Network Connection Utilities for Windows

Name	Type	Source	Price	Desc
NetSwitcher	Net Connection Manager	No	###	Their 802_11 Tester and Profile Builder for NetSwitcher allows profiles to be saved for connecting to wireless networks. Requires NDIS 5.1 or greater
AirSnare	Wireless IDS	No	\$0.00	Uses WinPcap to collect data from the wireless network. Must be associated with the desired network before using the tool.
WinPcap	Packet Capturing	Yes	\$0.00	Brings libpcap functionality to the Windows platform. I don't think this lib includes any functionality to connect to a wireless network. It only captures packets once an association has been made.
wpa_supplicant	Net Connection Manager	Yes	\$0.00	Not sure how well it works, but wpa_supplicant can be used to manage connections on windows.
WiFi Hopper	Network Discovery, Site Survey, Connection Manager	No	###	Windows survey tool. Allows connections from within the application. Looks very nice from the screen shots
MAC Address Changer	MAC Address	Yes	\$0.00	The code can be downloaded from codeproject, but you have to sign up for an account. Looks like a GUI AP, so would be curious how they implement the change and how many cards are actually supported.
