure that work continually has to expand, causing potentially destructive results for both people and the planet. Competition ensures that we can never take it easy, for as Max Stirner argued, "*[r]estless acquisition does not let us take breath, take a calm enjoyment. We do not get the comfort of our possessions. . . Hence it is at any rate helpful that we come to an agreement about human labours that they may not, as under competition, claim all our time and toil.*" [The Ego and Its Own, p. 268]

Value needs to be created, and that can only be done by labour. It is ironic that supporters of capitalism, while usually saying that "*work*" is and always will be hell, support an economic system which must continually expand that "*work*" (i.e. labour) while deskilling and automating it and those who do it. Anarchists, in contrast, argue that work need not be hell, and indeed, that when enriched by skills and self-management, can be enjoyable. We go further and argue that work need not take all our time and that **labour** (i.e. unwanted and boring work) can and must be minimised. Hence, while the "*anti-work*" capitalist submits humanity to more and more labour, the anarchist desires the liberation of "*work*" and the end of "*labour*" as a way of life.

In addition, market decisions are crucially conditioned by the purchasing power of those income groups

that can back their demands with money. The market is a continuous bidding for goods, resources, and services, with those who have the most purchasing power the winners. This means that the market system is the worst one for allocating resources when purchasing power is unequally distributed. This is why orthodox economists make the convenient assumption of a "*given distribution of income*" when they try to show that a market-based allocation of resources is the best one (for example, "*Pareto optimality*"). While a mutualist system should reduce inequality drastically, it cannot be assumed that inequalities will not increase over time. This is because inequalities in resources leads to inequalities of power on the market. Any trade or contract will benefit the powerful more than the powerless, so reinforcing and potentially increasing the inequalities and power between the parties. This could, over time, lead to a return to capitalism (as Proudhon himself noted, the "*original equality [between contractor and workmen] was bound to disappear through the advantageous position of the master and the dependence of the wage-workers.*" [**System of Economical Contradictions**, p. 201]).

With the means of life monopolised by one class, the effects of market forces and unequal purchasing power can be terrible. As Allan Engler points out, "*[w]hen people are denied access to the means of livelihood, the invisible hand of market forces does not intervene on their behalf. Equilibrium between supply and demand has no necessary connection with human need. For example, assume a country of one million people in which 900,000 are without means of livelihood. One million bushels of wheat are produced. The entire crop is sold to 100,000 people at \$10 a bushel. Supply and demand are in equilibrium, yet 900 000 people will face starvation.*" [**Apostles of Greed**, pp. 50-51] In case anyone thinks that this just happens in theory, the example of African countries hit by famine gives a classic example of this occurring in practice. There, rich landowners grow cash crops and export food to the developed nations while millions starve in their own.

Lastly, there are the distributional consequences of the market system. As markets inform by 'exit' only -- some products find a market, others do not -- 'voice' is absent. The operation of 'exit' rather than 'voice' leaves behind those without power in the marketplace. For example, the wealthy do not buy food poisoned with additives, the poor consume it. This means a division grows between two environments: one inhabited by those with wealth and one inhabited by those without it. As can be seen from the current capitalist practice of "*exporting pollution*" to developing countries, this problem can have serious ecological and social effects. So, far from the market being a "*democracy*" based on "*one dollar, one vote*," it is an oligarchy in which, for example, the "*79 000 Americans who earned the minimum wage in 1987 have the same influence [or "vote"] as Michael Milken, who 'earned' as much as all of them combined.*" [Michael Albert and Robin Hahnel, **The Political Economy of Participatory Economics**, p. 21]

In other words, markets are always biased in favour of effective demand, i.e. in favour of the demands of people with money. A market may be Pareto-optimal, but it can never (except in the imaginary abstractions of mathematical welfare economics) allocate the necessities of life to those who need them the most.

In addition, markets never internalise external costs. Two people (or companies) who strike a market-rational bargain between themselves need not consider the consequences of their bargain for other

people outside their bargain, nor the consequences for the earth. Thus market exchanges are never bilateral agreements as their effects impact on the wider society (in terms of, say, pollution, inequality and so on). The market also ignores the needs of future generations as they always discount the value of the long term future. A payment to be made 1 000 years from now (a mere speck in geological time) has a market value of virtually zero according to any commonly used discount rate. Even 50 years in the future cannot be adequately considered as competitive pressures force a short term perspective on people harmful to present and future generations, plus the ecology of the planet.

Also, markets do not reflect the values of things we do not put a price upon (as we argued in [section B.5](#)). It cannot protect wilderness, for example, simply because it requires people to turn it into property and sell it as a commodity. If you cannot afford to visit the new commodity, the market turns it into something else, no matter how much you value it. This ensures that the market cannot really provide the information necessary for rational-decision making and so resources are inefficiently allocated and we all suffer from the consequences of that.

Thus are plenty of reasons for concluding that efficiency and the market not only do not necessarily coincide, but, indeed, necessarily do not coincide. Indeed, rather than respond to individual needs, the market responds to money (more correctly, profit), which by its very nature provides a distorted indication of individual preferences (and does not take into account values which are enjoyed collectively, such as clean air, or **potentially** enjoyed, such as the wilderness a person may never visit but desires to see exist and protected).

So, for all its talk of "*invisible hands*" and "*individual freedom*," capitalism ignores the actual living individual in the economy and society. The "*individual rights*" on which capitalists' base their "*free*" system are said to be "*man's rights*," on what "*man needs*." But "*man*," after all, is only an abstraction, not a real living being. By talking about "*man*" and basing "*rights*" on what this abstraction is said to need, capitalism and statism ignore the uniqueness of each person and the conditions required to develop that uniqueness. As Max Stirner pointed out, "*[h]e who is infatuated with **Man** leaves persons out of account so far as that infatuation exists, and floats in an ideal, sacred interest. **Man**, you see, is not a person, but an ideal, a spook.*" [**The Ego and Its Own**, p. 79] And like all spooks, it requires sacrifice -- the sacrifice of individuality to hierarchy and authority.

This anti-individual biases in capitalism can be seen by its top-down nature and the newspeak used to disguise its reality. For example, there is what is called "*increasing flexibility of the labour market.*" "*Flexibility*" sounds great: rigid structures are unappealing and hardly suitable for human growth. In reality, as Noam Chomsky points out "*[f]lexibility means insecurity. It means you go to bed at night and don't know if you have a job tomorrow morning. That's called flexibility of the labour market, and any economist can explain that's a good thing for the economy, where by 'the economy' now we understand profit-making. We don't mean by 'the economy' the way people live. That's good for the economy, and temporary jobs increase flexibility. Low wages also increase job insecurity. They keep inflation low. That's good for people who have money, say, bondholders. So these all contribute to what's called a 'healthy economy,' meaning one with very high profits. Profits are doing fine. Corporate profits are*

zooming. But for most of the population, very grim circumstances. And grim circumstances, without much prospect of a future, may lead to constructive social action, but where that's lacking they express themselves in violence." [**Keeping the Rabble in Line**, pp. 283-4]

This does not mean that social anarchists propose to "*ban*" the market -- far from it. This would be impossible. What we do propose is to convince people that a profit-based market system has distinctly **bad** effects on individuals, society and the planet's ecology, and that we can organise our common activity to replace it with libertarian communism. As Max Stirner argued, "*competition. . .has a continued existence. . . [because] all do not attend to **their affair** and come to an **understanding** with each other about it. . . .Abolishing competition is not equivalent to favouring the guild. The difference is this: In the **guild** baking, etc., is the affair of the guild-brothers; in **competition**, the affair of chance competitors; in the **union**, of those who require baked goods, and therefore my affair, yours, the affair of neither guildic nor the concessionary baker, but the affair of the **united**."* [**Ego and Its Own**, p. 275]

Therefore, social anarchists do not appeal to "*altruism*" in their struggle against the de-humanising effects of the market, but rather, to egoism: the simple fact that co-operation and mutual aid is in our best interests as individuals. By co-operating and controlling "*the affairs of the united*," we can ensure a free society which is worth living in, one in which the individual is not crushed by market forces and has time to fully develop his or her individuality and uniqueness:

"Solidarity is therefore the state of being in which Man attains the greatest degree of security and wellbeing; and therefore egoism itself, that is the exclusive consideration of one's own interests, impels Man and human society towards solidarity." [Errico Malatesta, **Anarchy**, p. 28]

I.1.4 If capitalism is exploitative, then isn't socialism as well?

Some "*Libertarian*" capitalists say yes to this question, arguing that the Labour Theory of Value (LTV) does not imply socialism but what they call "*self-managed*" capitalism. This, however, is not a valid inference. The LTV can imply both socialism (selling the product of ones labour) and communism (distribution according to need). The theory is a critique of capitalism, not necessarily the basis of a socialist economy, although it **can** be considered this as well. For example, Proudhon used the LTV as the foundation of his proposals for mutual banking and co-operatives, while Robert Owen used it as the basis of his system of labour notes. Marx, on the other hand, use the LTV purely as a critique of capitalism while hoping for communism.

In other words, though a system of co-operative selling on the market (what is mistakenly termed "*self-managed*" capitalism by some) or exchanging labour-time values would not be communism, it is **not** capitalism. This is because the workers are not separated from the means of production. Therefore, right-libertarians' attempts to claim that it is capitalism are false, an example of misinformed insistence that virtually **every** economic system, bar state socialism and feudalism, is capitalist. Some libertarian Marxists (as well as Leninists) claim, similarly, that non-communist forms of socialism are also just

"*self-managed*" capitalism. Why libertarian Marxists desire to reduce the choices facing humanity to either communism or some form of capitalism is frankly strange, but also understandable because of the potential dehumanising effects of market systems seen under capitalism.

However, it could be argued that communism (based on free access and communal ownership of resources) would mean that workers are exploited by non-workers (the young, the sick, the elderly and so on). While this may reflect the sad lack of personal empathy (and so ethics) of the pro-capitalist defenders of this argument, it totally misses the point as far as communist anarchism goes. This is because of two reasons.

Firstly, "*anarchist communism . . . means voluntary communism, communism from free choice*" [A. Berkman, **ABC of Anarchism**, p. 11], which means it is not imposed on anyone but is created and practised only by those who believe in it. Therefore it would be up to the communities and syndicates to decide how they wish to distribute the products of their labour and individuals to join, or create, those that meet their ideas of right and wrong. Some may decide on equal pay, others on payment in terms of labour time, yet others on communistic associations (we have indicated elsewhere why most anarchists consider that communism would be in people's self-interest, so we will not repeat ourselves here). The important thing to realise is that co-operatives will decide what to do with their output, whether to exchange it or to distribute it freely. Hence, because it is based on free agreement, anarchist communism cannot be exploitative. Members of a co-operative which is communistic are free to leave, after all. Needless to say, the co-operatives will usually distribute their product to others within their confederation and exchange with the non-communist ones in a different manner. We say "*usually*," for in the case of emergencies like earthquakes and so forth the situation would call for mutual aid.

Secondly, the so-called "*non-workers*" have been, or will be, workers. As the noted Spanish anarchist De Santillan pointed out, "*[n]aturally, children, the aged and the sick are not considered parasites. The children will be productive when they grow up. The aged have already made their contribution to social wealth and the sick are only temporarily unproductive.*" [**After the Revolution**, p. 20] In other words, over their life time, everyone contributes to society and it so using the "*account book*" mentality of capitalism misses the point.

The reason why capitalism is exploitative is that workers **have** to agree to give the product of their labour to another (the boss) in order to be employed in the first place (see [section B.4](#)). Capitalists would not remain capitalists if their capital did not produce a profit. In libertarian communism, by contrast, the workers themselves agree to distribute part of their product to others (i.e. society as a whole, their neighbours, friends, and so forth). It is based on free agreement, while capitalism is marked by power, authority, and the firm hand of market forces. As resources are held in common, people have the option of working alone if they so desired.

Similarly, capitalism by its very nature as a "*grow or die*" system, needs to expand into new areas, meaning that unlike libertarian socialism, it will attempt to undermine and replace other social systems (usually by force, if history is any guide). As freedom cannot be given, there is no reason for a

libertarian-socialist system to expand beyond the effect of a "*good example*" on the oppressed of capitalist regimes.

C.6 Can market dominance by Big Business change?

Capital concentration, of course, does not mean that in a given market, dominance will continue forever by the same firms, no matter what. However, the fact that the companies that dominate a market can change over time is no great cause for joy (no matter what supporters of free market capitalism claim). This is because when market dominance changes between companies all it means is that **old** Big Business is replaced by **new** Big Business:

"Once oligopoly emerges in an industry, one should not assume that sustained competitive advantage will be maintained forever. . . once achieved in any given product market, oligopoly creates barriers to entry that can be overcome only by the development of even more powerful forms of business organisation that can plan and co-ordinate even more complex specialised divisions of labour." [William Lazonick, **Business Organisation and the Myth of the Market Economy**, p. 173]

Hardly a great improvement as changing the company hardly changes the impact of capital concentration or Big Business on the economy. While the faces may change, the system itself remains the same.

In a developed market, with a high degree of monopoly (i.e. high market concentration and capital costs that create barriers to entry into it), new companies can usually only enter under four conditions:

1) They have enough capital available to them to pay for set-up costs and any initial losses. This can come from two main sources, from other parts of their company (e.g. Virgin going into the cola business) or large firms from other areas/nations enter the market. The former is part of the diversification process associated with Big Business and the second is the globalisation of markets resulting from pressures on national oligopolies (see section [C.4](#)). Both of which increases competition within a given market for a period as the number of firms in its oligopolistic sector has increased. Over time, however, market forces will result in mergers and growth, increasing the degree of monopoly again.

2) They get state aid to protect them against foreign competition (e.g. the South East Asian "Tiger" economies or the 19th century US economy) - *"Historically, political strategies to develop national economies have provided critical protection and support to overcome. . . barriers to entry."* [William Lazonick, **Op. Cit.**, p. 87]

3) Demand exceeds supply, resulting in a profit level which tempts other big companies into the market or gives smaller firms already there excess profits, allowing them to expand. Demand still

plays a limiting role in even the most oligopolistic market (but this process hardly decreases barriers to entry/mobility or oligopolistic tendencies in the long run).

4) The dominant companies raise their prices too high or become complacent and make mistakes, so allowing other big firms to undermine their position in a market (and, sometimes, allow smaller companies to expand and do the same). For example, many large US oligopolies in the 1970s came under pressure from Japanese oligopolies because of this. However, as noted in section [C.4.2](#), these declining oligopolies can see their market control last for decades and the resulting market will still be dominated by oligopolies (as big firms are generally replaced by similar sized, or bigger, ones).

Usually some or all of these processes are at work at once.

Let's consider the US steel industry as an example. The 1980's saw the rise of the so-called "mini-mills" with lower capital costs. The mini-mills, a new industry segment, developed only after the US steel industry had gone into decline due to Japanese competition. The creation of Nippon Steel, matching the size of US steel companies, was a key factor in the rise of the Japanese steel industry, which invested heavily in modern technology to increase steel output by 2,216% in 30 years (5.3 million tons in 1950 to 122.8 million by 1980). By the mid 1980's, the mini-mills and imports each had a quarter of the US market, with many previously steel-based companies diversifying into new markets.

Only by investing \$9 billion to increase technological competitiveness, cutting workers wages to increase labour productivity, getting relief from stringent pollution control laws and (very importantly) the US government restricting imports to a quarter of the total home market could the US steel industry survive. The fall in the value of the dollar also helped by making imports more expensive. In addition, US steel firms became increasingly linked with their Japanese "rivals," resulting in increased centralisation (and so concentration) of capital.

Therefore, only because competition from foreign capital created space in a previously dominated market, driving established capital out, combined with state intervention to protect and aid home producers, was a new segment of the industry able to get a foothold in the local market. With many established companies closing down and moving to other markets, and once the value of the dollar fell which forced import prices up and state intervention reduced foreign competition, the mini-mills were in an excellent position to increase US market share.

This period in the US steel industry was marked by increased "co-operation" between US and Japanese companies, with larger companies the outcome. This meant, in the case of the mini-mills, that the cycle of capital formation and concentration would start again, with bigger companies driving out the smaller ones through competition.

So, while the actual companies involved may change over time, the economy as a whole will always be marked by Big Business due to the nature of capitalism. That's the way capitalism works -- profits for

the few at the expense of the many.

C.11 Doesn't Chile prove that the free market benefits everyone?

This is a common right-wing "Libertarian" argument, one which is supported by many other supporters of "free market" capitalism. Milton Friedman, for example, stated that Pinochet *"has supported a fully free-market economy as a matter of principle. Chile is an economic miracle."* [Newsweek, Jan, 1982] This viewpoint is also commonplace in the more mainstream right, with US President George Bush praising the Chilean economic record in 1990 when he visited that country.

General Pinochet was the figure-head of a military coup in 1973 against the democratically elected left-wing government led by President Allende, a coup which the CIA helped organise. Thousands of people were murdered by the forces of "law and order" during the coup and Pinochet's forces *"are conservatively estimated to have killed over 11 000 people in his first year in power."* [P. Gunson, A. Thompson, G. Chamberlain, **The Dictionary of Contemporary Politics of South America**, Routledge, 1989, p. 228]

The installed police state's record on human rights was denounced as barbaric across the world. However, we will ignore the obvious contradiction in this "economic miracle", i.e. why it almost always takes authoritarian/fascistic states to introduce "economic liberty," and concentrate on the economic facts of the free-market capitalism imposed on the Chilean people.

Working on a belief in the efficiency and fairness of the free market, Pinochet desired to put the laws of supply and demand back to work, and set out to reduce the role of the state and also cut back inflation. He, and *"the Chicago Boys"* -- a group of free-market economists -- thought what had restricted Chile's growth was government intervention in the economy -- which reduced competition, artificially increased wages, and led to inflation. The ultimate goal, Pinochet once said, was to make Chile *"a nation of entrepreneurs."*

The role of the Chicago Boys cannot be understated. They had a close relationship with the military from 1972, and according to one expert had a key role in the coup:

"In August of 1972 a group of ten economists under the leadership of de Castro began to work on the formulation of an economic programme that would replace [Allende's one]. . . In fact, the existence of the plan was essential to any attempt on the part of the armed forces to overthrow Allende as the Chilean armed forces did not have any economic plan of their own." [Silvia Bortzutzky, *"The Chicago Boys, social security and welfare in Chile"*, **The Radical Right and the Welfare State**, Howard Glennerster and James Midgley (eds.), p. 88]

It is also interesting to note that *"[a]ccording to the report of the United States Senate on covert actions*

in Chile, the activities of these economists were financed by the Central Intelligence Agency (CIA)" [Bortutzky, Op. Cit., p. 89]

Obviously some forms of state intervention were more acceptable than others.

The actual results of the free market policies introduced by the dictatorship were far less than the "miracle" claimed by Friedman and a host of other "Libertarians." The initial effects of introducing free market policies in 1975 was a shock-induced depression which resulted in national output falling by 15 percent, wages sliding to one-third below their 1970 level and unemployment rising to 20 percent. [Elton Rayack, **Not so Free to Choose**, p. 57] This meant that, in per capita terms, Chile's GDP only increased by 1.5% per year between 1974-80. This was considerably less than the 2.3% achieved in the 1960's. The average growth in GDP was 1.5% per year between 1974 and 1982, which was lower than the average Latin American growth rate of 4.3% and lower than the 4.5% of Chile in the 1960's. Between 1970 and 1980, per capita GDP grew by only 8%, while for Latin America as a whole, it increased by 40%. Between the years 1980 and 1982 during which all of Latin America was adversely affected by depression conditions, per capita GDP fell by 12.9 percent, compared to a fall of 4.3 percent for Latin America as a whole. [**Op. Cit.**, p. 64]

In 1982, after 7 years of free market capitalism, Chile faced yet another economic crisis which, in terms of unemployment and falling GDP was even greater than that experienced during the terrible shock treatment of 1975. Real wages dropped sharply, falling in 1983 to 14 percent below what they had been in 1970. Bankruptcies skyrocketed, as did foreign debt and unemployment. [**Op. Cit.**, p. 69] By 1983, the Chilean economy was devastated and it was only by the end of 1986 that Gross Domestic Product per capita (barely) equalled that of 1970. [Thomas Skidmore and Peter Smith, *"The Pinochet Regime"*, pp. 137-138, **Modern Latin America**]

Faced with this massive collapse of a *"free market regime designed by principled believers in a free market"* (to use Milton Friedman's words from an address to the "Smith Centre," a conservative Think Tank at Cal State entitled *"Economic Freedom, Human Freedom, Political Freedom"*) the regime organised a massive bailout. The "Chicago Boys" resisted this measure until the situation became so critical that they could not avoid it. The IMF offered loans to Chile to help it out of the mess its economic policies had helped create, but under strict conditions. The total bailout cost 3 per cent of Chile's GNP for three years, a cost which was passed on to the taxpayers. This follows the usual pattern of "free market" capitalism -- market discipline for the working class, state aid for the elite. During the "miracle," the economic gains had been privatised; during the crash the burden for repayment was socialised.

The Pinochet regime **did** reduce inflation, from around 500% at the time of the CIA-backed coup (given that the US undermined the Chilean economy -- *"make the economy scream"*, Richard Helms, the director of the CIA -- high inflation would be expected), to 10% by 1982. From 1983 to 1987, it fluctuated between 20 and 31%. The advent of the "free market" led to reduced barriers to imports *"on the ground the quotas and tariffs protected inefficient industries and kept prices artificially high. The*

result was that many local firms lost out to multinational corporations. The Chilean business community, which strongly supported the coup in 1973, was badly affected." [Skidmore and Smith, **Op. Cit.**]

The decline of domestic industry had cost thousands of better-paying jobs. The ready police repression made strikes and other forms of protest both impractical and dangerous. According to a report by the Roman Catholic Church 113 protesters had been killed during social protest against the economic crisis of the early 1980s, with several thousand detained for political activity and protests between May 1983 and mid-1984. Thousands of strikers were also fired and union leaders jailed. [Rayack, **Op. Cit.**, p. 70] The law was also changed to reflect the power property owners have over their wage slaves and the *"total overhaul of the labour law system [which] took place between 1979 and 1981. . . aimed at creating a perfect labour market, eliminating collective bargaining, allowing massive dismissal of workers, increasing the daily working hours up to twelve hours and eliminating the labour courts."* [Silvia Borzutzky, **Op. Cit.**, p. 91] Little wonder, then, that this favourable climate for business operations resulted in generous lending by international finance institutions.

By far the hardest group hit was the working class, particularly the urban working class. By 1976, the third year of Junta rule, real wages had fallen to 35% below their 1970 level. It was only by 1981 that they has risen to 97.3% of the 1970 level, only to fall again to 86.7% by 1983. Unemployment, excluding those on state make-work programmes, was 14.8% in 1976, falling to 11.8% by 1980 (this is still double the average 1960's level) only to rise to 20.3% by 1982. [Rayack, **Op. Cit.**, p. 65]. Unemployment (including those on government make-work programmes) had risen to a third of the labour force by mid-1983. By 1986, per capita consumption was actually 11% lower than the 1970 level. [Skidmore and Smith, **Op. Cit.**] Between 1980 and 1988, the real value of wages grew only 1.2 percent while the real value of the minimum wage declined by 28.5 percent. During this period, urban unemployment averaged 15.3 percent per year. [Silvia Bortzutzky, **Op. Cit.**, p. 96] Even by 1989 the unemployment rate was still at 10% (the rate in 1970 was 5.7%) and the real wage was still 8% lower than in 1970. Between 1975 and 1989, unemployment averaged 16.7%. In other words, after nearly 15 years of free market capitalism, real wages had still not exceeded their 1970 levels and unemployment was still higher. As would be expected in such circumstances the share of wages in national income fell from 42.7% in 1970 to 33.9% in 1993. Given that high unemployment is often attributed by the right to strong unions and other labour market "imperfections," these figures are doubly significant as the Chilean regime, as noted above, reformed the labour market to improve its "competitiveness."

Another consequence of Pinochet's neo-classical monetarist policies *"was a contraction of demand, since workers and their families could afford to purchase fewer goods. The reduction in the market further threatened the business community, which started producing more goods for export and less for local consumption. This posed yet another obstacle to economic growth and led to increased concentration of income and wealth in the hands of a small elite."* [Skidmore and Smith, **Op. Cit.**]

It is the increased wealth of the elite that we see the true "miracle" of Chile. According to one expert in the Latin American neo-liberal revolutions, the elite *"had become massively wealthy under Pinochet"* and when the leader of the Christian Democratic Party returned from exile in 1989 he said that economic

growth that benefited the top 10 per cent of the population had been achieved (Pinochet's official institutions agreed). [Duncan Green, **The Silent Revolution**, p. 216, Noam Chomsky, **Deterring Democracy**, p. 231] In 1980, the richest 10% of the population took in 36.5% of the national income. By 1989, this had risen to 46.8%. By contrast, the bottom 50% of income earners saw their share fall from 20.4% to 16.8% over the same period. Household consumption followed the same pattern. In 1970, the top 20% of households had 44.5% of consumption. This rose to 51% in 1980 and to 54.6% in 1989. Between 1970 and 1989, the share going to the other 80% fell. The poorest 20% of households saw their share fall from 7.6% in 1970 to 4.4% in 1989. The next 20% saw their share fall from 11.8% to 8.2%, and middle 20% share fell from 15.6% to 12.7%. The next 20% share their share of consumption fall from 20.5% to 20.1%.

Thus the wealth created by the Chilean economy in during the Pinochet years did **not** "trickle down" to the working class (as claimed would happen by "free market" capitalist dogma) but instead accumulated in the hands of the rich. As in the UK and the USA, with the application of "trickle down economics" there was a vast skewing of income distribution in favour of the already-rich. That is, there has been a 'trickle-up' (or rather, a **flood** upwards). Which is hardly surprising, as exchanges between the strong and weak will favour the former (which is why anarchists support working class organisation and collective action to make us stronger than the capitalists).

In the last years of Pinochet's dictatorship, the richest 10 percent of the rural population saw their income rise by 90 per cent between 1987 and 1990. The share of the poorest 25 per cent fell from 11 per cent to 7 per cent. [Duncan Green, **Op. Cit.**, p. 108] The legacy of Pinochet's social inequality could still be found in 1993, with a two-tier health care system within which infant mortality is 7 per 1000 births for the richest fifth of the population and 40 per 1000 for the poorest 20 per cent. [**Ibid.**, p. 101]

Per capita consumption fell by 23% from 1972-87. The proportion of the population below the poverty line (the minimum income required for basic food and housing) increased from 20% to 44.4% between 1970 and 1987. Per capita health care spending was more than halved from 1973 to 1985, setting off explosive growth in poverty-related diseases such as typhoid, diabetes and viral hepatitis. On the other hand, while consumption for the poorest 20% of the population of Santiago dropped by 30%, it rose by 15% for the richest 20%. [Noam Chomsky, **Year 501**, pp. 190-191] The percentage of Chileans without adequate housing increased from 27 to 40 percent between 1972 and 1988, despite the claims of the government that it would solve homelessness via market friendly policies.

In the face of these facts, only one line of defence is possible on the Chilean "Miracle" -- the level of economic growth. While the share of the economic pie may have dropped for most Chileans, the right argue that the high economic growth of the economy meant that they were receiving a smaller share of a bigger pie. We will ignore the well documented facts that the **level** of inequality, rather than absolute levels of standards of living, has most effect on the health of a population and that ill-health is inversely correlated with income (i.e. the poor have worse health than the rich). We will also ignore other issues related to the distribution of wealth, and so power, in a society (such as the free market re-enforcing and increasing inequalities via "free exchange" between strong and weak parties, as the terms of any exchange will be skewed in favour of the stronger party, an analysis which the Chilean experience

provides extensive evidence for with its "competitive" and "flexible" labour market). In other words, growth without equality can have damaging effects which are not, and cannot be, indicated in growth figures.

So we will consider the claim that the Pinochet regime's record on growth makes it a "miracle" (as nothing else could). However, when we look at the regime's growth record we find that it is hardly a "miracle" at all -- the celebrated economic growth of the 1980s must be viewed in the light of the two catastrophic recessions which Chile suffered in 1975 and 1982. As Edward Herman points out, this growth was *"regularly exaggerated by measurements from inappropriate bases (like the 1982 trough)."* [**The Economics of the Rich**]

This point is essential to understand the actual nature of Chile's "miracle" growth. For example, supporters of the "miracle" pointed to the period 1978 to 1981 (when the economy grew at 6.6 percent a year) or the post 1982- 84 recession up-swing,. However, this is a case of "lies, damn lies, and statistics" as it does not take into account the catching up an economy goes through as it leaves a recession. During a recovery, laid-off workers go back to work and the economy experiences an increase in growth due to this. This means that the deeper the recession, the higher the subsequent growth in the up-turn. So to see if Chile's economic growth was a miracle and worth the decrease in income for the many, we need to look at whole business cycle, rather than for the upturn. If we do this we find that Chile had the second worse rate of growth in Latin America between 1975 and 1980. The average growth in GDP was 1.5% per year between 1974 and 1982, which was lower than the average Latin American growth rate of 4.3% and lower than the 4.5% of Chile in the 1960's.

Looking at the entire Pinochet era we discover that only by 1989 -- 14 years into the free-market policies - did per capita output climb back up to the level of 1970. Between 1970 and 1990, Chile's total GDP grew by a decidedly average 2% a year. Needless to say, these years also include the Allende period and the aftermath of the coup and so, perhaps, this figure presents a false image of the regime's record. If we look at the 1981-90 period to (i.e. during the height of Pinochet's rule, beginning 6 years after the start of the Chilean "Miracle"), the figure is **worse** with the growth rate in GDP just 1.84% a year. This was slower than Chile during the 1950s (4%) or the 1960s (4.5%). Indeed, if we take population increase into account, Chile saw a per capita GDP growth of just 0.3% a year between 1981 and 1990 (in comparison, the UK GDP per capita grew by 2.4% during the same period and the USA by 1.9%).

Thus the growth "miracles" refer to recoveries from depression-like collapses, collapses that can be attributed in large part to the free- market policies imposed on Chile! Overall, the growth "miracle" under Pinochet turns out to be non-existent. The full time frame illustrates Chile's lack of significant economic and social process between 1975 and 1989. Indeed, the economy was characterised by instability rather than real growth. The high levels of growth during the boom periods (pointed to by the right as evidence of the "miracle") barely made up for the losses during the bust periods.

Similar comments are possible in regards to the privatised pension System, regarded by many as a success and a model for other countries. However, on closer inspection this system shows its weaknesses

-- indeed, it can be argued that the system is only a success for those companies making extensive profits from it (administration costs of the Chilean system are almost 30% of revenues, compared to 1% for the U.S. Social Security system [Doug Henwood, **Wall Street**, p. 305]). For working people, it is a disaster. According to SAFP, the government agency which regulates the system, 96% of the known workforce were enrolled in February 1995, but 43.4% of these were not adding to their funds. Perhaps as many as 60% do not contribute regularly (given the nature of the labour market, this is unsurprising). Unfortunately, regular contributions are required to receive full benefits. Critics argue that only 20% of contributors will actually receive good pensions.

It is interesting to note that when this programme was introduced, the armed forces and police were allowed to keep their own generous public plans. If the plans **were** as good as their supporters claim, you would think that those introducing them would have joined them. Obviously what was good enough for the masses were not suitable for the rulers.

The impact on individuals extended beyond purely financial considerations, with the Chilean labour force *"once accustomed to secure, unionised jobs [before Pinochet] . . . [being turned] into a nation of anxious individualists . . . [with] over half of all visits to Chile's public health system involv[ing] psychological ailments, mainly depression. 'The repression isn't physical any more, it's economic - feeding your family, educating your child,' says Maria Pena, who works in a fishmeal factory in Concepcion. 'I feel real anxiety about the future', she adds, 'They can chuck us out at any time. You can't think five years ahead. If you've got money you can get an education and health care; money is everything here now.'"* [Duncan Green, **Op. Cit.**, p. 96]

Little wonder, then, that *"adjustment has created an atomised society, where increased stress and individualism have damaged its traditionally strong and caring community life. . . suicides have increased threefold between 1970 and 1991 and the number of alcoholics has quadrupled in the last 30 years . . . [and] family breakdowns are increasing, while opinion polls show the current crime wave to be the most widely condemned aspect of life in the new Chile. 'Relationships are changing,' says Betty Bizamar, a 26-year-old trade union leader. 'People use each other, spend less time with their family. All they talk about is money, things. True friendship is difficult now.'"* [**Ibid.**, p. 166]

The experiment with free market capitalism also had serious impacts for Chile's environment. The capital city of Santiago became one of *"the most polluted cities in the world"* due the free reign of market forces. [Nathaniel Nash, cited by Noam Chomsky, **Year 501**, p. 190] With no environmental regulation there is general environmental ruin and water supplies have severe pollution problems. [Noam Chomsky, **Ibid.**] With the bulk of the country's experts being based on the extraction and low processing of natural resources, eco-systems and the environment have been plundered in the name of profit and property. The depletion of natural resources, particularly in forestry and fishing, is accelerating due to the self-interested behaviour of a few large firms looking for short term profit.

All in all, the experience of Chile under Pinochet and its "economic miracle" indicates that the costs involved in creating a free market capitalist regime are heavy, at least for the majority. Rather than being

transitional, these problems have proven to be structural and enduring in nature, as the social, environmental, economic and political costs become embedded into society. The murky side of the Chilean "miracle" is simply not reflected in the impressive macroeconomic indicators used to market "free market" capitalism, indicators themselves subject to manipulation as we have seen.

Since Chile has become (mostly) a democracy (with the armed forces still holding considerable influence) some movement towards economic reforms have begun and been very successful. Increased social spending on health, education and poverty relief has occurred since the end of the dictatorship and has lifted over a million Chileans out of poverty between 1987 and 1992 (the poverty rate has dropped from 44.6% in 1987 to 23.2% in 1996, although this is still higher than in 1970). However, inequality is still a major problem as are other legacies from the Pinochet era, such as the nature of the labour market, income insecurity, family separations, alcoholism, and so on.

Chile has moved away from Pinochet's "free-market" model in other ways too. In 1991, Chile introduced a range of controls over capital, including a provision for 30% of all non-equity capital entering Chile to be deposited without interest at the central bank for one year. This reserve requirement - known locally as the encaje - amounts to a tax on capital flows that is higher the shorter the term of the loan.

As William Greider points out, Chile *"has managed in the last decade to achieve rapid economic growth by abandoning the pure free-market theory taught by American economists and emulating major elements of the Asian strategy, including forced savings and the purposeful control of capital. The Chilean government tells foreign investors where they may invest, keeps them out of certain financial assets and prohibits them from withdrawing their capital rapidly."* [**One World, Ready or Not**, p. 280]

Thus the Chilean state post-Pinochet has violated its "free market" credentials, in many ways, very successfully too. Thus the claims of free-market advocates that Chile's rapid growth in the 1990s is evidence for their model are false (just as their claims concerning South-East Asia also proved false, claims conveniently forgotten when those economies went into crisis). Needless to say, Chile is under pressure to change its ways and conform to the dictates of global finance. In 1998, Chile eased its controls, following heavy speculative pressure on its currency, the peso.

So even the neo-liberal jaguar has had to move away from a purely free market approach on social issues and the Chilean government has had to intervene into the economy in order to start putting back together the society ripped apart by market forces and authoritarian government.

So, for all but the tiny elite at the top, the Pinochet regime of "economic liberty" was a nightmare. Economic "liberty" only seemed to benefit one group in society, an obvious "miracle." For the vast majority, the "miracle" of economic "liberty" resulted, as it usually does, in increased poverty, pollution, crime and social alienation. The irony is that many right-wing "libertarians" point to it as a model of the benefits of the free market.

C.11.1 But didn't Pinochet's Chile prove that "economic

freedom is an indispensable means toward the achievement of political freedom"?

Pinochet did introduce free-market capitalism, but this meant real liberty only for the rich. For the working class, "economic liberty" did not exist, as they did not manage their own work nor control their workplaces and lived under a fascist state.

The liberty to take economic (never mind political) action in the forms of forming unions, going on strike, organising go-slows and so on was severely curtailed by the very likely threat of repression. Of course, the supporters of the Chilean "Miracle" and its "economic liberty" did not bother to question how the suppression of political liberty effected the economy or how people acted within it. They maintained that the repression of labour, the death squads, the fear installed in rebel workers could be ignored when looking at the economy. But in the real world, people will put up with a lot more if they face the barrel of a gun than if they do not.

The claim that "economic liberty" existed in Chile makes sense only if we take into account that there was only **real** liberty for one class. The bosses may have been "left alone" but the workers were not, unless they submitted to authority (capitalist or state). Hardly what most people would term as "liberty."

As far as political liberty goes, it was only re-introduced once it was certain that it could not be used by ordinary people. As Cathy Scheider notes, "economic liberty" has resulted in most Chileans having

"little contact with other workers or with their neighbours, and only limited time with their family. Their exposure to political or labour organisations is minimal. . . they lack either the political resources or the disposition to confront the state. The fragmentation of opposition communities has accomplished what brute military repression could not. It has transformed Chile, both culturally and politically, from a country of active participatory grassroots communities, to a land of disconnected, apolitical individuals. The cumulative impact of this change is such that we are unlikely to see any concerted challenge to the current ideology in the near future." [Report on the Americas, (NACLA) XXVI, 4/4/93]

In such circumstances, political liberty can be re-introduced, as no one is in a position to effectively use it. In addition, Chileans live with the memory that challenging the state in the near past resulted in a fascist dictatorship murdering thousands of people as well as repeated and persistent violations of human rights by the junta, not to mention the existence of "anti-Marxist" death squads -- for example in 1986 "Amnesty International accused the Chilean government of employing death squads." [P. Gunson, A. Thompson, G. Chamberlain, **Op. Cit.**, p. 86] According to one Human Rights group, the Pinochet regime was responsible for 11,536 human rights violations between 1984 and 1988 alone. [Calculation of "Comite Nacional de Defensa do los Derechos del Pueblo," reported in **Fortin**, September 23, 1988]

These facts that would have a strongly deterrent effect on people contemplating the use of political

liberty to actually **change** the status quo in ways that the military and economic elites did not approve of. In addition, it would make free speech, striking and other forms of social action almost impossible, thus protecting and increasing the power, wealth and authority of the employer over their wage slaves. The claim that such a regime was based on "economic liberty" suggests that those who make such claims have no idea what liberty actually is.

As Kropotkin pointed out years ago, *"freedom of press. . . and all the rest, are only respected if the people do not make use of them against the privileged classes. But the day the people begin to take advantage of them to undermine those privileges, then the so-called liberties will be cast overboard."* [Words of a Rebel, p. 42] Chile is a classic example of this.

Moreover, post-Pinochet Chile is not your typical "democracy." Pinochet is a senator for life, for example, and he has appointed one third of the senate (who have veto power - and the will to use it - to halt efforts to achieve changes that the military do not like). In addition, the threat of military intervention is always at the forefront of political discussions. This was seen in 1998, when Pinochet was arrested in Britain in regard of a warrant issued by a Spanish Judge for the murders of Spanish citizens during his regime. Commentators, particularly those on the right, stressed that Pinochet's arrest could undermine Chile's "fragile democracy" by provoking the military. In other words, Chile was only a democracy in-so-far as the military let it be. Of course, few commentators acknowledged the fact that this meant that Chile was not, in fact, a democracy after all. Needless to say, Milton Friedman considers Chile to have "political freedom" now.

It is interesting to note that the leading expert of the Chilean "economic miracle" (to use Milton Friedman's words) did not consider that political liberty could lead to "economic liberty" (i.e. free market capitalism). According to Sergio de Castro, the architect of the economic programme Pinochet imposed, fascism was required to introduce "economic liberty" because:

"it provided a lasting regime; it gave the authorities a degree of efficiency that it was not possible to obtain in a democratic regime; and it made possible the application of a model developed by experts and that did not depend upon the social reactions produced by its implementation." [quoted by Silvia Bortzutzky, *The Chicago Boys, social security and welfare in Chile*, **The Radical Right and the Welfare State**, Howard Glennerster and James Midgley (eds.), p. 90]

In other words, fascism was an ideal political environment to introduce "economic liberty" **because** it had destroyed political liberty. Perhaps we should conclude that the denial of political liberty is both necessary and sufficient in order to create (and preserve) "free market" capitalism? And perhaps to create a police state in order to control industrial disputes, social protest, unions, political associations, and so on, is no more than to introduce the minimum force necessary to ensure that the ground rules the capitalist market requires for its operation are observed?

As Brian Barry argues in relation to the Thatcher regime in Britain which was also heavily influenced by

the ideas of "free market" capitalists like Milton Friedman and Frederick von Hayek, perhaps it is:

*"Some observers claim to have found something paradoxical in the fact that the Thatcher regime combines liberal individualist rhetoric with authoritarian action. But there is no paradox at all. Even under the most repressive conditions . . . people seek to act collectively in order to improve things for themselves, and it requires an enormous exercise of brutal power to fragment these efforts at organisation and to force people to pursue their interests individually. . . left to themselves, people will inevitably tend to pursue their interests through collective action - in trade unions, tenants' associations, community organisations and local government. Only the pretty ruthless exercise of central power can defeat these tendencies: hence the common association between individualism and authoritarianism, well exemplified in the fact that the countries held up as models by the free-marketers are, without exception, authoritarian regimes" ["The Continuing Relevance of Socialism", in **Thatcherism**, edited Robert Skidelsky, p. 146]*

Little wonder, then, that Pinochet's regime was marked by authoritarianism, terror and rule by savants. Indeed, *"[t]he Chicago-trained economists emphasised the scientific nature of their programme and the need to replace politics by economics and the politicians by economists. Thus, the decisions made were not the result of the will of the authority, but they were determined by their scientific knowledge. The use of the scientific knowledge, in turn, would reduce the power of government since decisions will be made by technocrats and by the individuals in the private sector."* [Silvia Borzutzky, **Op. Cit.**, p. 90]

Of course, turning authority over to technocrats and private power does not change its nature - only who has it. Pinochet's regime saw a marked shift of governmental power away from protection of individual rights to a protection of capital and property rather than an abolition of that power altogether. As would be expected, only the wealthy benefited. The working class were subjected to attempts to create a "perfect labour market" - and only terror can turn people into the atomised commodities such a market requires.

Perhaps when looking over the nightmare of Pinochet's regime we should ponder these words of Bakunin in which he indicates the negative effects of running society by means of science books and "experts":

"human science is always and necessarily imperfect. . . were we to force the practical life of men - collective as well as individual - into rigorous and exclusive conformity with the latest data of science, we would thus condemn society as well as individuals to suffer martyrdom on a Procrustean bed, which would soon dislocate and stifle them, since life is always an infinitely greater thing than science." [**The Political Philosophy of Bakunin**, p. 79]

The Chilean experience of rule by free market ideologues prove Bakunin's points beyond doubt. Chilean society was forced onto the Procrustean bed by the use of terror and life was forced to conform to the

assumptions found in economics textbooks. And as we proved in the last section, only those with power or wealth did well out of the experiment.

C.12 Doesn't Hong Kong show the potentials of "free market" capitalism?

Given the general lack of laissez-faire in the world, examples to show the benefits of free market capitalism are few and far between. However, Hong Kong is often pointed to as an example of the power of capitalism and how a "pure" capitalism will benefit all.

It is undeniable that the figures for Hong Kong's economy are impressive. Per-capita GDP by end 1996 should reach US\$ 25,300, one of the highest in Asia and higher than many western nations. Enviably tax rates - 16.5% corporate profits tax, 15% salaries tax. In the first 5 years of the 1990's Hong Kong's economy grew at a tremendous rate -- nominal per capita income and GDP levels (where inflation is not factored in) almost doubled. Even accounting for inflation, growth was brisk. The average annual growth rate in real terms of total GDP in the 10 years to 1995 was six per cent, growing by 4.6 per cent in 1995.

However, looking more closely, we find a somewhat different picture than that painted by those claim it as an example of the wonders of free market capitalism (for the example of Chile, see section [C.11](#)).

Firstly, like most examples of the wonders of a free market, it is not a democracy, it was a relatively liberal colonial dictatorship run from Britain. But political liberty does not rate highly with many supporters of laissez-faire capitalism (such as right-libertarians, for example). Secondly, the government owns all the land, which is hardly capitalistic, and the state has intervened into the economy many times (for example, in the 1950s, one of the largest public housing schemes in history was launched to house the influx of about 2 million people fleeing Communist China). Thirdly, Hong Kong is a city state and cities have a higher economic growth rate than regions (which are held back by large rural areas). Fourthly, according to an expert in the Asian Tiger economies, *"to conclude . . . that Hong Kong is close to a free market economy is misleading."* [Robert Wade, **Governing the Market**, p. 332]

Wade notes that:

"Not only is the economy managed from outside the formal institutions of government by the informal coalition of peak private economic organisations [notably the major banks and trading companies, which are closely linked to the life-time expatriates who largely run the government. This provides a "point of concentration" to conduct negotiations in line with an implicit development strategy], but government itself also has available some unusual instruments for influencing industrial activity. It owns all the land. . . It controls rents in part of the public housing market and supplies subsidised public housing to roughly half the population, thereby helping to keep down the cost of labour. And its ability to increase or decrease the flow of immigrants from China also gives it a way of affecting labour costs." [Ibid.]

Wade notes that *"its economic growth is a function of its service role in a wider regional economy, as entrepot trader, regional headquarters for multinational companies, and refuge for nervous money."* [Op. Cit., p. 331]. In other words, an essential part of its success is that it gets surplus value produced elsewhere in the world. Handling other people's money is a sure-fire way of getting rich (see Henwood's **Wall Street** to get an idea of the sums involved) and this will have a nice impact on per-capita income figures (as will selling goods produced sweat-shops in dictatorships like China).

By 1995, Hong Kong was the world's 10th largest exporter of services with the industry embracing everything from accounting and legal services, insurance and maritime to telecommunications and media. The contribution of the services sectors as a whole to GDP increased from 60 per cent in 1970 to 83 per cent in 1994. Manufacturing industry has moved to low wage countries such as southern China (by the end of the 1970's, Hong Kong's manufacturing base was less competitive, facing increasing costs in land and labour -- in other words, workers were starting to benefit from economic growth and so capital moved elsewhere). The economic reforms introduced by Deng Xiaoping in southern China in 1978 were important, as this allowed capital access to labour living under a dictatorship (just as American capitalists invested heavily in Nazi Germany -- labour rights were null, profits were high). It is estimated about 42,000 enterprises in the province have Hong Kong participation and 4,000,000 workers (nine times larger than the territory's own manufacturing workforce) are now directly or indirectly employed by Hong Kong companies. In the late 1980's Hong Kong trading and manufacturing companies began to expand further afield than just southern China. By the mid 1990's they were operating across Asia, in Eastern Europe and Central America.

The gradual shift in economic direction to a more service-oriented economy has stamped Hong Kong as one of the world's foremost financial centres. This highly developed sector is served by some 565 banks and deposit-taking companies from over 40 countries, including 85 of the world's top 100 in terms of assets. In addition, it is the 8th largest stock market in the world (in terms of capitalisation) and the 2nd largest in Asia.

Therefore it is pretty clear that Hong Kong does not really show the benefits of "free market" capitalism. Wade indicates that we can consider Hong Kong as a *"special case or as a less successful variant of the authoritarian-capitalist state."* [Op. Cit., p. 333] Its success lies in the fact that it has access to the surplus value produced elsewhere in the world (particularly that from the workers under the dictatorship in China and from the stock market) which gives its economy a nice boost.

Given that everywhere cannot be such a service provider, it does not provide much of an indication of how "free market" capitalism would work in, say, the United States. And as there is in fact extensive (if informal) economic management and that the state owns all the land and subsidises rent and health care, how can it be even considered an example of "capitalism in action"?

F.2 What do "anarcho"-capitalists mean by "freedom"?

For "anarcho"-capitalists, the concept of freedom is limited to the idea of "*freedom from*." For them, freedom means simply freedom from the "*initiation of force*," or the "*non-aggression against anyone's person and property*." [Murray Rothbard, **For a New Liberty**, p. 23] The notion that real freedom must combine both freedom "*to*" **and** freedom "*from*" is missing in their ideology, as is the social context of the so-called freedom they defend.

Before starting, it is useful to quote Alan Haworth when he notes that "*[i]n fact, it is surprising how little close attention the concept of freedom receives from libertarian writers. Once again **Anarchy, State, and Utopia** is a case in point. The word 'freedom' doesn't even appear in the index. The word 'liberty' appears, but only to refer the reader to the 'Wilt Chamberlain' passage. In a supposedly 'libertarian' work, this is more than surprising. It is truly remarkable.*" [**Anti-Libertarianism**, p. 95]

Why this is the case can be seen from how the "anarcho"-capitalist defines freedom.

In a right-libertarian or "anarcho"-capitalist society, freedom is considered to be a product of property. As Murray Rothbard puts it, "*the libertarian defines the concept of 'freedom' or 'liberty'. . . [as a] condition in which a person's ownership rights in his body and his legitimate material property rights are not invaded, are not aggressed against. . . . Freedom and unrestricted property rights go hand in hand.*" [**Op. Cit.**, p.41]

This definition has some problems, however. In such a society, one cannot (legitimately) do anything with or on another's property if the owner prohibits it. This means that an individual's only **guaranteed** freedom is determined by the amount of property that he or she owns. This has the consequence that someone with no property has no guaranteed freedom at all (beyond, of course, the freedom not to be murdered or otherwise harmed by the deliberate acts of others). In other words, a distribution of property is a distribution of freedom, as the right-libertarians themselves define it. It strikes anarchists as strange that an ideology that claims to be committed to promoting freedom entails the conclusion that some people should be more free than others. However, this is the logical implication of their view, which raises a serious doubt as to whether "anarcho"-capitalists are actually interested in freedom.

Looking at Rothbard's definition of "liberty" quoted above, we can see that freedom is actually no longer considered to be a fundamental, independent concept. Instead, freedom is a derivative of something more fundamental, namely the "*legitimate rights*" of an individual, which are identified as property rights. In other words, given that "anarcho"-capitalists and right libertarians in general consider the right to property as "absolute," it follows that freedom and property become one and the same. This suggests an alternative name for the right Libertarian, namely "**Propertarian**." And, needless to say, if we do not accept the right-libertarians' view of what constitutes "legitimate" "rights," then their claim to be

defenders of liberty is weak.

Another important implication of this "liberty as property" concept is that it produces a strangely alienated concept of freedom. Liberty, as we noted, is no longer considered absolute, but a derivative of property -- which has the important consequence that you can "sell" your liberty and still be considered free by the ideology. This concept of liberty (namely "liberty as property") is usually termed "self-ownership." But, to state the obvious, I do not "own" myself, as if were an object somehow separable from my subjectivity -- I **am** myself. However, the concept of "self-ownership" is handy for justifying various forms of domination and oppression -- for by agreeing (usually under the force of circumstances, we must note) to certain contracts, an individual can "sell" (or rent out) themselves to others (for example, when workers sell their labour power to capitalists on the "free market"). In effect, "self-ownership" becomes the means of justifying treating people as objects -- ironically, the very thing the concept was created to stop! As L. Susan Brown notes, "*[a]t the moment an individual 'sells' labour power to another, he/she loses self-determination and instead is treated as a subjectless instrument for the fulfilment of another's will.*" [**The Politics of Individualism**, p. 4]

Given that workers are paid to obey, you really have to wonder which planet Murray Rothbard is on when he argues that a person's "*labour service is alienable, but his will is not*" and that he [sic!] "*cannot alienate his will, more particularly his control over his own mind and body.*" [**The Ethics of Liberty**, p. 40, p. 135] He contrasts private property and self-ownership by arguing that "*[a]ll physical property owned by a person is alienable . . . I can give away or sell to another person my shoes, my house, my car, my money, etc. But there are certain vital things which, in natural fact and in the nature of man, are inalienable . . . [his] will and control over his own person are inalienable.*" [**Op. Cit.**, pp. 134-5]

But "*labour services*" are unlike the private possessions Rothbard lists as being alienable. As we argued in section B.1 ("[Why do anarchists oppose hierarchy](#)") a person's "*labour services*" and "*will*" cannot be divided -- if you sell your labour services, you also have to give control of your body and mind to another person! If a worker does not obey the commands of her employer, she is fired. That Rothbard denies this indicates a total lack of common-sense. Perhaps Rothbard will argue that as the worker can quit at any time she does not alienate their will (this seems to be his case against slave contracts -- see [section F.2.6](#)). But this ignores the fact that between the signing and breaking of the contract and during work hours (and perhaps outside work hours, if the boss has mandatory drug testing or will fire workers who attend union or anarchist meetings or those who have an "unnatural" sexuality and so on) the worker **does** alienate his will and body. In the words of Rudolf Rocker, "*under the realities of the capitalist economic form . . . there can be no talk of a 'right over one's own person,' for that ends when one is compelled to submit to the economic dictation of another if he does not want to starve.*" [**Anarcho-Syndicalism**, p. 17]

Ironically, the rights of property (which are said to flow from an individual's self-ownership of themselves) becomes the means, under capitalism, by which self-ownership of non-property owners is denied. The foundational right (self-ownership) becomes denied by the derivative right (ownership of things). Under capitalism, a lack of property can be just as oppressive as a lack of legal rights because of

the relationships of domination and subjection this situation creates.

So Rothbard's argument (as well as being contradictory) misses the point (and the reality of capitalism). Yes, **if** we define freedom as "*the absence of coercion*" then the idea that wage labour does not restrict liberty is unavoidable, but such a definition is useless. This is because it hides structures of power and relations of domination and subordination. As Carole Pateman argues, "*the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself. . . To sell command over the use of oneself for a specified period . . . is to be an unfree labourer.*" [**The Sexual Contract**, p. 151]

In other words, contracts about property in the person inevitably create subordination. "Anarcho"-capitalism defines this source of unfreedom away, but it still exists and has a major impact on people's liberty. Therefore freedom is better described as "self-government" or "self-management" -- to be able to govern one's own actions (if alone) or to participate in the determination of joint activity (if part of a group). Freedom, to put it another way, is not an abstract legal concept, but the vital concrete possibility for every human being to bring to full development all their powers, capacities, and talents which nature has endowed them. A key aspect of this is to govern one's own actions when within associations (self-management). If we look at freedom this way, we see that coercion is condemned but so is hierarchy (and so is capitalism for during working hours, people are not free to make their own plans and have a say in what affects them. They are order takers, **not** free individuals).

It is because anarchists have recognised the authoritarian nature of capitalist firms that they have opposed wage labour and capitalist property rights along with the state. They have desired to replace institutions structured by subordination with institutions constituted by free relationships (based, in other words, on self-management) in **all** areas of life, including economic organisations. Hence Proudhon's argument that the "*workmen's associations . . . are full of hope both as a protest against the wage system, and as an affirmation of reciprocity*" and that their importance lies "*in their denial of the rule of capitalists, money lenders and governments.*" [**The General Idea of the Revolution**, pp. 98-99]

Unlike anarchists, the "anarcho"-capitalist account of freedom allows an individual's freedom to be rented out to another while maintaining that the person is still free. It may seem strange that an ideology proclaiming its support for liberty sees nothing wrong with the alienation and denial of liberty but, in actual fact, it is unsurprising. After all, contract theory is a "*theoretical strategy that justifies subjection by presenting it as freedom*" and nothing more. Little wonder, then, that contract "*creates a relation of subordination*" and not of freedom [Carole Pateman, **Op. Cit.**, p. 39, p. 59]

Any attempt to build an ethical framework starting from the abstract individual (as Rothbard does with his "*legitimate rights*" method) will result in domination and oppression between people, **not** freedom. Indeed, Rothbard provides an example of the dangers of idealist philosophy that Bakunin warned about when he argued that while "*[m]aterialism denies free will and ends in the establishment of liberty; idealism, in the name of human dignity, proclaims free will, and on the ruins of every liberty founds authority.*" [**God and the State**, p. 48] This is the case with "anarcho"-capitalism can be seen from

Rothbard's wholehearted support for wage labour and the rules imposed by property owners on those who use, but do not own, their property. Rothbard, basing himself on abstract individualism, cannot help but justify authority over liberty.

Overall, we can see that the logic of the right-libertarian definition of "freedom" ends up negating itself, because it results in the creation and encouragement of **authority**, which is an **opposite** of freedom. For example, as Ayn Rand points out, *"man has to sustain his life by his own effort, the man who has no right to the product of his effort has no means to sustain his life. The man who produces while others dispose of his product, is a slave."* [The Ayn Rand Lexicon: Objectivism from A to Z, pp. 388-9] But, as was shown in [section C](#), capitalism is based on, as Proudhon put it, workers working *"for an entrepreneur who pays them and keeps their products,"* and so is a form of **theft**. Thus, by "libertarian" capitalism's **own** logic, capitalism is based not on freedom, but on (wage) slavery; for interest, profit and rent are derived from a worker's **unpaid** labour, i.e. *"others dispose of his [sic] product."*

And if a society **is** run on the wage- and profit-based system suggested by the "anarcho" and "libertarian" capitalists, freedom becomes a commodity. The more money you have, the more freedom you get. Then, since money is only available to those who earn it, Libertarianism is based on that classic saying *"work makes one free!"* (*Arbeit macht frei!*), which the Nazis placed on the gates of their concentration camps. Of course, since it is capitalism, this motto is somewhat different for those at the top. In this case it is *"other people's work makes one free!"* -- a truism in any society based on private property and the authority that stems from it.

Thus it is debatable that a libertarian or "anarcho" capitalist society would have less unfreedom or coercion in it than "actually existing capitalism." In contrast to anarchism, "anarcho"-capitalism, with its narrow definitions, restricts freedom to only a few aspects of social life and ignores domination and authority beyond those aspects. As Peter Marshall points out, the right-libertarian's *"definition of freedom is entirely negative. It calls for the absence of coercion but cannot guarantee the positive freedom of individual autonomy and independence."* [Demanding the Impossible, p. 564] By confining freedom to such a narrow range of human action, "anarcho"-capitalism is clearly **not** a form of anarchism. Real anarchists support freedom in every aspect of an individual's life.

F.2.1 What are the implications of defining liberty in terms of (property) rights?

The change from defending liberty to defending (property) rights has important implications. For one thing, it allows right libertarians to imply that private property is similar to a "fact of nature," and so to conclude that the restrictions on freedom produced by it can be ignored. This can be seen in Robert Nozick's argument that decisions are voluntary if the limitations on one's actions are not caused by human action which infringe the rights of others. Thus, in a "pure" capitalist society the restrictions on freedom caused by wage slavery are not really restrictions because the worker voluntarily consents to the contract. The circumstances that drive a worker to make the contract are irrelevant because they are created by people exercising their rights and not violating other peoples' ones (see the section on

"Voluntary Exchange" in **Anarchy, State, and Utopia**, pp. 262-265).

This means that within a society "[w]hether a person's actions are voluntary depends on what limits his alternatives. If facts of nature do so, the actions are voluntary. (I may voluntarily walk to someplace I would prefer to fly to unaided)." [**Anarchy, State, and Utopia**, p. 262] Similarly, the results of voluntary actions and the transference of property can be considered alongside the "facts of nature" (they are, after all, the resultants of "natural rights"). This means that the circumstances created by the existence and use of property can be considered, in essence, as a "natural" fact and so the actions we take in response to these circumstances are therefore "voluntary" and we are "free" (Nozick presents the example [p. 263] of someone who marries the only available person -- all the more attractive people having already chosen others -- as a case of an action that is voluntary despite removal of all but the least attractive alternative through the legitimate actions of others. Needless to say, the example can be -- and is -- extended to workers on the labour market -- although, of course, you do not starve to death if you decide not to marry).

However, such an argument fails to notice that property is different from gravity or biology. Of course not being able to fly does not restrict freedom. Neither does not being able to jump 10 feet into the air. But unlike gravity (for example), private property has to be protected by laws and the police. No one stops you from flying, but laws and police forces must exist to ensure that capitalist property (and the owners' authority over it) is respected. The claim, therefore, that private property in general, and capitalism in particular, can be considered as "facts of nature," like gravity, ignores an important fact: namely that the people involved in an economy must accept the rules of its operation -- rules that, for example, allow contracts to be enforced; forbid using another's property without his or her consent ("theft," trespass, copyright infringement, etc.); prohibit "conspiracy," unlawful assembly, rioting, and so on; and create monopolies through regulation, licensing, charters, patents, etc. This means that capitalism has to include the mechanisms for deterring property crimes as well as mechanisms for compensation and punishment should such crimes be committed. In other words, capitalism is in fact far more than "voluntary bilateral exchange," because it **must** include the policing, arbitration, and legislating mechanisms required to ensure its operation. Hence, like the state, the capitalist market is a social institution, and the distributions of goods that result from its operation are therefore the distributions sanctioned by a capitalist society. As Benjamin Franklin pointed out, *"Private property . . . is a Creature of Society, and is subject to the Calls of that Society."*

Thus, to claim with Sir Isaiah Berlin (the main, modern, source of the concepts of "negative" and "positive" freedom -- although we must add that Berlin was not a right-Libertarian), that "[i]f my poverty were a kind of disease, which prevented me from buying bread . . . as lameness prevents me from running, this inability would not naturally be described as a lack of freedom" totally misses the point [*"Two Concepts of Liberty"*, in **Four Essays on Liberty**, p. 123]. If you are lame, police officers do not come round to stop you running. They do not have to. However, they **are** required to protect property against the dispossessed and those who reject capitalist property rights.

This means that by using such concepts as "negative" liberty and ignoring the social nature of private property, right-libertarians are trying to turn the discussion away from liberty toward "biology" and

other facts of nature. And conveniently, by placing property rights alongside gravity and other natural laws, they also succeed in reducing debate even about rights.

Of course, coercion and restriction of liberty **can** be resisted, unlike "natural forces" like gravity. So if, as Berlin argues, "*negative*" freedom means that you "*lack political freedom only if you are prevented from attaining a goal by human beings,*" then capitalism is indeed based on such a lack, since property rights need to be enforced by human beings ("*I am prevented by others from doing what I could otherwise do*"). After all, as Proudhon long ago noted, the market is manmade, hence any constraint it imposes is the coercion of man by man and so economic laws are not as inevitable as natural ones [see Alan Ritter's **The Political Thought of Pierre-Joseph Proudhon**, p. 122]. Or, to put it slightly differently, capitalism requires coercion in order to work, and hence, is **not** similar to a "fact of nature," regardless of Nozick's claims (i.e. property rights have to be defined and enforced by human beings, although the nature of the labour market resulting from capitalist property definitions is such that direct coercion is usually not needed). This implication is actually recognised by right-libertarians, because they argue that the rights-framework of society should be set up in one way rather than another. In other words, they recognise that society is not independent of human interaction, and so can be changed.

Perhaps, as seems the case, the "anarcho"-capitalist or right-Libertarian will claim that it is only **deliberate** acts which violate your (libertarian defined) rights by other humans beings that cause unfreedom ("*we define freedom . . . as the **absence of invasion** by another man of an man's person or property*" [Rothbard, **The Ethics of Liberty**, p. 41]) and so if no-one deliberately coerces you then you are free. In this way the workings of the capitalist market can be placed alongside the "facts of nature" and ignored as a source of unfreedom. However, a moments thought shows that this is not the case. Both deliberate and non-deliberate acts can leave individuals lacking freedom.

Let us assume (in an example paraphrased from Alan Haworth's excellent book **Anti-Libertarianism**, p. 49) that someone kidnaps you and places you down a deep (naturally formed) pit, miles from anyway, which is impossible to climb up. No one would deny that you are unfree. Let us further assume that another person walks by and accidentally falls into the pit with you.

According to right-libertarianism, while you are unfree (i.e. subject to deliberate coercion) your fellow pit-dweller is perfectly free for they have subject to the "facts of nature" and not human action (deliberate or otherwise). Or, perhaps, they "voluntarily choose" to stay in the pit, after all, it is "only" the "facts of nature" limiting their actions. But, obviously, both of you are in **exactly the same position**, have **exactly the same choices** and so are **equally** unfree! Thus a definition of "liberty" that maintains that only deliberate acts of others -- for example, coercion -- reduces freedom misses the point totally.

Why is this example important? Let us consider Murray Rothbard's analysis of the situation after the abolition of serfdom in Russia and slavery in America. He writes:

*"The **bodies** of the oppressed were freed, but the property which they had worked and eminently deserved to own, remained in the hands of their former oppressors. With*

economic power thus remaining in their hands, the former lords soon found themselves virtual masters once more of what were now free tenants or farm labourers. The serfs and slaves had tasted freedom, but had been cruelly deprived of its fruits. " [The Ethics of Liberty, p. 74]

However, contrast this with Rothbard's claims that if market forces ("voluntary exchanges") result in the creation of free tenants or labourers then these labourers and tenants are free (see, for example, **The Ethics of Liberty**, pp. 221-2 on why "economic power" within capitalism does not exist). But the labourers dispossessed by market forces are in **exactly** the same situation as the former serfs and slaves. Rothbard sees the obvious "*economic power*" in the later case, but denies it in the former. But the **conditions** of the people in question are identical and it is these conditions that horrify us. It is only his ideology that stops Rothbard drawing the obvious conclusion -- identical conditions produce identical social relationships and so if the formally "free" ex-serfs are subject to "*economic power*" and "*masters*" then so are the formally "free" labourers within capitalism! Both sets of workers may be formally free, but their circumstances are such that they are "free" to "consent" to sell their freedom to others (i.e. economic power produces relationships of domination and unfreedom between formally free individuals).

Thus Rothbard's definition of liberty in terms of rights fails to provide us with a realistic and viable understanding of freedom. Someone can be a virtual slave while still having her rights non-violated (conversely, someone can have their property rights violated and still be free; for example, the child who enters your backyard without your permission to get her ball hardly violates your liberty -- indeed, you would never know that she has entered your property unless you happened to see her do it). So the idea that freedom means non-aggression against person and their legitimate material property justifies extensive **non-freedom** for the working class. The non-violation of property rights does **not** imply freedom, as Rothbard's discussion of the former slaves shows. Anyone who, along with Rothbard, defines freedom "*as the absence of invasion by another man of any man's person or property*" in a deeply inequality society is supporting, and justifying, capitalist and landlord domination. As anarchists have long realised, in an unequal society, a contractarian starting point implies an absolutist conclusion.

Why is this? Simply because freedom is a result of **social** interaction, not the product of some isolated, abstract individual (Rothbard uses the model of Robinson Crusoe to construct his ideology). But as Bakunin argued, "*the freedom of the individual is a function of men in society, a necessary consequence of the collective development of mankind.*" He goes on to argue that "*man in isolation can have no awareness of his liberty . . . Liberty is therefore a feature not of isolation but of interaction, not of exclusion but rather of connection.*" [Selected Writings, p. 146, p. 147] Right Libertarians, by building their definition of freedom from the isolated person, end up by supporting restrictions of liberty due to a neglect of an adequate recognition of the actual interdependence of human beings, of the fact what each person does is effected by and affects others. People become aware of their humanity (liberty) in society, not outside it. It is the **social relationships** we take part in which determine how free we are and any definition of freedom which builds upon an individual without social ties is doomed to create relations of domination, not freedom, between individuals -- as Rothbard's theory does (to put it another way, voluntary association is a necessary, but not sufficient, condition for freedom. Which is why anarchists

have always stressed the importance of equality -- see [section F.3](#) for details).

So while facts of nature can restrict your options and freedom, it is the circumstances within which they act and the options they limit that are important (a person trapped at the bottom of a pit is unfree as the options available are so few; the lame person is free because their available options are extensive). In the same manner, the facts of society can and do restrict your freedom because they are the products of human action and are defined and protected by human institutions, it is the circumstances within which individuals make their decisions and the social relationships these decisions produce that are important (the worker driven by poverty to accept a slave contract in a sweat shop is unfree because the circumstances he faces have limited his options and the relations he accepts are based upon hierarchy; the person who decides to join an anarchist commune is free because the commune is non-hierarchical and she has the option of joining another commune, working alone and so forth).

All in all, the right-Libertarian concept of freedom is lacking. For an ideology that takes the name "Libertarianism" it seems happy to ignore actual liberty and instead concentrate on an abstract form of liberty which ignores so many sources of unfreedom as to narrow the concept until it becomes little more than a justification for authoritarianism. This can be seen from right-Libertarian attitudes about private property and its effects on liberty (as discussed in the [next section](#)).

F.2.2 How does private property affect freedom?

The right-libertarian does not address or even acknowledge that the (absolute) right of private property may lead to extensive control by property owners over those who use, but do not own, property (such as workers and tenants). Thus a free-market capitalist system leads to a very selective and class-based protection of "rights" and "freedoms." For example, under capitalism, the "freedom" of employers inevitably conflicts with the "freedom" of employees. When stockholders or their managers exercise their "freedom of enterprise" to decide how their company will operate, they violate their employee's right to decide how their labouring capacities will be utilised. In other words, under capitalism, the "property rights" of employers will conflict with and restrict the "human right" of employees to manage themselves. Capitalism allows the right of self-management only to the few, not to all. Or, alternatively, capitalism does not recognise certain human rights as **universal** which anarchism does.

This can be seen from Austrian Economist W. Duncan Reekie's defence of wage labour. While referring to *"intra-firm labour markets"* as *"hierarchies"*, Reekie (in his best *ex cathedra* tone) states that *"[t]here is nothing authoritarian, dictatorial or exploitative in the relationship. Employees order employers to pay them amounts specified in the hiring contract just as much as employers order employees to abide by the terms of the contract."* [**Markets, Entrepreneurs and Liberty**, p. 136, p. 137]. Given that *"the terms of contract"* involve the worker agreeing to obey the employers orders and that they will be fired if they do not, its pretty clear that the ordering that goes on in the *"intra-firm labour market"* is decidedly **one way**. Bosses have the power, workers are paid to obey. And this begs the question, **if** the employment contract creates a free worker, why must she abandon her liberty during work hours?

Reekie actually recognises this lack of freedom in a "round about" way when he notes that *"employees in a firm at any level in the hierarchy can exercise an entrepreneurial role. The area within which that role can be carried out increases the more authority the employee has."* [**Op. Cit.**, p. 142] Which means workers **are** subject to control from above which restricts the activities they are allowed to do and so they are **not** free to act, make decisions, participate in the plans of the organisation, to create the future and so forth within working hours. And it is strange that while recognising the firm as a hierarchy, Reekie tries to deny that it is authoritarian or dictatorial -- as if you could have a hierarchy without authoritarian structures or an unelected person in authority who is not a dictator. His confusion is shared by Austrian guru Ludwig von Mises, who asserts that the *"entrepreneur and capitalist are not irresponsible autocrats"* because they are *"unconditionally subject to the sovereignty of the consumer"* while, **on the next page**, admitting there is a *"managerial hierarchy"* which contains *"the average subordinate employee."* [**Human Action**, p. 809 and p. 810] It does not enter his mind that the capitalist may be subject to some consumer control while being an autocrat to their subordinated employees. Again, we find the right-"libertarian" acknowledging that the capitalist managerial structure is a hierarchy and workers are subordinated while denying it is autocratic to the workers! Thus we have "free" workers within a relationship distinctly **lacking** freedom (in the sense of self-government) -- a strange paradox. Indeed, if your personal life were as closely monitored and regulated as the work life of millions of people across the world, you would rightly consider it oppression.

Perhaps Reekie (like most right-libertarians) will maintain that workers voluntarily agree ("consent") to be subject to the bosses dictatorship (he writes that *"each will only enter into the contractual agreement known as a firm if each believes he will be better off thereby. The firm is simply another example of mutually beneficial exchange"* [**Op. Cit.**, p. 137]). However, this does not stop the relationship being authoritarian or dictatorial (and so exploitative as it is **highly** unlikely that those at the top will not abuse their power). And as we argue further in the [next section](#) (and also see sections [B.4](#), [F.3.1](#) and [F.10.2](#)), in a capitalist society workers have the option of finding a job or facing abject poverty and/or starvation.

Little wonder, then, that people "voluntarily" sell their labour and "consent" to authoritarian structures! They have little option to do otherwise. So, **within** the labour market, workers **can** and **do** seek out the best working conditions possible, but that does not mean that the final contract agreed is "freely" accepted and not due to the force of circumstances, that both parties have equal bargaining power when drawing up the contract or that the freedom of both parties is ensured. Which means to argue (as many right-libertarians do) that freedom cannot be restricted by wage labour because people enter into relationships they consider will lead to improvements over their initial situation totally misses the points. As the initial situation is not considered relevant, their argument fails. After all, agreeing to work in a sweatshop 14 hours a day **is** an improvement over starving to death -- but it does not mean that those who so agree are free when working there or actually **want** to be there. They are not and it is the circumstances, created and enforced by the law, that have ensured that they "consent" to such a regime (given the chance, they would desire to **change** that regime but cannot as this would violate their bosses property rights and they would be repressed for trying).

So the right-wing "libertarian" right is interested only in a narrow concept of freedom (rather than in "freedom" or "liberty" as such). This can be seen in the argument of Ayn Rand (a leading ideologue of

"libertarian" capitalism) that "**Freedom**, in a political context, means freedom from government coercion. It does **not** mean freedom from the landlord, or freedom from the employer, or freedom from the laws of nature which do not provide men with automatic prosperity. It means freedom from the coercive power of the state -- and nothing else!" [**Capitalism: The Unknown Ideal**, p. 192] By arguing in this way, right libertarians ignore the vast number of authoritarian social relationships that exist in capitalist society and, as Rand does here, imply that these social relationships are like "the laws of nature." However, if one looks at the world without prejudice but with an eye to maximising freedom, the major coercive institution is seen to be not the state but capitalist social relationships (as indicated in [section B.4](#)).

The right "libertarian," then, far from being a defender of freedom, is in fact a keen defender of certain forms of authority and domination. As Peter Kropotkin noted, the "*modern Individualism initiated by Herbert Spencer is, like the critical theory of Proudhon, a powerful indictment against the dangers and wrongs of government, but its practical solution of the social problem is miserable -- so miserable as to lead us to inquire if the talk of 'No force' be merely an excuse for supporting landlord and capitalist domination.*" [**Act For Yourselves**, p. 98]

To defend the "freedom" of property owners is to defend authority and privilege -- in other words, statism. So, in considering the concept of liberty as "freedom from," it is clear that by defending private property (as opposed to possession) the "anarcho"-capitalist is defending the power and authority of property owners to govern those who use "their" property. And also, we must note, defending all the petty tyrannies that make the work lives of so many people frustrating, stressful and unrewarding.

However, anarchism, by definition, is in favour of organisations and social relationships which are non-hierarchical and non-authoritarian. Otherwise, some people are more free than others. Failing to attack hierarchy leads to massive contradiction. For example, since the British Army is a volunteer one, it is an "anarchist" organisation! (see [next section](#) for a discussion on why the "anarcho"-capitalism concept of freedom also allows the state to appear "libertarian").

In other words, "full capitalist property rights" do not protect freedom, in fact they actively deny it. But this lack of freedom is only inevitable if we accept capitalist private property rights. If we reject them, we can try and create a world based on freedom in all aspects of life, rather than just in a few.

F.2.3 Can "anarcho"-capitalist theory justify the state?

Ironically enough, "anarcho"-capitalist ideology actually allows the state to be justified along with capitalist hierarchy. This is because the reason why capitalist authority is acceptable to the "anarcho"-capitalist is because it is "voluntary" -- no one forces the worker to join or remain within a specific company (force of circumstances are irrelevant in this viewpoint). Thus capitalist domination is not really domination at all. But the same can be said of all democratic states as well. Few such states bar exit for its citizens -- they are free to leave at any time and join any other state that will have them (exactly as employees can with companies). Of course there **are** differences between the two kinds of

authority -- anarchists do not deny that -- but the similarities are all too clear.

The "anarcho"-capitalist could argue that changing jobs is easier than changing states and, sometimes, this is correct -- but not always. Yes, changing states does require the moving of home and possessions over great distances but so can changing job (indeed, if a worker has to move half-way across a country or even the world to get a job "anarcho"-capitalists would celebrate this as an example of the benefits of a "flexible" labour market). Yes, states often conscript citizens and send them into dangerous situations but bosses often force their employees to accept dangerous working environments on pain of firing. Yes, many states do restrict freedom of association and speech, but so do bosses. Yes, states tax their citizens but landlords and companies only let others use their property if they get money in return (i.e. rent or profits). Indeed, if the employee or tenant does not provide the employer or landlord with enough profits, they will quickly be shown the door. Of course employees can start their own companies but citizens can start their own state if they convince an existing state (the owner of a set of resources) to sell/give land to them. Setting up a company also requires existing owners to sell/give resources to those who need them. Of course, in a democratic state citizens can influence the nature of laws and orders they obey. In a capitalist company, this is not the case.

This means that, logically, "anarcho"-capitalism must consider a series of freely exitable states as "anarchist" and not a source of domination. If consent (not leaving) is what is required to make capitalist domination not domination then the same can be said of statist domination. Stephen L. Newman makes the same point:

"When the price of exercising one's freedom is terribly high, what practical difference is there between the commands of the state and those issued by one's employer? . . . Though admittedly the circumstances are not identical, telling disgruntled empowers that they are always free to leave their jobs seems no different in principle from telling political dissidents that they are free to emigrate." [Liberalism at Wit's End, pp. 45-46]

Murray Rothbard, in his own way, agrees:

*"If the State may be said too properly **own** its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because there **is** no private property in its area, because it really owns the entire land surface. **So long** as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property." [The Ethics of Liberty, p. 170]*

Rothbard's argues that this is **not** the case simply because the state did not acquire its property in a "*just*" manner and that it claims rights over virgin land (both of which violates Rothbard's "homesteading" theory of property -- see [section F.4.1](#) for details and a critique). Rothbard argues that this defence of statism (the state as property owner) is unrealistic and ahistoric, but his account of the origins of property is equally unrealistic and ahistoric and that does not stop him supporting capitalism. People in

glass houses should not throw stones!

Thus he claims that the state is evil and its claims to authority/power false simply because it acquired the resources it claims to own "*unjustly*" -- for example, by violence and coercion (see **The Ethics of Liberty**, pp. 170-1, for Rothbard's attempt to explain why the state should not be considered as the owner of land). And even **if** the state **was** the owner of its territory, it cannot appropriate virgin land (although, as he notes elsewhere, the "*vast*" US frontier no longer exists "*and there is no point crying over the fact*" [**Op. Cit.**, p. 240]).

So what makes hierarchy legitimate for Rothbard is whether the property it derives from was acquired justly or unjustly. Which leads us to a few **very** important points.

Firstly, Rothbard is explicitly acknowledging the similarities between statism and capitalism. He is arguing that **if** the state had developed in a "*just*" way, then it is perfectly justifiable in governing ("*set [ting] down rules*") those who "consent" to live on its territory in **exactly** the same way a property owner does. In other words, private property can be considered as a "justly" created state! These similarities between property and statism have long been recognised by anarchists and that is why we reject private property along with the state (Proudhon did, after all, note that "*property is despotism*" and well as "*theft*"). But, according to Rothbard, something can look like a state (i.e. be a monopoly of decision making over an area) and act like a state (i.e. set down rules for people, govern them, impose a monopoly of force) but not be a state. But if it looks like a duck and sounds like a duck, it is a duck. Claiming that the origins of the thing are what counts is irrelevant -- for example, a cloned duck is just as much a duck as a naturally born one. A statist organisation is authoritarian whether it comes from "*just*" or "*unjust*" origins. Does transforming the ownership of the land from states to capitalists **really** make the relations of domination created by the dispossession of the many less authoritarian and unfree? Of course not.

Secondly, much property in "actually existing" capitalism is the product (directly or indirectly) of state laws and violence ("*the emergence of both agrarian and industrial capitalism in Britain [and elsewhere, we must add] . . . could not have got off the ground without resources to state violence -- legal or otherwise*" [Brian Morris, **Ecology & Anarchism**, p. 190]). If state claims of ownership are invalid due to their history, then so are many others (particularly those which claim to own land). As the initial creation was illegitimate, so are the transactions which have sprung from it. Thus if state claims of property rights are invalid, so are most (if not all) capitalist claims. If the laws of the state are illegitimate, so are the rules of the capitalist. If taxation is illegitimate, then so are rent, interest and profit. Rothbard's "historical" argument against the state can also be applied to private property and if the one is unjustified, then so is the other.

Thirdly, **if** the state had evolved "justly" then Rothbard would actually have nothing against it! A strange position for an anarchist to take. Logically this means that if a system of corporate states evolved from the workings of the capitalist market then the "anarcho"-capitalist would have nothing against it. This can be seen from "anarcho"-capitalist support for company towns even though they have correctly been

described as "*industrial feudalism*" (see [section F.6](#) for more on this).

Fourthly, Rothbard's argument implies that similar circumstances producing similar relationships of domination and unfreedom are somehow different if they are created by "*just*" and "*unjust*" means. Rothbard claims that because the property is "*justly*" acquired it means the authority a capitalist over his employees is totally different from that of a state over its subject. But such a claim is false -- both the subject/citizen and the employee are in a similar relationship of domination and authoritarianism. As we argued in [section F.2.2](#), how a person got into a situation is irrelevant when considering how free they are. Thus, the person who "consents" to be governed by another because all available resources are privately owned is in exactly the same situation as a person who has to join a state because all available resources are owned by one state or another. Both are unfree and are part of authoritarian relationships based upon domination.

And, lastly, while "anarcho"-capitalism may be a "just" society, it is definitely **not** a free one. It will be marked by extensive hierarchy, unfreedom and government, but these restrictions of freedom will be of a private nature. As Rothbard indicates, the property owner and the state create/share the same authoritarian relationships. If statism is unfree, then so is capitalism. And, we must add, how "just" is a system which undermines liberty. Can "justice" ever be met in a society in which one class has more power and freedom than another. If one party is in an inferior position, then they have little choice but to agree to the disadvantageous terms offered by the superior party (see [section F.3.1](#)). In such a situation, a "just" outcome will be unlikely as any contract agreed will be skewed to favour one side over the other.

The implications of these points are important. We can easily imagine a situation within "anarcho"-capitalism where a few companies/people start to buy up land and form company regions and towns. After all, this **has** happened continually throughout capitalism. Thus a "natural" process may develop where a few owners start to accumulate larger and larger tracks of land "justly". Such a process does not need to result in **one** company owning the world. It is likely that a few hundred, perhaps a few thousand, could do so. But this is not a cause for rejoicing -- after all the current "market" in "unjust" states also has a few hundred competitors in it. And even if there is a large multitude of property owners, the situation for the working class is exactly the same as the citizen under current statism! Does the fact that it is "justly" acquired property that faces the worker really change the fact she must submit to the government and rules of another to gain access to the means of life?

When faced with anarchist criticisms that **circumstances** force workers to accept wage slavery the "anarcho"-capitalist claims that these are to be considered as objective facts of nature and so wage labour is not domination. However, the same can be said of states -- we are born into a world where states claim to own all the available land. If states are replaced by individuals or groups of individuals does this change the essential nature of our dispossession? Of course not.

Rothbard argues that "[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc." [**Op. Cit.**, p. 173] and, equally obviously, this ultimate-decision making power extends to those who **use**, but do not own, such property. But how "free" is a

free society where the majority have to sell their liberty to another in order to live? Rothbard (correctly) argues that the State *"uses its monopoly of force . . . to control, regulate, and coerce its hapless subjects. Often it pushes its way into controlling the morality and the very lives of its subjects."* [Op. Cit., p. 171] However he fails to note that employers do exactly the same thing to their employees. This, from an anarchist perspective, is unsurprising, for (after all) the employer is *"the ultimate decision-making power over his just property"* just as the state is over its "unjust" property. That similar forms of control and regulation develop is not a surprise given the similar hierarchical relations in both structures.

That there is a choice in available states does not make statism any less unjust and unfree. Similarly, just because we have a choice between employers does not make wage labour any less unjust or unfree. But trying to dismiss one form of domination as flowing from "just" property while attacking the other because it flows from "unjust" property is not seeing the wood for the trees. If one reduces liberty, so does the other. Whether the situation we are in resulted from "just" or "unjust" steps is irrelevant to the restrictions of freedom we face because of them (and as we argue in [section F.2.5](#), "unjust" situations can easily flow from "just" steps).

The "anarcho"-capitalist insistence that the voluntary nature of an association determines whether it is anarchistic is deeply flawed -- so flawed in fact that states and state-like structures (such as capitalist firms) can be considered anarchistic! In contrast, anarchists think that the hierarchical nature of the associations we join is equally as important as its voluntary nature when determining whether it is anarchistic or statist. However this option is not available to the "anarcho"-capitalist as it logically entails that capitalist companies are to be opposed along with the state as sources of domination, oppression and exploitation.

F.2.4 But surely transactions on the market are voluntary?

Of course, it is usually maintained by "anarcho"-capitalists that no-one puts a gun to a worker's head to join a specific company. Yes, indeed, this is true -- workers can apply for any job they like. But the point is that the vast majority cannot avoid having to sell their liberty to others (self-employment and co-operatives **are** an option, but they account for less than 10% of the working population and are unlikely to spread due to the nature of capitalist market forces -- see sections [J.5.11](#) and [J.5.12](#) for details). And as Bob Black pointed out, right libertarians argue that *"'one can at least change jobs.' but you can't avoid having a job -- just as under statism one can at least change nationalities but you can't avoid subjection to one nation-state or another. But freedom means more than the right to change masters."* [The Libertarian as Conservative]

So why do workers agree to join a company? Because circumstances force them to do so - circumstances created, we must note, by **human** actions and institutions and not some abstract "fact of nature." And if the world that humans create by their activity is detrimental to what we should value most (individual liberty and individuality) then we should consider how to **change that world for the better**. Thus "circumstances" (current "objective reality") is a valid source of unfreedom and for human investigation and creative activity -- regardless of the claims of right-Libertarians.

Let us look at the circumstances created by capitalism. Capitalism is marked by a class of dispossessed labourers who have nothing to sell by their labour. They are legally barred from access to the means of life and so have little option but to take part in the labour market. As Alexander Berkman put it:

"The law says your employer does not sell anything from you, because it is done with your consent. You have agreed to work for your boss for certain pay, he to have all that you produce . . .

"But did you really consent?"

*"When the highway man holds his gun to your head, you turn your valuables over to him. You 'consent' all right, but you do so because you cannot help yourself, because you are **compelled** by his gun.*

*"Are you not **compelled** to work for an employer? Your need compels you just as the highwayman's gun. You must live. . . You can't work for yourself. . . The factories, machinery, and tools belong to the employing class, so you **must** hire yourself out to that class in order to work and live. Whatever you work at, whoever your employer may be, it is always comes to the same: you must work **for him**. You can't help yourself. You are **compelled**." [What is Communist Anarchism?, p. 9]*

Due to this class monopoly over the means of life, workers (usually) are at a disadvantage in terms of bargaining power -- there are more workers than jobs (see sections [B.4.3](#) and [F.10.2](#) for a discussion why this is the normal situation on the labour market).

As was indicated in section B.4 ([How does capitalism affect liberty?](#)), within capitalism there is no equality between owners and the dispossessed, and so property is a source of **power**. To claim that this power should be "left alone" or is "fair" is *"to the anarchists. . . preposterous. Once a State has been established, and most of the country's capital privatised, the threat of physical force is no longer necessary to coerce workers into accepting jobs, even with low pay and poor conditions. To use Ayn Rand's term, 'initial force' has **already taken place**, by those who now have capital against those who do not. . . . In other words, if a thief died and willed his 'ill-gotten gain' to his children, would the children have a right to the stolen property? Not legally. So if 'property is theft,' to borrow Proudhon's quip, and the fruit of exploited labour is simply legal theft, then the only factor giving the children of a deceased capitalist a right to inherit the 'booty' is the law, the State. As Bakunin wrote, 'Ghosts should not rule and oppress this world, which belongs only to the living'" [Jeff Draughn, **Between Anarchism and Libertarianism**].*

Or, in other words, right-Libertarianism fails to *"meet the charge that normal operations of the market systematically places an entire class of persons (wage earners) in circumstances that compel them to accept the terms and conditions of labour dictated by those who offer work. While it is true that*

individuals are formally free to seek better jobs or withhold their labour in the hope of receiving higher wages, in the end their position in the market works against them; they cannot live if they do not find employment. When circumstances regularly bestow a relative disadvantage on one class of persons in their dealings with another class, members of the advantaged class have little need of coercive measures to get what they want." [Stephen L. Newman, **Liberalism at Wit's End**, p. 130]

To ignore the circumstances which drive people to seek out the most "beneficial exchange" is to blind yourself to the power relationships inherent within capitalism -- power relationships created by the unequal bargaining power of the parties involved (also see [section F.3.1](#)). And to argue that "consent" ensures freedom is false; if you are "consenting" to be join a dictatorial organisation, you "consent" **not** to be free (and to paraphrase Rousseau, a person who renounces freedom renounces being human).

Which is why circumstances are important -- if someone truly wants to join an authoritarian organisation, then so be it. It is their life. But if circumstances ensure their "consent" then they are not free. The danger is, of course, that people become **accustomed** to authoritarian relationships and end up viewing them as forms of freedom. This can be seen from the state, which the vast majority support and "consent" to. And this also applies to wage labour, which many workers today accept as a "necessary evil" (like the state) but, as we indicate in [section F.8.6](#), the first wave of workers viewed with horror as a form of (wage) slavery and did all that they could to avoid. In such situations all we can do is argue with them and convince them that certain forms of organisations (such as the state and capitalist firms) are an evil and urge them to change society to ensure their extinction.

So due to this lack of appreciation of circumstances (and the fact that people become accustomed to certain ways of life) "anarcho"-capitalism actively supports structures that restrict freedom for the many. And how is "anarcho"-capitalism **anarchist** if it generates extensive amounts of archy? It is for this reason that all anarchists support self-management within free association -- that way we maximise freedom both inside **and** outside organisations. But only stressing freedom outside organisations, "anarcho"-capitalism ends up denying freedom as such (after all, we spend most of our waking hours at work). If "anarcho"-capitalists **really** desired freedom, they would reject capitalism and become anarchists -- only in a libertarian socialist society would agreements to become a wage worker be truly voluntary as they would not be driven by circumstances to sell their liberty.

This means that while right-Libertarianism appears to make "choice" an ideal (which sounds good, liberating and positive) in practice it has become a "dismal politics," a politics of choice where most of the choices are bad. And, to state the obvious, the choices we are "free" to make are shaped by the differences in wealth and power in society (see [section F.3.1](#)) as well as such things as "isolation paradoxes" (see [section B.6](#)) and the laws and other human institutions that exist. If we ignore the context within which people make their choices then we glorify abstract processes at the expense of real people. And, as importantly, we must add that many of the choices we make under capitalism (shaped as they are by the circumstances within which they are made), such as employment contracts, result in our "choice" being narrowed to "love it or leave it" in the organisations we create/join as a result of these "free" choices.

This ideological blind spot flows from the "anarcho"-capitalist definition of "freedom" as "absence of coercion" -- as workers "freely consent" to joining a specific workplace, their freedom is unrestricted. But to defend **only** "freedom from" in a capitalist society means to defend the power and authority of the few against the attempts of the many to claim their freedom and rights. To requote Emma Goldman, *"'Rugged individualism' has meant all the 'individualism' for the masters . . . , in whose name political tyranny and social oppression are defended and held up as virtues' while every aspiration and attempt of man to gain freedom . . . is denounced as . . . evil in the name of that same individualism."* [**Red Emma Speaks**, p. 112]

In other words, its all fine and well saying (as right-libertarians do) that you aim to abolish force from human relationships but if you support an economic system which creates hierarchy (and so domination and oppression) by its very workings, "defensive" force will always be required to maintain and enforce that domination. Moreover, if one class has extensive power over another due to the systematic (and normal) workings of the market, any force used to defend that power is **automatically** "defensive". Thus to argue against the use of force and ignore the power relationships that exist within and shape a society (and so also shape the individuals within it) is to defend and justify capitalist and landlord domination and denounce any attempts to resist that domination as "initiation of force."

Anarchists, in contrast, oppose **hierarchy** (and so domination within relationships -- bar S&M personal relationships, which are a totally different thing altogether; they are truly voluntary and they also do not attempt to hide the power relationships involved by using economic jargon). This opposition, while also including opposition to the use of force against equals (for example, anarchists are opposed to forcing workers and peasants to join a self-managed commune or syndicate), also includes support for the attempts of those subject to domination to end it (for example, workers striking for union recognition are not "initiating force", they are fighting for their freedom).

In other words, apparently "voluntary" agreements can and do limit freedom and so the circumstances that drive people into them **must** be considered when deciding whether any such limitation is valid. By ignoring circumstances, "anarcho"-capitalism ends up by failing to deliver what it promises -- a society of free individuals -- and instead presents us with a society of masters and servants. The question is, what do we feel moved to insist that people enjoy? Formal, abstract (bourgeois) self-ownership ("freedom") or a more substantive control over one's life (i.e. autonomy)?

F.2.5 But surely circumstances are the result of liberty and so cannot be objected to?

It is often argued by right-libertarians that the circumstances we face within capitalism are the result of individual decisions (i.e. individual liberty) and so we must accept them as the expressions of these acts (the most famous example of this argument is in Nozick's **Anarchy, State, and Utopia** pp. 161-163 where he maintains that *"liberty upsets patterns"*). This is because whatever situation evolves from a just situation by just (i.e. non-coercive steps) is also (by definition) just.

However, it is not apparent that adding just steps to a just situation will result in a just society. We will illustrate with a couple of banal examples. If you add chemicals which are non-combustible together you can create a new, combustible, chemical (i.e. X becomes not-X by adding new X to it). Similarly, if you have an odd number and add another odd number to it, it becomes even (again, X becomes not-X by adding a new X to it). So it **is** very possible to go from an just state to an unjust state by just step (and it is possible to remain in an unjust state by just acts; for example if we tried to implement "anarcho"-capitalism on the existing -- unjustly created -- situation of "actually existing" capitalism it would be like having an odd number and adding even numbers to it). In other words, the outcome of "just" steps can increase inequality within society and so ensure that some acquire an unacceptable amount of power over others, via their control over resources. Such an inequality of power would create an "unjust" situation where the major are free to sell their liberty to others due to inequality in power and resources on the "free" market.

Ignoring this objection, we could argue (as many "anarcho"-capitalists and right-libertarians do) that the unforeseen results of human action are fine unless we assume that these human actions are in themselves bad (i.e. that individual choice is evil).

Such an argument is false for three reasons.

First, when we make our choices the aggregate impact of these choices are unknown to us -- and not on offer when we make our choices. Thus we cannot be said to "choose" these outcomes, outcomes which we may consider deeply undesirable, and so the fact that these outcomes are the result of individual choices is besides the point (if we knew the outcome we could refrain from doing them). The choices themselves, therefore, do not validate the outcome as the outcome was not part of the choices when they were made (i.e. the means do not justify the ends). In other words, private acts often have important public consequences (and "bilateral exchanges" often involve externalities for third parties). Secondly, if the outcome of individual choices is to deny or restrict individual choice on a wider scale at a later stage, then we are hardly arguing that individual choice is a bad thing. We want to arrange it so that the decisions we make now do not result in them restricting our ability to make choices in important areas of life at a latter stage. Which means we are in favour of individual choices and so liberty, not against them. Thirdly, the unforeseen or unplanned results of individual actions are not necessarily a good thing. If the aggregate outcome of individual choices harms individuals then we have a right to modify the circumstances within which choices are made and/or the aggregate results of these choices.

An example will show what we mean (again drawn from Haworth's excellent **Anti-Libertarianism**, p. 35). Millions of people across the world bought deodorants which caused a hole to occur in the ozone layer surrounding the Earth. The resultant of these acts created a situation in which individuals and the eco-system they inhabited were in great danger. The actual acts themselves were by no means wrong, but the aggregate impact was. A similar argument can apply to any form of pollution. Now, unless the right-Libertarian argues that skin cancer or other forms of pollution related illness are fine, its clear that the resultant of individual acts can be harmful to individuals.

The right-Libertarian could argue that pollution is an "initiation of force" against an individual's property-rights in their person and so individuals can sue the polluters. But hierarchy also harms the individual (see [section B.1](#)) -- and so can be considered as an infringement of their "property-rights" (i.e. liberty, to get away from the insane property fetish of right-Libertarianism). The loss of autonomy can be just as harmful to an individual as lung cancer although very different in form. And the differences in wealth resulting from hierarchy is well known to have serious impacts on life-span and health.

As noted in [section F.2.1](#), the market is just as man-made as pollution. This means that the "circumstances" we face are due to aggregate of millions of individual acts and these acts occur within a specific framework of rights, institutions and ethics. Anarchists think that a transformation of our society and its rights and ideals is required so that the resultant of individual choices does not have the ironic effect of limiting individual choice (freedom) in many important ways (such as in work, for example).

In other words, the **circumstances** created by capitalist rights and institutions requires a **transformation** of these rights and institutions in such a way as to maximise individual choice for all -- namely, to abolish these rights and replace them with new ones (for example, replace property rights with use rights). Thus Nozick's claims that "*Z does choose voluntarily if the other individuals A through Y each acted voluntarily and within their rights*" [**Op. Cit.**, p. 263] misses the point -- it is these rights that are in question (given that Nozick **assumes** these rights then his whole thesis is begging the question).

And we must add (before anyone points it out) that, yes, we are aware that many decisions will unavoidably limit current and future choices. For example, the decision to build a factory on a green-belt area will make it impossible for people to walk through the woods that are no longer there. But such "limitations" (if they can be called that) of choice are different from the limitations we are highlighting here, namely the lose of freedom that accompanies the circumstances created via exchange in the market. The human actions which build the factory modify reality but do not generate social relationships of domination between people in so doing. The human actions of market exchange, in contrast, modify the relative strengths of everyone in society and so has a distinct impact on the social relationships we "voluntarily" agree to create. Or, to put it another way, the decision to build on the green-belt site does "limit" choice in the abstract but it does **not** limit choice in the kind of relationships we form with other people nor create authoritarian relationships between people due to inequality influencing the content of the associations we form. However, the profits produced from using the factory increases inequality (and so market/economic power) and so weakens the position of the working class in respect to the capitalist class within society. This increased inequality will be reflected in the "free" contracts and working regimes that are created, with the weaker "trader" having to compromise far more than before.

So, to try and defend wage slavery and other forms of hierarchy by arguing that "circumstances" are created by individual liberty runs aground on its own logic. If the circumstances created by individual liberty results in pollution then the right-Libertarian will be the first to seek to change those circumstances. They recognise that the right to pollute while producing is secondary to our right to be healthy. Similarly, if the circumstances created by individual liberty results in hierarchy (pollution of the

mind and our relationships with others as opposed to the body, although it affects that to) then we are entitled to change these circumstances too and the means by which we get there (namely the institutional and rights framework of society). Our right to liberty is more important than the rights of property -- sadly, the right-Libertarian refuses to recognise this.

F.2.6 Do Libertarian-capitalists support slavery?

Yes. It may come as a surprise to many people, but right-Libertarianism is one of the few political theories that justifies slavery. For example, Robert Nozick asks whether "*a free system would allow [the individual] to sell himself into slavery*" and he answers "*I believe that it would.*" [**Anarchy, State and Utopia**, p. 371] While some right-Libertarians do not agree with Nozick, there is no logical basis in their ideology for such disagreement.

The logic is simple, you cannot really own something unless you can sell it. Self-ownership is one of the cornerstones of laissez-faire capitalist ideology. Therefore, since you own yourself you can sell yourself.

(For Murray Rothbard's claims of the "*unenforceability, in libertarian theory, of voluntary slave contracts*" see **The Ethics of Liberty**, pp. 134-135 -- of course, **other** libertarian theorists claim the exact opposite so "*libertarian theory*" makes no such claims, but nevermind! Essentially, his point revolves around the assertion that a person "*cannot, in nature, sell himself into slavery and have this sale enforced - for this would mean that his future will over his own body was being surrendered in advance*" and that if a "*labourer remains totally subservient to his master's will voluntarily, he is not yet a slave since his submission is voluntary.*" [p. 40] However, as we noted in [section F.2](#), Rothbard emphasis on quitting fails to recognise that actual denial of will and control over ones own body that is explicit in wage labour. It is this failure that pro-slave contract "libertarians" stress -- as we will see, they consider the slave contract as an extended wage contract. Moreover, a modern slave contract would likely take the form of a "*performance bond*" [**Op. Cit.**, p. 136] in which the slave agrees to perform X years labour or pay their master substantial damages. The threat of damages that enforces the contract and such a "contract" Rothbard does agree is enforceable -- along with "*conditional exchange*" [p. 141] which could be another way of creating slave contracts.)

The right-Libertarian J. Philmore argues there is a "*fundamental contradiction*" in a modern liberal society for the state to prohibit slave contracts. Lets, however, not do these arguers for slavery an injustice. They are arguing for a "*civilised form of contractual slavery*" (our emphasis). [J. Philmore, "*The Libertarian Case for Slavery*", **The Philosophical Forum**, xiv, 1982, p. 55, p. 58] Such a "civilised" form of slavery could occur when an individual would "agree" to sell themselves to themselves to another (as when a starving worker would "agree" to become a slave in return for food). In addition, the contract would be able to be broken under certain conditions (perhaps in return for breaking the contract, the former slave would have pay damages to his or her master for the labour their master would lose - a sizeable amount no doubt and such a payment could result in debt slavery, which is the most common form of "civilised" slavery. Such damages may be agreed in the contract as a "performance bond" or "conditional exchange").

So, right-Libertarians are talking about "civilised" slavery (or, in other words, civil slavery) and not forced slavery.

We must stress that this is no academic debate. "Voluntary" slavery has been a problem in many societies and still exists in many countries today (particularly third world ones where bonded labour -- i. e. where debt is used to enslave people -- is the most common form). With the rise of sweat shops and child labour in many "developed" countries such as the USA, "voluntary" slavery (perhaps via debt and bonded labour) may become common in all parts of the world -- an ironic (if not surprising) result of "freeing" the market and being indifferent to the actual freedom of those within it.

And it is interesting to note that even Murray Rothbard is not against the selling of humans. He argued that children are the property of their parents. They can (bar actually murdering them by violence) do whatever they please with them, even sell them on a "*flourishing free child market*." [**The Ethics of Liberty**, p. 102] Combined with a whole hearted support for child labour (after all, the child can leave its parents if it objects to working for them) such a "free child market" could easily become a "child slave market" -- with entrepreneurs making a healthy profit selling infants to other entrepreneurs who could make profits from the toil of "their" children (and such a process did occur in 19th century Britain). Unsurprisingly, Rothbard ignores the possible nasty aspects of such a market in human flesh (such as children being sold to work in factories, homes and brothels). And, of course, such a market could see women "specialising" in producing children for it (the use of child labour during the Industrial Revolution actually made it economically sensible for families to have more children) and, perhaps, gluts and scarcities of babies due to changing market conditions. But this is besides the point.

Of course, this theoretical justification for slavery at the heart of an ideology calling itself "libertarianism" is hard for many right-Libertarians to accept. Some of the "anarcho"-capitalist type argue that such contracts would be very hard to enforce in their system of capitalism. This attempt to get out of the contradiction fails simply because it ignores the nature of the capitalist market. If there is a demand for slave contracts to be enforced, then companies will develop to provide that "service" (and it would be interesting to see how two "protection" firms, one defending slave contracts and another not, could compromise and reach a peaceful agreement over whether slave contracts were valid). Thus we could see a so-called "anarchist" or "free" society producing companies whose specific purpose was to hunt down escaped slaves (i.e. individuals in slave contracts who have not paid damages to their owners for freedom). Of course, perhaps Rothbard would claim that such slave contracts would be "outlawed" under his "general libertarian law code" but this is a denial of market "freedom". If slave contracts **are** "banned" then surely this is paternalism, stopping individuals from contracting out their "labour services" to whom and however long they "desire". You cannot have it both ways.

So, ironically, an ideology proclaiming itself to support "liberty" ends up justifying and defending slavery. Indeed, for the right-libertarian the slave contract is an exemplification, not the denial, of the individual's liberty! How is this possible? How can slavery be supported as an expression of liberty? Simple, right-Libertarian support for slavery is a symptom of a **deeper** authoritarianism, namely their uncritical acceptance of contract theory. The central claim of contract theory is that contract is the means

to secure and enhance individual freedom. Slavery is the antithesis to freedom and so, in theory, contract and slavery must be mutually exclusive. However, as indicated above, some contract theorists (past and present) have included slave contracts among legitimate contracts. This suggests that contract theory cannot provide the theoretical support needed to secure and enhance individual freedom. Why is this?

As Carole Pateman argues, "*contract theory is primarily about a way of creating social relations constituted by subordination, not about exchange.*" [**The Sexual Contract**, p. 40] Rather than undermining subordination, contract theorists justify modern subjection - "*contract doctrine has proclaimed that subjection to a master - a boss, a husband - is freedom.*" [**Op. Cit.**, p. 146] The question central to contract theory (and so right-Libertarianism) is not "are people free" (as one would expect) but "are people free to subordinate themselves in any manner they please." A radically different question and one only fitting to someone who does not know what liberty means.

Anarchists argue that not all contracts are legitimate and no free individual can make a contract that denies his or her own freedom. If an individual is able to express themselves by making free agreements then those free agreements must also be based upon freedom internally as well. Any agreement that creates domination or hierarchy negates the assumptions underlying the agreement and makes itself null and void.

This is most easily seen in the extreme case of the slave contract. John Stuart Mill stated that such a contract would be "null and void." He argued that an individual may voluntarily choose to enter such a contract but in so doing "*he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. . . The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom.*" He adds that "*these reasons, the force of which is so conspicuous in this particular case, are evidently of far wider application.*" [cited by Pateman, **Op. Cit.**, pp. 171-2]

And it is such an application that defenders of capitalism fear (Mill did in fact apply these reasons wider and unsurprisingly became a supporter of a market syndicalist form of socialism). If we reject slave contracts as illegitimate then, logically, we must also reject **all** contracts that express qualities similar to slavery (i.e. deny freedom) including wage slavery.

The right Libertarian J. Philmore sees what is at stake and argues that "*contractual slavery [is] . . . [an] extension of the employer-employee contract.*" He asserts (correctly) that "*any thorough and decisive critique of voluntary slavery. . . would carry over to the employment contract. . . Such a critique would thus be a **reductio ad absurdum**.*" [Philmore, **Op. Cit.**, p. 55] In other words, the difference between wage labour and slavery is the time scale, a slave contract is "merely" an extended employment contract. It is rare to find a supporter of capitalism being so honest! (And as Carole Pateman notes, "*[t]here is a nice historical irony here. In the American South, slaves were emancipated and turned into wage labourers, and now American contractarians argue that all workers should have the opportunity to turn themselves into civil slaves.*" [**Ibid.**, p. 63]).

All this does not mean that we must reject free agreement. Far from it! Free agreement is **essential** for a society based upon individual dignity and liberty. There are a variety of forms of free agreement and anarchists support those based upon co-operation and self-management (i.e. individuals working together as equals). Anarchists desire to create relationships which reflect (and so express) the liberty that is the basis of free agreement. Capitalism creates relationships that deny liberty. The opposition between autonomy and subjection can only be maintained by modifying or rejecting contract theory, something that capitalism cannot do and so the right-wing Libertarian rejects autonomy in favour of subjection (and so rejects socialism in favour of capitalism).

The real contrast between anarchism and right-Libertarianism is best expressed in their respective opinions on slavery. Anarchism is based upon the individual whose individuality depends upon the maintenance of free relationships with other individuals. If individuals deny their capacities for self-government from themselves through a contract the individuals bring about a qualitative change in their relationship to others - freedom is turned into mastery and subordination. For the anarchist, slavery is thus the paradigm of what freedom is **not**, instead of an exemplification of what it is (as right-Libertarians state).

As Proudhon argued "*[i]f I were asked to answer the following question: What is slavery? and I should answer in one word, It is murder, my meaning would be understood at once. No extended argument would be required to show that the power to take from a man his thought, his will, his personality, is a power of life and death; and that to enslave a man is to kill him.*" [**What is Property?**, p. 37]

In contrast, the right-Libertarian effectively argues that "I support slavery because I believe in liberty." It is a sad reflection of the ethical and intellectual bankruptcy of our society that such an "argument" is actually taken seriously by (some) people. The concept of "slavery as freedom" is far too Orwellian to warrant a critique - we will leave it up to right Libertarians to corrupt our language and ethical standards with an attempt to prove it.

From the basic insight that slavery is the opposite of freedom, the anarchist rejection of authoritarian social relations quickly follows (the rejection that Philmore and other right-Libertarians fear):

"Liberty is inviolable. I can neither sell nor alienate my liberty; every contract, every condition of a contract, which has in view the alienation or suspension of liberty, is null: the slave, when he plants his foot upon the soil of liberty, at that moment becomes a free man. . . Liberty is the original condition of man; to renounce liberty is to renounce the nature of man: after that, how could we perform the acts of man?" [P.J. Proudhon, **Op. Cit.**, p. 67]

The employment contract (i.e. wage slavery) abrogates liberty. It is based upon inequality of power and "*exploitation is a consequence of the fact that the sale of labour power entails the worker's subordination.*" [Carole Pateman, **Op. Cit.**, P. 149] Hence Proudhon's (and Mill's) support of self-management and opposition to capitalism - any relationship that resembles slavery is illegitimate and no

contract that creates a relationship of subordination is valid. Thus in a truly anarchistic society, slave contracts would be unenforceable -- people in a truly free (i.e. non-capitalist) society would **never** tolerate such a horrible institution or consider it a valid agreement. If someone was silly enough to sign such a contract, they would simply have to say they now rejected it in order to be free -- such contracts are made to be broken and without the force of a law system (and private defence firms) to back it up, such contracts will stay broken.

The right-Libertarian support for slave contracts (and wage slavery) indicates that their ideology has little to do with liberty and far more to do with justifying property and the oppression and exploitation it produces. Their support and theoretical support for slavery indicates a deeper authoritarianism which negates their claims to be libertarians.

F.2.7 But surely abolishing capitalism would restrict liberty?

Many "anarcho"-capitalists and other supporters of capitalism argue that it would be "authoritarian" to restrict the number of alternatives that people can choose between by abolishing capitalism. If workers become wage labourers, so it is argued, it is because they "value" other things more -- otherwise they would not agree to the exchange. But such an argument ignores that reality of capitalism.

By **maintaining** capitalist private property, the options available to people **are** restricted. In a fully developed capitalist economy the vast majority have the "option" of selling their labour or starving/living in poverty -- self-employed workers account for less than 10% of the working population. Usually, workers are at a disadvantage on the labour market due to the existence of unemployment and so accept wage labour because otherwise they would starve (see [section F.10.2](#) for a discussion on why this is the case). And as we argue in sections [J.5.11](#) and [J.5.12](#), even **if** the majority of the working population desired co-operative workplaces, a capitalist market will not provide them with that outcome due to the nature of the capitalist workplace (also see Juliet C. Schor's excellent book **The Overworked American** for a discussion of why workers desire for more free time is not reflected in the labour market). In other words, it is a myth to claim that wage labour exists or that workplaces are hierarchical because workers value other things -- they are hierarchical because bosses have more clout on the market than workers and, to use Schor's expression, workers end up wanting what they get rather than getting what they want.

Looking at the reality of capitalism we find that because of inequality in resources (protected by the full might of the legal system, we should note) those with property get to govern those without it during working hours (and beyond in many cases). If the supporters of capitalism were actually concerned about liberty (as opposed to property) that situation would be abhorrent to them -- after all, individuals can no longer exercise their ability to make decisions, choices, and are reduced to being order takers. If choice and liberty are the things we value, then the ability to make choices in all aspects of life automatically follows (including during work hours). However, the authoritarian relationships and the continual violation of autonomy wage labour implies are irrelevant to "anarcho"-capitalists (indeed, attempts to change this situation are denounced as violations of the autonomy of the property owner!).

By purely concentrating on the moment that a contract is signed they blind themselves to the restricts of liberty that wage contracts create.

Of course, anarchists have no desire to **ban** wage labour -- we aim to create a society within which people are not forced by circumstances to sell their liberty to others. In order to do this, anarchists propose a modification of property and property rights to ensure true freedom of choice (a freedom of choice denied to us by capitalism). As we have noted many times, "bilateral exchanges" can and do adversely effect the position of third parties if they result in the build-up of power/money in the hands of a few. And one of these adverse effects can be the restriction of workers options due to economic power. Therefore it is the supporter of capitalist who restricts options by supporting an economic system and rights framework that by their very workings reduce the options available to the majority, who then are "free to choose" between those that remain (see also [section B.4](#)). Anarchists, in contrast, desire to expand the available options by abolishing capitalist private property rights and removing inequalities in wealth and power that help restrict our options and liberties artificially.

So does an anarchist society have much to fear from the spread of wage labour within it? Probably not. If we look at societies such as the early United States or the beginnings of the Industrial Revolution in Britain, for example, we find that, given the choice, most people preferred to work for themselves. Capitalists found it hard to find enough workers to employ and the amount of wages that had to be offered to hire workers were so high as to destroy any profit margins. Moreover, the mobility of workers and their "laziness" was frequently commented upon, with employers despairing at the fact workers would just work enough to make end meet and then disappear. Thus, left to the actions of the "free market," it is doubtful that wage labour would have spread. But it was not left to the "free market".

In response to these "problems", the capitalists turned to the state and enforced various restrictions on society (the most important being the land, tariff and money monopolies -- see sections [B.3](#) and [F.8](#)). In free competition between artisan and wage labour, wage labour only succeeded due to the use of state action to create the required circumstances to discipline the labour force and to accumulate enough capital to give capitalists an edge over artisan production (see [section F.8](#) for more details).

Thus an anarchist society would not have to fear the spreading of wage labour within it. This is simply because would-be capitalists (like those in the early United States) would have to offer such excellent conditions, workers' control and high wages as to make the possibility of extensive profits from workers' labour nearly impossible. Without the state to support them, they will not be able to accumulate enough capital to give them an advantage within a free society. Moreover, it is somewhat ironic to hear capitalists talking about anarchism denying choice when we oppose wage labour considering the fact workers were not given any choice when the capitalists used the state to develop wage labour in the first place!

F.2.8 Why should we reject the "anarcho"-capitalist definitions of freedom and justice?

Simply because they lead to the creation of authoritarian social relationships and so to restrictions on liberty. A political theory which, when consistently followed, has evil or iniquitous consequences, is a bad theory.

For example, any theory that can justify slavery is obviously a bad theory - slavery does not cease to stink the moment it is seen to follow your theory. As right-Libertarians can justify slave contracts as a type of wage labour (see [section F.2.6](#)) as well as numerous other authoritarian social relationships, it is obviously a bad theory.

It is worth quoting Noam Chomsky at length on this subject:

"Consider, for example, the 'entitlement theory of justice'. . . [a]ccording to this theory, a person has a right to whatever he has acquired by means that are just. If, by luck or labour or ingenuity, a person acquires such and such, then he is entitled to keep it and dispose of it as he wills, and a just society will not infringe on this right.

"One can easily determine where such a principle might lead. It is entirely possible that by legitimate means - say, luck supplemented by contractual arrangements 'freely undertaken' under pressure of need - one person might gain control of the necessities of life. Others are then free to sell themselves to this person as slaves, if he is willing to accept them. Otherwise, they are free to perish. Without extra question-begging conditions, the society is just.

*"The argument has all the merits of a proof that $2 + 2 = 5$. . . Suppose that some concept of a 'just society' is advanced that fails to characterise the situation just described as unjust. . . Then one of two conclusions is in order. We may conclude that the concept is simply unimportant and of no interest as a guide to thought or action, since it fails to apply properly even in such an elementary case as this. Or we may conclude that the concept advanced is to be dismissed in that it fails to correspond to the pretheoretical notion that it intends to capture in clear cases. If our intuitive concept of justice is clear enough to rule social arrangements of the sort described as grossly unjust, then the sole interest of a demonstration that this outcome might be 'just' under a given 'theory of justice' lies in the inference by **reductio ad absurdum** to the conclusion that the theory is hopelessly inadequate. While it may capture some partial intuition regarding justice, it evidently neglects others.*

"The real question to be raised about theories that fail so completely to capture the concept of justice in its significant and intuitive sense is why they arouse such interest. Why are they not simply dismissed out of hand on the grounds of this failure, which is striking in clear cases? Perhaps the answer is, in part, the one given by Edward Greenberg in a discussion of some recent work on the entitlement theory of justice. After reviewing empirical and conceptual shortcomings, he observes that such work 'plays an

important function in the process of . . . 'blaming the victim,' and of protecting property against egalitarian onslaughts by various non-propertied groups.' An ideological defence of privileges, exploitation, and private power will be welcomed, regardless of its merits.

"These matters are of no small importance to poor and oppressed people here and elsewhere." [The Chomsky Reader, pp. 187-188]

It may be argued that the reductions in liberty associated with capitalism is not really an iniquitous outcome, but such an argument is hardly fitting for a theory proclaiming itself "libertarian." And the results of these authoritarian social relationships? To quote Adam Smith, under the capitalist division of labour the worker *"has no occasion to exert his understanding, or exercise his invention"* and *"he naturally loses, therefore, the habit of such exercise and generally becomes as stupid and ignorant as it is possible for a human creature to become."* The worker's mind falls *"into that drowsy stupidity, which, in a civilised society, seems to benumb the understanding of almost all of the inferior [sic!] ranks of people."* [cited by Chomsky, **Op. Cit.**, p. 186]

Of course, it may be argued that these evil effects of capitalist authority relations on individuals are also not iniquitous (or that the very real domination of workers by bosses is not really domination) but that suggests a desire to sacrifice real individuals, their hopes and dreams and lives to an abstract concept of liberty, the accumulative effect of which would be to impoverish all our lives. The kind of relationships we create **within** the organisations we join are of as great an importance as their voluntary nature. Social relations **shape** the individual in many ways, restricting their freedom, their perceptions of what freedom is and what their interests actually are. This means that, in order not to be farcical, any relationships we create must reflect in their internal workings the critical evaluation and self-government that created them in the first place. Sadly capitalist individualism masks structures of power and relations of domination and subordination within seemingly "voluntary" associations -- it fails to note the relations of domination resulting from private property and so *"what has been called 'individualism' up to now has been only a foolish egoism which belittles the individual. Foolish because it was not individualism at all. It did not lead to what was established as a goal; that is the complete, broad, and most perfectly attainable development of individuality."* [Peter Kropotkin, **Selected Writings**, p. 297]

This right-Libertarian lack of concern for concrete individual freedom and individuality is a reflection of their support for "free markets" (or "economic liberty" as they sometimes phrase it). However, as Max Stirner noted, this fails to understand that *"[p]olitical liberty means that the polis, the State, is free; . . . not, therefore, that I am free of the State. . . It does not mean my liberty, but the liberty of a power that rules and subjugates me; it means that one of my despots . . . is free."* [The Ego and Its Own, p. 107] Thus the desire for "free markets" results in a blindness that while the market may be "free" the individuals within it may not be (as Stirner was well aware, *"[u]nder the regime of the commonality the labourers always fall into the hands of the possessors . . . of the capitalists, therefore."* [Op. Cit., p. 115])

In other words, right-libertarians give the greatest importance to an abstract concept of freedom and fail

to take into account the fact that real, concrete freedom is the outcome of self-managed activity, solidarity and voluntary co-operation. For liberty to be real it must exist in all aspects of our daily life and cannot be contracted away without seriously effecting our minds, bodies and lives. Thus, the right-Libertarian's *"defence of freedom is undermined by their insistence on the concept of negative liberty, which all too easily translates in experience as the negation of liberty."* [Stephan L. Newman, **Liberalism as Wit's End**, p. 161]

Thus right-Libertarian's fundamental fallacy is that "contract" does not result in the end of power or domination (particularly when the bargaining power or wealth of the would-be contractors is not equal). As Carole Pateman notes, *"[i]ronically, the contractarian ideal cannot encompass capitalist employment. Employment is not a continual series of discrete contracts between employer and worker, but . . . one contract in which a worker binds himself to enter an enterprise and follow the directions of the employer for the duration of the contract. As Huw Benyon has bluntly stated, 'workers are paid to obey.'"* [**The Sexual Contract**, p. 148] This means that *"the employment contract (like the marriage contract) is not an exchange; both contracts create social relations that endure over time - social relations of subordination."* [**Ibid.**]

Authority impoverishes us all and must, therefore, be combated wherever it appears. That is why anarchists oppose capitalism, so that there shall be *"no more government of man by man, by means of accumulation of capital."* [P-J Proudhon, cited by Woodcock in **Anarchism**, p. 110] If, as Murray Bookchin point it, *"the object of anarchism is to increase choice"* [**The Ecology of Freedom**, p. 70] then this applies both to when we are creating associations/relationships with others and when we are **within** these associations/relationships -- i.e. that they are consistent with the liberty of all, and that implies participation and self-management **not** hierarchy. "Anarcho"-capitalism fails to understand this essential point and by concentrating purely on the first condition for liberty ensures a society based upon domination, oppression and hierarchy and not freedom.

It is unsurprising, therefore, to find that the basic unit of analysis of the "anarcho"-capitalist/right-libertarian is the transaction (the "trade," the "contract"). The freedom of the individual is seen as revolving around an act, the contract, and **not** in our relations with others. All the social facts and mechanisms that precede, surround and result from the transaction are omitted. In particular, the social relations that result from the transaction are ignored (those, and the circumstances that make people contract, are the two unmentionables of right-libertarianism).

For anarchists it seems strange to concentrate on the moment that a contract is signed and ignore the far longer time the contract is active for (as we noted in [section A.2.14](#), if the worker is free when they sign a contract, slavery soon overtakes them). Yes, the voluntary nature of a decision is important, but so are the social relationships we experience due to those decisions.

For the anarchist, freedom is based upon the insight that other people, apart from (indeed, **because** of) having their own intrinsic value, also are "means to my end", that it is through their freedom that I gain my own -- so enriching my life. As Bakunin put it:

"I who want to be free cannot be because all the men around me do not yet want to be free, and consequently they become tools of oppression against me." [quoted by Errico Malatesta in **Anarchy**, p. 27]

Therefore anarchists argue that we must reject the right-Libertarian theories of freedom and justice because they end up supporting the denial of liberty as the expression of liberty. What this fails to recognise is that freedom is a product of social life and that (in Bakunin's words) *"[n]o man can achieve his own emancipation without at the same time working for the emancipation of all men around him. My freedom is the freedom of all since I am not truly free in thought and in fact, except when my freedom and my rights are confirmed and approved in the freedom and rights of all men who are my equals."* [**Ibid.**]

Other people give us the possibilities to develop our full human potentiality and thereby our freedom, so when we destroy the freedom of others we limit our own. *"To treat others and oneself as property,"* argues anarchist L. Susan Brown, *"objectifies the human individual, denies the unity of subject and object and is a negation of individual will . . . even the freedom gained by the other is compromised by this relationship, for to negate the will of another to achieve one's own freedom destroys the very freedom one sought in the first place."* [**The Politics of Individualism**, p. 3]

Fundamentally, it is for this reason that anarchists reject the right-Libertarian theories of freedom and justice -- it just does not ensure individual freedom or individuality.

F.3 Why do anarcho"-capitalists generally place little or no value on "equality," and what do they mean by that term?

Murray Rothbard argues that *"the 'rightist' libertarian is not opposed to inequality."* [For a New Liberty, p. 47] In contrast, "leftist" libertarians oppose inequality because it has harmful effects on individual liberty.

Part of the reason "anarcho"-capitalism places little or no value on "equality" derives from their definition of that term. Murray Rothbard defines equality as:

*"A and B are 'equal' if they are identical to each other with respect to a given attribute... There is one and only one way, then, in which any two people can really be 'equal' in the fullest sense: they must be identical in **all** their attributes."*

He then points out the obvious fact that *"men are not uniform,. . . the species, mankind, is uniquely characterised by a high degree of variety, diversity, differentiation: in short, inequality."* [Egalitarianism as a Revolt against Nature and Other Essays, p. 4, p.5]

In others words, every individual is unique. Something no egalitarian has ever denied. On the basis of this amazing insight, he concludes that equality is impossible (except "equality of rights") and that the attempt to achieve "equality" is a "revolt against nature" -- as if any anarchist had ever advocated such a notion of equality as being identical!

And so, because we are all unique, the outcome of our actions will not be identical and so social inequality flows from natural differences and not due to the economic system we live under. Inequality of endowment implies inequality of outcome and so social inequality. As individual differences are a fact of nature, attempts to create a society based on "equality" (i.e. making everyone identical in terms of possessions and so forth) is impossible and "unnatural."

Before continuing, we must note that Rothbard is destroying language to make his point and that he is not the first to abuse language in this particular way. In George Orwell's **1984**, the expression *"all men are created equal"* could be translated into Newspeak, but it would make as much sense as saying *"all men have red hair,"* an obvious falsehood (see *"The Principles of Newspeak"* Appendix). It's nice to know that "Mr. Libertarian" is stealing ideas from Big Brother, and for the same reason: to make critical thought impossible by restricting the meaning of words.

"Equality," in the context of political discussion, does not mean "identical," it usually means equality of rights, respect, worth, power and so forth. It does not imply treating everyone identically (for example,

expecting an eighty year old man to do identical work to an eighteen violates treating both with respect as unique individuals). For anarchists, as Alexander Berkman writes, *"equality does not mean an equal amount but equal **opportunity**. . . Do not make the mistake of identifying equality in liberty with the forced equality of the convict camp. True anarchist equality implies freedom, not quantity. It does not mean that every one must eat, drink, or wear the same things, do the same work, or live in the same manner. Far from it: the very reverse, in fact. Individual needs and tastes differ, as appetites differ. It is **equal** opportunity to satisfy them that constitutes true equality. Far from levelling, such equality opens the door for the greatest possible variety of activity and development. For human character is diverse, and only the repression of this free diversity results in levelling, in uniformity and sameness. Free opportunity and acting out your individuality means development of natural dissimilarities and variations. . . . Life in freedom, in anarchy will do more than liberate man merely from his present political and economic bondage. That will be only the first step, the preliminary to a truly human existence."* [**The ABC of Anarchism**, p. 25]

Thus anarchists reject the Rothbardian-Newspeak definition of equality as meaningless within political discussion. No two people are identical and so imposing "identical" equality between them would mean treating them as **unequals**, i.e. not having equal worth or giving them equal respect as befits them as human beings and fellow unique individuals.

So what should we make of Rothbard's claim? It is tempting just to quote Rousseau when he argued *"it is . . . useless to inquire whether there is any essential connection between the two inequalities [social and natural]; for this would be only asking, in other words, whether those who command are necessarily better than those who obey, and if strength of body or of mind, wisdom, or virtue are always found in particular individuals, in proportion to their power or wealth: a question fit perhaps to be discussed by slaves in the hearing of their masters, but highly unbecoming to reasonable and free men in search of the truth."* [**The Social Contract and Discourses**, p. 49] But a few more points should be raised.

The uniqueness of individuals has always existed but for the vast majority of human history we have lived in very egalitarian societies. If social inequality did, indeed, flow from natural inequalities then **all** societies would be marked by it. This is not the case. Indeed, taking a relatively recent example, many visitors to the early United States noted its egalitarian nature, something that soon changed with the rise of wage labour and industrial capitalism (a rise dependent upon state action, we must add, -- see section [F.8](#)). This implies that the society we live in (its rights framework, the social relationships it generates and so forth) has a far more of a decisive impact on inequality than individual differences. Thus certain rights frameworks will tend to magnify "natural" inequalities (assuming that is the source of the initial inequality, rather than, say, violence and force). As Noam Chomsky argues:

"Presumably it is the case that in our 'real world' some combination of attributes is conducive to success in responding to 'the demands of the economic system' . . . One might suppose that some mixture of avarice, selfishness, lack of concern for others, aggressiveness, and similar characteristics play a part in getting ahead [in capitalism]. . .

Whatever the correct collection of attributes may be, we may ask what follows from the fact, if it is a fact, that some partially inherited combination of attributes tends to material success? All that follows . . . is a comment on our particular social and economic arrangements . . . The egalitarian might responds, in all such cases, that the social order should be changes so that the collection of attributes that tends to bring success no longer do so . . . " [The Chomsky Reader, p. 190]

So, perhaps, if we change society then the social inequalities we see today would disappear. It is more than probable that natural difference has been long ago been replaced with **social** inequalities, especially inequalities of property (which will tend to increase, rather than decrease, inequality). And as we argue in section [F.8](#) these inequalities of property were initially the result of force, **not** differences in ability. Thus to claim that social inequality flows from natural differences is false as most social inequality has flown from violence and force. This initial inequality has been magnified by the framework of capitalist property rights and so the inequality within capitalism is far more dependent upon, say, the existence of wage labour, rather than "natural" differences between individuals.

If we look at capitalism, we see that in workplaces and across industries many, if not most, unique individuals receive identical wages for identical work (although this often is not the case for women and blacks, who receive less wages than male, white workers). Similarly, capitalists have deliberately introduced wage inequalities and hierarchies for no other reason than to divide (and so rule) the workforce (see section [D.10](#)). Thus, if we assume egalitarianism **is** a revolt against nature, then much of capitalist economic life is in such a revolt (and when it is not, the "natural" inequalities have been imposed artificially by those in power).

Thus "natural" differences do not necessarily result in inequality as such. Given a different social system, "natural" differences would be encouraged and celebrated far wider than they are under capitalism (where, as we argued in section [B.1](#), hierarchy ensures the crushing of individuality rather than its encouragement) without any change in social equality. The claim that "natural" differences generates social inequalities is question begging in the extreme -- it takes the rights framework of society as a given and ignores the initial source of inequality in property and power. Indeed, inequality of outcome or reward is more likely to be influenced by social conditions rather than individual differences (as would be the case in a society based on wage labour or other forms of exploitation).

Another reason for "anarcho"-capitalist lack of concern for equality is that they think that "*liberty upsets patterns*" (see section [F.2.5](#), for example). It is argued that equality can only be maintained by restricting individual freedom to make exchanges or by taxation of income. However, what this argument fails to acknowledge is that inequality also restricts individual freedom (see [next section](#), for example) and that the capitalist property rights framework is not the only one possible. After all, money is power and inequalities in terms of power easily result in restrictions of liberty and the transformation of the majority into order takers rather than free producers. In other words, once a certain level of inequality is reached, property does not promote, but actually conflicts with, the ends which render private property legitimate. Moreover, Nozick (in his "liberty upsets patterns" argument) "*has produced . . . an argument*

for unrestricted private property using unrestricted private property, and thus he begs the question he tries to answer." [Andrew Kerhohan, "*Capitalism and Self-Ownership*", from **Capitalism**, p. 71] For example, a worker employed by a capitalist cannot freely exchange the machines or raw materials they have been provided with to use but Nozick does not class this distribution of "restricted" property rights as infringing liberty (nor does he argue that wage slavery itself restricts freedom, of course).

So in response to the claim that equality could only be maintained by continuously interfering with people's lives, anarchists would say that the inequalities produced by capitalist property rights also involve extensive and continuous interference with people's lives. After all, as Bob Black notes "*[y]our foreman or supervisor gives you more or-else orders in a week than the police do in a decade*" nevermind the other effects of inequality such as stress, ill health and so on [**Libertarian as Conservative**]. Thus claims that equality involves infringing liberty ignores the fact that inequality also infringes liberty. A reorganisation of society could effectively minimise inequalities by eliminating the major source of such inequalities (wage labour) by self-management (see section [I.5.12](#) for a discussion of "capitalistic acts" within an anarchist society). We have no desire to restrict free exchanges (after all, most anarchists desire to see the "gift economy" become a reality sooner or later) but we argue that free exchanges need not involve the unrestricted property rights Nozick assumes. As we argue in sections [F.2](#) and [F.3.1](#), inequality can easily led to the situation where self-ownership is used to justify its own negation and so unrestricted property rights may undermine the meaningful self-determination (what anarchists would usually call "freedom" rather than self-ownership) which many people intuitively understand by the term "self-ownership".

Thus, for anarchists, the "anarcho"-capitalist opposition to equality misses the point and is extremely question begging. Anarchists do not desire to make humanity "identical" (which would be impossible and a total denial of liberty **and** equality) but to make the social relationships between individuals equal in **power**. In other words, they desire a situation where people interact together without institutionalised power or hierarchy and are influenced by each other "naturally," in proportion to how the (individual) **differences** between (social) **equals** are applicable in a given context. To quote Michael Bakunin, "*[t]he greatest intelligence would not be equal to a comprehension of the whole. Thence results. . . the necessity of the division and association of labour. I receive and I give -- such is human life. Each directs and is directed in his turn. Therefore there is no fixed and constant authority, but a continual exchange of mutual, temporary, and, above all, voluntary authority and subordination.*" [**God and the State**, p. 33]

Such an environment can only exist within self-managed associations, for capitalism (i.e. wage labour) creates very specific relations and institutions of authority. It is for this reason anarchists are socialists (i. e. opposed to wage labour, the existence of a proletariat or working class). In other words, anarchists support equality precisely **because** we recognise that everyone is unique. If we are serious about "equality of rights" or "equal freedom" then conditions must be such that people can enjoy these rights and liberties. If we assume the right to develop one's capacities to the fullest, for example, then inequality of resources and so power within society destroys that right simply because people do not have the means to freely exercise their capacities (they are subject to the authority of the boss, for

example, during work hours).

So, in direct contrast to anarchism, right-Libertarianism is unconcerned about any form of equality except "equality of rights". This blinds them to the realities of life; in particular, the impact of economic and social power on individuals within society and the social relationships of domination they create. Individuals may be "equal" before the law and in rights, but they may not be free due to the influence of social inequality, the relationships it creates and how it affects the law and the ability of the oppressed to use it. Because of this, all anarchists insist that equality is essential for freedom, including those in the Individualist Anarchist tradition the "anarcho"-capitalist tries to co-opt -- *"Spooner and Godwin insist that inequality corrupts freedom. Their anarchism is directed as much against inequality as against tyranny"* and *"[w]hile sympathetic to Spooner's individualist anarchism, they [Rothbard and David Friedman] fail to notice or conveniently overlook its egalitarian implications."* [Stephen L. Newman, **Liberalism at Wit's End**, p. 74, p. 76]

Why equality is important is discussed more fully in the [next section](#). Here we just stress that without social equality, individual freedom is so restricted that it becomes a mockery (essentially limiting freedom of the majority to choosing **which** employer will govern them rather than being free within and outside work).

Of course, by defining "equality" in such a restrictive manner, Rothbard's own ideology is proved to be nonsense. As L.A. Rollins notes, *"Libertarianism, the advocacy of 'free society' in which people enjoy 'equal freedom' and 'equal rights,' is actually a specific form of egalitarianism. As such, Libertarianism itself is a revolt against nature. If people, by their very biological nature, are unequal in all the attributes necessary to achieving, and preserving 'freedom' and 'rights'. . . then there is no way that people can enjoy 'equal freedom' or 'equal rights'. If a free society is conceived as a society of 'equal freedom,' then there ain't no such thing as 'a free society'."* [**The Myth of Natural Law**, p. 36]

Under capitalism, freedom is a commodity like everything else. The more money you have, the greater your freedom. "Equal" freedom, in the Newspeak-Rothbardian sense, **cannot** exist! As for "equality before the law", its clear that such a hope is always dashed against the rocks of wealth and market power (see [next section](#) for more on this). As far as rights go, of course, both the rich and the poor have an "equal right" to sleep under a bridge (assuming the bridge's owner agrees of course!); but the owner of the bridge and the homeless have **different** rights, and so they cannot be said to have "equal rights" in the Newspeak-Rothbardian sense either. Needless to say, poor and rich will not "equally" use the "right" to sleep under a bridge, either.

Bob Black observes in **The Libertarian as Conservative** that *"[t]he time of your life is the one commodity you can sell but never buy back. Murray Rothbard thinks egalitarianism is a revolt against nature, but his day is 24 hours long, just like everybody else's."*

By twisting the language of political debate, the vast differences in power in capitalist society can be "blamed" not on an unjust and authoritarian system but on "biology" (we are all unique individuals, after

all). Unlike genes (although biotechnology corporations are working on this, too!), human society **can** be changed, by the individuals who comprise it, to reflect the basic features we all share in common -- our humanity, our ability to think and feel, and our need for freedom.

F.3.1 Why is this disregard for equality important?

Simply because a disregard for equality soon ends with liberty for the majority being negated in many important ways. Most "anarcho"-capitalists and right-Libertarians deny (or at best ignore) market power. Rothbard, for example, claims that economic power does not exist; what people call "*economic power*" is "*simply the right under freedom to refuse to make an exchange*" [**The Ethics of Liberty**, p. 222] and so the concept is meaningless.

However, the fact is that there are substantial power centres in society (and so are the source of hierarchical power and authoritarian social relations) which are **not the state**. The central fallacy of "anarcho"-capitalism is the (unstated) assumption that the various actors within an economy have relatively equal power. This assumption has been noted by many readers of their works. For example, Peter Marshall notes that "*anarcho-capitalists' like Murray Rothbard assume individuals would have equal bargaining power in a [capitalist] market-based society*" [**Demanding the Impossible**, p. 46] George Walford also makes this clear in his comments on David Friedman's **The Machinery of Freedom**:

"The private ownership envisaged by the anarcho-capitalists would be very different from that which we know. It is hardly going too far to say that while the one is nasty, the other would be nice. In anarcho-capitalism there would be no National Insurance, no Social Security, no National Health Service and not even anything corresponding to the Poor Laws; there would be no public safety-nets at all. It would be a rigorously competitive society: work, beg or die. But as one reads on, learning that each individual would have to buy, personally, all goods and services needed, not only food, clothing and shelter but also education, medicine, sanitation, justice, police, all forms of security and insurance, even permission to use the streets (for these also would be privately owned), as one reads about all this a curious feature emerges: everybody always has enough money to buy all these things.

"There are no public casual wards or hospitals or hospices, but neither is there anybody dying in the streets. There is no public educational system but no uneducated children, no public police service but nobody unable to buy the services of an efficient security firm, no public law but nobody unable to buy the use of a private legal system. Neither is there anybody able to buy much more than anybody else; no person or group possesses economic power over others.

"No explanation is offered. The anarcho-capitalists simply take it for granted that in their favoured society, although it possesses no machinery for restraining competition (for this

*would need to exercise authority over the competitors and it is an **anarcho**- capitalist society) competition would not be carried to the point where anybody actually suffered from it. While proclaiming their system to be a competitive one, in which private interest rules unchecked, they show it operating as a co-operative one, in which no person or group profits at the cost of another." [On the Capitalist Anarchists]*

This assumption of (relative) equality comes to the fore in Murray Rothbard's "Homesteading" concept of property (discussed in section [F.4.1](#)). "Homesteading" paints a picture of individuals and families doing into the wilderness to make a home for themselves, fighting against the elements and so forth. It does **not** invoke the idea of transnational corporations employing tens of thousands of people or a population without land, resources and selling their labour to others. Indeed, Rothbard argues that economic power does not exist (at least under capitalism; as we saw in section [F.2.1](#) he does make -- highly illogical -- exceptions). Similarly, David Friedman's example of a pro-death penalty and anti-death penalty "defence" firm coming to an agreement (see section [F.6.3](#)) assumes that the firms have equal bargaining powers and resources -- if not, then the bargaining process would be very one-sided and the smaller company would think twice before taking on the larger one in battle (the likely outcome if they cannot come to an agreement on this issue) and so compromise.

However, the right-libertarian denial of market power is unsurprising. The necessity, not the redundancy, of equality is required if the inherent problems of contract are not to become too obvious. If some individuals **are** assumed to have significantly more power than others, and if they are always self-interested, then a contract that creates equal partners is impossible -- the pact will establish an association of masters and servants. Needless to say, the strong will present the contract as being to the advantage of both: the strong no longer have to labour (and become rich, i.e. even stronger) and the weak receive an income and so do not starve.

If freedom is considered as a function of ownership then it is very clear that individuals lacking property (outside their own body, of course) loses effective control over their own person and labour (which was, lets not forget, the basis of their equal natural rights). When ones bargaining power is weak (which is typically the case in the labour market) exchanges tend to magnify inequalities of wealth and power over time rather than working towards an equalisation.

In other words, "contract" need not replace power if the bargaining position and wealth of the would-be contractors are not equal (for, if the bargainers had equal power it is doubtful they would agree to sell control of their liberty/time to another). This means that "power" and "market" are not antithetical terms. While, in an abstract sense, all market relations are voluntary in practice this is not the case within a capitalist market. For example, a large company has a comparative advantage over small ones and communities which will definitely shape the outcome of any contract. For example, a large company or rich person will have access to more funds and so stretch out litigations and strikes until their opponents resources are exhausted. Or, if a local company is polluting the environment, the local community may put up with the damage caused out of fear that the industry (which it depends upon) would relocate to another area. If members of the community **did** sue, then the company would be merely exercising its

property rights when it threatened to move to another location. In such circumstances, the community would "freely" consent to its conditions or face massive economic and social disruption. And, similarly, *"the landlords' agents who threaten to discharge agricultural workers and tenants who failed to vote the reactionary ticket"* in the 1936 Spanish election were just exercising their legitimate property rights when they threatened working people and their families with economic uncertainty and distress. [Murray Bookchin, **The Spanish Anarchists**, p. 260]

If we take the labour market, it is clear that the "buyers" and "sellers" of labour power are rarely on an equal footing (if they were, then capitalism would soon go into crisis -- see section [F.10.2](#)). In fact, competition *"in labour markets is typically skewed in favour of employers: it is a buyer's market. And in a buyer's, it is the sellers who compromise."* [Juliet B. Schor, **The Overworked American**, p. 129] Thus the ability to refuse an exchange weights most heavily on one class than another and so ensures that "free exchange" works to ensure the domination (and so exploitation) of one party by the other.

Inequality in the market ensures that the decisions of the majority of within it are shaped in accordance with that needs of the powerful, not the needs of all. It was for this reason that the Individual Anarchist J. K. Ingalls opposed Henry George's proposal of nationalising the land. Ingalls was well aware that the rich could outbid the poor for leases on land and so the dispossession of the working classes would continue.

The market, therefore, does not end power or unfreedom -- they are still there, but in different forms. And for an exchange to be truly voluntary, both parties must have equal power to accept, reject, or influence its terms. Unfortunately, these conditions are rarely met on the labour market or within the capitalist market in general. Thus Rothbard's argument that economic power does not exist fails to acknowledge that the rich can out-bid the poor for resources and that a corporation generally has greater ability to refuse a contract (with an individual, union or community) than vice versa (and that the impact of such a refusal is such that it will encourage the others involved to "compromise" far sooner). And in such circumstances, formally free individuals will have to "consent" to be unfree in order to survive.

As Max Stirner pointed out in the 1840s, free competition *"is not 'free,' because I lack the **things** for competition."* [**The Ego and Its Own**, p. 262] Due to this basic inequality of wealth (of "things") we find that *"[u]nder the **regime** of the commonality the labourers always fall into the hands of the possessors . . . of the capitalists, therefore. The labourer cannot **realise** on his labour to the extent of the value that it has for the customer."* [**Op. Cit.**, p. 115] Its interesting to note that even Stirner recognises that capitalism results in exploitation. And we may add that value the labourer does not "*realise*" goes into the hands of the capitalists, who invest it in more "things" and which consolidates and increases their advantage in "free" competition.

To quote Stephan L. Newman:

"Another disquieting aspect of the libertarians' refusal to acknowledge power in the market is their failure to confront the tension between freedom and autonomy. . . Wage

labour under capitalism is, of course, formally free labour. No one is forced to work at gun point. Economic circumstance, however, often has the effect of force; it compels the relatively poor to accept work under conditions dictated by owners and managers. The individual worker retains freedom [i.e. negative liberty] but loses autonomy [positive liberty]." [**Liberalism at Wit's End**, pp. 122-123]

(As an aside, we should point out that the full Stirner quote cited above is "[u]nder the **regime** of the commonality the labourers always fall into the hands of the possessors, of those who have at their disposal some bit of the state domains (and everything possessible in State domain belongs to the State and is only a fief of the individual), especially money and land; of the capitalists, therefore. The labourer cannot **realise** on his labour to the extent of the value that it has for the customer."

It could be argued that we misrepresenting Stirner by truncating the quote, but we feel that such a claim this is incorrect. Its clear from his book that Stirner is considering the "minimal" state ("*The State is a -commoners' State . . . It protects man . . . according to whether the rights entrusted to him by the State are enjoyed and managed in accordance with the will, that is, laws, of the State.*" The State "*looks on indifferently as one grows poor and the other rich, unruffled by this alternation. As **individuals** they are really equal before its face.*" [**Op. Cit.**, p. 115, p. 252]). As "anarcho"-capitalists consider their system to be one of rights and laws (particularly property rights), we feel that its fair to generalise Stirner's comments into capitalism **as such** as opposed to "minimum state" capitalism. If we replace "State" by "libertarian law code" you will see what we mean. We have included this aside before any right-libertarians claim that we are misrepresenting Stirner' argument.)

If we consider "equality before the law" it is obvious that this also has limitations in an (materially) unequal society. Brian Morris notes that for Ayn Rand, "*[u]nder capitalism . . . politics (state) and economics (capitalism) are separated . . . This, of course, is pure ideology, for Rand's justification of the state is that it 'protects' private property, that is, it supports and upholds the economic power of capitalists by coercive means.*" [**Ecology & Anarchism**, p. 189] The same can be said of "anarcho"-capitalism and its "protection agencies" and "general libertarian law code." If within a society a few own all the resources and the majority are dispossessed, then any law code which protects private property **automatically** empowers the owning class. Workers will **always** be initiating force if act against the code and so "equality before the law" reinforces inequality of power and wealth.

This means that a system of property rights protects the liberties of some people in a way which gives them an unacceptable degree of power over others. And this cannot be met merely by reaffirming the rights in question, we have to assess the relative importance of various kinds of liberty and other values we how dear.

Therefore right-libertarian disregard for equality is important because it allows "anarcho"-capitalism to ignore many important restrictions of freedom in society. In addition, it allows them to brush over the negative effects of their system by painting an unreal picture of a capitalist society without vast extremes of wealth and power (indeed, they often construe capitalist society in terms of an ideal -- namely artisan

production -- that is really **pre**-capitalist and whose social basis has been eroded by capitalist development). Inequality shapes the decisions we have available and what ones we make:

"An 'incentive' is always available in conditions of substantial social inequality that ensure that the 'weak' enter into a contract. When social inequality prevails, questions arises about what counts as voluntary entry into a contract . . . Men and women . . . are now juridically free and equal citizens, but, in unequal social conditions, the possibility cannot be ruled out that some or many contracts create relationships that bear uncomfortable resemblances to a slave contract." [Carole Pateman, **The Sexual Contract**, p. 62]

This ideological confusion of right-libertarianism can also be seen from their opposition to taxation. On the one hand, they argue that taxation is wrong because it takes money from those who "earn" it and gives it to the poor. On the other hand, "free market" capitalism is assumed to be a more equal society! If taxation takes from the rich and gives to the poor, how will "anarcho"-capitalism be more egalitarian? That equalisation mechanism would be gone (of course, it could be claimed that all great riches are purely the result of state intervention skewing the "free market" but that places all their "rags to riches" stories in a strange position). Thus we have a problem, either we have relative equality or we do not. Either we have riches, and so market power, or we do not. And its clear from the likes of Rothbard, "anarcho"-capitalism will not be without its millionaires (there is, after all, apparently nothing un-libertarian about *"organisation, hierarchy, wage-work, granting of funds by libertarian millionaires, and a libertarian party"*). And so we are left with market power and so extensive unfreedom.

Thus, for a ideology that denounces egalitarianism as a *"revolt against nature"* it is pretty funny that they paint a picture of "anarcho"-capitalism as a society of (relative) equals. In other words, their propoganda is based on something that has never existed, and never will, namely an egalitarian capitalist society.

F.3.2 But what about "anarcho"-capitalist support for charity?

Yes, while being blind to impact of inequality in terms of economic and social power and influence, most right-libertarians **do** argue that the very poor could depend on charity in their system. But such a recognition of poverty does not reflect an awareness of the need for equality or the impact of inequality on the agreements we make. Quite the reverse in fact, as the existence of extensive inequality is assumed -- after all, in a society of relative equals, poverty would not exist, nor would charity be needed.

Ignoring the fact that their ideology hardly promotes a charitable perspective, we will raise four points. Firstly, charity will not be enough to countermand the existence and impact of vast inequalities of wealth (and so power). Secondly, it will be likely that charities will be concerned with "improving" the moral quality of the poor and so will divide them into the "deserving" (i.e. obedient) and "undeserving" (i.e. rebellious) poor. Charity will be forthcoming to the former, those who agree to busy-bodies sticking their noses into their lives. In this way charity could become another tool of economic and social power

(see Oscar Wilde's **The Soul of Man Under Socialism** for more on charity). Thirdly, it is unlikely that charity will be able to replace all the social spending conducted by the state -- to do so would require a ten-fold increase in charitable donations (and given that most right-libertarians denounce the government for making them pay taxes to help the poor, it seems unlikely that they will turn round and **increase** the amount they give). And, lastly, charity is an implicate recognition that, under capitalism, no one has the right of life -- its a privilege you have to pay for. That in itself is enough to reject the charity option. And, of course, in a system designed to secure the life and liberty of each person, how can it be deemed acceptable to leave the life and protection of even one individual to the charitable whims of others? (Perhaps it will be argued that individual's have the right to life, but not a right to be a parasite. This ignores the fact some people **cannot** work -- babies and some handicapped people -- and that, in a functioning capitalist economy, many people cannot find work all the time. Is it this recognition of that babies cannot work that prompts many right-libertarians to turn them into property? Of course, rich folk who have never done a days work in their lives are never classed as parasites, even if they inherited all their money). All things considered, little wonder that Proudhon argued that:

"Even charitable institutions serve the ends of those in authority marvellously well.

"Charity is the strongest chain by which privilege and the Government, bound to protect them, holds down the lower classes. With charity, sweeter to the heart of men, more intelligible to the poor man than the abstruse laws of Political Economy, one may dispense with justice." [The General Idea of the Revolution, pp. 69-70]

As noted, the right-libertarian (passing) acknowledgement of poverty does not mean that they recognise the existence of market power. They never ask themselves how can someone be free if their social situation is such that they are drowning in a sea of usury and have to sell their labour (and so liberty) to survive.

D.8 What causes militarism and what are its effects?

There are two main causes of capitalist militarism. Firstly, there is the need to contain the domestic enemy - the oppressed and exploited sections of the population. The other, as noted in the section on imperialism, is that a strong military is necessary in order for a ruling class to pursue an aggressive and expansionist foreign policy. For most developed capitalist nations, this kind of foreign policy becomes more and more important because of economic forces, i.e. in order to provide outlets for its goods and to prevent the system from collapsing by expanding the market continually outward. This outward expansion of, and so competition between, capital needs military force to protect its interests (particularly those invested in other countries) and give it added clout in the economic jungle of the world market.

Capitalist militarism also serves several other purposes and has a number of effects. First, it promotes the development of a specially favoured group of companies involved in the production of armaments or armament related products ("defence" contractors), who have a direct interest in the maximum expansion of military production. Since this group is particularly wealthy, it exerts great pressure on government to pursue the type of state intervention and, often, the aggressive foreign policies it wants.

This "special relationship" between state and Big Business also has the advantage that it allows the ordinary citizen to pay for industrial Research and Development. Government subsidies provide an important way for companies to fund their research and development at taxpayer expense, which often yields "spin-offs" with great commercial potential as consumer products (e.g. computers). Needless to say, all the profits go to the defence contractors and to the commercial companies who buy licences to patented technologies from them, rather than being shared with the public which funded the R&D that made the profits possible.

It is necessary to provide some details to indicate the size and impact of military spending on the US economy:

"Since 1945. . . there have been new industries sparking investment and employment . . . In most of them, basic research and technological progress were closely linked to the expanding military sector. The major innovation in the 1950s was electronics . . . [which] increased its output 15 percent per year. It was of critical importance in workplace automation, with the federal government providing the bulk of the research and development (R&D) dollars for military-orientated purposes. Infrared instrumentation, pressure and temperature measuring equipment, medical electronics, and thermoelectric energy conversion all benefited from military R&D. By the 1960s indirect and direct military demand accounted for as much as 70 percent of the total output of the electronics industry. Feedbacks also developed between electronics and aircraft, the second growth

*industry of the 1950s. By 1960 . . . [i]ts annual investment outlays were 5.3 times larger than their 1947-49 level, and over 90 percent of its output went to the military. Synthetics (plastics and fibers) was another growth industry owing much of its development to military-related projects. Throughout the 1950s and 1960s, military-related R&D, including space, accounted for 40 to 50 percent of total public and private R&D spending and at least 85% of federal government share." [Richard B. Du Boff, **Accumulation and Power**, pp. 103-4]*

Not only this, government spending on road building (initially justified using defence concerns) also gave a massive boost to private capital (and, in the process, totally transformed America into a land fit for car and oil corporations). The cumulative impact of the 1944, 1956 and 1968 Federal Highway Acts "allowed \$70 billion to be spent on the interstates without [the money] passing through the congressional appropriations board." The 1956 Act "[i]n effect wrote into law the 1932 National Highway Users Conference strategy of G[eneral] M[otors] chairman Alfred P. Sloan to channel gasoline and other motor vehicle-related excise taxes into highway construction." GM also illegally bought-up and effectively destroyed public transit companies across America, so reducing competition against private car ownership. The net effect of this state intervention was that by 1963-66 "one in every six business enterprise was directly dependent on the manufacture, distribution, servicing, and the use of motor vehicles." The impact of this process is still evident today -- both in terms of ecological destruction and in the fact that automobile and oil companies are still dominate the top twenty of the Fortune 500. [**Op. Cit.**, p. 102]

This system, which can be called military Keynesianism, has three advantages over socially-based state intervention. Firstly, unlike social programmes, military intervention does not improve the situation (and thus, hopes) of the majority, who can continue to be marginalised by the system, suffer the discipline of the labour market and feel the threat of unemployment. Secondly, it acts like welfare for the rich, ensuring that while the many are subject to market forces, the few can escape that fate - while singing the praises of the "free market". And, thirdly, it does not compete with private capital.

Because of the connection between militarism and imperialism, it was natural after World War II that America should become the world's leading military state at the same time that it was becoming the world's leading economic power, and that strong ties developed between government, business, and the armed forces. American "military capitalism" is described in detail below, but the remarks also apply to a number of other "advanced" capitalist states.

In his farewell address, President Eisenhower warned of the danger posed to individual liberties and democratic processes by the "**military-industrial complex**," which might, he cautioned, seek to keep the economy in a state of continual war-readiness simply because it is good business. This echoed the warning which had been made earlier by sociologist C. Wright Mills (in **The Power Elite**, 1956), who pointed out that since the end of World War II the military had become enlarged and decisive to the shape of the entire American economy, and that US capitalism had in fact become a military capitalism. This situation has not substantially changed since Mills wrote, for it is still the case that all US military officers have grown up in the atmosphere of the post-war military-industrial alliance and have been

explicitly educated and trained to carry it on. So, despite recent cuts in the US defence budget, American capitalism remains military capitalism, with a huge armaments industry and defence contractors still among the most powerful of political entities.

D.8.1 Will militarism change with the apparent end of the Cold War?

Many politicians seemed to think so in the early nineties, asserting that a "*peace dividend*" was at hand. Since the Gulf War, however, Americans have heard little more about it. Although it's true that some fat was trimmed from the defence budget, both economic and political pressures have tended to keep the basic military-industrial complex intact, insuring a state of global war-readiness and continuing production of ever more advanced weapons systems into the foreseeable future.

Since it's having more and more trouble dominating the world economically, America now claims superpower status largely on the basis of its military superiority. Therefore the US won't be likely to renounce this superiority willingly-- especially since the prospect of recapturing world economic superiority appears to depend in part on her ability to bully other nations into granting economic concessions and privileges, as in the past. Hence the US public is being bombarded with propaganda designed to show that an ongoing US military presence is necessary in every corner of the planet.

For example, after the Gulf War the draft of a government White Paper was released in which it was argued that the US must maintain its status as the world's strongest military power and not hesitate to act unilaterally if UN approval for future military actions is not forthcoming. Although then President Bush, under election-year political pressures, denied that he personally held such views, the document reflected the thinking of powerful authoritarian forces in government -- thinking that has a way of becoming public policy through secret National Security Directives (see section D.9.2 -- [What is "Invisible government"?](#)).

For these reasons it would not be wise to bet on a deep and sustained American demilitarisation. It is true that troop strength is being cut back in response to Soviet withdrawals from Eastern Europe; but these cutbacks are also prompted by the development of automated weapons systems which reduce the number of soldiers needed to win battles, as demonstrated in the Persian Gulf.

Although there may appear to be no urgent need for huge military budgets now that the Soviet threat is gone, the US has found it impossible to kick its forty-year addiction to militarism. As Noam Chomsky points out in many of his works, the "*Pentagon System*," in which the public is forced to subsidise research and development of high tech industry through subsidies to defence contractors, is a covert substitute in the US for the overt industrial planning policies of other "advanced" capitalist nations, like Germany and Japan. US defence businesses, which are among the biggest lobbyists, cannot afford to lose this "corporate welfare." Moreover, continued corporate downsizing and high levels of unemployment will produce strong pressure to maintain defence industries simply in order to keep

people working.

Despite some recent modest trimming of defence budgets, the demands of US military capitalism still take priority over the needs of the people. For example, Holly Sklar points out that Washington, Detroit, and Philadelphia have higher infant death rates than Jamaica or Costa Rica and that Black America as a whole has a higher infant mortality rate than Nigeria; yet the US still spends less public funds on education than on the military, and more on military bands than on the National Endowment for the Arts [*"Brave New World Order,"* in Cynthia Peters, ed., **Collateral Damage**, 1992, pp. 3-46]. But of course, politicians continue to maintain that education and social services must be cut back even further because there is "no money" to fund them.

A serious problem at this point, however, is that the collapse of the Soviet Union leaves the Pentagon in desperate need of a sufficiently dangerous and demonic enemy to justify continued military spending in the style to which it's accustomed. Saddam Hussein was temporarily helpful, but he's not enough of a menace to warrant the robust defence budgets of yore now that his military machine has been smashed. There are some indications, however, that the US government has its sights on Iran.

The main point in favour of targeting Iran is that the American public still craves revenge for the 1979 hostage humiliation, the Lebanon bombing, the Iran-Contra scandal, and other outrages, and can thus be relied on to support a war of retribution. Hence it would not be surprising to hear much more in the future about a possible Iranian nuclear threat and about the dangers of Iranian influence in the Moslem republics of the ex-Soviet empire.

In the wake of the Persian Gulf War, the United States has quietly been building a network of defence alliances reminiscent of the Eisenhower years after World War II, so that America may now be called upon to police disturbances all over the Arab World. Sending troops to Somalia appears to have been designed to help accustom Americans to such a role.

Besides Iran, unfriendly regimes in North Korea, Cuba, and Libya, as well as communist guerrilla groups in various South American nations, also hold great promise as future testing grounds for new weapons systems. And of course there is the recent troop deployments to Haiti and Bosnia, which provide the Pentagon with more arguments for continued high levels of defence spending. In a nutshell, then, the trend toward increasing militarism is not likely to be checked by the present military "downsizing," which will merely produce a leaner and more efficient fighting machine.

D.9 What is the relationship between wealth polarisation and authoritarian government?

We have previously noted the recent increase in the rate of wealth polarisation, with its erosion of working-class living standards. This process has been referred to by Noam Chomsky as "*Third-Worldisation*." It is appearing in a particularly acute form in the US -- the "richest" industrialised nation which also has the highest level of poverty, since it is the most polarised -- but the process can be seen in other "advanced" industrial nations as well, particularly in the UK.

Third World governments are typically authoritarian, since harsh measures are required to suppress rebellions among their impoverished and discontented masses. Hence "Third-Worldisation" implies not only economic polarisation but also increasingly authoritarian governments. As Philip Slater puts it, a large, educated, and alert "middle class" (i.e. average income earners) has always been the backbone of democracy, and anything that concentrates wealth tends to weaken democratic institutions [**A Dream Deferred**, p. 68].

If this is true, then along with increasing wealth polarisation in the US we should expect to see signs of growing authoritarianism. This hypothesis is confirmed by numerous facts, including the following: continuing growth of an "imperial presidency" (concentration of political power); extralegal operations by the executive branch (e.g. the Iran-Contra scandal, the Grenada and Panama invasions); skyrocketing incarceration rates; more official secrecy and censorship; the rise of the Far Right; more police and prisons; FBI requests for massive wiretapping capability; and so on. Public support for draconian measures to deal with crime reflect the increasingly authoritarian mood of citizens beginning to panic in the face of an ongoing social breakdown, which has been brought about, quite simply, by ruling-class greed that has gotten out of hand -- a fact that is carefully obscured by the media.

One might think that representative democracy and constitutionally guaranteed freedoms would make an authoritarian government impossible in the United States and other liberal democratic nations with similar constitutional "protections" for civil rights. In reality, however, the declaration of a "national emergency" would allow the central government to ignore constitutional guarantees with impunity and set up what Hannah Arendt calls "invisible government" -- mechanisms allowing an administration to circumvent constitutional structures while leaving them nominally in place (see section [D.9.2](#)).

In this regard it is important to remember that the Nazis created a "shadow government" in Germany even as the "democratic" Weimar constitution continued to operate in theory. Hitler at first implemented his programmes through the constitution, using existing government agencies and departments. Later he set up Nazi Party bureaus that duplicated the functions of the Weimar government, allowing the latter to remain in place but without power, while the Nazi bureaus (especially the SS, and of course Hitler himself) held the actual power. The Communist Party in Russia created a similar invisible government after the Bolshevik revolution, leaving the revolutionary constitution as well as the government

bureaucracy in place while Communist Party agencies and the General Secretary wielded the real power [See Marilyn French, **Beyond Power**, p. 349].

If the drift toward social breakdown continues in the "advanced" industrial nations, it's not difficult to conceive of voters electing overtly authoritarian, right-wing administrations campaigning on "law-and-order" platforms. In the face of widespread rioting, looting, and mayhem (especially if it spilled over from the ghettos and threatened the suburbs), reactionary hysteria could propel authoritarian types into both the executive and legislative branches of government. The "middle classes" (i.e. professionals, small business people and so on) would then support charismatic martial-style leaders who promised to restore law and order, particularly if they were men with impressive military or police credentials.

Once elected, and with the support of willing legislatures and courts, authoritarian administrations could easily create much more extensive mechanisms of invisible government than already exist, giving the executive branch virtually dictatorial powers. Such administrations could also vastly increase government control of the media, implement martial law, escalate foreign militarism, further expand the funding and scope of the police, national guard units, secret police and foreign intelligence agencies, and authorise more widespread surveillance of citizens as well as the infiltration of dissident political groups. Random searches and seizures, curfews, government control of all organised meetings, harassment or outright banning of groups that disagreed with or attempted to block government policies, and the imprisonment of political dissidents and others judged to be dangerous to "national security" would then become routine.

These developments would not occur all at once, but so gradually, imperceptibly, and logically -- given the need to maintain "law and order" -- that most people would not even be aware that an authoritarian take-over was underway. Indeed, it is already underway in the US (see Bertram Gross, **Friendly Fascism**, South End Press, 1989).

In the following subsections we will examine some of the symptoms of growing authoritarianism listed above, again referring primarily to the example of the United States. We are including these sections in the FAQ because the disturbing trends canvassed here give the anarchist programme of social reconstruction more urgency than would otherwise be the case. For if radical and dissident groups are muzzled -- as always happens under authoritarian rule -- that programme will be much more difficult to achieve.

D.9.1 Why does political power become concentrated under capitalism?

Under capitalism, political power tends to become concentrated in the executive branch of government, along with a corresponding decline in the effectiveness of parliamentary institutions. As Paul Sweezy points out, parliaments grew out of the struggle of capitalists against the power of centralised monarchies during the early modern period, and hence the function of parliaments has always been to check and control the exercise of executive power. For this reason, *"parliaments flourished and reached*

the peak of their prestige in the period of competitive capitalism when the functions of the state, particularly in the economic sphere, were reduced to a minimum." [**Theory of Capitalist Development**, p. 310]

As capitalism develops, however, the ruling class must seek to expand its capital through foreign investments, which leads to imperialism, which in turn leads to a tightening of class lines and increasingly severe social conflict, as we have seen earlier (see D.5.2). As this happens, legislatures become battlegrounds of contending parties, divided by divergent class and group interests, which reduces their capacity for positive action. And at the same time, the ruling class increasingly needs a strong centralised state that can protect its interests in foreign countries as well as solve difficult and complex economic problems. *"Under the circumstances, parliament is forced to give up one after another of its cherished prerogatives and to see built up under its very eyes the kind of centralised and uncontrolled authority against which, in its youth, it had fought so hard and so well."* [**Ibid.**, p. 319]

This process can be seen clearly in the history of the United States. Since World War II, power has become centralised in the hands of the president to such an extent that scholars now refer to an "imperial presidency," following Arthur Schlesinger's 1973 book of that title.

Contemporary US presidents' appropriation of congressional authority, especially in matters relating to national security, has paralleled the rise of the United States as the world's strongest and most imperialistic military power. In the increasingly dangerous and interdependent world of the 20th century, the perceived need for a leader who can act quickly and decisively, without possibly disastrous obstruction by Congress, has provided an impetus for ever greater concentration of power in the White House.

This concentration has taken place in both foreign and domestic policy, but it has been catalysed above all by a series of foreign policy decisions in which modern US presidents have seized the most vital of all government powers, the power to make war. And as they have continued to commit troops to war without congressional authorisation or public debate, their unilateral policy-making has spilled over into domestic affairs as well.

In the atmosphere of omnipresent crisis that developed in the fifties, the United States appointed itself guardian of the "free world" against the Red Menace. This placed unprecedented military resources under the control of the President. At the same time, the Eisenhower Administration established a system of pacts and treaties with nations all over the globe, making it difficult for Congress to limit the President's deployment of troops according to the requirements of treaty obligations and national security, both of which were left to presidential judgement. The CIA, a secretive agency accountable to Congress only after the fact, was made the primary instrument of US intervention in the internal affairs of other nations for national security reasons.

With President Johnson's massive deployment of troops to Vietnam, the scope of presidential war-making power took a giant leap forward. Unlike Truman's earlier decision to commit troops in Korea

without prior congressional approval, the UN had not issued any resolutions to legitimate US involvement in Vietnam. In justifying the President's decision, the State Department implied that in the interdependent world of the twentieth century, warfare anywhere on the globe could constitute an attack on the United States which might require immediate response, and hence that the Commander-in-Chief was authorised to take "defensive" war measures without congressional approval or UN authorisation.

Following Vietnam, the presidency was further strengthened by the creation of an all-volunteer military, which is less subject to rebellions in the face of popular opposition to a foreign war than a conscripted force. With their control over the armed forces more secure, presidents since Nixon have been liberated for a much wider range of foreign adventures. The collapse of the Soviet military threat now makes it easier than ever for the President to pursue military options in striving to achieve foreign policy objectives, as the Persian Gulf conflict clearly showed. United States involvement there would have been much more difficult during the Cold War, with the Soviet Union supporting Iraq.

It is sometimes argued that Watergate fatally weakened the power of the US presidency, but this is not actually the case. Michael Lind lists several reasons why [in *"The Case for Congressional Power: the Out-of-Control Presidency," The New Republic*, Aug. 14, 1995]. First, the President can still wage war at will, without consulting Congress. Second, thanks to precedents set by Bush and Clinton, important economic treaties (like GATT and NAFTA) can be rammed through Congress as "fast-track" legislation, which limits the time allowed for debate and forbids amendments. Third, thanks to Jimmy Carter, who reformed the Senior Executive Service to give the White House more control over career bureaucrats, and Ronald Reagan, who politicised the upper levels of the executive branch to an unprecedented degree, presidents can now pack government with their spoilsmen and reward partisan bureaucrats. Fourth, thanks to George Bush, presidents now have a powerful new technique to enhance presidential prerogatives and erode the intent of Congress even further -- namely, signing laws while announcing that they will not obey them. Fifth, thanks also to Bush, yet another new instrument of arbitrary presidential power has been created: the "tsar," a presidential appointee with vague, sweeping charges that overlap with or supersede the powers of department heads.

As Lind also points out, the White House staff that has ballooned since World War II seems close to becoming an extra-constitutional "fourth branch" of government. The creation of presidential "tsars" whose powers overlap or supersede those of department heads is reminiscent of the creation of shadow governments by Hitler and Stalin (see also section D.9.2 -- [What is "Invisible government"?](#)).

Besides the reasons noted above, another cause of increasing political centralisation under capitalism is that industrialisation forces masses of people into alienated wage slavery, breaking their bonds to other people, to the land, and to tradition, which in turn encourages strong central governments to assume the role of surrogate parent and to provide direction for their citizens in political, intellectual, moral, and even spiritual matters [see Hannah Arendt, **The Origins of Totalitarianism**, 1968]. And as Marilyn French emphasises [in **Beyond Power**], the growing concentration of political power in the capitalist state can also be attributed to the form of the corporation, which is a microcosm of the authoritarian state, since it is based on centralised authority, bureaucratic hierarchy, antidemocratic controls, and lack

of individual initiative and autonomy. Thus the millions of people who work for large corporations tend automatically to develop the psychological traits needed to survive and "succeed" under authoritarian rule: notably, obedience, conformity, efficiency, subservience, and fear of responsibility. The political system naturally tends to reflect the psychological conditions created at the workplace, where most people spend about half their time.

Reviewing such trends, Ralph Miliband concludes that "*[h]owever strident the rhetoric of democracy and popular sovereignty may be, and despite the 'populist' overtones which politics must now incorporate, the trend is toward the ever-greater appropriation of power at the top.*" [**Divided Societies**, Oxford, 1989]

D.9.2. What is "invisible government"?

We've already briefly noted the phenomenon of "invisible government" or "shadow government" (see section [D.9](#)), which occurs when an administration is able to bypass or weaken official government agencies or institutions to implement policies that are not officially permitted. In the US, the Reagan Administration's Iran-Contra affair is an example. During that episode the National Security Council, an arm of the executive branch, secretly funded the Contras, a mercenary counterinsurgency force in Central America, in direct violation of the Boland Amendment which Congress had passed for the specific purpose of prohibiting such funding. The fact that investigators could not prove the President's authorisation or even knowledge of the operation is a tribute to the presidential "deniability" its planners took care to build into it.

Other recent cases of invisible government in the United States involve the weakening of official government agencies to the point where they can no longer effectively carry out their mandate. Reagan's tenure in the White House again provides a number of examples. The Environmental Protection Agency, for instance, was for all practical purposes neutralised when employees dedicated to genuine environmental protection were removed and replaced with people loyal to corporate polluters. Evidence suggests that the Department of the Interior under Reagan-appointee James Watt was similarly co-opted. Such detours around the law are deliberate policy tools that allow presidents to exercise much more actual power than they appear to have on paper.

One of the most potent methods of invisible government in the US is the President's authority to determine foreign and domestic policy through National Security Directives that are kept secret from Congress and the American people. Such NSDs cover a virtually unlimited field of actions, shaping policy that may be radically different from what is stated publicly by the White House and involving such matters as interference with First Amendment rights, initiation of activities that could lead to war, escalation of military conflicts, and even the commitment of billions of dollars in loan guarantees -- all without congressional approval or even knowledge.

According to congressional researchers, past administrations have used national security orders to intensify the war in Vietnam, send US commandos to Africa, and bribe foreign governments. The

Reagan Administration wrote more than 320 secret directives on everything from the future of Micronesia to ways to keep the government running after a nuclear holocaust. Jeffrey Richelson, a leading scholar on US intelligence, says that the Bush Administration had written more than 100 NSDs as of early 1992 on subjects ranging from the drug wars to nuclear weaponry to support for guerrillas in Afghanistan to politicians in Panama. Although the subjects of such orders have been discovered by diligent reporters and researchers, none of the texts has been declassified or released to Congress. Indeed, the Bush Administration consistently refused to release even **unclassified** NSDs!

On October 31, 1989, nine months before the Iraqi invasion of Kuwait, President Bush signed NSD-26, ordering US agencies to expand political and economic ties with Iraq, giving Iraq access to US financial aid involving a billion-dollar loan guarantee as well as military technology and foodstuffs later sold for cash. Members of Congress, concerned that policy decisions involving billion-dollar commitments of funds should be made jointly with the legislature, dispatched investigators in 1991 to obtain a list of the secret directives. The White House refused to co-operate, ordering the directives kept secret "*because they deal with national security.*" Iraq's default on the loans it obtained through NSD-26 means that American taxpayers are footing the billion-dollar bill.

The underlying authoritarianism of politicians is often belied by their words. For instance, even as Reagan claimed to favour diminished centralisation he was calling for a radical increase in his control of the budget and for extended CIA activities inside the country -- with less congressional surveillance -- both of which served to increase centralised power [Tom Farrer, "*The Making of Reaganism*," New York Review of Books, Jan 21, 1982, cited in Marilyn French, **Beyond Power**, p. 346]. President Clinton's recent use of an Executive Order to bail out Mexico from its debt crisis after Congress failed to appropriate the money falls right into the authoritarian tradition of running the country by fiat.

Perhaps the most disturbing revelation to emerge from the Iran-Contra affair was the Reagan administration's contingency plan for imposing martial law. Alfonso Chardy, a reporter for the **Miami Herald**, revealed in July 1987 that Lt. Col. Oliver North, while serving on the National Security Council's staff, had worked with the Federal Emergency Management Agency on a plan to suspend the Bill of Rights by imposing martial law in the event of "*national opposition to a US military invasion abroad.*" This martial law directive was still in effect in 1988 [Richard O. Curry, ed., **Freedom at Risk: Secrecy, Censorship, and Repression in the 1980s**, Temple University Press, 1988].

Former US Attorney General Edwin Meese declared that the single most important factor in implementing martial law would be "*advance intelligence gathering to facilitate internment of the leaders of civil disturbances*" [**Ibid.**, p. 28}. As discussed in B.16.5, during the 1980s the FBI greatly increased its surveillance of individuals and groups judged to be potentially "subversive," thus providing the Administration with a convenient list of people who would be subject to immediate internment during civil disturbances. The Omnibus Counter-terrorism Bill now being debated in the US Congress would give the President virtually dictatorial powers, by allowing him to imprison and bankrupt dissidents by declaring their organisations "terrorist."

D.9.3 Why are incarceration rates rising?

A large prison population is another characteristic of authoritarian regimes. Hence the burgeoning US incarceration rate during the past decade, coupled with the recent rapid growth of the prison "industry" must be regarded as further evidence of a drift toward authoritarian government, as one would expect given the phenomenon of "Third-Worldisation."

Prison inmates in the US are predominantly poor, and the sentences handed out to people without social prestige or the resources to defend themselves are much harsher than those received by people with higher incomes who are charged with the same crimes. Federal Bureau of Justice Statistics show that the median incomes of male prisoners before sentencing is about one-third that of the general population. Median incomes of inmates are even lower if the relatively few (and more-affluent) white-collar criminals are not included in the calculations.

Since the poor are disproportionately from minorities, the prison population is also disproportionately minority. By 1992, the American authorities were imprisoning black men at a rate five times higher than the old apartheid regime had done at its worst in South Africa, and there were more prisoners of Mexican descent in the US than in all of Mexico [Phil Wilayto, "*Prisons and Capitalist Restructuring*," **Workers' World**, January 15, 1995].

Michael Specter reports that more than 90 percent of all the offences committed by prison inmates are crimes against property ["*Community Corrections*," **The Nation**, March 13, 1982]. In an era where the richest one percent of the population owns more property than the bottom 90 percent combined, it's hardly a surprise that those at the very bottom should try to recoup illegally some of the maldistributed wealth they are unable to obtain legally.

In the 1980s the United States created mandatory sentences for dozens of drug offences, expanded capital punishment, and greatly increased the powers of police and prosecutors. The result was a doubling of the prison population from 1985 to 1994, according to a report recently issued by the US Department of Justice. Yet the overall crime rate in the U.S. has remained almost constant during the past twenty years, according to the same report. Indeed, the rate dropped 15 percent from 1980 to 1984, yet the number of prisoners increased 43 percent during that same period. The crime rate then increased by 14 percent from 1985 to 1989, while the number of prisoners grew by 52 percent.

Although the growth of the US prison population has been swollen out of proportion to the crime rate by new drug sentencing laws, drug use has not decreased. Repressive measures are clearly not working, as anyone can see, yet they're still favoured over social programmes, which continue to be scaled back. For example, a recently passed crime law in the US commits billions of dollars for more police and prisons, while at the same time the new Republican Congress eliminates family planning clinics, school lunch programmes, summer youth jobs programmes, etc. Prison construction has become a high-growth industry, one of the few "bright" spots in the American economy, attracting much investment by Wall Street vultures.

D.9.4 Why is government secrecy and surveillance of citizens on the increase?

Authoritarian governments are characterised by fully developed secret police forces, extensive government surveillance of civilians, a high level of official secrecy and censorship, and an elaborate system of state coercion to intimidate and silence dissenters. All of these phenomena have existed in the US for at least eighty years, but since World War II they have taken more extreme forms, especially during the 1980s. In this section we will examine the operations of the secret police.

The creation of an elaborate US "national security" apparatus has come about gradually since 1945 through congressional enactments, numerous executive orders and national security directives, and a series of Supreme Court decisions that have eroded First Amendment rights. The policies of the Reagan administration, however, reflected radical departures from the past, as revealed not only by their comprehensive scope but by their institutionalisation of secrecy, censorship, and repression in ways that will be difficult, if not impossible, to eradicate. As Richard Curry points out, the Reagan administration's success stems *"from major structural and technological changes that have occurred in American society during the twentieth century -- especially the emergence of the modern bureaucratic State and the invention of sophisticated electronic devices that make surveillance possible in new and insidious ways."* [Curry, **Op. Cit.**, p. 4]

The FBI has used "countersubversive" surveillance techniques and kept lists of people and groups judged to be potential national security threats since the days of the Red Scare in the 1920s. Such activities were expanded in the late 1930s when Franklin Roosevelt instructed the FBI to gather information about Fascist and Communist activities in the US and to conduct investigations into possible espionage and sabotage. FBI chief J. Edgar Hoover interpreted these directives as authorising open-ended inquiries into a very broad category of potential "subversives"; and by repeatedly misinforming a succession of careless or indifferent presidents and attorneys general about the precise scope of Roosevelt's directives, Hoover managed for more than 30 years to elicit tacit executive approval for continuous FBI investigations into an ever-expanding class of political dissidents [Geoffrey R. Stone, *"The Reagan Administration, the First Amendment, and FBI Domestic Security Investigations,"* in Curry, **Ibid.**].

The advent of the Cold War, ongoing conflicts with the Soviet Union, and fears of the *"international Communist conspiracy"* provided justification not only for covert CIA operations and American military intervention in countries all over the globe, but also contributed to the FBI's rationale for expanding its domestic surveillance activities.

Thus in 1957, without authorisation from Congress or any president, Hoover launched a highly secret operation called COINTELPRO:

"From 1957 to 1974, the bureau opened investigative files on more than half a million 'subversive'

*Americans. In the course of these investigations, the bureau, in the name of 'national security,' engaged in widespread wire-tapping, bugging, mail-openings, and break-ins. Even more insidious was the bureau's extensive use of informers and undercover operative to infiltrate and report on the activities and membership of 'subversive' political associations ranging from the Socialist Workers Party to the NAACP to the Medical Committee for Human Rights to a Milwaukee Boy Scout troop." [Stone, **Ibid.**, p. 274].*

But COINTELPRO involved much more than just investigation and surveillance. It was used to discredit, weaken, and ultimately destroy the New Left and Black radical movements of the sixties and early seventies, i.e. to silence the major sources of political dissent and opposition.

The FBI fomented violence through the use of agents provocateurs and destroyed the credibility of movement leaders by framing them, bringing false charges against them, distributing offensive materials published in their name, spreading false rumours, sabotaging equipment, stealing money, and other dirty tricks. By such means the Bureau exacerbated internal frictions within movements, turning members against each other as well as other groups.

Government documents show the FBI and police involved in creating acrimonious disputes which ultimately led to the break-up of such groups as Students for a Democratic Society, the Black Panther Party, and the Liberation News Service. The Bureau also played a part in the failure of such groups to form alliances across racial, class, and regional lines. The FBI is implicated in the assassination of Malcolm X, who was killed in a "factional dispute" that the Bureau bragged of having "developed" in the Nation of Islam, and of Martin Luther King, Jr., who was the target of an elaborate FBI plot to drive him to suicide before he was conveniently killed by a sniper. Other radicals were portrayed as criminals, adulterers, or government agents, while still others were murdered in phoney "shoot-outs" where the only shooting was done by the police.

These activities finally came to public attention because of the Watergate investigations, congressional hearings, and information obtained under the Freedom of Information Act (FOIA). In response to the revelations of FBI abuse, Attorney General Edward Levi in 1976 set forth a set of public guidelines governing the initiation and scope of the bureau's domestic security investigations, severely restricting its ability to investigate political dissidents.

The Levi guidelines, however, proved to be only a temporary reversal of the trend. Although throughout his presidency Ronald Reagan professed to be against the increase of state power in regard to domestic policy, he in fact expanded the power of the national bureaucracy for "national security" purposes in systematic and unprecedented ways. One of the most significant of these was his immediate elimination of the safeguards against FBI abuse that the Levi guidelines had been designed to prevent. This was accomplished through two interrelated executive branch initiatives: Executive Order 12333, issued in 1981, and Attorney General William French Smith's guidelines, which replaced Levi's in 1983.

The Smith guidelines permitted the FBI to launch domestic security investigations if the facts

"*reasonably indicated*" that groups or individuals were involved in criminal activity. More importantly, however, the new guidelines also authorised the FBI to "*anticipate or prevent crime.*" As a result, the FBI could now investigate groups or individuals whose statements "*advocated*" criminal activity or indicated an **apparent intent** to engage in crime, particularly crimes of violence.

As Curry notes, the language of the Smith guidelines provided FBI officials with sufficient interpretative latitude to investigate virtually any group or individual it chose to target, including political activists who opposed the administration's foreign policy. Not surprisingly, under the new guidelines the Bureau immediately began investigating a wide variety of political dissidents, quickly making up for the time it had lost since 1976. Congressional sources show that in 1985 alone the FBI conducted 96 investigations of groups and individuals opposed to the Reagan Administration's Central American policies, including religious organisations who expressed solidarity with Central American refugees.

The Smith guidelines only allowed the Bureau to investigate dissidents. Now, however, there is a far greater threat to the US Bill of Rights waiting in the wings: the so-called Omnibus Counter-Terrorism Bill. If passed, this bill would allow the President, on his own initiative and by his own definition, to declare any person or organisation "terrorist."

Section 301(c)6 states that these presidential rulings will be considered as conclusive and cannot be appealed in court. The Attorney General would also be handed new enforcement powers, e.g. suspects would be considered guilty unless proven innocent, and the source or nature of the evidence brought against suspects would not have to be revealed if the Justice Department claimed a "national security" interest in suppressing such facts, as of course it would. Suspects could also be held without bail and deported for any reason if they were visiting aliens. Resident aliens would be entitled to a hearing, but could nevertheless be deported even if no crime were proven! US citizens could be put in jail for up to ten years and pay a \$250,000 fine if declared guilty.

An equally scary provision of the Counter-Terrorism Bill is Section 603, which subsumes all "terrorist" crimes under the RICO (Racketeer-Influenced Criminal Organisation) civil asset forfeiture statutes. Thus anyone merely accused of "interfering" or "impeding" or "threatening" a current or former federal employee could have all their property seized under "conspiracy to commit terrorism" charges. Some in Congress now want to designate all local gun-related charges as federal terrorist crimes. Obviously the Counter-Terrorism Bill would simply add to the abuses that are already widespread in drug cases under the seizure and forfeiture laws. This is hardly surprising, since Federal and state agencies and local police are encouraged to make seizures and get to keep the property for their own use, and since anonymous informants who make charges leading to seizures are entitled to part of the property seized.

If this bill passes, it is certain to be used against the Left, as COINTELPRO was in the past. For it will greatly increase the size and funding of the FBI and give it the power to engage in "anti-terrorist" activities all over the country, without judicial oversight. The mind reels at the ability this bill would give the government to suppress dissidents or critics of capitalism, who have historically been the favourite targets of FBI abuses. For example, if an agent provocateur were to bring an illegal stick of

dynamite to a peaceful meeting of philosophical anarchists, he could later report everyone at the meeting to the government on charges of conspiracy to commit a terrorist act. The agent could even blow something up with the dynamite and claim that other members knew of the plan. Everyone in the group could then have all their property seized and be jailed for up to ten years!

Even if the Counter-Terrorism Bill doesn't pass in its present form, the fact that a draconian measure like this is even being considered says volumes about the direction in which the US -- and by implication the other "advanced" capitalist states -- are headed.

D.9.5 But doesn't authoritarian government always involve censorship?

Yes. And central governments have been quietly increasing their power over the media for the past several decades. Monopolistic control of mass communications may not be readily evident in nominally democratic societies, where there seem to be many different sources of information. Yet on closer inspection it turns out that virtually all the major media -- those that reach the vast majority of people -- promulgate essentially the same neocapitalist world view. This is because the so-called "free" press is owned by a handful of capitalistic media conglomerates. Such uniformity insures that any facts, concepts, or opinions that clash with or tend to discredit the fundamental principles of that world view are unlikely to reach a wide audience (see section [D.3](#)).

There are numerous ties between government, news magazines, and newspapers. Corporate interests dominate television and radio; and for reasons described earlier, the interests of major corporations largely coincide with those of the government. The tendency in recent years has been toward the absorption of small independent print media, especially newspapers, by conglomerates that derive their major profits from such industries as steel, oil, and telephone equipment. As Marilyn French notes, the effect of these conglomerates' control *"is to warn communications media away from anything that might be disturbing, and toward a bland, best-of-all-possible-worlds point of view. Although people have a wide range of reading and viewing material to choose from, the majority of it offers the same kinds of distraction -- fads and fashions, surface glitter -- or tranquillisation: all problems are solvable, no serious injustice or evil is permitted to continue"* [French, **Op. Cit.**, p. 350]. In other words, people are granted ever-increasing access to an ever-decreasing range of "acceptable" ideas.

These trends represent an unofficial and unsystematic form of censorship. In the United States, however, the federal government has been extending official and systematic forms of censorship as well. Again, the Reagan Administration proceeded furthest in this regard. In 1983 alone, more than 28,000 speeches, articles, and books written by government employees were submitted to government censors for clearance. The Reagan government even set a precedent for restricting information that is not classified. This it accomplished by passing laws requiring all government employees with security clearances to sign Standard Form 189, which allows them to be prosecuted for divulging not only classified information but that which is "nonclassified but classifiable." The latter is a deliberately vague, Catch-22 category that has sufficient interpretative latitude to allow for the harassment of most would-be whistle-

blowers [Curry, **Op. Cit.**].

The United States Information Agency (USIA), which sends scholars overseas as part of its AMPARTS programme of educational and cultural exchanges, has attempted to screen the political opinions of scholars it selects for foreign speaking engagements. In 1983 the House Foreign Affairs Subcommittee on International Operations criticised USIA officials for "*violating the letter and spirit of its charter*" in choosing its AMPARTS speakers on the basis of "*partisan political ideology*."

In early 1984 the USIA's policies became a national scandal when the **Washington Post** revealed that since late 1981 the USIA had been compiling a blacklist containing not only the names of prominent academics but of national figures, including Coretta Scott King, Congressman Jack Brooks, and former Senator Gary Hart. Under the Immigration, Naturalisation, and Nationality Act (known as "the McCarran Act") foreign nationals have been denied entry into the United States because of their political and ideological beliefs. Among the most notable among the thousands who have been so denied are Nobel Prize-winning authors Gabriel Garcia Marquez and Czeslaw Milosz, as well as author Carlos Fuentes, playwright Dario Fo, actress Franca Rame, novelist Doris Lessing, NATO Deputy Supreme Commander Nino Pasti, renowned Canadian writer Farley Mowat, American-born feminist writer Margaret Randall, and Hortensia Allende, widow of the former Socialist president of Chile, Salvador Allende.

In perhaps the most disturbing censorship development in recent years, the Reagan Administration used the powers of the Trading with the Enemy Act to place an embargo on magazines and newspapers from Cuba, North Vietnam, and Albania (but not China or the ex-Soviet Union), and confiscated certain Iranian books purchased by television journalists abroad. These materials were not embargoed because they contained American secrets, but simply because it was thought they might contain information the Administration did not want Americans to know [French, **Op. Cit.**, p. 433].

Official censorship was also highly evident during the recent Persian Gulf massacre. In this one-sided conflict, the government not only severely curtailed the press's access to information about the war, restricting reporters to escorted "press pools," but to a large extent turned the major news media into compliant instruments of Administration propaganda. This was accomplished by creating competition between the TV networks and news services for the limited number of slots in the pools, thus making news departments dependent on the government's good will and turning news anchors into cheerleaders for the US-led slaughter.

Reporting on the Gulf War was also directly censored by the military, by news and photo agencies, or by both. For instance, when award-winning journalist Jon Alpert, a longtime NBC stringer, "*came back from Iraq with spectacular videotape of Basra [Iraq's second largest city, population 800,000] and other areas of Iraq devastated by US bombing, NBC president Michael Gartner not only ordered that the footage not be aired but forbade Alpert from working for the network in the future*" [Fairness and Accuracy in Reporting, **Extra, Special Issue on the Gulf War**, 1991, p. 15].

As John R. Macarthur has documented, congressional approval for the war might not have been forthcoming without a huge preliminary propaganda and disinformation campaign designed to demonise Saddam Hussein and his troops. The centrepiece of this campaign -- the now infamous story of Iraqi soldiers allegedly ripping premature Kuwaiti babies from their incubators and leaving them to die on the cold hospital floor -- was a total fabrication masterminded by an American public relations firm funded by the Kuwaiti government-in-exile and eagerly disseminated by the Administration with the help of a credulous and uncritical news establishment [John R. Macarthur, **Second Front: Censorship and Propaganda in the Gulf War**, Hill & Wang, 1992; also, John Stauber and Sheldon Rampton, **Toxic Sludge is Good For You! Lies, Damn Lies and the Public Relations Industry**, Common Courage Press, 1995].

These trends toward a system of official and unofficial censorship do not bode well for future freedom of speech and of the press. For they establish precedents for muzzling, intimidating, and co-opting the primary sources of public information -- precedents that can be invoked whenever an administration finds it convenient. This is just one more piece of evidence that late capitalism is leading inexorably toward authoritarian government.

D.9.6 What does the Right want?

In his book **Post-Conservative America** Kevin Phillips, one of the most knowledgeable and serious conservative ideologues, discusses the possibility of fundamental alterations that he regards as desirable in the US government. His proposals leave no doubt about the direction in which the Right wishes to proceed. *"Governmental power is too diffused to make difficult and necessary economic and technical decisions,"* Phillips maintains. *"[A]ccordingly, the nature of that power must be re-thought. Power at the federal level must be augmented, and lodged for the most part in the executive branch"* [p. 218].

In the model state Phillips describes, Congress would be reduced to a mere tool of a presidency grown even more "imperial" than it already is, with congressional leaders serving in the Cabinet and the two-party system merged into a single-party coalition. Before we dismiss this idea as impossible to implement, let's remember that the distinction between the two major parties has already been virtually obliterated, as each is controlled by the corporate elite, albeit by different factions within it.

Despite many tactical disagreements, virtually all members of this elite share a basic set of principles, attitudes, ideals, and values. Whether Democrat or Republican, most of them have graduated from the same Ivy League schools, belong to the same exclusive social clubs, serve on the same interlocking boards of directors of the same major corporations, and send their children to the same private boarding schools [See G. William Domhoff, *Who Rules America Now?* 1983; C. Wright Mills, **The Power Elite**, 1956]. Perhaps most importantly, they share the same psychology, which means that they have the same priorities and interests: namely, those of corporate America.

Hence there's actually only one party already -- the Business Party -- which wears two different masks to hide its real face from the public. Similar remarks apply to the liberal democratic regimes in the rest of

the advanced capitalist states. The absence of a true opposition party, which itself is a main characteristic of authoritarian regimes, is thus an accomplished fact already, and has been so for many years.

Besides the merging of the major political parties, other forces are leading inexorably toward the scenario described by Phillips. For instance, the power of the executive branch continues to grow because the authority of Congress has been progressively weakened by scandals, partisan bickering, gridlock, and ongoing revelations of legislative corruption. Indeed, bribe-taking, influence-peddling, check-bouncing, conflicts of interest, shady deals, sex scandals, and general incompetence now seem almost routine on Capitol Hill. Unless something is done to restore congressional respectability, the climate will remain conducive to a further consolidation of power in the presidency.

Phillips assures us that all the changes he envisions can be accomplished without altering the Constitution. Such marvels are indeed possible. The Emperor Augustus centralised all real power in his own hands without disbanding the Roman Senate or the Roman Republic; Hitler implemented his Nazi programmes while leaving the Weimar constitution intact; Stalin ruled under the revolutionary constitution which was theoretically democratic.

The facts cited here as evidence for the gradual authoritarianisation of the United States have been canvassed before by others, sometimes accompanied by warnings of impending dictatorship. So far such warnings have proven to be premature. What is especially alarming today, however, is that the many signs of growing authoritarianism examined above are now coinciding with the symptoms of a social breakdown -- a "coincidence" which in the past has heralded the approach of tyranny.

Fully authoritarian regimes in the US and other First World nations would represent far more than a mere threat to citizens' civil liberties and their hopes for a better society. For authoritarian regimes tend to be associated with reckless military adventurism led by autocratic heads of state. Thus, in a nuclear world in which Europe and Japan followed the US lead toward authoritarian government, the likelihood of nuclear aggression by irresponsible politicians would continue to grow. In that case, the former anxieties of the Cold War would seem mild by comparison. Hence the urgency of the anarchist programme of anti-authoritarianism, political decentralisation, and grassroots democracy -- the only real antidotes to the disturbing trends described above.

As an aside we should note that many naysayers and ruling class apologists often deny the growing authoritarianism as "paranoia" or "conspiracy theorising." The common retort is "but if things are as bad as you say, how come the government lets you write this seditious FAQ?"

The reason we can write this work unmolested is testimony to the lack of power possessed by the public at large, in the existing political culture--that is, countercultural movements needn't be a concern to the government until they become broader-based and capable of challenging the existing economic order--only then is it "necessary" for the repressive, authoritarian forces to work on undermining the movement.

So long as there is no effective organising and no threat to the interests of the ruling elite, people are permitted to say whatever they want. This creates the illusion that the society is open to all ideas, when, in fact, it isn't. But, as the decimation of the Wobblies and anarchist movement after the First World War first illustrated, the government will seek to eradicate any movement that poses a significant threat.

The proper application of spin to dissident ideology can make it seem that **any** alternatives to the present system "just wouldn't work" or "are utopian", even when such alternatives are in the self-interest of the population at large. This ideological pruning creates the misperception in people's minds that radical theories haven't been successfully implemented because they are inherently flawed--and naturally, the current authoritarian ideology is portrayed as the only "sane" course of action for people to follow.

For example, most Americans reject socialism outright, without any understanding or even willingness to understand what socialism is really about. This isn't because (libertarian) socialism is wrong; it's a direct result of capitalist propagandising of the past 70 years (and its assertion that "socialism" equals Stalinism).

Extending this attitude to the people themselves, authoritarians (with generous help from the corporate press) paint dissidents as "crackpots" and "extremists," while representing themselves as reasonable "moderates", regardless of the relative positions they are advocating. In this way, a community opposing a toxic waste incinerator in their area can be lambasted in the press as the bad guys, when what is really happening is a local community is practising democracy, daring to challenge the corporate/government authoritarians!

In the Third World, dissenters are typically violently murdered and tossed into unmarked mass graves; here, in the First World, more subtle subversion must take place. The "invisible hand" of advanced capitalist authoritarian societies is no less effective; the end result is the same, if the methodology differs--the elimination of alternatives to the present socio-economic order.

H.5 What is vanguardism and why do anarchists reject it?

Many socialists follow the ideas of Lenin and, in particular, his ideas on vanguard parties. These ideas were expounded by Lenin in his (in)famous work, **What is to be Done?**, which is considered as one of the important books in the development of Bolshevism.

The core of these ideas is the concept of "*vanguardism*," or the "*vanguard party*." According to this perspective, socialists need to organise together in a party, based on the principles of "*democratic centralism*," which aims to gain a decisive influence in the class struggle. The ultimate aim of such a party is revolution and its seizure of power. Its short term aim is to gather into it all "*class conscious*" workers into a "*efficient*" and "*effective*" party, alongside members of other classes who consider themselves as revolutionary Marxists. The party would be strictly centralised, with all members expected to submit to party decisions, speak in one voice and act in one way. Without this "*vanguard*," injecting its politics into the working class (who, it is argued, can only reach trade union consciousness by its own efforts), a revolution is impossible.

Lenin laid the foundation of this kind of party in his book **What is to be Done?** and the vision of the "*vanguard*" party was explicitly formalised in the Communist International. As Lenin put it, "*Bolshevism has created the ideological and tactical foundations of a Third International . . . Bolshevism can serve as a model of tactics for all.*" [Collected Works, vol. 28, p. 292-3] Using the Russian Communist Party as its model, Bolshevik ideas on party organisation were raised as a model for revolutionaries across the world. Since then, the various followers of Leninism and its offshoots like Trotskyism have organised themselves in this manner (with varying success).

The wisdom of applying an organisational model that had been developed in the semi-feudal conditions of Tsarist Russia to **every** country, regardless of its level of development, has been questioned by anarchists from the start. After all, could it not be wiser to build upon the revolutionary tendencies which had developed in specific countries rather than import a new model which had been created for, and shaped by, radically different social, political and economic conditions? The wisdom of applying the vanguard model is not questioned on these (essentially materialist) points by those who subscribe to it. While revolutionary workers in the advanced capitalist nations subscribed to anarchist and syndicalist ideas, this tradition is rejected in favour of one developed by, in the main, bourgeois intellectuals in a nation which was still primarily feudal and absolutist. The lessons learned from years of struggle in actual capitalist societies were simply rejected in favour of those from a party operating under Tsarism. While most supporters of vanguardism will admit that conditions now are different than in Tsarist Russia, they still subscribe to organisational method developed in that context and justify it, ironically enough, because of its "success" in the totally different conditions that prevailed in Russia in the early 20th Century! And Leninists claim to be materialists! Perhaps the reason why Bolshevism rejected the materialist approach was because most of the revolutionary movements in advanced capitalist countries

were explicitly anti-parliamentarian, direct actionist, decentralist, federalist and influenced by libertarian ideas? This materialist analysis was a key aspect of the council-communist critique of Lenin's **Left-Wing Communism**, for example (see Herman Gorter's **Open Letter to Comrade Lenin** for one excellent reply to Bolshevik arguments, tactics and assumptions).

However, this attempt to squeeze every working class movement into **one** "officially approved" model dates back to Marx and Engels. Faced with any working class movement which did **not** subscribe to their vision of what they should be doing (namely organised in political parties to take part in "political action," i.e. standing in bourgeois elections) they simply labelled it as the product of non-proletarian "sects." They went so far as to gerrymander the 1872 conference of the First International to make acceptance of "political action" mandatory on all sections in an attempt to destroy anarchist influence in it.

So this section of our FAQ will explain why anarchists reject this model. In our view, the whole concept of a "*vanguard party*" is fundamentally anti-socialist. Rather than present an effective and efficient means of achieving revolution, the Leninist model is elitist, hierarchical and highly inefficient in achieving a socialist society. At best, these parties play a harmful effect in the class struggle by alienating activists and militants with their organisational principles and manipulative tactics within popular structures and groups. At worse, these parties can seize power and create a new form of class society (a state capitalist one) in which the working class is oppressed by new bosses (namely, the party hierarchy and its appointees). As we discuss in [section H.5.9](#), their "efficiency" is a false economy.

However, before discussing why anarchists reject "vanguardism" we need to stress a few points. Firstly, anarchists recognise the obvious fact that the working class is divided in terms of political consciousness. Secondly, from this fact most anarchists recognise the need to organise together to spread our ideas as well as taking part in, influencing and learning from the class struggle. As such, anarchists have long been aware of the need for revolutionaries to organise **as revolutionaries**. Thirdly, anarchists are well aware of the importance of revolutionary minorities playing an inspiring and "leading" role in the class struggle. We do not reject the need for revolutionaries to "*give a lead*" in struggles, we reject the idea of institutionalised leadership and the creation of a leader/led hierarchy implicit (and sometimes no so implicit) in vanguardism.

As such, we do not oppose "*vanguardism*" for these reasons. So when Leninists like Tony Cliff argue that it is "*unevenness in the class [which] makes the party necessary*," anarchists reply that "*unevenness in the class*" makes it essential that revolutionaries organise together to influence the class but that organisation does not and need not take the form of a vanguard party. [Tony Cliff, **Lenin**, vol. 2, p. 149] This is because we reject the concept and practice for three reasons.

Firstly, and most importantly, anarchists reject the underlying assumption of vanguardism. As we discuss in the [next section](#), vanguardism is based on the argument that "*socialist consciousness*" has to be introduced into the working class from outside. We argue that not only is this position empirically false, it is fundamentally anti-socialist in nature. This is because it logically denies that the emancipation

of the working class is the task of the working class itself. Moreover, it serves to justify elite rule. Some Leninists, embarrassed by the obvious anti-socialist nature of this concept, try and argue that Lenin (and so Leninism) does not hold this position. As we prove in [section H.5.4](#), such claims are false.

Secondly, there is the question of organisational structure. Vanguard parties are based on the principle of "*democratic centralism*" (see [section H.5.5](#)). Anarchists argue that such parties, while centralised, are not, in fact, democratic nor can they be. As such, the "*revolutionary*" or "*socialist*" party is no such thing as it reflects the structure of the capitalist system it claims to oppose. We discuss this in sections [H.5.6](#) and [H.5.10](#).

Lastly, anarchists argue that such parties are, despite the claims of their supporters, not actually very efficient or effective in the revolutionary sense of the word. At best, they hinder the class struggle by being slow to respond to rapidly changing situations. At worse, they are "efficient" in shaping both the revolution and the post-revolutionary society in a hierarchical fashion, so re-creating class rule. We discuss this aspect of vanguardism in [section H.5.9](#).

So these are key aspects of the anarchist critique of vanguardism, which we discuss in more depth in the following sections. It is a bit artificial to divide these issues into different sections because they are all related. The role of the party implies a specific form of organisation (as Lenin himself stressed), the form of the party influences its effectiveness. However, it is for ease of presentation we divide up our discussion so.

H.5.1 Why are vanguard parties anti-socialist?

The reason why vanguard parties are anti-socialist is simply because of the role assigned to them by Lenin, which he thought was vital. Simply put, without the party, no revolution would be possible. As Lenin put it in 1900, "*[i]solated from Social-Democracy, the working class movement becomes petty and inevitably becomes bourgeois.*" [**Collected Works**, vol. 4, p. 368]

In **What is to be Done?**, he expands on this position:

*"Class political consciousness can be brought to the workers **only from without**, that is, only outside of the economic struggle, outside the sphere of relations between workers and employers. The sphere from which alone it is possible to obtain this knowledge is the sphere of relationships between **all** the various classes and strata and the state and the government -- the sphere of the interrelations between **all** the various classes."* [**Essential Works of Lenin**, p. 112]

Thus the role of the party is to inject socialist politics into a class incapable of developing them itself.

Lenin is at pains to stress the Marxist orthodoxy of his claims and quotes the "*profoundly true and*

important" comments of Karl Kautsky on the subject. [Op. Cit., p. 81] Kautsky, considered the "pope" of Social-Democracy, stated that it was *"absolutely untrue"* that *"socialist consciousness"* was a *"necessary and direct result of the proletarian class struggle."* Rather, *"socialism and the class struggle arise side by side and not one out of the other . . . Modern socialist consciousness can arise only on the basis of profound scientific knowledge . . . The vehicles of science are not the proletariat, but the bourgeois intelligentsia: it was on the minds of some members of this stratum that modern socialism originated, and it was they who communicated it to the more intellectually developed proletarians who, in their turn, introduced it into the proletarian class struggle."* Kautsky stressed that *"socialist consciousness is something introduced into the proletarian class struggle from without."* [quoted by Lenin, Op. Cit., pp. 81-2]

Lenin, as is obvious, wholeheartedly agreed with this position (any attempt to claim that he did not or later rejected it is nonsense, as we prove in [section H.5.4](#)). Lenin, with his usual modesty, claimed to speak on behalf of the workers when he wrote that *"intellectuals must talk to us, and tell us more about what we do not know and what we can never learn from our factory and 'economic' experience, that is, you must give us political knowledge."* [Op. Cit., p. 108] Thus we have Lenin painting a picture of a working class incapable of developing "political knowledge" or *"socialist consciousness"* by its own efforts and so is reliant on members of the party, themselves either radical elements of the bourgeoisie and petty-bourgeoisie or educated by them, to provide it with such knowledge.

The obvious implication of this argument is that the working class cannot liberate itself by its own efforts. After all, if the working class cannot develop its own political theory by its own efforts then it cannot conceive of transforming society and, at best, can see only the need to work within capitalism for reforms to improve its position in society. Without the radical bourgeois to provide the working class with "socialist" ideas, a socialist movement, let alone society, is impossible. A class whose members cannot develop political knowledge by its own actions cannot emancipate itself. It is, by necessity, dependent on others to shape and form its movements. To quote Trotsky's telling analogy on the respective roles of party and class, leaders and led:

"Without a guiding organisation, the energy of the masses would dissipate like steam not enclosed in a piston. But nevertheless, what moves things is not the piston or the box, but the steam." [History of the Russian Revolution, vol. 1, p. 17]

While Trotsky's mechanistic analogy may be considered as somewhat crude, it does expose the underlying assumptions of Bolshevism. After all, did not Lenin argue that the working class could not develop *"socialist consciousness"* by themselves and that it had to be introduced from without? How can you expect steam to create a piston? You cannot. Thus we have a blind, elemental force incapable of conscious thought being guided by a creation of science, the piston (which, of course, is a product of the work of the *"vehicles of science,"* namely the **bourgeois intelligentsia**). In the Leninist perspective, if revolutions are the locomotives of history (to use Marx's words) then the masses are the steam, the party the locomotive and the leaders the train driver. The idea of a future society being constructed democratically from below by the workers themselves rather than through occasionally elected leaders

seems to have passed Bolshevism past. This is unsurprising, given that the Bolsheviks saw the workers in terms of blindly moving steam in a box, something incapable of being creative unless an outside force gave them direction (instructions).

Cornelius Castoriadis provides a good critique of the implications of the Leninist position:

*"No positive content, nothing new capable of providing the foundation for the reconstruction of society could arise out of a mere awareness of poverty. From the experience of life under capitalism the proletariat could derive no new principles either for organising this new society or for orientating it in another direction. Under such conditions, the proletarian revolution becomes . . . a simple reflex revolt against hunger. It is impossible to see how socialist society could ever be the result of such a reflex . . . Their situation forces them to suffer the consequences of capitalism's contradictions, but in no way does it lead them to discover its causes. An acquaintance with these causes comes not from experiencing the production process but from theoretical knowledge . . . This knowledge may be accessible to individual workers, but not to the proletariat **qua** proletariat. Driven by its revolt against poverty, but incapable of self-direction since its experiences does not give it a privileged viewpoint on reality, the proletariat according to this outlook, can only be an infantry in the service of a general staff of specialists. These specialists **know** (from considerations that the proletariat as such does not have access to) what is going wrong with present-day society and how it must be modified. The traditional view of the economy and its revolutionary perspective can only found, and actually throughout history has only founded, a **bureaucratic politics** . . . [W]hat we have outlined are the consequences that follow objectively from this theory. And they have been affirmed in an ever clearer fashion within the actual historical movement of Marxism, culminating in Stalinism."* [Social and Political Writings, vol. 2, pp. 257-8]

Thus we have a privileged position for the party and a perspective which can (and did) justify party dictatorship **over** the proletariat. Given the perspective that the working class cannot formulate its own "ideology" by its own efforts, of its incapacity to move beyond "*trade union consciousness*" independently of the party, the clear implication is that the party could in no way be bound by the predominant views of the working class. As the party embodies "*socialist consciousness*" (and this arises outside the working class and its struggles) then opposition of the working class to the party signifies a failure of the class to resist alien influences. As Lenin put it:

*"Since there can be no talk of an independent ideology being developed by the masses of the workers in the process of their movement, **the only choice is: either bourgeois or socialist ideology. There is no middle course . . . Hence, to belittle socialist ideology in any way, to deviate from it in the slightest degree means strengthening bourgeois ideology. There is a lot of talk about spontaneity, but the spontaneous development of the labour movement leads to its becoming subordinated to bourgeois ideology . . . Hence our task, the task of Social-Democracy, is to combat spontaneity, to divert the labour movement from its spontaneous, trade unionist striving to go under the wing of the***

bourgeoisie, and to bring it under the wing of revolutionary Social-Democracy." [Lenin, **Op. Cit.**, pp. 82-3]

The implications of this argument became clear once the Bolsheviks seized power. As a justification for party dictatorship, you would be hard pressed to find any better. If the working class revolts against the ruling party, then we have a "*spontaneous*" development which, inevitably, is an expression of bourgeois ideology. As the party represents socialist consciousness, any deviation in working class support for it simply meant that the working class was being "*subordinated*" to the bourgeoisie. This meant, obviously, that to "*belittle*" the "*role*" of the party by questioning its rule meant to "*strengthen bourgeois ideology*" and when workers spontaneously went on strike or protested against the party's rule, the party had to "*combat*" these strivings in order to maintain working class rule! As the "*masses of the workers*" cannot develop an "*independent ideology*," the workers are rejecting socialist ideology in favour of bourgeois ideology. The party, in order to defend the "*the revolution*" (even the "*rule of the workers*") has to impose its will onto the class, to "*combat spontaneity*."

As we saw in [section H.1.2](#), none of the leading Bolsheviks were shy about drawing these conclusions once in power and faced with working class revolt against their rule. Indeed, they raised the idea that the "*dictatorship of the proletariat*" was also, in fact, the "*dictatorship of the party*" and, as we discuss in [section H.3.8](#) integrated this into their theory of the state. Thus, Leninist ideology implies that "*workers' power*" exists independently of the workers. This means that the sight of the "*dictatorship of the proletariat*" (i.e. the Bolshevik government) repressing the proletariat, who cannot develop socialist consciousness by themselves, is to be expected.

This elitist perspective of the party, the idea that it and it alone possesses knowledge can be seen from the resolution of the Communist International on the role of the party. It stated that "*the working class without an independent political party is a body without a head.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 194] This use of biological analogies says more about Bolshevism than its authors intended. After all, it suggests a division of labour which is unchangeable. Can the hands evolve to do their own thinking? Of course not. Thus, yet again, we have an image of the class as unthinking brute force.

The implications of this model can be drawn from Victor Serge's comments from 1919. As he put it, the party "*is in a sense the nervous system of the class. Simultaneously the consciousness and the active, physical organisation of the dispersed forces of the proletariat, which are often ignorant of themselves and often remain latent or express themselves contradictorily.*" And the masses, what is their role? Well, the party is "*supported by the entire working population,*" although, strangely enough, "*it maintains its unique situation in dictatorial fashion.*" He admits "*the energies which have just triumphed . . . exist outside*" the party and that "*they constitute its strength only because it represents them knowingly.*" Thus the workers are "[*b*ehind" the communists, "*sympathising instinctively with the party and carrying out the menial tasks required by the revolution.*" [**Revolution in Danger**, p. 67, p. 66 and p. 6] Can we be surprised that the workers have the "*menial tasks*" to perform when the party is the conscious element? Equally, can we be surprised that this situation is maintained "*in dictatorial fashion*"? It was precisely

this kind of social division of labour between manual and mental labour which helped cause the Russian revolution in the first place!

As the Cohen-Bendit brothers argue, the *"Leninist belief that the workers cannot spontaneously go beyond the level of trade union consciousness is tantamount to beheading the proletariat, and then insinuating the Party as the head . . . Lenin was wrong, and in fact, in Russia the Party was forced to decapitate the workers' movement with the help of the political police and the Red Army under the brilliant leadership of Trotsky and Lenin."* [**Obsolute Communism**, pp. 194-5]

As well as explaining the subsequent embrace of party dictatorship **over** the working class, vanguardism also explains the notorious inefficiency of Leninist parties faced with revolutionary situations we discuss in [section H.5.8](#). After all, basing themselves on the perspective that all spontaneous movements are inherently bourgeois they could not help but be opposed to autonomous class struggle and the organisations and tactics it generates. James C. Scott, in his excellent discussion of the roots and flaws in Lenin's ideas on the party, makes the obvious point that since, for Lenin, *"authentic, revolutionary class consciousness could never develop autonomously within the working class, it followed that that the actual political outlook of workers was always a threat to the vanguard party."* [**Seeing like a State**, p. 155] As Maurice Brinton argues, the *"Bolshevik cadres saw their role as the leadership of the revolution. Any movement not initiated by them or independent of their control could only evoke their suspicion."* These developments, of course, did not occur by chance or accidentally. As Brinton notes, *"a given ideological premise (the preordained hegemony of the Party) led necessarily to certain conclusions in practice."* [**The Bolsheviks and Workers' Control**, p. xi and p. xii]

Bakunin expressed the implications of the vanguardist perspective extremely well. It is worthwhile quoting him at length:

*"Idealists of all sorts, metaphysicians, positivists, those who uphold the priority of science over life, the doctrinaire revolutionists -- all of them champion with equal zeal although differing in their argumentation, the idea of the State and State power, seeing in them, quite logically from their point of view, the only salvation of society. **Quite logically**, I say, having take as their basis the tenet -- a fallacious tenet in our opinion -- that thought is prior to life, and abstract theory is prior to social practice, and that therefore sociological science must become the starting point for social upheavals and social reconstruction -- they necessarily arrived at the conclusion that since thought, theory, and science are, for the present at least, the property of only a very few people, those few should direct social life; and that on the morrow of the Revolution the new social organisation should be set up not by the free integration of workers' associations, villages, communes, and regions from below upward, conforming to the needs and instincts of the people, but solely by the dictatorial power of this learned minority, allegedly expressing the general will of the people."* [**The Political Philosophy of Bakunin**, pp. 283-4]

The idea that *"socialist consciousness"* can exist independently of the working class and its struggle

suggests exactly the perspective Bakunin was critiquing. For vanguardism, the abstract theory of socialism exists prior to the class struggle and exists waiting to be brought to the masses by the educated few. The net effect is, as we have argued, to lay the ground for party dictatorship. The basic idea of vanguardism, namely that the working class is incapable of developing "*socialist consciousness*" by its own efforts, contradicts the socialist maxim that "*the emancipation of the working class is the task of the working class itself.*" Thus the concept is fundamentally anti-socialist, a justification for elite rule and the continuation of class society in new, party approved, ways.

H.5.2 Have vanguardist assumptions been validated?

As discussed in the [last section](#), Lenin claimed that workers can only reach a "*trade union consciousness*" by their own efforts. Anarchists argued that such an assertion is empirically false. The history of the labour movement is marked by revolts and struggles which went far further than just seeking reforms and revolutionary theories derived from such experiences.

As such, the category of the "*economic struggle*" corresponds to no known social reality. Every "*economic*" struggle is "*political*" in some sense and those involved can, and do, learn political lessons from them. As Kropotkin noted in the 1880s, there "*is almost no serious strike which occurs together with the appearance of troops, the exchange of blows and some acts of revolt. Here they fight with the troops; there they march on the factories . . . Thanks to government intervention the rebel against the factory becomes the rebel against the State.*" [quoted by Caroline Cahm, **Kropotkin and the Rise of Revolutionary Anarchism**, p. 256] If history shows anything, it shows that workers are more than capable of going beyond "*trade union consciousness.*" The Paris Commune, the 1848 revolts and, ironically enough, the 1905 and 1917 Russian Revolutions show that the masses are capable of revolutionary struggles in which the self-proclaimed "*vanguard*" of socialists spend most of their time trying to catch up with them!

These last two examples, the Russian Revolutions, also help to discredit Lenin's argument that the workers cannot develop socialist consciousness alone due to the power of bourgeois ideology. This, according to Lenin, required the bourgeois intelligentsia to import "*socialist*" ideology from outside the movement. Lenin's argument is flawed. Simply put, if the working class is subjected to bourgeois influences, then so are the "*professional*" revolutionaries within the party. Indeed, the strength of such influences on the "professionals" of revolution **must** be higher as they are not part of proletarian life. After all, if social being determines consciousness than if a revolutionary is no longer part of the working class, then they no longer are rooted in the social conditions which generate socialist theory and action. Rootless and no longer connected with collective labour and working class life, the "*professional*" revolutionary is more likely to be influenced by the social milieu he or she now is part of (i.e. a bourgeois, or at best petit-bourgeois, environment). This may explain the terrible performance of such "vanguards" in revolutionary situations (see [section H.5.8](#)).

This tendency for the "*professional*" revolutionary and intellectuals to be subject to the bourgeois influences which Lenin subscribes solely to the working class can continually be seen from the history

of the Bolshevik party. For example, as Trotsky himself notes:

"It should not be forgotten that the political machine of the Bolshevik Party was predominantly made up of the intelligentsia, which was petty bourgeois in its origin and conditions of life and Marxist in its ideas and in its relations with the proletariat. Workers who turned professional revolutionists joined this set with great eagerness and lost their identity in it. The peculiar social structure of the Party machine and its authority over the proletariat (neither of which is accidental but dictated by strict historical necessity) were more than once the cause of the Party's vacillation and finally became the source of its degeneration . . . In most cases they lacked independent daily contact with the labouring masses as well as a comprehensive understanding of the historical process. They thus left themselves exposed to the influence of alien classes." [Stalin, vol. 1, pp. 297-8]

He pointed to the example of the First World War, when, *"even the Bolshevik party did not at once find its way in the labyrinth of war. As a general rule, the confusion was most pervasive and lasted longest amongst the Party's higher-ups, who came in direct contact with bourgeois public opinion."* Thus the professional revolutionaries *"were largely affected by compromisist tendencies, which emanated from bourgeois circles, while the rank and file Bolshevik workingmen displayed far greater stability resisting the patriotic hysteria that had swept the country."* [Op. Cit., p. 248 and p. 298] It should be noted that he is repeating earlier comments from his **History of the Russian Revolution** when he argued that the *"immense intellectual backsliding of the upper stratum of the Bolsheviks during the war"* was caused by *"isolation from the masses and isolation from those abroad -- that is primarily from Lenin."* [vol. 3, p. 134] As we discuss in the appendix on ["What happened during the Russian Revolution?"](#), even Trotsky had to admit that during 1917 the working class was far more revolutionary than the party and the party more revolutionary than the *"party machine"* of *"professional revolutionaries."*

Ironically enough, Lenin himself recognised this aspect of the intellectuals after he had praised their role in bringing "revolutionary" consciousness to the working class in his 1904 work **One Step Forward, Two Steps Back**. He argued that it was now the *"presence of large numbers of radical intellectuals in the ranks . . . [which] has made . . . the existence of opportunism, produced by their mentality, inevitable."* [contained in Robert V. Daniels, **A Documentary History of Communism**, vol. 1, p. 25] According to Lenin's new philosophy, the working class simply needs to have been through the *"schooling of the factory"* in order to give the intelligentsia lessons in political discipline, the very same intelligentsia which up until then had played the leading role in the Party and had given political consciousness to the working class. In his words:

"The factory, which seems only a bogey to some, represents that highest form of capitalist co-operation which has united and disciplined the proletariat, taught it to organise . . . And it is precisely Marxism, the ideology of the proletariat trained by capitalism, that has taught . . . unstable intellectuals to distinguish between the factory as a means of exploitation (discipline based on fear of starvation) and the factory as a means of organisation (discipline based on collective work . . .). The discipline and organisation

which come so hard to the bourgeois intellectual are especially easily acquired by the proletariat just because of this factory 'schooling.'" [Op. Cit., p. 24]

Lenin's analogy is, of course, flawed. The factory is a "means of exploitation" because its "means of organisation" is top-down and hierarchical. The "collective work" which the workers are subjected to is organised by the boss and the "discipline" is that of the barracks, not that of free individuals. In fact, the "schooling" for revolutionaries is **not** the factory, but the class struggle. As such, healthy and positive discipline is generated by the struggle against the way the workplace is organised under capitalism. Factory discipline, in other words, is completely different from the discipline required for social struggle or revolution. Thus the workers become revolutionary in so far as they reject the hierarchical discipline of the workplace and develop the self-discipline required to fight that discipline.

A key task of anarchism is encourage working class revolt against this type of discipline, particularly in the capitalist workplace. The "discipline" Lenin praises simply replaces human thought and association with the following of orders and hierarchy. Thus anarchism aims to undermine capitalist (imposed and brutalising) discipline in favour of solidarity, the "discipline" of free association and agreement based on the community of struggle and the political consciousness and revolutionary enthusiasm that struggle creates. To the factory discipline Lenin argues for, anarchists argue for the discipline produced in workplace struggles and conflicts against that hierarchical discipline. Thus, for anarchists, the model of the factory can never be the model for a revolutionary organisation any more than Lenin's vision of society as "one big workplace" could be our vision of socialism (see [section H.3.1](#)). Ultimately, the factory exists to reproduce hierarchical social relationships and class society just as much as it exists to produce goods.

It should be noted that Lenin's argument does not contradict his earlier arguments. The proletariat and intellectual have complementary jobs in the party. The proletariat is to give lessons in political discipline to the intellectuals as they have been through the process of factory (i.e. hierarchical) discipline. The role of the intellectuals as providers of "political consciousness" is the same and so they give political lessons to the workers.

Moreover, his vision of the vanguard party is basically the same as in **What is to Be Done?**. This can be seen from his comments that his opponent (the leading Menshevik Martov) "*wants to lump together organised and unorganised elements in the Party, those who submit to direction and those who do not, the advanced and the incorrigibly backward.*" He stressed that the "*division of labour under the direction of a centre evokes from him [the intellectual] a tragicomical outcry against people being transformed into 'wheels and cogs'*" [Op. Cit., p. 21 and p. 24] Thus there is the same division of labour as in the capitalist factory, with the boss ("the centre") having the power to direct the workers (who "*submit to direction*"). Thus we have a "revolutionary" party organised in a **capitalist** manner, with the same "*division of labour*" between order givers and order takers.

H.5.3 Why does vanguardism imply party power?

As we discussed in [section H.5.1](#), anarchists argue that the assumptions of vanguardism leads to party rule over the working class. Needless to say, followers of Lenin disagree that the idea that vanguardism results in such an outcome. For example, Chris Harman of the British Socialist Workers Party argues the opposite case in his essay "*Party and Class.*" However, his own argument suggests the elitist conclusions we have draw from Lenin's.

Harman argues that there are two ways to look at the revolutionary party, the Leninist way and the traditional social-democratic way (as represented by the likes of Trotsky and Rosa Luxemburg in 1903-5). "*The latter,*" he argues, "*was thought of as a party of the whole [working] class . . . All the tendencies within the class had to be represented within it. Any split within it was to be conceived of as a split within the class. Centralisation, although recognised as necessary, was feared as a centralisation over and against the spontaneous activity of the class. Yet it was precisely in this kind of party that the 'autocratic' tendencies warned against by Luxemburg were to develop most. For within it the confusion of member and sympathiser, the massive apparatus needed to hold together a mass of only half-politicised members in a series of social activities, led to a toning down of political debate, a lack of political seriousness, which in turn reduced the ability of the members to make independent political evaluations and increased the need for apparatus-induced involvement.*" [**Party and Class**, p. 32]

Thus, the lumping together into one organisation all those who consider themselves as "*socialist*" and agree with the party's aims creates in a mass which results in "*autocratic*" tendencies within the party organisation. As such, it is important to remember that "*the Party, as the vanguard of the working class, must not be confused with the entire class.*" [**Op. Cit.**, p. 22] For this reason, the party must be organised in a specific manner which reflect his Leninist assumptions:

"The alternative [to the vanguard party] is the 'marsh' -- where elements motivated by scientific precision are so mixed up with those who are irremediably confused as to prevent any decisive action, effectively allowing the most backward to lead." [**Op. Cit.**, p. 30]

The problem for Harman is now how to explain how the proletariat can become the ruling class if this is true. He argues that "*the party is not the embryo of the workers' state -- the workers' council is. The working class as a whole will be involved in the organisations that constitute the state, the most backward as well as the most progressive elements.*" As such, the "*function of the party is not to be the state.*" [**Op. Cit.**, p. 33] Thus, the implication is that the working class will take an active part in the decision making process during the revolution (although the level of this "*involvement*" is unspecified, probably for good reasons as we explain). If this **is** the case, then the problem of the mass party reappears, but in a new form (we must also note that this problem must have also appearing in 1917, when the Bolshevik party opened its doors to become a mass party).

As the "*organisations that constitute the state*" are made up of the working class "*as a whole,*" then, obviously, they cannot be expected to wield power (i.e. directly manage the revolution from below). If they did, then the party would be "*mixed up*" with the "*irremediably confused*" and so could not lead (as

we discuss in [section H.5.5](#), Lenin links "*opportunism*" to "*primitive*" democracy, i.e. self-management, within the party). Hence the need for party power. Which, of course, explains Lenin's 1920 comments that an organisation embracing the whole working class cannot exercise the "*dictatorship of the proletariat*" and that a "*vanguard*" is required to do so (see [section H.1.2](#) for details). Of course, Harman does not explain how the "*irremediably confused*" are able to judge that the party is the best representative of its interests. Surely if someone is competent enough to pick their ruler, they must also be competent enough to manage their own affairs directly? Equally, if the "*irremediably confused*" vote against the party once it is in power, what happens? Will the party submit to the "*leadership*" of what it considers "*the most backward*"? If the Bolsheviks are anything to go by, the answer has to be no.

Ironically, he argues that it "*is worth noting that in Russia a real victory of the apparatus over the party required precisely the bringing into the party hundreds of thousands of 'sympathisers,' a dilution of the 'party' by the 'class.'*" . . . *The Leninist party does not suffer from this tendency to bureaucratic control precisely because it restricts its membership to those willing to be serious and disciplined enough to take **political** and **theoretical** issues as their starting point, and to subordinate all their activities to those.*" [Op. Cit., p. 33] Yet, in order to have a socialist revolution, the working class as a whole must participate in the process and that implies self-management. Thus the decision making organisations will be based on the party being "*mixed up*" with the "*irremediably confused*" as if they were part of a non-Leninist party.

From Harman's own assumptions, this by necessity results in an "autocratic" regime within the new "*workers' state*." This was implicitly recognised by the Bolsheviks when they stressed that the function of the party was to become the government, the head of the state. Lenin and Trotsky continually stressed this fact, urging that the party "*assume power*," that the Bolsheviks "*can and **must** take state power into their own hands*." Indeed, "*take over full state power alone*." [Lenin, **Selected Works**, vol. 2, p. 329, p. 328 and p. 352] Thus, while the working class "*as a whole*" will be "*involved in the organisations that constitute the state*," the party (in practice, its leadership) will hold power (see [section H.3.8](#) for a further discussion of this Bolshevik position). And for Trotsky, this substitution of the party for the class was inevitable:

"We have more than once been accused of having substituted for the dictatorship of the Soviets the dictatorship of our party. Yet it can be said with complete justice that the dictatorship of the Soviets became possible only by means of the dictatorship of the party. It is thanks to the clarity of its theoretical vision and its strong revolutionary organisation that the party has afforded to the Soviets the possibility of becoming transformed from shapeless parliaments of labour into the apparatus of the supremacy of labour. In this 'substitution' of the power of the party for the power of the working class there is nothing accidental, and in reality there is no substitution at all. The Communists express the fundamental interests of the working class. It is quite natural that, in the period in which history brings up those interests . . . the Communists have become the recognised representatives of the working class as a whole." [**Terrorism and Communism**, p. 109]

He notes that within the state, *"the last word belongs to the Central Committee of the party."* [Op. Cit., p. 107] In 1937, he repeats this argument, explicitly linking the *"objective necessity"* of the *"revolutionary dictatorship of a proletarian party"* to the *"heterogeneity of the revolutionary class, the necessity for a selected vanguard in order to assure the victory."* Stressed the *"dictatorship of a party,"* he argued that *"[a]bstractly speaking, it would be very well if the party dictatorship could be replaced by the 'dictatorship' of the whole toiling people without any party, but this presupposes such a high level of political development among the masses that it can never be achieved under capitalist conditions."* [Writings 1936-37, pp. 513-4]

This means that given Harman's own assumptions, autocratic rule by the party is inevitable. Ironically, he argues that *"to be a 'vanguard' is not the same as to substitute one's own desires, or policies or interests, for those of the class."* He stresses that an *"organisation that is concerned with participating in the revolutionary overthrow of capitalism by the working class cannot conceive of substituting itself for the organs of the direct rule of that class."* [Op. Cit., p. 33 and p. 34] However, the logic of his argument suggests otherwise. Simply put, his arguments against a broad party organisation are also applicable to self-management during the class struggle and revolution. The rank and file party members are *"mixed up"* in the class. This leads to party members becoming subject to bourgeois influences. This necessitates the power of the higher bodies over the lower (see [section H.5.5](#)). The highest party organ, the central committee, must rule over the party machine, which in turn rules over the party members, who, in turn, rule over the workers. This logical chain was, ironically enough, recognised by Trotsky in 1904 in his polemic against Lenin. He argued:

"The organisation of the party substitutes itself for the party as a whole; then the central committee substitutes itself for the organisation; and finally the 'dictator' substitutes himself for the central committee." [quoted by Harman, Op. Cit., p. 22]

Obviously once in power in 1920 this substitution was less of a concern for him than in 1904! Which, however, does not deny the insight Trotsky showed in 1904 about the dangers inherent in the Bolshevik assumptions on working class spontaneity and how revolutionary ideas develop. Dangers which he, ironically, helped provide empirical evidence for.

This false picture of the party (and its role) explains the progression of the Bolshevik party after 1917. As the soviets organised all workers, we have the problem that the party (with its *"scientific"* knowledge) is swamped by the class. The task of the party is to *"persuade, not coerce these [workers] into accepting its lead"* and, as Lenin made clear, for it to take political power. [Harman, Op. Cit., p. 34] Once in power, the decisions of the party are in constant danger of being overthrown by the working class, which necessitates a state run with *"iron discipline"* (and the necessary means of coercion) by the party. With the disempowering of the mass organisations by the party, the party itself becomes a substitute for popular democracy as being a party member is the only way to influence policy. As the party grows, the influx of new members *"dilutes"* the organisation, necessitating a similar growth of centralised power at the top of the organisation. This eliminates the substitute for proletarian democracy which had developed within the party (which explains the banning of factions within the Bolshevik party

in 1921). Slowly but surely, power concentrates into fewer and fewer hands, which, ironically enough, necessitates a bureaucracy to feed the party leaders information and execute its will. Isolated from all, the party inevitably degenerates and Stalinism results.

We are sure that many Trotskyists will object to our analysis, arguing that we ignore the problems facing the Russian Revolution in our discussion. Harman argues that it was *"not the form of the party that produces party as opposed to soviet rule, but the decimation of the working class"* that occurred during the Russian Revolution. [Op. Cit., p. 37] This is false. As noted, Lenin was always explicit that about the fact that the Bolshevik's sought party rule ("full state power") and that their rule **was** working class rule. As such, we have the first, most basic, substitution of party power for workers power. Secondly, as we discuss in [section 6](#) of the appendix on "[What happened during the Russian Revolution?](#)", the Bolshevik party had been gerrymandering and disbanding soviets before the start of the Civil War, so proving that it cannot be held accountable for this process of substitution. Thirdly, Leninists are meant to know that civil war is inevitable during a revolution. To blame the inevitable for the degeneration of the revolution is hardly convincing (particularly as the degeneration started before the civil war broke out).

Unsurprisingly, anarchists reject the underlying basis of this progression, the idea that the working class, by its own efforts, is incapable of developing beyond a *"trade union consciousness."* The actions of the working class itself condemned these attitudes as outdated and simply wrong long before Lenin's infamous comments were put on paper. In every struggle, the working class has created its own organisations to co-ordinate its struggle (to use Trotsky's analogy, the steam creates its own piston and constantly has). In the process of struggle, the working class changes its perspectives. This process is uneven in both quantity and quality, but it does happen. As such, anarchists do not think that **all** working class people will, at the same time, spontaneously become anarchists. If they did, we would be in an anarchist society today!

As we argued in sections [J.3](#) and [H.2.10](#), anarchists acknowledge that political development within the working class is uneven. The difference between anarchism and Leninism is how we see socialist ideas developing. In every class struggle there is a radical minority which takes the lead and many of this minority develop revolutionary conclusions from their experiences. As such, members of the working class develop their own revolutionary theory and it does not need bourgeois intellectuals to inject it into them.

Anarchists go on to argue that this minority (along with any members of other classes who have broken with their background and become libertarians) should organise and work together. The role of this revolutionary organisation is to co-ordinate revolutionary activity, discuss and revise ideas and help others draw the same conclusions as they have from their own, and others, experiences. The aim of such a group is, by word and deed, to assist the working class in its struggles and to draw out and clarify the libertarian aspects of this struggle. It seeks to abolish the rigid division between leaders and led which is the hallmark of class society by drawing the vast majority of the working class into social struggle and revolutionary politics by encouraging their direct management of the class struggle. Only this participation and the political discussion it generates will allow revolutionary ideas to become

widespread.

In other words, anarchists argue that precisely **because** of political differences ("unevenness") we need the fullest possible democracy and freedom to discuss issues and reach agreements. Only by discussion and self-activity can the political perspectives of those in struggle develop and change. In other words, the fact Bolshevism uses to justify its support for party power is the strongest argument against it.

Our differences with vanguardism could not be more clear.

H.5.4 Did Lenin abandon vanguardism?

As discussed in [section H.5.1](#), vanguardism rests on the premise that the working class cannot emancipate itself. As such, the ideas of Lenin as expounded in **What is to be Done?** contradicts the key idea of Marx that the emancipation of the working class is the task of the working class itself. Thus the paradox of Leninism. On the one hand, it subscribes to an ideology allegedly based on working class self-liberation. On the other, the founder of that school wrote an obviously influential work whose premise not only logically implies that they cannot, it also provides the perfect rationale for party dictatorship over the working class (and as the history of Leninism in power showed, this underlying premise was much stronger than any democratic-sounding rhetoric -- see "[What happened during the Russian Revolution?](#)").

It is for this reason that many Leninists are somewhat embarrassed by Lenin's argument in **What is to be Done?**. Hence we see Chris Harman writing that *"the real theoretical basis for his [Lenin's] argument on the party is not that the working class is incapable on its own of coming to theoretical socialist consciousness . . . The real basis for his argument is that the level of consciousness in the working class is never uniform."* [**Party and Class**, pp. 25-6] In other words, Harman changes the focus of the question away from the point explicitly and repeatedly stated by Lenin that the working class was incapable on its own of coming to theoretical socialist consciousness and that he was simply repeating Marxist orthodoxy when he did.

Harman bases his revision on Lenin's later comments regarding his book, namely that he sought to *"straighten matters out"* by *"pull[ing] in the other direction"* to the *"extreme"* which the *"economists"* had went to. He repeated this in 1907 (see below). While Lenin may have been right to attack the *"economists,"* his argument that socialist consciousness comes to the working class only *"from without"* is not a case of going too far in the other direction; it is wrong. Simply put, you do not attack ideas you disagree with arguing an equally false set of ideas. This suggests that Harman's attempt to downplay Lenin's elitist position is flawed. Simply put, the *"real theoretical basis"* of the argument was precisely the issue Lenin himself raised, namely the incapacity of the working class to achieve socialist consciousness by itself. It is probably the elitist conclusions of this argument which drives Harman to try and change the focus to another issue, namely the political unevenness within the working class.

Some go to even more extreme lengths, denying that Lenin even held such a position. For example, Hal Draper argues at length that Lenin did not, in fact, hold the opinions he actually expressed in his book! While Draper covers many aspects of what he calls the *"Myth of Lenin's 'Concept of The Party,'"* in his essay of the same name, we will concentrate on the key idea, namely that socialist ideas are developed outside the class struggle by the radical intelligentsia and introduced into the working class from without. Here, as argued in [section H.5.1](#), is the root of the anti-socialist basis of Leninism.

So what does Draper say? On the one hand, he denies that Lenin held this theory (he states that it is a *"virtually non-existent theory"* and *"non-existent after WITBD"*). He argues that those who hold the position that Lenin actually meant what he said in his book *"never quote anything other than WITBD,"* and states that this is a *"curious fact"* (a fact we will disprove shortly). Draper argues as follows: *"Did Lenin put this theory forward even in WITBD? Not exactly."* He then notes that Lenin *"had just read this theory in the most prestigious theoretical organ of Marxism of the whole international socialist movement"* and it had been *"put forward in an important article by the leading Marxist authority,"* Karl Kautsky. Draper notes that *"Lenin first paraphrased Kautsky"* and then *"quoted a long passage from Kautsky's article."*

This much, of course, is well known by anyone who has read Lenin's book. By paraphrasing and quoting Kautsky as he does, Lenin is showing his agreement with Kautsky's argument. Indeed, Lenin states before quoting Kautsky that his comments are *"profoundly true and important"* [**Essential Works of Lenin**, p. 79] As such, by explicitly and obviously agreeing with Kautsky, it can be said that it also becomes Lenin's theory as well! Over time, particularly after Kautsky had been labelled a *"renegade"* by Lenin, Kautsky's star waned and Lenin's rose. Little wonder the argument became associated with Lenin rather than the discredited Kautsky. Draper then speculates that *"it is curious . . . that no one has sought to prove that by launching this theory . . . Kautsky was laying the basis for the demon of totalitarianism."* A simple reason exists for this, namely the fact that Kautsky, unlike Lenin, was never the head of a one-party dictatorship and justified this system politically. Indeed, Kautsky attacked the Bolsheviks for this, which caused Lenin to label him a *"renegade."* Kautsky, in this sense, can be considered as being inconsistent with his political assumptions, unlike Lenin who took his assumptions to their logical conclusions.

How, after showing the obvious fact that *"the crucial 'Leninist' theory was really Kautsky's,"* he then wonders *"[d]id Lenin, in WITBD, adopt Kautsky's theory?"* He answers his own question with an astounding *"Again, not exactly!"* Clearly, quoting approvingly of a theory and stating it is *"profoundly true"* does not, in fact, make you a supporter of it! What evidence does Draper present for his amazing answer? Well, Draper argued that Lenin *"tried to get maximum mileage out of it against the right wing; this was the point of his quoting it. If it did something for Kautsky's polemic, he no doubt figured that it would do something for his."* Or, to present a more simple and obvious explanation, Lenin **agreed** with Kautsky's *"profoundly true"* argument!

Aware of this possibility, Draper tries to combat it. *"Certainly,"* he argues, *"this young man Lenin was not (yet) so brash as to attack his 'pope' or correct him overtly. But there was obviously a feeling of*

discomfort. While showing some modesty and attempting to avoid the appearance of a head-on criticism, the fact is that Lenin inserted two longish footnotes rejecting (or if you wish, amending) precisely what was worst about the Kautsky theory on the role of the proletariat." So, here we have Lenin quoting Kautsky to prove his own argument (and noting that Kautsky's words were "profoundly true and important"!) but "feeling discomfort" over what he has just approvingly quoted! Incredible!

So how does Lenin "amend" Kautsky's "profoundly true and important" argument? In two ways, according to Draper. Firstly, in a footnote which "was appended right after the Kautsky passage" Lenin quoted. Draper argued that it "was specifically formulated to undermine and weaken the theoretical content of Kautsky's position. It began: 'This does not mean, of course, that the workers have no part in creating such an ideology.' But this was exactly what Kautsky did mean and say. In the guise of offering a caution, Lenin was proposing a modified view. 'They [the workers] take part, however,' Lenin's footnote continued, 'not as workers, but as socialist theoreticians, as Proudhons and Weitlings; in other words, they take part only when they are able . . .' In short, Lenin was reminding the reader that Kautsky's sweeping statements were not even 100% true historically; he pointed to exceptions." Yes, Lenin **did** point to exceptions **in order to refute objections to Kautsky's argument before they were raised!** It is clear that Lenin is **not** refuting Kautsky. He is agreeing with him and raising possible counter-examples in order to refute potential objections based on them. Thus Proudhon adds to socialist ideology in so far as he is a "socialist theoretician" and not a worker! How clear can you be? As Lenin continues, people like Proudhon "take part only to the extent that they are able, more or less, to acquire the knowledge of their age and advance that knowledge." In other words, insofar as they learn from the "vehicles of science." Neither Kautsky or Lenin denied that it was possible for workers to acquire such knowledge and pass it on. However this does **not** mean that they thought workers, as part of their daily life and struggle **as workers**, could develop "socialist theory." Thus Lenin's footnote reiterates Kautsky's argument rather than, as Draper hopes, refutes it.

Draper turns to another footnote, which he notes "was not directly tied to the Kautsky article, but discussed the 'spontaneity of the socialist idea. 'It is often said,' Lenin began, 'that the working class spontaneously gravitates towards socialism. This is perfectly true in the sense that socialist theory reveals the causes of the misery of the working class ... and for that reason the workers are able to assimilate it so easily,' but he reminded that this process itself was not subordinated to mere spontaneity. 'The working class spontaneously gravitates towards socialism; nevertheless, ... bourgeois ideology spontaneously imposes itself upon the working class to a still greater degree.'" Draper argues that this "was obviously written to modify and recast the Kautsky theory, without coming out and saying that the Master was wrong." So, here we have Lenin approvingly quoting Kautsky in the main text while, at the same time, providing a footnote to show that, in fact, he did not agree with what he has just quoted! Truly amazing -- and easily refuted. After all, the footnote stresses that workers appreciate socialist theory "**provided**, however, that this theory does not step aside for spontaneity and **provided** it subordinates spontaneity to itself." In other words, workers "assimilate" socialist theory only when socialist theory does not adjust itself to the "spontaneous" forces at work in the class struggle. Thus, rather than refuting Kautsky by the backdoor, Lenin in this footnote still agrees with him. Socialism does not develop, as Kautsky stressed, from the class struggle but rather has to be injected into it. This means, by necessity, the theory "subordinates spontaneity to itself."

Draper argues that this "*modification*" simply meant that there "*are several things that happen spontaneously,*" and what will win out is not decided only by spontaneity" but as can be seen, this is not the case. Only when "*spontaneity*" is subordinated to the theory (i.e. the party) can socialism be won, a totally different position. As such, when Draper asserts that "[a]ll that was clear at this point was that Lenin was justifiably dissatisfied with the formulation of Kautsky's theory," he is simply expressing wishful thinking. This footnote, like the first one, continues the argument developed by Lenin in the main text and in no way is in contradiction to it. As is obvious.

Draper argues that the key problem is that critics of Lenin "*run two different questions together: (a) What was, historically, the **initial** role of intellectuals in the beginnings of the socialist movement, and (b) what **is** - and above all, what should be - the role of bourgeois intellectuals in a working-class party today.*" He argues that Kautsky did not believe that "*if it can be shown that intellectuals historically played a certain initiatory role, they **must** and **should** continue to play the same role now and forever. It does not follow; as the working class matured, it tended to throw off leading strings.*" However, this is unconvincing. After all, if socialist consciousness cannot be generated by the working class by its own struggles then this is applicable now and in the future. Thus workers who join the socialist movement will be repeating the party ideology, as developed by intellectuals in the past. If they **do** develop new theory, it would be, as Lenin stressed, "*not as workers, but as socialist theoreticians*" and so socialist consciousness still does not derive from their own class experiences. This places the party in a privileged position vis-à-vis the working class and so the elitism remains.

Ironically, Draper agrees with Kautsky and Lenin as regards the claim that socialism does not develop out of the class struggle. As he put it, "*[a]s a matter of fact, in the International of 1902 no one really had any doubts about the historical facts concerning the beginnings of the movement.*" The question is, "*[b]ut what followed from those facts?*" To which he argues that Marx and Engels "*concluded, from the same facts and subsequent experiences, that the movement had to be sternly warned against the influence of bourgeois intellectuals inside the party.*" (We wonder if Marx and Engels included themselves in the list of "*bourgeois intellectuals*" the workers had to be "*sternly warned*" about?) Thus, amusingly enough, Draper argues that Marx, Engels, Kautsky and Lenin all held to the "*same facts*" that socialist consciousness developed outside the experiences of the working classes!

Draper, after rewriting history somewhat in his laborious and hardly convincing arguments, states that it "*is a curious fact that no one has ever found this alleged theory anywhere else in Lenin's voluminous writings, not before and not after [What is to be Done?]. It never appeared in Lenin again. No Leninologist has ever quoted such a theory from any other place in Lenin.*" However, as this theory was the orthodox Marxist position, Lenin had no real need to reiterate this argument continuously. After all, he had quoted the acknowledged leader of Marxism on the subject explicitly to show the orthodoxy of his argument and the "*non-Marxist*" base of those he argued against. Once the debate had been won and orthodox Marxism triumphant, why repeat the argument again? As we will see below, this was exactly the position Lenin **did** take in 1907 when he wrote an introduction to a book which contained **What is to Be Done?**.

In contradiction to Draper's claim, Lenin **did** return to this matter. In October 1905 he wrote an a short article in praise of an article by Stalin on this very subject. Stalin had sought to explain Lenin's ideas to the Georgian Social-Democracy and, like Lenin, had sought to root the argument in Marxist orthodoxy (partly to justify the argument, partly to expose the Menshevik opposition as being "non-Marxists"). Stalin argues along similar lines to Lenin:

"the question now is: who works out, who is able to work out this socialist consciousness (i.e. scientific socialism)? Kautsky says, and I repeat his idea, that the masses of proletarians, as long as they remain proletarians, have neither the time nor the opportunity to work out socialist consciousness . . . The vehicles of science are the intellectuals . . . who have both the time and opportunity to put themselves in the van of science and workout socialist consciousness. Clearly, socialist consciousness is worked out by a few Social-Democratic intellectuals who posses the time and opportunity to do so." [Collected Works, vol. 1, p. 164]

Stalin stresses the Marxist orthodoxy by stating Social-Democracy *"comes in and introduces socialist consciousness into the working class movement. This is what Kautsky has in mind when he says 'socialist consciousness is something introduced into the proletarian class struggle from without.'"* [Op. Cit., pp. 164-5] That Stalin is simply repeating Lenin's and Kautsky's arguments is clear, as is the fact it was considered the orthodox position within social-democracy.

If Draper is right, then Lenin would have taken the opportunity to attack Stalin's article and express the alternative viewpoint Draper is convinced he held. However, Lenin put pen to paper to **praise** Stalin's work, noting *"the splendid way in which the problem of the celebrated 'introduction of a consciousness from without' had been posed."* Lenin explicitly agrees with Stalin's summary of his argument. He argues that *"social being determines consciousness . . . Socialist consciousness corresponds to the position of the proletariat"* and then quotes Stalin: *"Who can and does evolve this consciousness (scientific socialism)?"* and answers (again approvingly quoting Stalin) that *"its 'evolution' is a matter for a few Social-Democratic intellectuals who posses the necessary means and time."* Lenin does argue that Social-Democracy meets *"an instinctive **urge** towards socialism"* when it *"comes to the proletariat with the message of socialism,"* but this does not counter the main argument that the working class cannot develop socialist consciousness by it own efforts and the, by necessity, elitist and hierarchical politics that flow from this position. [Lenin, **Collected Works**, vol. 9, p. 388]

That Lenin did not reject his early formulations can also be seen from in his introduction to the pamphlet *"Twelve Years"* which contained **What is to be Done?**. Rather than explaining the false nature of that work's more infamous arguments, Lenin in fact defended them. For example, as regards the question of professional revolutionaries, he argued that the statements of his opponents now *"look ridiculous"* as *"today the idea of an organisation of professional revolutionaries has **already** scored a complete victory,"* a victory which *"would have been impossible if this idea had not been pushed to the **forefront** at the time."* He noted that his work had *"vanquished Economism . . . and finally **created** this organisation."* On the question of socialist consciousness, he simply reiterates the Marxist orthodoxy of his position, noting that its *"formulation of the relationship between spontaneity and political*

*consciousness was agreed upon by all the Iskra editors . . . Consequently, there could be no question of any difference in principle between the draft Party programme and **What is to be Done?** on this issue."* So while Lenin argues that he had "*straighten out what had been twisted by the Economists,*" he did not correct his early arguments. [**Collected Works**, vol. 13, p. 101, p. 102 and p. 107]

Looking at Lenin's arguments at the Communist International on the question of the party we see an obvious return to the ideas of **What is to be Done?**. Here we have a similar legal/illegal duality, strict centralism, strong hierarchy and the vision of the party as the "*head*" of the working class (i.e. its consciousness). In **Left-Wing Communism**, Lenin mocks those who reject the idea that dictatorship by the party is the same as that of the class.

Ultimately, the whole rationale for the kind of wishful thinking that Draper inflicts on us is flawed. As noted above, you do not combat what you think is an incorrect position with one which you consider as also being wrong or do not agree with! You counter what you consider as an incorrect position with one you consider correct and agree with. As Lenin, in WITBD, explicitly did. This means that later attempts by his followers to downplay the ideas raised in Lenin's book are unconvincing. Moreover, as he was simply repeating Social-Democratic orthodoxy it seems doubly unconvincing.

Clearly, Draper is wrong. Lenin did, as indicated above, actually mean what he said in **What is to be Done?**. The fact that Lenin quoted Kautsky simply shows that this position was the orthodox Social-Democratic one, held by the mainstream of the party. Given that Leninism was (and still is) a "*radical*" offshoot of this movement, this should come as no surprise. However, Draper's comments remind us how religious many forms of Marxism are. After all, why do we need facts when we have the true faith?

H.5.5 What is "*democratic centralism*"?

As noted above, anarchists oppose vanguardism for three reasons, one of which is the way it recommends how revolutionaries should organise to influence the class struggle.

So how is a "vanguard" party organised? To quote the Communist International's 1920 resolution on the role of the Communist Party in the revolution, the party must have a "*centralised political apparatus*" and "*must be organised on the basis of iron proletarian centralism.*" This, of course, suggests a top-down structure internally, which the resolution explicitly calls for. In its words, "*Communist cells of every kind must be subordinate to one another as precisely as possible in a strict hierarchy.*" [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 193, p. 198 and p. 199] Therefore, the vanguard party is organised in a centralised, top-down way. However, this is not all, as well as being "*centralised,*" the party is also meant to be democratic, hence the expression "*democratic centralism.*" On this the resolution states:

"The Communist Party must be organised on the basis of democratic centralism. The most important principle of democratic centralism is election of the higher party organs by the lowest, the fact that all instructions by a superior body are unconditionally and

necessarily binding on lower ones, and existence of a strong central party leadership whose authority over all leading party comrades in the period between one party congress and the next is universally accepted." [Op. Cit., p. 198]

For Lenin, speaking in the same year, democratic centralism meant *"only that representatives from the localities meet and elect a responsible body which must then govern . . . Democratic centralism consists in the Congress checking on the Central Committee, removing it and electing a new one."* [quoted by Robert Service, **The Bolshevik Party in Revolution**, p. 131] Thus, *"democratic centralism"* is inherently top-down, although the *"higher"* party organs are, in principle, elected by the *"lower."* Without this, of course, there would be no *"democratic"* aspect to the party. The real question is whether such democracy is effective, a topic we will return to. However, the key point is that the central committee is the active element, the one whose decisions are implemented and so the focus of the structure is in the *"centralism"* rather than the *"democratic"* part of the formula.

As we noted in [section H.2.14](#), the Communist Party was expected to have a dual structure, one legal and the other illegal. The resolution states that *"[i]n countries where the bourgeoisie . . . is still in power, the Communist parties must learn to combine legal and illegal activity in a planned way. However, the legal work must be placed under the actual control of the illegal party at all times."* [**Proceedings and Documents of the Second Congress 1920**, vol. 1, p. 198-9] It goes without saying that the illegal structure is the real power in the party and that it cannot be expected to be as democratic as the legal party, which in turn would be less that democratic as the illegal would have the real power within the organisation.

All this has clear parallels with Lenin's infamous work, **What is to be done?**. In that work Lenin argues for *"a powerful and strictly secret organisation, which concentrates in its hands all the threads of secret activities, an organisation which of necessity must be a centralised organisation."* This call for centralisation is not totally dependent on secrecy, though. As he notes, *"specialisation necessarily presupposes centralisation, and in its turn imperatively calls for it."* Such a centralised organisation would need leaders and Lenin argues that *"no movement can be durable without a stable organisation of leaders to maintain continuity."* As such, *"the organisation must consist chiefly of persons engaged in revolutionary activities as a profession."* Thus, we have a centralised organisation which is managed by specialists, by *"professional revolutionaries."* [**Essential Works of Lenin**, p. 158, p. 153, p. 147 and p. 148]

This does not mean that these *"professional revolutionaries"* all come from the bourgeoisie or petit bourgeoisie. According to Lenin:

"A workingman agitator who is at all talented and 'promising' must not be left to work eleven hours a day in a factory. We must arrange that he be maintained by the Party, that he may in due time go underground." [Op. Cit., p. 155]

Thus the full time professional revolutionaries are drawn from all classes into the party apparatus.

However, in practice the majority of such full-timers were/are middle class. Trotsky notes that *"just as in the Bolshevik committees, so at the [1905] Congress itself, there were almost no workingmen. The intellectuals predominated."* [Stalin, vol. 1, p. 101] This did not change, even after the influx of working class members in 1917 the *"incidence of middle-class activists increases at the highest echelons of the hierarchy of executive committees."* [Robert Service, **The Bolshevik Party in Revolution**, p. 47] An ex-worker was a rare sight in the Bolshevik Central Committee, an actual worker non-existent. However, regardless of their original class background what unites the full-timers is not their origin but rather their current relationship with the working class, one of separation and hierarchy.

The organisational structure of this system was made clear at around the same time as **What is to be Done?**, with Lenin arguing that the factory group (or cell) of the party *"must consist of a small number of revolutionaries, receiving direct from the [central] committee orders and power to conduct the whole social-democratic work in the factory. All members of the factory committee must regard themselves as agents of the [central] committee, bound to submit to all its directions, bound to observe all 'laws and customs' of this 'army in the field' in which they have entered and which they cannot leave without permission of the commander."* [quoted by E.H. Carr, **The Bolshevik Revolution**, vol. 1, p. 33] The similarities to the structure proposed by Lenin and agreed to by the Comintern in 1920 is obvious. Thus we have a highly centralised party, one run by *"professional revolutionaries"* from the top down (as we noted in [section H.3.3](#) Lenin stressed that the organisational principle of Marxism was from top down).

It will be objected that Lenin was discussing the means of party building under Tsarism and advocated wider democracy under legality. However, given that in 1920 he universalised the Bolshevik experience and urged the creation of a dual party structure (based on legal and illegal structures), his comments on centralisation are applicable to vanguardism in general. Moreover, in 1902 he based his argument on experiences drawn from democratic capitalist regimes. As he argued, *"no revolutionary organisation has ever practised broad democracy, nor could it, however much it desired to do so."* This was not considered as just applicable in Russia under the Tsar as Lenin then goes on to quote the Webb's *"book on trade unionism"* in order to clarify what he calls *"the confusion of ideas concerning the meaning of democracy."* He notes that *"in the first period of existence in their unions, the British workers thought it was an indispensable sign of democracy for all members to do all the work of managing the unions."* This involved *"all questions [being] decided by the votes of all the members"* and all *"official duties"* being *"fulfilled by all the members in turn."* He dismisses *"such a conception of democracy"* as *"absurd"* and *"historical experience"* made them *"understand the necessity for representative institutions"* and *"full-time professional officials."* [Essential Works of Lenin, p. 161 and pp. 162-3]

Needless to say, Lenin links this to Kautsky, who *"shows the need for professional journalists, parliamentarians, etc., for the Social-Democratic leadership of the proletarian class struggle"* and who *"attacks the 'socialism of anarchists and litterateurs' who . . . proclaim the principle that laws should be passed directly by the whole people, completely failing to understand that in modern society this principle can have only a relative application."* [Op. Cit., p. 163] The universal nature of his dismissal of self-management within the revolutionary organisation in favour of representative forms is thus stressed.

Significantly, Lenin states that this "*primitive' conception of democracy*" exists in two groups, the "*masses of the students and workers*" and the "*Economists of the Bernstein persuasion*" (i.e. reformists). Thus the idea of directly democratic working class organisations is associated with opportunism. He was generous, noting that he "*would not, of course, . . . condemn practical workers who have had too few opportunities for studying the theory and practice of real [sic!] democratic [sic!] organisation*" but individuals "*play[ing] a leading role*" in the movement should be so condemned! [Op. Cit., p. 163] These people should know better! Thus "*real*" democratic organisation implies the restriction of democracy to that of electing leaders and any attempt to widen the input of ordinary members is simply an expression of workers who need educating from their "*primitive*" failings!

In summary, we have a model of a "*revolutionary*" party which is based on full-time "*professional revolutionaries*" in which the concept of direct democracy is replaced by a system of, at best, representative democracy. It is highly centralised, as befitting a specialised organisation. As noted in [section H.3.3](#), the "*organisational principle of revolutionary Social-Democracy*" was "*to proceed from the top downward*" rather than "*from the bottom upward.*" [Lenin, **Collected Works**, vol. 7, pp. 396-7] Rather than being only applicable in Tsarist Russia, Lenin drew on examples from advanced, democratic capitalist countries to justify his model in 1902 and in 1920 he advocated a similar hierarchical and top-down organisation with a dual secret and public organisation in the **Communist International**. The continuity of ideas is clear.

H.5.6 Why do anarchists oppose "**democratic centralism**"?

What to make of Lenin's suggested model of "*democratic centralism*" discussed in the [last section](#)? It is, to use Cornelius Castoriadis's term, a "*revolutionary party organised on a capitalist manner.*" He argues that in practice the "*democratic centralist*" party, while being centralised, will not be very democratic. In fact, the level of democracy would reflect that in a capitalist republic rather than a socialist society. In his words:

"The dividing up of tasks, which is indispensable wherever there is a need for co-operation, becomes a real division of labour, the labour of giving orders being separate from that of carrying them out . . . this division between directors and executants tends to broaden and deepen by itself. The leaders specialise in their role and become indispensable while those who carry out orders become absorbed in their concrete tasks. Deprived of information, of the general view of the situation, and of the problems of organisation, arrested in their development by their lack of participation in the overall life of the Party, the organisation's rank-and-file militants less and less have the means or the possibility of having any control over those at the top.

*"This division of labour is supposed to be limited by 'democracy.' But democracy, which should mean that **the majority rules**, is reduced to meaning that the majority **designates its rulers**; copied in this way from the model of bourgeois parliamentary democracy, drained of any real meaning, it quickly becomes a veil thrown over the unlimited power of*

the rulers. The base does not run the organisation just because once a year it elects delegates who designate the central committee, no more than the people are sovereign in a parliamentary-type republic because they periodically elect deputies who designate the government.

*"Let us consider, for example, 'democratic centralism' as it is supposed to function in an ideal Leninist party. That the central committee is designated by a 'democratically elected' congress makes no difference since, once it is elected, it has complete (statutory) control over the body of the Party (and can dissolve the base organisations, kick out militants, etc.) or that, under such conditions, it can determine the composition of the next congress. The central committee could use its powers in an honourable way, these powers could be reduced; the members of the Party might enjoy 'political rights' such as being able to form factions, etc. Fundamentally this would not change the situation, for the central committee would still remain the organ that defines the political line of the organisation and controls its application from top to bottom, that, in a word, has permanent monopoly on the job of leadership. The expression of opinions only has a limited value once the way the group functions prevents this opinion from forming on solid bases, i.e. permanent **participation** in the organisation's activities and in the solution of problems that arise. If the way the organisation is run makes the solution of general problems he specific task and permanent work of a separate category of militants, only their opinion will, or will appear, to count to the others." [Social and Political Writings, vol. 2, pp. 204-5]*

Castoridis' insight is important and strikes at the heart of the problem with vanguard parties. They simply reflect the capitalist society they claim to represent. As such, Lenin's argument against "primitive" democracy in the revolutionary and labour movements is significant. When he asserts that those who argue for direct democracy "completely" fail to "understand that in modern society this principle can have only a relative application," he is letting the cat out of the bag. [Lenin, **Op. Cit.**, p. 163] After all, "modern society" is capitalism, a class society. In such a society, it is understandable that self-management should not be applied as it strikes at the heart of class society and how it operates. That Lenin can appeal to "modern society" without recognising its class basis says a lot. The question becomes, if such a "principle" is valid for a class system, is it applicable in a socialist society one and in the movement aiming to create such a society? Can we postpone the application of our ideas until "after the revolution" or can the revolution only occur when we apply our socialist principles in resisting class society?

In a nutshell, can the same set of organisational structures be used for the different ends? Can bourgeois structures be considered neutral or have they, in fact, evolved to ensure and protect minority rule? Ultimately, form and content are not independent of each other. Form and content adapt to fit each other and they cannot be divorced in reality. Thus, if the bourgeoisie embrace centralisation and representation they have done so because it fits perfectly with their specific form of class society. Neither centralisation and representation can undermine minority rule and, if they did, they would quickly be eliminated. This can be seen from the fate of radicals utilising representative democracy. If they are in a position to threaten bourgeois society, representative government is eliminated in favour of even stronger forms of

centralisation (e.g. fascism or some other form of dictatorship).

Ironically enough, both Bukharin and Trotsky acknowledged that fascism had appropriated Bolshevik ideas. The former demonstrated at the 12th Congress of the Communist Party in 1923 how Italian fascism had *"adopted and applied in practice the experiences of the Russian revolution"* in terms of their *"methods of combat."* In fact, *"[i]f one regards them from the **formal** point of view, that is, from the point of view of the technique of their political methods, then one discovers in them a complete application of Bolshevik tactics. . . in the sense of the rapid concentration of forced [and] energetic action of a tightly structured military organisation."* [quoted by R. Pipes, **Russia Under the Bolshevik Regime, 1919-1924**, p. 253] The latter, in his uncompleted biography on Stalin noted that *"Mussolini stole from the Bolsheviks . . . Hitler imitated the Bolsheviks and Mussolini."* [**Stalin**, vol. 2, p. 243] The question arises as to whether the same tactics and structures serve both the needs of fascist reaction **and** socialist revolution? Now, if Bolshevism can serve as a model for fascism, it must contain structural and functional elements which are also common to fascism. After all, no one has detected a tendency of Hitler or Mussolini, in their crusade against democracy, the organised labour movement and the left, to imitate the organisational principles of anarchism or even of Menshevism.

Simply put, we can expect decisive structural differences to exist between capitalism and socialism if these societies are to have different aims. Where one is centralised to facilitate minority rule, the other must be decentralised and federal to facilitate mass participation. Where one is top-down, the other must be from the bottom-up. If a *"socialism"* exists which uses bourgeois organisational elements then we should not be surprised if it turns out it is socialist in name only. The same applies to revolutionary organisations. As the anarchists of **Trotwatch** explain:

"In reality, a Leninist Party simply reproduces and institutionalises existing capitalist power relations inside a supposedly 'revolutionary' organisation: between leaders and led; order givers and order takers; between specialists and the acquiescent and largely powerless party workers. And that elitist power relation is extended to include the relationship between the party and class." [**Carry on Recruiting!**, p. 41]

If you have an organisation which celebrates centralisation, having an institutionalised *"leadership"* separate from the mass of members becomes inevitable. Thus the division of labour which exists in the capitalist workplace or state is created. Forms cannot and do not exist independently of people and so imply specific forms of social relationships within them. These social relationships shape those subject to them. Can we expect the same forms of authority to have different impacts simply because the organisation has *"socialist"* or *"revolutionary"* in its name? Of course not. It is for this reason that anarchists argue that only in a *"libertarian socialist movement the workers learn about non-dominating forms of association through creating and experimenting with forms such as libertarian labour organisations, which put into practice, through struggle against exploitation, principles of equality and free association."* [John Clark, **The Anarchist Moment**, p. 79]

As noted above, a *"democratic centralist"* party requires that the *"lower"* party bodies (cells, branches,

etc.) should be subordinate to the higher ones (e.g. the central committee). The higher bodies are elected at the (usually) annual conference. As it is impossible to mandate for future developments, the higher bodies therefore are given carte blanche to determine policy which is binding on the whole party (hence the *"from top-down"* principle). In between conferences, the job of full time (ideally elected, but not always) officers is to lead the party and carry out the policy decided by the central committee. At the next conference, the party membership can show its approval of the leadership by electing another. The problems with this scheme are numerous:

*"The first problem is the issue of hierarchy. Why should 'higher' party organs interpret party policy any more accurately than 'lower' ones? The pat answer is that the 'higher' bodies compromise the most capable and experienced members and are (from their lofty heights) in a better position to take an overall view on a given issue. In fact what may well happen is that, for example, central committee members may be more isolated from the outside world than mere branch members. This might ordinarily be the case because given the fact that many central committee members are full timers and therefore detached from more real issues such as making a living . . ." [ACF, **Marxism and its Failures**, p. 8]*

Equally, in order that the *"higher"* bodies can evaluate the situation they need effective information from the *"lower"* bodies. If the *"lower"* bodies are deemed incapable of formulating their own policies, how can they be wise enough, firstly, to select the right leaders and, secondly, determine the appropriate information to communicate to the *"higher"* bodies? As such, given the assumptions for centralised power in the party, can we not see that *"democratic centralised"* parties will be extremely inefficient in practice as information and knowledge is lost in the party machine and whatever decisions which are reached at the top are made in ignorance of the real situation on the ground? As we discuss in [section H.3.8](#), this is usually the fate of such parties.

Within the party, as noted, the role of *"professional revolutionaries"* (or *"full timers"*) is stressed. As Lenin argued, any worker which showed any talent must be removed from the workplace and become a party functionary. Is it surprising that the few Bolshevik cadres (i.e. professional revolutionaries) of working class origin soon lost real contact with the working class? Equally, what will their role **within** the party be? As we discuss in [section 3](#) of the appendix on ["What happened during the Russian Revolution?"](#), their role in the Bolshevik party was essentially conservative in nature and aimed to maintain their own position. As Bakunin argued (in a somewhat different context) Marxism always *"comes down to the same dismal result: government of the vast majority of the people by a privileged minority. But this minority, the Marxists say, will consist of workers. Yes, perhaps of former workers, who, as soon as they become rulers or representatives of the people will cease to be workers and will begin to look upon the whole workers' world from the heights of the state. They will no longer represent the people but themselves and their own pretensions to govern the people."* [**Statism and Anarchy**, p. 178] Replacing *"state"* with *"party machine"* and *"the people"* by *"the party"* we get a good summation of the way the Bolshevik cadres **did** look upon the party members (see [section H.5.9](#)). It also indicates the importance of organising today in a socialist manner rather than in a bourgeois one.

That the anarchist critique of "*democratic centralism*" is valid, we need only point to the comments and analysis of numerous members (and often soon to be ex-members) of such parties. Thus we get a continual stream of articles discussing why specific parties are, in fact, "*bureaucratic centralist*" rather than "democratic centralist" and what is required to reform them. That almost every "*democratic centralist*" party in existence is not that democratic does not hinder their attempts to create one which is. In a way, the truly "*democratic centralist*" party is the Holy Grail of modern Leninism. As we discuss in [section H.5.10](#), their goal may be as mythical as that of the Arthurian legends.

H.5.7 Is the way revolutionaries organise important?

As we discussed in the [last section](#), anarchists argue that the way revolutionaries organise today is important. However, according to some of Lenin's followers, the fact that the "revolutionary" party is organised in a non-revolutionary manner does not matter. In the words of Chris Harman, leading member of the British Socialist Workers' Party, "*[e]xisting under capitalism, the revolutionary organisation [i.e. the vanguard party] will of necessity have a quite different structure to that of the workers' state that will arise in the process of overthrowing capitalism.*" [**Party and Class**, p. 34]

However, in practice this distinction is impossible to make. If the party is organised in specific ways then it is so because this is conceived to be "*efficient*," "*practical*" and so on. Hence we find Lenin arguing against "*backwardness in organisation*" and that the "*point at issue is whether our ideological struggle is to have forms of a higher type to clothe it, forms of Party organisation binding on all.*" [contained in Robert V. Daniels, **A Documentary History of Communism**, vol. 1, p. 23] Why would the "*workers' state*" be based on "*backward*" or "*lower*" kinds of organisational forms? If, as Lenin remarked, "*the organisational principle of revolutionary Social-Democracy*" was "*to proceed from the top downward*," why would the party, once in power, reject its "*organisational principle*" in favour of one it thinks is "*opportunist*," "*primitive*" and so on?

Therefore, as the **vanguard** the party represents the level to which the working class is supposed to reach then its organisational principles must, similarly, be those which the class must reach. As such, Harman's comments are incredulous. How we organise today is hardly irrelevant, particularly if the revolutionary organisation in question seeks (to use Lenin's words) to "*take over full state power alone.*" [**Selected Works**, vol. 2, p. 352] These prejudices (and the political and organisational habits they generate) will influence the shaping of the "*workers' state*" by the party once it has taken power. This decisive influence of the party and its ideological as well as organisational assumptions can be seen when Trotsky argued in 1923 that "*the party created the state apparatus and can rebuild it anew . . . from the party you get the state, but not the party from the state.*" [**Leon Trotsky Speaks**, p. 161] This is to be expected, after all the aim of the party is to take, hold and execute power. Given that the vanguard party is organised as it is to ensure effectiveness and efficiency, why should we assume that the ruling party will not seek to recreate these organisational principles once in power? As the Russian Revolution proves, this is the case:

*"On 30 October, Sovnarkom [The Council of People's Commissars] unilaterally arrogated to itself legislative power simply by promulgating a decree to this effect. This was, effectively, a Bolshevik **coup d'etat** that made clear the government's (and party's) pre-eminence over the soviets and their executive organ. Increasingly, the Bolsheviks relied upon the appointment from above of commissars with plenipotentiary powers, and they split up and reconstituted fractious Soviets and intimidated political opponents."* [Neil Harding, **Leninism**, p. 253]

As such, to claim how we organise under capitalism is not important to a revolutionary movement is simply not true. The way revolutionaries organise have an impact both on themselves and how they will view the revolution developing. An ideological prejudice for centralisation and "top-down" organisation will not disappear once the revolution starts. Rather, it will influence the way the party acts within it and, if it aims to seize power, how it will exercise that power once it has.

For these reasons anarchists stress the importance of building the new world in the shell of the old. All organisations exert pressures on their membership and create social relationships which shape them. As the members of these parties will be part of the revolutionary process, they will influence how that revolution will develop and any *"transitional"* institutions which are created. As the aim of such organisations is to facilitate the creation of socialism, the obvious implication is that the revolutionary organisation must, itself, reflect the society it is trying to create. Clearly, then, the idea that how we organise as revolutionaries today can be considered somehow independent of the revolutionary process and the nature of post-capitalist society and its institutions cannot be maintained (particularly is the aim of the *"revolutionary"* organisation is to seize power on behalf of the working class).

As we argue elsewhere (see section [H.2.10](#) and [J.3](#)) anarchists argue for revolutionary groups based on self-management, federalism and decision making from below. In other words, we apply within our organisations the same principles as those which the working class has evolved in the course of its own struggles. Autonomy is combined with federalism, so ensuring co-ordination of decisions and activities is achieved from below upwards by means of mandated and recallable delegates. Effective co-operation is achieved as it is informed by and reflects the needs on the ground. Simply put, working class organisation and discipline -- as exemplified by the workers' council or strike committee -- represents a completely different thing from **capitalist** organisation and discipline, of which Leninists are constantly asking for more (albeit draped with the Red Flag and labelled *"revolutionary"*). And as we discuss in the [next section](#), the Leninist model of top-down centralised parties is marked more by its failures than its successes, suggesting that not only is the vanguard model undesirable, it is also unnecessary.

H.5.8 Are vanguard parties effective?

In a word, no. Vanguard parties have rarely been proven to be effective organs for fermenting revolutionary change which is, let us not forget, their stated purpose. Indeed, rather than being in the vanguard of social struggle, the Leninist parties are often the last to recognise, let alone understand, the initial stirrings of important social movements and events. It is only once these movements have

exploded in the streets that the self-proclaimed "*vanguards*" notice it and decide it requires their leadership.

Part of this process are constant attempts to install their political program onto movements that they do not understand, movements that have proven to be successful using different tactics and methods of organisation. Rather than learn from the experiences of others, social movements are seen as raw material, as a source of new party members, to be used in order to advance the party rather than the autonomy and combativeness of the working class. The latest example of this process is the current "*anti-globalisation*" or "*anti-capitalist*" movement which started without the help of these self-appointed vanguards, who have since spent a lot of time trying to catch up with the movement while criticising its proven organisational principles and tactics.

The reasons for such behaviour are not too difficult to find. They lie in organisational structure favoured by these parties and the mentality lying behind them. As anarchists have long argued, a centralised, top-down structure will simply be unresponsive to the needs of those in struggle. The inertia associated with the party hierarchy will ensure that it responds slowly to new developments and its centralised structure means that the leadership is isolated from what is happening on the ground and cannot respond appropriately. The underlying assumption of the vanguard party, namely that the party represents the interests of the working class, makes it unresponsive to new developments within the class struggle. As Lenin argued that spontaneous working class struggle tends to reformism, the leaders of a vanguard party automatically are suspicious of new developments which, by their very nature, rarely fit into previously agreed models of "*proletarian*" struggle. The example of Bolshevik hostility to the soviets spontaneously formed by workers during the 1905 Russian revolution is one of the best known examples of this tendency.

Murray Bookchin is worth quoting at length on this subject:

*"The 'glorious party,' when there is one, almost invariably lags behind the events . . . In the beginning . . . it tends to have an inhibitory function, not a 'vanguard' role. Where it exercises influence, it tends to slow down the flow of events, not 'co-ordinate' the revolutionary forced. This is not accidental. The party is structured along hierarchical lines **that reflect the very society it professes to oppose**. Despite its theoretical pretensions, it is a bourgeois organism, a miniature state, with an apparatus and a cadre whose function it is to **seize** power, not **dissolve** power. Rooted in the pre-revolutionary period, it assimilates all the forms, techniques and mentality of bureaucracy. Its membership is schooled in obedience and in the preconceptions of a rigid dogma and is taught to revere the leadership. The party's leadership, in turn, is schooled in habits born of command, authority, manipulation and egomania. This situation is worsened when the party participates in parliamentary elections. In election campaigns, the vanguard party models itself completely on existing bourgeois forms and even acquires the paraphernalia of the electoral party. . .*

"As the party expands, the distance between the leadership and the ranks inevitably increases. Its leaders not only become 'personages,' they lose contact with the living situation below. The local groups, which know their own immediate situation better than any remote leaders, are obliged to subordinate their insights to directives from above. The leadership, lacking any direct knowledge of local problems, responds sluggishly and prudently. Although it stakes out a claim to the 'larger view,' to greater 'theoretical competence,' the competence of the leadership tends to diminish as one ascends the hierarchy of command. The more one approaches the level where the real decisions are made, the more conservative is the nature of the decision-making process, the more bureaucratic and extraneous are the factors which come into play, the more considerations of prestige and retrenchment supplant creativity, imagination, and a disinterested dedication to revolutionary goals.

"The party becomes less efficient from a revolutionary point of view the more it seeks efficiency by means of hierarchy, cadres and centralisation. Although everyone marches in step, the orders are usually wrong, especially when events begin to move rapidly and take unexpected turns -- as they do in all revolutions. . .

"On the other hand, this kind of party is extremely vulnerable in periods of repression. The bourgeoisie has only to grab its leadership to destroy virtually the entire movement. With its leaders in prison or in hiding, the party becomes paralysed; the obedient membership had no one to obey and tends to flounder. Demoralisation sets in rapidly. The party decomposes not only because of the repressive atmosphere but also because of its poverty of inner resources.

"The foregoing account is not a series of hypothetical inferences, it is a composite sketch of all the mass Marxian parties of the past century -- the Social Democrats, the Communists and the Trotskyist party of Ceylon (the only mass party of its kind. To claim that these parties failed to take their Marxian principles seriously merely conceals another question: why did this failure happen in the first place? The fact is, these parties were co-opted into bourgeois society because they were structured along bourgeois lines. The germ of treachery existed in them from birth." [Post-Scarcity Anarchism, pp. 194-8]

Thus, the evidence Bookchin summarises suggests that vanguard parties are less than efficient promoting revolutionary change. Sluggish, unresponsive, undemocratic, they simply cannot adjust to the dynamic nature of social struggle, never mind revolution. This is to be expected:

"For the state centralisation is the appropriate form of organisation, since it aims at the greatest possible uniformity in social life for the maintenance of political and social equilibrium. But for a movement whose very existence depends on prompt action at any favourable moment and on the independent thought and action of its supporters, centralism could but be a curse by weakening its power of decision and systematically

repressing all immediate action. If, for example, as was the case in Germany, every local strike had first to be approved by the Central, which was often hundreds of miles away and was not usually in a position to pass a correct judgement on the local conditions, one cannot wonder that the inertia of the apparatus of organisation renders a quick attack quite impossible, and there thus arises a state of affairs where the energetic and intellectually alert groups no longer serve as patterns for the less active, but are condemned by these to inactivity, inevitably bringing the whole movement to stagnation. Organisation is, after all, only a means to an end. When it becomes an end in itself, it kills the spirit and the vital initiative of its members and sets up that domination by mediocrity which is the characteristic of all bureaucracies." [Rudolf Rocker, **Anarcho-Syndicalism**, p. 54]

As we discuss in [section 3](#) of the appendix on "[What happened during the Russian Revolution?](#)" the example of the Bolshevik party during the Russian Revolution amply proves Rocker's point. Rather than being a highly centralised, disciplined vanguard party, the Bolshevik party was marked by extensive autonomy throughout its ranks. Party discipline was regularly ignored, including by Lenin in his attempts to get the central party bureaucracy to catch up with the spontaneous revolutionary actions and ideas of the Russian working class. As Bookchin summarises, the "*Bolshevik leadership was ordinarily extremely conservative, a trait that Lenin had to fight throughout 1917 -- first in his efforts to reorient the Central Committee against the provisional government (the famous conflict over the 'April Theses'), later in driving the Central Committee toward insurrection in October. In both cases he threatened to resign from the Central Committee and bring his views to 'the lower ranks of the party.'*" Once in power, however, "*the Bolsheviks tended to centralise their party to the degree that they became isolated from the working class.*" [Op. Cit., pp. 198-9 and p. 199]

The "vanguard" model of organising is not only inefficient and ineffective from a revolutionary perspective, it generates bureaucratic and elitist tendencies which undermine any revolution unfortunate enough to be dominated by such a party. For these extremely practical and sensible reasons anarchists reject it wholeheartedly.

In summary, vanguard parties have been proven to be less than effective in a revolutionary sense. Their top-down centralised structure is simply not responsive enough to the needs of social struggle and so usually remain out of touch with such movements, spending most of their time trying to catch up with them. As we discuss in the [next section](#), the only thing vanguard parties **are** effective at is to supplant the diversity produced and required by revolutionary movements with the drab conformity produced by centralisation and to replace popular power and freedom with party power and tyranny.

H.5.9 What are vanguard parties effective at?

As we discussed the [last section](#), vanguard parties are not efficient as agents of revolutionary change. So, it may be asked, what **are** vanguard parties effective at? If they are harmful to revolutionary struggle, what are they good at? The answer to this is simple. No anarchist would deny that vanguard parties are

extremely efficient and effective at certain things, most notably reproducing hierarchy and bourgeois values into so-called "*revolutionary*" organisations and movements. As Murray Bookchin argues, the party "*is efficient in only one respect -- in moulding society in its own hierarchical image if the revolution is successful. It recreates bureaucracy, centralisation and the state. It fosters the very social conditions which justify this kind of society. Hence, instead of 'withering away,' the state controlled by the 'glorious party' preserves the very conditions which 'necessitate' the existence of a state -- and a party to 'guard' it.*" [**Post-Scarcity Anarchism**, pp. 197-8]

Thus, by being structured along hierarchical lines that reflect the very system that it professes to oppose, the vanguard party very "*effectively*" reproduces that system within both the current radical social movements **and** any revolutionary society that may be created. This means that once in power, it shapes society in its own image. Ironically, this tendency towards conservatism and bureaucracy was noted by Trotsky:

"As often happens, a sharp cleavage developed between the classes in motion and the interests of the party machines. Even the Bolshevik Party cadres, who enjoyed the benefit of exceptional revolutionary training, were definitely inclined to disregard the masses and to identify their own special interests and the interests of the machine on the very day after the monarchy was overthrown. What, then, could be expected of these cadres when they became an all-powerful state bureaucracy?" [**Stalin**, vol. 1, p. 298]

In such circumstances, it is unsurprising that urging party power and identifying it with working class power would have less than revolutionary results. Discussing the Bolsheviks in 1905 Trotsky points out this tendency existed from the start:

"The habits peculiar to a political machine were already forming in the underground. The young revolutionary bureaucrat was already emerging as a type. The conditions of conspiracy, true enough, offered rather merge scope for such formalities of democracy as electiveness, accountability and control. Yet, undoubtedly the committeemen narrowed these limitations considerably more than necessity demanded and were far more intransigent and severe with the revolutionary workingmen than with themselves, preferring to domineer even on occasions that called for lending an attentive ear to the voice of the masses." [**Op. Cit.**, p. 101]

He quotes Krupskaya on these party bureaucrats, the "*committeemen*." Krupskaya argues that "*as a rule*" they "*did not recognise any party democracy*" and "*did not want any innovations. The 'committeeman' did not desire, and did not know how to, adapt himself to rapidly changing conditions.*" [quoted by Trotsky, **Op. Cit.**, p. 101] This conservatism played havoc in the party during 1917, incidentally. It would be no exaggeration to argue that the Russian revolution occurred in spite of, rather than because of, Bolshevik organisational principles (see [next section](#)). These principles, however, came into their own once the party had seized power, ensuring the consolidation of bureaucratic rule by an elite.

That a vanguard party helps to produce a bureaucratic regime once in power should not come as a surprise. If the party, to use Trotsky's expression, exhibits a "*caste tendency of the committeemen*" can we be surprised if once in power it reproduces such a tendency in the state it is now the master of? [Op. Cit., p. 102] And this "*tendency*" can be seen today in the multitude of Trotskyist sects that exist.

H.5.10 Why does "*democratic centralism*" produce "*bureaucratic centralism*"?

In spite of the almost ritualistic assertions that vanguard parties are "*the most democratic the world has seen*," an army of ex-members, expelled dissidents and disgruntled members testify that they do not live up to the hype. They argue that most, if not all, "vanguard" parties are not "*democratic centralist*" but are, in fact, "*bureaucratic centralist*." Within the party, in other words, a bureaucratic clique controls it from the top-down with little democratic control, never mind participation.

For anarchists, this is hardly surprising. The reasons why this continually happens are rooted in the nature of "*democratic centralism*" itself.

Firstly, the assumption of "*democratic centralism*" is that the membership elect a leadership and give them the power to decide policy between conferences and congresses. This has a subtle impact on the membership, as it is assumed that the leadership has a special insight into social problems above and beyond that of anyone else, otherwise they would not have been elected to such an important position. Thus many in the membership come to believe that disagreements with the leadership's analysis, even before they had been clearly articulated, are liable to be wrong. Doubt dares not speak its name. Unquestioning belief in the party leadership has been an all too common recurring theme in many accounts of vanguard parties.

Conformity within such parties is also reinforced by the intense activism expected by members, particularly leading activists and full-time members. Paradoxically, the more deeply people participate in activism, the harder it becomes to reflect on what they are doing. The unrelenting pace often induces exhaustion and depression, while making it harder to "*think your way out*" -- too many commitments have been made and too little time is left over from party activity for reflection. Moreover, high levels of activism prevent many, particularly the most committed, from having a personal life outside their role as party members. This high-speed political existence assure that rival social networks atrophy through neglect, so ensuring that the party line is the only one which members get exposed to. Members tend to leave, typically, because of exhaustion, crisis, even despair rather than as the result of rational reflection and conscious decision.

Secondly, given that vanguard parties are based on the belief that they are the guardians of "*scientific socialism*," this means that there is a tendency to squeeze all of social life into the confines of the party's ideology. Moreover, as the party's ideology is a "science" it is expected to explain everything (hence the tendency of Leninists to expound on every subject imaginable, regardless of whether the author knows enough about the subject to discuss it in an informed way). The view that the party's ideology explains

everything eliminates the need for fresh or independent thought, precludes the possibility of critically appraising past practice or acknowledging mistakes, and removes the need to seek meaningful intellectual input outside the party's own ideological fortress. As Victor Serge, anarchist turned Bolshevik, admitted in his memoirs, "*Bolshevik thinking is grounded in the possession of the truth. The Party is the repository of truth, and any form of thinking which differs from it is a dangerous or reactionary error. Here lies its spiritual source of intolerance. The absolute conviction of its lofty mission assures it of a moral energy quite astonishing in its intensity -- and, at the same time, a clerical mentality which is quick to becoming Inquisitorial.*" [**Memoirs of a Revolutionary**, p. 134]

In fact, the intense levels of activism means that members are bombarded with party propaganda, are in endless party meetings, or spend time reading party literature and so, by virtue of the fact that there is not enough time to read anything, members end up reading nothing but party publications. Most points of contact with the external world are eliminated or drastically curtailed. Indeed, such alternative sources of information and such thinking is regularly dismissed as being contaminated by bourgeois influences. This often goes so far as to label those who question any aspect of the party's analysis revisionists or deviationists, bending to the "*pressures of capitalism,*" and are usually driven from the ranks as heretics. All this is almost always combined with contempt for all other organisations on the Left (indeed, the closer they are to the party's own ideological position the more likely they are to be the targets of abuse).

Thirdly, the practice of "*democratic centralism*" also aids this process towards conformity. Based on the idea that the party must be a highly disciplined fighting force, the party is endowed with a powerful central committee and a rule that all members must publicly defend the agreed-upon positions of the party and the decisions of the central committee, whatever opinions they might hold to the contrary in private. Between conferences, the party's leading bodies usually have extensive authority to govern the party's affairs, including updating party doctrine and deciding the party's response to current political events.

As unity is the key, there is a tendency to view any opposition as a potential threat. It is not at all clear when "*full freedom to criticise*" policy internally can be said to disturb the unity of a defined action. The norms of democratic centralism confer all power between conferences onto a central committee, allowing it to become the arbiter of when a dissident viewpoint is in danger of weakening unity. The evidence from numerous vanguard parties suggest that their leaderships usually view **any** dissent as precisely such a disruption and demand that dissidents cease their action or face expulsion from the party.

It should also be borne in mind that Leninist parties also view themselves as vitally important to the success of any future revolution. This cannot help but reinforce the tendency to view dissent as something which automatically imperils the future of the planet and so something which must be combated at all costs. As Lenin stressed in a polemic directed to the international communist movement in 1920, "*[w]hoever brings about even the slightest weakening of the iron discipline of the party of the proletariat (especially during its dictatorship) is actually aiding the bourgeoisie against the proletariat.*" [**Collected Works**, vol. 31, p. 45] As can be seen, Lenin stresses the importance of "*iron*

discipline" at all times, not only during the revolution when *"the party"* is applying *"its dictatorship"* (see [section H.3.8](#) for more on this aspect of Leninism). This provides a justification of whatever measures are required to restore the illusion of unanimity, including the trampling underfoot of whatever rights the membership may have on paper and the imposition of any decisions the leadership considers as essential between conferences.

Fourthly, and more subtly, it is well known that when people take a public position in defence of a proposition, there is then a strong tendency for their private attitudes to shift so that they harmonise with their public behaviour. It is difficult to say one thing in public and hold to a set of private beliefs at variance with what is publicly expressed. In short, if people tell others that they support X (for whatever reason), they will slowly begin to change their own opinions and, indeed, internally come to support X. The more public such declarations have been, the more likely it is that such a shift will take place. This has been confirmed by empirical research (see R. Cialdini, **Influence: Science and Practice**).

This suggests that if, in the name of democratic centralism, party members publicly uphold the party line, it becomes increasingly difficult to hold a private belief at variance with publicly expressed opinions. The evidence suggests that it is not possible to have a group of people presenting a conformist image to society at large while maintaining an inner party regime characterised by frank and full discussion. Conformity in public tends to equal conformity in private. So given what is now known of social influence, *"democratic centralism"* is almost certainly destined to prevent genuine internal discussion. This is sadly all too often confirmed in the internal regimes of vanguard parties, where debate is often narrowly focused on a few minor issues of emphasis rather than fundamental issues of policy and theory.

It has already been noted (in [section H.5.5](#)) that the organisational norms of democratic centralism imply a concentration of power at the top. There is abundant evidence that such a concentration has been a vital feature of every vanguard party and that such a concentration limits party democracy. An authoritarian inner party regime is maintained, which ensures that decision making is concentrated in elite hands. This regime gradually dismantles or ignores all formal controls on its activities. Members are excluded from participation in determining policy, calling leaders to account, or expressing dissent. This is usually combined with persistent assurances about the essentially democratic nature of the organisation, and the existence of exemplary democratic controls -- on paper. Correlated with this inner authoritarianism is a growing tendency toward the abuse of power by the leaders, who act in arbitrary ways, accrue personal power and so on (as noted by Trotsky with regards to the Bolshevik party machine, as mentioned above). Indeed, it is often the case that activities that would provoke outrage if engaged in by rank-and-file members are tolerated when they apply to leaders. As one group of Scottish libertarians notes:

"Further, in so far as our Bolshevik friends reject and defy capitalist and orthodox labourist conceptions, they also are as much 'individualistic' as the anarchist. Is it not boasted, for example, that on many occasions Marx, Lenin and Trotsky were prepared to be in a minority of one -- if they thought they were more correct than all others on the

*question at issue? In this, like Galileo, they were quite in order. Where they and their followers, obsessed by the importance of their own judgement go wrong, is in their tendency to refuse this inalienable right to other protagonists and fighters for the working class." [APCF, "Our Reply," **Class War on the Home Front**, p. 70]*

As in any hierarchical structure, the tendency is for those in power is to encourage and promote those who agree with them. This means that members usually find their influence and position in the party dependent on their willingness to conform to the hierarchy and its leadership. Dissenters will rarely find their contribution valued and advancement is limited, which produces a strong tendency not to make waves. As Miasnikov, a working class Bolshevik dissident, argued in 1921, *"the regime within the party"* meant that *"if someone dares to have the courage of his convictions,"* they are called either a self-seeker or, worse, a counter-revolutionary, a Menshevik or an SR. Moreover, within the party, favouritism and corruption were rife. In Miasnikov's eyes a new type of Communist was emerging, the toadying careerist who *"knows how to please his superiors."* At the last party congress Lenin attended, Miasnikov was expelled. Only one delegate, V. V. Kosior, *"argued that Lenin had taken the wrong approach to the question of dissent. If someone, said Kosior, had the courage to point out deficiencies in party work, he was marked down as an oppositionist, relieved of authority, placed under surveillance, and -- a reference to Miasnikov -- even expelled from the party."* [Paul Avrich, **Bolshevik Opposition to Lenin**] Serge notes about the same period that Lenin *"proclaimed a purge of the Party, aimed at those revolutionaries who had come in from other parties -- i.e. those who were not saturated with the Bolshevik mentality. This meant the establishment within the Party of a dictatorship of the old Bolsheviks, and the direction of disciplinary measures, not against the unprincipled careerists and conformist late-comers, but against those sections with a critical outlook."* [Op. Cit., p. 135]

This, of course, also applies to the party congress, on paper the sovereign body of the organisation. All too often, resolutions at party conferences will either come from the leadership or be completely supportive of its position. If branches or members submit resolutions which are critical of the leadership, enormous pressure is exerted to ensure that they are withdrawn. Moreover, often delegates to the congress are not mandated by their branches, so ensuring that rank and file opinions are not raised, never mind discussed. Other, more drastic measures have been known to occur. Victor Serge saw what he termed the *"Party steamroller"* at work in early 1921 and saw *"the voting rigged for Lenin's and Zinoviev's 'majority'"* in one of the districts of Petrograd. [Op. Cit., p.123]

All too often, such parties have "elected" bodies which have, in practice, usurped the normal democratic rights of members and become increasingly removed from formal controls. All practical accountability of the leaders to the membership for their actions is eliminated. Usually this authoritarian structure is combined with militaristic sounding rhetoric and the argument that the *"revolutionary"* movement needs to be organised in a more centralised way than the current class system, with references to the state's forces of repression (notably the army). As Murray Bookchin argued, the Leninist *"has always had a grudging admiration and respect for that most inhuman of all hierarchical institutions, the military."* [**Toward an Ecological Society**, p. 254f]

The modern day effectiveness of the vanguard party can be seen by the strange fact that many Leninists

fail to join any of the existing parties due to their bureaucratic internal organisation and that many members are expelled (or leave in disgust) due to their attempts to make them more democratic. If vanguard parties are such positive organisations to be a member of, why do they have such big problems with member retention? Why are there so many vocal ex-members? Why are so many Leninists ex-members of vanguard parties, desperately trying to find an actual party which matches their own vision of democratic centralism rather than the bureaucratic centralism which seems the norm?

Our account of the workings of vanguard parties explains, in part, why many anarchists and other libertarians voice concern about them and their underlying ideology. We do so because their practices are disruptive and alienate new activists, hindering the very goal (socialism/revolution) they claim to be aiming for. As anyone familiar with the numerous groupings and parties in the Leninist left will attest, the anarchist critique of vanguardism seems to be confirmed in reality while the Leninist defence seems sadly lacking (unless, of course, the person is a member of such a party and then their organisation is the exception to the rule!).

H.5.11 Can you provide an example of the negative nature of vanguard parties?

Yes. Our theoretical critique of vanguardism we have presented in the last few sections is more than proved by the empirical evidence of such parties in operation today. Rarely do "vanguard" parties reach in practice the high hopes their supporters like to claim for them. Such parties are usually small, prone to splitting as well as leadership cults, and usually play a negative role in social struggle. A long line of ex-members complain that such parties are elitist, hierarchical and bureaucratic.

Obviously we cannot hope to discuss all such parties. As such, we will take just one example, namely the arguments of one group of dissidents of the biggest British Leninist party, the Socialist Workers Party. It is worth quoting their account of the internal workings of the SWP at length:

"The SWP is not democratic centralist but bureaucratic centralist. The leadership's control of the party is unchecked by the members. New perspectives are initiated exclusively by the central committee (CC), who then implement their perspective against all party opposition, implicit or explicit, legitimate or otherwise.

"Once a new perspective is declared, a new cadre is selected from the top down. The CC select the organisers, who select the district and branch committees - any elections that take place are carried out on the basis of 'slates' so that it is virtually impossible for members to vote against the slate proposed by the leadership. Any members who have doubts or disagreements are written off as 'burnt out' and, depending on their reaction to this, may be marginalised within the party and even expelled.

"These methods have been disastrous for the SWP in a number of ways: Each new

perspective requires a new cadre (below the level of the CC), so the existing cadre are actively marginalised in the party. In this way, the SWP has failed to build a stable and experienced cadre capable of acting independently of the leadership. Successive layers of cadres have been driven into passivity, and even out of the revolutionary movement altogether. The result is the loss of hundreds of potential cadres. Instead of appraising the real, uneven development of individual cadres, the history of the party is written in terms of a star system (comrades currently favoured by the party) and a demonology (the 'renegades' who are brushed aside with each turn of the party). As a result of this systematic dissolution of the cadre, the CC grows ever more remote from the membership and increasingly bureaucratic in its methods. In recent years the national committee has been abolished (it obediently voted for its own dissolution, on the recommendation of the CC), to be replaced by party councils made up of those comrades active at any one time (i.e. those who already agree with current perspectives); district committees are appointed rather than elected; the CC monopolise all information concerning the party, so that it is impossible for members to know much about what happens in the party outside their own branch; the CC give a distorted account of events rather than admit their mistakes . . . history is rewritten to reinforce the prestige of the CC . . . The outcome is a party whose conferences have no democratic function, but serve only to orientate party activists to carry out perspectives drawn up before the delegates even set out from their branches. At every level of the party, strategy and tactics are presented from the top down, as pre-digested instructions for action. At every level, the comrades 'below' are seen only as a passive mass to be shifted into action, rather than as a source of new initiatives."

*"The only exception is when a branch thinks up a new tactic to carry out the CC's perspective. In this case, the CC may take up this tactic and apply it across the party. In no way do rank and file members play an active role in determining the strategy and theory of the party -- except in the negative sense that if they refuse to implement a perspective eventually even the CC notice, and will modify the line to suit. A political culture has been created in which the leadership outside of the CC consists almost solely of comrades loyal to the CC, willing to follow every turn of the perspective without criticism . . . Increasingly, the bureaucratic methods used by the CC to enforce their control over the political direction of the party have been extended to other areas of party life. In debates over questions of philosophy, culture and even anthropology an informal party 'line' emerged (i.e. concerning matters in which there can be no question of the party taking a 'line'). Often behind these positions lay nothing more substantial than the opinions of this or that CC member, but adherence to the line quickly became a badge of party loyalty, disagreement became a stigma, and the effect was to close down the democracy of the party yet further by placing even questions of theory beyond debate. Many militants, especially working class militants with some experience of trade union democracy, etc., are often repelled by the undemocratic norms in the party and refuse to join, or keep their distance despite accepting our formal politics." [ISG, **Discussion Document of Ex-SWP Comrades**]*

They argue that a "democratic" party would involve the "[r]egular election of all party full-timers, branch and district leadership, conference delegates, etc. with the right of recall," which means that in the SWP appointment of full-timers, leaders and so on is the norm. They argue for the "right of branches to propose motions to the party conference" and for the "right for members to communicate horizontally in the party, to produce and distribute their own documents." They stress the need for "an independent Control Commission to review all disciplinary cases (independent of the leadership bodies that exercise discipline), and the right of any disciplined comrades to appeal directly to party conference." They argue that in a democratic party "no section of the party would have a monopoly of information" which indicates that the SWP's leadership is essentially secretive, withholding information from the party membership. [Ibid.]

Even more significantly, given our discussion on the influence of the party structure on post-revolutionary society in [section H.5.7](#), they argue that "[w]orst of all, the SWP are training a layer of revolutionaries to believe that the organisational norms of the SWP are a shining example of proletarian democracy, applicable to a future socialist society. Not surprisingly, many people are instinctively repelled by this idea." [Ibid.]

Some of these critics of Leninism do not give up hope and still look for a truly democratic centralist party rather than the bureaucratic centralist ones which seem so common. For example, our group of ex-SWP dissidents argue that "[a]nybody who has spent time involved in 'Leninist' organisations will have come across workers who agree with Marxist politics but refuse to join the party because they believe it to be undemocratic and authoritarian. Many draw the conclusion that Leninism itself is at fault, as every organisation that proclaims itself Leninist appears to follow the same pattern." [Lenin vs. the SWP: Bureaucratic Centralism Or Democratic Centralism?] This is a common refrain with Leninists -- when reality says one thing and the theory another, it must be reality that is at fault. Yes, every Leninist organisation may be bureaucratic and authoritarian but it is not the theory's fault that those who apply it are not capable of actually doing so successfully. Such an application of scientific principles by the followers of "scientific socialism" is worthy of note -- obviously the usual scientific method of generalising from facts to produce a theory is inapplicable when evaluating "scientific socialism" itself. However, Rather than ponder the possibility that "democratic centralism" does not actually work and automatically generates the "bureaucratic centralism," they point to the example of the Russian revolution and the original Bolshevik party as proof of the validity of their hopes.

Indeed, it would be no exaggeration to argue that the only reason people take the vanguard party organisational structure seriously is the apparent success of the Bolsheviks in the Russian revolution. However, as noted above, even the Bolshevik party was subject to bureaucratic tendencies and as we discuss in the [section 3](#) of the appendix on "[What happened during the Russian Revolution?](#)", the experience of the 1917 Russian Revolutions disprove the effectiveness of "vanguard" style parties. The Bolshevik party of 1917 was a totally different form of organisation than the ideal "democratic centralist" type argued for by Lenin in 1902 and 1920. As a model of revolutionary organisation, the "vanguardist" one has been proven false rather than confirmed by the experience of the Russian revolution. Insofar as the Bolshevik party was effective, it operated in a non-vanguardist way and insofar

as it did operate in such a manner, it held back the struggle.

I.8 Does revolutionary Spain show that libertarian socialism can work in practice?

Yes. As Murray Bookchin puts it, "*[i]n Spain, millions of people took large segments of the economy into their own hands, collectivised them, administered them, even abolished money and lived by communistic principles of work and distribution -- all of this in the midst of a terrible civil war, yet without producing the chaos or even the serious dislocations that were and still are predicted by authoritarian 'radicals.'* Indeed, in many collectivised areas, the efficiency with which an enterprise worked by far exceeded that of a comparable one in nationalised or private sectors. This 'green shoot' of revolutionary reality has more meaning for us than the most persuasive theoretical arguments to the contrary. On this score it is not the anarchists who are the 'unrealistic day-dreamers,' but their opponents who have turned their backs to the facts or have shamelessly concealed them." ["Introductory Essay," in **The Anarchist Collectives**, Sam Dolgoff (ed.), p. xxxix]

Sam Dolgoff's book is by far the best English source on the Spanish collectives and deserves to be quoted at length (as we do below). He quotes French Anarchist Gaston Leval comments that in those areas which defeated the fascist uprising on the 19th of July 1936 a profound social revolution took place based, mostly, on anarchist ideas:

"In Spain, during almost three years, despite a civil war that took a million lives, despite the opposition of the political parties . . . this idea of libertarian communism was put into effect. Very quickly more than 60% of the land was very quickly collectively cultivated by the peasants themselves, without landlords, without bosses, and without instituting capitalist competition to spur production. In almost all the industries, factories, mills, workshops, transportation services, public services, and utilities, the rank and file workers, their revolutionary committees, and their syndicates reorganised and administered production, distribution, and public services without capitalists, high-salaried managers, or the authority of the state.

"Even more: the various agrarian and industrial collectives immediately instituted economic equality in accordance with the essential principle of communism, 'From each according to his ability and to each according to his needs.' They co-ordinated their efforts through free association in whole regions, created new wealth, increased production (especially in agriculture), built more schools, and bettered public services. They instituted not bourgeois formal democracy but genuine grass roots functional libertarian democracy, where each individual participated directly in the revolutionary reorganisation of social life. They replaced the war between men, 'survival of the fittest,' by the universal practice of mutual aid, and replaced rivalry by the principle of solidarity . . .

"This experience, in which about eight million people directly or indirectly participated, opened a new way of life to those who sought an alternative to anti-social capitalism on the one hand, and totalitarian state bogus socialism on the other." [Op. Cit., pp. 6-7]

Thus about eight million people directly or indirectly participated in the libertarian based new economy during the short time it was able to survive the military assaults of the fascists and the attacks and sabotage of the Communists. This in itself suggests that libertarian socialist ideas are of a practical nature.

Lest the reader think that Dolgoff and Bookchin are exaggerating the accomplishments and ignoring the failures of the Spanish collectives, in the following subsections we will present specific details and answer some objections often raised by misinformed critics. We will try to present an objective analysis of the revolution, its many successes, its strong points and weak points, the mistakes made and possible lessons to be drawn from the experience, both from the successes and the mistakes.

This libertarian influenced revolution has (generally) been ignored by historians, or its existence mentioned in passing. Some so-called historians and "*objective investigators*" have slandered it and lied about (when not ignoring) the role anarchists played in it. Communist histories are particularly unreliable (to use a polite word for their activities) but it seems that almost **every** political perspective has done this (including liberal, right-wing libertarian, Stalinist, Trotskyist, Marxist, and so on). Indeed, the myths generated by Marxists of various shades are quite extensive (see the appendix on "[Marxists and Spanish Anarchism](#)" for a reply to some of the more common ones).

Thus any attempt to investigate what actually occurred in Spain and the anarchists' role in it is subject to a great deal of difficulty. Moreover, the positive role that Anarchists played in the revolution and the positive results of our ideas when applied in practice are also downplayed, if not ignored. Indeed, the misrepresentations of the Spanish Anarchist movement are downright amazing (see Jerome R. Mintz's wonderful book **The Anarchists of Casa Viejas** for a refutation of the historians claims, a refutation based on oral history, as well as J. Romero Maura's, "*The Spanish case*", contained in **Anarchism Today**, edited by J. Joll and D. Apter. Both are essential reading to understand the distortions of historians about the Spanish anarchist movement).

All we can do here is present a summary of the social revolution that took place and attempt to explode a few of the myths that have been created around the work of the C.N.T. and F.A.I. during those years.

In addition, we must stress that this section of the FAQ can be nothing but an introduction to the Spanish Revolution. We concentrate on the economic and political aspects of the revolution as we cannot cover the social transformations that occurred. All across non-fascist Spain traditional social relationships between men and women, adults and children, individual and individual were transformed, revolutionised, in a libertarian way. C.N.T. militant Abel Paz gives a good indication of this when he wrote:

"Industry is in the hands of the workers and all the production centres conspicuously fly the red and black flags as well as inscriptions announcing that they have really become collectives. The revolution seems to be universal. Changes are also evident in social relations. The former barriers which used to separate men and woman arbitrarily have been destroyed. In the cafes and other public places there is a mingling of the sexes which would have been completely unimaginable before. The revolution has introduced a fraternal character to social relations which has deepened with practice and show clearly that the old world is dead." [Durruti: **The People Armed**, p. 243]

The social transformation empowered individuals and these, in turn, transformed society. Anarchist militant Enriqueta Rovira presents a vivid picture of the self-liberation the revolution generated:

*"The atmosphere then [during the revolution], the feelings were very special. It was beautiful. A feeling of -- how shall I say it -- of power, not in the sense of domination, but in the sense of things being under **our** control, of under anyone's. Of **possibility**. We **had** everything. We had Barcelona: It was ours. You'd walk out in the streets, and they were ours -- here, CNT; there, **comite** this or that. It was totally different. Full of possibility. A feeling that we could, together, really **do** something. That we could make things different."* [quoted by Martha A. Ackelsberg and Myrna Margulies Breithart, *"Terrains of Protest: Striking City Women"*, pp. 151-176, **Our Generation**, vol. 19, No. 1, pp. 164-5]

Moreover, the transformation of society that occurred during the revolution extended to all areas of life and work. For example, the revolution saw *"the creation of a health workers' union, a true experiment in socialised medicine. They provided medical assistance and opened hospitals and clinics."* [Juan Gomez Casas, **Anarchist Organisation: The History of the FAI**, p. 192] We discuss this example in some detail in [section I.5.12](#) and so will not do so here. Therefore, we must stress that this section of the FAQ is just an introduction to what happened and does not (indeed, cannot) discuss all aspects of the revolution. We just present an overview, bringing out the libertarian aspects of the revolution, the ways workers' self-management was organised, how the collectives organised and what they did.

Needless to say, many mistakes were made during the revolution. We point out and discuss some of them in what follows. Moreover, much of what happened did not correspond exactly with what many people consider as the essential steps in a communist (libertarian or otherwise) revolution. Economically, for example, few collectives reached beyond a mutualist or collectivist state. Politically, the fear of a fascist victory made many anarchists accept collaboration with the state as a lesser evil. However, to dismiss the Spanish Revolution because it did not meet the ideas laid out by a handful of revolutionaries would be sectarian and elitist nonsense. No working class revolution is pure, no mass struggle is without its contradictions, no attempt to change society will be perfect. *"It is only those who do nothing who make no mistakes,"* as Kropotkin so correctly pointed out. [**Kropotkin's Revolutionary Pamphlets**, p. 143] The question is whether the revolution creates a system of institutions which will allow those involved to discuss the problems they face and correct the decisions they make. In this, the Spanish Revolution clearly succeeded, creating organisations based on the initiative, autonomy and

power of working class people.

For more information about the social revolution, Sam Dolgoff's **The Anarchist Collectives** is an excellent starting place. Gaston Leval's **Collectives in the Spanish Revolution** is another essential text. Jose Pierat's **Anarchists in the Spanish Revolution** and Vernon Richards' **Lessons of the Spanish Revolution** are excellent critical anarchist works on the revolution and the role of the anarchists. Robert Alexander's **The Anarchists in the Spanish Civil War** is a good general overview of the anarchist's role in the revolution and civil war, as is Burnett Bolloten's **The Spanish Civil War**. Noam Chomsky's excellent essay "*Objectivity and Liberal Scholarship*" indicates how liberal books on the Spanish Civil War can be misleading, unfair and essentially ideological in nature (this classic essay can be found in **The Chomsky Reader** and **American Power and the New Mandarins**). George Orwell's **Homage to Catalonia** cannot be bettered as an introduction to the subject (Orwell was in the POUM militia at the Aragon Front and was in Barcelona during the May Days of 1937).

I.8.1 Wasn't the Spanish Revolution primarily a rural phenomenon and therefore inapplicable as a model for modern industrialised societies?

Quite the reverse. More urban workers took part in the revolution than in the countryside. So while it is true that collectivisation was extensive in rural areas, the revolution also made its mark in urban areas and in industry.

In total, the "*regions most affected*" by collectivisation "*were Catalonia and Aragon, were about 70 per cent of the workforce was involved. The total for the whole of Republican territory was nearly 800,000 on the land and a little more than a million in industry. In Barcelona workers' committees took over all the services, the oil monopoly, the shipping companies, heavy engineering firms such as Volcano, the Ford motor company, chemical companies, the textile industry and a host of smaller enterprises. . . Services such as water, gas and electricity were working under new management within hours of the storming of the Atarazanas barracks . . . a conversion of appropriate factories to war production meant that metallurgical concerns had started to produce armed cars by 22 July . . . The industrial workers of Catalonia were the most skilled in Spain . . . One of the most impressive feats of those early days was the resurrection of the public transport system at a time when the streets were still littered and barricaded.*" Five days after the fighting had stopped, 700 tramcars rather than the usual 600, all painted in the colours of the CNT-FAI were operating in Barcelona." [Antony Beevor, **The Spanish Civil War**, pp. 91-2]

About 75% of Spanish industry was concentrated in Catalonia, the stronghold of the anarchist labour movement, and widespread collectivisation of factories took place there. However, collectivisation was not limited to Catalonia and took place all across urban as well as rural Republican Spain. As Sam Dolgoff rightly observes, "*[t]his refutes decisively the allegation that anarchist organisational principles are not applicable to industrial areas, and if at all, only in primitive agrarian societies or in*

isolated experimental communities." [The Anarchist Collectives, pp. 7-8]

There had been a long tradition of peasant collectivism in the Iberian Peninsula, as there was among the Berbers and in the ancient Russian **mir**. The historians Costa and Reparaz maintain that a great many Iberian collectives can be traced to "*a form of rural libertarian-communism [which] existed in the Iberian Peninsula before the Roman invasion. Not even five centuries of oppression by Catholic kings, the State and the Church have been able to eradicate the spontaneous tendency to establish libertarian communistic communities.*" [cited, **Op. Cit.**, p. 20] So it is not surprising that there were collectives in the countryside.

According to Augustin Souchy, "*[i]t is no simple matter to collectivise and place on firm foundations an industry employing almost a quarter of a million textile workers in scores of factories scattered in numerous cities. But the Barcelona syndicalist textile union accomplished this feat in a short time. It was a tremendously significant experiment. The dictatorship of the bosses was toppled, and wages, working conditions and production were determined by the workers and their elected delegates. All functionaries had to carry out the instructions of the membership and report back directly to the men on the job and union meetings. The collectivisation of the textile industry shatters once and for all the legend that the workers are incapable of administrating a great and complex corporation*" [cited, **Op. Cit.**, p. 94].

Moreover, Spain in the 1930s was not a "*backward, peasant country,*" as is sometimes supposed. Between 1910 and 1930, the industrial working class more than doubled to over 2,500,000. This represented just over 26% of the working population (compared to 16% twenty years previously). In 1930, 45 per cent of the working population were engaged in agriculture. [Ronald Fraser, **The Blood of Spain**, p. 38] In Catalonia alone, 200,000 workers were employed in the textile industry and 70,000 in metal-working and machinery manufacturing. This was very different than the situation in Russia at the end of World War I, where the urban working class made up only 10% of the population.

Capitalist social relations had also penetrated agriculture much more thoroughly than in "*backward, underdeveloped*" countries by the 1930s. In Russia at the end of World War I, for example, agriculture mostly consisted of small farms on which peasant families worked mainly for their own subsistence, bartering or selling their surplus. In Spain, however, agriculture was oriented to the world market and by the 1930s approximately 90% of farm land was in the hands of the bourgeoisie. [Fraser, **Op. Cit.**, p. 37] Spanish agribusiness also employed large numbers of labourers who did not own enough land to support themselves. The revolutionary labour movement in the Spanish countryside in the 1930s was precisely based on this large population of rural wage-earners (the socialist UGT land workers union had 451,000 members in 1933, 40% of its total membership, for example).

Therefore the Spanish Revolution cannot be dismissed as a product of pre-industrial society. The urban collectivisations occurred predominately in the most heavily industrialised part of Spain and indicate that anarchist ideas are applicable to modern societies (indeed, the CNT organised most of the unionised urban working class). By 1936 agriculture itself was predominately capitalist (with 2% of the population owning 67% of the land). The revolution in Spain was the work (mostly) of rural and urban wage

labourers (joined with poor peasants) fighting a well developed capitalist system.

Therefore, the anarchist revolution in Spain has many lessons for revolutionaries in developed capitalist countries and cannot be dismissed as a product of industrial backwardness.

I.8.2 How were the anarchists able to obtain mass popular support in Spain?

Anarchism was introduced in Spain in 1868 by Giuseppe Fanelli, an associate of Michael Bakunin, and found fertile soil among both the workers and the peasants of Spain.

The peasants supported anarchism because of the rural tradition of Iberian collectivism mentioned in the [last section](#). The urban workers supported it because its ideas of direct action, solidarity and free federation of unions corresponded to their needs in their struggle against capitalism and the state.

In addition, many Spanish workers were well aware of the dangers of centralisation and the republican tradition in Spain was very much influenced by federalist ideas (coming, in part, from Proudhon's work). The movement later spread back and forth between countryside and cities as union organisers and anarchist militants visited villages and as peasants came to industrial cities like Barcelona, looking for work.

Therefore, from the start anarchism in Spain was associated with the labour movement (as Bakunin desired) and so anarchists had a practical area to apply their ideas and spread the anarchist message. By applying their principles in everyday life, the anarchists in Spain ensured that anarchist ideas became commonplace and accepted in a large section of the population.

This acceptance of anarchism cannot be separated from the structure and tactics of the C.N.T. and its fore-runners. The practice of direct action and solidarity encouraged workers to rely on themselves to identify and solve their own problems. The decentralised structure of the anarchist unions had an educational effect of their members. By discussing issues, struggles, tactics, ideals and politics in their union assemblies, the members of the union educated themselves and, by the process of self-management in the struggle, prepared themselves for a free society. The very organisational structure of the C.N.T. ensured the dominance of anarchist ideas and the political evolution of the union membership. As one C.N.T. militant from Casas Viejas put it, new members *"asked for too much, because they lacked education. They thought they could reach the sky without a ladder . . . they were beginning to learn . . . There was good faith but lack of education. For that reason we would submit ideas to the assembly, and the bad ideas would be thrown out."* [quoted by J. Mintz, **The Anarchists of Casas Viejas**, p. 27]

It was by working in the union meetings that anarchists influenced their fellow workers. The idea that the anarchists, through the F.A.I, controlled the C.N.T is a myth. Not all anarchists in the C.N.T were

members of the F.A.I, for example. Almost all F.A.I members were also rank-and-file members of the C.N.T. who took part in union meetings as equals. Anarchists were not members of the FAI indicate this. Jose Borrás Casacarosa notes that "*[o]ne has to recognise that the F.A.I. did not intervene in the C.N.T. from above or in an authoritarian manner as did other political parties in the unions. It did so from the base through militants . . . the decisions which determined the course taken by the C.N.T. were taken under constant pressure from these militants.*" Jose Campos notes that F.A.I. militants "*tended to reject control of confederal committees and only accepted them on specific occasions . . . if someone proposed a motion in assembly, the other F.A.I. members would support it, usually successfully. It was the individual standing of the **faista** in open assembly.*" [quoted by Stuart Christie, **We, the Anarchists**, p. 62]

This explains the success of anarchism in the CNT. Anarchist ideas, principles and tactics, submitted to the union assemblies, proved to be good ideas and were not thrown out. The structure of the organisation, in other words, decisively influenced the **content** of the decisions reached as ideas, tactics, union policy and so on were discussed by the membership and those which best applied to the members lives were accepted and implemented. The C.N.T assemblies showed the validity of Bakunin's arguments for self-managed unions as a means of ensuring workers' control of their own destinies and organisations. As he put it, the union "*sections could defend their rights and their autonomy [against union bureaucracy] in only one way: the workers called general membership meetings . . . In these great meetings of the sections, the items on the agenda were amply discussed and the most progressive opinion prevailed.*" [**Bakunin on Anarchism**, p. 247] The C.N.T was built on such "*popular assemblies*," with the same radicalising effect. It showed, in practice, that bosses (capitalist as well as union ones) were not needed -- workers can manage their own affairs directly. As a school for anarchism it could not be bettered as it showed that anarchist principles were not utopian. The C.N.T, by being based on workers' self-management of the class struggle, prepared its members for workers' self-management of the revolution and the new society.

The Spanish Revolution also shows the importance of anarchist education and media. In a country with a very high illiteracy rate, huge quantities of literature on social revolution were disseminated and read out loud at meetings by those who could read to those who could not. Anarchist ideas were widely discussed. "*There were tens of thousands of books, pamphlets and tracts, vast and daring cultural and popular educational experiments (the Ferrer schools) that reached into almost every village and hamlet throughout Spain.*" [**The Anarchist Collectives**, p. 27] The discussion of political, economic and social ideas was continuous, and "*the centro [local union hall] became the gathering place to discuss social issues and to dream and plan for the future. Those who aspired to learn to read and write would sit around . . . studying.*" [Jerome R. Mintz, **The Anarchists of Casas Viejas**, p. 160] One anarchist militant described it as follows:

"With what joy the orators were received whenever a meeting was held . . . We spoke that night about everything: of the ruling inequality of the regime and of how one had a right to a life without selfishness, hatred, without wars and suffering. We were called on another occasion and a crowd gathered larger than the first time. That's how the pueblo started to evolve, fighting the present regime to win something by which they could sustain

themselves, and dreaming of the day when it would be possible to create that society some depict in books, others by word of mouth. Avid for learning, they read everything, debated, discussed, and chatted about the different modes of perfect social existence." [Perez Cordon, quoted by Jerome R. Mintz, **Op. Cit.**, p. 158]

Newspapers and periodicals were extremely important. By 1919, more than 50 towns in Andalusia had their own libertarian newspapers. By 1934 the C.N.T. (the anarcho-syndicalist labour union) had a membership of around one million and the anarchist press covered all of Spain. In Barcelona the C.N.T. published a daily, **Solidaridad Obrera** (Worker Solidarity), with a circulation of 30,000. The FAI's magazine **Tierra y Libertad** (Land and Liberty) had a circulation of 20,000. In Gijon there was **Vida Obrera** (Working Life), in Seville **El Productor** (The Producer), and in Saragossa **Accion y Cultura** (Action and Culture), each with a large circulation. There were many more.

As well as leading struggles, organising unions, and producing books, papers and periodicals, the anarchists also organised libertarian schools, cultural centres, co-operatives, anarchist groups (the F.A.I), youth groups (the Libertarian Youth) and women's organisations (the Free Women movement). They applied their ideas in all walks of life and so ensured that ordinary people saw that anarchism was practical and relevant to them.

This was the great strength of the Spanish Anarchist movement. It was a movement *"that, in addition to possessing a revolutionary ideology [sic], was also capable of mobilising action around objectives firmly rooted in the life and conditions of the working class . . . It was this ability periodically to identify and express widely felt needs and feelings that, together with its presence at community level, formed the basis of the strength of radical anarchism, and enabled it to build a mass base of support."* [Nick Rider, *"The practice of direct action: the Barcelona rent strike of 1931"*, p. 99, from **For Anarchism**, pp. 79-105]

Historian Temma Kaplan stressed this in her work on the Andalusian anarchists. She argued that the anarchists were *"rooted in" social life and created "a movement firmly based in working-class culture."* They *"formed trade unions, affinity groups such as housewives' sections, and broad cultural associations such as workers' circles, where the anarchist press was read and discussed."* Their *"great strength . . . lay in the merger of communal and militant trade union traditions. In towns where the vast majority of worked in agriculture, agricultural workers' unions came to be identified with the community as a whole . . . anarchism . . . show[ed] that the demands of agricultural workers and proletarians could be combined with community support to create an insurrectionary situation . . . It would be a mistake . . . to argue that 'village anarchism' in Andalusia was distinct from militant unionism, or that the movement was a surrogate religion."* [**Anarchists of Andalusia: 1868-1903**, p. 211, p. 207, pp. 204-5]

The Spanish anarchists, before and after the C.N.T was formed, fought in and out of the factory for economic, social and political issues. This refusal of the anarchists to ignore any aspect of life ensured that they found many willing to hear their message, a message based around the ideas of individual

liberty. Such a message could do nothing but radicalise workers for *"the demands of the C.N.T went much further than those of any social democrat: with its emphasis on true equality, autogestion [self-management] and working class dignity, anarchosyndicalism made demands the capitalist system could not possibly grant to the workers."* [J. Romero Maura, *"The Spanish case"*, p. 79, from **Anarchism Today**, edited by J. Joll and D. Apter]

Strikes, due to the lack of strike funds, depended on mutual aid to be won, which fostered a strong sense of solidarity and class consciousness in the CNT membership. Strikes did not just involve workers. For example, workers in Jerez responded to bosses importing workers from Malaga *"with a weapon of their own -- a boycott of those using strikebreakers. The most notable boycotts were against landowners near Jerez who also had commercial establishments in the city. The workers and their wives refused to buy there, and the women stationed themselves nearby to discourage other shoppers."* [Jerome R. Mintz, **Op. Cit.**, p. 102]

The structure and tactics of the C.N.T encouraged the politicisation, initiative and organisational skills of its members. It was a federal, decentralised body, based on direct discussion and decision making from the bottom up. *"The C.N.T tradition was to discuss and examine everything"*, as one militant put it. In addition, the C.N.T created a viable and practical example of an alternative method by which society could be organised. A method which was based on the ability of ordinary people to direct society themselves and which showed in practice that special ruling authorities are undesirable and unnecessary.

The very structure of the C.N.T and the practical experience it provided its members in self-management produced a revolutionary working class the likes of which the world has rarely seen. As Jose Peirats points out, *"above the union level, the C.N.T was an eminently political organisation . . . , a social and revolutionary organisation for agitation and insurrection."* [**Anarchists in the Spanish Revolution**, p. 239]

The C.N.T. was organised in such a way as to encourage solidarity and class consciousness. Its organisation was based on the **sindicato unico** (one union) which united all workers of the same workplace in the same union. Instead of organising by trade, and so dividing the workers into numerous different unions, the C.N.T united all workers in a workplace into the same organisation, all trades, skilled and unskilled, where in a single organisation and so solidarity was increased and encouraged as well as increasing their fighting power by eliminating divisions within the workforce. All the unions in an area were linked together into a local federation, the local federations into a regional federation and so on. As J. Romero Maura argues, the *"territorial basis of organisation linkage brought all the workers from one area together and fomented working-class solidarity over and above corporate [industry or trade] solidarity."* [*"The Spanish case"*, p. 75, from **Anarchism Today**, edited by J. Joll and D. Apter]

Thus the structure of the C.N.T. encouraged class solidarity and consciousness. In addition, being based on direct action and self-management, the union ensured that working people became accustomed to managing their own struggles and acting for themselves, directly. This prepared them to manage their own personal and collective interests in a free society (as seen by the success of the self-managed

collectives created in the revolution). Thus the process of self-managed struggle and direct action prepared people for the necessities of the social revolution and the an anarchist society -- it built, as Bakunin argued, the seeds of the future in the present.

In other words, *"the route to radicalisation . . . came from direct involvement in struggle and in the design of alternative social institutions."* Every strike and action empowered those involved and created a viable alternative to the existing system. For example, while the strikes and food protests in Barcelona at the end of the First World War *"did not topple the government, patterns of organisation established then provided models for the anarchist movement for years to follow."* [Martha A. Ackelsberg and Myrna Margulies Breithart, *"Terrains of Protest: Striking City Women"*, pp. 151-176, **Our Generation**, vol. 19, No. 1, p. 164] The same could be said of every strike, which confirmed Bakunin's and Kropotkin's stress on the strike as not only creating class consciousness and confidence but also the structures necessary to not only fight capitalism, but to replace it.

It was the revolutionary nature of the C.N.T. that created a militant membership who were willing and able to use direct action to defend their liberty. Unlike the Marxist led German workers, organised in a centralised fashion and trained in the obedience required by hierarchy, who did nothing to stop Hitler, the Spanish working class (like their comrades in anarchist unions in Italy) took to the streets to stop fascism.

The revolution in Spain did not "just happen"; it was the result of nearly seventy years of persistent anarchist agitation and revolutionary struggle, including a long series of peasant uprisings, insurrections, industrial strikes, protests, sabotage and other forms of direct action that prepared the peasants and workers organise popular resistance to the attempted fascist coup in July 1937 and to take control of the economy when they had defeated it in the streets.

I.8.3 How were Spanish industrial collectives organised?

Marta A. Ackelsberg gives us an excellent short summary of how the industrial collectives were organised:

"In most collectivised industries, general assemblies of workers decided policy, while elected committees managed affairs on a day-to-day basis." [**Free Women of Spain**, p. 73]

The collectives were based on workers' democratic self-management of their workplaces, using productive assets that were under the custodianship of the entire working community and administered through federations of workers' associations. Augustin Souchy writes:

"The collectives organised during the Spanish Civil War were workers' economic associations without private property. The fact that collective plants were managed by those who worked in them did not mean that these establishments became their private

property. The collective had no right to sell or rent all or any part of the collectivised factory or workshop, The rightful custodian was the C.N.T., the National Confederation of Workers Associations. But not even the C.N.T. had the right to do as it pleased. Everything had to be decided and ratified by the workers themselves through conferences and congresses." [cited in **The Anarchist Collectives**, p. 67]

According to Souchy, in Catalonia *"every factory elected its administrative committee composed of its most capable workers. Depending on the size of the factory, the function of these committees included inner plant organisation, statistics, finance, correspondence, and relations with other factories and with the community. . . . Several months after collectivisation the textile industry of Barcelona was in far better shape than under capitalist management. Here was yet another example to show that grass roots socialism from below does not destroy initiative. Greed is not the only motivation in human relations."* [Op. Cit., p 95]

Thus the individual collective was based on a mass assembly of those who worked there. This assembly nominated administrative staff who were mandated to implement the decisions of the assembly and who had to report back to, and were accountable to, that assembly. For example, in Castellon de la Plana *"[e]very month the technical and administrative council presented the general assembly of the Syndicate with a report which was examined and discussed if necessary, and finally introduced when this majority thought it of use. Thus all the activities were known and controlled by all the workers. We find here a practical example of libertarian democracy."* [**Collectives in the Spanish Revolution**, p. 303]

So, in general, the industrial collectives were organised from the bottom-up, with policy in the hands of workers' assemblies who elected the administration required, including workplace committees and managers. However, power rested at the base of the collective, with *"all important decisions [being] taken by the general assemblies of the workers, . . . [which] were widely attended and regularly held. . . if an administrator did something which the general assembly had not authorised, he was likely to be deposed at the next meeting."* An example of this process can be seen from the Casa Rivieria company. After the defeat of the army coup *"a control committee (Comite de Control) was named by the Barcelona Metal Workers' Union to take over temporary control of the enterprises. . . A few weeks after July 19th, there was the first general assembly of the firm's workers . . . It elected an enterprise committee (Comite de Empresa) to take control of the firm on a more permanent basis. . . . Each of the four sections of the firm -- the three factories and the office staff -- held their own general assemblies at least once a week. There they discussed matters ranging from the most important affairs to the most trivial."* [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 469 and p. 532]

A plenum of syndicates met in December of 1936 and formulated norms for socialisation in which the inefficiency of the capitalist industrial system was analysed. The report of the plenum stated:

"The major defect of most small manufacturing shops is fragmentation and lack of technical/commercial preparation. This prevents their modernisation and consolidation into better and more efficient units of production, with better facilities and co-

ordination. . . . For us, socialisation must correct these deficiencies and systems of organisation in every industry. . . . To socialise an industry, we must consolidate the different units of each branch of industry in accordance with a general and organic plan which will avoid competition and other difficulties impeding the good and efficient organisation of production and distribution. . . ." [cited by Souchy, **The Anarchist Collectives**, p. 83]

As Souchy points out, this document is very important in the evolution of collectivisation, because it indicates a realisation that "*workers must take into account that partial collectivisation will in time degenerate into a kind of bourgeois co-operativism,*" [Op. Cit., p. 83] as discussed earlier. Thus many collectives did not compete with each other for profits, as surpluses were pooled and distributed on a wider basis than the individual collective -- in most cases industry-wide.

We have already noted some examples of the improvements in efficiency realised by collectivisation during the Spanish Revolution ([section I.4.10](#)). Another example was the baking industry. Souchy reports that, "*[a]s in the rest of Spain, Barcelona's bread and cakes were baked mostly at night in hundreds of small bakeries. Most of them were in damp, gloomy cellars infested with roaches and rodents. All these bakeries were shut down. More and better bread and cake were baked in new bakeries equipped with new modern ovens and other equipment.*" [Op. Cit., p. 82]

Therefore, the collectives in Spain were marked by workplace democracy and a desire to co-operate within and across industries. This attempt at libertarian socialism, like all experiments, had its drawbacks as well as successes and these will be discussed in the [next section](#) as well as some of the conclusions drawn from the experience.

I.8.4 How were the Spanish industrial collectives co-ordinated?

The methods of co-operation tried by the collectives varied considerably. Initially, there were very few attempts to co-ordinate economic activities beyond the workplace. This is hardly surprising, given that the overwhelming need was to restart production, convert a civilian economy to a wartime one and to ensure that the civilian population and militias were supplied with necessary goods. This, unsurprisingly enough, lead to a situation of anarchist mutualism developing, with many collectives selling the product of their own labour on the market (in other words, a form of simple commodity production).

This lead to some economic problems as there existed no framework of institutions between collectives to ensure efficient co-ordination of activity and so lead to pointless competition between collectives (which lead to even more problems). As there were initially no confederations of collectives nor mutual/communal banks this lead to the inequalities that initially existed between collectives (due to the fact that the collectives took over rich and poor capitalist firms) and it made the many ad hoc attempts at mutual aid between collectives difficult and temporary.

Therefore, the collectives were (initially) a form of "*self-management straddling capitalism and*

socialism, which we maintain would not have occurred had the Revolution been able to extend itself fully under the direction of our syndicates." [Gaston Leval, **Collectives in the Spanish Revolution**, pp. 227-8] As economic and political development are closely related, the fact that the C.N.T. did not carry out the **political** aspect of the revolution meant that the revolution in the economy was doomed to failure. As Leval stresses, in *"the industrial collectives, especially in the large towns, matters proceeded differently as a consequence of contradictory factors and of opposition created by the co-existence of social currents emanating from different social classes."* [**Op. Cit.**, p. 227]

Given that the C.N.T. program of libertarian communism recognised that a fully co-operative society must be based upon production for use, C.N.T. militants fought against this system of mutualism and for inter-workplace co-ordination. They managed to convince their fellow workers of the difficulties of mutualism by free debate and discussion within their unions and collectives.

Therefore, the degree of socialisation varied over time (as would be expected). Initially, after the initial defeat of Franco's forces, there was little formal co-ordination and organisation. The most important thing was to get production started again. However, the needs of co-ordination soon became obvious (as predicted in anarchist theory and the programme of the CNT). Gaston Leval gives the example of Hospitalet del Llobregat with regards to this process:

*"Local industries went through stages almost universally adopted in that revolution . . . [I]n the first instance, **comites** nominated by the workers employed in them [were organised]. Production and sales continued in each one. But very soon it was clear that this situation gave rise to competition between the factories. . . creating rivalries which were incompatible with the socialist and libertarian outlook. So the CNT launched the watchword: 'All industries must be ramified in the Syndicates, completely socialised, and the regime of solidarity which we have always advocated be established once and for all.*

"The idea won support immediately" [**Op. Cit.**, pp. 291-2]

Another example was the woodworkers' union which a massive debate on socialisation and decided to do so (the shopworkers' union had a similar debate, but the majority of workers rejected socialisation). According to Ronald Fraser a *"union delegate would go round the small shops, point out to the workers that the conditions were unhealthy and dangerous, that the revolution was changing all this, and secure their agreement to close down and move to the union-built Double-X and the 33 EU."* [Ronald Fraser, **Blood of Spain**, p. 222]

This process went on in many different unions and collectives and, unsurprisingly, the forms of co-ordination agreed to lead to different forms of organisation in different areas and industries, as would be expected in a free society. However, the two most important forms can be termed syndicalisation and confederalism (we will ignore the forms created by the collectivisation decree as these were not created by the workers themselves).

"*Syndicalisation*" (our term) meant that the C.N.T.'s industrial union ran the whole industry. This solution was tried by the woodworkers' union after extensive debate. One section of the union, "*dominated by the F.A.I. [the anarchist federation], maintained that anarchist self-management meant that the workers should set up and operate autonomous centres of production so as to avoid the threat of bureaucratisation.*" [Ronald Fraser, **Blood of Spain**, p. 222] However, those in favour of syndicalisation won the day and production was organised in the hands of the union, with administration posts and delegate meetings elected by the rank and file.

However, the "*major failure . . . (and which supported the original anarchist objection) was that the union became like a large firm . . . [and its] structure grew increasingly rigid.*" According to one militant, "*From the outside it began to look like an American or German trust*" and the workers found it difficult to secure any changes and "*felt they weren't particularly involved in decision making.*"

In the end, the major difference between the union-run industry and a capitalist firm organisationally appeared to be that workers could vote for (and recall) the industry management at relatively regular General Assembly meetings. While a vast improvement on capitalism, it is hardly the best example of participatory self-management in action although the economic problems caused by the Civil War and Stalinist led counter-revolution obviously would have had an effect on the internal structure of any industry and so we cannot say that the form of organisation created was totally responsible for any marginalisation that took place.

The other important form of co-operation was what we will term "*confederalisation.*" This form of co-operation was practised by the Badalona textile industry (and had been defeated in the woodworkers' union). It was based upon each workplace being run by its elected management, sold its own production, got its own orders and received the proceeds. However, everything each mill did was reported to the union which charted progress and kept statistics. If the union felt that a particular factory was not acting in the best interests of the industry as a whole, it was informed and asked to change course. According to one militant, the union "*acted more as a socialist control of collectivised industry than as a direct hierarchised executive*" [Op. Cit., p. 229]

This system ensured that the "*dangers of the big 'union trust' as of the atomised collective were avoided*" [Fraser, Op. Cit., p. 229] as well as maximising decentralisation of power. Unlike the syndicalisation experiment in the woodworkers' industry, this scheme was based on horizontal links between workplaces (via the C.N.T. union) and allowed a maximum of self-management **and** mutual aid. The ideas of an anarchist economy sketched in [section I.3](#) reflects in many ways the actual experiments in self-management which occurred during the Spanish Revolution.

Therefore, the industrial collectives co-ordinated their activity in many ways, with varying degrees of direct democracy and success. As would be expected, mistakes were made and different solutions found. When reading this section of the FAQ its important to remember that an anarchist society can hardly be produced "*overnight*" and so it is hardly surprising that the workers of the C.N.T. faced numerous problems and had to develop their self-management experiment as objective conditions allowed them to.

Unfortunately, thanks to fascist aggression and Communist Party back-stabbing, the experiment did not last long enough to fully answer all the questions we have about the viability of the solutions they tried. Given the time, however, we are sure they would have solved the problems they faced.

I.8.5 How were the Spanish agricultural co-operatives organised and co-ordinated?

Jose Peirats describes collectivisation among the peasantry as follows:

"The expropriated lands were turned over to the peasant syndicates, and it was these syndicates that organised the first collectives. Generally the holdings of small property owners were respected, always on the condition that only they or their families would work the land, without employing wage labour. In areas like Catalonia, where the tradition of petty peasant ownership prevailed, the land holdings were scattered. There were no great estates. Many of these peasants, together with the C.N.T., organised collectives, pooling their land, animals, tools, chickens, grain, fertiliser, and even their harvested crops.

"Privately owned farms located in the midst of collectives interfered with efficient cultivation by splitting up the collectives into disconnected parcels. To induce owners to move, they were given more or even better land located on the perimeter of the collective.

*"The collectivist who had nothing to contribute to the collective was admitted with the same rights and the same duties as the others. In some collectives, those joining had to contribute their money (Girondella in Catalonia, Lagunarrotta in Aragon, and Cervera del Maestra in Valencia)." [cited **The Anarchist Collectives**, p. 112]*

Peirats also notes that in conducting their internal affairs, all the collectives scrupulously and zealously observed democratic procedures. For example, *"Hospitalet de Llobregat held regular general membership meetings every three months to review production and attend to new business. The administrative council, and all other committees, submitted full reports on all matters. The meeting approved, disapproved, made corrections, issued instructions, etc."* [**Ibid.**, p. 119]

Dolgoff observes that *"supreme power was vested in, and actually exercised by, the membership in general assemblies, and all power derived from, and flowed back to, the grass roots organisations of the people"* and quotes Gaston Leval:

"Regular general membership meetings were convoked weekly, bi-weekly, or monthly. . . and these meetings were completely free of the tensions and recriminations which inevitably emerge when the power of decisions is vested in a few individuals -- even if democratically elected. The Assemblies were open for everyone to participate in the

proceedings. Democracy embraced all social life. In most cases, even the 'individualists' who were not members of the collective could participate in the discussions, and they were listened to by the collectivists." [Op. Cit., p 119f]

It was in these face-to-face assemblies that decisions upon the distribution of resources were decided both within and without the collective. Here, when considering the importance of mutual aid, appeals were made to an individual's sense of empathy. As one activist remembers:

"There were, of course, those who didn't want to share and who said that each collective should take care of itself. But they were usually convinced in the assemblies. We would try to speak to them in terms they understood. We'd ask, 'Did you think it was fair when the cacique [local boss] let people starve if there wasn't enough work?' and they said, 'Of course not.' They would eventually come around. Don't forget, there were three hundred thousand collectivists [in Aragon], but only ten thousand of us had been members of the C. N.T.. We had a lot of educating to do." [Felix Carrasquer, quoted by Martha A. Ackelsberg in **Free Women of Spain**, p. 79]

In addition, regional federations of collectives were formed in many areas of Spain (for example, in Aragon and the Levant). The federations were created at congresses to which the collectives in an area sent delegates. These congresses agreed a series of general rules about how the federation would operate and what commitments the affiliated collectives would have to each other. The congress elected an administration council, which took responsibility for implementing agreed policy.

These federations had many tasks. They ensured the distribution of surplus produce to the front line and to the cities, cutting out middlemen and ensuring the end of exploitation. They also arranged for exchanges between collectives to take place. In addition, the federations allowed the individual collectives to pool resources together in order to improve the infrastructure of the area (building roads, canals, hospitals and so on) and invest in means of production which no one collective could afford.

In this way individual collectives pooled their resources, increased and improved the means of production they had access to as well as improving the social infrastructure of their regions. All this, combined with an increase of consumption at the point of production and the feeding of militia men and women fighting the fascists at the front.

Rural collectivisations allowed the potential creative energy that existed among the rural workers and peasants to be unleashed, an energy that had been wasted under private property. The popular assemblies allowed community problems and improvements to be identified and solved directly, drawing upon the ideas and experiences of everyone and enriched by discussion and debate. This enabled rural Spain to be transformed from one marked by poverty and fear, into one of hope and experimentation (see the [next section](#) for a few examples of this experimentation).

Therefore self-management in collectives combined with co-operation in rural federations allowed an

improvement in quality of rural life. From a purely economic viewpoint, production increased and as Benjamin Martin summarises, "[t]hough it is impossible to generalise about the rural land take-overs, there is little doubt that the quality of life for most peasants who participated in co-operatives and collectives notably improved." [The Agony of Modernisation, p. 394]

More importantly, however, this improvement in the quality of life included an increase in freedom as well as in consumption. To requote the member of the Beceite collective in Aragon we cited in [section A.5.6](#), "it was marvellous. . . to live in a collective, a free society where one could say what one thought, where if the village committee seemed unsatisfactory one could say. The committee took no big decisions without calling the whole village together in a general assembly. All this was wonderful." [Ronald Fraser, **Blood of Spain**, p. 288]

I.8.6 What did the agricultural collectives accomplish?

Here are a few examples cited by Jose Peirats:

"In Montblanc the collective dug up the old useless vines and planted new vineyards. The land, improved by modern cultivation with tractors, yielded much bigger and better crops. . . . Many Aragon collectives built new roads and repaired old ones, installed modern flour mills, and processed agricultural and animal waste into useful industrial products. Many of these improvements were first initiated by the collectives. Some villages, like Calanda, built parks and baths. Almost all collectives established libraries, schools, and cultural centres." [cited **The Anarchist Collectives**, p. 116]

Gaston Leval points out that *"the Peasant Federation of Levant . . . produced more than half of the total orange crop in Spain: almost four million kilos (1 kilo equals about 2 and one-fourth pounds). It then transported and sold through its own commercial organisation (no middlemen) more than 70% of the crop. (The Federations's commercial organisation included its own warehouses, trucks, and boats. Early in 1938 the export section established its own agencies in France: Marseilles, Perpignan, bordeaux, Cherbourg, and Paris.) Out of a total of 47,000 hectares in all Spain devoted to rice production, the collective in the Province of Valencia cultivated 30,000 hectares."* [cited in **Ibid.**, p. 124]

To quote Peirats again:

"Preoccupation with cultural and pedagogical innovations was an event without precedent in rural Spain. The Amposta collectivists organised classes for semi-literates, kindergartens, and even a school of arts and professions. The Seros schools were free to all neighbours, collectivists or not. Grau installed a school named after its most illustrious citizen, Joaquin Costa. The Calanda collective (pop. only 4,500) schooled 1,233 children. The best students were sent to the Lyceum in Caspe, with all expenses paid by the collective. The Alcoriza (pop. 4,000) school was attended by 600 children. Many of the

schools were installed in abandoned convents. In Granadella (pop. 2,000), classes were conducted in the abandoned barracks of the Civil Guards. Graus organised a print library and a school of arts and professions, attended by 60 pupils. The same building housed a school of fine arts and high grade museum. In some villages a cinema was installed for the first time. The Penalba cinema was installed in a church. Viladecana built an experimental agricultural laboratory.

"The collectives voluntarily contributed enormous stocks of provisions and other supplies to the fighting troops. Utiel sent 1,490 litres of oil and 300 bushels of potatoes to the Madrid front (in addition to huge stocks of beans, rice, buckwheat, etc.). Porales de Tujana sent great quantities of bread, oil, flour, and potatoes to the front, and eggs, meat, and milk to the military hospital.

"The efforts of the collectives take on added significance when we take into account that their youngest and most vigorous workers were fighting in the trenches. 200 members of the little collective of Vilaboi were at the front; from Viledecans, 60; Amposta, 300; and Calande, 500." [Ibid., pp. 116-120]

Peirats sums up the accomplishments of the agricultural collectives as follows:

"In distribution the collectives' co-operatives eliminated middlemen, small merchants, wholesalers, and profiteers, thus greatly reducing consumer prices. The collectives eliminated most of the parasitic elements from rural life, and would have wiped them out altogether if they were not protected by corrupt officials and by the political parties. Non-collectivised areas benefited indirectly from the lower prices as well as from free services often rendered by the collectives (laundries, cinemas, schools, barber and beauty parlours, etc.)." [Ibid., p114]

Leval emphasises the following achievements (among others):

"In the agrarian collectives solidarity was practised to the greatest degree. Not only was every person assured of the necessities, but the district federations increasingly adopted the principle of mutual aid on an inter-collective scale. For this purpose they created common reserves to help out villages less favoured by nature. In Castile special institutions for this purpose were created. In industry this practice seems to have begun in Hospitalet, on the Catalan railways, and was applied later in Alcoy. Had the political compromise not impeded open socialisation, the practices of mutual aid would have been much more generalised. . . A conquest of enormous importance was the right of women to livelihood, regardless of occupation or function. In about half of the agrarian collectives, the women received the same wages as men; in the rest the women received less, apparently on the principle that they rarely live alone. . . In all the agrarian collectives of Aragon, Catalonia, Levant, Castile, Andalusia, and Estremadura, the workers formed

groups to divide the labour or the land; usually they were assigned to definite areas. Delegates elected by the work groups met with the collective's delegate for agriculture to plan out the work. This typical organisation arose quite spontaneously, by local initiative. . . In addition . . . the collective as a whole met in weekly, bi-weekly or monthly assembly . . . The assembly reviewed the activities of the councillors it named, and discussed special cases and unforeseen problems. All inhabitants -- men and women, producers and non-producers -- took part in the discussion and decisions . . . In land cultivation the most significant advances were: the rapidly increased use of machinery and irrigation; greater diversification; and forestation. In stock raising: the selection and multiplication of breeds; the adaptation of breeds to local conditions; and large-scale construction of collective stock barns." [Ibid., pp. 166-167]

Martha A. Ackelsberg sums up the experience well:

"The achievements of these collectives were extensive. In many areas they maintained, if not increased, agricultural production [not forgetting that many young men were at the front line], often introducing new patterns of cultivation and fertilisation. . . collectivists built chicken coups, barns, and other facilities for the care and feeding of the community's animals. Federations of collectives co-ordinated the construction of roads, schools, bridges, canals and dams. Some of these remain to this day as lasting contributions of the collectives to the infrastructure of rural Spain." [The Free Women of Spain, p. 79]

She also points to inter-collective solidarity, noting that the *"collectivists also arranged for the transfer of surplus produce from wealthier collectives to those experiencing shortages."* [Ibid.]

Therefore, as well as significant economic achievements, the collectives ensured social and political ones too. Solidarity was practised and previously marginalised people took direct and full management of the affairs of their communities, transforming them to meet their own needs and desires.

I.8.7 I've heard that the rural collectives were created by force. Is this true?

No, it is not. The myth that the rural collectives were created by "terror," organised and carried out by the anarchist militia, was started by the Stalinists of the Spanish Communist Party. More recently, some right-wing Libertarians have warmed up and repeated these Stalinist fabrications. Anarchists have been disproving these allegations since 1936 and it is worthwhile to do so again here.

As Vernon Richards notes, *"[h]owever discredited Stalinism may appear to be today the fact remains that the Stalinist lies and interpretation of the Spanish Civil War still prevail, presumably because it suits the political prejudices of those historians who are currently interpreting it."* [Introduction to Gaston Leval's **Collectives in the Spanish Revolution**, p. 11] Here we shall present evidence to refute

claims that the rural collectives were created by force.

Firstly, we should point out that rural collectives were created in many different areas of Spain, such as the Levant (900 collectives), Castile (300) and Estremadura (30), where the anarchist militia did not exist. In Catalonia, for example, the C.N.T. militia passed through many villages on its way to Aragon and only around 40 collectives were created unlike the 450 in Aragon. In other words, the rural collectivisation process occurred independently of the existence of anarchist troops, with the majority of the 1,700 rural collectives created in areas without a predominance of anarchist troops.

One historian, Ronald Fraser, seems to imply that the Aragon Collectives were imposed upon the Aragon population. As he puts it the "*collectivisation, carried out under the general cover, if not necessarily the direct agency, of C.N.T. militia columns, represented a revolutionary minority's attempt to control not only production but consumption for egalitarian purposes and the needs of the war.*" [**Blood of Spain**, p. 370] Notice that he does not suggest that the anarchist militia actually **imposed** the collectives, a claim for which there is little or no evidence. Moreover, Fraser presents a somewhat contradictory narrative to the facts he presents. On the one hand, he talks of a policy of "*obligatory*" collectivism imposed on the peasants by the C.N.T., while on the other hand he presents extensive evidence that the collectives did not have a 100% membership rate. How can collectivisation be obligatory if people remain outside the collectives? Similarly, he talks of how **some** C.N.T. militia leaders justified forced collectivisation in terms of the war effort while acknowledging the official C.N.T. policy of opposing forced collectivisation, an opposition expressed in practice as only around 5% of the collectives were total (and expressed in his own book as collectivists interviewed continually note that people remained outside their collectives!).

Thus Fraser's attempts to paint the Aragon collectives as a form of "*war communism*" imposed upon the population by the C.N.T. and obligatory for all fails to co-incidence with the evidence he presents.

Earlier he states that "*[t]here was no need to dragoon them [the peasants] at pistol point [into collectives]: the coercive climate, in which 'fascists' were being shot, was sufficient. 'Spontaneous' and 'forced' collectives existed, as did willing and unwilling collectivists within them.*" [**Op. Cit.**, p.349] Therefore, his suggestion that the Aragon collectives were imposed upon the rural population is based upon the insight that there was a "*coercive climate*" in Aragon at the time. Of course a civil war against fascism would produce a "*coercive climate*," particularly at the front line, and so the C.N.T. can hardly be blamed for that. In addition, in a life and death struggle against fascism, in which the fascists were systematically murdering vast numbers of anarchists, socialists and republicans in the areas under their control, it is hardly surprising that some anarchist troops took the law into their own hands and murdered some of those who supported and would help the fascists. Given what was going on in fascist Spain, and the experience of fascism in Germany and Italy, the C.N.T. militia knew exactly what would happen to them and their friends and family if they lost.

The question does arise, however, of whether the climate was made so coercive by the war and the nearness of the anarchist militia that individual choice was impossible.

The facts speak for themselves -- rural collectivisation in Aragon embraced more than 70% of the population in the area saved from fascism. Around 30% of the population felt safe enough not to join a collective, a sizeable percentage.

If the collectives had been created by anarchist terror or force, we would expect a figure of 100% membership in the collectives. This was not the case, indicating the basically voluntary nature of the experiment (we should point out that other figures suggest a lower number of collectivists which makes the forced collectivisation argument even less likely). Historian Antony Beevor (while noting that there *"had undoubtedly been pressure, and no doubt force was used on some occasions in the fervour after the rising"*) just stated the obvious when he wrote that *"the very fact that every village was a mixture of collectivists and individualists shows that peasants had not been forced into communal farming at the point of a gun."* [**The Spanish Civil War**, p. 206] In addition, if the C.N.T. militia had forced peasants into collectives we would expect the membership of the collectives to peak almost overnight, not grow slowly over time. However, this is what happened:

"At the regional congress of collectives, held at Caspe in mid-February 1937, nearly 80 000 collectivists were represented from 'almost all the villages of the region.' This, however, was but a beginning. By the end of April the number of collectivists had risen to 140 000; by the end of the first week of May to 180 000; and by the end of June to 300 000." [Graham Kelsey, *"Anarchism in Aragon,"* pp. 60-82, **Spain in Conflict 1931-1939**, Martin Blinkhorn (ed.), p. 61]

If the collectives had been created by force, then their membership would have been 300 000 in February, 1937, not increasing steadily to reach that number four months later. Neither can it be claimed that the increase was due to new villages being collectivised, as almost all villages had sent delegates in February. This indicates that many peasants joined the collectives because of the advantages associated with common labour, the increased resources it placed at their hands and the fact that the surplus wealth which had in the previous system been monopolised by the few was used instead to raise the standard of living of the entire community.

The voluntary nature of the collectives is again emphasised by the number of collectives which allowed smallholders to remain outside. According to evidence Fraser presents (on page 366), an F.A.I. schoolteacher is quoted as saying that the forcing of smallholders into the collective *"wasn't a widespread problem, because there weren't more than twenty or so villages where collectivisation was total and no one was allowed to remain outside..."* Instead of forcing the minority in a village to agree with the wishes of the majority, the vast majority (95%) of Aragon collectives stuck to their libertarian principles and allowed those who did not wish to join to remain outside.

So, only around 20 were *"total"* collectives (out of 450) and around 30% of the population felt safe enough **not** to join. In other words, in the vast majority of collectives those joining could see that those who did not were safe. These figures should not be discounted, as they give an indication of the basically spontaneous and voluntary nature of the movement. As was the composition of the new

municipal councils created after July 19th. As Graham Kesley notes, "*[w]hat is immediately noticeable from the results is that although the region has often been branded as one controlled by anarchists to the total exclusion of all other forces, the C.N.T. was far from enjoying the degree of absolute domination often implied and inferred.*" [**Anarchosyndicalism, Libertarian Communism and the State**, p. 198]

In his account of the rural revolution, Burnett Bolloten notes that it "*embraced more than 70 percent of the population*" in liberated Aragon and that "*many of the 450 collectives of the region were largely voluntary*" although "*it must be emphasised that this singular development was in some measure due to the presence of militiamen from the neighbouring region of Catalonia, the immense majority of whom were members of the C.N.T. and F.A.I.*" [**The Spanish Civil War**, p. 74]

As Gaston Leval points out, "*it is true that the presence of these forces . . . favoured indirectly these constructive achievements by preventing active resistance by the supporters of the bourgeois republic and of fascism.*" [**Collectives in the Spanish Revolution**, p. 90]

In other words, the presence of the militia changed the balance of class forces in Aragon by destroying the capitalist state (i.e. the local bosses - caciques - could not get state aid to protect their property) and many landless workers took over the land. The presence of the militia ensured that land could be taken over by destroying the capitalist "*monopoly of force*" that existed before the revolution (the power of which will be highlighted below) and so the C.N.T. militia allowed the possibility of experimentation by the Aragonese population.

This class war in the countryside is reflected by Bolloten's statement that "*[if] the individual farmer viewed with dismay the swift and widespread collectivisation of agriculture, the farm workers of the Anarchosyndicalist C.N.T. and the Socialist UGT saw it as the commencement of a new era.*" [**The Spanish Civil War**, p. 63] Both were mass organisations and supported collectivisation.

Therefore, anarchist militia allowed the rural working class to abolish the artificial scarcity of land created by private property (and enforced by the state). The rural bosses obviously viewed with horror the possibility that they could not exploit day workers' labour. As Bolloten points out "*the collective system of agriculture threaten[ed] to drain the rural labour market of wage workers.*" [**Op. Cit.**, p. 62] Little wonder the richer peasants and landowners hated the collectives.

Bolloten also quotes a report on the district of Valderrobes which indicates popular support for the collectives:

"Collectivisation was nevertheless opposed by opponents on the right and adversaries on the left. If the eternally idle who have been expropriated had been asked what they thought of collectivisation, some would have replied that it was robbery and others a dictatorship. But, for the elderly, the day workers, the tenant farmers and small proprietors who had always been under the thumb of the big landowners and heartless

usurers, it appeared as salvation" [Op. Cit., p. 71]

However, most historians ignore the differences in class that existed in the countryside. They ignore it and explain the rise in collectives in Aragon (and ignore those elsewhere) as the result of the C.N.T. militia. Fraser, for example, states that "*[v]ery rapidly collectives . . . began to spring up. It did not happen on instructions from the C.N.T. leadership -- no more than had the [industrial] collectives in Barcelona. Here, as there, the initiative came from C.N.T. militants; here, as there, the 'climate' for social revolution in the rearguard was created by C.N.T. armed strength: the anarcho-syndicalists' domination of the streets of Barcelona was re-enacted in Aragon as the C.N.T. militia columns, manned mainly by Catalan anarcho-syndicalist workers, poured in. Where a nucleus of anarcho-syndicalists existed in a village, it seized the moment to carry out the long-awaited revolution and collectivised spontaneously. Where there was none, villagers could find themselves under considerable pressure from the militias to collectivise. . .*" [Op. Cit., p. 347]

In other words, he implies that the revolution was mostly imported into Aragon from Catalonia. However, the majority of C.N.T. column leaders were opposed to the setting up of the Council of Aragon (a confederation for the collectives) [Fraser, **Op. Cit.**, p. 350]. Hardly an example of Catalan C. N.T. imposed social revolution. The evidence we have suggests that the Aragon C.N.T. was a widespread and popular organisation, suggesting that the idea that the collectives were imported into Aragon by the Catalan C.N.T. is simply **false**.

Fraser states that in "*some [of the Aragonese villages] there was a flourishing C.N.T., in others the UGT was strongest, and in only too many there was no unionisation at all.*" [**Blood of Spain**, p. 348] The question arises of how extensive was that strength. The evidence we have suggests that it was extensive, strong and growing, so indicating that rural Aragon was not without a C.N.T. base, a base that makes the suggestion of imposed collectives a false one.

Murray Bookchin summarises the strength of the C.N.T. in rural Aragon as follows:

"The authentic peasant base of the C.N.T. [by the 1930s] now lay in Aragon . . . [C.N.T. growth in Zaragoza] provided a springboard for a highly effective libertarian agitation in lower Aragon, particularly among the impoverished labourers and debt-ridden peasantry of the dry steppes region." [**The Spanish Anarchists**, p. 203]

Graham Kelsey, in his social history of the C.N.T. in Aragon between 1930 and 1937, provides the necessary evidence to more than back Bookchin's claim of C.N.T. growth. Kelsey points out that as well as the "*spread of libertarian groups and the increasing consciousness among C.N.T. members of libertarian theories . . . contribu[ting] to the growth of the anarchosyndicalist movement in Aragon*" the existence of "*agrarian unrest*" also played an important role in that growth [**Anarchosyndicalism, Libertarian Communism and the State**, pp. 80-81]. This all lead to the "*revitalisation of the C.N.T. network in Aragon*" [p. 82] and so by 1936, the C.N.T. had built upon the "*foundations laid in 1933. . . [and] had finally succeeded in translating the very great strength of the urban trade-union organisation*

in Zaragoza into a regional network of considerable extent." [Op. Cit., p. 134]

Kelsey and other historians note the long history of anarchism in Aragon, dating back to the late 1860s. However, before the 1910s there had been little gains in rural Aragon by the C.N.T. due to the power of local bosses (called **caciques**):

*"Local landowners and small industrialists, the **caciques** of provincial Aragon, made every effort to enforce the closure of these first rural anarcho-syndicalist cells [created after 1915]. By the time of the first rural congress of the Aragonese C.N.T. confederation in the summer of 1923, much of the progress achieved through the organisation's considerable propaganda efforts had been countered by repression elsewhere." [Graham Kelsey, "Anarchism in Aragon," p. 62]*

A C.N.T. activist indicates the power of these bosses and how difficult it was to be a union member in Aragon:

*"Repression is not the same in the large cities as it is in the villages where everyone knows everybody else and where the Civil Guards are immediately notified of a comrade's slightest movement. Neither friends nor relatives are spared. All those who do not serve the state's repressive forces unconditionally are pursued, persecuted and on occasions beaten up." [cited by Kelsey, **Op. Cit.**, p. 74]*

However, while there were some successes in organising rural unions, even in 1931 *"propaganda campaigns which led to the establishment of scores of village trade-union cells, were followed by a counter-offensive from village **caciques** which forced them to close." [Ibid. p. 67]* But even in the face of this repression the C.N.T. grew and *"from the end of 1932. . . [there was] a successful expansion of the anarcho-syndicalist movement into several parts of the region where previously it had never penetrated." [Kelsey, **Anarcho-syndicalism, Libertarian Communism and the State**, p. 185]*

This growth was built upon in 1936, with increased rural activism which had slowly eroded the power of the **caciques** (which in part explains their support for the fascist coup). After the election of the Popular Front, years of anarchist propaganda and organisation paid off with a massive increase in rural membership in the C.N.T.:

"The dramatic growth in rural anarcho-syndicalist support in the six weeks since the general election was emphasised in the [Aragon C.N.T.'s April] congress's agenda. . . the congress directed its attention to rural problems . . . [and agreed a programme which was] exactly what was to happen four months later in liberated Aragon." [Kelsey, "Anarchism in Aragon", p. 76]

In the aftermath of a regional congress, held in Zaragoza at the start of April, a series of intensive propaganda campaigns was organised through each of the provinces of the regional confederation. Many

meetings were held in villages which had never before heard anarcho- syndicalist propaganda. This was very successful and by the beginning of June, 1936, the number of Aragon unions had topped 400, compared to only 278 one month earlier (an increase of over 40% in 4 weeks). [**Ibid.**, pp. 75-76]

This increase in union membership reflects increased social struggle by the Aragonese working population and their attempts to improve their standard of living, which was very low for most of the population. A journalist from the conservative-Catholic **Heraldo de Aragon** visited lower Aragon in the summer of 1935 and noted "*[t]he hunger in many homes, where the men are not working, is beginning to encourage the youth to subscribe to misleading teachings.*" [cited by Kesley, **Ibid.**, p. 74]

Little wonder, then, the growth in C.N.T. membership and social struggle Kesley indicates:

"Evidence of a different kind was also available that militant trade unionism in Aragon was on the increase. In the five months between mid-February and mid-July 1936 the province of Zaragoza experienced over seventy strikes, more than had previously been recorded in any entire year, and things were clearly no different in the other two provinces . . . the great majority of these strikes were occurring in provincial towns and villages. Strikes racked the provinces and in at least three instances were actually transformed into general strikes." [**Ibid.**, p. 76]

Therefore, in the spring and summer of 1936, we see a massive growth in C.N.T. membership which reflects growing militant struggle by the urban and rural population of Aragon. Years of C.N.T. propaganda and organising had ensured this growth in C.N.T. influence, a growth which is also reflected in the creation of collectives in liberated Aragon during the revolution. Therefore, the construction of a collectivised society was founded directly upon the emergence, during the five years of the Second Republic, of a mass trade-union movement infused by libertarian, anarchist principles. These collectives were constructed in accordance with the programme agreed at the Aragon C.N.T. conference of April 1936 which reflected the wishes of the rural membership of the unions within Aragon (and due to the rapid growth of the C.N.T. afterwards obviously reflected popular feelings in the area).

In the words of Graham Kesley, "*libertarian dominance in post-insurrection Aragon itself reflected the predominance that anarchists had secured before the war; by the summer of 1936 the C.N.T. had succeeded in establishing throughout Aragon a mass trade-union movement of strictly libertarian orientation, upon which widespread and well-supported network the extensive collective experiment was to be founded.*" [**Ibid.**, p. 61]

Additional evidence that supports a high level of C.N.T. support in rural Aragon can be provided by the fact that it was Aragon that was the centre of the December 1933 insurrection organised by the C.N.T. As Bookchin notes, "*only Aragon rose on any significant scale, particularly Saragossa . . . many of the villages declared libertarian communism and perhaps the heaviest fighting took place between the vineyard workers in Rioja and the authorities*" [M. Bookchin, **Op. Cit.**, p. 238]

It is unlikely for the C.N.T. to organise an insurrection in an area within which it had little support or influence. According to Kesley's in-depth social history of Aragon, *"it was precisely those areas which had most important in December 1933 . . . which were now [in 1936], in seeking to create a new pattern of economic and social organisation, to form the basis of libertarian Aragon."* [G. Kesley, **Anarchosyndicalism, Libertarian Communism and the State**, p. 161] After the revolt, thousands of workers were jailed, with the authorities having to re-open closed prisons and turn at least one disused monastery into a jail due to the numbers arrested.

Therefore, it can be seen that the majority of collectives in Aragon were the product of C.N.T. (and UGT) influenced workers taking the opportunity to create a new form of social life, a form marked by its voluntary and directly democratic nature. For from being unknown in rural Aragon, the C.N.T. was well established and growing at a fast rate - *"Spreading out from its urban base... the C.N.T., first in 1933 and then more extensively in 1936, succeeded in converting an essentially urban organisation into a truly regional confederation."* [**Ibid.**, p. 184]

Therefore the evidence suggests that historians like Fraser are wrong to imply that the Aragon collectives were created by the C.N.T. militia and enforced upon a unwilling population. The Aragon collectives were the natural result of years of anarchist activity within rural Aragon and directly related to the massive growth in the C.N.T. between 1930 and 1936. Thus Kesley is correct to state that:

"Libertarian communism and agrarian collectivisation were not economic terms or social principles enforced upon a hostile population by special teams of urban anarchosyndicalists . . ." [G. Kesley, **Op. Cit.**, p. 161]

This is not to suggest that there were **no** examples of people joining collectives involuntarily because of the *"coercive climate"* of the front line. And, of course, there were villages which did not have a C.N.T. union within them before the war and so created a collective because of the existence of the C.N.T. militia. But these can be considered as exceptions to the rule.

Moreover, the way the C.N.T. handled such a situation is noteworthy. Fraser indicates such a situation in the village of Alloza. In the autumn of 1936, representatives of the C.N.T. district committee had come to suggest that the villagers collectivise (we would like to stress here that the C.N.T. militia which had passed through the village had made no attempt to create a collective there).

A village assembly was called and the C.N.T. explained their ideas and suggested how to organise the collective. However, who would join and how the villagers would organise the collective was left totally up to them (the C.N.T. representatives *"stressed that no one was to be maltreated"*). Within the collective, self-management was the rule.

According to one member, *"[o]nce the work groups were established on a friendly basis and worked their own lands, everyone got on well enough,"* he recalled. *"There was no need for coercion, no need for discipline and punishment. . . A collective wasn't a bad idea at all."* [**Op. Cit.**, p. 360] This

collective, like the vast majority, was voluntary and democratic - "*I couldn't oblige him to join; we weren't living under a dictatorship.*" [Op. Cit., p. 362] In other words, **no** force was used to create the collective and the collective was organised by local people directly.

Of course, as with any public good (to use economic jargon), all members of the community had to pay for the war effort and feed the militia. As Kesely notes, "*[t]he military insurrection had come at a critical moment in the agricultural calendar. Throughout lower Aragon there were fields of grain ready for harvesting. . . . At the assembly in Albalate de Cinca the opening clause of the agreed programme had required everyone in the district, independent farmers and collectivists alike, to contribute equally to the war effort, thereby emphasising one of the most important considerations in the period immediately following the rebellion.*"

In addition, the collectives controlled the price of crops in order to ensure that speculation and inflation were controlled. However, these policies as with the equal duties of individualists and collectivists in the war effort were enforced upon the collectives by the war.

Lastly, in support of the popular nature of the rural collectives, we will indicate the effects of the suppression of the collectives in August 1937 by the Communists, namely the collapse of the rural economy. This sheds considerable light on the question of popular attitudes to the collectives.

In October, the Communist-controlled Regional Delegation of Agrarian Reform acknowledged that "*in the majority of villages agricultural work was paralysed causing great harm to our agrarian economy.*" This is confirmed by Jose Silva, a Communist Party member and general secretary of the Institute of Agrarian Reform, who commented that after Lister had attacked Aragon, "*labour in the fields was suspended almost entirely, and a quarter of the land had not been prepared at the time for sowing.*" At a meeting of the agrarian commission of the Aragonese Communist Party (October 9th, 1937), Jose Silva emphasised "*the little incentive to work of the entire peasant population*" and that the situation brought about by the dissolution of the collectives was "*grave and critical.*" [quoted by Bollothen, **Op. Cit.**, p. 530]

Jose Peirats explains the reasons for this economic collapse as a result of popular boycott:

"When it came time to prepare for the next harvest, smallholders could not by themselves work the property on which they had been installed [by the communists]. Dispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour." [**Anarchists in the Spanish Revolution**, p. 258]

If the collectives were unpopular, created by anarchist force, then why did the economy collapse after the suppression? If Lister had overturned a totalitarian anarchist regime, why did the peasants not reap the benefit of their toil? Could it be because the collectives were essentially a spontaneous Aragonese development and supported by most of the population there? This analysis is backed up by Yaacov

Oved's statement (from a paper submitted to the XII Congress of Sociology, Madrid, July 1990):

"Those who were responsible for this policy [of "freeing" the Aragon Collectivists], were convinced that the farmers would greet it joyfully because they had been coerced into joining the collectives. But they were proven wrong. Except for the rich estate owners who were glad to get their land back, most of the members of the agricultural collectives objected and lacking all motivation they were reluctant to resume the same effort of in the agricultural work. This phenomenon was so widespread that the authorities and the communist minister of agriculture were forced to retreat from their hostile policy." [Yaacov Oved, **Communismo Libertario and Communalism in the Spanish Collectivisations (1936-1939)**]

Even in the face of Communist repression, most of the collectives kept going. This, if nothing else, proves that the collectives were popular institutions. As Yaacov Oved argues in relation to the breaking up of the collectives:

"Through the widespread reluctance of collectivists to co-operate with the new policy it became evident that most members had voluntarily joined the collectives and as soon as the policy was changed a new wave of collectives was established. However, the wheel could not be turned back. An atmosphere of distrust prevailed between the collectives and the authorities and every initiative was curtailed" [Op. Cit.]

Jose Peirats sums up the situation after the communist attack on the collectives and the legalisation of the collectives as follows:

"It is very possible that this second phase of collectivisation better reflects the sincere convictions of the members. They had undergone a sever test and those who had withstood it were proven collectivists. Yet it would be facile to label as anti-collectivists those who abandoned the collectives in this second phase. Fear, official coercion and insecurity weighed heavily in the decisions of much of the Aragonese peasantry." [Op. Cit., p. 258]

While the collectives had existed, there was a 20% increase in production (and this is compared to the pre-war harvest which had been *"a good crop."* [Fraser, p. 370]); after the destruction of the collectives, the economy collapsed. Hardly the result that would be expected if the collectives were forced upon an unwilling peasantry. The forced collectivisation by Stalin in Russia resulted in a famine. Only the victory of fascism made it possible to restore the so-called *"natural order"* of capitalist property in the Spanish countryside. The same land-owners who welcomed the Communist repression of the collectives also, we are sure, welcomed the fascists who ensured a lasting victory of property over liberty.

So, overall, the evidence suggests that the Aragon collectives, like their counterparts in the Levante, Catalonia and so on, were **popular** organisations, created by and for the rural population and, essentially, an expression of a spontaneous and popular social revolution. Claims that the anarchist

militia created them by force of arms are **false**. While acts of violence **did** occur and some acts of coercion **did** take place (against C.N.T. policy, we may add) these are the exceptions to the rule. Bollothen's summary best fits the facts:

"But in spite of the cleavages between doctrine and practice that plagued the Spanish Anarchists whenever they collided with the realities of power, it cannot be overemphasised that notwithstanding the many instances of coercion and violence, the revolution of July 1936 distinguished itself from all others by the generally spontaneous and far-reaching character of its collectivist movement and by its promise of moral and spiritual renewal. Nothing like this spontaneous movement had ever occurred before." [Op. Cit., p. 78]

I.8.8 But did the Spanish collectives innovate?

Yes. In contradiction to the old capitalist claim that no one will innovate unless private property exists, the workers and peasants exhibited much more incentive and creativity under libertarian socialism than they had under the private enterprise system. This is apparent from Gaston Leval's description of the results of collectivisation in Cargagente:

"Carcagente is situated in the southern part of the province of Valencia. The climate of the region is particularly suited for the cultivation of oranges. . . . All of the socialised land, without exception, is cultivated with infinite care. The orchards are thoroughly weeded. To assure that the trees will get all the nourishment needed, the peasants are incessantly cleaning the soil. 'Before,' they told me with pride, 'all this belonged to the rich and was worked by miserably paid labourers. The land was neglected and the owners had to buy immense quantities of chemical fertilisers, although they could have gotten much better yields by cleaning the soil. . . .' With pride, they showed me trees that had been grafted to produce better fruit.

"In many places I observed plants growing in the shade of the orange trees. 'What is this?,' I asked. I learned that the Levant peasants (famous for their ingenuity) have abundantly planted potatoes among the orange groves. The peasants demonstrate more intelligence than all the bureaucrats in the Ministry of Agriculture combined. They do more than just plant potatoes. Throughout the whole region of the Levant, wherever the soil is suitable, they grow crops. They take advantage of the four month [fallow period] in the rice fields. Had the Minister of Agriculture followed the example of these peasants throughout the Republican zone, the bread shortage problem would have been overcome in a few months." [cited in Dolgoff, **Anarchist Collectives**, p. 153]

This is just one from a multitude of examples presented in the accounts of both the industrial and rural collectives (for more see [section C.2.3](#) in which we present more examples to refute that charge that "workers' control would stifle innovation" and [I.8.6](#)). The available evidence proves that the membership

of the collectives showed a keen awareness of the importance of investment and innovation in order to increase production and to make work both lighter and more interesting **and** that the collectives allowed that awareness to be expressed freely. The Spanish collectives indicate that, given the chance, everyone will take an interest in their own affairs and express a desire to use their minds to improve their surroundings. In fact, capitalism distorts what innovation exists under hierarchy by channelling it purely in how to save money and maximise investor profit, ignoring other, more important, issues.

As Gaston Leval argues, self-management encouraged innovation:

"The theoreticians and partisans of the liberal economy affirm that competition stimulates initiative and, consequently, the creative spirit and invention without which it remains dormant. Numerous observations made by the writer in the Collectives, factories and socialised workshops permit him to take quite the opposite view. For in a Collective, in a grouping where each individual is stimulated by the wish to be of service to his fellow beings research, the desire for technical perfection and so on are also stimulated. But they also have as a consequence that other individuals join those who were first to get together. Furthermore, when, in present society, an individualist inventor discovers something, it is used only by the capitalist or the individual employing him, whereas in the case of an inventor living in a community not only is his discovery taken up and developed by others, but is immediately applied for the common good. I am convinced that this superiority would very soon manifest itself in a socialised society." [**Collectives in the Spanish Revolution**, p. 247]

Therefore the actual experiences of self-management in Spain supports the points made in [section I.4.11](#). Freed from hierarchy, individuals will creatively interact with the world to improve their circumstances. This is not due to "market forces" but because the human mind is an active agent and unless crushed by authority it can no more stop thinking and acting than the Earth stop revolving round the Sun. In addition, the Collectives indicate that self-management allows ideas to be enriched by discussion, as Bakunin argued:

"The greatest intelligence would not be equal to a comprehension of the whole. Thence results... the necessity of the division and association of labour. I receive and I give - such is human life. Each directs and is directed in his turn. Therefore there is no fixed and constant authority, but a continual exchange of mutual, temporary, and, above all, voluntary authority and subordination" [**God and the State**, p. 33]

The experience of self-management proved Bakunin's point that society is more intelligent than even the most intelligent individual simply because of the wealth of viewpoints, experience and thoughts contained there. Capitalism impoverishes individuals and society by its artificial boundaries and authority structures.

I.8.9 Why, if it was so good, did it not survive?

Just because something is good does not mean that it will survive.

For example, the Warsaw Ghetto uprising against the Nazis failed but that does not mean that the uprising was a bad cause or that the Nazi regime was correct, far from it. Similarly, while the experiments in workers' self-management and communal living undertaken across Republican Spain is one of the most important social experiments in a free society ever undertaken, this cannot change the fact that Franco's forces and the Communists had access to more and better weapons.

Faced with the aggression and terrorism of Franco, and behind him the military might of Fascist Italy and Nazi Germany, the treachery of the Communists, and the aloofness of the Western bourgeois "republics" (whose policy of "non-intervention" was strangely ignored when their citizens aided Franco) it is amazing the revolution lasted as long as it did.

This does not excuse the actions of the anarchists themselves. As is well known, the C.N.T. co-operated with the other anti-fascist parties and trade unions on the Republican side (see [next section](#)). This co-operation led to the C.N.T. joining the anti-fascist government and "anarchists" becoming ministers of state. This co-operation, more than anything, helped ensure the defeat of the revolution. While much of the blame can be placed at the door of the would-be "leaders," who like most leaders started to think themselves irreplaceable and spokespersons for the organisations they were members of, it must be stated that the rank-and-file of the movement did little to stop them. Most of the militant anarchists were at the front-line (and so excluded from union and collective meetings) and so could not influence their fellow workers (it is no surprise that the "Friends of Durruti" group were mostly ex-militia men). However, it seems that the mirage of anti-fascist unity proved too much for the majority of C.N.T. members (see [section I.8.12](#)).

Some anarchists still maintain that the Spanish anarchist movement had no choice and that collaboration (while having unfortunate effects) was the only choice available. This view was defended by Sam Dolgoff and finds some support in the writings of Gaston Leval, August Souchy and many other anarchists. However, most anarchists today oppose collaboration and think it was a terrible mistake (at the time, this position was held by the majority of non-Spanish anarchists plus a large minority of the Spanish movement, becoming a majority as the implications of collaboration became clear). This viewpoint finds its best expression in Vernon Richard's **Lessons of the Spanish Revolution** and, in part, in such works as **Anarchists in the Spanish Revolution** by Jose Peirats and **Anarchist Organisation: The History of the F.A.I** by Juan Gomaz Casas as well as in a host of pamphlets and articles written by anarchists ever since.

So, regardless of how good a social system is, objective facts will overcome that experiment. Saturnino Carod (a leader of a C.N.T. Militia column at the Aragon Front) sums up the successes of the revolution as well as its objective limitations:

"Always expecting to be stabbed in the back, always knowing that if we created problems,

only the enemy across the lines would stand to gain. It was a tragedy for the anarcho-syndicalist movement; but it was a tragedy for something greater -- the Spanish people. For it can never be forgotten that it was the working class and peasantry which, by demonstrating their ability to run industry and agriculture collectively, allowed the republic to continue the struggle for thirty-two months. It was they who created a war industry, who kept agricultural production increasing, who formed militias and later joined the army. Without their creative endeavour, the republic could not have fought the war . . ." [quoted by Fraser, **Blood of Spain**, p. 394]

I.8.10 Why did the C.N.T. collaborate with the state?

As is well known, in September 1936 the C.N.T joined the Catalan government, followed by the central government in November. This followed on from the decision made on July the 21st to not speak of Libertarian Communism until after Franco had been defeated. In other words, to collaborate with other anti-fascist parties and unions in a common front against fascism.

This, initially, involved the C.N.T agreeing to join a "*Central Committee of Anti-Fascist Militias*" proposed by the leader of the Catalan government, Louis Companys. This committee was made up of representatives of various anti-fascist parties and groups. From this it was only a matter of time until the C.N.T joined an official government as no other means of co-ordinating activities existed (see [section I.8.13](#)).

The question must arise, **why** did the C.N.T decide to collaborate with the state, forsaking its principles and, in its own way, contribute to the counter-revolution and the losing of the war. This is an important question. Indeed, it is one Marxists always throw up in arguments with anarchists or in anti-anarchist diatribes. Does the failure of the C.N.T to implement anarchism after July 19th mean that anarchist politics are flawed? Or, rather, does the experience of the C.N.T and F.A.I during the Spanish revolution indicate a failure of **anarchists** rather than of **anarchism**, a mistake made under difficult objective circumstances and one which anarchists have learnt from? Needless to say, anarchists argue that the latter answer is the correct one. In other words, as Vernon Richards argues, "*the basis of [his] criticism is not that anarchist ideas were proved to be unworkable by the Spanish experience, but that the Spanish anarchists and syndicalists failed to put their theories to the test, adopting instead the tactics of the enemy.*" [**Lessons of the Spanish Revolution**, p. 14] The writers of this FAQ agree.

So, why **did** the CNT collaborate with the state during the Spanish Civil War? Simply put, rather than being the fault of anarchist theory (as Marxists like to claim), its roots can be discovered in the situation facing the Catalan anarchists on July 20th. The objective conditions facing the leading militants of the CNT and FAI influenced the decisions they took, decisions which they later justified by **mis**-using anarchist theory.

What was the situation facing the Catalan anarchists on July 20th? Simply put, it was an unknown situation. Jose Peirats quotes from the report made by the C.N.T to the **International Workers**

Association as follows:

"Levante was defenceless and uncertain . . . We were in a minority in Madrid. The situation in Andalusia was unknown . . . There was no information from the North, and we assumed the rest of Spain was in the hands of the fascists. The enemy was in Aragon, at the gates of Catalonia. The nervousness of foreign consular officials led to the presence of a great number of war ships around our ports." [quoted in **Anarchists in the Spanish Revolution**, p. 180]

He also notes that:

"According to the report, the CNT was in absolute control of Catalonia in July 19, 1936, but its strength was less in Levante and still less in central Spain where the central government and the traditional parties were dominant. In the north of Spain the situation was confused. The CNT could have mounted an insurrection on its own 'with probable success' but such a takeover would have led to a struggle on three fronts: against the fascists, the government and foreign capitalism. In view of the difficulty of such an undertaking, collaboration with other antifascist groups was the only alternative." [**Op. Cit.**, p. 179]

In the words of the CNT report itself:

"The CNT showed a conscientious scrupulousness in the face of a difficult alternative: to destroy completely the State in Catalonia, to declare war against the Rebels [i.e. the fascists], the government, foreign capitalism, and thus assuming complete control of Catalan society; or collaborating in the responsibilities of government with the other antifascist fractions." [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156]

Moreover, as Gaston Leval later argued, given that the *"general preoccupation [of the majority of the population was] to defeat the fascists . . . the anarchists would, if they came out against the state, provoke the antagonism . . . of the majority of the people, who would accuse them of collaborating with Franco."* Implementing an anarchist revolution would, in all likelihood, also *"result . . . [in] the instant closing of the frontier and the blockade by sea by both fascists and the democratic countries. The supply of arms would be completely cut off, and the anarchists would rightly be held responsible for the disastrous consequences."* [quoted in **The Anarchist Collectives**, p. 52 and p. 53]

While the supporters of Lenin and Trotsky will constantly point out the objective circumstances in which their heroes made their decisions during the Russian Revolution, they rarely mention those facing the anarchists in Spain on the 20th of July, 1936. It seems hypocritical to point to the Russian Civil War as the explanation of all of Bolshevism's crimes against the working class (indeed, humanity) while remaining silent on the forces facing the C.N.T-F.A.I at the start of the Spanish Civil War. The fact that

if the CNT had decided to implement libertarian communism in Catalonia they would have to face the fascists (commanding the bulk of the Spanish army), the Republican government (commanding the rest) **plus** those sections in Catalonia which supported it is rarely mentioned. Moreover, when the decision to collaborate was made it was **immediately after the defeat of the army uprising in Barcelona** -- the situation in the rest of the country was uncertain and when the social revolution was in its early days.

Stuart Christie indicates the dilemma facing the leadership of the CNT at the time:

"The higher committees of the CNT-FAI-FIJJL in Catalonia saw themselves caught on the horns of a dilemma: social revolution, fascism or bourgeois democracy. Either they committed themselves to the solutions offered by social revolution, regardless of the difficulties involved in fighting both fascism and international capitalism, or, through fear of fascism (or of the people), they sacrificed their anarchist principles and revolutionary objectives to bolster, to become, part of the bourgeois state . . . Faced with an imperfect state of affairs and preferring defeat to a possibly Pyrrhic victory, the Catalan anarchist leadership renounced anarchism in the name of expediency and removed the social transformation of Spain from their agenda.

"But what the CNT-FAI leaders failed to grasp was that the decision whether or not to implement Libertarian Communism, was not theirs to make. Anarchism was not something which could be transformed from theory into practice by organisational decree . . . [the] spontaneous defensive movement of 19 July had developed a political direct of its own." [We, the Anarchists!, p. 99]

Given that the pro-fascist army still controlled a third or more of Spain (including Aragon) and that the CNT was not the dominant force in the centre and north of Spain, it was decided that a war on three fronts would only aid Franco. Moreover, it was a distinct possibility that by introducing libertarian communism in Catalonia, Aragon and elsewhere, the workers' militias and self-managed industries would have been starved of weapons, resources and credit. That isolation was a real problem can be seen from De Santillan's later comments on why the CNT joined the government:

"The Militias Committee guaranteed the supremacy of the people in arms . . . but we were told and it was repeated to us endlessly that as long as we persisted in retaining it, that is, as long as we persisted in propping up the power of the people, weapons would not come to Catalonia, now would we be granted the foreign currency to obtain them from abroad, nor would we be supplied with the raw materials for our industry. And since losing the war meant losing everything and returning to a state like that prevailed in the Spain of Ferdinand VII, and in the conviction that the drive given by us and our people could not vanish completely from the new economic life, we quit the Militias Committee to join the Generalidad government." [quoted by Stuart Christie, **Op. Cit.**, p. 109]

It was decided to collaborate and reject the basic ideas of anarchism until the war was over. A terrible

mistake, but one which can be understood given the circumstances in which it was made. This is not, we stress, to justify the decision but rather to explain it and place it in context. Ultimately, the **experience** of the Civil War saw a blockade of Republic by both "democratic" and fascist governments, the starving of the militias and self-managed collectives of resources and credit as well as a war on two fronts when the State felt strong enough to try and crush the CNT and the semi-revolution its members had started. Unfortunately, the anarchist movement did not have a crystal-ball with which to see the future. Ultimately, even faced with the danger of fascism, the liberals, the right-wing socialists and communists preferred to undermine the anti-fascist struggle by attacking the CNT. In this, history proved Durruti totally correct:

"For us it is a matter of crushing Fascism once and for all. Yes, and in spite of the Government.

"No government in the world fights Fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to Fascism to maintain itself. The liberal government of Spain could have rendered the fascist elements powerless long ago. Instead it compromised and dallied. Even now at this moment, there are men in this Government who want to go easy on the rebels. You can never tell, you know-- he laughed -- the present Government might yet need these rebellious forces to crush the workers' movement . . .

"We know what we want. To us it means nothing that there is a Soviet Union somewhere in the world, for the sake of whose peace and tranquillity the workers of Germany and China were sacrificed to Fascist barbarians by Stalin. We want revolution here in Spain, right now, not maybe after the next European war. We are giving Hitler and Mussolini far more worry to-day with our revolution than the whole Red Army of Russia. We are setting an example to the German and Italian working class on how to deal with fascism.

"I do not expect any help for a libertarian revolution from any Government in the world. Maybe the conflicting interests of the various imperialisms might have some influence in our struggle. That is quite possible . . . But we expect no help, not even from our own Government, in the last analysis."

"You will be sitting on a pile of ruins if you are victorious," said [the journalist] van Paasen.

Durruti answered: *"We have always lived in slums and holes in the wall. We will know how to accommodate ourselves for a time. For, you must not forget, we can also build. It is we the workers who built these palaces and cities here in Spain and in America and everywhere. We, the workers, can build others to take their place. And better ones! We are not in the least afraid of ruins. We are going to inherit the earth; there is not the slightest doubt about that. The bourgeoisie might blast and ruin its own world before it leaves the*

stage of history. We carry a new world here, in our hearts. That world is growing this minute." [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, pp. 193-4f]

Isolation, the uneven support for a libertarian revolution across Spain and the dangers of fascism were real problems, but they do not excuse the libertarian movement for its mistakes. As we discuss in sections [I.8.11](#) and [I.8.13](#), the biggest of these mistakes was forgetting basic anarchist ideas and an anarchist approach to the problems facing the Spanish people. If these ideas had been applied in Spain, the outcome of the Civil War and Revolution would have been different.

In summary, while the decision to collaborate is one that can be understood (due to the circumstances under which it was made), it cannot be justified in terms of anarchist theory. Indeed, as we argue in the [next section](#), attempts by the CNT leadership to justify the decision in terms of anarchist principles are not convincing and cannot be done without making a mockery of anarchism.

I.8.11 Was the decision to collaborate a product of anarchist theory, so showing anarchism is flawed?

As we indicated in the [last section](#), the decision to collaborate with the state was made by the CNT due to the fear of isolation. The possibility that by declaring libertarian communism, the CNT would have had to fight the Republican government and foreign interventions **as well as** the military coup influenced the decision reached by the militants of Catalan anarchism. They argued that such a situation would only aid Franco.

Rather than being the product of anarchist ideology, the decision was made in light of the immediate danger of fascism and the situation in other parts of the country. The fact is that the circumstances in which the decision to collaborate was made are rarely mentioned by Marxists, who prefer to quote CNT militant Garcia Oliver's comment from over a year later:

"The CNT and the FAI decided on collaboration and democracy, renouncing revolutionary totalitarianism which would lead to the strangulation of the revolution by the anarchist and Confederal dictatorship. We had to choose, between Libertarian Communism, which meant anarchist dictatorship, and democracy, which meant collaboration." [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, p. 34]

It is this quote, and quotes like it, which is ritualistically trotted out by Marxists when attacking anarchist ideas. They argue that they expose the bankruptcy of anarchist theory. So convinced of this, they rarely bother discussing the problems facing the CNT after the defeat of the military coup we discussed in the [last section](#) nor do they compare these quotes to the anarchist theory they claim inspired them. There are good reasons for this. Firstly, if they presented the objective circumstances the CNT found itself in then their readers may see that the decision, while wrong, is understandable and had nothing to do with anarchist theory. Secondly, by comparing these quotes to anarchist theory they would soon see how at

odds they are with it. Indeed, they invoke anarchism to justify conclusions the exact opposite of that theory.

So what can be made of Garcia Oliver's argument?

As Abel Paz notes, "*[i]t is clear that the explanations given . . . were designed for their political effect, hiding the atmosphere in which these decisions were taken. These declarations were made a year later when the CNT were already far removed from their original positions It is also the period when they had become involved in the policy of collaboration which lead taking part in the Central Government. But in a certain way they shed light on the unknown factors which weighted so heavily on these who took part in the historic Plenum.*" [Durruti: **The People Armed**, p. 215]

For example, when the decision was made, the revolution had not started yet. The street fighting had just ended and the Plenum decided "*not to speak about Libertarian Communism as long as part of Spain was in the hands of the fascists.*" [Mariano R. Vesquez, quoted by Paz, **Op. Cit.**, p.214] The revolution took place **from below** in the days following the decision, independently of the wishes of the Plenum. In the words of Abel Paz:

"When the workers reached their workplaces . . . they found them deserted . . . The major centres of production had been abandoned by their owners . . . The CNT and its leaders had certainly not foreseen this situation; if they had, they had, they would have given appropriate guidance to the workers when they called off the General Strike and ordered a return to work. What happened next was the result of the workers' spontaneous decision to take matters into their own hands.

"Finding the factories deserted, and no instructions from their unions, they resolved to operate the machines themselves." [**The Spanish Civil War**, pp. 54-5]

The rank and file of the CNT, on their own initiative, took advantage of the collapse of state power to transform the economy and social life of Catalonia. Paz stresses that "*no orders were given for expropriation or colectivisation -- which proved that the union, which represented the will of the their members until July 18th, had now been overtaken by events*" and the "*union leaders of the CNT committees were confronted with a revolution that they had not foreseen . . . the workers and peasants had bypassed their leaders and taken collective action.*" [**Op. Cit.**, p. 40 and p. 56]

As the revolution had not yet begun and the CNT Plenum had decided **not** to call for its start, it is difficult to see how "*libertarian communism*" (i.e. the revolution) could "*lead to the strangulation of the revolution*" (i.e. libertarian communism). In other words, this particular rationale put forward by Garcia Oliver could not reflect the real thoughts of those present at the CNT plenum and so, in fact, was a later justification for the CNT's actions.

Similarly, Libertarian Communism is based on self-management, by its nature opposed to dictatorship.

According to the CNT's resolution at its congress in Zaragoza in May, 1936, "*the foundation of this administration will be the Commune*" which is "*autonomous*" and "*federated at regional and national levels.*" The commune "*will undertake to adhere to whatever general norms [that] may be agreed by majority vote after free debate.*" It stressed the free nature of society aimed at by the CNT:

"The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes . . . every commune which is implicated will have its right to have its say . . . On matters of a regional nature, it is the duty of the regional federation to implement agreements . . . So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 106-7]

Hardly a picture of "*anarchist dictatorship*"! Indeed, it is far more "*democratic*" than the capitalist state Oliver describes as "*democracy.*"

Clearly, these often quoted words of Garcia Oliver cannot be taken at face value. Made in 1937, they present an attempt to misuse anarchist ideals to defend the anti-anarchist activities of the CNT leadership rather than a meaningful explanation of the decisions made on the 20th of July, 1936.

Moreover, the decision made then clearly stated that Libertarian Communism would be back on the agenda once Franco was defeated. Oliver's comments were applicable **after** Franco was defeated just as much as when they were made. The real reasons for the decision to collaborate lies elsewhere, namely in the objective circumstances facing the CNT after the defeat of the army in Barcelona, July 20th, 1936, and **not** in anarchist theory.

This can clearly be seen from the report made by the CNT to the **International Workers Association** to justify the decision to forget anarchist theory and collaborate with bourgeois parties and join the government. The report states that "*the CNT, loyal to its ideals and its purely anarchist nature, did not attack the forms of the State, nor try publicly to penetrate or dominate it . . . none of the political or juridical institutions were abolished.*" [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156]

In other words, according to this report, "anarchist" ideals do not, in fact, mean the destruction of the state, but rather the **ignoring** of the state. That this is nonsense, concocted to justify the CNT leaderships' betrayal of its ideals, is clear. To do so we just need to look at Bakunin and Kropotkin and look at the activities of the CNT **before** the start of the war.

Bakunin had argued that "*the revolution must set out from the first to radically and totally destroy the State*" and that the "*natural and necessary consequence of this destruction*" will include the "*dissolution*

of army, magistracy, bureaucracy, police and priesthood." Capital would be expropriated (i.e. the *"confiscation of all productive capital and means of production on behalf of workers' associations, who are to put them to use"*) and the state replaced by *"the federative Alliance of all working men's associations"* which *"will constitute the Commune."* [Michael Bakunin: **Selected Writings**, p. 170] Similarly, Kropotkin had stressed that the *"Commune . . . must break the State and replace it by the Federation."* [Words of a Rebel, p. 83]

Thus anarchism has always been clear on what to do with the state, and it is obviously not what the CNT did to it! Nor had the CNT always taken this perspective. Before the start of the Civil War, the CNT had organised numerous insurrections against the state. For example, in the spontaneous revolt of CNT miners in January 1932, the workers *"seized town halls, raised the black-and-red flags of the CNT, and declared **comunismo libertario**."* In Tarassa, the same year, the workers again *"seiz[ed] town halls"* and the town *"swept by street fighting."* The revolt in January 1933 began with *"assaults by Anarchist action groups . . . on Barcelona's military barracks . . . Serious fighting occurred in working-class **barrios** and the outlying areas of Barcelona . . . Uprising occurred in Tarassa, Sardanola-Ripollet, Lerida, in several **pueblos** in Valencia province, and in Andalusia."* In December 1933, the workers *"reared barricades, attacked public buildings, and engaged in heavy street fighting . . . many villages declared libertarian communism."* [Murray Bookchin, **The Spanish Anarchists**, p. 225, p. 226, p. 227 and p. 238]

It seems that the CNT leadership's loyalty to *"its ideals and its purely anarchist nature"* which necessitated *"not attack[ing] the forms of the State"* was a very recent development! That enemies of anarchism quote Garcia Oliver's words from 1937 or from this document and others like it in order to draw conclusions about anarchist theory says more about their politics than about anarchism!

As can be seen, the rationales later developed to justify the betrayal of anarchist ideas and the revolutionary workers of Spain have no real relationship to anarchist theory. They were created to justify a non-anarchist approach to the struggle against fascism, an approach based on ignoring struggle from below and instead forging alliances with parties and unions at the top (in the style of the UGT *"Workers' Alliance"* the CNT had correctly argued against before the war).

Rather than trying to cement a unity with other organisations at the top level, the leadership of the CNT should have applied their anarchist ideas by inciting the oppressed to enlarge and consolidate their gains (which they did anyway). This would have liberated all the potential energy within the country (and elsewhere), energy that clearly existed as can be seen from the spontaneous collectivisations that occurred after the fateful Plenum of July 20th and the creation of volunteer workers' militia columns sent to liberate those parts of Spain which had fallen to Franco.

The role of anarchists, therefore, was that of *"inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority"* and *"to support, to incite and encourage the development of the social revolution and to frustrate any attempts by the bourgeois capitalist state to reorganise itself, which it would seek to do."* This would

involve "*seeking to destroy bourgeois institutions through the creation of revolutionary organisms.*" [Vernon Richards, **Op. Cit.**, p. 44, p. 46 and p. 193]

In other words, to encourage, what Bakunin called the "*federation of the standing barricades,*" made up of "*delegates . . . vested with binding mandates and accountable and revocable at all times*") which could have been the initial framework for both defending and extending the revolution (to "*defend the revolution*" a "*communal militia*" would be organised, the revolution would "*radiate . . . outwards*" and communes would "*federate . . . for common defence.*") [Michael Bakunin, **No Gods, No Masters**, vol. 1, p. 155 and p. 142] The equivalent of the "*Sections*" of the French Revolution, what Kropotkin argued "*laid the foundations of a new, free, social organisation*" and expressed "*the principles of anarchism.*" [**The Great French Revolution**, vol. 1, p. 206 and p. 204] Indeed, such an organisation already existing in embryo in the CNT's **barrios** defence committees which had led and co-ordinated the struggle against the military coup throughout the city.

Later, a delegate meeting from the various workplaces (CNT and UGT organised as well as unorganised ones) would have to had been arranged to organise, to again quote Bakunin, "*the federal Alliance of workers associations*" which would "*constitute the Commune*" and complement the "*federation of the standing barricades.*" [**Op. Cit.**, p. 155] In more modern terminology, a federation of workers' councils combined with a federation of workers' militias and community assemblies. Without this, the revolution was doomed as was the war against Franco's forces.

Such a development, applying the basic ideas of anarchism (and as expounded in the CNT's May resolution on Libertarian Communism), was not an impossibility. After all, the CNT-FAI organised something similar in Aragon. The fear that if libertarian communism was implemented then a civil war within the anti-fascist forces would occur (so aiding Franco) was a real one. Unfortunately, the conclusion draw from that fear, namely to win the war against Franco before talking about the revolution, was the wrong one. After all, a civil war within the Republican side **did** occur, when the state had recovered enough to do start it. Similarly, with the fear of a blockade by foreign governments. This happened away, confirming Durruti's comment that he "*did not expect help for a libertarian revolution from any government in the world . . . not even from our own government in the last analysis.*" [quoted by Vernon Richards, **Op. Cit.**, p. 194f] Organising a full and proper delegate meeting in the first days of the revolution would have allowed these ideas to be discussed by the whole membership of the CNT and, perhaps, a different decision may have been reached on the subject of collaboration.

By thinking they could postpone the revolution until after the war, the CNT leadership made two mistakes. Firstly, they should have known that their members would hardly miss this opportunity to implement their ideas so making their decision redundant (and a statist backlash inevitable). Secondly, they abandoned their anarchist ideas, failing to understand that the struggle against fascism would never be effective without the active participation of the working class. Such participation could never be achieved by placing the war before the revolution and by working in top-down, statist structures or within a state.

Indeed, the mistake made by the CNT, while understandable, cannot be justified given that their consequences had been predicted by numerous anarchists beforehand, including Kropotkin decades previously in an essay on the Paris Commune. In that essay he refutes the two assumptions of the CNT leadership -- first, of placing the war before the revolution and, second, that the struggle could be waged by authoritarian structures or a state.

Kropotkin had explicitly attacked the mentality and logic begin the official CNT line of not mentioning Libertarian Communism *"until such time as we had captured that part of Spain that was in the hands of the rebels."* Kropotkin had lambasted those who had argued *"Let us first make sure of victory, and then see what can be done."* His comments are worth quoting at length:

*"Make sure of victory! As if there were any way of transforming society into a free commune without laying hands upon property! As if there were any way of defeating the enemy so long as the great mass of the people is not directly interested in the triumph of the revolution, in witnessing the arrival it of material, moral and intellectual well-being for all! They sought to consolidate the Commune first of all while postponing the social revolution for later on, while the only effective way of proceeding was **to consolidate the Commune by the social revolution!**"*

"It was the same with the governmental principle. In proclaiming the free Commune, the people of Paris proclaimed an essential anarchist principle . . . If we admit, in fact, that a central government is absolutely useless to regulate the relations of communes between each other, why do we grant its necessity to regulate the mutual relations of the groups that constitute the Commune? . . . A government within the Commune has no more right to exist than a government over the Commune." [Words of a Rebel, p. 97]

Kropotkin's argument was sound, as the CNT discovered. By waiting until victory in the war they were defeated. Kropotkin also indicated the inevitable effects of the CNT's actions in co-operating with the state and joining representative bodies. In his words:

"Paris . . . sent her devoted sons to the Hotel-de-Ville [the town hall]. Indeed, immobilised there by fetters of red tape, forced to discuss when action was needed, and losing the sensitivity that comes from continual contact with the masses, they saw themselves reduced to impotence. Paralysed by their distancing from the revolutionary centre -- the people -- they themselves paralysed the popular initiative." [Op. Cit., pp. 97-8]

Which, in a nutshell, was what happened to the leading militants of the CNT who collaborated with the state. Kropotkin was proved right, as was anarchist theory from Bakunin onwards. As Vernon Richards argues, *"there can be no excuse" for the CNT's decision, as "they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT."* [Lessons of the Spanish Revolution, pp. 41-2] It seems difficult to blame anarchist theory for the decisions of the CNT when that theory argues the opposite position.

However, while the experience of Spain confirms anarchist theory **negatively**, it also confirms it **positively** by the Council of Aragon. The Council of Aragon was created by a meeting of delegates from CNT unions, village collectives and militia columns to protect the new society the people of Aragon were building. Its creation exposes as false the claim that anarchism failed in during the Spanish Civil War. In Aragon, the CNT **did** follow the ideas of anarchism, abolishing both the state and capitalism. If they had followed this example in Catalonia, the outcome of the Civil War may have been different.

In spite of opposition from the two Catalan militia leaders, the Aragonese delegates at the Bujaraloz assembly, encouraged by Durruti, supported the proposals and the Regional Defence Council of Aragón was born with the specific objective of implementing libertarian communism. The meeting also decided to press for the setting up of a National Defence Committee which would link together a series of regional bodies that were organised on principles similar to the one now established in Aragon.

The formation of the Regional Defence Council was an affirmation of commitment to the principles of libertarian communism. This principled stand for revolutionary social and economic change stands at odds with the claims that the Spanish Civil War indicates the failure of anarchism. After all, in Aragon the CNT **did** act in accordance with anarchist theory and its own history and politics.

Therefore, the activities of the CNT during the Civil War cannot be used to discredit anarchism although it can be used to show that anarchists can and do make terrible decisions in difficult circumstances. That Marxists always point to this event in anarchist history is unsurprising, for it was a terrible mistake.

However, to use this to generalise about anarchism is false as it, firstly, requires a dismissal of the objective circumstances the decision was made in (see [last section](#)) and, secondly, it means ignoring anarchist theory and history. It also gives the impression that anarchism as a revolutionary theory must be evaluated purely from one event in its history. The experiences of the Makhnovists in the Ukraine, the U.S.I and U.A.I. in the factory occupations of 1920 and fighting fascism in Italy, the insurrections of the C.N.T. during the 1930s, the Council of Aragon created by the CNT in the Spanish Revolution and so on, are all ignored when evaluating anarchism. Hardly convincing, although handy for Marxists. As is clear from, for example, the experiences of the Makhnovists and the Council of Aragon, that anarchism has been applied successfully on a large scale, both politically and economically, in revolutionary situations.

As Emma Goldman argued, the *"contention that there is something wrong with Anarchism . . . because the leading comrades in Spain failed Anarchism seems to be very faulty reasoning . . . the failure of one or several individuals can never take away from the depth and truth of an ideal."* [**Vision on Fire**, p. 299] This is even more the case when anarchists can point to anarchist theory and other examples of anarchism in action which fully followed anarchist ideas. That opponents of anarchism fail to mention these examples suggests their case against anarchism, based on the experience of the CNT in the Spanish Civil War, is deeply flawed.

Rather than show the failure of anarchism, the experience of the Spanish Revolution indicates the failure

of anarchists to apply their ideas in practice. Faced with extremely difficult circumstances, they compromised their ideas in the name of anti-fascist unity. Sadly, their compromises **confirmed** (rather than refuted) anarchist theory as they led to the defeat of both the revolution **and** the civil war.

I.8.12 Was the decision to collaborate imposed on the CNT's membership?

A few words have to be said about the development of the CNT and FAI post 19th of July. It is clear that the CNT and FAI changed in nature and were the not same organisations as they were **before** July 1936. Both organisations became more centralised and bureaucratic, with the membership excluded from many major decisions. As Peirats argues:

"In the CNT and among militant anarchists there had been a tradition of the most scrupulous respect for the deliberations and decisions of the assemblies, the grassroots of the federalist organisation. Those who held administrative office had been merely the mandatories of those decisions. The regular motions adopted by the National congresses spelled out to the Confederation and its representative committees ineluctable obligations of a basic and general nature incumbent upon very affiliated member regardless of locality or region. And the forming of such general motions was the direct responsibility of all of the unions by means of motions adopted at their respective general assemblies. Similarly, the Regional or Local Congresses would establish the guidelines of requirement and problems that obtained only at regional or local levels. In both instances, sovereignty resided always with the assemblies of workers whether in their unions or in their groups.

"This sense of rigorous, everyday federalist procedure was abruptly amended from the very outset of the revolutionary phase. . . This amendment of the norms of the organisation was explained away by reference to the exceptional turn of events, which required a greater agility of decisions and resolutions, which is to say a necessary departure from the circuitous procedures of federalist practice which operated from the bottom upwards." [The CNT in the Spanish Revolution, vol. 1, p. 213]

In other words, the CNT had become increasingly hierarchical, with the higher committees becoming transformed into executive bodies rather than administrative ones (*"it is safe to assert that the significant resolutions in the organisation were adopted by the committees, very rarely by the mass constituency. Certainly, circumstances required quick decisions from the organisation, and it was necessary to take precautions to prevent damaging leaks. These necessities tempted the committees to abandon the federalist procedures of the organisation."* [Jose Peirats, **Anarchists in the Spanish Revolution**, p. 188]).

Ironically, rather than the *"anarchist leaders"* of the CNT failing to *"seize power"* as Trotsky and his followers lament, they did -- **in their own organisations**. Such a development proved to be a disaster and re-enforced the anarchist critique against hierarchical and centralised organisations. The CNT higher

committees became isolated from the membership, pursued their own policies and compromised and paralysed the creative work being done by the rank and file -- as predicted in anarchist theory. However, be that as it may, as we will indicate below, it would be false to assert that these higher committees simply imposed the decision to collaborate on their memberships (as, for example, Vernon Richards seems to imply in his **Lessons of the Spanish Revolution**). While it **is** true that the committees presented many decisions as a **fait accompli** the rank-and-file of the C.N.T and F.A.I did not simply follow orders and ratify all decisions blindly.

In any revolutionary situation decisions have to be made fast and sometimes without consulting the base of the organisation. However, such decisions must be accountable to the membership who must discuss and ratify them (this was the policy within the CNT militias, for example). The experience of the CNT and FAI in countless strikes, insurrections and campaigns had proven the decentralised, federal structure was more than capable of pursuing the class war -- revolution is no exception as it is the class war in its most concentrated form. In other words, the organisational principles of the CNT and FAI were more than adequate for a revolutionary situation.

The centralising tendencies, therefore, cannot be blamed on the exception circumstances of the war. Rather, it is the policy of collaboration which explains them. Unlike the numerous strikes and revolts that occurred before July 19th, 1936, the CNT higher committees had started to work within the state structure. This, by its very nature, must generate hierarchical and centralising tendencies as those involved must adapt to the states basic structure and form. The violations of CNT policy flowed from the initial decision to compromise in the name of "*anti-fascist unity*" and a vicious circle developed -- each compromise pushed the CNT leadership further into the arms of the state, which increased hierarchical tendencies, which in turn isolated these higher committees of the CNT from the masses, which in turn encouraged a conciliatory policy by those committees.

This centralising and hierarchical tendency did not mean that the higher committees of the CNT simply imposed their will on the rest of the organisation. It is very clear that the decision to collaborate had, initially, the passive support of the majority of the CNT and FAI (probably because they thought the war would be over after a few weeks or months). This can be seen from various facts. As visiting French anarchist Sebastian Faure noted, while "*effective participation in central authority has had the approval of the majority within the unions and in the groups affiliated to the FAI, that decision has in many places encountered the opposition of a fairly substantial minority. Thus there has been no unanimity.*" [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 183]

In the words of Peirats:

"Were all of the militants of the same mind? . . . Excepting some vocal minorities which expressed their protests in their press organs and through committees, gatherings, plenums and assemblies, the dismal truth is that the bulk of the membership was in thrall to a certain fatalism which was itself a direct consequence of the tragic realities of the war." [Op. Cit., p. 181]

And:

"We have already seen how, on the economic plane, militant anarchism forged ahead, undaunted, with its work of transforming the economy. It is not to be doubted -- for to do so would have been to display ignorance of the psychology of libertarian rank and file of the CNT -- that a muffled contest, occasionally erupting at plenums and assemblies and manifest in some press organs broke out as soon as the backsliding began. In this connection, the body of opinion hostile to any possible deviation in tactics and principles was able to count throughout upon spirited champions." [Op. Cit., p. 210]

Thus, within the libertarian movement, there was a substantial minority who opposed the policy of collaboration and made their opinions known in various publications and meetings. While many (if not most) revolutionary anarchists volunteered for the militias and so were not active in their unions as before, there were various groups (such as Catalan Libertarian Youth, the Friends of Durruti, other FAI groups, and so on) which were opposed to collaboration and argued their case openly in the streets, collectives, organisational meetings and so on. Moreover, outside the libertarian movement the two tiny Trotskyist groups also argued against collaboration, as did sections of the POUM. Therefore it is impossible to state that the CNT membership were unaware of the arguments against the dominant policy. Also the Catalan CNT's higher committees, for example, after the May Days of 1937 could not get union assemblies or plenums to expel the Friends of Durruti nor to get them to withhold financial support for the Libertarian Youth, who opposed collaboration vigorously in their publications, nor get them to call upon various groups of workers to stop distributing opposition publications in the public transit system or with the daily milk. [Abe Bluestein in Gomez Casas's **Anarchist Organisation: The History of the FAI**, p. 10]

This suggests that in spite of centralising tendencies, the higher committees of the CNT were still subject to some degree of popular influence and control and should not be seen as having dictatorial powers over the organisation. While many decisions **were** presented as **fait accompli** to the union plenums (often called by the committees at short notice), in violation of past CNT procedures, the plenums could not be railroaded into any ratifying any decision the committees wanted. The objective circumstances associated with the war against Franco and fascism convinced most C.N.T. members and libertarian activists that working with other parties and unions within the state was the only feasible option. To do otherwise was to weaken the war effort by provoking another Civil War in the anti-Franco camp. While such a policy did not work (when it was strong enough the Republican state did start a civil war against the C.N.T. which gutted the struggle against fascism) it cannot be argued that it was imposed upon the membership nor that they did not hear opposing positions. Sadly, the call for anti-fascist unity dominated the minds of the libertarian movement.

In the early stages, the majority of rank-and-file militants believed that the war would be over in a matter of weeks. After all, a few days had been sufficient to rout the army in Barcelona and other industrial centres. This inclined them to, firstly, tolerate (indeed, support) the collaboration of the CNT with the "*Central Committee of Anti-Fascist Militias*" and, secondly, to start expropriating capitalism in the belief

that the revolution would soon be back on track (the opportunity to start introducing anarchist ideas was simply too good to waste, regardless of the wishes of the CNT Plenum). They believed that the revolution and libertarian communism, as debated and adopted by the CNT's Zaragoza Congress of May that year, was an inseparable aspect of the struggle against economic and social oppression and proceeded appropriately. The ignoring of the state, rather than its destruction, was seen as a short-term compromise, soon to be corrected. Sadly, they were wrong -- collaboration had a logic all its own, one which got worse as the war dragged on (and soon it was too late).

Which, we must note indicates the superficial nature of most Marxist attacks on anarchism using the CNT as the key evidence. After all, it was the anarchists and anarchist influenced members of the CNT who organised the collectives, militias and started the transformation of Spanish society. They did so inspired by anarchism and in an anarchist way. To praise their actions, while attacking "anarchism", shows a lack of logic -- it was anarchism which inspired these actions. Indeed, these actions have more in common with anarchist ideas than the actions and rationales of the CNT leadership. Thus, to attack "anarchism" by pointing to the anti-anarchist actions of a few leaders while ignoring the anarchist actions of the majority is flawed.

Therefore, to summarise, it is clear that while the internal structure of the CNT was undermined and authoritarian tendencies increased by its collaboration with the state, the CNT was not transformed into a mere appendage to the higher committees of the organisation. The union plenums could and did reject the calls made by the leadership of the CNT. Support for "*anti-fascist unity*" was widespread among the CNT membership (in spite of the activities and arguments of large minority of anarchists) and was reflected in the policy of collaboration pursued by the organisation. While the CNT higher committees were transformed into a bureaucratic leadership, increasingly isolated from the rank and file, it cannot be argued that their power was absolute nor totally at odds with the wishes of the membership. Ironically, but unsurprisingly, the divergences from the C.N.T's previous libertarian organisational principles confirmed anarchist theory and became a drag on the revolution and a factor in its defeat.

As we argued in [section I.8.11](#), the initial compromise with the state, the initial betrayal of anarchist theory and CNT policy, contained all the rest. Moreover, rather than refute anarchism, the experience of the CNT after it had rejected anarchist theory confirmed the principles of anarchism -- centralised, hierarchical organisations hindered and ultimately destroyed the revolution.

The experience of the C.N.T and F.A.I suggests that those, like Leninists, who argue for **more** centralisation and for "*democratic*" hierarchical structures have refused to understand, let alone learn from, history. The increased centralisation within the C.N.T aided and empowered the leadership (a minority) and disempowered the membership (the majority). Rather than federalism hindering the revolution, it, as always, was centralism which did so.

Therefore, in spite of a sizeable minority of anarchists **within** the C.N.T and F.A.I arguing against the dominate policy of "*anti-fascist unity*" and political collaboration, this policy was basically agreed to by the C.N.T membership and was not imposed upon them. The membership of the C.N.T could, and did,

reject suggestions of the leadership and so, in spite of the centralisation of power that occurred in the C.N.T due to the policy of collaboration, it cannot be argued that this policy was alien to the wishes of the rank-and-file.

I.8.13 What political lessons were learned from the revolution?

The most important political lesson learned from the Spanish Revolution is that a revolution cannot compromise with existing power structures. In this, it just confirmed anarchist theory.

The Spanish Revolution is a clear example of the old maxim, "*those who only make half a revolution dig their own graves.*" Essentially, the most important political lesson of the Spanish Revolution is that a social revolution will only succeed if it follows an anarchist path and does not seek to compromise in the name of fighting a "*greater evil.*" As Kropotkin put it, a "*revolution that stops half-way is sure to be soon defeated.*" [**The Great French Revolution**, vol. 2, p. 553]

On the 20th of July, after the fascist coup had been defeated in Barcelona, the C.N.T. sent a delegation of its members to meet the leader of the Catalan Government. A plenum of C.N.T union shop stewards, in the light of the fascist coup, agreed that libertarian communism would be "*put off*" until Franco had been defeated (the rank and file ignored them and collectivised their workplaces). They organised a delegation to visit the Catalan president to discuss the situation:

*"The delegation. . . was intransigent . . . Either Companys [the Catalan president] must accept the creation of a Central Committee [of Anti-Fascist Militias] as the ruling organisation or the C.N.T. would **consult the rank and file and expose the real situation to the workers.** Companys backed down."* [Abel Paz, **Durruti: the people Armed**, p. 216, our emphasis]

The C.N.T committee members used their new-found influence in the eyes of Spain to unite with the leaders of other organisations/parties but not the rank and file. This process led to the creation of the "*Central Committee of Anti-Fascist Militias*", in which political parties as well as labour unions were represented. This committee was not made up of mandated delegates from workplaces, communities or barricades, but of representatives of existing organisations, nominated by committees. Instead of a genuine confederal body (made up of mandated delegates from workplace, militia and neighbourhood assemblies) the C.N.T. created a body which was not accountable to, nor could reflect the ideas of, ordinary working class people expressed in their assemblies. The state and government was not abolished by self-management, only ignored.

This first betrayal of anarchist principles led to all the rest, and so to the defeat of the revolution and the civil war. As Emma Goldman argued, the Spanish anarchists had "*come to realise that once they went into the so-called united-front, they could do nothing else but go further. In other words, the one mistake, the one wrong step inevitably led to others as it always does. I am more than ever convinced that if the comrades had remained firm on their own grounds they would have remained stronger than*

they are now. But I repeat, once they had made common cause for the period of the anti-Fascist war, they were driven by the logic of events to go further." [**Vision on Fire**, pp. 100-1]

The most obvious problem, of course, was that collaboration with the state ensured that a federation of workers' associations could not be created to co-ordinate the struggle against fascism and the social revolution. As Stuart Christie argues, "*[b]y imposing their leadership from above, these partisan committees suffocated the mushrooming popular autonomous revolutionary centres -- the grass-roots factory and local revolutionary committees -- and prevented them from proving themselves as an efficient and viable means of co-ordinating communications, defence and provisioning. They also prevented the Local Revolutionary committees from integrating with each other to form a regional, provincial and national federal network which would facilitate the revolutionary task of social and economic reconstruction.*" [**We, the Anarchists!**, pp. 99-100] Without such a federation, it was only a matter of time before the C.N.T joined the bourgeois government.

Rather than being an example of "*dual power*" as many Trotskyists maintain, the "*Central Committee of Anti-Fascist Militias*" created on July 20th, 1936, was, in fact, an organ of class collaboration and a handicap to the revolution. Stuart Christie was correct to call it an "*artificial and hybrid creation,*" a "*compromise, an artificial political solution, an officially sanctioned appendage of the Generalidad government*" which "*drew the CNT-FAI leadership inexorably into the State apparatus, until then its principal enemy.*" [**Op. Cit.**, p. 105] Only a true federation of delegates from the fields, factories and workplaces could have been the framework of a true organisation of (to use Bakunin's expression) "*the social (and, by consequence, anti-political) power of the working masses.*" [**Michael Bakunin: Selected Writings**, pp. 197-8]

Therefore, the C.N.T forgot a basic principle of anarchism, namely "*the destruction . . . of the States.*" Instead, like the Paris Commune, the C.N.T thought that "*in order to combat . . . reaction, they had to organise themselves in reactionary Jacobin fashion, forgetting or sacrificing what they themselves knew were the first conditions of revolutionary socialism.*" The real basis of the revolution, the basic principle of anarchism, was that the "*future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal.*" [Bakunin, **Op. Cit.**, p. 198, p. 202 and p. 204] By not doing this, by working in a top-down compromise body rather than creating a federation of workers' councils, the C.N.T leadership could not help eventually sacrificing the revolution in favour of the war.

Of course, if a full plenum of CNT unions and **barrios** defence committees, with delegates invited from UGT and unorganised workplaces, had taken place there is no guarantee that the decision reached would have been in line with anarchist theory. The feelings for antifascist unity were strong. However, the decision would have been fully discussed by the rank and file of the union, under the influence of the revolutionary anarchists who were later to join the militias and leave for the front. It is likely, given the wave of collectivisation and what happened in Aragon, that the decision would have been different and the first step would have made to turn this plenum into the basis of a free federation of workers associations -- i.e. the framework of an anarchist and self-managed society -- which could have smashed

the state and ensured no other appeared to take its place.

The basic idea of anarchism, the need to create a federation of workers councils, was ignored. In the name of "*antifascist*" unity, the C.N.T worked with parties and classes which hated both them and the revolution. In the words of Sam Dolgoff "*both before and after July 19th, an unwavering determination to crush the revolutionary movement was the leitmotif behind the policies of the Republican government; irrespective of the party in power.*" [**The Anarchist Collectives**, p. 40] Without creating a means to organise the "*social power*" of the working class, the CNT was defenceless against these parties once the state had re-organised itself.

To justify their collaboration, the leaders of the C.N.T-F.A.I argued that not collaborating would have lead to a civil war within the civil war, so allowing Franco easy victory. In practice, while paying lip service to the revolution, the Communists and republicans attacked the collectives, murdered anarchists, cut supplies to collectivised industries (even **war** industries) and disbanded the anarchist militias after refusing to give them weapons and ammunition (preferring to arm the Civil Guard in the rearguard in order to crush the C.N.T. and so the revolution). By collaborating, a civil war was not avoided. One occurred anyway, with the working class as its victims, as soon as the state felt strong enough.

Garcia Oliver (the first ever, and hopefully last, "anarchist" minister of justice) stated in 1937 that collaboration was necessary and that the C.N.T. had "*renounc[ed] revolutionary totalitarianism, which would lead to the strangulation of the revolution by anarchist and Confederal [C.N.T.] dictatorship. We had confidence in the word and in the person of a Catalan democrat*" Companys (who had in the past jailed anarchists). Which means that only by working with the state, politicians and capitalists can an anarchist revolution be truly libertarian! Furthermore, in the words of Vernon Richards:

"This argument contains . . . two fundamental mistakes, which many of the leaders of the CNT-FAI have since recognised, but for which there can be no excuse, since they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT. Firstly, that an armed struggle against fascism or any other form of reaction could be waged more successfully within the framework of the State and subordinating all else, including the transformation of the economic and social structure of the country, to winning the war. Secondly, that it was essential, and possible, to collaborate with political parties -- that is politicians -- honestly and sincerely, and at a time when power was in the hands of the two workers organisations. . .

"All the initiative . . . was in the hands of the workers. The politicians were like generals without armies floundering in a desert of futility. Collaboration with them could not, by any stretch of the imagination, strengthen resistance to Franco. On the contrary, it was clear that collaboration with political parties meant the recreation of governmental institutions and the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives were also transferred to a governing

hierarchy, and this could not have other than an adverse effect on the morale of the revolutionary fighters." [Lessons of the Spanish Revolution, p. 42]

The dilemma of "*anarchist dictatorship*" or "*collaboration*" raised in 1937 was fundamentally wrong. It was never a case of banning parties, and other organisations under an anarchist system, far from it. Full rights of free speech, organisation and so on should have existed for all but the parties would only have as much influence as they exerted in union, workplace, community and militia assemblies, as should be the case! "*Collaboration*" yes, but within the rank and file and within organisations organised in an anarchist manner. Anarchism does not respect the "freedom" to be a boss or politician.

In his history of the F.A.I., Juan Gomaz Casas (an active F.A.I. member in 1936) makes this clear:

"How else could libertarian communism be brought about? It would always signify dissolution of the old parties dedicated to the idea of power, or at least make it impossible for them to pursue their politics aimed at seizure of power. There will always be pockets of opposition to new experiences and therefore resistance to joining 'the spontaneity of the unanimous masses.' In addition, the masses would have complete freedom of expression in the unions and in the economic organisations of the revolution as well as their political organisations in the district and communities." [Anarchist Organisation: the History of the F.A.I., p. 188f]

Instead of this "*collaboration*" from the bottom up, by means of a federation of workers' associations, community assemblies and militia columns as argued for by anarchists from Bakunin onwards, the C.N.T. and F.A.I. committees favoured "*collaboration*" from the top down. The leaders ignored the state and co-operated with other trade unions officials as well as political parties in the **Central Committee of Anti-Fascist Militias**. In other words, they ignored their political ideas in favour of a united front against what they considered the greater evil, namely fascism. This inevitably led the way to counter-revolution, the destruction of the militias and collectives, as they was no means by which these groups could co-ordinate their activities independently of the state.

In particular, the continued existence of the state ensured that economic confederalism between collectives (i.e. extending the revolution under the direction of the syndicates) could not develop naturally nor be developed far enough in all places. Due to the political compromises of the C.N.T. the tendencies to co-ordination and mutual aid could not develop freely (see [next section](#)).

It is clear that the defeat in Spain was due to a failure not of anarchist theory and tactics but a failure of anarchists to **apply** their theory and tactics. Instead of destroying the state, the C.N.T.-F.A.I. ignored it. For a revolution to be successful it needs to create organisations which can effectively replace the state and the market; that is, to create a widespread libertarian organisation for social and economic decision-making through which working class people can start to set their own agendas. Only by going this route can the state and capitalism be effectively smashed.

In building the new world we must destroy the old one. Revolutions are authoritarian by their very nature, but only in respect to structures and social relations which promote injustice, hierarchy and inequality. It is not "*authoritarian*" to destroy authority and not tyrannical to dethrone tyrants! Revolutions, above all else, must be libertarian in respect to the oppressed. That is, they must develop structures that involve the great majority of the population, who have previously been excluded from decision-making about social and economic issues. As such, a revolution is the most **libertarian** thing ever.

As the **Friends of Durruti** argued a "*revolution requires the absolute domination of the workers' organisations.*" ["*The Friends of Durruti accuse*", from **Class War on the Home Front**, p. 34] Only this, the creation of viable anarchist social organisations, can ensure that the state and capitalism can be destroyed and replaced with a just system based on liberty, equality and solidarity. Just as Bakunin, Kropotkin and a host of other anarchist thinkers had argued decades previously.

Thus the most important lesson gained from the Spanish Revolution is simply the correctness of anarchist theory on the need to organise the "*social power*" of the working class by a free federation of workers associations to destroy the state. Without this, no revolution can be lasting. As Gomez Casas correctly argues, "*if instead of condemning that experience [of collaboration], the movement continues to look for excuses for it, the same course will be repeated in the future . . . exceptional circumstances will again put . . . anarchism on [its] knees before the State.*" [**Op. Cit.**, p. 251]

The second important lesson is on the nature of anti-fascism. The C.N.T. leadership, along with many (if not most) of the rank-and-file, were totally blinded by the question of anti-fascist unity, leading them to support a "*democratic*" state against a "*fascist*" one. While the basis of a new world was being created around them by the working class, inspiring the fight against fascism, the C.N.T. leaders collaborated with the system that spawns fascism. Indeed, while the anti-fascist feelings of the CNT leadership were sincere, the same cannot be said of their "*allies*" (who seemed happier attacking the gains of the semi-revolution than fighting fascism). As the Friends of Durruti make clear, "*Democracy defeated the Spanish people, not Fascism.*" [**Class War on the Home Front**, p. 30]

To be opposed to fascism is not enough, you also have to be anti-capitalist. As Durruti stressed, "*[n]o government in the world fights fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to fascism to maintain itself.*" [quoted Vernon Richards, **Op. Cit.**, p. 193f]

In Spain, anti-fascism destroyed the revolution, not fascism. As the Scottish Anarchist Ethal McDonald argued at the time, "*Fascism is not something new, some new force of evil opposed to society, but is only the old enemy, Capitalism, under a new and fearful sounding name . . . Anti-Fascism is the new slogan by which the working class is being betrayed.*" [**Workers Free Press**, Oct 1937]

Thirdly, the argument of the CNT that Libertarian Communism can wait until after the war was a false one. Fascism can only be defeated by ending the system that spawned it (i.e. capitalism). In addition, in terms of morale and inspiration, the struggle against fascism could only be effective if it was also a

struggle **for** something better -- namely a free society. To fight fascism for a capitalist democracy which had repressed the working class would hardly inspire those at the front. Similarly, the only hope for workers' self-management was to push the revolution as far as possible, i.e. to introduce libertarian communism while fighting fascism. The idea of waiting for libertarian communism ultimately meant sacrificing it for the war effort.

Fourthly, the role of anarchists in a social revolution is to always encourage organisation "*from below*" (to use one of Bakunin's favourite expressions), revolutionary organisations which can effectively smash the state. Bakunin himself argued (as noted above) in favour of workers' councils, complemented by community assemblies (the federation of the barricades) and a self-managed militia. This model is still applicable today and was successfully applied in Aragon by the CNT.

Therefore, the political lessons gained from the experience of the C.N.T come as no surprise. They, in general, confirm anarchist theory. As Bakunin argued, no revolution is possible unless the state is smashed, capital expropriated and a free federation of workers' associations created as the framework of libertarian socialism. Rather than refuting anarchism, the experience of the Spanish Revolution confirms it.

I.8.14 What economic lessons were learned from the revolution?

The most important lesson from the revolution is the fact that ordinary people took over the management of industry and did an amazing job of keeping (and improving!) production in the face of the direst circumstances. Not only did workers create a war industry from almost nothing in Catalonia, they also improved working conditions and innovated with new techniques and processes. The Spanish Revolution shows that self-management is possible and that the constructive powers of ordinary people inspired by an ideal can transform society.

From the point of view of individual freedom, it's clear that self-management allowed previously marginalised people to take an active part in the decisions that affected them. Egalitarian organisations provided the framework for a massive increase in participation and individual self-government, which expressed itself in the extensive innovations carried out by the Collectives. The Collectives indicate, in Stirner's words, that "*[o]nly in the union can you assert yourself as unique, because the union does not possess you, but you possess it or make it of use to you.*" [**The Ego and Its Own**, p. 312] A fact Emma Goldman confirmed from her visits to collectives and discussions with their members:

"I was especially impressed with the replies to my questions as to what actually had the workers gained by the collectivisation . . . the answer always was, first, greater freedom. And only secondly, more wages and less time of work. In two years in Russia [1920-21] I never heard any workers express this idea of greater freedom." [**Vision on Fire**, p. 62]

As predicted in anarchist theory, and borne out by actual experience, there exists large untapped reserves of energy and initiative in the ordinary person which self-management can call forth. The collectives proved Kropotkin's argument that co-operative work is more productive and that if the economists wish to prove *"their thesis in favour of **private property** against all other forms of **possession**, should not the economists demonstrate that under the form of communal property land never produces such rich harvests as when the possession is private. But this they could not prove; in fact, it is the contrary that has been observed."* [**The Conquest of Bread**, p. 146]

Therefore, five important lessons from the actual experience of a libertarian socialist economy can be derived:

Firstly, that an anarchist society cannot be created overnight, but is a product of many different influences as well as the objective conditions. In this the anarchist collectives confirmed the ideas of anarchist thinkers like Bakunin and Kropotkin (see [section I.2](#)).

The lesson from every revolution is that the mistakes made in the process of liberation by people themselves are always minor compared to the results of creating institutions **for** people. The Spanish Revolution is a clear example of this, with the *"collectivisation decree"* causing more harm than good. Luckily, the Spanish anarchists recognised the importance of having the freedom to make mistakes, as can be seen by the many different forms of collectives and federations tried.

The actual process in Spain towards industrial co-ordination and so socialisation was dependent on the wishes of the workers involved -- as would be expected in a true social revolution. As Bakunin argued, the *"revolution should not only be made for the people's sake; it should also be made by the people."* [**No Gods, No Masters**, vol. 1, p. 141] The problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly -- and this implies anarchism, not centralisation or state control/ownership. The experience of the collectives in Spain supports this basic idea of anarchism.

Secondly, that self-management allowed a massive increase in innovation and new ideas.

The Spanish Revolution is clear proof of the anarchist case against hierarchy and validates Isaac Puente words that in *"a free collective each benefits from accumulated knowledge and specialised experiences of all, and vice versa. There is a reciprocal relationship wherein information is in continuous circulation."* [cited in **The Anarchist Collectives**, p. 32]

Thirdly, the importance of decentralisation of management.

The woodworkers' union experience indicates that when an industry becomes centralised, the administration of industry becomes constantly merged in fewer hands which leads to ordinary workers being marginalised. This can happen even in democratically run industries and soon result in apathy

developing within it. This was predicted by Kropotkin and other anarchist theorists (and by many F.A.I. members in Spain at the time). While undoubtedly better than capitalist hierarchy, such democratically run industries are only close approximations to anarchist ideas of self-management. Importantly, however, the collectivisation experiments also indicate that co-operation need not imply centralisation (as can be seen from the Badelona collectives).

Fourthly, the importance of building links of solidarity between workplaces as soon as possible.

While the importance of starting production after the fascist uprising made attempts at co-ordination seem of secondary importance to the collectives, the competition that initially occurred between workplaces helped the state to undermine self-management. Because there was no People's Bank or other communistic body to co-ordinate credit and production, state control of credit and the gold reserves made it easier for the Republican state (through its monopoly of credit) to undermine the revolution and control the collectives and (effectively) nationalise them in time (Durruti and a few others planned to seize the gold reserves but were advised not to by De Santillan).

This attack on the revolution started when the Catalan State issued a decree legalising (and so controlling) the collectives in October 1936 (the famous "*Collectivisation Decree*"). The counter-revolution also withheld funds for collectivised industries, even war industries, until they agreed to come under state control. The industrial organisation created by this decree was a compromise between anarchist ideas and those of other parties (particularly the communists) and in the words of Gaston Leval, "*the decree had the baneful effect of preventing the workers' syndicates from extending their gains. It set back the revolution in industry.*" [**The Anarchist Collectives**, p. 54]

And lastly, that an economic revolution can only succeed if the existing state is destroyed. As Kropotkin argued, "*a new form of economic organisation will necessarily require a new form of political structure*" -- capitalism needs the state, socialism needs anarchy. [**Kropotkin's Revolutionary Pamphlets**, p. 181] Without the new political structure, the new economic organisation cannot develop to its full potential.

Due to the failure to consolidate the revolution **politically**, it was lost **economically**. The decree "*legalising collectivisation*" "*distorted everything right from the start*" [**Collectives in the Spanish Revolution**, p. 227] and helped undermine the revolution by ensuring that the mutualism of the collectives did not develop freely into libertarian communism ("*The collectives lost the economic freedom they had won at the beginning*" due to the decree, as one participant put it. [Ronald Fraser, **Blood of Spain**, p. 230]).

As Fraser notes, it "*was doubtful that the C.N.T. had seriously envisaged collectivisation of industry. . . before this time.*" [**Op. Cit.**, p. 212] C.N.T. policy was opposed to the collectivisation decree. As an eyewitness pointed out, the C.N.T.'s "*policy was thus not the same as that pursued by the decree.*" [**Op. Cit.**, p. 213] Indeed, leading anarchists like Abad de Santillan opposed it and urged people to ignore it:

"I was an enemy of the decree because I considered it premature . . . when I became

councillor, I had no intention of taking into account or carrying out the decree: I intended to allow our great people to carry on the task as they best saw fit, according to their own inspiration." [Op. Cit., p. 212]

However, with the revolution lost politically, the C.N.T. was soon forced to compromise and support the decree (the C.N.T. did propose more libertarian forms of co-ordination between workplaces but these were undermined by the state). A lack of effective mutual aid organisations allowed the state to gain power over the collectives and so undermine and destroy self-management. Working class control over the economy (important as it is) does not automatically destroy the state. In other words, the economic aspects of the revolution cannot be considered in isolation from its political ones.

However, these points do not diminish the successes of the Spanish revolution. As Gaston Leval argued, *"in spite of these shortcomings [caused lack of complete socialisation] . . . the important fact is that the factories went on working, the workshops and works produced without the owners, capitalists, shareholders and without high management executives."* [Collectives in the Spanish Revolution, p. 228]

Beyond doubt, these months of economic liberty in Spain show not only that libertarian socialism **works** and that working class people can manage and run society ourselves but that it can improve the quality of life and increase freedom. Given the time and breathing space, the experiment would undoubtedly have ironed out its problems. Even in the very difficult environment of a civil war (and with resistance of almost all other parties and unions) the workers and peasants of Spain showed that a better society is possible. They gave a concrete example of what was previously just a vision, a world which was more humane, more free, more equitable and more civilised than that run by capitalists, managers, politicians and bureaucrats.

Marxists and Spanish Anarchism

In this appendix of our FAQ we discuss and reply to various analyses of Spanish anarchism put forward by Marxists, particularly Marxist-Leninists of various shades. The history and politics of Spanish Anarchism is not well known in many circles, particularly Marxist ones, and the various misrepresentations and distortions that Marxists have spread about that history and politics are many. This appendix is an attempt to put the record straight with regards the Spanish Anarchist movement and point out the errors associated with the standard Marxist accounts of that movement, its politics and its history.

Hopefully this appendix will go some way towards making Marxists (and others) investigate the actual facts of anarchism and Spanish anarchist history rather than depending on inaccurate secondary material (usually written by their comrades).

Part of this essay is based on the article "*Trotskyist Lies on Anarchism*" which appeared in **Black Flag** issue no. 211 and Tom Wetzel's article **Workers' Power and the Spanish Revolution**.

1. Were the Spanish Anarchists "*Primitive Rebels*"?

The thesis that the Spanish Anarchists were "*primitive rebels*," with a primitive understanding of the nature of revolution is a common one amongst Marxists. One of the main sources for this kind of argument is Eric Hobsbawm's **Primitive Rebels**, who was a member of the British Communist Party at the time. While the obvious Stalinist nature of the author may be thought enough to alert the intelligent of its political biases, its basic thesis is repeated by many Marxists.

Before discussing Hobsbawm in more detail, it would be useful to refute some of the more silly things so-called serious historians have asserted about Spanish Anarchism. Indeed, it would be hard to find another social or political movement which has been more misrepresented or its ideas and activities so distorted by historians whose attitudes seem more supported by ideological conviction rather than history or investigation of social life.

One of the most common descriptions of Spanish anarchism is that it was "*religious*" or "*millenarium*" in nature. Hobsbawm himself accepts this conceptualisation, along with historians and commentators like Gerald Brenan and Franz Brokenau (who, in fact, did state "*Anarchism is a religious movement*"). Such use of religion was largely due to the influence of Juan Diaz del Moral, a lawyer and historian who was also a landowner. As Jerome R. Mintz points out, "*according to Diaz del Moral, the moral and passionate obreros conscientes [conscious workers -- i.e. workers who considered themselves to be anarchists] absorbed in their pamphlets and newspapers were akin to frenzied believers in a new religion.*" [**The Anarchists of Casas Viejas**, p. 5f] However, such a perspective was formed by his class position and privileges which could not help but reflect them:

*"Diaz del Moral ascribed to the campesinos [of Andalusia] racial and cultural stereotypes that were common saws of his class. The sole cause for the waves of rural unrest, Diaz del Moral asserted, could be found in the psychology of the campesinos . . . He believed that the Andalusian field workers had inherited a Moorish tendency toward ecstasy and millenarianism that accounted for their attraction to anarchist teaching. Diaz del Moral was mystified by expressions of animosity directed toward him, but the workers considered him to be a *senorito*, a landowner who does not labour . . . Although he was both scholarly and sympathetic, Diaz del Moral could not comprehend the hunger and the desperation of the campesinos around him . . . To Diaz del Moral, campesino ignorance, passion, ecstasy, illusion, and depression, not having a legitimate basis in reality, could be found only in the roots of their racial heritage." [Op. Cit., pp. 5-6]*

Hence the "*religious*" nature of anarchism -- it was one of the ways an uncomprehending member of the middle-class could explain working class discontent and rebellion. Unfortunately, this "explanation" has become common place in history books (partly reflected academics class interest too and lack of understanding of working class interests, needs and hopes).

As Mintz argues, *"at first glance the religious model seems to make anarchism easier to understand, particularly in the absence of detailed observation and intimate contact. The model was, however, also used to serve the political ends of anarchism's opponents. Here the use of the terms 'religious' and 'millenarium' stamp anarchist goals as unrealistic and unattainable. Anarchism is thus dismissed as a viable solution to social ills."* He continues by arguing that the *"oversimplifications posited became serious distortions of anarchist belief and practice"* (as we shall see). [Op. Cit., p. 5 and p. 6]

Temma Kaplan's critique of the "*religious*" view is also worth mentioning. She argues that *"the millenarium theory is too mechanistic to explain the complex pattern of Andalusian anarchist activity. The millenarian argument, in portraying the Andalusian anarchists as fundamentally religious, overlooks their clear comprehension of the social sources of their oppression."* She concludes that *"the degree of organisation, not the religiosity of workers and the community, accounts for mass mobilisations carried on by the Andalusian anarchists at the end of the nineteenth century."* She also notes that the *"[i]n a secular age, the taint of religion is the taint of irrationality."* [**Anarchists of Andalusia: 1868-1903**, pp. 210-12 and p. 211] Thus, the Andalusian anarchists had a clear idea who their enemies were, namely the ruling class of the region. She also points out that, for all their revolutionary elan, the anarchists developed a rational strategy of revolution, channelling their energies into organising a trade union movement that could be used as a vehicle for social and economic change. Moreover, as well as a clear idea of how to change society they had a clear vision of what sort of society they desired -- one built around collective ownership and federations of workers' associations and communes.

Therefore the idea that anarchism can be explained in "*religious*" terms is fundamentally flawed. It basically assumes that the Spanish workers were fundamentally irrational, unable to comprehend the sources of their unhappiness nor able to define their own political goals and tactics and instead looked to

naive theories which reinforced their irrationalities. In actuality, like most people, they were sensible, intelligent human beings who believed in a better life and were willing to apply their ideas in their everyday life. That historians apply patronising attitudes towards them says more about the historians than the campesinos.

This uncomprehending attitude to historians can be seen from some of the more strange assertions they make against the Spanish Anarchists. Gerald Brenan, Eric Hobsbawm and Raymond Carr, for example, all maintained that there was a connection between anarchist strikes and sexual practices. Carr's description gives a flavour:

"Austere puritans, they sought to impose vegetarianism, sexual abstinence, and atheism on one of the most backward peasantries of Europe . . . Thus strikes were moments of exaltation as well as demands for better conditions; spontaneous and often disconnected they would bring, not only the abolition of piece-work, but 'the day,' so near at hand that sexual intercourse and alcohol were abandoned by enthusiasts till it should dawn." [Spain: 1808-1975, p. 444]

Mintz, an American anthropologist who actually stayed with the campesino's for a number of years after 1965, actually asked them about such claims. As he put it, the *"level-headed anarchists were astonished by such descriptions of supposed Spanish puritanism by over-enthusiastic historians."* [Op. Cit., p. 6] As one anarchist put it, *"[o]f course, without any work the husband couldn't provide any food at dinnertime, and so they were angry at each other, and she wouldn't have anything to do with him. In that sense, yes, there were no sexual relations."* [quoted, Op. Cit., p. 7]

Mintz traces the citations which allowed the historians to arrive at such ridiculous views to a French social historian, Angel Maraud, who observed that during the general strike of 1902 in Moron, marriages were postponed to after the promised division of the lands. As Mintz points out, *"as a Frenchman, Maraud undoubtedly assumed that everyone knew a formal wedding ceremony did not necessarily govern the sexual relations of courting couples."* [Op. Cit., p. 6f]

As for abstinence and puritanism, nothing could be further from the truth. As Mintz argues, the anarchists considered alcoholism as being *"responsible for much of the social malaise among many workers . . . Excessive drinking robbed the worker of his senses and deprived his family of food. Anarchist newspapers and pamphlets hammered out the evil of this vice."* However, *"[p]roscriptions were not of a puritanical order"* (and so there was no desire to "impose" such things on people) and quotes an anarchist who stated that *"coffee and tobacco were not prohibited, but one was advised against using them. Men were warned against going to a brothel. It was not a matter of morality but of hygiene."* As for vegetarianism, it *"attracted few adherents, even among the obreros conscientes."* [Op. Cit., pp. 86-7 and p. 88]

Moreover, academic mockery of anarchist attempts to combat alcoholism (and **not** alcohol as such) forgets the social context. Being academics they may not have experienced wage labour directly and so

do not realise the misery it can cause. People turn to drink simply because their jobs are so bad and seek escape from the drudgery of their everyday lives. As Bakunin argued, "*confined in their life like a prisoner in his prison, without horizon, without outlet . . . the people would have the singularly narrow souls and blunted instincts of the bourgeois if they did not feel a desire to escape; but of escape there are but three methods -- two chimerical and a third real. The first two are the dram-shop and the church, debauchery of the body or debauchery of the mind; the third is social revolution.*" [**God and the State**, p. 16] So to combat alcoholism was particularly important as many workers turned to alcohol as a means of escaping the misery of life under capitalism. Thus Bookchin:

"[T]o abstain from smoking, to live by high moral standards, and to especially adjure the consumption of alcohol was very important at the time. Spain was going through her own belated industrial revolution during the period of anarchist ascendancy with all its demoralising features. The collapse of morale among the proletariat, with rampant drunkenness, venereal disease, and the collapse of sanitary facilities, was the foremost problem which Spanish revolutionaries had to deal with . . . On this score, the Spanish anarchists were eminently successful. Few CNT workers, much less a committed anarchist, would have dared show up drunk at meetings or misbehave overtly with their comrades. If one considers the terrible working and living conditions of the period, alcoholism was not as serious a problem in Spain as it was in England during the industrial revolution." ["Introductory Essay", **The Anarchist Collectives**, Sam Dolgoff (ed.), pp. xix-xxf]

Mintz sums up by stating "*[c]ontrary to exaggerated accounts of anarchist zeal, most thoughtful obreros conscientes believed in moderation, not abstinence.*" [**Op. Cit.**, p. 88] Unfortunately Mintz's work, the product of years of living with and talking to the people actually involved in the movement, does not seem to have made much impact on the historians. Unsurprising, really, as history is rarely about the actions, ideas and hopes of working people.

As can be seen, historians seem to delight in misrepresenting the ideas and actions of the Spanish Anarchists. Sometimes, as just seen, the distortions are quite serious, extremely misleading and ensure that anarchism cannot be understood or viewed as a serious political theory (we can understand why Marxists historians would seek this). Sometimes they can be subtle as when Ronald Fraser states that at the CNT's Saragossa congress in 1936 "*the proposal to create a libertarian militia to crush a military uprising was rejected almost scornfully, in the name of traditional anti-militarism.*" [**Blood of Spain**, p. 101] Hugh Thomas makes the same claim, stating at "*there was no sign that anyone [at the congress] realised that there was a danger of fascism; and no agreement, in consequence, on the arming of militias, much less the organisation of a revolutionary army as suggested by Juan Garcia Oliver.*" [**The Spanish Civil War**, p. 181]

However, what Fraser and Thomas omit to tell the reader is that this motion "*was defeated by one favouring the idea of guerrilla warfare.*" [Peter Marshal, **Demanding the Impossible**, p. 460] The Saragossa resolution itself stated that a "*permanent army constitutes the greatest danger for the revolution . . . The armed people will be the best guarantee against all attempts to restore the destroyed*

regime by interior or exterior forces . . . Each Commune should have its arms and elements of defence." [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 64]

Fraser's and Hugh's omission is extremely serious -- it gives a radically false impression of anarchist politics. Their comments could lead a reader to think that anarchists, as Marxists claim, do not believe in defending a revolution. As can be seen from the actual resolutions of the Saragossa conference, this is not the case. Indeed, given that the congress was explicitly discussing, along with many other issues, the question of "*defence of the revolution*" their omission seriously distorts the CNT's position and anarchist theory. As seen, the congress supported the need to arm the people and to keep those arms under the control of the communes (as well as the role of "*Confederal Defence Forces*" and the efficient organisation of forces on a national level). Given that Thomas quotes extensively from the Saragossa resolution on libertarian communism we can only surmise that he forgot to read the section entitled "*Defence of the Revolution.*"

Hugh and Thomas omissions, however, ensure that anarchism is presented as an utopian and naive theory, unaware of the problems facing society. In reality, the opposite is the case -- the Spanish anarchists were well aware of the need to arm the people and resist counter-revolution and fascism by force. Regardless of Thomas' claims, it is clear that the CNT and FAI realised the danger of fascism existed and passed appropriate resolutions outlining how to organise an effective means of self-defence (indeed, as early as February 14 of that year, the CNT had issued a prophetic manifesto warning that right-wing elements were ready to provoke a military coup [Murray Bookchin, **The Spanish Anarchists**, p. 273]). To state otherwise, while quoting from the document that discusses the issue, must be considered a deliberate lie.

However, to return to our main point -- Eric Hobsbawm's thesis that the Spanish anarchists were an example of "*pre-political*" groups -- the "*primitive rebels*" of his title.

Essentially, Hobsbawm describes the Spanish Anarchists -- particularly the Andalusian anarchists -- as modern-day secular mystics who, like the millenarians of the Middle Ages, were guided by the irrational belief that it was possible to will profound social change. The actions of the Spanish anarchist movement, therefore, can be explained in terms of millenarian behaviour -- the belief that it was able to jump start to utopia via an act of will.

The Spanish farm and industrial workers, it is argued, were unable to grasp the complexities of the economic and political structures that dominated their lives and so were attracted to anarchism. According to Hobsbawm, anarchism is marked by "*theoretical primitivism*" and a primitive understanding of revolution and this explained why anarchism was popular with Spanish workers, particularly farm workers. According to Hobsbawm, anarchism told the workers that by spontaneously rising up together they could overthrow the forces of repression and create the new millennium.

Obviously, we cannot refute Hobsbawm's claims of anarchism's "*theoretical primitivism*" in this appendix, the reader is invited to consult the main FAQ. Moreover, we cannot stress more that

Hobsbawm's assertion that anarchists believe in spontaneous, overnight uprisings is false. Rather, we see revolution as a **process** in which day-to-day struggle and organisation play a key role -- it is not seen as occurring independently of the on-going class struggle or social evolution. While we discuss in depth the nature of an anarchist social revolution in [section J.7](#), we can present a few quotes by Bakunin to refute Hobsbawm's claim:

"Revolutions are not improvised. They are not made at will by individuals. They come about through the force of circumstances and are independent of any deliberate ill or conspiracy." [quoted by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 139]

"It is impossible to rouse people by artificial means. Popular revolutions are born by the actual force of events . . . It is impossible to bring about such a revolution artificially. It is not even possible to speed it up at all significantly . . . There are some periods in history when revolutions are quite simply impossible; there are other periods when they are inevitable." [**Michael Bakunin: Selected Writings**, p. 183]

As Brian Morris correctly argues, *"Bakunin denies that a social revolution could be made by the will of individuals, independent of social and economic circumstances. He was much less a voluntarist than his Marxist critics make out . . . he was . . . aware that the social revolution would be a long process that may take many years for its realisation."* [**Bakunin: The Philosophy of Freedom**, pp. 138-9] To aid the process of social revolution, Bakunin supported the need for *"pioneering groups or associations of advanced workers who were willing to initiate this great movement of self-emancipation."* However, more is needed -- namely popular working class organisations -- *"what is the organisation of the masses? . . . It is the organisation by professions and trades . . . The organisation of the trade sections . . . bear in themselves the living seed of the new society which is to replace the old world. They are creating not only the ideas but also the facts of the future itself."* [**Bakunin on Anarchism**, p. 252 and p. 255]

Therefore, Bakunin saw revolution as a process which starts with day-to-day struggle and creation of labour unions to organise that struggle. As he put it himself:

*"What policy should the International [Workers' Association] follow during th[e] somewhat extended time period that separates us from this terrible social revolution . . . the International will give labour unrest in all countries an **essentially economic** character, with the aim of reducing working hours and increasing salary, by means of the **association of the working masses** . . . It will [also] propagandise its principles . . . Lastly, the International will expand and organise across frontiers of all countries, so that when the revolution -- brought about by the force of circumstances -- breaks out, the International will be a real force and will know what it has to do. Then it will be able to take the revolution into its own hands and give it a direction that will benefit the people: an earnest international organisation of workers' associations from all countries, capable of replacing this departing world of States and bourgeoisie."* [**The Basic Bakunin**, pp.

109-10]

However, while quoting Bakunin refutes part of his thesis, Hobsbawm does base his case on some actual events of Spanish Anarchist history. Therefore we need to look at these cases and show how he gets these wrong. Without an empirical basis, his case obviously falls even without quotes by Bakunin. Luckily the important examples he uses have been analysed by people without the ideological blinkers inherent in Leninism.

While we shall concentrate on just two cases -- Casa Viejas in 1933 and the Jerez rising of 1892 -- a few general points should be mentioned. As Jerome Mintz notes, Hobsbawms' *"account is based primarily on a preconceived evolutionary model of political development rather than on data gathered in field research. The model scales labour movements in accord with their progress toward mass parties and central authority. In short, he explains how anarchosyndicalists were presumed to act rather than what actually took place, and the uprising at Casa Viejas was used to prove an already established point of view. Unfortunately, his evolutionary model misled him on virtually every point."* [Op. Cit., p. 271] We should also note his "model" is essentially Marxist ideology -- namely, Marx's assertion that his aim for mass political parties expressed the interests of the working class and all other visions were the products of sectarians. Mintz also points out that Hobsbawm does not live up to his own model:

"While Hobsbawm's theoretical model is evolutionary, in his own treatment anarchism is often regarded as unchanging from one decade to the other. In his text, attitudes and beliefs of 1903-5, 1918-20, 1933, and 1936 are lumped together or considered interchangeable. Of course during these decades the anarchosyndicalists had developed their programs and the individuals involved had become more experienced." [Op. Cit., p. 271f]

Hobsbawm believed that Casas Viejas was the classic "anarchist" uprising -- *"utopian, millenarian, apocalyptic, as all witnesses agree it to have been."* [Primitive Rebels, p. 90] As Mintz states, *"the facts prove otherwise. Casas Viejas rose not in a frenzy of blind millenarianism but in response to a call for a nation-wide revolutionary strike. The insurrection of January 1933 was hatched by faistas [members of the FAI] in Barcelona and was to be fought primarily there and in other urban centres. The uprisings in the countryside would be diversionary and designed to keep the civil guard from shifting reinforcements. The faista plot was then fed by intensive newspaper propaganda, by travelling orators, and by actions undertaken by the [CNT] defence committees. Representatives of the defence committees from Casas Viejas and Medina had received instructions at a regional meeting held days before. On January 11, the anarchosyndicalists of Casas Viejas believed that they were joining their companeros who had already been at the barricades since January 8."* [Op. Cit., p. 272]

Hobsbawm argued that the uprising occurred in accordance with an established economic pattern:

"Economic conditions naturally determined the timing and periodicity of the revolutionary outbreaks -- for instance, social movements tended to reach a peak intensity during the

worse months of the year -- January to March, when farm labourers have least work (the march on Jerez in 1892 and the rising of Casas Viejas in 1933 both occurred early in January), March-July, when the proceeding harvest has been exhausted and times are lean." [Op. Cit., p. 79]

Mintz states the obvious:

"In reality, most agricultural strikes took place in May and June, the period of the harvest and the only time of the year when the campesinos had any leverage against the landowners. The uprising at Casas Viejas occurred in January precisely because it was not an agricultural strike. The timing of the insurrection, hurriedly called to coincide with a planned railway strike that would make it difficult for the government to shift its forces, was determined by strategic rather than economic considerations." [Op. Cit., p. 273]

As for the revolt itself, Hobsbawm asserts that:

"Secure from the outside world, [the men] put up the red and black flag of anarchy and set about dividing the land. They made no attempt to spread the movement or kill anyone." [Op. Cit., p. 274]

Which, as Mintz clearly shows, was nonsense:

"As is already evident, rather than securing themselves from the rest of world, the uprising at Casas Viejas was a pathetic attempt to join in an ill-fated national insurrection. With regard to his second point, there was neither the time nor the opportunity to 'set about dividing the land.' The men were scattered in various locations guarding roads and paths leading to the town. There were no meetings or discussions during this brief period of control. Only a few hours separated the shooting at the barracks and the entrance of the small [government] rescue force from Alcala. Contrary to Hobsbawm's description of peaceful enterprise, at the outset the anarchists surrounding the barracks had fired on the civil guards, mortally wounding two men." [Op. Cit., p. 274]

As can be seen, Hobsbawm was totally wrong about the uprising itself and so it cannot be used as evidence for his thesis. On other, less key issues, he was equally wrong. Mintz gives an excellent summary:

"Since kinship is a key feature in 'primitive' societies, according to Hobsbawm, it was a major factor in the leadership of the sindicato [union] in Casas Viejas.

"There is no evidence that kinship had anything to do with leadership in the anarchist movement in Casa Viejas or anywhere else. The reverse would be closer to the truth.

Since the anarchists expressed belief in universal brotherhood, kinship ties were often undermined. In times of strike or in carrying out any decision of the collective membership, obreros conscientes sometimes had to act counter to their kinship demands in order to keep faith with the movement and with their companeros.

"Hobsbawm's specific examples are unfortunately based in part on errors of fact. . .

"Hobsbawm's model [also] requires a charismatic leader. Accordingly, the inspired leader of the uprising is said to be 'old Curro Cruz ('Six Fingers') who issued the call for revolution . . . '

[. . .]

"This celebration of Seisdedo's role ['Six Fingers'], however, ignores the unanimous view of townspeople of every class and political persuasion, who assert that the old man was apolitical and had nothing to do with the uprising . . . every observer and participant in the uprising agrees that Seisdedos was not the leader and was never anything other than a virtuous charcoal burner with but a slight interest in anarchosyndicalism.

[. . .]

"Should the role of charismatic leader be given to someone else in the town? This was not a case of mistaken identity. No single person in Casas Viejas could lay claim to dominating the hearts and minds of the men. . . The sindicato was governed by a junta. Among the cast of characters there is no sign of charismatic leadership . . ." [Op. Cit., pp. 274-6]

Mintz sums up by stating *"Hobsbawm's adherence to a model, and the accumulation of misinformation, led him away from the essential conflicts underlying the tragedy and from the reality of the people who participated in it."* [Op. Cit., p. 276]

The Jerez uprising of 1892 also fails to provide Hobsbawm with any empirical evidence to support his claims. Indeed, as in Casas Viejas, the evidence actually works against him. The actual events of the uprising are as follows. Just before midnight of 8th January 1892, several hundred workers entered the town of Jerez crying *"Long live the revolution! Long live Anarchy!"* Armed with only rocks, sticks, scythes and other farm equipment, they marched toward the city jail with the evident intention of releasing its prisoners -- who included many political prisoners, victims of the government's recent anti-anarchist campaign. A few people were killed and the uprising dispersed by a regiment of mounted troops.

Hobsbawm claims this revolt as evidence for his *"primitive rebels"* thesis. As historian George R. Esenwein argues:

"[T]he Jerez incident cannot be explained in terms of this model. What the millenarian view fails to do in this instance is to credit the workers with the ability to define their own political goals. This is not to deny that there were millenarian aspects of the rising, for the mob action of the workers on the night of 8 January indicates a degree of irrationalism that is consistent with millenarian behaviour. But . . . the agitators seem to have had a clear motive in mind when they rose: they sought to release their comrades from the local jail and thereby demonstrate their defiance of the government's incessant persecution of the International [Workers' Association] movement. However clumsily and crudely they expressed their grievance, the workers were patently aiming to achieve this objective and not to overthrow the local government in order to inaugurate the birth of a libertarian society." [**Anarchist Ideology and the Working Class Movement in Spain: 1868-1898**, p. 184]

Similarly, many Marxists (and liberal historians) point to the *"cycle of insurrections"* that occurred during the 1930s. They usually portray these revolts as isolated insurrections organised by the FAI who appeared in villages and proclaimed libertarian communism. The picture is one of disorganisation, millenarianism and a believe in spontaneous revolution inspired by a few militants and their daring actions. Nothing could be further from the truth. The *"cycle of insurrections"* was far more complex than this, as Juan Gomez Casas makes clear:

"Between 1932 and 1934 . . . the Spanish anarchists tried to destroy the existing social order through a series of increasingly violent strikes and insurrections, which were at first spontaneous, later co-ordinated." [**Anarchist Organisation: The History of the FAI**, p. 135]

Stuart Christie stresses this point when he wrote *"[i]t has been widely assumed that the cycle of insurrections which began in . . . January 1933 were organised and instigated by the FAI . . . In fact the rising had nothing to do with the FAI. It began as an entirely spontaneous local affair directed against a local employer, but quickly mushroomed into a popular movement which threatened to engulf the whole of Catalonia and the rest of Spain . . . [CNT militant] Arturo Parera later confirmed that the FAI had not participated in the aborted movement 'as an organisation.'"* [**We, the Anarchists**, p. 66] While the initial revolts, such as those of the miners of Alto Llobregat in January 1932, were spontaneous acts which caught the CNT and FAI by surprise, the following insurrections became increasingly organised and co-ordinated by those organisations. The January 1933 revolt, as noted above, was based around a planned strike by the CNT railway workers union. The revolt of December 1933 was organised by a National Revolutionary Committee. Both revolts aimed at uprisings all across Spain, based on the existing organisations of the CNT -- the unions and their "Defence committees". Such a degree of planning belies any claims that Spanish Anarchists were *"primitive rebels"* or did not understand the complexities of modern society or what was required to change it.

Ultimately, Hobsbawm's thesis and its underlying model represents Marxist arrogance and sectarianism. His model assumes the validity of the Marxist claim that true working class movements are based on

mass political parties based on hierarchical, centralised, leadership and those who reject this model and political action (electioneering) are sects and sectarians. It was for this reason that Marx, faced with the increased influence of Bakunin, overturned the First International's original basis of free discussion with his own concept of what a real workers' movement should be.

Originally, because the various sections of the International worked under different circumstances and had attained different degrees of development, the theoretical ideals which reflected the real movement would also diverge. The International, therefore, was open to all socialist and working class tendencies. The general policies of the International would be, by necessity, based on conference decisions that reflected the free political development that flowed from local needs. These decisions would be determined by free discussion within and between sections of all economic, social and political ideas. Marx, however, replaced this policy with a common program of "*political action*" (i.e. electioneering) by mass political parties via the fixed Hague conference of 1872. Rather than having this position agreed by the normal exchange of ideas and theoretical discussion in the sections guided by the needs of the practical struggle, Marx imposed what **he** considered as the future of the workers movement onto the International -- and denounced those who disagreed with him as sectarians. The notion that what Marx considered as necessary might be another sectarian position imposed on the workers' movement did not enter his head nor that of his followers -- as can be seen, Hobsbawm (mis)interpreted anarchism and its history thanks to this Marxist model and vision.

However, once we look at the anarchist movement without the blinkers created by Marxism, we see that rather than being a movement of "*primitive rebels*" Spanish Anarchism was a movement of working class people using valid tactics to meet their own social, economic and political goals -- tactics and goals which evolved to meet changing circumstances. Seeing the rise of anarchism and anarcho-syndicalism as the political expression of the class struggle, guided by the needs of the practical struggle they faced naturally follows when we recognise the Marxist model for what it is -- just one possible interpretation of the future of the workers' movement rather than **the** future of that movement. Moreover, as the history of Social Democracy indicates, the predictions of Bakunin and the anarchists within the First International were proved correct. Therefore, rather than being "*primitive rebels*" or sectarian politics forced upon the working class, anarchism reflected the politics required to built a **revolutionary** workers' movement rather than a reformist mass party.

2. How accurate is Felix Morrow's book on the Spanish Revolution?

It is fair to say that most Marxists in Britain base their criticisms of the Spanish Anarchism, particularly the revolution of 1936, on the work of Trotskyist Felix Morrow. Morrow's book **Revolution and Counter-Revolution in Spain**, first published in 1938, actually is not that bad -- for some kinds of information. However, it is basically written as Trotskyist propaganda. All too often Morrow is inaccurate, and over-eager to bend reality to fit the party line. This is particularly the case when discussing the actions and ideas of the CNT and FAI and when discussing the activities of his fellow Trotskyists in Spain, the Bolshevik-Leninists. We discuss the first set of inaccuracies in the following

sections, here we mention the second, Morrow's comments on the Spanish Trotskyists.

The Bolshevik-Leninists, for example, an obscure sect who perhaps numbered 20 members at most, are, according to Morrow, transformed into the only ones who could save the Spanish Revolution -- because they alone were members of the Fourth International, Morrow's own organisation. As he put it:

"Only the small forces of the Bolshevik-Leninists. . . clearly pointed the road for the workers." [Felix Morrow, **Revolution and Counter-Revolution in Spain**, p. 191]

"Could that party [the party needed to lead the revolution] be any but a party standing on the platform of the Fourth International?" [**Op. Cit.**, p. 248]

And so on. As we will make clear in the following discussion, Morrow was as wrong about this as he was about anarchism.

The POUM -- a more significant Marxist party in Spain, though still tiny compared to the anarchists -- is also written up as far more important than it was, and slagged off for failing to lead the masses to victory (or listening to the Bolshevik-Leninists). The Fourth Internationalists *"offered the POUM the rarest and most precious form of aid: a consistent Marxist analysis"* [**Op. Cit.**, p. 105] (never mind Spanish workers needing guns and solidarity!). But when such a programme -- prepared in advance -- was offered to the POUM by the Fourth International representative -- only two hours after arriving in Spain, and a quarter of an hour after meeting the POUM [**Op. Cit.**, p. 139] -- the POUM were not interested. The POUM have been both attacked (and claimed as their own) by Trotskyists ever since.

It is Morrow's attacks on anarchism, though, that have most readily entered leftist folklore -- even among Marxists who reject Leninism. Some of Morrow's criticisms are fair enough -- but these were voiced by anarchists long before Morrow put pen to paper. Morrow, in fact, quotes and accepts the analyses of anarchists like Camillo Berneri (*"Berneri had been right"* etc. [**Op. Cit.**, p. 153]), and praises anarchists like Durruti (*"the greatest military figure produced by the war"* [**Op. Cit.**, p. 224]) -- then sticks the boot into anarchism. Indeed, Durruti's analysis is praised but he is transformed into *"no theoretician, but an activist leader of masses. . . his words express the revolutionary outlook of the class-conscious workers."* [**Op. Cit.**, p. 250] Of course, his words, activity and *"outlook"* (i.e. political analysis) did not spring out of thin air but rather, to state the obvious, were informed by and reflected his anarchist politics, history, activity and vision (which in turn reflected his experiences and needs as a member of the working class). Morrow obviously wanted to have his cake and eat it.

Typically for today's left, perhaps, the most quoted sections of Morrow's book are the most inaccurate. In the next eight sections we discuss some of the most inaccurate claims. After that we point out that Morrow's analysis of the militias is deeply ironic given Trotsky's actions as leader of the Red Army. Then we discuss some of Morrow's inaccurate assertions about anarchism in general.

Of course, some of the errors we highlight in Morrow's work are the product of the conditions in which

it was written -- thousands of miles from Spain in America, dependent on papers produced by Spanish Marxists, Anarchists and others. We cannot blame him for such mistakes (although we can blame the Trotskyist publisher who reprints his account without indicating his factual errors and the Marxist writers who repeat his claims without checking their accuracy). We **do**, however, blame Morrow for his errors and misrepresentations of the activities and politics of the Spanish Anarchists and anarchism in general. These errors derive from his politics and inability to understand anarchism or provide an honest account of it.

By the end of our discussion we hope to show why anarchists argue that Morrow's book is deeply flawed and its objectively skewed by the authors politics and so cannot be taken at face value. Morrow's book may bring comfort to those Marxists who look for ready-made answers and are prepared to accept the works of hacks at face-value. Those who want to learn from the past -- instead of re-writing it -- will have to look elsewhere.

3. Did a "*highly centralised*" FAI control the CNT?

According to Morrow, "*Spanish Anarchism had in the FAI a highly centralised party apparatus through which it maintained control of the CNT*" [Op. Cit., p. 100]

In reality, the FAI -- the Iberian Anarchist Federation -- was founded, in 1927, as a confederation of regional federations (including the Portuguese Anarchist Union). These regional federations, in turn, coordinated local and district federations of highly autonomous anarchist affinity groups. In the words of Murray Bookchin:

*"Like the CNT, the FAI was structured along confederal lines: the affinity groups were linked together in a Local Federation and the Local Federation in District and Regional Federations. A Local Federation was administered by an ongoing secretariat, usually of three persons, and a committee composed of one mandated delegate from each affinity group. This body comprised a sort of local executive committee. To allow for a full expression of rank-and-file views, the Local Federation was obliged to convene assemblies of all the **faistas** in its area. The District and Regional Federations, in turn, were simply the Local federation writ large, replicating the structure of the lower body. All the Local Districts and Regional Federations were linked together by a Peninsular Committee whose tasks, at least theoretically, were administrative. . . [A FAI secretary] admits that the FAI 'exhibited a tendency towards centralism' . . . Yet it must also be emphasised that the affinity groups were far more independent than any comparable bodies in the Socialist Party, much less the Communist. . . the FAI was not an internally repressive organisation . . . Almost as a matter of second nature, dissidents were permitted a considerable amount of freedom in voicing and publishing material against the leadership and established policies."* [The Spanish Anarchists, pp. 197-8]

And:

"Most writers on the Spanish labour movement seem to concur in the view that, with the departure of the moderates, the CNT was to fall under the complete domination of the FAI . . . But is this appraisal correct? The FAI . . . was more loosely jointed as an organisation than many of its admirers and critics seem to recognise. It has no bureaucratic apparatus, no membership cards or dues, and no headquarters with paid officials, secretaries, and clerks. . . They jealously guarded the autonomy of their affinity groups from the authority of higher organisational bodies -- a state of mind hardly conducive to the development of a tightly knit, vanguard organisation.

*"The FAI, moreover, was not a politically homogeneous organisation which followed a fixed 'line' like the Communists and many Socialists. It had no official program by which all **faistas** could mechanically guide their actions."* [Op. Cit., p. 224]

So, while the FAI may have had centralising tendencies, a *"highly centralised"* political party it was not. Further, many anarcho-syndicalists and affinity groups were not in the FAI (though most seem to have supported it), and many FAI members put loyalty to the CNT (the anarcho-syndicalist union confederation) first. For instance, according to the minutes of the FAI national plenum of January-February 1936:

"The Regional Committee [of Aragon, Rioja, and Navarra] is completely neglected by the majority of the militants because they are absorbed in the larger activities of the CNT"

And:

"One of the reasons for the poor condition of the FAI was the fact that almost all the comrades were active in the defence groups of the CNT" (report from the Regional Federation of the North).

These are internal documents and so unlikely to be lies. [Juan Gomez Casas, **Anarchist Organisation: the History of the FAI**, p. 165 and p. 168]

Anarchists were obviously the main influence in the CNT. Indeed, the CNT was anarcho-syndicalist long before the FAI was founded -- from its creation in 1910 the CNT had been anarcho-syndicalist and remained so for 17 years before the FAI existed. However, Morrow was not the only person to assert *"FAI control"* of the CNT. In fact, the claim of *"FAI control"* was an invention of a reformist minority within the organisation -- people like Angel Pestana, ex-CNT National Secretary, who wanted to turn the CNT into a politically *"neutral"* union movement. Pestana later showed what he meant by forming the Syndicalist Party and standing for Parliament (the Cortes). Obviously, in the struggle against the reformists, anarcho-syndicalists -- inside the FAI or not -- voted for people they trusted to run CNT committees. The reformists (called **Treinistas**) lost, split from the CNT (taking about 10% of the membership with them), and the myth of *"FAI dictatorship"* was born. Rather than accept that the

membership no longer supported them, the **Treinistas** consoled themselves with tales that a minority, the FAI, had taken control of the CNT.

In fact, due to its decentralised and federal structure, the FAI could not have had the sort of dominance over the CNT that is often attributed to it. At union congresses, where policies and the program for the movement were argued out:

"[D]elegates, whether or not they were members of the FAI, were presenting resolutions adopted by their unions at open membership meetings. Actions taken at the congress had to be reported back to their unions at open meetings, and given the degree of union education among the members, it was impossible for delegates to support personal, non-representative positions." [Juan Gomez Casas, **Anarchist Organisation: The History of the FAI**, p. 121]

The union committees were typically rotated out of office frequently and committeemen continued to work as wage-earners. In a movement so closely based on the shop floor, the FAI could not maintain influence for long if they ignored the concerns and opinions of co-workers. Moreover, only a minority of the anarcho-syndicalist activists in the CNT belonged to the FAI and, as Juan Gomez Casas points out in his history of the FAI, FAI militants frequently had a prior loyalty to the CNT. Thus his summation seems correct:

"As a minority organisation, the FAI could not possibly have had the kind of control attributed to it . . . in 1931 . . . there were fifty CNT members for each member of a FAI group. The FAI was strongly federalist, with its groups at the base freely associated. It could not dominate an organisation like the CNT, which had fifty times as many members and was also opposed to hierarchy and centralism. We know that FAI militants were also CNT militants, and frequently they were loyal first to the CNT. Their influence was limited to the base of the organisation through participation in the plenums of militants or unions meetings." [**Op. Cit.**, p. 133]

He sums up by arguing:

*"The myth of the FAI as conqueror and ruler of the CNT was created basically by the **Treinistas**"* [**Op. Cit.**, p. 134]

Therefore, Morrow is re-cycling an argument which was produced by the reformist wing of the CNT after it had lost influence in the union rank-and-file. Perhaps he judges the FAI by his own standards? After all, the aim of Leninists is for the vanguard party to control the labour unions in their countries. Anarchists reject such a vision and believe in union autonomy -- influence of political parties and groups should only exist in as much as they influence the rank-and-file who control the union. Rather than aim to control the CNT, the FAI worked to influence its membership. In the words of Francisco Ascaso (friend of Durruti and an influential anarchist militant in the CNT and FAI in his own right):

"There is not a single militant who as a 'FAIista' intervenes in union meetings. I work, therefore I am an exploited person. I pay my dues to the workers' union and when I intervene at union meetings I do it as someone who is exploited, and with the right which is granted me by the card in my possession, as do the other militants, whether they belong to the FAI or not." [cited by Abel Paz, **Durruti: The People Armed**, p. 137]

In other words, the FAI "*controlled*" the CNT only to the extent it influenced the membership -- who, in fact, controlled the organisation. We must also note that Ascaso's comment echoes Bakunin's that the "*purpose of the Alliance [i.e. anarchist federation] is to promote the Revolution . . . it will combat all ambition to dominate the revolutionary movement of the people, either by cliques or individuals. The Alliance will promote the Revolution only through the NATURAL BUT NEVER OFFICIAL INFLUENCE of all members of the Alliance.*" [**Bakunin on Anarchism**, p. 387]

Regardless of Morrow's claims, the FAI was a federation of autonomous affinity groups in which, as one member put it, "*[e]ach FAI group thought and acted as it deemed fit, without bothering about what the others might be thinking or deciding . . . they had no . . . opportunity or jurisdiction . . . to foist a party line upon the grass-roots.*" [Francisco Carrasquer, quoted by Stuart Christie, **We, the Anarchists!**, p. 28] There was co-ordination in a federal structure, of course, but that did not create a "*highly centralised*" party-like organisation. Morrow judged the FAI according to his own standards, squeezing it into his ideological vision of the world rather than reporting the reality of the situation (see Stuart Christie's work for a more detailed refutation of the usual Marxist and Liberal inventions of the activities and nature of the FAI).

In addition, Morrow's picture of the FAI implicitly paints the CNT as a mere "transmission belt" for that organisation (and so a re-production of the Bolshevik position on the relationship of the labour unions and the revolutionary party). Such a picture, however, ignores the CNT's character as a non-hierarchical, democratic (self-managed) mass movement which had many tendencies within it. It also fails to understand the way anarchists seek to influence mass organisations -- not by assuming positions of power but by convincing their fellow workers' of the validity of their ideas in policy making mass assemblies (see [section J.3.6](#) for more details).

In other words, Morrow's claims are simply false and express a total lack of understanding of the nature of the CNT, the FAI and their relationship.

4. What is the history of the CNT and the Communist International?

Morrow states that the "*tide of the October Revolution had, for a short time, overtaken the CNT. It had sent a delegate to the Comintern [Communist International] Congress in 1921. The anarchists had then resorted to organised fraction work and recaptured it.*" [**Op. Cit.**, p. 100] He links this to the FAI by stating "*[t]henceforward . . . the FAI . . . maintained control of the CNT.*" Given that the FAI was

formed in 1927 and the CNT disassociated itself with the Comintern in 1922, five years before the FAI was created, "*thenceforward*" does not do the FAI's ability to control the CNT before it was created justice!

Partly it is the inability of the Communist Party and its Trotskyist off-shoots to dominate the CNT which explains Morrow's comments. Seeing anarchism as "*petty bourgeois*" it is hard to combine this with the obvious truth that a mass, revolutionary, workers' union could be so heavily influenced by anarchism rather than Marxism. Hence the need for FAI (or anarchist) "control" of the CNT. It allows Trotskyists ignore dangerous ideological questions. As J. Romero Maura notes, the question why anarchism influenced the CNT "*in fact raises the problem why the reformist social democratic, or alternatively the communist conceptions, did not impose themselves on the CNT as they managed to in most of the rest of Europe. This question . . . is based on the false assumption that the anarcho-syndicalist conception of the workers' struggle in pre-revolutionary society was completely at odds with what the **real** social process signified (hence the constant reference to religious', 'messianic', models as explanations).*" He argues that the "*explanation of Spanish anarcho-syndicalist success in organising a mass movement with a sustained revolutionary **elan** should initially be sought in the very nature of the anarchist concept of society and of how to achieve revolution.*" [J. Romero Maura, "*The Spanish Case*", in **Anarchism Today**, D. Apter and J. Joll (eds.), p. 78 and p. 65] Once we do that, we can see the weakness of Morrow's (and others) "*Myth of the FAI*" -- having dismissed the obvious reason for anarchist influence, namely its practicality and valid politics, there can only be "control by the FAI."

However, the question of affiliation of the CNT to the Comintern is worth discussing as it indicates the differences between anarchists and Leninists. As will be seen, the truth of this matter is somewhat different to Morrow's claims and indicates well his distorted vision.

Firstly to correct a factual error. The CNT in fact sent two delegations to the Comintern. At its 1919 national congress, the CNT discussed the Russian Revolution and accepted a proposition that stated it "*declares itself a staunch defender of the principles upheld by Bakunin in the First International. It declares further that it affiliates provisionally to the Third International on account of its predominantly revolutionary character, pending the holding of the International Congress in Spain, which must establish the foundations which are to govern the true workers' International.*" [**No Gods, No Masters**, vol. 2, pp. 220-1]

In June 1920, Angel Pestana arrived in Moscow and represented the CNT at the Second Congress of the Communist International. He was arrested when he arrived back in Spain and so could not give his eye-witness account of the strangulation of the revolution and the deeply dishonest manipulation of the congress by the Communist Party. A later delegation arrived in April 1921, headed by Andres Nin and Joaquin Maurin professing to represent the CNT. Actually, Nin and Maurin represented virtually no one but the Lerida local federation (their stronghold). Their actions and claims were disavowed by a plenum of the CNT the following August.

How did Nin and Maurin manage to get into a position to be sent to Russia? Simply because of the

repression the CNT was under at the time. This was the period when Catalan bosses hired gun men to assassinate CNT militants and members and the police exercised the notorious practice known as **ley de fugas** (shot while trying to escape). In such a situation, the normal workings of the CNT came under must stress and *"with the best known libertarian militants imprisoned, deported, exiled, if not murdered outright, Nin and his group managed to hoist themselves on to the National Committee . . . Pestana's report not being available, it was decided that a further delegation should be sent . . . in response to Moscow's invitation to the CNT to take part in the foundation of the Red International of Labour Unions."* [Ignacio de Llorens, **The CNT and the Russian Revolution**, p. 8] Juan Gomez Casas confirms this account:

"At a plenum held in Lerida in 1921, while the CNT was in disarray [due to repression] in Catalonia, a group of Bolsheviks was designated to represent the Spanish CNT in Russia . . . The restoration of constitutional guarantees by the Spanish government in April 1922, permitted the anarcho-syndicalists to meet in Saragossa in June 11 . . . [where they] confirmed the withdrawal of the CNT from the Third International and the entrance on principle into the new [revolutionary syndicalist] International Working Men's Association." [**Anarchist Organisation: History of the FAI**, p. 61]

We should note that along with pro-Bolshevik Nin and Maurin was anarchist Gaston Leval. Leval quickly got in touch with Russian and other anarchists, helping some imprisoned Russia anarchists get deported after bringing news of their hunger strike to the assembled international delegates. By embarrassing Lenin and Trotsky, Leval helped save his comrades from the prison camp and so saved their lives.

By the time Leval arrived back in Spain, Pestana's account of his experiences had been published -- along with accounts of the Bolshevik repression of workers, the Kronstadt revolt, the anarchist movement and other socialist parties. These accounts made it clear that the Russian Revolution had become dominated by the Communist Party and the *"dictatorship of the proletariat"* little more than dictatorship by the central committee of that party.

Moreover, the way the two internationals operated violated basic libertarian principles. Firstly, the *"Red Labour International completely subordinated trade unions to the Communist Party."* [Peirats, **Anarchists in the Spanish Revolution**, p. 38] This completely violated the CNT principle of unions being controlled by their members (via self-management from the bottom up). Secondly, the congresses' methodology in its debates and decision-making were alien to the CNT tradition. In that organisation self-management was its pride and glory and its gatherings and congresses reflected this. Pestana could not fathom the fierce struggle surrounding the make-up of the chairmanship of the Comintern congress:

*"Pestana says that he was particularly intrigued by the struggle for the chairmanship. He soon realised that the chair **was** the congress, and that the Congress was a farce. The chairman made the rules, presided over deliberations, modified proposals at will, changed the agenda, and presented proposals of his own. For a start, the way the chair*

handled the gavel was very inequitable. For example, Zinoviev gave a speech which lasted one and one-half hours, although each speaker was supposedly limited to ten minutes. Pestana tried to rebut the speech, but was cut off by the chairman, watch in hand. Pestana himself was rebutted by Trotsky who spoke for three-quarters of an hour, and when Pestana wanted to answer Trotsky's attack on him, the chairman declared the debate over." [Op. Cit., pp. 37-8]

In addition, "*[i]n theory, every delegate was free to table a motion, but the chair itself selected the ones that were 'interesting.'* Proportional voting [by delegation or delegate] had been provided for, but was not implemented. The Russian Communist Party ensured that it enjoyed a comfortable majority." Peirats continues by noting that "*[t]o top it all, certain important decisions were not even made in the congress hall, but were made begin the scenes.*" That was how the resolution that "*[i]n forthcoming world congresses of the Third International, the national trade union organisations affiliated to it are to be represented by delegates from each country's Communist Party*" was adopted. He also noted that "*[o]bjections to this decision were quite simply ignored.*" [No Gods, No Masters, vol. 2, p. 224]

Many of the syndicalist delegates to this "*pantomime*" congress later meet in Berlin and founded the anarcho-syndicalist **International Workers Association** based on union autonomy, self-management and federalism. Unsurprisingly, once Pestana and Leval reported back to their organisation, the CNT rejected the Bolshevik Myth and re-affirmed the libertarian principles it had proclaimed at its 1919 congress. At a plenum of the CNT in 1922, the organisation withdrew its provisional affiliation and voted to join the syndicalist International formed in Berlin.

Therefore, rather than the anarchists conducting "*fraction work*" to "*recapture*" the CNT, the facts are the pro-Bolshevik National Committee of 1921 came about due to the extreme repression the CNT was suffering at the time. Militants were being assassinated in the streets, including committee members. In this context it is easy to see how an unrepresentative minority could temporarily gain influence in the National Committee. Moreover, it was CNT plenary session which revoked the organisations provisional affiliation to the Comintern -- that is, a regular meeting of mandated and accountable delegates. In other words, by the membership itself who had been informed of what had actually been happening under the Bolsheviks. In addition, it was this plenum which agreed affiliation to the anarcho-syndicalist **International Workers Association** founded in Berlin during 1922 by syndicalists and anarchists horrified by the Bolshevik dictatorship, having seen it at first hand.

Thus the decision of the CNT in 1922 (and the process by which this decision was made) follow exactly the decisions and processes of 1919. That congress agreed to provisionally affiliate to the Comintern until such time as a real workers' International inspired by the ideas of Bakunin was created. The only difference was that this International was formed in Germany, not Spain. Given this, it is impossible to argue that the anarchists "*recaptured*" the CNT.

As can be seen, Morrow's comment presents radically false image of what happened during this period. Rather than resort to "*fraction work*" to "*recapture*" the CNT, the policies of the CNT in 1919 and 1922

were identical. Moreover, the decision to disaffiliate from the Comintern was made by a confederal meeting of mandated delegates representing the rank-and-file as was the original. The anarchists did not "capture" the CNT, rather they continued to influence the membership of the organisation as they had always done. Lastly, the concept of "capture" displays no real understanding of how the CNT worked -- each syndicate was autonomous and self-managed. There was no real officialdom to take over, just administrative posts which were unpaid and conducted after working hours. To "capture" the CNT was impossible as each syndicate would ignore any unrepresentative minority which tried to do so.

However, Morrow's comments allow us to indicate some of the key differences between anarchists and Leninists -- the CNT rejected the Comintern because it violated its principles of self-management, union autonomy and equality and built party domination of the union movement in its place.

5. Why did the CNT not join the Workers' Alliance?

Morrow in his discussion of the struggles of the 1930s implies that the CNT was at fault in not joining the Socialist UGT's "*Workers' Alliance*" (**Alianza Obrera**). These were first put forward by the Marxist-Leninists of the BOC (Workers and Peasants Bloc -- later to form the POUM) after their attempts to turn the CNT into a Bolshevik vanguard failed [Paul Preston, **The Coming of the Spanish Civil War**, p. 154]. Socialist Party and UGT interest began only after their election defeat in 1933. By 1934, however, there existed quite a few alliances, including one in Asturias in which the CNT participated. Nationally, however, the CNT refused to join with the UGT and this, he implies, led to the defeat of the October 1934 uprising (see [next section](#) for a discussion of this rebellion).

However, Morrow fails to provide any relevant historical background to understand the CNT's decision. Moreover, their reasons **why** they did not join have a striking similarity to Morrow's own arguments against the "Workers' Alliance" (which may explain why Morrow does not mention them). In effect, the CNT is damned for having policies similar to Morrow's but having principles enough to stick to them.

First, we must discuss the history of UGT and CNT relationships in order to understand the context within which the anarchists made their decision. Unless we do this, Morrow's claims may seem more reasonable than they actually are. Once we have done this we will discuss the politics of that decision.

From 1931 (the birth of the Second Spanish Republic) to 1933 the Socialists, in coalition with Republicans, had attacked the CNT (a repeat, in many ways, of the UGT's collaboration with the quasi-fascist Primo de Rivera dictatorship of 1923-30). Laws were passed, with Socialist help, making lightning strikes illegal and state arbitration compulsory. Anarchist-organised strikes were violently repressed, and the UGT provided scabs -- as against the CNT Telephone Company strike of 1931. This strike gives an indication of the role of the socialists during its time as part of the government (Socialist Largo Caballero was the Minister of Labour, for example):

"The UGT . . . had its own bone to pick with the CNT. The telephone syndicate, which the CNT had established in 1918, was a constant challenge to the Socialists' grip on the

Madrid labour movement. Like the construction workers' syndicate, it was a CNT enclave in a solidly UGT centre. Accordingly, the government and the Socialist Party found no difficulty in forming a common front to break the strike and weaken CNT influence.

*"The Ministry of Labour declared the strike illegal and the Ministry of the Interior called out the Civil Guard to intimidate the strikers . . . Shedding all pretence of labour solidarity, the UGT provided the **Compania Telefonica** with scabs while **El Socialista**, the Socialist Party organ, accused the CNT of being run by **pistoleros**. Those tactics were successful in Madrid, where the defeated strikers were obliged to enrol in the UGT to retain their jobs. So far as the Socialists were concerned, the CNT's appeals for solidarity had fallen on deaf ears. . .*

*"In Seville, however, the strike began to take on very serious dimensions. . . on July 20, a general strike broke out in Seville and serious fighting erupted in the streets. This strike . . . stemmed from the walkout of the telephone workers . . . pitched battles took place in the countryside around the city between the Civil Guard and the agricultural workers. Maura, as minister of interior, decided to crush the 'insurrection' ruthlessly. Martial law was declared and the CNT's headquarters was reduced to shambles by artillery fire. After nine days, during which heavily armed police detachments patrolled the streets, the Seville general strike came to an end. The struggle in the Andalusian capital left 40 dead and some 200 wounded." [Murray Bookchin, **The Spanish Anarchists**, pp. 221-2]*

Elsewhere, "[d]uring a Barcelona building strike CNT workers barricaded themselves in and said they would only surrender to regular troops. The army arrived and then machine-gunned them as soon as they surrendered." [Antony Beevor, **The Spanish Civil War**, p. 33] In other words, the republican-socialist government repressed the CNT with violence as well as using the law to undermine CNT activities and strikes.

Morrow fails to discuss this history of violence against the CNT. He mentions in passing that the republican-socialist coalition government "[i]n crushing the CNT, the troops broadened the repression to the whole working class." He states that "[u]nder the cover of putting down an anarchist putsch in January 1933, the Civil Guard 'mopped up' various groups of trouble makers. And encounter with peasants at Casas Viejas, early in January 1933, became a **cause celebre** which shook the government to its foundations." However, his account of the Casas Viejas massacre is totally inaccurate. He states that "the little village . . ., after two years of patient waiting for the Institute of Agrarian Reform to divide the neighbouring Duke's estate, the peasants had moved in and begun to till the soil for themselves." [**Op. Cit.**, p. 22]

Nothing could be further from the truth. Firstly, we must note that the land workers (who were not, in the main, peasants) were members of the CNT. Secondly, as we pointed in [section 1](#), the uprising had nothing to do with land reform. The CNT members did not "till the soil", rather they rose in insurrection

as part of a planned CNT-FAI uprising based on an expected rail workers strike (the "*anarchist putsch*" Morrow mentions). The workers were too busy fighting the Civil and Assault Guards to till anything. He is correct in terms of the repression, of course, but his account of the events leading up to it is not only wrong, it is misleading (indeed, it appears to be an invention based on Trotskyist ideology rather than having any basis in reality). Rather than being part of a "*broadened . . . repression [against] the whole working class,*" it was actually part of the "*putting down*" of the anarchist revolt. CNT members were killed -- along with a dozen politically neutral workers who were selected at random and murdered. Thus Morrow downplays the role of the Socialists in repressing the CNT and FAI -- he presents it as general repression rather than a massacre resulting from repressing a CNT revolt.

He even quotes a communist paper stating that 9 000 political prisoners were in jail in June 1933. Morrow states that they were "*mostly workers.*" [p. 23] Yes, they were mostly workers, CNT members in fact -- "*[i]n mid-April [1933]. . . the CNT launched a massive campaign to release imprisoned CNT-FAI militants whose numbers had now soared to about 9 000.*" [Bookchin, **Op. Cit.**, pp. 231-2]

Moreover, during and after CNT insurrections in Catalonia in 1932, and the much wider insurrections of January 1933 (9 000 CNT members jailed) and December 1933 (16 000 jailed) Socialist solidarity was nil. Indeed, the 1932 and January 1933 revolts had been repressed by the government which the Socialist Party was a member of.

In other words, and to state the obvious, the socialists had been part of a government which repressed CNT revolts and syndicates, imprisoned and killed their members, passed laws to restrict their ability to strike and use direct action and provided scabs during strikes. Little wonder that Peirats states "*[i]t was difficult for the CNT and the FAI to get used to the idea of an alliance with their Socialist oppressors.*" [**Anarchists in the Spanish Revolution**, p. 94]

It is **only** in this context can we understand the events of 1934 and the refusal of the CNT to run into the UGT's alliance. Morrow, needless to say, does not present this essential context and so the reader cannot understand why the CNT acted as it did in response to Socialist appeals for "unity." Instead, Morrow implies that CNT-FAI opposition to "workers alliances" were due to them believing "*all governments were equally bad.*" [p. 29] Perhaps if Morrow had presented an honest account of the repression the republican-socialist government had inflicted on the CNT then the reader could make an informed judgement on why anarchist opposition to the socialist proposals existed. Rather than being sectarian or against labour unity, they had been at receiving end of extensive socialist scabbing and state repression.

Moreover, as well as the recent history of socialist repression and scabbing, there was also the experience of a similar alliance between the CNT and UGT that had occurred in 1917. The first test of the alliance came with a miners strike in Andalusia, and a "*CNT proposal for a joint general strike, to be initiated by UGT miners and railway workers, had been rejected by the Madrid Socialists . . . the miners, after striking for four months, returned to work in defeat.*" Little wonder that "*the pact was in shreds. It was to be eliminated completely when a general strike broke out in Barcelona over the arrests of the CNT leaders and the assassination of Layret. Once again the CNT called upon the UGT for*

support. Not only was aid refused but it was denied with an arrogance that clearly indicated the Socialists had lost all interest in future collaboration. . . The strike in Catalonia collapsed and, with it, any prospect of collaboration between the two unions for years to come." [Bookchin, **Op. Cit.**, pp. 175-6]

Of course, such historical context would confuse readers with facts and so goes unmentioned by Morrow.

In addition, there was another reason for opposing the "workers' alliances" -- particularly an alliance between the UGT and CNT. Given the history of UGT and CNT pacts plus the actions of the UGT and socialists in the previous government it was completely sensible and politically principled. This reason was political and flowed from the CNT's libertarian vision. As Durruti argued in 1934:

"The alliance, to be revolutionary, must be genuinely working class. It must be the result of an agreement between the workers' organisation, and those alone. No party, however, socialist it may be, can belong to a workers' alliance, which should be built from its foundations, in the enterprises where the workers struggle. Its representative bodies must be the workers' committee chosen in the shops, the factories, the mines and the villages. We must reject any agreement on a national level, between National Committees, but rather favour an alliance carried out at the base by the workers themselves. Then and only then, can the revolutionary drive come to life, develop and take root." [quoted by Abel Paz, **Durruti: The People Armed**, p. 154]

In the Central Region, Orobon Fernandez argued along similar lines in Madrid's **La Tierra**:

"Revolutionary proletarian democracy is direct management of society by the workers, a certain bulwark against party dictatorships and a guarantee of the development of the revolution's forces and undertakings. . . what matters must is that general guidelines are laid down so that these may serve as a platform of the alliance and furnish a combative and constructive norm for the united forces . . . [These include:] acceptance of revolutionary proletarian democracy, which is to say, the will of the majority of the proletariat, as the common denominator and determining factor of the new order of things. . . immediate socialisation of the means of production, transportation, exchange, accommodation and finance . . . federated according to their area of interest and confederated at national level, the municipal and industrial organisations will maintain the principle of unity in the economic structure." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 74-5]

The May 1936 Saragossa congress of the CNT passed a resolution concerning revolutionary alliances which was obviously based on these arguments. It stated that in order *"to make the social revolution an effective reality, the social and political system regulating the life of the country has to be utterly destroyed"* and that the *"new revolutionary order will be determined by the free choice of the working*

class." [quoted by Jose Peirats, **Op. Cit.**, p. 100]

Only such an alliance, from the bottom up and based on workers' self-management could be a revolutionary one. Indeed, any pact not based on this but rather conducted between organisations would be a pact the CNT and the bureaucracy of the UGT -- and remove any possibility of creating genuine bodies of working class self-management (as the history of the Civil War proved). Indeed, Morrow seems to agree:

"The broad character of the proletarian insurrection was explained by the Communist Left (Trotskyist). It devoted itself to efforts to build the indispensable instrument of the insurrection: workers' councils constituted by delegates representing all the labour parties and unions, the shops and streets; to be created in every locality and joined together nationally . . . Unfortunately, the socialists failed to understand the profound need of these Workers' Alliances. The bureaucratic traditions were not to be so easily overcome . . . the socialist leaders thought that the Workers' Alliances meant they would have merely to share leadership with the Communist Left and other dissident communist groups . . . actually in most cases they [Workers' Alliances] were merely 'top' committees, without elected or lower-rank delegates, that is, little more than liaison committees between the leadership of the organisations involved." [**Op. Cit.**, pp. 27-8]

As can be seen, this closely follows Durruti's arguments. Bar the reference of "*labour parties*," Morrow's "*indispensable instrument*" is identical to Durruti's and other anarchist's arguments against taking part in the "Workers' Alliances" created by the UGT and the creation of genuine alliances from the bottom-up. Thus Morrow faults the CNT for trying to force the UGT to form a **real** workers' alliance by not taking part in what Morrow himself admits were "*little more than liaison committees between the leadership*"! Also, Morrow argues that "[w]ithout developing soviets -- workers' councils -- it was inevitable that even the anarchists and the POUM would drift into governmental collaboration with the bourgeoisie" and he asks "[h]ow could party agreements be the substitute for the necessary vast network of workers' councils?" [**Op. Cit.**, p. 89 and p. 114] Which was, of course, the CNT-FAI's argument. It seems strange that Morrow faults the CNT for trying to create real workers' councils, the "*indispensable instrument*" of the revolution, by not taking part in a "*party agreements*" urged by the UGT which would undermine real attempts at rank-and-file unity from below.

Of course, Morrow's statement that "*labour parties and unions*" should be represented by delegates as well as "*the shop and street*" contradicts claims it would be democratic. After all, that it would mean that some workers would have multiple votes (one from their shop, their union and their party). Moreover, it would mean that parties would have an influence greater than their actual support in the working class -- something a minuscule group like the Spanish Trotskyists would obviously favour as would the bureaucrats of the Socialist and Communist Parties. Little wonder the anarchists urged a workers' alliance made up of actual workers rather than an organisation which would allow bureaucrats, politicians and sects more influence than they actually had or deserved.

In addition, the "Workers' Alliances" were not seen by the UGT and Socialist Party as an organisation of equals. Rather, in words of historian Paul Preston, *"from the first it seemed that the Socialists saw the Alianza Obrera was a possible means of dominating the workers movement in areas where the PSOE and UGT were relatively weak."* [Op. Cit., p. 154] The Socialist Party only allowed regional branches of the Alianza Obrera to be formed only if they could guarantee Party control would never be lost. [Adrian Schubert *"The Epic Failure: The Asturian Revolution of October 1934"*, in **Revolution and War in Spain**, Paul Preston (ed.), p. 127] Raymond Carr argues that the Socialists, *"in spite of professions to the contrary, wished to keep socialist domination of the Alianza Obrera"* [Spain: 1808-1975, pp. 634-5f] And only one month after the first alliance was set up, one of its founder members -- the Catalan **Socialist Union** -- left in protest over PSOE domination. [Preston, **The Coming of the Spanish Civil War**, p. 157] In Madrid, the Alianza was *"dominated by the Socialists, who imposed their own policy."* [Op. Cit., p. 154] Indeed, as Jose Peirats notes, in Asturias where the CNT had joined the Alliance, *"despite the provisions of the terms of the alliance to which the CNT had subscribed, the order for the uprising was issued by the socialists. In Oviedo a specifically socialist, revolutionary committee was secretly at work in Oviedo, which contained no CNT representatives."* [The CNT in the Spanish Revolution, vol. 1, p. 78] Largo Caballero's desire for trade union unity in 1936 was from a similar mould -- *"[t]he clear implication was that proletarian unification meant Socialist take-over."* Little wonder Preston states that *"[i]f the use that he [Caballero] made of the Alianza Obreras in 1934 had revealed anything, it was that the domination of the working class movement by the UGT meant far more to Largo Caballero than any future prospect of revolution."* [Preston, Op. Cit., p. 270]

As can be seen, the CNT's position seemed a sensible one given the nature and activities of the "Workers' Alliance" in practice. Also it seems strange that, if unity was the UGT's aims, that a CNT call, made by the national plenary in February 1934, for information and for the UGT to clearly and publicly state its revolutionary objectives, met with no reply. [Peirats, Op. Cit., p. 75] In addition, the Catalan Workers' Alliance called a general strike in March 1934 the day **after** the CNT's -- hardly an example of workers' unity. [Norman Jones, *"Regionalism and Revolution in Catalonia"*, **Revolution and War in Spain**, Paul Preston (ed.), p. 102]

Thus, the reasons why the CNT did not join in the UGT's "Workers' Alliance" are clear. As well as the natural distrust towards organisations that had repressed them and provided scabs to break their strikes just one year previously, there were political reasons for opposing such an alliance. Rather than being a force to ensure revolutionary organisations springing from the workplace, the "Workers' Alliance" was little more than pacts between the bureaucrats of the UGT and various Marxist Parties. This was Morrow's own argument, which also provided the explanation why such an alliance would weaken any real revolutionary movement. To requote Morrow, *"[w]ithout developing soviets -- workers' councils -- it was inevitable that even the anarchists and the POUM would drift into governmental collaboration with the bourgeoisie."* [Op. Cit., p. 89]

That is exactly what happened in July, 1936, when the CNT did forsake its anarchist politics and joined in a "Workers' Alliance" type organisation with other anti-fascist parties and unions to set up the *"Central Committee of Anti-Fascist Militias"* (see [section 20](#)). Thus Morrow himself provides the explanation of the CNT's **political** rationale for being wary of the UGT's "Workers' Alliance" while, of

course, refusing to provide the historical context the decision was made.

However, while the CNT's refusal to join the "Workers' Alliance" outside of Asturias may have been principled (and sensible), it may be argued that they were the only organisation with revolutionary potential (indeed, this would be the only argument Trotskyists could put forward to explain their hypocrisy). Such an argument would be false for two reasons.

Firstly, such Alliances may have potentially created a revolutionary situation but they would have hindered the formation of working class organs of self-management such as workers' councils (soviets). This was the experience of the Central Committee of Anti-Fascist Militias and of the Asturias revolt -- in spite of massive revolutionary upheaval such councils based on delegates from workplace and community assemblies were **not** formed.

Secondly, the CNT policy of "Unity, yes, but by the rank-and-file" was a valid method of "from the bottom up solidarity." This can be seen from just two examples -- Aragon in 1934 and Madrid in 1936. In Aragon, there was a *"general strike that had totally paralysed the Aragonese capital throughout April 1935, ending . . . on 10 May. . . the Zaragoza general strike had been a powerful advertisement of the value of a united working-class front . . . [However,] no formal agreement . . . had been reached in Zaragoza. The pact there has been created on a purely circumstantial basis with a unity of trade-union action achieved in quite specific circumstances and generated to a considerable extent by the workers themselves."* [Graham Kelsey, **Anarchism in Aragon**, p. 72] In Madrid, April 1936 (in the words of Morrow himself) *"the CNT declared a general strike in Madrid . . . The UGT had not been asked to join the strike, and at first had denounced it . . . But the workers came out of all the shops and factories and public services . . . because they wanted to fight, and only the anarchists were calling them to struggle."* [Op. Cit., p. 41]

Thus Morrow's comments against the CNT refusing to join the Workers' Alliance do not provide the reader with the historical context required to make an informed judgement of the CNT's decision. Moreover, they seem hypocritical as the CNT's reasons for refusing to join is similar to Morrow's own arguments against the Workers' Alliance. In addition, the CNT's practical counter-proposal of solidarity from below had more revolutionary potential as it was far more likely to promote rank-and-file unity plus the creation of self-managed organisations such as workers' councils. The Workers' Alliance system would have hindered such developments.

6. Was the October 1934 revolt sabotaged by the CNT?

Again, following Morrow, Marxists have often alleged that the Socialist and Workers Alliance strike wave, of October 1934, was sabotaged by the CNT. To understand this allegation, you have to understand the background to October 1934, and the split in the workers' movement between the CNT and the UGT (unions controlled by the reformist Socialist Party, the PSOE).

Socialist conversion to "revolution" occurred only after the elections of November 1933. In the face of

massive and bloody repression (see [last section](#)), the CNT-FAI had agitated for a mass abstention at the polling booth. Faced with this campaign, the republicans and socialists lost and all the laws they had passed against the CNT were used against themselves. When cabinet seats were offered to the non-republican (fascist or quasi-fascist) right, in October 1934, the PSOE/UGT called for a general strike. If the CNT, nationally, failed to take part in this -- a mistake recognised by many anarchist writers -- this was not (as reading Morrow suggests) because the CNT thought "*all governments were equally bad*" [Morrow, **Op. Cit.**, p. 29], but because of well-founded, as it turned out, mistrust of Socialist aims.

A CNT call, on the 13th of February 1934, for the UGT to clearly and publicly state its revolutionary objectives, had met with no reply. As Peirats argues, "*[t]hat the absence of the CNT did not bother them [the UGT and Socialist Party] is clear from their silence in regards to the [CNT's] National Plenary's request.*" [Peirats, **Anarchists in the Spanish Revolution**, p. 96] Rhetoric aside, the Socialist Party's main aim in October seems to have been to force new elections, so they could again form a (mildly reformist) coalition with the Republicans (their programme for the revolt was written by right-wing socialist Indalecio Prieto and seemed more like an election manifesto prepared by the Liberal Republicans than a program for revolutionary change). This was the viewpoint of the CNT, for example. Thus, the CNT, in effect, was to be used as cannon-fodder to help produce another government that would attack the CNT.

As we discussed in the [last section](#), the UGT backed "Workers Alliances" were little better. To repeat our comments again, the Socialist Party (PSOE) saw the alliances as a means of dominating the workers movement in areas where the UGT was weak. The Socialist "Liaison Committee", for instance, set up to prepare for insurrection, only allowed regional branches to take part in the alliances if they could guarantee Party control (see [last section](#)). Raymond Carr argues that the Socialists, "*in spite of professions to the contrary, wished to keep socialist domination of the **Alianza Obrera.***" [**Spain: 1808-1975**, pp. 634-5f] Only one month after the first alliance was set up, one of its founder members -- the Socialist Union of Catalonia -- left in protest over PSOE domination.

During October the only real centre of resistance was in Asturias (on the Spanish north coast). However, before discussing that area, we must mention Madrid and Barcelona. According to Morrow, Catalonia "*should have been the fortress of the uprising*" and that "*[t]errribly discredited for their refusal to join the October revolt, the anarchists sought to apologise by pointing to the repression they were undergoing at the time from Companys.*" [**Op. Cit.**, p. 30 and p. 32] Morrow fails, however and yet again, to mention a few important facts.

Firstly, the uprising in Catalonia was pushed for and lead by Estat Catala which had "*temporary ascendancy over the other groups in the Esquerra*" (the Catalan Nationalist Party which was the Catalan government). "*Companys felt obliged to yield to Dencas' [the leader of Estat Catala] demand that Catalonia should take this opportunity for breaking with Madrid.*" [Gerald Brenan, **The Spanish Labyrinth**, pp. 282-3] Estat Catala "*was a Youth movement . . . and composed mostly of workmen and adventurers -- men drawn from the same soil as the **sindicatos libres** [boss created anti-CNT yellow unions] of a dozen years before -- with a violent antagonism to the Anarcho-Syndicalists. It had a small*

military organisation, the *escamots*, who wore green uniforms. It represented Catalan Nationalism in its most intransigent form: it was in fact Catalan Fascism." [Op. Cit., p. 282] Gabriel Jackson calls Estat Catala a "quasi-fascist movement within the younger ranks of the Esquerra." [The Spanish Republic and the Civil War: 1931-1939, p. 150] Ronald Fraser terms it "the extreme nationalist and proto-fascist" wing of the party. [Blood of Spain, p. 535] Hugh Thomas notes "the fascist colouring of Dencas ideas." [The Spanish Civil War, p. 135]

In other words, Morrow attacks the CNT for not participating in a revolt organised and led by Catalan Fascists (or, at best, near fascists)!

Secondly, far from being apologetics, the repression the CNT was suffering from Dencas police forces was very real and was occurring right up to the moment of the revolt. In the words of historian Paul Preston:

"[T]he Anarchists bitterly resented the way in which the Generalitat had followed a repressive policy against them in the previous months. This had been the work of the Generalitat's counsellor for public order, Josep Dencas, leader of the quasi-fascist, ultra-nationalist party Estat Catala." [The Coming of the Spanish Civil War, p. 176]

This is confirmed by anarchist accounts of the rising. As Peirats points out:

*"On the eve of the rebellion the Catalan police jailed as many anarchists as they could put their hands on . . . The union offices had been shut for some time. The press censor had completely blacked out the October 6th issue of **Solidaridad Obrera** . . . When the woodworkers began to open their offices, they were attacked by the police, and a furious gunfight ensued. The official radio . . . reported . . . that the fight had already begun against the FAI fascists . . . In the afternoon large numbers of police and *escamots* turned out to attack and shut down the editorial offices of **Solidaridad Obrera**."* [Peirats, Op. Cit., pp. 98-9]

In other words, the first shots fired in the Catalan revolt were against the CNT by those in revolt against the central government!

Why were the first shots of the revolt directed at the members of the CNT? Simply because they were trying to take part in the revolt in an organised and coherent manner as urged by the CNT's Regional Committee itself. In spite of the mass arrests of anarchists and CNT militants the night before by the Catalan rebels, the CNT's Catalan Regional Committee issued a clandestine leaflet that stated that the CNT "must enter the battle in a manner consistent with its revolutionary anarchist principles . . . The revolt which broke out this morning must acquire the characteristics of a popular act through the actions of the proletariat . . . We demand the right to intervene in this struggle and we will take this." A leaflet had to be issued as **Solidaridad Obrera** was several hours late in appearing due censorship by the Catalan state. The workers had tried to open their union halls (all CNT union buildings had been

closed by the Catalan government since the CNT revolt of December 1933) because the CNT's leaflet had called for the "*[i]mmediate opening of our union buildings and the concentration of the workers on those premises.*" [quoted by Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 85] The participation of the CNT in the revolt as an organised force was something the Catalan rebels refused to allow and so they fired on workers trying to open their union buildings. Indeed, after shutting down **Solidaridad Obrera**, the police then tried to break up the CNT's regional plenum that was then in session, but fortunately it was meeting on different premises and so they failed. [Peirats, **Op. Cit.**, pp. 85-6]

Juan Gomez Casas argues that:

"The situation [in October 1934] was especially difficult in Catalonia. The Workers' Alliance . . . declared a general strike. Luis Companys, president of the Catalan Parliament, proclaimed the Catalan State within the Spanish Federal Republic . . . But at the same time, militants of the CNT and the FAI were arrested . . . Solidaridad Obrera was censored. The Catalan libertarians understood that the Catalan nationalists had two objectives in mind: to oppose the central government and to destroy the CNT. Jose Dencas, Counsellor of Defence, issued a strict order: 'Watch out for the FAI' . . . Luis Companys broadcast a message on October 5 to all 'citizens regardless of ideology.' However, many anarchosyndicalist militants were held by his deputy, Dencas, in the underground cells of police headquarters." [**Op. Cit.**, pp. 151-2]

Hence the paradoxical situation in which the anarchists, anarcho-syndicalists and FAI members found themselves in during this time. The uprising was organised by Catalan fascists who continued to direct their blows against the CNT. As Abel Paz argues, "*[f]or the rank and file Catalan worker . . . the insurgents . . . were actually orienting their action in order to destroy the CNT. After that, how could they collaborate with the reactionary movement which was directing its blows against the working class? Here was the paradox of the Catalan uprising of October 6, 1934.*" [**Durruti: The People Armed**, p. 158]

In other words, during the Catalan revolt, "*the CNT had a difficult time because the insurgents were its worst enemies.*" [Peirats, **The Anarchists in the Spanish Revolution**, p. 98] However, the complexity of the actual situation does not bother the reader of Morrow's work as it is not reported. Little wonder, as Peirats argues, the "*absurd contention according to which the confederal proletariat of Catalonia betrayed their brethren in Asturias melts away in the face of a truthful narration of the facts.*" [**The CNT in the Spanish Revolution**, vol. 1, p. 86]

In summary, therefore, Morrow expected the membership of the Catalan CNT and FAI to join in a struggle started and directed by Catalan fascists, whose leaders in the government were arresting and shooting their members, censoring their press, closing their union offices and refusing them a role in the revolt as self-organised forces. We think that sums up the validity of Trotskyism as a revolutionary theory quite well.

In Madrid, the revolt was slightly less farcical. Here the CNT joined the general strike. However, the UGT gave the government 24 hours notice of the general strike, allowing the state to round up the Socialist "leaders," seize arm depots and repress the insurrection before it got started [Morrow, **Op. Cit.**, p. 30]. As Bookchin argues, the *"massive strike in Madrid, which was supported by the entire left, foundered for want of arms and a revolutionary sense of direction."* [**Op. Cit.**, p. 245] He continues:

"As usual, the Socialists emerged as unreliable allies of the Anarchists. A revolutionary committee, established by the CNT and FAI to co-ordinate their own operations, was denied direly needed weapons by the UGT. The arms, as it turned out, had been conveniently intercepted by government troops. But even if they had been available, it is almost certain that the Socialists would not have shared them with the Anarchists. Indeed, relationships between the two major sectors of the labour movement had already been poisoned by the failure of the Socialist Youth and the UGT to keep the CNT adequately informed of their plans or confer with Anarchosindicalist delegates. Despite heavy fighting in Madrid, the CNT and FAI were obliged to function largely on their own. When, at length, a UGT delegate informed the revolutionary committee that Largo Caballero was not interested in common action with the CNT, the committee disbanded." [**Op. Cit.**, p. 246]

Bookchin correctly states that *"Abad de Santillan was to observe with ample justification that Socialist attempts to blame the failure of the October Insurrection on Anarchist abstention was a shabby falsehood"* and quotes Santillan:

"Can there be talk of abstention of the CNT and censure of it by those who go on strike without warning our organisation about it, who refuse to meet with the delegates of the National Committee [of the CNT], who consent to let the Lerroux-Gil Robles Government take possession of the arms deposits and let them go unused before handing them over to the Confederation and the FAI?" [**Ibid.**]

Historian Paul Preston confirms that in Madrid *"Socialists and Anarchists went on strike . . ."* and that *"the Socialists actually rejected the participation of Anarchist and Trotskyist groups who offered to help make a revolutionary coup in Madrid."* [**The Coming of the Spanish Civil War**, p. 174] Moreover, *"when delegates travelled secretly to Madrid to try to co-ordinate support for the revolutionary Asturian miners, they were rebuffed by the UGT leadership."* [Graham Kelsey, **Anarchism in Aragon**, p. 73]

Therefore, in two of the three centres of the revolt, the uprising was badly organised. In Catalonia, the revolt was led by fascist Catalan Nationalists who arrested and shot at CNT militants. In Madrid, the CNT backed the strike and was ignored by the Socialists. The revolt itself was badly organised and quickly repressed (thanks, in part, to the actions of the Socialists themselves). Little wonder Peirats asks:

"Although it seems absurd, one constantly has to ask whether the Socialists meant to start a true revolution [in October 1934] in Spain. If the answer is affirmative, the questions

keep coming: Why did they not make the action a national one? Why did they try to do it without the powerful national CNT? Is a peaceful general strike revolutionary? Was what happened in Asturias expected, or were orders exceeded? Did they mean only to scare the Radical-CEDA government with their action?" [**The Anarchists in the Spanish Revolution**, pp 95-6]

The only real centre of resistance was in Asturias (on the Spanish north coast). Here, the CNT had joined the Socialists and Communists in a "Workers Alliance". But, against the alliance's terms, the Socialists alone gave the order for the uprising -- and the Socialist-controlled Provincial Committee starved the CNT of arms. This despite the CNT having over 22 000 affiliates in the area (to the UGT's 40 000). We discuss the activities of the CNT during the revolt in Asturias later (in [section 20](#)) and so will do so here.

Morrow states that the *"backbone of the struggle was broken . . . when the refusal of the CNT railroad workers to strike enabled the government to transport goods and troops."* [Morrow, **Op. Cit.**, p. 30] Yet in Asturias (the only area where major troop transportation was needed) the main government attack was from a sea borne landing of Foreign Legion and Moroccan troops - against the port and CNT stronghold (15 000 affiliates) of Gijon (and, we must stress, the Socialists and Communists refused to provide the anarchists of these ports with weapons to resist the troop landings). Hence his claim seems somewhat at odds with the actual events of the October uprising.

Moreover, he seems alone in this claim. No other historian (for example, Hugh Thomas in **The Spanish Civil War**, Raymond Carr in **Spain: 1808-1975**, Paul Preston in **The Coming of the Spanish Civil War**, Gerald Brenan, **The Spanish Labyrinth**, Gabriel Jackson, **The Spanish Republic and the Civil War: 1931-1939**) makes this claim. But, of course, these are not Trotskyists and so can be ignored. However, for objective readers such an omission might be significant.

Indeed, when these other historians **do** discuss the crushing of the Asturias they all stress the fact that the troops came from the sea. For example, Paul Preston notes that *"[w]ith CEDA approval, Franco . . . insisted on the use of troops from Africa . . . they shipped Moorish mercenaries to Asturias."* [**The Coming of the Spanish Civil War**, p. 177] Gabriel Jackson argues that the government *"feared to send in the regular Army because of the strong possibility that the Spanish conscripts would refuse to fire on the revolutionaries -- or even desert to them. The War Minister . . . , acting on the advice of Generals Franco and Goded, sent in contingents of the Moorish **regulares** and of the Foreign Legions."* These troops arrived *"at the ports of Aviles and Gijon."* [**The Spanish Republic and the Civil War: 1931-1939**, p. 157]

Richard A. H. Robinson argues that it *"was soon decided that the [Asturias] rebellion could only be crushed by experienced, professional troops. The other areas of Spain could not be denuded of their garrisons in case there were other revolutionary outbreaks. Franco therefore called upon Colonel Yague to lead a force of Moorish regulars to help re-conquer the province from the rebels."* [**The Origins of Franco's Spain**, pp. 190-1] Stanley G. Payne gives a more detailed account of the state's

attack:

"Army reinforcements were soon being rushed toward the region . . . Eduardo Lopez Ochoa . . . head[ed] the main relief column . . . he began to make his way eastward [from Galicia] with a modest force of some 360 troops in trucks, half of whom had to be detached on the way to hold the route open. Meanwhile . . . in the main Asturian coastal city of Gijon . . . reinforcements first arrived by sea on the seventh, followed by larger units from the Moroccan Protectorate on the tenth." [**Spain's First Democracy**, p. 219]

No mention of trains in these accounts, so indicating that Morrow's assertions are false. The main attack on Asturias, and so the transportation of troops and goods, was by *sea*, not by trains.

In addition, these historians point to other reasons for the defeat of the revolt -- the amazingly bad organisation of it by the Socialist Party. Raymond Carr sums up the overwhelming opinion of the historians when he says that "*[a]s a national movement the revolution was a fiasco.*" [**Op. Cit.**, p. 633] Hugh Thomas states that the revolt in Catalonia was "*crushed nearly as quickly as the general strike had been in Madrid.*" [**The Spanish Civil War**, p. 136] Brenan correctly argues that "*[f]rom the moment that Barcelona capitulated and the rising in Madrid fizzled out, the miners were of course doomed.*" [**Op. Cit.**, p. 286] The failure of both these revolts was directly attributable to the policies and actions of the Socialists who controlled the "*Workers' Alliances*" in both areas. Hence historian Paul Heywood:

"[A]n important factor which contributed to the strikes' collapse and made the state's task easier was the underlying attitude of the Socialists. For all the talk of united action by the Left, the Socialists still wished to dominate any combined moves. Unwilling to cede its traditional hegemony, the PSOE rendered the Alianza obrera necessarily ineffective . . .

"Thus, there was little genuine unity on the Spanish Left. Moreover, the strike was very poorly planned. Differences within the PSOE meant that there was no agreement even as to the programme of the strike. For the . . . leftists, it represented the initiation of a full-scale Socialist revolution; for . . . the centrists in the party, the aim of the strike was to force Alcala-Zamora to reconsider and invite the Socialists back into a coalition government with the Republicans." [**Marxism and the Failure of Organised Socialism in Spain 1879-1936** pp. 144-5]

Significantly, Heywood argues that "*[o]ne thing, however, did emerge from the October strike. The example of Asturias provided a pointed lesson for the Left: crucially, the key to the relative success of the insurrection there was the participation of the CNT in an effective Alianza obrera. Without the CNT, the Asturian rising would have been as short-lived and as easily defeated as those in Madrid and Barcelona.*" [**Op. Cit.**, p. 145]

Having discussed both Madrid and Barcelona above, we leave it to the reader to conclude whether

Morrow's comments are correct or whether a more likely alternative explanation for the revolt's failure is possible.

However, even assuming Morrow's claims that the failure of the CNT rail workers' union to continue striking in the face of a completely farcical "revolt" played a key role in its defeat were true, it does not explain many facts. Firstly, the government had declared martial law -- placing the railway workers in a dangerous position. Secondly, as Jerome R. Mintz points out, railway workers *"were represented by two competing unions -- the Sindicato Nacional Ferroviario of the UGT . . . and the CNT-affiliated FNIFF . . . The UGT . . . controlled the large majority of the workers. [In 1933] Trifon Gomez, secretary of the UGT union, did not believe it possible to mobilise the workers, few of whom had revolutionary aspirations."* [**The Anarchists of Casa Viejas**, p. 178] Outside of Catalonia, the majority of the railway workers belonged to the UGT [Sam Dolgoff, **The Anarchist Collectives**, p. 90f] Asturias (the only area where major troop transportation was needed) does not border Catalonia -- apparently the army managed to cross Spain on a rail network manned by a minority of its workers.

However, these points are of little import when compared to the fact that Asturias the main government attack was, as we mentioned above, from a sea borne landing of Foreign Legion and Moroccan troops. Troops from Morocco who land by sea do not need trains. Indeed, The ports of Aviles and Gijon were the principle military bases for launching the repression against the uprising.

The real failure of the Asturias revolt did not lie with the CNT, it lay (unsurprisingly enough) with the Socialists and Communists. Despite CNT pleas the Socialists refused arms, Gijon fell after a bloody struggle and became the main base for the crushing of the entire region (*"Arriving at the ports of Aviles and Gijon on October 8, these troops were able to overcome the resistance of the local fishermen and stevedores. The revolutionary committees here were Anarchist dominated. Though they had joined the rising and accepted the slogan UHP [Unity, Proletarian Brothers], the Socialists and Communists of Oviedo clearly distrusted them and had refused arms to their delegate the day before."* [Gabriel Jackson, **Op. Cit.**, p. 157]).

This Socialist and Communist sabotage of Anarchist resistance was repeated in the Civil War, less than two years later.

As can be seen, Morrow's account of the October Insurrection of 1934 leaves a lot to be desired. The claim that the CNT was responsible for its failure cannot withstand a close examination of the events. Indeed, by providing the facts which Morrow does not provide we can safely say that the failure of the revolt across Spain rested squarely with the PSOE and UGT. It was badly organised, they failed to cooperate or even communicate with CNT when aid was offered, they relied upon the enemies of the CNT in Catalonia and refused arms to the CNT in both Madrid and Asturias (so allowing the government force, the main force of which landed by sea, easy access to Asturias). All in all, even if the minority of railway workers in the CNT had joined the strike it would have, in all probability, resulted in the same outcome.

Unfortunately, Morrow's assertions have become commonplace in the ranks of the Left and have become even more distorted in the hands of his Trotskyist readers. For example, we find Nick Wrack arguing that the *"Socialist Party called a general strike and there were insurrectionary movements in Asturias and Catalonia, In Madrid and Catalonia the anarchist CNT stood to one side, arguing that this was a 'struggle between politicians' and did not concern the workers even though this was a strike against a move to incorporate fascism into the government."* He continues, *"[i]n Asturias the anarchist militants participated under the pressure of the masses and because of the traditions of unity in that area. However, because of their abstentionist stupidity, the anarchists elsewhere continued to work, even working trains which brought the Moorish troops under Franco to suppress the Asturias insurrection."* ["Marxism, Anarchism and the State", pp. 31-7, **Militant International Review**, no. 46, p. 34]

Its hard to work out where to start in this travesty of history. We will start with the simple errors. The CNT **did** take part in the struggle in Madrid. As Paul Preston notes, in Madrid the *"Socialists and Anarchists went on strike"* [**The Coming of the Spanish Civil War**, p. 174] In Catalonia, as indicated above, the "insurrectionary movement" in Catalonia was organised and lead by Catalan Fascists, who shot upon CNT members when they tried to open their union halls and who arrested CNT and FAI militants the night before the uprising. Moreover, the people organising the revolt had been repressing the CNT for months previously. Obviously attempts by Catalan Fascists to become a government should be supported by socialists, including Trotskyists. Moreover, the UGT and PSOE had worked with the quasi-fascist Primo do Rivera dictatorship during the 1920s. The hypocrisy is clear. So much for the CNT standing *"to one side, arguing that this was a 'struggle between politicians' and did not concern the workers even though this was a strike against a move to incorporate fascism into the government."*

His comments that *"the anarchists . . . work[ed] trains which brought the Moorish troops under Franco to suppress the Asturias insurrection"* is just plain silly. It was **not** anarchists who ran the trains, it was railway workers -- under martial law -- some of whom were in the CNT and some of whom were anarchists. Moreover, as noted above the Moorish troops under Franco arrived **by sea** and not by train. And, of course, no mention of the fact that the CNT-FAI in the strategically key port of Gijon was denied arms by the Socialists and Communists, which allowed the Moorish troops to disembark without real resistance.

Morrow has a lot to answer for.

7. Were the Friends of Durruti Marxists?

It is sometimes claimed that the **Friends of Durruti** Group which formed during the Spanish Revolution were Marxists or represented a "break" with anarchism and a move towards Marxism. Both these assertions are false. We discuss whether the Friends of Durruti (FoD) represented a "break" with anarchism in the [following section](#). Here we indicate that claims of the FoD being Marxists are false.

The Friends of Durruti were formed, in March 1937, by anarchist militants who had refused to submit to

Communist-controlled "militarisation" of the workers' militias. During the Maydays -- the government attack against the revolution two months later -- the Friends of Durruti were notable for their calls to stand firm and crush the counter-revolution. During and after the May Days, the leaders of the CNT asserted that the FoD were Marxists (which was quite ironic as it was the CNT leaders who were acting as Marxists in Spain usually did by joining with bourgeois governments). This was a slander, pure and simple.

The best source to refute claims that the FoD were Marxists (or becoming Marxist) or that they were influenced by, or moved towards, the Bolshevik-Leninists is Agustin Guillamon's book **The Friends of Durruti Group: 1937-1939**. Guillamon is a Marxist (of the "left-communist" kind) and no anarchist (indeed he states that the *"Spanish Revolution was the tomb of anarchism as a revolutionary theory of the proletariat."* [p. 108]). That indicates that his account can be considered objective and not anarchist wishful thinking. Here we use his work to refute the claims that the FoD were Marxists. [Section 9](#) discusses their links (or lack of them) with the Spanish Trotskyists.

So were the FoD Marxists? Guillamon makes it clear -- no, they were not. In his words, *"[t]here is nothing in the Group's theoretical tenets, much less in the columns of **El Amigo del Pueblo** [their newspaper], or in their various manifestos and handbills to merit the description 'marxist' being applied to the Group [by the CNT leadership]. They were simply an opposition to the CNT's leadership's collaborationist policy, making their stand within the organisation and upon anarcho-syndicalist ideology."* [p. 61] He stresses this in his conclusion:

"The Friends of Durruti was an affinity group, like many another existing in anarcho-syndicalist quarters. It was not influenced to any extent by the Trotskyists, nor by the POUM. Its ideology and watchwords were quintessentially in the CNT idiom: it cannot be said that they displayed a marxist ideology at any time . . . They were against the abandonment of revolutionary objectives and of anarchism's fundamental and quintessential ideological principles, which the CNT-FAI leaders had thrown over in favour of anti-fascist unity and the need to adapt to circumstances." [p. 107]

In other words, they wanted to return the CNT *"to its class struggle roots."* [**Ibid.**] Indeed, Balius (a leading member of the group and writer of its 1938 pamphlet **Towards a Fresh Revolution**) was moved to challenge the charges of "marxist" levelled at him:

"I will not repay defamatory comment in kind. But what I cannot keep mum about is that a legend of marxism has been woven about my person and I should like the record put straight . . . It grieves me that at the present time there is somebody who dares call me a Marxist when I could refute with unanswerable arguments those who hang such an unjustified label on me. As one who attends our union assemblies and specific gatherings, I might speak of the loss of class sensibility which I have observed on a number of occasions. I have heard it said that we should be making politics -- in as many words, comrades -- in an abstract sense, and virtually no one protested. And I, who have been

aghast at countless such instances, am dubbed a marxist just because I feel, myself to be a one hundred percent revolutionary . . . On returning from exile in France in the days of Primo de Rivera . . . I have been a defender of the CNT and the FAI ever since. In spite of my paralysis, I have done time in prison and been taken in manacles to Madrid for my fervent and steadfast championship of our organisations and for fighting those who once were friends of mine Is that not enough? . . . So where is this marxism of mine? Is it because my roots are not in the factory? . . . The time has come to clarify my position. It is not good enough to say that the matter has already been agreed. The truth must shine through. As far as I am concerned, I call upon all the comrades who have used the press to hang this label upon me to spell out what makes me a marxist." [El Amigo del Pueblo, no. 4, p. 3]

As can be seen, the FoD were not Marxists. Two more questions arise. Were they a "break" with anarchism (i.e. moving towards Marxism) and were they influenced by the Spanish Trotskyists. We turn to these questions in the next two sections.

8. Did the Friends of Durruti "*break with*" anarchism?

Morrow claims that the Friends of Durruti (FoD) "*represented a conscious break with the anti-statism of traditional anarchism. They explicitly declared the need for democratic organs of power, juntas or soviets, in the overthrow of capitalism.*" [Morrow, **Op. Cit.**, p. 247] The truth of the matter is somewhat different.

Before discussing his assertion in more detail a few comments are required. Typically, in Morrow's topsy-turvy world, all anarchists like the Friends of Durruti (Morrow also includes the Libertarian Youth, the "*politically awakened*" CNT rank and file, local FAI groups, etc.) who remained true to anarchism and stuck to their guns (often literally) -- represented a break with anarchism and a move towards Marxism, the revolutionary vanguard party (no doubt part of the 4th International), and a fight for the "workers state." Those anarchists, on the other hand, who compromised for "anti-fascist unity" (but mainly to try and get weapons to fight Franco) are the real anarchists because "*class collaboration . . . lies concealed in the heart of anarchist philosophy.*" [**Op. Cit.**, p. 101]

Morrow, of course, would have had a fit if anarchists pointed to the example of the Social Democrat's who crushed the German Revolution or Stalin's Russia as examples that "rule by an elite lies concealed in the heart of Marxist philosophy." It does not spring into Morrow's mind that those anarchists he praises are the ones who show the revolutionary heart of anarchism. This can best be seen from his comments on the Friends of Durruti, who we argue were not evolving towards "Marxism" but rather were trying to push the CNT and FAI back to its pre-Civil War politics and strategy. Moreover, as we argue in [section 12](#), anarchism has always argued for self-managed working class organisations to carry out and defend a revolution. The FoD were simply following in the tradition founded by Bakunin.

In other words, we will show that they did not "*break with*" anarchism -- rather they refused to

compromise their anarchism in the face of "comrades" who thought winning the war meant entering the government. This is clear from their leaflets, paper and manifesto. Moreover, as will become obvious, their "break" with anarchism actually just restates pre-war CNT policy and organisation.

For example, their leaflets, in April 1937, called for the unions and municipalities to "*replace the state*" and for no retreat:

"We have the organs that must supplant a State in ruins. The Trade Unions and Municipalities must take charge of economic and social life." [quoted by Agustin Guillamon, **Op. Cit.**, p. 38]

This clearly is within the CNT and anarcho-syndicalist tradition. Their manifesto, in 1938, repeated this call ("*the state cannot be retained in the face of the unions*"), and made three demands as part of their programme. It is worth quoting these at length:

"I - Establishment of a Revolutionary Junta or National Defence Council.

"This body will be organised as follows: members of the revolutionary Junta will be elected by democratic vote in the union organisations. Account is to be taken of the number of comrades away at the front . . . The Junta will steer clear of economic affairs, which are the exclusive preserve of the unions.

"The functions of the revolutionary Junta are as follows:

- "a) The management of the war*
- "b) The supervision of revolutionary order*
- "c) International affairs*
- "d) Revolutionary propaganda.*

"Posts to come up regularly for re-allocation so as to prevent anyone growing attached to them. And the trade union assemblies will exercise control over the Junta's activities.

"II - All economic power to the syndicates.

"Since July the unions have supplied evidence of the great capacity for constructive labour. . . It will be the unions that structure the proletarian economy.

"An Economic Council may also be set up, taking into consideration the natures of the Industrial Unions and Industrial federations, to improve on the co-ordination of economic activities.

"III - Free municipality.

[...]

"The Municipality shall take charge of those functions of society that fall outside the preserve of the unions. And since the society we are going to build shall be composed exclusively of producers, it will be the unions, no less, that will provide sustenance for the municipalities. . .

"The Municipalities will be organised at the level of local, comarcal and peninsula federations. Unions and municipalities will maintain liaison at local, comarcal and national levels." [**Towards a Fresh Revolution**]

This programme basically mimics the pre-war CNT policy and organisation and so cannot be considered as a "break" with anarchist or CNT politics or tradition.

Firstly, we should note that the "municipality" was a common CNT expression to describe a "commune" which was considered as *"all the residents of a village or hamlet meeting in assembly (council) with full powers to administer and order local affairs, primarily production and distribution."* In the cities and town the equivalent organisation was "the union" which *"brings individuals together, grouping them according to the nature of their work . . . First, it groups the workers of a factory, workshop or firm together, this being the smallest cell enjoying autonomy with regard to whatever concerns it alone . . . The local unions federate with one another, forming a local federation, composed of the committee elected by the unions, and of the general assembly that, in the last analysis, holds supreme sovereignty."* [Issac Puente, **Libertarian Communism**, p. 25 and p. 24]

In addition, the *"national federations [of unions] will hold as common property the roads, railways, buildings, equipment, machinery and workshops"* and the *"free municipality will federate with its counterparts in other localities and with the national industrial federations."* [**Op. Cit.**, p. 29 and p. 26] Thus Puente's classic pre-war pamphlet is almost identical to points two and three of the FoD Programme.

Moreover, the "Economic Council" urged by the FoD in point two of their programme is obviously inspired by the work of Abad Diego de Santillan, particularly his book **After the Revolution (El Organismo Economico de la Revolucion)**. Discussing the role of the "Federal Council of Economy", de Santillan says that it *"receives its orientation from below and operates in accordance with the resolutions of the regional and national assemblies."* [p. 86] Just as the CNT Congresses were the supreme policy-making body in the CNT itself, they envisioned a similar body emanating from the rank-and-file assemblies to make the guiding decisions for a socialised economy.

This leaves point one of their programme, the call for a "Revolutionary Junta or National Defence Council." It is here that Morrow and a host of other Marxists claim the FoD broke with anarchism towards Marxism. Nothing could be further from the truth.

Firstly, anarchists have long supported the idea of workers' councils (or soviets) as an expression of working class power to control their own lives (and so society) -- indeed, far longer than Marxists. Thus we find Bakunin arguing that the *"future social organisation must be made solely from the bottom up, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal."* Anarchists *"attain this goal . . . by the development and organisation, not of the political but of the social (and, by consequence, anti-political) power of the working masses."* [Michael Bakunin: **Selected Writings**, p. 206 and p. 198] These councils of workers' delegates (workers' councils) would be the basis of the commune and defence of the revolution:

"the federative Alliance of all working men's associations . . . constitute the Commune . . . Commune will be organised by the standing federation of the Barricades. . . [T]he federation of insurgent associations, communes and provinces . . . [would] organise a revolutionary force capable of defeating reaction . . . it is the very fact of the expansion and organisation of the revolution for the purpose of self-defence among the insurgent areas that will bring about the triumph of the revolution." [Op. Cit., pp. 170-1]

This perspective can be seen in the words of the German anarcho-syndicalist H. Ruediger (member of the IWA's secretariat in 1937) when he argued that for anarchists *"social re-organisation, like the defence of the revolution, should be concentrated in the hands of **working class organisations** -- whether labour unions or new organs of spontaneous creation, such as free councils, etc., which, as an expression of the will of the workers themselves, from **below up**, should construct the revolutionary social community."* [quoted in **The May Days in Barcelona**, Vernon Richards (ed.), p. 71]

Camillo Berneri sums up the anarchist perspective clearly when he wrote:

"The Marxists . . . foresee the natural disappearance of the State as a consequence of the destruction of classes by the means of 'the dictatorship of the proletariat,' that is to say State Socialism, whereas the Anarchists desire the destruction of the classes by means of a social revolution which eliminates, with the classes, the State. The Marxists, moreover, do not propose the armed conquest of the Commune by the whole proletariat, but they propose the conquest of the State by the party which imagines that it represents the proletariat. The Anarchists allow the use of direct power by the proletariat, but they understand by the organ of this power to be formed by the entire corpus of systems of communist administration -- corporate organisations [i.e. industrial unions], communal institutions, both regional and national -- freely constituted outside and in opposition to all political monopoly by parties and endeavouring to a minimum administrative centralisation." ["Dictatorship of the Proletariat and State Socialism", **Cienfuegos Press Anarchist Review**, no. 4, p. 52]

In other words, anarchists **do** support democratic organs of power when they are **directly** democratic (i. e. self-managed). *"The basic idea of Anarchism is simple,"* argued Voline, *"no party . . . placed above or*

*outside the labouring masses . . . ever succeeds in emancipating them . . . Effective emancipation can only be achieved by the **direct, widespread, and independent action of those concerned, of the workers themselves**, grouped, not under the banner of a political party . . . but in their own class organisations (productive workers' unions, factory committees, co-operatives, et cetera) on the basis of concrete action and self-government." [The Unknown Revolution, p, 197]*

Anarchists oppose **representative** organs of power as these are governments and so based on minority power and subject to bureaucratic deformations which ensure **un**-accountability from below. Anarchists argue *"that, by its very nature, political power could not be exercised except by a very restricted group of men at the centre. Therefore this power -- the **real** power -- could not belong to the soviets. It would actually be in the hands of the party."* [Voline, **Op. Cit.**, p. 213]

Thus Morrow's argument is flawed on the basic point that he does not understand anarchist theory or the nature of an anarchist revolution (also see [section 12](#)).

Secondly, and more importantly given the Spanish context, the FoD's vision has a marked similarity to pre-Civil War CNT organisation, policy and vision. This means that the idea of a National Defence Council was not the radical break with the CNT that some claim. Before the civil war the CNT had long has its defence groups, federated at regional and national level. Historian Jerome Mintz provides a good summary:

*"The policies and actions of the CNT were conducted primarily by administrative juntas, beginning with the sindicato, whose junta consisted of a president, secretary, treasurer, and council members. At each step in the confederation, a representative [sic! -- delegate] was sent to participate at the next organisational level -- from sindicato to the district to the regional confederation, then to the national confederation. In addition to the juntas, however, there were two major committee systems established as adjuncts to the juntas that had developed some autonomy: the **comites pro presos**, or committees for political prisoners, which worked for the release of prisoners and raised money for the relief of their families; and the **comites de defensa**, or defence committees, whose task was to stockpile weapons for the coming battle and to organise the shock troops who would bear the brunt of the fighting." [The Anarchists of Casas Viejas, p. 141]*

Thus we see that the CNT had its *"juntas"* (which means council or committee and so does not imply any authoritarianism) as well as *"defence committees"* which were elected by democratic vote in the union organisations decades before the FoD existed. The Defence Committees (or councils) were a CNT insurgent agency in existence well before July 1936 and had, in fact, played a key role in many insurrections and strikes, including the events of July 1936. In other words, the *"break"* with anarchism Morrow presents was, in fact, an exact reproduction of the way the CNT had traditionally operated and acted -- it is the same program of a *"workers defence council"* and *"union management of the economy"* that the CNT had advocated prior to the outbreak of the Civil War. The only *"break"* that **did** occur post 19th of July was that of the CNT and FAI ignoring its politics and history in favour of "anti-fascist

unity" and a UGT "Workers' Alliance" with all anti-fascist unions and parties (see [section 20](#)).

Moreover, the CNT insurrection of December 1933 had been co-ordinated by a National Revolutionary Committee [**No Gods, No Masters**, vol. 2, p. 235]. D.A. Santillan argued that the *"local Council of Economy will assume the mission of defence and raise voluntary corps for guard duty and if need be, for combat"* in the *"cases of emergency or danger of a counter-revolution."* [**After the Revolution**, p. 80] During the war itself a CNT national plenum of regions, in September 1936, called for a National Defence Council, with majority union representation and based on Regional Defence Councils. The Defence Council of Aragon, set up soon after, was based on these ideas. The need for co-ordinated revolutionary defence and attack is just common sense -- and had been reflected in CNT theory, policy and structure for decades.

An understanding of the basic ideas of anarchist theory on revolution combined with the awareness of the CNT's juntas (administrative councils or committees) had *"defence committees"* associated with them makes it extremely clear that rather than being a *"conscious break with the anti-statism of traditional anarchism"* the FoD's programme was, in fact, a conscious **return** to the anti-statism of traditional anarchism and the revolutionary program and vision of the pre-Civil War CNT.

This is confirmed if we look at the activities of the CNT in Aragon where they formed the *"Defence Council of Aragon"* in September 1936. In the words of historian Antony Beevor, *"[i]n late September delegates from the Aragonese collectives attended a conference at Bujaraloz, near where Durruti's column was based. They decided to establish a Defence Council of Aragon, and elected as president Joaquin Ascaso."* [**Op. Cit.**, p. 96] In February 1937, the first congress of the regional federation of collectives was held at Caspe to co-ordinate the activities of the collectives -- an obvious example of a regional economic council desired by the FoD. Morrow does mention the Council of Aragon -- *"the anarchist-controlled Council for the Defence of Aragon"* [**Op. Cit.**, p. 111] -- however, he strangely fails to relate this fact to anarchist politics. After all, in Aragon the CNT-FAI remained true to anarchism, created a defence council and a federation of collectives. If Morrow had discussed the events in Aragon he would have had to draw the conclusion that the FoD were not a *"conscious break with the traditional anti-statism of anarchism"* but rather were an expression of it.

This can be seen from the comments made after the end of the war by the Franco-Spanish Group of **The Friends of Durruti**. They clearly argued for a return to the principles of anarchism and the pre-war CNT. They argued not only for workers' self-organisation and self-management as the basis of the revolution but also to the pre-war CNT idea of a workers' alliance from the bottom up rather than a UGT-style one at the top (see [section 5](#)). In their words:

"A revolution requires the absolute domination of the workers' organisations as was the case in July, 1936, when the CNT-FAI were masters . . . We incline to the view that it is necessary to form a Revolutionary Alliance; a Workers' Front; where no one would be allowed to enter and take their place except on a revolutionary basis . . . " [**The Friends of Durruti Accuse**]

As can be seen, rather than a "revolutionary government" the FoD were consistently arguing for a federation of workers' associations as the basis of the revolution. In this they were loyally following Bakunin's basic arguments and the ideas of anarchism. Rather than the FoD breaking with anarchism, it is clear that it was the leading committees of the CNT and FAI which actually broke with the politics of anarchism and the tactics, ideas and ideals of the CNT.

Lastly there are the words of Jaime Balius, one of the FoD's main activists, who states in 1976 that:

"We did not support the formation of Soviets; there were no grounds in Spain for calling for such. We stood for 'all power to the trade unions'. In no way were we politically orientated . . . Ours was solely an attempt to save the revolution; at the historical level it can be compared to Kronstadt because if there the sailors and workers called for 'all power to the Soviets', we were calling for all power to the unions." [quoted by Ronald Fraser, **Blood of Spain**, p. 381]

"Political" here meaning "state-political" -- a common anarchist use of the word. According to Fraser, the *"proposed revolutionary junta was to be composed of combatants from the barricades."* [**Ibid.**] This echoes Bakunin's comment that the *"Commune will be organised by the standing federation of the Barricades and by the creation of a Revolutionary Communal Council composed of one or two delegates from each barricade . . . vested with plenary but accountable and removable mandates."* [**Op. Cit.**, pp. 170-1]

As can be seen, rather than calling for power to a party or looking to form a government (i.e. being *"politically orientated"*) the FoD were calling for *"all power to the unions."* This meant, in the context of the CNT, all power to the union assemblies in the workplace. Decision making would flow from the bottom upwards rather than being delegated to a "revolutionary" government as in Trotskyism. To stress the point, the FoD did not represent a *"break"* with anarchism or the CNT tradition. To claim otherwise means to misunderstand anarchist politics and CNT history.

Our analysis, we must note, also makes a mockery of Guillamon's claim that because the FoD thought that libertarian communism had to be *"impose[d]"* and *"defended by force of arms"* their position represented an *"evolution within anarchist thought processes."* [**Op. Cit.**, p. 95] As has been made clear above, from Bakunin onwards revolutionary anarchism has been aware of the need for an insurrection to create an anarchist society by destroying both the state and capitalism (i.e. to *"impose"* a free society upon those who wish hierarchy to continue and are in a position of power) and for that revolution to be defended against attempts to defeat it. Similarly, his claim that the FoD's *"revolutionary junta"* was the equivalent of what *"others call the vanguard or the revolutionary party"* cannot be defended given our discussion above -- it is clear that the junta was not seen as a form of delegated power by rather as a means of defending the revolution like the CNT's defence committees and under the direct control of the union assemblies.

It may be argued that the FoD did not actually mean this sort of structure. Indeed, their manifesto states

that they are *"introducing a slight variation in anarchism into our program. The establishment of a Revolutionary Junta."* Surely this implies that they saw themselves as having moved away from anarchism and CNT policy? As can be seen from Balius' comments during and after the revolution, the FoD were arguing for *"all power to the unions"* and stating that *"apolitical anarchism had failed."* However, *"apolitical"* anarchism came about post-July 19th when the CNT-FAI (ignoring anarchist theory and CNT policy and history) **ignored** the state machine rather than destroying it and supplanting it with libertarian organs of self-management. The social revolution that spontaneously occurred after July 19th was essentially economic and social (i.e. *"apolitical"*) and not *"anti-political"* (i.e. the destruction of the state machine). Such a revolution would soon come to grief on the shores of the (revitalised) state machine -- as the FoD correctly argued had happened.

To state that they had introduced a variation into their anarchism makes sense post-July 1936. The *"apolitical"* line of the CNT-FAI had obviously failed and a new departure was required. While it is clear that the FoD's "new" position was nothing of the kind, it was elemental anarchist principles, it was "new" in respect to the policy the CNT ("anarchism") had conducted during the Civil War -- a policy they justified by selective use of anarchist theory and principles. In the face of this, the FoD could claim they were presenting a new variation in spite of its obvious similarities to pre-war CNT policies and anarchist theory. Thus the claim that the FoD saw their ideas as some sort of departure from traditional anarchism cannot be maintained, given the obvious links this "new" idea had with the past policies and structure of the CNT. As Guillamon makes it clear, the FoD made *"their stand within the organisation and upon anarcho-syndicalist ideology"* and *"[a]t all times the Group articulated an anarcho-syndicalist ideology, although it also voiced radical criticism of the CNT and FAI leadership. But it is a huge leap from that to claiming that the Group espoused marxist positions."* [Op. Cit., p. 61 and p. 95]

One last comment. Morrow states that the *"CNT leadership . . . expelled the Friends of Durruti"* [Op. Cit., p. 189] This is not true. The CNT leadership did **try** to expel the FoD. However, as Balius points out, the *"higher committees order[ed] our expulsion, but this was rejected by the rank and file in the trade union assemblies and at a plenum of FAI groups held in the Casa CNT-FAI."* [quoted by Agustin Guillamon, Op. Cit., p. 73] Thus the CNT leadership could never get their desire ratified by any assembly of unions or FAI groups. Unfortunately, Morrow gets his facts wrong (and also presents a somewhat false impression of the relationship of the CNT leadership and the rank and file).

9. Were the Friends of Durruti influenced by Trotskyists?

Morrow implies that the Bolshevik-Leninists *"established close contacts with the anarchist workers, especially the 'Friends of Durruti'"* [Op. Cit., p. 139] The truth, as usual, is somewhat different.

To prove this we must again turn to Guillamon's work in which he dedicates a chapter to this issue. He brings this chapter by stating:

*"It requires only a cursory perusal of **El Amigo del Pueblo** or Balius's statements to establish that the Friends of Durruti were never marxists, nor influenced at all by the*

Trotskyists or the Bolshevik-Leninist Section. But there is a school of historians determined to maintain the opposite and hence the necessity for this chapter." [Op. Cit., p. 94]

He stresses that the FoD *"were not in any way beholden to Spanish Trotskyism is transparent from several documents"* and notes that while the POUM and Trotskyists displayed *"an interest" in "bringing the Friends of Durruti under their influence"* this was *"something in which they never succeeded."* [Op. Cit., p. 96 and p. 110]

Pre-May, 1937, Badius himself states that the FoD *"had no contact with the POUM, nor with the Trotskyists."* [Op. Cit., p. 104] Post-May, this had not changed as witness E. Wolf letter to Trotsky in July 1937 which stated that it *"will be impossible to achieve any collaboration with them . . . Neither the POUMists nor the Friends would agree to the meeting [to discuss joint action]."* [Op. Cit., pp. 97-8]

In other words, the Friends of Durruti did not establish *"close contacts"* with the Bolshevik-Leninists after the May Days of 1937. While the Bolshevik-Leninists may have wished for such contacts, the FoD did not (they probably remembered their fellow anarchists and workers imprisoned and murdered when Trotsky was in power in Russia). They were, of course, contacts of a limited kind but no influence or significant co-operation. Little wonder Badius stated in 1946 that the *"alleged influence of the POUM or the Trotskyists upon us is untrue."* [quoted, Op. Cit., p. 104]

It is hardly surprising that the FoD were not influenced by Trotskyism. After all, they were well aware of the policies Trotsky introduced when he was in power. Moreover, the program of the Bolshevik-Leninists was similar in rhetoric to the anarchist vision -- they differed on the question of whether they actually **meant** *"all power to the working class"* or not (see section [12](#) and [13](#)). And, of course, the Trotskyists activities during the May Days amounted to little more than demanding that the workers' do what they were already doing (as can be seen from the leaflet they produced -- as George Orwell noted, *"it merely demanded what was happening already"* [**Homage to Catalonia**, p. 221]). As usual, the "vanguard of the proletariat" were trying to catch up with the proletariat.

In theory and practice the FoD were miles ahead of the Bolshevik-Leninists -- as to be expected, as the FoD were anarchists.

10. What does the Friends of Durruti's programme tell us about Trotskyism?

Morrow states that the FoD's *"slogans included the essential points of a revolutionary program: all power to the working class, and democratic organs of the workers, peasants and combatants, as the expression of the workers' power."* [Op. Cit., p. 133] It is useful to compare Leninism to these points to see if that provides a revolutionary program.

Firstly, as we argue in more detail in [section 11](#), Trotsky abolished the democratic organs of the Red Army. Lenin's rule also saw the elimination of the factory committee movement and its replacement with one-man management appointed from above (see [section 17](#) and Maurice Brinton's **The Bolsheviks and Workers' Control** for details). Both these events occurred before the start of the Russian Civil War in May 1918. Moreover, neither Lenin nor Trotsky considered workers' self-management of production as a key aspects of socialism. On this level, Leninism in power did not constitute a *"revolutionary program."*

Secondly, Leninism does **not** call for *"all power to the working class"* or even *"workers' power"* to manage their own affairs. To quote Trotsky, in an article written in 1937, *"the proletariat can take power only through its vanguard."* The working classes' role is one of supporting the party:

"Without the confidence of the class in the vanguard, without support of the vanguard by the class, there can be no talk of the conquest of power."

"In this sense the proletarian revolution and dictatorship are the work of the whole class, but only under the leadership of the vanguard."

Thus, rather than the working class as a whole seizing power, it is the *"vanguard"* which takes power -- *"a revolutionary party, even after seizing power . . . is still by no means the sovereign ruler of society."* [**Stalinism and Bolshevism**] So much for "workers' power" -- unless you equate that with the "power" to give your power, your control over your own affairs, to a minority who claim to represent you. Indeed, Trotsky even attacks the idea that workers' can achieve power directly via organs of self-management like workers' councils (or soviets):

"Those who propose the abstraction of the Soviets from the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." [**Op. Cit.**]

In other words, the dictatorship of the proletariat is, in fact, expressed by *"the party dictatorship."* In this Trotsky follows Lenin who asserted that:

*"The very presentation of the question -- 'dictatorship of the Party **or** dictatorship of the class, dictatorship (Party) of the leaders **or** dictatorship (Party) of the masses?' -- is evidence of the most incredible and hopeless confusion of mind . . . [because] classes are usually . . . led by political parties. . . "* [**Left-wing Communism: An Infantile Disorder**, pp. 25-6]

As has been made clear above, the FoD being anarchists aimed for a society of generalised self-management, a system in which working people directly controlled their own affairs and so society. As these words by Lenin and Trotsky indicate they did not aim for such a society, a society based on *"all*

power to the working class." Rather, they aimed for a society in which the workers would delegate their power into the hands of a few, the revolutionary party, who would exercise power **on their behalf**. The FoD meant exactly what they said when they argued for "*all power to the working class*" -- they did not mean this as a euphemism for party rule. In this they followed Bakunin:

"[T]he federated Alliance of all labour associations . . . will constitute the Commune . . . there will be a federation of the standing barricades and a Revolutionary Communal Council will operate on the basis of one or two delegates from each barricade . . . these deputies being invested with binding mandates and accountable and revocable at all times. . . An appeal will be issued to all provinces, communes and associations inviting them to follow the example set . . . [and] to reorganise along revolutionary lines . . . and to then delegate deputies to an agreed place of assembly (all of those deputies invested with binding mandates and accountable and subject to recall), in order to found the federation of insurgent associations, communes and provinces . . . Thus it is through the very act of extrapolation and organisation of the Revolution with an eye to the mutual defences of insurgent areas that the . . . Revolution, founded upon . . . the ruins of States, will emerge triumphant. . .

"Since it is the people which must make the revolution everywhere, and since the ultimate direction of it must at all times be vested in the people organised into a free federation of agricultural and industrial organisations . . . being organised from the bottom up through revolutionary delegation . . ." [No God, No Masters, vol. 1, pp. 155-6]

And:

"Not even as revolutionary transition will we countenance national Conventions, nor Constituent Assemblies, nor provisional governments, nor so-called revolutionary dictatorships: because we are persuaded that revolution is sincere, honest and real only among the masses and that, whenever it is concentrated in the hands of a few governing individuals, it inevitably and immediately turns into reaction." [Op. Cit., p. 160]

As can be seen, Bakunin's vision is precisely, to use Morrow's words, "*all power to the working class, and democratic organs of the workers, peasants and combatants, as the expression of the workers' power.*" Thus the Friends of Durruti's program is not a "*break*" with anarchism (as we discussed in more detail in [section 8](#)) but rather in the tradition started by Bakunin -- in other words, an anarchist program. It is Leninism, as can be seen, which rejects this "*revolutionary program*" in favour of all power to the representatives of the working class (i.e. party) which it confuses with the working class as a whole.

Given that Morrow asserts that "*all power to the working class*" was an "*essential*" point of "*a revolutionary program*" we can only conclude that Trotskyism does not provide a revolutionary program -- rather it provides a program based, at best, on representative government in which the workers' delegate their power to a minority or, at worse, on party dictatorship **over** the working class (the

experience of Bolshevik Russia would suggest the former quickly becomes the latter, and is justified by Bolshevik ideology).

By his own arguments, here as in so many other cases, Morrow indicates that Trotskyism is not a revolutionary movement or theory.

11. Why is Morrow's comments against the militarisation of the Militias ironic?

Morrow denounces the Stalinist militarisation of the militias (their "*campaign for wiping out the internal democratic life of the militias*") as follows:

"The Stalinists early sought to set an 'example' by handing their militias over to government control, helping to institute the salute, supremacy of officers behind the lines, etc. . . .

"The example was wasted on the CNT masses . . . The POUM reprinted for distribution in the militias the original Red Army Manual of Trotsky, providing for a democratic internal regime and political life in the army." [Op. Cit., p. 126]

Morrow states that he supported the "*democratic election of soldiers' committees in each unit, centralised in a national election of soldiers' delegates to a national council.*" Moreover, he attacks the POUM leadership because it "*forbade election of soldiers' committees*" and argued that the "*simple, concrete slogan of elected soldier's committees was the only road for securing proletariat control of the army.*" He attacks the POUM because its "*ten thousand militiamen were controlled bureaucratically by officials appointed by the Central Committee of the party, election of soldiers' committees being expressly forbidden.*" [Op. Cit., p. 127, p. 128 and pp. 136-7]

Again, Morrow is correct. A revolutionary working class militia **does** require self-management, the election of delegates, soldiers' councils and so on. Bakunin, for example, argued that the fighters on the barricades would take a role in determining the development of the revolution as the "*Commune will be organised by the standing federation of the Barricades . . . composed of one or two delegates from each barricade . . . vested with plenary but accountable and removable mandates.*" This would complement "*the federative Alliance of all working men's [and women's] associations . . . which will constitute the Commune.*" [Michael Bakunin: Selected Writings, pp. 170-1] That is **exactly** why the CNT militia organised in this fashion (and, we must note, they were only applying the organisational principles of the CNT and FAI -- i.e. anarchism -- to the militias). The militia columns were organised in a libertarian fashion from the bottom up:

"The establishment of war committees is acceptable to all confederal militias. We start from the individual and form groups of ten, which come to accommodations among

themselves for small-scale operations. Ten such groups together make up one centuria, which appoints a delegate to represent it. Thirty centurias make up one column, which is directed by a war committee, on which the delegates from the centurias have their say. . . although every column retains its freedom of action, we arrive at co-ordination of forces, which is not the same thing as unity of command." [No Gods, No Masters, vol. 2, pp. 256-7]

In other words, Morrow is arguing for an **anarchist** solution to the problem of defending the revolution and organising those who were fighting fascism. We say anarchist for good reason. What is ironic about Morrow's comments and description of "*workers' control of the army*" is that these features were **exactly** those eliminated by Trotsky when he created the Red Army in 1918! Indeed, Trotsky acted in **exactly** the same way as Morrow attacks the Stalinists for acting (and they used many of the same arguments as Trotsky did to justify it).

As Maurice Brinton correctly summarises:

"Trotsky, appointed Commissar of Military Affairs after Brest-Litovsk, had rapidly been reorganising the Red Army. The death penalty for disobedience under fire had been restored. So, more gradually, had saluting, special forms of address, separate living quarters and other privileges for officers. Democratic forms of organisation, including the election of officers, had been quickly dispensed with." [The Bolsheviks and Workers' Control, p. 37]

He notes that "*[f]or years, Trotskyist literature has denounced these reactionary facets of the Red Army as examples of what happened to it 'under Stalinism.'*" [Op. Cit., p. 37f] This claim was, amazingly enough, also made by Trotsky himself. In 1935 he re-wrote history by arguing that "*[i]n the fire of the cruel struggle [of the Civil War], there could not be even a question of a privileged position for officers: the very word was scrubbed out of the vocabulary.*" Only "*after the victories had been won and the passage made to a peaceful situation*" did "*the military apparatus*" try to "*become the most influential and privileged part of the whole bureaucratic apparatus*" with "*the Stalinist bureaucracy . . . gradually over the succeeding ten to twelve years*" ensuring for them "*a superior position*" and giving them "*ranks and decorations.*" [How Did Stalin Defeat the Opposition?]

In fact, "*ranks and decorations*" and "*superior*" positions were introduced by Trotsky **before** the outbreak of the Civil War in May 1918. Having been responsible for such developments you would think he would remember them!

On March 28th, 1918, Trotsky gave a report to the Moscow City Conference of the Communist Party. In this report he stated that "*the principle of election is politically purposeless and technically inexpedient, and it has been, in practice, abolished by decree*" and that the Bolsheviks "*fac[ed] the task of creating a regular Army.*" Why the change? Simply because the Bolshevik Party held power ("*political power is in the hands of the same working class from whose ranks the Army is recruited*"). Of course, power was

actually held by the Bolshevik party, not the working class, but never fear:

*"Once we have established the Soviet regime, that is a system under which the government is headed by persons who have been directly elected by the Soviets of Workers', Peasants' and Soldiers' Deputies, there can be no antagonism between the government and the mass of the workers, just as there is no antagonism between the administration of the union and the general assembly of its members, and, therefore, there cannot be any grounds for fearing the **appointment** of members of the commanding staff by the organs of the Soviet Power."* [Work, Discipline, Order]

Of course, most workers' are well aware that the administration of a trade union usually works against them during periods of struggle. Indeed, so are most Trotskyists as they often denounce the betrayals by that administration. Thus Trotsky's own analogy indicates the fallacy of his argument. Elected officials do not necessarily reflect the interests of those who elected them. That is why anarchists have always supported **delegation** rather than representation combined with decentralisation, strict accountability and the power of instant recall. In a highly centralised system (as created by the Bolsheviks and as exists in most social democratic trade unions) the ability to recall an administration is difficult as it requires the agreement of **all** the people. Thus there are quite a few grounds for fearing the appointment of commanders by the government -- no matter which party makes it up.

If, as Morrow argues, the *"simple, concrete slogan of elected soldier's committees was the only road for securing proletarian control of the army"* then Trotsky's regime in the Red Army ensured the defeat of proletarian control of that organisation. The question Morrow raises of who would control the army, the working class or the bourgeois failed to realise the real question -- who was to control the army, the working class, the bourgeois or the state bureaucracy. Trotsky ensured that it would be the latter.

Hence Morrow's own arguments indicate the anti-revolutionary nature of Trotskyism -- unless, of course, we decide to look only at what people say and not what they do.

Of course some Trotskyists know what Trotsky actually did when he held power and try and present apologetics for his obvious destruction of soldiers' democracy. One argues that the *"Red Army, more than any other institution of the civil war years, embodied the contradiction between the political consciousness and circumstantial coercion. On the one hand the creation of a Red Army was a retreat: it was a conscripted not a voluntary army; officers were appointed not elected . . . But the Red Army was also filled with a magnificent socialist consciousness."* [John Rees, *"In Defence of October"*, **International Socialism**, no. 52, pp. 3-82, p. 46]

This argument is somewhat weak for two reasons.

Firstly, the regressive features of the Red Army appeared **before** the start of the Civil War. It was a political decision to organise in this way, a decision **not justified at the time in terms of circumstantial necessity**. Indeed, far from it (like most of the other Bolshevik policies of the period).

Rather it was justified under the rather dubious rationale that workers did not need to fear the actions of a workers' state. Circumstances were not mentioned at all nor was the move considered as a retreat or as a defeat. It was not even considered as a matter of principle.

This perspective was reiterated by Trotsky after the end of the Civil War. Writing in 1922, he argued that:

"There was and could be no question of controlling troops by means of elected committees and commanders who were subordinate to these committees and might be replaced at any moment . . . [The old army] had carried out a social revolution within itself, casting aside the commanders from the landlord and bourgeois classes and establishing organs of revolutionary self-government, in the shape of the Soviets of Soldiers' Deputies. These organisational and political measures were correct and necessary from the standpoint of breaking up the old army. But a new army capable of fighting could certainly not grow directly out of them . . . The attempt made to apply our old organisational methods to the building of a Red Army threatened to undermine it from the very outset . . . the system of election could in no way secure competent, suitable and authoritative commanders for the revolutionary army. The Red Army was built from above, in accordance with the principles of the dictatorship of the working class. Commanders were selected and tested by the organs of the Soviet power and the Communist Party. Election of commanders by the units themselves -- which were politically ill-educated, being composed of recently mobilised young peasants -- would inevitably have been transformed into a game of chance, and would often, in fact, have created favourable circumstances for the machinations of various intriguers and adventurers. Similarly, the revolutionary army, as an army for action and not as an arena of propaganda, was incompatible with a regime of elected committees, which in fact could not but destroy all centralised control." [**The Path of the Red Army**]

If a "circumstantial" factor exists in this rationale, it is the claim that the soldiers were "politically ill-educated." However, **every** mass movement or revolution **starts** with those involved being "politically ill-educated." The very process of struggle educates them politically. A key part of this radicalisation is practising self-management and self-organisation -- in other words, in participating in the decision making process of the struggle, by discussing ideas and actions, by hearing other viewpoints, electing and mandating delegates. To remove this ensures that those involved **remain** "politically ill-educated" and, ultimately, incapable of self-government. It also contains the rationale for continuing party dictatorship:

"If some people . . . have assumed the right to violate everybody's freedom on the pretext of preparing the triumph of freedom, they will always find that the people are not yet sufficiently mature, that the dangers of reaction are ever-present, that the education of the people has not yet been completed. And with these excuses they will seek to perpetuate their own power." [Errico Malatesta, **Life and Ideas**, p. 52]

In addition, Trotsky's rationale refutes any claim that Bolshevism is somehow "fundamentally" democratic. The ramifications of it were felt everywhere in the soviet system as the Bolsheviks ignored the "wrong" democratic decisions made by the working masses and replaced their democratic organisations with appointees from above. Indeed, Trotsky admits that the *"Red Army was built from above, in accordance with the principles of the dictatorship of the working class."* Which means, to state the obvious, appointment from above, the dismantling of self-government, and so on are *"in accordance with the principles"* of Trotskyism. These comments were not made in the heat of the civil war, but afterward during peacetime. Notice Trotsky admits that a *"social revolution"* had swept through the Tsarist army. His actions, he also admits, reversed that revolution and replaced its organs of *"self-government"* with ones identical to the old regime. When that happens it is usually called by its true name, namely **counter**-revolution.

For a Trotskyist, therefore, to present themselves as a supporter of self-managed militias is the height of hypocrisy. The Stalinists repeated the same arguments used by Trotsky and acted in exactly the same way in their campaign against the CNT and POUM militias. Certain acts have certain ramifications, no matter who does them or under what government. In other words, abolishing democracy in the army will generate autocratic tendencies which will undermine socialistic ones **no matter who does it**. The same means cannot be used to serve different ends as there is an intrinsic relationship between the instruments used and the results obtained -- that is why the bourgeoisie do not encourage democracy in the army or the workplace! Just as the capitalist workplace is organised to produce proletarians and capital along with cloth and steel, the capitalist army is organised to protect and reinforce minority power. The army and the capitalist workplace are not simply means or neutral instruments. Rather they are social structures which generate, reinforce and **protect** specific social relations. This is what the Russian masses instinctively realised and conducted a social-revolution in both the army and workplace to **transform** these structures into ones which would enhance rather than crush freedom and working class autonomy. The Bolsheviks reversed these movements in favour of structures which reproduced capitalist social relationships **and justified it in terms of "socialism."** Unfortunately, capitalist means and organisations would only generate capitalist ends.

It was for these reasons that the CNT and its militias were organised from the bottom up in a self-managed way. It was the only way **socialists** and a socialist society could be created -- that is why anarchists are anarchists, we recognise that a socialist (i.e. libertarian) society cannot be created by authoritarian organisations. As the justly famous Sonvillier Circular argued *"[h]ow could one expect an egalitarian society to emerge out of an authoritarian organisation? It is impossible."* [quoted by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 61] Just as the capitalist state cannot be utilised by the working class for its own ends, capitalist/statist organisational principles such as appointment, autocratic management, centralisation and delegation of power and so on cannot be utilised for social liberation. They are not designed to be used for that purpose (and, indeed, they were developed in the first place to stop it and enforce minority rule!).

In addition, to abolish democracy on the pretext that people are not ready for it ensures that it will never exist. Anarchists, in contrast, argue that *"[o]nly freedom or the struggle for freedom can be the school for freedom."* [Malatesta, **Op. Cit.**, p. 59]

Secondly, how can a "*socialist consciousness*" be encouraged, or continue to exist, without socialist institutions to express it? Such a position is idealistic nonsense, expressing the wishful notion that the social relationships people experiences does not impact on those involved. In effect, Rees is arguing that as long as the leaders have the "right ideas" it does not matter how an organisation is structured. However, how people develop, the ideas they have in their heads, are influenced by the relations they create with each other -- autocratic organisations do not encourage self-management or socialism, they produce bureaucrats and subjects.

An autocratic organisation **cannot** encourage a socialist consciousness by its institutional life, only in spite of it. For example, the capitalist workplace encourages a spirit of revolt and solidarity in those subject to its hierarchical management and this is expressed in direct action -- by **resisting** the authority of the boss. It only generates a socialist perspective via resistance to it. Similarly with the Red Army. Education programs to encourage reading and writing does not generate socialists, it generates soldiers who are literate. If these soldiers do not have the institutional means to manage their own affairs, a forum to discuss political and social issues, then they remain order takers and any socialist conscious will wither and die.

The Red Army was based on the fallacy that the structure of an organisation is unimportant and it is the politics of those in charge that matter (Marxists make a similar claim for the state, so we should not be too surprised). However, it is no co-incidence that bourgeois structures are always hierarchical -- self-management is a politically educational experience which erodes the power of those in charge and transforms those who do it. It is to stop this development, to protect the power of the ruling few, that the bourgeois always turn to centralised, hierarchical structures -- they reinforce elite rule. You cannot use the same form of organisation and expect different results -- they are designed that way for a reason! To twitter on about the Red Army being "*filled with a magnificent socialist consciousness*" while justifying the elimination of the only means by which that consciousness could survive, prosper and grow indicates a complete lack of socialist politics and any understanding of materialist philosophy.

Moreover, one of the basic principles of the anarchist militia was equality between all members. Delegates received the same pay, ate the same food, wore the same clothes as the rest of the unit. Not so in the Red Army. Trotsky thought, when he was in charge of it, that inequality was "*in some cases . . . quite explicable and unavoidable*" and that "[e]very Red Army warrior fully accepts that the commander of his unit should enjoy certain privileges as regards lodging, means of transport and even uniform." [**More Equality!**]

Of course, Trotsky would think that, being the head commander of the Army. Unfortunately, because soldier democracy had been abolished by decree, we have no idea whether the rank and file of the Red Army agreed with him. For Trotsky, privilege "*is, in itself, in certain cases, inevitable*" but "[o] **stentatious indulgence in privilege is not just evil, it is a crime.**" Hence his desire for "*more*" equality rather than equality -- to aim for "*eliminating the most abnormal [!] phenomena, softening [!] the inequality that exists*" rather than abolish it as they did in the CNT militias. [**Op. Cit.**]

But, of course, such inequalities that existed in the Red Army are to be expected in an autocratically run organisation. The inequality inherent in hierarchy, the inequality in power between the order giver and order taker, will, sooner or later, be reflected in material inequality. As happened in the Red Army (and all across the "workers' state"). All Trotsky wanted was for those in power to be respectable in their privilege rather than showing it off. The anarchist militias did not have this problem because being libertarian, delegates were subject to recall and power rested with the rank and file, **not** an elected government.

As another irony of history, Morrow quotes a Bolshevik-Leninist leaflet (which "*points the road*") as demanding "*[e]qual pay for officers and soldiers.*" [Op. Cit., p. 191] Obviously these good Trotskyists had no idea what their hero actually wrote on this subject or did when in power. We have to wonder how long their egalitarian demands would have survived once they had acquired power -- if the experience of Trotsky in power is anything to go by, not very long.

Trotsky did not consider how the abolition of democracy and its replacement with an autocratic system would effect the morale or consciousness of the soldiers subject to it. He argued that in the Red Army "*the best soldier does not mean at all the most submissive and uncomplaining.*" Rather, "*the best soldier will nearly always be sharper, more observant and critical than the others. . . by his critical comments, based on facts accessible to all, he will pretty often undermine the prestige of the commanders and commissars in the eyes of the mass of the soldiers.*" However, not having a democratic army the soldiers could hardly express their opinion other than rebellion or by indiscipline. Trotsky, however, adds a comment that makes his praise of critical soldiers seem less than sincere. He states that "*counter-revolutionary elements, agents of the enemy, make conscious and skilful use of the circumstances I have mentioned [presumably excessive privilege rather than critical soldiers, but who can tell] in order to stir up discontent and intensify antagonism between rank and file and the commanding personnel.*" [Op. Cit.] The question, of course, arises of who can tell the difference between a critical soldier and a "*counter-revolutionary element*"? Without a democratic organisation, soldier are dependent (as in any other hierarchy) on the power of the commanders, commissars and, in the Red Army, the Bolshevik Secret Police (the Cheka). In other words, members of the very class of autocrats their comments are directed against.

Without democratic organisation, the Red Army could never be a means for creating a socialist society, only a means of reproducing autocratic organisation. The influence of the autocratic organisation created by Trotsky had a massive impact on the development of the Soviet State. According to Trotsky himself:

"The demobilisation of the Red Army of five million played no small role in the formation of the bureaucracy. The victorious commanders assumed leading posts in the local Soviets, in economy, in education, and they persistently introduced everywhere that regime which had ensured success in the civil war. Thus on all sides the masses were pushed away gradually from actual participation in the leadership of the country." [**The Revolution Betrayed**]

Obviously Trotsky had forgotten who created the regime in the Red Army in the first place! He also seems to have forgotten that after militarising the Red Army, he turned his power to militarising workers (starting with the railway workers). He also forgets that Lenin had been arguing that workers' must "**unquestioningly obey the single will of the leaders of labour**" from April 1918 along with granting "*individual executives dictatorial power (or 'unlimited' powers)*" and that "*the appointment of individuals, dictators with unlimited powers*" was, in fact, "*in general compatible with the fundamental principles of Soviet government*" simply because "*the history of revolutionary movements*" had "*shown*" that "*the dictatorship of individuals was very often the expression, the vehicle, the channel of the dictatorship of revolutionary classes.*" He notes that "*[u]ndoubtedly, the dictatorship of individuals was compatible with bourgeois democracy.*" [**The Immediate Tasks of the Soviet Government**, p. 34 and p. 32]

In other words, Lenin urged the creation of, and implemented, **bourgeois** forms of workplace management based on the appointment of managers from above. To indicate that this was not in contradiction with Soviet principles, he points to the example of **bourgeois** revolutions! As if bourgeois methods do not reflect bourgeois interests and goals. In addition, these "dictators" were given the same autocratic powers Trotsky claimed the demobilisation of the Red Army four years later had "*persistently introduced everywhere.*" Yes, "*on all sides the masses were pushed away gradually from actual participation in the leadership of the country*" but the process had started immediately after the October Revolution and was urged and organised by Lenin and Trotsky before the Civil War had started.

Lenin's support for appointment of ("*dictatorial*") managers from above makes Trotsky's 1922 comment that the "*Red Army was built from above, in accordance with the principles of the dictatorship of the working class*" take on a new light. [**The Path of the Red Army**] After all, Lenin argued for an economy system built from above via the appointment of managers before the start of the Civil War. The Red Army was created from above via the appointment of officers before the start of the Civil War. Things had certainly changed since Lenin had argued in **The State and Revolution** that "*[a]ll officials, without exception, [would be] elected and subject to recall at any time.*" This would "*serve as the bridge between capitalism and socialism.*" [**The Essential Lenin**, p. 302] One major difference, given Trotsky's rationales, seems to be that the Bolsheviks were now in power and so election and recall without exception could be forgotten and replaced by appointment.

In summary, Trotsky's argument against functional democracy in the Red Army could, and was, used to justify the suppression of any democratic decision or organisation of the working class the Bolshevik government disapproved of. He used the same argument, for example, to justify the undermining of the Factory Committee movement and the struggle for workers' control in favour of one-man management -- the form of management in the workplace was irrelevant as the workers' were now citizens of a workers' state and under a workers' government (see [section 17](#)). Needless to say, a state which eliminates functional democracy in the grassroots will not stay democratic for long (and to remain the sovereign power in society, any state will have to eliminate it or, at the very least, bring it under central control -- as institutionalised in the USSR constitution of 1918).

Instead of seeing socialism as a product of free association, of working class self-organisation from the bottom up by self-managed organisations, Trotsky saw it as a centralised, top-down system. Of course, being a democrat of sorts he saw the Bolshevik Government as being elected by the mass of the population (or, more correctly, he saw it being elected by the national congress of soviets). However, his vision of centralisation of power provided the rationale for destroying functional democracy in the grass-roots -- and without healthy roots, any plant will wither and die. Little wonder, then, that the Bolshevik experiment proved such a disaster -- yes, the civil war did not help but the logic of Bolshevism has started to undermine working class self-management **before** it started.

Thus Trotsky's argument that the democratic nature of a workers' army or militia is irrelevant because a "workers' state" exists is flawed on many different levels. And the experience of Trotsky in power indicates well the poverty of Trotskyism and Morrow's criticism of the CNT -- his suggestion for a self-managed militia is pure anarchism with nothing to do with Leninism and the experience of Bolshevism in power.

12. What is ironic about Morrow's vision of revolution?

Equally ironic as Morrow's comments concerning democratic militias (see [last section](#)) is his argument that the revolution needed to *"give the factory committees, militia committees, peasant committees, a democratic character, by having them elected by all workers in each unit; to bring together these elected delegates in village, city, regional councils . . . [and] a national congress."* [Op. Cit., p. 100]

Such a position is correct, such developments were required to ensure the success of the revolution. However, it is somewhat ironic that a Trotskyist would present them as somehow being opposed to anarchism when, in fact, they are pure anarchism. Indeed, anarchists were arguing in favour of workers' councils more than five decades before Lenin discovered the importance of the Russian Soviets in 1917. Moreover, as we will indicate, what is even more ironic is the fact that Trotskyism does not actually see these organs as an expression of working class self-management and power but rather as a means of the party to take power. In addition, we must also note that it was Lenin and Trotsky who helped undermine the Russian workers' factory committees, militia committees and so on in favour of party rule. We will discuss each of these ironies in turn.

Firstly, as noted, such Morrow's stated position is exactly what Bakunin and the anarchist movement had been arguing since the 1860s. To quote Bakunin:

*"the federative alliance of all working men's associations . . . constitute the Commune . . . all provinces, communes and associations . . . by first **reorganising** on revolutionary lines . . . [will] constitute the federation of insurgent associations, communes and provinces . . . [and] organise a revolutionary force capable defeating reaction . . . [and for] self-defence . . . [The] revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means*

of revolutionary delegation. . . " [Michael Bakunin: Selected Writings, p. 170-2]

"The future social organisation must be made solely from the bottom up, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal." [Op. Cit., p. 206]

Here is Kropotkin presenting the same vision:

"independent Communes for the territorial organisation, and of federations of Trade Unions [i.e. workplace associations] for the organisation of men [and women] in accordance with their different functions. . . [and] free combines and societies . . . for the satisfaction of all possible and imaginable needs, economic, sanitary, and educational; for mutual protection, for the propaganda of ideas, for arts, for amusement, and so on." [Peter Kropotkin, **Evolution and Environment**, p. 79]

"the complete independence of the Communes, the Federation of free communes and the social revolution in the communes, that is to say the formation of associated productive groups in place of the state organisation." [quoted by Camillo Berneri, **Peter Kropotkin: His Federalist Ideas**]

Bakunin also mentions that those defending the revolution would have a say in the revolutionary structure -- the *"Commune will be organised by the standing federation of the Barricades and by the creation of a Revolutionary Council composed of . . . delegates from each barricade . . . vested with plenary but accountable and removable mandates."* [Op. Cit., p. 171] This obviously parallels the democratic nature of the CNT militias.

Interestingly enough, Marx commented that *"odd barricades, these barricades of the Alliance [Bakunin's anarchist organisation], where instead of fighting they spend their time writing mandates."* [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 111] Obviously the importance of militia self-management was as lost on him as it was on Lenin and Trotsky -- under Marx's state would its defenders just be cannon-fodder, obeying their government and officers without the ability to help determine the revolution they were fighting for? Apparently so. Moreover, Marx quotes Bakunin's support for *"responsible and recallable delegates, vested with their imperative mandates"* without commenting on the fact Bakunin **predicts** those features of the Paris Commune Marx praised in his **Civil War in France** by a number of years. Looks like Morrow is not the first Marxist to appropriate anarchist ideas without crediting their source.

As can be seen, Morrow's suggestion on how to push the Spanish Revolution forward just repeats the ideas of anarchism. Any one familiar with anarchist theory would not be surprised by this as they would know that we have seen a free federation of workplace and communal associations as the basis of a revolution and, therefore, a free society since the time of Proudhon. Thus Morrow's "Trotskyist" vision

of a federation of workers' council actually reproduces basic anarchist ideas, ideas which pre-date Lenin's support for soviets as the basis of his "workers' state" by over half a century (we will indicate the fundamental difference between the anarchist vision and the Trotskyist in due course).

As an aside, these quotes by Bakunin and Kropotkin make a mockery of Lenin's assertion that anarchists do not analysis "*what to put in the place of what has been destroyed [i.e. the old state machine] and how*" [Essential Works of Lenin, p. 362] Anarchists have always suggested a clear answer to what we should "*replace*" the state with -- namely free federations of working class organisations created in the struggle against capital and state. To state otherwise is to either be ignorant of anarchist theory or seek to deceive.

Some anarchists like Bakunin and the anarcho-syndicalists and collectivists saw these organisations being based primarily on libertarian labour unions complemented by whatever organisations were created in the process of revolution ("*The future society must be nothing else than the universalisation of the organisation that the International has formed for itself*" -- "*The Sonvillier Circular*" echoing Bakunin, quoted by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 61] Others like Kropotkin and anarcho-communists saw it as a free federation of organisations created by the process of revolution itself. While anarchists did not present a blueprint of what would occur after the revolution (and rightly so) they did provide a general outline in terms of a decentralised, free federation of self-managed workers' associations as well as linking these future forms of working class self-government with the forms generated in the current class struggle in the here and now.

Similarly, Lenin's other assertion that anarchists do not study "*the concrete lessons of previous proletarian revolutions*" [Ibid.] is equally baseless, as any one reading, say, Kropotkin's work would soon realise (for example, **The Great French Revolution, Modern Science and Anarchism** or his pamphlet "*Revolutionary Government*"). Starting with Bakunin, anarchists analysed the experiences of the Paris Commune and the class struggle itself to generalise political conclusions from them (for example, the vision of a free society as a federation of workers' associations is clearly a product of analysing the class struggle and looking at the failures of the Commune). Given that Lenin states in the same work that "*anarchists had tried to claim the Paris Commune as their 'own'*" [p. 350] suggests that anarchists **had** studied the Paris Commune and he was aware of that fact. Of course, Lenin states that we had "*failed to give . . . a true solution*" to its lessons -- given that the solution anarchists proposed was a federation of workers councils to smash the state and defend the revolution his comments seem strange as this, according to **The State and Revolution**, is the "Marxist" solution as well (in fact, as we will soon see, Lenin played lip service to this and instead saw the solution as government by his party rather than the masses as a whole).

Thus, Morrow's vision of what was required for a successful revolution parallels that of anarchism. We shall now discuss where and how they differ.

The essential difference between the anarchist and Trotskyist vision of workers' councils as the basis of a revolution is what role these councils should play. For anarchists, these federations of self-managed

assemblies is the actual framework of the revolution (and the free society it is trying to create). As Murray Bookchin puts it:

*"There can be no separation of the revolutionary process from the revolutionary goal. A society based on self-administration must be achieved by means of self-administration . . . Assembly and community must arise from within the revolutionary process itself; indeed, the revolutionary process must **be** the formation of assembly and community, and with it, the destruction of power. Assembly and community must become 'fighting words,' not distinct panaceas. They must be created as **modes of struggle** against the existing society, not as theoretical or programmatic abstractions. . . The factory committees . . . must be managed directly by workers' assemblies in the factories. . . neighbourhood committees, councils and boards must be rooted completely in the neighbourhood assemble. They must be answerable at every point to the assembly, they and their work must be under continual review by the assembly; and finally, their members must be subject to immediate recall by the assembly. The specific gravity of society, in short, must be shifted to its base -- the armed people in permanent assembly."* [Post-Scarcity Anarchism, pp. 167-9]

Thus the anarchist social revolution sees workers' councils as organs of working class self-management, the means by which they control their own lives and create a new society based on their needs, visions, dreams and hopes. They are not seen as means by which others, the revolutionary party, seized power **on behalf** of the people as Trotskyists do.

Harsh words? No, as can be seen from Morrow who is quite clear on the role of working class organisation -- it is seen purely as the means by which the party can take power. As he argues, there is *"no magic in the soviet form: it is merely the most accurate, most quickly reflecting and responsively changing form of political representation of the masses. . . It would provide the arena in which the revolutionary party can win the support of the working class."* [Op. Cit., p. 136]

He states that initially the *"reformist majority in the executive committee would decline the assumption of state power. But the workers could still find in the soviets their natural organs of struggle until the genuinely revolutionary elements in the various parties banded together to win a revolutionary majority in the congress and establish a workers' state."* In other words, the *"workers' state, the dictatorship of the proletariat . . . can only be brought into existence by the direct, **political** intervention of the masses, through the factory and village councils (soviets) at that point where a majority in the soviets is wielded by the workers' party or parties which are determined to overthrow the bourgeois state. Such was the basic theoretical contribution of Lenin."* [Op. Cit., p. 100 and p. 113]

From an anarchist perspective, this indicates well the fundamental difference between anarchism and Trotskyism. For anarchists, the existence of an *"executive committee"* indicates that the workers' council do not, in fact, have power in society -- rather it is the minority in the executive committee who have been delegated power. Rather than govern themselves and society directly, workers are turned into

voters implementing the decisions their leaders have made on their behalf. If revolutionary bodies like workers' councils **did** create a "workers' state" (as Morrow recommends) then their power would be transferred and centralised into the hands of a so-called "revolutionary" government. In this, Morrow follows his guru Trotsky:

"the proletariat can take power only through its vanguard. In itself the necessity for state power arises from an insufficient cultural level of the masses and their heterogeneity. In the revolutionary vanguard, organised in a party, is crystallised the aspirations of the masses to obtain their freedom. Without the confidence of the class in the vanguard, without support of the vanguard by the class, there can be no talk of the conquest of power.

"In this sense the proletarian revolution and dictatorship are the work of the whole class, but only under the leadership of the vanguard." [Trotsky, **Stalinism and Bolshevism**]

Thus, rather than the working class as a whole "seizing power", it is the "vanguard" which takes power -- "a revolutionary party, even after seizing power . . . is still by no means the sovereign ruler of society." [**Ibid.**] He mocks the anarchist idea that a socialist revolution should be based on the self-management of workers within their own autonomous class organisations:

"Those who propose the abstraction of Soviets to the party dictatorship should understand that only thanks to the party dictatorship were the Soviets able to lift themselves out of the mud of reformism and attain the state form of the proletariat." [Trotsky, **Op. Cit.**, p. 18]

In this he followed comments made when he was in power. In 1920 he argued that "[w]e have more than once been accused of having substituted for the dictatorships of the Soviets the dictatorship of the party. Yet it can be said with complete justice that the dictatorship of the Soviets became possible only by means of the dictatorship of the party. It is thanks to the . . . party . . . [that] the Soviets . . . [became] transformed from shapeless parliaments of labour into the apparatus of the supremacy of labour. In this 'substitution' of the power of the party for the power of the working class there is nothing accidental, and in reality there is no substitution at all. The Communists express the fundamental interests of the working class." [**Terrorism and Communism**, p. 109] Any claims that Trotsky's infamously authoritarian (indeed dictatorial) politics were a temporary aberration caused by the necessities of the Russian Civil War are refuted by these quotes -- 17 years later he was still arguing the same point.

He had the same vision of party dictatorship being the basis of a revolution in 1924. Commenting on the Bolshevik Party conference of April 1917, he states that "whole of . . . Conference was devoted to the following fundamental question: Are we heading toward the conquest of power in the name of the socialist revolution or are we helping (anybody and everybody) to complete the democratic revolution? . . . Lenin's position was this: . . . the capture of the soviet majority; the overthrow of the Provisional Government; the seizure of power through the soviets." Note, **through** the soviets not **by** the soviets thus indicating the fact the Party would hold the real power, not the soviets of workers' delegates.

Moreover, he states that *"to prepare the insurrection and to carry it out under cover of preparing for the Second Soviet Congress and under the slogan of defending it, was of inestimable advantage to us."* He continued by noting that it was *"one thing to prepare an armed insurrection under the naked slogan of the seizure of power by the party, and quite another thing to prepare and then carry out an insurrection under the slogan of defending the rights of the Congress of Soviets."* The Soviet Congress just provided *"the legal cover"* for the Bolshevik plans rather than a desire to see the Soviets actually start managing society. [**The Lessons of October**]

We are not denying that Trotskyists do aim to gain a majority within working class conferences. That is clear. Anarchists also seek to gain the support of the mass of the population. It is what they do next that counts. Trotskyists seek to create a government above these organisations and dominate the executive committees that requires. Thus power in society shifts to the top, to the leaders of the centralised party in charge of the centralised state. The workers' become mere electors rather than actual controllers of the revolution. Anarchists, in contrast, seek to dissolve power back into the hands of society and empower the individual by giving them a direct say in the revolution through their workplace, community and militia assemblies and their councils and conferences.

Trotskyists, therefore, advocate workers councils because they see them as **the** means the vanguard party can take power. Rather than seeing socialism or "workers' power" as a society in which everyone would directly control their own affairs, Trotskyists see it in terms of working class people delegating their power into the hands of a government. Needless to say, the two things are not identical and, in practice, the government soon turns from being the people's servant into its master.

It is clear that Morrow always discusses workers councils in terms of the strategy and program of the party, not the value that workers councils have as organs of direct workers control of society. He clearly advocates workers councils because he sees them as the best way for the vanguard party to rally workers around its leadership and organise the seizure of state power. At no time does he see them as means by which working class people can govern themselves directly -- quite the reverse.

The danger of such an approach is obvious. The government will soon become isolated from the mass of the population and, due to the centralised nature of the state, difficult to hold accountable. Moreover, given the dominant role of the party in the new state and the perspective that it is the workers' vanguard, it becomes increasingly likely that it will place its power before that of those it claims to represent.

Certainly Trotsky's role in the Russian revolution tells us that the power of the party was more important to him than democratic control by workers through mass bodies. When the workers and sailors of the Kronstadt navy base rebelled in 1921, in solidarity with striking workers in Petrograd, they were demanding freedom of the press for socialist and anarchist groups and new elections to the soviets. But the reaction of the Bolshevik leadership was to crush the Kronstadt dissent in blood. Trotsky's attitude towards workers democracy was clearly expressed at the time:

"They [the dissent Bolsheviks of the Workers' Opposition] have placed the workers' right

to elect representatives above the Party. As if the Party were not entitled to assert its dictatorship even if that dictatorship temporarily clashed with the passing moods of the worker's democracy!"

He spoke of the "*revolutionary historic birthright of the Party*" and that it "*is obliged to maintain its dictatorship . . . regardless of temporary vacillations even in the working class . . . The dictatorship does not base itself at every given moment on the formal principle of a workers' democracy.*" [quoted by M. Brinton, **Op. Cit.**, p. 78]

This perspective naturally follows from Trotsky's vanguardist politics. For Leninists, the party is the bearer of "*socialist consciousness*" and, according to Lenin in **What is to be Done?**, workers, by their own efforts, can only achieve a "*trade union*" consciousness and, indeed, "*there can be no talk of an independent ideology being developed by the masses of workers in the process of their struggle*" and so "*the only choice is: either bourgeois or socialist ideology*" (the later being developed not by workers but by the "*bourgeois intelligentsia*"). [**Essential Works of Lenin**, p. 82 and p. 74] To weaken or question the party means to weaken or question the socialist nature of the revolution and so weaken the "*dictatorship of the proletariat.*" Thus we have the paradoxical situation of the "proletarian dictatorship" repressing workers, eliminating democracy and maintaining itself against the "*passing moods*" of the workers (which means rejecting what democracy is all about). Hence Lenin's comment at a conference of the Cheka (his political police) in 1920:

"Without revolutionary coercion directed against the avowed enemies of the workers and peasants, it is impossible to break down the resistance of these exploiters. On the other hand, revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves." [**Collected Works**, vol. 24, p. 170]

Significantly, of the 17 000 camp detainees on whom statistical information was available on 1 November 1920, peasants and workers constituted the largest groups, at 39% and 34% respectively. Similarly, of the 40 913 prisoners held in December 1921 (of whom 44% had been committed by the Cheka) nearly 84% were illiterate or minimally educated, clearly, therefore, either peasants or workers. [George Leggett, **The Cheka: Lenin's Political Police**, p. 178] Needless to say, Lenin failed to mention this aspect of his system in **The State and Revolution** (a failure shared by Morrow and later Trotskyists).

It is hard to combine these facts and Lenin's and Trotsky's comments with the claim that the "workers' state" is an instrument of class rule -- after all, Lenin is acknowledging that coercion will be exercised against members of the working class as well. The question of course arises -- who decides what a "*wavering*" or "*unstable*" element is? Given their comments on the role of the party and the need for the party to assume power, it will mean in practice whoever rejects the government's decisions (for example, strikers, local soviets who reject central decrees and instructions, workers who vote for anarchists or parties other than the Bolshevik party in elections to soviets, unions and so on, socialists and anarchists, etc.). Given a hierarchical system, Lenin's comment is simply a justification for state repression of its

enemies (including elements within or even the whole working class).

It could be argued, however, that workers could use the soviets to recall the government. However, this fails for two reasons (we will ignore the question of the interests of the bureaucratic machine which will inevitably surround a centralised body -- see [section H.3.9](#) for further discussion).

Firstly, the Leninist state will be highly centralised, with power flowing from the top-down. This means that in order to revoke the government, all the soviets in all parts of the country must, at the same time, recall their delegates and organise a national congress of soviets (which, we stress, is not in permanent session). The local soviets are bound to carry out the commands of the central government (to quote the Soviet constitution of 1918 -- they are to "*carry out all orders of the respective higher organs of the soviet power*"). Any independence on their part would be considered "*wavering*" or an expression of "*unstable*" natures and so subject to "*revolutionary coercion*". In a highly centralised system, the means of accountability is reduced to the usual bourgeois level -- vote in the general election every few years (which, in any case, can be annulled by the government to ensure that the soviets do not go back into the "*mud*" via the "*passing moods*" caused by the "*insufficient cultural level of the masses*"). In other words, the soviet form may be the "*most accurate, most quickly reflecting and responsively changing form of political representation of the masses*" (to use Morrow's words) but only **before** they become transformed into state organs.

Secondly, "*revolutionary coercion*" against "*wavering*" elements does not happen in isolation. It will encourage critical workers to keep quiet in case they, too, are deemed "*unstable*" and become subject to "*revolutionary*" coercion. As a government policy it can have no other effect than deterring democracy.

Thus Trotskyist politics provides the rationale for eliminating even the limited role of soviets for electing representatives they hold in that ideology.

Morrow argues that "*[o]ne must never forget . . . that soviets **do not begin** as organs of state power*" rather they start as "*organs defending the workers' daily interests*" and include "*powerful strike committees.*" [Op. Cit., p. 136] That is true, initially workers' councils are expressions of working class power and are organs of working class self-management and self-activity. They are subject to direct control from below and unite from the bottom up. However, once they are turned into "*organs of state power*" their role (to re-quote the Soviet constitution of 1918) becomes that of "*carry[ing] out all orders of the respective higher organs of the soviet power.*" Soviet power is replaced by party power and they become a shell of their former selves -- essentially rubber-stamps for the decisions of the party central committee.

Ironically, Morrow quotes the main theoretician of the Spanish Socialist Party as stating "*the organ of the proletarian dictatorship will be the Socialist Party*" and states that they "*were saying precisely what the anarchist leaders had been accusing both communists and revolutionary socialists of meaning by the proletarian dictatorship.*" [Op. Cit., p. 99 and p. 100] This is hardly surprising, as this was what the likes of Lenin and Trotsky **had** been arguing. As well as the quotes we have provided above, we may

add Trotsky's comment that the *"fundamental instrument of proletarian revolution is the party."* [**Lessons of October**] And the resolution of the Second World Congress of the Communist International which stated that *"[e]very class struggle is a political struggle. The goal of this struggle . . . is the conquest of political power. Political power cannot be seized, organised and operated except through a political party."* [cited by Duncan Hallas, **The Comintern**, p. 35] In addition, we may quote Lenin's opinion that:

"The very presentation of the question -- 'dictatorship of the Party or dictatorship of the class, dictatorship (Party) of the leaders or dictatorship (Party) of the masses?' -- is evidence of the most incredible and hopeless confusion of mind . . . [because] classes are usually . . . led by political parties. . . "

And:

"To go so far in this matter as to draw a contrast in general between the dictatorship of the masses and the dictatorship of the leaders, is ridiculously absurd and stupid." [**Left-wing Communism: An Infantile Disorder**, pp. 25-6 and p. 27]

As Lenin and Trotsky constantly argued, proletarian dictatorship was impossible without the political party of the workers (whatever its name). Indeed, to even discuss any difference between the dictatorship of the class and that of the party just indicated a confused mind. Hence Morrow's comments are incredulous, particularly as he himself stresses that the soviet form is useful purely as a means of gaining support for the revolutionary party which would take over the executive of the workers' councils. He clearly is aware that the party is the **essential** organ of proletarian rule from a Leninist perspective -- without the dictatorship of the party, Trotsky argues, the soviets fall back into the mud. Trotsky, indeed, stressed this need for the dictatorship of the party rather than of the proletariat in a letter written in 1937:

"The revolutionary dictatorship of a proletarian party is for me not a thing that one can freely accept or reject: It is an objective necessity imposed upon us by the social realities -- the class struggle, the heterogeneity of the revolutionary class, the necessity for a selected vanguard in order to assure the victory. The dictatorship of a party belongs to the barbarian prehistory as does the state itself, but we can not jump over this chapter, which can open (not at one stroke) genuine human history. . . The revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution . . . Abstractly speaking, it would be very well if the party dictatorship could be replaced by the 'dictatorship' of the whole toiling people without any party, but this presupposes such a high level of political development among the masses that it can never be achieved under capitalist conditions. The reason for the revolution comes from the circumstance that capitalism does not permit the material and the moral development of the masses." [Trotsky, **Writings 1936-37**, pp. 513-4]

The net result of Bolshevik politics in Russia was that Lenin and Trotsky undermined the self-management of working class bodies during the Russian Revolution and **before** the Civil War started in May 1918. We have already chronicled Trotsky's elimination of democracy and equality in the Red Army (see [section 11](#)). A similar fate befell the factory committees (see [section 17](#)) and soviet democracy (as noted above). The logic of Bolshevism is such that at no point did Lenin describe the suppression of soviet democracy and workers' control as a defeat (indeed, as far as workers' control went Lenin quickly moved to a position favouring one-man management). We discuss the Russian Revolution in more detail in the appendix on "[What happened during the Russian Revolution?](#)" and so will not do so here.

All in all, while Morrow's rhetoric on the nature of the social revolution may sound anarchist, there are important differences between the two visions. While Trotskyists support workers' councils on purely instrumentalist grounds as the best means of gaining support for their party's assumption of governmental power, anarchists see workers' councils as the means by which people can revolutionise society and themselves by practising self-management in all aspects of their lives. The difference is important and its ramifications signify why the Russian Revolution became the "dictatorship **over** the proletariat" Bakunin predicted. His words still ring true:

*"[b]y popular government they [the Marxists] mean government of the people by a small under of representatives elected by the people. . . [That is,] government of the vast majority of the people by a privileged minority. But this minority, the Marxists say, will consist of workers. Yes, perhaps, of **former** workers, who, as soon as they become rulers or representatives of the people will cease to be workers and will begin to look upon the whole workers' world from the heights of the state. They will no longer represent the people but themselves and their own pretensions to govern the people."* [**Statism and Anarchy**, p. 178]

It was for this reason that he argued the anarchists do *"not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction."* [**Michael Bakunin: Selected Writings**, p. 237] The history of the Russian Revolution proved him right. Hence anarchist support for popular assemblies and federations of workers' councils as the framework of the social revolution rather than as a means to elect a "revolutionary" government.

One last point. We must point out that Morrow's follows Lenin in favouring executive committees associated with workers' councils. In this he actually ignores Marx's (and Lenin's, in **State and Revolution**) comments that the Paris Commune was *"to be a working, not a parliamentary, body, executive and legislative at the same time."* [**Selected Writings**, p. 287] The existence of executive committees was coded into the Soviet Union's 1918 Constitution. This suggests two things. Firstly, Leninism and Trotskyism differ on fundamental points with Marx and so the claim that Leninism equals

Marxism is difficult to support (the existence of libertarian Marxists like Anton Pannekoek and other council communists also disprove such claims). Secondly, it indicates that Lenin's claims in **State and Revolution** were ignored once the Bolsheviks took power so indicating that use of that work to prove the democratic nature of Bolshevism is flawed.

Moreover, Marx's support of the fusion of executive and legislative powers is not as revolutionary as some imagine. For anarchists, as Bookchin argues, "*[i]n point of fact, the consolidation of 'executive and legislative' functions in a single body was regressive. It simply identified the process of policy-making, a function that rightly should belong to the people in assembly, with the technical execution of these policies, a function that should be left to strictly administrative bodies subject to rotation, recall, limitations of tenure . . . Accordingly, the melding of policy formation with administration placed the institutional emphasis of classical [Marxist] socialism on centralised bodies, indeed, by an ironical twist of historical events, bestowing the privilege of formulating policy on the 'higher bodies' of socialist hierarchies and their execution precisely on the more popular 'revolutionary committees' below.*" [Toward an Ecological Society, pp. 215-6]

13. Why do anarchists reject the Marxist "workers' state"?

Morrow asserts two "fundamental" tenets of "anarchism" in his book [Op. Cit., pp. 101-2]. Unfortunately for him, his claims are somewhat at odds with reality. Anarchism, as we will prove in [section 14](#), does not hold one of the positions Morrow states it does. The first "tenet" of anarchism he fails to discuss at all and so the reader cannot understand **why** anarchists think as they do. We discuss this "tenet" here.

The first tenet is that anarchism "*has consistently refused to recognise the distinction between a bourgeois and a workers' state. Even in the days of Lenin and Trotsky, anarchism denounced the Soviet Union as an exploiters' regime.*" [Op. Cit., p. 101] It is due to this, he argues, the CNT co-operated with the bourgeois state:

*"The false anarchist teachings on the nature of the state . . . should logically have led them [the CNT] to refuse governmental participation in any event . . . the anarchists were in the intolerable position of objecting to the necessary administrative co-ordination and centralisation of the work they had already begun. Their anti-statism 'as such' had to be thrown off. What **did** remain, to wreck disaster in the end, was their failure to recognise the distinction between a workers' and a bourgeois state."* [Op. Cit., p. 101]

Needless to say, Morrow does not bother to explain **why** anarchists consider the bourgeois and workers' state to be similar. If he did then perhaps his readers would agree with the anarchists on this matter. However, before discussing that we have to address a misrepresentation of Morrow's. Rather than the expression of anarchist politics, the actions of the CNT were in direct opposition to them. As we showed in the [section 12](#), anarchists see a social revolution in terms of creating federations of workers associations (i.e. workers' councils). It was this vision that had created the structure of the CNT (as

Bakunin had argued, *"the organisation of the trade sections and their representation in the Chambers of Labour . . . bear in themselves the living seeds of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself"* [**Bakunin on Anarchism**, p. 255]).

Thus, the social revolution would see the workers' organisation (be they labour unions or spontaneously created organs) *"tak[ing] the revolution into its own hands . . . an earnest international organisation of workers' associations . . . [would] replac[e] this departing political world of States and bourgeoisie."* [**The Basic Bakunin**, p. 110] This is **precisely** what the CNT did not do -- rather it decided against following anarchist theory and instead decided to co-operate with other parties and unions in the *"Central Committee of Anti-Fascist Militias"* (at least temporarily until the CNT stronghold in Saragossa was liberated by CNT militias). In effect, it created a UGT-like "Alliance" with other anti-fascist parties and unions and rejected its pre-war policy of "unity from below." The CNT and FAI leadership decided not to talk of libertarian communism but only of the fight against fascism. A greater mistake they could not have made.

An anarchist approach in the aftermath of the fascist uprising would have meant replacing the Generalitat with a federal assembly of delegates from workplace and local community assemblies (a Defence Council, to use a CNT expression). Only popular assemblies (not political parties) would be represented (parties would have an influence only in proportion to their influence in the basic assemblies). All the CNT would have had to do was to call a Regional Congress of unions and invite the UGT, independent unions and unorganised workplaces to send delegates to create the framework of this system. This, we must stress, was **not** done. We will discuss why in [section 20](#) and so will refrain from doing so here. However, **because** the CNT in effect "postponed" the political aspects of the social revolution (namely, to quote Kropotkin, to *"smash the State and replace it with the Federation [of Communes]"* [**No Gods, No Masters**, vol. 1, p. 259]) the natural result would be exactly as Morrow explains:

"But isn't it a far cry from the failure to create the organs to overthrow the bourgeoisie, to the acceptance of the role of class collaboration with the bourgeoisie? Not at all . . . Without developing soviets -- workers' councils -- it was inevitable that even the anarchists and the POUM would drift into governmental collaboration with the bourgeoisie." [**Op. Cit.**, pp. 88-9]

As Kropotkin predicted, *"there can be no half-way house: either the Commune is to be absolutely free to endow itself with whatever institutions it wishes and introduce all reforms and revolutions it may deem necessary, or else it will remain . . . a mere subsidiary of the State, chained in its every movement."* [**Op. Cit.**, p. 259] Without an alternative means of co-ordinating the struggle, the CNT would, as Morrow argued, have little choice but to collaborate with the state. However, rather than being a product of anarchist theory, as Morrow states, this came about by **ignoring** that theory (see [section 20](#)).

This can be seen from the false alternative used to justify the CNT's and FAI's actions -- namely, *"either libertarian communism, which means anarchist dictatorship, or democracy, which means*

collaboration." The creation of libertarian communism is done **from below** by those subject to capitalist and statist hierarchy overthrowing those with power over them by smashing the state machine and replacing it with self-managed organisations as well as expropriating capital and placing it under workers' self-management. As Murray Bookchin argues:

*"Underlying all [the] errors [of the CNT], at least in theoretical terms, was the CNT-FAI's absurd notion that if it assumed power in the areas it controlled, it was establishing a 'State.' As long as the institutions of power consisted of armed workers and peasants as distinguished from a professional bureaucracy, police force, army, and cabal of politicians and judges, they were no[t] a State . . . These institutions, in fact comprised a revolutionary people in arms . . . not a professional apparatus that could be regarded as a State in any meaningful sense of the term. . . That the 'taking of power' by an armed people in militias, libertarian unions and federations, peasant communes and industrial collectives could be viewed as an 'anarchist dictatorship' reveals the incredible confusion that filled the minds of the 'influential militants.'" ["Looking Back at Spain," pp. 53-96, **The Radical Papers**, pp. 86-7]*

This perspective explains why anarchists do not see any fundamental difference between a so-called "workers' state" and the existing state. For anarchists, the state is based fundamentally on hierarchical power -- the delegation of power into the hands of a few, of a government, of an "executive" committee. Unlike Lenin, who stressed the "bodies of armed men" aspect of the state, anarchists consider the real question as one of who will tell these "bodies of armed men" what to do. Will it be the people as a whole (as expressed through their self-managed organisations) or will be it a government (perhaps elected by representative organisations)?

If it **was** simply a question of consolidating a revolution and its self-defence then there would be no argument:

"But perhaps the truth is simply this: . . . [some] take the expression 'dictatorship of the proletariat' to mean simply the revolutionary action of the workers in taking possession of the land and the instruments of labour, and trying to build a society and organise a way of life in which there will be no place for a class that exploits and oppresses the producers.

"Thus constructed, the 'dictatorship of the proletariat' would be the effective power of all workers trying to bring down capitalist society and would thus turn into Anarchy as soon as resistance from reactionaries would have ceased and no one can any longer seek to compel the masses by violence to obey and work for him. In which case, the discrepancy between us would be nothing more than a question of semantics. Dictatorship of the proletariat would signify the dictatorship of everyone, which is to say, it would be a dictatorship no longer, just as government by everybody is no longer a government in the authoritarian, historical and practical sense of the word.

"But the real supporters of 'dictatorship of the proletariat' do not take that line, as they are making quite plain in Russia. Of course, the proletariat has a hand in this, just as the people has a part to play in democratic regimes, that is to say, to conceal the reality of things. In reality, what we have is the dictatorship of one party, or rather, of one' party's leaders: a genuine dictatorship, with its decrees, its penal sanctions, its henchmen and above all its armed forces, which are at present [1919] also deployed in the defence of the revolution against its external enemies, but which will tomorrow be used to impose the dictator's will upon the workers, to apply a break on revolution, to consolidate the new interests in the process of emerging and protect a new privileged class against the masses." [Malatesta, **No Gods, No Masters**, vol. 2, pp. 38-9]

Maurice Brinton sums up the issue well when he argued that *"workers' power" "cannot be identified or equated with the power of the Party -- as it repeatedly was by the Bolsheviks . . . What 'taking power' really implies is that the vast majority of the working class at last realises its ability to manage both production and society -- and organises to this end."* [**The Bolsheviks and Workers' Control**, p. xiv]

The question is, therefore, one of **who** "seizes power" -- will it be the mass of the population or will it be a party claiming to represent the mass of the population. The difference is vital -- and anyone who confuses the issue (like Lenin) does so either out of stupidity or vested interests.

If it **is** the mass of people then they have to express themselves and their power (i.e. the power to manage their own affairs). That requires that individuals -- no matter where they are, be it in the workplace, community or on the front line -- are part of self-managed organisations. Only by self-management in functional groups can working class people be said to controlling their own lives and determining their own fate. Such a system of popular assemblies and their means of defence would not be a state in the anarchist sense of the word.

As we argued in [section 12](#), the Trotskyist vision of revolution, while seeming in some ways similar to that of anarchists, differ on this question. For Trotskyists, the **party** takes power, **not** the mass of the population directly. Only if you view "proletarian" seizure of power in terms of electing a political party to government could you see the elimination of functional democracy in the armed forces and the workplaces as no threat to working class power. Given Trotsky's actual elimination of democracy in the Red Army and Navy plus his comments on one-man management (and their justifications -- see sections [11](#) and [17](#)) it is clear that Trotskyists consider the workers' state in terms of party government, **not** self-management, **not** functional direct democracy.

Yes, the Trotskyists do claim that it is the workers, via their soviets, who will elect the government and hold it accountable but such a position fails to realise that a social revolution can only be created from below, by the direct action of the mass of the population. By delegating power into the hands of a few, the revolution is distorted. The initiative and power no longer rests in the hands of the mass of the population and so they can no longer take part in the constructive work of the revolution **and so it will not reflect their interests and needs**. As power flows from the top-down, bureaucratic distortions are

inevitable.

Moreover, the government will inevitably clash with its subjects and Trotskyist theory provides the justification for the government imposing its wishes and negating workers' democracy (see [section 12](#) for evidence for this claim). Moreover, in the centralised state desired by Trotskyists democratic accountability will inevitably suffer as power flows to the top:

"The power of the local soviets passed into the hands of the [National] Executive Committee, the power of the Executive Committee passed into the hands of the Council of People's Commissars, and finally, the power of the Council of People's Commissars passed into the hands of the Political Bureau of the Communist Party." [Murray Bookchin, **Post-Scarcity Anarchism**, p. 152]

Little wonder, then, these CNT aphorisms:

"power corrupts both those who exercise it and those over whom it is exercised; those who think they can conquer the State in order to destroy it are unaware that the State overcomes all its conquerors. . . dictatorship of the proletariat is dictatorship without the proletariat and against them." [Peter Marshall, **Demanding the Impossible**, p. 456]

That, in a nut shell, why anarchists consider the workers' state as no real change from the bourgeois state. Rather than creating a system in which working class people directly manage their own affairs, the workers' state, like any other state, involves the delegation of that power into the hands of a few. Given that state institutions generate specific social relations, specific relations of authority (namely those order giver and order taker) they cannot help becoming separated from society, becoming a new class based on the state's bureaucratic machine. Any state structure (particularly a highly centralised one, as desired by Leninists) has a certain independence from society and so serves the interests of those within the State institutions rather than the people as a whole.

Perhaps a Leninist will point to **The State and Revolution** as evidence that Lenin desired a state based round the soviets -- workers' council -- and so our comments are unjustified. However, as Marx said, judge people by what they do, not what they say. The first act of the October Revolution was to form an executive power **over** the soviets (although, of course, in theory accountable to their national congress). In **The State and Revolution** Lenin praised Marx's comment that the Paris Commune was both administrative **and** executive. The "workers' state" created by Lenin did not follow that model (as Russian anarcho-syndicalists argued in August 1918, *"the Soviet of People's Commissars [i]s an organ which does not stem from the soviet structure but only interferes with its work"* [**The Anarchists in the Russian Revolution**, p. 118]).

Thus the Bolshevik state was not based around soviet self-management **nor** the fusion of executive and administrative in their hands but rather the use of the soviets to elect a government (a separate executive) which had the real power. The issue is quite simple -- either *"All power to the Soviets"* means just that or

it means *"All power to the government elected by the Soviets"*. The two are not the same as the first, for the obvious reason that in the second the soviets become simply ratification machines for the government and not organs in which the working masses can run their own affairs. We must also point out that the other promises made in Lenin's book went the same way as his support for the combining administration and executive tasks in the Paris Commune -- and, we stress, all **before** the Civil War started in May 1918 (the usual Trotskyist defence of such betrayals is blame the Civil War which is hard to do as it had not started yet).

So it is unsurprising that Morrow does not explain why anarchists reject the "dictatorship of the proletariat" -- to do so would be to show that Trotskyism is not the revolutionary movement for workers' liberty it likes to claim it is. Moreover, it would involve giving an objective account of anarchist theory and admitting that the CNT did not follow its teachings.

14. What is wrong with Morrow's *"fundamental tenet"* of anarchism?

According to Morrow the *"second fundamental tenet in anarchist teaching"* is, apparently, the following:

"Since Bakunin, the anarchists had accused Marxists of over-estimating the importance of state power, and had characterised this as merely the reflection of the petty-bourgeois intellectuals' pre-occupation with lucrative administrative posts. Anarchism calls upon workers to turn their backs on the state and seek control of the factories as the real source of power. The ultimate sources of power (property relations) being secured, the state power will collapse, never to be replaced."

He then sums up by stating the Spanish anarchists *"thus failed to understand that it was only the collapse of state power . . . which had enabled them to seize the factories."* [Op. Cit., p. 102]

It would be interesting to discover in what work of Bakunin, or any anarchist, such a position could be found. Morrow gives us no references to help us in our quest -- hardly surprising as no anarchist (Spanish or otherwise) ever argued this point before July 1936. However, in September 1936, we discover the CNT arguing that the *"withering away of the State is socialism's ultimate objective. Facts have demonstrated that in practice it is achieved by liquidation of the bourgeois State, brought to a state of asphyxiation by economic expropriation."* [No Gods, No Masters, vol. 2, p. 261] This, we must note, was the same month the CNT decided to join the Catalan Government! So much for the state having withered away.

However, will soon be made clear, such comments were a revision of anarchist theory brought about by the apparent victory of the CNT on July 19th, 1936 (just as other revisions occurred to justify CNT participation in the state). In other words, Morrow's *"second fundamental tenet"* does not exist in

anarchist theory. To prove this, we will quote Bakunin and a few other famous anarchists as well as giving an overview of some of the insurrections organised by the CNT before 1936. We start with Bakunin, Kropotkin and Malatesta.

Given that Bakunin thought that it was the *"power of the State"* which *"sustains the privileged classes"* against the *"legitimate indignation of the masses of the people"* it is hard to know what Morrow is talking about. [**The Political Philosophy of Bakunin**, p. 196] Given this perspective, it naturally follows that to abolish capitalism, to allow the seizure of factories by the workers, the state had to be abolished (or *"destroyed"*). Equally clear is that the *"natural and necessary consequence of this destruction will be . . . [among others, the] dissolution of army, magistracy, bureaucracy, police and priesthood. . . confiscation of all productive capital and means of production on behalf of workers' associations, who are to put them to use . . . the federative Alliance of all working men's associations . . . will constitute the Commune."* [**Michael Bakunin: Selected Writings** p. 253 and p. 170]

Thus, the state has to be abolished in order to ensure that workers' can take over the means of production, so abolishing capitalism. This is the **direct opposite** of Morrow's claim that *"[s]ince Bakunin" anarchism had "call[ed] upon the workers to turn their backs to the state and seek control of the factories as the real source of power."* While control of the economy by workers is an important, indeed a key, aspect of a social revolution it is not a sufficient one for anarchists. It must be combined with the destruction of the state (as Bakunin argued, *"[n]o revolution could succeed . . . today unless it was simultaneously a political and a social revolution"* [**No Gods, No Masters**, vol. 1, p. 141]). As the power of the state *"sustains"* the capitalists it clearly follows that the capitalist only has his property because the state protects his property claims -- without the state, workers' would seize the means of production. Which means, contra Morrow, Bakunin was aware that in order for workers' to take over their workplaces the state had to be destroyed as it was by means of the state that capitalist property rights are enforced.

And, just to stress the obvious, you cannot *"turn your backs on the state"* while dissolving the state bureaucracy, the army, police and so on. This is clear for Bakunin. He argued that *"[l]iberty can only be created by liberty, by an insurrection of all the people and the voluntary organisation of the workers from below upward."* And the nature of this workers' organisation? Workers' councils -- the *"proletariat . . . must enter the International [Workers' Association] en masse, form[ing] factory, artisan, and agrarian sections, and unite them into local federations."* [**Statism and Anarchy**, p. 179 and p. 49]

Similarly, we discover Kropotkin arguing that *"expropriation"* would occur at the same time as *"the capitalists' power to resist [had] been smashed"* and that *"the authorities"* will be *"overthrown."* [**No Gods, No Masters**, vol. 1, p. 232 and p. 233] He also recognised the need for self-defence, arguing that the revolution must *"withstand both the attempts to form a government that would seek to strangle it and any onslaughts which may emanate from without."* [**Op. Cit.**, p. 232] He argued the Commune *"must smash the State and replace it with the Federation and it will act accordingly."* [**Op. Cit.**, p. 259] You cannot do all this by *"turning your backs"* on the state. To smash the state you need to face it and fight it -- there is no other way.

Elsewhere he argued that the commune of the future would base itself on "*the principles of anarchist communism*" and "*entirely abolish . . . property, government, and the state.*" They will "*proclaim and establish their independence by direct socialist revolutionary action, abolishing private property*" when "*governments are swept away by the people . . . the insurgent people will not wait until some new government decrees, in its marvellous wisdom, a few economic reforms.*" Rather, they "*will take possession on the spot and establish their rights by utilising it without delay. They will organise themselves in the workshops to continue the work, but what they will produce will be what is wanted by the masses, not what gives the highest profit to employers. . . they will organise themselves to turn to immediate use the wealth stored up in the towns; they will take possession of it as if it had never been stolen from them by the middle class.*" [**The Commune of Paris**] Note that Kropotkin explicitly states that only **after** "*governments are swept away*" would the "*insurgent people . . . organise themselves in the workshops.*"

As Malatesta noted, the anarchist principles formulated in 1872 at the Congress of St Imier (under the influence of Bakunin, obviously) stated that "*[d]estruction of all political power is the first duty of the proletariat*" who must "*establish solidarity in revolutionary action outside the framework of bourgeois politics.*" He adds, "*[n]eedless to say, for the delegates of St. Imier as for us and for all anarchists, the abolition of political power is not possible without the simultaneous destruction of economic privilege.*" [**Life and Ideas**, pp. 157-8]

Malatesta himself always stressed that revolution required "*the insurrectionary act which sweeps away the material obstacles, the armed forces of the government.*" He argued that "*[o]nce the government has been overthrown . . . it will be the task of the people . . . to provide for the satisfaction of immediate needs and to prepare for the future by destroying privileges and harmful institutions.*" [**Op. Cit.**, p. 163 and p. 161] In other words, the revolution needs to smash the state and at the same time abolish capitalism by expropriation by the workers.

Thus anarchism is clear on that you need to destroy the state in order to expropriate capital. Morrow's assertions on this are clearly false. Rather than urging "*workers to turn their backs on the state and seek control of the factories as the real source of power*" anarchism calls upon workers to "*overthrow, "smash," "sweep away," "destroy", "dissolve"* the state and its bureaucratic machinery via an "*insurrectionary act*" and expropriate capital **at the same time** -- in other words, a popular uprising probably combined with a general strike ("*an excellent means for starting the social revolution,*" in Malatesta's words, but not in itself enough to make "*armed insurrection unnecessary*" [Errico Malatesta, **The Anarchist Reader**, pp. 224-5]).

That, in itself, indicates that Morrow's "*fundamental tenet*" of anarchism does not, in fact, actually exist. In addition, if we look at the history of the CNT during the 1930s we discover that the union organised numerous insurrections which did not, in fact, involve workers "*turning their backs on the state*" but rather attacking the state. For example, in the spontaneous revolt of CNT miners in January 1932, the workers "*seized town halls, raised the black-and-red flags of the CNT, and declared **comunismo***"

liberatariorio." In Tarassa, the same year, the workers again "*seiz[ed] town halls*" and the town "*swept by street fighting.*" The revolt in January 1933 began with "*assaults by Anarchist action groups . . . on Barcelona's military barracks . . . Serious fighting occurred in working-class **barrios** and the outlying areas of Barcelona . . . Uprising occurred in Tarassa, Sardanola-Ripollet, Lerida, in several **pueblos** in Valencia province, and in Andalusia.*" In Casas Viejas, as we discussed in [section 1](#), the CNT members surrounded and attacked the barracks of the Civil Guard. In December 1933, the workers "*reared barricades, attacked public buildings, and engaged in heavy street fighting . . . many villages declared libertarian communism.*" [Murray Bookchin, **The Spanish Anarchists**, p. 225, p. 226, p. 227 and p. 238]

Moreover, "*[w]herever possible . . . insurrections had carried out industrial and agrarian take-overs and established committees for workers' and peasant's control, libertarian systems of logistics and distribution -- in short, a miniature society 'organised on the lines set down by Kropotkin.'*" [Bookchin, **Op. Cit.**, p. 239]

Now, does all that really sound like workers turning their backs on the state and only seizing control of their factories?

Perhaps it will be argued that Morrow is referring to **after** the insurrection (although he clearly is not). What about the defence of the revolution? Anarchists have always been clear on this too -- the revolution would be defended by the people in arms. We have discussed this issue above (in sections [1](#) and [8](#) in particular) so we do not need to discuss it in much detail here. We will just provide another quote by Bakunin (although written in 1865, Bakunin made the same points over and over again until his death in 1876):

"While it [the revolution] will be carried out locally everywhere, the revolution will of necessity take a federalist format. Immediately after established government has been overthrown, communes will have to reorganise themselves along revolutionary lines . . . In order to defend the revolution, their volunteers will at the same time form a communal militia. But no commune can defend itself in isolation. So it will be necessary for each of them to radiate outwards, to raise all its neighbouring communes in revolt . . . and to federate with them for common defence." [**No Gods, No Masters**, vol. 1, p. 142]

This was essentially the position agreed by the CNT in May 1936:

"The armed people will be the best guarantee against all attempts to restore the destroyed regime by interior or exterior forces . . . Each Commune should have its arms and elements of defence." [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 64]

Like the CNT with its "*Defence Committees*" the defence of the revolution would rest with the commune and its federation. Thus Morrow's "*fundamental tenet*" of anarchism does not exist. We have **never**

urged the ignoring of the state nor the idea that seizing economic power will eliminate political power by itself. Nor is anarchism against the defence of a revolution. The position of the CNT in May 1936 was identical to that of Bakunin in 1865. The question is, of course, how do you organise a revolution and its defence -- is it by the whole people or is it by a party representing that people. Anarchists argue for the former, Trotskyists the latter. Needless to say, a state structure (i.e. a centralised, hierarchical structure based on the delegation of power) is required only when a revolution is seen as rule by a party -- little wonder anarchists reject the concept of a "workers' state" as a contradiction in terms.

The question of July 1936 however rears its head. If anarchism **does** stand for insurrection, workers councils and so on, then why did the CNT ignore the state? Surely that suggests anarchism is, as Morrow claims, flawed? No, it does not -- as we argue in some detail in [section 20](#) this confuses mistakes by **anarchists** with errors in anarchist theory. The CNT-FAI did not pursue anarchist theory and so July 1936 does not invalidate anarchism. As Bakunin argued, "*[n]o revolution could succeed . . . unless it was simultaneously a political and a social revolution.*" [**No Gods, No Masters**, vol. 1, p. 141] The revolution of July 1936 was a social revolution (it expropriated capital and revolutionised social relationships across society) but it was not a political revolution -- in other words, it did not destroy the state. The CNT refused to do this because of the danger of fascism and fear of isolation (see [section 20](#)). Little wonder the social revolution was defeated -- the CNT did not apply basic anarchist theory. To dismiss anarchist ideas because they were not applied seems somewhat strange.

To finish this section we must indicate that Morrow's statement concerning anarchists "turning our backs" to the state and concentrating on property actually contradicts both Engels and Lenin.

As Lenin notes in **The State and Revolution**, "*Marx agreed with Proudhon on the necessity of 'smashing' the present state machine. . . [there is] similarity between Marxism and anarchism (Proudhon and Bakunin) . . . on this point*" and that anarchists advocate "*the destruction of the state machine.*" [**Essential Works of Lenin**, p. 310 and p. 358] You can hardly smash the state or destroy the state machine by "turning your back" to it. Similarly, Engels argued (although distorting his thought somewhat) that Bakunin saw "*the state as the main evil to be abolished . . . [and] maintains that it is the state which has created capital, that the capitalist has his capital **only by the grace of the state** . . . [Hence] it is above all the state which must be done away with . . . organise, and when ALL workers are won over . . . abolish the state and replace it with the organisation of the International.*" [**The Marx-Engels Reader**, pp. 728-9] You cannot "*abolish*" and "*replace*" the state by ignoring it ("turning your back to it"). We must also stress that Engels comments disprove Lenin's assertion that anarchists "*have absolutely no clear idea of **what** the proletariat will put in its [the states] place.*" [**Op. Cit.**, p. 358] We have always been clear, namely a federation of workers' associations (this was the organisation of the First International). In other, more modern, words, a system of workers' councils -- a position Marxists only embraced six decades later when Lenin advocated them as the basis of his "workers' state."

Thus Morrow's comments against anarchism are in contradiction to usual Marxist claims against anarchism (namely, that we seek to smash the state but do not understand that the workers' state is necessary to abolish capitalism). Indeed, Engels attributed the opposite idea to Bakunin that Morrow

implies anarchists think with regards to property -- namely the idea that the capitalist has his property because of the state. Morrow's "*fundamental tenet*" of anarchism not only does not exist in anarchist theory, it does not even exist in the Marxist critique of that theory! It is impressive enough to assign a false doctrine to your enemies, it takes real ability to make a claim which contradicts your own theory's assertions!

15. Did Spanish Anarchism aim for the creation of "*collectives*" before the revolution?

The formation of the worker-managed enterprises called "*collectives*" in the Spanish revolution of 1936 has sometimes led people (particularly Marxists) to misconceptions about anarcho-syndicalist and communist-anarchist theory. These comments by a Marxist-Leninist are typical:

"Spanish anarchists believed that a system of autonomous collectives, with the weakest possible connections between them, was the alternative to capitalism and also to the Marxist view of society running the entire economy as one whole."

And:

"The anarchist theory led to the ordinary anarchist considering each factory as owned simply by the workers that laboured there, and not by the working class as a whole." [Joseph Green, "*The Black Autonomy Collective and the Spanish Civil War*", **Communist Voice** no. 10, Vol. 2, no. 5, Oct. 1, 1996]

This assertion is sometimes voiced by Libertarian Marxists of the council communist tendency (who should know better):

"At the time of the Civil War, a popular idea amongst the Spanish working class and peasants was that each factory, area of land, etc., should be owned collectively by its workers, and that these 'collectives' should be linked with each other on a 'federal' basis - that is, without any superior central authority.

"This basic idea had been propagated by anarchists in Spain for more than 50 years. When the Civil War began, peasants and working class people in those parts of the country which had not immediately fallen under fascist control seized the opportunity to turn anarchist ideal into reality." ["*Anarchism and the Spanish 'Revolution'*", **Subversion** no. 18]

Trotskyist Felix Morrow also presents a similar analysis when he states that the POUM "*recorded the tendency of CNT unions to treat collectivised property as their own. It never attacked the anarcho-syndicalist theories which created the tendency.*" [Op. Cit., p. 104]

However, the truth of the matter is somewhat different.

Firstly, as will soon become clear, CNT policy and anarchist theory was **not** in favour of workers' owning their individual workplaces. Instead both argued for **socialisation** of the means of life by a system of federations of workers' assemblies. Individual workplaces would be managed by their workers but they would not exist in isolation or independently of the others -- they would be members of various federations (minimally an industrial one and one which united all workplaces regardless of industry in a geographical area). These would facilitate co-ordination and co-operation between self-managed workplaces. The workplace would, indeed, be autonomous but such autonomy did not negate the need for federal organs of co-ordination nor did federation negate that autonomy (as we will discuss later in [section 18](#), autonomy means the ability to make agreements with others and so joining a federation is an expression of autonomy and not necessarily its abandonment, it depends on the nature of the federation).

Secondly, rather than being the product of "*more than 50 years*" of anarchist propaganda or of "*anarcho-syndicalist theories*", the "*collectives*" instituted during the Civil War were seen by the CNT as merely a temporary stop-gap. They had not been advocated in the CNT's pre-Civil War program, but came into existence precisely because the CNT was unable to carry out its libertarian communist program, which would have required setting up workers congresses and federal councils to establish co-ordination and aid the planning of common activities between the self-managed workplaces. In other words, the idea of self-managed workplaces was seen as one step in a process of socialisation, the basic building block of a federal structure of workers' councils. They were **not** seen as an end in themselves no matter how important they were as the base of a socialised economy.

Thus the CNT had never proposed that factories or other facilities would be owned by the people who happened to work there. The CNT's program called for the construction of "*libertarian communism.*" This was the CNT's agreed goal, recognising it must be freely created from below. In addition, the Spanish Anarchists argued for "*free experimentation, free show of initiative and suggestions, as well as the freedom of organisation,*" recognising that "*[i]n each locality the degree of [libertarian] communism, collectivism or mutualism will depend on conditions prevailing. Why dictate rules? We who make freedom our banner, cannot deny it in economy.*" [D. A. de Santillan, **After the Revolution**, p. 97] In other words, the CNT recognised that libertarian communism would not be created overnight and different areas will develop at different speeds and in different directions depending on the material circumstances they faced and what their population desired.

However, libertarian communism was the CNTs declared goal. This meant that the CNT aimed for a situation where the economy as a whole would be socialised and **not** an mutualist economy consisting independent co-operatives owned and controlled by their workers (with the producers operating totally independently of each other on the basis of market exchange). Instead, workers would manage their workplace directly, but would not own it -- rather ownership would rest with society as a whole but the day-to-day management of the means of production would be delegated to those who did the actual work. Councils of workers' delegates, mandated by and accountable to workplace assemblies, would be created to co-ordinate activity at all levels of the economy.

A few quotes will be needed to show that this was, in fact, the position of the Spanish Anarchists. According to Issac Puente, the *"national federations will hold as common property all the roads, railways, buildings, equipment, machinery and workshops."* The village commune *"will federate with its counterparts in other localities and with the national industrial federations."* [**Libertarian Communism**, p. 29 and p. 26] In D. A. de Santillan's vision, libertarian communism would see workers' councils overseeing 18 industrial sectors. There would also be *"councils of the economy"* for local, regional and national levels (ultimately, international as well). [**Op. Cit.**, pp. 50-1 and pp. 80-7] These councils would be *"constitute[d] by delegations or through assemblies"* and *"receives [their] orientation from below and operates in accordance with the resolutions"* of their appropriate *"assemblies."* [**Op. Cit.**, p. 83 and p. 86]

The CNT's national conference in Saragossa during May 1936 stressed this vision. Its resolution declared that the revolution would abolish *"private property, the State, the principle of authority, and . . . classes."* It argued that *"the economic plan of organisation, throughout national production, will adjust to the strictest principles of social economy, directly administered by the producers through their various organs of production, designated in general assemblies of the various organisations, and always controlled by them."* In urban areas, *"the workshop or factory council"* would make *"pacts with other labour centres"* via *"Councils of Statistics and Production"* which are the *"organ of relations of Union to Union (association of producers)"*, in other words, workers' councils. These would *"federate among themselves, forming a network of constant and close relations among all the producers of the Iberian Confederation."* In rural areas, *"the producers of the Commune"* would create a *"Council of Cultivation"* which would *"establish the same network of relations as the Workshop, Factory Councils and those of Production and Statistics, complementing the free federation represented by the Commune."*

The resolution argues that *"[b]oth the Associations of industrial producers and Associations of agricultural producers will federate nationally"* and *"Communes will federate on a county and regional basis . . . Together these Communes will constitute an Iberian Confederation of Autonomous Libertarian Communes."* Being anarchists, the CNT stressed that *"[n]one of these organs will have executive or bureaucratic character"* and their members *"will carry out their mission as producers, meeting after the work day to discuss questions of details which don't require the decision of the communal assemblies."* The assemblies themselves *"will meet as often as needed by the interests of the Commune. . . When problems are dealt with which affect a country or province, it must be the Federations which deliberate, and in the meetings and assemblies all Communities will be represented and the delegates will bring points of view previously agreed upon"* by the Commune assembly. [quoted by Robert Alexander, **The Anarchists in the Spanish Revolution**, vol. 1, p. 59, p. 60 and p. 62]

Joan Ferrer, a bookkeeper who was the secretary of the CNT commercial workers union in Barcelona, explained this vision:

"It was our idea in the CNT that everything should start from the worker, not -- as with the Communists -- that everything should be run by the state. To this end we wanted to set up industrial federations -- textiles, metal-working, department stores, etc. -- which would

be represented on an overall Economics Council which would direct the economy. Everything, including economic planning, would thus remain in the hands of the workers." [quoted by Ronald Fraser, **Blood of Spain**, p. 180]

However, social revolution is a dynamic process and things rarely develop exactly as predicted or hoped in pre-revolutionary times. The "collectives" in Spain are an example of this. Although the regional union conferences in Catalonia had put off overthrowing the government in July of 1936, workers began taking over the management of industries as soon as the street-fighting had died down. The initiative for this did not come from the higher bodies -- the regional and national committees -- but from the rank-and-file activists in the local unions. In some cases this happened because the top management of the enterprise had fled and it was necessary for the workers to take over if production was to continue. But in many cases the local union militants decided to take advantage of the situation to end wage labour by creating self-managed workplaces.

As to be expected of a real movement, mistakes were made by those involved and the development of the movement reflected the real problems the workers faced and their general level of consciousness and what they wanted. This is natural and to denounce such developments in favour of ideal solutions means to misunderstand the dynamic of a revolutionary situation. In the words of Malatesta:

"To organise a [libertarian] communist society on a large scale it would be necessary to transform all economic life radically, such as methods of production, of exchange and consumption; and all this could not be achieved other than gradually, as the objective circumstances permitted and to the extent that the masses understood what advantages could be gained and were able to act for themselves." [**Life and Ideas**, p. 36]

This was the situation in revolutionary Spain. Moreover, the situation was complicated by the continued existence of the bourgeois state. As Gaston Leval, in his justly famous study of the collectives, states *"it was not . . . true socialisation, but . . . a self-management straddling capitalism and socialism, which we maintain would not have occurred had the Revolution been able to extend itself fully under the direction of our syndicates."* [Gaston Leval, **Collectives in the Spanish Revolution**, p. 227-8] Leval in fact terms it *"a form of workers neo-capitalism"* but such a description is inaccurate (and unfortunate) simply because wage labour had been abolished and so it was not a form of capitalism -- rather it was a form of mutualism, of workers' co-operatives exchanging the product of their labour on the market.

However, Leval basic argument was correct -- due to the fact the political aspect of the revolution (the abolition of the state) had been "postponed" until after the defeat of fascism, the economic aspects of the revolution would also remain incomplete. The unions that had seized workplaces were confronted with a dilemma. They had control of their individual workplaces, but the original libertarian plan for economic co-ordination was precluded by the continued existence of the State. It was in this context of a partial revolution, under attack by the counter-revolution, that the idea of "collectives" was first put forward to solve some of the problems facing the workers and their self-managed workplaces. Unfortunately, this very "solution" caused problems of its own. For example, Gaston Leval indicates that the collectivisation

decree of October 1936 "*legalising collectivisation*", "*distorted everything right from the start*" [**Op. Cit.**, p. 227] and did not allow the collectives to develop beyond a mutualist condition into full libertarian communism. It basically legalised the existing situation while hindering its development towards libertarian communism by undermining union control.

This dilemma of self-managed individual workplaces and lack of federations to co-ordinate them was debated at a CNT union plenary in September of 1936. The idea of converting the worker-managed workplaces into co-operatives, operating in a market economy, had never been advocated by the Spanish anarchists before the Civil War, but was now seen by some as a temporary stop-gap that would solve the immediate question of what to do with the workplaces that had been seized by the workers. It was at this meeting that the term "collective" was first adopted to describe this solution. This concept of "collectivisation" was suggested by Joan Fabregas, a Catalan nationalist of middle class origin who had joined the CNT after July of 1936. As one CNT militant recalled:

"Up to that moment, I had never heard of collectivisation as a solution for industry -- the department stores were being run by the union. What the new system meant was that each collectivised firm would retain its individual character, but with the ultimate objective of federating all enterprises within the same industry." [quoted by Ronald Fraser, **Blood of Spain**, p. 212]

However, a number of unions went beyond "collectivisation" and took over all the facilities in their industries, eliminating competition between separate firms. The many small barber and beauty shops in Barcelona were shut down and replaced with large neighbourhood haircutting centres, run through the assemblies of the CNT barbers' union. The CNT bakers union did something similar. The CNT Wood Industry Union shut down the many small cabinet-making shops, where conditions were often dangerous and unhealthy. They were replaced with two large factories, which included new facilities for the benefit of the workforce, such as a large swimming pool.

The union ran the entire industry, from the felling of timber in the Val d'Aran to the furniture showrooms in Barcelona. The railway, maritime shipping and water, gas and electric industry unions also pursued this strategy of industrial unification, as did the textile union in the industrial town of Badalona, outside Barcelona. This was considered to be a step in the direction of eventual socialisation.

At the Catalan union plenary of September, 1936, "*the bigger, more powerful unions, like the woodworkers, the transport workers, the public entertainment union, all of which had already socialised [i.e. unified their industries under union management], wanted to extend their solution to the rest of industry. The smaller, weaker unions wanted to form co-operatives. . .*" [Fraser, **Op. Cit.**, p. 212]

The collectives came out of this conflict and discussion as a sort of "middle ground" -- however, it should be stressed that it did not stop many unions from ignoring the Catalan's governments' attempt to legalise (and so control) the collectives (the so-called "*collectivisation*" decree) as far as they could. As Albert Perez-Baro, a Catalan Civil Servant noted, "*the CNT . . . pursued its own, unilateral objectives*

which were different. Syndical collectivisation or syndicalised collectives, I would call those objectives; that's to say, collectives run by their respective unions . . . The CNT's policy was thus not the same as that pursued by the decree." [quoted by Fraser, **Op. Cit.**, pp. 212-3] Indeed, Abad de Santillan stated later that he *"was an enemy of the decree because I considered it premature . . . When I became [economics] councillor [of the Generalitat for the CNT], I had no intention of taking into account of carrying out the decree; I intended to allow our great people to carry on the task as they saw fit, according to their own aspiration."* [quoted, **Op. Cit.**, p. 212f]

Therefore, when Leninist Joseph Green argues the initial collectivisation of workplaces *"was the masses starting to take things into their own hands, and they showed that they could continue production in their workplaces . . . The taking over of the individual workplaces and communities is one step in a revolutionary process. But there is yet more that must be done -- the workplaces and communities must be integrated into an overall economy"* he is just showing his ignorance. The CNT, despite Green's assertions to the contrary, were well aware that the initial collectivisations were just one step in the revolution and were acting appropriately. It takes some gall (or extreme ignorance) to claim that CNT theory, policy and actions were, in fact, the exact opposite of what they were. Similarly, when he argues *"[h]ow did the anarchists relate the various workplace collectives to each other in Barcelona? . . . they made use of a patchwork system including a Central Labour Bank, an Economic Council, credit . . ."* he strangely fails to mention the socialisation attempts made by many CNT industrial unions during the revolution, attempts which reflected pre-war CNT policy. But such facts would get in the way of a political diatribe and so are ignored. [Green, **Op. Cit.**]

Green continues his inaccurate diatribe by arguing that:

"The problem is that, saddled with their false theory, they could not understand the real nature of the economic steps taken in the collectives, and thus they could not deal with the economic relations that arose among the collectives." [**Op. Cit.**]

However, the only thing false about this is the false assertions concerning anarchist theory. As is crystal clear from our comments above, the Spanish anarchists (like all anarchists) were well aware of the need for economic relations between collectives (self-managed workplaces) before the revolution and acted to create them during it. These were the industrial federations and federations of rural communities/collectives predicted in anarchist and CNT theory and actually created, in part at least, during the revolution itself.

Thus Green's "critique" of anarchism is, in fact, **exactly** what anarchist theory actually argues and what the Spanish anarchists themselves argued and tried to implement in all industries. Of course, there are fundamental differences between the anarchist vision of socialisation and the Leninist vision of Nationalisation but this does not mean that anarchism is blind to the necessity of integrating workplaces and communities into a coherent system of federations of workers' councils (as proven above). However, such federation has two sources -- it is either imposed from above or agreed to from below. Anarchists choose the former as the latter negates any claim that a revolution is a popular, mass movement from

below (and, incidentally, the Leninist claim that the "workers' state" is simply a tool of the workers to defeat capitalist oppression).

The actual process in Spain towards industrial federations and so socialisation was dependent on the wishes of the workers involved -- as would be expected in a true social revolution. For example, the department stores were collectivised and an attempt to federate the stores failed. The works councils opposed it, considering the enterprises as their own and were unwilling to join a federation -- the general assemblies of the collectives agreed. Joan Ferrer, the secretary of the CNT commercial union, considered it natural as "*[o]nly a few months before, the traditional relationship between employer and worker had been overthrown. Now the workers were being asked to make a new leap -- to the concept of collective ownership. It was asking a lot to expect the latter to happen overnight.*" [quoted by Fraser, **Op. Cit.**, p. 220]

However, before Leninists like Green rush in and assert that this proves that "*anarchist theory led to the ordinary anarchist considering each factory as owned simply by the workers that laboured there*" we should point out two things. Firstly, it was the "ordinary anarchists" who were trying to organise socialisation (i.e. CNT members and militants). Secondly, the Russian Revolution also saw workers taking over their workplaces and treating them as their own property. Leninists like Green would have a fit if we took these examples to "prove" that Leninism "*led to the ordinary Bolshevik worker considering each factory as owned simply by the workers that laboured there*" (which was what the Mensheviks **did** argue in 1917 when Martov "*blamed the Bolsheviks for creating the local, particularistic attitudes prevailing among the masses.*" [Samuel Farber, **Before Stalinism**, p. 72]). In other words, such events are a natural part of the process of a revolution and are to be expected regardless of the dominant theory in that revolution.

To summarise.

The Spanish revolution does confirm anarchist theory and in no way contradicts it. While many of the aspects of the collectives were in accord with pre-war CNT policy and anarchist theory, other aspects of them were in contradiction to them. This was seen by the militants of the CNT and FAI who worked to transform these spontaneously created organs of economic self-management into parts of a socialised economy as required for libertarian communism. Such a transformation flowed from below and was not imposed from above, as would be expected in a libertarian social revolution.

As can be seen, the standard Marxist account of the collectives and its relationship to anarchist theory and CNT policy is simply wrong.

16. How does the development of the collectives indicate the differences between Bolshevism and anarchism?

As argued in the [last section](#), the collectives formed during the Spanish Revolution reflected certain

aspects of anarchist theory but not others. They were a compromise solution brought upon by the development of the revolution and did not, as such, reflect CNT or anarchist theory or vision but being self-managed by their workers. The militants of the CNT and FAI tried to convince their members to federate together and truly socialise the economy, with various degrees of success. A similar process occurred during the Russian Revolution of 1917. There workers created factory committees which tried to introduce workers' self-management of production. The differences in outcome in these two experiences and the actions of the Bolsheviks and anarchists indicate well the fundamental differences between the two philosophies. In this section we discuss the contrasting solutions pursued by the CNT and the Bolsheviks in their respective revolutions.

The simple fact is that revolutions are complex and dynamic processes which involve many contradictory developments. The question is how do you push them forward -- either from below or from above. Both the Spanish and the Russian revolution were marked by "localism" -- when the workers in a factory consider it their own property and ignore wider issues and organisation.

Lenin and the Bolsheviks "solved" the problem of localism by eliminating workers' self-management in favour of one-man management appointed from above. Attempts by the workers and factory committees themselves to combat localism were stopped by the Bolshevik dominated trade unions which "*prevented the convocation of a planned All-Russian Congress of Factory Committees*" in November 1917 when "*called upon*" by the Bolsheviks "*to render a special serve to the nascent Soviet State and to discipline the Factory Committees.*" [I. Deutscher, quoted by Maurice Brinton, **The Bolsheviks and Workers' Control**, p. 19] Instead, the Bolsheviks built from the top-down their system of "*unified administration*" based on converting the Tsarist system of central bodies which governed and regulated certain industries during the war. [Brinton, **Op. Cit.**, p. 36] The CNT, in comparison, tried to solve the problem of localism by a process of discussion and debate from below. Both were aware of the fact the revolution was progressing in ways different from their desired goal but their solution reflected their different politics -- libertarian in the case of the CNT, authoritarian in the case of Bolshevism.

Therefore, the actual economic aspects of the Spanish revolution reflected the various degrees of political development in each workplace and industry. Some industries socialised according to the CNT's pre-war vision of libertarian communism, others remained at the level of self-managed workplaces in spite of the theories of the union and anarchists. This was the case with other aspects of the collectives. As Vernon Richards points out, "*[i]n some factories . . . the profits or income were shared out among the workers . . . As a result, wages fluctuated in different factories and even within the same industry . . . But fortunately . . . the injustice of this form of collectivisation was recognised and combated by the CNT syndicates from the beginning.*" [**Lessons of the Spanish Revolution**, pp. 106-7]

Thus the collectives, rather than expressing the economic vision of communist-anarchism or anarcho-syndicalism, came into existence precisely because the CNT was unable to carry out its libertarian communist program, which would have required setting up workers congresses and co-ordinating councils to establish common ownership and society wide self-management. To assert that the collectives were an exact reflection of anarchist or anarcho-syndicalist theory is, therefore, incorrect. Rather, they reflected certain aspects of that theory (such as workers' self-management in the workplace)

while others (industrial federations to co-ordinate economic activity, for example) were only partially met. This, we must stress, is to be expected as a revolution is a **process** and not an event. As Kropotkin argued:

"It is a whole insurrectionary period of three, four, perhaps five years that we must traverse to accomplish our revolution in the property system and in social organisation." [**Words of a Rebel**, p. 72]

Thus the divergence of the actual revolution from the program of the CNT was to be expected and so did not represent a failure or a feature of anarchist or anarcho-syndicalist theory as Morrow and other Marxists assert. Rather, it expresses the nature of a social revolution, a movement from below which, by its very nature, reflects real needs and problems and subject to change via discussion and debate. Bakunin's comments stress this aspect of the revolution:

"I do not say that the peasants [and workers], freely organised from the bottom up, will miraculously create an ideal organisation, confirming in all respects to our dreams. But I am convinced that what they construct will be living and vibrant, a thousands times better and more just than any existing organisation. Moreover, this . . . organisation, being on the one hand open to revolutionary propaganda . . . , and on the other, not petrified by the intervention of the State . . . will develop and perfect itself through free experimentation as fully as one can reasonably expect in our times.

"With the abolition of the State, the spontaneous self-organisation of popular life . . . will revert to the communes. The development of each commune will take its point of departure the actual condition of its civilisation . . ." [**Bakunin on Anarchism**, p. 207]

To **impose** an "ideal" solution would destroy a revolution -- the actions and decisions (**including what others may consider mistakes**) of a free people are infinitely more productive and useful than the decisions and decrees of the best central committee. Moreover, a centralised system by necessity is an imposed system (as it excludes by its very nature the participation of the mass of the people in determining their own fate). As Bakunin argued, *"Collectivism could be imposed only on slaves, and this kind of collectivism would then be the negation of humanity. In a free community, collectivism can come about only through the pressure of circumstances, not by imposition from above but by a free spontaneous movement from below."* [**Op. Cit.**, p. 200] Thus socialisation must proceed from below, reflecting the real development and desires of those involved. To "speed-up" the process via centralisation can only result in replacing socialisation with nationalisation and the elimination of workers' self-management with hierarchical management. Workers' again would be reduced to the level of order-takers, with control over their workplaces resting not in their hands but in those of the state.

Lenin argued that *"Communism requires and presupposes the greatest possible centralisation of large-scale production throughout the country. The all-Russian centre, therefore, should definitely be given the right of direct control over all the enterprises of the given branch of industry. The regional centres*

define their functions depending on local conditions of life, etc., in accordance with the general production directions and decisions of the centre." He continued by explicitly arguing that "[t]o deprive the all-Russia centre of the right to direct control over all the enterprises of the given industry . . . would be regional anarcho-syndicalism, and not communism." [Marx, Engels and Lenin, **Anarchism and Anarcho-Syndicalism**, p. 292]

We expect that Morrow would subscribe to this "solution" to the problems of a social revolution generates. However, such a system has its own problems.

First is the basic fallacy that the centre will not start to view the whole economy as its property (and being centralised, such a body would be difficult to effectively control). Indeed, Stalin's power was derived from the state bureaucracy which ran the economy in its own interests. Not that it suddenly arose with Stalin. It was a feature of the Soviet system from the start. Samuel Farber, for example, notes that, *"in practice, [the] hypercentralisation [pursued by the Bolsheviks from early 1918 onwards] turned into infighting and scrambles for control among competing bureaucracies"* and he points to the *"not untypical example of a small condensed milk plant with few than 15 workers that became the object of a drawn-out competition among six organisations including the Supreme Council of National Economy, the Council of People's Commissars of the Northern Region, the Vologda Council of People's Commissars, and the Petrograd Food Commissariat."* [**Op. Cit.**, p. 73] In other words, centralised bodies are not immune to viewing resources as their own property (and compared to an individual workplace, the state's power to enforce its viewpoint against the rest of society is considerably stronger).

Secondly, to eliminate the dangers of workers' self-management generating "propertarian" notions, the workers' have to have their control over their workplace reduced, if not eliminated. This, by necessity, generates **bourgeois** social relationships and, equally, appointment of managers from above (which the Bolsheviks did embrace). Indeed, by 1920 Lenin was boasting that in 1918 he had *"pointed out the necessity of recognising the dictatorial authority of single individuals for the pursue of carrying out the Soviet idea"* and even claimed that at that stage *"there were no disputes in connection with the question"* of one-man management. [quoted by Brinton, **Op. Cit.**, p. 65] While the first claim is true (Lenin argued for one-man management appointed from above **before** the start of the Civil War in May 1918) the latter one is **not** true (excluding anarchists and anarcho-syndicalists, there were also the dissent Left-Communists in the Bolshevik party itself).

Thirdly, a centralised body effectively excludes the mass participation of the mass of workers -- power rests in the hands of a few people which, by its nature, generates bureaucratic rule. This can be seen from the example of Lenin's Russia. The central bodies the Bolsheviks created had little knowledge of the local situation and often gave orders that contradicted each other or had little bearing to reality, so encouraging factories to ignore the centre. In other words the government's attempts to centralise actually led to localism (as well as economic mismanagement)! Perhaps this was what Green means when he argues for a *"new centralism"* which would be *"compatible with and requiring the initiative of the workers at the base"* [Green **Op. Cit.**]-- that is, the initiative of the workers to ignore the central bodies and keep the economy going **in spite** of the *"new centralism"*?

The simple fact is, a socialist society **must** be created from below, by the working class itself. If the workers do not know how to create the necessary conditions for a socialist organisation of labour, no one else can do it for them or compel them to do it. If the state is used to combat "localism" and such things then it obviously cannot be in the hands of the workers' themselves. Socialism can only be created by workers' own actions and organisations otherwise it will not be set up at all -- something else will be, namely state capitalism.

Thus, a close look at Lenin's "solution" indicates that Trotskyist claim that their state is the *"tool of the majority in their fight against exploitation by the few"* (to use Joseph Green's words) is refuted by their assertion that this state will also bring the economy under centralised control and by the actions of the Bolsheviks themselves.

Why is this? Simply because **if** the mass of collectives are not interested in equality and mutual aid in society as a whole then how can the government actually be the "tool" of the majority when it imposes such "mutual aid" and "equality" upon the collectives? In other words, the interests of the government replace those of the majority. After all, if workers **did** favour mutual aid and equality then they would federate themselves to achieve it. (which the collectives were actually doing all across Spain, we must note). If they do not do this then how can the "workers' state" be said to be simply their tool when it has to **impose** the appropriate economic structure upon them? The government is elected by the whole people, so it will be claimed, and so must be their tool. This is obviously flawed -- "if," argued Malatesta, *"you consider these worthy electors as unable to look after their own interests themselves, how is it that they will know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing a genius from the votes of a mass of fools? And what will happen to the minorities which are still the most intelligent, most active and radical part of a society?"* [Malatesta, **Anarchy**, p. 53]

What does all this mean? Simply that Trotskyists recognise, implicitly at least, that the workers' state is not, in fact, the simple tool of the workers. Rather, it is the means by which "socialism" will be imposed upon the workers by the party. If workers do not practice mutual aid and federation in their day-to-day running of their lives, then how can the state impose it if it is simply their tool? It suggests what is desired *"by all of the working people as a whole"* (nearly always a euphemism for the party in Trotskyist ideology) is different that what they actually want (as expressed by their actions). In other words, a conflict exists between the workers' and the so-called "workers' state" -- in Russia, the party imposed **its** concept of the interests of the working class, even against the working class itself.

Rather than indicate some kind of failure of anarchist theory, the experience of workers' self-management in both Spain and Russia indicate the authoritarian core of Trotskyist ideology. If workers do not practice mutual aid or federation then a state claiming to represent them, to be simply their tool, cannot force them to do so without exposing itself as being an alien body with power **over** the workers.

For these reasons Bakunin was correct to argue that anarchists have *"no faith except in freedom. Both [Marxists and anarchists], equally supporters of science which is to destroy superstition and replace*

*belief, differ in the former wishing to impose it, and the latter striving to propagate it; so human groups, convinced of its truth, may organise and federate spontaneously, freely, from the bottom up, by their own momentum according to their real interests, but never according to any plan laid down in advance and imposed upon the **ignorant masses** by some superior intellects."* Anarchists, he continues, "*think that there is much more practical and intellectual common sense in the instinctive aspirations and in the real needs of the mass of the people than in the profound intelligence of all these doctors and teachers of mankind who, after so many fruitless attempts to make humanity happy, still aspire to add their own efforts.*" [Michael Bakunin: Selected Writings, p. 198]

In summary, the problem of "localism" and any other problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly and that implies self-managed organising from the bottom up (i.e. anarchism) rather than delegating power to a minority at the top, to a "revolutionary" party or government. This applies economically, socially and politically. As Bakunin argued, the "*revolution should not only be made for the people's sake; it should also be made by the people.*" [No Gods, No Masters, vol. 1, p. 141]

Thus the actual experience of the collectives and their development, rather than refuting anarchism, indicates well that it is the only real form of socialism. Attempts to nationalise the means of production inevitably disempower workers and eliminate meaningful workers' self-management or control. It does not eliminate wage labour but rather changes the name of the boss. Socialism can only be built from below. If it is not, as the Russian experience indicated, then state capitalism will be the inevitable outcome.

17. Why is Morrow's support for "*proletarian methods of production*" ironic?

Morrow states "*[i]n the midst of civil war the factory committees are demonstrating the superiority of proletarian methods of production.*" [Op. Cit., p. 53] This is ironic as the Bolsheviks in power fought against the factory committees and their attempts to introduce the kind of workers' self-management Morrow praises in Spain (see Maurice Brinton's **The Bolsheviks and Workers' Control** for details). Moreover, rather than seeing workers' self-management as "*proletarian methods of production*" Lenin and Trotsky thought that how a workplace was managed was irrelevant under socialism. Trotsky argued that "*[i]t would be a most crying error to confuse the question as to the supremacy of the proletariat with the question of boards of workers at the head of factories. The dictatorship of the proletariat is expressed in the abolition of private property in the means of production, in the supremacy of the collective will of the workers [a euphemism for the Party -- M.B.] and not at all in the form in which individual economic organisations are administered.*" Indeed, "*I consider if the civil war had not plundered our economic organs of all that was strongest, most independent, most endowed with initiative, we should undoubtedly have entered the path of one-man management in the sphere of economic administration much sooner and much less painfully.*" [quoted by Maurice Brinton, Op. Cit., p. 66 and pp. 66-7]

In other words, Trotsky both in theory and in practice opposed "*proletarian methods of production*" -- and if the regime introduced by Trotsky and Lenin in Russia was **not** based on "*proletarian methods of production*" then what methods was it based on? One-man management with "*the appointment of individuals, dictators with unlimited powers*" by the government and "*the people unquestioningly obey [ing] the single will of the leaders of labour.*" [**The Immediate Tasks of the Soviet Government**, p. 32 and p. 34] In other words, the usual **bourgeois** methods of production with the workers' doing what the boss tells them. At no time did the Bolsheviks support the kind of workers' self-management introduced by the anarchist influenced workers of Spain -- indeed they hindered it and replaced it with one-man management at the first opportunity (see Maurice Brinton's classic **The Bolsheviks and Workers' Control** for details).

To point out the obvious, bourgeois methods of production means bourgeois social relations and relations of production. In other words, Morrow comments allows us to see that Lenin and Trotsky's regime was not proletarian at the point of production. How ironic. And if it was not proletarian at the point of production (i.e. at the source of **economic** power) how could it remain proletarian at the political level? Unsurprisingly, it did not -- party power soon replaced workers' power and the state bureaucracy replaced the party.

Yet again Morrow's book exposes the anti-revolutionary politics of Trotskyism by allowing anarchists to show the divergence between the rhetoric of that movement and what it did when it was in power. Morrow, faced with a workers' movement influenced by anarchism, inadvertently indicates the poverty of Trotskyism when he praises the accomplishments of that movement. The reality of Leninism in power was that it eliminated the very things Morrow praises -- such as "*proletarian methods of production,*" democratic militias, workers' councils and so on. Needless to say, the irony of Morrow's work is lost on most of the Trotskyists who read it.

18. Were the federations of collectives an "*abandonment*" of anarchist ideas?

From our discussion in [section 15](#), it is clear that anarchism does not deny the need for co-ordination and joint activity, for federations of self-managed workplaces, industries and rural collectives at all levels of society. Far from it. As proven in sections [12](#) and [15](#), such federations are a basic idea of anarchism. In anarchy co-ordination flows **from below** and not imposed by a few from above. Unfortunately Marxists cannot tell the difference between solidarity from below and unity imposed from above. Morrow, for example, argues that "*the anarchist majority in the Council of Aragon led in practice to the abandonment of the anarchist theory of the autonomy of economic administration. The Council acted as a centralising agency.*" [**Op. Cit.**, pp. 205-6]

Of course it does nothing of the kind. Yes, anarchists are in favour of autonomy -- including the autonomy of economic administration. We are also in favour of federalism to co-ordinate joint activity

and promote co-operation on a wide-scale (what Morrow would, inaccurately, call "centralism" or "centralisation"). Rather than seeing such agreements of joint activity as the "abandonment" of autonomy, we see it as an **expression** of that autonomy. It would be a strange form of "freedom" that suggested making arrangements and agreements with others meant a restriction of your liberty. For example, no one would argue that to arrange to meet your friend at a certain place and time meant the elimination of your autonomy even though it obviously reduces your "liberty" to be somewhere else at the same time.

Similarly, when an individual joins a group and takes part in its collective decisions and abides by their decisions, this does not represent the abandonment of their autonomy. Rather, it is an expression of their freedom. If we took Morrow's comment seriously then anarchists would be against all forms of organisation and association as they would mean the "*abandonment of autonomy*" (of course some Marxists **do** make that claim, but such a position indicates an essentially **negative** viewpoint of liberty, a position they normally reject). In reality, of course, anarchists are aware that freedom is impossible outside of association. Within an association absolute "autonomy" cannot exist, but such "autonomy" would restrict freedom to such a degree that it would be so self-defeating as to make a mockery of the concept of autonomy and no sane person would seek it.

Of course anarchists are aware that even the best association could turn into a bureaucracy that **does** restrict freedom. Any organisation could transform from being an expression of liberty into a bureaucratic structure which restricts liberty because power concentrates at the top, into the hands of an elite. That is why we propose specific forms of organisation, ones based on self-management, decentralisation and federalism which promote decision-making from the bottom-up and ensure that the organisation remains in the hands of its members and its policies are agreements between them rather than ones imposed upon them. For this reason the basic building block of the federation is the autonomous group assembly. It is this body which decides on its own issues and mandates delegates to reach agreements within the federal structure, leaving to itself the power to countermand the agreements its delegates make. In this way autonomy is combined with co-ordination in an organisation that is structured to accurately reflect the needs and interests of its members by leaving power in their hands. In the words of Murray Bookchin, anarchists "*do not deny the need for co-ordination between groups, for discipline, for meticulous planning, and for unity in action. But [we] believe that co-ordination, discipline, planning, and unity in action must be achieved **voluntarily**, by means of self-discipline nourished by conviction and understanding, not by coercion and a mindless, unquestioning obedience to orders from above.*" [**Post-Scarcity Anarchism**, p. 215]

Therefore, anarchist support for "*the autonomy of economic administration*" does not imply the lack of co-operation and co-ordination, of joint agreements and federal structures which may, to the uninformed like Morrow, seem to imply the "*abandonment*" of autonomy. As Kropotkin argued, the commune "*cannot any longer acknowledge any superior: that, above it, there cannot be anything, save the interests of the Federation, freely embraced by itself in concert with other Communes.*" [**No Gods, No Masters**, vol. 1, p. 259] This vision was stressed in the CNT's Saragossa resolution on Libertarian Communism made in May, 1936, which stated that the "*the foundation of this administration will be the commune. These communes are to be autonomous and will be federated at regional and national levels*

to achieve their general goals. The right to autonomy does not preclude the duty to implement agreements regarding collective benefits." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, p. 106] Hence anarchists do not see making collective decisions and working in a federation as an abandonment of autonomy or a violation of anarchist theory.

The reason for this is simple. To exercise your autonomy by joining self-managing organisations and, therefore, agreeing to abide by the decisions you help make is not a denial of that autonomy (unlike joining a hierarchical structure, we must stress). That is why anarchists have always stressed the importance of the **nature** of the associations people join **as well as** their voluntary nature -- as Kropotkin argued, the "*communes of the next revolution will not only break down the state and substitute free federation for parliamentary rule; they will part with parliamentary rule within the commune itself. . . . They will be anarchist within the commune as they will be anarchist outside it.*" [**The Commune of Paris**] Moreover, within the federal structures anarchists envision, the actual day-to-day running of the association would be autonomous. There would be little or no need for the federation to interfere with the mundane decisions a group has to make day in, day out. As the Saragossa resolution makes clear:

"[The] commune . . . will undertake to adhere to whatever general norms may be agreed by majority vote after free debate The inhabitants of a commune are to debate among themselves their internal problems Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes every commune which is implicated will have its right to have its say On matters of a regional nature, it is the duty of the regional federation to implement agreements So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation." [quoted by Jose Peirats, **Op. Cit.**, pp. 106-7]

Since the Council of Aragon and the Federation of Collectives were based on a federal structure, regular meetings of mandated delegates and decision-making from the bottom up, it would be wrong to call them a "*centralising agency*" or an "*abandonment*" of the principle of "*autonomy*." Rather, they were expressions of that autonomy based around a **federal** and not centralised organisation. The autonomy of the collective, of its mass assembly, was not restricted by the federation nor did the federation interfere with the day to day running of the collectives which made it up. The structure was a federation of autonomous collectives. The role of the Council was to co-ordinate the decisions of the federation delegate meetings -- in other words, purely administrative implementation of collective agreements. To confuse this with centralisation is a mistake common to Marxists, but it is still a confusion.

To summarise, what Morrow claims is an "*abandonment*" of anarchism is, in fact, an expression of anarchist ideas. The Council of Aragon and the Aragon Federation of Collectives were following the CNT's vision of libertarian communism and not abandoning it, as Morrow claims. As anyone with even a basic understanding of anarchism would know.

19. Did the experience of the rural collectives refute anarchism?

Some Leninists attack the rural collectives on similar lines as they attack the urban ones (as being independent identities and without co-ordination -- see [section 15](#) for details). They argue that "*anarchist theory*" resulted in them considering themselves as being independent bodies and so they ignored wider social issues and organisation. This meant that anarchist goals could not be achieved:

"Let's evaluate the Spanish collectives according to one of the basic goals set by the anarchists themselves. This was to ensure equality among the toilers. They believed that the autonomous collectives would rapidly equalise conditions among themselves through 'mutual aid' and solidarity. This did not happen . . . conditions varied greatly among the Spanish collectives, with peasants at some agricultural collectives making three times that of peasants at other collectives." [Joseph Green, **Op. Cit.**]

Of course, Green fails to mention that in the presumably "centralised" system created by the Bolsheviks, the official rationing system had a differentiation of **eight to one** under the class ration of May 1918. By 1921, this, apparently, had fallen to around four to one (which is still higher than the rural collectives) but, in fact, remained at eight to one due to workers in selected defence-industry factories getting the naval ration which was approximately double that of the top civilian workers' ration. [Mary McAuley, **Bread and Justice: State and Society in Petrograd 1917-1922**, pp. 292-3] This, we note, ignores the various privileges associated with state office and Communist Party membership which would increase differentials even more (and such inequality extended into other fields, Lenin for example warned in 1921 against "*giving non-Party workers a false sense of having some increase in their rights*" [Marx, Engels and Lenin, **Op. Cit.**, p. 325]). The various resolutions made by workers for equality in rations were ignored by the government (all this long before, to use Green's words "*their party degenerated into Stalinist revisionism*").

So, if equality is important, then the decentralised rural collectives were far more successful in achieving it than the "centralised" system under Lenin (as to be expected, as the rank-and-file were in control, not a few at the top).

Needless to the collectives could not unify history instantly. Some towns and workplaces started off on a more favourable position than others. Green quotes an academic (David Miller) on this:

"Such variations no doubt reflected historical inequalities of wealth, but at the same time the redistributive impact of the [anarchist] federation had clearly been slight."

Note that Green implicitly acknowledges that the collectives **did** form a federation. This makes a mockery of his claims that earlier claims that the anarchists "*believed that the village communities would enter the realm of a future liberated society if only they became autonomous collectives. They didn't see the collectives as only one step, and they didn't see the need for the collectives to be integrated into a broader social control of all production.*" [**Op. Cit.**] As proven above, such assertions are either the

product of ignorance or a conscious lie. We quoted numerous Spanish anarchist documents that stated the exact opposite to Green's assertions. The Spanish anarchists were well aware of the need for self-managed communities to federate. Indeed, the federation of collectives fits **exactly** pre-war CNT policy and anarchist theory (see sections [15](#) and [18](#) for details). To re-quote a Spanish Anarchist pamphlet, the village commune *"will federate with its counterparts in other localities and with the national industrial federations."* [Issac Puente, **Libertarian Communism**, p. 26] Thus what Green asserts the CNT and FAI did not see the need of, they in fact **did** see the need for and argued for their creation before the Civil War and actually created during it! Green's comments indicate a certain amount of "doublethink" -- he maintains that the anarchists rejected federations while acknowledging they did federate.

However, historical differences are the product of **centuries** and so it will take some time to overcome them, particularly when such changes are not imposed by a central government. In addition, the collectives were not allowed to operate freely and were soon being hindered (if not physically attacked) by the state within a year. Green dismisses this recognition of reality by arguing *"one could argue that the collectives didn't have much time to develop, being in existence for only two and a half years at most, with the anarchists only having one year of reasonably unhindered work, but one could certainly not argue that this experience confirmed anarchist theory."* However, his argument is deeply flawed for many reasons.

Firstly, we have to point out that Green quotes Miller who is using data from collectives in Castille. Green, however, was apparently discussing the collectives of Aragon and the Levante and their respective federations (as was Miller). To state the obvious, it is hard to evaluate the activities of the Aragon or Levante federation using data from collectives in the Castille federation. Moreover, in order to evaluate the redistributive activities of the federations you need to look at the differentials before and after the federation was created. The data Miller uses does not do that and so the lack of success of the federation cannot be evaluated using Green's source. Thus Green uses data which is, frankly, a joke to dismiss anarchism. This says a lot about the quality of his critique.

As far as the Castille federation goes, Robert Alexander notes *"[a]nother feature of the work of regional federation was that of aiding the less fortunate collectives. Thus, within a year, it spent 2 000 000 pesetas on providing chemical fertilisers and machines to poorer collectives, the money from this being provided by the sale of products of the wealthier ones."* [**The Anarchists in the Spanish Civil War**, vol. 1, p. 438] He also quotes an article from an anarchist paper which states *"there does not yet exist sufficient solidarity"* between rich and poor collectives and that notes *"the difficulties which the State has put in the way of the development of the collectives."* [**Op. Cit.**, p. 439] Thus the CNT was open about the difficulties it was experiencing in the collectives and the problems facing it.

Secondly, the collectives may have been in existence for about one year before the Stalinists attacked but their federations had not. The Castille federation was born in April, 1937 (the general secretary stated in July of that year *"[w]e have fought terrible battles with the Communists"* [**Op. Cit.**, p. 446]). The Aragon federation was created in February 1937 (the Council of Aragon was created in October 1936) and the Communists under Lister attacked in August 1937. The Levante federation was formed a

few weeks after the start of the war and the attacks against them started in March 1937. The longest period of free development, therefore, was only **seven** months and not a year. Thus the federations of collectives -- the means seen by anarchist theory to co-ordinate economic and social activities and promote equality -- existed for only a few months before they were physically attacked by the state. Green expects miracles if he thinks history can be nullified in half a year.

Thirdly, anarchists do not think communist-anarchism, in all its many aspects, is possible overnight. Anarchists are well aware, to quote Kropotkin, the "*revolution may assume a variety of characters and differing degrees of intensity among different peoples.*" [No Gods, No Masters, vol. 1, p. 231] Also, as noted above, we are well aware that a revolution is a **process** ("*By revolution we do not mean just the insurrectionary act*" [Malatesta, **Life and Ideas**, p. 156]) which will take some time to fully develop once the state has been destroyed and capital expropriated. Green's assertion that the Spanish Revolution refutes anarchist theory is clearly a false one.

Green argues that a "*vast organisational task faces the oppressed masses who are rising up to eliminate the old exploiting system, but anarchist theory just brushes aside this problem -- co-ordination between collective would supposedly be easily accomplished by 'mutual aid' or 'voluntary co-operation' or, if absolutely need be, by the weakest possible federation.*" [Op. Cit.] As can be seen from our discussion, such a claim is a false one. Anarchists are well aware of difficulties involved in a revolution. That is why we stress that revolution must come from below, by the actions of the oppressed themselves -- it is far too complex to left to a few party leaders to decree the abolition of capitalism. Moreover, as proven above anarchist theory and practice is well aware of the need for organisation, co-operation and co-ordination. We obviously do not "*brush it aside.*" This can be seen from Green's reference to "*the weakest possible federation.*" This obviously is a cover just in case the reader is familiar with anarchist theory and history and knows that anarchists support the federation of workers' associations and communes as the organisational framework of a revolution and of the free society.

This distorted vision of anarchism even extends to other aspects of the revolution. Green decides to attack the relative lack of international links the Spanish anarchist movement had in 1936. He blames this on anarchist theory and states "*again the localist anarchist outlook would go against such preparations. True, the anarchists had had their own International association in the 1870s, separate from the original First International and the Marxists. It had flopped so badly that the anarchists never tried to resuscitate it and seem to prefer to forget about it. Given anarchist localism, it is not surprising that this International doesn't even seem to be been missed by current-day anarchists.*" [Op. Cit.]

Actually, the anarchist International came out of the First International and was made up of the libertarian wing of that association. Moreover, in 1936 the CNT was a member of the International Workers' Association founded in 1922 in Berlin. The IWA was small, but this was due to state and Fascist repression. For example, the German FAUD, the Italian USI and the FORA in Argentina had all been destroyed by fascist governments. However, those sections which did exist (such as the Swedish SAC and French CGTSR) **did** send aid to Spain and spread CNT and FAI news and appeals (as did anarchist groups across the world). The IWA still exists today, with sections in over a dozen countries (including the CNT in Spain). In addition, the International Anarchist Federation also exists, having

done so for a number of decades, and also has sections in numerous countries. In other words, Green either knows nothing about anarchist history and theory or he does and is lying.

He attacks the lack of CNT support for Moroccan independence during the war and states "*[t]hey just didn't seem that concerned with the issue during the Civil War.*" Actually, many anarchists **did** raise this important issue. Just one example, Camillo Berneri argued that "*we must intensify our propaganda in favour of Morocco autonomy.*" ["What can we do?", **Cienfuegos Press Anarchist Review**, no. 4, p. 51] Thus to state "*the anarchists . . . didn't seem that concerned*" is simply false. Many anarchists were and publicly argued for it. Trapped as a minority force in the government, the CNT could not push through this position.

Green also points out that inequality existed between men and woman. He even quotes the anarchist women's organisation Mujeres Libres to prove his point. He then notes what the Bolsheviks did to combat sexism, "*[a]mong the methods of influence was mobilising the local population around social measures promulgated throughout the country. The banner of the struggle was not autonomy, but class-wide effort.*" Two points, Mujeres Libres was a nation wide organisation which aimed to end sexism by collective action inside and outside the anarchist movement by organising women to achieve their own liberation (see Martha Ackelsberg's , **Free Women of Spain** for more details). Thus its aims and mode of struggle **was** "*class-wide*" -- as anyone familiar with that organisation and its activities would know. Secondly, why is equality between men and women important? Because inequality reduces the freedom of women to control their own lives, in a word, it hinders they **autonomy**. Any campaign against sexism is based on the banner of autonomy -- that Green decides to forget this suggests a lot about his politics.

Thus Green gets it wrong again and again. Such is the quality of most Leninist accounts of the Spanish revolution.

20. Does the experience of the Spanish Revolution indicate the failure of anarchism or the failure of anarchists?

Marxists usually point to the events in Catalonia after July 19th, 1936, as evidence that anarchism is a flawed theory. They bemoan the fact that, when given the chance, the anarchists did not "*seize power*" and create a "*dictatorship of the proletariat.*" To re-quote Trotsky:

"A revolutionary party, even having seized power (of which the anarchist leaders were incapable in spite of the heroism of the anarchist workers), is still by no means the sovereign ruler of society." [**Stalinism and Bolshevism**]

However, as we argued in [section 12](#), the Trotskyist "definition" of "workers' power" and "proletarian dictatorship" is, in fact, party power, party dictatorship and party sovereignty -- **not** working class self-management. Indeed, in a letter written in 1937, Trotsky clarified what he meant: "*Because the leaders of the CNT renounced dictatorship for themselves they left the place open for the Stalinist*

dictatorship." [our emphasis, **Writings 1936-7**, p. 514]

Hence the usual Trotskyist lament concerning the CNT is that the anarchist leaders did not seize power themselves and create the so-called "*dictatorship of the proletariat*" (i.e. the dictatorship of those claiming to represent the proletariat). A strange definition of "*workers' power*," we must admit. The "leaders" of the CNT and FAI quite rightly rejected such a position -- unfortunately they also rejected the anarchist position at the same time, as we will see.

Trotsky states that the "*leaders of the CNT . . . explained their open betrayal of the theory of anarchism by the pressure of 'exceptional circumstances' . . . Naturally, civil war is not a peaceful and ordinary but an 'exceptional circumstance.' Every serious revolutionary organisation, however, prepares precisely for 'exceptional circumstances.'*" ["*Stalinism and Bolshevism*", **Op. Cit.**, p. 16]

Trotsky is, for once, correct. We will ignore the obvious fact that his own (and every other Leninist) account of the degeneration of the Russian Revolution into Stalinism is a variation of the "*exceptional circumstances*" excuse and turn to his essential point. In order to evaluate anarchism and the actions of the CNT we have to evaluate **all** the revolutionary situations it found itself in, **not** just July, 1936 in Catalonia. This is something Trotsky and his followers seldom do -- for reasons that will become clear.

Obviously space considerations does not allow us to discuss every revolutionary situation anarchism faced. We will, therefore, concentrate on the Russian Revolution and the activities of the CNT in Spain in the 1930s. These examples will indicate that rather than signifying the failure of anarchism, the actions of the CNT during the Civil War indicate the failure of anarchists to apply anarchist theory and so signifies a betrayal of anarchism. In other words, that anarchism is a valid form of revolutionary politics.

If we look at the Russian Revolution, we see anarchist theory gain its most wide scale influence in those parts of the Ukraine protected by the Makhnovist army. The Makhnovists fought against White (pro-Tsarist), Red and Ukrainian Nationalists in favour of a system of "*free soviets*" in which the "*working people themselves must freely choose their own soviets, which are to carry out the will and desires of the working people themselves. that is to say, **administrative**, not ruling councils.*" As for the economy, the "*land, the factories, the workshops, the mines, the railroads and the other wealth of the people must belong to the working people themselves, to those who work in them, that is to say, they must be socialised.*" ["*Some Makhnovist Proclamations*", contained in Peter Arshinov, **The History of the Makhnovist Movement**, p. 273]

To ensure this end, the Makhnovists refused to set up governments in the towns and cities they liberated, instead urging the creation of free soviets so that the working people could govern themselves. Taking the example of Aleksandrovsk, once they had liberated the city the Makhnovists "*immediately invited the working population to participate in a general conference . . . it was proposed that the workers organise the life of the city and the functioning of the factories with their own forces and their own organisations . . . The first conference was followed by a second. The problems of organising life*

according to principles of self-management by workers were examined and discussed with animation by the masses of workers, who all welcomed this ideas with the greatest enthusiasm . . . Railroad workers took the first step . . . They formed a committee charged with organising the railway network of the region . . . From this point, the proletariat of Aleksandrovsk began systematically to the problem of creating organs of self-management." [Op. Cit., p. 149]

They also organised free agricultural communes which "*[a]dmittedly . . . were not numerous, and included only a minority of the population . . . But what was most precious was that these communes were formed by the poor peasants themselves. The Makhnovists never exerted any pressure on the peasants, confining themselves to propagating the idea of free communes."* [Op. Cit., p. 87] Makhno played an important role in abolishing the holdings of the landed gentry. The local soviet and their district and regional congresses equalised the use of the land between all sections of the peasant community. [Op. Cit., pp. 53-4]

Moreover, the Makhnovists took the time and energy to involve the whole population in discussing the development of the revolution, the activities of the army and social policy. They organised numerous conferences of workers', soldiers' and peasants' delegates to discuss political and social issues. They organised a regional congress of peasants and workers when they had liberated Aleksandrovsk. When the Makhnovists tried to convene the third regional congress of peasants, workers and insurgents in April 1919 and an extraordinary congress of several regions in June 1919 (including Red Army soldiers) the Bolsheviks viewed them as counter-revolutionary, tried to ban them and declared their organisers and delegates outside the law. For example, Trotsky issued order 1824 which stated the June 1919 congress was forbidden, that to inform the population of it was an act of high treason and all delegates should be arrested immediately as were all the spreading the call. [Op. Cit., p. 98-105 and p. 122-31]

The Makhnovists replied by holding the conferences anyway and asking "*[c]an there exist laws made by a few people who call themselves revolutionaries, which permit them to outlaw a whole people who are more revolutionary than they are themselves?"* and "*[w]hose interests should the revolution defend: those of the Party or those of the people who set the revolution in motion with their blood?"* Makhno himself stated that he "*consider[ed] it an inviolable right of the workers and peasants, a right won by the revolution, to call conferences on their own account, to discuss their affairs."* [Op. Cit., p. 103 and p. 129] These actions by the Bolsheviks should make the reader ponder if the elimination of workers' democracy during the civil war can fully be explained by the objective conditions facing Lenin's government or whether Leninist ideology played an important role in it. As Arshinov argues, "*[w]hoever studies the Russian Revolution should learn it [Trotsky's order no. 1824] by heart."* [Op. Cit., p. 123] Obviously the Bolsheviks considered that soviet system was threatened if soviet conferences were called and the "dictatorship of the proletariat" was undermined if the proletariat took part in such events.

In addition, the Makhnovists "*full applied the revolutionary principles of freedom of speech, of thought, of the press, and of political association. In all cities and towns occupied by the Makhnovists, they began by lifting all the prohibitions and repealing all the restrictions imposed on the press and on political organisations by one or another power."* Indeed, the "*only restriction that the Makhnovists considered necessary to impose on the Bolsheviks, the left Socialist-Revolutionaries and other statist*

was a prohibition on the formation of those 'revolutionary committees' which sought to impose a dictatorship over the people." [Op. Cit., p. 153 and p. 154]

The army itself, in stark contrast to the Red Army, was fundamentally democratic (although, of course, the horrific nature of the civil war did result in a few deviations from the ideal -- however, compared to the regime imposed on the Red Army by Trotsky, the Makhnovists were much more democratic movement). Arshinov proves a good summary:

"The Makhnovist insurrectionary army was organised according to three fundamental principles: voluntary enlistment, the electoral principle, and self-discipline.

"Voluntary enlistment meant that the army was composed only of revolutionary fighters who entered it of their own free will.

"The electoral principle meant that the commanders of all units of the army, including the staff, as well as all the men who held other positions in the army, were either elected or accepted by the insurgents of the unit in question or by the whole army.

"Self-discipline meant that all the rules of discipline were drawn up by commissions of insurgents, then approved by general assemblies of the various units; once approved, they were rigorously observed on the individual responsibility of each insurgent and each commander." [Op. Cit., p. 96]

Thus the Makhnovists indicate the validity of anarchist theory. They organised the self-defence of their region, refused to form of a "revolutionary" government and so the life of the region, its social and revolutionary development followed the path of self-activity of the working people who did not allow any authorities to tell them what to do. They respected freedom of association, speech, press and so on while actively encouraging workers' and peasants' self-management and self-organisation.

Moving to the Spanish movement, the various revolts and uprisings organised by the CNT and FAI that occurred before 1936 were marked by a similar revolutionary developments as the Makhnovists. We discuss the actual events of the revolts in 1932 and 1933 in more detail in [section 14](#) and so will not repeat ourselves here. However, all were marked by the anarchist movement attacking town halls, army barracks and other sources of state authority and urging the troops to revolt and side with the masses (the anarchists paid a lot of attention to this issue -- like the French syndicalists they produced anti-militarist propaganda arguing that soldiers should side with their class and refuse orders to fire on strikers and to join popular revolts). The revolts also saw workers taking over their workplaces and the land, trying to abolish capitalism while trying to abolish the state. In summary, they were **insurrections** which combined political goals (the abolition of the state) and social ones (expropriation of capital and the creation of self-managed workplaces and communes).

The events in Asturias in October 1934 gives a more detailed account of nature of these insurrections.

The anarchist role in this revolt has not been as widely known as it should be and this is an ideal opportunity to discuss it. Combined with the other insurrections of the 1930s it clearly indicates that anarchism is a valid form of revolutionary theory.

While the CNT was the minority union in Asturias, it had a considerable influence of its own (the CNT had over 22 000 affiliates in the area and the UGT had 40 000). The CNT had some miners in their union (the majority were in the UGT) but most of their membership was above ground, particularly in the towns of Aviles and Gijon. The regional federation of the CNT had joined the Socialist Party dominated "Alianza Obrera," unlike the other regional federations of the CNT.

When the revolt started, the workers organised attacks on barracks, town halls and other sources of state authority (just as the CNT revolts of 1932 and 1933 had). Bookchin indicates that "*[s]tructurally, the insurrection was managed by hundreds of small revolutionary committees whose delegates were drawn from unions, parties, the FAI and even anti-Stalinist Communist groups. Rarely, if at all, were there large councils (or 'soviets') composed of delegates from factories.*" [**The Spanish Anarchists**, p. 249] This, incidentally, indicates that Morrow's claims that in Asturias "*the Workers' Alliances were most nearly like soviets, and had been functioning for a year under socialist and Communist Left leadership*" are false. [**Op. Cit.**, p. 31] The claims that the Asturias uprising had established soviets was simply Communist and government propaganda.

In fact, the Socialists "*generally functioned through tightly knit committees, commonly highly centralised and with strong bureaucratic proclivities. In Asturias, the UGT tried to perpetuate this form wherever possible . . . But the mountainous terrain of Asturias made such committees difficult to co-ordinate, so that each one became an isolated miniature central committee of its own, often retaining its traditional authoritarian character.*" The anarchists, on the other hand, "*favoured looser structures, often quasi-councils composed of factory workers and assemblies composed of peasants. The ambience of these fairly decentralised structures, their improvisatory character and libertarian spirit, fostered an almost festive atmosphere in Anarchist-held areas.*" [**Op. Cit.**, p. 249] Bookchin quotes an account which compares anarchist La Felguera with Marxist Sama, towns of equal size and separated only by the Nalon river:

*"[The October Insurrection] triumphed immediately in the metallurgical and in the mining town. . . . Sama was organised along military lines. Dictatorship of the proletariat, red army, Central Committee, discipline. authority . . . La Felguera opted for **comunismo libertario**: the people in arms, liberty to come and go, respect for the technicians of the Duro-Felguera metallurgical plant, public deliberations of all issues, abolition of money, the rational distribution of food and clothing. Enthusiasm and gaiety in La Felguera; the sullenness of the barracks in Sama. The bridges [of Sama] were held by a corp of guards complete with officers and all. No one could enter or leave Sama without a safe-conduct pass, or walk through the streets without passwords. All of this was ridiculously useless, because the government troops were far away and the Sama bourgeoisie disarmed and neutralised . . . The workers of Sama who did not adhere to the Marxist religion preferred to go to La Felguera, where at least they could breathe. Side by*

side there were two concepts of socialism: the authoritarian and the libertarian; on each bank of the Nalon, two populations of brothers began a new life: with dictatorship in Sama; with liberty in La Felguera." [Op. Cit., pp. 249-50]

Bookchin notes that "*[i]n contrast to the severely delimited Marxist committee in Sama, La Felguera workers met in popular assembly, where they socialised the industrial city's economy. The population was divided into wards, each of which elected delegates to supply and distribution committees. . . The La Felguera commune . . . proved to be so successful, indeed so admirable, that surrounding communities invited the La Felguera Anarchists to advice them on reorganising their own social order. Rarely were comparable institutions created by the Socialists and, where they did emerge, it was on the insistence of the rank-and-file workers."* [Op. Cit., p. 250]

In other words, the Asturias uprising saw anarchists yet again applying their ideas with great success in a revolutionary situation. As Bookchin argues:

"Almost alone, the Anarchists were to create viable revolutionary institutions structured around workers' control of industry and peasants' control of land. That these institutions were to be duplicated by Socialist workers and peasants was due in small measure to Anarchist example rather than Socialist precept. To the degree that the Asturian miners and industrial workers in various communities established direct control over the local economy and structured their committees along libertarian lines, these achievements were due to Anarchist precedents and long years of propaganda and education." [Op. Cit., p. 250-1]

Unlike their Socialist and Communist allies, the anarchists in Asturias took the Alianza's slogan "*Unity, Proletarian Brothers*" seriously. A key factor in the defeat of the uprising (beyond its isolation due to socialist incompetence elsewhere -- see [section 6](#)) was the fact that "*[s]o far as the Aviles and Gijon Anarchists were concerned . . . their Socialist and Communist 'brothers' were to honour the slogan only in the breach. When Anarchist delegates from the seaports arrived in Oviedo on October 7, pleading for arms to resist the imminent landings of government troops, their requests were totally ignored by Socialists and Communists who, as [historian Gabriel] Jackson notes, 'clearly mistrusted them.' The Oviedo Committee was to pay a bitter price for its refusal. The next day, when Anarchist resistance, hampered by the pitiful supply of weapons, failed to prevent the government from landing its troops, the way into Asturias lay open. The two seaports became the principal military bases for launching the savage repression of the Asturian insurrection that occupied so much of October and claimed thousands of lives."* [Murray Bookchin, Op. Cit., p. 248]

Therefore, to state as Morrow does that before July 1936, "*anarchism had never been tested on a grand scale*" and now "*leading great masses, it was to have a definite test*" is simply wrong. [Op. Cit., p. 101] Anarchism had had numerous definite tests before involving "*great masses,*" both in Spain and elsewhere. The revolts of the 1930s, the Makhnovists in the Ukraine, the factory occupations in Italy in 1920 (see [section A.5.5](#)) and in numerous other revolutionary and near revolutionary situations

anarchism had been tested **and had passed** those tests. Defeat came about by the actions of the Marxists (in the case of Asturias and Italy) or by superior force (as in the 1932 and 1933 Spanish insurrections and the Ukraine) **not** because of anarchist theory or activities. At no time did they collaborate with the bourgeois state or compromise their politics. By concentrating on July 1936, Marxists effectively distort the history of anarchism -- a bit like arguing the actions of the Social Democratic Party in crushing the German discredits Marxism while ignoring the actions and politics of the council communists during it or the Russian Revolution.

But the question remains, why did the CNT and FAI make such a mess (politically at least) of the Spanish Revolution of 1936? However, even this question is unfair as the example of the Aragon Defence Council and Federation of Collectives indicate that anarchists **did** apply their ideas successfully in certain areas during that revolution.

Morrow is aware of that example, as he argues that the "*Catalonian [i.e. CNT] militia marched into Aragon as an army of social liberation . . . Arriving in a village, the militia committees sponsor the election of a village anti-fascist committee . . . [which] organises production on a new basis*" and "*[e] very village wrested from the fascists was transformed into a forest of revolution.*" Its "*municipal councils were elected directly by the communities. The Council of Aragon was at first largely anarchist.*" He notes that "*[l]ibertarian principles were attempted in the field of money and wages*" yet he fails to mention the obvious application of libertarian principles in the field of **politics** with the state abolished and replaced by a federation of workers' associations. To do so would be to invalidate his basic thesis against anarchism and so it goes unmentioned, hoping the reader will not notice this confirmation of anarchist **politics** in practice. [Op. Cit., p. 53, p. 204 and p. 205]

So, from the experience of the Ukraine, the previous revolts in 1932, 1933 and 1934 and the example of the Council of Aragon it appears clear that rather than exposing anarchist theory (as Marxists claim), the example of July 1936 in Catalonia is an aberration. Anarchist politics had been confirmed as a valid revolutionary theory many times before and, indeed, shown themselves as the only one to ensure a free society. However, why did this aberration occur?

Most opponents of anarchism provide a rather (in)famous quote from FAI militant Juan Garcia Oliver, describing the crucial decision made in Catalonia in July of '36 to co-operate with Companys' government to explain the failure of the CNT to "seize power":

"The CNT and FAI decided on collaboration and democracy, eschewing revolutionary totalitarianism . . . by the anarchist and Confederal dictatorship." [quoted by Stuart Christie, **We, the Anarchists!**, p. 105]

In this statement Garcia Oliver describes the capitalist state as "democracy" and refers to the alternative of the directly democratic CNT unions taking power as "totalitarianism" and "dictatorship." Marxists tend to think this statement tells us something about the CNT's original program in the period leading up to the crisis of July 1936. As proven above, any such assertion would be false (see also [section 8](#)). In fact

this statement was made in December of 1937, many months after Garcia Oliver and other influential CNT activists had embarked upon collaboration in the government ministries and Republican army command. The quote is taken from a report by the CNT leadership, presented by Garcia Oliver and Mariano Vazquez (CNT National Secretary in 1937) at the congress of the International Workers Association (IWA). The CNT was aware that government participation was in violation of the principles of the IWA and the report was intended to provide a rationalisation. That report is an indication of just how far Garcia Oliver and other influential CNT radicals had been corrupted by the experience of government collaboration.

Garcia Oliver's position in July of 1936 had been entirely different. He had been one of the militants to argue in favour of overthrowing the Companys government in Catalonia in the crucial union assemblies of July 20-21. As Juan Gomez Casas argues:

"The position supported by Juan Garcia Oliver [in July of '36] has been described as 'anarchist dictatorship' Actually, though, Oliver was advocating application of the goals of the Saragossa Congress in Barcelona and Catalonia at a time in history when, in his opinion, libertarian communism was a real possibility. It would always signify dissolution of the old parties dedicated to the idea of [state] power, or at least make it impossible for them to pursue their politics aimed at seizure of power. There will always be pockets of opposition to new experiences and therefore resistance to joining 'the spontaneity of the popular masses.' In addition, the masses would have complete freedom of expression in the unions and in the economic organisations of the revolution as well as in their political organisations." [Anarchist Organisation: The History of the FAI, p. 188f]

Those libertarians who defended government participation in Spain argued that a non-hierarchical re-organisation of society in Catalonia in July of '36 could only have been imposed by force, against the opposition of the parties and sectors of society that have a vested interest in existing inequalities. They argued that this would have been a "dictatorship," no better than the alternative of government collaboration.

If this argument were valid, then it logically means that anarchism itself would be impossible, for there will always be sectors of society -- bosses, judges, politicians, etc. -- who will oppose social re-organisation on a libertarian basis. As Malatesta once argued, some people *"seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of a respect for the freedom of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas!"* [Anarchy, p. 41] It is doubtful he would have predicted that certain anarchists would be included in such believers!

Neither anarchism nor the CNT program called for suppressing other viewpoints. The various viewpoints that existed among the workforce and population would be reflected in the deliberations and debates of the workplace and community assemblies as well as in the various local and regional congresses and conference and on their co-ordinating Councils. The various political groups would be

free to organise, publish their periodicals and seek influence in the various self-managed assemblies and structures that existed. The CNT would be dominant because it had overwhelming support among the workers of Catalonia (and would have remained dominant as long as that continued).

What is essential to a state is that its authority and armed power be top-down, separate and distinct from the population. Otherwise it could not function to protect the power of a boss class. When a population in society directly and democratically controls the armed force (in fact, effectively **is** the armed force as in the case of the CNT militias), directly manages its own affairs in decentralised, federal organisations based on self-management from the bottom upwards and manages the economy, this is not a "state" in the historical sense. Thus the CNT would not in any real sense have "seized power" in Catalonia, rather it would have allowed the mass of people, previously disempowered by the state, to take control of their own lives -- both individually and collectively -- by smashing the state and replacing it by a free federation of workers' associations.

What this means is that a non-hierarchical society must be imposed by the working class against the opposition of those who would lose power. In building the new world we must destroy the old one. Revolutions are authoritarian by their very nature, but only in respect to structures and social relations which promote injustice, hierarchy and inequality. It is not "authoritarian" to destroy authority, in other words! Revolutions, above all else, must be libertarian in respect to the oppressed (indeed, they are acts of liberation in which the oppressed end their oppression by their own direct action). That is, they must develop structures that involve the great majority of the population, who have previously been excluded from decision making about social and economic issues.

So the dilemma of "anarchist dictatorship" or "collaboration" was a false one and fundamentally wrong. It was never a case of banning parties, etc. under an anarchist system, far from it. Full rights of free speech, organisation and so on should have existed for all but the parties would only have as much influence as they exerted in union, workplace, community, militia (and so on) assemblies, as should be the case! "Collaboration" yes, but within the rank and file and within organisations organised in a libertarian manner. Anarchism does not respect the "freedom" to be a capitalist, boss or politician.

Instead of this "collaboration" from the bottom up, the CNT and FAI committees favoured "collaboration" from the top down. In this they followed the example of the UGT and its "Workers' Alliances" rather than their own activities previous to the military revolt. Why? Why did the CNT and FAI in Catalonia reject their previous political perspective and reject the basic ideas of anarchism? As shown above, the CNT and FAI has successfully applied their ideas in many insurrections before hand. Why the change of direction? There were two main reasons.

Firstly, while a majority in Catalonia and certain other parts of Spain, the CNT and FAI were a minority in such areas as Castille and Asturias. To combat fascism required the combined forces of all parties and unions and by collaborating with a UGT-like "Anti-Fascist Alliance" in Catalonia, it was believed that such alliances could be formed elsewhere, with equality for the CNT ensured by the Catalan CNT's decision of equal representation for minority organisations in the Catalan Anti-Fascist Committee. This

would, hopefully, also ensure aid to CNT militias via the government's vast gold reserves and stop foreign intervention by Britain and other countries to protect their interests if libertarian communism was declared.

However, as Vernon Richards argues:

"This argument contains . . . two fundamental mistakes, which many of the leaders of the CNT-FAI have since recognised, but for which there can be no excuse, since they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT. Firstly, that an armed struggle against fascism or any other form of reaction could be waged more successfully within the framework of the State and subordinating all else, including the transformation of the economic and social structure of the country, to winning the war. Secondly, that it was essential, and possible, to collaborate with political parties -- that is politicians -- honestly and sincerely, and at a time when power was in the hands of the two workers organisations. . .

"All the initiative . . . was in the hands of the workers. The politicians were like generals without armies floundering in a desert of futility. Collaboration with them could not, by any stretch of the imagination, strengthen resistance to Franco. On the contrary, it was clear that collaboration with political parties meant the recreation of governmental institutions and the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives were also transferred to a governing hierarchy, and this could not have other than an adverse effect on the morale of the revolutionary fighters." [Lessons of the Spanish Revolution, p. 42]

In addition, in failing to take the initiative to unite the working class independently of the Republican state at the crucial moment, in July of '36, the CNT of Catalonia was in effect abandoning the only feasible alternative to the Popular Front strategy. Without a libertarian system of popular self-management, the CNT and FAI had no alternative but to join the bourgeois state. For a revolution to be successful, as Bakunin and Kropotkin argued, it needs to create libertarian organisations (such as workers' associations, free communes and their federations) which can effectively replace the state and the market, that is to create a widespread libertarian organisation for social and economic decision making through which working class people can start to set their own agendas. Only by going this can the state and capitalism be effectively smashed. If this is not done and the state is ignored rather than smashed, it continues and gets stronger as it will be the only medium that exists for wide scale decision making. This will result in revolutionaries having to work within it, trying to influence it since no other means exist to reach collective decisions.

The failure to smash the state, this first betrayal of anarchist principles, led to all the rest, and so the defeat of the revolution. Not destroying the state meant that the revolution could never be fully successful economically as politics and economics are bound together so closely. Only under the

political conditions of anarchism can its economic conditions flourish and vice versa.

The CNT had never considered a "strategy" of collaboration with the Popular Front prior to July of '36. In the months leading up to the July explosion, the CNT had consistently criticised the Popular Front strategy as a fake unity of leaders over the workers, a strategy that would subordinate the working class to capitalist legality. However, in July of '36, the CNT conferences in Catalonia had not seen clearly that their "temporary" participation in the Anti-Fascist Militia Committee would drag them inexorably into a practice of collaboration with the Popular Front. As Christie argues, *"the Militias Committee was a compromise, an artificial political solution . . . It . . . drew the CNT-FAI leadership inexorably into the State apparatus, until them its principle enemy, and led to the steady erosion of anarchist influence and credibility."* [Op. Cit., p. 105]

Secondly, the fear of fascism played a key role. After all, this was 1936. The CNT and FAI had seen their comrades in Italy and Germany being crushed by fascist dictatorships, sent to concentration camps and so on. In Spain, Franco's forces were slaughtering union and political militants and members by the tens of thousands (soon to reach hundreds of thousands by the end of the war and beyond). The insurrection had not been initiated by the people themselves (as had the previous revolts in the 1930s) and this also had a psychological impact on the decision making process. The anarchists were, therefore, in a position of being caught between two evils -- fascism and the bourgeois state, elements of which had fought with them on the streets. To pursue anarchist politics at such a time, it was argued, could have resulted in the CNT fighting on two fronts -- against the fascists and also against the Republican government. Such a situation would have been unbearable and so it was better to accept collaboration than aid Fascism by dividing the forces of the anti-fascist camp.

However, such a perspective failed to appreciate the depth of hatred the politicians and bourgeois had for the CNT. Indeed, by their actions it would appear they preferred fascism to the social revolution. So, in the name of "anti-fascist" unity, the CNT worked with parties and classes which hated both them and the revolution. In the words of Sam Dolgoff *"both before and after July 19th, an unwavering determination to crush the revolutionary movement was the leitmotif behind the policies of the Republican government; irrespective of the party in power."* [The Anarchist Collectives, p. 40]

Rather than eliminate a civil war developing within the civil war, the policy of the CNT just postponed it -- until such time as the state was stronger than the working class. The Republican government was quite happy to attack the gains of the revolution, physically attacking rural and urban collectives, union halls, assassinating CNT and FAI members of so on. The difference was the CNT's act only postponed such conflict until the balance of power had shifted back towards the status quo.

Moreover, the fact that the bourgeois republic was fighting fascism could have meant that it would have tolerated the CNT social revolution rather than fight it (and so weakening its own fight against Franco). However, such an argument remains moot.

It is clear that anti-fascism destroyed the revolution, not fascism. As a Scottish anarchist in Barcelona

during the revolution argued, "*Fascism is not something new, some new force of evil opposed to society, but is only the old enemy, Capitalism, under a new and fearful sounding name . . . Anti-Fascism is the new slogan by which the working class is being betrayed.*" [Ethal McDonald, **Workers Free Press**, Oct. 1937] This was also argued by the **Friends of Durruti** who stated that "*[d]emocracy defeated the Spanish people, not Fascism.*" [**The Friends of Durruti Accuse**]

The majority at the July 20-21 conferences went along with proposal of postponing the social revolution, of starting the work of creating libertarian communism, and smashing the state and replacing it with a federation of workers' assemblies. Most of the CNT militants there saw it as a temporary expedient, until the rest of Spain was freed from Franco's forces (in particular, Aragon and Saragossa). Companys' (the head of the Catalan government) had proposed the creation of a body containing representatives of all anti-fascist parties and unions called the "*Central Committee of Anti-Fascist Militias*," sponsored by his government. The CNT meeting agreed to this proposal, though only on condition that the CNT be given the majority on it. A sizeable minority of delegates were apparently disgusted by this decision. The delegation from Bajo Llobregat County (an industrial area south of Barcelona) walked out saying they would never go along with government collaboration.

Therefore, the decision to postpone the revolution and so to ignore the state rather than smashing was a product of isolation and the fear of a fascist victory. However, while "isolation" may explain the Catalan militants' fears and so decisions, it does not justify their decision. If the CNT of Catalonia had given Companys the boot and set up a federation of workplace and community assemblies in Catalonia, uniting the rank-and-file of the other unions with the CNT, this would have strengthened the resolve of workers in other parts of Spain, and it might have also inspired workers in nearby countries to move in a similar direction.

Isolation, the uneven support for a libertarian revolution across Spain and the dangers of fascism were real problems, but they do not excuse the libertarian movement for its mistakes. On the contrary, in following the course of action advised by leaders like Horacio Prieto and Abad Diego de Santillan, the CNT only weakened the revolution and helped to discredit libertarian socialism. After all, as Bakunin and Kropotkin continually stressed, revolutions break out in specific areas and then spread outward -- isolation is a feature of revolution which can only be overcome by action, by showing a practical example which others can follow.

Most of the CNT militants at the July 20th meeting saw the compromise as a temporary expedient, until the rest of Spain was freed from Franco's forces (in particular, Aragon and Saragossa). As the official account states, "*[t]he situation was considered and it was unanimously decided not to mention Libertarian Communism until such time as we had captured that part of Spain that was in the hands of the rebels.*" [quoted by Christie, **Op. Cit.**, p. 102] However, the membership of the CNT decided **themselves** to start the social revolution ("*very rapidly collectives . . . began to spring up. It did not happen on instructions from the CNT leadership . . . the initiative came from CNT militants*" [Ronald Fraser, **Blood of Spain**, p. 349]). The social revolution began anyway, from below, but without the key political aspect (abolition of the state) and so was fatally compromised from the beginning.

As Stuart Christie argues:

"The higher committees of the CNT-FAI-FIJJL in Catalonia saw themselves caught on the horns of a dilemma: social revolution, fascism or bourgeois democracy. Either they committed themselves to the solutions offered by social revolution, regardless of the difficulties involved in fighting both fascism and international capitalism, or, through fear of fascism . . . they sacrificed their anarchist principles and revolutionary objectives to bolster, to become part of the bourgeois state . . . Faced with an imperfect state of affairs and preferring defeat to a possibly Pyrrhic victory, Catalan anarchist leadership renounced anarchism in the name of expediency and removed the social transformation of Spain from their agenda.

"But what the CNT-FAI leaders failed to grasp was that the decision whether or not to implement Libertarian Communism was not theirs to make. Anarchism was not something which could be transformed from theory to practice by organisational decree. . .

"What the CNT-FAI leadership had failed to take on board was the fact that the spontaneous defensive movement of 19 July had developed a political direction of its own. On their own initiative, without any intervention by the leadership of the unions or political parties, the rank and file militants of the CNT, representing the dominant force within the Barcelona working class, together with other union militants had, with the collapse of State power, . . . been welded . . . into genuinely popular non-partisan revolutionary committees . . . in their respective neighbourhoods. They were the natural organisms of the revolution itself and direct expression of popular power." [Op. Cit., p. 99]

In other words, the bulk of the CNT-FAI membership acted in an anarchist way while the higher committees compromised their politics and achievements in the name of anti-fascist unity. In this the membership followed years of anarchist practice and theory. It was fear of fascism which made many of the leading militants of the CNT abandon anarchist politics and instead embrace "anti-fascist unity" and compromise with the bourgeois republic. To claim that July 1936 indicated the failure of anarchism means to ignore the constructive work of millions of CNT members in their workplaces, communities and militias and instead concentrate on a few militants who made the terrible mistake of ignoring their political ideas in an extremely difficult situation. As we said above, this may explain the decision but it does not justify it.

Therefore, it is clear that the experiences of the CNT and FAI in 1936 indicate a failure of anarchists to apply their politics rather than the failure of those politics. The examples of the Makhnovists, the revolts in Spain between 1932 and 1934 as well as the Council of Aragon show beyond doubt that this is the case. Rather than act as anarchists in July 1936, the militants of the Catalan CNT and FAI ignored their basic ideas (not lightly, we stress, but in response to real dangers). They later justified their decisions by putting their options in a Marxist light -- "either we impose libertarian communism, and so become an

anarchist dictatorship, or we collaborate with the democratic government." As Vernon Richards makes clear:

"Such alternatives are contrary to the most elementary principles of anarchism and revolutionary syndicalism. In the first place, an 'anarchist dictatorship' is a contradiction in terms (in the same way as the 'dictatorship of the proletariat' is), for the moment anarchists impose their social ideas on the people by force, they cease being anarchists . . . the arms of the CNT-FAI held could be no use for imposing libertarian communism . . . The power of the people in arms can only be used in the defence of the revolution and the freedoms won by their militancy and their sacrificed. We do not for one moment assume that all social revolutions are necessarily anarchist. But whatever form the revolution against authority takes, the role of anarchists is clear: that of inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority. . . the role of anarchists [is] to support, to incite and encourage the development of the social revolution and to frustrate any attempts by the bourgeois capitalist state to reorganise itself, which it would seek to do." [Op. Cit., pp. 43-6]

Their compromise in the name of anti-fascist unity contained the rest of their mistakes. Joining the "Central Committee of Anti-Fascist Militias" was the second mistake as at no time could it be considered as the embryo of a new workers' power. It was, rather, an organisation like the pre-war UGT "Workers' Alliances" -- an attempt to create links between the top-level of other unions and parties. Such an organisation, as the CNT recognised before the war (see [section 5](#)), could not be a means of creating a revolutionary federation of workers' associations and communes and, in fact, a hindrance to such a development, if not its chief impediment.

Given that the CNT had rejected the call for revolution in favour of anti-fascist unit on July 20th, such a development does not reflect the CNT's pre-war program. Rather it was a reversion to Felix Morrow's Trotskyist position of joining the UGT's "Workers' Alliance" in spite of its non-revolutionary nature (see [section 5](#)).

The CNT did not carry out its program (and so apply anarchist politics) and so did not replace the Generalitat (Catalan State) with a Defence Council in which only union/workplace assemblies (not political parties) were represented. To start the process of creating libertarian communism all the CNT would have had to do was to call a Regional Congress of unions and invite the UGT, independent unions and unorganised workplaces to send delegates. It could also have invited the various neighbourhood and village defence committees that had either sprung up spontaneously or were already organised before the war as part of the CNT. Unlike the other revolts it took part in the 1930s, the CNT did not apply anarchist politics. However, to judge anarchism by this single failure means to ignore the whole history of anarchism and its successful applications elsewhere, including by the CNT and FAI during numerous revolts in Spain during the 1930s and in Aragon in 1936.

Ironically enough, Kropotkin had attacked the official CNT line of not mentioning Libertarian Communism *"until such time as we had captured that part of Spain that was in the hands of the rebels."* In analysing the Paris Commune Kropotkin had lambasted those who had argued *"Let us first make sure of victory, and then see what can be done."* His comments are worth quoting at length:

"Make sure of victory! As if there were any way of forming a free commune without laying hands upon property! As if there were any way of conquering the foe while the great mass of the people is not directly interested in the triumph of the revolution, by seeing that it will bring material, moral and intellectual well-being to everybody.

"The same thing happened with regard to the principle of government. By proclaiming the free Commune, the people of Paris proclaimed an essential anarchist principle, which was the breakdown of the state.

"And yet, if we admit that a central government to regulate the relations of communes between themselves is quite needless, why should we admit its necessity to regulate the mutual relations of the groups which make up each commune? . . . There is no more reason for a government inside the commune than for a government outside." [The Commune of Paris]

Kropotkin's argument was sound, as the CNT discovered. By waiting until victory in the war they were defeated. Kropotkin also indicated the inevitable effects of the CNT's actions in co-operating with the state and joining representative bodies. In his words:

"Paris sent her devoted sons to the town hall. There, shelved in the midst of files of old papers, obliged to rule when their instincts prompted them to be and to act among the people, obliged to discuss when it was needful to act, to compromise when no compromise was the best policy, and, finally, losing the inspiration which only comes from continual contact with the masses, they saw themselves reduced to impotence. Being paralysed by their separation from the people -- the revolutionary centre of light and heat -- they themselves paralysed the popular initiative." [Op. Cit.]

Which, in a nutshell, was what happened to the leading militants of the CNT who collaborated with the state. As anarchist turned Minister admitted after the war, *"[w]e were in the government, but the streets were slipping away from us. We had lost the workers' trust and the movement's unity had been whittled away."* [No Gods, No Masters, vol. 2, p. 274] The actions of the CNT-FAI higher committees and Ministers helped paralyse and defeat the May Days revolt of 1937. The CNT committees and leaders become increasingly isolated from the people, they compromised again and again and, ultimately, became an impotent force. Kropotkin was proved correct. Which means that far from refuting anarchist politics or analysis, the experience of the CNT-FAI in the Spanish Revolution *confirms* it.

In summary, therefore, the Spanish Revolution of 1936 indicates the failure of anarchists rather than the

failure of anarchism.

One last point, it could be argued that anarchist theory allowed the leadership of the CNT and FAI to paint their collaboration with the state as a libertarian policy. That is, of course, correct. Anarchism is against the so-called "dictatorship of the proletariat" just as much as it is against the actual dictatorship of the bourgeoisie (i.e. the existing system and its off-shoots such as fascism). This allowed the CNT and FAI leaders to argue that they were following anarchist theory by not destroying the state completely in July 1936. Of course, such a position cannot be used to discredit anarchism simply because such a revision meant that it can never be libertarian to abolish government and the state. In other words, the use made of anarchist theory by the leaders of the CNT and FAI in this case presents nothing else than a betrayal of that theory rather than its legitimate use.

Also, and more importantly, while anarchist theory was corrupted to justify working with other parties and unions in a democratic state, **Marxist** theory was used to justify the brutal one-party dictatorship of the Bolsheviks, first under Lenin and the Stalin. That, we feel, sums up the difference between anarchism and Leninism quite well.

I.5 What could the social structure of anarchy look like?

The social and political structure of anarchy is similar to that of the economic structure, i.e., it is based on a voluntary federation of decentralised, directly democratic policy-making bodies. These are the neighbourhood and community assemblies and their confederations. In these grassroots political units, the concept of "*self-management*" becomes that of "*self-government*", a form of municipal organisation in which people take back control of their living places from the bureaucratic state and the capitalist class whose interests it serves.

"A new economic phase demands a new political phase," argued Kropotkin, *"A revolution as profound as that dreamed of by the [libertarian] socialists cannot accept the mould of an out-dated political life. A new society based on equality of condition, on the collective possession of the instruments of work, cannot tolerate for a week . . . the representative system . . . if we want the social revolution, we must seek a form of political organisation that will correspond to the new method of economic organisation. . . . The future belongs to the free groupings of interests and not to governmental centralisation; it belongs to freedom and not to authority."* [**Words of a Rebel**, pp. 143-4]

Thus the social structure of an anarchist society will be the opposite of the current system. Instead of being centralised and top-down as in the state, it will be decentralised and organised from the bottom up. As Kropotkin argued, *"socialism must become **more popular**, more communalistic, and less dependent upon indirect government through elected representatives. It must become more **self-governing**."* [**Kropotkin's Revolutionary Pamphlets**, p. 185] While anarchists have various different conceptions of how this communal system would be constituted (as we will see), they is total agreement on these basic visions and principles.

This empowerment of ordinary citizens through decentralisation and direct democracy will eliminate the alienation and apathy that are now rampant in the modern city and town, and (as always happens when people are free) unleash a flood of innovation in dealing with the social breakdown now afflicting our urban wastelands. The gigantic metropolis with its hierarchical and impersonal administration, its atomised and isolated "*residents*," will be transformed into a network of humanly scaled participatory communities (usually called "*communes*"), each with its own unique character and forms of self-government, which will be co-operatively linked through federation with other communities at several levels, from the municipal through the bioregional to the global.

Of course, it can (and has) been argued that people are just not interested in "*politics*." Further, some claim that this disinterest is why governments exist -- people delegate their responsibilities and power to others because they have better things to do. Such an argument, however, is flawed on empirical grounds. As we indicated in [section B.2.6](#), centralisation of power in both the French and American revolutions occurred **because** working people were taking **too much** interest in politics and social

issues, not the reverse (*"To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more. . ."* [Kropotkin, **Words of a Rebel**, p. 143]).

Simply put, the state is centralised to facilitate **minority rule** by excluding the mass of people from taking part in the decision making processes within society. This is to be expected as social structures do not evolve by chance -- rather they develop to meet specific needs and requirements. The specific need of the ruling class is to rule and that means marginalising the bulk of the population. Its requirement is for minority power and this is transformed into the structure of the state (and the capitalist company).

Even if we ignore the historical evidence on this issue, anarchists do not draw this conclusion from the current apathy that surrounds us. In fact, we argue that this apathy is not the cause of government but its result. Government is an inherently hierarchical system in which ordinary people are deliberately marginalised. The powerlessness people feel due to the workings of the system ensure that they are apathetic about it, thus guaranteeing that wealthy and powerful elites govern society without hindrance from the oppressed and exploited majority.

Moreover, government usually sticks its nose into areas that most people have no real interest in. Some things, as in the regulation of industry or workers' safety and rights, a free society could leave to those affected to make their own decisions (we doubt that workers would subject themselves to unsafe working conditions, for example). In others, such as the question of personal morality and acts, a free people would have no interest in (unless it harmed others, of course). This, again, would reduce the number of issues that would be discussed in a free commune.

Also, via decentralisation, a free people would be mainly discussing local issues, so reducing the complexity of many questions and solutions. Wider issues would, of course, be discussed but these would be on specific issues and so more focused in their nature than those raised in the legislative bodies of the state. So, a combination of centralisation and an irrational desire to discuss every and all questions also helps make *"politics"* seem boring and irrelevant.

As noted above, this result is not an accident and the marginalisation of *"ordinary"* people is actually celebrated in bourgeois *"democratic"* theory. As Noam Chomsky notes:

"Twentieth century democratic theorists advise that 'The public must be put in its place,' so that the 'responsible men' may 'live free of the trampling and roar of a bewildered herd,' 'ignorant and meddling outsiders' whose 'function' is to be 'interested spectators of action,' not participants, lending their weight periodically to one or another of the leadership class (elections), then returning to their private concerns. (Walter Lippman). The great mass of the population, 'ignorant and mentally deficient,' must be kept in their place for the common good, fed with 'necessary illusion' and 'emotionally potent oversimplifications' (Wilson's Secretary of State Robert Lansing, Reinhold Niebuhr). Their

'conservative' counterparts are only more extreme in their adulation of the Wise Men who are the rightful rulers -- in the service of the rich and powerful, a minor footnote regularly forgotten." [Year 501, p. 18]

As discussed in Section B.2.6 ("[Who benefits from centralisation?](#)") this marginalisation of the public from political life ensures that the wealthy can be "left alone" to use their power as they see fit. In other words, such marginalisation is a necessary part of a fully functioning capitalist society. Hence, under capitalism, libertarian social structures have to be discouraged. Or as Chomsky puts it, the *"rabble must be instructed in the values of subordination and a narrow quest for personal gain within the parameters set by the institutions of the masters; meaningful democracy, with popular association and action, is a threat to be overcome."* [Op. Cit., p. 18] This philosophy can be seen in the statement of a US Banker in Venezuela under the murderous Jimenez dictatorship:

"You have the freedom here to do whatever you want to do with your money, and to me, that is worth all the political freedom in the world." [quoted by Chomsky, Op. Cit., p. 99]

Deterring libertarian alternatives to statism is a common feature of our current system. By marginalising and disempowering people, the ability of individuals to manage their own social activities is undermined and weakened. They develop a "fear of freedom" and embrace authoritarian institutions and "strong leaders," which in turn reinforces their marginalisation.

This consequence is hardly surprising. Anarchists maintain that the desire to participate and the ability to participate are in a symbiotic relationship: participation feeds on itself. By creating the social structures that allow participation, participation will increase. As people increasingly take control of their lives, so their ability to do so also increases. The challenge of having to take responsibility for decisions that make a difference is at the same time an opportunity for personal development. To begin to feel power, having previously felt powerless, to win access to the resources required for effective participation and learn how to use them, is a liberating experience. Once people become active subjects, making things happen in one aspect of their lives, they are less likely to remain passive objects, allowing things to happen to them, in other aspects. All in all, "politics" is far too important a subject to leave to politicians, the wealthy and bureaucrats. After all, it is what affects, your friends, community, and, ultimately, the planet you live on. Such issues cannot be left to anyone but you.

Hence a meaningful communal life based on self-empowered individuals is a distinct possibility (indeed, it has repeatedly appeared throughout history). It is the hierarchical structures in statism and capitalism, marginalising and disempowering the majority, which is at the root of the current wide scale apathy in the face of increasing social and ecological disruption. Libertarian socialists therefore call for a radically new form of political system to replace the centralised nation-state, a form that would be based around confederations of self-governing communities. In other words, in anarchism *"[s]ociety is a society of societies; a league of leagues of leagues; a commonwealth of commonwealths of commonwealths; a republic of republics of republics. Only there is freedom and order, only there is spirit, a spirit which is self-sufficiency and community, unity and independence."* [Gustav Landauer, **For Socialism**, pp. 125-

126]

To create such a system would require dismantling the nation-state and reconstituting relations between communities on the basis of self-determination and free and equal confederation from below. In the following subsections we will examine in more detail why this new system is needed and what it might look like. As we stressed in the introduction, these are just suggestions of possible anarchist solutions to social organisation. Most anarchists recognise that anarchist communities will co-exist with non-anarchist ones after the destruction of the existing state. As we are anarchists we are discussing anarchist visions. We will leave it up to non-anarchists to paint their own pictures of a possible future.

I.5.1 What are participatory communities?

As Murray Bookchin argues in **The Rise of Urbanisation and the Decline of Citizenship** (reprinted as **From Urbanisation to Cities**), the modern city is a virtual appendage of the capitalist workplace, being an outgrowth and essential counterpart of the factory (where "*factory*" means any enterprise in which surplus value is extracted from employees). As such, cities are structured and administered primarily to serve the needs of the capitalist elite -- employers -- rather than the needs of the many -- their employees and their families. From this standpoint, the city must be seen as (1) a transportation hub for importing raw materials and exporting finished products; and (2) a huge dormitory for wage slaves, conveniently locating them near the enterprises where their labour is to be exploited, providing them with entertainment, clothing, medical facilities, etc. as well as coercive mechanisms for controlling their behaviour.

The attitude behind the management of these "*civic*" functions by the bureaucratic servants of the capitalist ruling class is purely instrumental: worker-citizens are to be treated merely as means to corporate ends, not as ends in themselves. This attitude is reflected in the overwhelmingly alienating features of the modern city: its inhuman scale; the chilling impersonality of its institutions and functionaries; its sacrifice of health, comfort, pleasure, and aesthetic considerations to bottom-line requirements of efficiency and "*cost effectiveness*"; the lack of any real communal interaction among residents other than collective consumption of commodities and amusements; their consequent social isolation and tendency to escape into television, alcohol, drugs, gangs, etc. Such features make the modern metropolis the very antithesis of the genuine community for which most of its residents hunger. This contradiction at the heart of the system contains the possibility of radical social and political change.

The key to that change, from the anarchist standpoint, is the creation of a network of participatory communities based on self-government through direct, face-to-face democracy in grassroots neighbourhood and community assemblies. As we argued in [section I.2.3](#) such assemblies will be born in social struggle and so reflect the needs of the struggle and those within it so our comments here must be considered as generalisations of the salient features of such communities and **not** blue-prints.

Traditionally, these participatory communities were called **communes** in anarchist theory ("*The basic social and economic cell of the anarchist society is the free, independent commune*" [A. Grachev, quoted

by Paul Avrich, **The Anarchists in the Russian Revolution**, p. 64]). Within anarchist thought, there are two main conceptions of the free commune. One vision is based on workplace delegates, the other on neighbourhood assemblies. We will sketch each in turn.

Bakunin argued that the *"future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal."* In other words, *"the federative Alliance of all working men's associations . . . will constitute the commune."* [**Michael Bakunin: Selected Writings**, p. 206 and p. 170]

This vision of the commune was created during many later revolutions (such as in Russia in 1905 and 1917 and Hungary in 1956). Being based on workplaces, this form of commune has the advantage of being based on groups of people who are naturally associated during most of the day (Bakunin considered workplace bodies as *"the natural organisation of the masses"* as they were *"based on the various types of work"* which *"define their actual day-to-day life"* [**The Basic Bakunin**, p. 139]). This would facilitate the organisation of assemblies, discussion on social, economic and political issues and the mandating and recalling of delegates. Moreover, it combines political and economic power in one organisation, so ensuring that the working class actually manages society.

This vision was stressed by later anarchist thinkers. For example, Spanish anarchist Issac Puente thought that in towns and cities *"the part of the free municipality is played by local federation. . . Ultimate sovereignty in the local federation of industrial unions lies with the general assembly of all local producers."* [**Libertarian Communism**, p. 27] The Russian anarchist G. P. Maximoff saw the *"communal confederation"* as being *"constituted by thousands of freely acting labour organisations."* [**The Program of Anarcho-Syndicalism**, p. 43]

Other anarchists counterpoise neighbourhood assemblies to workers' councils. These assemblies will be general meetings open to all citizens in every neighbourhood, town, and village, and will be the source of and final *"authority"* over public policy for all levels of confederal co-ordination. Such *"town meetings"* will bring ordinary people directly into the political process and give them an equal voice in the decisions that affect their lives. Such anarchists point to the experience of the French Revolution of 1789 and the *"sections"* of the Paris Commune as the key example of *"a people governing itself directly -- when possible -- without intermediaries, without masters."* It is argued, based on this experience, that *"the principles of anarchism . . . dated from 1789, and that they had their origin, not in theoretical speculations, but in the deeds of the Great French Revolution."* [Peter Kropotkin, **The Great French Revolution**, vol. 1, p. 210 and p. 204]

Critics of workers' councils point out that not all working class people work in factories or workplaces. Many are parents who look after children, for example. By basing the commune around the workplace, such people are automatically excluded. Moreover, in most modern cities many people do not live near where they work. It would mean that local affairs could not be effectively discussed in a system of workers' councils as many who take part in the debate are unaffected by the decisions reached (this is

something which the supporters of workers' councils **have** noticed and argue for councils which are delegates from both the inhabitants **and** the enterprises of an area).

In addition, anarchists like Murray Bookchin argue that workplace based systems automatically generate "*special interests*" and so exclude community issues. Only community assemblies can "*transcend the traditional special interests of work, workplace, status, and property relations, and create a **general** interest based on shared community problems.*" [Murray Bookchin, **From Urbanisation to Cities**, p. 254]

However, such communities assemblies can only be valid if they can be organised rapidly in order to make decisions and to mandate and recall delegates. In the capitalist city, many people work far from where they live and so such meetings have to be called for after work or at weekends. Thus the key need is to reduce the working day/week and to communalise industry. For this reason, many anarchists continue to support the workers' council vision of the commune, complemented by community assemblies for those who live in an area but do not work in a traditional workplace (e.g. parents bring up small children, the old, the sick and so on).

These positions are not hard and fast divisions, far from it. Puente, for example, thought that in the countryside the dominant commune would be "*all the residents of a village or hamlet meeting in an assembly (council) with full powers to administer local affairs.*" [**Op. Cit.**, p. 25] Kropotkin supported the soviets of the Russian Revolution, arguing that the "*idea of soviets . . . of councils of workers and peasants . . . controlling the economic and political life of the country is a great idea. All the more so, since it necessarily follows that these councils should be composed of all who take part in the production of natural wealth by their own efforts.*" [**Kropotkin's Revolutionary Pamphlets**, p. 254]

Which method, workers' councils or community assemblies, will be used in a given community will depend on local conditions, needs and aspirations and it is useless to draw hard and fast rules. It is likely that some sort of combination of the two approaches will be used, with workers' councils being complemented by community assemblies until such time as a reduced working week and decentralisation of urban centres will make purely community assemblies the more realistic option. It is likely that in a fully libertarian society, community assemblies will be the dominant communal organisation but in the period immediately after a revolution this may not be immediately possible. Objective conditions, rather than predictions, will be the deciding factor. Under capitalism, anarchists pursue both forms of organisation, arguing for community **and** industrial unionism in the class struggle (see sections [J.5.1](#) and [J.5.2](#)).

Regardless of the exact make up of the commune, they would share identical features. They would be free associations, based upon the self-assumed obligation of those who join them. In free association, participation is essential simply because it is the **only** means by which individuals can collectively govern themselves (and unless they govern themselves, someone else will). "*As a unique individual,*" Stirner argues, "*you can assert yourself alone in association, because the association does not own you, because you are one who owns it or who turns it to your own advantage.*" The rules governing the

association are determined by the associated and can be changed by them (and so a vast improvement over *"love it or leave"*) as are the policies the association follows. Thus, the association *"does not impose itself as a spiritual power superior to my spirit. I have no wish to become a slave to my maxims, but would rather subject them to my ongoing criticism."* [Max Stirner, **No Gods, No Masters**, vol. 1, p. 17]

Thus participatory communities are freely joined and self-managed by their members. No more division between order givers and order takers as exist within the state or capitalist workplaces. Rather the associated govern themselves and while the assembled people collectively decide the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed (see section A.2.11 -- ["Why are most anarchists in favour of direct democracy?"](#) -- for more details). As can be seen, a participatory commune is new form of social life, radically different from the state as it is decentralised, self-governing and based upon individual autonomy and free agreement. Thus Kropotkin:

"The representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of events imposes it." [**Words of a Rebel**, p. 125]

This *"new form of political organisation has to be worked out the moment that socialistic principles shall enter our life. And it is self-evident that this new form will have to be **more popular, more decentralised, and nearer to the folk-mote self-government** than representative government can ever be."* [Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 184] He, like all anarchists, considered the idea that socialism could be created by taking over the current state or creating a new one as doomed to failure. Instead, he recognised that socialism would only be built using new organisations that reflect the spirit of socialism (such as freedom, self-government and so on). Kropotkin, like Proudhon and Bakunin before him, therefore argued that *"[t]his was the form that the social revolution must take -- the independent commune. . . [whose] inhabitants have decided that they will communalise the consumption of commodities, their exchange and their production."* [**Op. Cit.**, p. 163]

In a nutshell, a participatory community is a free association, based upon the mass assembly of people who live in a common area, the means by which they make the decisions that affect them, their communities, bio-regions and the planet. Their essential task is to provide a forum for raising public issues and deciding them. Moreover, these assemblies will be a key way of generating a community (and community spirit) and building and enriching social relationships between individuals and, equally important, of developing and enriching individuals by the very process of participation in communal affairs. By discussing, thinking and listening to others, individuals develop their own abilities and powers while at the same time managing their own affairs, so ensuring that no one else does (i.e. they govern themselves and are no longer governed from above by others). As Kropotkin argued, self-management has an educational effect on those who practice it:

"The 'permanence' of the general assemblies of the sections -- that is, the possibility of

calling the general assembly whenever it was wanted by the members of the section and of discussing everything in the general assembly. . . will educate every citizen politically. . . The section in permanence -- the forum always open -- is the only wayy . . . to assure an honest and intelligent administration." [**The Great French Revolution**, vol. 1, pp. 210-1]

As well as integrating the social life of a community and encouraging the political and social development of its members, these free communes will also be integrated into the local ecology. Humanity would life in harmony with nature as well as with itself:

"We can envision that their squares will be interlaced by streams, their places of assembly surrounded by groves, their physical contours respected and tastefully landscaped, their soils nurtured carefully to foster plant variety for ourselves, our domestic animals, and wherever possible the wildlife they may support on their fringes." [Murray Bookchin, **The Ecology of Freedom**, p. 344]

The commune itself would aim for a balanced mix of agriculture and industry, as described by Peter Kropotkin in his classic work **Fields, Factories and Workshops**. Thus a free commune would aim to integrate the individual into social and communal life, rural and urban life into a balanced whole and human life into the wider ecology. In this way the free commune would make human habitation fully ecological, ending the sharp and needless (and dehumanising and de-individualising) division of human life from the rest of the planet. The commune will be a key means of the expressing diversity within humanity and the planet as well as improving the quality of life in society:

"The Commune . . . will be entirely devoted to improving the communal life of the locality. Making their requests to the appropriate Syndicates, Builders', Public Health, Transport or Power, the inhabitants of each Commune will be able to gain all reasonable living amenities, town planning, parks, play-grounds, trees in the street, clinics, museums and art galleries. Giving, like the medieval city assembly, an opportunity for any interested person to take part in, and influence, his town's affairs and appearance, the Commune will be a very different body from the borough council. . .

"In ancient and medieval times cities and villages expressed the different characters of different localities and their inhabitants. In redstone, Portland or granite, in plaster or brick, in pitch of roof, arrangements of related buildings or patterns of slate and thatch each locality added to the interests of travellers . . . each expressed itself in castle, home or cathedral.

"How different is the dull, drab, or flashy ostentatious monotony of modern England. Each town is the same. The same Woolworth's, Odeon Cinemas, and multiple shops, the same 'council houses' or 'semi-detached villas' . . . North, South, East or West, what's the difference, where is the change?

"With the Commune the ugliness and monotony of present town and country life will be swept away, and each locality and region, each person will be able to express the joy of living, by living together." [Tom Brown, **Syndicalism**, p. 59]

The size of the neighbourhood assemblies will vary, but it will probably fluctuate around some ideal size, discoverable in practice, that will provide a viable scale of face-to-face interaction and allow for both a variety of personal contacts and the opportunity to know and form a personal estimation of everyone in the neighbourhood. Some anarchists have suggested that the ideal size for a neighbourhood assembly might be under one thousand adults. This, of course, suggests that any town or city would itself be a confederation of assemblies -- as was, of course, practised very effectively in Paris during the Great French Revolution.

Such assemblies would meet regularly, at the very least monthly (probably more often, particularly during periods which require fast and often decision making, like a revolution), and deal with a variety of issues. In the words of the CNT's resolution on libertarian communism:

"the foundation of this administration will be the commune. These communes are to be autonomous and will be federated at regional and national levels to achieve their general goals. The right to autonomy does not preclude the duty to implement agreements regarding collective benefits.

"[The] commune . . . without any voluntary restrictions will undertake to adhere to whatever general norms may be agreed by majority vote after free debate. In return, those communities which industrialisation . . . may agree upon a different model of co-existence and will be entitled to an autonomous administration released from the general commitments . . .

". . . the commune is to be autonomous and confederated with the other communes . . . the commune will have the duty to concern itself with whatever may be of interest to the individual.

"It will have to oversee organising, running and beautification of the settlement. It will see that its inhabitants; are housed and that items and products be made available to them by the producers' unions or associations.

"Similarly, it is concern itself with hygiene, the keeping of communal statistics and with collective requirements such as education, health services and with the maintenance and improvement of local means of communication.

"It will orchestrate relations with other communes and will take care to stimulate all artistic and cultural pursuits.

"So that this mission may be properly fulfilled, a communal council is to be appointed . . . None of these posts will carry any executive or bureaucratic powers . . . [its members] will perform their role as producers coming together in session at the close of the day's work to discuss the detailed items which may not require the endorsement of communal assemblies.

"Assemblies are to be summoned as often as required by communal interests, upon the request of the communal council or according to the wishes of the inhabitants of each commune . . .

*"The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes . . . every commune which is implicated will have its right to have its say . . . On matters of a regional nature, it is the duty of the regional federation to implement agreements . . . So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 106-7]*

Thus the communal assembly discusses that which affects the community and those within it. As these local community associations, will be members of larger communal bodies, the communal assembly will also discuss issues which affect wider areas, as indicated, and mandate their delegates to discuss them at confederation assemblies (see [next section](#)). This system, we must note, was applied with great success during the Spanish revolution (see [section I.8](#)) and so cannot be dismissed as wishful thinking.

However, of course, the actual framework of a free society will be worked out in practice. As Bakunin correctly argued, society "*can, and must, organise itself in a different fashion [than what came before], but not from top to bottom and according to an ideal plan*" [**Michael Bakunin: Selected Writings**, p. 205] What does seem likely is that confederations of communes will be required. We turn to this in the [next section](#).

I.5.2 Why are confederations of participatory communities needed?

Since not all issues are local, the neighbourhood and community assemblies will also elect mandated and recallable delegates to the larger-scale units of self-government in order to address issues affecting larger areas, such as urban districts, the city or town as a whole, the county, the bio-region, and ultimately the entire planet. Thus the assemblies will confederate at several levels in order to develop and co-ordinate common policies to deal with common problems.

In the words of the CNT's resolution on libertarian communism:

"The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes.

"If, say, roads have to be built to link villages of a county or any matter arises to do with transportation and exchange of produce between agricultural and industrial counties, then naturally every commune which is implicated will have its right to have its say.

"On matters of a regional nature, it is the duty of the regional federation to implement agreements which will represent the sovereign will of all the region's inhabitants. So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation.

"Similarly, discussion of all problems of a national nature shall flow a like pattern . . .
" [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, p. 107]

In other words, the commune *"cannot any longer acknowledge any superior: that, above it, there cannot be anything, save the interests of the Federation, freely embraced by itself in concert with other Communes."* [Kropotkin, **No Gods, No Masters**, vol. 1, p. 259]

Federalism is applicable at all levels of society. As Kropotkin pointed out, anarchists *"understand that if no central government was needed to rule the independent communes, if national government is thrown overboard and national unity is obtained by free federation, then a central **municipal** government becomes equally useless and noxious. The same federative principle would do within the commune."* [Kropotkin's **Revolutionary Pamphlets**, pp. 163-164] Thus the whole of society would be a free federation, from the local community right up to the global level. And this free federation would be based squarely on the autonomy and self-government of local groups. With federalism, co-operation replaces coercion.

This need for co-operation does not imply a centralised body. To exercise your autonomy by joining self-managing organisations and, therefore, agreeing to abide by the decisions you help make is not a denial of that autonomy (unlike joining a hierarchical structure, where you forsake autonomy **within** the organisation). In a **centralised** system, we must stress, **power** rests at the top and the role of those below is simply to obey (it matters not if those with the power are elected or not, the principle is the same). In a **federal** system, power is **not** delegated into the hands of a few (obviously a "federal" government or state is a centralised system). Decisions in a federal system are made at the base of the organisation and flow upwards so ensuring that power remains decentralised in the hands of all. Working together to solve common problems and organise common efforts to reach common goals is not centralisation and

those who confuse the two make a serious error -- they fail to understand the different relations of authority each generates and confuse obedience with co-operation.

As in the economic federation of collectives, the lower levels will control the higher, thus eliminating the current pre-emptive powers of centralised government hierarchies. Delegates to higher-level co-ordinating councils or conferences will be instructed, at every level of confederation, by the assemblies they represent, on how to deal with any issue. These instructions will be binding, committing delegates to a framework of policies within which they must act and providing for their recall and the nullification of their decisions if they fail to carry out their mandates. Delegates may be selected by election and/or sortition (i.e. random selection by lot, as for jury duty currently).

Most anarchists recognise that there will be a need for "*public officials*" with specific tasks within the social confederation. We stress the word "*tasks*" as "*powers*" would not be the best word to describe their activities simply because their work is essentially administrative in nature. For example, an individual or a group of individuals may be elected to look into alternative power supplies for a community and report back on what they discover. They cannot impose their decision **onto** the community as they do not have the power to do so. They simply present their findings to the body which had mandated them. These findings are **not** a law which the electors are required to follow, but a series of suggestions and information from which the electors chose what they think is best. Or, to use another example, someone may be elected to overlook the installation of a selected power supply but the decision on what power supply to use and which specific project to implement has been decided upon by the whole community. Similarly with any delegate elected to a confederal council. Such a delegate will have their decisions mandated by their electors and are subject to recall by those electors. If such a delegate starts to abuse their position or even vote in ways opposed to by the communal assembly then they would quickly be recalled and replaced.

As such a person is an elected delegate of the community, they are a "*public official*" in the broadest sense of the word but that does not mean that they have power or authority. Essentially they are an agent of the local community who is controlled by, and accountable to, that community. Clearly, such "*officials*" are unlike politicians. They do not, and cannot, make policy decisions on behalf of those who elected them, and so they do not have governmental power over those who elected them. By this method the "*officials*" remain the servants of the public and are not given power to make decisions for people. In addition, these "*officials*" will be rotated frequently to prevent a professionalisation of politics and the problem of politicians being largely on their own once elected. And, of course, they will continue to work and live with those who elected them and receive no special privileges due to their election (in terms of more income, better housing, and so on).

Therefore, such "*public officials*" would be under the strict control of the organisations that elected them to administration posts. But, as Kropotkin argued, the general assembly of the community "*in permanence - the forum always open -- is the only way . . . to assure an honest and intelligent administration . . . [and is based upon] distrust of all executive powers.*" [**The Great French Revolution** Vol. 1, p. 211]

As Murray Bookchin argues, a *"confederalist view involves a clear distinction between policy making and the co-ordination and execution of adopted policies. Policy making is exclusively the right of popular community assemblies based on the practices of participatory democracy. Administration and co-ordination are the responsibility of confederal councils, which become the means for interlinking villages, towns, neighbourhoods, and cities into confederal networks. Power flows from the bottom up instead of from the top down, and in confederations, the flow of power from the bottom up diminishes with the scope of the federal council ranging territorially from localities to regions and from regions to ever-broader territorial areas."* [From **Urbanisation to Cities**, p. 253]

Thus the people will have the final word on policy, which is the essence of self-government, and each citizen will have his or her turn to participate in the co-ordination of public affairs. In other words, the *"legislative branch"* of self-government will be the people themselves organised in their community assemblies and their confederal co-ordinating councils, with the *"executive branch"* (public officials) limited to implementing policy formulated by the legislative branch, that is, by the people.

Besides rotation of public officials, means to ensure the accountability of such officials to the people will include a wider use of elections and sortitions, open access to proceedings and records of *"executive"* activities by computer or direct inspection, the right of citizen assemblies to mandate delegates to higher-level confederal meetings, recall their officials, and revoke their decisions, and the creation of accountability boards, elected or selected by lot (as for jury duty), for each important administrative branch, from local to national.

Thus confederations of communes are required to co-ordinate joint activity and discuss common issues and interests. Confederation is also required to protect individual, community and social freedom. The current means of co-ordinating wide scale activity -- centralism via the state -- is a threat to freedom as, to quote Proudhon, *"the citizen divests himself of sovereignty, the town and the Department and province above it, absorbed by central authority, are no longer anything but agencies under direct ministerial control."* He continues:

"The Consequences soon make themselves felt: the citizen and the town are deprived of all dignity, the state's depredations multiply, and the burden on the taxpayer increases in proportion. It is no longer the government that is made for the people; it is the people who are made for the government. Power invades everything, dominates everything, absorbs everything. . ." [The **Principle of Federation**, p. 59]

Moreover, *"[t]he principle of political centralism is openly opposed to all laws of social progress and of natural evolution. It lies in the nature of things that every cultural advance is first achieved within a small group and only gradually finds adoption by society as a whole. Therefore, political decentralisation is the best guaranty for the unrestricted possibilities of new experiments. For such an environment each community is given the opportunity to carry through the things which it is capable of accomplishing itself without imposing them on others. Practical experimentation is the parent of ever development in society. So long as each distinct is capable of effecting the changes within its own sphere*

which its citizens deem necessary, the example of each becomes a fructifying influence on the other parts of the community since they will have the chance to weigh the advantages accruing from them without being forced to adopt them if they are not convinced of their usefulness. The result is that progressive communities serve the others as models, a result justified by the natural evolution of things." [Rudolf Rocker, **Pioneers of American Freedom**, pp. 16-7]

The contrast with centralisation of the state could not be more clear. As Rocker argues, "*[i]n a strongly centralised state, the situation is entirely reversed and the best system of representation can do nothing to change that. The representatives of a certain district may have the overwhelming majority of a certain district on his [or her] side, but in the legislative assembly of the central state, he [or she] will remain in the minority, for it lies in the nature of things that in such a body not the intellectually most active but the most backward districts represent the majority. Since the individual district has indeed the right to give expression of its opinion, but can effect no changes without the consent of the central government, the most progressive districts will be condemned to stagnate while the most backward districts will set the norm."* [Op. Cit., p. 17]

Little wonder anarchists have always stressed what Kropotkin termed "*local action*" and considered the libertarian social revolution as "*proceed[ing] by proclaiming independent Communes which Communes will endeavour to accomplish the economic transformation within . . . their respective surroundings."* [Peter Kropotkin, **Act For Yourselves**, p. 43] Thus the advanced communities will inspire the rest to follow them by showing them a practical example of what is possible. Only decentralisation and confederation can promote the freedom and resulting social experimentation which will ensure social progress and make society a good place to live.

Moreover, confederation is required to maximise self-management. As Rocker explains, "*[i]n a smaller community, it is far easier for individuals to observe the political scene and become acquainted with the issues which have to be resolved. This is quite impossible for a representative in a centralised government. Neither the single citizen nor his [or her] representative is completely or even approximately to supervise the huge clockwork of the central state machine. The deputy is forced daily to make decisions about things of which he [or she] has no personal knowledge and for the appraisal of which he must therefore depend on others [i.e. bureaucrats and lobbyists]. That such a system necessarily leads to serious errors and mistakes is self-evident. And since the citizen for the same reason is not able to inspect and criticise the conduct of his representative, the class of professional politicians is given added opportunity to fish in troubled waters."* [Op. Cit., p. 17-18]

In other words, confederations are required to protect society and the individual against the dangers of centralisation. As Bakunin stressed, there are two ways of organising society, "*as it is today, from high to low and from the centre to circumference by means of enforced unity and concentration*" and the way of the future, by federalism "*starting with the free individual, the free association and the autonomous commune, from low to high and from circumference to centre, by means of free federation."* [Michael Bakunin: **Selected Writings**, p. 88] In other words, "*the organisation of society from the bottom up."* [The Basic Bakunin, p. 131]

Thus confederations of participatory communities are required to co-ordinate joint activities, allow social experimentation and protect the distinctiveness, dignity, freedom and self-management of communities and so society as a whole. This is why "*socialism is federalist*" and "*true federalism, the political organisation of socialism, will be attained only when these popular grass-roots institutions [namely, "communes, industrial and agricultural associations"] are organised in progressive stages from the bottom up.*" [Bakunin on Anarchism, p. 402]

I.5.3 What will be the scales and levels of confederation?

This can only be worked out in practice. In general, it would be save to say that confederations would be needed on a wide scale, including in towns and cities. No village, town or city could be self-sufficient nor would desire to be -- communication and links with other places are part and parcel of live and anarchists have no desire to retreat back into an isolated form of localism:

"No community can hope to achieve economic autarchy, nor should it try to do so. Economically, the wide range of resources that are needed to make many of our widely used goods preclude self-enclosed insularity and parochialism. Far from being a liability, this interdependence among communities and regions can well be regarded as an asset -- culturally as well as politically . . . Divested of the cultural cross-fertilisation that is often a product of economic intercourse, the municipality tends to shrink into itself and disappear into its own civic privatism. Shared needs and resources imply the existence of sharing and, with sharing, communication, rejuvenation by new ideas, and a wider social horizon that yields a wider sensibility to new experiences." [Murray Bookchin, **From Urbanisation to Cities**, p. 237]

This means that the scale and level of the confederations created by the communes will be varied and extensive. It would be hard to generalise about them, particularly as different confederations will exist for different tasks and interests. Moreover, any system of communes would start off based on the existing villages, towns and cities of capitalism. That is unavoidable and will, of course, help determine the initial scale and level of confederations.

It seems likely that the scale of the confederation will be dependent on the inhabited area in question. A village, for example, would be based on one assembly and (minimally) be part of a local confederation covering all the villages nearby. In turn, this local confederation would be part of a district confederation, and so on up to (ultimately) a continental and world scale. Needless to say, the higher the confederation the less often it would meet and the less it would have to consider in terms of issues to decide. On such a level, only the most general issues and decisions could be reached (in effect, only guidelines which the member confederations would apply as they saw fit).

In urban areas, the town or city would have to be broken down into confederations and these confederations would constitute the town or city assembly of delegates. Given a huge city like London, New York or Mexico City it would be impossible to organise in any other way. Smaller towns would

probably be able to have simpler confederations. We must stress here that few, if any, anarchists consider it desirable to have huge cities in a free society and one of the major tasks of social transformation will be to break the metropolis into smaller units, integrated with the local environment. However, a social revolution will take place in these vast metropolises and so we have to take them into account in our discussion.

Thus the issue of size would determine when a new level of confederation would be needed. A town or village of several thousand people could be organised around the basic level of the commune and it may be that a libertarian socialist society would probably form another level of confederation once this level has been reached. Such units of confederation would, as noted above, include urban districts within today's large cities, small cities, and rural districts composed of several nearby towns. The next level of confederation would, we can imagine, be dependent on the number of delegates required. After a certain number, the confederation assembly may become difficult to manage, so implying that another level of confederation is required. This would, undoubtedly, be the base for determining the scale and level of confederation, ensuring that any confederal assembly can actually manage its activities and remain under the control of lower levels.

Combined with this consideration, we must also raise the issue of economies of scale. A given level of confederation may be required to make certain social and economic services efficient (we are thinking of economies of scale for such social needs as universities, hospitals, and cultural institutions). While every commune may have a doctor, nursery, local communal stores and small-scale workplaces, not all can have a university, hospital, factories and so forth. These would be organised on a wider level, so necessitating the appropriate confederation to exist to manage them.

However, face-to-face meetings of the whole population are impractical at this size. Therefore, the decision making body at this level would be the **confederal council**, which would consist of mandated, recallable, and rotating delegates from the neighbourhood assemblies. These delegates would co-ordinate policies which have been discussed and voted on by the neighbourhood assemblies, with the votes being summed across the district to determine district policy by majority rule. The issues to be discussed by these confederal meetings/assemblies would be proposed by local communes, the confederal council would collate these proposals and submit them to the other communes in the confederation for discussion. Thus the flow of decision making would be from the bottom up, with the "*lowest*" bodies having the most power, particularly the power to formulate, suggest, correct and, if need be, reject decisions made at "*higher*" levels in the confederation.

Ties between bioregions or larger territories based on the distribution of such things as geographically concentrated mineral deposits, climate dependent crops, and production facilities that are most efficient when concentrated in one area will unite communities confederally on the basis of common material needs as well as values. At the bioregional and higher levels of confederation, councils of mandated, recallable, and rotating delegates will co-ordinate policies at those levels, but such policies will still be subject to approval by the neighbourhood and community assemblies through their right to recall their delegates and revoke their decisions.

In the final analysis, libertarian socialism cannot function optimally -- and indeed may be fatally undermined -- unless the present system of competing nation-states is replaced by a co-operative system of decentralised bioregions of self-governing communities confederated on a global scale. For, if a libertarian socialist nation is forced to compete in the global market for scarce raw materials and hard cash with which to buy them, the problems of "*petty-bourgeois co-operativism*," previously noted, will have merely been displaced to a higher level of organisation. That is, instead of individual co-operatives acting as collective capitalists and competing against each other in the national market for profits, raw materials, etc., the nation or community **as a whole** will become the "*collective capitalist*" and compete against other nations in the global capitalist market -- a situation that is bound to reintroduce many problems, e.g. militarism, imperialism, and alienating/disempowering measures in the workplace, justified in the name of "*efficiency*" and "*global competitiveness*."

To some extent such problems can be reduced in the revolutionary period by achieving self-sufficiency within bioregions as Kropotkin argued (see [section I.3.8](#)). This should be easier to achieve in a libertarian socialist economy as artificial needs are not manufactured by massive advertising campaigns of giant profit-seeking corporations. As a social revolution would, as Kropotkin predicted, suffer (initially) from isolation and disrupted trade patterns such a policy would have to be applied anyway and so interbioregional trade would be naturally be limited to other members of the libertarian socialist federation to a large degree. However, to eliminate the problem completely, anarchists envision a global council of bioregional delegates to co-ordinate global co-operation based on policies formulated and approved at the grassroots by the confederal principles outlined above. As noted above, most anarchists think that the "*higher*" the confederation, the more its decisions will be guidelines rather than anything else.

In summary, the size and scale of confederations will depend on practical considerations, based on what people found were optimal sizes for their neighbourhood assemblies and the needs of co-operation between them, towns, cities, regions and so on. We cannot, and have no wish, to predict the development of a free society. Therefore the scale and levels of confederation will be decided by those actually creating an anarchist world. All we can do is make a few suggestions of what seems likely.

I.5.4 How will anything ever be decided by all these meetings?

Anarchists have little doubt that the confederal structure will be an efficient means of decision making and will not be bogged down in endless meetings. We have various reasons for thinking this.

Firstly, we doubt that a free society will spend all its time in assemblies or organising confederal conferences. Certain questions are more important than others and few anarchists desire to spend all their time in meetings. The aim of a free society is to allow individuals to express their desires and wants freely -- they cannot do that if they are continually at meetings (or preparing for them). So while communal and confederal assemblies will play an important role in a free society, do not think that they will be occurring all the time or that anarchists desire to make meetings the focal point of individual life. Far from it!

Thus communal assemblies may occur, say, once a week, or fortnightly or monthly in order to discuss truly important issues. There would be no real desire to meet continuously to discuss every issue under the sun and few people would tolerate this occurring. This would mean that such meetings would current regularly and when important issues needed to be discussed, **not** continuously (although, if required, continuous assembly or daily meetings may have to be organised in emergency situations but this would be rare).

Secondly, it is extremely doubtful that a free people would desire waste vast amounts of time at such meetings. While important and essential, communal and confederal meetings would be functional in the extreme and not forums for hot air. It would be the case that those involved in such meetings would quickly make their feelings known to time wasters and those who like the sound of their own voices. Thus Cornelius Castoriadis:

"It might be claimed that the problem of numbers remains and that people never would be able to express themselves in a reasonable amount of time. This is not a valid argument. There would rarely be an assembly over twenty people where everyone would want to speak, for the very good reason that when there is something to be decided upon there are not an infinite number of options or an infinite number of arguments. In unhampered rank-and-file workers' gatherings (convened, for instance, to decide on a strike) there have never been 'too many' speeches. The two or three fundamental opinions having been voiced, and various arguments exchanged, a decision is soon reached.

"The length of speeches, moreover, often varies inversely with the weight of their content. Russian leaders sometimes talk on for four hours at Party Congresses without saying anything . . . For an account of the laconicism of revolutionary assemblies, see Trotsky's account of the Petrograd soviet of 1905 -- or accounts of the meetings of factory representatives in Budapest in 1956." [Political and Social Writings, vol. 2, pp. 144-5]

As we shall see below, this was definitely the case during the Spanish Revolution as well.

Thirdly, as these assemblies and congresses are concerned purely with joint activity and co-ordination, it is likely that they will not be called very often. Different associations, syndicates and co-operatives have a functional need for co-operation and so would meet more regularly and take action on practical activity which affects a specific section of a community or group of communities. Not every issue that a member of a community is interested in is necessarily best discussed at a meeting of all members of a community or at a confederal conference.

In other words, communal assemblies and conferences will have specific, well defined agendas, and so there is little danger of "*politics*" taking up everyone's time. Hence, far from discussing abstract laws and pointless motions which no one actually knows much about, the issues discussed in these conferences will be on specific issues which are important to those involved. In addition, the standard procedure may

be to elect a sub-group to investigate an issue and report back at a later stage with recommendations. The conference can change, accept, or reject any proposals.

As Kropotkin argued, anarchy would be based on *"free agreement, by exchange of letters and proposals, and by congresses at which delegates met to discuss well specified points, and to come to an agreement about them, but not to make laws. After the congress was over, the delegates [would return] . . . not with a law, but with the draft of a contract to be accepted or rejected."* [**Conquest of Bread**, p. 131]

By reducing conferences to functional bodies based on concrete issues, the problems of endless discussions can be reduced, if not totally eliminated. In addition, as functional groups would exist outside of these communal confederations (for example, industrial collectives would organise conferences about their industry with invited participants from consumer groups), there would be a limited agenda in most communal get-togethers.

The most important issues would be to agree on the guidelines for industrial activity, communal investment (e.g. houses, hospitals, etc.) and overall co-ordination of large scale communal activities. In this way everyone would be part of the commonwealth, deciding on how resources would be used to maximise human well-being and ecological survival. The problems associated with *"the tyranny of small decisions"* would be overcome without undermining individual freedom. (In fact, a healthy community would enrich and develop individuality by encouraging independent and critical thought, social interaction, and empowering social institutions based on self-management).

Is such a system fantasy? Given that such a system has existed and worked at various times, we can safely argue that it is not. Obviously we cannot cover **every** example, so we point to just two -- revolutionary Paris and Spain.

As Murray Bookchin points out, Paris *"in the late eighteenth century was, by the standards of that time, one of the largest and economically most complex cities in Europe: its population approximated a million people . . . Yet in 1793, at the height of the French Revolution, the city was managed institutionally almost entirely by [48] citizen assemblies. . . and its affairs were co-ordinated by the Commune . . . and often, in fact, by the assemblies themselves, or sections as they were called, which established their own interconnections without recourse to the Commune."* [**Society and Nature**, no. 5, p. 96]

Here is his account of how communal self-government worked in practice:

"What, then, were these little-known forty-eight sections of Paris . . . How were they organised? And how did they function?"

*"Ideologically, the **sectionnaires** (as their members were called) believed primarily in sovereignty of the people. This concept of popular sovereignty, as Albert Soboul observes, was for them 'not an abstraction, but the concrete reality of the people united in sectional*

assemblies and exercising all their rights.' It was in their eyes an inalienable right, or, as the section de la Cite declared in November 1792, 'every man who assumes to have sovereignty [over others] will be regarded as a tyrant, usurper of public liberty and worthy of death.'

*"Sovereignty, in effect, was to be enjoyed by **all** citizens, not pre-empted by 'representatives' . . . The radical democrats of 1793 thus assumed that every adult was, to one degree or another, competent to participate in management public affairs. Thus, each section . . . was structured around a **face-to-face democracy**: basically a general assembly of the people that formed the most important deliberative body of a section, and served as the incarnation of popular power in a given part of the city . . . each elected six deputies to the Commune, presumably for the pursue merely of co-ordinating all the sections in the city of Paris.*

"Each section also had its own various administrative committees, whose members were also recruited from the general assembly." [The Third Revolution, vol. 1, p. 319]

Little wonder Kropotkin argued that these "sections" showed "the principles of anarchism, expressed some years later in England by W. Godwin, . . . had their origin, not in theoretical speculations, but in the **deeds** of the Great French Revolution" [The Great French Revolution, vol. 1, p. 204]

Communal self-government was also practised, and on a far wider scale, in revolutionary Spain. All across Republican Spain, workers and peasants formed communes and federations of communes (see [section I.8](#) for fuller details). As Gaston Leval summarises the experience:

"There was, in the organisation set in motion by the Spanish Revolution and by the libertarian movement, which was its mainspring, a structuring from the bottom to the top, which corresponds to a real federation and true democracy . . . the controlling and co-ordinating Comites, clearly indispensable, do not go outside the organisation that has chosen them, they remain in their midst, always controllable by and accessible to the members. If any individuals contradict by their actions their mandates, it is possible to call them to order, to reprimand them, to replace them. It is only by and in such a system that the 'majority lays down the law.'

*"The syndical assemblies were the expression and the practice of libertarian democracy, a democracy having nothing in common with the democracy of Athens where the citizens discussed and disputed for days on end on the Agora; where factions, clan rivalries, ambitions, personalities conflicted, where, in view of the social inequalities precious time was lost in interminable wrangles. Here a modern Aristophenes would have had no reason to write the equivalent of **The Clouds**.*

"Normally those periodic meetings would not last more than a few hours. They dealt with

concrete, precise subjects concretely and precisely. And all who had something to say could express themselves. The Comite presented the new problems that had arisen since the previous assembly, the results obtained by the application of such and such a resolution . . . relations with other syndicates, production returns from the various workshops or factories. All this was the subject of reports and discussion. Then the assembly would nominate the commissions, the members of these commissions discussed between themselves what solutions to adopt, if there was disagreement, a majority report and a minority report would be prepared.

*"This took place in **all** the syndicates **throughout Spain**, in **all** trades and **all** industries, in assemblies which, in Barcelona, from the very beginnings of our movement brought together hundreds or thousands of workers depending on the strength of the organisations. So much so that the awareness of the duties, responsibilities of each spread all the time to a determining and decisive degree. . .*

"The practice of this democracy also extended to the agricultural regions . . . the decision to nominate a local management Comite for the villages was taken by general meetings of the inhabitants of villages, how the delegates in the different essential tasks which demanded an indispensable co-ordination of activities were proposed and elected by the whole assembled population. But it is worth adding and underlining that in all the collectivised villages and all the partially collectivised villages, in the 400 Collectives in Aragon, in the 900 in the Levante region, in the 300 in the Castilian region, to mention only the large groupings . . . the population was called together weekly, fortnightly or monthly and kept fully informed of everything concerning the commonweal.

"This writer was present at a number of these assemblies in Aragon, where the reports on the various questions making up the agenda allowed the inhabitants to know, to so understand, and to feel so mentally integrated in society, to so participate in the management of public affairs, in the responsibilities, that the recriminations, the tensions which always occur when the power of decision is entrusted to a few individuals, be they democratically elected without the possibility of objecting, did not happen there. The assemblies were public, the objections, the proposals publicly discussed, everybody being free, as in the syndical assemblies, to participate in the discussions, to criticise, propose, etc. Democracy extended to the whole of social life." [Collectives in the Spanish Revolution, pp. 205-7]

These collectives organised federations embracing thousands of communes and workplaces, whole branches of industry, hundreds of thousands of people and whole regions of Spain.

In other words, it **is** possible. It **has** worked. With the massive improvements in communication technology it is even more viable than before. Whether or not we reach such a self-managed society depends on whether we desire to be free or not.

I.5.5 Aren't participatory communities and confederations just new states?

No. As we have seen in [section B.2](#), a state can be defined both by its structure and its function. As far as structure is concerned, a state involves the politico-military and economic domination of a certain geographical territory by a ruling elite, based on the delegation of power into the hands of the few, resulting in hierarchy (centralised authority). As Kropotkin argued, "*the word 'State' . . . should be reserved for those societies with the hierarchical system and centralisation.*" [**Ethics**, p. 317f]

In a system of federated participatory communities, however, there is no ruling elite, and thus no hierarchy, because power is retained by the lowest-level units of confederation through their use of direct democracy and mandated, rotating, and recallable delegates to meetings of higher-level confederal bodies. This eliminates the problem in "representative" democratic systems of the delegation of power leading to the elected officials becoming isolated from and beyond the control of the mass of people who elected them. As Kropotkin pointed out, an anarchist society would make decisions by "*means of congresses, composed of delegates, who discuss among themselves, and submit **proposals**, not **laws**, to their constituents*", and so is based on **self-government**, **not** representative government (i.e. statism). [**The Conquest of Bread**, p. 135]

In addition, in representative democracy, elected officials who must make decisions on a wide range of issues inevitably gather an unelected bureaucracy around them to aid in their decision making, and because of its control of information and its permanency, this bureaucracy soon has more power than the elected officials (who themselves have more power than the people). In the system we have sketched, policy proposals formulated by higher-level confederal bodies would often be presented to the grassroots political units for discussion and voting (though the grassroots units could also formulate policy proposals directly), and these higher-level bodies would often need to consult experts in formulating such proposals. But these experts would not be retained as a permanent bureaucracy, and all information provided by them would be available to the lower-level units to aid in their decision making, thus eliminating the control of information on which bureaucratic power is based.

Perhaps it will be objected that communal decision making is just a form of "*statism*" based on direct, as opposed to representative, democracy -- "*statist*" because the individual is still be subject to the rules of the majority and so is not free. This objection, however, confuses statism with free agreement (i.e. co-operation). Since participatory communities, like productive syndicates, are voluntary associations, the decisions they make are based on self-assumed obligations (see section A.2.11 -- "[Why are most anarchists in favour of direct democracy?](#)"), and dissenters can leave the association if they so desire. Thus communes are no more "*statist*" than the act of promising and keeping ones word.

In addition, in a free society, dissent and direct action can be used by minorities to press their case (or defend their freedom) as well as debate. As Carole Pateman argues, "*[p]olitical disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based.*" [**The**

Problem of Political Obligation, p. 162] In this way, individual liberty can be protected in a communal system and society enriched by opposition, confrontation and dissent.

Without self-management and minority dissent, society would become an ideological cemetery which would stifle ideas and individuals as these thrives on discussion (*"those who will be able to create in their mutual relations a movement and a life based on the principles of free understanding . . . will understand that **variety, conflict even, is life and that uniformity is death**"* [Kropotkin, **Kropotkin's Revolutionary Pamphlets**, p. 143]). Therefore it is likely that a society based on voluntary agreements and self-management would, out of interpersonal empathy and self-interest, create a society that encouraged individuality and respect for minorities.

Therefore, a commune's participatory nature is the opposite of statism. April Carter, in **Authority and Democracy** agrees. She states that *"commitment to direct democracy or anarchy in the socio-political sphere is incompatible with political authority"* and that the *"only authority that can exist in a direct democracy is the collective 'authority' vested in the body politic . . . it is doubtful if authority can be created by a group of equals who reach decisions be a process of mutual persuasion."* [p. 69 and p. 380] Which echoes, we must note, Proudhon's comment that *"the true meaning of the word 'democracy'"* was the *"dismissal of government."* [**No Gods, No Masters**, vol. 1, p. 42] Bakunin argued that when the *"whole people govern"* then *"there will be no one to be governed. It means that there will be no government, no State."* [**The Political Philosophy of Bakunin**, p. 287] Malatesta, decades later, made the same point -- *"government by everybody is no longer government in the authoritarian, historical and practical sense of the word."* [**No Gods, No Masters**, vol. 2, p. 38] And, of course, Kropotkin argued that by means of the directly democratic sections of the French Revolution the masses *"practic[ed] what was to be described later as Direct Self-Government"* and expressed *"the principles of anarchism."* [**The Great French Revolution**, vol. 1, p. 200 and p. 204]

Anarchists assert that individuals and the institutions they create cannot be considered in isolation. Authoritarian institutions will create individuals who have a servile nature, who cannot govern themselves. Anarchists, therefore, consider it common sense that individuals, in order to be free, **must** have take part in determining the general agreements they make with their neighbours which give form to their communities. Otherwise, a free society could not exist and individuals would be subject to rules others make **for** them (following orders is hardly libertarian). Therefore, anarchists recognise the social nature of humanity and the fact any society based on contracts (like capitalism) will be marked by authority, injustice and inequality, **not** freedom. As Bookchin points out, *"[t]o speak of 'The Individual' apart from its social roots is as meaningless as to speak of a society that contains no people or institutions."* ["**Communalism: The Democratic Dimension of Anarchism**", **Society and Nature** no. 8, p. 15]

Society cannot be avoided and *"[u]nless everyone is to be psychologically homogeneous and society's interests so uniform in character that dissent is simply meaningless, there must be room for conflicting proposals, discussion, rational explication and majority decisions - in short, democracy."* [Bookchin, **Op. Cit.**, pp. 15-16] Those who reject democracy in the name of liberty (such as many supporters of capitalism claim to do) usually also see the need for laws and hierarchical authority (particularly in the

workplace). This is unsurprising, as such authority is the only means left by which collective activity can be co-ordinated if "*democracy*" (i.e. self-management) is rejected (usually as "*statist*", which is ironic as the resulting institutions, such as a capitalist company, are far more statist than self-managed ones).

However, it should be noted that communities can expel individuals or groups of individuals who constantly hinder community decisions. As Malatesta argued, "*for if it is unjust that the majority should oppress the minority, the contrary would be quite as unjust; and if the minority has a right to rebel, the majority has a right to defend itself. . . it is true that this solution is not completely satisfactory. The individuals put out of the association would be deprived of many social advantages, which an isolated person or group must do without, because they can only be procured by the co-operation of a great number of human beings. But what would you have? These malcontents cannot fairly demand that the wishes of many others should be sacrificed for their sakes.*" [A **Talk about Anarchist-Communism**, p. 29]

Nevertheless, such occurrences would be rare (for reasons discussed in [section I.5.6](#)), and their possibility merely indicates that free association also means the freedom **not** to associate. This a very important freedom for both the majority and the minority, and must be defended. However, as an isolated life is impossible, the need for communal associations is essential. It is only by living together in a supportive community can individuality be encouraged and developed along with individual freedom. However, anarchists are aware that not everyone is a social animal and that there are times that people like to withdraw into their own personal space. Thus our support for free association and federalism along with solidarity, community and self-management.

Lastly, that these communities and confederations are not just states with new names is indicated by two more considerations. Firstly, in regard to the activities of the confederal conferences, it is clear that they would **not** be passing laws on personal behaviour or ethics, i.e. not legislating to restrict the liberty of those who live in these communities they represent. For example, a community is unlikely to pass laws outlawing homosexuality or censoring the press, for reasons discussed in the [next section](#). Hence they would not be "*law-making bodies*" in the modern sense of the term, and thus not statist. Secondly, these confederations have no means to enforce their decisions. In other words, if a confederal congress makes a decision, it has no means to force people to act or not act in a certain way. We can imagine that there will be ethical reasons why participants will not act in ways to oppose joint activity -- as they took part in the decision making process they would be considered childish if they reject the final decision because it did not go in their favour. Moreover, they would also have to face the reaction of those who also took part in the decision making process. It would be likely that those who ignored such decisions (or actively hindered them) would soon face non-violent direct action in the form of non-co-operation, shunning, boycotting and so on.

So, far from being new states by which one section of a community imposes its ethical standards on another, the anarchist commune is just a public forum. In this forum, issues of community interest (for example, management of the commons, control of communalised economic activity, and so forth) are discussed and policy agreed upon. In addition, interests beyond a local area are also discussed and

delegates for confederal conferences are mandated with the wishes of the community. Hence, administration of things replaces government of people, with the community of communities existing to ensure that the interests of all are managed by all and that liberty, justice and equality are more than just ideals.

For these reasons, a libertarian-socialist society would not create a new state as far as structure goes. But what about in the area of function?

As noted in [section B.2.1](#), the function of the state is to enable the ruling elite to exploit subordinate social strata, i.e. to derive an economic surplus from them, which it does by protecting certain economic monopolies from which the elite derives its wealth, and so its power. But this function is completely eliminated by the economic structure of anarchist society, which, by abolishing private property, makes it impossible for a privileged elite to form, let alone exploit "*subordinate strata*" (which will not exist, as no one is subordinate in power to anyone else). In other words, by placing the control of productive resources in the hands of the workers councils and community assemblies, every worker is given free access to the means of production that he or she needs to earn a living. Hence no one will be forced to pay usury (i.e. a use-fee) in the form of appropriated surplus value (profits) to an elite class that monopolises the means of production. In short, without private property, the state loses its reason for existence.

I.5.6 Won't there be a danger of a "*tyranny of the majority*" under libertarian socialism?

While the "*tyranny of the majority*" objection does contain an important point, it is often raised for self-serving reasons. This is because those who raised the issue (for example, creators of the 1789 US constitution like Hamilton and Madison) saw the "*minority*" to be protected as the rich. In other words, the objection is not opposed to majority tyranny as such (they have no objections when the majority support their right to their riches) but rather attempts of the majority to change their society to a fairer one. However, as noted, the objection to majority rule **does** contain a valid point and one which anarchists have addressed -- namely, what about minority freedom within a self-managed society.

There is, of course, this danger in **any** society, be its decision making structure direct (anarchy) or indirect (by some form of government). Anarchists are at the forefront in expressing concern about it (see, for example, Emma Goldman's classic essay "*Minorities versus Majorities*" in **Anarchism and Other Essays**). We are well aware that the mass, as long as the individuals within it do not free themselves, can be a dead-weight on others, resisting change and enforcing conformity. As Goldman argued, "*even more than constituted authority, it is social uniformity and sameness that harass the individual the most.*" [**Red Emma Speaks**, p. 93] Hence Malatesta's comment that anarchists "*have the special mission of being vigilant custodians of freedom, against all aspirants to power and against the possible tyranny of the majority.*" [**Life and Ideas**, p. 161]

However, rather than draw elitist conclusions from this fact of life under capitalism and urge forms of government and organisation which restrict popular participation (and promote rule, and tyranny, by the few) -- as classical liberals do -- libertarians argue that only a process of self-liberation through struggle and participation can break up the mass into free, self-managing individuals. Moreover, we also argue that participation and self-management is the only way that majorities can come to see the point of minority ideas and for seeing the importance of protecting minority freedoms. This means that any attempt to restrict participation in the name of minority rights actually enforces the herd mentality, undermining minority and individual freedom rather than protecting it. As Carole Pateman argues:

"the evidence supports the arguments . . . that we do learn to participate by participating and that feelings of political efficacy are more likely to be developed in a participatory environment. Furthermore, the evidence indicates that experience of a participatory authority structure might also be effective in diminishing tendencies towards non-democratic attitudes in the individual." [**Participation and Democratic Theory**, p. 105]

However, while there is cause for concern (and anarchists are at the forefront in expressing it), the *"tyranny of the majority"* objection fails to take note of the vast difference between direct and *"representative"* forms of democracy.

In the current system, as we pointed out in [section B.5](#), voters are mere passive spectators of occasional, staged, and highly rehearsed debates among candidates pre-selected by the corporate elite, who pay for campaign expenses. More often the public is expected to choose simply on the basis of political ads and news sound bites. Once the choice is made, cumbersome and ineffective recall procedures insure that elected representatives can act more or less as they (or rather, their wealthy sponsors) please. The function, then, of the electorate in bourgeois *"representative government"* is ratification of *"choices"* that have been **already made for them!**

By contrast, in a direct, libertarian democracy, decisions are made following public discussion in community assemblies open to all. After decisions have been reached, outvoted minorities -- even minorities of one -- still have ample opportunity to present reasoned and persuasive counter-arguments to try to change the decision. This process of debate, disagreement, challenge, and counter-challenge, which goes on even after the defeated minority has temporarily acquiesced in the decision of the majority, is virtually absent in the representative system, where *"tyranny of the majority"* is truly a problem. In addition, minorities can secede from an association if the decision reached by it are truly offensive to them.

And let us not forget that in all likelihood, issues of personal conduct or activity will not be discussed in the neighbourhood assemblies. Why? Because we are talking about a society in which most people consider themselves to be unique, free individuals, who would thus recognise and act to protect the uniqueness and freedom of others. Unless people are indoctrinated by religion or some other form of ideology, they can be tolerant of others and their individuality. If this is not the case now, then it has more to do with the existence of authoritarian social relationships -- relationships that will be dismantled

under libertarian socialism -- and the type of person they create rather than some innate human flaw.

Thus there will be vast areas of life in a libertarian socialist community which are none of other people's business. Anarchists have always stressed the importance of personal space and "*private*" areas. Indeed, for Kropotkin, the failure of many "*utopian*" communities directly flowed from a lack personal space. One of the mistakes made by such "*utopian*" communities within capitalism was "*the desire to manage the community after the model of a family, to make it 'the great family.'* *They lived all in the same house and were thus forced to continuously meet the same 'brethren and sisters.'* *It is already difficult often for two real brothers to live together in the same house, and family life is not always harmonious; so it was a fundamental error to impose on all the 'great family' instead of trying, on the contrary, to guarantee as much freedom and home life to each individual.*" [Small Communal Experiments and Why they Fail, pp. 8-9]

Thus in an anarchist society, continual agreement on all issues is not desired. The members of a free society "*need only agree as to some advantageous method of common work, and are free otherwise to live in their own way.*" [Op. Cit., p. 22]

Which brings us to another key point. When anarchists talk of democratising or communalising the household or any other association, we do not mean that it should be stripped of its private status and become open to the "*tyranny of the majority*" or regulation by general voting in a single, universal public sphere. Rather, we mean that households and other relationships should take in libertarian characteristics and be consistent with the liberty of all its members. Thus a society based on self-management does not imply the destruction of private spheres of activity -- it implies the extension of anarchist principles into all spheres of life, both private and public. It does not mean the subordination of the private by the public, or vice versa.

So, in other words, it is highly unlikely that the "*tyranny of the majority*" will exert itself where most rightly fear it -- in their homes, how they act with friends, their personal space, how they act, and do on. As long as individual freedom and rights are protected, it is of little concern what people get up to (included the rights of children, who are also individuals and **not** the property of their parents). Direct democracy in anarchist theory is purely concerned with common resources and their use and management. It is highly unlikely that a free society would debate issues of personal behaviour or morality and instead would leave them to those directly affected by them -- as it should be, as we all need personal space and experimentation to find the way of life that best suits us.

Today an authoritarian worldview, characterised by an inability to think beyond the categories of domination and submission, is imparted by conditioning in the family, schools, religious institutions, clubs, fraternities, the army, etc., and produces a type of personality that is intolerant of any individual or group perceived as threatening to the perpetuation of that worldview and its corresponding institutions and values. Thus, as Bakunin argues, "*public opinion*" is potentially intolerant "*simply because hitherto this power has not been humanised itself; it has not been humanised because the social life of which it is ever the faithful expression is based . . . in the worship of divinity, not on respect for*

humanity; in authority, not on liberty; on privilege, not on equality; in the exploitation, not on the brotherhood, of men; on iniquity and falsehood, not on justice and truth. Consequently its real action, always in contradiction of the humanitarian theories which it professes, has constantly exercised a disastrous and depraving influence." [**God and the State**, p. 43f] In other words, *"if society is ever to become free, it will be so through liberated individuals, whose free efforts make society."* [Emma Goldman, **Anarchism and Other Essays**, p. 44]

In an anarchist society, however, a conscious effort will be made to dissolve the institutional and traditional sources of the authoritarian/submissive type of personality, and thus to free *"public opinion"* of its current potential for intolerance. In addition, it should be noted that as anarchists recognise that the practice of self-assumed political obligation implied in free association also implies the right to practice dissent and disobedience as well. As Carole Pateman notes, *"[e]ven if it is impossible to be unjust to myself, I do not vote for myself alone, but alone with everyone else. Questions about injustice are always appropriate in political life, for there is no guarantee that participatory voting will actually result in decisions in accord with the principles of political morality."* [**The Problem of Political Obligation**, p. 160]

If an individual or group of individuals feel that a specific decision threatens their freedom (which is the basic principle of political morality in an anarchist society) they can (and must) act to defend that freedom. *"The political practice of participatory voting rests in a collective self-consciousness about the meaning and implication of citizenship. The members of the political association understand that to vote is simultaneously to commit oneself, to commit one's fellow citizens, and also to commit oneself to them in a mutual undertaking . . . a refusal to vote on a particular occasion indicates that the refusers believe . . . [that] the proposal . . . infringes the principle of political morality on which the political association is based . . . A refusal to vote [or the use of direct action] could be seen as an appeal to the 'sense of justice' of their fellow citizens."* [Carole Pateman, **Op. Cit.**, p. 161]

As they no longer *"consent"* to the decisions made by their community they can appeal to the *"sense of justice"* of their fellow citizens by direct action and indicate that a given decision may have impacts which the majority were not aware. Hence direct action and dissent is a key aspect of an anarchist society and help ensure against the tyranny of the majority. Anarchism rejects the *"love it or leave it"* attitude that marks classical liberalism as well as Rousseau (this aspect of his work being inconsistent with its foundations in participation).

This vision of self-assumed obligation, with its basis in individual liberty, indicates the basic flaw of Joseph Schumpeter's argument against democracy as anything bar a political **method** of arriving at decisions (in his case who will be the leaders of a society). Schumpeter proposed the *"mental experiment"* of imagining a country which, democratically, persecuted Jews, witches and Christians (see his famous work **Capitalism, Socialism and Democracy**). He argues that we should not approve of these practices just because they have been decided upon by the democratic method and, therefore, democracy cannot be an end in itself.

However, such systematic persecution would conflict with the rules of procedure required if a country's or community's political method is to be called "*democratic*." This is because, in order to be democratic, the minority must be in a position for its ideas to become the majority's via argument and convincing the majority (and that requires freedom of discussion and association). A country or community in which the majority persecutes or represses a minority automatically ensures that the minority can never be in a position to become the majority (as the minority is barred by force from becoming so) or convince the majority of the errors of its way (even if it cannot become the majority physically, it can become so morally by convincing the majority to change its position). Schumpeter's example utterly violates democratic principles and so cannot be squared with the rules of democratic procedure. Thus majority tyranny is an outrage against both democratic theory **and** individual liberty (unsurprisingly, as the former has its roots in the latter).

This argument applies with even more force to a self-managed community too and so any system in which the majority tyrannises over a minority is, by definition, **not** self-managed as one part of the community is excluded from convincing the other ("*the enslavement of part of a nation denies the federal principal itself*." [P-J Proudhon, **The Principle of Federation**, p. 42f]). Thus individual freedom and minority rights are essential to direct democracy/self-management.

It should be stressed, however, that most anarchists do not think that the way to guard against possible tyranny by the majority is to resort to decision-making by consensus (where no action can be taken until every person in the group agrees) or a property system (based in contracts). Both consensus (see section A.2.12 -- "[Is consensus an alternative to direct democracy?](#)") and contracts (see section A.2.14 -- "[Why is voluntarism not enough?](#)") soon result in authoritarian social relationships developing in the name of "liberty."

For example, decision making by consensus tends to eliminate the creative role of dissent and mutate into a system that pressures people into psychic and intellectual conformity -- hardly a libertarian ideal. In the case of property and contract based systems, those with property have more power than those without, and so they soon determine what can and cannot be done -- in other words, the "*tyranny of the minority*" and hierarchical authority. Both alternatives are deeply flawed.

Hence most anarchists have recognised that majority decision making, though not perfect, is the best way to reach decisions in a political system based on maximising individual (and so social) freedom. Direct democracy in grassroots confederal assemblies and workers' councils ensures that decision making is "*horizontal*" in nature (i.e. between **equals**) and not hierarchical (i.e. governmental, between order giver and order taker). In other words, it ensures liberty.

I.5.7 What if I don't want to join a commune?

As would be expected, no one would be **forced** to join a commune nor take part in its assemblies. To suggest otherwise would be contrary to anarchist principles. We have already indicated (in the last two sections) why the communes would not be likely to restrict individuals with new "*laws*." Thus a

commune would be a free society, in which individual liberty would be respected and encouraged.

However, what about individuals who live within the boundaries of a commune but decide not to join? For example, a local neighbourhood may include households that desire to associate and a few that do not (this is actually happened during the Spanish Revolution). What happens to the minority of dissenters?

Obviously individuals can leave to find communities more in line with their own concepts of right and wrong if they cannot convince their neighbours of the validity of their ideas. And, equally obviously, not everyone will want to leave an area they like. So we must discuss those who decide to not to find a more suitable community. Are the communal decisions binding on non-members? Obviously not. If an individual or family desire **not** to join a commune (for whatever reason), their freedoms must be respected. However, this also means that they cannot benefit from communal activity and resources (such a free housing, hospitals, and so forth) and, possibly, have to pay for their use. As long as they do not exploit or oppress others, an anarchist community would respect their decision. After all, as Malatesta argued, *"free and voluntary communism is ironical if one has not the right and the possibility to live in a different regime, collectivist, mutualist, individualist -- as one wishes, always on condition that there is no oppression or exploitation of others."* [**Life and Ideas**, p. 103]

Many who oppose anarchist self-management in the name of freedom often do so because they desire to oppress and exploit others. In other words, they oppose participatory communities because they (rightly) fear that this would restrict their ability to oppress, exploit and grow rich off the labour of others. This type of opposition can be seen from history, when rich elites, in the name of liberty, have replaced democratic forms of social decision making with representative or authoritarian ones (see [section B.2.6](#)). Regardless of what defenders of capitalism claim, *"voluntary bilateral exchanges"* affect third parties and can harm others indirectly. This can easily be seen from examples like concentrations of wealth which have effects across society, or crime in the local community, or the ecological impacts of consumption and production. This means that an anarchist society would be aware that inequality and so statism could develop again and take precautions against it. As Malatesta put it, some *"seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for the **freedom** of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas."* [**Anarchy**, p. 41]

So, it goes without saying that the minority, as in any society, will exist within the ethical norms of the surrounding society and they will be *"forced to adhere"* to them in the same sense that they are *"forced to adhere"* to not murdering people. Few people would say that forcing people not to commit murder is a restriction of their liberty. Therefore, while allowing the maximum of individual freedom of dissent, an anarchist community would still have to apply its ethical standards to those beyond that community. Individuals would not be allowed to murder, harm or enslave others and claim that they are allowed to do so because they are not part of the local community (see [section I.5.8](#) on crime in an anarchist society).

Similarly, individuals would not be allowed to develop private property (as opposed to possession) simply because they wanted to. Such a "ban" on private property would not be a restriction on liberty simply because stopping the development of authority hardly counts as an authoritarian act (for an analogy, supporters of capitalism do not think that banning theft is a restriction of liberty and because this view is -- currently -- accepted by the majority, it is enforced on the minority). Even the word "ban" is wrong, as it is the would-be capitalist who is trying to ban freedom for others on their "property." Members of a free society would simply refuse to recognise the claims of private property -- they would simply ignore the would-be capitalist's pretensions and "keep out" signs. Without a state, or hired thugs, to back up their claims, they would just end up looking silly. "Occupancy and use" (to use Tucker's term) would be the limits of possession -- and so property would become "that control of a thing by a person which will receive either social sanction, or else unanimous individual sanction, when the laws of social expediency shall have been fully discovered." [B. Tucker, **Instead of a Book**, p. 131]

Tucker explains this system further:

"Suppose that all the municipalities have adopted the voluntary principle, and that compulsory taxation has been abolished. Now after this let us suppose that the Anarchistic view that occupancy and use should condition and limit landholding becomes the prevailing view. Evidently then these municipalities will proceed to formulate and enforce this view. What the formula will be no one can foresee. But continuing with our suppositions, we will say that they decide to protect no one in the possession of more than ten acres. In execution of this decision, they . . . notify all holders of more than ten acres within their limits that . . . they will cease to protect them in the possession of more than ten acres . . ." [The Individualist Anarchists, pp. 159-60]

A similar process would occur for housing, with tenants "would not be forced to pay [the landlord] rent, nor would [the landlord] be allowed to seize their property. The Anarchistic associations would look upon . . . tenants very much as they would look upon . . . guests." [Op. Cit., p. 162]

Therefore anarchists support the maximum of experiments while ensuring that the social conditions that allow this experimentation are protected against concentrations of wealth and power. As Malatesta put it, "Anarchism involves all and only those forms of life that respect liberty and recognise that every person has an equal right to enjoy the good things of nature and the products of their own activity." [The Anarchist Revolution, p. 14]

This means that Anarchists do not support the liberty of being a boss (anarchists will happily work **with** someone but not **for** someone). Of course, those who desire to create private property against the wishes of others expect those others to respect their wishes. So, when the would-be propertarians happily fence off their "property" and exclude others from it, could not these others remember these words from Woody Guthrie's **This Land is Your Land**, and act accordingly?

"As I went rumbling that dusty highway

*I saw a sign that said private property
But on the other side it didn't say nothing
This land was made for you and me''*

While happy to exclude others from "their" property, such owners seem more than happy to use the resources held in common by others. They are the ultimate "free riders," desiring the benefits of society but rejecting the responsibilities that go with it. In the end, such "individualists" usually end up supporting the state (an institution they claim to hate) precisely because it is the only means by which private property and their "freedom" to exercise authority can be defended.

So, as a way to eliminate the problem of minorities seeking power and property for themselves, an anarchist revolution places social wealth (starting with the land) in the hands of all and promises to protect only those uses of it which are considered just by society as a whole. In other words, by recognising that "property" is a product of society, an anarchist society will ensure that an individual's "property" is protected by his or her fellows when it is based purely upon actual occupancy and use. Thus attempts to transform minority dissent into, say, property rights would be fought by simply ignoring the "keep out" signs of property owned, but not used, by an individual or group.

Therefore, individuals are free not to associate, but their claims of "ownership" will be based around **use** rights, not property rights. Individuals will be protected by their fellows only in so far as what they claim to "own" is related to their ability to personally use said "property." As Kropotkin argued, *"when we see a peasant who is in possession of just the amount of land he can cultivate, we do not think it reasonable to turn him off his little farm. He exploits nobody, and nobody would have the right to interfere with his work. But if he possesses under the capitalist law more than he can cultivate himself, we consider that we must not give him the right of keeping that soil for himself, leaving it uncultivated when it might be cultivated by others, or of making other cultivate it for his benefit."* [**Act for Yourselves**, p. 104] Without a state to back up and protect property "rights," we see that all rights are, in the end, what society considers to be fair (the difference between law and social custom is discussed in [section I.7.3](#)). What the state does is to impose "rights" which do not have such a basis (i.e. those that protect the property of the elite) or "rights" which have been corrupted by wealth and would have been changed because of this corruption had society been free to manage its own affairs.

In summary, individuals will be free not to join a participatory community, and hence free to place themselves outside its decisions and activities on most issues that do not apply to the fundamental ethical standards of a society. Hence individuals who desire to live outside of anarchist communities would be free to live as they see fit but would not be able to commit murder, rape, create private property or other activities that harmed individuals. It should be noted, moreover, that this does not mean that their possessions will be taken from them by "*society*" or that "*society*" will tell them what to do with their possessions. Freedom, in a complex world, means that such individuals will not be in a position to turn their possessions into **property** and thus recreate capitalism (for the distinction between "*property*" and "*possessions*," see [section B.3.1](#)). This will not be done by "anarchist police" or by "banning" voluntary agreements, but purely by recognising that "*property*" is a social creation and by

creating a social system that will encourage individuals to stand up for their rights and co-operate with each other.

I.5.8 What about crime?

For anarchists, "*crime*" can best be described as anti-social acts, or behaviour which harms someone else or which invades their personal space. Anarchists argue that the root cause for crime is not some perversity of human nature or "*original sin*," but is due to the type of society by which people are moulded. For example, anarchists point out that by eliminating private property, crime could be reduced by about 90 percent, since about 90 percent of crime is currently motivated by evils stemming from private property such as poverty, homelessness, unemployment, and alienation. Moreover, by adopting anarchist methods of non-authoritarian child rearing and education, most of the remaining crimes could also be eliminated, because they are largely due to the anti-social, perverse, and cruel "*secondary drives*" that develop because of authoritarian, pleasure-negative child-rearing practices (See section J.6 -- "[What methods of child rearing do anarchists advocate?](#)")

"*Crime*", therefore, cannot be divorced from the society within which it occurs. Society, in Emma Goldman's words, gets the criminals it deserves. For example, anarchists do not think it unusual nor unexpected that crime exploded under the pro-free market capitalist regimes of Thatcher and Reagan. Crime, the most obvious symptom of social crisis, took 30 years to double in Britain (from 1 million incidents in 1950 to 2.2 million in 1979). However, between 1979 and 1992 the crime rate more than doubled, exceeding the 5 million mark in 1992. These 13 years were marked by a government firmly committed to the "*free market*" and "*individual responsibility*." It was entirely predictable that the social disruption, atomisation of individuals, and increased poverty caused by freeing capitalism from social controls would rip society apart and increase criminal activity. Also unsurprisingly (from an anarchist viewpoint), under these pro-market governments we also saw a reduction in civil liberties, increased state centralisation, and the destruction of local government. As Malatesta put it, the classical liberalism which these governments represented could have had no other effect, for "*the government's powers of repression must perforce increase as free competition results in more discord and inequality*." [**Anarchy**, p. 46]

Hence the paradox of governments committed to "*individual rights*," the "*free market*" and "*getting the state off our backs*" increasing state power and reducing rights while holding office during a crime explosion is no paradox at all. "*The conjuncture of the rhetoric of individual freedom and a vast increase in state power*," argues Carole Pateman, "*is not unexpected at a time when the influence of contract doctrine is extending into the last, most intimate nooks and crannies of social life. Taken to a conclusion, contract undermines the conditions of its own existence. Hobbes showed long ago that contract -- all the way down -- requires absolutism and the sword to keep war at bay*." [**The Sexual Contract**, p. 232]

Capitalism, and the contract theory on which it is built, will inevitably rip apart society. Capitalism is based upon a vision of humanity as isolated individuals with no connection other than that of money and

contract. Such a vision cannot help but institutionalise anti-social acts. As Kropotkin argued *"it is not love and not even sympathy upon which Society is based in mankind. It is the conscience -- be it only at the stage of an instinct -- of human solidarity. It is the unconscious recognition of the force that is borrowed by each man [and woman] from the practice of mutual aid; of the close dependency of every one's happiness upon the happiness of all; and of the sense of justice, or equity, which brings the individual to consider the rights of every other individual as equal to his [or her] own."* [**Mutual Aid**, p. 16]

The social atomisation required and created by capitalism destroys the basic bonds of society - namely human solidarity - and hierarchy crushes the individuality required to understand that we share a common humanity with others and so understand **why** we must be ethical and respect others rights.

We should also point out that prisons have numerous negative affects on society as well as often re-enforcing criminal (i.e. anti-social) behaviour. Kropotkin originated the accurate description of prisons as *"Universities of Crime"* wherein the first-time criminal learns new techniques and have adapt to the prevailing ethical standards within them. Hence, prisons would have the effect of increasing the criminal tendencies of those sent there and so prove to be counter-productive. In addition, prisons do not affect the social conditions which promote many forms of crime.

We are not saying, however, that anarchists reject the concept of individual responsibility. While recognising that rape, for example, is the result of a social system which represses sexuality and is based on patriarchy (i.e. rape has more to do with power than sex), anarchists do not "sit back" and say *"it's society's fault."* Individuals have to take responsibility for their own actions and recognise that consequences of those actions. Part of the current problem with "law codes" is that individuals have been deprived of the responsibility for developing their own ethical code, and so are less likely to develop "civilised" social standards (see [section I.7.3](#)).

Therefore, while anarchists reject the ideas of law and a specialised justice system, they are not blind to the fact that anti-social action may not totally disappear in a free society. Therefore, some sort of *"court"* system would still be necessary to deal with the remaining crimes and to adjudicate disputes between citizens.

These courts would function in one of two ways. One possibility is that the parties involved agree to hand their case to a third party. Then the *"court"* in question would be the arrangements made by those parties. The second possibility is when the parties cannot not agree (or if the victim was dead). Then the issue could be raised at a communal assembly and a *"court"* appointed to look into the issue. These *"courts"* would be independent from the commune, their independence strengthened by popular election instead of executive appointment of judges, by protecting the jury system of selection of random citizens by lot, and by informing jurors of their right to judge the law itself, according to their conscience, as well as the facts of a case. As Malatesta pointed out, *"when differences were to arise between men [sic!], would not arbitration voluntarily accepted, or pressure of public opinion, be perhaps more likely to establish where the right lies than through an irresponsible magistrate which has the right to adjudicate"*

on everything and everybody and is inevitably incompetent and therefore unjust?" [**Anarchy**, p. 43]

In the case of a "*police force*," this would not exist either as a public or private specialised body or company. If a local community did consider that public safety required a body of people who could be called upon for help, we imagine that a new system would be created. Such a system would "*not be entrusted to, as it is today, to a special, official body: all able-bodied inhabitants [of a commune] will be called upon to take turns in the security measures instituted by the commune.*" [James Guillaume, **Bakunin on Anarchism**, p. 371] This system would be based around a voluntary militia system, in which all members of the community could serve if they so desired. Those who served would not constitute a professional body; instead the service would be made up of local people who would join for short periods of time and be replaced if they abused their position. Hence the likelihood that a communal militia would become corrupted by power, like the current police force or a private security firm exercising a policing function, would be vastly reduced. Moreover, by accustoming a population to intervene in anti-social as part of the militia, they would be empowered to do so when not an active part of it, so reducing the need for its services even more.

Such a body would not have a monopoly on protecting others, but would simply be on call if others required it. It would no more be a monopoly of defence (i.e. a "*police force*") than the current fire service is a monopoly. Individuals are not banned from putting out fires today because the fire service exists, similarly individuals will be free to help stop anti-social crime by themselves, or in association with others, in an anarchist society.

Of course there are anti-social acts which occur without witnesses and so the "*guilty*" party cannot be readily identified. If such acts did occur we can imagine an anarchist community taking two courses of action. The injured party may look into the facts themselves or appoint an agent to do so or, more likely, an ad hoc group would be elected at a community assembly to investigate specific crimes of this sort. Such a group would be given the necessary "*authority*" to investigate the crime and be subject to recall by the community if they start trying to abuse whatever authority they had. Once the investigating body thought it had enough evidence it would inform the community as well as the affected parties and then organise a court. Of course, a free society will produce different solutions to such problems, solutions no-one has considered yet and so these suggestions are just that, suggestions.

As is often stated, prevention is better than cure. This is as true of crime as of disease. In other words, crime is best fought by rooting out its **causes** as opposed to punishing those who act in response to these causes. For example, it is hardly surprising that a culture that promotes individual profit and consumerism would produce individuals who do not respect other people (or themselves) and see them as purely means to an end (usually increased consumption). And, like everything else in a capitalist system, such as honour and pride, conscience is also available at the right price -- hardly an environment which encourages consideration for others, or even for oneself.

In addition, a society based on hierarchical authority will also tend to produce anti-social activity because the free development and expression it suppresses. Thus, irrational authority (which is often

claimed to be the only cure for crime) actually helps produce it. As Emma Goldman argued, crime *"is naught but misdirected energy. So long as every institution of today, economic, political, social, moral conspires to misdirect human energy into wrong channels; so long as most people are out of place doing things they hate to do, living a life they loathe to live, crime will be inevitable, and all the laws on the statues can only increase, but never do away with, crime"* [Red Emma Speaks, p. 57]

Eric Fromm, decades latter, makes the same point:

*"It would seem that the amount of destructiveness to be found in individuals is proportionate to the amount to which expansiveness of life is curtailed. By this we do not refer to individual frustrations of this or that instinctive desire but to the thwarting of the whole of life, the blockage of spontaneity of the growth and expression of man's sensuous, emotional, and intellectual capacities. Life has an inner dynamism of its own; it tends to grow, to be expressed, to be lived . . . the drive for life and the drive for destruction are not mutually interdependent factors but are in a reversed interdependence. The more the drive towards life is thwarted, the stronger is the drive towards destruction; the more life is realised, the less is the strength of destructiveness. **Destructiveness is the outcome of unlived life.** Those individual and social conditions that make for suppression of life produce the passion for destruction that forms, so to speak, the reservoir from which particular hostile tendencies -- either against others or against oneself -- are nourished"* [The Fear of Freedom, p. 158]

Therefore, by reorganising society so that it empowers everyone and actively encourages the use of all our intellectual, emotional and sensuous abilities, crime would soon cease to be the huge problem that it is now. As for the anti-social behaviour or clashes between individuals that might still exist in such a society, it would be dealt with in a system based on respect for the individual and a recognition of the social roots of the problem. Restraint would be kept to a minimum.

Anarchists think that public opinion and social pressure would be the main means of preventing anti-social acts in an anarchist society, with such actions as boycotting and ostracising used as powerful sanctions to convince those attempting them of the errors of their way. Extensive non-co-operation by neighbours, friends and work mates would be the best means of stopping acts which harmed others.

An anarchist system of justice, we should note, would have a lot to learn from aboriginal societies simply because they are examples of social order without the state. Indeed many of the ideas we consider as essential to justice today can be found in such societies. As Kropotkin argued, *"when we imagine that we have made great advances in introducing, for instance, the jury, all we have done is to return to the institutions of the so-called 'barbarians' after having changed it to the advantage of the ruling classes."* [The State: Its Historic Role, p. 18]

Like aboriginal justice (as documented by Rupert Ross in **Returning to the Teachings: Exploring Aboriginal Justice**) anarchists contend that offenders should not be punished but justice achieved by the

teaching and healing of all involved. Public condemnation of the wrongdoing would be a key aspect of this process, but the wrong doer would remain part of the community and so see the effects of their actions on others in terms of grief and pain caused. It would be likely that wrong doers would be expected to try to make amends for their act by community service or helping victims and their families.

So, from a practical viewpoint, almost all anarchists oppose prisons on both practical grounds (they do not work) and ethical grounds ("*We know what prisons mean -- they mean broken down body and spirit, degradation, consumption, insanity*" Voltairine de Cleyre, quoted by Paul Avrich in **An American Anarchist**, p. 146]). The Makhnovists took the usual anarchist position on prisons:

"Prisons are the symbol of the servitude of the people, they are always built only to subjugate the people, the workers and peasants. . . Free people have no use for prisons. Wherever prisons exist, the people are not free. . . In keeping with this attitude, they [the Makhnovists] demolished prisons wherever they went." [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153]

With the exception of Benjamin Tucker, no major anarchist writer supported the institution. Few anarchists think that private prisons (like private policemen) are compatible with their notions of freedom. However, all anarchists are against the current "*justice*" system which seems to them to be organised around **revenge** and punishing effects and not fixing causes.

However, there are psychopaths and other people in any society who are too dangerous to be allowed to walk freely. Restraint in this case would be the only option and such people may have to be isolated from others for their own, and others, safety. Perhaps mental hospitals would be used, or an area quarantined for their use created (perhaps an island, for example). However, such cases (we hope) would be rare.

So instead of prisons and a legal code based on the concept of punishment and revenge, anarchists support the use of public opinion and pressure to stop anti-social acts and the need to therapeutically rehabilitate those who commit anti-social acts. As Kropotkin argued, "*liberty, equality, and practical human sympathy are the most effective barriers we can oppose to the anti-social instinct of certain among us*" and **not** a parasitic legal system. [**The Anarchist Reader**, p. 117]

I.5.9 What about Freedom of Speech under Anarchism?

Many express the idea that **all** forms of socialism would endanger freedom of speech, press, and so forth. The usual formulation of this argument is in relation to state socialism and goes as follows: if the state (or "*society*") owned all the means of communication, then only the views which the government supported would get access to the media.

This is an important point and it needs to be addressed. However, before doing so, we should point out that under capitalism the major media are effectively controlled by the wealthy. As we argued in [section](#)

D.3, the media are **not** the independent defenders of freedom that they like to portray themselves as. This is hardly surprising, since newspapers, television companies, and so forth are capitalist enterprises owned by the wealthy and with managing directors and editors who are also wealthy individuals with a vested interest in the status quo. Hence there are institutional factors which ensure that the "*free press*" reflects the interests of capitalist elites.

However, in democratic capitalist states there is little overt censorship. Radical and independent publishers can still print their papers and books without state intervention (although market forces ensure that this activity can be difficult and financially unrewarding). Under socialism, it is argued, because "*society*" owns the means of communication and production, this liberty will not exist. Instead, as can be seen from all examples of "*actually existing socialism*," such liberty is crushed in favour of the government's point of view.

As anarchism rejects the state, we can say that this danger does not exist under libertarian socialism. However, since social anarchists argue for the communalisation of production, could not restrictions on free speech still exist? We argue no, for three reasons.

Firstly, publishing houses, radio stations, and so on will be run by their workers directly. They will be supplied by other syndicates, with whom they will make agreements, and **not** by "*central planning*" officials, who would not exist. In other words, there is no bureaucracy of officials allocating (and so controlling) resources (and so the means of communication). Hence, anarchist self-management will ensure that there is a wide range of opinions in different magazines and papers. There would be community papers, radio stations, etc., and obviously they would play an increased role in a free society. But they would not be the only media. Associations, political parties, industrial syndicates, and so on would have their own media and/or would have access to the resources of communication workers' syndicates, so ensuring that a wide range of opinions can be expressed.

Secondly, the "*ultimate*" power in a free society will be the individuals of which it is composed. This power will be expressed in communal and workplace assemblies that can recall delegates and revoke their decisions. It is doubtful that these assemblies would tolerate a set of would-be bureaucrats determining what they can or cannot read, see, or hear.

Thirdly, individuals in a free society would be interested in hearing different viewpoints and discussing them. This is the natural side-effect of critical thought (which self-management would encourage), and so they would have a vested interest in defending the widest possible access to different forms of media for different views. Having no vested interests to defend, a free society would hardly encourage or tolerate the censorship associated with the capitalist media ("*I listen to criticism because I am greedy. I listen to criticism because I am selfish. I would not deny myself another's insights*" [**The Right to be Greedy**]).

Therefore, anarchism will **increase** freedom of speech in many important ways, particularly in the workplace (where it is currently denied under capitalism). This will be a natural result of a society based

on maximising freedom and the desire to enjoy life.

We would also like to point out that during both the Spanish and Russian revolutions, freedom of speech was protected within anarchist areas.

For example, the Makhnovists in the Ukraine *"fully applied the revolutionary principles of freedom of speech, of thought, of the Press, and of political association. In all the cities and towns occupied . . . Complete freedom of speech, Press, assembly, and association of any kind and for everyone was immediately proclaimed."* [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153] This is confirmed by Michael Malet who notes that *"[o]ne of the most remarkable achievements of the Makhnovists was to preserve a freedom of speech more extensive than any of their opponents."* [**Nestor Makhno in the Russian Civil War**, p. 175]

In revolutionary Spain republicans, liberals, communists, Trotskyites and many different anarchist groups all had freedom to express their views. Emma Goldman writes that *"[o]n my first visit to Spain in September 1936, nothing surprised me so much as the amount of political freedom I found everywhere. True, it did not extend to Fascists . . . [but] everyone of the anti-Fascist front enjoyed political freedom which hardly existed in any of the so-called European democracies."* [**Vision on Fire**, p.147] This is confirmed in a host of other eye-witnesses, including George Orwell in **Homage to Catalonia** (in fact, it was the rise of the pro-capitalist republicans and communists that introduced censorship).

Both movements were fighting a life-and-death struggle against communist, fascist and pro-capitalist armies and so this defence of freedom of expression, given the circumstances, is particularly noteworthy.

Therefore, based upon both theory and practice, we can say that anarchism will not endanger freedom of expression. Indeed, by breaking up the capitalist oligopoly which currently exists and introducing workers' self-management of the press, a far wider range of opinions will become available in a free society. Rather than reflect the interests of a wealthy elite, the media would reflect the interests of society as a whole and the individuals and groups within it.

I.5.10 What about political parties?

Political parties and other interest groups will exist in an anarchist society as long as people feel the need to join them. They will not be *"banned"* in any way, and their members will have the same rights as everyone else. Individuals who are members of political parties or associations can take part in communal and other assemblies and try to convince others of the soundness of their ideas.

However, there is a key difference between such activity and politics under a capitalist democracy. This is because the elections to positions of responsibility in an anarchist society will not be based on party tickets nor will it involve the delegation of power. Emile Pouget's description of the difference between the syndicalist trade union and elections drives this difference home:

"The constituent part of the trade union is the individual. Except that the union member is spared the depressing phenomenon manifest in democratic circles where, thanks to the veneration of universal suffrage, the trend is towards the crushing and diminution of the human personality. In a democratic setting, the elector can avail of his [or her] will only in order to perform an act of abdication: his role is to 'award' his 'vote' to the candidate whom he [or she] wishes to have as his [or her] 'representative.'

"Affiliation to the trade union has no such implication . . . In joining the union, the worker merely enters into a contract -- which he may at any time abjure -- with comrades who are his equals in will and potential . . . In the union, say, should it come to the appointment of a trade union council to take charge of administrative matters, such 'selection' is not to be compared with 'election': the form of voting customarily employed in such circumstances is merely a means whereby the labour can be divided and is not accompanied by any delegation of authority. The strictly prescribed duties of the trade union council are merely administrative. The council performs the task entrusted to it, without ever overruling its principals, without supplanting them or acting in their place.

"The same might be said of all decisions reached in the union: all are restricted to a definite and specific act, whereas in democracy, election implies that the elected candidate has been issued by his [or her] elector with a carte blanche empowering him [or her] to decide and do as he [or she] pleases, in and on everything, without even the hindrance of the quite possibly contrary views of his [or her] principals, whose opposition, in any case, no matter how pronounced, is of no consequence until such time as the elected candidate's mandate has run its course.

"So there cannot be any possible parallels, let alone confusion, between trade unions activity and participation in the disappointing chores of politics." [No Gods, No Masters, vol. 2, pp. 67-68]

In other words, when individuals are elected to administrative posts they are elected to carry out their mandate, **not** to carry out their party's programme. Of course, if the individuals in question had convinced their fellow workers and citizens that their programme was correct, then this mandate and the programme would be identical. However this is unlikely in practice. We would imagine that the decisions of collectives and communes would reflect the complex social interactions and diverse political opinions their members and of the various groupings within the association.

Hence anarchism will likely contain many different political groupings and ideas. The relative influence of these within collectives and communes would reflect the strength of their arguments and the relevance of their ideas, as would be expected in a free society. As Bakunin argued, *"[t]he abolition of this mutual influence would be death. And when we vindicate the freedom of the masses, we are by no means suggesting the abolition of any of the natural influences that individuals or groups of individuals exert on them. What we want is the abolition of influences which are artificial, privileged, legal,*

official." [quoted by Malatesta in **Anarchy**, p. 50]

It is only when representative government replaces self-management that political debate results in "*elected dictatorship*" and centralisation of power into the hands of one party which claims to speak for the whole of society, as if the latter had one mind.

I.5.11 What about interest groups and other associations?

Anarchists do not think that social life can be reduced to political and economic associations alone. Individuals have many different interests and desires which they must express in order to have a truly free and interesting life. Therefore an anarchist society will see the development of numerous voluntary associations and groups to express these interests. For example, there would be consumer groups, musical groups, scientific associations, art associations, clubs, housing co-operatives and associations, craft and hobby guilds, fan clubs, animal rights associations, groups based around sex, sexuality, creed and colour and so forth. Associations will be created for all human interests and activities.

As Kropotkin argued:

"He who wishes for a grand piano will enter the association of musical instrument makers. And by giving the association part of his half-days' leisure, he will soon possess the piano of his dreams. If he is fond of astronomical studies he will join the association of astronomers. . . and he will have the telescope he desires by taking his share of the associated work. . . In short, the five or seven hours a day which each will have at his disposal, after having consecrated several hours to the production of necessities, would amply suffice to satisfy all longings for luxury, however varied. Thousands of associations would undertake to supply them." [**The Conquest of Bread**, p. 120]

We can imagine, therefore, an anarchist society being based around associations and interest groups on every subject which fires the imagination of individuals and for which individuals want to meet in order to express and further their interests. Housing associations, for example, would exist to allow inhabitants to manage their local areas, design and maintain their homes and local parks and gardens. Animal rights and other interest groups would produce information on issues they consider important, trying to convince others of the errors of eating meat or whatever. Consumer groups would be in dialogue with syndicates about improving products and services, ensuring that syndicates produce what is required by consumers. Environment groups would exist to watch production and make sure that it is not creating damaging side effects and informing both syndicates and communes of their findings. Feminist, homosexual, bisexual and anti-racist groups would exist to put their ideas across, highlighting areas in which social hierarchies and prejudice still existed. All across society, people would be associating together to express themselves and convince others of their ideas on many different issues.

Hence in a anarchist society, free association would take on a stronger and more positive role than under capitalism. In this way, social life would take on many dimensions, and the individual would have the

choice of thousands of societies to join to meet his or her interests or create new ones with other like-minded people. Anarchists would be the last to deny that there is more to life than work!

I.5.12 Would an anarchist society provide health care and other public services?

It depends on the type of anarchist society you are talking about. Different anarchists propose different solutions.

In an individualist-mutualist society, for example, health care and other public services would be provided by individuals or co-operatives on a pay-for-use basis. It would be likely that individuals or co-operatives/associations would subscribe to various insurance providers or enter into direct contracts with health care providers. Thus the system would be similar to privatised health care but without the profit margins as competition, it is hoped, would drive prices down to cost.

Other anarchists reject such a system. They are favour of socialising health care and other public services. They argue that a privatised system would only be able to meet the requirements of those who can afford to pay for it and so would be unjust and unfair. The need for medical attention is not dependent on income and so a civilised society would recognise this fact. Under capitalism, profit-maximising medical insurance sets premiums according to the risks of the insured getting ill or injured, with the riskiest may not being able to find insurance at any price. Private insurers shun entire industries, such as logging, as too dangerous for their profits due to the likelihood of accidents or illness. They review contracts regularly and drop people who get sick. Hardly a vision to inspire a free society or one compatible with equality and mutual respect.

Moreover, competition would lead to inefficiencies as prices would be inflated to pay for advertising, competition related administration costs, paying dividends to share-holders and so on. For example, in 1993, Canada's health plans devoted 0.9% of spending to overhead, compared to U.S. figures of 3.2% for Medicare and 12% for private insurers. In addition, when Canada adopted its publicly financed system in 1971, it and the U.S. both spent just over 7% of GDP on health care. By 1990, the U.S. was up to 12.3%, verses Canada's 9%.

As can be seen, social anarchists point to what happens under capitalism when discussing the benefits of a socialised system of health care in an anarchist society. Competition, they argue, harms health-care provision. According to Alfie Kohn:

"More hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for 'customers,' seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich . . ."

He concludes:

*"The result: hospital costs are actually **higher** in areas where there is more competition for patients."* [Alfie Kohn, **No Contest**, p. 240]

As Robert Kuttner notes:

"The American health-care system is a tangle of inequity and inefficiency -- and getting worse as private-market forces seek to rationalise it. A shift to a universal system of health coverage would cut this Gordian knot at a stroke. It would not only deliver the explicitly medical aspects of health more efficiently and fairly, but, by socialising costs of poor health, it would also create a powerful financial incentive for society as a whole to stress primary prevention. . . every nation with a universal system spends less of its GDP on health care than the United States . . . And nearly every other nation with a universal system has longer life spans from birth (though roughly equivalent life spans from adulthood) . . . most nations with universal systems also have greater patient satisfaction.

"The reasons . . . should be obvious. By their nature, universal systems spend less money on wasteful overhead, and more on primary prevention. Health-insurance overhead in the United States alone consumes about 1 percent of the GDP, compared to 0.1 percent in Canada. Though medical inflation is a problem everywhere, the universal systems have had far lower rates of cost inflation . . . In the years between 1980 and 1987, total health costs in the United States increased by 2.4 times the rate of GDP growth. In nations with universal systems, they increased far more slowly. The figures for Sweden, France, West Germany, and Britain were 1.2, 1.6, 1.8, and 1.7 percent, respectively . . .

[. . .]

"Remarkably enough, the United States spends most money on health care, but has the fewest beds per thousand in population, the lowest admission rate, and the lowest occupancy rate -- coupled with the highest daily cost, highest technology-intensiveness, and greatest number of employees per bed." [**Everything for Sale**, pp. 155-6]

In 1993, the US paid 13.4% of its GDP towards health care, compared to 10% for Canada, 8.6% for Sweden and Germany, 6.6% for Britain and 6.8% for Japan. Only 40% of the US population was covered by public health care and over 35 million people, 14% of the population, went without health insurance for all of 1991, and about twice that many were uninsured for some period during the year. In terms of health indicators, the US people are not getting value for money. Life expectancy is higher in Canada, Sweden, Germany, Japan and Britain. The USA has the highest levels of infant mortality and is last in basic health indicators as well as having fewer doctors per 1,000 people than the OECD average. All in all, the US system is miles behind the universal systems of other countries.

Of course, it will be argued that the USA is not an anarchy and so comparisons are pointless. However, it seems strange that the more competitive system, the more privatised system, is less efficient and less fair than the universal systems. It also seems strange that defenders of competition happily use examples from "*actually existing*" capitalism to illustrate their politics but reject negative examples as being a product of an "*impure*" system. They want to have their cake and eat it to.

Therefore, most anarchists are in favour of a socialised and universal health-care system for both ethical and efficiency reasons. Needless to say, an anarchist system of socialised health care would differ in many ways to the current systems of universal health-care provided by the state.

Such a system of socialised health-care will be built from the bottom-up and based around the local commune. In a social anarchist society, "*medical services . . . will be free of charge to all inhabitants of the commune. The doctors will not be like capitalists, trying to extract the greatest profit from their unfortunate patients. They will be employed by the commune and expected to treat all who need their services.*" Moreover, prevention will play an important part, as "*medical treatment is only the **curative** side of the science of health care; it is not enough to treat the sick, it is also necessary to prevent disease. That is the true function of hygiene.*" [James Guillaume, **Bakunin on Anarchism**, p. 371]

How would an anarchist health service work? It would be based on self-management, of course, with close links to the local commune and federations of communes. Each hospital or health centre would be autonomous but linked in a federation with the others, allowing resources to be shared as and when required while allowing the health service to adjust to local needs and requirements as quickly as possible.

The Spanish Revolution indicates how an anarchist health service would operate. In rural areas local doctors would usually join the village collective and provided their services like any other worker. Where local doctors were not available, "*arrangements were made by the collectives for treatment of their members by hospitals in nearby localities. In a few cases, collectives themselves build hospitals; in many they acquired equipment and other things needed by their local physicians.*" For example, the Monzon comarcal (district) federation of collectives in Aragon established maintained a hospital in Binefar, the Casa de Salud Durruti. By April 1937 it had 40 beds, in sections which included general medicine, prophylaxis and gynaecology. It saw about 25 outpatients a day and was open to anyone in the 32 villages of the comarca. [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 331 and pp. 366-7]

The socialisation of the health care took on a slightly different form in Catalonia but on the same libertarian principles. Gaston Leval provides us with an excellent summary:

"The socialisation of health services was one of the greatest achievements of the revolution. To appreciate the efforts of our comrades it must be borne in mind that the rehabilitated the health service in all of Catalonia in so short a time after July 19th. The revolution could count on the co-operation of a number of dedicated doctors whose

ambition was not to accumulate wealth but to serve the afflicted and the underprivileged.

*"The Health Workers' Union was founded in September, 1936. In line with the tendency to unite all the different classifications, trades, and services serving a given industry, **all** health workers, from porters to doctors and administrators, were organised into one big union of health workers*

[. . .]

"Our comrades laid the foundations of a new health service . . . The new medical service embraced all of Catalonia. It constituted a great apparatus whose parts were distributed according to different needs, all in accord with an overall plan. Catalonia was divided into nine zones . . . In turn, all the surrounding villages and towns were served from these centres.

"Distributed throughout Catalonia were twenty-seven towns with a total of thirty-six health centres conducting services so thoroughly that every village, every hamlet, every isolated peasant in the mountains, every woman, every child, anywhere, received adequate, up-to-date medical care. In each of the nine zones there was a central syndicate and a Control Committee located in Barcelona. Every department was autonomous within its own sphere. But this autonomy was not synonymous with isolation. The Central Committee in Barcelona, chosen by all the sections, met once a week with one delegate from each section to deal with common problems and to implement the general plan. . .

*"The people immediately benefited from the projects of the health syndicate. The syndicate managed all hospitals and clinics. Six hospitals were opened in Barcelona. . . Eight new sanitariums were installed in converted luxurious homes ideally situated amidst mountains and pine forests. It was no easy task to convert these homes into efficient hospitals with all new facilities. . ." [quoted by Sam Dolgoff, **The Anarchist Collectives**, pp. 99-100]*

People were no longer required to pay for medical services. Each collective, if it could afford it, would pay a contribution to its health centre. Building and facilities were improved and modern equipment introduced. Like other self-managed industries, the health service was run at all levels by general assemblies of workers who elected delegates and hospital administration.

In the Levante, the CNT built upon its existing Sociedad de Socorros Mutuos de Levante (a health service institution founded by the union as a kind of mutual benefit society which had numerous doctors and specialists). During the revolution, the Mutua had 50 doctors and was available to all affiliated workers and their families.

Thus, all across Spain, the workers in the health service re-organised their industry in libertarian lines

and in association with the local collective or commune and the unions of the CNT. As Gaston Leval summarises:

"Everywhere that we were able to study the towns and little cities transformed by the revolution, the hospitals, the clinics, the polyclinics and other health establishments have been municipalised, enlarged, modernised, put under the safekeeping of the collectivity. And where they didn't exist, they were improvised. The socialisation of medicine was a work for the benefit of all." [quoted by Robert Alexander, **Op. Cit.**, p. 677]

We can expect a similar process to occur in the future anarchist society. Workers in the health industry will organise their workplaces, federate together to share resources and information, to formulate plans and improve the quality of service to the public. The communes and their federations, the syndicates and federations of syndicates will provide resources and effectively own the health system, ensuring access for all.

Similar systems would operate in other public services. For example, in education we expect the members of communes to organise a system of free schools. This can be seen from the Spanish revolution. Indeed, the Spanish anarchists organised Modern Schools before the outbreak of the revolution, with 50 to 100 schools in various parts funded by local anarchist groups and CNT unions. During the revolution everywhere across Spain, syndicates, collectives and federations of collectives formed and founded schools. Indeed, education *"advanced at an unprecedented pace. Most of the partly or wholly socialised collectives and municipalities built at least one school. By 1938, for example, every collective in the Levant Federation had its own school."* [Gaston Leval, quoted by Sam Dolgoff, **The Anarchist Collectives**, p. 168] These schools aimed, to quote the CNT's resolution on Libertarian Communism, to *"help mould men with minds of their own -- and let it be clear that when we use the word 'men' we use it in the generic sense -- to which end it will be necessary for the teacher to cultivate every one of the child's faculties so that the child may develop every one of its capacities to the full."* [quoted by Jose Perriats, **The CNT in the Spanish Revolution**, p. 70] The principles of libertarian education, of encouraging freedom instead of authority in the school, was applied on vast scale (see [section J.5.13](#) for more details on Modern Schools and libertarian education).

This educational revolution was not confined to collectives or children. For example, the Federacion Regional de Campesinos de Levante formed institutes in each of its five provinces. The first was set up in October 1937 in an old convent with 100 students. The Federation also set up two *"universities"* in Valencia and Madrid which taught a wide variety of agricultural subjects and combined learning with practical experience in an experimental form attached to each university. The Aragon collectives formed a similar specialised school in Binefar. The CNT was heavily involved in transforming education in Catalonia. In addition, the local federation of the CNT in Barcelona established a school to train women workers to replace male ones being taken into the army. The school was run by the anarchist-feminist group the Mujeres Libres. [Robert Alexander, **Op. Cit.**, p. 406, p. 670 and pp. 665-8 and p. 670]

Ultimately, the public services that exist in a social anarchist society will be dependent on what

members of that society desire. If, for example, a commune or federation of communes desires a system of communal health-care or schools then they will allocate resources to implement it. They will allocate the task of creating such a system to, say, a special commission based on volunteers from the interested parties such as the relevant syndicates, professional associations, consumer groups and so on. For example, for communal education a commission or working group would include delegates from the teachers union, from parent associations, from student unions and so on. The running of such a system would be based, like any other industry, on those who work in it. Functional self-management would be the rule, with doctors managing their work, nurses theirs and so on, while the general running of, say, a hospital would be based on a general assembly of all workers there who would elect and mandate delegates, the administration staff and decide the policy the hospital would follow. Needless to say, other interested parties would have a say, including patients in the health system and students in the education system.

Thus, as would be expected, public services would be organised by the public, organised in their syndicates and communes. They would be based on workers' self-management of their daily work and of the system as a whole. Non-workers who took part in the system (patients, students) would not be ignored and would also place a role in providing essential feedback to assure quality control of services and to ensure that the service is responsive to users needs. The resources required to maintain and expand the system would be provided by the communes, syndicates and their federations. For the first time, public services would truly be public and not a statist system imposed upon the public from above.

Needless to say, any system of public services would not be imposed on those who did not desire it. They would be organised for and by members of the communes. Therefore, individuals who were not part of a local commune or syndicate would have to pay to gain access to the communal resources. However, it is unlikely that an anarchist society would be as barbaric as a capitalist one and refuse entry to cases who were ill and could not pay, nor turn away emergencies because they did not have enough money to pay. And just as other workers need not join a syndicate or commune, so doctors, teachers and so on could practice their trade outside the communal system as either individual artisans or as part of a co-operative. However, given the availability of free medical services it is doubtful they would grow rich doing so. Medicine, teaching and so on would revert back to what usually initially motivates people to take these up professions -- the desire to help others and make a positive impact in peoples lives.

I.5.13 Won't an anarchist society be vulnerable to the power hungry?

A common objection to anarchism is that an anarchist society will be vulnerable to be taken over by thugs or those who seek power. A similar argument is that a group without a leadership structure becomes open to charismatic leaders so anarchy would just lead to tyranny.

For anarchists, such arguments are strange. Society already **is** run by thugs and/or the off-spring of thugs. Kings were originally just successful thugs who succeeded in imposing their domination over a given territorial area. The modern state has evolved from the structure created to impose this

domination. Similarly with property, with most legal titles to land being traced back to its violent seizure by thugs who then passed it on to their children who then sold it or gave it to their offspring. The origins of the current system in violence can be seen by the continued use of violence by the state and capitalists to enforce and protect their domination over society. When push comes to shove, the dominant class will happily re-discover their thug past and employ extreme violence to maintain their privileges. The descent of large parts of Europe into Fascism during the 1930s, or Pinochet's coup in Chile in 1973 indicates how far they will go. As Peter Arshinov argued (in a slightly different context):

"Statists fear free people. They claim that without authority people will lose the anchor of sociability, will dissipate themselves, and will return to savagery. This is obviously rubbish. It is taken seriously by idlers, lovers of authority and of the labour of others, or by blind thinkers of bourgeois society. The liberation of the people in reality leads to the degeneration and return to savagery, not of the people, but of those who, thanks to power and privilege, live from the labour of the people's arms and from the blood of the people's veins . . . The liberation of the people leads to the savagery of those who live from its enslavement." [The History of the Makhnovist Movement, p. 85]

Anarchists are not impressed with the argument that anarchy would be unable to stop thugs seizing power. It ignores the fact that we live in a society where the power-hungry already hold power. As an argument against anarchism it fails and is, in fact, an argument against capitalist and statist societies.

Moreover, it also ignores fact that people in an anarchist society would have gained their freedom by overthrowing every existing and would-be thug who had or desired power over others. They would have defended that freedom against those who desired to re-impose it. They would have organised themselves to manage their own affairs and, therefore, to abolish all hierarchical power. And we are to believe that these people, after struggling to become free, would quietly let a new set of thugs impose themselves? As Kropotkin argued:

*"The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary . . . In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom . . . without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system . . . Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the **maintenance** of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition . . . They have it in their power to apply a prompt check by boycotting such a person and refusing to help him with their labour or to willing supply him with any articles in their possession. They have it in their power to use force against him. They have these powers individually as well as collectively. Being either past rebels*

who have been inspired with the spirit of liberty, or else habituated to enjoy freedom from their infancy, they are hardly to rest passive in view of what they feel to be wrong." [Kropotkin, **Act for Yourselves**, pp. 87-8]

Thus a free society would use direct action to resist the would-be ruler just as it had used direct action to free itself from existing rulers. An anarchist society would be organised in a way which would facilitate this direct action as it would be based on networks of solidarity and mutual aid. An injury to one is an injury to all and a would-be ruler would face a whole liberated society acting against him or her. Faced with the direct action of the population (which would express itself in non-co-operation, strikes, demonstrations, occupations, insurrections and so on) a would be power seeker would find it difficult to impose themselves. Unlike those accustomed to rulership in existing society, an anarchist people would be a society of rebels and so difficult to dominate and conquer.

Anarchists point to the example of the rise of Fascism in Italy, Spain and Germany to prove their point. In areas with strong anarchist movements the fascists were resisted most strongly. While in Germany Hitler took power with little or no opposition, in Italy and Spain the fascists had to fight long and hard to gain power. The anarchist and anarcho-sindicalist organisations fought the fascists tooth and nail, with some success before betrayal by the Republicans and Marxists. From this historical experience anarchists argue that an anarchist society would quickly and easily defeat would-be thugs as people would be used to practising direct action and self-management and would have no desire to stop practising them.

As for self-management resulting in "*charismatic*" leaders, well the logic is astounding. As if hierarchical structures are **not** based on leadership structures and do not require a charismatic leader! Such an argument is inherently self-contradictory -- as well as ignoring the nature of modern society and its leadership structures. Rather than mass assemblies being dominated by leaders, it is the case that hierarchical structures are the natural breeding ground for dictators. All the great dictators the world have seen have come to the forefront in **hierarchical** organisations, **not** libertarian structured ones. Hitler, for example, did not come to power via a libertarian organisation. Rather he used a highly centralised and hierarchically organised party to take control of a centralised, hierarchical state. The very disempowerment of the population in capitalist society results in them looking to leaders to act for them and so "*charismatic*" leaders are a natural result. An anarchist society, by empowering all, would make it more difficult, not less, for a would-be leader to gain power -- few people, if any, would be willing to sacrifice and negate themselves for the benefit of another.

As would be expected, given our comments above, anarchists think an anarchist society must defend itself against attempts to re-introduce the state or private property. The question of defence of an anarchist society is discussed in the [next section](#) and so we will not do so here.

Our discussion on the power hungry obviously relates to the more general the question of whether ethical behaviour be rewarded in an anarchist society. In other words, could an anarchist society be stable or would the unethical take over?

It is one of the most disturbing aspects of living in a world where the rush to acquire wealth is the single most important aspect of living is what happens to people who follow an ethical path in life.

Under capitalism, the ethical generally do not succeed as well as those stab their fellows in the back, those who cut corners, indulge in sharp business practises, drive competitors into the ground and live their lives with an eye on the bottom line but they do survive. Loyalty to a firm or a group, bending over backwards to provide a service, giving a helping hand to somebody in need, placing friendship above money, count for nothing when the bills come in. People who act ethically in a capitalist society are usually punished and penalised for their ethical, moral and principled behaviour. Indeed, the capitalist market rewards unethical behaviour as it generally reduces costs and so gives those who do it a competitive edge.

It is different in a free society. Anarchism is based on two principles of association, equal access to power and wealth. Everybody in an anarchist society irrespective of what they do, or who they are or what type of work they perform is entitled to share in society's wealth. Whether a community survives or prospers depends on the combined efforts of the people in that community. Ethical behaviour would become the norm in an anarchist community; those people who act ethically would be rewarded by the standing they achieve in the community and by others being more than happy to work with and aid them. People who cut corners, try to exercise power over others, refuse to co-operate as equals or otherwise act in an unethical manner would lose their standing in an anarchist society. Their neighbours and work mates would refuse to co-operate with them (or reduce co-operation to a minimum) and take other forms of non-violent direct action to point out that certain forms of activity was inappropriate. They would discuss the issue with the unethical person and try to convince them of the errors of their way. In a society where the necessities are guaranteed, people would tend to act ethically because ethical behaviour raises an individuals profile and standing within such a community. Capitalism and ethical behaviour are mutually exclusive concepts; anarchism encourages and rewards ethical behaviour.

Therefore, as can be seen, anarchists argue that a free society would not have to fear would-be thugs, "*charismatic*" leaders or the unethical. An anarchist society would be based on the co-operation of free individuals. It is unlikely that they would tolerate such behaviour and would use their own direct action as well as social and economic organisations to combat it. Moreover, the nature of free co-operation would reward ethical behaviour as those who practice it would have it reciprocated by their fellows.

One last point. Some people seem to think that anarchism is about the powerful being appealed to **not** to oppress and dominate others. Far from it. Anarchism is about the oppressed and exploited refusing to let others dominate them. It is **not** an appeal to the "*better side*" of the boss or would-be boss; it is about the solidarity and direct action of those subject to a boss **getting rid of the boss** -- whether the boss agrees to it or not! Once this is clearly understood the idea that an anarchist society is vulnerable to the power-hungry is clearly nonsense -- anarchy is based on resisting power and so is, by its very nature, more resistant to would-be rulers than a hierarchical one.

I.5.14 How could an anarchist society defend itself?

Anarchists are well aware that an anarchist society will have to defend itself from both inside and outside attempts to re-impose capitalism and the state. Indeed, every revolutionary anarchist has argued that a revolution will have to defend itself.

Unfortunately, Marxists have consistently misrepresented anarchist ideas on this subject. Lenin, for example, argued that the *"proletariat needs the state only temporarily. We do not at all disagree with the anarchists on the question of the abolition of the state as an aim. We maintain that, to achieve this aim, we must temporarily make use of the instruments, resources and methods of state power against the exploiters, just as the dictatorship of the oppressed class is temporarily necessary for the abolition of classes. Marx chooses the sharpest and clearest way of stating his position against the anarchists: after overthrowing the yoke of the capitalists, should workers 'lay down their arms' or use them against the capitalists in order to crush their resistance? But what is the systematic use of arms by one class against the other, if not a 'transitory form' of state."* ["*The State and Revolution*", **Essential Works of Lenin**, p. 316]

Fortunately, as Murray Bookchin points out, anarchists are *"not so naive as to believe anarchism could be established overnight. In imputing this notion to Bakunin, Marx and Engels wilfully distorted the Russian anarchist's views. Nor did the anarchists . . . believe that the abolition of the state involved 'laying down arms' immediately after the revolution. . ."* [**Post-Scarcity Anarchism**, p. 213] Even a basic familiarity with the work of anarchist thinkers would make the reader aware that Bookchin is right. As we shall see, anarchists have consistently argued that a revolution and an anarchist society needs to be defended against those who would try and re-introduce hierarchy, domination, oppression and exploitation (even, as with Leninists, they call themselves *"socialists"*). As Malatesta argued in 1891:

*"Many suppose that . . . anarchists, in the name of their principles, would wish to see that strange liberty respected which violates and destroys the freedom and life of others. They seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of a respect for the **freedom** of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas!"* [**Anarchy**, p. 41]

Anarchists reject the idea that defending a revolution, or even the act of revolution itself, represents or requires a *"state."* As Malatesta argued, the state *"means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few."* [**Op. Cit.**, p. 40] Luigi Fabbri stresses this when he argued that, for anarchists, *"the essence of the state . . . [is] centralised power or to put it another way the coercive authority of which the state enjoys the monopoly, in that organisation of violence know as 'government'; in the hierarchical despotism, juridical, police and military despotism that imposes laws on everyone."* ["*Anarchy and 'Scientific' Communism*", in **The Poverty of Statism**, pp. 13-49, Albert Meltzer (ed.), pp. 24-5] Therefore the state is the delegation of power, the centralisation of authority into the hands of a few at the top of society rather than a means of defending a revolution against the expropriated ruling class. To confuse the defence of a revolution and the state is,

therefore, a great mistake as it introduces an inequality of power into a so-called socialist society. In the words of Voline:

"All political power inevitably creates a privileged situation for the men who exercise it. Thus it violates, from the beginning, the equalitarian principle and strikes at the heart of the Social Revolution . . . [and] becomes the source of other privileges . . . power is compelled to create a bureaucratic and coercive apparatus indispensable to all authority . . . Thus it forms a new privileged caste, at first politically and later economically. . . It sows everywhere the seed of inequality and soon infects the whole social organism . . . It predisposes the masses to passivity, and all spirit and initiative is stifled by the very existence of power, in the extent to which it is exercised." [The Unknown Revolution, p. 249]

Unsurprisingly, anarchists think a revolution should defend itself in the same way that it organises itself -- from the bottom up, in a self-managed way. The means to defend an anarchist society or revolution are based around the organs of self-management that revolution creates. In the words of Bakunin:

"[T]he federative Alliance of all working men's associations . . . constitute the Commune . . . Commune will be organised by the standing federation of the Barricades and by the creation of a Revolutionary Communal Council composed of one or two delegates from each barricade . . . vested with plenary but accountable and removable mandates . . . all provinces, communes and associations . . . reorganising on revolutionary lines . . . [would] send . . . their representatives to an agreed meeting place . . . vested with similar mandates to constitute the federation of insurgent associations, communes and provinces . . . [which would] organise a revolutionary force capable of defeating reaction . . . it is the very fact of the expansion and organisation of the revolution for the purpose of self-defence among the insurgent areas that will bring about the triumph of the revolution. . .

"Since revolution everywhere must be created by the people, and supreme control must always belong to the people organised in a free federation of agricultural and industrial associations . . . organised from the bottom upwards by means of revolutionary delegation. . . " [Michael Bakunin: Selected Writings, pp. 170-2]

Thus we have a dual framework of revolution. On the one hand, the federation of workers' councils based on self-managed assemblies nominating mandated and accountable delegates. On the other, we have a federation of barricades, again based on self-management and mandated delegates, which actually defends the revolution against reaction. The success of the revolution depends on spreading it and organising joint self-defence. He stressed the importance of co-ordinating defence two years later, in 1870:

"[L]et us suppose . . . it is Paris that starts [the revolution] . . . Paris will naturally make

*haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour, every kind of capital and building; armed and organised by streets and **quartiers**, they will form the revolutionary federation of all the **quartiers**, the federative commune. . . All the French and foreign revolutionary communes will then send representatives to organise the necessary common services . . . and to organise common defence against the enemies of the Revolution, together with propaganda, the weapon of revolution, and practical revolutionary solidarity with friends in all countries against enemies in all countries."* [Op. Cit., p. 178-9]

As can be seen, the revolution not only abolishes the state by a free federation of workers associations, it also expropriates capital and ends wage labour. Thus the "*political revolution is transformed into social revolution.*" [Op. Cit., p. 171] Which, we must add, destroys another Marxist myth that claims that anarchists think, to quote Engels, that "*the state is the chief evil, [and] it is above all the state which must be done away with and then capitalism will go to blazes,*" in other words, the "*abolition of the state*" comes before the "*social revolution.*" [Marx and Engels, **The Marx-Engels Reader** p. 728] As can be clearly seen, anarchists consider the social revolution to be, **at the same time**, the abolition of the state **along with** the abolition of capitalism.

Therefore, Bakunin was well aware of the needs to defend a revolution after destroying the state and abolishing capitalism. It is clear that after a successful rising, the revolutionary population does **not** "*lay down their arms*" but rather organises itself in a federal to co-ordinate defence against reactionary areas which seek to destroy it.

Nor was Bakunin alone in this analysis. For example, we discover Errico Malatesta arguing that during a revolution we should "*[a]rm all the population.*" The revolution would have "*armed the people so that it can resist any armed attempt by reaction to re-establish itself.*" This revolution would involve "*creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution.*" Like Bakunin, Malatesta stresses the importance of co-ordinating activity via free federations of workers' associations -- "*the development of the revolution would be the task of volunteers, by all kinds of committees, local, intercommunal, regional and national congresses which would attend to the co-ordination of social activity,*" the "[o]rganisation of social life by means of free association and federations of producers and consumers, created and modified according to the wishes of their members," and so be "*under the direct control of the people.*" Again, like Bakunin, the revolution would abolish state and capital, and "*the workers . . . [should] take possession of the factories . . . federate among themselves . . . the peasants should take over the land and the produce usurped by the landlords.*" Ultimately, the "*most powerful means for defending the revolution remains always that of taking away from the bourgeois the economic means on which their power rests, and of arming everybody (until such time as one will have managed to persuade everybody to throw away their arms as useless and dangerous toys), and of interesting the mass of the population in the victory of the revolution.*" [**Life and Ideas**, p. 170, p. 165, p. 166, pp. 165-6, p. 184, p. 175, p. 165 and p. 173]

Malatesta stresses that a government is not required to defend a revolution:

"But, by all means, let us admit that the governments of the still unemancipated countries were to want to, and could, attempt to reduce free people to a state of slavery once again. Would this people require a government to defend itself? To wage war men are needed who have all the necessary geographical and mechanical knowledge, and above all large masses of the population willing to go and fight. A government can neither increase the abilities of the former nor the will and courage of the latter. And the experience of history teaches us that a people who really want to defend their own country are invincible: and in Italy everyone knows that before the corps of volunteers (anarchist formations) thrones topple, and regular armies composed of conscripts or mercenaries disappear." [**Anarchy**, pp. 40-1]

The Spanish anarchist D. A. Santillan argued that the *"local Council of Economy will assume the mission of defence and raise voluntary corps for guard duty and if need be, for combat"* in the *"cases of emergency or danger of a counter-revolution."* These Local Councils would be a federation of workplace councils and would be members of the Regional Council of the Economy which, like the Local Council, would be *"constitute[d] by delegations or through assemblies."* [**After the Revolution**, p. 80 and pp. 82-83] Yet again we see the defence of the revolution based on the federation of workers' councils and so directly controlled by the revolutionary population.

Lastly, we turn to the Spanish CNT's 1936 resolution on Libertarian Communism. In this document is a section entitled *"Defence of the Revolution"* which argues:

"We acknowledge the necessity to defend the advances made through the revolution . . . So . . . the necessary steps will be taken to defend the new regime, whether against the perils of a foreign capitalist invasion . . . or against counter-revolution at home. It must be remembered that a standing army constitutes the greatest danger for the revolution, since its influence could lead to dictatorship, which would necessarily kill off the revolution. . .

"The people armed will be the best assurance against any attempt to restore the system destroyed from either within or without. . .

"Let each Commune have its weapons and means of defence . . . the people will mobilise rapidly to stand up to the enemy, returning to their workplaces as soon as they may have accomplished their mission of defence. . . .

"1. The disarming of capitalism implies the surrender of weaponry to the communes which be responsible for ensuring defensive means are effectively organised nationwide.

"2. In the international context, we shall have to mount an intensive propaganda drive

among the proletariat of every country so that it may take an energetic protest, calling for sympathetic action against any attempted invasion by its respective government. At the same time, our Iberian Confederation of Autonomous Libertarian Communes will render material and moral assistance to all the world's exploited so that these may free themselves forever from the monstrous control of capitalism and the State." [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 110]

Therefore, an anarchist society defends itself in a non-statist fashion. Defence is organised in a libertarian manner, based on federations of free communes and workers' councils and incorporating self-managed workers' militias. This was exactly what the CNT-FAI did in 1936 to resist Franco's fascists. The militia bodies that were actually formed by the CNT in the revolution were internally self-governing, not hierarchical. Each militia column was administered by its own "*war committee*," made up of elected delegates, which in turn sent delegates to co-ordinate action on a specific front. Similarly, the Makhnovists during the Russian Revolution also organised in a democratic manner, subject to the decisions of the local workers' councils and their congresses.

Thus Anarchist theory and practice indicate that defence of a revolution need not involve a hierarchical system like the Bolshevik Red Army where the election of officers, soldiers' councils and self-governing assemblies were abolished by Trotsky in favour of officers appointed from above (see Trotsky's article **The Path of the Red Army** in which he freely admits to abolishing the soldiers "*organs of revolutionary self-government*" the Soviets of Soldiers' Deputies as well as "*the system of election*" of commanders by the soldiers themselves in favour of a Red Army "*built from above*" with appointed commanders).

As can be seen, the only armed force for the defence of the an anarchist society would be the voluntary, self-managed militia bodies organised by the free communes and federations of workers' associations. The militias would be unified and co-ordinated by federations of communes while delegates from each militia unit would co-ordinate the actual fighting. In times of peace the militia members would be living and working among the rest of the populace, and, thus, they would tend to have the same outlook and interests as their fellow workers.

Instead of organising a new state, based on top-down command and hierarchical power, anarchists argue that a revolutionary people can build and co-ordinate a militia of their own and control the defence of their revolution directly and democratically, through their own organisations (such as unions, councils of delegates elected from the shop floor and community, and so on). Where they have had the chance, anarchists have done so, with remarkable success. Therefore, an anarchist society can be defended against attempts to re-impose hierarchy and bosses (old or new).

For more discussion of this issue, see section J.7.6 ("[How could an anarchist revolution defend itself?](#)")
