THIS Work will, it is believed, supply the want, so long felt, of a Dictionary based on the etymological relations of words, and exhibiting the results of the latest philological research, at a price quite within the reach of every School.

The Dictionary contains the Etymology, Pronunciation, and Meanings of Words.

The Vocabulary contains every English word, with the exception of obsolete and very rare words, and technical terms not found in general literature. It includes, however, all the obsolete words that occur *in the Bible*. Great attention has been paid to the insertion of words in Natural History, Botany, Geology, Physics, Physiology, and other sciences, which of late have become more commonly the subject of study in schools. Numerous *Phrases* have also been introduced. Each un-compounded verb has its participles placed after it, and its past tense when different from the past participle, and exceptional plurals and adverbial forms are given.

The Arrangement of the words is *etymological*, while the alphabetical order is strictly preserved by means of references. Words derived from the same root, but with different affixes, are grouped together, the first word of each group being printed with a capital initial, and the derivatives under it with a small letter, while the groups themselves are separated from each other by a space.

The Pronunciation is exhibited in the simplest manner possible. The correct sound of every word is given by being written anew phonetically, thus obviating the use of a confusing array of marks. The syllabication and accentuation have also been carefully attended to, and different pronunciations given in cases where authorities are divided.

The Meanings are based on the root-ideas of the words, a plan not only logically correct, but calculated to give increased vividness to the conception. The primary meaning is given first (in italics), and the secondary meanings in the order of their logical connection with the primary one, different classes of meanings being separated by colons. The greatest care has been taken to express the meanings in the simplest language, a feature in respect to which this Dictionary will bear favourable comparison with any similar work.

Special attention has been paid to the definitions of the scientific and Technical terms, which will be found fully abreast of the present state of science, while they are expressed in the simplest language.

The **Etymological** part of the work has been prepared with the greatest care, and will be found to embody the very latest researches into this most interesting subject. The derivation of every word (so far as has been discovered) is given, each word being traced back, step by step, to its ultimate source, and the meaning of each foreign word distinctly told. In doubtful cases the more probable etymologies have been inserted. Contrary to the usual practice, the etymology has been enclosed in brackets at the end of each word, as allowing the speedier discovery of the meanings, and being in many respects a preferable arrangement to that usually followed.

In this department full advantage has been taken of the labours of Bopp, Pott, Grimm, Curtius, Diez, Donaldson, Max Müller, Latham, Garnett, Trench, Wedgwood, and others, who have investigated the Etymology of our language, a study which of late years has made such marked advances. The Editor begs specially to express his obligations to Mr Wedgwood's valuable *Dictionary of English Etymology*, lately completed—a work which no student of Etymology should be without.

A copious list of Prefixes and Affixes, with their signification, derivation, and affinities, as far as ascertained, has been appended to the work.

It is confidently hoped that this Dictionary will be found not only eminently suitable for general educational and practical purposes, but also peculiarly adapted for assisting in the higher philological study of the English language in advanced classes.

The Editor has much satisfaction in expressing his obligations to HENRY WEIR, Esq., M.A., Caius College, Cambridge, Classical Master in the Edinburgh Academy, for his assistance in the etymological portion of the work; and to WILLIAM JOLLY, Esq., Head English Master, George Watson's Hospital, Edinburgh, for his co-operation in the revision of the whole work, and for many valuable suggestions.

NOTE TO THE PRESENT EDITION.

The numerous reprints of this work that have been called for have been taken advantage of for the correction of such inaccuracies in the text as have been pointed out. In this edition *the obsolete and rare words* in THE APOCRYPHA, THE BOOK OF COMMON PRAYER, and THE SCOTCH METRICAL VERSION OF THE PSALMS have been inserted, and a Glossary of the obsolete and rare words and meanings in MILTON'S POETICAL WORKS, and other additions, have been given at the end.

EXPLANATIONS TO THE STUDENT.

The Arrangement of the Words.—Every word is given in its *alphabetical* place, printed in Clarendon, and there its meanings, &c. will generally be found. In certain cases, however, the word is referred to another, under which it is explained in its relation to words derived from the same root. *Participles* are always placed after their verbs, and *adverbs*, generally after their adjectives. When a word stands after another, with no meaning given, its meanings can be at once formed from those of the latter, by adding the signification of the affix: thus the meanings of darkness are obtained by prefixing the meaning of *ness*, *state of being*, to those of *dark*.

The Pronunciation.—The Pronunciation is given immediately after each word, by the word being spelled anew. In this new spelling, every consonant used has its ordinary unvarying sound, *none being employed having more than one sound*. The same sounds are always represented by the same letters, no matter how varied their actual spelling in the language. No consonant used has any mark attached to it, with the one exception of *th*, which is printed in common letters when sounded as in *thick*, but in italics when sounded as in *then*. *Unmarked vowels* have always their short sounds, as in *lad, led, lid, lot, but, book*. The *marked vowels* are shewn in the following line, which is printed at the bottom of each page—

fāte, fār; mē, hēr; mīne; mōte; mūte; mōōn.

Where more than one pronunciation of a word is given, that which is placed first is the more accepted.

The Spelling.—When more than one form of a word is given, that which is placed first is the more usual spelling.

The Meanings.—The *primary meaning* of every word is given *first*, in italics. The word *literally* (lit.) before a meaning, signifies that that is the meaning according to the letter, though it is not now, and may never have been, in use in the language; the word *originally* (orig.), that the meaning following once existed, though now obsolete.

The other meanings are arranged in the order of their connection with the root idea, those nearer the literal meaning being placed first; and they are classified in groups, separated by colons.

In B., before a meaning, signifies that it is used in the Bible in that special sense, though it does not imply that the other meanings of the word may not also be used there.

The Etymology.—The Etymology of each word is given after the meanings, within brackets. Where further information regarding a word is given elsewhere, it is so indicated by a reference. When no etymology follows a word, this implies that its derivation is given above, under the chief word of which it is a derivative. Where the etymology of a word is *doubtful*, different opinions are given; and where *unknown*, a query [?] is affixed. Under each word, the prefixes with their meanings are always stated, but not the affixes, although the force of the latter is always given under the literal meaning. A full list of Prefixes and Affixes, with their significations and roots, will be found in the Appendix.

* * The student is recommended at once to master the following list of abbreviations occurring in the work, which will be found to suggest their own meaning.
