

# Athena Progress - November 24, 2015 - 11:30am

## Minutes:

- 1) no meeting

## Achievements:

- 1) TestEncryption - not passing a valid response buffer back to the parser(fixed)
- 2) Added new command SECURE DELETE (exactly like put command)
- 3) Command:executor:task\_set fixed dword retrieval = \*((PULONG)(pCmd\_Exec->pArgs))
- 4) Parser: SET.txt output file should include the name & value (fixed)

## Issues:

- 1) Should NoProxy be first in the ConnState list?
- 2) Response should use the same ConnState that was used by receive - don't try all ConnStates again
- 3) Persistence - doesn't always work on install (requires reboot)
- 4) Uninstall - threads are not always cleaned up properly (TestCommandEngine)

### Test Cases:

- 1) Install / reboot - validate installation and check status after reboot (svchost)
- 2) Uninstall - validate cleanup
- 3) Get - retrieve files of different sizes
- 4) Put - write files of different sizes
- 5) Memload - load dlls
- 6) Memunload
- 7) Killfile
- 8) Offline win and lin (can this be automated?)
- 9) SET
- 10) Multiple command in a batch
- 11) Reinstall on the same box - if it isn't running it should just overwrite (check datafile)
- 12) Re-run the service - check if we can open the datafile
- 13) RamOnly - rundll should work fine for us
- 14) Validate that all files are removed from system (including state files)
- 15) Forensics - secure delete of .dll, data file and state file
