Introduction

Medieval Germany: An Encyclopedia is an introduction to the society and culture of German- and Dutch-speaking Europe from approximately C.E. 500 to 1500. By presenting articles on major persons, places, historical occurrences, artistic and technological accomplishments, intellectual developments, and daily life of the period roughly outlined, this reference work intends to answer readers' questions and supply further information on major topics from the broad field of medieval German studies. Its 647 entries were suggested and written by an international team of scholars from North America and Europe.

The editors conceived the entries as covering the fields of German and Dutch art history, language and literature, history, music, philosophy, religion, and general (social structure, daily life). Tangential articles such as "Boethius" or "Latin Language" reflect significant influences on the medieval German- and Dutch-speaking world.

How to Use This Book

Entries are arranged alphabetically. Article headings appear in English or German, depending on the authors' perception of the most common usage in English. Works of literature are discussed under the author's name, when known or supposed. Names are listed according to English-language customs, Wolfram von Eschenbach under "W," Ulrich Fuetrer under "F." Cross references ("See also...") follow articles when called for. An analytical index also serves to point users to the appropriate article. Blind entries ("John Ruusbroec. See Jan van Ruusbroec"; "Teutonic Knights. See [Deutschorden](#)") in both the text and the index lead nonspecialists to the information they seek.

Authors were asked to keep the general reader in mind; bibliographies, listing primary sources, translations, and secondary sources, were severely limited. They provide orientation into the vast field of medieval German studies; the works cited in turn contain a wealth of references for further reading and research. Thus, articles can be perused gainfully by nonspecialists and experts alike. English language sources were preferred but not always available.

Acknowledgments

Medieval Germany: An Encyclopedia, was conceived in 1986, when Edward R. Haymes was approached by Gary Kuris, then of Garland Publishing, at the Medieval Studies Conference at Western Michigan University in Kalamazoo, Michigan, about a German volume within Garland Publishing's Medieval Encyclopedia series. After serving as general editor during the initial phase, during which a first master list of articles was drawn up and many collaborators were won, Haymes passed on the general editorship to a former associate editor, Stephanie Cain Van D'Elden, who in turn relinquished the position in 1996 to the undersigned. I had been associated with the project from early on as a contributor and as a consulting editor (Old High German). I assumed the general editor position with the vast majority of entries chosen, very many of them assigned, a good number of them already submitted. In addition to Haymes and Van D'Elden, Joan A. Holladay (art) and Geert Claassens (Dutch) have been with the project since its inception, and have demonstrated near-saintly patience and stick-to-it-iveness. In addition, Holladay assumed the sizable burden of selecting, acquiring, and authoring labels for the many illustrations. She has been ably assisted by, among others, her husband, Daniel Hofmann, and Anne Rudloff Stanton. Michael Frassetto agreed to take over the vacated associate editor position for history late in 1996. Consulting editors Frank Gentry (Middle High German literature), Donna Mayer-Martin (music), Frank Tobin (religion and philosophy), and Jan Ziolkowski (Latin), have been invaluable over the years. Wesley Stevens (history) provided useful input.

It is indeed a pleasant duty to thank a veritable host of scholars who shall, for fear I might omit someone, remain unnamed, who responded to requests for suggestions for potential entries and authors. Without their selfless support, this would be a far inferior reference work. You know who you are, and many of you appear in a significant way in the bibliographies. A further group of individuals responded to my many requests for address information, or otherwise helped me locate persons whose whereabouts were or had become unknown to me. This encyclopedia is, then, truly the result of a team effort. Each article is signed. This gives credit where credit is due. The contributors have, in some cases, waited years for their work to see the light of day. Those collaborators whose work has been listed as "done" for a long period of time are to be thanked for their timely responses and submissions. Without them, the time-consuming efforts to gather less punctual submissions would not have been possible. Various factors contributed to the delays over the years. The editors are most grateful to the authors for their expertise, their collegiality, and their patience. It has been a pleasure to be in contact with so many selfless, considerate, and talented individuals. Most readers will not have the delight of reading as many articles as the editors have, and we have profited from our exposure to such a wide range of scholarship.

I have benefited from the support of the department of German, Russian, and East Asian Languages (Robert Di Donato, chair) and the College of Arts and Science (John Skillings, acting dean) of Miami University, who provided student staff support, technical support, and an atmosphere conducive to research. My colleagues David Siebenhar, Charlotte Wharton, and Dan Meyers cheerfully provided helpful answers to my many computer-related questions. Erin Brown assisted the general editor for one semester. Marianne Lown was my initial editorial contact at Garland Publishing; from 1997–1999, Joanne Daniels guided me. Richard Steins and Tim Roberts provided welcome support and expertise during an editorial transition phase. For the final stages, Laura Kathleen Smid has been a most conscientious and supportive editor. Finally, Cliff Kallemeyn has been a careful production editor. As always, Lynda Hoffman-Jeep and L. Cariña Jeep have supported me and my work.

The atmosphere generated at the medieval studies conferences at the Medieval Institute of Western Michigan University has always been encouraging and stimulating. The association with these conferences has been very productive in this undertaking.

I dedicate this book to the memory of my father, Charles W. Jeep, Jr., whose natural inquisitiveness and broad interests represent the kind of reader the collaborators on this volume hope to engage.

Aachen

A cultural and strategic center during the Carolingian dynasty and Holy Roman Empire, Aachen, known for its hot springs, was the location of first-century Roman baths. By the late fourth or early fifth century, Roman structures had been transformed into a Christian cult site. Perhaps lured by the waters, Pippin (Pépin) III, founder of the Carolingian dynasty, wintered in Aachen with his itinerant court in 766 and erected a residence. While little is known of Pippin's activities, evidence of his continuation of the cult site exists in scanty archaeological remains beneath the church built by his son, Charlemagne. Aachen's unparalleled renown and complex, changing significance may be tied to Charlemagne, who erected a palace—his favored residence—from ca. 792–805. This ambitious "capital," located within the Frankish strong-hold of Austrasia, created a political, ecclesiastical, and artistic center for Charlemagne's empire and became the kernel of the medieval city.

While excavations shed light on aspects of the extensive complex, Charlemagne's palace, located in what is still Aachen's center, is no longer extant, save for portions of his chapel to the Virgin and the *Granusturm*, a square, multistoried, staired structure punctured by round-arched windows. The chapel, a two-story polygonal structure with a multistoried westwork (western entry structure), preceded by a forecourt and flanked to the north and south by (now lost) basilical structures, exists today in much altered form, partially masked by nineteenth-century restorations. The chapel forecourt communicated with the audience hall to the north through a walk-way with a central gatehouse. The extant *Granusturm* stood at the east end of the audience hall (atop which a Gothic town hall was built), giving access to the building's upper reaches as well as to a neighboring two-story building.

Aspects of the palace structures may be likened formally to Roman and Byzantine works—the chapel to San Vitale in Ravenna and the audience hall to Constantine's audience hall in Trier. From what is known of the buildings and the chapel's lavish outfitting, however, it is evident that Charlemagne mined, and thus assumed and directed, a number of pasts to create a multivalent, malleable image. The chapel's bronze doors, the *spolia* (recycled) columns of the interior columnar screen juxtaposed with the second-story bronze grills and now-lost dome mosaic, as well as the rich production of the "court school," all bear witness to diverse, evocative artistic preoccupations.

With Charlemagne's death at Aachen in 814, Louis the Pious (Louis I) ruled from the center established by his father. Throughout the Middle Ages, possession of Aachen, and thus of Charlemagne, was seen as a conferral of authority and legitimacy, a notion evidenced early, in the unsuccessful attempt by Charles II (Charles the Bald) to take the city in 876. Aachen's multilayered and changing importance as a power center became increasingly complex as successive rulers took up residence, augmenting the palace as well as the burgeoning city.

The 936 coronation of Otto I (Otto the Great) initiated a tradition in which the chapel at Aachen was the locus for the coronation of "German" rulers until 1531. The Ottonian focus on their appropriated imperial center is evidenced by the rulers' extant commissions for the chapel, including the Lothar Cross (ca. 1000), the Gospel Book of Otto III (ca. 990), the altar frontal known as the Pala d'Oro (ca. 1020), and the ambo (lectern) of Henry II (r. 1002–1024). Otto III as well augmented the cityscape

Aachen, palace chapel, view from north. Photograph: Joan A.Holladay

through a ring of foundations: the Church of the Savior, a Benedictine foundation for women, to the north (on the site of the late-ninth-century funerary church of Louis the Pious); the basilical collegiate church dedicated to the emperor's friend, the martyr Saint Adalbert, to the east; and the Benedictine abbey of Burtscheid to the south. These foundations, completed under Henry II, have subsequently undergone numerous rebuildings. Otto III's particular interest in Aachen, and in Charlemagne, reached an apogee with his "discovery" of Charlemagne's tomb within the chapel on Pentecost in the year 1000. The twelfth century saw another spate of imperial interest in Aachen, as Frederick I Barbarossa, who walled the growing city in the late twelfth century (expanded in the thirteenth and fourteenth centuries), purportedly opened Charlemagne's tomb in 1165 and removed the remains. While the ruler again lavished great attention on Aachen, the elaborate chandelier (the *Barbarossaleuchter*), probably created in connection with Charlemagne's canonization after the exhumation, stands today as his significant commission. The creation of the shrine (ca. 1182–1215) for Charlemagne's relics and the *Marienschrein* (shrine of the Virgin), begun in 1238 to hold relics of Christ, the Virgin, and John the Baptist donated by Charlemagne, anchored the status of Aachen as a multivalent holy site.

The growing cult gave rise, beginning in the fourteenth century, to the city's prominence as a pilgrimage site, the goal of the *Aachenfahrt* (pilgrimage to Aachen). The numerous chapels attached to the perimeter of Charlemagne's building—the *Matthiaskapelle* (first quarter of the fourteenth century); the *Annakapelle* (thirteenth and fourteenth centuries); the *Karlskapelle* (1455–1474); the *Nikolaskapelle* (second half of the fifteenth century); and the vast choir (1355–1414)—together with additions to the chapels treasury, bear testimony to the changing yet persistently central importance of Aachen in the Middle Ages.

Abrogans

Preserved in three manuscripts, this Latin—Old High German glossary is "the oldest German book," the first German-Latin bilingual dictionary and the first German dictionary of any kind. The eighth-century manuscript from St. Gall includes the OHG Lord's Prayer and Creed (written by a different scribe), and also contains a significant source for the Latin *Abrogans*, the *Abavus maior* glossary. Some 3,670 Old High German glosses (circa 14,700 attestations) of an alphabetical Latin thesaurus of obscure biblical terms were compiled from various older Latin, largely patristic glossaries (see heading: *Incipiunt closas ex novo et veteris testamenti*, "Here begin glosses from the New and Old Testament"). Manuscript K (St. Gall) is a late-eighth-century copy from the southwestern German-speaking area, perhaps Murbach; Pa was copied circa 810 in Murbach; Ra represents an early ninth-century copy from Reichenau. K and Ra are copies made from the same version. The original *Abrogans deutsch* is perhaps from the mid-eighth century. The manuscripts show Irish/Anglo-Saxon scribal influence, corresponding to the introduction of glossaries to Germany by English missionaries.

Abrogans is an alphabetical listing by Latin headword [L], followed by Latin synonym(s) [S], each with Old High German translation [T]. Beginning with the title headword (K, p. 4): *Abrogans* [L1]=*dheomodi* [T1], *humilis* [S1]=*samftmoati* [T2]; *abba* [L2]=*faterlih* [T3], *pater* [S2]=*vater* [T4]; and so on. The glosses, an invaluable source of early OHG vocabulary and grammar, are evidence of intense lexicographical labor, aimed primarily at careful Bible study. *Samanunga-uuorto*, an abridged reworking of the Latin-German glossary, appeared later.

Adam of Bremen (fl. 2nd half of the 11th c.)

Author of the *Gesta Hammaburgensis ecclesiae Pontificum* (History of the Archbishops of Hamburg-Bremen), Adam of Bremen is widely regarded as one of the finest historians of the Early Middle Ages, yet little is known about the man himself beyond the hints and allusions embedded in his history and its extensive marginalia. These suggest that Adam was born in Franconia and was probably trained in the cathedral school of either Bamberg or Würzburg. In 1066/1067 he joined the church of Bremen, having been recruited by the mercurial and ambitious Archbishop Adalbert (1043–1072), who probably saw in him a means to improve the literary reputation of his see. By 1069, Adam was in charge of the cathedral school at Bremen, appearing in a document as *magister scholarum* (master of learning). Soon thereafter, Adam began working on his *Gesta*. In his search for information on the history of his church and its privileges, he drew upon—often quite critically—a wide range of sources including Carolingian hagiography, diplomata, papal letters, and the accounts of eyewitnesses such as King Sven II Estridsen of Denmark, one of Adam's principal informants on the peoples of and Christian missions to Scandinavia. Completed just after Adalbert's death (1072), the first "edition" of the history (1075/1076) was dedicated to Adalbert's successor Liemar (1072–1101). Adam continued to revise and augment his history in marginalia until his death in the early 1080s.

In the first two of the four books comprising his work, Adam traced the history of the church of Hamburg-Bremen from its foundation in the eighth century until 1043, attentively documenting the vicissitudes of its wealth and power in the region and the role played by its bishops in the politics of the German Reich. In book 3, Adam turned to the pontificate of Bishop Adalbert and rendered a portrait of his late patron that is remarkable for its subtle portrayal of this tragic, complex man; indeed, it is recognized as a milestone in medieval biography. Having repeatedly highlighted his church's leading role in the conversion of the northern peoples to Christianity, Adam devoted the whole of book 4 to detailed descriptions of the geography, people, and customs of the Scandinavian lands as well as the progress of missionary efforts in those areas. Although perhaps intended to aid and inspire later missionaries, Adam's relatively balanced account of these non-Christian peoples makes his work a monument of medieval geographical writing and one of the most important sources of information concerning pre-Christian Scandinavia.

Generally remembered as a musician, Adam von Fulda was a remarkably versatile scholar who was respected for his poetry and historiography as well as for his musical accomplishments. He was probably born in Fulda around 1445 and was a member of the Benedictine order at Vormbach until his marriage in 1490. In that year he went to work for Frederick the Wise, Elector of Saxony, entering court service at Torgau as a singer. In 1492 Frederick appointed him court historiographer, suggesting that he compile a history of the Saxons. By 1498 he was in charge of musical activities at Frederick's court. In 1502 he was appointed professor of music at Wittenberg University, a post he held until his death from the plague in 1505.

His music theory treatise *De musica*, the work for which he is best remembered, dates from his years at Vormbach; it was completed the year he left the order. The four parts of this work deal with music in general, the modes and their application in composition, musical meter and notation, and musical intervals. While Adam's rules for composition may be regarded today as vague and general, they are nevertheless a competent codification of contemporary practice. Noteworthy is his attack on those responsible for the damage done to music by instrumentation of vocal compositions and inaccurate musical notation.

Most of Adam's surviving music is liturgical, including seven hymns, one mass, a magnificat, two antiphons, and a respond. The compositional style of these works owes less to the composer's contemporaries such as Josquin des Prez and more to the Burgundian composers of the preceding generation, principally Guillaume Dufay, whom Adam regarded as a composer worthy of imitation. Yet Adam was most highly regarded in his time for his secular songs, three of which have survived: "Ach Jupiter" (Oh, Jupiter), "Apollo aller Kunst" (Apollo of all art), and "Ach hülf mich leyd" (Oh, help me sorrow), the last of which the Swiss music theorist Heinrich Loris (Henricus Glareanus, 1488–1563) recommended as a skillfully composed and justly famous work. Indeed, in addition to appearing in the *Dodecachordon* (Basel, 1547) with a sacred text added by Loris himself, versions of the song are found in many other musical collections of the time, such as in a songbook from Aachen and in transcription for keyboard in two collections from Poland.

Adam's publications outside of music include a collection of religious poetry compiled by Wolf Cyklops of Zwickau. This volume, published by Symphorian Reinhart in 1512 and known for its eight woodcuts by Lucas Cranach, was dedicated to Duke John of Saxony, brother of Frederick the Wise. Johannes Heidenberg (Johannes Trithemius, 1462–1516), abbot of Würzburg, used Adam's unfinished history of the Saxons in his own historical writings, but he attributes Adam's contributions to a fictitious eleventh-century monk, Megenfrid of Fulda.

Adelheid of Burgundy (ca. 931-December 16/17, 999)

Holy Roman Empress and saint, Adelheid (Adelaide) of Burgundy (Adelheid von Burgund) was the daughter of Rudolf II of Burgundy (r. 912–937) and Bertha of Swabia (d. 960). In 937 Adelheid was betrothed to Lothar of Italy, marrying him in 947. After Lothar's death in 950, Berengar II of Irea seized the throne and in April 951 Adelheid was incarcerated; she escaped in August. Her plight came to the attention of the German king Otto I, who traveled to Italy in September 951; they were married in October. Between 952 and 955 Adelheid had four children: Henry and Brun, both of whom died in childhood, and Mathilda and Otto. Adelheid was politically active during Otto's reign, but after his death in 973, she retired to Italy when her relationship with her son Otto II and his Byzantine wife Theophanu deteriorated,

After Otto II's death in 983, Theophanu's assumption of the regency for Otto III restricted Adelheid's influence. But Theophanu died in 991 and Adelheid continued the regency to 995. Adelheid spent her remaining years at the monastery of Selz, her foundation in Alsace. She died at Selz on the night of December 16/17, 999.

Adelheid was called "Companion of Kings" (*consors regni*); Pope Sylvester II called her "Mother of Kingdoms." Abbot Odilo of Cluny wrote her epitaph and Pope Urban II canonized her in 1097. No descriptions or personal letters exist, but the memorial book of the Ottonians contains the dates April 20, 950 and August 20, 950 with the details of Adelheid's imprisonment. These incidents defined Adelheid's personality, and it was through these deeds that she wished to be remembered.

Admonitio Generalis

The *Admonitio Generalis* (General Admonition) is the capitulary, or collection of ordinances, issued by Charlemagne in 789 that most clearly states the educational and religious goals and ideals of the great Frankish king and that also laid the foundation for the Carolingian renaissance. Consisting of eighty-two chapters (fifty-nine of which borrowed extensively from the eighth-century canon law collection *Dionysio-Hadriana*), the *Admonitio* reveals the level of cultural sophistication achieved at Charlemagne's court and the greater goals the court sought to reach. In this capitulary, Charlemagne asserted his understanding that he was a new Josiah with the responsibility to rule over God's new chosen people and the duty to reform their moral and spiritual lives so that they could achieve salvation. To accomplish this goal, and to create "peace, concord, and unanimity" among the Christian people, the *Admonitio* contains legislation concerning the moral reform and discipline of the priesthood. The capitulary emphasizes the responsibility of the priesthood to preach "rightly and honestly" and to avoid innovation and teachings contrary to the canons. Priests are expected to live moral lives, to teach their flocks to follow their example, and to be guided in the performance of their duties by the bishops. Chapter 72 of the *Admonitio* asserts the responsibility of the bishops and monks to establish schools to teach boys to read and write and to correct books important to the faith. The *Admonitio Generalis* established the religious reform program of Charlemagne's reign and, with the *Epistola de litteris colendis*, the revival of learning associated with his broader reform program.

Admont

In 1074 Archbishop Gebhard of Salzburg founded a Benedictine monastery in Styria with monks from the monastery of St. Peter at Salzburg. Gebhard, who presented the foundation books, vestments, chalices, and other liturgical necessities, was buried there. Among the manuscripts he gave Admont are an eleventh-century Italian giant Bible (Admont manuscripts C/D) and a gospel book (manuscript no. 511). The latter was made in Salzburg in the late eleventh century and is decorated with architecturally framed portraits of the gospel writers on gold grounds.

Admont's scholarly life and scriptorium were very active in the Romanesque period. It produced manuscripts of intellectual vigor, some of them illuminated. The fact that some of these were signed by women is a reminder that Admont also housed a group of nuns. Their conventual buildings and the abbey church were both dedicated in 1121.

The Admont Bible, a giant Bible made in Salzburg circa 1140–1150 (now Vienna, Österreichische Nationalbibliothek, no. Cod. Series nova 2701–2702), was owned by the monastery from the fourteenth century until 1937. This important Bible, known for its numerous framed miniatures, also contains many historiated and decorated initials. Much of its iconography and the modeling of its faces derive from Byzantine models, which is characteristic of Salzburg painting of the twelfth century.

The contents of the library, including around 1,100 manuscripts, are all that are left of the medieval monastery after the fire of 1865.

Adolf of Nassau (1250–July 2, 1298)

The son of Count Walram II of Nassau, Adolf was the German King from 1292 to 1298. Born in 1250, he married Imagina of Limburg and acquired a reputation as a warrior early on. His brief rise to prominence came about following the failure of King Rudolf I of Habsburg to win over King Wenceslas II of Bohemia to the election of Rudolf's son, Duke Albert of Austria, as successor to the throne at a diet held at Frankfurt in 1291, just weeks before his death. Duke Albert of Saxony and probably also Margrave Otto of Brandenburg gave their votes to Bohemia at Zittau for a sum of money. This coalition was broken up by Archbishop Siegfried of Cologne, who supported Count Adolf of Nassau, to whom he had been obligated since the battle of Worringen in 1288. Archbishop Siegfried in turn persuaded Archbishop Gerhard II of Mainz to join him. Adolf was elected in the Dominican church at Frankfurt on May 5, 1292 with the votes of Mainz (voting also for Bohemia), Cologne, Saxony, and perhaps also Brandenburg. Pfalzgrave (Count Palatine) Ludwig II was alone in supporting the candidacy of Albert of Austria.

Adolf's election was in part a reaction against the pro-French policy of the Habsburgs, but it was also due to the fact that Adolf was territorially weak and thus posed no threat to the great princes of the empire. Rudolf, too, had begun his reign as a weak king, but the acquisition of Austria had made him one of the most powerful princes in the empire, and a king with an extensive power base was not to their liking. Prior to his coronation on June 24, 1292, Adolf had capitulated to exorbitant demands by the electors which pushed his modest resources to the limit: Cologne was promised 25,000 marks, with several Nassau fortresses taken as security; he was also obligated to hand over various lands, including some fortresses which did not even belong to him; Wenceslas II of Bohemia apparently received the promise that Adolf's son Rupert would marry Agnes of Bohemia, and that until the marriage, imperial lands in Pleißen (around Altenburg) and Eger would be held as security; Archbishop Gerhard of Mainz insisted that Adolf assume his debts incurred with the curia at his (Gerhard's) election, and that Landgrave (territorial ruler) Henry of Hesse be elevated to the status of an imperial prince; Archbishop Bohemund of Trier made rather modest demands.

Adolf's policy thereafter was dictated by the need to relieve his staggering financial burdens, while at the same time securing a better territorial basis for his monarchy. In 1293 he bought the *Landgrafschaft* (provincial ducal property) of Thuringia (in some sources also Meißen) from the always-needy Albert the Entarteter, Landgrave of Thuringia for 11,000–12,000 marks of silver. While this increased Adolf's debt substantially, it gave him a significant territorial base, something he had previously lacked. Adolf's presence in Thuringia was perceived as a threat to the archbishop of Mainz, however, whose church had extensive holdings there also. The king's position vis-à-vis the princes took an even bolder upturn in June 1294 when Edward I of England offered an alliance against France which included a £25,000 subsidy. Backed with such resources, Adolf made a move to actually take possession of his Thuringian and other middle-Germany lands from the landgrave's disinherited sons, Frederick the Dauntless and Dietzmann (Dietrich).

Adolf's growing power so close to Bohemia eventually drove King Wenceslas into the camp of his former archrival, Duke Albert of Austria. Criticism of Adolf was voiced in 1297 while Archbishop Gerhard was in Prague to conduct the belated consecration of Wenceslas as king. By February 1298 Brandenburg and Saxony had joined the conspiracy as well: they had persuaded Duke Albert to bring his army to the Rhine and attack Adolf, following which they would declare the latter deposed and Albert his successor. The plot unfolded almost as scripted: while Albert busied Adolf with his army on the Upper Rhine, Archbishop Gerhard of Mainz, who had been excommunicated by the pope, set about to orchestrate the deposition; this action took place on June 23, 1298 with five of the seven electoral votes.

Adolf tried to reclaim in battle what he had lost through the electors' treachery: he fell at Göllheim, near Worms, on July 2, 1298, and was buried at the monastery Rosenthal. He was remembered in two long, contemporary poems.

One of the earliest and most important humanists of the Low Countries, Agricola was multitalented and had a great influence on the development of northern humanism.

He was born in 1443/1444 in Baflo near Groningen, studied medieval liberal arts in Erfurt (B.A. 1458) and Louvain (M.A. 1465), and law during his stay at Pavia (1468/1469–1475, with several interruptions). In Pavia he also became influenced by Italian humanists. In 1484 he lectured on Pliny the Younger at Heidelberg, where he died October 27, 1485.

Agricola was not a prolific writer; his oeuvre is rather limited and heterogeneous. It includes a treatise on the art of dialectical invention entitled *De inventione dialectica*, and a number of Latin poems, letters, and orations, most of which are available only in manuscripts and early printed editions.

In *De inventione dialectica*, completed in 1479 and considered to be his main work, Agricola puts forward a theory for finding arguments and for developing and structuring reasoning. In opposition to the medieval tradition, it combines dialectics and rhetoric. The work has a practical, not a theoretical, orientation and examines and uncovers the laws of speech and argumentation. It teaches how to use language correctly and persuasively, in literature, politics, preaching, science, and so on. The book became very popular in the sixteenth century and was issued in a large number of editions.

Also known as "Albert the Great" and "Universal Doctor," Albertus Magnus was a Dominican theologian, philosopher, scientist, and saint. One of the most famous medieval precursors of modern science and best known today as the teacher of Thomas Aquinas, Albert was renowned in his own day for his encyclopedic knowledge, his voluminous writings, and his interpretive rendering of Arabic Aristotelian sources into Latin. In part due to spurious works given his name, he gained further repute after his death and into the Renaissance as a magician and alchemist. Albert introduced his own sort of Aristotelian scholasticism to the Dominican houses of study he founded in Germany, and Albertist Aristotelianism became one strain of the scholastic *via antiqua* (old path) that endured in German universities.

Born in Lauingen, Bavaria, Albert first studied at Padua, joined the Dominicans in 1223, and went to Cologne to study theology. He moved to Paris (1241) to complete his master in theology (1245), and was the first German to hold a chair of theology there. He lectured at Paris until returning to Cologne (1248) to found the Dominican precursor to the university, *studium generale*. Thomas Aquinas, Ulrich of Strassburg, and Giles of Lessines were among his students during these years. Made provincial of German Dominicans (1254), Albert acted as arbiter in many difficult ecclesial and political disputes, one of which led to his being made bishop of Regensburg briefly in the 1260s. Sent to all Germany by Pope Urban IV to preach the Crusade in 1263–1264, he thereafter resided mostly in Cologne, although he traveled on foot continuously throughout Germany, as well as to France and to Italy. Albert preached, taught theology, and wrote continuously from the 1230s until just before his death in 1280.

In Paris in the 1240s he wrote his *Summa de creaturis* (Book of the Creatures) and commented on Peter Lombard's *Sentences*. Already making extensive use of Arabic and Greek Aristotelianism, Albert greeted the newly available Aristotle materials with enthusiasm. He decided to present the whole of human knowledge as found in Aristotle and his Arabic commentators to the Latin West and to correct or add to Aristotelian thinking by means of knowledge that had not been available to Aristotle. This monumental project of paraphrase and explanation took two decades and included mathematics, logic, natural philosophy and science—including botany, mineralogy, biology, and zoology—as well as ethics, politics, and metaphysics. Because of the suspicion cast on Aristotle by theological traditionalists, Albert's project amounted to a defense of philosophy and reason in its own right.

These commentaries, because of the nature of his sources, manifest the modified view of Aristotle in Neoplatonic commentators that was also adopted by Arabic Aristotelians such as Avicenna (Ibn Sina) and Averroës (Ibn Rushd). Albert generally adopted Aristotle's views of the physical world and repudiated what he believed were mistaken interpretations of Aristotle on such matters, while indicating where he himself thought the Stagirite incorrect. But Albert's view of what transcends the physical universe reflects the Christian Neoplatonic (and Augustinian) Aristotelianism that was the dominant view among later scholastics. In contrast, Aquinas's ideas, while arguably closer to Aristotle himself, were a minority view in the late Middle Ages.

A careful observer of natural phenomena, Albert often incorporated his own experience to correct and supplement his sources in his writings about the natural world. His discussion of place and time follows that of Avicenna, but with his own emphases: only two dimensions, length and width, are essential to place, while time's matter is the uninterrupted flow of indivisible nows, and its form is number. In logic Albert gave classic expression to the medieval doctrine of three types or modes of being of universals (*ante rem*: in divine thought; *in re*: in natural things; *post rem*: in human thought); this doctrine subordinated logic to metaphysics.

Albert elaborated on his own metaphysical ideas in *De causis et processu universitatis* (The Causes and Development of the Universe) during the 1260s when he was completing his commentary on Aristotle's *Metaphysics*. In this original synthesis he adopts Aristotle's cosmology and accepts the system of Intelligences governing the spheres (while denying that they are angels). But Albert modifies Avicenna's emanation doctrine so that it becomes primarily a causality of higher *attracting* lower rather than overflowing or emanating into lower. Within this concept, the first principles goodness calls and brings together all the forms found inchoate in matter, calling them to resemble the first. This Neoplatonism thus completes a metaphysics of being with a natural theology of the cause of being—the one or good found in *The Book of Causes* (by the Greek philosopher Proclus, ca. 410–485) and Pseudo-Dionysius, an early theologian, Linking the physical universe with the spiritual is the function of intellect. Albert's psychology criticized the view that there was only one intellect for all human beings. Yet he also attempted to harmonize Averroës's ideas about the intellect with his own commitment to the nobility and immortality of the human soul, leaving the unity of soul and body at best ambiguous. For Albert the process of abstraction is not merely from experienced particulars, but the result of a complex illumination (and use) of the human soul by the Intelligences en route to making everything one in God. That divine first cause thereby provides the object of his ethical ideal of the contemplative or speculative life as surpassing all others. This ideal entails what Albert calls the acquisition of intellect (*intellectus adeptus*), where the separate agent intellect becomes the form of the soul, producing a state of happiness or contemplative wisdom that consists in contemplation of the separated beings. It rewards philosophical effort that progressively detaches the soul from the world of perceptual experience and aims at acquisition of intellect, thus dovetailing nicely with Albert's religious beliefs and mystical leanings. For him theology based on religious faith is not merely speculative but also affective, however intellectual. All of his theological writings and commentaries concentrate on the reality of God, not just on ideas about him. For Albert there is no knowledge of the ultimate mystery that is not at once transformative of the knowers mind and heart and life.

[Cologne, History](#)

A contemporary of the Middle High German poets Heinrich von Morungen and Reinmar der Alte, Albrecht von Johansdorf wrote *Minnesang* (courtly love poetry) and Crusade lyric around 1200 in southern Germany. Documents show record of a certain Albertus de Janestorf, who served as a *ministerial* (cleric) of the bishop of Passau from approximately 1180 or 1185 to 1209.

Albrecht is known primarily as an author of *Minnelieder* (courtly love songs). Thirteen of his poems appear in the collection *Minnesangs Frühling* (Springtime of Minnesang, henceforth MF). His preference for long lines in his verse indicate that he had a thorough knowledge of the older form of *Minnesang* that had originated in the Danube region of Bavaria earlier in the twelfth century. However, Albrecht's own style of verse is entirely modern and surpasses even Frederick von Hausen in its use of the canzone stanza. In his poems, Albrecht favors the dialogue structure known as the *Wechsel* (exchange), in which the man and the woman speak in alternating strophes. This form recalls the typical dialogue of a Provençal *tenzone* but at the same time changes the traditional structure to reflect a courtly conversation between a knight and his lady; we no longer see a quarrel or debate. In these discussions, the emphasis is on the moral improvement of the knight through service to the lady. The lady is, however, spiritually involved in this process and she is an integral part of it.

Albrecht seems to have suffered a bit in his reputation as a poet of *Minnelieder*, mainly because of a dichotomy that some scholars have perceived in his work between love poetry and Crusade poetry, between the desire for the love of a lady and the love of God. The poem MF 87 illustrates this conflict in lines 13–18. As the lady gazes upon the Crusader's cross of her lover, she cannot help but wonder how he will manage both "*vam über mer und iedoch wesen hie*" (to travel across the sea and yet be here). Hugo Bekker postulates that this conflict may show that the lady's qualities are not necessarily reflections of divine attributes but that their influence may be confined to the temporal earthly plane alone. Thus we are perhaps dealing "not with *hohe Minne* [high or courtly love] but with the early budding of what we may conventionally call romantic love" (Bekker 1978, 97). In an effort to offer new criteria for reevaluating Albrecht's reputation as a poet of *Minnesang*, Bekker suggests that perhaps the concept of *hohe Minne* may not be the best standard by which to gauge the value of Albrecht's work. In Albrecht's ability to understand the conflict between *minne* and God in a more evenhanded fashion, using MF 91, lines 22–28 as an example, de Boor sees a precursor of the more equitable relationship that Walther von der Vogelweide describes as *ebene Minne* (even or equal love).

By general scholarly consensus, however, Albrecht's five Crusade poems mark an artistic high point for this genre in German medieval poetry. As Albrecht seeks to unite the call of God and the love of the lady under the common goal of service in the Crusade lyric, these poems may remain his most enduring legacy. Albrecht attempts to strike an equitable balance between the religious commitment of the Crusade and courtly service to ladies by offering the idea that courtly love has a component of higher moral (or even of religious) value. In resolving the opposition of Crusade and love (or *minne*), in allowing God and the lady to coexist in the same loving human heart, Albrecht von Johansdorf manages to transform the conflicts depicted in the works of his contemporaries Frederick von Hausen and Hartmann von Aue.

Albrecht von Kemenaten (fl. ca. 1230–1240)

Possibly a member of a Swabian ministerial family located near modern-day Gross-Kemnat, Albrecht names himself in the fragmentary Dietrich epic *Goldemar* (Strophe 2, line 2), preserved in a fourteenth-century Swabian manuscript. References to him in other sources suggest that he wrote ca. 1230–1240.

Only a bit more than the first nine strophes of *Goldemar* remain, but the formal elegance of its thirteen-line stanza (*Bernerton-* or *Eckenstrophe*) and its adaptation of heroic material in reaction to courtly literature are seen in other epics in which the medieval popular hero Dietrich von Bern, named after Theodoric the Great, the fifth century king of the Ostrogoths, plays a central role. Critics at first attributed *Eckenlied*, *Sigenot*, and *Virginal*, other Dietrich epics in *Bernerton*, to Albrecht. More recent studies of differences in dialect, transmission, and attitudes toward courtly customs have disproved this hypothesis.

All of the Dietrich epics in *Bernerton* depict Dietrich in conflict with dwarfs, giants, and dragons, unwilling to fight without serious reason, and, although naturally virtuous, unaware of the meaning of love and chivalry. To distinguish them from another, more serious group, usually called the "historical" Dietrich epics (see [Alpharts Tod](#)), these and other Dietrich epics in which he is motivated in a chivalric cause are called *aventiurehaft* (like a knightly quest).

Goldemar is an exception with regard to love: Dietrich falls in love with a maiden he sees in the company of Goldemar, the dwarf king. A reference in the prose supplement to the first printed version of the *Heldenbuch* (a collection of heroic tales printed after 1480) informs readers that Goldemar had abducted the maiden, Hertlin, daughter of the king of Portugal. Dietrich defeated Goldemar, rescued Hertlin, and took her as his first wife before Herrat (Heinzle 1981, 4r). Another reference in *Reinfried von Braunschweig* (an anonymous Middle High German verse romance, ca. 1300) says that Dietrich's relatives the Wülfinge helped him, and giants fought on Goldemar's side.

Albrecht von Scharfenberg (fl. late 13th c.)

This Middle High German poet was named by the fifteenth-century writer Ulrich Füetrer as one of the greatest German poets, and revealed by him as the author of two otherwise unknown courtly romances, "Seifrid de Ardemont" and "Merlin." Albrecht was long considered identical with Wolfram von Eschenbach, since throughout most of his lengthy work, *Der jüngere Titurel* (the Later Titurel), he masqueraded as Wolfram, author of the *Titurel* fragments, finally naming himself, Albrecht, in stanza 5883. Seven stanzas inserted at two earlier points in the text (the so-called *Hinweisstrophen*, or reference stanzas), also claim that Wolfram is not the author, although without naming Albrecht. The *Jüngerer Titurel* has been dated ca. 1270–1275 through textual evidence and a fragmentary dedication poem (the *Verfasserfragment*, or author fragment). Albrecht, perhaps born in Bavaria and active to the north (in Thuringia?), has not been further identified.

From the later Middle Ages until well into the nineteenth century, *Der jüngere Titurel* was highly esteemed, considered by many to be Wolfram's greatest work. Its reputation faltered after 1829 when the scholar Karl Lachmann declared it tedious and not by Wolfram, but its standing recovered in the late twentieth century. There are eleven complete manuscripts and nearly fifty fragments extant; an incunabulum version was printed in Strasbourg in 1477.

The complex plot of the *Jüngerer Titurel* revolves around a love story based on the fragmentary account of Sigune and Tschionatulander found in Wolfram's *Parzival* and *Titurel*. Their tragic tale becomes part of a moralizing saga with a worldwide sweep encompassing an enormous cast of characters, the Christian West and the heathen East, Arthur's court and the Grail kingdom—the entire story subordinated to a didactic message of Christian virtue. The verse form is a refined version of Wolfram's *Titurel* stanza.

Leading scholar and adviser in the court of Charlemagne and architect of the Carolingian renaissance, Alcuin and his fellow intellectuals eagerly promoted and perhaps engineered Charlemagne's imperial coronation. Alcuin envisioned Charlemagne leading a Christian empire in the manner of Plato's philosopher-king. Although reality fell short of this dream, Alcuin's vision lived on as an ideal toward which all later medieval rulers continued to strive.

Arriving in Aachen from York in the 780s at Charlemagne's invitation, Alcuin brought the vital tradition of Northumbrian scholarship to Charlemagne's court. He established himself as the head of a court school; among his students was Charlemagne himself. A lifelong educator, Alcuin used education as a means of reforming and regulating the clergy. He founded many new schools. He wrote texts on grammar and composed the first treatises on rhetoric and dialectics since Boethius. Setting up a scriptorium, Alcuin assigned an unprecedented number of scribes to the task of preserving classic and patristic manuscripts.

As a theologian, Alcuin emphasized the authority of the fathers of the church over original thought. Alcuin authored numerous commentaries on Scripture, always following in the tradition of the church fathers and carefully avoiding innovation. Nevertheless, in the very act of establishing the boundaries for discussions of doctrine, Alcuin contributed to a lasting theological framework for Christian discourse.

In 796, Alcuin became the abbot of St. Martin, near Tours. From the comfort of this prestigious and wealthy monastery, he continued to council Charlemagne and his advisers by means of a stream of steady correspondence, which the scholar maintained until his death.

Alexander Literature, Dutch

In the Low Countries various literary and historical texts about Alexander the Great were written in the vernacular in the Middle Ages. The most significant and eldest literary work is *Alexanders Geesten*, an epic poem of about 14,200 verses in rhyming couplets, composed by the important Flemish author Jacob van Maerlant around 1260. It was commissioned by a lady, most probably Aleide van Avesnes, sister of King William (Willem) II of Holland. The main source of inspiration for Maerlant was the *Alexandreis* by Walter (Gautier) of Châtillon, a Latin epic in Virgilian style, written somewhere between 1170 and 1180 for the archbishop of Reims. Like the author of his source Maerlant divided his text into ten books. He simplified the style of the flowery language of Walter and Christianized his text by eliminating mythological figures and by using Christian imagery and terminology. By portraying Alexander more as a medieval sovereign than as a classical hero, the poet made *Alexanders Geesten* seem like a work of guidance for a young prince, a so-called "mirror of princes." To his adaptation Maerlant also added an exhaustive description of the world, treatises on Babylonian Persian and Roman history, biblical history, and narratives about nature. For this addition the author consulted a further seventeen sources. The text of *Alexanders Geesten* has survived in only one complete manuscript and in four fragments. The main manuscript (Munich, Bayerische Staatsbibliothek, manuscript no. cgm. 41) is written in a language containing many dialect features used around 1400 in the Lower Rhine area between Kleve (Cleves) and Gulik.

Jacob van Maerlant again gives a detailed treatment of Alexander in his last work, *Spiegel historiael* (Mirror of History), an adaptation in Middle Dutch rhyming couplets of Vincent of Beauvais's *Speculum historiale*.

Far into the Middle Ages, Alexander continued to be popular in the Low Countries, witnessed by the fifteenth-century *Die historie van den groten Koninc Alexander* (History of the Great King Alexander). This literary work in Middle Dutch prose, a so-called *volksboek* (folk book) and first printed in 1477, is based on the section on Alexander in a fourteenth-century history Bible. Considering that the composer of this Bible used Maerlant's *Spiegel historiael* as well as his *Alexanders Geesten* for this section, the Flemish poet seems to have contributed considerably to the disclosure of Alexander's history meant for an illiterate audience.

Alexanderlied

Throughout the Middle Ages the story of Alexander the Great, based on at least five accounts by ancient authors—among which the *Historiae Alexandri Magni* written by Quintus Curtius Rufus (first century C.E.) and the prose romance by Pseudo-Callisthenes (second century B.C.E.) were most prominent—enjoyed tremendous popularity and was retold in almost all European languages. Sometime between 1150 and 1170 the *Pfaffe* (priest) Lambrecht recreated the story in Middle High German poem *Alexanderlied* on the basis of the Old French *Roman d'Alexandre* composed by Alberic of Bisinzo, which has come down to us in only 105 verses. Lambrecht's poem (*The Song of Alexander*) has survived only in the famous *Vorau Sammelhandschrift* (manuscript no. 276) from the second half of the twelfth century, where it was copied down between material from the Old Testament (*Jüngere Judith*) and the New Testament (Frau Ava's *Leben Jesu*) and obviously served as a historical-fictional document to support the biblical statements.

Little is known about Lambrecht except that he was well versed in Latin and French and composed a fragmentary sermon-like legend, *Tobias*, derived from the eponymous biblical book. On the basis of his language we may assume that he came from the Moselle region, probably from Trier, but he seems to have composed his works in Cologne. From allusions in the text we know that Lambrecht was familiar with Germanic heroic poetry and Homer's *Iliad*. Lambrecht's *Alexander* was further developed sometime in the 1170s by an anonymous poet and copied in a Strasbourg manuscript which was lost to fire in 1870.

The *Vorau Alexander* comprises 1,533 verses and describes the life of Alexander the Great from his childhood to his first major military successes, concluding, against historical fact, with the death of the Persian king Darius at the hands of Alexander in their first battle. In his prologue Lambrecht emphasizes the transitory nature of this world and presents Alexander as an example of the vainglory of secular fame and wealth. However, despite explicit criticism of Alexander's greed for ever new conquests, the text is dominated by a profound admiration for the Greek ruler and his military accomplishments. In contrast to the later *Alexander* versions, the *Vorau Alexander* does not dwell on the miraculous events and observations pertaining to the world of the East, which Alexander conquered. Instead Lambrecht emphasizes the impact of Alexander's six teachers, among them Aristotle, and invests much energy in the descriptions of the ferocious siege of Tyre. The poet characterizes Alexander as *wunderliche* (v. 45), that is, as impressive and amazing, but refrains from highlighting his intellectual curiosity and desire to explore the unknown world, so typical of the later versions.

Scholarship is divided over the question of whether the fragmentary ending was intended or not. Lambrecht refrained from extrapolating his French source and perceived his role to be more that of a historian who weighs the validity and truthfulness of the various sources available to him. Alexander's heathenness explains why he destroyed Jerusalem and Bethlehem, among other holy sites in Palestine, and the poet contrasts him negatively with King Solomon (v. 25ff.), pointing out the Greek ruler's vengefulness and cruelty.

The protagonist's main quest, to fight against Darius, rests in the latter's request for tribute payments to him as a sign of the Greeks' submission under the Persian rule (v. 82f.). Alexander battles for his personal honor and glory and does not allow any religious arguments to influence his thinking. Ultimately, the poem's main purpose emerges to be a warning against *vanitas* (vanity) and of God's punishment of human sinfulness. But Alexander also serves as God's instrument in fulfilling the biblical prophecy in his destruction of the Persian empire.

Alphabet

All writing systems that use linear symbols for vowels are derived ultimately from the Greek alphabet, in which Phoenician letter names such as aleph, which were consonants in the Phoenician alphabet, were taken by the acrophonic principle (whereby the letter has the same meaning as the first sound of its name) to be vowels.

German was most frequently written in the Latin alphabet in the Middle Ages, and Otfrid has left us a treatise on the problems this created in his prefatory poem *Ad Liutpertum*. Only a few modifications were made, for example in the use of *k*, *w*, and *z*. It is to be noted that *u* and *v* and *i* and *j*, though used in the Middle Ages, did not indicate the distinction found today.

In the elementary education of the Middle Ages and throughout, the theory of the connection between the letter and the sound was that of Greek grammarians. A letter had three elements: shape (*figura*), name (*nomen*), and meaning (*potestas*, the sound or sounds it represented), with the meaning being read from the first sound of the letter name. It is thus important to investigate the letter names along with their shapes. The investigation of the shapes of the letters is the realm of paleography.

The alphabet was not as well known in the Middle Ages as it is now, and it was often thought to be great art to write so-called abecedaria or *abc* poems with each division beginning with a different letter of the alphabet. Wolfram von Eschenbach could speak of "the art of abc" (*die kunst von abece*; *Parzival*, v. 453.15) as if it were great learning. In this same passage, Wolfram mentions necromancy. The alphabet was used in the Middle Ages for magic purposes in many different ways. We also already encounter in Isidore of Seville the notion of the meaning of each letter of the alphabet, and this notion is continued and extended in later works, so that, for example, Q was considered the "shameful letter" (*suntleick oder schentleick leben*). Alphabetization was thought to be a great art, and where used is quite often not strict, so that *ab* may appear after *at*, for example.

The alphabet was also used for "secret" writing by use of various codes. In literature, we find names imbedded within the lines, as in *Tristan*, as well as acrostic (whereby the first letters of a line or verse spell a name) and *teleosticha* (in which the final letters of a line or verse spell a name). The opening verses of Otfrid's *Evangelienbuch* offer the best known example, employing both. The letters of a word are often taken to form an acronym for the etymology; e.g., *Devs* (God) is said to have the etymology *dans eternam vitam suis*, "He Who grants eternal life to His people." Play with the alphabet was not uncommon, especially in the case of names, so that we find anagrams, reversals, and so on. Most of the secret writings are simple substitution codes, but some have resisted all attempts at decipherment even until today, as is the case of the famous Bacon Cipher (Voynich Manuscript), a text in Latin script attributed to Roger Bacon. Monograms are also found, some quite elaborate.

Other alphabets were used for the writing of German, most notably runes and the Hebrew alphabet. There is a sizable literature in German in Hebrew script, beginning with the Old High German lullaby (*Schlummerlied*). Of course, works in Early Yiddish, such as the early sixteenth-century *Bovobukh* (Buovo d'Ancona Book) of Elija Levita, are written in Hebrew script. Much work is left to be done in editing and deciphering such works, and their attribution is much disputed.

Alpharts Tod

This fragmentary narrative is composed as a sequel and response to *Buch von Bern* (also called *Dietrichs Flucht*) and *Rabenschlacht*; all three narratives are usually classified as "historical" Dietrich epics, or heroic narratives featuring Theodoric (Dietrich von Bern), fifth-century king of the Ostrogoths. The names of some of the characters reflect those of historical figures from the period of the Germanic migrations, but narrative events, assimilated to traditional story patterns or schemata, are literary, not historical. On the other hand, the three narratives reflect political realities of the thirteenth century more directly than do the episodic, or *aventurehafte* Dietrich epics (see [Albrecht von Kemenaten](#)). *Alpharts Tod* is preserved on thirty-three leaves of a fifteenth-century Hanau manuscript that once also contained Johann von Würzburg's *Wilhelm von Österreich* and the epic *Nibelungenlied*. Manuscript evidence shows that *Alphart* once covered forty-six leaves, of which leaves 1, 18, and 23–34 are now missing. Of its 469 four-line strophes 236 are Nibelungen strophes, 231 are in the verse form known as *Hildebrandston*. Its dialect is West Central German, but linguistic and literary evidence indicates that it was based on a mid- to late-thirteenth-century Alemannic version.

The plot of *Alpharte Tod* is easily summarized. Kaiser Ementrich, Dietrich's uncle, has declared war against him to force Dietrich to receive land from him in fief. He sends Hen, Dietrich's former vassal, to bring Dietrich this information.

Young Alphart, Dietrich's man, insists upon standing watch alone. Alphart's uncle Hylbrand, who has brought him up as his own son, fights a duel with him to prevent him from doing so. Alphart wins.

On watch, Alphart defeats, one by one, an eighty-man detachment sent by Ementrich. Ementrich, desperate, forces Wytdich, also a former vassal of Dietrich's, to duel with Alphart. Alphart is close to victory when Hen comes to Wytdich's aid. Fighting unethically, two against one, and also breaking their oath as former vassals not to fight against Dietrich, they kill Alphart. (Lacuna, or gap, between leaf 23–34.)

Hylbrand obtains help from nobles living at Breisach. To avenge Alphart's death and to defend Bern, Dietrich and his men engage in battle. They win, but Ementrich, Wytdich, and Hen escape to Ravenna. Dietrich laments for his men and rewards the survivors. There is a great feast at Bern, whereupon the Breisach nobles return home.

Paralleling similar developments in the French historical tales known as *chansons de geste*, *Alphart* was composed to solidify the tendency toward the formation of a Dietrich cycle (represented by *Buch von Bern* and *Rabenschlacht*), by depicting the beginning of the feud between Dietrich and Ementrich. All three narratives were inspired by the *Nibelungenlied*, in which Dietrich is depicted as an exile who loses his men. *Alphart's* plot somewhat resembles that of the *Chanson de Roland* (Song of Roland), either because of literary influence or because both epics are composed according to schemata common to heroic narrative. As a late addition to the Dietrich story, *Alphart* documents the fact that a productive, heroic, narrative tradition survived in Germany until late in the Middle Ages.

Anegenge

Das Anegenge (The Beginning) is an anonymous poem of 3,242 lines in the southern Bavarian dialect of Middle High German, from the last quarter of the twelfth century. Its author expounds some of the theological questions that arise from the story of the Creation up through the Flood (Genesis 1–9). Although there are long passages of narrative based on the Bible, *Das Anegenge* is not a biblical epic, strictly speaking. In its often discursive and analytical approach to questions of dogma, the poem is unique in the German vernacular religious literature of the twelfth century. Like most of these works, it contains pastoral elements, including direct admonishment of the audience, but the author, a priest or monk, is not content with conveying basic doctrine or ethics in poetic form. He is intellectually far more ambitious, however much one might fault his execution.

Following a conventional opening prayer asking for God's guidance, the author warns his lay audience not to try to penetrate God's mysteries too deeply lest they drown themselves in their effort. The author then announces the themes for which he will provide guidance: (1) God's mode of existence before the Creation, (2) the Trinity, (3) God's prescience of Lucifer's fall and (4) that of Adam and Eve, (5) the Incarnation, and (6) the fate of unbaptized children. There is much repetition and overlap. The author typically states his position, then dismisses contrary views by citing authorities, or by providing arguments based on reason, or by constructing skillful allegories. To call this method "scholastic" would be to reach too high. As a document of laypeople's theological sophistication, however, the work provides fascinating witness.

[Bible](#)

Middle Ages texts about animals can be divided into three genres. The first, natural history, aims at passing on to the audience "real knowledge" about animals, often in the form of the so-called book of beasts (Latin *bestiarium*). In the second, the fable, animals are often the main characters in a short moralistic tale that focuses on an aspect of human behavior. The third, the animal epic, has the same moralizing function as the fable, but it is usually a story in which animal characters act in a longer and more complex narrative. In all three of these genres the animal is described with respect to its meaning for man.

The genre of the natural history, belonging to the *artes*-literature (liberal arts), ultimately goes back to the Greek book of animals *Physiologus* and the works of Pliny the Elder (d. 79). A fine representative in Middle Dutch is *Der naturen bloeme* (The Flowers of Nature, ca. 1266), an adaptation of Thomas of Cantimpré's *Liber de natura rerum* (The Book of Nature's Things) by the Flemish poet Jacob van Maerlant. This highly organized "encyclopedia" combines empirical knowledge (though fantasy has its part in it) of Aristotelian background with frequent moralizing apostrophes in which the world of the animals is used as a source of social knowledge. Another example is the translation of Richard de Fournival's *Bestiaire d'amour* (Fables of Love, 1245–1260), in which the behavior of animals from the older stories is compared with the experiences and lamentations of the rejected lover. This translation, in the dialect of the Lower Rhine area, is preserved in a richly illuminated manuscript and was made by an anonymous translator, probably commissioned by count Reinoud I van Gelre (d. 1326).

The fable is also an inheritance of antiquity. Seminal for the genre is the collection of the semilegendary Aesop(us) (Greece, 6th c. B.C.E.), but before him exemplary tales with animals as protagonists must have been circulating in India, Egypt, and Mesopotamia. The most famous collection of fables in Middle Dutch is the *Esopet* (sixty-seven of Aesop's fables), translated from Latin in the thirteenth century (perhaps in Flanders).

A tributary to the fable, but of a different form and nature, is the animal epic. With respect to the form—a large-scale narrative with complex intrigue—it is related to chivalric literature. Animals are the leading characters, as in the fable, and the didactic element is very important. But the didactics are combined with satire, the world of the animal very often being a derisive imitation of human society. Instrumental in this imitation is the fact that the animals use language, a feature which classifies the animal epic as fiction (*fabula*) in the eyes of the medieval audience. In the *Speculum stultorum* (The Fools' Mirror, 1179/1180) by Nigellus de Longo Campo, the ass Burnellus is the main character, a role usually reserved in European animal epic for the wolf and the fox.

The first animal epic of the Low Countries is in Latin, the *Ysengrimus*. This poem of 6,574 lines was written in Gent (1148–1149) by an author that has a different name in every preserved manuscript: Nivardus, Balduinus Cecus, or Bernardus. It is likely that he belonged to the clergy, but otherwise nothing is known about him. The *Ysengrimus* in itself is not entirely original, drawing from the Aesopian fable and the Latin *Ecbasis captivi* (11th c.), and was in its turn a major source for the Old French *Roman de Renart*.

From the *Roman de Renart* the first branch, *Li Plaid* (after 1173), was the most important source of the Middle Dutch *Van den vos Reynaerde*, a beautiful poem in coupled rhyme (3,468 lines), by the otherwise unknown Flemish poet Willem. He used other parts of the *Roman de Renart* as additional sources, but managed to mould this material into a flawless animal epic that defies the notion of "adaptation." The dating is uncertain, but there is a consensus about 1230–1260 as being the most plausible period. Of *Van den vos Reynaerde* three complete manuscripts and fragments of four more have been preserved, one of them combining this epic with a copy of Maerlant's *Der naturen bloeme*. Another of the complete manuscripts and one of the fragments have a special place in the manuscript tradition, because they actually contain a younger, enlarged version of *Van den vos Reynaerde*, in which this text is completely incorporated.

This enlarged version, called *Reinaerts historie*, was written around 1375 by an anonymous poet and is almost twice the size of *Van den vos Reynaerde*, some 7,800 lines. The poet incorporated this text, but not altogether unaltered: he follows the intrigue of *Van den vos Reynaerde* very closely, but changed many details as a preparation for his continuation. The continuation itself is mainly based on the sixth branch of the *Roman de Renart*, entitled *Le combat judiciaire* (The Legal Battle), which the poet follows in an independent way. Of his additional sources the Middle Dutch *Esopet*, the Old French *Cléomadés* of Adenet li Roi, and works of the Latin poet Seneca should be mentioned. For a long time *Reinaerts historie* was neglected in favor of Willem's story, yet recent research has shown that it is a well-composed text in its own right, which vigorously denounces the perversion of human ethics. It is in this form that the story of Reynard the Fox became popular in Dutch and European literature. William Caxton used it as a source for his *The historye of reynard the foxe* (1481) and it was also the source for the oldest printed version in Middle Low German, the *Reynke de vos* (Lübeck 1498). Ultimately a large part of the postmedieval printed versions in many European languages—e.g., Johann Wolfgang von Goethe's *Reineke Fuchs*—can be traced back to the Middle Dutch *Reinaerts historie*.

Another descendant of *Van den vos Reynaerde* came into being shortly after the original. Not later than 1279 a certain Balduinus Iuvenis from Bruges translated and adapted the text into Latin. This *Reynardus vulpes* (1,850 lines) is the first known adaptation of a Middle Dutch text into that language.

Born to a minor noble family in Swabia, Anno II, archbishop of Cologne, became one of medieval Germany's most powerful ecclesiastics. Driven by the ambition to advance the see of Cologne during his tenure as archbishop from 1056 to 1075, Anno left a controversial legacy as saint on the one hand and manipulative power player on the other.

Anno built or renovated several of Cologne's churches, including St. Mary's ad gradus ("on the steps"), St. George, St. Mary-in-the-Capitol, St. Gereon, and Great St. Martin. He also took on political rivals, especially the aristocratic Ezzonid family. In the late 1050s, Anno persuaded Ezzo's daughter Richeza to assign a number of important family properties to Cologne. In 1060, a bitter conflict between Anno and Richeza's cousin, Count Palatine Henry, resulted in Henry's loss of the Siegburg (Southeast of Cologne), where Anno founded a monastic community. With Ezzonid power broken, Anno focused his political acumen on the affairs of the realm. The death of Emperor Henry III in 1056 quickly led to instability in the Reich. The young Henry IV was barely six years old, and the regency exercised by the empress Agnes was unpopular with the German aristocracy. In 1062, Anno took matters into his own hands by kidnapping the boyking at Kaiserswerth on the Rhine. Temporarily, Anno, as new regent, was the most powerful person in Germany. In 1064, however, Anno was called to Italy in the wake of a papal schism. Upon his return, Anno found that his rival Adalbert, archbishop of Hamburg-Bremen, had ingratiated himself with the young king. In 1065, Henry IV celebrated his coming of age, and promptly shook off whatever was left of the authority Anno had once exercised over him.

Despite his role as archchancellor of Italy and the Roman church, Anno distanced himself in the 1070s from papal reform developments south of the Alps. More important for Anno was monastic reform as a means of furthering the influence of Cologne. Monks from Anno's Siegburg foundation reformed a number of important communities in Germany. Other storms were brewing in the twilight years of Anno's pontificate. Cologne was a wealthy city with a substantial middle class, and early yearnings for urban liberty clashed with the archbishop's grip as lord of the city. In 1074, after Anno's servants impounded a merchant boat, the city rebelled. Anno locked himself in the cathedral to escape rioting burghers, and in disguise that evening fled through a hole in the city wall. The rebellion was brutally suppressed by Anno a few days later, but left a bitter memory for both city and bishop. When Anno died in 1075, he was buried in his beloved monastery on the Siegburg, where he was soon honored for his personal sanctity. His career, on the eve of the Investiture Controversy, cannot be stereotyped as either proimperial or propapal. Anno fought for the rights not of the Roman church as much as for those of his own see.

Written down circa 1077, *Das Annolied* (the Song of Anno) is one of the most fascinating works of the Early Middle High German period and second only to the *Kaiserchronik* for insights into important aspects of the medieval worldview, especially the medieval concept of historical progression (*translatio imperii*) and its allegorical interpretation. The complete work is preserved through most fortunate chance; it exists only in a very late edition by Martin Opitz (1639), and vv. 19–78 in an edition of *De literis & lingua getarum, siue, Gothorum* by Bonaventura Vulcanius (d. 1614) from 1597. Each edition appears to be based on a different manuscript—not, however, on a different redaction of the poem. The complete work consists of 878 lines contained in forty-nine strophes of unequal length.

The most pressing reason for the composition of the *Annolied* was the glorification of Anno the prince, Anno the bishop, and Anno the "good shepherd" of his Cologne flock (ca. 1010–1075, archbishop 1056–1075), no mean task, since Anno was and is an extremely controversial political figure. It is clear that Anno is being proposed as a candidate for sainthood, an event that did ultimately take place roughly one hundred years later in 1183. The skillfulness of the poet in situating Anno and in weaving the events of the bishop's life into the broad tapestry of the history of salvation and the history of the world is quite unique in early Middle High German poetry.

It is conjectured that the immediate source for the "Anno" portion of the *Annolied* (strophes 34–48) was a now-lost *Vita Annonis* (Life of Anno) by Reginhard, the abbot of Siegburg (1076–1105). A most important source for the *Vita Annonis* is the annals of Lampert, monk of Hersfeld (ca. 1078). Unfortunately the identity of the *Annolied* poet is not known, and the place and time of composition can likewise not be determined with certainty. Since Anno died in December 1075 and the text reports his death, we do at least have a terminus a quo. And although scholarly opinion is somewhat divided on these topics, in more recent scholarship consensus is nonetheless forming around the conjecture that the work was composed sometime between March 1077 and December 1081 by a monk of the reform monastery of Siegburg. The poet skillfully weaves the account of Creation, the history of the city, the progression of empires from East to West, the relationship of the Romans with the Franks, and the case for Anno's canonization into a seamless whole. In addition, we encounter, for the first time in the vernacular, an episode about the legendary feats of Alexander the Great. The anecdote involves the familiar narrative of Alexander exploring the depths of the sea in a type of ancient bathysphere. But in the *Annolied* something new is added: Alexander is betrayed by his faithless men and abandoned to die on the ocean floor. (Although occurring in later versions of the Alexander story, the motif of the faithless men is not attested in any sources up to the time of the composition of the *Annolied*.) After seeing fear-inspiring merpeople and other marvels of the deep, Alexander devised a plan for his rescue. He caused some of his blood to spill into the water. The blood irritated the ocean to the extent that it spat Alexander out upon dry land.

The *Annolied* can justly be labeled a phenomenon of eleventh-century vernacular literature. Not only do we find the first mentionings in the vernacular of a hitherto unknown aspect of the Alexander legend, as well as the fleshed out account of the *translatio imperii*, the notion that the ancient Roman Empire would pass on to the German rulers, which would enjoy great popularity in later centuries but which was by no means a pressing concern in the eleventh century. We also are confronted with an extraordinary work of art whose complexity and clear spirit of dedication inspire admiration and great respect for the unknown monk-poet and his labor of love as well as thanks to Martin Opitz for having rescued this tale.

Archer/Bowman

Archers and archery were a traditional part of the German army during the Middle Ages. Because of the large number of arrowheads found in premedieval Germanic graves, it is thought that Germanic tribes operated the bow as a weapon even before they entered the borders of the Roman Empire, and that they continued to use the bow once they had settled beyond the Rhine and Danube Rivers. These early archers generally were equipped with a bow of simple wood construction, but in later centuries bows were improved by the addition of horn, sinew, and glue in a composite construction complete with angled ears to give more pull to the bowstring. By the end of the eleventh century the crossbow had also joined the more traditional bow in the German army, with units of crossbow men as well as other archers participating in military endeavors both in the Holy Roman Empire and in the Holy Land. The traditional bow continued to be used in Germany, both in war and in hunting, although by the end of the Middle Ages the crossbow was the most prominent archery weapon among soldiers. Some German armies also hired crossbow-armed foreign mercenaries, principally from Italy and Switzerland.

Archpoet

The so-called Archpoet (the Latin form *Archipoeta* is followed in German), whose real name is unknown, was probably born around 1130 in Germany or eastern France. Nothing is known of him except what he reveals in ten surviving poems. Despite a knightly background, he disliked martial arts and preferred poetry. His nickname, which is found as a subscription in the main manuscript of his poems, may have been given to him because of the esteem in which his audience held him, or it may play upon the "arch-" elements in the titles of his chief patron, Reinald of Dassel (d. 1167), who was the archbishop of Cologne and the archchancellor of Frederick I Barbarossa (ca. 1122–1190). Because Frederick was king of Germany and Holy Roman Emperor, Reinald's court moved frequently in Germany, Burgundy, and northern Italy.

The Archpoet's poems date from the early and mid-1160s, and all of them can be classed as occasional poems, relating to the chief concerns and events of Reinald's court. In them the Archpoet gives signs of knowing the trivium of grammar, rhetoric, and dialectic as well as the basics of theology, whereas his short-lived study of medicine leaves almost no marks. He alludes with apparent ease to the Vulgate Bible and Roman poets, and he incorporates parody of confessions, sermons, and liturgy. Although his poems often constitute petitions for food, drink (especially wine), money, and clothing, and although they seem always to have been meant for public recitation at the court, the Archpoet differentiates himself sharply from professional entertainers of a humbler sort.

Two of the poems are in leonine hexameters, but the rest are based on accentual rhythms. The most famous of the poems is the Archpoet's confession to the archchancellor (incipit, or first line, "Aestuans intrinsecus"). Whereas the other nine poems survive mostly in only a single manuscript, this one is extant in more than thirty, most famously in the *Carmina burana*; Carl Orff set its first five strophes to music in his oratorio (1937). The confession is one of four in the *Vagantenstrophe*, with dissyllabic rhyme.

One remarkable aspect of the Archpoet—or of his persona as a poet, if his name does not in itself indicate such distancing—is his candor about his shortcomings. He discusses his proclivity for love affairs, drinking, gambling, and keeping bad company. Nor is his physical condition much better than his moral, to judge by his complaints about his cough and his proximity to death. The former failings may be little more than a stance struck by the poet to entertain his audience; the persona could be as far from the reality as that of Chaucer the character was from Chaucer the poet or man. Unfortunately the latter defects may well have taken the life of the Archpoet at a young age, since he disappears from our view in 1167 at the latest.

Together with *Dulciflorie* and *Moriz von Craûn*, *Aristoteles und Phyllis* is one of the three earliest German novellas (*maeren*), all anonymous short tales in verse based on French sources. *Le Lai d' Aristote* by Henri d' Andeli, the Old French courtly version of the narrative, was composed around 1230, and *Aristoteles und Phyllis* followed shortly thereafter.

The oldest and single manuscript of this version, B, was written in the second quarter of the thirteenth century in an Alemannic dialect (originally in Rhine-Franconian). This manuscript, in fragments, comprises only 204 verses and contains in addition *Der arme Heinrich* (E) of Hartmann von Aue. Version B of *Aristoteles und Phyllis* was slightly influenced in style and motifs by Hartmann's *Erec*, but especially by Gottfried von Straßburg's *Tristan*. In the later version, S, of about 1290 (554 verses), complete interpolations of *Tristan* are added in several places to make a parody out of the behavior of Aristoteles, since Tristan's love is paralleled with Phyllis's humorous seduction of Aristoteles. But the real love between Alexander (Aristotle's pupil) and Phyllis, who is angry at Aristotle's attempts to keep the two apart, is also based on *Tristan*.

In both versions, Alexander's parents appear, and Alexander and Phyllis are still adolescents. Aristoteles gets reprimanded for letting Phyllis ride him like a horse. Only in the older version B, which is more elegant and courtly, do Alexander and Phyllis stay together. And Phyllis wanted to be carried on Aristoteles's back, because her feet were tired. There were three manuscripts of version S in collections in Strasbourg (ca. 1330/1350, in Alemannic), Regensburg (fourteenth century, in Bavarian) and in Karlsruhe (ca. 1430/1435, in Swabian/ Bavarian/East-Franconian).

From circa 1430/1440, a Moselle-Franconian manuscript contains a play titled *Aristoteles und die Königin* (Phyllis is not named here), which does not include the *Tristan* interpolations but is just as farcical as version S. The parents of Alexander do not appear. Alexander and Phyllis are adults, and Aristoteles praises love at the end and does not flee. The play includes motifs of both versions, B and S.

The story of *Aristoteles und Phyllis* is also adapted as a scene (114 verses) in the *Alexandreis* of Ulrich von Etzenbach. Alexander is grown up, and the foreign queen, who stays with him, is Candacis. The role of Aristoteles is played by the teacher Aristander, whereas Aristoteles stayed home in Athens in the Alexander epic. This episode is based on the old version B of *Aristoteles und Phyllis* and secondarily on the Latin exemplum of *Aristoteles* by Jacques de Vitry of ca. 1230.

While the German *maere* of *Aristoteles und Phyllis* has a two-part schema, first the love affair between Alexander and Phyllis, which gets disturbed by Aristoteles, and second Phyllis's revenge by tricking Aristoteles into a compromising situation and ridicule, the Latin exemplum, on the other hand, is a misogynous clerical version, where it is Alexander's wife, the queen, who, after a brief introduction, gets reprimanded for trying to take revenge, and Aristoteles gets away with an excuse not to trust women. This literary tradition is conveyed in three later *Fastnachtspiele* and a play by Hans Sachs.

The term *Armenbibel*, or *Biblia Pauperum* (Paupers' Bible), is the designation applied to a category of manuscripts and early printed books that narrate the lives of Christ and the Virgin within the framework of biblical typology. In a sequence of pictures and short texts, these works explicate the typological relationship between persons, objects, and events in the New Testament, called the antitypes, and the persons, objects, and events in the Old Testament that prefigure or foreshadow them, called the types, by virtue of some significant parallel between the two. For example, Christ on the cross is prefigured by the brazen serpent raised up on a tree by Moses.

A total of seventy-nine complete or fragmentary examples survive. The earliest date from the beginning of the fourteenth century, but these were probably preceded by one or more lost models perhaps dating as far back as the twelfth century. Manuscript versions were produced until the late fifteenth century, the preponderance in Germany and Austria. A few block book (printed from blocks of engraved wood) versions appeared in the Netherlands and in Germany in the mid-fifteenth century, and the first of several fifteenth- and sixteenth-century editions printed with moveable type were published by Albrecht Pfister in Bamberg in 1462–1463. The earliest texts are Latin; German and dual German/Latin texts began to appear in the late fourteenth century.

Armenbibel (Vienna, Österreichische Nationalbibliothek, Cod. 1198), fol. 7r: Old Testament types for the Crucifixion. Photograph: Bildarchiv, ÖNB Wien

The *Biblia Pauperum* differs from other typological treatises such as the *Speculum Humanae Salvationis* (Mirror of Human Salvation) and the *Concordantia Caritatis* (Concordance of Charity) in its narrative structure and in the importance of pictures relative to text. It is further characterized by a schematic organization in which each antitype is typically accompanied by two types, with identifying labels, or *títuli*, by four Old Testament prophets and their relevant prophetic verses, and by short texts, or *lectiones*, that explain the typological relationships. A core sequence of thirty-four antitypes that begins with the Annunciation and concludes with the death of the Virgin is present from the beginning; starting in the late fourteenth century, that sequence was frequently augmented by additional scenes from the Passion, reflecting the intensified preoccupation with Christ's suffering and death that marks late medieval devotional practice. Extant examples have been grouped into three families associated with Austria, Weimar, and Bavaria respectively, based chiefly on the selection and sequence of antitypes and on the compositional arrangement of pictorial and textual elements on the page. Within these families, individual manuscripts vary considerably in the nature and quality of execution. Most are illustrated with pen-and-ink drawings; only a few are fully illuminated.

The authorship, intended audience, and purpose of the *Biblia Pauperum* remain obscure. The title *Biblia Pauperum*, which appears in just two fairly late manuscripts, inspired the once current view that it was produced for the use of poor, semiliterate clergy who had to rely on pictures as a source of religious knowledge. More recently, authorities have suggested that it was more likely directed to laypeople who likewise needed pictures for instruction and were wealthy enough to afford books. Both views must be approached cautiously, as scholars of later medieval religious life have come to appreciate that religious images did not function merely as substitutes for texts but were accorded independent importance as objects of devotion and meditation and as mnemonic devices for a broad spectrum of beholders that included highly literate individuals, among them monks and nuns.

The presumed author of the thirty-eight-hundred-line *Rede vom heiligen Glouben* (Treatise on Holy Faith) identifies himself in line 3737 of the work with the phrase "ich arme Hartman," utilizing the fairly common epithet *arm*, a translation of Latin *miser* (poor). A more exact identification of Hartmann was not possible in 2000. Although probably written ca. 1140–1160, the work itself was contained in the Strasbourg-Molsheimer manuscript (ca. 1187) that was burned during the French siege of Strasbourg in 1870. Fortunately, the work was faithfully copied and printed prior to the conflagration—there is a postulated four-hundred-line lacuna (gap) between lines 3224 and 3625.

The work is an exposition of the Christian *credo* (the Apostles' Creed) as it appears in the Sunday liturgy and is best described as a rhymed theological tract. Although Hartmann displays more than a passing familiarity with Platonist discourse, the *Rede vom heiligen Glouben* is not a learned theological document on the intricacies of the *credo* and the subtleties of interpretation, but rather can be viewed as a primer to aid the laity in comprehending the central mysteries of Christianity contained in the creed. The text evidences a cohesive internal structure proceeding from Creation to Redemption and its significance to the proper conduct of life on earth and to the certainty of the final judgment and reward for the just.

Hartmann concentrates much energy on descriptions of the emerging noble lifestyle in the twelfth century, which he views as a possible threat to the soul. Thus he admonishes his listeners to renounce their possessions and enter a monastery as *conversi* (converts). If they cannot do that, they should help the poor; remember the one who is the author of all their wealth and joy; and control their sexual appetites. Moderation in all things and a life of active Christianity will ensure the salvation of the soul regardless of one's station in life.

Armor

There were three types of defensive armaments worn during the Middle Ages: that to cover the body, or armor, that to cover the head, or helmets, and that carried by the nonweapon-wielding hand, or shields. Each of these, unlike their offensive counterparts, descended directly from that worn by late imperial Roman soldiers and changed little in the style, choice of metal for construction, and method of manufacture throughout all of Europe until the end of the Middle Ages.

By the fall of Rome an imperial soldier would be outfitted either in a *lorica squamata* cuirass, which was made of a large number of metallic scales attached to each other by wire or leather laces and affixed to a linen textile undergarment by linen cord, or, becoming increasingly more popular, a *lorica hamata*, which was constructed of metal rings. Alternate rows of these rings were punched out of sheet metal, with the connecting row in between made from metal wire, the ring ends butted or riveted together; each ring was interlocked with four others, two in the row above and two in the row below. Thirty-five thousand to forty thousand of these rings were needed to make a cuirass. Both styles covered the torso from the shoulder to at least the middle of the thigh and some seem to have stretched as far down as the knee. Both could be worn by either an infantry or a cavalry soldier. There were also two different types of helmets. The infantry helmet was bowl-shaped, made of two iron halves joined together by a metal strip. It was lined by a leather cap, not attached to the outer helmet, on which was affixed an iron neck guard and iron cheek pieces. The cavalry helmet was also bowl-shaped, but instead of having an inner leather cap on which the neck and cheek guards were affixed, it was constructed of four to six pieces, including a ridge, nose guard, and extremely wide cheekpieces, all of which were attached by rivets or hinges to the helmet itself. The shield carried by these soldiers was quite long, rectangular in shape and curved to fit the body. It was made of plywood and was covered in leather, on which was fastened gilded and silvered bronze decoration and a metallic boss. Around its edges was a rim of wrought iron or bronze.

During most of the Middle Ages, the *lorica squamata* and the *lorica hamata* continued to be made and worn for defensive protection. The *lorica squamata* is the lesser known of the two styles; nevertheless, as cloth-covered armor it continued to be popular, if not the preferred armor of infantry soldiers, as excavations of grave mounds at the site of the Battle of Visby have shown. The *lorica hamata*, or chain mail suit of armor, is much better known, and was undoubtedly a much more protective body armor; it was also extraordinarily expensive. Chain mail armor remained the primary body armor of knights and cavalry soldiers—in other words, of those who could afford it—into the late Middle Ages. Sometimes it was short, covering only the torso and thighs of the wearer, while at other times it enclosed even the feet, hands, and head. It was also usually worn over, but not attached to, a heavy quilted undergarment (known as a *haubergeon*), which added to the defensive capability of the armor. Chain mail continued to be used and favored by soldiers in the fourteenth century, but as high-powered crossbows and longbows were able to break the rings and penetrate the armor, new, more capable defense was needed. This led to the next significant change in defensive armaments: plate armor. After a series of experimental and evolutionary developments, full suits of plate armor, covering from the head to the feet, became constructed and worn, initially only in tournaments, but eventually in warfare as well. This change was initiated in the late thirteenth and early fourteenth centuries and lasted well into the sixteenth century.

During the Middle Ages, soldiers of all European lands wore metal helmets made of several pieces which were formed to protect the head and face. For the cavalry, especially the knights, helmets eventually enclosed the entire head, first in the can-shaped manner of the high medieval great helm, then in the *bascinet*, a conical helmet truncated at the top and sometimes ending in a slight point, with a moveable visor, and finally in the famous "frog-mouthed" helmet, which developed in the late Middle Ages and became extremely popular for use in tournaments as well as in warfare. The infantry preferred the open "kettle hat" which, although acquiring a much larger brim, did not differ much from the late Roman infantry helmet.

The late Roman shield changed frequently in shape and size throughout the Middle Ages, but not in materials or method of manufacture. Carolingian shields were large and round, but by the eleventh century they had given way to the narrower, "kite-shaped" shield. Both, however, remained made of wood, and at least some were covered, perhaps on both sides, by leather. The kiteshaped shield would dominate shield design for nearly two centuries until it evolved into a more triangular shape, shorter, wider, probably lighter and almost always flat. At the same time, the shape of the new shield allowed for more maneuverability on horseback; infantry troops continued to use the kite-shaped shield for a while until they too switched to the newer triangular design. The flat or slightly curved triangular shield of moderate size popular in the thirteenth century continued to be popular in the fourteenth and fifteenth centuries as well, but, it seems, only among cavalry soldiers.

After the turn of the fifteenth century, the triangular cavalry shield was supplanted by shields of a variety of shapes and sizes. The most common of these was an oblong, either rounded or pointed on the lower edge, and often bent forward at the top and bottom. Leaf-shaped and round shields were also known. Cavalry shields also began to be made of metal, and sometimes, if used exclusively in tournaments, they were reinforced by extra metallic plates. Infantry soldiers also rejected their thirteenth-century triangular shields, returning sometime in the early fourteenth century to the round shield not seen in regular use in western Europe since Charlemagne's day. Three styles of late medieval infantry shields developed: the medium-sized target or targe, the small buckler, and the very large pavise. Most infantry shields continued to be made of wood covered by leather.

Author of the Middle High German poem known chiefly as the *Loblied auf den Heiligen Geist* (Song of Praise to the Holy Spirit), preserved in a Vorau manuscript (no. 276, fol. 129vb-133vb). Scholars may also refer to the poem as *Gedicht von der Siebenzahl* (Poem on Number Seven; not to be confused with *De septem sigillis*, On the Seven Signs, from a MHG Innsbruck manuscript). The Bavarian dialect in which the work is written and the given name of the poet have led some scholars to believe that the author may have been that of the Juliana (also Juliane) legend, the prior of the Premonstratenser monastery of Schäftlarn near Munich from 1158 until the year of his death in 1163. Known as "ein priester der hiez Arnolth" (a priest called Arnolth, v. 919), the author examines the significance and symbolism of the sacred number seven. The short poem of 955 rhymed verses addresses a lay audience, *vil tumpen leigen* (very uneducated laypersons, v. 937) to impart religious knowledge on topics such as the seven supplications in the Lord's Prayer, the seven gifts of the Holy Spirit, and the seven seals of the Apocalypse, as well as natural knowledge of the physical universe as a macrocosmos, with its seven planets, phases of the moon, and days of the week, complemented by human existence as a microcosmos with its seven *artes* (liberal arts), seven ages of man, and so on. The rhyme and verse technique indicate the work as dating from the middle of the twelfth century. A further indication is that scholars have noted similarities between Arnolt's "Song of Praise to the Holy Spirit" (v. 640–695) and the *Kaiserchronik* (v. 605–642), whose final entry dates from Christmas 1146. Arnolt's use of number symbolism highlights the divine order of creation and its meaning for life in this world. The author concludes his poem as he began with a hymn of praise to the Holy Spirit.

The other work attributed to Arnolt is the Juliane legend: "ein ewart do,/Arnolt was er geheizen" (a priest there, Arnolt he was called; Juliane, v. 4f.). A holy woman, Juliane renounces pagan gods and refuses to marry her promised suitor, Count Aulesius, unless he becomes Christian. Divine intercession enables her to endure the tribulations that await in prison and joyfully gain the crown of martyrdom. Though the work is preserved only in a fourteenth-century manuscript from the women's' monastery of the Augustiner-Chorherrenstift Seckau (University Library in Graz, cod. 1501, 12th c. fol. 95r-134r), Arnolt is still likely to have been the author. Scholars note that the "burlesque" scene, where Juliane not only resists temptation by the devil, but subdues the ancient foe and forces him to confess his transgressions, belongs to the Latin tradition of the legend and need not indicate late medieval authorship.

Ars Moriendi

Written by an anonymous author, probably in the early fifteenth century, the text of the *Ars Moriendi* (The Art of Dying Well) developed out of a series of writings about the way to die in the Christian faith. It first appears after the Council of Constance (1414–1418) and may have actually been composed at the council. Its original audience seems to have been the laity, who were increasingly emulating a variety of clerical practices in the later Middle Ages, including participating in elaborate death rituals. The *Ars Moriendi*, now preserved in over three hundred Latin and vernacular versions, recounts the final hours of the protagonist, the dying Moriens, as he is tempted to turn away from his faith but successfully resists and finally achieves a good death.

Germany was particularly important in the development of the illustrated *Ars Moriendi*, and the largest group of texts can be associated with southern Germany, specifically Bavaria and Swabia. Although the text appears in a long version that is rarely illustrated, its great popularity was as a block book, where both text and images are printed from carved wood blocks. Almost all of these block books were printed at Augsburg in southern Germany. In such books the text was radically shortened to suit the format and accompanied by a standardized series of eleven woodcuts. Each image centers on Moriens in his bed. In five prints, demons tempt Moriens by trying to get him to renounce his faith, to turn to despair, to impatience, to vainglory, and to avarice. Each image of temptation is followed by an illustration showing angels supporting Moriens in corresponding virtuous behavior. The final print shows Moriens achieving a good death surrounded by his family and endorsed by the Church.

The block book illustrations may have been created for that format. Most of the illuminated manuscript versions have miniatures that seem dependent on the printed versions rather than vice versa. There is a series of copper plate engravings of the *Ars Moriendi* images attributed to Master E.S., which are very similar to the illustrations of the block books, and scholars have speculated that they may have been made as a model for the books.

Block books were a popular media that provided information to medieval users through a variety of means. In addition to their visual presence, the characters in the *Ars Moriendi* woodcuts hold scrolls with short written messages that paraphrase elements contained in the already reduced text. Sometimes the *Ars Moriendi* was printed on a single sheet, which could be hung on the wall. In this case the text was reduced to the scrolls held by various participants.

The *Ars Moriendi* was part of a late medieval interest in the societal mediation of death. This preoccupation encompassed a greater prevalence of wills and an interest in the sacrament of extreme unction. It also included the appearance of other visual programs related to the idea of dying well, including the Three Living and the Three Dead, which shows three healthy young men confronting three skeletalized dead, and the Dance of Death, where death in the form of a skeleton comes to a variety of people in different stations of life.

Stories revolving around King Arthur, or the *matière de Bretagne* (Breton material), found their way into German-speaking areas primarily through France. The first Arthurian romance in German, *Erec* (ca. 1180), by Hartmann von Aue (ca. 1160–1210), appeared in the southwestern corner of the German empire, where the house of Zähringen, probable candidate for Hartmann's sponsors, maintained extended personal, political, and cultural relationships with their French neighbors. Centers of patronage in Thuringia, Bavaria, and Austria later became focal points for this modern genre, which rapidly gained popularity among the educated nobility. It is not clear what role the oral tradition of wandering storytellers played in the spread of the genre throughout Europe, and in German-speaking areas in particular. Many German adaptations of French narrations, containing elements that cannot be traced directly to their putative sources, appear only in later versions of the stories. However, in general, the written versions of the romances of Chrétien de Troyes (ca. 1140–1190) became the standard for a certain type of Arthurian narrative in the German vernacular during the early stages of the genre. Three of Chrétien's four Arthurian romances (*Erec et Enide*, *Yvain*, and *Le conte du Graal*) were adapted into German coinciding with the first high period of German literature, between 1180 and 1220. Along with the usual motifs, Chrétien's narrative form of the double turning point in the hero's development is carried over into German versions. It shows the initial rise of an individual to glory at King Arthur's court, an incident that turns the hero's fate to shame, a period of despair followed by a reassessment of values, a quest for gradual redemption, and the hero's final rise to the status of an exemplary knight.

Hartmann's *Erec* serves as a typical example of this narrative technique: Erec gains his beautiful wife, Enite, by winning the grand prize at a tournament in King Arthur's court. Hailed as the premier knight, he ascends to rulership of the parental empire. But blinded by Enite's beauty, he spends most of his time in bed with his wife instead of looking to the business of government, leading to public shame. Enraged, he tears himself and his wife away from the comforts of the court. Through a series of dangerous adventures, he gradually realizes his true duty as a responsible ruler and husband. Supported by the unwavering love of his wife, he is victorious in a final duel with the ruler of an enchanted court, which ultimately leads the royal couple, now back at court, to even higher fame and glory and an ideal state of governance.

Hartmann's adaptation has been preserved through only one fairly complete sixteenth-century manuscript included in Hans Ried's *Ambraser Heldenbuch* (Book of Heroes from Ambras Castle) and fragments of three manuscripts from the thirteenth and fourteenth centuries. *Erec* is not a mere translation but an expansion of Chrétien's model through a process that has been identified by French scholars as *adaptation courtoise*, or courtly adaptation. Authorial comments are lengthened or inserted and elaborate descriptions of courtly ambiance are interpolated at the expense of dialogue. Greater emphasis is placed on the key role and depth of the evolving love between the royal couple in serving as a basis for a sound system of government. The same technique, yet more limited, can be observed in Hartmann's *Iwein* (ca. 1202), which is similar to *Erec* in its thematic development.

The flagship of Arthurian narrative based on Chrétien is Wolfram von Eschenbach's *Parzival* (ca. 1200–1210). No other courtly romance has been preserved in so many manuscripts. More than eighty have survived, sixteen complete versions and sixty-six fragments. Wolfram seems to have been by far the most popular writer of courtly romances throughout the German Middle Ages. It may be assumed that Chrétien's *Le conte du Graal* (the Count of the Grail), a fragment, was Wolfram's primary source. But Wolfram turned it into a true masterpiece of his own, vastly expanding the family history of the dynasty of the Grail kings, placing love and marriage at the center of the Grail quest, which in Chrétien's version focused primarily on the theme of sin and atonement, and sharpening the dichotomy between the worldly and fallible Arthurian court and the ideal, selfless rulership of the Grail dynasty.

Wolfram expands even further upon the theme of the Grail dynasty through a second romance in stanzas, *Titirel*, which remained a fragment. It is the story of the tragic youthful love affair between Sigune, Parzival's aunt, and Schionatulander, who dies early in combat because of Sigune's capricious wish to possess an elaborate hound's leash inscribed with a love story.

This romance was continued and expanded by Albrecht von Scharfenberg, probably a well-educated cleric, origin unknown, whose language places him into the Bavarian/East Middle German region. His work, *Der Jüngere Titirel* (the Younger Titirel; ca. 1260–1275), is a vast compendium of the history of the Grail kings, in great detail, dating back to ancient Troy and the Roman emperors. This history, which is the complete story of Sigune and Tschinotulander, was only alluded to by Wolfram, in both *Parzival* and *Titirel*. The narration continues far beyond Paraval's ascension to the Grail kingdom, relating the story of the legendary priest-king Johann, whose empire extended into India. Fifty-eight manuscripts and a print from 1477 testify to a great popularity of the work. Until the nineteenth century the narrative had been considered Wolfram's masterpiece, and throughout the late Middle Ages Wolfram was probably better known through Albrecht's romance than through his own works. Another expansion of Wolfram's *Parzival* was compiled by two goldsmiths from Strasbourg, Philipp Colin and Claus Wisse, in their *Rappoltsteiner Parzifal* (1331–1336). A relatively faithful copy of Wolfram's *Parzival* was expanded by translations from Chrétien's *Le conte du Graal* and its various French continuations.

A second and later type of Arthurian literature juxtaposes the almost classical narrative structure based on Chrétien with a complex web of plots and subplots. These romances are oriented around one or two exemplary heroes outside the traditional circle of the round table, who use the passive and sometimes foolish Arthurian court mainly to mirror their own superior qualities. This type of narrative vastly expanded on fantastic, otherworldly elements, including dwarfs, giants, humanoid monsters, and numerous miraculous events. The first representative of this genre is *Wigalois* (1210–1215) by Wirt von Grafenberg (ca. 1170–1235). The romance begins as a narrative with Gawein (Arthur's nephew) as its central character, but later Wigalois, Gawein's son, follows his father's footsteps and surpasses him. Other representatives of the genre are *Daniel von dem blühenden Tal* (Daniel of the Blossoming Valley; 1210–1225) by a poet identified as Der Stricker (ca. 1190–1250), which features Arthur as active hero next to the central character. Stricker's Daniel triggered a later version by Der Pleier, *Garel von dem blühenden Tal* (Garel of the Blossoming Valley), followed by another romance by the same author, *Meleranz* (both works composed ca. 1240–1270). Of the same type is Konrad von Stoffein's *Gauriel von Muntabel* (after 1250). Heinrich von dem Türlin's complex work, *Diu Crône* (the Crown, ca. 1230), featuring Gawain as its central character, constitutes the most representative model for this type of Arthurian literature.

The stories involving Lancelot, Guinevere, and King Arthur as central characters make up a third and less popular type of Arthurian literature in Germany. The earliest version, *Lanzelet* (ca. 1200) by Ulrich von Zatzikhoven, has a narrative structure quite distinct from Chrétien's, and its motifs differ from most other sources of Lancelot stories. Lanzelet represents a type of hero whose development never takes a negative turn. He is complete and perfect from beginning to end. He gets involved with King Arthur's court only in order to rescue Guinevere from her abductor, Vâlerin, a feat of which Arthur and his champions seem to be totally incapable. Ulrich's actual source cannot be identified. The Middle High German *ProsaLancelot* (Prose Lancelot; before 1250), on the other hand, is a faithful translation of the French *Lancelot en prose* (1215–1230), perhaps mediated by a Middle Dutch version. It is preserved through nine fragmentary manuscripts from the thirteenth to sixteenth centuries.

A key element within the general European context of the Arthurian tradition, the Merlin figure, found limited and late entrance into German literature. Only a fragment of that story cycle is preserved in the so-called *Rheinischer Merlin* (Rhenish Merlin; 1250–1300), while the *Prosa-Lancelot* includes a narrative section on Merlin of merely seventy lines. *Der theure Mörlin* (the Dear Mörlin) by Albrecht von Scharfenberg is preserved only in a late medieval compilation of stories, Ulrich Füetret's *Buch der Abenteuer* (Book of Adventures, 1473–1483). It is the sole complete German representative of the cycle that has such a prominent place in Geoffrey of Monmouth, the French Arthurian cycle of narratives by Robert de Boron, and the Vulgate cycle.

The fourth type of the German Arthurian tradition is the stories involving the tragic couple Tristan and Isolt, which probably was not originally related to the Arthurian tradition but became linked with it at a later stage of its development. Both early German versions of the story show a loose, almost casual connection to the Arthurian cycle of stories. Eilhart von Oberge's *Tristrant* (ca. 1170–1190) was preserved in fragments from three early manuscripts dating back to the late twelfth to early thirteenth centuries. It is generally accepted to be based on the so-called *Estoire*, the earliest French Tristan romance, which has been lost but is considered as the basis of all later adaptations of the subject matter. In the narrative, Tristrant woos Isalde of Ireland for his master, King Mark of Cornwall. On their journey from Ireland to Cornwall they accidentally drink some of the love potion meant for King Mark before his wedding night. An inextricable passionate love thereafter consumes the couple throughout a series of persecutions and attempts to separate them

transgression against the prevalent moral codes is tied firmly to the mechanism of the magic potion.

Gottfried von Straßburg's (died before 1230) *Tristan und Isolde* (ca. 1210), based on the narration by Thomas d'Angleterre, is generally considered the masterpiece of the genre. However, the work breaks off shortly after the final separation of the couple, omitting Tristan's marriage to Isolt of the White Hands and the final reunification of the lovers in death. Early continuations of the story claim that the work was unfinished due to the premature death of the poet, but theories prevail that Gottfried simply gave up on it. The romance has been preserved through eleven complete manuscripts and sixteen fragments, most of them dating back to the early thirteenth century. Gottfried's work is much more than a translation of Thomas's version into German. His extensive commentaries on love as a special force that rules the lives of individuals and brings them into opposition with society make it one of the most complex works of the period. The conflicts of erotic relationships vis-à-vis the rigid codes of a feudal society are presented without simple solutions. The ambiguous function of the love potion has been the subject of controversies among interpreting scholars since the nineteenth century.

The *Tristan* of Ulrich von Türlenheim (Swabian, fl. 1236–1244 in Augsburg), composed before 1243 under the patronage of territorial princes close to the imperial dynasty of the Staufen family, claims to be a continuation of Gottfried's work. But although Ulrich seems stylistically indebted to Gottfried, most of his motif developments point to Eilhart's *Tristrant* as a direct source. The story begins where Gottfried breaks off, with Tristan marrying Isolt of the White Hands, and continues to the tragic demise of the couple, with King Mark planting the rose and vine on their grave. The ensuing intertwining of these symbolizes the final unification of the lovers in death. Ulrich seems preoccupied with the end of the story and deals very little with the social and ethical issues raised by Gottfried.

A second continuation of Gottfried's *Tristan* was written by the burgher Heinrich von Freiberg, under the patronage of Bohemian nobility. His *Tristan* is based partly on Ulrich von Türlenheim's version and partly on Eilhart's. It also includes and expands motifs that occur before Gottfried breaks off. Like Ulrich, Heinrich fully integrates Tristan with King Arthur's court and his model knights. In a sense, Heinrich turns Gottfried's ideas around by playing down the importance of erotic love, seen here as a mere machination of the devil, who is ultimately responsible for the moral transgressions of the lovers and their ensuing sufferings. The symbols of the rose and the vine are interpreted in a traditional Christian sense, whereby the lovers find only peace and salvation after death, when the human vine finally embraces Christ, represented by the rosebush.

An episodic spin-off from the larger cycle is *Tristan als Mönch* (Tristan as Monk; 1210–1260, perhaps Alsatian, South Franconian/Allemanic, Switzerland). The story concerns the episode of Tristan's return to Cornwall after his marriage to Isolt of the White Hands. Believed dead and disguised as a monk, Tristan travels from home and is rejoined with his beloved Isolt the Fair. The episode is triggered by Guinevere and Arthur, who invite the entire high nobility to festivities at Carduel. Each knight is supposed to be accompanied by his dearest love. Tristan is torn between betraying his wife and acknowledging his one and only love, Isolt, the Blonde. He takes his wife to Cornwall but then disappears. Compared to Gottfried's work, the short romance seems to upgrade the importance of the institution of marriage, while the effect of the love potion is never mentioned.

The fragment of a Middle Low German Tristan romance (ca. 1350) contains the adaptation of the episode of Tristan and the dwarf. In this narrative, Tristan is approached by a dwarf, also named Tristan, for assistance in finding his lost lover. When the former declines, the dwarf, believing Tristan is dead, claims Tristan would have helped him for sure. Contrary to Gottfried and Thomas, his sources, the writer places the exemplary knight above the exemplary lover as the essence of his narration. Toward the end of the medieval period the prose novel *Tristrant und Isalde* (first printing 1484), a streamlined version of the entire narrative material, was aimed primarily at an audience of burghers. Knightly values are downplayed in this work in favor of a more sentimental approach to the theme of the unfortunate lovers, whose negative example was intended to instruct people in the importance of placing obedience to Christian values above the entrapments of erotic love.

Having reached their heyday during the thirteenth and early fourteenth centuries, with a brief revival from the viewpoint of story collecting during the fifteenth and early sixteenth centuries, literary treatments of Arthurian matter gradually faded away during the sixteenth and seventeenth centuries, only to be rediscovered and revived during the late eighteenth and early nineteenth centuries. One common feature of the German Arthurian literature is the relative weak role King Arthur plays in most of the narratives. This phenomenon may be explained by the ambivalent attitude toward centralized rulership taken by most of the territorial lords who sponsored this type of literature.

Although the manuscripts date mainly from the fourteenth and fifteenth centuries, the heyday of Middle Dutch Arthurian literature occurred in the second half of the thirteenth century, when most of the romances were created; at the beginning of the fourteenth century many of them were collected in the so-called *Lancelot Compilation*. Flanders, where French manuscripts were produced (and illustrated), where the counts were important patrons of French authors (Philippe d'Alsace, for example, sponsored Chr ien de Troyes's *Conte du Graal*, ca. 1190), and where Middle Dutch variants of Arthurian names appear in the charters very early, was by far the most productive region, as the dialect features of the manuscripts indicate. Rhymed couplets of three or four beats were the literary form for Arthurian romance throughout the period, as well as for Middle Dutch Charlemagne epics and chronicles. Only rarely is the patron for a given romance mentioned. The texts often are anonymous and the date of their creation can usually be indicated only approximately; even the dates of the (often fragmented) manuscripts are far from certain.

In the decades just before 1250, one of the first texts to be translated into Middle Dutch was the *Conte du Graal* (Count of the Grail, with its first continuation). Of *Conte du Graal*, the *Perchevael*, only fragments remain, but the episodes concerning Walewein (Gauvain) have been edited to fit into the *Lancelot Compilation*, as is the case for most of the romances. Other early translations and/or adaptations are the *Wrake van Ragisel* (an adaptation of the *Vengeance Raguidel*) and *Tristan* (a fragment of a translation of the version by Thomas of Britain). Around 1260 a poet, probably Jacob van Maerlant, translated *Torec*, using a now lost French text about a knight and a golden circlet. The first half of the *Ferguut* is a translation of Guillaume le Clerc's *Fergus*, but the second part of the text has no direct relation to the French original. Not only in new versions or endings did the Middle Dutch authors express their creativity, however. There are also original romances, such as *Walewein*; *Ridder metter mouwen* (the story of "the knight with the sleeve"), a love story and search for the father (*Vatersuche*), and *Moriaen*, a tale of a Moorish knight's chivalric education and quest for his father. Written by two authors, Penninc and Pieter Vostaert, *Walewein* (11,200 lines) follows the fairy tale motif of the Golden Bird and describes how Walewein, aided by a prince in the guise of a fox, finds a beautiful damsel and a magic sword in order to meet the challenge of bringing a floating chess set to Arthur's court. The frontispiece of the Leiden manuscript (ca. 1350) shows Walewein setting out on his quest. The text was influential: the authors of the *Ridder metter mouwen* and *Moriaen* both adapted episodes from *Walewein*.

Apart from these "episodic" texts, there also are translations of the more "biographical" and "historical" Old French prose texts. Probably the first of these are Jacob van Maerlant's renderings of the prose *Joseph d'Armathie* and *Merlin: the Historie vanden Grale* and the *Boek van Merline*, composed around 1261 for Albrecht van Voorne (a nobleman from the inner circle of the count of Holland). The principal French text in this genre, the *Lancelot en prose*, was translated into Middle Dutch at least three times. The fragments of *Lantsloot vander Haghedochte* (Lancelot of the Cave) reveal that this first adaptation in verse reduced most of the innovative features, especially the geographical and chronological "realism" of the original, to a more traditional format. Probably created probably around 1280, the second rhymed Flemish version—the *Lanceloet-Queeste vanden Grale-Arturs Doet* (preserved in the *Lancelot Compilation*)—maintained the innovations and provided a more faithful translation. The two fragments of the third translation show that its author went one step further and rendered the story in Middle Dutch prose. Other Dutch versions of the *Lancelot en prose* may be the basis of German translations. Finally, the Brabantine poet Lodewijk van Velthem translated in 1326 the *Suite-Vulgate du Merlin*, attaching his *Merlijn Continuatie* to Maerlant's Grail and Merlin texts. Apart from Middle Dutch fragments, this trilogy is preserved in a Middle Low German retelling (*Umschreibung*) from ca. 1425, included in a manuscript at Burgsteinfurt (North Rhine-Westphalia).

The combination of already existing works with new and/or adapted texts also resulted in a manuscript now in The Hague, the aforementioned *Lancelot Compilation* (early fourteenth century). The last leaf of this manuscript states that *her* (lord) Lodewijc van Velthem was the owner. One of its most intriguing aspects is the markings of the contemporaneous medieval editor, who corrected scribal errors but also added marginal signs and words to facilitate the oral delivery of the text. The creator of the *Lancelot Compilation* used the Flemish *Lanceloet-Queeste-Arturs Doet* as the framework and added seven romances to this history of Arthur's reign. Some of these romances have come down to us only in this codex and may have been adapted or created especially for their insertion by the compiler: *Walewein ende Keye*, a story of the rivalry between Gauvain and Kay, with no known parallel in Old French, *Lanceloet en het hert met de witte voet* (Lancelot and the White-footed Deer), a tale reminiscent of the "Dragons tongue" episode in *Tristan* and of the *Lai de Tyolet*, and *Torec*. Fragments of the other texts exist, but their full story is preserved (in a rewritten form, as comparison with the fragments shows) only here. Between the *Lanceloet* and the *Queeste*, the *Perchevael* (the Gauvain episodes), and the *Moriaen* were inserted, whereas the *Wrake van Ragisel*, *Ridder metter mouwen*, *Walewein ende Keye*, *Lanceloet en het hert met de witte voet*, and *Torec* were placed between the *Queeste* and *Arturs Doet*. In the first decades of the fourteenth century, most of the Middle Dutch Arthurian romances were thus brought together in two collections of texts, both in some relation to Lodewijk van Velthem. By concept and contents, these collections may have been conceived as one great Arthurian summa, or definitive collection.

The probable dates of the manuscripts indicate that the Middle Dutch Arthurian romances were copied, and enjoyed by their audiences, in the fourteenth and fifteenth centuries, even though none of the texts has come to us in a great number of copies. Later on, printers favored Charlemagne epics over Arthurian romances. Two quires of the *Historie van Merlijn*, printed ca. 1535–1540 by Simon Cock in Antwerp, are the only witness to interest in the Arthurian realm in the days of early printing in the Low Countries.

Aschaffenburg

A city in present-day Bavaria, on the right bank of the Main River, Aschaffenburg was an important ecclesiastical center in the late Middle Ages. Although the early history of Aschaffenburg is clouded with uncertainty, the city is thought to be located at the site of the Roman, then Alemannic, settlement referred to as Ascapha in a late-seventh-century geography text. Evidence suggests that the present-day *Kilianskapelle* (Chapel of St. Kilian) is located where the settlement's first church was built between 711 and 716. Aschaffenburg is remembered as the place where King Ludwig III (ca. 835–882) married the Saxon princess Liutgard in 869. Duke Luitolf of Swabia and his wife Ida established the collegiate foundation St. Peter and Alexander in 957. After this church and surrounding lands were given to the archbishop of Mainz in 982–983, a close relationship between Aschaffenburg and the archdiocese of Mainz developed.

A bridge over the Main, completed in 986, fostered growth of the settlement, but markets, tolls, and other requirements for an actual town were not present until the twelfth century. Early in that century, the archbishop, having become involved in a dispute with the emperor, renewed the settlements fortifications and presumably laid out the rudiments of the medieval castle as well. A new church dedicated to Saints Peter and Alexander but referred to as the *Stiftskirche* was built during the twelfth and thirteenth centuries; it combines Romanesque and Gothic elements.

From the middle of the thirteenth century, Aschaffenburg's importance increased as a result of its being the second residence of the archbishops of Mainz who, after the pope, held the highest ecclesiastical rank in the Holy Roman Empire. As the location of assemblies, synods, and numerous official visits, the city prospered into the sixteenth century. Beginning in 1509, Matthias Gothardt (Matthias Grünewald) directed building projects at the castle. He served as fountain and waterworks director, master mechanic, and court painter. On August 10, 1552, troops of Margrave Albert Alcibiades of Brandenburg plundered and destroyed the Gothic structure. The medieval castle keep, however, still stands in the court-yard of the seventeenth-century Johannisburg Palace.

Augsburg

Augsburg, located in present-day Bavaria on the Lech River, was an important political, economic, and cultural center throughout the Middle Ages and into the early modern period. It had become a Roman city around 30 C.E. Christians were present from the early fourth century C.E.; in 304, the young Christian woman Afra was martyred in Augsburg for refusing to make offerings to the emperor. Saint Afra became one of the two patron saints of the city, and her grave was one of the most important sites of pilgrimage, local worship, and architectural activity. Exactly when Augsburg became an episcopal seat is debated. However, the first document clearly referring to an Augsburg bishop (Wikterp) is dated 738.

Wikterp's successor, Bishop Simpert (778–807) began construction of the cathedral, which was consecrated in 805–807. The cathedral was rebuilt and expanded several times: under Bishop Ulrich (924–973), who joined Saint Afra as the city's second patron saint; under Bishop Embrico between 1056 and 1065, when the bronze double doors with their thirty-five scenes from the Old Testament and ancient mythology were added; and then between 1331 and 1431, when the structure's nave and side aisles were expanded and rebuilt in the Gothic style, and a large choir with ambulatory and radiating chapels was added to the east end. The bronze doors are one of the most important surviving examples of Romanesque bronze relief sculpture, and the Romanesque stained glass windows depicting five Old Testament prophets (ca. 1140) on the south wall of the cathedral's nave are the oldest extant stained glass windows.

In addition to the cathedral, other churches were built and decorated for the growing number of parishes. When the Franciscans and Dominicans came to Augsburg in the 1220s, many monastic institutions were established, requiring the construction and decoration of residences and places of worship. The church erected to honor Saint Afra had been expanded to include the worship of Saint Ulrich. From 1474 to 1500 this church, with its double patronage, was substantially expanded.

Augsburg was also rich in secular architecture. First mention of a city hall was made in 1260. This wooden structure was replaced in 1385 by a masonry one. The last decades of the fourteenth century also saw the construction of guild halls, including those for the weavers, butchers, and bakers.

In the fifteenth century Hans Burgkmair, Ulrich Apt, Hans Holbein the Elder, and other Augsburg painters achieved local prominence. Augsburg also became one of the earliest major centers for printing, which had begun there by 1468. Printers included Erhard Ratdolt and Anton Sorg.

Bamberg

A bishopric and city in Bavaria, Bamberg was especially important during the Ottonian through Gothic periods. A small settlement seems to have existed on the site since the seventh century, but Bamberg was essentially founded in the early eleventh century when the Holy Roman Emperor Henry II and his wife, the Empress Kunigunde, established a bishopric there in 1007. Henry hoped to create a "new Rome" in the eastern part of his domain, and to this end a cathedral, palace, market, and settlement were built, forming a center of imperial power. Henry showed his devotion to his foundation by lavishing gifts on Bamberg Cathedral, including vestments, especially an embroidered cope known as the *Sternenmantel* for its unique star design (Bamberg, Diözesanmuseum), ivory book covers, and manuscripts. The status of Bamberg was enhanced by the burial of the imperial couple in the cathedral that they had founded. An additional consequential figure associated with Ottonian Bamberg was Pope Clement II (1046–1047), who was bishop of Bamberg before his elevation and was also buried in Bamberg Cathedral.

Bamberg cathedral's connections with both a holy emperor and a pope gave the church a unique character that continued to be reflected in the building's decorative programs through the Middle Ages. The importance of the emperor and his wife was heightened by Henry's canonization in 1146 and Kunigunde's in 1200. Although the present building dates from the thirteenth century, Henry II was the patron of the original cathedral, which was consecrated in 1012. The Ottonian cathedral had a high choir in the west and a second choir in the east with a crypt under it. While nothing of this church remains above ground, its plan and masonry fragments are known through excavation; perhaps because of the great status of the original patron, the Ottonian cathedral's plan influenced the layout of the later larger church.

The present cathedral, dedicated to St. Peter and St. George, was built after a fire in 1183 under Bishop Ekbert von Andechs (1203–1237) and consecrated on May 6, 1237. This church follows the general plan of the earlier Ottonian church with two choirs. There is a transept on the western end of the building and four exterior towers. Because of the double choir, the main entrance to the cathedral, the Prince's Portal, (*Fürstenpforte*) is located in the middle of the nave's north side. The cathedral's interior exhibits the heavy mural surface and regular spatial organization typical of the German interpretation of Gothic architecture. The nave is divided into square bays with four-part ribbed groin vaulting, and the building has a two-story elevation, consisting of a pointed nave arcade and a single window per bay.

The sculpture at Bamberg Cathedral represents one of the finest ensembles in any German cathedral. The work consists of three sculpted portals: the Mercy Portal (*Gnadenpforte*), next to the east choir on the north side; the Adam Portal (*Adampforte*), also next to the east choir but on the south side; and the already mentioned Prince's Portal on the north side of the nave. Additional sculpture is found in the interior of the building, including a choir screen, figures placed against interior columns, and tombs. Of the three portals, the work on the Mercy Portal is the earliest. It has a semicircular tympanum (arch above doorway) showing the Virgin and Child surrounded by the cathedral's patron saints, Peter and George, and its

Bamberg, cathedral, Princes' Portal: Last Judgment. *Photograph: Joan A.Holladay*

founders, Henry II and Kunigunde, with two smaller scale ecclesiastics in the outer corners. The only other sculpted decoration in this portal is a capital frieze of martyrs. The Mercy Portal's style is similar to contemporary sculpture in Cologne and ultimately probably related to a figure and drapery style found in Mosan metalwork. In addition to the Mercy Portal, this workshop carved the eastern face of the choir screen with pairs of apostles. The sculptors of the Mercy Portal created some of the jamb figures for the Prince's Portal. Most of that portal is sculpted by a different workshop, however, with a very close association to Reims Cathedral. This Bamberg/Reims group sculpted the semicircular Last Judgment tympanum and the remaining jamb figures (side posts) on the Prince's Portal in a program that represents a compressed version of Reims's north transept facade. The Reims-related workshop also carved jamb figures of Henry II, Kunigunde, St. Peter, St. Stephen, Adam, and Eve for the Adam Portal and additional sculpture presently inside the cathedral, including the famous Bamberg Rider. This workshop represents one of the most direct connections between French and German sculpture during the Gothic period, and many German sites in the thirteenth century including Magdeburg, Mainz, and Naumburg exhibit styles derived from the Bamberg workshop's interpretation of French cathedral sculpture. Stylistically this Bamberg/Reims workshop is characterized by an interest in classical sources (seen especially in the Visitation groups at both cathedrals) and in natural observation apparent in both faces and vegetal forms. At Bamberg there is also a heightened emotional expressiveness, seen in the grinning and grimacing faces of the Last Judgment tympanum on the Prince's Portal, which is absent at Reims.

The interior sculpture at the cathedral includes a Visitation group, the renowned Bamberg Rider, and several other figures associated with the Bamberg/Reims workshop. There are considerable problems with the original placement of much of this interior sculpture. The Rider is presently positioned on the north pier in the entrance to the east choir. He sits firmly on his horse looking away from the wall with the reins in one hand and the strings of his mantel in the other, and seems to embody the knightly virtues so important in the medieval domestication of those who fight. Along with the figure of Uta from Naumburg, the Bamberg Rider has become one of the popular icons of German medieval art. The figure, horse, and plinth (base) are made of seven pieces of sandstone and represent a considerable technical achievement, although the Rider's specific identity is uncertain. Stylistically the figure resembles the figure of Philip Augustus at Reims, and proposed identifications include Henry II or another German ruler, Constantine, the first Christian emperor, and St. Stephen of Hungary, who was the brother-in-law of Henry II. Most of these identifications would support the concepts of saintly ruler, church foundation, and association of secular and religious power, so important in the imagery at Bamberg Cathedral. There are significant parallels between the Bamberg Rider and the slightly later Magdeburg Rider. But unlike the Magdeburg Rider, the Bamberg Rider is not freestanding and may have always had an interior placement.

A tomb for Pope Clement was also sculpted during this campaign. The original form of the monument is open to question, but it consisted of two components—an effigy, presently mounted on a pier in the east choir, and a tomb chest of gray marble. The effigy, also by the Bamberg/Reims workshop, is very similar to jamb figures of clerics on French cathedrals. The marble tomb chest has a rare iconography, with St. John the Baptist and the Death of

the Pope on the short sides of the chest and the Cardinal Virtues on the long sides. Bamberg Cathedral continued to receive sculptural embellishment during the later Middle Ages. Wooden sculpted choir stalls dating from around 1380 were originally present in both the east and the west choirs of the cathedral. Reliefs of Henry II and Kunigunde appear in the decorative program of the choir stalls along with saints, prophets, and a collection of hybrid creatures. Tillmann Riemenschneider sculpted the tomb of Henry II and Kunigunde between 1499 and 1513. Originally located in the east end of the nave, it consists of effigies of the emperor and empress on a tomb chest decorated with narrative panels of their lives, drawn mostly from the Golden Legend of Jacobus de Voragine. A Virgin altarpiece of 1523 by Veit Stoss, originally made for a Carmelite convent in Nuremberg, was subsequently transferred to Bamberg by Stoss's son during the Reformation. While the cathedral is the most notable medieval structure in Bamberg, several other churches date from the Middle Ages, although most received extensive baroque remodeling during a period of prosperity in the seventeenth century. The Benedictine abbey of St. Michel's, founded in 1015 by Bamberg's first bishop, Eberhard, had a plan that originally related to that of Hirsau, but the church received extensive later remodeling. Bishop St. Otto (d. 1139), who converted the Pomeranians, is buried in a sculpted tomb (first half of the fifteenth century) located in St. Michael's Abbey. Bamberg also has a fine late Gothic example of a parish church dedicated to the Virgin (1375–1387), which has been related to the architectural style of the Parler family. The Cistercian cloister of Ebrach is near Bamberg. Secular buildings from the Middle Ages include the palace, founded by Henry II but rebuilt between 1475 and 1511, and some of the canon's half-timbered houses in the area around the cathedral.

Barbarossa

See [Frederick I Barbarossa](#).

Basel

Located on the Rhine, Basel was an ecclesiastical and intellectual center throughout the Middle Ages, and the site of the Council of Basel, a general council of the Roman Catholic Church, in the fifteenth century. While a Celtic settlement had existed from the middle of the first century B.C.E. on the hill over the Rhine now occupied by a cathedral, the Roman colony that shares its early history with Basel (also Basle) was founded upstream at Augusta Raurica, seven miles to the east. Settled in 44 B.C.E., the Roman town thrived until the third century, when it was moved, for the purposes of better defense, to the hill where the cathedral now stands. The name *Basilia* (English also Basle) is documented as early as 374. In 455 the Romans abandoned the site to the local Alemannic tribes. Isolated bishops are documented from the fifth century; a continuous succession is known only from the middle of the eighth. The city was Frankish from the beginning of the sixth century; from about 900 it belonged to the kingdom of Burgundy; under Emperor Henry II, at the beginning of the eleventh century, it was incorporated into the empire.

Under the Celts a cult building may have stood on the site of the present cathedral, and the Romans seem to have continued religious activities in this area after their move there. While one might hypothesize a Merovingian building on the same site, archaeological excavations have documented only two earlier church buildings in the area of the present cathedral. A ninth- or tenth-century building traced the dimensions of the present building's nave and aisles. An Ottonian structure was dedicated in 1019 in the presence of the emperor Henry II. It is not possible to say whether the earlier of the two buildings was the much-praised church finished by Bishop Hatto (891–913) in the early ninth century or a replacement for this building after the Magyar invasion of 917; it is also possible that the rebuilding after 917 took a full century. Henry's presence at the dedication and his gift of the golden altar antependium (now in Paris, Musée de Cluny) gave him a reputation as the cathedral's founder.

Basel, *Münster*, west façade, detail: portal. Photograph: Joan A.Holladay

The present building was erected in the last third of the twelfth century in late Romanesque style. At least the choir, which includes the first use of an ambulatory in a German bishops church, was finished by 1205. The majestic interior is marked by a three-story elevation, wide proportions, and heavy walls. The exterior of the Romanesque building has been almost entirely obscured: first by the addition of chapels along the aisles in the late thirteenth and first half of the fourteenth centuries, then by the reerection of the upper levels of the towers and choir after an earthquake in 1356. Johannes Parler, then at work on the cathedral of Freiburg im Breisgau, undertook the rebuilding; his influence is most visible in the triforium and clerestory of the choir. After a rededication of the high altar in 1363, work on the crossing and west facade proceeded more slowly; the towers were completed by 1500.

Contemporary with the late Romanesque building campaign is the north transept door, the so-called Gallus portal, named after the altar to the missionary Saint Gall inside the transept. The late twelfth-century portal is noteworthy as one of the earliest figural portals in German-speaking areas and as one of the earliest representations of the Acts of Charity according to Matt. 25:34–36. Six two-figure reliefs representing care for the hungry, the thirsty, the homeless, the naked, the sick, and the incarcerated frame the doorway. As in the biblical text, these good deeds are portrayed in the tympanum as preparation for the Last Judgment. The lintel shows the Wise and Foolish Virgins, a related theme, also from Matthew 25. The jamb figures represent the Evangelists,

After about 1258, the west facade was reconfigured with a narthex between the two towers. The sculptured portal opened from the narthex into the nave. After the 1356 earthquake, the portal was moved forward to the exterior facade of the narthex and four remaining large-scale figures mounted in the spandrels at tympanum level. The program centered on a narrative tympanum representing the Passion and culminating in an image of the Last Judgment; only the archivolts survived the Reformation. They represent prophets and angels in a style close to that of the Erminold Master, a noted sculptor whose preserved works at Prüfening and Regensburg date from the 1260s. The four large-scale figures, usually dated about 1290, are related in style and iconography to the nearly contemporary portals at Strasbourg and Freiburg. The figure of a Foolish Virgin, along with the heads of two others preserved in the Cathedral Museum, must have come from a full group of the Wise and Foolish Virgins; this figure is now paired with the so-called Prince of the World. The Prince, who represents temptation, was added to the portal program at Strasbourg for the sake of the portal's symmetry; as the Bridegroom-Christ figure of the biblical parable lets the Wise Virgins into the garden of Paradise, the Prince tempts their foolish counterparts with worldly pleasures. The Basel program must have comprised the full group of twelve figures. Their original placement is difficult to ascertain. The textual source and the understanding of the Wise and Foolish Virgins as an allegory of preparedness for entry into heaven account for the association of the group elsewhere with the Last Judgment and for its typical location on the doorway. However, the preserved archivolts are not deep enough to have had corresponding jambs with space for the full twelve-figure group, and the quarter-century chronological gap between the execution of the archivolts and these figures would also argue against a placement in the immediate portal context. Equally difficult to explain in the context of the portal are the two remaining figures in large scale, which represent the emperor Henry II and his wife Kunigunde. It seems likely that they stood around the interior walls of the deep narthex, analogous to the arrangement at the Münster at Freiberg im Breisgau.

The Franciscan church (*Barfüsserkirche*, now the Historical Museum), to the south of the cathedral, was erected about 1300. On their arrival in Basel in 1231, the Franciscans had settled outside the city wall to the west, near the preserved thirteenth- or fourteenth-century gate known as the *Spalentor*. In 1250 they moved to the city center, to the site of the current church. A fire in the cloister in 1298 may have necessitated the replacement of the mid-thirteenth-century building; the new church was built at the turn of the century immediately to the north of its predecessor and in a similar form. The lay church is separated from the monks' choir not only by a deep choir screen but by a striking difference in the form of the two spaces. The monks preached to the lay community in the spacious aisled nave with its flat wood ceiling. Beyond the choir screen the single vessel of the vaulted choir, its walls dissolved in a continuous band of stained glass windows, marked a hierarchically more important space.

The church of the Dominican monks (*Predigerkirche*) was erected between 1233 and 1269 and rebuilt in part after 1356, and that of the Dominican nuns,

at Klingental in Kleinbasel across the river, was built in the 1280s and 1290s. Both used a form similar to that of the Franciscan church. The Klingental cloister and the wall around the cemetery near the Dominican church were both decorated with painted cycles of the Dance of Death. The series in the cloister at Klingental seems to have predated slightly that on the wall of the cemetery near the men's house, ca. 1445–1450. Portions of the latter, preserved when the wall was dismantled in the nineteenth century, are preserved in the Historical Museum.

The Council of Basel, held in the city from 1431 to 1448, debated the growing reform movements within the Church. It marks the beginning of the city's important role in the intellectual life of late medieval Europe. The first university in Switzerland was founded in Basel in 1459–1460. By the end of the century, Basel had become a major center of the newly founded printing industry. Scholars from all over Europe came to live and work in Basel, where they had access to the means to publish their works. Their presence there attracted not only students but artists, who hoped to find work decorating and illustrating their books. After 1500, these included such wellknown figures as the Dutch humanist Erasmus (d. 1536 in Basel) and the German painter and printmaker Hans Holbein the Younger (d. 1545) and his brother Ambrosius (d. ca. 1519).

Beatrijs van Nazareth (1200–1268)

The Brabantine mystic Beatrijs van Nazareth was born in 1200, the youngest child of a burgher family in Tienen (in the present-day Belgian province of Flemish-Brabant); for that reason she is also known as Beatrijs van Tienen. She evidently was trained in the medieval liberal arts (*artes liberales*), showing a good knowledge of Latin. In 1215 she took the solemn vows as a Cistercian nun. In 1236 she moved to the convent in Nazareth (near the town of Lier), where she was prioress until her death in 1268.

Quite a lot is known about the life of this mystic thanks to the Latin text *Vita Beatricis*, written in the last quarter of the thirteenth century by an anonymous Cistercian monk. Allegedly this *vita* was based on a diary that Beatrijs kept in Middle Dutch, but which is now lost. The only surviving work by her is entitled *Van seven manieren van heileger minne* (The Seven Steps of Holy Love), a short treatise in prose, dealing with seven aspects of the love for God. This work dates back to 1250 and is therefore one of the oldest Middle Dutch texts in prose (together with some works by the other Brabantine mystic, Hadewijch). *Van seuen manieren van heileger minne* has come down to us in three manuscripts from the fourteenth and fifteenth centuries, always in combination with other texts.

Beatrijs van Nazareth is, alongside Hadewijch, one of the most prominent representatives of female mysticism in the medieval Low Countries. Her treatise was probably meant for people within her own circle, possibly as an introduction into the spiritual life for the novices of her own convent. Beatrijs considers the love of man for God to be a gift of God and describes in seven steps the experience of joy and longing as well as tension and agony caused by this spiritual *minne*. The ultimate goal of mystical ascent, according to Beatrijs, is the fulfillment of love and the union of the soul with its heavenly bridegroom.

Beatrijs's treatise reveals influences of the *amor* (love of God) concept as was current in twelfth-century Northern French spirituality, prominently expressed in texts of Cistercian origin. In the *minne*, then, God reveals Himself and man is free to comply with that love; in love, man can meet God.

The works of Beatrijs and Hadewijch are of the utmost importance for the development of Middle Dutch as a written language. Both mystics tried to express the role of the divine and the experiencing of God in their lives, while realizing that their vernacular falls short vis-à-vis such an endeavor. Thus they frequently made use of neologisms, using the language in a creative way. They laid the foundations of a Middle Dutch mystical language, which made itself felt in the oeuvre of Jan van Ruusbroec and, through him, in the writings of the Modern Devotion, a later religious movement.

Beguines

Flourishing in thirteenth-century Germany and the Low Countries, Beguines were urban laywomen devoted to imitating Christ through poverty, chastity, and the apostolic life, without formalized rule or official order. They lived a hybrid of religious and secular lives as part of a broader renewal called *mulieres religiosae* (religious women). They attributed their movement to no single founder, but had roots in Gregorian reform. Enjoining moderation rather than extreme asceticism, they supported themselves through hospital work, weaving, and acts of charity. Beguines (and Beghards, their fewer male counterparts) lived either individually, in group homes, or in protected clusters of residences and churches called *beguinages*.

The most prominent Beguine communities in Germanic areas thrived in Cologne (eventually including over one hundred houses), Mainz, Strasbourg, Basel, and Wesel. Most German Beguines lived in the small sororities that could be found interspersed throughout nearly all German cities. They represented a significant portion of the population, and records show their notable economic and material contributions.

Beguines evoked both praise and censure from ecclesiastical authorities. Their fate rode the oscillating tide of the Church's attempts to respond to and regulate the swell of religious lay movements. Thus, although Jacques de Vitry, bishop of Acre, courted and secured approval for the holy women from Pope Honorius III (1216–1227), the Fourth Lateran Council (1215) banned new forms of religious life. Pope Gregory IX's bull (1233) offered protection for northern spiritual women, while a Mainz synod of the same year confiscated Beguine property. Most of the specific synodic legislation against Beguines voiced suspicion over unauthorized teaching and unregulated practice. For example, Eichstätt (1284) opposed unauthorized lay leaders delivering sermons. Mainz (1261) objected to women donning a habit and maintaining chastity without the supervision of enclosure. Magdeburg (1261) reminded Beguines to obey parish priests. Church authorities gradually associated Beguines with antinomianism because some women taught complex theological doctrines. As a result, the Council of Vienne (1311) censured them more forcefully with two decisive decrees (1317). *Ad nostrum* turned the Inquisition on Beguines and outlined specific errors. *Cum de quibusdam mulieribus* called for the dissolution of Beguines, but left a degree of latitude in enforcement. As pressure increased, many Beguines joined stable tertiary and mendicant orders, with whom they had already sustained productive, collaborative relationships.

Beguines authored some of the earliest, most artful theologies in European vernaculars. These mystical teachings constitute their most lasting legacy. The most influential German Beguine is inarguably Mechthild von Magdeburg (d. ca. 1282). In *Das Fließende Licht der Gottheit* she develops a language of images, paradox, and courtly convention to teach about the soul, God, and mystical union. The lesser-known German Beguines Agnes Blannbekin (d. 1312) and Christina of Stammeln (d. 1315) contribute to our growing awareness of Beguine devotion. Because of the fluidity of medieval linguistic borders, we may also include two Flemish Beguines, Beatrijs van Nazareth (d. 1268) and Hadewijch of Antwerp (fl. thirteenth century), as contributors to medieval religious culture in the Rhine region. The Beguine writers influenced later German mystical authors including Meister Eckhart (also Ekehart, Eckart; d. 1327) and Margaretha Ebner (d. 1351).

A prolific author and composer of almost five hundred song-poems, Michael (or Michel) Beheim (also Behaim; Beham) was until the late twentieth century dismissed as a *Vielschreiber* (scribbler) and mere cultural-historical curiosity. He is now recognized as one of the most important singers, composers, and publishers (*Liedpublizistern*) of the fifteenth century. Beheim's reevaluation, facilitated by the appearance of a critical edition of his poems (*Gedichte*, published 1968–1972), coincided with the reassessment of fifteenth-century aesthetics in general. Beheim is an important figure because of his poetic range and the range of his ambition. A manuscript scribe, poet, and composer, he produced a virtual summa of medieval themes and poetic forms, creating religious songs, moral and ethical poetry, political and historical writings, autobiographical verse, love songs, fables, and songs on the nature and status of the singer's art. (He even writes on Dracula, Vlad the Impaler.) As a poetic musician (*musicus poeticus*) and lay theologian, Beheim championed *rechte kunst* (proper art) and artistic individuality, the latter grounded in the composition of original songs, or *Töne* (occasion pieces with titles such as *Zugweise*, *Kurze Weise*, *Verkehrte Weise*, *Osterweise*, *Trummetenweise*, *Gekrönte Weise*, *Slecht guldin Weise*, *Hohe guldin Weise*, *Hofweise*, *Slegweise*, *Lange Weise*, *Angstweise*). Beheim also fashioned lengthy chronicles in verse: *Pfälzische Reimchronik*, (Palatine Rhyme Chronicle), *Buch von der statt Triest* (The Book of the City Treist), and *Buch von den Wienern* (The Book of the Viennese). Since the poet set these chronicles to music, thus making them sung epics (*Sangvers-Epen*), they hold the distinction of being the final specimens of Middle High German epic material that was sung. All of Beheim's oeuvre can in fact be performed to music, and he perhaps surprisingly leaves to his audience a choice of modes of reception. In the foreword to the *Buch von der statt Triest* he states, for example, that "you can read it like a rhymed book or sing it like a song" (*man es lesen mag als ein gereimptes puch oder singen als ain lied*). By presenting an alternative to traditional, communal, oral song performance, Beheim makes one of the first appeals in German literature to silent readers.

Literary criticism on Michael Beheim is devoted to taxonomy; for example, whether he was a medieval or modern poet, whether he was a Meistersinger, and if the term "professional poet" (*Berufsdichter*), frequently applied to him in research, helps us to understand him any better. That his work is difficult to pigeonhole arises from Beheim's status as a transition poet par excellence; as such, he embodies clashing and contradictory, but not mutually exclusive, tendencies. For instance, although he was a conservative author who cataloged and recapitulated the entire repertoire of fourteenth- and fifteenth-century German political writers, or *Spruchdichter*, Beheim sanctioned, and made a specific appeal to, a modern reading audience, recognizing the power and place of the book. Similarly, his great concern for the accurate textual transmission of his "collected works" on the manuscript page marks him as both a conservator and a protohumanistic student of the word. Although Beheim esteemed tradition, imitating and paraphrasing revered masters (Johann von Neumarkt, Heinrich von Mügeln, Heinrich Seuse, Heinrich von Langenstein, Thomas Peuntner, the Nicholas von Dinkelsbühl redactor, Muskatblüt), he reanimated not only poetry but theology, promulgating an Augustinian renewal in the vernacular that deserves the name of pre-Lutheran biblical humanism. Using songpoetry as a medium for proselytism among the laity, Beheim stylized himself as a poet-theologian and transmitter of patristic theology, who translated, versified, and set to music Scripture, sacred tractates, and sermons.

It is uncertain whether Michael Beheim was born in 1416 or 1421, or if he died before 1472 or after 1479, but it is possible to reconstruct his life in otherwise remarkable detail from rich autobiographical verses, for example, Song 24, "On Michael Peham's [sic] birth and his travels to this country" (*Von Michel Pehams gepurt und seinem her chomen in dis lannd*). In strophes bearing the traces of emendation as authorial intervention, Beheim alludes to his humble origins as a weavers son, and sketches a career path that leads to no less than the imperial court of Frederick III of Habsburg. Among his prominent patrons were King Christian I of Denmark, Konrad von Weinsberg (the imperial archchamberlain), Count Ulrich II von Cilli, and Margrave Albrecht III, ("Achilles") von Brandenburg-Ansbach. For another noble sponsor, Frederick I of Wittelsbach, elector and Count Palatine, the poet reformulates the centuries-old adage concerning medieval German literary patronage, "Whose bread I eat, their song I sing" (*Wes' Brot ich eß, des Lied ich sing*). These words have had an extraordinarily negative resonance in Beheim scholarship because they are deemed an expression of personal ethics rather than a rhetorical formula. A master of the rhetorical art, he was a loquacious, self-conscious artist with a sharp eye for accuracy of textual transmission and a strong belief that poetry should serve a moral purpose. His melodies and strophic structures, his wide-ranging and varied themes, his ecumenical impulses and his promotion of sacred subject matter as appropriate to secular audiences, all make him the architect of a rich compendium of songs and song types.

Benedict, Rule of Saint

One of the most important documents of western Christendom is the rule for monks written in the early sixth century by Saint Benedict of Nursia (b. ca. 480), founder of the monastery at Monte Cassino as well as others in the area around Rome. Although probably meant as no more than a guide for those monasteries Benedict himself had established, the Rule of Saint Benedict gradually became the guiding principle for the governance and functioning of monasteries and nunneries throughout western Europe, which were then termed "Benedictine."

In 787, after a visit to Monte Cassino, Charlemagne had an exact copy of the Latin text made, possibly from Saint Benedict's autograph manuscript, and sent to Aachen. This authentic copy became the standard text guiding Carolingian monastic reform after the Synod of Aachen in 802 urged the adoption of the Rule of Saint Benedict in Frankish monasteries.

The rule itself requires that the text be read to the whole community of monks each year (chapter 60) and that the entire text be read three times to novices during their first year (chapter 58), a time when they are unlikely to have much knowledge of Latin. Thus, not only did every monastery library have its own copy of the rule, but the Latin text soon became an object of glossing and translating efforts.

Six Old High German glosses of the Latin text of the Rule of Saint Benedict are extant. Although only a single ninth-century OHG translation of the rule still exists (St. Gall, Stiftsbibliothek, Codex 916), it is known that two others once belonged to the same St. Gall Abbey library.

In the later Middle Ages, translating efforts increased. A single monastery might have several translations of the rule made in succeeding generations. Of the seventy extant MHG translations dating from the twelfth to the early sixteenth centuries, only seventeen have been edited and published in entirety.

The Old High German translation of the rule is an interlinear version with the German words written above the Latin words they translate, without regard for German word order. Studies show that the German text is not a translation of the Latin text above which it appears, but of a slightly different Latin text of the rule. For roughly the first third of the Latin text, virtually every word is translated; thereafter, the translation becomes a gloss with only certain words translated.

The earliest extant MHG version of the Benedictine rule is the Rule of Zwiefalten, from a monastery in Württemberg, written in Swabian dialect. (Published MHG rules are named after the monastery of origin or, occasionally, the present location, e.g., the London Rule.) Like the OHG rule, Zwiefalten is an interlinear version of an older text, copied in the mid- to late twelfth century.

The Rule of Oxford, early fourteenth century, once belonged to the monastery at Eberbach in the Rhineland. However, the fact that its language was adapted for use by nuns indicates that it was not likely used there, but perhaps at one of the Rhenish foundations affiliated with Eberbach.

No definitive studies of the MHG rules establish relationships and affinities between the various translations. Preliminary comparisons indicate a remarkable amount of freedom exercised by medieval translators in rendering this important religious document into German.

Bern

The city of Bern (Switzerland) owes its founding to Duke Berthold V of Zähringen, who chose the site on the Aare peninsula in 1191 as a point of defense against the French-speaking regions. Bern was granted free imperial status in 1218, but by the end of the fourteenth century the citizenry governed the city. Bern's strong local nobility and appetite for property alienated the neighboring regions as its importance and power grew. Its entrance into the Swiss Confederation in 1353 is attributed in part to Bern's attempt to quell various uprisings of its own subjects, who sympathized with the Confederates (Uri, Schwyz, Unterwalden).

Bern's planning and architecture reflect its prosperity in the late Middle Ages. The city, with its three parallel main streets, was divided into modules which were then leased, subdivided into housing, and subleased. Its infrastructure was impressively progressive: canals for transport, sewers and canals for drinking water, as well as fortifications; four gates survive from the twelfth and fourteenth centuries. A fire in 1405 destroyed all private houses, but Bern's two smaller churches, the Französische Kirche (French Church) and the Nydeggkirche, survived. After building a city hall (1406–1417), Bern's citizens saw the need for an equally impressive ecclesiastical structure. A cathedral dedicated to Saint Vincent was built on the site of the original twelfth-century parish church. Matthäus Ensinger, who was also working on the cathedrals in Ulm and Strasbourg, planned and oversaw the building of the Bern cathedral for twenty-five years beginning in 1421. The result is a basilica with few alterations made to the original plan. Of note is the choir, with stained glass windows of iconographic interest. The decorative vaults with sculpted capstones were erected by Daniel Heinz between 1571 and 1575. The sculpture decorating the three portals of the facade was executed by Erhart Kűng from Westphalia between 1458 and 1505. Represented in the tympanum of the central portal is the scene of the Last Judgment, which, in its images of the classes in late medieval society, demonstrates the influence of the mystery plays of the period.

Berno von Reichenau (d. June 7, 1048)

The abbot of one of southern Germany's leading monasteries, Berno von Reichenau (also Bern, Bernardus, Berno Augiensis) contributed richly to medieval German culture. His writings encompass treatises on music theory, liturgy, and theology, as well as saints' lives, sermons, letters, and musical compositions. His most famous pupil was the music theorist, composer, and historian Hermann von Reichenau (also Hermannus Contractus), whose historical writings provide essential information concerning Berno's biography.

The circumstances of Berno's birth are unknown, although he was probably born to a German family of some prominence. He is first associated with the monastery of Prüm. In 1008 Emperor Henry II appointed him abbot of the island monastery of Reichenau. In 1014 Berno traveled to Rome for Henry's coronation, a measure of his high political standing. In 1022 he again accompanied Henry to Rome, this time also visiting Monte Cassino. These journeys, as well as a third trip in 1027 to attend the coronation of Emperor Conrad II, doubtless gave him access to sources important for his musical and liturgical research. Upon the accession of the unsympathetic Conrad, Berno was embroiled in disputes over encroachments upon previously granted ecclesiastical privileges. Emperor Henry III, son of Conrad II, proved to be a more supportive sovereign than his predecessor, and visited Berno at Reichenau on February 4, 1040. Berno died there on June 7, 1048, having in his forty years as abbot guided the monastery to new levels of artistic and scholarly achievement. He was buried in the newly consecrated choir of the abbey church. Berno's tomb was rediscovered in 1929; measurements of his remains show that he stood an imposing six feet three inches tall.

As a music theorist, Berno struck a balance between practical application and abstract theory. His most significant contributions are three tonaries (lists of chants ordered by mode). Most important of these is the *Prologus in tonarium*, a tonary with explanatory prologue that was widely distributed during the eleventh and twelfth centuries, sometimes with later interpolations. By Berno's own admission it is mainly a compendium from earlier sources. Another, abridged, tonary, *De consona tonorum diversitate*, was apparently intended for teaching novices at Reichenau. In addition to the tonaries, a treatise entitled *De mensurando monochordo* (On measuring monochords) has been tentatively attributed to Berno. Berno's views on mode appear to have been relatively conservative, and do not reflect the growing influence of the Italian music theorist Guido of Arezzo. Berno's treatment of transposition and modal affinity forms an important background to Hermann's highly original work. In the area of rhythm, Berno warns against the failure to distinguish between long and short notes.

Berno's musical compositions include three hymns, an Epiphany trope, three sequences, and an office for Saint Ulrich; an office for Saint Meinrad is also tentatively ascribed to him.

As hagiographer, liturgist, and theologian, Berno's contributions are also rich. His *Vita sancti Udalrici* (Life of Saint Ulrich) is noteworthy for its fine literary style. Also ascribed to Berno are treatises on religious topics including Advent, prayer (in hexameter), fasting, and heresy, as well as on the Mass (*De quibusdam rebus ad missae officium pertinentibus*, On Certain Things Pertaining to the Office of the Mass) and on differences between the Gallic and Roman Psalters (*De varia psalmodia*); Berno's authorship of these latter two treatises has been questioned by modern scholars, however. More than a dozen sermons and sermon fragments are preserved, many of them on Marian topics, as well as about twenty letters to emperors, bishops, abbots, and other leaders. That numerous other works of music theory, history, and poetry came to be attributed to Berno, often on weak grounds, testifies to the esteem in which he was held by later generations of medieval scribes.

Bernward of Hildesheim (960–1022)

Bishop of Hildesheim and abbot of St. Michael's, Hildesheim (1007–1022), Bernward was a pivotal member of the Ottonian court, and his patronage stimulated the arts at Hildesheim. He was born in 960 into a noble Saxon family that enjoyed the friendship of the Ottonian emperors. By 977 he had joined the imperial chancellery as a notary. He subsequently became court chaplain and tutor to Otto III. As bishop of Hildesheim, Bernward continued to advise and represent Otto III and Henry II. His imperial service entailed considerable travel. Under Otto II, during the regency, and under Otto III, he was frequently in Italy, especially Rome. As Henry II's diplomatic representative to Robert II of France in 1007, he visited Paris, Saint-Denis, and Tours. The various cultural sources to which Bernward was exposed on these occasions were fundamental with respect to his patronage of the arts at Hildesheim. As bishop of Hildesheim, Bernward was responsible for several major commissions. In addition to the Benedictine monastery church of St. Michael's, his patronage is represented by a series of illuminated manuscripts and several important works in metal, especially the hollowcast bronze column and doors now in the cathedral at Hildesheim. The complex program of the doors, which relates to the fall of man and his redemption through Christ, depends on a typological reading of paired Old and New Testament scenes and indicates the erudition of the patron. Formally and iconographically, the doors and the column derive from Carolingian sources from Tours, Reims, and Metz, but the general concept as well as the hollow-cast technique reflect Bernward's acquaintance with classical and early Christian Roman monuments.

Berthold von Henneberg (1441/1442–1504)

A prelate who wielded considerable political influence under Maximilian I, Berthold, after twenty years as a cathedral canon and dean of Mainz, succeeded as archbishop in 1484. The diocese was in somewhat desolate condition after many wars with regional dynastic families over territorial lordship. Like many other contemporaries, Berthold believed that a reform of the Holy Roman Empire, which should establish an effective central government dominated by the princes, might end the recurrent warfare. At the *Reichstag* of Worms (Diet of Worms) in 1495, Berthold's leadership gained the passage of the "eternal territorial peace" (*ewige Landfriede*) and the founding of an imperial chamber court (*Reichskammergericht*). Both were helpful in promoting lasting stability in the empire.

But Berthold and the reformers were not satisfied with these accomplishments, thinking that Emperor Maximilian I was too distracted by his "foreign" wars and territorial ambitions. So at Augsburg in 1500 Berthold restricted Maximilian with an imperial regime (*Reichsregiment*) run by the princes. Long archchancellor in name and by tradition, Berthold briefly became so in fact as he gained control of the imperial chancery and seal. By the time of Berthold's death in 1504, however, Emperor Maximilian had exploited the disagreements among the princes and estates and successfully regained his authority.

Berthold von Holle

The author of three courtly love romances, *Demantîn*, *Crane*, and *Darifant*, named for their heroes, was probably the scion of a Hildesheim ministerial family who is attested from 1251 to 1270. Berthold, who mentions Duke Johann of Brunswick in the *Crane* prologue, apparently had connections to the Guelph court.

Demantîn (11,761 verses) and *Crane* (4,919 verses) are each preserved in one manuscript and three fragments. A fragment of 265 verses survives of *Darifant*, leaving its content largely unclear. The reception of the texts remained confined to northern Germany, and in the fifteenth century, the first half of *Crane* was adapted for prose in Cologne. Berthold's exceptional position in German thirteenth-century courtly romance rests on his northern sphere of activity and his hybrid language, a mixture of Middle High and Low German.

In *Demantîn*, the prince Demantîn woos the Greek king's daughter Sirgamot in vain. Her father marries her to the old king of Antioch, who does not consummate the union. Demantîn elopes with her and defends their love in a war against both her father and her husband, who finally renounces her. The rather strictly composed plot structure is determined by the succession of fight, adventure, and festivity. Love is the highest value for the noble-minded protagonists and, according to the old ideals of knightly service, the unrivaled motivation of masculine action. Conflicts with honor and marriage are settled in love's favor without enduringly endangering the social order. Berthold's depiction of chivalric standards, courtly lifestyle, and ceremonial splendor is decidedly nostalgic. The mainly realistic setting is mingled with reminiscences of the fairy-tale world of Arthurian romance, as a dwarf king who advises Demantîn's friend Firganant of princely ideals is familiar with France and Germany, and a fairy queen is the sovereign of German fairies.

Crane, the hero of the title, is the nickname of the Hungarian king's son Gayol, who wanders to the imperial court with his friends Stare (starling) and Valke (falcon), sons of the dukes of Bavaria and Austria. He falls in love with the emperor's daughter Acheloyde and, after some complications are resolved, marries her. In the second half of the romance, he demonstrates his princely skills in a series of adventures. In the decisive tournament for Acheloyde, Crane fights in disguise, initiating what seems to be a conflict of social rank. Unaware of his real position, Acheloyde proves the honest loyalty (*triuwe*) of her love by consenting to an alliance that would deprive her of her social status. Just as she exemplifies loyalty in love, Crane's marshal Assundin incarnates political loyalty, the three companions loyalty in friendship, and Crane himself knightly and princely loyalty. Therefore, the romance is entirely concentrated on the praise of *triuwe* as the central virtue of nobility.

Berthold takes his motifs from the courtly epic tradition, but no concrete sources have been discovered. Wolfram von Eschenbach, whom he names as his model, only marginally influenced his style and poetic technique. Compared to other love romances of the thirteenth century, such as Rudolf von Ems's *Willehalm von Orleins* and Konrad von Würzburg's *Partonopier* and *Engelhard*, the simplicity and stereotypy of his language and the lack of rhetorical pretension are striking.

Berthold von Regensburg (ca. 1210–1272)

The most well-known and effectual preacher in the vernacular in the German Middle Ages was the Franciscan priest Berthold von Regensburg. Neither Berthold's birthdate nor birthplace has been established, but he is identified with the Minorite order in Regensburg, of which he became a member, possibly after years of study in Magdeburg. While Berthold acted as confessor to the women of nearby Obermünster and Niedermünster, his fellow Franciscan David von Augsburg probably served as his assistant. Beginning in 1240 and continuing until his death, Berthold preached to religious and lay audiences first in southern Germany, then Bohemia, Switzerland, Styria, and France. In 1263 Pope Urban IV requested that Berthold assist Albertus Magnus in preaching the Crusades. Berthold's preaching to the masses took place outside the church and in the vernacular; embellished descriptions of his sermonizing assert that the lay crowds sometimes numbered forty thousand to two hundred thousand. Such exaggerated estimates substantiate Berthold's popularity and the respect in which he was held. Because of his notoriety he also was called upon to settle disputes in the political and religious spheres.

The only extant works by and attributed to Berthold are Latin and German sermons. Five collections of sermons comprise the Latin corpus. Of these only the first three collections—*Rusticanus de Dominicis* (Rural Sunday Sermons), *Rusticanus de Sanctis* (Holy Day), and *Commune Sanctorum Pusticani* (Rural Saints' Day Sermons)—numbering 254 works, are indisputably by Berthold; they were prepared between 1250 and 1255 for his fellow preachers. The authenticity of the remaining 135 Latin sermons is uncertain. In the preface to the sermons Berthold states that he undertook the editing of the works to counter the error-ridden versions being produced by enthusiastic but unskilled clerics.

The authorship of the German sermons cannot be ascertained with any degree of certainty. More than two hundred pieces have at one time or another been attributed to Berthold, but today fewer than one hundred are identified as works based on the sermons of the Franciscan. It is presumed that the vernacular sermons were copied and edited by Franciscan monks in or around Augsburg beginning in the 1260s, before Berthold's death, until approximately 1275; nonetheless, it is unlikely that Berthold read or approved of many of the works. The editor's hand is clearly discernible; thus these sermons should not be viewed as mere transcriptions of the sermons as preached by Berthold. The German sermons reveal a dependence on the earlier Latin homiletic works, but none is a translation from the Latin.

More than three hundred manuscripts containing Berthold's Latin sermons have been identified; in contrast only eight principal manuscripts that include the vernacular sermons are extant. The Latin homiletic works follow the tradition of the thematic or university-style sermon of the Scholastics, whereas the vernacular sermons emphasize *exempla* (examples) as opposed to a rigid structure or an interpretation of Scripture. In general Berthold would have preached the Latin sermons to a learned, religious audience and the vernacular sermons to the laity; the notable exceptions are the German *Sermones ad Religiosas* (*Klosterpredigten*, Sermons for the Religious), which were preached to women in Berthold's spiritual care.

The frequency of Berthold's name in medieval chronicles, the wealth of extant sermons by and attributed to him, and the esteem in which his contemporaries held him and successors attest to his influence and importance.

A painter who was born in Minden in Westphalia, Bertram is documented in Hamburg from 1367, and is known to have led a prospering and influential workshop there. A testament of 1390 speaks of an intended pilgrimage to Rome; one dated 1410 disposes of a considerable fortune.

Image rights not available

Twenty-four painted scenes survive from the first opening of a double-winged carved altarpiece from the church of Saint Peter (moved to Grabow in 1731; now Kunsthalle, Hamburg). They were painted by Bertram in 1379 and narrate the Latin poem *Speculum humanae salvationis* (1324, Mirror of Human Salvation) from Creation to the flight into Egypt. The initial scenes are dominated by the single image of the Creator, silhouetted against a gold ground. This monumental, eloquent figure is created in color and light without visible drawing lines, reminiscent of the painting style of Master Theoderic in Prague. Powerful limbs can be discerned below heavy garments. The narrative is convincingly carried by a sense of movement in the figure and by the forceful gestures of the large hands. Here, as in the later multifigured scenes, nature and architecture merely create a sparse stage setting for the vigorous protagonists.

An altarpiece, painted around 1410 for a convent at Buxtehude, is decorated with eighteen apocryphal and biblical scenes from the life of the Virgin. There, in tune with stylistic trends, Bertram's figures are reduced in scale and dressed in lighter materials, and they inhabit a more furnished stage. However, the distinct figure style of the workshop persists. It was echoed in many German workshops, and reflections have even been noted in wall paintings in the Chapterhouse of Westminster Abbey, London.

Beyeren, Herald (ca. 1345–1414)

The son of Claes Heynen, Beyeren was a court poet and historian. Born in the county of Holland, from 1371 he was employed as a messenger by Jan van Blois, one of the count of Holland's nobles, and nine years later he worked at the court of Duke Willem I of Gelre (d. February 16, 1402) as Gelre Herald. He wrote *Ehrenreden*, a German genre of short elegiac poems in honor of specific knights, usually written after they had died, in which the knight's arms were described according to the rules of blazon. In these and other works, he defended the old chivalric ideal. Around 1395 he was invested with the title of King of Arms of the Ruyers, which made him the most important herald in the area between the Meuse and the Rhine. For his own use, he compiled the *Gelre Wapenboek* (Gelve Book of Arms), in which he not only brought together arms of the European nobility, but also recorded his poems and included a portrait of himself. He took this manuscript with him to the court of Holland, with which he took service as Beyeren Herald in 1402. In his new surroundings, the genre of the *Ehrenreden* slowly receded into the background and he began to concentrate on writing long historiographical works, such as the *Wereldkroniek* (World Chronicle) and the *Hollandse kroniek* (Dutch Chronicle). These writings reveal his knowledge of the earlier literary tradition; he used works by Martin of Troppan (Martinus Polonus), Jacob van Maerlant, Melis Stokes, Jan van Boendale, and Johannes de Beka, among others. The form in which his work has come down to us may be called remarkable: six illuminated autographs have survived.

Bible

From the time of the Christianization of Germany, the Bible influenced almost every area of life. Biblical influence was utterly pervasive throughout the Carolingian and Ottonian periods and continued even after the rise of chivalry. Especially before the thirteenth century, this influence was often indirect; for most Germans of that time, the Bible was a Latin document, available mainly to the educated.

Several different forms of the Latin Bible were in use. Although the Vulgate text produced by Saint Jerome soon dominated, older manuscripts often contain the earlier and less accurate Old Latin (*Itala*) version. Since the Bible is very large, most manuscripts are incomplete, containing, for example, only the Gospels or the Psalms. Instead of the Gospels, some offer the diatessaron attributed to the second-century Syrian theologian Tatian; a diatessaron combines portions of the four Gospels, omitting redundant passages.

A famous ninth-century manuscript from Fulda contains, in parallel columns, a Latin diatessaron and a slightly divergent Old High German translation. The German *Tatian* (the modern title given to the OHG text) was not unique; we possess fragments of a slightly earlier translation of Matthew (in a collection of fragments known as *Isidor*). We also have several early translations of the Lord's Prayer (Matt. 6:9–13) and of various Psalms, meant for prayer and sometimes instruction. Williram's (Abbot of Eversberg, Bavaria) eleventh-century annotated translation of the Song of Songs was a particular favorite (at least eighteen manuscripts). Later, we find more ambitious translation projects: hints of a (possibly heretical) translation about 1260, and a complete New Testament in Augsburg in 1350. Although the famous Gutenberg Bibles are in Latin, the Strasbourg printer Johann Mentelin printed the first German Bible in 1466, using a clumsy translation perhaps 150 years old. Even before Mentelin, German texts are not rare; more than eight hundred earlier manuscripts contain all or part of the Bible in German. These translations were not used in the Mass; throughout the Middle Ages, even in parish churches, the Epistle and Gospel passages assigned for the day were chanted or read in Latin. Yet even before translations became common, the contents and teachings of the Bible were well known. As the Scriptures were proclaimed in Latin, German churchgoers could meditate on the biblical scenes and motifs often painted on church walls and ceilings. Outside, carved images might be found on the doors or over the portals. Later, stained or painted glass, and sometimes statues, presented biblical themes. Studying any book on medieval pictorial arts, one is struck by how many paintings, illuminations, and even simple decorations represent biblical scenes.

The Bible also figured heavily in German literature. Until the appearance of courtly literature shortly before 1200, the most significant German poetic works dealt with biblical topics. Many of these are finely crafted and strikingly original. The ninth-century Old Saxon *Heliand* portrays Christ as a Germanic king-hero; like the Old Saxon *Genesis* poem, it used the traditional alliterative verse form to which the newly converted Saxons were accustomed. Slightly later, Otfrid of Weißenburg created a new, rhyming verse form for his monumental Gospel poem. His new meter was quickly imitated, becoming the basis for almost all subsequent Old High German poetry, and eventually developed into the courtly couplet favored in Middle High German epics. While it is not entirely clear for whom these poems were intended—Otfrid says his is meant to keep the "laymens disgusting singing" (*laicorum cantus obscoenus*) from disturbing pious ears—we still find poems such as "Christ and the Samaritan Woman" (tenth century) and the longer "Vienna Millstätt *Genesis* and *Exodus*" (eleventh and twelfth century, respectively). Later, however, religious poetry strays farther from the Bible. Hartmann von Aue's *Armer Heinrich* slightly resembles Job but is completely independent. Other poets use extracanonical material; Konrad of Fussesbrunnen reworked the apocryphal Gospel of the Infancy of Jesus.

As elsewhere in Europe, early medieval German interpretation of the Bible followed the principle of the three senses of Scripture, first formalized by Origen in the third century: besides the obvious "literal sense," Scripture had a "moral sense" and, most important, a "spiritual sense." Many narrative passages of Otfrid's poem are followed by reflective and interpretive sections labeled *mystice* ("in a mystical sense"), which may be longer than the narrative. Some scholars, including Origen himself, even claimed that the literal sense of a passage might sometimes be false, at least in details, if this helped to express the spiritual sense. The Frankish theologian Hrabanus Maurus (ca. 784–856) apparently thought it below Christ's dignity to ride into Jerusalem on an ass, as the four Gospels say. According to this scholar, the ass was included because spiritually it represented the synagogue; as indicated in the *Heliand*, Jesus must have walked.

The spiritual sense was particularly important for interpreting the Old Testament, where scholars looked for "types" foreshadowing persons and events of the New Testament. The Israelites' passage through the Red Sea was a type of baptism; Eve and the serpent a type of the Annunciation. Typology reaches a peak in the so-called *Biblia pauperum* (Paupers' Bible), printed from woodblocks in the Netherlands ca. 1460 but known in manuscript a few centuries earlier. Each page depicts an incident from the New Testament flanked by two counterparts (types) from the Old Testament: the Crucifixion is matched with Abraham's near-sacrifice of Isaac (Gen. 22:1–18) and with Moses raising up the bronze serpent (Num. 21:8–9). But not all spiritual-typological interpretations were so reasonable. The eleventh-century German didactic treatise *Elder Physiologus*, having explained that the lion signifies Christ because of its strength, makes it a type of the Resurrection: the lion is born dead, but is brought to life by the father on the third day. We are further told, with muddled metaphors and unnatural history, that the elephant and its mate represent Adam and Eve.

The development of Scholasticism in the twelfth century greatly affected the role of Scripture in theology, which now concentrated its interest on theological and philosophical speculation rather than biblical interpretation. Increasingly, dissident or reform-minded groups, such as the Waldenses and Hussites, invoked the Bible as the supreme authority in religious matters, trumping policies of an often corrupt papacy and ineffectual general councils. This led in turn to suspicion by the Church of vernacular Bible reading by "unqualified" laymen.

The *Heliand*, the nearly six-thousand-line Old Saxon (OS) epic narrative that was titled by its first editor, Andreas Schmeller, in 1830, is the earliest heroic epic of continental Germanic (Gmc.). Most likely composed during the reign of Louis the Pious (814–840), as evidenced in the prose preface A attributed to the *Heliand*, this New Testament epic (together with the Old Saxon Old Testament poem *Genesis*) fulfills the proselytizing intent of Louis the Pious while foiling his reputed destruction of heroic Germanic literature. For it is the unique achievement of the *Heliand* author(s) to have portrayed the life of Christ in the guise of a Germanic lord (OS *drohtin*) with a retinue of twelve thanes (OS *thegn*) in the wooded environs (OS *waldos*) of northern Germany and the North Sea coast.

The language of the *Heliand* is not German. It is Saxon and, accordingly, genetically aligned with English and Frisian of a thousand years ago (Old English [OE] and Old Frisian [OF]). That the descendant languages of Old Saxon develop into what are termed Middle Low German and Modern Low German is indicative of the ever increasing linguistic interference from German in the course of the second millennium. Still, the indigenous, heterogeneous nature of Old Saxon cannot be denied.

Old Saxon's filiation with Frisian and English is considered by far older, originally allied in the Ingvaeonic (or North Sea Germanic) *Sprachbund* (group of languages) accountable for such isoglosses (linguistic markers) as the loss of nasal before *f*, *s*, and **ʀ*, with compensatory lengthening of the preceding vowel (e.g., OS/OE/OF/ *fff* but OHG *fiimf*). Another telltale North Sea Germanic isogloss reflected in the Old Saxon language is the syncretism (identicalness) of persons in the plural verb suffixes in both of the synthetic (not using helping verbs) tenses and moods; thus the present indicative *-ad*, the present subjunctive *-en*, the preterite indicative *-un*, and the preterite subjunctive *-in* for all three persons of the plural verb. The rhotic (lacking *r*) pronominal morphology (e.g., OS *he*, "he" and *mi*, "me," in contrast with OHG *er* and *mir*, respectively), as well as the syncretism of the OS dative *mi* with the accusative *mi* and the dative/accusative *us*, "us," *unk*, "us two," *thi*, "you" singular, *eu*, "you" plural, and *ink*, "you two," are Ingvaeonisms. A hallmark of North Sea Germanic is the masculine plural nominative/accusative noun morphology in *-s* (e.g., OS *waldos*, "forests").

On the other hand, Old High German interference in Old Saxon is repeatedly understood as such, rather than as being autochthonous (occurring independently). Thus, the Old Saxon *Heliand* manuscripts evince ambivalence, albeit inconsistently, with regard to the Ingvaeonic loss of nasal discussed above (e.g., *ōdran*, "other" [manuscript M] and *andran* [manuscript C]). Similarly, consider the accusative/dative case syncretism (e.g., *mik*, "me" [manuscript M] and *mi* [manuscript C]). Nowhere in the Old Saxon phonology is graphemic interference from Old High German so widely invoked as in the case of the Old Saxon digraphs (two letter spellings) *<ie>* and *<uo>*, frequently interpreted as mere graphemic representation of Gmc. (Germanic) **ē2* and **ō* (*denotes unattested forms), which diphthongize (evolve into two vowels) in Old High German to *ie* and *uo*, respectively. The *Heliand* data are typically ambiguous. For the reflexes of Gmc. **ō*, for example, manuscript M overwhelmingly yields *<ō>*, while manuscript C strongly prefers *<uo>*. However, collateral phonological strategies in manuscript C allow the extrapolation of a paralinguistic conditioner, *draw*, which speaks to glided vowels, if not full diphthongs, for the digraphs of manuscript C.

Lexically the *Heliand* yields isoglosses shared with Old High German, such as OS *slutil*, "key," OHG *sluzzi*, but OE *coæg*, OF *sletel* and *kei*, while OS *ant-*, *bilukan*, "unlock, lock," are cognate with OE *-lucan* and OF *-luka* rather than with OHG *-sliozan*. Old Saxon's bipartate nature is displayed in the semantics of, for example, the *Heliand* word *drom*, which incorporates both the OE gloss "joy" and the OHG gloss "dream," of OE *dream* and OHG *troum*, respectively.

The *Heliand* manuscripts C and M transmit most of the Bible epic; in addition three *Heliand* fragments are extant, namely manuscripts P, V, and S. The tenth-century manuscript C (Cotton Caligula, no. A. VII), housed in the British Library, London, consists of lines 1 through 5,968 with a few small lacunas; it is the most complete *Heliand* manuscript, numbering 165 leaves. The remaining four manuscripts are dated in the ninth century. Manuscript M (no. Cgm. 25) is housed in the Bayerische Staatsbibliothek in Munich. More than one-sixth of the lines contained in manuscript C are missing from manuscript M, which contains 74 leaves and a half leaf that supplies the final lines 5,959–5,983 of the *Heliand*. Fragment P, formerly housed in Prague, now in the Museum für deutsche Geschichte in Berlin, consists of a single leaf. Numbered R56/2537, the manuscript P fragment contains lines 958–1006 of the *Heliand*. Lines 1279–1356 of the *Heliand* are recorded in one of four Vatican fragments, designated manuscript V (Palatinus Latinus 1447) and housed in the Vatican Library, Rome. (The remaining three manuscript V fragments comprise the Old Saxon *Genesis*, discussed below). The most recently discovered *Heliand* fragment, Manuscript S, was found in the Staatliche Bibliothek am Johannes-Turmeier-Gymnasium in Straubing. Manuscript S contains discontinuous portions from the *Heliand* fits V through IX. Now housed in the Bayerische Staatsbibliothek, Munich, the manuscript S fragment consists of eight leaf sides, with only the top and the bottom third of the first two and the last two sides preserved.

The provenance of the *Heliand* manuscripts and their possible (i.e., hypothesized) archetype are difficult to ascertain; the varying viewpoints are not only complex but also frequently contradictory. Possible sites targeted for the writing of the *Heliand* and/or its prototype are Werden on the Ruhr in the southwestern part of the Old Saxon territory, or Corvey on the Weser River farther to the east. Strong arguments are invoked for a Fulda origin, the influential and prestigious scriptorium on Old High German territory founded by Boniface, née Wynfrith of Wessex. Indeed, the *Heliand* poet may have moved between one or more of these scriptoria in the writing of manuscript M. Manuscript C is widely held to have been written in southern England, while the newly found manuscript S fragments, which share features with manuscript M, have been claimed for Werden. The richness of linguistic variation, which is amply evident in all parts of the grammar, is such that the *Heliand* manuscript evidence defies conclusive dialect identification.

The confusing nature of the *Heliand* data has led to speculation that the language of the *Heliand* represents a quasi-pidgin language, used for the purpose of proselytizing. On the one hand this is consonant with the conversion mission of the superstratum (invading group) Franks; on the other hand, it makes little sense if the ordinary Old Saxon native speaker had difficulties understanding a specialized level of usage. Alternately, the *Heliand* is viewed as a literary work representative of a more formal register that may have been the province of the more educated proselytizers. Transversing dialects and registers is time; a feature such as the conspicuous sequence *-cht*, which correlates with *-ft*, as in OS *craft:cracht*, "power," has long been viewed as a later (tenth century) western change in progress from *f* to *h*, in addition to possibly being representative of a formal register. The newly found manuscript S (dating from the ninth century) evinces exclusively *ht*. However, this may also be accountable to the limited remains of manuscript S.

The V manuscript, which delivers but one fragment of the *Heliand*, yields three fragments of an Old Saxon *Genesis*: verses 1–26a depicting the fall of Adam and Eve; verses 27–150 telling the story of Cain and Abel, and the Antichrist; verses 151–337 dealing with Abraham, Sodom, and Lot's salvation. The Old Saxon *Genesis* fragments, discovered by Karl Zangmeister in 1894 in the Vatican Library, confirmed the brilliant 1875 conjecture of Eduard Sievers that the so-called Old English *Later Genesis*, or *Genesis B*, is a translation of a lost Old Saxon *Genesis*. Sievers hypothesized an Old Saxon original *Genesis* purely on the basis of internal linguistic evidence comparing, for example, the OE *Genesis B gieng* (1.626; 3rd person, singular, preterite), "went," with OS *Heliand geng*, rather than with expected OE *eode*.

The alliance of the Old Saxon *Genesis* with the *Heliand* is postulated via external evidence, specifically through their alleged attribution by a Latin prose preface, *Praefatio in librum antiquum lingua Saxonica conscriptum* (Preface to an old book written in the Saxon language), consisting of two parts, A and B, and of a Latin verse preface, *Versus de poeta et interprete huius codicis* (Verses about the poet and interpreter of this book), both of which provide a rationale for the composition of the *Heliand* and *Genesis* narrative epics. The prefaces also give clues to such questions as the time of composition (in or shortly after the reign of *Ludouicus piissimus Augustus* (August Louis the Most Pious) and to the personage of the author(s) of the *Heliand* and *Genesis*. Preface A reveals that the purpose of Louis in commissioning the Saxon poet (*de gente Saxonum*) was to make the Scriptures accessible to all his subjects, noneducated and educated alike (*non solum literatis verum etiam illiteratis*).

A labyrinth of linguistic and textual problems is associated with the Latin prefaces, and not only with regard to their putative linkage to the *Heliand* and *Genesis*. The time, place, and author of the prefaces come into question; indeed, the problem of the legitimacy of the prefaces relative to the *Heliand* and *Genesis* occupies a large portion of the *Heliand*'s textual history. Of the innumerable bits of evidence produced by the prefaces, preface A provides the word *vitteas* (fits) by which the *Heliand* sections or chapters are designated. In fact manuscript C confirms the existence of such running chapter heads.

The word *vitteas* itself helps identify preface A as of early medieval origin rather than as belonging to the Renaissance. *Vitteas* is a contamination of the Gmc. root **fit* (posited IndoEuropean form **ped*, "foot") and the Latin (Lat.) feminine accusative plural desinence *as*. Genetically related to Old Norse (ON) *fiþja*, "to tie the ends of yarn on a warp," and to OHG *fizza*, "a tied set of wound yarns," the metaphor of sectioning in weaving appears to fall within the semantic features of *vitteas*. This semantic trope extends to varying morphology such as ON *tattr*, which incorporates the features "thread, strand," and "section," and relates genetically with Latin *texere*, "weave." Notice also that English *rhapsody*, which can refer to a section of an epic poem, again derives from the weaving concept, Greek *rhaptēin*, "to sew." The poet, *vates* of preface A, reoccurs in preface B (*Vatem*) and in the verse preface (*Vates*). Both the prose preface B and the verse preface, in particular the latter, exploit the Caedmonian metaphor of a naive but divinely inspired poet. The *Heliand* and *Genesis* poet(s) are hardly surpassed in choice of relatively simple yet sublime words and phrases and their elegantly crafted interdigitation. The quality of the epics is profusely praised in preface B as surpassing all German poetry in its elegance (*cuncta Theudisca poëmata suo vincat decore*). All three Latin prefaces bear witness to the texts' sweet decor (Preface A: *sui decoris dulcedinem*), wealth of vocabulary, excellence of meaning (Preface B: *copia verborum...excellētia sensuum*); and skillful diction (Versus: *docta...carmina*). True to Germanic style (compare the kennings of Old Norse and Old English), a wealth of compounds infuses the Old Saxon Bible epics. Thus, for example, the Old Saxon copulative compound *gisunfader*, "son(s) and father," referring to the disciples John, James, and their father, as matched by the OHG *sunufaterungo* of the *Lay of Hildebrand*, attests to the astounding sophistication of the *Heliand* poet(s) in partaking of the rich bequeathment of heroic Germanic lexicon. Similarly, the verse form of the *Heliand* and *Genesis* is Germanic in employing alliterative technique, for which the opening line of the *Heliand* can serve as a prototype: "*Mánega uuáron, the sia iro mód gespón*" (There were many whose mood impelled them.) The line is divided into two half lines by caesura. Each half line has two primary stressed syllables, of which two alliterate in *m*, the latter being the principal stave. Old Saxon allows a great number of nonprimary stressed syllables leading to extended lines, as well as alliteration of word classes other than the nominal and verbal classes more standard to Germanic alliterative verse. The verse form of the *Heliand* thus evinces modifications of paradigm Germanic alliterative poetry engendered by linguistic change, foremost the weakening of the intensity of Germanic stress, disabling alliteration and proliferating tertiary stressed syllables as found, for example, in vowel epenthesis (loss) and end-syllable weakening. Not at all to be regarded as diminishing their beauty, the interplay of the evolution of the Old Saxon language with the form of the Bible epics yields stunning pragmatic effects. Notice the loquacious-ness of the Old Saxon Adam in the *Genesis* long line *Uuela, that thu nu Eua...* (Woe, that you now Eve) compared with the Old English *Genesis B Hwæt, Ƿ *u Eue...* (What, you Eve). Further, the numerical-architectonic structuring of the *Heliand* emulates an architectural feat reminiscent of a medieval stained glass window. Beyond the phonology, morphology, and lexicon, the syntax infuses the Old Saxon Bible epics with powerful narrative strategies. In the linear syntax finite verb-first order, in particular with introductory word, is the unmarked order, thus (X)VSO (optional element X, verb V, subject S, object O). Frequently the X position is filled by a particle; the negative particle OS *ne* is constrained proclitically to the finite verb. The striking verb-first order in Germanic finds explanation in the concatenative (linking) function of the particles and, indeed, of the bare finite verb itself in advancing the epic narrative. The linguist Otto Behaghel's law, whereby semantically associated concepts are syntactically adjacent, together with his law of old information before new, in this case anaphoric suturing by the particle or verb with the previous discourse, intersect with Wilhelm Wackernagel's law of metrically light elements, of which the verb is one, placed to the left. Enhancing the epic narrative strategies of the linear syntax are those of the nonlinear syntax, that is, the morphology. The unmarked finite verb in the (X)VS order is a statal auxiliary (OS *werdan*, "become," *wesan*, "be," *hebbian*, "have") in syntagm with past participle. As past perfect forms, they function to portray action previous to an action more proximate in time, and within their own proposition they are imperfective and accordingly serve to background rather than to foreground the narrative action. The affective meaning is low-keyed, "laidback," in contrast to proximate, on-the-spot action, yielding a continuative, conjunctive pragmatic effect produced by the interaction of the adjectival participle plus auxiliary and compounded by the latter's position in verb-first order. Thus it is that the internal linguistic machinery of Old Saxon helps encode a Gospel harmony, in keeping with a popular Christian trope of the waning first millennium, which is also a heroic Bible epic deeply in synchrony with the essential native Germanic culture of the Old Saxons.

During the Middle Ages, no complete translation of the Bible into the vernacular of the Low Countries was produced, although partial translations were made perhaps as early as the ninth century. From this period stem the so-called *Wachtendonckse Psalmen*, an interlinear translation of twenty-five Psalms into Old Dutch. They have only been preserved in a copy from the sixteenth century and are named after their last known possessor, the canon Arnoldus van Wachtendonck of Liège. Early Middle Dutch translations of the Psalter probably circulated, but have not come down to us.

Though not a Bible translation in the strict sense, the *Rijmbijbel* (or *Scolastica*) by the Flemish poet Jacob van Maerlant marks the beginning of the popularization of the Bible in the Dutch language. Jacob finished this abridged adaptation of Petrus Comestor's *Historia Scolastica* in 1271, adding an adaptation of Flavius Josephus's *De Bello Iudaico* (The Jewish War) to it. This poem of almost thirty-five thousand lines in rhymed couplets was in all probability commissioned by a nobleman and intended to serve an audience of noble laymen. From the period 1270 to 1360 several witnesses of a Middle Dutch tradition of Bible translations have been preserved, yet the exact and relative chronology of these translations as well as their interdependencies are still a matter of debate. The so-called Southern Dutch translation of the New Testament is only preserved in six relatively young manuscripts (not all of them contain all the books of the New Testament), which has led to the opinion that this translation was produced around 1390. Yet twentieth-century research came up with arguments for a much earlier dating, perhaps even before Jacob's *Rijmbijbel*. This translation of the Gospels, letters of Saint Paul, canonical letters, Acts of the Apostles, and the Revelations sticks very close to the Latin text and contains many untranslated Latin words.

Perhaps at the end of the thirteenth century, a brilliant harmony (retelling) of the Gospels was made, which is usually referred to as the Liège diatesseron. This diatesseron, preserved completely in only one manuscript, was made by an anonymous monk from Flanders or Brabant. The main source was probably the Latin *Vita Christi* (in the version of a manuscript now at Fulda, Germany); its structure can be compared to Tatian's history of the life of Jesus. Additional sources were the *Glossa ordinaria* and Jacob's *Rijmbijbel*. The fact that it contained readings which were not corroborated by the Latin version of the Bible, or Vulgate, gives the work a particular place in the tradition of Middle Dutch Bible translations. The translator underpins his text with glosses from Gospel commentaries by Augustin, Jerome, Gregory the Great, and Bede. In the same period some other harmonies of the Gospels were made, which were more in accordance with the Vulgate. Some twenty manuscripts are known (though some just contain excerpts or have come down fragmentarily), in which sometimes features of the Liège diatesseron appear. A good representative of these Vulgate-oriented harmonies is the so-called *Diatesseron Harense*. Probably related to these harmonies is the *Amsterdam Lectionary*, a translation of the Gospel pericopes (liturgical readings). This lectionary belongs to a group of lectionaries and epistolaries that had their origin in (West) Flanders. A younger representative is the *Lectionary of Gruuthuse*. Of this group some seven manuscripts have been preserved. Often they contain other texts (e.g. a Middle Dutch translation of the *Credo* or a calendar) useful in liturgical practice, or a translation of a separate Bible book (e.g., the Apocalypse).

Around 1400 an anonymous translator (from Flanders or Brabant) produced the first Middle Dutch translation of the Psalms that actually has been preserved. Yet linguistic features of this translation, of which six manuscripts remain, testify to the fact that previously other translations of the Psalms must have circulated in the Low Countries. In the same period and region, the Apocalypse was translated. In one of the three manuscripts preserved, it is combined with the Psalms translation mentioned above. Another manuscript (Paris, Bibliothèque National, manuscript no. Néerl. 3) occupies a special place in the tradition because it contains twentythree magnificent, full-page miniatures.

In the middle of the fourteenth century the so-called Bible Translator of 1360 started his activities as a translator. This anonymous monk, most probably from the Carthusian abbey of Herne (some thirty miles southwest of Brussels), is responsible for a great number of Middle Dutch translations of important Latin texts. He derives his name from his second translation, a "history bible" (retelling), which he made at the request of Jan Tay, a citizen of Brussels. With the Vulgate as his main source he translated the Pentateuch, Joshua, Judges, Ruth, 1 and 2 Samuel, 1 and 2 Kings, Tobias, Daniel, Judith, Esther, Job, and 1 and 2 Maccabees. From Petrus Comestor's *Historia Scolastica* he drew Ezekiel, Habakkuk, Ezra, and Nehemiah. For the New Testament he used an older Middle Dutch harmony of the Gospels and translated the *Actus apostolorum* from the Vulgate. The first part of this history bible was completed on June 12, 1360, the second part on June 23, 1361. In some manuscripts of this history bible we also find the texts *Cyrus*, *Jan Hyrcanus* (III Maccabees), and *Destruxie van Jerusalem* (Destruction of Jerusalem); as well as *Alexanders Historie*, which has led some scholars to believe that the Bible Translator translated or adapted these texts too for inclusion in his history bible. In his translation, the Bible Translator used additional sources such as the *Glossa ordinaria*, Jacob's *Rijmbijbel*, and the *Bible historiale* of Guiard des Moulins. Later he translated some parts again, and adding new translations of other parts—Isaiah (before 1384), Jeremiah, Lamentations, Ezekiel, Proverbs, Ecclesiastes, Song of Songs, The Wisdom of Solomon, Ecclesiasticus (Jezus Sirach), and the Psalms—all with the Vulgate as his source, he almost came to produce a complete Bible in the vernacular. This history bible was widespread, as more than thirty preserved manuscripts witness. Remarkable features of his work as a translator are his reflections on the difficulties he met in translating the Vulgate (e.g., in the prologue to the Pentateuch) and his habit of outlining glosses or quotations from his additional sources with a rubric, thus explicitly separating them from his main text.

Around 1400 a second (North Dutch) history bible, the so-called *Noordnederlandse historiebijbel*, was made in the county of Holland. The main source was the Vulgate, yet in composition the *Historia scolastica* by Petrus Comestor was followed. It contains Pentateuch, Joshua, Judges, Ruth, 1 and 2 Samuel, 1 and 2 Kings, Tobias, Godolias (an extract from Jeremiah), Daniel, Judith, Ezra, and Maccabees, with interpolations of secular materials (e.g., a history of Alexander). Of this history bible only seven manuscripts remain, six of which were written by the same scribe.

At the end of his life, the founder of the *Devotio moderna*, Geert Grote (1340–1384), made a book of hours, for which he translated fifty-four Psalms completely and six Psalms partially. Probably at the beginning of the fifteenth century a follower of Grote continued his translation and completed what is now known as the *Psalms and Cantica in the Standard Redaction of the Modern Devotion*. Generally it is assumed that this continuator was Johan Scutken (d. 1423), a cleric from the convent of Windesheim. Of this standard redaction, the third complete Psalms translation in Middle Dutch, fifty-six manuscripts are known (although some are now lost or damaged).

The same Johan Scutken was responsible for the so-called Northern Dutch translation of the New Testament, and this attribution is of a much greater certainty. He must have made this translation—which contains the four Gospels, letters of Saint Paul, canonical letters, Acts of the Apostles, and the Apocalypse, but also the pericopes (readings) from the Old Testament—between 1387 and 1391. The great number of manuscripts (more than 120) which contain it completely or partially testifies to the popularity of this translation. Scutken's translation formed the basis for several lectionaries (readers) and harmonies of the Gospels.

A separate branch of the tradition of Middle Dutch Bible translations is formed by the so-called Utrecht Bibles. In some thirty manuscripts, large parts of the history bible by the Bible Translator of 1360 were combined with parts of Scutken's translation (especially the letters of the Apostles and the Apocalypse) and the *Psalms and Cantica in the Standard Redaction of the Modern Devotion*. Several of the manuscripts are lavishly illuminated.

The first printed book in Middle Dutch was a Bible, printed in Delft in 1477, by Jacob Jacobsoen van der Meer and Mauricius Yemantsoen van Middelborch. It was an edition in two volumes of the Old Testament (but without the Psalms). They used the translation of the Bible Translator of 1360, even printed his prologue, but omitted his glosses and his interpolations from Comestor's *Historia Scolastica*. The books Chronicles, Ezekiel, and the lesser prophets were translated especially for this printed Bible. A complete printed Bible was not to be printed until the Reformation.

This anonymous monk, most probably from the Carthusian abbey of Herne (some thirty miles southwest of Brussels), is one of the most enigmatic figures of Middle Dutch literature. His biography can to some extent be deduced from his works: his first known translation dates from 1358, the last from 1388. He is called the "Bible Translator of 1360" because in that year he finished the first part of his *Historijenibel* (history Bible), a narrative retelling of the Bible. In the thirty years of his activity he did not write any original work as far as we know, but translated a great number of important Latin texts into Middle Dutch, thus playing an important role in intellectual, spiritual, and devotional developments in the Low Countries during the fourteenth century.

The attribution of texts to the Bible Translator is based on diverse criteria. In the prologues added to his translations, he sometimes mentions texts he already translated or wants to translate in the future. In these prologues (or in colophons) he occasionally gives statements of a more personal nature, concerning his health, or mentions the work's date of completion. His vocabulary shows some idiosyncrasies and his translation technique has its peculiarities (although it is not unique in itself), and reveals a thorough command of Latin. On these criteria scholars have come to a consensus concerning his oeuvre.

In 1357 and the beginning of 1358 he translated the *Legenda aurea* (Golden Legend) of Jacobus de Voragine. In a colophon he gives January 10, 1357 as the day of completion, but because the Bible Translator in all probability used the Easter style, the dates of all the works he completed between January 1 and Easter must be revised. The *Gulden legende* is the first Middle Dutch translation of this hagiographic collection, but a second was soon to follow in the northern parts of the Low Countries (which dates from circa 1400). Of both this translation and the second, more than one hundred manuscripts are known (some only fragmentary); some contain sections from both translations.

His second work was the production of his history Bible, which he made at the request of Jan Tay, a citizen of Brussels. With the Vulgate (Latin version) as his main source, he translated the following books: Pentateuch, Joshua, Judges, Ruth, Samuel 1 and 2, Kings 1 and 2, Tobias, Daniel, Judith, Esther, Job, and 1 and 2 Maccabees. From the twelfth-century writer Petrus Comestor's *Historia Scolastica* (Scholastic History) he took Ezekiel, Habakkuk, Ezra, and Nehemiah. For the New Testament he used an older Middle Dutch harmony (or compilation) of the Gospels and translated the Acts (*Actas apostolorum*) from the Vulgate. The first part of this history Bible was completed on June 12, 1360, the second part on June 23, 1361. In some manuscripts we also find the texts *Cyrus*, *Jan Hyrcanus* (Maccabees III), *Destruxie van Jerusalem* (Destruction of Jerusalem) and *Alexanders Historie* (Story of Alexander), which led some scholars to believe that the Bible Translator also translated or adapted these texts for inclusion in his history Bible. In his translation, the Bible Translator used additional sources such as a Latin glossary (*Glossa ordinaria*), the Dutch *Rijmbijbel* (Rhymed Bible, or *Scolastica*) of Jacob van Maerlant, and the French *Bible historiale* (History Bible) of Guiard des Moulins. Later he retranslated some parts and, adding new translations of other sections, all with the Vulgate as his source, he ended up producing a nearly complete Bible in the vernacular. This text was widespread, as more than thirty preserved manuscripts attest. Around 1400, a second history Bible was produced in the county of Holland which was made virtually independent of the Bible Translation of 1360. Of it, only seven manuscripts remain.

On request of Lodewijc Thonijs, a noble citizen of Brussels, the Bible Translator produced the first Middle Dutch version of the Benedictine Rule (*Regula Sancti Benedicti*). This translation, *Benedictus regule*, was completed on or around January 13, 1373. The colophon states that Lodewijc Thonijs intended it as a gift to his sister Maria Thonijs, a Benedictine nun in the convent of Vorst, as a means to better acquaint the nuns with the rule. In this translation some flaws occur, which makes it quite certain that the Bible Translator did not belong to the Benedictine order. Fourteen manuscripts of this translation survive.

Sente Gregorius omeliën op de evangeliën (St. Gregory's Sermons on the Gospels) was completed in Lent of 1381, a translation of the Latin *Homiliae XL in Evangelia* (Forty Sermons on the Gospels) of Gregory the Great (ca. 540–604). Of this translation some seventeen manuscripts are known, as well as two manuscripts containing only excerpts. The Bible Translator altered the order of the sermons from the Latin manuscripts.

A translation of the *Collationes patrum* (learned commentaries on religious topics) of Johannes Cassianus (ca. 360–435) was finished on January 5th, 1383, also on request of Lodewijc Thonijs (he donated a copy of it to the Benedictine convent to which his sister belonged). The Bible Translator did not give a translation of the full text; he omitted *collationes* 13 (on free will and grace) and 17 (on essentials and accidentia in spiritual life). The semipelagianistic (refuting the notion of original sin) tendencies in these *collationes* were apparently well understood by the Bible Translator, and he thus deemed these parts to be spiritually dangerous for the "simple" folk, the *il-literati*, for whom he was translating. Two manuscripts have come down to us, yet both are lacking *collationes* 1–12. Cassianus's *Collationes patrum* were to be translated a second time in Middle Dutch, at the beginning of the fifteenth century, by an anonymous translator within the circles of the "New Piety" (*Devotio moderna*), to which Cassianus's text was very dear. Remarkably enough, one of the manuscripts combines *collationes* 16 and 18–24 in the translation of the Bible Translator with *collationes* 1–14 and 17 in the second translation.

Then he returned to the Bible, translating Isaiah, Jeremiah, Lamentations, and Ezekiel from the Vulgate. The date of completion of these books of the Bible is unknown, but Isaiah must have been completed before 1384.

Bonaventura's *Lignum vitae*, a mystical-ascetic treatise, was translated as *Vanden houte slevens*, completed on August 2, 1386. Of this translation three manuscripts and an excerpt remain. In the colophon of the most important manuscript (Brussels, Koninklijke Bibliotheek, 15087–15090, fol. 154ra), the Latin text is wrongly attributed to the Carthusian theologian Henry of Balma.

On March 1, 1387 he completed *Der minnen gaert*, a translation of the *Stimulus amoris* by Pseudo-Bonaventura. In the colophon of the most important of the two preserved manuscripts (Brussels, Koninklijke Bibliotheek, 15087–15090, fol. 129ra), the Latin text is also wrongly attributed to the same Henry of Balma.

His *Sente Gregorius Dyalogus* was completed on November 4, 1388, a translation of the saints' lives (*Libri IV dialogorum de vita et miraculis patrum Italicorum et de aeternitate animarum*) by Gregory the Great. Four copies of this translation remain. It is thought to be his last, because in the prologue the Bible Translator complains about his health and old age. A second translation, from within circles of the Modern Devotion, was made around 1400 and had far greater dissemination.

These are the translations that can be dated, but some others cannot. It is still plausible that the undated works were produced between 1361 and 1372 and 1373 and 1380. These are:

1. A translation of Proverbs, Ecclesiastes, Song of Songs, The Wisdom of Solomon, and Ecclesiasticus (*Jezus Sirach*) from the Vulgate.
2. A separate translation of the Psalms after the Vulgate.
3. *Der vader boec*, a translation of the *Historia monachorum in Aegypto* (ca. 412) by Thimotheus of Alexandria (book 2 of the *Vitae Patrum*), with additional saints' lives from book 1 of the *Vitae Patrum* and other hagiographical texts. As the Bible Translator in the prologue refers to his translations of the Old and New Testament, this must have been done after 1361, but before his translation of the *Verba Seniorum*. Seven manuscripts with the complete translation have been preserved, but additionally some ten manuscripts are known to contain parts of it.
4. A translation of the so-called *Verba Seniorum*, which is books 5 and 6 of the famous *Vitae Patrum*. This translation, entitled *Der heiligher vadere collacien*, is also undated but surely came after *Der vader boec*. A first comparison with the *Verba seniorum* as edited in Migne's *Patrologia Latina* shows the Bible Translator either reshuffled the *dicta* in his source or used a hitherto unknown version of the Latin text. Five manuscripts with this translation have come down to us. A second Middle Dutch translation was soon made, probably by Wernbold van Buscop, a kindred soul of Geert Groote, founder of the *Devotio moderna*.
5. *Vier omeliën van Sinte Bernardus op dat evangelie Missus est Gabriël angelus* (Four Sermons by Saint Bernard on the Gospel words "An angel, Gabriel, is sent"), a translation of Saint Bernard's Latin work of the same title, *Homiliae IV de laudibus Virginis Matris super verba Evangelii Missus est angelus Gabriel*. Four manuscripts are known of this translation, which has scarcely been investigated.
6. *Homiliae in Ezechielem prophetam* (Sermons on the Prophet Ezekiel) by Gregory the Great. In the prologue to his translation of Jeremiah, the Bible

Translator explicitly states his intention to translate this work, but no translation has as yet been found. Of some other translations the attribution to the Bible Translator is still a matter of dispute. The preserved manuscripts show that most of the Bible Translator's texts were widespread throughout the Low Countries. The fact that some texts were copied alongside translations made by members of the *Devotio moderna* testifies to the profound influence that the Bible Translator had on their spiritual development. Why, especially in this environment, so many of the texts mentioned above were retranslated remains a subject for further research. Remarkable is the fact that the Bible Translator made some of his translations at the behest of certain citizens of Brussels. Such an involvement of laymen in the dissemination of sacred literature is far from common in a time when the clergy jealously guarded its monopoly as mediators between God and His revelation and the great mass of nonclerics. In many prologues this issue is addressed, with the Bible Translator complaining about the opposition he meets from the clergy. Yet we must not see the Bible Translator as a precursor of the Reformation: in a time when the Church was in upheaval and clerical discipline both within and outside of the monasteries waned, he merely wanted to meet the needs of the laymen—as well as that of the illiterate members of the clergy—for spiritual guidance, by providing vernacular versions of important religious and devotional texts. The Bible Translator has had an extraordinary influence on the development of Middle Dutch as a literary language. Translating *uten herden swaren ghewapenden Latine te Dietschen* ("from the very difficult Latin into Dutch," cited in the colophon to Cassianus's *Collationes*) was not a simple task, as the Bible Translator was confronted with syntactic and lexical differences between Latin and Middle Dutch. This often resulted in an extension of the semantic realm of Middle Dutch words or in slightly adjusted use of Latin terms (with or without an explicative gloss). Very important are his explicit reflections on the technique of translating, as in the prologue to the Pentateuch translation, which reveal him to be a careful scholar, well aware of the difficulties of his task.

Billunger

Historians recognize two noble lines associated with the family name Billung (German plural Billunger). The "Older Billungs" were active in the time of Charlemagne (ca. 742–814) in the regions of Ostfalen (Eastphalia) and Hessa, while the "Younger Billungs" first came to prominence in the reign of Saxon king Otto I (936–973) with the brothers Wichmann I and Hermann I. The precise genealogical relationship between these two lines is not known. The older of the two brothers and a nobleman of excellent reputation in the eyes of the historian Widukind of Corvey, Wichmann I (d. 944) expanded Billung territorial holdings on the middle Weser, Lippe, and lower Rhine Rivers through his marriage to Frideruna, sister of Queen Matilda, wife of King Henry I (r. 919–936). When King Otto I (r. 936–973) passed him over for a position of command on Saxony's eastern frontier and chose his younger brother Hermann, the elder Billung rebelled briefly against the king, but was eventually and permanently reconciled with him. Wichmann I's son, Wichmann II, died young (d. 967), a rebel against the king, an outlaw, and a figure who fascinated his contemporaries. Hermann I (d. 973) was declared *princeps militiae* (prince of the military) by Otto I in 936 and was charged with leading military expeditions and given oversight (*procuratio*) of Saxony in the king's absence. Through the opportunities provided by his command of the Slavic frontier on the lower Elbe Hermann greatly expanded the patrimony of his branch of the Billungs in the Bardengau in lower Saxony and on the middle Weser. During the life of his son Bernhard I (d. 1011), the ducal title of the Billungs came to mark the family's own position of leadership among the Saxon nobility rather than a royal office (such as *princeps militiae*) with determinate powers and privileges. The change in the title means that the role of the Billungs, now the most highly regarded Saxon dynasty, had switched from king's representative to the tribe to the tribe's representative to the king. In the time of Duke Bernhard II (d. 1059) the Billungs lost their favored position at the Saxon royal court, a decline in status accelerated by the increasing strife among the dukes, the bishops of Paderborn, and the archbishops of Hamburg-Bremen. The Billungs' relation to the German emperors worsened rapidly during the rule of Archbishop Adalbert (1043–1072), who attempted to use his unique influence at the royal court to minimize, if not eliminate, the ducal family's power in the region. This hostility continued under Bernhard II's son Duke Ordulf (1059–1072), further undermining, at least in part, the political preeminence of the Billung dukes within the Saxon nobility. Thus, while the Billung dukes participated in the first phases of the Saxon War (1073–1088) against Henry IV, they were not its leaders, and eventually Ordulf's son, Duke Magnus (1059–1106) went over to the side of Henry IV. Dying without male heirs, Magnus was the last Billung duke. King Henry V (r. 1106–1125) divided the Billung patrimony between the Welf and Ascanian houses into which the Billungs had married. He conferred the Billungs' ducal title, however, upon Lothar III of Supplinburg.

Birth, Marriage, Burial

Although statistical evidence to support the claim is almost completely lacking, childbirth in medieval Germany among all levels of society probably did not differ substantially from the experience of birth elsewhere in Europe. Labor was dangerous for both mother and child, and high rates of maternal and infant mortality can be assumed. Normally, midwives attended a woman in labor; physicians were present in rare circumstances, and only when mother and child were in grave danger. While fictional, the scene of Herzeloide's labor described in Wolfram von Eschenbach's *Parzival* was probably not uncommon in real life. Herzeloide lapsed into a comalike state for some time while pregnant, but those around her would not or could not help her. Only a "wise old man" knew the "proper" remedy of forcing her teeth apart and splashing water into her mouth to revive her. Having endured this questionable procedure, she barely survived big-boned Parzival's birth. In fact, cesarean section to save the life of both mother and child does not seem to have been practiced until the later Middle Ages.

Complex economic, legal, and political issues affected marriage. A woman was transferred from the *mund*, or protection, of her father to that of her husband, who was obligated to compensate the father. The morning after the wedding, the groom also traditionally gave his bride a gift, or *Morgengabe*. A dowry given by the woman's family was not as substantial or important as the man's payments during most of the German Middle Ages. Church law insisted that all baptized Christians had the right to contract marriage regardless of social status, but also forbade marriages within prohibited degrees of kinship. The former right was often in practice restricted by lords who did not want unfree dependents—which included peasant serfs as well as powerful ministerials—to marry outside of a lordship. The latter prohibition was subject to sometimes spectacular violations, such as the marriage of Otto of Hammerstein and Irmgard in the early eleventh-century Rhineland. The attempt to dissolve their marriage against their will led to a dispute involving king, archbishops, pope, and other aristocrats.

Among aristocrats at least, burial was an important means of forging and preserving family identity. The preservation of liturgical and spiritual *memoria* (memorial records) was not left to chance, and numerous donations to religious communities were tied to a donor's right to be buried in a church so benefited. By the twelfth century (and anticipated by the Salian dynastic necropolis at Speyer), many elite families (such as the Welfs) had begun to designate burial sites within family monasteries on ancestral family land. This has often been taken as evidence of an emerging consciousness of the family as patrilineal dynasty rather than broad kin-group characterized by both paternal and maternal inheritance. Although this thesis remains controversial, members of the medieval German elite were increasingly specific about their wishes concerning place of burial. One striking example is that of Arnold II of Wied, archbishop of Cologne from 1151 to 1156, who endowed the splendid double-chapel Schwarzrheindorf as his burial site.

Block Book

A fifteenth- and early-sixteenth-century book whose pages, both text and picture, are printed from wood blocks on paper (xylography). Made mainly in the Netherlands and in Germany, block books contain texts of religious, moral, and theological subjects, printed on only one side of the page. The blank backs were often pasted together to provide a continuous sequence. The pictures serve to make visible the story told by the less important short texts accompanying them, in contrast to illuminated manuscripts, in which the text dominates. Three different combinations of text and picture are found: (1) picture and text together on one page, (2) text and picture facing one another on two pages, and (3) text alone or with small pictures integrated into the text. Although it was earlier assumed that the block books precoded the invention of printing, a study of the watermarks of the paper on which they were printed showed that the most popular first editions were printed after 1460 and thus were produced simultaneously with incunabula. Most of the texts, such as the typological *Biblia Pauperum* (Paupers' Bible) and *Speculum humanae salvationis* (Mirror of Human Salvation), *Revelation*, or *Antichrist*, were well-known in manuscript form. Didactic texts, such as the *Ars moriendi* (On the Art of Dying), *Canticum canticorum* (Song of Songs), *Defensorium virginitatis Mariae* (Defense of the Virgin Mary), and *Ars memorandi* (The Art of Memory), were also numerous. In contrast, there are relatively few secular texts. Although they were less expensive than handmade manuscripts, block books were also luxury items available only to the nobility and well-situated citizens, or to teachers or clergy who used them in their work. Since most were written in the vernacular, they were apparently intended for people who did not read Latin.

Boethius (ca. 480-ca. 525 C.E.)

Anicius Manlius Severinus Boethius was a Roman philosopher whose Latin translations and commentaries on Aristotle, Plato, and the Greek Neoplatonists introduced the work of these thinkers to western Europe. He was a member of a prominent Roman Christian family and possibly educated in Alexandria and/or Athens. In 510 he was appointed Roman consul and in 522 Master of the Offices in the court of Theoderic the Great, but he soon fell from favor: found guilty of treason and sorcery, he was sentenced to death. Imprisoned and awaiting execution, he wrote *De consolazione philosophiae* (*The Consolation of Philosophy*), a Platonic dialogue in the form of a Menippian satire (after the Greek writer Menippus, third century B.C.E.), as an attempt to give transcendent meaning to his fall.

His works, rediscovered in the ninth century by Alcuin in the Carolingian empire, under Alfred the Great in Britain, helped determine the development of western European civilization. Boethian concepts of education, explained in his two surviving treatises on the *quadrivium* (a term he invented, designating four of the seven liberal arts), defined the structure and content of the monastic school system. His translations and commentaries on Aristotle, two of which were translated into Old German at St. Gall by Notker Labeo, introduced Aristotelian logic to the West. These and his theological tractates appealed primarily to scholars. There is some evidence that the *De institutione musica*, the primary authority on music theory throughout the Middle Ages, also influenced medieval literature, most notably Gottfried von Straßburg's *Tristan*.

The *Consolation of Philosophy* was undoubtedly the best-known and most influential work of Boethius. Accompanied by glosses and commentaries and used as a textbook in monastery schools, it directly and indirectly influenced the language, style, thought, and imagery of later generations. Notker Labeo and others translated it into German. Meister Eckhart quoted it in his homilies. Its image of the goddess Fortuna with her wheel recurred frequently in secular literature and art. Its influence on medieval English literature is well known, but investigation of the nature and extent of its influence on medieval German literature is just beginning.

The Middle Dutch tradition of Boethius's (d. 524) *De consolatione philosophiae* (*The Consolation of Philosophy*) is clearly a phenomenon of the later Middle Ages, and probably not without reason. In the thirteenth century, Jacob van Maerlant translated minor parts of this work in his *Spiegel historiael* (*Mirror of History*). But it was not until the second half of the fifteenth century that the complete text of the *Consolatio* was translated into Middle Dutch. And it is striking that in that period, almost simultaneously, two full Middle Dutch translations were carried out.

Probably the oldest integral translation is from Jacob Vilt, a goldsmith in Bruges. He completed his Middle Dutch translation of the *Consolatio* in 1466. The autograph is not preserved, but we have one manuscript copied in 1470 by Drubbel (Utrecht, University Library, manuscript no. 1335), hidierto unedited. Vilt's translation is only partly based on the original Latin. In the prologue he mentions that an Old French translation of Jean de Meun was used—in fact a copy of a pseudo de Meun. As in the Boethian and pseudo de Meun traditions, Vilt translates into both prose and verse. In marginal glosses he locates his commentary (especially on passages in prose): he elucidates ideas, historical persons, and images. In general, his translation is detailed and comprehensive. As for the poems, much attention is paid to their form. Vilt uses various rhyme schemes, following in the so-called *Rederijkers* (Dutch poets' society) tradition.

The second integral translation, the so-called *Ghent Boethius*, is preserved in an impressive yet hidierto unedited incunable (book printed before 1500). It was printed by Arend de Keyser in 1485 in Ghent. Over fifty copies of this incunable have survived. It is printed onto 360 large folios, and is set in two Gothic type fonts. Some copies have miniatures. It contains the complete Latin text of the *Consolatio*, a Middle Dutch translation in verse and prose, and an extensive Middle Dutch commentary, probably the most extensive commentary comprised on the *Consolatio* during the Middle Ages. Translation and commentary were written sometime between 1444 and 1477. In the incunable, the text of the *Consolatio* is divided into short fragments, each fragment followed by its Middle Dutch translation and the commentary relating to the fragment. The author is unknown, but it is assumed that he was from Ghent because of the dialect coloring of the translation and the commentary. In the prologue the author explains his method of translation, especially regarding the meters. Because of the rules he imposed on himself—no more lines than the Latin verses, no more than ten syllables per line—he was not always able to translate the complete contents of the Latin poems. However, he usually translates the missing parts in the commentary, where he offers the complete text by means of paraphrase. He seems to have tried to translate in a faithful way, although that did not prevent him from adding some obvious Christian accents to his translation. The commentary is a peculiar compilation of all kinds of explanations ranging from textual analysis to elucidations on topics only remotely concerning the actual text of the *Consolatio*. These explanations are accompanied by citations from the Bible and from a wide range of classical and medieval authorities. It is notable that hardly any contemporary authorities are cited. The main source of the commentary is the Latin commentary of Renier of St. Trudon, probably the rector of the Latin school in Mechelen (ca. 1370). This Latin commentary is preserved in four manuscripts.

One of the most successful composers of fables or didactic narrative was the Dominican monk Ulrich Boner, whose name appears in documents between 1324 and 1350 produced in Bern, Switzerland. Late medieval audiences tremendously enjoyed reading fables for entertainment and moral instruction. Boner was the first to put together a major collection of these works in the tradition of Aesop, which he called *Edelstein* (precious stone), completed around 1350. The name implies that the fables function analogously to precious stones, which reveal their true salutary and divinatory character only after a thorough investigation. With his fables Boner wanted to teach his audience general moral and ethical lessons. He combined many medieval fables from the Latin tradition, especially from the text corpus of the Anonymus Neveleti (fables 1–62) and of Avian (fables 63–91). Boner's *Edelstein* remained the most influential and popular fable collection in Germany for the following century. When a Bamberg printer published it in 1461, it was one of the first secular texts written in German and printed for the book market. Each fable has a title and a subtitle; the latter serves as an indicator of the specific theme to be dealt with in the fable. At the end is the epimythion, the moral, didactic explanation. Although Boner pursued religious intentions with his *Edelstein*, often the fables convey worldly messages, such as the advantages of specific types of behavior and the value of political freedom.

The rediscovery of the Middle Ages by enlightened intellectuals such as Johann Jakob Bodmer (1698–1783) and Gotthold Ephraim Lessing (1729–1781) began with their editorial work of Boner's fables.

Bonn

The medieval city of Bonn, on the river Rhine, achieved political prominence in the fourteenth century as the site of the coronation of two German kings. The city lay to the south of the site of a Roman camp founded in the time of Augustus. Here the church known as the *Münster*

Schwarzrheindorf, chapel, view from east. *Photograph: Joan A. Holladay*

(now the parish church St. Martin) rose over the site of a memorial chapel erected in the Roman cemetery in the second half of the third or first half of the fourth century. Legend credits Saint Helena, the mother of the Roman emperor Constantine, with the church's foundation; as at Xanten and the church of St. Gereon at Cologne, her patronage is associated with the veneration of martyrs from the Theban legion, in this case Saints Cassius and Florentius. The current building is the fifth on this site: the early Christian *memoria* (memorial site) was succeeded by a small hall church erected about 400, a larger Carolingian building about 780, and a stately Salian church with a double choir built in the mid-eleventh century. The choir of the present church was consecrated in 1153, with work on the nave continuing until about 1220. The sharply demarcated stories of rhythmic arcades that articulate the choir exterior and the integrated towers are definitive elements of the Rhenish Romanesque.

Arnold von Wied, prior of Cologne Cathedral and chancellor, erected on the opposite side of the Rhine the chapel at Schwarzrheindorf (d. 1151). It was subsequently enlarged by his sisters about 1170. The two-story chapel is decorated with mid-twelfth-century wall paintings juxtaposing the visions of Ezekiel and scenes from the New Testament.

The city gained in political importance after 1288, when the archbishop, driven from Cologne by the citizens, took up residence in his palace in Bonn (on the site now occupied by the University of Bonn). After disputed elections, the archbishop crowned two German kings, Frederick III the Fair in 1314 and Charles IV in 1346, in the Bonn Münster rather than the traditional palace chapel at Aachen.

Bookmaking and Production

In late antiquity, the parchment codex had replaced the papyrus role. This represented a leap in bookmaking technology that brought with it obvious advantages of endurance and ease of use. It was in this form that the book as we still know it was produced throughout the Middle Ages in Europe. Leaves of parchment were folded and gathered into convenient groupings, usually four, and then bound with two facing pages, making any page as easily accessible as the first. In Germany, as throughout Europe, early medieval book production was exclusively the work of the monasteries. Encouraged by their rules to pray and meditate on God's Word, it became imperative to produce the books that would permit such study, given the total absence of larger public or private book collections. Book production was then, from the transition of late antiquity to the early Middle Ages, in the hands of those who made books for their own use. The manufacture of books was both labor intensive and expensive, even for the most ordinary of codices. Great care was taken in producing any book, and certain examples meant for display or use in special circumstances were created as works of art, as costly and beautiful as any painting or sculpture.

The labor to produce the materials needed for making books was time intensive and represented a wide range of skills. The most basic material was parchment, most often the skins of cows or sheep, and each skin had to undergo a lengthy finishing process in order to provide a suitable writing surface. Scores of animals, sometimes hundreds, would be needed for a single book. Once the parchment was delivered to the scriptorium, it underwent further preparation: arrangement by hair and flesh sides, so that like sides faced each other, and ruling by pricking or lead point. On very rare occasions the parchment might be colored to add further drama to the writing surface. Other basic materials that had to be fabricated were ink and writing utensils. Ink was manufactured from natural materials, either carbon (soot) or iron gall, mixed with wine, water, or vinegar. Colored inks, mostly red, were produced from vermilion or cinnabar. Finally, very costly books could be written with gold or silver. The actual writing utensil was most often a quill feather, cut and sharpened to specification. A typical scribe's tool set thus consisted of a sharp knife, several quills, ink horns, chalk, razor and sponge for corrections, a lead point, a ruler, and an awl (and, from the fourteenth century on, glasses).

The actual hand copying of texts was preceded by the need to decide upon a text to be copied, not an inconsequential task when confronted with the reality that not all texts could be produced in sufficient quantities. If the desired text was not available, arrangements had to be made to borrow it from some other monastery. If parchment was unavailable or in short supply, the master scribe, or *armarius*, might decide to erase the text of an older, possibly no longer comprehensible or useful, codex. The production of books from erased texts, or palimpsests, was most common in the early Middle Ages. The role of the monastic school and its teachers was crucial in determining not only the texts and the type of script to be used, but also the layout and assignment of tasks. Many manuscripts were produced in a kind of assembly line. Several scribes would work on the same manuscript simultaneously, each having been assigned a gathering of leaves and a particular portion of text. It seems that most copying was done silently, since it was necessary for several scribes to work side by side on different texts. Once a portion of the text was completed, it might be given to a corrector for proofreading and emendation. Next it was handed to a rubricator for the highlighting of initials and parts of text in red. For more elaborate efforts, an illuminator would furnish the text with images in the form of initials or full-page paintings in spaces left by the copyist. Finally, a book had to be bound in order to protect the text and allow for ease of use over a long period of time. The leaves first had to be ordered, often with the help of numbers or catchwords indicating the next gathering. Bindings could be parchment or leather covers, simply wrapping the pages; more commonly the leaves were sewn together and placed between wooden boards covered with leather. This process often involved the destruction of older books for the use of parchment scraps to strengthen the bindings themselves. The boards could be decorated with pressed stamps or engravings. Bindings were then often marked in some way by the librarian to indicate title and location. In some cases, the binding was itself a work of art and representation, encrusted with precious stones and gold or worked in ivory.

With the growth of universities in Germany in the late fourteenth century, book use and its production moved away from the exclusive realm of the monasteries. University texts were usually dictated by faculty to students, and the university often paid secular scribes to produce approved texts. Even monasteries began to produce books on request for well-paying citizens who wanted to exhibit their literary taste. Various monastic orders, especially women's, specialized in text copying for a fee. The most important development in medieval bookmaking was the introduction of paper. This material could be produced relatively inexpensively in great quantities, was durable and long lasting, and was well-suited for handwriting. Since its introduction in the thirteenth century and its manufacture in Germany as of 1390, paper was to revolutionize the production of books, quadrupling the production rate of the previous century. Over half of all manuscripts still extant from medieval Germany are from the fifteenth century and written on paper. This revolution was to be consummated with the invention of movable type around 1450. Expensive books made for the exclusive use of certain closed communities were replaced by printed books that combined inexpensive materials and textual replication on a commercial scale.

Boppe, Meister (fl. end of the 13th c.)

Boppe was a poet and composer best known for didactic lyrics. References to fellow poet Konrad von Würzburg (d. 1287) in an obituary prayer to King Rudolf of Habsburg (1273–1291) and to the margraves of Baden indicate that Boppe had composed his verses and music in southern Germany by the end of the thirteenth century. As for most of the didactic lyrical poets (*Sangspruchdichter*), however, there is no external documentary evidence of this. The famous Heidelberg University *Codex Manesse* attributes forty stanzas in eight different metrical and melodic forms (*Töne*) to him, but other manuscripts ascribe six of these *Töne* and seven of the strophes to other poets. The Jena manuscript, which gives Boppe the title *Meister* (master) preserves only the first *Ton*, later named *Hofton* (court verse form), with eighteen stanzas. A nine-strophical *Ave Maria* in the *Hofton* survives in a fourteenth-century Heidelberg manuscript. As Boppe ranks with a group of twelve famous old *Sangspruch* masters, more than two hundred further stanzas in the *Hofton* are recorded in *Meistersang* manuscripts of the fifteenth and sixteenth centuries. Boppe is commonly regarded as the composer of the *Hofton* and the author of the *Hofton* stanzas in the older manuscripts, with the exception of the religious *Ave Maria*. The stanzas of the other *Töne* not attributed to other poets may be his. The number of the *Meistersang* texts that are his work—and to what extent they are his work—remains uncertain. Boppe's poems treat the common themes of the thirteenth-century didactic lyric (*Sangspruchdichtung*) in conventional ways. In the role of teacher and counselor, the poet gives instruction and advice to his courtly audience, praising secular chivalric ideals and female virtues as well as God and the Virgin Mary. While divine grace is the highest value in one stanza, earthly love's rewards outrank everything else in another, and in a satirical strophe money is the ultimate ideal. The poet laments his own poverty and extols decency, charity, and princely generosity, a merit particularly important for the wandering artists; he decries miserliness, self-praise, and unjustified eulogy. He has knowledge of the mysteries of Redemption, the dignity of the priesthood and of mankind, the preexistence of the Virgin and her identity as God's mercy, the contrasts between outer appearance and inner worth, good advice and false counsel. In the role of the minnesinger, he gives a satirical catalog of the lady's preposterous demands. Boppe's technical devices indicate considerable rhetorical skill. He repeatedly uses the traditional bestiary imagery to exemplify good and false behavior and has a special preference for cumulative enumerations, displayed by catalogs of countries and peoples, values and virtues, biblical *exempla* (examples), and series of parallel statements and rhetorical questions, often combined with anaphora.

Bouvines, Battle of (July 27, 1214)

In France's war with Flanders in 1213–1214, King Philip II Augustus of France fought against King John of England, who was allied with both the Flemish and Emperor Otto IV of Brunswick. The Flemish plan called for a broad coordinated attack toward Paris, with English forces moving from the south while the Germans and Flemings advanced from the northeast, thus dividing Philip's resources. Unfortunately, the English advance failed and Otto's army faced Philip's concentrated forces when they met at Bouvines, south of Tournai. Philip's larger and better organized knights overwhelmed Otto's in cavalry charges and melees. The French killed over 150 nobles and knights and captured over another 150, while sustaining hardly any losses of their own. As a consequence, Otto, who was fighting for control of the empire with Frederick II, Staufer, lost any chance of reclaiming his former imperial authority. And the defeat both sealed John's loss of Normandy and Anjou and fueled the discontent in England that led to the Magna Carta. Meanwhile Philip II, confiscating John's lands and encroaching into the Lowlands, achieved a lasting dominance for the monarchy in France.

Brabant, Duchy of

The duchy of Brabant (now the Belgian provinces Antwerp and Brabant and the Dutch province North Brabant) constituted one of the largest principalities in the western part of the German empire. As early as 870, the Treaty of Meerssen mentions the *gau* (district) of Brabant. The history of the duchy of Brabant is generally thought to begin by the end of the twelfth century. This duchy was situated on territory of the older and larger duchy Lower Lorraine, founded around 959. Its nucleus consisted of the territorial possessions of the Reiniers, an important ducal house of Lorraine. In 977 the West Frankish Carolingian Charles of Lower Lorraine obtained the title of duke of Lower Lorraine. His daughter Gerberga (d. 1008) married Lambert I (d. 1015), count of Louvain and of Brabant (of which Brussels was the center). Lambert was the founding father of the dukes of Brabant, who, referring to Lambert's marriage, rightfully claimed to descend from Charlemagne. This background explains why the Brabantine dukes continuously tried, using the Brabantine territory as a stepping-stone, to regain the territory of the old Lower Lorraine.

The title of duke of Lower Lorraine had meanwhile passed to the house of the Ardennes. In 1066 Godfrey (Godfried) I the Bearded (1095–1139), count of Louvain, received the ducal title of Lower Lorraine from King Henry V of Germany. In that same year Godfrey I was enfeoffed with the margravate Antwerp. In general his reign is considered to mark the beginning of the history of the duchy of Brabant. The ducal title of Lower Lorraine would remain in the possession of the Brabantine dynasty: Godfrey II (1139–1142), Godfrey III (1142–1190), Henry I (1190–1235), Henry II (1235–1248), Henry III (1248–1261), Henry IV (1261–1267). The last was the oldest son of Henry III, but he was underage and weak minded. A regency was established and exercised by the widowed duchess Aleidis of Burgundy until Henry IV resigned his right to the duchy in 1267 in Kortenberg in favor of his younger brother John I (1267–1294); thereafter followed John II (1294–1312), John III (1312–1355, the last duke from the Brabantine dynasty), and Johanna (1355–1406). Johanna, the oldest daughter of John III, was married to Duke Wenceslas of Luxembourg (d. 1383). The marriage remained childless and, after Wenceslas's demise, the Burgundy dynasty under the reign of Johanna became anchored in Brabant. This meant the definitive end of the autonomous history of the duchy. The dukes of Brabant from the house of Burgundy were Antoine of Burgundy (1406–1415); John IV (1415–1427); Philip of Saint-Pol (1427–1430); Philip the Good, duke of Burgundy (1430–1467); Charles the Bold, duke of Burgundy (1467–1477); and Maria of Burgundy (1477–1482), daughter of Charles the Bold. She was succeeded by Philip the Fair (1482–1506), the son from her marriage with the Habsburg Maximilian of Austria. And thus Brabant passed to the Habsburgs.

By 1106 the title duke of Lorraine was nothing more than an empty box, an honor no longer connected to any real power. Still, the dukes of Brabant always proudly carried the designation. In addition, they tried to establish sovereign authority over this part of the old Carolingian "Middle Kingdom," especially after the reign of Henry I. In scholarly literature this policy is known as the Brabantine dukes' *Drang nach Osten* (push toward the East). Its Lorraine character has traditionally been denied by scholars. Until the late twentieth century, the motives behind the strategy were misinterpreted, due largely to the Belgian historian Henri Pirenne (1862–1935) and his *Histoire de Belgique* (1900–1932). The *éminence grise* (gray eminence) of Belgian historiography, Pirenne believed that the Brabantine expansion policy stemmed from the pursuit by the Brabantines of a strong state that would be independent of the German empire. Brabantine expansionism, however, meant more than mere imperialism. It was inspired by a legitimate quest for the restoration of the Brabantines' authority as dukes of Lower Lorraine. From this viewpoint, the battle of Woeringen in 1288 and the subsequent annexation of the duchy of Limburg by Brabant in 1289 can be interpreted as a partial realization of the Brabantine dukes' Lorraine dream, for the duchy of Limburg was part of the old Lower Lorraine. In contrast to what Pirenne and his followers claimed, this battle had nothing to do with a political project aimed at dominating the trade route between Bruges and Cologne. The trade route did not even run through the duchy of Limburg (though some negligible kilometers ran through 's-Hertogenrade, the possession of which was traditionally linked with the title of the duke of Limburg). When Duke Philip the Good of Burgundy became duke of Brabant in 1430, he also inherited the dream of the Brabantine dynasty of restoring Brabantine sovereignty over Lower Lorraine. However, his plan to establish a Lorraine kingdom failed. His son and successor Charles the Bold in turn wanted to unify Lower and Upper Lorraine under his rule, to form a kingdom with Nancy as capital. When he was killed in a battle with Duke René of Upper Lorraine in 1477 before the gates of Nancy, this undertaking, too, failed.

From an ecclesiastical point of view, the territory of the duchy of Brabant was largely situated within the boundaries of the diocese of Liège (archbishopric of Cologne). The remaining part resided in the diocese of Cambrai (archbishopric of Reims). In 1332 and 1336 Duke John III of Brabant requested of the pope (first John XXII and then Benedict XII) the establishment of a separate diocese of Brabant. This request, however, was denied. Brabant's position between the dioceses of Liège and Cambrai would remain unchanged until the establishment of new dioceses in the Low Countries under Philip II (1559). The duchy was predominantly Dutch speaking. Only a small part of the territory, the *Roman Pays de Brabant* (Romance Territory of Brabant), was French speaking.

The relationship between the dukes of Brabant and their Brabantine subjects was dominated by the opposition between the external aims of the dukes (the realization of their Lorraine ambitions) and the internally focused popular priorities of the prominent Brabantine cities, especially the seven that were known as the "good cities" (Louvain, Brussels, Antwerp, 's-Hertogenbosch, Tienen, Nijvel, and Zoutleeuw). Inspired by the ideology of popular sovereignty, the cities judged that the dukes' main priority was to serve the general interest of Brabant. From the cities' perspective, the realization of the dynasty's ambitions required too great a risk. Wars cost money and the region's textile industry, the import of raw materials and the export of final products, would suffer heavily from the disruption caused by a military conflict. The leading role that the Brabantine cities played in the production of luxury cloth in Europe would then be threatened.

On a national level, the political community of Brabant was organized into three estates. The First Estate consisted of the prelates of the old Brabantine abbeys. The convents of the mendicant orders and the secular clergy were represented in the Second Estate, together with the Brabantine knights. The Third Estate contained the "good cities" and was the most powerful in the duchy due to its economic strength. Consequently, the cities were the dynasty's most important opponents, especially in the thirteenth and fourteenth centuries. Within the Third Estate, Louvain and Brussels were most prominent. These two cities de facto determined the policy of their estate and heavily influenced national politics. The Brabantine knights were active as an estate only in the wake of the great cities. For instance, at a time when the death of John III was expected to cause a succession crisis, they concluded a treaty on May 17, 1355 in which the treaty of the Brabantine cities of March 8, 1355 was literally included, thereby avoiding a succession struggle. The prelates (First Estate) were at first only politically active when their contribution was demanded in a general poll. Their resistance to a poll in 1314 and in 1335, for example, led to the oldest known confederations of the Brabantine abbeys.

Characteristic of the political culture in Brabant was the early development of constitutionalism. As many aspects as possible of the relationship between the duke and his subjects were laid down in written privileges (constitutions) granted by the duke. These documents increasingly and systematically restricted the duke's power. The list of constitutions is impressive: the wills of Henry II (1248) and Henry III (1261); the Charter of Kortenberg (1312) and the Privilege of the Brabantine abbeys, both granted by John II on his deathbed; the Flemish and Walloon Charter of 1314 (John III); and, most important, the famous Ceremonial Entry (*Blijde Inkomst*) of Johanna and Wenceslas (granted on January 3, 1356, but legally valid only a few months from the end of February 1356 onward). Henceforth and until the end of the Ancient Regime, all dukes of Brabant would have to grant their subjects a Ceremonial Entry, a sign of acknowledgment, at the commencement of their reign. In this context the *Nieuw Regiment* (New Regiment) of John IV is also important (1422).

The ideology of popular sovereignty played an important role in the duchy and was applied in specific political situations. This can be illustrated by various examples, such as the case of John III, who was only twelve years old when his father, John II, died in 1312. Because of the indebtedness of the ducal treasury, partly due to the Limburg succession-war (1283–1289) and the battle of Woeringen (June 5, 1288), Brabantine merchants abroad were arrested and their merchandise confiscated. The ransom and the sales profit of the confiscated goods served to settle the duke's debts. This situation proved catastrophic for the foreign trade of the duchy. To handle the crisis, a regency consisting of Floris Berthout, Lord of Mechelen, and the count of Gulik was established. However, the regents did not succeed in resolving the trade problem. Hence the cities assumed control in 1314. They extended the legal age of John III for six more years, until 1320. From 1314 until 1320 the duchy was governed by a municipal regency. This council proved

successful and consequently ended the crisis in the foreign trade.

The Third Estate was instrumental in the preservation of the territorial integrity of the duchy. For instance in 1354–1355, a succession crisis loomed after the death of John III. The three legal sons of the duke were deceased. His three legal daughters were married: Johanna to Duke Wenceslas of Luxembourg, Margaretha to Count Louis of Mâle of Flanders, and Mary to Duke Reinald of Gelre. With the cities' consent, the duke had named his oldest daughter, Johanna, as his successor. The other daughters inherited a sum of money. This was not sufficient in the opinion of Louis of Mâle, who claimed Mechelen and sovereignty over the Scheldt region on behalf of his wife. War and a possible disintegration of the Brabantine territory were possible, as it was feared that the Duke of Gelre might also assert his territorial rights. Thus, after the death of John III, representatives of the cities and Johanna immediately commenced to negotiate in John's castle in Tervuren on December 5, 1355. When Johanna granted Brabant the Ceremonial Entry on January 3, 1356, measures for the preservation of the territorial integrity of the duchy were central to the document. They constituted the *sine qua non* for the cities—and thereby the country's—recognition of Johanna as duchess.

Brabant also had a tradition of written political treaties, as evidenced by the town pacts (*stedenbonden*) of 1261–1262, 1313, 1355, 1372, and 1428, the *Ridderbond* (pact of the members of the Second Estate) of 1355, and the confederations of Brabantine abbeys of 1314 and 1335. The Brabantine-Flemish treaty of December 3, 1339, agreed upon by the major Brabantine and Flemish towns, also belongs to this tradition. All stipulations from these texts form a sort of "democratic" constitution, admired by the other regions of the Low Countries, which were not as politically evolved (in the North it would take until the schism in 1581–1585 and in the South until the end of the sixteenth century). The duchy of Brabant (and not the county of Flanders, as Pirenne had claimed) became the most prominent region of the Low Countries, of fundamental importance to the development of a sense of solidarity in this region in the period before the House of Burgundy came to power in Brabant.

In addition to the ambition of the Brabantine dukes to regain sovereignty over Lower Lorraine, the actions of the Brabant dynasts within the German empire caused strife between the dukes and their subjects. The dukes were German princes and members of the *Richfürstenstand* (upper noble class). They paid homage to the German king/emperor. As guardian of the coronation city of Aachen, which boasted the throne of Charlemagne and his descendants, they shared in the Carolingian prestige. In the famous Heidelberg *Minnesang* manuscript (Codex Manesse), the lyrical poetry of John I appears among those of other Middle High German poets. In addition, various dukes were considered to be successors to the German throne.

John III, grandson of John I, the hero of Woeringen he so admired, was the patron of the Middle High German epic *Lobengrin*, written between September 16, 1332, and November 1333. The protagonist of the epic, Lohengrin, refers to the historical John III of Brabant. This identification throws a special light on the role the duke wished to play in the German empire. The anonymous author was granted the commission during the first phase of a great coalition against Brabant (1332–1334). This coalition aligned all of the landlords of the principalities surrounding Brabant. Their main goal was to take revenge on John III for the victory of John I in the battle of Woeringen in 1288 and to break the power and esteem of Brabant. In this tense atmosphere, when the future of Brabant was at stake, the duke commissioned the writing of the *Lohengrin* (7,670 verses). This patronage clarifies the position of the Brabantine dukes as German *Reichsfürsten* (imperial dukes).

During the composition of the *Lohengrin*, Brabant, as part of the Middle Kingdom and of the duchy of Lower Lorraine, was threatened with extinction. John III successfully resisted the coalition against him. But other parts of the former Carolingian Middle Kingdom, Upper Lorraine and the Arelaat, were at risk of being irretrievably lost to the German empire due to increasing French influence in these territories and the lax, even passive, response of Louis of Bavaria. In the epic, Lohengrin (John III) is presented as the indispensable savior, the defender of the empire's interests, sent by the community of the Grail. He unconditionally pays homage to the German king for Brabant/Lower Lorraine. Acts of homage for Upper Lorraine and the Arelaat follow. These three acts of homage are the only ones mentioned in the *Lohengrin*. The homage for Upper Lorraine is instigated after an arbitral decision by Lohengrin, who declares that the duchy would forever remain within the German empire. After this declaration the king of the Arelaat pays homage as well.

The message of the epic is clear: as Lorraine is defended by Duke Lohengrin, so must the other parts of the Middle Kingdom be safeguarded in order to preserve them for the empire. In contrast to the lax action of Louis of Bavaria when confronted with the impending loss of Upper Lorraine and of the Arelaat, all means must be employed to fully reintegrate these territories into the empire. This is the clear political message of the patron of the epic, John III. The reproach addressed to Louis of Bavaria is beyond misinterpretation.

But what was the motive behind this literary, propagandistic initiative of John III? Why choose that moment to commission such a work? The epic was written at a time when the abdication of Louis of Bavaria was possible. If this were to occur, a new king would have to be chosen. In *Lohengrin*, John III let himself be pictured as the savior of the German empire, as someone who, with God's help, could defend its interests. In other words, he ensured that he would be seen as the ideal candidate for the throne in the event that Louis of Bavaria stepped down. The intended audience of this epic was first and foremost the electors and their courts and other powerful leading figures who were thought to influence the choice for a new king.

Presumably, the involvement of John III in matters concerning the empire is representative of the involvement of his predecessors. Only *Lohengrin* allows us to imagine its extent. With respect to Belgian historiography, John III's commitment to imperial state matters has traditionally been discounted. Until recently it was believed that at that time, although Brabant juridically still belonged to the empire, the dukes operated largely independently of the empire, especially after John I. Here again the misconception can be attributed to Henri Pirenne, whose *Histoire de Belgique* attempted to trace the fundamentals of Belgian independence in order to legitimize the new state following the revolution of 1830. As a consequence his conception of Belgian history was deterministic in character. He took into account only those past events and tendencies that more or less prefigured the 1830 revolution. He systematically disregarded indications of unrealized possibilities, such as the annexation of Brabant by the German empire, a consequence of the Lorraine ambitions of the Brabantine dynasty. The medieval history of the duchy of Brabant, then, at least until the beginning of Burgundian rule, should henceforth be linked with German history. The medieval history of Germany continues to be written starting from the boundaries of the contemporary Federal Republic of Germany. Hence, Brabant is only briefly or coincidentally mentioned, when it is mentioned at all.

Braunschweig

Chronicles relate that Braunschweig, a city in Lower Saxony, was founded in 861 by two brothers, Bruno and Dankward. The first castle, the Dankwarderode, was built in the early eleventh century by Count Liudolf and his wife, Gertrude, who also founded a collegiate church next to their castle where Liudolf was buried in 1038. Later Braunschweig passed first to the imperial family (1090) then through marriage to Henry the Proud, duke of Saxony and leader of the Guelph party. His son, the Guelph duke Henry the Lion (1129–1195), made Braunschweig his capital. While retaining and improving the core of castle and church, Henry also constructed much new town fabric. Interested in expansion of the empire north and east, and the role of merchants, Henry was involved with the founding of the Hanseatic city of Lübeck and created new merchant quarters in Braunschweig.

Henry the Lion completed a series of impressive architectural and artistic projects in the old center of Braunschweig, which reflected his desires to create a worthy ducal capital. He rebuilt the Dankwarderode around a courtyard with the rebuilt church of St. Blasius forming the south side. One of the most impressive monuments of Henry's reign is the over-life-size lion erected in the castle courtyard in 1166. This sculpture, made of gilt bronze, stands poised with open mouth. It has an elaborately detailed mane and originally had glass eyes. As the first fully freestanding sculpture since antiquity, the sources for the lion are a matter of considerable interest. Sculpture in Italy such as the Etruscan she-wolf may have been a source, especially since the she-wolf was in the prestigious collection of the pope and displayed outside the Lateran palace during the Middle Ages, providing a model for both the form and the placement of such an animal figure. More precise stylistic antecedents for the Braunschweig lion may be found in small bronze aquamanile (vessel) common in Germany in the twelfth century that often took the form of lions. The lion's association with Henry's name (Guelph=Leo in Latin=lion) provides additional reasons for the public display of this sculpture.

Henry rebuilt the ducal church adjoining the Dankwarderode and dedicated it to St. Blasius and St. John the Baptist (1173–1194). The church later became the cathedral of Braunschweig. A major function of the rebuilt church was to hold the relics Henry brought back from a pilgrimage to the Holy Land in 1172–1173. The twelfth-century building had a basilican plan with a single side aisle, transept, and massive two-towered westwork. The entrance from the palace courtyard was in the transept arm. The church is groin-vaulted in square bays with a simple two-story elevation, and the east end has an elevated choir with a semicircular apse above a crypt. This eastern part of the church contains an extensive cycle of wall painting from the second quarter of the thirteenth century showing the lives of the patron saints, Blasius and John the Baptist; it is stylistically related to the manuscript group of the Goslar Evangelary.

The interior of the church contained several important large sculptures and pieces of church furniture, including the Imverard Cross of the mid-twelfth century, a wooden sculpture of the clothed Christ on the Cross, and from 1188 a bronze candelabra decorated with enamels and an altar dedicated to the Virgin with a marble slab and five bronze columns. Tombs of Henry the Lion and Matilda Plantagenet, his wife, commissioned circa 1235–1240 by their sons, including Emperor Otto IV, were placed at the entrance to the choir. They represent the first example of a double tomb in Germany, although the type already existed in France. The royal couple is depicted as of an ideal age. The effigy of the duke holds a sword and model of a church. Matilda's hands are clasped in prayer. While consoles are placed under the effigies' feet, the drapery falls as if the figures were lying down. The style of the figures is full-bodied with deep, three-dimensional drapery in rather excited folds, which have been related to the *Zackenstil* (jagged or zigzag style). The style is similar to German thirteenth-century cathedral sculpture such as that of the Goldene Pforte at Freiberg Cathedral. It is possible that the Braunschweig tombs conceptually related to tombs of Matilda's parents, the Plantagenet tombs at Fontevault in France.

The church of St. Blasius was the medieval repository of the collection of metalwork known as the Guelph Treasure. This collection of metalwork, presently dispersed in many collections, dates from the Ottonian, Romanesque, and Gothic periods, and was first inventoried in 1482. The chronicler Arnold von Lübeck refers to Henry's zeal in enriching the House of God, and this is thought to include his components of the Guelph Treasure. It is known that Henry brought relics and reliquaries back from Constantinople, where the Emperor Manuel Comnenus was trying to win Henry's favor, and these objects were subsequently donated to St. Blasius. But a large number of the works in the Guelph Treasure are German, reflecting German expertise in metalwork. These objects include portable altars, reliquaries, and several arm reliquaries (Berlin, Staatlichen Museen, Preussischer Kulturbesitz, Kunstgewerbemuseum, nos. Inv. W. 12, W. 19, W. 20, W. 23).

Henry the Lion was also a donor of manuscripts; one of his most impressive donations was the Gospels of Henry the Lion (Wolfenbüttel, Herzog August-Bibliothek Cod. Guelf., no. 105 Noviss. 2), made at the scriptorium of the abbey of Helmarshausen and originally placed on the high altar at St. Blasius. The famous coronation miniature (fol. 171v) shows Henry and Matilda crowned by Christ and surrounded by their famous ancestors.

While the late twelfth century was the apogee of Braunschweig's medieval history, another period of artistic achievement began during the reign of Duke Otto the Mild (1318–1346). At this time Braunschweig became a center in the Hanseatic League, ushering in a new period of prosperity. The city market square with its Rathaus (town hall, 1393–1396) was laid out, and modifications were made to the adjoining church of St. Martin. This church, which had a westwork, was erected around 1250 and was remodeled in the early fifteenth century. Architectural modifications were also undertaken at the ducal church of St. Blasius around this time (1469–1474). The north aisle was modified into a double hall with elaborate ribbed groin vaulting on decorated columns. The mendicants were active in late medieval Braunschweig, and the Franciscan cloister and church, the Brüdernkirche, were built between 1343 and 1361. Other impressive medieval churches in Braunschweig include St. Michaelis, begun in 1158 and the second-oldest in the city; St. Peter's, a Gothic hall church from the end of the thirteenth century; and the Benedictine abbey of St. Aegidien and its cloister, rebuilt as a Gothic hall church after a fire of 1278.

Brendan

A Middle Dutch poem (2,284 verses) probably composed in the second half of the twelfth century, *De reis van Sint Brandaan* (The Voyage of Saint Brendan), tells the story of the Irish abbot Brandaan, who, during a sea voyage of nine years, lands on miraculous coasts where he encounters many wonderful and strange creatures. The reason for the voyage is Brandaan's lack of faith: enraged by so many lies, he has thrown a book describing the wonders of God's creation into the fire. An angel appears and gives him the divine order to make a sea voyage to discover for himself what is truth and what is falsehood. The voyage and the written report of it are to replace the book that Brandaan has burned.

In the narrative's various episodes, Brandaan stays at heavenly and infernal places, is confronted with sea monsters, and meets hermits, devils, and the strange people of the *Walseranden*. In addition to information on natural and supernatural phenomena, some theological problems are raised.

The Middle Dutch *Reis van Sint Brandaan* has come down to us in two manuscripts from around 1400. The text in the Van Hulthem manuscript is not complete: 332 verses (presumably) are lacking due to a missing first page. The Comburg manuscript offers us a complete text. The two versions diverge in word choice and formulation. Together with two German texts in verse and a High German prose version, they go back to a now-lost original that was composed around 1150 in the Middle Franconian area. The text was meant for a twelfth-century lay audience.

Investigating the sources of *De reis van Sint Brandaan* is a complex business. The author used older and contemporary works, Latin and vernacular texts, and books of a discursive as well as a narrative character. The text has some episodes in common with the Latin prose *Navigatio Sancti Brendani Abbatis*, which possibly dates back to the ninth century. The Latin text in turn is related to the old Irish genre of the *immrama* (sea voyage stories that recount landings on miraculous coasts), and especially to one of those stories, the *Immram curaig Máele Dúin* (The Sea Voyage of Mael Duin's Ship). The genre was very popular. The Latin text is preserved in more than one hundred manuscripts and was translated into several medieval vernacular languages. In addition to this Latin text, the author of the Middle Dutch version made use of other sources, such as texts about the marvels of the East. Some episodes resemble parts of the twelfth-century German text *Herzog Ernst* (Duke Henry). The author also used discursive sources belonging to the medieval Latin physiologus and bestiary tradition. The text also contains innovations, such as the instigating event of the burned book that must be replaced by Brandaan.

The Irish abbot Brendan is a historical figure. *Brénaínd moccu Altai* was born in 500 near Tralee in the north of the county of Kerry (southwest Ireland). He was an important religious leader who founded several monasteries in the west of Ireland. He died around 580. In the eighth century he was known as a famous sailor. Later on he was invoked as a saint against fire. Several versions of the life of Saint Brendan (*Vita Brendani*) have survived, in which biographical data are mixed with episodes of a miraculous voyage. This *Vita* probably had some influence on the *Navigatio Sancti Brendani Abbatis*.

Bruno of Magdeburg (fl. late 11th c.)

The chronicler Bruno of Magdeburg (also Bruno of Merseburg) served in the episcopal *familiae* of Archbishop Werner of Magdeburg (1063–1078), then Bishop Werner of Merseburg (1059–1093), two of the principal ecclesiastical leaders of the rebellion known as the Saxon War (1073–1088). It is to Werner of Merseburg that Bruno dedicated the historical narrative for which he is known, the *Liber de bello saxonico* (Book on the Saxon War) probably early in 1082. In his history, Bruno defended the Saxons' rebellion against charges of *lèsemajesté* (crime against the crown) through a vivid portrayal of the "unkingly" deeds of Henry IV's youth and a highly partisan account of the first eight years (1073–1081) of the Saxons' rebellion against that king. Far from opponents of God-ordained kingship, Bruno strove to portray the Saxon rebels as spokesmen and restorers of the right Christian political order. He was therefore at pains to highlight and document the absolute obedience of the rebel leaders to the voice of the divine order, the reform papacy under Pope Gregory VII (1073–1085), and did so by including verbatim transcriptions of key letters from Pope Gregory VII, Henry IV, and the Saxon princes; indeed, he is our only source for the latter. Yet, although a vigorous apologist for the Saxon cause and adherent of the reform papacy, Bruno was also willing to criticize the Saxon princes for ignorance, overconfidence, and self-interest, and the papacy and its legates for vacillation and double-dealing. A tightly constructed, incisive, at times eloquent and dryly humorous work, the *Book on the Saxon War* reveals the author to have been not only a well-trained Latin stylist who was particularly influenced by the classical historian Sallust's works, but a perceptive observer of his society and its politics.

Buch von Bern and *Rabenschlacht*

Also known as the "historical" Dietrich epics, *Buch von Bern* (also called *Dietrichs Flucht*) and *Rabenschlacht* were composed in Bavarian-Austrian dialect and transmitted together in four complete manuscripts, showing that they were perceived as a double epic by their audience, the Austrian nobility. Two fragments survived to modern times. One, now lost, contained 318 lines of *Buch von Bern*, the other, 58 strophes from *Rabenschlacht*. The two narratives are interrelated in plot, but different in other respects. *Buch von Bern* is written in the rhymed couplets of chronicles and courtly romances; in an excursus decrying unjust treatment of the lower nobility by princes, one Heinrich der Vogler (a pseudonym) names himself as the author (line 8,000). Heinrich might have written only this and similar excurses, or he might be the author in the sense that he reworked a traditional tale to depict a thirteenth-century political situation. *Rabenschlacht* is anonymous and written in a unique six-line strophe. Its many inconsistencies and high proportion of native terms for warfare are characteristic of oral-traditional style, but other elements of style and content mark it as a work of the mid- to late thirteenth century.

The two oldest manuscripts of *Buch von Bern* (the late-thirteenth-century Riedegg and early-fourteenth-century Windhagen manuscripts) lack the extended prologue (over two thousand lines), recounting the succession of kings of Italy (including Ortnit and Wolfdietrich) that characterizes later versions (a Heidelberg manuscript from 1447 and the Ambras manuscript prepared by Hans Ried for Kaiser Maximilian). There are no variations in the main plot. Prior to Dietrich's birth Italy has been divided among his father, Dietmar, and his two uncles, Diether and Ermrich. Ermrich, ruler of Rome, attacks young Dietrich in order to take over northern Italy. Advisers help Dietrich win a battle at Milan. The hero's plans to reward his men are foiled when Ermrich's men take a number of Dietrich's men hostage. Dietrich goes into exile so that the hostages can be released. He obtains the support of Etzel (Attila) in order to go back to Bern (Verona) and face Ermrich again. He wins a partial victory. Returning to Etzel, he must marry Herrat, Queen Helche's niece, in order to obtain further support. A third battle occurs when the treacherous Witege gives Raben (Ravenna) back to Ermrich. Although Dietrich again wins a partial victory, he suffers heavy losses. He laments for the dead on both sides (especially for his man, young Alphart, who has been killed), then returns to Etzel. *Rabenschlacht* begins between the second and third battle. Dietrich, in exile, laments the loss of his men, especially that of Alphart (strophe 10, line 5). To assuage his grief, Helche arranges for his marriage to Herrat. The army prepares to leave for Raben. The sons of Helche and Etzel are only children, but they insist on going with the army. Helche and Etzel reluctantly agree to let them go in Dietrich's care. The boys and Dietrich's younger brother are forbidden to leave Bern. They insist upon taking a ride outside the gates. The weather is foggy, which causes them to take a wrong path into the vicinity of the battle. The next morning all three children are killed by Witege, one of Ermrich's men, in unfair combat (see [Alpharts Tod](#), in which the murder of the youthful hero takes place two against one at the hands of Wytdich and Hen). After the first part of the battle, Dietrich discovers that the boys are dead, laments, and pursues Witege, who, aided by a mermaid, escapes into the sea. The battle continues. Dietrich wins, but Ermrich escapes. Ruedeger pleads Dietrich's case with Helche and Etzel, who reluctantly forgive him.

The chronological relationship of *Buch von Bern* and *Rabenschlacht* is not entirely clear, but because *Buch von Bern* can be interpreted as a response to *Rabenschlacht* in many respects, it seems probable that *Rabenschlacht* is the earlier of the two.

Burchard of Worms (965–1025)

Burchard (also Buggo) was bishop of Worms and a codifier of the laws of both court and Church. Probably from a comital, or ducal family in Hesse, he served in the diocese of Mainz for Archbishop Willigis, who brought him to the attention of the Emperor Otto III. Otto named him bishop of Worms in 1000. Burchard was respected enough to be entrusted with raising the future emperor Conrad II. Burchard tried to restore order to his see, which had been devastated by the Hungarian invasions. He rebuilt old and established new churches and monasteries. Even more important, two documents attest to his far-sighted planning and organization. First, he compiled a collection of laws known as the *Decretum Collectarium* or the *Brocardus*, after himself. Burchard's *Decretum* had widespread use; later canonists such as Ivo of Chartres and Gratian drew heavily from it. Second, he wrote the Laws and Statutes for the Familia of St. Peter of Worms, the first example of a law book for court vassals and ministerials.

Burg

Members of the landed aristocracy during the Carolingian period tended to be itinerant, moving about from one unfortified manor house to another. Where fortification (*burg*=castle) did exist, it tended to be large scale, providing protection for both the owner and the neighboring rural populace in the uncertainties of the ninth and tenth centuries. Most often, burgs were built of timber, not unlike forts on the Russian and American frontiers in the eighteenth and nineteenth centuries. Already in the early tenth century, however, certain families were beginning to build smaller-scale residences of stone, intended for the use of their *familia*—that is, of their household alone.

Unlike England, where numerous, very large royal castles were erected during the reign of William the Conqueror, German kings as late as the reign of Henry III (d. 1056) owned few castles, apart from the citadels in towns like Goslar, Nuremberg, and Regensburg, which were provincial headquarters, and nobles and kings alike lived in rambling unfortified manor houses. With the outbreak of the civil war, the situation changed and castles sprang up throughout Germany, built by temporal and spiritual lords as well as by the emperors themselves. An important acquisition was the fortress Trifels, perched high above Annweiler in the Wasgau forest of the Rhineland, which dates from 1040–1060 and was surrendered by the archbishop of Mainz to Emperor Henry V in 1113. Custom dictated that upon the death of an emperor, the imperial insignia be taken to Trifels. At the end of the twelfth century, the English king Richard I was brought to Trifels while his fate was being decided.

Whereas the private castles built in England during the reign of King Stephen (1135–1154) were frequently torn down by his successor, Henry II, the process of building castles on the hereditary estates of the German nobility during the eleventh century could not be halted once the civil war was over. The earliest reference to the Zollerburg, ancestral home of the imperial house of Hohenzollern, is 1061; Frederick of Büren built the castle of Staufen about 1077 and was thenceforward known as Frederick of Staufen; the family of Berthold began to call itself von Zähringen about 1100. One of the most famous of the Rhine castles, that of Stahleck above the town of Bacharach, is first mentioned in 1135. Few German castles are more famous than the Wartburg, home of the landgraves of Thuringia; it was the setting for a dazzling courtly culture at the end of the twelfth and the early thirteenth centuries, but also the stage on which Saint Elizabeth of Hungary (d. 1231) played out her short adult life.

The proliferation of castles continued into the thirteenth and fourteenth centuries. The archbishops of Mainz, for example, built the castle Lahneck above Oberlahnstein in 1240, while the Martinsburg in Oberlahnstein itself dates from the late fourteenth century. Throughout Germany, control of the countryside rested in the hands of hundreds of counts, lesser nobles, and *ministeriales* (administrators), who generally styled themselves after their castle or burg. It was from the castle that their authority was exerted, and it was in a large degree the castle upon which their authority was constructed. As ecclesiastical princes such as the archbishops of Cologne extended their temporal lordship during the twelfth and thirteenth centuries, they acquired fortresses (such as the Homburg and the Godesburg, near Bonn) which they garrisoned with their own *ministeriales*, and they compelled the noble occupants of other burgs to become their vassals.

Caesarius of Heisterbach (1180-ca. 1240)

A Cistercian monk educated in Cologne, Caesarius became the prior and master of novices at the monastery of Heisterbach. His extant writings include a number of sermons and a few saints' lives, but Caesarius is most noted for his *Dialogus miraculorum* (Dialogue on Miracles), compiled and written in Latin between 1219 and 1223. As novice master, he gathered the material together in a collection of stories intended to illustrate Christian doctrine for the monks in his charge and aid in the development and preparation of sermons on particular topics. Hence, the stories are divided into a variety of thematic units, with subject headings such as conversion, contrition, confession, temptation, demons, the Eucharist, and the Miracles of the Virgin Mary. The collection is framed by a dialogue between a novice monk (*novicius interrogans*) and the master (*monachus respondens*). The content, owing as much to an oral tradition as to religious sources, straddles the border between official canonical doctrine and that of folk legend. Many of the stories depict scenes drawn from the everyday life of the region and time period, including that of emperors, peasants, townspeople, beggars, and clergy. Because the stories are meant to serve as examples to live by, they are called *exempla*, and while they are shaped as miracle tales, weaving religious doctrine with popular material, each has a particular moral point. While the primary audience for the *Dialogus miraculorum* was that of male Cistercian monasteries, there is evidence that the works of Caesarius are important in the history of medieval women's spirituality in Germany. There are over two hundred references to women's cloisters in Caesarius's works and evidence that he personally knew six Cistercian women's monasteries in the Lower Rhineland.

Canossa

One of the four regional fortresses of the Countess Matilda of Tuscany in Reggio Emilia, Canossa was constructed with triple walls on a steep rock that jutted out from the Appenines over the plain. Ruins, in particular of its church St. Apollonio, have remained as a reminder of the famous encounter there in January 1077 between Pope Gregory VII (1073–1085) and King Henry IV (1056–1106). The pope had deposed and excommunicated Henry at the Roman synod of February 1076 in response to letters brought by messengers from the assembly (diet) meeting at Worms in January 1076, renouncing on the part of the archbishops and bishops their obedience to "Brother Hildebrand" and on the part of the king calling on Gregory to resign. When the deposition became known in Germany, Henry found himself deserted. The opposition gathered at Tribur in October 1076 together with papal legates. They declared that they would no longer recognize Henry as king if he would not succeed in obtaining absolution from the pope within a year. They also invited Gregory to come to Augsburg in February 1077 to act as mediator between themselves and the king. In desperation Henry decided to meet Gregory in Italy, crossing with his wife Bertha and their two-yearold son Conrad in a particularly severe winter the sixthousand-feet-high Mont Cenis, the only pass that was open to the king. It was an almost suicidal undertaking. When Gregory, on his way to Augsburg, heard in Mantua of Henry's arrival, he retreated to Matilda's castle of Canossa. Henry appeared as a penitent, barefoot and in sackcloth, in the castle yard asking for admittance. Gregory could not easily refuse reconciliation, especially since Henry 's cause was supported by others present, the Countess Matilda, Abbot Hugh of Cluny who was Henry's godfather, and Countess Adelheid of Turin, Henry's mother-in-law. Gregory secured a written promise and an oath from Henry that he would accept the pope's judgment and allow him free passage. The pope then lifted up Henry from the ground and gave him and his companions communion. The events were judged differently even by contemporaries. Penance per se was not an act that would detract from the royal dignity, but Henry certainly had recognized Gregory as judge and thus as an intermediary between himself and God. He was visibly subordinate to the sovereignty of the Church and his status as king by the grace of God was bound to suffer.

Capitularies

Capitularies were instruments of government used by the Carolingians, consisting of collections of written articles (*capitula*). The articles summarized oral proclamations made by the king in consultation with an assembly of lay and ecclesiastical leaders. The Carolingians used capitularies to regulate the royal administration and to bolster the national laws governing the different peoples of the Carolingian empire. The collections also contained measures related to Church dogma, ecclesiastical organization, and the liturgy. The kings' authority to issue capitularies derived from the royal ban (*bannum*): his right to command subjects to perform services for the realm and punish them for disobedience. Charlemagne and Louis the Pious issued the most important capitularies between 779 and 805, frequently following on revolts or other crises. These articles promoted an image of the Carolingian empire as a unified Christian polity. Several collections were also produced for the provinces east of the Rhine (Bavaria, Alemania, Frisia, and Saxony). Most notably, Charlemagne dictated harsh measures to eradicate Saxon paganism. With the division of the empire in 843, the production of capitularies decreased. The legal authority of the advisory assembly also tended to grow in relation to royal authority, especially east of the Rhine. The practice of issuing capitularies died out in the late ninth century.

The *Carmina Burana* is not only the richest surviving collection of Medieval Latin lyric poetry, but because of the German composer Carl Orff's 1938 setting of twentyfour of the songs as a "secular cantata," doubtless also the most well-known to the general public. It is also unique both in being the only collection organized by thematic categories, and in containing forty-seven "German strophes" attached to Latin songs whose strophic form they usually share, as well as a number of Latin-German and Latin-French macaronic (bilingual) poems and Latin liturgical dramas. Moreover, if current theories about its origin are correct, the collection was not only put together in medieval Germany, but its creators were probably a group of bilingual (or even multilingual) Germanspeaking clerics in the Tyrol who themselves wrote a number both of the Latin lyrics and the German strophes unique to the manuscript.

A loose translation of "Songs of Benediktbeuron," *Carmina Burana* is the popular name given to the manuscript, no. Clm 4660 in the Bavarian State Library in Munich, by its first editor, Johannes Schmeller. The history of the manuscript (*Codex Buranus*) before 1803 is unknown. Though a later editor, Otto Schumann, had argued for a late-thirteenth-century date for the original manuscript, its final editor, Bernhard Bischoff, has suggested on paleographic grounds a date closer to 1230, and scholarship has generally supported that date. In 1803 the manuscript was in the monastic library of Benediktbeuron, south of Munich. At some previous time it had been rebound in an order different from the original order, and some of the leaves had become separated; these were discovered by Wilhelm Meyer and published as the *Fragmenta Burana* (Fragments from Benediktbeuron) in 1901. When the monasteries were secularized in 1803, the rebound manuscript and the separate leaves went to the Bavarian State Library, where the manuscript was discovered and published in a semidiplomatic edition by Johannes Schmeller in 1847. A critical edition of the manuscript was begun in 1930 by Alfons Hilka and Otto Schumann, and was completed by Bernhard Bischoff in 1970.

The critical edition, following the organization of the manuscript before it was rebound, is divided into four sections: (1) moral-satiric poems (nos. 1–55), (2) love songs (56–186), (3) drinking and gaming songs (187–226), and (4) liturgical plays (227–228). The *Fragmenta Burana* form a final section (1*–26*). That would indicate a total of 254 poems in the manuscript. The numbering system initiated by Hilka and Schumann, however, assigns letters (e.g., CB 48, CB 48a) to stanzas or sections considered not part of the basic song (e.g., the so-called German strophes) but apparently considered part of it by the original scribes, and Roman numerals to quantitative poems that parallel tradition shows to have independent status (e.g., CB 32 I and II); finally, the notes to the critical texts often contain additional stanzas or verses (some from the *Codex Buranus* itself, some from parallel manuscripts) that the editors consider to be inauthentic. As a result, the actual number of different poems or poem fragments in the critical edition is far higher than the numbering would indicate. Counting all of the separately identified stanzas and songs, section 1 contains 89 poems; section 2, 222; section 3, 73; section 4, 2, and the *Fragmenta*, 32, for a total of 418 individual works or fragments.

If Schmeller's 1847 edition was for the most part a diplomatic printing of the extant manuscript in its rebound form and without the *Fragmenta*, the Hilka-Schumann-Bischoff edition presents a text that reflects the original manuscript only in its ordering. Hilka and Schumann established as their editorial principle the consultation of the entire parallel transmission for each separate work. Although a number of the poems are unique to the *Codex Buranus*, the greater number are also transmitted elsewhere, often with a different text, and often with many parallel manuscripts (there are 502 manuscripts in the final accounting of the parallel tradition, 106 of them containing two or more songs also in the *Codex Buranus*). The result is that each poem in their edition amounts to a separate critical edition: e.g., the metrical poem "Pergama flere volo" (CB 101) is based on 61 parallel manuscripts.

Though the parallel manuscript tradition is extensive (53 manuscripts in Paris, 48 in Munich, 34 in London, 24 in Cambridge), only a few overlap significantly with the *Codex Buranus*. The most important is Florence Laurenziana Plut. 29,1, a manuscript, originally French, from the end of the thirteenth century, which not only contains nineteen songs from the *Carmina Burana* (CB 12, 14, 15, 19, 21, 22, 26, 27, 31, 33, 34, 36, 47, 63, 67, 131, 131a, 188, 189), but also the music for these songs in mensural notation.

The *Codex Buranus* itself is a "musical" manuscript: 43 of the poems are "notated" with lineless neumes (a notation system that shows the general melodic contours without indication of intervals or rhythm), and neumatic notation had been intended by the scribes for another sixteen poems. Of those 59 poems, only eighteen have parallel manuscripts with mensural notation. Those songs with music in parallel manuscripts have been edited in performing versions by Ulrich Müller (1979), and there have been two recordings of the "complete" music of the *Carmina Burana* (by the Clemencic Consort in 1978 and the Mew London Consort in 1994). The two collections do not completely duplicate one another, and both directors include speculative melodies based either upon interpretation of the neumes or upon "contrafacture"—the use of a surviving melody by another poem with the same strophic form.

The notion of contrafacture is central, finally, to most theories about the German strophes of the *Carmina Burana*. Most of these 47 strophes in Middle High German attached to Latin songs show the same strophic form as the parallel Latin poem (or a very similar form, considering the different languages), and nine of them occur in other manuscripts: CB 48a is a stanza from Otto von Botenlauben, CB 113a from Dietmar von Aist, CB 143a, 147a, and 166a from Reinmar von Hagenau, CB 150a from Heinrich von Mohrunge, CB 151a from Lutolt von Seven, CB 168a from Neidhart von Reuenthal, and CB 169a and 211a from Walther von der Vogelweide (211a is a stanza from Walther's famous "Palatine Song," *Palästinalied*); CB 203a is a stanza from the Middle High German poem *Eckenlied*. Earlier theories argued, therefore, that the melodies of the German strophes had served as models for the Latin poems, and that is certainly true in some instances. Given, however, the multilingual nature of the manuscript, the fact that many of the German strophes unique to the *Codex Buranus* have little literary merit, and that a number are significantly different in form from "their" Latin poems, it now seems likely that many of the unique German strophes are jeux d'esprit attributed to the Tyrolean compilers of the manuscript, who may indeed be the authors also of a number of the Latin poems.

Painting
Sculpture and Metalwork]

Introduction

The term Carolingian derives from "Carolus Magnus," Charlemagne's name in Latin, and refers, literally, to art produced in areas ruled by a monarch of the Carolingian family. Geographically, this included the western half of Germany, the Low Countries, most of France, and parts of Italy. Chronologically, Carolingian rule in what is now Germany extended from 751 until 910. In this instance the historicopolitical definition of an artistic period is not arbitrary, for the leading centers of Carolingian art production were the royal courts and the monasteries with close ties to them. And members of the Carolingian family were among the chief patrons of early medieval art.

The most important Carolingian court was Charlemagne's at Aachen, but the Carolingian pattern of royal succession, with all of a ruler's sons dividing his lands, meant that the boundaries of kingdoms and the locations of courts shifted. This makes it difficult to generalize about the centers of Carolingian art. Monasteries, which were not transient, were somewhat less susceptible to shifting political currents; important German monasteries active in Carolingian art production include those at St. Gall, Fulda, Reichenau, and Lorsch.

Carolingian art is generally characterized by great material richness, technical excellence, and iconography that is often extremely sophisticated. Formally it manifests various syntheses between the abstract art of the Carolingians' barbarian ancestors and the illusionistic representational styles of Rome and Byzantium, centers that Carolingian kings and monks saw as political and intellectual models. Carolingian art was tremendously influential throughout much of the Middle Ages because of the success of this formal synthesis and the immense prestige of the Carolingians, typically looked on as the first kings of France and Germany. In Germany, the Ottonians and Salians drew on Carolingian models with especial frequency.

Architecture

As with much of Carolingian culture, Carolingian architecture was not innovative, but involved the standardization of previously established types. Nonetheless, Carolingian buildings were of great importance in the Middle Ages thanks to the exceptional prestige of the ruling dynasty and the sheer extent of Carolingian construction: over four hundred monasteries were built or rebuilt in the century before 855.

Carolingian architecture is difficult to characterize because the evidence is scant. Only a handful of buildings remain and they are not representative of the full range of construction, for they include no structures in wood, the material used in the early Middle Ages for almost every building that was not a church. Even among the stone churches, few are well preserved; many fell into ruin, were destroyed (typically by fire to their wooden roofs), or became outmoded and were replaced.

Based on the extant buildings and what can be gleaned from history and archeology, however, Carolingian churches can be divided into two main groups: basilicas and centrally-planned structures. Throughout the early Middle Ages the basic church building was the hallshaped basilica; the Carolingians codified rather than challenged this tradition. Extant Carolingian basilicas include the churches constructed for Charlemagne's courtier Einhard at Seligenstadt and Michelstadt-Steinbach. There were prestigious, but now-last Carolingian basilicas at Fulda and St. -Denis. Basilicas have an entrance facade, almost without exception in the west, and in the east an apse, a semicircular sanctuary sheltering the altar. The rectangular area between entrance and apse, the nave, varied in length and width and was sometimes flanked by two or four aisles. The nave connected the door to the most important part of the building and gave the basilica its characteristic axis. In the Carolingian period, when stone vaulting was rarely used, such churches were covered with a simple peaked timber roof. The large blank spaces of the nave and apse walls provided ample room for mural decoration in fresco or mosaic.

The basilica's popularity as a building type for the Carolingians is easy to understand; it was simple to construct and highly adaptable in size and scale. More important, it was well suited to the Christian liturgy, since its layout directed the viewer's attention to the altar as soon as he or she stepped through the door. In a church that served a large populace, the nave sheltered the worshippers, with the clergy or monks around the altar. In churches without large congregations, such as that of St. Riquier at Centula, the nave was the site of additional altars, used in the monastery's complex processional liturgy. A final, significant reason for the widespread popularity of the basilica among the Carolingians was the prestige they ascribed to its form. The fourth-century Roman basilicas, especially that of St. Peter, were the most important churches in medieval Christendom; Carolingian basilicas, such as those at Fulda and St. -Denis, followed these early Christian models closely in an attempt to link the Carolingians to Mediterranean Christianity.

The adoption of the traditional basilican form and the more consistent use of stone as a building material illustrate a systematization characteristic of Carolingian administration and culture. The best architectural expression of this Carolingian tendency to regularize is the so-called plan of St. Gall, a unique architectural ground plan for a never-built monastery, made in the first decades of the ninth century. In its completeness—every one of the monastery's many functions finds architectural expression—and consistent use of a modular system of proportions, the St. Gall plan, which featured a basilican church at its heart, is a fine architectural example of the Carolingian desire to standardize.

Not all Carolingian churches were basilicas; some were centrally planned, dominated not by an axis but by a single central point or area. Like the basilica, this is a building type with a long history, going back to classical antiquity and subsequently adopted by Christians for structures with a central focal point. The most famous centrally-planned structure of the Middle Ages, the palace chapel at Aachen, is Carolingian, part of a large complex established by Charlemagne around 790. The chapel has two stories, with a ring-like corridor surrounding the open central space on each level; Charlemagne's throne was in the second-floor gallery. The form of the Aachen chapel is likely derived from the octagonal church of San Vitale in the Adriatic city of Ravenna, built in the sixth century by the Byzantine emperor Justinian as a foothold in his attempt to reconquer Italy. Ravenna was not simply an abstract model for Charlemagne's builders; Einhard's biography of the emperor reports that the columns inside the chapel were taken from Ravenna and Rome, the imperial capital of the pagan Caesars and, more important for Charlemagne, of Constantine and his Christian successors. The evocation and spoliation of these

cities at Aachen invokes the two great imperial models, Rome and Byzantium, and this invocation was fulfilled in 800 when Charlemagne himself was crowned Roman emperor. Both the complex intellectual program of the palace chapel and its dependence on earlier models are characteristic of Carolingian building.

Another characteristic Carolingian structure is found at Lorsch, a monastery with close ties to the royal court. Often called a gatehouse, its function is debated. It is a small freestanding building, with three arches at ground level and a room on the first floor. In its combination of classical elements (such as the Corinthian capitals of the engaged columns and the triple opening on the ground floor, which evokes the Arch of Constantine in Rome) and more typically medieval elements (such as the brightly colored stonework and the stone reminders of timber construction in the second story) this building encapsulates several aspects of Carolingian architecture, otherwise a difficult subject to define.

Ivories

Elephant ivory was a luxury material in Carolingian Germany, available via trade, gifts, or reuse of older pieces. Plaques frequently served as bookcover decoration, reflecting the Carolingian revival of manuscript production. Several caskets and combs also survive.

Among early products are the Dagulf Psalter bookcovers (Paris, Louvre), made for Charlemagne at Aachen to give to Pope Hadrian I (d. 795). They depict King David, to whom Charlemagne was often compared, and Saint Jerome as, respectively, composer and reviser of the Psalms. The rounded figures with busily fluttering draperies are translations of late Antique forms. Similar figures occur on the cover of a Gospel Book in Oxford (Bodleian Library): Christ is shown treading the Beasts surrounded by Infancy and Miracle scenes. The surrounding of a triumphal motif with narrative generally has antique sources, and several scenes copy extant fifth-century ivories. The Lorsch Gospel covers, largest of the group, came late in Charlemagne's reign. The front (Vatican), relatively more linear, is centered on Christ treading the beasts and the back, with more varied drapery, on Mary holding the infant Christ. The overall five-part format and the flying angels holding medallions recall early Byzantine diptychs.

Charlemagne's son Drogo became bishop of Metz (823–855), where he patronized ivory carving. The Drogo Sacramentary covers (Paris, Bibliothèque Nationale) show a series of episcopal rites. Their rustic style, with large heads, also appears in the surrounding Infancy scenes on a bookcover in Frankfurt (Liebieghaus), whose format resembles the earlier Oxford cover. The center panel here is a Temptation of Christ in a more classical style, with more natural proportions and clinging drapery.

Under Drogo's successor at Metz, Bishop Adventius (858–875), two groups of ivories were produced. The earlier, with relatively flat and linear figures, includes the Ascension on the Coburg Gospels (early 860s) and a matching Crucifixion plaque in the Victoria and Albert Museum (London). The Crucifixion scene is expanded with personifications: the Church receives Christ's blood in a chalice as Synagogue turns away, while below are seated the Sea and Earth, an imperial motif of universal triumph. The Ascension cover has border panels of birds in vine scrolls with jagged leaves typical of Metz ornament. A Metz ivory in Florence (Bargello Museum) shows a layman, probably the centurion Cornelius, welcoming and being baptized by Saint Peter. In 863, Stventius recovered the wealthy nearby monastery of St. Peter at Gorze from lay control, an event probably underlying this ivory.

Later in Adventius's episcopate, further carvings, in a more solid and rounder style, can be grouped around the ivory-inlaid throne (St. Peter's, Vatican) made circa 870–875 for Charles the Bald. The pair of panels on the Metz Gospelbooks (Paris Bibliothèque Nationale, lat. 9383 and 9390) includes a Crucifixion showing new personifications imported from Charles's more westerly workshop. Its companion shows scenes of Christ's Resurrection in an order following the liturgical calendar. A similar liturgical ordering occurs in the Mirade scenes on a Metz ivory in Berlin (Staatliche Museen).

The monastery of St. Gall produced ivories under Abbot Salomon, who was also bishop of Constance (890–920). The covers of Gospel-Lectinary Ms. 53 at St. Gall, ascribed to the monk Tuotilo, combine scenes of Christ in Majesty and the Assumption of the Virgin with Saint Gall's encounter with a bear. The figural scenes, in a linear style, are juxtaposed with fields of leaf-scroll ornament related to north Italian art. The emphasis on ornament brings the end of Carolingian art back to preCarolingian tendencies.

Mural Painting

Very little Carolingian mural, or wall, painting has survived, but the scant remains, the archaeological evidence, and written records all indicate that it was a common pictorial form although, because its raw materials were not of great value, not an especially prestigious one. Wall painting was found in many Carolingian buildings, both secular and religious, but it is difficult to distinguish the Carolingian uses of this medium from those of their predecessors or successors. Most Carolingian churches were basilicas with relatively small windows, leaving large areas of wall space in both the nave and the apse

available for painted decoration. Following the example of the prestigious early Christian Roman basilicas such as Old St. Peter's or St. Paul outside the Walls, these areas were often decorated with scenes from the Life of Christ or important saints. Surviving examples from the ninth century include the Alpine churches of Müstair (Switzerland), Malles, and Naturno (both Italy); the church of St. Maximin in Trier (now Trier, Landesmuseum); and the gateway to the monastery at Lorsch. Carolingian secular buildings were also decorated with frescoes. The most famous were the paintings in the church and royal hall of the Carolingian royal palace at Ingelheim, frescoes now lost but described in an important poem by Ermoldus Nigellus written in the 820s. These depicted events from the Old and New Testaments in the church and, in the royal hall, scenes from pagan and Christian history, including images of the Carolingian monarchs themselves.

Painting

Although Carolingian painting survives in fragmentary wall paintings from Brescia, Müstair, Malles Venosta, Lorsch, Corvey, and Trier, it is preserved primarily in illu

Image rights not available

minated manuscripts. The art historical term *Carolingian* has traditionally referred to those manuscripts associated with the court of Charlemagne, sole ruler of the Franks from 771 until his death in 814; with monastic and humanistic production under his son, Louis the Pious (814–840); and with the court of Charlemagne's grandson, Charles the Bald (840–877). This literature has assumed Charlemagne's deliberate revival of late Antique forms and has defined Carolingian primarily in relation to court production. Despite a presumed, inherent unity, however, historians of the period have repeatedly uncovered a pluralism, an internationalism characteristic of the scholars assembled by Charlemagne. The complex political, cultural, and social strands of the age are mirrored in developments in the art of illumination.

Charlemagne's success seems to lie not in effecting a conscious renaissance but in his ability to identify the need for reform. The reforms initiated during his rule called for new books. The large number of manuscripts that survive from the later eighth to mid-ninth century witness an organized effort to integrate visual components, such as evangelist portraits from the best available models, into books that would serve the practical needs created by the reform of script from numerous local hands into a clear, standardized minuscule; the reform of the gradually corrupted text of the Vulgate Bible; and a standardization of the liturgy.

The traditional corpus of Carolingian manuscripts begins with those service books and Gospels made for Charlemagne and known collectively as the works of the Court School. These include the Godescalc Evangeliary, 781–783 (Paris, Bibliothèque Nationale, n.a. lat. 1203); the Dagulf Psalter, 783–794 (Vienna, National Library, Cod. 1861); the late-eighth-century Vienna Coronation Gospels in the Vienna Treasury; the early-ninth-century Soissons Gospels (Paris, Bibliothèque Nationale, n.a. lat. 1203); and the Bibles made under Alcuin (d. 804), abbot of St. Martin at Tours. The earliest manuscripts from the period before 800, including the Dagulf Psalter and a Gospel book in Paris (Bibliothèque de l'Arsenal, ms. 4), contain no figural representations and rely on insular, geometric decorative forms with which their northern artists were familiar and comfortable. Aniconic tendencies are later implied in a Gospel book made, probably at Fleury around 820 for Theodulf, bishop of Orléans, the author of the *Libri Carolini* and a major force in the iconoclastic debate in the west (Bern, Burgerbibliothek, Cod. 348; Mutherich and Gaehde 1976: pl. 11). The influence of the Byzantine east is apparent in the evangelist portraits of the Vienna Coronation Gospels, in which oversized halos and an illusionism reminiscent of late Antiquity differentiate these miniatures from their contemporaries found in books made for Charlemagne. The nascent works of the Carolingian production reflect the diversity of the period. Other writing centers active during the early Carolingian period have traditionally been excluded from the discussion, but both political and textual ties indicate that books made at Salzburg in the later eighth century also deserve to be considered Carolingian. Salzburg, ruled until 784 by Tassilo, Duke of Bavaria and a cousin of Charlemagne, was later governed by an appointee of the emperor himself. Eighth-century text connections further support Salzburg's ties to the early Court School. For instance, the Canticles in a psalter made for Tassilo before 788 (Montpellier, Bibliothèque de l'Université, ms. 409) are textually related to the Dagulf Psalter, one of the earliest books made for Charlemagne and intended as a gift for Pope Adrian I (d. 795) (*Der Goldene Psalter*, commentary, 42–43). After Charlemagne's death in 814, book production centered in monasteries in those areas overseen by strong archbishops like Ebbo at Reims (816–835) and Drogo at Metz (823–855).

The second generation of Carolingian painting circa 814–840 (Koehler and Mutherich IV–VI) exemplifies a true appreciation for late Antique texts both secular and religious. These books are arguably the most significant of all Carolingian production in that they preserve otherwise unknown luxury books from the fourth and fifth centuries. During the rule of Louis the Pious, copies were made of late Antique treatises such as the fourth-century copy of the *Phenomenon* by the Greek poet Aratos of the third century B.C.E. (Leiden, Bibliotheek der Rijksuniversiteit, Voss. lat. Q 79; Aratea 1989). Scientific concerns are also apparent in astronomic and computistic manuscripts made during the first half of the ninth century (Madrid, Biblioteca Nacional, Cod. 3307, made at Metz, ca. 840; and Vienna, National Library, Cod. 387, made at Salzburg, 809–818). A Carolingian copy of the *Psychomachia*, a poem depicting the battle of virtues and vices by the fourth-century Christian poet Prudentius (Bern, Burgerbibliothek, Cod. 264), spawned numerous copies between the ninth and the twelfth centuries. Similarly, ninth-century copies of comedies by the Roman poet Terence were recycled throughout the Middle Ages for teaching Latin grammar (Rome, Biblioteca Vaticana, Vat. lat. 3868, ca. 820; and Paris, Bibliothèque Nationale lat. 7899, after 850). The antique figural poem, or *carmina figurata*, a device created in the early fourth century by Constantine the Great's court poet, in which the text is arranged on the page to form an image, was used by artists in the Madrid *Aratea* manuscript. A similarly intimate text-image connection was created by the Fulda scribes and artists who designed the acrostic poems in a copy of Hrabanus Maurus's *De laudibus sanctae crucis*, made for the Emperor Louis the Pious (Rome, Biblioteca Vaticana, Reg. lat. 124, ca. 840–842; Mutherich and Gaehde 1976: pl. 12, Irblich 1994: no. 48).

The final phase of Carolingian painting spans the rule of Charlemagne's grandson Charles the Bald (840–877), whose court school produced densely ornamented Gospel books and illuminated Bibles (Koehler and Mutherich V). The practical functions of these manuscripts are overshadowed by the presence of the book as an object indicative of wealth and power. In one of the most elaborate images in the Codex Aureus of St. Emmeram dated 870 (Munich, Bavarian State Library, Clm. 14000), the emperor is portrayed in a liturgical context among the heavenly hosts and twenty-four Elders of the Apocalypse as they adore the Lamb in an eschatological composition that fills two pages (Mutherich and Gaehde 1976: pls. 37–38). In the frontispiece to the Book of Psalms in a Bible presented to Charles the Bald by Count Vivian, lay abbot of Tours (845–846, Paris, Bibliothèque Nationale lat. 1), the

emperor is associated with the biblical King David. The image revolves around a crowned figure of Charles wrapped only in a mantle and boots as he plays a harp and dances as did David before the Ark (1 Chron. 13:8). Four musicians and his honor guard surround the emperor. This page also combines theological and humanistic concerns by combining female allegories of the Christian cardinal virtues with inscribed portraits of the king's chief musicians. With the Court School of Charles the Bald, Carolingian painting reached a baroque phase; at Charles's death in 877, the empire was divided and lost centralized power. It soon became too weak to withstand invasions from the north.

Style in the Carolingian period is a function of several components: individual artists interpreting the style of models mainly imported from central Italy, indigenous artistic traditions creating cohesive regional systems of decoration and figure types, and external influences from the British Isles and Byzantium. Insular influences are a consistent component of Carolingian painting. The earliest manuscripts compose the page around geometric decorative forms and panel-style frames borrowed from the insular artistic tradition. Northern artists working for Charlemagne, for instance, in the Evangelist portraits of the Soissons Gospels, deconstruct the spatial compositions of their southern models and reconstruct spatial relationships in the manner of insular artists. As late as 870, the opacity of the dense patterns characteristic of insular carpet pages is reappropriated in the decoration of the Codex Aureus of Charles the Bald (Mütherich and Gaehde 1976: pl. 36).

The evangelist portraits of the Coronation Gospels in Vienna (Mütherich and Gaehde 1976: pls. 8, 10) exhibit a distinctive flaking of white and blue pigments like their Byzantine counterparts, suggesting that the pigments were prepared in the west according to an eastern recipe. However, these portraits also display a reduced three-dimensionality, spatially ambiguous furnishings, and an atmospheric illusionism less subtly rendered than in eastern examples. The Vienna evangelist portraits also contain contradictions between frame and field that are anticlassicizing and betray a northern artist's hand. (For instance, John's footstool overlaps the portrait's frame, and the remnants of Mark's footrest reveal its oblique angle and unnatural slant.) The three-dimensional conception of the figures and a concern for comprehensible space in manuscripts made Charlemagne argue for the presence of high quality, late Antique models from central Italy. The rendering of the illusionism and the reordering of settings supports an interpretation by northern artists. Carolingian painting style is characterized by diverse regional interpretations of available models. Hasty renderings from late Antique books are echoed in the sketchy, diminutive figures from the scriptorium of the monastery at Hautvilliers near Reims (Koebler and Mütherich VI) in manuscripts like the Utrecht Psalter, made for Archbishop Ebbo (Utrecht, Bibliotheek der Rijksuniversiteit, Cat. Cod. MS Bibl. Rhenotraiectinae, I, Nr. 32, 816–835). The active, often calligraphic Reimois style that also marks the illustrations of the Paris Terence tenaciously survives in later medieval copies. A ninth-century Reimois copy of the *Psychomachia* now in Bern (Burgerbibliothek Cod. 264) retains heavily contoured figures that rest comfortably in credible space and attest to fine late Antique origins. Bible production at Tours continued past the mid-ninth century and produced large-format illustrated Bibles whose figure style is a northern artist's reinterpretation of late Antique images. The regional style of each of these manuscripts reflects a sense of the place of their production, which often overwhelms individual artists' approach to the model.

The manuscripts made at Metz during the rule of Charles the Bald display their own distinct style, which follows the design of contemporary ivory carving from the same area. The acanthus openwork of the decorated initials in the Drogo Sacramentary (Paris, Bibliothèque Nationale lat. 9428; *Drogo Sakramentar* 1974) creates elegant compositions silhouetted against reserved parchment. The tendrils that entwine the shafts of each decorated letter also serve as settings for small scenes depicting biblical events that refer literally or allegorically to the liturgical readings of the Sacramentary. The leafy acanthus and faux metallic, marble, and cabochon surfaces organized within paneled frames in a Sacramentary fragment made in Metz around 870 relate to the heavily decorated pages produced at the court School of Charles the Bald (Paris, Bibliothèque Nationale lat. 1141; Mütherich and Gaehde 1976: pls. 32–34).

The elegant geometric compositions found in the so-called Second Bible of Charles the Bald (871–873; Paris, Bibliothèque Nationale lat. 2) contrast with Charles's earlier manuscript decoration. Here reserved parchment serves as a background for beaked beast heads, panel-style frames filled with interlace, and fields of dotting, which are borrowed from the ornamental pages of seventh-century Hiberno-Saxon decoration to create a new Franco-Saxon style.

Charlemagne, like most great leaders, was able to surround himself with key people, led by Alcuin of York, who identified certain needs for reform of script, Bible text, and liturgy. He set in motion the establishment of book production, supplying his northern artists with a network of the best available models from central Italy. This Carolingian system of churchmen and artists continued to produce for three generations. To recognize the divergent styles in these manuscripts is to increase the appreciation of this artistic period. Areas that have traditionally been labeled peripheral to the Carolingian corpus should be brought into the fold of this diverse production. To consider writing centers like that at Salzburg under Tassilo as Carolingian is not only historically correct but also advantageous to our understanding of the period. Stylistic diversity and the variety of manuscript types and texts selected to be copied create the richness of the phenomenon of Carolingian painting.

Sculpture and Metalwork

Metalwork, coins, engrave gems, seal dies, and life-size stone and stucco figures were made from Lotharingia to Bavaria. Large sculpture survives in fragments such as the Lorsch head from circa 800; it may derive from the cult of relics, from the Marian cult, or from ruler images. Texts document many

lost works but describe their materials, which were of monetary and symbolic value, not their imagery. Most metalwork objects had wooden cores sheathed in precious metals.

The classification of surviving works is uncertain. Brooches were enameled with saints throughout the eastern empire. Scandinavian finds may be Carolingian or local imitations. Style may reflect outside influences, patrons' wishes, or regional habits. Sculpture is nonetheless provenanced by stylistic comparison to manuscripts and ivories, attributed to Aachen and Metz. Gem mounts

Aachen, palace chapel, bronze door, detail. Photograph: Joan A. Holladay

changing from bands to filigree arcades also indicate relative chronology. Monumental cast bronze doors and railings remain in their original setting at the palace chapel in Aachen, near an archaeologically attested workshop. Use of ornament links them to Charlemagne's Court School of the early 790s, which also produced brooches.

Clerics and later rulers are also identified as patrons by inscriptions on coins and seals; on the lost reliquary of Einhard, which took the form of a small triumphal arch with Christian imagery; and on a rock crystal disk engraved with scenes from the Old Testament story of Susanna for Lothar II (855–869). Another inscription links Duke Tassilo of Bavaria with the liturgical cup (768/769–788) that defines the "Tassilo chalice style," also called "Anglo-Carolingian" in reference to its strong Insular (Great Britain) flavor. Eighty-five known metalwork objects use this style (ca. 750–850). A book cover on the Lindau Gospels shows the group's iconographic complexity, with the animals of Creation, Adoration of the Cross, and universal renewal in the Crucifixion.

Liturgical functions are common for Carolingian sculpture. Many processional crosses probably resembled the so-called Ardennes Cross (ca. 825–875)—one face a Tree of Life, the other a gemmed triumphal cross with a transparent center stone covering a relic. Several crystal Crucifixions shared this function; others were set on altars. Relics were also kept in purse or house reliquaries. Among the most elaborate is a late-eighth-century example from Enger; one side is decorated with overlapping crosses and enameled animals, the others with reliefs of Christ, angels, Mary, and saints, all guarded by lions above: a typical mix of Frankish and Mediterranean motifs recalling Creation and Christian salvation. Equally elaborate altars and book covers abounded, but the portable Adelhausen altar (ca. 800–850) and the tenth-century metalwork on the book cover (now Paris, Bibliothèque Nationale, lat. 9383) are among the few surviving German examples. The Aachen bronzes were both liturgical and political. Likewise political were figures that substituted for rulers (as had Roman busts), probably including the miniature bronze equestrian known as the Metz Rider (ca. 800 or ca. 870).

Portrait coins and seals imitating Roman models claim authority for Carolingian rulers and demonstrate interest in Roman and early Christian art. Other objects physically incorporate earlier works, as does the ewer reliquary at St.-Maurice d'Agaune in Switzerland. More frequent are innovative compositions inspired by Roman forms. Most Carolingian sculpture expresses contemporary ideas, as On a Crystal Baptism (855–869) that uses liturgical elements to examine the roles of bishops and catechumens.

Carolingians

Ruling much of Europe from the eighth to the tenth centuries, the Carolingians, so-called for their greatest member, Charlemagne (742–814), and for their tendency to name children in each generation Charles (Carolus), laid the foundation for later medieval civilization. The Carolingian tradition of coronation and their governmental ideas would serve as the model for the medieval German empire, and the breakup of the Carolingian empire would lead to the emergence of medieval France and Germany. Their reign witnessed, too, a great cultural flowering traditionally called the Carolingian renaissance.

The dynasty's origins can be traced to a marriage alliance between the Austrasian nobles Arnulf, bishop of Metz (d. ca. 645), and Pippin I (also Pepin the Elder) of Landen (d. 640). The fortunes of the family rested upon its control of the office of mayor of the palace (*major domus*), a reward to Pippin for his help to the Merovingian king Chlotar II (584–629). Pippin became one of the most powerful figures in the kingdom and passed this legacy on to his son Grimoald (d. 656). The family suffered a setback as a result of Grimoald's political ambitions and his effort to replace the reigning Merovingian with his own son. This premature usurpation led to the murder of Grimoald.

The fortunes of the family were revived by Pippin II of Herstal (687–714) and Charles Martel (714–741). Pippin recovered the office of mayor and united the Frankish kingdom at the battle of Tertry in 687. Civil strife broke out after Pippin's death between his widow, Plectrude, and his illegitimate son, Charles. After initial setbacks, it was Charles who prevailed and assumed the office of mayor.

Charles Martel's term as mayor witnessed the increasing prestige and power of the family. A fierce warrior, Charles successfully imposed his authority on the kingdom during the 720s and won victories against foreign foes. His most important battle was in 732 near Poitiers, where he defeated a Muslim army from Spain. Although subsequent battles were necessary to expel the raiders, the battle of Poitiers established Martel's reputation as a great warrior. Charles further strengthened the alliance between his family and the Frankish church. Although he would alienate much church land to compensate the nobility and ensure their loyalty—an effort that would seriously weaken the church—Charles established strong ties with the royal abbey of St. Denis, promoted the activities of Anglo-Saxon missionaries, and received a proposal from the pope for an alliance against the Lombards in Italy. So great was Charles's power in the kingdom by the end of his life that he ruled without a Merovingian king and, in Frankish royal tradition, divided the succession between his two sons, Pippin (also Pépin) III the Short (d. 768) and Carloman (d. 754).

The brothers ruled effectively—appointing a new Merovingian king and promoting needed religious and political reform—until Carloman withdrew to a monastery in 747. This action left Pippin as sole mayor and led him to petition the pope, Zacharias (741–752), to order by apostolic authority that Pippin be made king. Zacharias responded as Pippin had hoped and in November 751, Pippin was elected king by the Frankish nobles and crowned and anointed by the bishops of the realm. Coronation and unction were repeated in 754 by Pope Stephen II and led to the establishment of a firm alliance between Rome and the kingdom of the Franks.

Pippin's reign as king (751–768) was a critical time in the history of the dynasty because it was Pippin who established the foundation of Carolingian royal policy. He continued the program of reform of the church and strengthened ties with Rome by two invasions to protect the pope from his Lombard enemies. He undertook the vigorous expansion of the realm and promoted the idea of sacral kingship. Despite his many achievements, Pippin's reign is often overshadowed by that of his illustrious son, Charlemagne.

When Pippin died in 768 he left the kingdom to his sons Carloman and Charlemagne. Tensions existed between the two brothers and civil war nearly broke out but Carloman's death in 771 opened the way for the sole rule of his brother as king until 800 and then as emperor until 814. Charlemagne's success was, in part, the result of his abilities as a warrior; his reign witnessed the dramatic expansion of the territory of the kingdom. Charles undertook a campaign lasting from 772 to 804 to conquer and convert the Saxons. This process saw nearly annual campaigns into Saxony, the mass execution of Saxons, destruction of pagan shrines, and the deportation of large numbers of Saxons. Renewing his father's efforts with even greater enthusiasm, Charles invaded Italy, defeated the Lombards, and became king of the Lombards. He overcame the duke of Bavaria, Tassilo, in 787 and smashed the Avars in the early 790s. His first venture into Muslim Spain had disastrous results but, undaunted, he returned to create the Spanish March, his foray into Spanish territory.

A successful empire builder, Charlemagne was also an innovator in government. The basic unit of government was the county, which was ruled in the king's name by local nobles whose responsibilities included maintaining peace and order, implementing royal law, and dispensing justice. New local judicial officers (*scabini*) were established to adjudicate local disputes. The local authorities were overseen by special representatives of the king, the *missi dominici*, who were usually dispensed in pairs, one noble and one ecclesiastic, to ensure the proper administration of justice, publish new laws, and hear oaths of loyalty. Charles also issued a new type of law, the capitulary, and generally increased the use of writing in government. The capitularies addressed a wide range of issues including religious reform, education, and administration of royal palaces. The most famous of these, the *Admonitio Generalis* of 789, laid the foundation for the great cultural revival known as the Carolingian renaissance. Charles himself invited scholars from throughout Europe, including Alcuin, Theodulf of Orléans, and Paul the Deacon, to participate in his court.

Charlemagne was also responsible for reviving the empire in the west. This occurred when Charles went to Rome to investigate an attack on Pope Leo III (795–816). On December 25, 800, Charles attended Christmas mass and while rising from prayer Leo crowned him emperor and those in the church hailed him as emperor and augustus. Although doubts about Charlemagne's interest in the imperial title were raised by his biographer, Einhard, who declared that Charles would not have entered the church that day had he known what was to happen, many of the court scholars had already asserted Charlemagne's imperial stature in the 790s. And Charles would employ the title in his last years and would rededicate himself to his program of renewal with a new "imperial" capitulary in 802.

Although Charles first saw the title as a special honor for himself alone, he passed on the imperial dignity intact to his sole surviving son, Louis the Pious (778–840). Louis's reign was characterized by continued cultural and religious reform but also by civil war. Louis emphasized his imperial authority in ways that his father did not and sought to ensure the empire's indissolubility by a sophisticated plan of succession in 817. The *Ordinatio Imperii* made provision for all of Louis's sons but reserved imperial and sovereign authority for his eldest son, Lothar (795–855), who would be associated with his father as emperor and then made his successor. Dissatisfaction with the plan emerged almost immediately and was the cause of the revolt in 817 of Louis's nephew, Bernard, who died in the forceful suppression of the uprising. Despite this, Louis's reign during the 810s and 820s saw important achievements, including monastic reform, which was a precursor of the Cluniac reform (renewal of monasteries using the Benedictive Rule) and governmental reform that provided legal and constitutional grounds for Carolingian power in Italy.

Despite these positive developments, Louis's reign became troubled in the late 820s and 830s. The birth of a fourth son, Charles the Bald (823–877), and the reorganization of his succession plan provided the other sons, and many nobles and bishops, reason to revolt against Louis's authority. The 830s witnessed much turmoil in the empire and even the deposition of Louis by Lothar. But Louis would regain his throne and rule until his death in 840 when he was succeeded by Lothar, Charles, and Louis the German (804–876).

Civil war intensified in the years after Louis's death as his surviving sons struggled for preeminence in the empire. After several bloody battles, the brothers agreed to the Treaty of Verdun, 843, which divided the realm between them, with Charles getting western Francia, Louis eastern Francia, and Lothar central Francia and Italy as well as the imperial title. Lothar's territory was the least defensible, a problem in the face of civil tensions but also in the face of Viking, Muslim, and Magyar invasions. His acceptance of the tradition of division of inheritance further undermined the territorial integrity of the central kingdom. Indeed, the treaty of Meerssen, 870, saw the division of the northern parts of Lothar's territory between Charles and Louis. Charles survived the wars of the 830s and 840s to establish a strong kingship and to resurrect the dynamic court culture of his grandfather. He also assumed the imperial crown and captured Aachen before his death in 877. It was the kings of West Francia that would preserve the dynasty the longest, lasting until 987, when death and betrayal brought an end to the line.

In East Francia, the dynasty would be replaced much sooner but it would leave an important legacy on its successors and on the medieval empire. After the wars of the 840s, Louis the German continued the Carolingian line in East Francia but was faced with many challenges. He ruled over a diverse

kingdom comprising Bavaria, Franconia, Saxony, Swabia, and Thuringia. He was plagued by attacks from Slavs and Vikings and faced the rising power of the nobility, especially the Liudolfings, and suffered revolts from within his family, including two by his son Carloman (d. 880). His dependence on the church, especially the monasteries of his realm, was, in part, the result of the special problems of his kingdom. He divided the realm between his three sons, who succeeded him on his death on August 28, 876, but it would be Louis's son, Charles the Fat (r. 876–887, d. 888) who would receive the imperial title and, for a short time, reunite the empire.

Despite a strong start to his reign and early success against invaders, Charles' ill health and the growing success of Viking raiders led to his deposition in 887. He was succeeded in East Francia by the illegitimate son of his brother, Arnulf of Carinthia (887–899), who ruled with much early success and was crowned emperor in Rome. But Arnulf too was plagued by ill health in his later years and was succeeded after his death by his six-year-old son, Louis the Child (899–911). Louis was the last of the Carolingians to rule in East Francia. His reign was marked by destructive Magyar invasions and the deaths of powerful nobles who were critical to the defense of the realm. On the death of Louis, the nobles of East Francia elected Conrad I king, thereby laying the foundation for the rise of the medieval German kingdom. Conrad and his successors inherited a realm divided into numerous duchies and threatened by foreign invaders, but they also became heir to Carolingian traditions of government and strong ties with the Church.

Charlemagne (747–814)

Charles the Great (*magnus*, whence the French "Charlemagne"), King of the Franks (768–814) and emperor of the West (800–814) was born in 747 to Pippin (Pépin) III and his wife, Bertha, daughter of the powerful Count Caribert of Laon. Pippin, mayor of the palace of the Franks, named his son after his own father, the redoubtable Charles Martel (d. 742). In 751 when Charles was still a boy, Pippin became king after deposing Childeric III (743–751), the last member of the Merovingian dynasty established by Clovis (481–511). The legitimacy of the new dynasty was bolstered when Pope Stephen II (also III, 752–757) came to Francia to bless Bertrada (Bertha) and in the name of Saint Peter anoint Pippin and his sons Charles and Carloman as "patricians of the Romans." The pope forbade the Franks from choosing anyone as king other than a Carolingian (from the Latin Carolus, Charles). This dynastic change and the relationship binding the political and military power of the Carolingian family to the spiritual power of the papacy were revolutionary events. Pippin III proved to be a resourceful and energetic king whose conquest of Aquitaine, two successful expeditions against the Lombards, and promotion of religious reform demonstrated the potential and direction of the new dynasty.

During his long reign Charles more fully realized and amplified Pippin's initiatives. So spectacular was his achievement that his posthumous reputation assumed legendary proportions, Einhard (ca. 770–840), who grew up at Charles's court, in his valuable *Life of Charles* borrowed language from Suetonius's *Lives of the Caesars* (second-century C.E.) to add rhetorical luster appropriate to his subject. In later centuries crusading and romance legends inspired by Charles's memory enriched medieval vernacular literature. In the twentieth century his memory served to advance the prospects of a united Europe. Since 1949, the citizens of Aachen, Germany, have annually awarded the International Charlemagne Prize (*Karlpries*) to individuals whose activities further "the creation of a United States of Europe." In his own time, Charles grappled with the implications of a new style of kingship, faced the challenges of conquest, revolt, and the future of the dynasty, and attempted to unify and reform a society embracing a welter of different peoples within a community that eventually stretched over one million square kilometers.

The kingdom Charles inherited from his father in 768 was much smaller, essentially modern France, Belgium, the Netherlands, Luxembourg, and western Germany. At first Charles shared the kingdom with his younger brother Carloman. Corulership set the stage for rivalry within the family, especially when Carloman refused to aid in suppressing rebellions in Aquitaine, but Carloman's death in December 771 averted serious dynastic tension. As sole king, Charles turned his attention to solidifying control of political and military resources and to crises outside his realm. A successful king in the early Middle Ages was a successful warlord. Charles, as had Pippin III and Charles Martel before him, succeeded as a leader because he succeeded as a warrior. Charles drew the warrior class, some 250 to 300 counts and their followers, to his cause by sharing with them the spoils of war and political authority. Aristocratic loyalty and support provided the mainstay of Charles's war machine. Charles's detailed orders to his warriors stipulating when and where to mobilize and what equipment and manpower to bring offer an unparalleled insight to his command and control structure. His ability to make war almost continually and most often successfully for more than thirty years on many fronts attests to Charles's success as a military commander.

After Carloman's death Charles's armies began to campaign outside Francia. In 772, rejecting his mother's efforts to ally with the Lombard kingdom (Charles had even married a soon to be repudiated Lombard princess), Charles responded to calls of Pope Hadrian I (772–795) for help against the "pestiferous" Lombards. After a siege of nine months the Lombard capital of Pavia fell in 774 and Desiderius, the last Lombard king of the two-century-old kingdom, was captured and confined to the monastery of Corbie in northern Francia. Charles became the king of the Lombards. During the siege of Pavia, he made the first ever visit by a Frankish king to Rome. Charles's political relationship to the pope was ambiguous and Hadrian soon chafed under the growing presence and influence of Frankish counts and ecclesiastics in Italy. Although linked to Desiderius by family ties, Duke Tassilo III of Bavaria did not intervene in the Lombard war. Tassilo earlier had agreed to become a vassal of Pippin. When Charles required Tassilo to renew his pledges in 781, the semi-independent duke balked. After military threats and a decade of diplomatic intrigue, Tassilo was confined to a monastery and in 794 "abdicated." The annexation of Lombardy and Bavaria is all the more impressive when viewed together with the continuous conflict in Saxony. One of the last centers of vibrant Germanic paganism, the Saxon homeland east of the Rhine was a hotbed of political resistance to Carolingian aggression fueled by devotion to Saxon culture and skillful exploitation of Frankish preoccupation in other regions. Earlier in the eighth century Charles Martel fought against the Saxons, a struggle his grandson continued in 772. Saxony was finally subdued in 804, but not until after several uprisings led by the spirited Widukind (also Wittekind), the massacre of forty-five hundred Saxon prisoners, and the forced deportation of Saxons to Francia. The conquest and eventual Christianization of Saxony extended Carolingian power into a region never controlled by the Roman Empire.

In 777 the emir of Barcelona, no doubt encouraged by the success of Frankish arms, persuaded Charles to invade Spain, which had been under Muslim control since 711. This bold venture ended in 778 in a disaster immortalized in the *Song of Roland*, the attack on Charles's rear guard by Basques in the Pyrenees. Operations in the 790s in the Danube basin where the Avars had been settled from the sixth century, met greater success. As the partisans of the Lombards and of Tassilo, these "new Huns" defined themselves as enemies of the Carolingians. In 791 Charles initiated an eastern campaign that Einhard described as second only to the Saxon wars in its intensity and significance. By 796 Charles had crushed Avar power. Significantly, Einhard seemed most impressed by the fifteen wagons, each drawn by four oxen, that were required to haul Avar treasure back to Francia. Three years later in 799 the Bretons in Brittany, who had long been foes of the Franks, surrendered to Charles's armies.

Charles's ceaseless campaigns enriched and transformed his kingdom. As the lands under his control expanded to cover most of western Europe, the Carolingians established contact with peoples on their periphery including Scandinavians, Slavs, Byzantines, Muslims, and AngloSaxons. The patriarch of Jerusalem as well as Harun arRashid, the caliph of Baghdad, and the imperial court at Constantinople exchanged embassies and correspondence with Charles's court. But Charles's primary focus lay in controlling the heterogeneous lands and peoples of his vast domain measuring some six hundred miles along each axis from Scandinavia to the Mediterranean and from the Atlantic to the Danube. Charles's administrative and political structure was multilayered. Although master of all, Charles delegated power and authority to trusted followers. His sons Louis and Pippin were appointed subkings of Aquitaine and Italy, respectively, while his brother-in-law Gerold was put in charge of Bavaria. Charles established marches in dangerous border regions whose governors controlled the local counts. Elsewhere counts exercised military, judicial, and fiscal authority. Charles tried to hold this centrifugal system of shared authority together by several means. Royal capitularies, documents organized by topics (*capitula*), established and broadcast policy. The subjects of these—including farm management, minting, heresy, religious reform, justice, famine, warfare, education, feuds, homicide, rape, widows, and orphans—suggests the range of his concept of governance. Several capitularies addressed specifically to the *missi*, the king's personal representatives dispatched throughout the kingdom to carry out his wishes and to investigate local problems, point to another level of administrative and political control.

Missi (from the Latin *missus*, "one who is sent out") had been used by Merovingian kings, but Charles extended and regularized their use as agents of government, who linked a highly fragmented political system to the king's household.

When he was not campaigning Charles settled in favorite palaces at Frankfurt, Herstal, Ingelheim, Mainz, Worms, and Thionville, in the heartlands of the Frankish kingdom. After 794 he resided semipermanently at the new palace complex at Aachen. The king's household, with its feasts, rituals, comings and goings, hunting expeditions, and, in Aachen's warm springs, group bathing, formed a dynamic community. Carolingian poets memorialized the conviviality of the royal entourage. Charles's household consisted of the seneschal who maintained provisions, butlers, cupbearers, chamberlains, who took care of the living quarters, the constable, who attended the stable, a host of domestics, and family members. By the end of his long life, Charles presided over a large, three-generation family. Einhard mentions five wives as well as four concubines who were a part of Charles's household and bore at least sixteen children who survived infancy. His wives, especially Hildegard, Fastrada, and Liutgard played important political and public roles, as did his sons and daughters, some of whom became bishops, abbots, and abbesses. Ironically, the religious reform that Charles encouraged would shortly after his death lead to condemnation of his Germanic warlord lifestyle. In a widely reported dream, the monk Wetti related in 824 that he had observed in the afterlife a wild beast gnawing at Charles's genitals as punishment for his sexual sins.

The system of governance and administration that Charles gradually built up depended on loyalty and commitment to his policies. In practice the system was often compromised by the personal and family interests of officials who used their positions to enrich themselves. Charges of corruption and abuse

of power by missive counts, judges, and even *missi* who succumbed to bribery occur commonly in the sources, especially during the last decade of Charles's reign. Important family connections made it difficult to bring corrupt officials to justice. In addition to periodic rebellions of conquered peoples, Charles also faced serious challenges to his regime. In 785–786, a rebellion led by Count Hadrad of Thuringia had to be brutally suppressed. A few years later in 792 one of Charles's sons was discovered at the center of a plot against the king's life involving Frankish aristocrats. After dealing swiftly with the rebels, Charles attempted to enforce loyalty by legal and religious means. In 786, 789, 792, and again in 802 after he became emperor, he required an ever widening group, which eventually embraced all freemen, lay and clerical, over the age of twelve, to swear personal loyalty to him. The 802 oath was especially significant, since it bound oath takers not only to obey the emperor and protect his life, but also to live Christian lives. The nexus between politics and religion had long been a feature of Frankish life and culture. Charles Martel and Pippin III enjoyed close relations with clergy and identified with religious reform. The prologue to the mid-eighth-century revision of the Salic Law unabashedly depicted the Franks as God's new Chosen People. Within this tradition Charles enacted religious reforms and promoted Christianity as vigorously as he waged war and managed his kingdom. He drew talented churchmen to his court as advisers, many of whom he was able to place strategically in bishoprics and monasteries throughout his realm. These churchmen often performed important political duties as well. Court scholars honored Charles's patronage of their work by calling him David after the biblical king. In religious matters, however, Charles modeled himself on Johiah, the Hebrew king who undertook a root and branch reform of Israel based on biblical precepts. His great reform capitulary, the *Admonitio Generalis* of 789, outlines the king's blueprint for a biblically based society. With the biblical kings of old, Charles confidently determined religious policy and used his court to define religious orthodoxy in the West, especially opposing Spanish views on the nature of Christ and Byzantine views of images in worship.

The centrality of the Bible in Carolingian political culture sparked reform in education and stimulated literary culture. During Charles's reign political authority in a massive, sustained, and visible way promoted intellectual culture as essential to the well-being of society. Charles's patronage attracted the leading scholars of Europe to his court, often non-Franks such as the Anglo-Saxon Alcuin, the Visigoth Theodulf, the Italian Peter of Pisa, and the Irishman Dungal. Alcuin, who enjoyed a close personal relationship with Charles, played an especially significant role in establishing a new pedagogy and in training Frankish students to serve as "soldiers of Christ" in the parishes, cathedrals, and monasteries of Carolingian Europe. Charles interacted comfortably with his court scholars, admired Augustine's *City of God*, spoke Latin fluently, and was particularly interested in astronomy and time reckoning. In their pursuit of biblical wisdom as a guide for the reform of their society, Carolingian scholars produced a more legible form of Latin script, Carolingian minuscule. In their efforts to improve learning in Latin and the liberal arts as a stepping-stone to more profound comprehension of sacred wisdom, they copied Roman texts that might otherwise have perished. Carolingian masters and students composed the first audience to systematically read and interpret the works of the Christian church fathers. In their numerous commentaries, technical schoolbooks, theological, philosophical, and political treatises, histories, poetry, and letters, they attempted to integrate secular learning and sacred wisdom in the services of Carolingian society. The emergence of controversy and debate on fundamental theological, philosophical, political, and legal issues testifies to the sophistication and originality of the new culture. Charles's patronage and the wealth flowing into the hands of aristocrats and ecclesiastics also stimulated artistic production in the form of metalwork, elaborate book covers, jewelry, crystal, ivory carving, painting, and manuscript illumination. Some six hundred new buildings went up in the Carolingian realms, including cathedrals, monasteries, and palace complexes at Aachen and Paderborn.

On December 25, 800, Pope Leo III (795–816) crowned Charles emperor in Rome. Charles's continentwide conquests and strong leadership certainly justified the title, but contemporary sources are unclear about the meaning of the coronation and modern scholars continue to debate its significance. Not even the participants seemed fully aware of the implication of the revival of the imperial title in the West. Certainly the coronation was not a surprise, as Einhard reported, since Charles's circle in the late 790s had already begun to describe him in imperial terms. Charles had come to Rome to rescue the city from his political enemies. The pope no doubt saw conferral of the imperial title as a means to draw Charles even closer to the see of St. Peter and to forge new links with a Western emperor to replace the fractured links with the emperor in Constantinople. "David" was to become Constantine. Again, Rome was disappointed in the new arrangement since Charles dominated the Roman church as he had the church to the north of the Alps. The great programmatic Capitulary of 802 defining an imperial Christian political culture for Europe was crafted in Aachen, not Rome. What the imperial office meant to the relationship between pope and emperor, religion and politics, would be debated for centuries to come. For Charles the emperorship was a personal honor. When in 806 he outlined the future division of the empire among his legitimate sons, Charles, Pippin, and Louis, the question of the imperial title was ignored. In 813, with two of his three heirs dead, Charles bestowed the title on Louis without benefit of papal consultation or approval.

The division of 806 and Louis's coronation in 813 were the actions of a man contemplating his last years. Charles died on January 28, 814 at Aachen and was buried there. His long reign strengthened the power of his family in Europe, entrenched warrior-aristocrats as partners with kings in governing, promoted a distinctly European Christian religion and culture, defined a new sacral kingship, and revived the ambiguous ideology of empire. More than anything, Charles consolidated the fundamental elements of an emerging European identity that late generations would refine and burnish.

Charlemagne Epics, Dutch

Throughout the Middle Ages, Charlemagne epics were popular in the Low Countries. Some of them are among the oldest known literature written in Middle Dutch: *Van den bere Wisselau*, the *Roelantslied*, and *Renout van Montalbaen* probably date to the late twelfth century. An example of a more recent text is *Hughe van Bordeus*, which originated presumably in the fourteenth century. Charlemagne epics were copied through the end of the Middle Ages. Unfortunately, all of these epics save one (*Karel ende Elegast*) have been preserved only fragmentarily. Nevertheless, each of the three cycles that the medieval French poet Bertrand de Bar-sur-Aube distinguished with regard to the French *chansons de geste* (song of deeds) is represented. The cycle of the king is represented by, for example, *Aspremont*, *Beerte metten brede voeten*, *Karel ende Elegast*, and the *Roelantslied*; *Van den bere Wisselau*, a text that seems to stem from a Germanic tradition, can also be assigned to this cycle. *Gheraert van Viane* and *Willem van Oringen*, among others, belong to the cycle of Guillaume d'Orange (*geste de Garin de Monglane*). The cycle of the rebellious vassals is represented by *Madelgijis*, *Ogier van Denemarken*, and *Renout van Montalbaen*. In addition, there are fragments of texts not belonging to any of these three major cycles: *Hughe van Bordeus* and the *Roman der Lorreinen*, for example. Finally, fragments exist which have not yet been identified.

All of the Dutch Charlemagne epics are written in rhyming couplets. It has been argued that texts such as the Limburg *Aiol*, *Renout van Montalbaen*, and the *Roelantslied*, which show the oldest stage in the development of versification techniques, were originally written in long internally rhyming verses. Most Charlemagne epics are thought to have been composed in Flanders. The majority of the manuscripts in which they have come down to us were probably also executed in this region. In other regions too, however, Charlemagne epics were composed or copied. The *Roman der Lorreinen* and *Van den bere Wisselau* are thought to be Brabantine; besides a Flemish *Aiol* there is a Limburg one; and we know that a poet from Holland composed a *Willem van Oringen*, which might be identified with the *Willem van Oringen* of which some hundreds of verses have been preserved.

The source of most Middle Dutch Charlemagne epics has been a French *chanson de geste*, but this in no way means that the Dutch texts are slavish imitations of their French parallels. Some of them can be labeled as (free) translations. The *Roelantslied*, for example, is a translation of the *Chanson de Roland*. The Limburg *Aiol*, too, is a translation. The Flemish *Aiol* and a number of other texts, on the other hand, must instead be characterized as free adaptations or retellings. Sometimes, the differences between the Middle Dutch text and its Old French counterpart are such as to evoke the idea that, while composing his text, the Dutch poet had no manuscript containing the French text within reach, but based it on his recollection of one or more performances of a *chanson de geste* he had attended. The Middle Dutch *Ogier* and *Renout van Montalbaen* may have been composed in this way. Worthy of mention is the special place among the Charlemagne epics occupied by *Karel ende Elegast*, in which we are told how Charles, obeying an order of God, sets out stealing and so discovers that a conspiracy has been planned against him. No *chanson de geste* telling of this story has been preserved, but we may assume that one existed: *Renaut de Montauban* and *Le restor du paon* both contain a brief summary of the story. Whereas the majority of the Middle Dutch Charlemagne epics are considered to be dependent on French texts, there is an intriguing hypothesis stating that in the case of *Karel ende Elegast* the dependency is in the opposite direction: according to this hypothesis, the creator of the lost *chanson de geste* (the *Chanson de Basin*) used a Middle Dutch *Karel ende Elegast*.

Karel ende Elegast appeared in print from the late fifteenth century on. In all printed editions that have been preserved, it kept its original metrical form: it is a text in rhymed verses. In employing this meter, *Karel ende Elegast* constitutes an exception to the printed Dutch Charlemagne literature: all of the other printed texts are prose romances. The sixteenth-century *Historie vander coninghinnen Sibilla*, a text that has come down to us only in a prose version in print, appears to derive from a Spanish prose text. Other romances are prose adaptations of Middle Dutch rhymed epics. Some of these romances, like the *Historie vanden vier Heemskinderen* (a prose adaptation of *Renout van Montalbaen*) were popular for centuries.

After Charlemagne's death in 814, his son, Louis the Pious (814–840) shifted the focus on education away from the royal court and into the monasteries. In general, this had a numbing effect on the development of secular literature. Einhard wrote the first secular biography, *Vita Caroli Magni* (Life of Charlemagne), in Latin prose under the reign of Louis. Nevertheless, for the next 350 years, secular literary works, especially those written in the German vernacular, remained scarce in contrast to the massive body of spiritual literature in Latin. Interest in Charlemagne and his times did not rise again at the secular courts until the middle of the twelfth century, when influenced by the second Crusade (1147–1149), Charlemagne was rediscovered as the great defender of Christianity against the heathen onslaught and as the force that had reunified the Roman empire into the Holy Roman Empire.

According to German scholarly tradition, the term *Heldenepik* (heroic epics) has been reserved for the "genuine" Germanic poetic narrations oriented around the historical Dietrich figure, King Theoderic (471–526) of the Ostrogoths. Centerpiece of that Germanic tradition is the *Nibelungenlied*, which became the German national epic. The French national heroic epic, *Chanson de Roland* (Song of Roland, early twelfth century), on the other hand, along with the entire literary genre *chanson de geste* (song of deeds), centered around Charlemagne, never received the attention as *Heldenepik* by the early German scholars, although its first representative, *Rolandslied* (Song of Roland, 1170) appeared at least thirty years before the so-called German national epic. No other epic of the twelfth century found such a rapid and wide acceptance. It has been preserved through two complete and four fragmentary manuscripts dating back to the twelfth century or around 1200. The *Rolandslied* was written in Regensburg by a priest who called himself Chonrat (Konrad), probably under the patronage of Duke Henry the Lion, the most powerful territorial lord in Germany, and his English wife Mathilda. The historical background to the epic is the annihilation of Charlemagne's rear guard in the Pyrenees by Basque warriors upon his return from Spain. The French source highlights the leader of the rear guard, Roland, a legendary hero, who in defense of his *dulce France* (sweet France) and his king refuses to call for help after being ambushed by the traitors, until with his last gasp he blows his horn Olifant, thus bringing back Charlemagne to witness his heroic death and punish the traitors. Konrad follows the plot of his source carefully but shifts the emphasis away from the theme of French nationalism in order to emphasize the crusading spirit of the fight against the heathens, thus almost doubling the original length of the epic. The figure of Charlemagne is highlighted as the exemplary Christian ruler and legitimate bearer of the crown of the Holy Roman Empire, reflecting the canonization of Charlemagne that took place around that time. It is possible that Konrad's patron, Henry the Lion, seeing himself as Charlemagne's descendant, wanted to underline his own claims to the imperial throne against the dynasty of the Staufer family.

Three types of the French heroic epic tradition, the *chanson de geste*, were adapted into German, the first being epics that deal with Charlemagne's legendary biography in a more or less panegyric fashion. The *chanson de Roland* is the most prominent representative of this type. Another German adaptation of this work was composed by a professional writer from East Franconia, who called himself Der Stricker and worked most of the time in Austria for various patrons. His work, known under the title *Karl* (1215–1233), is probably based on Konrad's earlier version but uses several other French sources as well. Der Stricker's main motive may have been to give Konrad's version the smooth formal surface of the courtly romance, which was then in fashion. No less than twenty-four complete and twenty-three fragmentarily preserved manuscripts testify to its success. The only other German adaptation of the *chanson de Roland* is a Low German version, based on Konrad's *Rolandslied* and other French sources, which are responsible for an interpolated episode on Roland's and Olivier's meeting with a heathen prince, Ospinel, and a final episode after Roland's death that deviates completely from Konrad's version. Although it may have been originally composed during the early thirteenth century, the Low German *Rolandslied* is completely preserved only as part five of a loose compilation of originally independent works that deal with Charlemagne's life. Their independence is evidenced by manuscript fragments clearly different from the versions preserved in the compilation. This magnum opus of thirty-six thousand verse lines, known under the title *Karlmeinet*, is written in the Ripuarian dialect of the region around Cologne and Aachen and was probably compiled after the first decade of the fourteenth century. The compiler has made a conscious effort to give the work a semblance of wholeness through introductory and linking segments, the longest of which, part three, tells about Charlemagne's conquests, his fight against the Saracens, and his coronation as Holy Roman Emperor. The final segment of *Karlmeinet* dealing with Charlemagne's last years and death originated from the compiler's pen as well. The first part of the compilation is the independent work *Karl und Galie*. It tells the story of the young orphaned heir to the throne, who flees from treacherous usurpers to Spain, where he finds refuge under the pseudonym (Karl) Meinet at the court of King Galafer of Toledo, with whose help he regains his realm. Secretly engaged to Galafer's daughter, Galie, Charlemagne returns to Spain to abduct her, is pursued by the Saracens, but finally brings her home, where she converts to Christianity and becomes his queen. The second part of *Karlmeinet*, *Morant und Galie*, has also been identified as an originally independent work. It is the story of treacherous courtiers who accuse one of Charlemagne's confidants, Morant, of having an affair with Galie. Eventually, Morant remains victorious in the decisive duel and marries Galie's friend Florette.

A second type of *chanson de geste* has been identified as *gestes des vassaux rebelles* (tales of rebellious vassals), narratives that feature vassals who are either falsely accused of treason or rebel against unjust treatment by Charlemagne. These epics, created toward the end of the twelfth century, originally reflected the struggle of the territorial lords against the idea of a centralized kingdom pushed by the house of Capet, whose members claimed to be directly descended from Charlemagne. The conflict, which in France was finally settled in favor of centralism around 1200 by Philippe II Auguste, continued to fester in Germany without ever being resolved. This may explain the continued interest in these epics in German-speaking areas. One of them is represented in *Karlmeinet* as *Karl und Elegast*. Like this work, most of the other epics of this type, named for individual heroes like Gerart van Rossilion, Ogier von Dänemark, and Reinolt von Montelban, found their way into Germany via Dutch adaptations and are fully preserved only in fifteenth- and sixteenth-century manuscripts. Others, like Herpin, Sibille, Loher und Maller, appear in fifteenth-century novels by Elisabeth von Nassau-Saarbrücken, which have been adapted directly from French sources.

A third type of *chanson de geste* is only loosely associated with Charlemagne's biography. These epics are focused on the figure of Guillaume d'Orange, who was historically related to Charlemagne and fought under him and Louis the Pious against the Saracens. The literary Guillaume (Willehalm, in German) fights against his own father-in-law, Terramer, leader of the Muslim armies, who wants to recapture his daughter Arabele for the "right" faith. Willehalm and Arabele had fallen in love and fled to France. Arabele is baptized under the name of Gyburc before they get married. All this is cause for two horrible battles at Aliscanz that wipe out thousands of warriors. The earliest and most outstanding representative of this genre is Wolfram von Eschenbach's *Willehalm* (ca. 1210–1220). Wolfram's direct source may have been a version of the French epic *Bataille d'Aliscanz*, but he may also have used sources from oral tradition. Although unfinished, Wolfram's epic is a masterpiece of Crusade literature. He strips the rough edges off the warrior world of the *chanson de geste* and creates an elaborate and refined courtly setting for the enormous holy war. By building such extreme contrasts he directs attention to the sheer cruelty—or madness—of pitting the noblest representatives of both cultures, which he presents as virtually equal in quality, in deadly battles against each other over the issue of baptism. Wolfram's *Willehalm* seems to have enjoyed almost the same popularity as his *Parzival*. Twelve complete manuscripts—some of them with precious illuminations—and fifty-eight fragments have survived. Ulrich von Türheim continued the unfinished work with his *Rennewart* (before 1250) and Ulrich von dem Türlin wrote its pre-history, *Arabel* (after 1253, before 1278), thus creating a trilogy of more than sixty thousand verse lines. Aside from *Die Schlacht von Alischanz* (The Battle of Alischanz), an early fourteenth-century independent Low German translation of the French epic, the material was frequently viewed as a historical record and thus found entry in many fifteenth- and sixteenth-century chronicles. In general, Charlemagne epics are to be considered among histories, folkloric legends, and courtly romances throughout the Middle Ages in Germany.

Charles III, the Fat (839-January 13, 888)

The third son of Louis the German (r. 840–876), Charles the Fat became king of Alemannia upon his father's death and king of Italy in 879; he was the last Carolingian emperor. In 881, Pope John VIII, hoping to involve Charles in the defense of Italy, crowned the king and his wife, Richardis, emperor and empress. When his younger brother Louis the Younger (r. 876–882) died, Charles gained control of Franconia, Saxony, and Bavaria. Finally, after the death of King Carloman (r. 879–884) of West Francia, magnates in the west invited Charles to be their king and pledged him their loyalty in June 885. Although nominally reunited, the union of the Carolingian empire under Charles was ephemeral. Saracens, Northmen, Slavs, resistance from important magnates such as Arnulf of Carinthia, his failure to produce a legitimate heir, and a debilitating illness (he suffered a spectacular seizure at the royal synod of Frankfurt on January 26, 873) led to Charles's forced retirement in November 887.

Charles had a lasting impact on medieval literature. He commissioned Notker, a monk of St. Gall, to compose the *Deeds of Charlemagne*, an engaging portrait of exemplary kingship that includes edifying lessons from the reigns of Louis the Pious and Louis the German. Charles is also the center of the vivid *Vision of Karl III*, an account, probably composed at Reims in the entourage of Bishop Fulk, that conveys considerable anxiety about Carolingian dynastic succession.

Charles III, the Simple (879–929)

King of the West Frankish kingdom, Charles III is also known to modern scholars as Charles the Simple or Charles the Straightforward, a more accurate translation of posthumous references to him as *simplex* (simple).

Charles was born on September 17, 879, just five months after his father, King Louis the Stammerer, had died and less than two years after the death of his illustrious paternal grandfather, Emperor Charles the Bald. Before he was six years old, both of his half brothers (Louis III and Carloman), heirs to their father's kingdom, had suffered accidental deaths. Before he was nine, his uncle, Emperor Charles the Fat, whom the West Frankish magnates had invited to be their king, had abdicated and died. When Charles was thirteen, a group of magnates, disgruntled with King Odo, the emperor's successor, crowned the boy as their king, but they were unable to wrest the kingdom from Odo's control. Charles would not actually rule until Odo's death in 898.

Historical evidence for Charles' reign is sparse, most details of the period are elusive, and interpretations must be speculative. Nonetheless, a few important moments can be ascertained. In 911, for example, in a meeting at Saint-Clair-sur-Epte with the Northmen (Norse) of the Seine basin, Charles seems to have named their leader, Rollo, count of the region around Rouen in exchange for Rollo's defense against other Norse bands and for his conversion to Christianity.

In that same year, the nobles of Lotharingia, a neighboring kingdom, recognized Charles as their king, and, over the next decade, he sought to solidify his dynastic claim to the Lotharingian throne. But his authority in the region was challenged, and eventually undermined, by a series of conflicts with the Lotharingian aristocracy. Most notable was his clash with a Count Gislebert who rebelled in 915 when Charles did not invest him with the dukedom previously held by his father. Gislebert and his supporters were able to enlist the support of Henry of Saxony who hoped to extend his influence into Lotharingia. But Charles and Henry made a truce in 921 and recognized one another, respectively, as "King of the Western Franks" (*rex Francorum occidentaliū*)—Charles was the first king to take this title—and "King of the Eastern Franks" (*rex Francorum orientaliū*). The Lotharingians continued to recognize Charles as their king, but not for long. By 925 Lotharingia was firmly in the hands of Henry and his newly named duke, Gislebert.

By that time, Charles had also lost authority over the West Frankish lands. Led by the powerful Robert of Neustria, brother of the deceased King Odo and a loyal supporter of Charles at the beginning of his reign, the magnates rebelled against the king, ostensibly because Charles seemed to be too greatly influenced by a Lotharingian adviser named Hagano. Whether or not this was indeed the cause of simmering tensions between Charles and his magnates, or merely a symptom of a more profound dissatisfaction with Charles' rule, support for the king remained low among the West Frankish aristocracy from about 917 onward. In 922 tensions reached a head. The rebels declared Robert their king and then, when he died in a battle against Charles at Soissons in 923—a battle the rebels won—they elected Rudolf of Burgundy as Robert's successor. Before Charles had an opportunity to face the challenge presented by his new rival, he was captured by the treacherous Count Herbert of Vermandois and held captive until he died on October 7, 929.

Although we cannot reconstruct in great detail Charles' reign, we can identify some changes in West Frankish politics and kingship within his lifetime. As Janet Nelson points out, unlike his namesake Charles the Bald, Charles the Simple appears to have been unable to distribute honors (*honores*) strategically among his magnates, to transfer dukes or counts from one office to another, or to intervene effectively in ecclesiastical appointments within his kingdom. Nor is there any evidence that he sent out *missi* (decrees) or issued capitularies, as had previous Carolingian kings. By the end of his life, the political landscape of his grandfather's empire had undergone a major change. The West Frankish lands, the heartland of that empire, now consisted of a handful of territorial principalities ruled more directly by heads of aristocratic dynasties than by the king.

Charles IV (1316–1378)

Emperor Charles IV (r. 1346–1378) was born in Prague, May 14, 1316, the eldest son of John of Luxembourg and Elizabeth of Bohemia. He was baptized under the name of Wenceslas, following the tradition of the Premyslid (Bohemian) dynasty. At the age of seven he was sent to Paris to be educated at the court of Charles IV of France. At his confirmation Wenceslas was given the name of Charles. In Paris he met the Benedictine abbot Pierre Roger de Fécamp, later Pope Clement VI, whose sermons made a major impact on young Charles' spiritual development. He also studied briefly at the University of Paris.

Following campaigns in Italy to secure Luxembourg interests (1331–1333), Charles administered the kingdom of Bohemia during his father's absence. During his stay in Bohemia (1334–1336) Charles retrieved mortgaged crown lands and negotiated two very important treaties with Poland (Trencin and Visegrád). These treaties established one of the basic aspects of Charles' foreign policy: the abandonment of military expansion in favor of a policy based on treaties and alliances. Charles consistently aimed to maintain the balance of power between Poland, Hungary, the Teutonic Knights, the Habsburg dominions, and his own Bohemian crown lands.

In 1340, when his father became blind, Charles assumed control over the Luxembourg domains, opening the way for his eventual acquisition of the imperial throne. Emperor Louis the Bavarian's policies, particularly his attempts to obtain Tyrol and his renewed conflicts with the papacy, had aroused the enmity of other German princes. In 1344 an assembly of princes demanded that Louis do sufficient penance to lift the ban of excommunication within two years or face deposition. When Louis failed to do so, the electors met, declared Louis deposed, and elected Charles as emperor on July 1, 1346. Charles' uncle, Archbishop Baldwin of Trier, played a leading role in the negotiations with the princes and the papacy that led to the election.

Initially, Charles' position was rather weak. Because of his support from Clement VI, he was identified by some as yet another "clergy king" (*Pfaffenkönig*). Many bishops and nearly all the imperial cities remained loyal to Louis. Worse for Charles, shortly after his election, he lost a good number of supporters, including his father blind King John, who died fighting for the French at Crècy (August 26, 1346). Civil war was prevented when Louis the Bavarian died bear hunting in October 1347. Although supporters of the Wittelsbach dynasty elected Günther of Schwarzburg king of Germany in January 1349, he was dead by the end of summer.

Prague served as the political, cultural, and spiritual center of Charles' domain. The city had already risen to prominence under the Premyslid rulers, but had suffered serious neglect under King John. Charles began reconstruction of the Hradshin castle during his first long stay in Bohemia in the 1330s. In 1344 he arranged for the bishop of Prague to be elevated to the rank of archbishop. After his coronation as King of Bohemia in 1347, Charles initiated a number of projects that substantially reshaped the city. A new cathedral dedicated to St. Veit was begun on the Hradshin. Within the cathedral, Charles had built a special chapel to hold the relics of St. Wenceslas. He also founded a university in 1348, the first in the empire. With the foundation of the New Town (*Nové Město*) in Prague, Charles nearly tripled the size of the city.

Charles' political views and his religious ideas were closely connected. From his early years in Paris and Italy, he had developed a sense of his own divine mission. This ideal was represented in the new coronation *ordo*, or rites, devised for Bohemia in 1347. The coronation *ordo*, like his mania for collecting religious relics, reflected the conservative side of Charles' religiosity. But, although his personal religious views connected him most strongly with the *Devotio Antiqua*, he was not without sympathy for the *Devotio Moderna*. He was acquainted with Johannes Tauler and Christina Ebner among the German mystics. In 1363 Charles brought the fiery preacher Conrad Waldhauser to Prague and later supported and defended Waldhauser's student Jan Milic, albeit after Milic stopped identifying the emperor as the Antichrist.

Charles's Italian policies reflected a realization that it would be nearly impossible to restore imperial authority in that region. He made two trips to Rome after his election as emperor. In the winter of 1354–1355 Charles traveled to Rome for his imperial coronation (January 6, 1355) and to settle affairs in the Holy City following the revolt and death of the tribunal official Cola de Rienzo the previous fall. During his trip, Charles met the poet Petrarch in Mantua on December 15, 1354. Two years later Petrarch traveled to Prague as part of a diplomatic mission from the Visconti, a Lombard noble family. During that visit, Charles failed to convince the poet to remain at his court. He likewise refused Petrarch's invitation to intervene more forcibly in Italian affairs.

In Bohemia, Charles sought to establish a more centralized administration. Much of his effort was aimed at increasing the size and scope of the area that compromised the Bohemian crown lands. He transferred the Silesian duchies from their status as fiefs of the empire to the Bohemian crown. Charles also undertook to create "New Bohemia," a string of possessions in the Upper Palatinate and Franconia that would link Bohemia with the Rhineland. The Bohemian nobles were not wholly supportive of these ventures, however, and sharply resisted Charles's attempts to codify Bohemian law in the *Majestas Carolina* of 1355.

Charles was much more successful in dealing with the states of the empire. Three general trends typify his German policy. First, he devoted his dynastic

policy (*Hausmachtspolitik*), to maintain and increase the power of the Luxembourg dynasty within and without the empire. Secondly, Charles sought to fill vacant bishoprics with his supporters, revivifying the imperial church as a political tool for the emperors. Finally, he made alliances with leading states and cities in the empire and sponsored leagues, in particular, city leagues, to help maintain the public peace. The cities of Nuremberg and Lübeck, as well as the Hohenzollern burgraves (districts) of Nuremberg and the margraves of Miessen, benefited from Charles' patronage. In general, Charles's German policy focused on maintaining a balance of power within the empire.

One of the main achievements of Charles' reign was the promulgation of the Golden Bull on January 10, 1356. The Golden Bull regulated the conduct of imperial elections, fixing the number of electors at seven: the archbishops of Mainz, Trier, and Cologne, the king of Bohemia, the margraves of Miessen and Brandenburg, and the counts Palatine of the Rhine. Succession in the secular electoral principalities was to follow primogeniture. The Golden Bull gave the electoral princes extensive rights, including the *jus de non appellando et de non evocando*, or privilege of nomination and selection, and elevated the position of the king of Bohemia over that of the other electors. Charles sought to create unity among the electoral princes, and ultimately, to ensure hereditary succession through the regulated process of election.

Charles leaned heavily on the imperial cities, particularly those in Swabia, as executors of the public peace (*Landfriede*). Although the Golden Bull forbade leagues in principle, city leagues and princely leagues created by the emperor in order to secure the peace became a fixed part of Charles' *Landfrieden* policy. The Swabian *Landfriede* of 1370, comprised almost entirely of imperial cities, was clearly directed against a growing alliance of the Habsburgs and the counts of Württemberg.

In 1377 Charles returned to France, accompanied by his son Wenceslas, to gain French support for his plans to put his younger son, Sigismund, on the Polish throne. During the negotiations, Charles agreed to recognize the French dauphin as imperial vicar in the kingdom of Arles, effectively ceding the Arelat to France in perpetuity.

In the last years of his reign, Charles occupied himself largely with the succession and with returning the papacy to Rome. The emperor needed to acquire the mark (territory) of Brandenburg in order to secure the election to emperor of his eldest son Wenceslas (June 10, 1376). To raise money, Charles opted to mortgage a number of imperial cities. On July 4, 1376, in opposition to this decision, a group of Swabian cities formed a league. War broke out the following spring, by which time twentyeight cities had joined the Swabian city league, with the aim of achieving the status of free imperial cities.

Conflict also ensured from Charles' determination to return the papacy to Rome. He was able to convince Pope Gregory XI and the curia to return to Rome in September 1377, but after Gregory's death (March 26, 1378), a series of disputes between the newly elected Pope Urban VI and Charles ultimately resulted in the Great Schism.

Charles IV died in Prague on November 29, 1378. He was married four times: to Blanche of Valois (1316–1348), Anna of Wittelsbach (1329–1353), Anna von Schweidnitz (1339–1362), and Elizabeth of Pomerania (1347–1393). At his death the Luxembourg lands were divided between his sons, Wenceslas IV (Bohemia and Silesia), Sigismund (Brandenburg), and Johann (Görlitz), and his brothers Johann Heinrich (Moravia) and Wenceslas (Luxembourg and Brabant).

Charles IV, Art

The son born to John, Count of Luxembourg, and Elizabeth Premyslid, Queen of Bohemia, on May 14, 1316, in Prague was baptized Wenceslas, a dynastically rich name that honored Elizabeth's Premyslid past. In April 1323, he accompanied his father to the court of Charles IV of France, where he remained during the following decade. Soon after his arrival in Paris, he was confirmed, and the king gave the boy his own name; the reference to Charlemagne would prove useful in Charles' later imperial politics. While in Paris, Charles attended the university, where he acquired a lifelong dedication to learning that resulted in his later introducing education to the people of his empire.

After reaching his majority in 1333, Charles returned to Prague where he ruled jointly with his father. (His mother had died in 1330.) Upon the death of John in 1346, Charles was crowned king of Bohemia. With the backing of a majority of the German electors, the pope, and the French crown, he was elected king of the Romans. On Easter in 1355, in Rome, Charles was crowned Holy Roman Emperor by the pope.

During the course of his rule, Charles was responsible for nearly tripling the size of Bohemia and, by consolidating the power of the kings of Bohemia through political alliances, turning the German kingship into an office of primogeniture rather than election. These two goals were primarily achieved through his four marriages: to Blanche of Valois (m. 1323-d. 1348), Anne of the Palatinate and Wittelsbach (m. 1349-d. 1353), Anne of Swidnica (m. 1353-d. 1362), and Elizabeth of Pomerania (m. 1363-d. 1393). Each of his wives, contributed extensive lands to Charles' kingdom, either in the form of dowries or through inheritance. These marriages were just as critical, though, for forging relations with members of his wives' families, some of whom were electors who had been less than supportive of his causes in the past. By securing votes through marriage alliances, Charles was able to see his fifteen-year-old son, Wenceslas, crowned king of the Romans in 1376.

As a student in Paris Charles acquired a love for, and understanding of, the political potential of architecture, sculpture, painting, and literature. His imprint is most noticeable in the city he chose for his imperial seat, Prague, but his patronage also touched many smaller towns. In the capital he renovated the Premyslid Palace in Hradcany, continued work on St. Vitus Cathedral as part of the recent promotion of Prague to an archbishopric, founded the University—the first in central Europe—and the New Town, and, through these measures, increased trade and pilgrimage. His palace at Karlstein outside Prague remains one of the most stunning examples of eastern Gothic architecture, and his patronage of Peter Parler as the designer of St. Vitus and the Charles Bridge testifies to Charles's ability as a connoisseur and adventurous patron. He gathered around him many foreign artists and local masters, two of whom were Tommaso da Modena and Theodericus of Prague. The exchange between these varied artistic traditions resulted in the vital "Bohemian school" of visual arts.

In the realms of history and literature, not only did Charles actively assemble a vast local and international library, as well as commission chronicles of Bohemia, he himself composed an autobiography and a *vita* of his ancestor, Saint Wenceslas. By having many of these works translated into the vernacular, Charles promoted learning of the less-esteemed German and Czech languages in addition to Latin, Italian, and French. The importance he placed on language as a unifying tool is also apparent in the political document that codified the German electoral process, the Golden Bull.

Charms

Also known as *Zaubersprüche* or *Heilsegen*, charms are usually short, often formulaic, texts, either spoken or written, used to elicit a desired outcome. They might be as simple as a single word or string of characters, or elaborate compilations of several charms incorporating various motifs.

Charms were used and recorded throughout the medieval period in all parts of Germany. Texts are found in psalters, prayer books and liturgical manuscripts (often as marginalia) in herbals, and in medical and veterinary compendia, scattered among the herbal recipes and other remedies. In the late Middle Ages, charms were recorded in *Hausrezeptbücher*, books containing practical information for running a household. If named at all, *Segen* or *Benedictio* ("blessing") was the designation applied to these texts in the manuscripts. (The term *Zauberspruch*, charm, cannot be dated earlier than the seventeenth century.)

Some individual medieval German charms have been studied intensively, e.g., the Merseburg charms (see below), but there has been no truly definitive study of the corpus of Old High German (OHG) and Middle High German (MHG) charms. It is doubtful that any OHG charms are still undiscovered; however, there may be German charms from the later medieval period still to be found in manuscripts. Thus, one cannot speak conclusively about medieval German charms, but only point out tendencies in these texts.

Charms may be a mixture of German and Latin. Early mixed-language texts often had a Latin heading and instructions accompanying a German charm, while the situation in later macaronic texts tended to the reverse. Many early critics often omitted the Latin segments in their editions of the OHG charms, obscuring the Christian context in which the charms were found.

Charms may manifest literary characteristics similar to longer contemporary works and be in verse, prose, or a mixed form. While the earliest charms seldom follow the metrical rules of Germanic poetry, these older texts do exhibit some features of *Stabreim*, e.g., the Bavarian worm charm (*Pro nussia*, Munich, Bayerische Staatsbibliothek, manuscript no. Clm. 18524, 2, fol. 203b, 9th c.), the Merseburg charms (10th c.) and the Viennese dog charm (Vienna, Nationalbibliothek, manuscript no. Cod. 552, fol. 107r, 10th c.). A twelfth-century charm for a lame horse (*Ad equum errehet*, Paris, Bibliothèque Nationale, no. nouv. acq. lat. 229, p. 251) is considered to be in Otfridian, an Old High German end-rhyming verse. (It is, however, important to note that critics have not all been in agreement about the forms of individual OHG charms.) An elaborate wound charm in a British Library (BL) manuscript (BL Arundel, no. 295, fol. 113r, 13th c.) is written in rhymed pairs suggestive of the meter of *Parzival*.

In their "classical" form, charms consist of a heading, often naming the purpose, instructions for use or accompanying ritual (frequently including the recitation of the Lord's Prayer and/or Hail Mary, typically three of each), a historiola (in narrative charms) and the incantation proper. By no means do all charms exhibit all parts, nor is a charm without one of these parts incomplete. Nor do the parts, if present, always follow "classical" order. In particular, the heading and instructions might follow the charm itself.

Examples of headings include: *Contra vermes* (Old Saxon worm charm, Vienna, Nationalbibliothek, no. Cod. 751, fol. 188v, 10th c.); *Ad pestem equi quod dicitur morth* (horse charm, Vatican, Pal. lat. 1158, fol. 68v, 12th c.); *Vor dy worme* (BL Arundel 33, fol. 95a, manuscript dated 1432); and *Item dis ist ain bewärte segen für das blütten wa das ist* (blood charm, St. Gall, Stiftsbibliothek, no. Cod. 755, p. 71, 15th c.). Where a series of charms with the same purpose follow one another in a manuscript, the only heading of the succeeding texts might be *Item*.

Instructions may be as simple as *dic* at the beginning and *Pater noster. ter.* at the end of the Vatican horse charm, or complex, e.g., *Item des ersten leg din hand uff the wunden oder uff die nasen und sprich dise wortt* (Like the first one, place your hand on the wound or on the nose and say these words,) at the beginning and *wenn du dise wortt gesprichest so sprich drü pater noster und aue maria* (when you say those words, also say three Our Fathers and Hail Marys) at the end of the St. Gall blood charm.

Narrative charms begin with an historiola (*epische Einleitung* an "epic introduction") which relates an anecdote, often involving a cure analogous to the one sought or promised by the charm. With the exception of the Merseburg charms (see below), the narrative motifs are manifestly Christian, paraphrasing Biblical or apocryphal events. Frequent motifs include: "Three Angels" confronting a disease demon; "Three Brothers," who meet Christ while searching for a cure; "Longinus," who pierces Christ's side with a spear; and "Job" sitting on a dung heap. Particular motifs were associated with certain ailments. For example, Job charms were for worms; Longinus appeared in blood and wound charms, as well as in charms for removing arrow and spear heads.

The majority of extant charms are healing blessings (*Heilsegen*). Their purpose was to contribute to the health and well-being of humans or valuable domestic beasts, especially horses. As such, *Heilsegen* may be either prophylactic or curative. They were used to treat epilepsy, lameness, bleeding, fevers, worms (in German society, not worms *per se*, but worms as the cause of disease and pain, e.g., toothache worms) and as birthing aids, to name only a few uses. Even those earlier charms not specifically medical in purpose, e.g., the Lorsch Bee charm (Vatican Library, no. Pal. lat. 220, fol. 58r, 10th c.), nevertheless address the concerns of a largely agrarian society. Later in the period, charms served a much broader range of purposes, including aiding lovers, fighting fires, winning horse races, controlling pests and curing sleeplessness in children. Charms of particular use to a chivalrous and crusading society included weapon blessings, and journey and wound charms.

In the late Middle Ages, charms tended to exhibit more "magical" characteristics, i.e., mysterious words, characters, or figures. They also became more elaborate, conflating charms and motifs that earlier had appeared singly and broadening the application of traditional motifs.

Also in the later period, charms were sometimes recorded in the court proceedings of witchcraft trials. With these charms, the "black" magical element crept in, with reported charms often being directed towards harm rather than good. How the context in which these charms were recorded might have affected their content and form has not yet been studied.

The Merseburg Charms

Of all the German charms so far published, none have aroused more interest or engendered more discussion and debate among Germanists than the two Merseburg charms. The texts of the charms, generally based on Steinmeyer's edition (see below), and a literal translation, follow:

First Merseburg charm:

1	<i>Eiris sazun idisi, sazun hera duoder. suma hapt heptidun, suma heri lezidun,</i>	Once sat women, they sat here then there. some fastened bonds, some impeded an army,
5	<i>suma clubodun umbi cuoniouuidi insprinc haptbandun, inuar uigandun! .H.</i>	some unraveled fetters: escape the bonds, flee the enemy! .H.

1	<i>Phol ende Uuodan uuorun zi holza. du uuart demo Balderes uolon sin uuoz birenkii.</i>	Phol and Wodan rode to the woods. Then, Balder's foal wrenched his foot.
5	<i>thu biguolen Sinthgunt, Sunna era suister, thu biguolen Friia.</i>	Then did Sinthgunt enchant it, Sunna her sister, then did Freya enchant it,
	<i>Uolla era suister, thu biguolen Uuodan,</i>	Fulla her sister, then did Wodan enchant it,
10	<i>so he uuola conda: sose benrenki, sose bluotrenki sose lidirenki:</i>	as he well could: if a bone- wrenching, if a blood- wrenching, if a limb- wrenching:
15	<i>ben zi bena, bluot zi bluoda, lid zi geliden sose gelimida sin!</i>	bone to bone, blood to blood, limb to limb, as if bonded!

The texts, discovered in 1841 by Georg Waitz in a theological manuscript (Merseburg Cathedral Library, Codex 136, f. 84r [85r old numbering]), were first published and analyzed by Jacob Grimm in 1842.

As is true of perhaps most medieval German charms, both are narrative charms, with *historiola* (first charm, 11. 1–6; second charm, 11. 1–13) and incantation (first charm, 11. 7–8; second charm, 11. 14–17). The second charm clearly belongs to the tradition of healing charms. (For whatever the cause, there were a number of charms for curing lameness in horses and humans.) In nearly every other respect, the Merseburg charms differ from most other extant OHG and MHG charm texts.

No other charms show so clearly a structure based on the number three. This is especially striking in the second charm. Moreover, the second Merseburg charm is the only medieval German charm to specify gods from the pagan, Germanic past. This doubtless led Grimm to characterize both charms as pagan, an attribute most critics have since accepted. Critics also almost universally agree that the purpose of the first charm is to free captives, a purpose not only unique among medieval German charms, but also among other medieval western European charms.

Virtually every other point concerning these texts has been disputed by scholars and not yet conclusively settled. From the exact meaning of *idisi* and *umbi cuoniouuidi* to the significance of the apparent *H* at the end of the first Merseburg charm, and from the question of who or what was *Phol*, and whether *Balderes* is a reference to the god "Baldr" or an appellative referring to Phol or Uuodan, to how many goddesses speak in the second charm, critics disagree on interpretations of both texts. Since the charms are recorded in a theological manuscript, most likely by a monk, and are followed by a liturgical prayer, even the question of whether or not they are pagan has been disputed by some modern critics. Indeed, it would be more accurate to say that the charms are not clearly Christian, than to state categorically that they are pagan. Both representative of their genre and unique in their details, the Merseburg charms serve as a reminder that, as much as is known about life in medieval Germany, there is still much to be learned. Charms can provide an extraordinary insight into that life.

Childhood

Children in medieval Germany, for the most part, were regarded as deficient adults. Because children lacked speech, they cried to make their wishes known; because they lacked sense and experience, they were foolish and indiscreet; and because they lacked gravity, they played games and sought pleasure. From this point of view, the best that could be said was that, not having had much opportunity to sin, children were purer than adults. Middle High German *tump* means "young," "inexperienced," and "foolish," suggesting that deficiencies of age, experience, and wisdom inevitably go hand in hand.

That medieval Germans viewed children as deficient adults does not mark them as particularly benighted in their attitude towards their young. Most Europeans, from antiquity into the eighteenth century, believed the same thing. Nor does it support the theory that people in the Middle Ages had no "idea of childhood" because they failed to perceive the difference between children and adults, a claim that has gained wide currency since it was made almost forty years ago by Philippe Ariès. A period of life defined by its lack of adult qualities and skills is a period of life defined precisely by its difference from adulthood. Nor did the medieval belief that children were deficient adults mean that medieval children were not loved by their parents—another widely held view that can be traced to Ariès. Nearly all contemporary texts assumed that parents' love for their children was powerful and inevitable.

Evidence about childhood in medieval Germany is hard to come by since the usual historical sources spend hardly a word on children, even those, like Frederick Barbarossa or St. Elizabeth, who were born into the highest nobility and grew up to capture the imagination of their contemporaries. In order to learn about the medieval German idea of childhood, therefore, one must draw on less orthodox sources: narrative, didactic, homiletic, and other sorts of texts. About the childhood of social groups that did not figure in texts—the vast majority of the population—we still know virtually nothing.

Childhood in medieval Germany was more disruptive than we would find tolerable. Mortality rates were high, especially for children and mothers, so that even if a child reached adulthood—between 30 and 50 percent did not—one or both parents might well have already died. Social practices, too, took children away from their parents. Among these customs were oblation (which placed children in religious houses) and fosterage (which sent them to other households to be educated). In 1211, when she was only four, Saint Elizabeth was sent by her parents, the king and queen of Hungary, to the Thuringian court, where she grew up alongside her future husband. Childhood dislocation was common in literary texts as well: Tristan was orphaned at birth, raised by foster parents, and then abducted and abandoned on an unknown coast.

Since we now believe that childhood experiences have a profound effect on later development, we would expect the disruptions Elizabeth or Tristan suffered as children would have left permanent psychological scars. Medieval Germans did not. They believed that a child's nature was determined at birth, largely as a consequence of his or her lineage. One's nature could be very specific: a person could inherit a predisposition to noble love, skill at jousting, or a sense of decorum. Because individual nature was fixed at birth, children were assumed to come of age with that nature intact, regardless of the disruptions they had endured. Childhood was not understood as a stage of life in which the individual, moving through a series of developmental stages, was shaped by education, experience, and environment but as one in which the deficiencies of childhood gradually disappeared and the immutable nature of the individual was gradually revealed. Childhood was seen as a period not of development, but of revelation.

As a consequence, education played a smaller role than we would expect. To be sure, children, especially future clerics, were educated in monasteries and cathedral schools, at courts and at universities, in fact and in fiction. But the child's nature determined how much could be accomplished and the techniques that would be required. Educating ordinary children was viewed as a thankless task: such children had to be disciplined frequently and taught to fear their masters if there was to be any hope of inculcating good habits in them. Children with exceptional natures, on the other hand, hardly required education at all. Although Parzival was kept ignorant of knighthood until he was nearly grown up, he needed only a few words of instruction before defeating the first five knights against whom he jousting. He succeeded because of "the nature that he had inherited from Gahmuret," his father (Wolfram von Eschenbach, *Parzival*, 174, 24). In medieval Germany education was considered merely the catalyst that released the nature that was always there, unaffected by childhood deprivations or dislocations.

Although medieval Germans, in general, found little to recommend childhood, childhood seems to have enjoyed enhanced status at court. Narrative texts written for secular courts between 1150 and 1300 paid particular attention to children. These texts represent detailed programs of courtly education and elaborate rites of passage, such as knighting and marriage. Between 1200 and 1250 writers expanded the depiction of childhood in their sources (*Parzival*) and added stories of childhood to narratives that had none (*Nibelungenlied*). Vernacular didactic texts, which appeared for the first time during this period, were optimistic in tone, unlike those written later in the century. Literary texts exhibited an increased sentimentality: children cried and played with toys; parents displayed greater tenderness to their children; children fell in love. During precisely those years when courtly culture flourished, childhood, like eating, fighting, sexual desire, and other aspects of life, was refined, stylized, and given a courtly form. Courtly childhood, like festivals, chivalry, and courtly love, became an attribute of courtly life, a mark of distinction whereby the secular elite staked its claim to cultural status. The courtly reevaluation of childhood marked an important step in the transformation of childhood from a period of life defined by its failure to measure up to adulthood into one believed to be different from adulthood, but special and of interest for its own sake.

Christmas Plays

See [Drama, Christmas Plays](#).

Although towns (or cities) appeared in the northern parts of the Low Countries from the twelfth century onwards, chronicles treating the history of a town or reporting urban events did not come into being—probably because urban self-consciousness was still absent—before the second half of the fifteenth century. The first chronicles were in the form of small treatises (*Chronicle of Haarlem to 1328*, ca. 1490; the *Descriptio oppidi Amstelodamensis*, ca. 1490, a description of the towns of the county of Holland with special emphasis on Amsterdam; and the *Libellus de Traiecto instaurato*, ca. 1485, a survey of the buildings of Maastricht) or short poems about local events.

The first real town chronicle was written by Jacob Bijndorp, town secretary of Kampen (from 1466 until 1482), a prospering town because of its membership of the North-German Hanseatic League. His chronicle, with several continuations by other town secretaries until 1547, demonstrates the origin of a new genre: it starts as a history of the world and does not concentrate on local events until sometime in the 15th century.

In the southern parts of the Low Countries urban development came earlier. Yet, town chronicles did not flourish there. It is true that the *Annales Gandenses*, written by a friar of Ghent, contains an account of the struggle between the Flemish towns and the King of France during the years 1297–1310, and Jean d'Outremeuse of Liège (1338–1400) wrote an enormous rhymed chronicle of his native town, the *Geste de Liège*, from its legendary Trojan origin until his own times. But, although those chronicles, just like the unreliable *Liber de antiquitate urbis Tornacensis* (Tournai) or the *Chronica Tornacensis*, pay much attention to the history of those towns, they are not, strictly speaking, town chronicles, since their primary focus is world history.

Chronicles, City, German

Written in Middle High German and early New High German, the German city chronicles are a collection of chiefly secular texts with religious underpinnings that deal with the economic, political, and social events comprising the history of medieval German municipalities and the lives of their citizens.

City chronicles, written in the vernacular between the thirteenth and the end of the sixteenth century, are descendants of the earliest German language chronicles: *das Annolied* (Song of [Bishop] Anno [of Cologne]) from the late eleventh century, and *die Kaiserchronik* or *Chronica* (Chronicle of the Kings) in 17,283 rhymed verses, from the middle of the twelfth century. These works promoted and conceptualized the attributes and legitimacy of the ideal ruler. The former, a propagandistic work attributed to the monastery of Siegburg, advocated the canonization of archbishop Anno of Cologne (ca. 1010–1075). In this chronicle, the city of Cologne is merely the setting for the idealized depiction of Anno as the personification of justice and Christian charity. The latter, the "Imperial Chronicle," was written by a monk or cleric from Regensburg in 1147 at the behest of a high-ranking nobleman—possibly the Bavarian duke, Henry the Proud. It tells of imperial rulers and the qualities they require—the foremost being justice—and of the proper role of emperors and popes within the empire.

The vernacular rhymed chronicles aimed to legitimize and preserve the traditional privileges of the feudal nobility. Unlike Latin chronicles addressed chiefly to a monastic audience, these vernacular rhymed chronicles instructed an increasingly lay public on the just exercise of monarchical power within the divine plan for salvation. Traditional allusions to saints, miracles, and fabulous occurrences were still prevalent in historical works of the period, however, as a means of edification and delight.

While these rhymed chronicles legitimized feudal nobility and its privileges by using traditional themes, the city chronicles, predominantly in vernacular prose, highlighted the burghers' interest in topical events by rendering them with greater factualness. For instance, one of the oldest vernacular prose chronicles, the *Strasburger Chronik*, completed in 1362 by Fritsche Klosener, a minor official (*summissarius*) of the Strasbourg cathedral, reveals both an emphasis on facts and a logical organization of materials, though not always in strict chronological order. Klosener includes both papal and imperial history, but he devotes more than half of his chronicle to the history of Strasbourg as a bishopric and city. The chronicler documents specific Strasbourg events, such as the earthquake of 1357, the persecution of the Jews in 1298, 1337, and 1349, the unrest in the guilds during the years 1308, 1332–1348, and 1349, and the ensuing changes to the charter of the city council. This emphasis on facts and topicality reflected the social values of urban communities founded chiefly on practical economic and political concerns.

During the thirteenth and fourteenth centuries, the German kings and emperors of the Holy Roman Empire granted increasing privileges to imperial cities (*Reichsstädte*), such as Nuremberg and Frankfurt, that were directly subject to the emperor rather than to surrounding territorial principalities. These cities, together with the so-called *Freie Städte* (free cities) of Cologne, Augsburg, Basel, Regensburg, Speyer, and Worms, all of which were freed by their citizenry from the rule of lordly bishops, came to consider such privileges as *reht*, their lawful right. The inhabitants of both types of cities—the legal and constitutional distinction between them all but disappeared by the sixteenth century—began to identify the *Reich* no longer with a transient king, as was customary during the earlier medieval period, but with their own cities as bulwarks of the empire, and eventually as the empire per se. The *Nürnberger Chronik* of Sigmund Meisterlin (1488), for example, demonstrates the assertive, political self-image of the most influential imperial city of the period—the city of the *Reichstage*, where the imperial diet of the Holy Roman Empire convened—through the use of the interchangeable terms *fürsten und städt* and *städt und fürsten*. The use of one formulation for the other attests to Meisterlin's belief in the equality of his city with the nobility, deferring only to the higher authority of the pope and the emperor. The chronicler depicts the municipality of Nuremberg as the embodiment of the empire and, indeed, of the apprehensible world itself.

The compilation of often diverse and seemingly unrelated materials in city chronicles underscores the conviction that city and empire were one and the same. As a consequence of this perceived unity, local and imperial history became inseparable. Nevertheless, the relationships of these municipalities—and even territorial cities (*landesherrliche Städte*) subject to the immediate jurisdiction of regional rulers—with the powerful nobility of the German-speaking lands and beyond, could range from alliances of convenience and necessity to open aggression in the struggle for power, land, and economic advantage. In particular, the increasing consolidation of disparate regions into geographically contiguous states (*Flächenstaaten*) by ambitious territorial rulers heightened the anxiety of municipal citizens and found resonance in numerous city chronicles.

It was, however, during the late medieval period of the fourteenth and fifteenth centuries that the often conflicting interests of cities with those of territorial rulers achieved their greatest prominence in city chronicles. These histories are primarily based on official sources compiled by city clerks (*Stadtschreiber*). One such chronicler was Konrad Justinger (d. 1425), who was commissioned by the *Stadtrat*, the governing body of Bern, in 1421. Justinger's *Chronik der Stadt Bern* (City Chronicle of Bern) encompasses the history of the city from the election of Frederick Barbarossa in 1152 to the laying of the cornerstone for the cathedral in 1421. The chronicler not only evaluated and compiled official documents for this work, but also collected songs of his day.

In 1474, almost sixty years after Justinger's death, the *Stadtrat* of Bern commissioned another chronicler, Diebold Schilling the Elder, to provide an official history of the city, and Justinger's 's chronicle provided him with the first part of his three-part continuation.

Unofficial municipal and personal histories by individual citizens were also compiled. From 1450 to 1468, out of personal interest in his city's welfare Burkhard Zink, a naturalized citizen of Augsburg, recorded local events of the years 1368 to 1468. In the second chapter of his *Augsburger Chronik*, Zink included his autobiography. The account of his youth, up to his becoming a citizen of Augsburg—an expensive and prestigious privilege that granted social and economic advantage—was not without intrinsic, exemplary value for the city. The story of Zink as an *Augsburger* merged and coincided with the continuing history of Augsburg itself. The city became the vibrant, active subject, rather than the mere object of the chronicle.

Unofficial and official chroniclers alike viewed their prosperity as inextricably bound to their municipality, but they also identified themselves as members of the civic community, the empire, and Christendom. During the later medieval period the status of *Reichsstadt* heightened this identification. Imperial cities came to regard themselves as the very embodiment of the empire and imperial *reht* as a legal, judicial, and political entity. City chroniclers thus strove to expatiate upon the theme of city government by singing its praises and affirming its legitimacy.

In a later Augsburg chronicle of the city's Weavers' Guild, the so-called *Weberchronik* from the year 1544, Clemens Jäger, a guild master and civil servant, likened the municipal government of the imperial city of Augsburg to that of the Roman republic. By designating the mayor as consul, the village administrator as praetor, and other officials as their republican counterparts, Clemens employed historical precedents to extol his city's form of government as one founded on ancient and venerable tradition. The chronicle also served a political purpose. A guild-dominated city council had originated during the fourteenth-century uprisings of numerous influential artisans against the confining rule of hereditary oligarchy. Hence, the chronicler's appeal to the authority of wellknown historical precedents encouraged citizens to retain the established tradition of their city's government.

The city chronicles also recounted the role played by their respective civic communities in the progression of Christian history toward salvation. In doing so, they documented municipal history as a meaningful series of divine acts and interventions in the affairs of cities and of citizens who considered themselves to be agents of God's design. The chroniclers strove to demonstrate that even deleterious events and disruptions of civic life, whether from natural disasters, usurpation of power, or moral laxity, were not merely accidental occurrences but divine admonitions for repentance and reform. The dreadful appearance of comets, for example, commonly presaged ominous events. The comet of 1435 (noted in the *Konstanzer Chronik*), was interpreted as a warning of the election of an unworthy pope, and the comet of 1472 (recorded in the *Lübecker Ratschronik*), by turning its tail toward the Southwest, was seen to have foretold a plague in the Rhine area and war in France and Burgundy. Thus, city chronicles provided instruction on how to gain salvation and prosperity by learning from lessons past, present, and, perhaps, the future.

Late medieval city chronicles commonly rendered past, present, and anticipated future events as contemporaneous with the life of the chronicler and his city. As such, the perception of temporal history was a static one that focused on lasting values and enduring beliefs preserved within the "eternal"

present. This view affirmed municipal rights and privileges not only for the fleeting moment, but in perpetuity. As a record of at least nominally Christian communities, city chronicles also sought to promote some certainty of redemption through timeless, immediate examples of Gods ongoing benevolence toward their city and citizenry, as well as of His occasional displeasure, in order to spur moral reform. What distinguishes these chronicles from their earlier counterparts, however, is the value city chroniclers of the later medieval period placed on the rendering of history as verifiable facts and events. As scholars have noted, the city acquired its own *persona* during this period. City chronicles portrayed the city itself as playing a central role in the formation of its own history and in the definition of its urban identity and that of its citizens.

The origin of Dutch regional chronicles, a widespread and prevailing genre of historiography in the Low Countries, is related to the rise of territorial principalities and dynasties. Chronicles with regional interest also originated in monasteries and other spiritual centers, and, incidentally, in towns. The formation of the Burgundian state, in which most areas of the Netherlands of the fourteenth and fifteenth centuries were successively incorporated, gave the genre a new impulse. On the one hand, chronicle-writing was stimulated by the political aspirations of the Burgundian dukes; on the other, it reflected growing territorial self-consciousness.

Holland, where the counts took advantage of the monastery of Egmond as an intellectual center, was the undisputed historiographic center of the North. Several sources became important in chronicling the history of the rise of the county of Holland: the twelfth-century *Annales Egmundanenses*, with a fourteenth-century continuation by Willem, Procurator of Egmond, who also considers international affairs; the thirteenth-century *Chronicon Egmundanum*, an adaptation of the *Annales*; the Middle Dutch rhymed chronicle of Melis Stoke (ca. 1300), who was closely connected with the court, as was Claes Heynzenoon (*Hollantsche cronike* until 1409); the prose chronicle of the unoriginal *Clerc uten Lagen Landen*, a member of the chancery of the counts of Holland; and the influential *Chronographia* of Johannes Beka (ca. 1350), whose well-written chronicle was later translated into Middle Dutch. Beka also described the history of the diocese of Utrecht, Holland's constant enemy, and advocated a reconciliation between Holland and Utrecht because of their common origin. Jan Gerbrandszoon of Leyden (Johannis a Leydis), prior of a Haarlem monastery (ca. 1470), in his comprehensive *Chronicum comitum Hollandie et episcoporum Ultraiectensium* (Chronicle of the Duchy of Holland and the Bishopric of Utrecht) and the *Chronicon* by the Gorkum cleric Theodericus Pauli dealt with the same territories.

The historiographic output in the diocese of Utrecht, whose worldly authority was far-reaching but ineffective, lagged very much behind that of Holland. Around 1020 the monk Alpertus of Metz, who was related to the spiritual and secular aristocracy in the diocese, wrote his *De diversitate temporum* (On various times), an important source for our knowledge of the influential noble dynasties of the time. Two centuries later, an anonymous but competent writer, close to the bishop, wrote the *Quaedam narracio de Groninghe*, which dealt particularly with the bishops' military campaigns and other events in the northern part of their diocese.

In Frisia, which was able to withdraw from the authority of neighboring principalities, historiography flourished mainly in monasteries. The Premonstratensian monastery Bloemhof near Wittewierum and the monastery Thabor, of canons regular, were especially influential centers. They were the cradle of the *Chronica* of the abbots Emo and Menko (thirteenth century).

An important historical source for the county of Gelre, a duchy since 1339, is *De nobili principatu Gelrie et eius origine* by the cleric Willem de Berchen (who lived near Nijmegen), characterized by its reaction against the Burgundian penetration into the region.

In the South, the duchy of Brabant, the counties of Flanders, Hainault, and Namur, and the diocese of Liège were the main principalities. The chronicle genre flourished especially in the first two. In Brabant, territorial historiography began with a compilation of several genealogies of the ducal dynasty in order to legitimate its Carolingian descent: the *Chronica de origine ducum Brabantiae* (ca. 1300). Around 1290 the *Yeeste van de slag bij Woeringen*, by Jan van Heelu, was written. In light of Brahan's successful annexation of Limburg, Heelu defended the claims of the dynasty and demonstrated the loyalty to his sovereign lord. The *Brabantsche Yeesten* (ca. 1316) by the Antwerp alderman-clerk Jan van Boendale also attempted to reconcile the diverging interests of the Brabantine towns and the dynasty. In Hennen van Merchtenen's *Cronike van Brabant* (to 1414) Brabantian nationalism was harmoniously connected with the Burgundian transfer of power. For the duchy's new rulers, Edmond de Dynter, secretary to John and Philip of Burgundy, wrote a documented chronicle of Brabant until 1442: *Chronica nobilissimorum ducum Lotharingiae et Brabantiae. Die alder excellentste cronyke van Brabant*—published in 1497 by the printer Roland van den Dorpe of Antwerp—which traced the Burgundian dynasty to the Trojans via the Brabantine dukes and the Carolingians. This chronicle marked the end as well as the height of Brabantine historiography.

Flanders had many of the same characteristics as Brabant. The number of texts is considerable; their mutual relationship, however, is complex. The starting point is the *Flandria generosa* (ca. 1164), begun in the abbey at Saint-Omer and continued until 1347. This genealogy of the Flemish counts influenced the principal Flemish vernacular chronicles: the *Chronique de Flandre*, of which the oldest version—also called *Ancienne chronique de Flandre*—covers the period to 1342 and the latest version, to 1383; the *Rijmkroniek van Vlaanderen* (to 1405), which describes social disturbances in the fourteenth century; and the *Kronijk van Vlaanderen* (to 1467). Via the pro-Burgundian *Cronike ende genealogie van den princen ende graven van [...] Vlaenderlant* (to 1440), attributed to Johannes of Dixmude, the chronicle genre comes to a close in *Die excellente Cronike van Vlaanderen*, printed in Antwerp in 1531 by Willem Vorsterman.

The history of Hainault is partially treated by the well-informed Gislebert of Mons (d. 1225), chancellor and ambassador of Count Baudouin V, in his *Chronicon Hanoniense*. For the territories of Liège, two works are important: the *Historia et res gestae pontificum Leodiensium* by the Liegian canon and lawyer Jan van Hocsem (d. 1348), whose attention to economic issues is remarkable; and the legendary *Geste de Liège* by Jean d'Outremeuse (1338–1400), a chronicle interlacing the genres of the town chronicle and the Charlemagne romances.

In addition to regional chronicles, the history of the Low Country territories is, though often incidentally, treated by several well-known Burgundian historiographers, including Froissart and others.

Middle High German and early New High German compendia recounted the social, political, economic, and military history of a region or territory, chiefly to legitimize the territorial claims of the ruling nobility. The primary expression of these claims were chronicles which supported the *Landesfürsten* (regional princes) in their efforts to consolidate and expand their newly emerging territorial states. Numerous examples of such chronicles appear from the end of the thirteenth century and throughout the late medieval period.

Prominent among them is a prodigious early fourteenth-century work of nearly 100,000 verses, the Austrian Rhyme Chronicle (*Österreichische Reimchronik*) of Ottokar von Steiermark. The chronicler (ca. 1260/ 1265 to 1319/1321), possibly Ottokar aus der Geul, was a member of an administrative family in the service of the regional prince Otto II of Lichtenstein (son of Ulrich von Lichtenstein, the author of *Frauendienst*). Ottokar documents the reign of the Habsburg kings Rudolf and Albrecht as an amalgam of Austrian-Steiermark (Styrian) regional and imperial history. The work begins with the death of Emperor Frederick II in 1250 and ends with the uprising in Lower Austria against Duke Frederick I in 1309. The authors familiarity with vernacular literary works provided models for the chronicles depiction of courtly life and its rendering of courtly speech. He refers to courtly epics such as *Iwein*, *Parzival*, and *Willehalm*, and, among others, to works such as *Meier Helmbrecht* and the heroic epics, the *Nibelungenlied* and the *Dietrichepik*.

Ottokar chronicles the struggle between Ottokar II of Bohemia and the Habsburger Rudolf I, and favorably depicts the landed nobility's energetic support of the Habsburgs in putting an end to the Bohemian king's "unjust" territorial expansion. Although deemed worthy of praise by the chronicler as an exemplary king and brave knight, Ottokar II incurs God's wrath by chasing after worldly renown (*nach der Werlde lone*, 1. 16738). In addition to opinionated commentary, Ottokar, the chronicler, combines contrived materials such as fictitious accounts and dialogues with actual written and oral sources to promulgate what scholars have characterized as pro-Habsburg sentiment, albeit one in the interest of the Styrian-Austrian landed nobility.

Preceding Ottokar von Steiermark's work was the Book of Princes, or *Fürstenbuch*, by Jans Enikel. The author refers to himself in the prologue as a *rehter Wiener* (v. 19–23), a Viennese burgher in good standing, and he may well have been a property owner who enjoyed patrician status. Although his name is not documented in Viennese archives, that of his grandfather (noted in the prologue) appears frequently. Writing in the last quarter of the thirteenth century, Jans recounts the ancient founding of Vienna and the inception and dominant role of the Babenberger dynasty after Albrecht, names the first margrave to become a Christian, and describes in detail the final Babenberg rulers, Count Ludwig II and, in particular, Duke Frederick II (1230–1246). And though the laudable qualities of Duke Frederick II, *der vogt was in Österrich* (ll. 2119–2136), receive ample mention, the chronicler does not refrain from depicting the duke's attributes in a revealing account of his excesses. These include not only the fleecing of certain citizens of Vienna by devious financial means, but the rape of a young Viennese woman named Brünhild at an official court function—a despotic incident that led the outraged townspeople to drive the transgressor from their city.

It is during the account of these final Babenberg rulers that the chronicler first mentions the Viennese citizenry. In this context, he promotes the interests of the Viennese upper strata as patrician knights, "Ritterbürger" (*miles et civis*), and decidedly exaggerates their political and economic importance. In addition to the Book of Princes, a regional chronicle, Jans Enikel is also believed to be the author of a world chronicle (*Die Weltchronik*) which expresses emerging Austrian national pride.

Another prominent work of the period is the Braunschweiger (Brunswick) Rhymed Chronicle (*Braunschweigische Reimchronik*). This history of the Welf dynasty and that of the city of Braunschweig promoted the territorialization process under the Welf duke Albrecht I, the possible patron of the chronicle. Writing toward the end of the thirteenth century, the chronicler, possibly of the St. Blasius cloister in Braunschweig, advocated the interests of the Welf ruling house by hyperbolizing Albrecht I as a paragon of knightly virtues and the flower of his dynasty. Although the chronicle may have been completed during Albrecht's lifetime, it is likely that the patron at the time the work was completed was his oldest son and duke, Heinrich der Wunderliche, whose death was in 1322.

Many other regional chronicles from the fourteenth to the sixteenth century from the German-speaking lands have been preserved. Examples of these later works can be found in the *Kronike von Pruzinlant*, compiled by Nikolaus von Jeroschin (ca. 1290–1345) as a history of the Teutonic Order; *Deutscher Orden*, completed circa 1331–1341, and based on a Prussian chronicle (*Chronicon terrae Prussiae*) by the Teutonic knight Peter Dusburg from 1326; the Rhymed Mecklenburg Chronicle (*Mecklenburgische Reimchronik*) by Ernst von Kirchberg, commissioned by Duke Albrecht II of Mecklenburg during the second half of the fourteenth century; and the *Chronica de principibus terrae Bavarorum*, the first Bavarian regional chronicle (*Landeschronik*), compiled by Andreas von Regensburg, a religious chronicler from the local cloister St. Mang (*Augustinerchorherrenstift*), at the behest of Ludwig VII of Bavaria in 1425 and continued from 1428 until 1436.

Andreas von Regensburg also translated his work into German in *Die Chronik von den Fürsten von Bayern*. Another German-language chronicle was the *Schwäbische Chronik*, from the second half of the fifteenth century, compiled in prose by Thomas Lirer and printed in Ulm in several editions by Konrad Dinckmuth in 1485 and 1486. The latter edition is renowned as one of the finest illustrated histories of the period. The *Chronica Baioariorum* (Bavarian Chronicle) by Veit Arnepek (ca. 1435–96), was translated into German, *Chronik der Bayern*, by 1493. Other chronicles included the *Chronik von den Fürsten aus Bayern*, compiled by Hans Ebran von Wildenberg (1426-ca. 1502) chiefly as a genealogy of the Wittelsbach dynasty; the *Hand- und Hausbuch* (Handbook and Housebook), written by Konrad Stolle (ca. 1430–1505) as a regional history of Thuringia; and the *Landeschronik von Thüringen und Hessen*, by Wigand Gestenberg (1457–1522), who probably completed it after 1515.

Scholars have noted that the regional chronicles of the Swiss Confederation, e.g., the *Berner Chronik* (1420) by Konrad Justinger (d. 1438) and his later collaborators such as Diebold Schilling, the Elder (ca. 1430–1486) and Diebold Schilling, the Younger (1460-ca. 1520), comprise a pronounced variant of the genre in their glorification of the confederations separation from the empire and its struggle for sovereignty. The sixteenth-century historical source that Friedrich Schiller used for his *Wilhelm Tell*, the *Chronicon helveticum*, by Aegidius Tschudi (1505–1572), may well be deemed the zenith of Swiss regional chronicles.

Historical writings that deal with biblical, ecclesiastical, and profane history, starting from the Creation or the birth of Christ, world chronicles operate within a universal and salvation-oriented system. The chronicles are organized around biblically founded periods (*aetates*), according to the theory of four world empires or periods of rule.

The genre originated in the Low Countries in the eleventh century in spiritual and, especially, monastic circles. The monumental *Chronographica sive Chronica* by the learned Benedictine Sigebert of Gembloux (1029–1112), who continued the world chronicle of Eusebius/ Hieronymus from 381 until his own time, is an early and very influential specimen of the genre. Several authors extended the chronicle, including some from the monasteries of Affligem and Ourscamps.

The genre remained popular in monastic circles until the end of the Middle Ages. At the end of the thirteenth century, Balduinus, a Norbertine monk of the monastery Ninove, in East Flanders, and Johannes de Thielrode, monk of St. Baaf's Abbey in Gent, each completed a world chronicle. The latter, covering the period up to 1130, is principally based on the *Flandria generosa*. In the fifteenth century, Cornelius Zantfliet (d. 1461), a monk in Liège, wrote a relatively accurate world chronicle and, in a Cistercian abbey, Ter Duinen Jan Brandon (d. 1428), Egidius de Roye (d. 1478), and Adriaan de Budt (d. 1488) produced their *Chronodromon*, a chronicle with a particularly Burgundian viewpoint, based on several Flemish sources.

From the second half of the thirteenth century, the *Chronicon summorum pontificum imperatorumque ac de septem aetatibus mundi* by Martinus van Troppau (d. 1278) and the *Speculum historiale* by Vincentius of Beauvais (d. 1264) surpassed Sigebert's chronicle in influence. Both works were frequently used by authors of world chronicles in the vernacular. These had begun to appear during the same period and were written by clerics commissioned by secular principals. Among them was a world chronicle by Jacob van Maerlant and the priest Lodewijk van Velthem (near Louvain), who continued Maerlant's translation to 1250 for Maria van Berlaer. For Gerard van Voorne, viscount of Zeeland, Velthem wrote a continuation of the chronicle to 1316, with special attention to the end of time and contemporary events.

In courtly circles, around 1400, Claes Heynenzoon produced a world chronicle, also based on Vincentius and Martinus. Claes was a herald, first in the service of the duke of Gelre and afterwards of Willem VI, count of Holland, to whom he dedicated his work. A few decades later a world chronicle appeared with no direct connection to monasteries or principalities: the *Chronicon Tielense*, written by a layman from the area near Tiel, (begun ca. 1425; a definitive version ca. 1450) and based on, among others, chronicles by Martinus of Troppau and Johannes Beka. Especially in its final sections, this chronicle recounts the history of adjacent territorial principalities.

Around the year 1480, the historian Theodericus Pauli, a priest in Gorkum, began his tripartite *Chronicon universale*, which extends until 1488, a skillful compilation based on an impressive number of sources. At about the same time, the first printed world chronicle appeared: the *Fasciculus temporum* by Werner Rolevinck in Cologne in 1474; a translated and extensive edition was produced a few years later by the printer Jan Veldenaer (Utrecht, 1480).

Although medieval Latin historiography was fully developed and highly advanced by the mid-twelfth century (examples include Ekkehard of Aura's world chronicle completed by 1125, Otto of Freising's world chronicle composed between 1143 and 1146, and the chronicle by Frutolf of Michelsberg in the early twelfth century), world chronicles in German were not composed until the thirteenth century. The anonymous poet of the *Annolied* (ca. 1080/1085 or shortly after 1105) and the composer of the *Kaiserchronik* (Chronicle of the Emperors, ca. 1135–1147) had already incorporated extensive historiographical information into their texts, but their dominant framework continued to be the literary and hagiographical narrative.

Shortly before 1218, the priest Eberhard wrote the *Gandersheimer Reimchronik*, in which the history of his convent, seen from a global perspective, received primary attention. This world chronicle was written in Low German and based on local oral traditions, but the author also mentioned political events in Rome and in the German empire. Eberhard intended his work primarily as a way to audienticate the convents claims of independence from the bishop's jurisdiction, and he strongly criticized courtly culture and the vices of the nobility as a class.

Another Low German writer (Eike von Repgow?) created the enormously popular *Sächsische Weltchronik* (Saxon World Chronicle) sometime in the middle of the thirteenth century. In this chronicle, the usual verse is almost completely replaced by prose. The text takes the reader from biblical times (Genesis) to the thirteenth century C.E. but focuses on the history of the Roman Empire. Various versions of this chronicle exist; one was translated into Middle High German, and another, into Latin.

Rudolf von Ems was the first to write a true world chronicle in Middle High German. Commissioned by German king Conrad IV sometime in the 1240s, the chronicle was designed to serve as political propaganda. Since Conrad had to struggle to maintain the power base of the Hohenstaufens, Rudolf portrayed the imperial family as sacrosanct and included within the text an extensive hymn on the Hohenstaufen. This was all to no avail, however, as Conrad died in 1251 while in Italy, and the German empire subsequently collapsed. Rudolf himself had accompanied Conrad on his military campaign and died in the same year, leaving his chronicle as a fragment of 33,500 verses.

The chronicle, divided into six major historical periods, begins in biblical times and first breaks off after an account of King Solomon. An anonymous writer continued the chronicle for 2,900 verses, ending his work with the prophet Eli. Didactic elements were mostly missing in Rudolf's work; instead, the author emphasized a theological worldview by contrasting the divine world (*Gotis stat*) with the secular world (*der weltlichen stat*). In addition, Rudolf included accounts of ancient Greece, Troy, and Italy, developed a cosmography, and discussed the current geopolitical situation in Germany in the context of the history of royal rulers from the time of the Old Testament to the Hohenstaufen family (Conrad IV). Both stylistically and conceptually, Rudolf closely followed the model of the courtly romance in his world chronicle—one reason for the great popularity of his work.

An anonymous author created the *Chritherre-Chronik* at the request of the margrave Henry III of Meißen (1247–1288) sometime in the second half of the thirteenth century. He relied heavily on the Bible, especially the Book of Judges, and closely followed the model of clerical literature aimed at religious teaching. Around 1270/1280 the prose chronicle *Buch der Könige* (Book of Kings) was written by a member of the Augsburg Franciscans, who also included a *Prosa-Kaiserchronik*, a prose version modeled after the twelfth-century rhymed *Kaiserchronik*.

One of the most popular world chronicles proved to be Jans Enikel's *Weltchronik* (World Chronicle) from the second half of the thirteenth century. Enikel, Viennese and of noble origin, found a very enthusiastic audience, as is evident by the surviving thirty-nine manuscripts (this was a lot for the time). He emphasized the Old Testament period and history since the foundation of Rome, but dealt very little with the present. Enikel used the *Imago mundi* (Image of the World) of the theologian Honorius Augustodunensis as his model, but he also incorporated many narrative texts for the entertainment of his readers.

The Magdeburger *Weichbildchronik* (Town Chronicle), composed in prose at about the same time, served as introductory text to a law book and combined world history with local history up to the time of King William of Holland (d. 1256). Other German world chronicles from the late thirteenth century were the *Braunschweigische Reimchronik* (Braunschweig/Brunswick Rhymed Chronicle), the *Livländische Reimchronik* (Livland Rhymed Chronicle), and the *Österreichische Reimchronik* (Austrian Rhymed Chronicle).

In the first half of the fourteenth century Heinrich von München composed a massive world chronicle, which consisted of 56,000 to 100,000 verses, the length varying among the eighteen surviving manuscripts. Apart from a chronological survey, Heinrich also included legends, hagiographic narratives, and even pieces from secular literature. In 1337 an unknown author wrote the *Oberrheinische Chronik* (Upper Rhenish Chronicle) with particular focus on the history of the papacy and the German emperors. Jacob Twinger von Königshofen's *Deutsche Chronik* (German Chronicle) from 1386 combines global history with local history. Dietrich Engelhus (ca. 1362–1434) composed a world chronicle in Latin, which he translated into German in 1424. On the basis of his *Cronica Novella* (New Chronicle), Hermann Komer (ca. 1365–1438), a Lübeck Dominican, created a Low German translation in which he traced world history until the time of his own death. The Ulm city doctor and translator Heinrich Steinhöwel printed a world chronicle in 1473 entitled *Tütsche Cronica* (German Chronicle), which purported to cover the entire time period from Genesis to Emperor Frederick II. Jacob Köbel extended the chronicle to the year 1531. The two Nuremberg council scribes Johannes Plattenberger and Theodorich Truchsess produced a German world chronicle in 1459 entitled *Excerpta chronicarum* (Excerpts from the Chronicles), a massive compilation from previous works. This, in turn, was an influential source for Hartmann Schedel (1440–1514), a Nuremberg medical doctor and the author of the monumental *Liber Chronicarum* (Book of Chronicles), first printed in 1493.

Many of these world chronicles were constantly rewritten, expanded, copied, and modified to meet new expectations, widen historical horizons, and offer different evaluations of past events. Often deriving their basic material from Latin chronicles, they were extremely well received by learned audiences, as we can tell from the many manuscript copies (e.g., there are more than one hundred manuscripts and fragments of the *ChritherreChronik*). In many cases, however, they were more religious than historical, and often included literary elements for general entertainment. Many of the world chronicles were richly illustrated.

Chur

The only urban settlement in the Roman province of *Raetia prima*, the capital of the present canton of Graubünden in Switzerland, Chur lies at the confluence of the Plessur and Rhine rivers in the foothills of the Alps. At the heart of the medieval city is the so-called *Hof* (court) on an elevated rock plateau inside the late Roman fort. Here the bishops, documented from 451, erected their cathedral.

Several early medieval churches have been documented archeologically. The most important is the twostory St. Stephen's from the fifth and sixth centuries, the tomb site for the bishops of Chur; remains of its once rich decoration with mosaics and paintings are preserved. Typical for the Carolingian period are the single-aisled longitudinal churches with three half-round apses, as seen in the parish church of St. Martin, rebuilt in the late Gothic period. The church of St. Luzi, also of this type, was rebuilt as a Premonstratensian church in the twelfth century. The only remnant of the earlier church is the Carolingian ring crypt for the relics of the "apostle" Saint Luzius, who was thought to be responsible for the conversion of the bishopric to Christianity.

The predecessors to the Romanesque cathedral of St. Mary's on the Hof have only been partially excavated. The choir of the vaulted three-bay basilica is elevated over a hall crypt; a rectangular choir bay precedes the square apse. The final dedication is dated 1272. The building contains important architectural sculpture on the interior: the capitals increase in quality from west to east with the most significant in the choir. Indirect stylistic influences from northern Italy seem probable. At the entrance to the crypt, four statue columns from about 1200 represent apostles standing on lions; these nearly life-sized figures may have come from a lectern. The late Gothic winged altarpiece on the high altar was made between 1486 and 1492 by Jacob Russ of Ravensburg. The cathedral treasury preserves numerous late antique and medieval relics, reliquaries, crosses, sculptures, and panel paintings, which document the uninterrupted continuity of the bishopric back into the early Christian period.

Cistercian Art and Architecture

The Cistercian order began as a reform of Benedictine monasticism at the monasteries of Cîteaux and Clairvaux in the eastern French region of Burgundy. This reform included a different, more austere, attitude towards the visual arts and architecture than was common in contemporary Benedictine practice. These restrictions, believed necessary to preserve monastic life from distraction and to save money for the poor, were promulgated in a series of general canons restricting most kinds of liturgical art.

With its rigorous reforms and with a spokesman of extremely high caliber in Saint Bernard of Clairvaux (d. 1153), the Cistercian order became extremely popular during the twelfth century and spread rapidly. The original house of Cîteaux (1098) had four daughter houses founded by 1115, including Morimond (1115). Most of the early German Cistercian houses for men were dependencies of Morimond, with several important houses founded before 1150 including Ebrach (1127), Altenberg (1133), Heiligenkreuz (1135), and Georgenthal (1142), each of which founded numerous dependencies of its own. German Cistercian houses for women included Wechterswinkel (before 1144), which had ties to the male house at Ebrach or Bildhausen, and later had a large group of women's houses as dependencies.

Architecturally, monasteries were supposed to be plain and functional. The earliest Cistercian churches consisted of a nave with a simple square east end without towers or crypt. The pointed arches and meticulous stone work of French Cistercian architecture are closely related to the emerging Gothic style of the Île-de-France, and the Cistercians are frequently credited with bringing elements of that style to Germany.

Although the strong central control of Cîteaux created overall uniformity in Cistercian architecture, German Cistercian buildings also reflect local Romanesque architectural traditions. Square apses, like that at Ebrach, were typical, but other types of apses were preferred in certain regions; these include the polygon, as at Bronnbach, and the apse *en échelon* (in stepped formation), which can be seen, for example, at Altenberg. Cistercian churches do not usually have crypts, but German churches built for cloistered women include crypts under the raised nun's gallery, as at Frauental.

Because of demands that monasteries of this order be in isolated locations and be self-sufficient, and that all monks participate in manual labor, Cistercians were involved in considerable technical innovation, especially mining and metallurgy, which were practiced at the German Cistercian houses of Walkenreid, Sittichenbach, and Alzelle.

Many Cistercian abbeys illuminated manuscripts; the abbey of Ebrach, for example, had a celebrated scriptorium active from the thirteenth to the fifteenth century. Sifridus Vitulus was a particularly notable scribe and illuminator working at Ebrach in the early fourteenth century. Cistercian women were also active as illuminators, as is suggested by a gradual from a Cistercian convent at Frauenroth (Stuttgart, Württembergische Landesbibliothek, manuscript no. HB I 246, 14th c.).

Clothing, Costume, and Fashion

In addition to its protective function, dress in medieval Germany also served purposes of social differentiation. Already under the Franks, clothing followed strict rules: both sexes wore similar tunic-like garments dependent on Roman models. Women's robes reached to the ground; men complemented their shorter garment with a mantle clasped on the right shoulder and leggings held up by fabric bands twisted around the legs. Functionality and poverty dictated the farmers' typical smocks and pants; people of lower social position were forbidden to wear the robes, fabrics, and colors reserved for feudal lords.

In the tenth and eleventh centuries, the lengthening of the man's robe led to a single look for members of the

Thirteenth-century fashion: Empress Adelheid and Emperor Otto I, Meissen, Cathedral, choir, north wall. Photograph: Joan A. Holladay

upper classes, lay and religious, men and women; common people continued to wear the shorter robe. Byzantine influence became apparent in women's clothing in the eleventh century in the use of expensive fabrics and decoration and the lengthening of the undergarment to form a train.

Extravagant cuts mark the clothing of the twelfth and thirteenth centuries: tightly cut upper garments that emphasized the body, overgarments (*Suckenie*) with removable decorative sleeves, and mantles with tassels. Wimples, chaplets, and various forms of veils were the most common forms of headwear. In the course of the thirteenth century, how the clothes were worn became important: the gathering up of overlong robes revealed the underdress in a contrasting color as well as the masses of fabric that marked the wearer's wealth. The arrangement of folds and the use of coded gestures, such as the linking of the finger through the tassel cord, conveyed information about the wearer's social status. Men's clothing was similar to women's but used less fabric and fewer folds; robes of different colors worn over one another and garments divided vertically into two colors (*mi-parti*) also made clothing more colorful.

Unusually slim proportions are characteristic of fourteenth-century clothing: garments were cut more tightly, and trains, sleeves, and toes of pointed shoes were lengthened according to the status of the wearer. The most striking innovations were the *decolleté* and the *Kruseler*, a veil with a crimped or pleated edge. In the middle of the fourteenth century, men's clothing changed fundamentally when the long outer garment, one of the most important privileges of the nobility, was replaced by the *Schecke*, a short garment that accentuated the body. The new fitted style made buttons and buttonholes necessary; like belts (*Dupsing*), they were also fashionable accessories. Little bells attached to the belt were a typically German fashion statement, epitomizing elegant dress for both sexes.

In the fifteenth century, the *Schecke* was increasingly shortened, becoming a doublet, and the leggings became the pants with codpiece preferred by younger men. Characteristic of the second half of the century is the *Schaube*, a long cloak with collar open in the front, and the beret. The tight bodice with a shirt underneath similar to a man's developed from the women's upper garment to cover the bosom.

Clovis (481–511)

The most important king of the Merovingian dynasty, Clovis was a *magnus et egregius pugnator*, according to Gregory of Tours. A "brutal and treacherous warrior," he unified the Frankish kingdoms and laid the foundation for later Frankish power and influence. He cultivated good relations with the bishops in his realm and was the first Frankish king to convert to Christianity.

Clovis waged a series of wars to expand the boundaries of his realm. Although there exists much debate over the exact chronology of these events and even over the extent of Clovis' war-making, it is likely that he pursued an aggressive foreign policy that led to an enlarged Frankish kingdom. His many battles included victories over Syagrius in 486, the Alamans at the battle of Tolbiac in 496, the Burgundians in 500, the Visigoths in 507, and various lesser Frankish kings in his last years.

The wars against the Alamans and Visigoths were given religious significance by Gregory, an interpretation of these events that reveals how important the conversion of Clovis was to this Gallo-Roman bishop. The king's conversion, under the influence of his wife Chlothild and in the face of defeat at the battle of Tolbiac, may be little more than pious legend, but Clovis did convert to Catholic Christianity at some point between 496 and 508. It is no longer generally held that Clovis converted directly to Catholic Christianity from paganism, but it is believed that he converted first to Arian Christianity or, at least, was sympathetic to the Arian confession. His conversion did not greatly influence Frankish belief, but it did solidify relations with the Catholic hierarchy in his realm.

In his last years, Clovis' power came to be recognized by the emperor in Constantinople—who may have granted him an honorary consulship—and in Ostrogothic (East Gothic) Italy. Also in his last years, Clovis focused more on domestic policy by holding a church council at Orléans and by issuing the Salic (Salian) Law, an act which suggests the influence of Roman legal and administrative traditions on the king. At his death, the kingdom was divided among his sons, establishing a tradition that would continue throughout Merovingian history.

Coblenz

Coblenz lies at the confluence of the Moselle and Rhine rivers and at the meeting point of four Rhine schist massifs. Founded by the Romans in 9 B.C.E. as *Castrum ad Confluentes* (whence the corrupted form *Coblenz*) on the left bank of the Rhine, it was an important point along the frontier or *limes*. In the fifth century, it was destroyed by the Franks, who then built a *Königshof* (regal court) on the ruins. The settlement that grew around this fortification had little importance early on: according to Gregory of Tours, the Frankish Coblenz of 585 was too small to accommodate a royal delegation from King Guntrams to his cousin Sigebert within its walls.

In 807 Charlemagne held a *Gerichtstag*, or session of the imperial court, here. From this point onward, the medieval town began to grow in importance. At the assemblies and *Fürstentage* (princely diets) which were held here, important decisions were made concerning affairs of the Carolingian empire. Louis the Pious spent time at Coblenz in 819 and 823, and the presence of Louis and his wife at the consecration of the original St. Castor church at Coblenz in 836 by Archbishop Hetti of Trier, added special significance as well.

Six years later (842), and again in 848 and 860, Coblenz was the site where the three kings—Lothar, Louis the German, and Charles the Bald—negotiated the partition of their fathers and grandfather's empire. In 886, Coblenz, together with Andernach and Sinzig, was the price for which the Viking Gottfried would cease his ravaging and make peace with Charles the Fat.

What had originally been an imperial town became an episcopal one in 1018 when Emperor Henry II granted the *Königshof* to the archbishop of Trier; at the same time, Trier acquired the strategically located fortress Ehrenbreitstein, which had been built on the opposite bank of the Rhine in the tenth century. The new lords attempted to improve the appearance and well-being of the town, which, by the twelfth century, had become an important trading center, controlling trade on both rivers.

At times, the town was the residence of the archbishops. Reflecting the growing significance of Coblenz was the church of St. Florin, which dates from ca. 1100, and the Liebfraukirche, the choir of which was begun in the twelfth century. A "customs roll" from the early twelfth century provides a unique look into where people traded goods—both raw materials and finished products—at the time. The town was chartered in 1214.

In 1208 Archbishop John I of Trier expanded the collegiate church of St. Castor. Eight years later, the Teutonic Knights established a *Komturei* (fortified residence) next to this church on the triangle of land where the Mosel joins the Rhine. From this point onward, the name *Deutsches Eck* (German Corner) has remained as the designation for this geographical nexus. The Dominicans were introduced into Coblenz in 1233, providing a bulwark against heretical activities that had been noticed at Coblenz, Mainz, and Cologne during the latter part of the previous century.

Archbishop Arnold of Trier secured the rights of advocacy over Coblenz in 1253 from the counts of Nassau. In the previous year, he had begun to build a wall around that portion of the residential area that had outgrown the old Frankish town. Additional portions of the new town wall were built by the burghers, who complained to Archbishop Henry of Vinstingen about the lack of protection on the land side. Fearing a diminution of his authority in the town, Henry in 1280 erected an archiepiscopal fortress nearby.

Coblenz was the favorite residence of Baldwin of Luxemburg, Archbishop of Trier in the fourteenth century, who was the most powerful and influential of the medieval metropolitans. In 1343 he began constructing a fourteen-arch bridge across the Rhine, something that had not existed at Coblenz for more than 800 years. Named for him, the structure still stands today. At nearby Rens, Baldwin helped secure the election of his brother Henry as German emperor in 1308. During his regime, the German princes, under the presidency of Louis the Bavarian, came to Coblenz in 1338 for a dazzling assembly. King Edward III of England appeared as well, seeking help against France from the Germans.

Coburg

Very little information about Coburg's early history has survived. The name is first mentioned in 1056 when Queen Richeza of Poland transferred her holdings in Coburg to the archbishop of Cologne. Other documents from the late eleventh century attest to the presence of a church that was surrounded by a walled settlement strategically located on a hill overlooking the Itz valley. The fortified castle, *Veste Coburg*, was probably begun by the dukes of Andechs-Meran. By the thirteenth century, a town existed in the valley below the earlier settlement. Before 1217, construction of a parish church and priory began. The church was named after the town patron, Saint Mauritius, a Moor whose head is represented in the city seal. The present church of St. Moritz is a late Gothic, fourteenth century, three-aisle *Hallenkirche* (hall church), the interior of which was later ornamented in Baroque style. The establishment of a mint in 1268 presupposes the presence of thriving trade and commerce in Coburg. Louis of Bavaria granted the rights of self-government to the city in 1331. The dukes of Wettin (Saxony) made Coburg their center of government in 1353, and in establishing residence there during the sixteenth century, increased the political and cultural importance of the city. The painter Lucas Cranach the Elder visited Coburg several times between 1500 and 1506 while working on commissions for the dukes. Cranach is responsible for the oldest extant representations of the fortress, one of which is found on the left wing of the altarpiece in Dresden known as the *Katarinenaltar* (Catherine Altar, 1506).

Coinage and Mints

The first German coins created in the time of the great migrations by the Franks and Merovingians (fifth century) were modeled on Roman-Byzantine coinage. The gold coin *solidus* was the main unit, but its third, the *triens* was the more common (ca. 1.4 grams). The fines of the Salian Law (508–511) mention a silver coinage in which 40 *denarii* equalled one *solidus*.

With the reforms of Pepin III (751–768), the silver *denarius* replaced the gold coin, and minting became solely a royal prerogative. The name of the king began to appear on the coins, and private coins disappeared. The number of mints was reduced.

In the 790s, Charlemagne (768–814) reformed the coinage by increasing the weight of the minting pound to 408.24 gr., which equalled 240 *denar/pfennig* coins (1.7 gr.). This system became almost universal in Europe in the eighth to twelfth centuries. The accounting system defined twelve *pfennig* as a *solidus/schilling*, and twenty *schilling* as a *libra/pfund*, but only the penny, halfpenny, and farthing (a quarter of a penny) were minted. Most mints were located in the Rhineland towns of Aachen, Bonn, Cologne, Mainz, and Trier.

The Ottonian and Salian period (ca. 950–1125) was the age of the *Ferhandelsdenar* (foreign trade denar), when coins were used in foreign trade. Most coins left Germany and later appeared in Scandinavian, Polish, Baltic, and Russian hoards, apparently as a result of a well established Baltic trade. One hundred thousand *pfennig* have been found in Scandinavia, and 94,000, in Poland and Pomerania; the fact that only 30,000 have been found in Germany may indicate a weak internal economy. The coins continued to be of almost the same weight, even though several ecclesiastical institutions obtained minting privileges in the tenth century. The great variety of types was a threat to the unity of the German coinage.

Another base, the *mark*, was first mentioned in 1015. It was of Scandinavian origin and weighed eight Roman ounces (*øre*, 218.3 gr.). Around 1100 the *mark* began to supplant the *pfund*. Most prominent was the *mark* of Cologne, which had various values: The currency *mark* (210.24 gr.) consisted of 12 *schilling*, or 144 *pfennig*; the *mark* of weight (215.5 gr.) equalled 16 *Lot* (of 4 *Kvintin* of 16 *ort* each). The commercial *mark* weight was 200 g. The *mark* of Cologne (233.85 gr.) became the basis of currency in Germany 1559–1857.

During the Hohenstaufen period (1138–1254), the national minting system disintegrated. Only the coinage of Cologne and Westphalia kept their value, while the weight of the *pfennig* declined by half. When ecclesiastical and feudal lords obtained the privilege of minting, the coinage became regional and valid only in the area where it was produced. The individual areas were clearly distinguished by different weight standards. In the east, the coins were repeatedly called in and renewed (*abstractio et renovatio*). Typical coinage of the period 1150–1350 was the artistic *hohlpfennig* or *bracteates*, which had a relief on one side only.

With the explosive growth in the number of towns, trade also expanded, resulting in the need for rationalization of money circulation in the thirteenth and fourteenth centuries. Since the Emperor (*Kaiser*) no longer controlled coinage, minting had become strictly local.

To overcome the confusing variety of local coinage, districts allied with one another to mint coins of similar value and type. These alliances, called *Münzverein* (also *Münzbund*, minting alliances), blossomed in the fourteenth century; they appear in Lübeck-Hamburg from 1255 onward and in the Wendische *Münzbund* 1373/1379 to 1570. The Upper Rhenian *Münzbund* consisted of 74 mints (*Rappenmünzbund*) and lasted from 1386 to 1537.

In the late Middle Ages, the *Groschen* and the *Gulden* became the standard coinage in Europe. The *Groschen* was modeled on the silver coin, *Gros tournois* (4.22 gr.), introduced by Louis IX of France in 1266. The *Groschen* was especially popular in northern and western Germany between Oldenburg and the Rhineland, in Saxony, Thuringia, Hesse, and in the Netherlands. The coin flourished in the period 1360–1380 but became obsolete in 1400, except in Frankfurt, where it lasted to the sixteenth century. The *Gulden* (3.54 gr., 1252), a Florentine gold coin, was widely imitated and became standard coinage in the Rhenish *Münzbund*.

Cologne, Archdiocese

Bishop Irenaeus of Lyons records the existence of a Christian community in Cologne (*Köln*) by the late second century. Maternus, later bishop of Trier and the first documented bishop of Cologne, was present at the synod of Rome (313) and Arles (314). The troubles attending the arrival of the Franks in Cologne produced a gap in the list of bishops from the death of Bishop Severin (397) to ca. 565–567, but, through the patronage of the bishops of Trier and of the Frankish ruling house, the Cologne church was revived by the time of Bishop Kunibert's pontificate (ca. 626–648).

The late sixth century began a long period of close relations between the Cologne bishopric and the German monarchy that would last until the thirteenth century. The bishops served Merovingian kings as royal councilors, as ambassadors, and as regents for the Austrasian court in Cologne. The Carolingians established a special *amicitia* (friendly relationship) with the Cologne bishops, which found its fullest expression when Charlemagne raised Bishop Hildebald to metropolitan status over a vast province in 794/795. The archbishopric of Cologne would eventually encompass most of northwest Germany from Friesland and Saxony to lower Lotharingia, and include the bishoprics of Utrecht, Osnabrück, Minden, Münster, and Liège. The Norman destruction of the city interrupted Cologne's rise to predominance in the lower Rhineland and western Saxony, but the see was quickly revived under the Saxon monarchy. Emperor Otto I (936–973) appointed his youngest brother, Bruno, as both archbishop of Cologne and *archidux* of Lotharingia. Bruno (r. 953–965) also served as imperial regent from 961–965 and laid the foundations for archiepiscopal lordship over the city of Cologne and its environs which would last until 1288. During this period, archbishops of Cologne exercised royal rights of high justice, tolls, weights and measures, mints, markets, and defense.

By the mid-eleventh century the archbishops of Cologne had emerged as the preeminent ecclesiastics of the German episcopate. Since the pontificate of Archbishop Heribert (999–1021) they had enjoyed the right to crown and anoint the king-elect at Aachen, thereby playing a central role in all royal elections. As imperial princes, the archbishops became deeply involved in the emperors' Italian affairs; to expand their authority in this realm, they were given the office of chancellor of Italy from 1031 onward. Anno II (1256–1275) and Engelbert I (1215–1225) would also periodically continue to fulfill the role of imperial regent. Pope Leo IX confirmed these prerogatives in 1052, and added to them the authority to preside over the provincial synod.

Of course, this mixture of secular and spiritual lordship drew the archbishops of Cologne directly into the Investiture Controversy. In general the archbishops stood on the side of the Salian monarchs; yet, after the Concordat of Worms (1122), imperial influence over episcopal elections dwindled. Rainald of Dassel (1159–1167) and Philip of Heinsberg (1167–1191) were the last two archbishops who were raised to the see by imperial command without allowing for canonical elections. Thereafter, the local noble houses of Berg and Hochstaden competed within the cathedral chapter for the archiepiscopal honor, placing a combined eleven of the seventeen archbishops during the years 1132–1297.

In 1180 the archbishops added the duchy of Westphalia to their ducal domains in lower Lotharingia. Philip of Heinsberg received the newly created duchy by virtue of Emperor Frederick Barbarossa's dismantling of Welf ducal lands in Saxony. This period marks the high point of archiepiscopal involvement in imperial politics, a role requiring the archbishops to be away from Cologne for extended periods for embassies throughout Europe and for military campaigns in Italy during the papal schism.

By the early thirteenth century, however, the archbishops of Cologne moved away from a pro-Staufen policy and began to establish their own independent territorial principality. Archbishop Adolf I of Altena (1193–1203; 1212–16), during the Welf-Staufen struggle for the throne (*Thronstreit*), alternately supported Welf or Staufen candidates depending on the advantage that might pertain to his territorial independence. His coronation prerogative ensured that the Cologne archbishop would be at the center of political intrigue surrounding royal elections, but in Adolf I's case, this proved a mixed blessing. Although he was able, with English financial support, to obtain the election of Otto IV, his subsequent abandonment of the Welf for Philip of Swabia led to excommunication and deposition by Pope Innocent III as well as to deep discord with the burghers of Cologne.

Although Archbishop Engelbert I of Berg returned to the Staufen camp as regent of the young Henry (VII) and imperial regent for Emperor Frederick II, by the 1240s, Archbishop Conrad of Hochstaden (1238–1261) had joined the pope and archbishop of Mainz in an effective anti-Staufen policy that curtailed imperial power in Germany. The result was the establishment of the archbishop's territorial principality based on two duchies and provincial ecclesiastical authority.

Thereafter, the archbishops of Cologne were the real holders of royal authority in northwest Germany. In 1258 the archbishop Conrad of Hochstaden confirmed this status by obtaining from his personal candidate for royal election, Richard of Cornwall, not only confirmation of full imperial authority throughout the territorial principality, but, also, the right to install new bishops in the name of the king. By this time many nobles held fiefs of the archbishop of Cologne: the duke of Limburg, the counts of Saffenberg, Jülich, Berg, Are, Geldern, Kleve, Kessel, Zutphen, Armsberg, Altena, Mark, and Tecklenburg, and the lords of Hochstaden, Isenburg, Tomburg, Heinsberg, and Lippe.

At the peak of princely power in the mid-thirteenth century, the archbishops sought to tighten control over the autonomous burghers of Cologne and the local nobility of lower Lotharingia and Westphalia. This led to a half-century of civil wars, which culminated in the collapse of the archbishop's ducal power when Archbishop Siegfried of Westerburg was defeated at the Battle of Worringen (1288) at the hands of a coalition of Cologners and nobles from Brabant, Jülich, Berg, and Kleve. From this time on, the archbishops no longer resided in Cologne, but rather at their palaces in Bonn and Brühl.

By the late thirteenth century, the papacy had secured the right to appoint the archbishops of Cologne, and subsequent archbishops maintained good relations with Rome throughout the fourteenth and fifteenth centuries. As loyalists to the Avignon papacy, Archbishops Henry II of Virneburg (1304–1332) and Walram of Jülich (1332–1349) refused to recognize Ludwig of Bavaria's kingship. Archbishop William von Gennepe (1349–1362) was influential in the kingship of Charles IV (1346–1378) and in the editing of the Golden Bull (1356). But, by the mid-fifteenth century, the archbishopric had declined to a second-class power and no longer played a leading role in imperial politics.

Evidence for the beginning of a parish system on the left bank of the Rhine can be found in the sixth century, and for Westphalia by the end of the eighth century. Many of these episcopal parishes and tithes were eventually given to religious foundations and cloisters during the ninth and tenth centuries. By the eleventh century, the archdiaconate and the college of priors were fully functioning in the archdiocese. The cathedral chapter of canons is first documented in 866, but evidence suggests its origin in the seventh century. By the end of the twelfth century, there were thirty-six benefices for canons, sixteen supplementary benefices, and twenty benefices for cathedral scholars (*magistri*). Since around 1216, eight of the benefices had been reserved for canon priests.

As a sign of its importance in the archdiocese, the cathedral chapter had its own seal by 1106/1109. It often struggled with the college of priors in episcopal elections however, and by the mid-thirteenth century, had successfully asserted its independence and power. The chapter separated from the archbishopric (*Erzstift*) through the establishment of its own assembly and independent benefices, and by removing itself from liability for the archbishop's debts. Final success was achieved in 1250, when the college of priors was removed from episcopal elections and sons of ministerials and burghers were no longer accepted as candidates for the cathedral chapter. Thereafter, the canons lived the life of independent, powerful, and princely churchmen, certain to become archbishops.

Cologne, Art

Medieval Cologne grew up over a Roman settlement founded in 38 B.C.E. and elevated to the status of colony in 50 C.E. Christians were present in the city from the second century; bishops were named from the fourth. In the fourth century Saint Ursula and her 11,000 virgin

companions and Saint Gereon and soldiers from the Theban legion are supposed to have been martyred here and buried in the Roman cemeteries outside the city walls. At the beginning of the fifth century, a Frankish king replaced the Roman governor. The Franks occupied the Roman buildings, in many cases using them for their intended functions. Thus, both the street plan and the location of major public buildings in modern Cologne date back 2000 years to Roman times.

Cologne's important role in Charlemagne's campaign to Christianize Eastern Europe was acknowledged with its elevation to an archbishopric at the end of the eighth century. The archbishop was simultaneously the city's political and ecclesiastical overlord until Archbishop Siegfried's expulsion after his defeat at the Battle of Worringen in 1288. Thereafter, the city was ruled by a council comprised of patricians, tradesmen and representatives of the guilds. At this time the city, with a population of about 40,000, was the largest in Germany, and, with Paris and London, one of the largest in Europe. Its strategic position on the Rhine and its alliance with the Hansa made it an important trading center. It was also an important center of learning. From the mid-thirteenth century, the Franciscans, Dominicans, and Augustinians each established a *studium generale* or "college" here, and Albertus Magnus, Master Eckhart, and Duns Scotus were among those called to teach. The university was founded in 1389.

The late antique bishops of Cologne had their cathedral on the same site as the present church. Two richly endowed graves from the mid-sixth century attest to continued use of the site for religious purposes under the Franks. As early as the end of the sixth century, a new cathedral was erected on the easternmost part of the present site. It was replaced in the ninth century by a stately double-choir basilica, whose large scale corresponded to the political importance of the new archbishopric. This political claim was made more visible in renovations carried out in the middle of the tenth century under Archbishop Bruno, brother of the Holy Roman Emperor Otto I. Two additional aisles added along the sides of the nave heightened the resemblance to Old St. Peter's in Rome. This likeness, already established by the western choir dedicated to Saint Peter, reflected Cologne's reputation among German churches as *quasi mater et matrona* ("like a mother and a matron").

The acquisition of the relics of the Three Magi for the cathedral in 1164 and the resulting increase in pilgrim traffic, as well as the introduction of the new Gothic style in France, made the Carolingian cathedral appear small and out of date. Archbishop Konrad von Hochstaden laid the cornerstone of the present building in 1248. The choir, closely related to that of the cathedral at Amiens, was consecrated in 1322. After completion of the south portal of the west façade by sculptors of the Parler school about 1380, work slowed and finally came to a complete halt in 1560. The building was finished, largely according to medieval plan, between 1842 and 1880 as a symbol of the newly united Germany.

The decoration of the church interior centers on two main themes: the role of the Virgin, with Saint Peter, the cathedral's patron, in the history of salvation; and the place of the cathedral in the political life of the German realm. The Virgin stands with Christ at the head of the apostles on the piers of the choir (1280s), and the relief scenes at the center of each side of the high altar (1310s) describe episodes from her life. Paintings of scenes from her life also decorate the south choir screen (1330s).

The shrine of the Three Kings (ca. 1181–1230), attributed to Nicholas of Verdun, serves as the nexus for a program of overtly political content. As the first kings recognized by Christ, the Magi were seen as worthy forebears of the German kings who claimed divine sanction for their rule. This idea is expressed concretely on the front of the shrine where Otto IV, who donated the gold for this panel, is represented as the fourth magus. The status of the Archbishop of Cologne, who traditionally crowned newly elected kings at Aachen, was also enhanced by association with the magi.

The interdependence of the cathedral and the German kings is further highlighted in the program of the clerestory windows (1311), where forty-eight kings attend the Adoration of the Magi in the axis window; in the choir stalls (1308–1311), whose easternmost seats were reserved for the emperor and the pope; and on the choir screen (1330s), where painted sequences oppose images of the archbishops of Cologne with representations of the Roman and Holy Roman emperors.

The great churches of the tenth and eleventh centuries owe their origins to three of the city's archbishops: Bruno (953–965), Heribert (999–1021), and Anno (1056–1075). Simultaneously with his renovations to the cathedral, Archbishop Bruno founded the Benedictine abbey of St. Pantaleon on the site of

a Carolingian oratory just outside the city wall to the west. Bruno's patronage was continued by the Empress Theophanu, wife of Otto II; his successor, Warin, dedicated the building in 980. The powerful entry tract, known as a *Westwerk*, refers to the buildings imperial connections.

Across the river at Deutz, Archbishop Heribert founded a Benedictine abbey in 1002 over the ruins of a Roman fort. Dedicated in 1020, the church made deliberate reference to the palace chapel at Aachen, not only in the centralized ground plan, but in the double dedication to the Virgin and the Savior. The church was completely rebuilt in the seventeenth century.

Of the two churches founded by Archbishop Anno, only the church of St. George, founded in 1059 and dedicated in 1067, still stands. The patronage of the church of Sta. Maria ad gradus, dedicated in 1057, and its location at the east end of the cathedral were intended to further heighten Cologne's resemblance to Rome.

As the result of a dream, Anno added the long choir to the fourth-century church of St. Gereon, whose original structure is associated with Saint Helena, the mother of the Emperor Constantine. The centralized plan of the earlier structure marks its function as a martyrion, commemorating the saint and his martyred companions of the Theban legion.

Anno also dedicated the church of Sta. Maria im Kapitol, built over the site of the city's major Roman temple by the Abbess Ida, granddaughter of Emperor Otto II and Theophanu. Here, too, the choice of models was intended to heighten the importance of the foundation: as at the Early Christian Church of the Nativity in Bethlehem, the transept ends and choir are given almost identical rounded forms, resulting in a triconch. Of the well-preserved furnishings from the Middle Ages, only the wood doors date from the period before the church's dedication in 1065. The left door describes the Infancy of Christ in eleven relief scenes, while the right door depicts episodes from the Entry into Jerusalem to Pentecost.

A second period of intense building activity occurred from the early twelfth to the early thirteenth century. Many of the churches built in previous centuries were enlarged or remodeled, and a number of buildings preserved from still earlier periods were replaced. Aisles were added along the nave of St. Pantaleon. In the middle of the twelfth century, the nave and choir of St. George were given stone vaults, and, a few years later, the west choir was completely rebuilt on an extended plan. The enlarged choir at St. Gereon, now flanked by square towers, was dedicated in 1156. The membering of the exterior of the east end took up the arcaded pattern articulated at the church of St. Cassius and Florentius at Bonn three years earlier and became a standard for the Cologne churches of this period. It can be seen at both Great St. Martin (1150–1240) and the Church of the Apostles (1192-ca. 1220), which also reuse the triconch form first articulated in Cologne at Sta. Maria im Kapitol.

The Carolingian church at the burial site of the Holy Virgins, now St. Ursula, was replaced soon after excavators working on the city wall in 1106 discovered a Roman cemetery, which was presumed to contain the relics of the entire virgin band. The church of St. Severin, also built over a fourth-century cult site in a Roman cemetery, was finished with the consecration of the choir in 1237. St. Kunibert, the last of Cologne's corona of Romanesque churches, was dedicated in 1247, the year before work began on the new Gothic cathedral. The stylistic similarity of these numerous Romanesque churches gives Cologne's religious architecture a unified look even today.

In this period, too, should be placed the great golden shrines that once marked the treasuries of nearly all Cologne's churches. These copper- and silver-gilt shrines typically take a simplified church-form and measure over one and a half meters long. Seated apostles or other saints in *repoussé* (repose) fill the arcades along the long sides, and relief or enamel scenes of the saint's life and martyrdom decorate the sloped roof. The shrine of Saint Heribert, ca. 1160–1170, is among the best preserved of these works, but the contemporary shrine for Saint Ursula, now heavily restored, and that of her fiancé Aetherius (ca. 1170) are still housed at the church of St. Ursula. Those for Saint Maurinus (ca. 1170) and Saint Albinus (1186) are at St. Pantaleon. The Three Kings' shrine in the cathedral (ca. 1181–1230) is the latest and grandest of the series.

Even before the decision to build a new cathedral, the Franciscans had begun construction of a church in the Gothic style near the city center in 1246. The churches of the Dominicans and the Poor Clares, erected in the next decades, are no longer preserved. The new Gothic choir erected at St. Ursula's echoes the forms of the Sainte-Chapelle, the royal chapel built in the palace at Paris between 1241 and 1248. The choir of St. Ursula's, together with that added to the palace chapel at Aachen in the middle of the fourteenth century, another follower of the Sainte-Chapelle, in turn influenced the new choir added to the church of St. Andreas between 1414 and 1420. In 1466 and 1493, two of Cologne's leading patrician families constructed small chapels in Late Gothic style in the corners between the lobes of the triconch at Sta. Maria im Kapitol.

Until 1106, when areas to the north, west, and south were incorporated into the city, Cologne was contained within the Roman wall. A new wall, erected between about 1180 and the middle of the thirteenth century, was razed in the nineteenth century to provide space for the ring road surrounding the inner city. A number of the gates that gave access through the wall are preserved: the *Ullreppforte* and *Severinstor* at the south and the *Eigelsteintor* at the north. Of the stately houses built by the local patricians, only the house of the Overstolz family still stands. Its arcaded front and fragments of interior painting attest to its decoratively representative intentions.

The *Rathaus* (city hall), erected over the site of the Roman *praetorium*, was also intended to proclaim the city's status. The oldest preserved part, the Hansa Hall, dates to the 1330s. Here, larger than life-sized sculptured figures of the Nine Heroes present Old Testament, Early Christian, and medieval role models for the decision makers in the room below. Prophet figures on the opposite wall and the building's tower, one of the defining monuments of the cityscape, date to the beginning of the fifteenth century.

As early as the Ottonian period, Cologne was a center for both sculpture and painting. In addition to the doors at Sta. Maria im Kapitol, the Gero cross (969–976) and some twenty illuminated manuscripts provide evidence of the high quality of artistic production in the city around the time of the millennium. The paintings in the vaults of the parish church of St. Maria Lyskirchen (1220/30–1270) precede the numerous works created in a fully developed Gothic style in the years around 1300. In addition to the painted and sculpted decoration created for the cathedral choir in the years of its construction, polychromed (multi-colored) wood sculptures were produced in the city in great numbers, especially figures of the Virgin and wooden busts for the relics of Saint Ursula and her companions. Illuminators were also active, producing manuscripts for religious foundations and private patrons both inside and outside the city.

The International Style is represented in Cologne by the paintings of the so-called Master of Saint Veronica and a number of so-called Soft Style Madonnas, including figures at the cathedral, Sta. Maria Lyskirchen, and St. Gereon. The work of Stefan Lochner (d. 1451) exemplifies the increasing realism of the succeeding period. The city's two best known sculptors in the fifteenth century were Konrad Kuyn, who also served as master of the works at the cathedral, and Tilman van der Burch.

Cologne, History

Cologne (German *Köln*, from Latin *colonia* "colony") was the largest medieval German city, with a population of ca. 40,000 by the early fourteenth century. Geographically favored as a commercial and administrative center, the city was located at the southern end of the lower Rhineland where its natural harbor converged with the east-west land routes. Cologne was famous throughout Europe for its exports of wine (especially to England), metals, and manufactured goods such as textiles, armor and weapons, dressed furs, leather and felt goods, glass ceramics, and goldwork. It was also a major trade emporium, hosting three yearly fairs from the eleventh century onward and enjoying the right of staple (commercial supplier) from 1259.

The Romans initially resettled a Germanic tribe known as the Ubii on this site in 38 B.C.E. This *oppidum Ubiorum* was then superseded in 50 C.E. by a Roman colony named after the empress Agrippina (who had been born there), complete with a stone wall and nine gates. Hence, the modern name Cologne is derived from the Latin appellation: *Colonia Claudia Ara Agrippinensium*. The emperor Constantine further fortified this city of 98.6 hectares with a fort (*Kastell Divitia*) on the right bank of the Rhine (Deutz) and joined the two with a bridge across the river during the years 310–315 C.E. By 90 C.E. Cologne had become the Roman capital of Lower Germany. Upon the arrival of the Franks in the mid-fourth century the colony declined rapidly, although it became a residence for the Ripuarian Frankish kings and retained a bishop's see and three churches of martyrs (St. Severin, St. Gereon, St. Ursula). Charlemagne eventually raised the bishopric to metropolitan status, thus assuring the archbishops of Cologne a vast archdiocese in northern Germany.

After Cologne's destruction by the Vikings in 881–882, a distinctly medieval city began to emerge. The Saxon emperor Otto I appointed his youngest brother, Bruno, archbishop of Cologne, and under Bruno I (ca. 925–985), the *portus* was once again a fortified wall and mercantile activity quickly expanded. The emperor also gave Bruno the duchy of Lotharingia (Lorraine) with all its attendant rights of jurisdiction (high justice, tolls, weights and measures, mints, markets, defense). The archbishops of Cologne became imperial princes, with Cologne as the capital of their domains. This meant that their ducal authority also extended to the city itself, although the archbishops' jurisdiction directly affected most of the population only in the areas of the courts and economic policy. An independent-minded citizenry proceeded to settle Cologne, and friction soon developed. In 1074 the burghers rebelled against the heavy hand of Archbishop Anno II's rule. In subsequent years, municipal leaders often turned to the monarch for relief against their *Stadtherren*; they even defended the Salian Henry IV against his rebellious son Henry V in 1106 and were rewarded with imperial authorization to extend and maintain the city's fortifications—until then the prerogative of the archbishops.

Few conflicts developed during the twelfth century because the archbishops were most often away from the city on imperial business. As archchancellors of Italy, they were deeply involved in the emperor's Italian campaigns during the Staufen era. Their absence allowed the burghers to further increase their autonomy and experience in self-governance. The positions of *Burggraf* (noble-man) and *Stadtvogt* (ministerial, or court administrator) were increasingly replaced by the burghers (called *scabini* or *Schöffen*) in the administration of archiepiscopal and parish courts. A council of wealthy burgher families called the *Richerzeche* (or *Meliorat*) was formed, which elected two mayors and assumed increasing control over craft regulations and municipal economic policy (mint, tolls, taxes).

In 1180 the city's leaders obtained imperial authority to extend the city walls yet again; this initiative went against the express wishes of the archbishop and gave Cologne the highest and strongest walls in Germany. At this time the city had reached the size of just over 400 hectares.

By the early thirteenth century, effective control of the city had passed from the archbishop to some fifteen powerful patrician families (*Geschlechter*), who administered local government through twelve districts (*Sondergemeinden*), based mostly on parish boundaries. At these parish courts the *scabini* and *Amtsleute* (officials) administered low justice and managed the affairs of the districts. From 1130 onward, municipal records (*Schreinsurkunden*) were kept. Inheritances, purchases, mortgages, and bequests of houses and property were recorded and citizens were enrolled for taxation purposes. In 1216 a City Council (*Rat*) was formed in order to widen political participation beyond the patrician *Geschlechter* in the *Richerzeche* (*Meliorat*) and college of *scabini*. At first the *Rat* was suppressed by both the archbishop and the *Geschlechter*, but it had replaced the *Richerzeche* (*Meliorat*) as the leading municipal institution by the mid-thirteenth century. The *Geschlechter* were able to maintain control of the *Rat*, however, throughout the remainder of the century.

During the thirteenth century, latent tensions between the archbishops and the autonomous patrician families reemerged. The *Thronstreit* between the Staufen and Welf dynasties during the first two decades of the century produced an open split between the two parties. The Cologners supported Otto IV out of economic motives while the archbishops and their ministerials, out of territorial motives, wavered between Staufen and the alternate anti-Welf candidates. In reaction to this hostile situation, the archbishops sought creative ways to regain authority over the city.

By 1258 hostilities had reached such a level that Albertus Magnus was invited to head the Great Arbitration commission, which was to settle disputed claims of jurisdiction once and for all. The commission's settlement proved unhelpful in resolving tensions, however, since it determined that ultimate jurisdictional authority derived from the archbishop's lordship but had traditionally been delegated to and exercised by the burghers. The archbishops, thereafter, sought to use longstanding disputes among the patrician families to dismantle the settlement.

In 1259 Archbishop Conrad Hochstaden failed in his effort to pit the craftsmen against the *Geschlechter*. His successor, Engelbert II of Falkenburg, was imprisoned after breaching the terms of the Great Arbitration by attempting to fortify the municipal tower with his soldiers. Engelbert was held in the count of Jülich's castle for over a year while bloody battles raged between the patrician factions of the city of Cologne. The archbishop supported the losing faction in this conflict, and after release from prison, he abandoned Cologne for palaces in Bonn and Brühl.

Archbishop Siegfried of Westerburg was the last to make a concerted effort at recovering power. In 1279 he purchased the favor of the high court of the *Burggraf* in order to retain legal jurisdiction in the city and surrounding countryside, and then struck directly by leading an army against the city in 1288. When a coalition of Cologne citizens and local nobles defeated the archbishop's army at the Battle of Worringen, they secured permanent municipal autonomy.

Cooperation among the patrician *Geschlechter* would last until the fourteenth century, when growing factional discord provided the craftsmen and lesser merchants the chance to overthrow them. The weavers led a revolt in 1370–1371 that resulted in a mixed government of patricians and craft guilds. This experiment failed, but, in 1396, a substantial alliance of merchant corporations (*Gaffeln*) and craft guilds finally overthrew the patrician *Geschlechter* regime and produced a *Verbundbrief* that would serve as the municipal constitution of Cologne until the end of the eighteenth century. The *Richerzeche* (*Meliorat*) was abolished in favor of a reconstituted City Council (*Rat*), thus assuring broader representation. By the mid-fifteenth century the last vestige of patrician privilege, the office of *scabini* (*Schöffen*), was open to anyone with proper professional qualifications. Cologne was granted the status of a free imperial city in 1475 by Emperor Frederick III.

Medieval Cologne was famous for its abundance and variety of religious institutions. The cathedral was dedicated to St. Peter and the Virgin Mary in 870, and an ambitious rebuilding project in the Gothic style was initiated in 1248 after the original edifice had burned down. The massive cathedral was not completed, however, until 1880. After Archbishop Rainald of Dassel translated the relics of the Three Kings (Magi) from Milan to the cathedral's high altar in 1164, these patron saints joined Saint Ursula and her minions to make Cologne a Europe-wide pilgrimage site. *Sancta Colonia*, as the city was called, possessed dozens of religious foundations from every order, from Benedictines to the Brethren of the Common Life, and over 150 Beguine houses in addition to its eighteen parish churches and numerous chapels. Great intellectuals like Duns Scotus, Albertus Magnus, Gerard Pucelle, and Meister Eckhart lived in Cologne, and the city joined with Dominicans to found a university in 1388.

Cologne's Jewish community can be traced back to late antiquity and, though restricted to a ghetto in St. Laurence parish and viciously persecuted during the Crusades and the Black Death, it maintained a synagogue and vital socio-economic ties to other Jewish communities from Basle to York. The community was driven out of Cologne in 1349 during the panic of the plague, but allowed back in 1372. The Jews were expelled again in 1424, and their synagogue was transformed into the City Councils chapel dedicated to St. Maria in Jerusalem.

The Latin word *comes*, or "count," meant "companion" and retained this basic meaning throughout the Middle Ages. In the late Roman Empire, however, *comes* also came to designate a "companion of the prince" and, by extension, a range of high governmental functionaries. During the Merovingian period, counts and similar officials, known as a *graviones* or *graffiones* (whence the German word *Graf* "count" is derived), were responsible for a variety of military and civilian functions, playing a particularly important role in local and royal justice. By the end of the eighth century, the offices of *Graf* and *comes* had become almost synonymous, and *Graf* remains the usual German translation of *comes*.

In theory, counts were administrative officers directly dependent on the king; in practice, many comital (ducal) lands and rights became the private possessions of local noble families in a process known as "allodialization." Thus, while the early Carolingians had effectively used counts as flexible instruments for the direct administration of royal lands and the control of the local nobility, by the late ninth century, counts in many regions were recognized as princes in their own right, owing fealty to the king but having a high degree of autonomy within their territories.

Although German kings attempted to limit the development of comital autonomy by a variety of means, from the eleventh century onwards many older comital families were able to strengthen their domination of a defined region centered around a key castle or monastery (which often gave the family its name). It should be noted, however, that, throughout the later Middle Ages, many new counts continued to be directly subordinate to the king and were used effectively to administer royal lands and justice. Counts also held, at different times and places, extensive economic and juridical rights over medieval cities and occupied important positions in regional ecclesiastical affairs as the advocates and patrons of religious houses and churches.

Concordat of Worms

Since the eighteenth century, the documents which three legates of Pope Calixtus II (1119–1124) exchanged with Emperor Henry V on September 23, 1122, near Worms, have been known as the Concordat of Worms. The concordat put an end to the struggle between the papacy and the empire over investitures and ended the schism in the church. Henry V solemnly promised to renounce the practice of investiture of bishops and abbots with ring and staff and to permit free canonical elections and consecration of the elected ecclesiastics. At the same time, the emperor pledged to return all church properties and the *regalia* (relic possessions) of Saint Peter, which had fallen into his hands or those of his supporters during the Investiture Controversy. The privilege document of Calixtus II has come down to us only in secondary copies, but the copy signed by Henry V is still preserved in the *Archivio Segreto* (Secret Archives) of the Vatican. In the case of Germany, the pope agreed that bishops and abbots would be elected in the presence of the king. Moreover, the king would be allowed to invest the elected ecclesiastics with the temporalities (*regalia*) of the future see using a staff as a symbol. The investiture would take place before the consecration of the elected bishop or abbot, thus giving the king a chance to veto a candidate. In other parts of the empire (Burgundy and Italy) prelates would be invested with their temporalities by the emperor within six months of their elections. All of the ecclesiastics would be obliged to fulfill all of the duties to the emperor which they incurred through their investiture. The documents exchanged at Worms constituted a compromise and were only a partial victory for the papal party. Even so, Calixtus II, at first could only succeed in obtaining the grudging approval of the First Lateran Council (1123) by emphasizing the dispensatory character of the privilege. Nevertheless, the concordat determined the future relationship between church and monarchy. Since it had been concluded at the insistence and with the assistance of the secular and ecclesiastical princes of Germany, it also established the basic structure of the German constitution in the Middle Ages.

[Investiture Controversy](#)

Conrad I (Konrad I) was born about 880, the son of Glismoda and her husband Conrad the Elder of the house of the Konradiner. This family, originally from the Trier/ Lahn/Alsace area, made a belated entry into the high politics of East Francia when Arnulf of Carinthia married Oda, a Konradiner family member. As the secular guardians of Arnulf's son, Louis the Child (Ludwig das Kind), the Konradiner family increased their wealth and power in the Main-Franconia region during Louis' short reign (900–911). They achieved this success at the expense of the Babenbergers, whose almost total collapse they engineered in 906, aided by the subtle diplomacy of Hatto, archbishop of Mainz.

When Louis the Child died, Conrad was chosen as his successor at a meeting of mostly Franconian nobles in November 911 at Forchheim. Conrad was the first non-Carolingian ruler of East Francia, but his succession seems to have been carefully planned, and the new king gave every indication that he wished to exercise the prerogatives of his Carolingian predecessors. His charters indicate a strong desire to follow tradition, and his chancery was filled with clerks from the previous reign. Between 911 and 913, Conrad developed an energetic program of governmental renewal, but putting it into action proved very difficult. Only those members of the higher clergy who needed royal protection for their churches were in favor of Conrad's plans. The secular nobility was less amenable.

Conrad could not prevent the nobles of Lotharingia from immediately allying themselves with the West Frankish Carolingian ruler. In the northern part of his realm, Conrad was recognized as king by Duke Otto of Saxony, a revered elder statesman. But Otto died in 912, and his son and successor Henry (Heinrich) discouraged any royal interference in his duchy after 915.

Nor was Conrad any more effective in the southern part of his realm. In Bavaria the weakness of royal authority since 899 had enabled Duke Liutpold, and, after 907, his son Arnulf, to create a strong local power base in spite of continuous struggle with the Magyars. In 913 Conrad married Kunigunde, the widow of Liutpold, and Arnulf of Bavaria became his stepson; this did not improve their relationship. Neither repeated invasions nor the temporary exile of the young duke with the Magyars allowed Conrad to have any say in Bavaria. The defeat of the Magyars in 913 at the battle of the Inn, undertaken by the Bavarians and Swabians without royal aid, did nothing to enhance Conrad's reputation as a strong defender of the realm.

Royal government had also ceased to function in Swabia. In the late ninth century, Arnulf of Carinthia had guarded this western frontier against both West Francia and the kingdom of Burgundy. Around 910 the Hunfridinger Burchard had attempted to become duke, but he was killed in 911 and his son exiled. The brothers Erchanger and Berthold sought to take his place. They seem to have expected Conrad's tacit approval for their actions since his wife Kunigunde was their sister. Conrad tried to prevent strong ducal government in Swabia, but in 915 Erchanger and his adherents defeated the king's forces and Erchanger became duke.

This did not mean peace in Swabia, however. Erchanger and his brother Berthold feuded continuously with Bishop Solomon of Constance, abbot of St. Gall and Conrad's chancellor, whom they imprisoned and attempted to blind. Thereupon, a group of bishops called a synod at Hohenaltheim (near Nordlingen) in 916, under the leadership of the papal legate Peter of Orta, and condemned the offenders to incarceration in a monastery. But Conrad, who was not present and who was not pleased over this clerical interference in his royal prerogatives, reversed the episcopal verdict, captured Erchanger, Berthold, and their nephew and had them beheaded on January 21, 917. The real beneficiary of Conrad's move was the young Burchard II, who had returned in 915 and may have been involved in the elimination of his rivals. Burchard became duke late in 918.

After 917 Conrad retreated to Franconia, and his sphere of power became more restricted. In 918 he did make one final attempt to defeat Arnulf of Bavaria, but he was badly wounded in this attack and did not recover. Not yet 40, he died on December 23, 918. He was buried in the monastery of Fulda.

It was in death that Conrad achieved most renown. According to contemporary accounts, he recognized in his final days that he had failed as king because he had neither luck nor charisma. Conrad commanded his brother Eberhard to take the royal insignia: the sword, the crown, the scepter, the mantle, and the arm rings to Henry of Saxony, the one person who might succeed where Conrad had failed. Whatever the truth of these stories—and most of them come from the pens of the court historians of the Ottonians—Eberhard did approach Henry and, after several months of negotiations, Henry was chosen king by the nobles of the *regnum Franconium* and *Saxonum* in May 919. The era of the Ottonian kings had begun.

The annals and chronicles composed in the opening decades of the tenth century had little information about Conrad I beyond noting his election in 911 and death in 918. Additional details depended upon the writer's location; the execution of the Swabian rebels is the most frequently cited story. In modern scholarship Conrad has usually been perceived as a footnote in works dealing with the origins of the German monarchy. More recently, however, investigations have shown that Conrad's policies were not so far removed from those of his successor, Henry, but that his early death prevented him from achieving any of his goals. Conrad the King (*Conradus rex*) was perhaps a better ruler than he realized.

Conrad II (ca. 990-June 4,1039)

The first monarch of the new royal dynasty of the Salians, Conrad (Konrad) II was born circa 990 to Heinrich, son of Duke Otto of Carinthia and grandson of Duke Conrad of Lotharingia (d. 955). After his father's death, he was raised by his grandfather and uncle Conrad until he was taken into the episcopal household of Bishop Burchard of Worms (1000—d. 1025), supposedly because of ill-treatment at the hands of his relatives. In 1016, he married Gisela (d. 1043), daughter of Hermann II of Bavaria, thereby allying himself with one of the noblest families in the *Reich* (empire). The future king Henry III was born to the couple one year later in 1017.

When King Henry II died childless early in 1024, the nobility of the *Reich* was presented with the opportunity to elect a new monarch and ruling house. The royal election, recounted in unusual detail by the royal biographer and chaplain Wipo, was held at Kamba on the Rhine on September 4, 1024. Chosen over his rival and cousin Conrad the Younger (d. 1039), Conrad II was consecrated and crowned king by Archbishop Aribo of Mainz on September 8.

Once crowned king, Conrad had to make his kingship, his royal *presentia*, felt throughout his realm by establishing the personal bonds with local ecclesiastics, monasteries, and nobles that were the true guarantees of his kingship's power and stability. Furthermore, he had to gain the support of the Saxons and the members of the Lotharingian nobility who had not consented to his election. Therefore, following the tradition of his Ottonian predecessors, he devoted the next fifteen months to a royal *iter* (journey) that enabled him to meet and negotiate with nobles from Lotharingia to Saxony as well as those in Alemannia, Bavaria, Franconia, and Swabia.

With his rule thus consolidated by late 1025, Conrad embarked upon an expedition to Italy that lasted from the spring of 1026 until early summer of 1027. There he reestablished his authority over such rebellious cities of northern Italy as Pavia and Ravenna and broke down the opposition to royal rule within the Italian nobility through a combination of diplomacy and military might. Crowned Roman emperor by Pope John XIX (1024—1032) on Easter (March 26) of 1027 with King Cnut of England and Denmark and King Rudolf III of Burgundy in attendance, Conrad then headed south into Apulia, where he reestablished nominal German sovereignty over the Lombard princes and attempted to secure the frontier with Byzantine southern Italy.

Back in Germany, Conrad pondered the future of the dynasty. At Regensburg in June of 1027, he elevated his son Henry as duke of Bavaria and, on Easter of 1028, had him crowned king at Aachen with the consent of the princes of the *Reich*. The death in 1033 of King Rudolf III enabled the Salian monarch to expand his hegemony by incorporating the kingdom of Burgundy into the *Reich*. Around 1034, after his earlier bid for a marriage alliance with Byzantium had failed, Conrad turned to Denmark for a bride for his son; Henry III married King Cnut's (1017–1035) daughter Kunigunde in 1036. With the deaths of the reigning dukes of Swabia and Carinthia in 1038 and 1039 respectively, Conrad invested Henry III with those duchies, thereby giving him a unique position of power in the three southernmost duchies of the German *Reich*.

Despite the extent of his power, Conrad II faced several internal rebellions and significant foreign challenges during his reign. Just two years after Conrad's election, a group of conspirators led by his rival Conrad the Younger rebelled during the king's first expedition to Italy. After an initial show of loyalty, the king's stepson Duke Ernst II of Swabia later joined this rebellion; he persisted in his opposition to Conrad, despite brief returns to grace and appointments to office, until he was killed in August of 1030.

In 1036 Conrad journeyed again to Lombardy to settle widespread disputes between subvassals and their lay and ecclesiastical overlords over the security of the subvassals' legal status and rights. After overcoming the resistance of the Italian episcopate and their attempt to introduce Count Odo of Champagne (995–1037) as king, Conrad finally settled the dispute in favor of the subvassals with his decree *Constitutio de feudis* of 1037, which represented a major departure from the earlier, proepiscopal policies of his Ottonian predecessors.

On his eastern frontiers, Conrad responded to the repeated political challenges posed by Poland, Bohemia, and Hungary through a combination of military might, alliances with neighboring princes, territorial exchanges, and diplomacy, designed essentially to maintain the status quo rather than expand German hegemony.

Perhaps the most debated aspect today of Conrad's kingship is his ecclesiastical policy. Earlier scholarship stressed the secularity of Conrad II's reign and the king's calculated development and exploitation of the *Reichskirche* (imperial church) to achieve secular political aims. More recent studies, however, while not ignoring Conrad's political and economic reliance on ecclesiastical and monastic structures, have offered a more balanced assessment that highlights Conrad's personal association with leading monastic reformers of his time, including Odilo of Cluny, William of Dijon, and Poppo of Stablo; his efforts to further their reforms; his swift change in policy after a unique case of simony reported by Wipo; and his support of reformers such as Bruno of Egisheim, the future Pope Leo IX. Finally, they argue that, although Conrad undoubtedly saw himself as the head of the imperial Church, this position of leadership remained, in his mind, a religious as well as a secular office, an attitude certainly manifested by his son Henry III.

Dying on June 4, 1039, Conrad II was laid to rest by Empress Gisela and King Henry III in the cathedral of Speyer.

Conrad of Marburg (ca. 1180–1233)

One of medieval Germany's most fascinating personalities was born about 1180, probably near Marburg, in Hesse. Eventually he became a Premonstratensian priest. In 1214 he was commissioned by Pope Innocent III to press the crusade against the Albigensians, a mandate which resulted in a series of bloody massacres. Two years later he appeared as a different type of crusade preacher, this time as a recruiter of men to participate in the Fifth Crusade which had been called into being in 1213 by Pope Innocent. According to the chronicler Burchard of Ursberg, most recruiting activity slowed down following the death of Innocent in July 1216, but Conrad of Marburg and Conrad of Krosigk were two who apparently continued their efforts without ceasing.

By 1226 Conrad of Marburg had acquired an influential position at the court of Ludwig IV, landgrave of Thuringia; a year earlier he became the confessor of Ludwig's wife, Elizabeth, whom he disciplined with physical brutality. The prolonged fasts which he prescribed for her eventually wore down her health and ultimately may have caused her early death, but in the process she developed a reputation for piety which served to promote her beatification almost immediately. Here too, Conrad of Marburg was influential, just as he had been in determining her place of burial at Marburg where St. Elizabeth's church soon arose as a fitting shrine for her relics.

Conrad had meanwhile obtained another papal assignment: Pope Gregory IX made him the chief inquisitor in Germany, with the mandate to exterminate heresy, denounce clerical marriages, and reform the monasteries. His methods were so severe that a plea went out from the German bishops to have the pope remove him. Their plea was ignored, however.

In 1233 he took his maniacal inquisition to the final extreme by accusing one of the highest members of German society—Count Henry of Sayn—of various forms of heretical activity, including such bizarre behavior as riding on turtles. Henry in turn appealed to a court of his peers, an assembly of princes. Such a diet, held at Mainz under the presidency of King Henry VII declared him innocent. Speaking for the others, Archbishop Dietrich II of Trier declared that Count Henry was departing from the session "a free man and a Christian." Conrad of Marburg is said to have muttered that, had he been found guilty, things would have been very different.

The hatred toward Conrad was by now difficult to control. As he and his companions rode away from Mainz toward Marburg, he was brutally murdered on July 30, 1233. When news of this event reached Rome, the pope merely accepted it; no effort was made to punish the perpetrators. The contemporary chronicles report that, with the death of Conrad, peace and quiet returned to Germany once again.

Conrad of Urach (fl. late 12th c.)

Conrad of Urach was the son of Count Eginio the Bearded of Urach; his mother came from the family of the dukes of Zähringen. His birth fell before 1170. Apparently determined for a clerical career early on, he received his training at the cathedral school of Liège (St. Lambert's), where his maternal great-uncle, Rudolf of Zähringen, sat as bishop 1167–1191. At some point (probably while his uncle was still bishop), Conrad acquired a canonate in the cathedral; in 1196 he appears as cathedral dean, charged with maintaining order among the community. That the canons were in need of reform can be seen from the statutes issued in 1202 by Cardinal legate Guy Poré. By that time, however, Conrad had left the chapter.

Conrad's uncle, Duke Berthold V of Zähringen, was a candidate for the throne of Germany in the disputed election which followed the untimely death of Henry VI in 1197. As guarantees that he would produce the money needed to secure his election, Berthold offered his nephews—Conrad and Berthold of Urach—to the archbishops of Cologne and Trier; meanwhile, most other German princes had elected Philip of Swabia, brother of the deceased king. Hearing this, the duke renounced his claims, but the two archbishops retained their hostages for some time longer. This use of them as pawns in the political game of chess apparently had a profound effect upon both hostages: should they be released, they vowed to become monks, and, in fact, both became Cistercians. In 1199, Conrad entered the Cistercian house at Villers-on-the-Dyle in Brabant.

Meanwhile, on February 1, 1200, Albert of Cuyck, the successor to Rudolf of Zähringen as bishop of Liège, died, and the see was left vacant. Part of the cathedral chapter elected Conrad of Urach, who had not yet made his final profession at Villers, as bishop; another faction elected an archdeacon who was studying at Paris at the time. Conrad renounced any claim to the office, however, apparently preferring the *vita contemplativa* (contemplative life) to the *vita activa* (active life) required of a German prince bishop. He made his final vows at Villers. His family ties, as well as his obvious abilities, led to his becoming prior at Villers by ca. 1204, and in 1208/1209 he was elected abbot. His reputation as an ardent reformer and as a rigorous administrator led to his elevation as abbot of Clairvaux in 1214, and, as such, he attended the Fourth Lateran Council.

Despite his having become a monk, Conrad could not escape the responsibilities placed on him as one of the most influential individuals in the Latin Christendom of his day. In December 1216, he was sent with Abbot Arnald of Cîteaux to Philip II and Louis of France to negotiate peace with England. In 1217 Conrad became abbot of Cîteaux and general of the Cistercian Order; he probably assumed office at the general meeting of the chapter of the order held at the end of the year.

In January 1219, Pope Honorius III consecrated Conrad as cardinal bishop of Porto and San Rufina. At the time, there were twenty members of the College of Cardinals: four cardinal bishops, eight cardinal priests, and eight cardinal deacons. Of these, sixteen were from Italian provinces, two from Iberia, one from England, and one from Languedoc. Conrad thus joined the college as its only German member and remained so thus until 1225. During Lent 1220, he was appointed as the successor of Cardinal Bertrand as legate to the Albigensian lands, and given a mandate to support Amalrich de Montfort against Count Raymond of Toulouse. His fame spread, to the extent that soon thereafter, he was nominated to the archbishopric of Besançon. Honorius III would not allow this, however, claiming that Conrad's talents were needed throughout the Church.

In 1224 Conrad was given the legation as crusade preacher in Germany, but he also participated in various other activities, such as the condemnation of the accused renegade prior Henry Minneke at Hildesheim in October 1224, the national synod held at Mainz in November and December 1225, and the burial of Archbishop Engelbert of Cologne in December 1225. By May 1226 he was back in Rome, and he was present on March 18, 1227, when Honorius III died. According to tradition, Conrad was the first to be offered the tiara, but, again, he rejected an episcopal office. Only then was Gregory IX chosen. Even had Conrad accepted, however, his pontificate might well have been a brief one: he died on September 29, 1227, and was buried at Clairvaux, at the side of the smaller altar.

[Crusades](#); [Henry VI](#)

One of the most significant German painters of the late Middle Ages, Conrad von Soest played a pivotal role in the diffusion of the International Courtly Style in northern Europe. His name is known through signatures on two altarpieces. A marriage contract, dated February 11, 1394, can plausibly be connected with the painter. It was signed by six of the most prominent patricians of Dortmund and attests to the painter's considerable wealth and high social standing. He was a member of the confraternities of the Marienkirche (1396—?) and of the Nikolaikirche (1412–1422).

Iconographic and stylistic evidence suggests that, following his apprenticeship in Dortmund, Conrad joined the workshop of the Parent Master in Paris in the 1380s. There he seems to have had access also to designs by Jacquemart de Hesdin. The creative and vigorous style of Conrad's underdrawing, consistent in the two signed altarpieces, refutes any notion of an imitative artist dependent on Burgundian patterns. Instead, Conrad achieved a synthesis of the style and technique learned in the royal workshops in Paris with this Westphalian inheritance, without forsaking originality.

His earliest surviving work, the signed *Niederwildungen* Altarpiece from 1403 (Stadtkirche, Bad Wildungen), was painted under the patronage of the Order of St. John. The Closed altarpiece depicts four saints venerated in the church. When open, twelve painted scenes, arranged in two rows around a central full-height Crucifixion, describe the life of Christ from the Annunciation to the Last Judgment. In the multifigured Crucifixion, the courtly elegance of some attendants contrasts with the realism of bucolic figures. The noted art historian Erwin Panofsky (1953, p. 71) spoke of precocious naturalism when he extolled the sharp characterization and powerful modeling of the thieves, and he compared the linear description of the noble figures to work by the universally esteemed Limbourg brothers. Conrad was a gifted and observant storyteller. The tender humanity of his elegant protagonists combined with selective naturalistic description, together with the outstanding craftsmanship, decorative surface pattern created by sinuous line, and a sophisticated iconography, place the altarpiece in the forefront of artistic development around 1400.

By around 1420, when Conrad painted his other signed work, the altarpiece for the church of the Virgin (*Marienkirche*) in Dortmund, he concentrated on the dramatic potential of his now monumental figures and the emotional power of color. The altarpiece was commissioned by his own confraternity. The panels were cut in 1720 to fit into a (lost) baroque framework. They originally showed a central *Death of the Virgin*, surmounted by a lunette, flanked by the *Nativity* and *Adoration* on the obverse, and the *Annunciation* and *Coronation* on the reverse sides of the wings. Conrad's subtle and varied palette was now supported by a sensitive awareness of the effect of light and shade in the modeling of forms. His courtly figures, careful characterization, costly pigments, and exquisite punchwork would have gratified the taste and chivalric ideals of his cosmopolitan patrons.

The patrician members of the confraternity belonged to an exclusive, well-educated, and prosperous group who played a leading part in the influential international trading association, the Hanseatic League. Their lifestyle eased the diffusion of Conrad's last perpetuated style abroad. Conrad's influence was most profoundly felt in Cologne; his style was introduced there by the immigrant Veronica Master and still reflected in the work of Stefan Lochner.

Conradin of Hohenstaufen (1252–1268)

Grandson of Frederick II (1194–1250) and son of Conrad IV (1228–1254), Conradin or "little Conrad," the titular king of Jerusalem and king of Sicily, faced many difficulties in his short life. His father's untimely death in 1254, when Conradin was only two years old, hampered his efforts to secure his rights to the succession. He was displaced from his Hohenstaufen legacy in 1258 by Manfred of Sicily (1232–1266), his uncle and illegitimate son of Frederick II. He also faced opposition from the papacy which continued its anti-Hohenstaufen crusade. But the most serious opposition came from Charles of Anjou who had been invited by Pope Urban IV to launch a crusade to conquer Sicily. Charles had defeated Manfred at the Battle of Benevento in 1266 where the Hohenstaufen leader died. Opponents of the Angevin and of the papacy turned to the young Conradin after Manfred's death to lead them against their enemies. Conradin met with much support from the Italians as he traveled south to Sicily to claim his birthright. But despite Italian support and a substantial army, Conradin's youth and inexperience proved no match for Charles. Although Conradin's approach forced Charles to abandon the siege of Lucera, a Hohenstaufen stronghold, he would not be able to overcome his rival. At the battle of Tagliacozzo, Conradin was defeated and taken captive by Charles, who had the young king beheaded on October 29, 1268. Conradin's death brought to a close the illustrious line of the Hohenstaufen.

Constance

Located on the Rhine River at its exit from Lake Constance (German, *Bodensee*), the Roman fortress of *Constantia* was known as early as the third century (C.E.) when it was captured by the Alemanni. In 560 or 570 the bishopric of Windisch (*Vindonissa*) was transferred to Constance, and remained one of the most powerful in Germany throughout the Middle Ages. Tradition has it that Fridolin erected a monastery here in 511 and that another monastery had been established outside the city by Irish monks in the seventh century. In the suburb of Petershausen lies the monastery which Bishop Gebhard established in 953; the equally famous abbey of Kreuzlingen lay before the south gate.

The location of the city attracted merchants and, even in the early Middle Ages, Constance was a major trade center. About 900 it acquired market rights, and by the eleventh and twelfth centuries, it was one of the most important markets in Germany, specializing in linen processing. Over time, the burghers became more and more independent, a condition which led to friction with the bishops who had acquired the rights of lordship over the city. In 1192 Constance became a free imperial city when Henry VI declared it free from all duties to the bishop.

The favorable location of Constance between Germany and Northern Italy meant that emperors frequently spent time there. Charlemagne, Louis the Pious, and Otto II all sojourned in the city and granted the bishops various rights and privileges. It was here that Henry III delivered his speech against simony and established a general peace. In 1076, 3600 clerics assembled in a synod at Constance and repudiated the papal order on celibacy. In 1358 the Emperor Charles IV held a dazzling *Fürstentag* at Constance.

Three other events at Constance stand out for their high drama: the peace concluded between Frederick Barbarossa and Pope Eugenius III in June 1183; the sudden appearance of Frederick of Sicily before the city gates in 1212; and the Council of Constance, 1414–1418.

The Treaty of Constance (1183) brought to an end the struggle between the emperor and the towns of the Lombard League. Frederick renounced his claims to royal rights in northern Italy; the cities in turn recognized the overlordship of the empire. A house on the upper marketplace of the city, the Barbarossa Inn, carries the inscription *Curia Pacis*, indicating the spot where this accord took place.

Young Frederick of Staufen successfully evaded his rival Otto IV's loyal forces in northern Italy in the summer of 1212 by crossing the Alps through the Engadine to the lands of a friendly prelate, the bishop of Chur. He finally reached Germany where he had allies of his own. Moving swiftly from one Swiss abbey to another, the news of his arrival rallied loyal forces, and by mid-September Frederick had about three hundred cavalry, largely supplied by churchmen. The last significant hurdle before he could seriously challenge the Welf was the city of Constance, towards which Otto was progressing with some speed. The challenge for Frederick was to get there first, persuade the bishop to receive him, and deny access to his rival. Otto's cooks had already entered the city, a great reception was being prepared, and Otto himself was across the lake and expected in Constance within a matter of hours. Suddenly, seemingly out of nowhere, Frederick appeared before the gates of the city and demanded admission. The hour of decision had come for the bishop; after some hesitation, he opened the gates. Frederick entered, quickly won the allegiance of the burghers, and, successfully and literally, slammed the door in Otto's face. From Constance he progressed down the Rhine where he received the submission of the great episcopal cities and their prelates. Without the triumph at Constance, Frederick II of Staufen would most likely have failed in his attempt to assert his claim to the German throne in 1212, and the history of the empire thereafter would have been much different.

Two centuries later, nearly 100,000 people jammed Constance when an ecumenical council of the Church was held 1414–1417 to heal the Great Schism and deal with various matters of Church discipline, including heresy. Once again an emperor was present. This was Sigismund, under whose protection Jan Hus and Jerome of Prague had come to the council to defend themselves against charges of heresy. Hus was imprisoned from December 6, 1414, until March 24, 1415, at the Dominican monastery on an island in Lake Constance while the council fathers met in the cathedral to discuss his errors and decide his fate. He was declared a heretic and burned at the stake on July 6, 1415, in the plaza which lies in the western part of the city in an area called "Paradise." The following year, the burgrave of Nürnberg was enfeoffed with (granted control of) the Mark Brandenburg by Emperor Sigismund in the marketplace of Constance. Two more years were required before the Schism was healed, however. In 1417 a conclave held in the *Kaufhaus* (merchants' hall) proclaimed the election of Martin V as pope and settling the schism.

Constance, Art

As a result of its strategic location and the political significance of its bishop, Constance (German, *Konstanz*) also became a major center of art production. Especially in the late thirteenth and early fourteenth century, paintings, sculptures, and metalwork objects from Constance were exported throughout southern Germany and present-day

Constance, cathedral, chapel of St. Maurice, Holy Grave. Photograph: Joan A.Holladay

Switzerland, where they influenced works of other, less active, centers. The squat, expressive figures of the Holy Grave in the circular chapel at the eastern end of the cathedral predict the characteristic Constance style of circa 1300, which finds its fully developed form in the wood sculptures associated with Master Heinrich of Constance. His images of Saint John resting on the bosom of Christ (now in Museum Mayer van den Bergh, Antwerp) and the standing Virgin and Child, made for the convent of Dominican nuns at St. Katharinenthal—and still located there—share heart-shaped faces with slightly pinched features and sweet expressions, elegant, expressive gestures, and lyrically flowing draperies. The lavishly decorated gradual painted for St. Katharinenthal in 1312 (now in Zurich, Schweizerisches Landesmuseum, Inv. No. LM 29329) and wall paintings preserved in the Haus zur Kunkel and the church of the Dominican cloister (now the Insel Hotel) exhibit two-dimensional versions of this same style.

Conversion

Conversion, meant primarily as conversion of non-Christians to Christianity, has played a more central role in German history than one might initially think. The Germanic peoples were the first outside the Roman Empire to be systematically converted to Christianity. It was for the Goths that Bishop Ulphilas (ca. 311–383), the "Apostle of the Goths," translated the Bible into Gothic—the first known transcription of any Germanic language into writing. Other bishops, including those of Rome, also pressed on with the work of conversion, sometimes advocating the use of pressure and force.

Charlemagne took this aggressiveness one step further by linking conversion with conquest in his long wars with the Saxons. (He does not seem to have pursued this kind of policy with respect to the Avars and Slavs, however.) The Saxons, in their turn, combined conversion with conquest, beginning in the 920s and sporadically thereafter until full resumption of the policy in the twelfth century. Missionary activity was promoted by the founding of new sees, especially the archbishopric of Magdeburg around 968. The bishopric of Bamberg was explicitly established by Henry II in 1007 "so that the paganism of the Slavs would be destroyed, and the memory of the name of Christ would always be remembered there." In the thirteenth and fourteenth centuries, the Teutonic Knights continued this work against the Slavs and extended it to the Baltic peoples. As a result, the boundaries of the Christian Empire were progressively pushed far to the east of where the Romans had dared to go. In this respect, as in so many others, medieval Germany was the heir of Charlemagne.

Germany was also an important base for the conversion of the Scandinavian peoples to Christianity. Even as these dreaded "Northmen" devastated the Continent and the British Isles in the ninth and tenth centuries, St. Anskar (801–865), the "Apostle of the North" and first archbishop of Hamburg-Bremen (ca. 848), used his sees to try to convert the Danes. Anskar was a Picard by background, but monks from Anglo-Saxon England and elsewhere similarly labored among the Norsemen. The extent of the Christian imperial ambition of the Germans however, was revealed two centuries later when Adalbert, archbishop of Hamburg-Bremen from 1045 to 1072 and regent from 1056 to 1066, so vigorously promoted missionary activity in the Orkneys, Iceland, and Greenland, as well as Scandinavia, that Pope Leo IX named him papal legate and vicar of the North. Adalbert had hoped to be appointed primate of the North, but his hopes were frustrated by the opposition of his enemies, the destruction of Hamburg by the Wends in 1071–1072, and the papal creation of separate churches in Denmark, Norway, and Sweden in 1004, 1153, and 1164, respectively. Despite later imperial claims and the ever sensitive issue of Schleswig and Holstein, the northern borders of the empire were now effectively rounded off, more or less concluding the conversion efforts.

There is a second meaning of "conversion," which became particularly important after the Roman emperors adopted Christianity as the sole official religion of the empire in the fourth century. Christianity was no longer a matter of choice, and infant baptism became the norm. "Conversion," which had previously preceded baptism, was now to be experienced later in life as a call to conversion of heart, to a life of sacrifice in imitation of Christ, especially in forgoing wealth, sex, and one's own will in submission to the will of God. For the next thousand years, in Germany as in the rest of Christendom, this ordinarily meant withdrawing from the world, becoming a hermit, a monk, or a nun, and embracing the vows of poverty, chastity, and obedience. Without a doubt, the most famous German who ever underwent "conversion" was the one who ended up challenging this understanding of the word—Martin Luther.

Cookbooks

The *Répertoire des manuscrits médiévaux contenant des recettes culinaires* lists forty-five late-medieval codices containing culinary recipes in High and Low German. The collections range from miscellaneous recipes to extensive cookbooks of 200 to 300 recipes. Most of the culinary manuscripts were written in the 15th century, and often appear in composite codices together with such standard treatises as *Regimen sanitatis*, or *Regimen duodecim mensium*, (a book of horse remedies and a book on grafting respectively).

The oldest German cookbook is contained in the Universitätsbibliothek in Munich (no. 2° Cod. ms. 731) and is known as *Daz buoch von guoter spise* (The Book of Good Food). It was entered into the codex between 1345 and 1354 at the request of Michael de Leone, notary to the Bishop of Würzburg, and compiled from two different sources. Part I consists of a rhymed prologue, fifty-five culinary recipes, and two recipe-parodies; Part II, of forty-four recipes. Two cookbooks in the tradition of the *Buoch von guoter spise* are in Vienna (Nationalbibliothek, Cod. Vind. 2897, *Wiener Kochbuch*, "The Viennese Cookbook", and Cod. Vind. 4995, *Mondseer Kochbuch*).

Unlike modern cookbooks, which give precise cooking instructions and usually divide the recipes into appetizers, soups, side dishes, salads, fish, meat fowl, desserts, and breads, their medieval counterparts provide hardly any quantities and often list the recipes in little or no apparent order. The *Buoch von guoter spise* starts with a sweet dish, followed by deer liver, two chicken dishes, and a sweet rice dish. Small groupings of recipes, which share a certain ingredient, shape, or consistency, are sometimes discernable. In Part II of the *Buoch* a distinction is made between dishes for fast and feast days. Most of the medieval cookbooks reflect an aristocratic or monastic cuisine, which later became accessible to a larger bourgeois audience through early printed editions such as the *Kuchenmeysterey* published in Passau ca. 1486. The ingredients most frequently mentioned in German cookbooks are pepper, saffron, apples, almonds and almond milk, honey, sugar, rice, fish, pork, bacon, chicken, butter, lard, vinegar, milk, water, wine, bread, eggs, cheese, flour, and salt. Popular dishes included purees, puddings, pies, *blanc manger*, casseroles, fritters, roasts, flat cakes, sauces, and special presentations (*Schaugerichte*).

Only two German cookbooks provide the names of aristocratic cooks: the *Kochbuch Meister Eberhards*, and the *Kochbuch Meister Hannsens*. Eberhard's Germanlanguage treatise consists of twenty-four culinary recipes and a dietetic list of foodstuffs based on Konrad von Eichstätt's *Sanitatis Conservator*; Hannsen's collection includes 289 recipes, of which twelve are for colors, dyes, and miscellaneous remedies. Culinary recipes can also be found in the vast dietetic literature of the Middle Ages.

Coronation

The early German kings were installed by a single constitutive act: their election and acclamation by the nobles of the realm. To this was added the ecclesiastical rite of unction, anointing the candidate with consecrated oil. This act symbolized the new birth in Christ of the ruler-elect and was drawn from the rite of baptismal unction. (The link to Old Testament royal unction is only indirect.) The rite of unction was first recorded in Frankish lands when Pippin the Short assumed the throne and was anointed by a papal emissary in 751. Anointing was not considered necessary until around 850, after which it became standard in the West Frankish kingdom. The first authenticated case of unction of an East Frankish ruler was that of Conrad I in 911, and the ceremony only became standard from the time of Otto I. Otto also fixed the place for German royal coronations at Aachen for the remainder of the Middle Ages and decreed that the ceremony would be performed by the archbishop of Mainz.

The liturgy of coronation developed in the second half of the ninth century, defining more clearly the sacred duty and character of the ruler. Unction especially emphasized the ruler's duty to defend the Church and his answerability to the clergy. From 962 on, most German kings were also crowned as emperor, and the imperial *ordo* (or rites) reinforced the close relationship between emperor and Church. Imperial coronation was in the gift of the pope and was conferred along with a special duty to defend the Church, especially the Roman Church, against its foes.

The coronation *ordo* adopted by the Ottonians probably dates from the first third of the tenth century. It became standard through its inclusion in the widelycirculated Romano-German pontifical of circa 960. According to this rite, the ruler shares the ministry of a bishop and is mediator between clergy and people. The coronation rite has four main parts: first, the emperor promises protection and defense of the Roman Church; second, after three consecrating prayers, the emperorelect prostrates himself and then is anointed with the oil of exorcism on his right arm and between his shoulders; third, the pope places the crown on the emperor's head before the main altar; and finally, mass is celebrated.

The first certain unction of a queen was that of Judith, daughter of Charles the Bald, upon her marriage to Aethelwulf of Wessex in 856. The ceremony was probably conducted to safeguard her position in a foreign land. It became standard with West Frankish queens, but was only introduced to Germany in the tenth century, perhaps with the coronation of Edith, Otto I's first wife, in 936, but certainly upon his marriage to Adelheid in 951.

For both kings and queens, the ceremony of coronation served to set the ruler apart as God's special child by adoption. It conferred divine protection and made attack upon the ruler sacrilege. In female coronations, the prayers also stressed fecundity. Election and unction together signified the assent of all nobles, both secular and ecclesiastical, to the ruler's authority.

Corvey

The Benedictine abbey of Corvey (Northrhine-Westphalia) was founded in 822 by Emperor Louis the Pious on the west bank of the river Weser. The first Carolingian abbey church—consecrated in 844 and replaced in 1665 by the present post-Gothic structure—is known from excavations to have been a basilica with a rectangular choir and axial chapel. Later, this first church was enlarged with transepts and a choir with apse, surrounded by an annular outer crypt that terminated in a cruciform axial chapel.

To this church was added in 873–885 the westwork (entrance structure on west side), which, though altered, has survived intact. Through the monumental massing of its three towers and its use as a setting for court ceremonies, this westwork represents a monument to imperial presence in the abbey church and the region. Its square core continues from the crypt-like entrance hall up into tower, where the choir of St. John is surrounded on three sides by galleries and screened off from the church by similar arcades. Traces of Carolingian wall decoration have been found, depicting, besides architectural elements, scenes from the myth of the Argonauts. More recently, the outlines of large-scale figures on the high walls have been detected. In addition, fragments of the painted ceiling of the destroyed cruciform chapel have been uncovered by excavation.

Under Abbot Wibald of Stavelot and Corvey (1147–1158), the westwork was transformed into the present two-towered façade. The dramatic change was achieved by reducing the central tower to the roof level of the church and by incorporating the central space as a western gallery (now reserved primarily for liturgical use) into the church structure.

Councils/Synods

Councils and synods in medieval Germany derived from a tradition in the primitive Church when disciples of Christ gathered to establish policies and clarify doctrines. In the post-Apostolic era, bishops of the various Roman provinces developed the practice of gathering to discuss and reach decisions on matters of both theological and disciplinary nature. Various ecumenical councils held between 325 and 787 dealt with a host of issues, the most controversial of which tended to involve definitions of the Godhead.

In the Latin West several councils were held from the ninth century on: the great royal-imperial assemblies of the Carolingian age; the general councils convened under papal auspices in the eleventh century and thereafter (including the four Lateran, or papal councils of 1123, 1139, 1179, and 1215); provincial gatherings directed by a papal legate or the metropolitan; and diocesan synods at which the clergy of a diocese assembled under the presidency of the local bishop. During the twelfth century, synods on a national scale, which had been quite customary during the Salian period, became less common. While some dioceses, such as Halberstadt and Hildesheim, maintained strong synodal traditions throughout the century, the practice of holding annual synods with the clergy of their diocese seems to have died out in many bishoprics.

Whereas the early Christian councils were preoccupied with doctrinal matters, those of the Latin West from ca. 1050 to 1122 gave much greater attention to various aspects of "reform" as constantly redefined in each new generation; such issues as simony, clerical continence, and lay investiture were paramount. While eighteen German bishops were present at the Third Lateran Council in 1179, twenty-one attended the Fourth Lateran in 1215, together with a significant number of abbots and other ecclesiastical representatives.

Canon 6 of the Lateran IV constitutions ordained that a provincial synod be held each year, during which the metropolitan would read the decrees of the general council and treat other matters of concern with his suffragans (subordinates); they in turn were obligated to meet once annually with their diocesan clergy in order to improve the discipline of the clergy and their ability to perform their pastoral duties (*cura animarum*). Recent studies have concluded that this mandate was only partially carried out, and that, throughout the thirteenth century, synods at both the diocesan and provincial levels were held only sporadically. Relatively few examples exist of statutes issued by German prelates during this time.

One of the most spectacular synods in thirteenth-century Germany was held during November and December 1225 at Mainz under the direction of Cardinallegate Conrad of Urach who had spent the previous year traversing the realm on various matters of papal business, and whose knowledge of the German church was perhaps unrivaled at the time. The statutes issued on this occasion served as the nucleus for several later collections of the thirteenth and early fourteenth centuries.

The increased in the number of sets of diocesan and provincial synodal statutes in Germany after 1300 indicates, perhaps, that the synodal tradition was still alive, but, by and large, it failed to achieve the regeneration of the medieval Church for which Innocent III had expressed hope in 1215.

Crossbow

The crossbow was a mechanical bow that became the standard archery weapon in Germany during the Middle Ages. The basic construction of the weapon was a small bow attached to a stock that provided a groove for the bolt and handle, with a bowstring that was held in place ready for release by a trigger mechanism.

Descended from the ancient Greek *gastraphetes* (or "belly bow"), the crossbow became popular in western Europe during the late eleventh century. Because of its brutality in war, both Pope Urban II (r. 1088–1099) and the Second Lateran Council (1139) condemned its use among Christians. However, this condemnation was rarely heeded as the crossbow became increasingly popular in Europe. This was especially the case in Germany, where most emperors and nobles used crossbowmen in their armies between the twelfth and fifteenth centuries, frequently employing foreign mercenary crossbowmen if they failed to recruit sufficient numbers of these troops from among their own subjects. Crossbowmen were used tactically at the beginning of a battle and on the flanks as harassers of opposing forces. By the late Middle Ages, the crossbow had increased in use and efficiency. The composite crossbow, made of horn, sinew, and glue, was considerably more powerful than earlier bows. Stirrups, windlasses, and *cranequins* were added to the stock to enable the bow to be strung with greater tension, increasing immensely the power of the pull. Improvements to the release mechanism and to the bolt also added to the efficiency of the weapon. By the early thirteenth century, castles were being designed with openings for crossbows and ships were being outfitted with the weapon. By the early fifteenth century, crossbows were being replaced in the defense of castles by small-caliber cannons, and, ultimately, by the middle of the sixteenth century, the weapon had been replaced on the battlefield by handguns.

Crusades

Although generally recognized as a French phenomenon, the crusading movement, and the ideals associated with it, was not without influence in Germany. Absent from the successful First Crusade, German knights and their kings and emperors participated in the Second and Third Crusades. The emperor Frederick II Hohenstaufen himself led a Crusade to rescue Jerusalem in the thirteenth century and faced a Crusade against him led by a hostile papacy. Moreover, the crusading ideal influenced relations with Germany's pagan neighbors on its eastern frontier and inspired the creation of a military order which, ultimately, would help push Christianity eastward.

The origins of the idea of the Crusade are rooted in the social, cultural, and religious transformation occurring at the turn of the millennium. As the invasions of the tenth century waned, and western knights turned their aggression against their neighbors, an effort emerged to redefine the function of the knight and focus his energy against a common, non-Christian foe. The effort to Christianize knighthood and sanctify war can be traced to the *vita* (life) of Gerald of Aurillac and the Peace of God movement of the early eleventh century. The sanctification of knighthood was also part of the broader reform movement of the eleventh century, especially the Gregorian reform movement. Indeed, Pope Gregory VII planned to lead a Crusade himself in 1074. Finally, the growing interest in the Holy Land and the increasing number of pilgrims journeying there—including the mass pilgrimage from Germany in 1064–1065—contributed to the idea of the Crusade. In part, the Crusades were designed to protect pilgrims traveling to Jerusalem and to protect Jerusalem itself from Muslims, who were deemed the enemies of the faith.

The First Crusade began with Pope Urban II's call to arms at the Council of Clermont in 1095. Inspired by Byzantine defeats at the hands of the Turks and reports of the persecution of Christians and their requests for aid, Urban appealed to the knights of Christendom to end their conflicts against each other and to make war on their enemies, the Turks, thereby rescuing the Holy Land. Urban's call to arms was received enthusiastically by the people of Europe and inspired peasants and warriors to make the journey to defend the Holy Land. In the empire, however, the call to arms was not well received. This was due, not to any lack of religious zeal on the part of the military aristocracy of the Empire, but, as Otto of Freising noted, to "the hostility which existed at the time between the king and pope." Indeed, one of the consequences of the ongoing Investiture Controversy was the near complete absence of German knights from the First Crusade.

The First Crusade was not, however, without consequences for Germany. It was in the empire that some of the worst excesses and greatest atrocities of the Crusade were committed. Inspired by the call to defeat the enemies of Jesus Christ, a number of crusaders attacked the Jews living in several cities in the empire. The pogroms were led by the Rhineland noble Emich of Leiningen, who gained much support despite the official prohibition against violence towards the Jews issued by Henry IV. The first city to suffer was Speyer, but here, thanks to a generous bribe, the Jews were protected by the bishop, and only a small number suffered from crusader violence. Far worse massacres would follow in the late spring and summer of 1096. From May 25 to May 29, the Jewish community at Mainz suffered the persecutions of Emich and his crusaders. This was followed by an assault on the community of Jews in Cologne and by attacks on the Jews in Trier and Metz by a branch of the main army. A separate army led by Peter the Hermit forced the community of Regensburg to accept baptism, and a third, attacked towns in Bohemia. The crusaders offered the Jews the choice between conversion and death in these cities and desecrated their holy books, synagogues, and cemeteries. Religious fervor, greed, and the desire to avenge the death of Christ led to the violent pogroms that occurred in a number of cities in the empire as the crusaders traveled to the Holy Lands.

Although they did not participate in the First Crusade, Germans would involve themselves in several subsequent Crusades. The fall of Edessa to the Turkish leader 'Imad ad-Din Zengi inspired the call for the Second Crusade (1147–1149) and for active participation in that Crusade by German knights and their king, Conrad III. Although at first reluctant to participate because of internal difficulties in Germany and Italy, Conrad was persuaded to take the cross after hearing a sermon delivered by Bernard of Clairvaux at the Christmas mass at the king's court in Speyer in 1146. Indeed, so great was the enthusiasm for a Crusade that a large number of Saxons petitioned for the right to launch a separate Crusade against the pagan Wends. Conrad's attention, however, was directed toward the Holy Land, toward which he headed with a substantial army of knights and nobles, including his nephew and heir, Frederick Barbarossa. Warmly received and provisioned by the Byzantine emperor Manuel I, Conrad would not have similar good fortune when he entered Islamic territory. On October 25, 1147, he and his army were ambushed near Dorylaeum, site of a great crusader victory in 1097, and decisively defeated. Many of the survivors returned home, leaving Conrad with a much reduced force, with which he would join the main crusader army. The ambush near Dorylaeum was but one of many disasters to plague the ill-fated Second Crusade, whose final disaster would come with the attempt to take Damascus in July 1148. Although Conrad and the Crusade leaders had early success at Damascus, they maneuvered themselves into an untenable position and were forced to withdraw. Conrad himself would leave the Holy Land in the fall of 1148 and, after a brief stay in Constantinople, return to Germany in early 1149, having had little success as a crusader.

The Third Crusade (1189–1192) similarly precipitated by a disaster in the Holy Lands, also witnessed the enthusiastic, but ultimately doomed, participation of German warriors. The defeat at the Battle of Hattin and the fall of Jerusalem to the great general Saladin moved secular and ecclesiastical leaders in Western Christendom to call for a crusade. The Third Crusade boasted leadership by the greatest of Europe's rulers: Richard I of England, Philip II Augustus of France, and Emperor Frederick Barbarossa. The emperor had participated in the unfortunate Second Crusade and had long been enamored with the idea of crusading. He and many nobles took the cross in the presence of a papal legate during mass on the fourth Sunday of Lent in 1188. Barbarossa organized and led the largest, most organized, and best disciplined army the Crusades had ever seen. The army, numbered by contemporaries at 100,000, journeyed eastward until it reached Constantinople, where the emperor Isaac Angelus proved difficult. Barbarossa was able, however, to persuade Isaac to support and provision the crusading force. The army then proceeded into Asia Minor. After early difficulties, the crusaders managed to take Konya and then move into the friendly territory of Cilicia. Shortly thereafter, Barbarossa, still vigorous at age 70, apparently attempted to swim the river Gösku, but drowned at midstream. Leaderless, the German army fragmented; some crusaders returned home, and others proceeded to Syria, suffering losses along the way. The loss of the emperor greatly demoralized the remaining crusaders and weakened the overall effort of the Crusade.

Despite the lack of success of the Second and Third Crusades and the calamity of the Fourth Crusade, the crusading ideal remained attractive in the empire, and German crusaders continued to participate in the great campaigns of the thirteenth century. Children from the Rhineland, led by a boy named Nicholas, participated in the Children's Crusade in 1212, and Leopold of Austria and many other German knights participated in the Fifth Crusade (1217–1221).

Among the supporters of the Fifth Crusade was the emperor Frederick II Hohenstaufen, who delayed embarking for the Holy Land until 1228 so that he could resolve political difficulties in the empire. In many ways a conventional Christian ruler who recognized his obligation to God and the Church, Frederick's sense of imperial authority and responsibility informed his crusading sensibility. He launched a Crusade that was as complex and unconventional as he himself is often claimed to have been. Among the unusual characteristics of this Crusade was the size of his army, which was much smaller than conventional crusading armies, and its much greater focus.

Frederick had a better grasp of the politics of the Islamic world than most Western leaders and sought to use that knowledge to his advantage; paradoxically, he had a poor understanding of Latin politics in the eastern Mediterranean. His affairs in the Holy Land were complicated by his status as king of Jerusalem through his marriage to Yolande (Isabella), the heiress to the throne. Although he crowned himself king of Jerusalem and later celebrated a crown-wearing ceremony while in Jerusalem—consciously suggesting the legend of himself as the Last Emperor—the death of his wife made his claims to the throne somewhat tenuous. Nonetheless, he ruled as king and waged his Crusade as king of Jerusalem rather than as a traditional Western crusader.

Two characteristics made his crusade truly unique. Frederick himself waged no real war; instead, in a treaty signed on February 18, 1229, negotiated with the sultan, he received Bethlehem, Nazareth, much of Jerusalem, and a strip of land from the coast to the Holy City. Meanwhile, he faced a Crusade against him led by Pope Gregory IX, who had excommunicated the emperor before the latter's departure for the Holy Land. Frederick may have acquired

Jerusalem, but his Crusade brought little benefit and worsened the already difficult situation for him in Italy and the empire. German crusading activities were not limited to the Holy Land or participation in the armies of the various individual crusades. Beginning at the time of the Second Crusade and lasting into the sixteenth century, German knights received approval to wage Crusades against pagans living along the eastern frontier of the empire. Crusades were launched against Estonia and Livonia in the early thirteenth century and against Prussia in 1230. A series of particularly ruthless Crusades against Prussia in the 1260s and 1270s hastened the Christianization of Prussia and its colonization by Germans. Of critical importance in these Crusades was the Order of the Hospital of St. Mary of the Germans of Jerusalem which was founded in 1189/1190 and is more commonly known as the Teutonic Knights (*Deutschorden*). Founded in the Holy Land, the Teutonic Knights were involved in building castles, creating settlements, and fighting wars of conquest along the empires frontier. These activities, lasting into the sixteenth century, were part of the longstanding policy of the empire's push to the east. They also reveal the flexibility of the idea of the crusade and its popularity and importance in Germany.

Most of the Middle Dutch Crusade literature survives only in fragments and consists mainly of translations (in rhymed couplets) from Old French sources. From the *Roman van Antiochië* (Old French: *Chanson d'Antioche*) some 175 lines remain; from the *Godevaerts Kinsthede* (Old French: *Enfances Godefroi*), only sixty. Both fragments stem from the same manuscript and seem to indicate that the complete Old French Crusade cycle was translated into Middle Dutch, probably commissioned by the dukes of Brabant (between 1250 and ca. 1300). The *Boudewijn van Seborch* (Old French: *Baudouin de Sebourc*), of which some 430 verses remain in fragments of two manuscripts, was perhaps written for the court of Hainault, Holland in the second half of fourteenth century.

The *Roman van Saladin* has a Flemish background. Of this text, only 160 verses remain. It is a translation of the lost Old French proto-*Saladin*. The *Roman van Cassant* is also a translation from an Old French source (proved by references in other texts), but this source has left no other traces. The fragments stem from the late fourteenth century and contain some sixty-five, mostly damaged or illegible verses. It has, perhaps, a Flemish background.

The only complete Middle Dutch crusade texts are in printed form. *Dystorie van Saladine* was printed between 1479–1483 at Oudenaarde (Belgium) by Arend de Keyser. It is a reworking of the *Roman van Saladin* in 2111/2112 eight-line stanzas. This incunabulum, perhaps printed on the occasion of the siege of Rhodos in 1480, is the best representative of the lost Old French proto-*Saladin*.

The *Ridder metter Swane*, containing the Swan Knight legend traditionally connected with the Crusade story (the Swan Knight was the grandfather of Godfrey of Bouillon), also survives only in printed form. This popular tale in prose (with rhymed monologues and dialogues) was printed more than twenty-five times in the Low Countries between the early sixteenth century and 1930. The *Historie van Godevaert van Boloen* is a translation from the *Historia de itinere contra Turcos*, a printed Crusade chronicle (Cologne, ca. 1472) containing a combination of the chronicles of Robert of Reims and Fulkert of Chartres. The Middle Dutch translation, as yet unedited, is a beautiful incunabulum printed in 1486 at Gouda. It seems to mark the beginning of the "scientific" study of Crusade historiography in Dutch vernacular.

Crusades, Opposition

Opposition to crusading, which can be traced from the time of the First Crusade, came from different quarters and took a variety of forms. As major military enterprises, leaving for an extended and uncertain period, the crusading armies attracted large numbers of camp followers and noncombatants. The presence of these people prompted criticism from those who, with good reason, argued that they impeded the military effectiveness of the army. The presence of women, especially, became the standard explanation for defeat as a divine punishment for human sinfulness. Failures were also attributed to the consequences of the crusaders' pride and avarice. One finds the Latin phrase *peccatis exigentibus hominum* ("great human sinfulness") in numerous chronicle accounts of military reverses, such as the disastrous outcome of the Second Crusade. This belief in divine retribution prompted calls for reform in the crusading armies. On the Third Crusade, for example, the Emperor Frederick Barbarossa ruled that those guilty of fornication would be punished severely.

There was also criticism of lay rulers for their delay in taking up the cross. The prompt departure of Frederick Barbarossa in response to Saladin's defeat of the forces of the Latin kingdom at Hattin was contrasted with the vacillation of Richard I of England and Philip Augustus of France. Three decades later, however, the Emperor Frederick II was subject to similar criticism for his tardiness in departing on the Fifth Crusade and was even blamed by some for the defeat of the crusaders at Damietta. Predictably, one can also find opposition to the introduction of taxation in order to finance the Crusades. The German minnesinger Walther von der Vogelweide denounced the papal levies as a cunning scheme to enrich the papacy and its allies, and there was further criticism of the redemption of indulgences in the thirteenth century.

All this, however, was directed at the crusaders or aspects of the crusading movement rather than at the concept itself. Opposition to the crusades as such came in two forms—criticism of specific expeditions and fundamental criticism. Although the idea of crusading against heretics and opponents of the papacy in Europe can be traced back to the twelfth century, it was the thirteenth century when major expeditions were launched against the Albigensian heretics in Southern France and against Frederick II and his heirs, Conrad, Manfred, and Conradin. The use of the Crusade against the Hohenstaufen aroused fierce criticism from a number of sources. Chroniclers and vernacular poets from the Languedoc, Northern Italy, and the imperial heartland of Germany were forthright in their attacks upon the papacy and its supporters. Critics lamented that aid was wrongly being diverted from the Holy Land to the detriment of the campaign against the Muslims. Of the opponents of later crusades in Italy, some were known enemies of the papal curia; others came from Ghibelline territory.

It has been argued in the past that, largely because of the diversion of the crusades from the East, criticism of crusading grew stronger during the thirteenth century, and that the seeds of decline were well established by the time of the Second Council of Lyons in 1274. The real picture is more complex. Except for the occasional pacifist or group such as the Joachites, there was very little fundamental criticism of crusading in the twelfth and thirteenth centuries. The crusading movement was very much alive and well in the late Middle Ages. After the fall of Acre in 1291, attempts continued to be made to regain Jerusalem, but crusading had become much more diverse: there were now numerous theaters of operation from Spain to northeastern Europe and against a range of Christian opponents of the Church.

Disillusionment with the very idea of crusading, expressed in some of the most virulent attacks upon the movement, originated in the mid-twelfth century in the bitter aftermath of the Second Crusade. Two key critics were German—Gerhoh of Reichersberg and the annalist of Würzburg. Initially a supporter of the expedition, Gerhoh's position had changed dramatically by 1160 when he began work on his "On the Study of the Antichrist" (*De investigatione antichristi*). As the title suggests, he drew a connection between the failure of the Crusade and the presence of the Antichrist. The Würzburg annalist, like other contemporaries, criticized the behavior of the crusaders. He then went on to suggest that the crusade itself was inspired by the devil against God's righteous punishment of the world. The devil, he wrote, had deceived men into taking the cross at the peril of their bodies and souls. There is nothing like this in the reaction to either the battle of Hattin and the subsequent fall of Jerusalem to Saladin, or the later fall of Acre to the Mamluks. Enthusiasm for the Crusades remained, even when political difficulties in Western Europe undermined attempts to launch new expeditions to the Holy Land.

Crusades, Recruitment

Following the announcement of a Crusade in 1095 at Clermont, various charismatic preachers set out to recruit an army that could liberate the Holy Land from Muslim hands. There appears to have been little such preaching done in Germany, however, for the evidence suggests that an awareness of an impending crusade developed only as crusaders from France were passing through the region.

In 1146, Pope Eugenius III initially tried to keep the preaching of the Second Crusade limited to France and Italy, hoping that the German king, Conrad III, could be persuaded to help him regain control of Rome from the Normans of Sicily. The task of preaching the Crusade was entrusted to Abbot Bernard of Clairvaux, who adhered to the papal plan. He was forced to change course, however, when an unauthorized Cistercian monk named Rudolf began to preach to the inhabitants of northern France and the Rhineland in the style of one of the millenarian preachers of the First Crusade. Above all, it was Rudolf's urging of renewed pogroms against the Jews that necessitated Bernard's traveling to Germany. Arriving in the Rhineland, Bernard dealt quickly with Rudolf, and then remained to preach; at Christmas, Conrad III, together with numerous other Germans, took up the cross.

The Third Crusade came on the heels of the fall of Jerusalem to the Muslims in 1187, and recruitment north of the Alps was entrusted to Archbishop Joscius of Tyre and Cardinal Legate Henry of Albano. The first men to take the cross did so at an imperial diet at Strasbourg in December 1187; the emperor, Frederick Barbarossa, delayed until March 1188 at Mainz. His decision to enlist in the Crusade caught the attention of his generation, but his tragic drowning en route to the Holy Land resulted in minimal German involvement in subsequent military engagements.

Two formal Crusades occurred during the pontificate of Innocent III (1198–1216)—the Fourth and the Fifth. German participation in the Fourth Crusade was limited, although some German prelates such as Bishop Conrad of Halberstadt were present. The events of 1204, including discussions leading to the redirection of crusade efforts toward Constantinople, only served to convince the pontiff that greater control was necessary, however, and in 1213 he announced a new Crusade in the encyclical *Quia maior nunc*. In each realm, men of proven talent and loyalty were chosen as preacher-recruiters and were given limited powers to use in that effort. In Germany we find *magister* (master) Oliver of Paderborn and *magister* Hermann of Bonn in the province of Cologne; *magister* Conrad of Speyer and others in the province of Mainz; the Cistercian abbot of Villers-en-Brabant, Conrad of Urach, and the abbot of Rommersdorf in the province of Trier; the former bishop of Halberstadt, Conrad of Krosigk, in the province of Magdeburg; and Albert, cathedral provost of Salzburg, in the province of Salzburg.

The recruiting effort was reinforced at the Fourth *Lateranum* (council at Rome) where Innocent III issued the decree *Ad liberandum* aimed at raising the necessary money for the enterprise. The crusade preachers were given the task of collecting the half-tithe and of procuring the necessary supplies and ships. The crusade preachers traveled throughout Germany, agitating the populace whenever they could and capitalizing on occasions, such as knightly tournaments and local feast days, which brought together large numbers of people. The resulting army of German warriors was substantial.

Later Crusades also sought to find support in Germany; in 1225 Pope Honorius III recalled several experienced recruiters, including Oliver of Paderborn, Conrad of Speyer, and Conrad of Krosigk, to preach. Later in the thirteenth century, in 1263 and 1264, Albert the Great served as a Crusade legate in Germany as well.

David von Augsburg (1200/1210–1272)

The Franciscan teacher and preacher David von Augsburg profoundly influenced his contemporaries and successors through his vernacular and Latin tracts on the ascetic and mystical nature of religious life. Around 1240 David became the novice master at the Franciscan monastery in Regensburg, which along with Augsburg was the spiritual center of the Franciscans in the thirteenth century. In 1246 he was appointed papal visitor of two abbeys in the vicinity, a position he shared with Berthold von Regensburg and several other Minorites. As Berthold's assistant, David accompanied the renowned preacher on homiletic and mission tours.

David's extant works consist solely of his Latin and German tracts and letters; in many instances the authenticity is still disputed. His *De exterioris et interioris hominis compositione secundum triplicem statum incipientium, proficientium et perfectorum* is one of the most significant works on the spiritual life in the Middle Ages and survives in some four hundred manuscripts, including many German and Dutch translations. The work consists of three treatises, each devoted to one aspect of the threefold way. The first part focuses on the life of the spiritual neophyte and how the novice must free himself of the world and its enticements and be educated. In part two the inner person is called to reform in light of the image of the trinity. The third part enumerates seven steps to be followed by a religious person seeking perfection, i.e., divine knowledge. Speculative mystical theology predominates as well in the *Sieben Staffeln des Gebetes* (The Seven Steps of Prayer), which survives in three German versions as well as a Latin source; only the German version "B" is unquestionably by David. David's tracts proved particularly influential in the Netherlands among the Windesheimer and the adherents of the *Devotio moderna* (New Piety).

De Heinrico

A macaronic (bilingual) Latin-German poem commemorating the reconciliation of Henry, duke of Bavaria, with Holy Roman Emperor Otto, *De Heinrico* (About Henry) is written in the new meter seen in Otfrid's gospel poem, with assonance but—being bilingual—little rhyme. Each long line contains both languages: typically, a Latin half line followed by a syntactically connected German half line. Thus the anonymous poet writes:

de quodam duce/themo hêron Heinriche,
qui cum dignitate/thero Beiaro riche bewarode.
of a certain duke,/the Lord Henry,
who with honor/took care of the Bavarians'
realm. (w. 3–4)

Whether the Old High German poem refers to Emperor Otto I (936–973) and his brother Henry, whom he made Duke of Bavaria in 941, or to Otto III (983–1002) and Henry the Quarrelsome (son of the preceding Henry) is unknown; both interpretations entail chronological difficulties. Though both pairs quarreled, the poem does not speak directly of reconciliation: Otto receives Henry with honor, attends mass with him, again receives him and leads him to the Council, where he accepts Henry's advice:

Then all the discussion stood/under Henry's control:
whatever Otto did,/Henry had counseled it all: and whatever he omitted/Henry had also counseled that (w. 22–24)

Though found in the eleventh-century manuscript of the "Cambridge Songs," the poem is unambiguously of German origin. The author stresses the honor shown to the duke of Bavaria; nevertheless, though some have posited an original Bavarian version, the dialect is North Rhenish Franconian, except that Otto, because of his Saxon origins, is made to speak Old Saxon.

Dendrochronology

Tree-ring dating, or dendrochronology, is a method for dating wood or objects in which wood has been used, based on measurements of the variation in the width of annual growth rings of the wood.

Dendrochronology was developed using the well-defined rings of temperate and subpolar gymnosperm and angiosperm species (e.g., oak, beech, fir, pine, spruce). The method has not been successfully applied in the tropics.

The width of annual growth-rings of trees varies from year to year, depending on climatic and other environmental conditions in each year during the life of a tree. Over a number of years, the pattern of variation from year to year becomes increasingly distinctive and unique for the specific time and place in which a given tree grew.

The measured sequence of an undated sample can be compared with a continuous dated sequence of measured tree-ring widths for a specific region. If the bark or the terminal growth-ring is preserved in an undated sample, the exact felling year of a tree from which it came is also determined. If the bark and outer rings have been trimmed, it is possible to estimate the felling year for a given sample by adding to the date of the last reserved ring a specified number of years. The value is an average number of sapwood rings for a particular region.

As an example for a dendrochronological dating, the analysis of the Wartburg will be described. The construction of its palace is dated with construction starting shortly before 1157. The tie-beams of the ground floor and of the first upper story were cut around 1162 (+5/-3). The construction (without the second story) may have taken five to ten years. The so-called Elizabeth Gallery was built not before 1477 and the Margaret Gallery not before 1478; the construction of the Luther Gallery (Vogtei) was started in 1480. Further building activities from the seventeenth and nineteenth centuries can also be identified dendrochronologically.

Der Deutsche Orden (*Ordo Theutonicorum*, literally "The German Order," but more commonly known as the Teutonic Knights) was founded 1189/1190 at the siege of Acre to provide spiritual and hospital services for German crusaders. Its duties were enlarged in 1198 to include military service; within a few years its military role was more prominent than its hospital duties. The *Deutschorden*, like other military orders, could not maintain itself in the Holy Land solely from the lands it held there. Money, recruits, and reinforcements came from Germany and Italy, where it possessed lands, churches, and hospitals—gifts of friends, admirers, and relatives of members. By the early thirteenth century it was clear that the Crusade to the Holy Land was not going well. Christian territories had shrunk to the point that the military orders could not deploy the knights whom they had recruited and trained. Seeking to employ his knights usefully, Grandmaster Hermann von Salza (1210–1239) sent knights to Transylvania (1211–1225), Prussia (1226), and Livonia (1237). After the loss of Acre in 1291, the order concentrated on the struggle against Lithuanian pagans and Orthodox Russians. In 1309 the grandmaster moved his residence to Marienburg in Prussia.

There were three classes of membership: knights, often of ministerial and burgher ancestry, but as time passed, ever more of noble ancestry; priests; and serving brothers ("graymantles") who were men-at-arms and administrators rather than actual servants. They lived in convents like other orders of friars but the knights spent their time training for war. Hunting was a popular pastime that kept men and horses in peak condition. In the fourteenth century, when grandmasters such as Winrich von Kniprode (1352–1382) were attracting prominent Western nobles to join summer and winter expeditions into Lithuania, the order became famous for chivalric display. Chaucer's knight came to Prussia in this era. In the fifteenth century, after the English, French, and German crusaders ceased to come to Prussia, the banquets degenerated into all-male drinking parties; nobles began to look on the order as a sinecure for their younger sons.

The order was especially well known for its Realpolitik. Rational planning can be seen in the organization of the Prussian state and its commerce, military strategy, and diplomacy to a degree unusual in this era. The officers did not hesitate to defy the pope when necessary, as was often the case when their interests were threatened by ambitious and capable ecclesiastical opponents and Christian monarchs.

Still, it would be a mistake to underestimate the members' piety. Religious duties were carried out faithfully under the supervision of officers often known for their personal zeal and of the priest brothers. Fast days and vigils were taken seriously. At one time the order petitioned the pope for permission to hear Matins before dawn because the days were so short during the Prussian winter that they needed every moment of light for warfare against the pagan foe.

There were three important regional groupings, each led by a master elected for life: Prussia, Livonia, and Germany. Each held annual chapter meetings, to which convents sent representatives and grand chapter meetings when necessary to discuss important business or elect a new grandmaster. There were disputes between these bodies, often acrimonious ones, even schisms; on a few occasions these resulted in civil war, coups, and threats of war. On the whole, however, the principles of poverty, obedience, and chastity prevailed over personal honor, individual or group ambition, and differing views concerning political and military strategy.

In 1308 the Prussian branch of the order became the dominant power of the region by annexing Pomerellia. Though the purchase of Brandenburg rights was technically correct, the action angered the Poles. For the rest of the century the Polish king was often an ally in the wars against the pagans, but occasionally hostile and always a potential enemy. At the Battle of Tannenberg (1410) King Jagiello of Poland and Duke Vytautas of Lithuania crushed the order's army. The balance of power shifted rapidly, with the order sinking ever deeper into impotence and irrelevance.

After 1525, when the last grandmaster in Prussia, Albrecht von Hohenzollern, converted that branch of the order to Protestantism, rendered homage to the king of Poland, and became duke of Prussia, the German master adopted his titles and authority. This reorganized order contained mixed convents, some part Roman Catholic, part Lutheran, part Evangelical. By 1590 the Roman Catholic convents of the order had evolved into a branch of the Habsburg military machine, providing officers and troops for the wars against the Turks in the Balkans. In 1809 this order was abolished and its possessions confiscated, but it was revived in 1834 as the *Deutscher Orden* (Order of German Knights) to provide hospital services and in 1866 as an honorary organization of the upper nobility. In 1918 the Habsburg connection dissolved. In 1929 the organization returned to its original function, a hospital order. Today it also provides ministerial services, providing priests to German-speaking congregations in countries where Germans are minorities.

Devotio Moderna

The *Devotio moderna* (renewed, literally "modern devotion") was a Dutch religious movement begun in the 1370s consisting of houses of brothers and sisters living in common. Master Geert Grote founded the *Devotio moderna* in 1375 when he opened up his own home to the first sisters. The movement was characterized by a commitment to evangelical work, the surrender of private property to the community, and prayerful meditations. The brothers and sisters of the *Devotio moderna* produced some original texts (collations, exercises, and customaries), collections of excerpted spiritual writings, and copy work. The last of these documents were written around 1500.

The term "Devotio moderna" is usually rendered into English as the "Modern Devotion" and its adherents referred to as the "New Devout," but a more accurate translation of *moderna* is "renewed," as it was the renewal of apostolic devotion and not a new form of devotion that Master Geert and his students sought. This distinction between renewed and new was an important one to the New Devout because the movement never declared a new or different doctrinal position from that of the Roman Catholic Church. Although the houses often had their own rectors and confessors and heard in-house sermons (collations), their members, nevertheless, attended mass daily. Still, the New Devout distinguished themselves from other parishioners by attending mass separately and by prostrating themselves during mass.

The *Devotio moderna* was dedicated to evangelical work, that is, the conversion or "saving" of their neighbors. Such evangelizing took the form of "preaching" publicly in the town square and "teaching" individuals who came to the common house for instruction. The evangelical message, like their private meditations, focused on vice and virtue, judgment and salvation, and the life and Passion of Christ. The movement required chastity, charity, humility, and obedience of all its adherents. It stressed a characterization of God as a loving and compassionate father and as a nurturing mother, with frequent references to the milk of God feeding the Christian child.

Though Master Geert and a few of the movement's brothers and sisters were from the upper classes and were university educated, the vast majority of its members were of the middle and lower classes and were educated by the brothers and sisters in the group of teachers known as the Common Life. The adherents of the *Devotio moderna* regarded education and wealth with suspicion, declaring that any activity not also useful to spiritual progression was not a worthy pursuit. Members of the houses were required to surrender all their personal property to the common fund and demonstrate proper Christian humility at all times. For these reasons (voluntary poverty and a humble disposition), the community was suspicious of and in turn suspected by those of wealth or social pretension, including local patricians and the wealthy, often corrupt religious orders.

In addition to giving over their property and incomes to the common life, each brother and sister performed manual labor that served both practical and spiritual purposes. Practically, it provided the brothers and sisters with the financial support necessary to maintain the community chest. Spiritually, manual labor, seen as a necessary distraction from the world, was incorporated into their meditations. From the spiritual point of view the most highly regarded form of manual labor was the copying of religious texts, an activity that both brothers and sisters performed. In addition to copying, the sisters also participated in more traditional female work, such as sewing, tatting, and brewing.

In many respects the *Devotio moderna* resembled other spiritual separatist movements that were eventually declared heretical by the church, and, because of its criticism of corrupt clergy and its tendency to elevate the laity to positions of authority, the movement has been called proto-Protestant and is even credited with contributing to the Reformation. However, the *Devotio moderna* did not consider itself to be anti-Catholic or anti-church, having never taken up a doctrinal position in contradiction to the Catholic Church. In fact, the movement's main criticism of the church—excesses and corruption within the Roman Catholic hierarchy—was a concern that the Catholic or Counter-Reformation addressed. Furthermore, wherever the Protestant Reformation took hold, the houses of the common life disappeared, surviving the longest in the Catholic regions of Germany.

Few biographical details remain on Dhuoda, the only known female author of the Carolingian Renaissance. This well-educated noblewoman from a powerful Austrasian family married Bernard, duke of Septimania, at the royal palace at Aachen on June 29, 824. Bernard, a powerful imperial magnate, played an important but unpredictable role in the turbulent 830s and 840s. During the duke's extended absences between the births of their two sons, William (826) and Bernard (841), Dhuoda played a key role administering the province. To counter Bernard's emerging disloyalty, King Charles the Bald summoned William to court as a royal hostage in 841. In response, Dhuoda crafted her *Liber manualis* (Handbook) to guide her teenage son through his perilous stay at the palace. Tragically, she may have witnessed her husband's execution for treason in 844, and perhaps also that of William in 849 after his failed attempts to avenge his father's death. The younger Bernard (d. 886) lived long enough to carry on the family line, for it was his son, William the Pious of Aquitaine, who founded the monastery Cluny in 910. Dhuoda's own death date is unknown, but the *Liber's* references to her recurring sickness, as well as its detailed instructions for her funeral, indicate that she may have died shortly after finishing her book in 843.

Although much of what is known of Dhuoda centers around the men in her life, her own work has commanded far greater scholarly interest. Written in the genre of the "mirror for princes," the *Liber manualis* endeavored to help William fulfill his complementary and sometimes contradictory roles of son, vassal, and Christian. Despite the author's protestations of ignorance, her advice exhibits an intimate and wide-ranging familiarity with scripture and patristics well situated within the broader literary and theological currents of the Carolingian era. Recent studies of Dhuoda's book have uncovered veiled critiques of Bernard's political inconstancy, as well as several inherent assertions of matriarchal authority. Once dismissed as artless and incoherent, the *Liber manualis* is a monument of medieval women's literature.

Diet and Nutrition

In medieval German literature the diet of the nobility is described as consisting of game, fish, and white bread; that of the peasants as dark bread, porridge, turnips, and sidemeat, i.e. the cheap cuts of pork. In these texts aristocrats drink wine, while peasants drink water, milk, cider, or beer. This rather simplistic view of the medieval diet does not yet take into account the bourgeoisie, which was becoming a significant cultural force in the later Middle Ages. Although the quantity of meat eaten in castles was higher than that in towns or in the countryside, only a small percentage of it was game. Domestic animals such as pigs, cattle, sheep, goats, and chickens were a much bigger source of meat. In addition, all classes depended heavily on grain and fruit. In Germany, oats and barley were preferred over millet. Studies of fecal waste have shown that cherries, plums, sloes, damsons, apples, pears, medlars, hazel- and walnuts, other types of berries, rose hips, and elderberries were the most popular fruit. Food-stuffs such as fruit and vegetables were normally eaten when in season; foods that had been preserved through marinating (kraut), salting (fish), smoking (meat), and drying (fruit, electuary), or fresh fruit (apples), were stored for the winter in cellars and larders. Whenever possible, animals such as fish and chickens were kept alive until they were needed in the kitchen. Small animals no longer a part of German cuisine included squirrels, hedgehogs, beavers, starlings, sparrows, and jays. Cooks especially those of more modest households, used all the parts of an animal (meat, blood, head, inner organs) and turned them into purees, pies, and sausages. Finely chopped or mashed, foodstuffs were colored and/or filled in molds in the shape of mushrooms, fish, crayfish, eggs, and birds. Leftovers, too, were used to prepare new dishes. Herbs such as mint, sage, rue, leeks, onions, parsley, fennel, dill, caraway, lovage, mustard, watercress, juniper berries, celery, and horseradish were used fresh in the summer and dried in the winter. Most spices had to be imported and were therefore very expensive. The most affordable were pepper and ginger, followed by cinnamon, cloves, nutmeg, and saffron, which was approximately seven times more expensive than pepper. Other luxury goods were almonds, rice, and sugar, which were also in high esteem as foods for the sick and convalescent.

Fasting laws prohibited the consumption of meat, fowl, lard, eggs, and dairy products on every Friday and Saturday, all church holidays, during Lent, and before saints' holidays, which amounted to more than a third of the days of the Christian calendar. Those who could not afford fish had to live on hemp, lentils, beans, and bread. Poppy-, lin-, and rapeseed oil were substitutes for butter and lard in Germany.

The main meals of the day were eaten at sunrise, noon, and sundown and usually consisted of several courses. Most of the tableware was made of wood, metal, and pottery. Glass was still rare, and the cutlery included a knife and spoon, but no fork. According to medieval medicine, the right quantity, composition, and sequence of dishes was essential for maintaining or restoring the balance of the four humors (hot, cold, wet, dry) in the human body. German physicians such as Konrad von Eichstätt and Arnold von Bamberg wrote dietetic treatises (*Regimen sanitatis literature*) in which they described the humoral qualities of individual food-stuffs, and occasionally provided culinary recipes. This dietetic information later found its way into medieval German cookbooks.

New in the diet of fifteenth-century Germany are salads prepared from raw vegetables, pasta, and a variety of imported foods such as capers, figs, dates, lemons, limes, oranges, pomegranates, pine nuts, and carob beans. Wine, initially drunk by the nobility and on special occasions, had now become a drink consumed by everybody who could afford it, regardless of status.

Dietrich und Wenezlan

This fragmentary Dietrich epic (499 lines), composed in rhymed couplets of Bavarian dialect, is preserved on two leaves of a parchment manuscript from the middle of the thirteenth century. It is the second-oldest surviving Dietrich epic; only the *Eckenlied* strophe from the *Carmina Burana* is older. The fragment might be the only surviving part of an epic called by der Marner *Der Riuzen Sturm*.

The fragment begins as Wolfhart, Dietrich's man, brings Dietrich a challenge from Wenezlan, a Polish prince. Wenezlan has taken both Wolfhart and Hildebrand hostage. Having heard of Dietrich's great strength, Wenezlan challenges him to a duel with the understanding that, if Dietrich does not accept the challenge, Wenezlan will kill the hostages. Dietrich hesitates. Wolfhart mentions that he and Hildebrand accompanied Dietrich into exile; such loyalty deserves support. Also, if Dietrich does not accept the challenge, Wenezlan will attack Etzel, with whom Dietrich is now allied.

Saying he was only joking, Dietrich accepts the challenge and informs Etzel of it. They order the army to fold its tents and march with them across the Salzach River into Wenezlan's territory. They arrive at nightfall and make camp (Lacuna).

Ladies watch from a magnificent tent as the duel begins. Wolfhart, seeing Dietrich in distress, urges him on to greater feats. The duel continues until evening. As the fragment ends, Dietrich wonders how long he will have to go on fighting.

The narrative combines elements of the historical and *aventiurehaften* (knightly quest) Dietrich epics in such a way that it is ambiguous with regard to its predominant tradition (see entries for [Alpharts Tod](#) and Albrecht von Kemenaten). As in many of the *aventiurehaften* texts, Dietrich refuses to accept a courtly challenge, and this results in unnecessary combat (see entry for Albrecht von Kemenaten). But the situation is also political, as in the "historical" Dietrich epics (see entry for [Alpharts Tod](#)). As in the *Nibelungenlied*, *Rabenschlacht*, and *Buch von Bern*, Dietrich is in exile with Etzel. When he understands that the situation threatens Etzel's interests and the lives of his men, he accepts the challenge. The duel in the presence of ladies is thus both necessary conflict and courtly game. In content, style, and composition, *Dietrich und Wenezlan* is most similar to *Biterolf und Dietleib*, another narrative in rhymed couplets that is ambiguous with regard to its predominant tradition and also involves an encounter with a prince of Poland.

Dietrichepik

The figure of Dietrich von Bern, based loosely on the historical Ostrogothic king in Italy Theoderic the Great (r. 493–526), became the central figure of a wide variety of verse narratives composed during the High Middle Ages in Germany. The variety of these narratives along with the profusion of variant versions and their adaptations in the Norwegian *Thidrekssaga af Bern* suggests a wide distribution of oral tales in verse throughout the German-speaking world. The stories are composed in four-line strophes similar to that of the *Nibelungenlied* (*Alpharts Tod*, *der Wunderer*, *Rabenschlacht*), in rhymed couplets (*Biterolf und Dietleip*, *Laurin*, *Walberan*, *Dietrich und Wenzeland*, *Das Buch von Bern*), and in a clumsy thirteen-line stanza known as the *Bernerton*, or "Melody of Verona" (*Virginal*, *Eckenlied*, *Sigenot*, *Goldemar*). As far as content is concerned, it is traditional to divide the narratives into the historical (*Buch von Bern*, *Rabenschlacht*, *Alpharts Tod*) and the remainder, generally referred to as *märchenhaft* (fairy-tale-like) narratives. Dietrich also appears in the *Nibelungenlied* and in the *Rosengarten zu Worms* as a major character, and in some versions of the *Wolfdietrich* he is inserted as Wolfdietrich's grandson. The legendary *history* "story" of Dietrich appears all together only in the Norwegian saga. Dietrich is presented as a king of the Amelungs in Bern (Verona), who is the nephew of the Roman emperor Ermenrich. After being falsely accused by his uncle's evil adviser, he is driven from his lands and spends thirty years in exile at the court of Etzel (Attila the Hun). During this time he takes part in an attempt to retake his lands that is militarily successful but leads to the death of the sons of Etzel and his return to Etzel in mourning. He is also involved in the cataclysmic battle with the Nibelungs/Burgundians that concludes the *Nibelungenlied*, and most of his men are killed. He finally returns to his land and rules until his death. The legendary history of Dietrich arose soon after his lifetime in heroic stories. It essentially turns his historical career on its head, since he ruled competently over his kingdom for thirty-three years and was never driven from it. The story was well established by the time of composition of the ninth-century *Hildebrandslied*, which features Dietrich's weapons-master and also refers to Dietrich's enemy as Otachre, a name clearly derived from that of the historical enemy of Theoderic, Odoacer. The villainous Ermanaric was later substituted for Odoacer, in spite of his having died more than a century before Dietrich's reign.

Dinkelsbühl

Founded between 1170 and 1180 at the site of a preexisting settlement on the Wörnitz River, Dinkelsbühl is one of the most noteworthy medieval settlements in Franconia. The town developed around the crossing of an important north-south road used as part of a pilgrimage route to Rome and an east-west road that led to a ford across the Wörnitz. Travel logs attest to visits from kings and emperors, and under Rudolf von Habsburg, who came to Dinkelsbühl in 1285, the town became a *Reichsstadt* (imperial city). The economy of Dinkelsbühl depended primarily on market trade, and its craftsmen were respected particularly for the production of woven goods, scythes, and sickles.

The wall around Dinkelsbühl, completed in 1430, and an early Gothic gate tower, the Wörnitz Tor, are well preserved to this day. Between 1448 and 1492, the late Gothic, three-aisle church dedicated to St. George, the Georgskirche, was constructed on the foundation of the first parish church, the Romanesque Bartholomäuskirche. Although the exterior of the Georgskirche was never completed, it is one of the most remarkable *Hallenkirchen* (hall churches) in southern Germany. The Gothic church tower incorporates the Romanesque base and portal of the earlier west facade.

From the late fifteenth century, the economy of Dinkelsbühl began to decline so that its craftsmen produced wares primarily to serve the needs of the immediately surrounding areas. Spared serious damage during the Thirty Years' War, the town retains much of its fifteenth-century character even today.

Diocese

The diocese is a telling marker of the decline of the Roman Empire, the concomitant rise of Christianity, and the growth of medieval Germany. Originally an occasional unit of Roman civil administration, the diocese was employed by Diocletian (284–305) in his reorganization of the empire when, on top of the existing provincial structure, he added four prefectures and twelve dioceses. As the emperors of the following century adopted Christianity as the sole official religion of the empire, what had been largely an urban religion now necessarily had to expand into the countryside (*pagus*) to embrace the *pagani* (pagans) living there. And in the rapidly disintegrating West in particular, bishops came to govern these areas increasingly called "dioceses," although these were much smaller than those of Diocletian.

The original eight dioceses of what later became medieval Germany were largely defined by the outer limits of Roman occupation, in a line along the Rhine running from Constance to Cologne and including Trier on the Moselle. According to tradition, bishops are attested in all these cities in the fourth century. While it is unclear whether Augsburg had bishops this early, in these cities it is problematical whether bishops continued to rule during the disasters of the fifth and sixth centuries. Continuity does exist from the seventh century onward here as well as in Augsburg, Brixen, and Regensburg. Thereafter the progress was steady and marched *pari passu* (side by side) with the work of conversion and, increasingly, of conquest conducted by both the Franks and the Bavarians. Thus around 700 Salzburg came into being, and in the eighth century the Bavarian dioceses of Freising, Passau, Würzburg, Eichstätt, and Bremen were founded. In the ninth no fewer than eight new dioceses were created, and at least another ten in the tenth. To provide order for this extraordinary growth, metropolitan or archiepiscopal sees were established *de novo* (as new) or by elevation of existing bishoprics: Mainz, Salzburg, Trier, and Cologne between circa 780 and 800; Hamburg-Bremen in 848; and Magdeburg by 968. New dioceses continued to be founded into the thirteenth century as expansion into Scandinavian and especially Slavic lands continued. Thus for the Teutonic Knights (*Die Deutschorden*) Prussia was divided in 1243 into four exempt dioceses whose bishops were completely subject to the order. But elsewhere the outer limits of the German church and empire had already been demarcated by the popes' creation between circa 1000 and 1164 of archdioceses and primatial (church officials') sees for Poland, Hungary, Denmark, Norway, and Sweden. Significantly, however, the diocese of Prague, created in 973, remained in the province of Mainz until its separation and elevation to an archbishopric in 1344—a clear sign of the special place of the kingdom of Bohemia in the empire.

By 1500 there were about sixty dioceses in Germany. It is difficult to be precise about the number, for much depends on whether one counts exempt dioceses and especially those in the penumbra of the empire (e.g., Metz, Toul, Verdun, Besançon, Breslau). Although German dioceses varied greatly in size, they were on average much larger than those in Italy (where there were nearly 250) or even England (17). Even more distinctive was the fact that from the High Middle Ages about four dozen of them developed into prince-bishoprics whose incumbents ruled both dioceses as bishops and territories (usually called *Hochstifte*, *Erzstifte* in the case of archbishoprics) as princes. Dioceses and *Hochstifte* were never coterminous, and in the case of Constance the bishop ruled the largest diocese and one of the smallest *Hochstifte* in the empire. This disparity became increasingly significant in the fourteenth and especially the fifteenth centuries with the progressive extension of princely power over the church. In those regions where one form or another of "Reformation" was introduced in the sixteenth century, the "diocese" subject to Catholic bishops came to be effectively restricted to the confines of the *Hochstifte* until the end of the Old Reich (empire).

Dirc van Delf, author of Dutch religious texts, was one of the most learned men of his time. He was probably born in Delft (county of Holland) around 1365. At an early age he entered the Dominican convent at Utrecht. After many years of study he became doctor of theology. From December 1399 onward we find him at the court of Duke Albrecht of Bavaria, count of Holland, in The Hague. There he had the function of court chaplain, but he also lectured at German universities, such as Cologne and Erfurt. We lose all trace of Dirc van Delf after the death of his patron Albrecht in the year 1404.

In 1401, a book presumably written by Dirc for countess Margaret of Cleves, wife of Albrecht, is mentioned in the accounts of the court in The Hague, but unfortunately it has not survived. For Duke Albrecht he started writing around 1403 the *Tafel van den Kersten Ghelove* (*Handbook of the Christian Faith*), a scholastic summa, or compendium, in the vernacular. Stylistically, it is one of the best Middle Dutch prose works, and is indeed one of the most learned encyclopedias of all European vernacular languages. The text consists of two large parts: the Winterstuc (Winter Piece) and the Somerstuc (Summer Piece). The main source of the *Tafel van den Kersten Ghelove* is the *Compendium of Religious Truths* (*Compendium theologiae veritatis*) by Hugh Ripelin of Strasbourg (also known as Hugo Argentinensis, ca. 1210-ca. 1270), but Dirc made use of many other Latin sources as well. Dirc's personal achievement consists in his regrouping and reformulating of this large amount of knowledge. He always takes into account the intellectual level of his audience, and his use of images often corresponds with the experiences of the members of the court. His work deals with the whole creation: there are, among others, chapters about God, the creation of the world, the creation of humankind, the angels, more scientific subjects like the planets, the four elements, physiognomy, and also virtues and vices, God's mercy, the life of Christ, the acts of the apostles, the ecclesiastical hierarchy, works of mercy, liturgy, the sacraments, social order, the Antichrist, and the Last Judgment. Using the Aristotelian system of dialectical reasoning, Dirc expounds God's perfect plan for the laity: nothing is without sense or reason. Finally, he significantly enriched the Middle Dutch vocabulary with neologisms from scholasticism.

His dedication manuscript that has come down to us is illuminated with superb miniatures with an aesthetic as well as a didactic function. They form a concrete support of the text. Besides richly illuminated manuscripts for the aristocracy, less luxuriously executed manuscripts have survived as well. The latter were used by the clergy and especially in nunneries and Beguine communities. In an environment where knowledge of Latin could be problematic, the vernacular *Tafel van den Kersten Ghelove* filled a need for religious reading material. In addition, many miscellanies with religious texts contain excerpts from the *Tafel van den Kersten Ghelove*. A Middle Low German adaptation exists as well.

Donation of Constantine

Although one of the most important and well-known forgeries of the Middle Ages, the date of composition and purpose of the Donation (German, *Schenkung*) of Constantine, or *Constitutum Constantini*, remain unclear. It has been seen as a document designed to support papal efforts to strengthen ties with the Frankish kingdom or to undermine Byzantine rights in Italy. Others have argued that the forgery was designed to legitimize papal claims to the Exarchate (Eastern Church). The Donation is thought to have been intended to assert the papacy's emancipation from the constitutional structure of the Eastern Empire, and may have also asserted the papacy's own independence and political legitimacy in Italy. The Donation, whatever its origin, would have a long career in defense or in opposition to papal authority until proved a forgery by Lorenzo Valla in 1439.

There is consensus that the Donation was written in the 750s by a Lateran cleric, possibly with the knowledge of Pope Stephen II, and was associated with the coronation and Donation of Pippin, by which Ravenna was given to the papacy. The forgery was based on the legends of Pope Sylvester I, which had existed since the fifth century. The first part of the Donation describes the events of Constantine's conversion, including being cured of leprosy and instructed in matters of the faith by Sylvester. In this section, Constantine asserts the importance of Rome as the city of Peter and Paul and as the ultimate authority in matters of orthodoxy. In the second part, Constantine makes his donation to the papacy prior to his own departure for the new capital in the east. He grants the pope supremacy over the sees of Antioch, Alexandria, Constantinople, Jerusalem, and all the churches of the world, and he grants temporal authority over "Judea, Greece, Asia, Thrace, Africa, Italy, and various islands." Most important, Constantine bestows on the pope "our palace [the Lateran], the city of Rome and all the provinces, districts, and cities of Italy or of the western regions."

Although its origins remain unclear, the later history of the Donation is more definite. The forgery was involved in the struggles between church and state and manipulated by advocates on both sides. In the late ninth century, Frankish bishops inserted the Donation into canon law collections to secure ecclesiastical property rights. In the eleventh century emperors and popes passed judgment on the document. Otto III questioned the authenticity of the Donation and rejected the "mendacious privileges" and "fictitious writings" found in the document. The Gregorian Reformers found support for their territorial claims in Italy and rights to primacy in the Donation. It also provided a framework for the ceremonial and political programs of the Gregorians, especially their claim to control of the imperial dignity. In the twelfth century, Innocent II saw in the Donation justification for the continued "imperialization" of the papacy, and in the thirteenth century Innocent III inferred from the Donation rights to intervene in imperial elections. Indeed, the Donation influenced political and religious affairs long after its origins in the Carolingian period.

Drama

Those who think of "drama" as a branch of literature practiced by writers of talent or genius from classical Antiquity to the present must abandon this notion when investigating drama in medieval Germany. Nearly all German plays are anonymous, and most are the work of civic committees or of clerks hired for the occasion, not of "writers" esteemed for their craft. Men could make their living in medieval Germany writing and performing love songs or religious and gnomic poetry, or writing sacred or secular stories in verse, but we do not know that anyone in medieval Germany made a living writing, performing, directing, or producing plays. These activities fell to amateurs who were fully engaged by other professions most of the year. At a given season they might fill roles in a dramatic performance for a particular audience, whether this was the congregation of a church or the townspeople and visitors assembled on a city square. The scripts for these plays were not regarded as "literature" and so were often not preserved—at least the paucity of play texts in comparison with documented performances supports this inference. In these respects, medieval drama has much in common with the amateur theatricals and civic pageants of today.

Modern assumptions about the nature of drama are also a poor guide to the medieval phenomenon because they are largely derived from tenets in Aristotle's *Poetics*, as these have been embodied in and modified by centuries of European and American dramaturgy. One often meets the criticism that medieval plays are incoherent and disorganized. It is a commonplace of Hrosvit criticism, for example, that her *Gallicanus* consists of two independent actions loosely connected by the presence of the titular hero, but what criteria are appropriate to Hrosvit's tenth-century work? She had no knowledge of, hence no concern with, Aristotelian unities. The aesthetics of medieval drama do not arise in classical antiquity, and one must not approach it with modern assumptions about the literary construction of "drama" or the characteristics of a "good play."

Although there were no theaters in medieval Germany, there were stages (at the simplest, platforms indoors or outdoors that permitted spectators better lines of sight). Costumes and properties were used, and special effects could be created. One may accordingly speak of the drama as "staged impersonation for dramatic effect," i.e., role playing intended to move spectators emotionally and (sometimes) cognitively.

The great majority of plays depict events from Christian sacred history with the purpose of confirming the spectators' understanding of their religious significance. These plays do not so much teach new lessons as confirm old ones; they justify Christian tradition and many offices and activities of both church and state, serving in this way a deeply conservative social purpose. Medieval German drama as a communal activity sponsored and financed by institutions of governance (often city councils) was no place for the questioning of commonly held beliefs. Secular drama had greater freedom in this regard than did sacred, partly because of its close connection to Carnival, and seems thus to have enjoyed the seasonal license of transgression. Even so, it restricted its sharpest barbs to common human failings in such areas as sexuality and business life.

The beginnings of German drama can be traced back at least to the tenth century (Easter plays). Key moments in the gospel narrative of Jesus' death and resurrection were expanded verbally and accompanied by gestures and movements. Just how elaborate these expansions could become at an early date is shown by the tenth-century *Regularis concordia*, in which costumes, props, and body language are specified, but this *English* document can only be suggestive for German practices. Nonetheless, twelfth-century German manuscripts from the monastery of St. Lambrecht (Rhineland Palatinate) transmit an Easter liturgical drama in Latin that calls for dramatic action ("let the cantor appoint two, one old and the other young, who, after the shouting of the crowd has been finished, should come to the sepulcher, the youth first and let him wait; let the old man, following, gaze attentively into the tomb...." Bevington 1975:38) in which the congregation was to participate by singing hymns in German ("the shouting of the crowd"). It is a very long way from this playlet to the Easter spectacles staged in the fifteenth and even sixteenth centuries, which could involve hundreds of people, last for days, and cost a lot of money, nor is the development linear—i.e., the relatively simple dramatizations of the early centuries do not give way uniformly and progressively to elaborate productions. In the chapbook *Til Eulenspiegel*, published in 1515, the thirteenth prank is about Til sabotaging a little Easter play traditionally staged in the village church, in which the priest plays Jesus, his maid the angel, and two peasants the three (sic) Marys. Such village enactments, as well as grand urban spectacles, must have been familiar to the readership of the book.

The roots of serious drama in Christian liturgy connect it firmly to the Latin language. By the end of the Middle Ages, however, the use of Latin had shrunk to a few moments of highly liturgical character (in *Til Eulenspiegel*'s prank, both the maid and one of the peasants recites in Latin). In general, the reduction of Latin and the growing predominance of German in religious plays parallels their progression out of the church and into the marketplace for performance, as well as their textual expansion: it became ever more necessary to give access through vernacular speech to the content of the impersonations, which moved ever further from their familiar gospel origins. This general development does not, however, serve to explain the relations of Latin and German in each specific play. The complex dramas found in the thirteenth-century manuscript of the *Carmina Burana* are basically Latin, but the long Passion play includes German lyrics for songs sung by Mary Magdalene. Almost contemporary is the Easter play transmitted (in fragments) by a manuscript once in the monastic library at Muri, Switzerland, which is entirely in German. This was long regarded as "the first drama in German," but recent scholarship has argued persuasively that this particular manuscript, written for a prompter, included only the German portion of the play, which was original, and omitted all the traditional Latin material, which was so familiar that no performer would have stumbled over it. The relationship of Latin and the vernacular in medieval German dramas is a basic research problem.

As the language of educated discourse, Latin was also used for nonbiblical dramas in the earlier centuries. Hrosvit, a canoness at the abbey Gandersheim (Saxony), wrote six short plays in Latin, supposedly in imitation of Terence, around the middle of the tenth century. Although these did not influence the development of mainstream German drama, they are little jewels from a person who had the intuitions and instincts of a fine playwright as well as a keen, subtle mind, a good measure of self-esteem, and pride in her gender. Three plays featuring Roman emperors (*Gallicanus*; *Agape*, *Chionia and Irene*; *Sapientia*) study the relationship of political power and Christian truth, and thus constitute oblique advice to the Ottonian imperial court. Hrosvit was closely connected with this court through her abbess, teacher, and friend Gerberg, a niece of Emperor Otto the Great. Her pair of prostitute dramas, *Maria* and *Thais*, are similar in showing young women lost in the carnal world and apparently redeemed through the efforts of elderly, celibate monks, but these formidable heroines pursue holiness passionately once their ignorance (their despair of forgiveness) is removed, and in the case of *Maria* this ignorance must be charged to her well-intentioned but bumbling male mentor, the hermit Abraham, Hrosvit was a writer many centuries ahead of her time.

Another Latin play of remarkable originality and depth is the *Play of Antichrist* from the late twelfth century, preserved in a manuscript from the Tegernsee monastery (Bavaria). It presents a complex political action involving the German king (who is also the Holy Roman emperor) and the kings of France, Greece, Jerusalem, and Babylon. After a first section, in which the German emperor subdues the Western world for the Faith, Antichrist appears and confounds the entire empire—last of all the emperor himself, and then only through false miracles—before God strikes him down. This play glorifies in eschatological perspective the Hohenstaufen dynasty of Frederick I Barbarossa. It has been argued that a performance must have required an outdoor arena the size of a polo field, on which elaborate equestrian and martial exercises could be presented, as well as the dialog and singing contained in the manuscript.

One gains good insights into fully fledged German religious drama of the Middle Ages from the *Frankfurt Director's Script*, written in the first half of the fourteenth century. The manuscript, a roll made of seven parchment pages glued together, contains stage directions in red ink and the first words of speeches and songs in black. These outline a Passion play that lasted two days and was a huge undertaking, requiring more than eighty actors on the first day alone and giving cues for some four hundred speeches and songs. It begins with a series of messianic prophecies from seven Old Testament authorities brought forward by St. Augustine in an effort to persuade Jews of the truth of Christianity. They are scorned by the Jews, however, so Augustine calls for a dramatization of sacred history to be performed as another way to convince the unbelievers. The following Passion play is thus a play within the play. It begins with the story of John the Baptist and scenes from Jesus' public life, from his baptism through various healings; there follow the Sermon on the Mount, the raising of Lazarus, the entry into Jerusalem, the meal with Simon the Pharisee and the anointing by Mary Magdalene, then the heart of the Passion story, the Last Supper through the Crucifixion. The play does not end here, however, but includes the Resurrection and standard

scenes from Easter play tradition, culminating in Jesus's Ascension. The final two scenes are a return to the frame, the conflict between Christians and Jews regarding the true faith, and Church disputes successfully with Synagogue, from whom a group of "eight or ten" Jews fall away and request baptism. This baptism is staged, as the insignia of authority (robe and crown) fall from the figure of Synagogue. Both the main action and the frame demonstrate to the play's audience the correctness of Christian belief and the eventual triumph of the Faith over even the obdurate Jews.

Medieval religious drama is centered on the events of Holy Week, to which by far the greatest number of texts pertains. The Christmas season was also dramatically productive, though to a lesser degree, and there is at least one play each transmitted for Corpus Christi, Whitsuntide, the Ascension, the Assumption, and other feasts. There are also saints' plays, and a group about the Last Judgment. In contrast with this fecundity of staged impersonations dealing with Christianity, plays treating purely secular themes are very few before the middle of the fifteenth century, when the urban Shrovetide (Carnival, or *Fastnachtspiel*) play tradition is preserved in manuscripts. One is sure that there were secular plays before the written evidence begins, but little can be said of them that is not conjecture.

Secular drama emerges toward the end of the fourteenth century. Manuscripts hold hints of a tradition of mummery or simple playmaking about *The Conflict of Spring [May] and Fall*. The merits of the seasons are advanced by comical advocates—"Lily Bush" praises spring as the time of natural beauty and refined love, "Bold Toper" extols fall as the season of the vintage. The form of the "plays" is that of a simple revue, serial speech making. This conflict between high and low culture was no doubt made comical by the exaggerations of the rivals not only in words but also in costumes, characterizations, and mime. Audience sympathy was certainly on the side of "Bold Toper," who stands for the indulgences of the vintage, hence by implication for instincts and appetites released from all the fetters of life in medieval communities.

There are plays from roughly the same period that feature Neidhart, a chivalric hero derived from a thirteenth-century troubadour of this name, in his entanglements with hostile peasants. The plot of the earliest "Neidhart play" (just sixty-six lines, in a manuscript dated 1360–1370) gives a feeling for the type: Who will find the first flower of spring? The duchess of Austria will bestow her special favor on that person. Neidhart spots a flower and places his hat over it for safekeeping, then hurries off to fetch the duchess and her court. She comes on stage, lifts the hat—and is disgusted, outraged at Neidhart! (The audience probably saw mimed what we can only deduce from parallel versions of this plot: that peasants observed Neidhart making his discovery, then one of them picked the flower when Neidhart had gone and promptly defecated on the very spot before replacing the hat). This scatological prank is at the center of the five Neidhart plays transmitted, the longest of which (around 2,600 lines) exceeds well-known Easter plays in textual length.

Secular drama achieves full growth in the fifteenth century with the proliferation of Carnival plays. About 150 have been preserved; most are from the major urban cultures of Lübeck and Nuremberg, but a cluster comes from Tyrol. In the prolific Nuremberg tradition, they are brief theatrical entertainments for the pre-Lenten period performed in taverns or private homes by apprentices and journeymen in the trades, and feature simple humor derived from bodily functions—reproductive or excretory—or social friction (dishonest workmen, shrewish wives). In form they vary from the simple revue, a sequence of autonomous speeches directed to a core problem or conflict, such as a wife's complaint that her husband is no good sexually, to one-act dramas with several roles and discernible development. The tradition in Lübeck, which can be dated back at least to 1430 and may thus be the earliest, was somewhat different. Performers were young men from well-to-do families, organized in fraternities, and performances took place on open-air stages. Unfortunately not one Lübeck play survives in manuscript, although we do possess a register of titles of seventy-three plays, from which it appears that many of these treated serious subjects in a serious manner.

From Nuremberg, over 100 late medieval Carnival plays are known (to which the eighty-three plays of this kind by the early modern author Hans Sachs could be added). The earliest play that can be dated with confidence was written in 1456 by the artisan Hans Rosenplüt—untypically, it is a serious piece on the menace of the Turk to Christian Europe—so the Nuremberg tradition (which was exported to Tyrol) is a phenomenon of the end of the Middle Ages. The plays are usually short and vulgar, suitable for the amusement of a crowd drinking strong beer and requiring little or no rehearsal. "The Doctors Play" is 102 lines long, with four roles: three servants bring the urine of their master or mistress to a doctor for analysis; he concludes that a peasant has eaten bad meat and needs to empty his bowels, the young wife whose old husband can't satisfy her at night needs a young lover, and a housemaid is not sick but pregnant, for which the "cure" is a cradle. If the long and rich tradition of religious plays in medieval Germany expresses the spiritual hunger of the people and serves to legitimate the ecclesiastical and political status quo, then the Carnival plays that erupt in the fifteenth century express in a compensatory manner the carnality of urban populations and their skepticism of established, late medieval institutions.

Drama, Christmas Plays

While not as widely performed and attested as Passion plays and Easter plays—there are only eight play manuscripts—Christmas plays still formed an essential part of the annual cycle of religious drama in the German-speaking part of Central Europe. As with Easter plays, Christmas plays were performed only during the appropriate liturgical season; however, Passion plays and Corpus Christi plays may also include representations of the Nativity. In contrast to the more expansive Passion and Easter plays, even the larger of the Christmas plays remains somewhat shorter—the Christmas play from Hesse (ca. 1450) has 870 lines and 27 parts.

In a wider sense, these plays present the story of Jesus' Nativity and closely related incidents: the Annunciation, the Visitation, his birth, the visits by the shepherds and Magi, the murder of the innocents, the flight to Egypt, and the purification of Mary. They may also include prophets plays in which the coming of Jesus is foretold. More narrowly, Christmas plays are those that depict the core moments of the Nativity. In the German tradition, however, a special scene is added in which the baby is rocked in a cradle (the *Kindelwiegen*), and he is entertained with special songs and dances. Some of these carols—such as "Joseph, lieber neve mein" and "In dulci júbilo"—are still popular today.

The plays show Latin roots, having grown out of prophets plays and Christmas liturgies. As with all medieval religious drama, however, the role of apocryphal religious literature is also immense. Of the earlier plays, the most developed is the Latin Benediktbeuern Christmas Play (early thirteenth century). A major component of this play—based on the pseudo-Augustinian *Sermo contra Judeos, Paganos, et Arianos*—is its lengthy prophets play, in which the coming of Jesus is foretold by the prophets from the Old Testament. These prophecies are then opposed by Archisynagogus. The oldest theatrical Christmas scenes in German come not from an independent play but, rather, from the Himmelgarten Passion fragment (mid-thirteenth century). The first separate Christmas play comes from St. Gall (ca. 1330), but most texts date from the late fifteenth and early sixteenth centuries. From the Erlau collection, we have a crib play and a Magi play (fifteenth century). The Christmas play from Hesse (ca. 1450), with its numerous coarsely comical elements, is among the most developed of this genre: Joseph struggles with the maidservants and others; the shepherds bring to the baby their all-too-earthly requests, including protection of their sheep from wolves. There is also a play from Sterzing (1511) and a fragmentary Swabian Christmas play from the early fifteenth century, first published in the 1970s.

Current research has benefited most from the renewed interest in performance records and from a catalog of religious drama. These have shown that the performance of plays related to the Christmas season was more widespread than manuscript evidence indicates. There is also a newly edited Annunciation play from the "Debs Manuscript." No German-language Christmas play has been translated into English thus far, and only the Latin Benediktbeuern Christmas play is currently available in translation.

[Drama, Easter Plays](#); [Drama, Passion Plays](#)

Apart from some occasional fragments (*Abraham and Sarah* and *Antichrist*; see below) and a small number of plays (by Colijn—also Caillieu or Keyart—van Rijsssele, and Anthonis de Roovere; see below) extant only in later copies, just one collection of Dutch plays has survived from before 1494—the beginning of the Habsburg dynasty in the Low Countries. The so-called Van Hulthem manuscript includes *Abele Spelen* and *Sotternieën*. Two fifteenth-century codices contain *Die Eerste Bliscap van Maria* and *Die Sevenste Bliscap onser Vrouwen*, representing the first and the last episodes of a Brussels cycle of Plays of our Lady. Finally, the oldest printed version of the famous play of *Elckerlyc* dates back to circa 1495.

Abele Spelen and Sotternieën

Among the oldest Western European manuscripts with secular plays in the vernacular, a Flemish one, the Van Hulthem codex, contains four *Abele Spelen*, one dramatized *Sotte Boerde*, and five *Sotternieën*. Whereas the last word refers to the genre of farce, the term *abel* is ambiguous. It has been explained as "refined," "artistic," "able," "fine," and the like. The plays are part of a larger manuscript, possibly used in a scriptorium for copying individual texts on demand. Originally, they may have been of the repertory of a group of professional actors (*camerspelers*) who, unlike the amateur rhetoricians, charged entrance fees for their private performances, presumably held for an aristocratic audience. The paper manuscript dates back to the early fifteenth century.

All four *abele spelen* deal with matters of the heart. In one, *Vanden Winter ende Vanden Somer*, we find an allegorical debate about which season is best suitable for love. Summer and Winter, both supported by two helpers, cannot find a solution to their dispute and decide to settle their argument by combat. Moiaert, follower of Summer and personification of the lover, urges Venus to solve the conflict. As soon as she appears on stage, Winter gives in. Yet Venus proclaims that neither can do without the other. A fragment of a play on the same theme is preserved in a single leaf manuscript at Ghent, dating back to circa 1436. *Esmoreit*, *Lanseloet van Denemerken*, and *Gloriant*—the three remaining *abele spelen*—display a chivalrous atmosphere and do not contain any explicit allegory. Each play is set in, alternately, a Christian and an Islamic environment. The play of *Esmoreit* is named after a Sicilian prince whose father is led to believe that his wife was unfaithful to him and that his son is illegitimate. Instead of killing the child, the deviser of these allegations, Robbrecht, sells it to a Saracen from Damascus. There Esmoreit is brought up by the king's daughter, Damiet, who is told that the boy is a foundling. Many years later she falls in love with her protégé. On discovering this and hearing about his uncertain background, Esmoreit wants to prove his noble birth and sets off on a quest. Back home his mother recognizes her son by the turban he wears, one in which she used to wrap him up as a baby. Thus Robbrecht's felony is revealed and he is sentenced to be hanged. After both have converted to Christianity, Damiet and Esmoreit are joined in matrimony.

Another prince, *Lanseloet*, has fallen in love with Sanderijn, a young woman of noble birth but lower in rank. His mother, to make an end to Lanseloet's lovesickness, sets a trap for the girl, making her believe that her son is ill and needs to be attended. After thus being lured into his room, she is raped by Lanseloet and then flees from the castle. Wandering about in the woods she meets a noble foreigner who invites her to become his spouse. The girl accepts and so they leave for Rawast, a town in a faraway country somewhere in Africa. Lanseloet soon mourns his loss. He commands his servant, Reinout, to find Sanderijn and bring her back to him. When she is found, Sanderijn refuses to obey Lanseloet's wishes. Fearing that he will start a war to conquer her, Reinout tells Lanseloet that Sanderijn died on hearing his master's name, whereupon the prince dies himself.

Gloriant, duke of Brunswick, is utterly reluctant to marry. Yet in Abelant lives a certain Florentijn who decides to test Gloriant's stubbornness. She has her portrait made and sends it to him. On seeing her image, Gloriant falls in love with the depicted woman. Despite warnings by his uncle, he travels to Abelant, where the two soon fall into each other's arms. Their amorous rendezvous, however, is watched over by Florentijn's cousin, Floerant, who betrays them to Roedelioen, the princess's father. The lovers are arrested and imprisoned, but the girl's servant releases Gloriant from the dungeon. When Florentijn is interrogated by her father about her misdeeds, Gloriant suddenly appears and chases away his opponent. He carries off Florentijn to Brunswick, where the couple is heartily welcomed. Once more, a conversion to Christianity is part of the play's climax.

Much research has been done to find sources for the three chivalrous *abele spelen*. Duinhoven regards *Esmoreit* as a profane version of the story of Moses. Tenacious claims by the same scholar see the tale dramatized in *Lanseloet van Denemerken* as related to the Old French romance of *Lancelot du Lac*. But since *Esmoreit* and *Gloriant* as well as other names in the latter play are found in the Old French *Baudouin de Sebourc* (a Middle Dutch translation of which is known to us), it seems likely that the chivalrous *abele spelen* rather stem from narrative sources related to the Crusades.

The play *Lanseloet* enjoyed great popularity at a very early period. In 1412, it was performed in Aachen, and as late as 1720, it still belonged to the repertory of a Dutch Zeeland Rhetoricians' Chamber. Moreover, during the fifteenth and sixteenth centuries, it was printed at least a dozen times, both in Dutch and in Low German. The chapbook version of the play is not directly copied from the text in the Van Hulthem manuscript. The latter reflects an older stage of development in which chivalric and bourgeois societies coexist, whereas the printed text expresses concepts more closely related to civic moral standards.

Each of the four *abele spelen* is followed by a farce, or *sotternie*. Hence *Vanden Winter ende vanden Somer* combines with *Rubben*, *Lanseloet van Denemerken* with *Die Hexe* (The Witch), *Esmoreit* with *Lippijn*, and *Gloriant* with *Die Buskenblaser* (The Boxblower). Finally, the incomplete *sotte boerde* (a genre, similar to the French *fabliau*, otherwise known in a narrative mode only) of *Drie Daghe Here* (Three Days Lord) is united with an incomplete *sotternie*, *Truwanten* (Truants). Most of the *sotternieën*, as well as *Drie Daghe Here*, deal with the stereotype problem of distorted marital relations in which wives dominate their spouses. In *Die Hexe* we find a conflict between two women and a farmer's wife who is under suspicion of being a witch. *Truwanten* is a most peculiar farce showing how a maidservant is carried off by the devil after her mistress has found out about her connections with a truant.

Eerste Bliscap van Maria and Sevenste Bliscap Onser Vrouwen

Legend has it that, in 1348, the Holy Virgin instructed a woman to transport her miraculous statue from Antwerp to Brussels by boat. To commemorate this event the latter town inaugurated an annual procession. On the occasion of its centenary, the local authorities (possibly incorporating an older celebratory tradition) decided to establish a cycle of mystery plays on the Seven Joys of Mary. The texts of the first and the last plays, called *Die eerste bliscap van Maria* and *Die sevenste bliscap van onser vrouwen*, respectively, have been preserved for posterity. Manuscripts, in use until 1566, the year in which the *Ommegang* (procession) was last held, date back to the mid—fifteenth century. Fragments of *Die eerste bliscap* dating from the same era were recently discovered as well.

Die eerste bliscap van Maria (The First Joy of Our Lady) is a dramatization of the Annunciation, preceded by the history of Adam and Eve's Fall and by a Trial in Heaven. The play represents the only extant example in Dutch of a drama structure that resembles a Corpus Christi Cycle. Interspersed with scenes of Lucifer and Envy, the two instigators of Adam's misery, we successively find Adam and Eve's temptation, their expulsion from Eden, a Satan's Trial in which humankind is condemned to hell, Adam's death including the Legend of the Cross, and a prophet play. In a next sequence, Bitter Suffering persuades Passionate Prayer to try and convince Mercy to release the Patriarchs from hell. Demonstrating the effects of praying, Passionate Prayer drills a hole into the ceiling of the stage, thus getting access to heaven. At her request, Mercy successfully pleads to God against Justice on behalf of humankind, eventually resulting in the promise by God's Son to incarnate. Now the main topic of the play, the Annunciation, is arrived at. In the temple Joachim is denied his offerings to the priests because of his infertility. An angel nevertheless announces Anna's pregnancy. Mary's birth, her naming and presentation in the temple, the election of Joseph as her future spouse, and a scene showing Gabriel's Annunciation to the Virgin conclude the play.

Die sevenste bliscap van onser vrouwen (The Seventh Joy of Our Lady) dramatizes the Holy Virgins death and assumption as described in Apocryphal writings. However, according to Mak the text is entirely based on Jacobus de Voragine's *Legenda aurea*. Once more, it is Gabriel who visits Mary. Now he announces God's decision that it is time to join her Son in heaven. The apostles are brought to Mary's dwelling to be present at her deathbed. All are transported by air on clouds. Shortly before she dies, devils try to tempt the Virgin but the Archangel Michael chases them away. After she has died, God commands the apostles to bury her body in the valley of Josaphat. While singing the antiphon *Exit de Egypto*, the procession is attacked by Jews. But as soon as they attempt to touch the bier their hands wither. How the Jews eventually retreat we do not know because here the manuscript lacks some 350 lines. The play continues with a tardy St. Thomas—after all, he was in India!—being the sole apostle to witness Mary's assumption in person. He explains the events to the others. Proving his claims, he shows them Mary's girdle, which he was given by one of the angels present. Her tomb is found empty. After having praised the Lord and the Virgin, the apostles separate again.

Elckerlyc

The Dutch version of the highly allegorized story in which humankind is summoned to give account of his earthly deeds is, as was finally confirmed by E.R.Tigg, older than its famous English counterpart, *Everyman*. Tigg proved his theory by indicating that rhyming stop-gaps in the English text had been added to conceal the nonrhyming result of a literal translation from the Dutch. Moreover, *Everyman*, printed in 1525, is labeled anti-Reformation, whereas *Elckerlyc* is characterized as ante-Reformation. It seems very unlikely, however, that *Everyman* is a direct translation from any of the four extant Dutch versions. *Elckerlyc* survives in three late-fifteenth- to early-sixteenth-century chapbook versions and in a manuscript dating from the final decade of the sixteenth century. The latter play and *Everyman* frequently differ from the printed texts, thus suggesting that both go back to older versions.

The play may have been awarded a first prize during a drama competition in Antwerp. The source for the latter information, the title page of *Homulus* (1536), the play's first Latin translation by the Maastricht schoolmaster Ischyrius, also names Petrus Diesthemius as its alleged author. From a theological point of view, *Elckerlijc* proves to have been of utmost importance. Hence, Latin translations and adaptations made the text available to a scholarly world. As for the play's general story line, various sources have been cited. *Barlaam* and *Josaphat* in Jacobus de Voragine's *Legenda aurea* presents the closest analogy to the tale dramatized in *Elckerlyc*.

Other Plays

Town records, though not so far systematically studied, indicate that performing drama was common practice in most cities throughout the entire fifteenth century, both in the northern and southern provinces. J.A.Worp was one of the first Dutch scholars to give an extensive list of performances as found in city accounts. His list includes references to Christmas plays, Easter plays, Passion plays, Resurrection plays, and saints plays throughout the fifteenth century, related mainly to the southern provinces. Secular drama is scarcely represented. Most records, however, lack specific titles of plays. In more recent years, Worp's pioneering work is supplemented, particularly in relation to the archives of the northern provinces. In Arnhem, for example, performances independent of a Shrovetide tradition of *Neidhart* plays were discovered, dating back to 1395. A play, presumably a farce, on "Lizzy who wanted to have a husband who smells of a harness," was performed in Deventer in 1470. Four years later the town staged a *King Ahasverus*, and in 1484 the local Guild of Seafarers on Bergen (Norway) produced a play on *Susanna*. This is fairly exceptional, for some time during the fifteenth century, the Rhetoricians' Chambers assumed full responsibility for organizing drama performances. Some even claim to have been established in the early decades of the fifteenth century, such as the Chamber of "The Book" in Brussels (1401), the "The Holy Ghost" in Bruges (1428), and "The Jesse Flower" in Middelburg (1430).

Fragments of a fifteenth-century *Abraham-and-Sarah Play* were found in Zutphen, a small Hansa town in the eastern part of the Netherlands. The text is a

dramatization of Gen. 18:6–15. In the Liège State Archives, fragments were also discovered in a mid—fifteenth-century *Play of Antichrist*. The manuscript contains rubrics partly in Latin, but otherwise it reveals characteristics that point at the province of Limburg as its place of origin. Its contents mainly consist of a dialogue between Antichrist and the prophets Elijah and Enoch, ending in their deaths. In 1445, a *Play on the Coming of Antichrist* was performed in the town of Zwolle as well. Shortly after Margaret of Savoy's birth (January 10, 1480), Brussels's official town poet, Colijn Caillieu, composed an untitled *presentspel* (gift play) on this happy event. Caillieu may be identified as Colijn van Rijsssele, author of *De spiegel der minnen*, and as the "amorous" Colijn Keyart, who wrote *Van Narcissus ende Echo* (see below). The play is inspired by seasonal tradition. It stages a dialogue among three Kings: the King of Clergy, the King of Nobility, and the King of Labor. Adorned with a profusion of references to biblical and classical literature, prefiguring Margaret's birth, the Kings inform one another about their descent and their ambitions. They intend to offer certain gifts to the newly born child: a rose, a golden apple, and the sweet leaves of Eden's Tree of Life. All three Kings had been instructed to do so by Experience. The latter allegorical person eventually ties the symbolic meaning of the three gifts together into one image: the leaves, the rose, and the apple can be found on a single branch of a tree. They can even be compared to gold, myrrh, and incense. Finally a stage compartment is opened revealing a mother and child to whom the Kings offer their gifts. The play gives an excellent example of how future sixteenth-century Rhetoricians would create their versions of similar occasional plays in countless numbers. The famous sixteenth-century humanist scholar and man of letters Dirck Volckertsz Coornhert (1522–1590) was the first person to edit, in 1561, Colijn van Rijsssele's (d. ca. 1481) play of *De spiegel der minnen* (The Mirror of Love). The fairly lengthy text consists of six plays relating the story of two lovers who, because the girl's father refused to allow them to get married, recently died in a Zeeland town. The author proves to have been extremely well informed in matters of astrological and medical implication. A few years earlier, in 1552, a play by Colijn, nicknamed "amorous" alias Colijn Keyart, was copied out by a certain Reyer Gheurtz: *Van Narcissus ende Echo*, a dramatization of one of the tales in Ovid's *Metamorphosis*. Van Gijsen is convinced that this play, too, was composed by Van Rijsssele; a 1621 edition of the text erroneously names Jan Baptist Houwaert (1533–1599) as its author.

Anthony de Roovere (ca. 1430–1482), a bricklayer or master builder and official town poet of the city of Bruges, composed a play based on the Athanasian and Apostolic Creeds, *Quiconque vult salvus esse*. In 1527, it was copied out by his fellow townsman Cornelis Everaert (ca. 1480–1556). The play is built on disputations among a Christian, a Jew, and a Muslim, attacking each others beliefs, changing sides throughout the entire discussion. Allegorical characters, named Law and Faith, present the Christian dogmas, which are commented on by the two non-Christians and a third critic, named Half Wise Half Fool. The play ends in a *tableau vivant* (a scene in which actors remain in a fixed position), displaying a Crucifix.

Drama, Easter Plays

Together with Passion plays, the Easter play represents the most widespread and most highly developed of the medieval theater traditions of the German Middle Ages. In a broader context, plays of the Easter season may include all manner of works that depict scenes from the story of Jesus' arrest, death, and Resurrection, thus including Passion plays, Easter plays, Marian lamentations (*Marienklage* or *planctus*), Emmaus (or pilgrim) plays, Corpus Christi plays, as well as plays about Mary Magdalene, the Last Supper, and the Deposition from the Cross. In the narrower sense, the Easter play depicts the events of Jesus' Resurrection, from the setting of guards at the tomb, to the Harrowing of Hell, the mercator (merchant) scenes, the three Marys at the tomb, Jesus as gardener, the race between Peter and John, and other appearances by Jesus after the Resurrection. While Passion plays often contained the events of Easter Day as well, Easter plays themselves were shorter and generally confined to one day.

This article concentrates on the narrower sense of the term: plays about the events of Easter Day. There are still remains of thirty-two such vernacular plays (often under the heading *osterspil*, "Easter Play," or some form of the word *pascha/paschalis*, "Easter") with varying amounts of Latin text.

The roots of the Easter play go back to the *Quem queritis* Easter trope (tenth-century manuscripts from Limoges and St. Gall); that is, when the angel at the tomb asks the three Marys "Whom do you seek?" Out of this prototheatrical moment grew the Easter liturgical plays (*Osterfeiern*), which remained entirely in Latin, and thus were still suitable for use during the Latin mass. There are 528 such plays from the German-speaking parts of Central Europe. Easter liturgical plays were recorded and performed up to the end of the Middle Ages.

With the advent of Easter plays (*Osterspiele*) the tenor changed greatly. Certain satirical elements came to the fore, such as the mercator scene, with the often ribald antics of the unguent merchant, his wife, and his servant. Another major comical scene is the restocking of hell with new souls, the so-called *Ständesatire* (social satire). This grew out of one of the central episodes of the Easter play—based on the Gospel of Nicodemus—in which Jesus descends to hell and opens the gates to free the righteous souls (Adam, Isaiah, Seth, John the Baptist, and others) of those who had died before his coming. The newly emptied realm of hell was often then refilled with the souls of contemporary sinners and cheats, such as the baker who steals dough or the tailor who takes the extra fabric.

The first German-language example we have is the fragmentary Easter play from Muri (mid-thirteenth century), which is noteworthy in part because of its use of courtly language. From the fourteenth century we have fragments from Breslau (Wrocław), Munich, Berlin, and Linz. One of the more complete of the early plays is the Innsbruck Thuringian Easter Play of 1391, which includes both the mercator scenes and the *Ständesatire*. These plays reached their zenith in the mid- to late fifteenth century, with play texts and fragments from Low German areas (Redentin, Wolfenbüttel, Osnabrück), West Central German (Trier, Melk, Berlin), Alemannic areas (Feldkirch, Regensburg), and the Bavarian areas (Erlau, Bozen, Tyrol, Steinach, Vienna, Munich, Göttweig). The play traditions generally end in the course of the sixteenth century, often with the advent of the Protestant Reformation.

Since the 1960s, there has been an increased interest in all medieval German drama. For Easter plays, this has meant newly published texts from Tyrol (Debs Manuscript); inclusion in a catalog of all medieval German religious plays; and a collection of performance records for religious drama. Attempts have also been made to incorporate the plays' origins into the nomenclature for the Easter plays, using such hybrid forms as the Innsbruck Thuringian Easter Play.

Only the Redentin play (1464), with its expansive *Ständesatire* has thus far been translated into English.

Drama, Last Judgment Plays

A corpus of religious plays predominantly associated with the Alemannic region whose core content is derived from Matthew 25:31–46. They tell of Christ summoning humankind to the Last Judgment, rewarding those who have followed his commandments and punishing all sinners by casting them into hell. A characteristic feature of these plays is a basically tripartite composition, involving a prelude, the actual judgment scenes, and a conclusion. Typically, the plays' emphasis is on condemnation rather than salvation, since their historical purpose was to portray vividly the horrors of hell and to serve as a strong deterrent to those viewing the performance. Whereas Latin versions of the play were performed as far back as the end of the thirteenth century, we have no information regarding the genesis of the German variants. Hellmut Rosenfeld assumes a mid-fourteenth-century prototype. Written in rhymed couplets, the plays vary in length from 334 verses (Donaueschingen play) to 2,762 verses (Luzern play). They are transmitted in paper manuscripts from the fifteenth and sixteenth centuries. Since Reuschel's 1906 investigation, it has been commonplace among scholars to employ the somewhat dubious distinction between original and expanded versions. The former group encompasses the plays associated with the towns of Bern, Copenhagen, Donaueschingen, Güssingen, Rheinau (now called Schaffhausener Weltgerichtsspiel and located in Zurich), Walenstadt, and with the Jantz collection (consisting of the Berlin, Chur, Luzern, and Munich plays) Additional known variants of the play are lost.

Medieval German drama, conceivably the most important representative of urban literature, has received only scant attention when compared to other genres, and Last Judgment plays are no exception. It was not until the 1980s that they became a focal point of interest. Initial activities centered on editorial projects. Only the Munich and Luzern plays remain unedited, yet plans are under discussion for a definitive edition of all plays. Topics of scholarly inquiry have also included the sources and role of the illustrations in the Copenhagen and the Berlin variants as well as the actual purpose of specific manuscripts. Even a superficial comparison of the Munich and the Copenhagen play, for example, would seem to suggest on the basis of explicit stage directions in the former that some branches of the transmission were intended as scripts for a production, whereas others had undergone a transformation, most notably through the addition of a picture cycle, to a text intended for reading. This transformation, in turn, raised fundamental questions about appropriate generic labeling. Complicating the discussion of generic affiliation is the fact that plays containing a bare minimum of "stage directions," such as the Donaueschingen or Jantz variants, could conceivably serve as the basis for a performance. The 1984 production of the Bern play in the city's historical museum showed that the absence of detailed staging directions and a manuscript source clearly intended for reading purposes do not rule out a priori the possibility of performance.

[Drama](#)

In the Low Countries, few manuscripts have been preserved containing liturgical drama. Hence there is no need to discriminate any further between different types of Easter plays and Christmas plays.

Easter Plays

Type I specimens of a *Visitatio Sepulchri*, consisting of a brief dialogue at the Tomb of Christ among the three Marys and the Angel, are present in codices from Postel, Tongres, and Utrecht. Type II versions, with an elaborate rendering of the original trope as well as including text having a bearing on the apostles Peter and John, were found in manuscripts from Haarlem and Utrecht.

In 1938, Jos. Smits van Waesberghe discovered a hitherto unknown *Ludus Paschalis* (Easter play, twelfth century) in a Maastricht *Evangelary* (book of gospel readings) preserved at the Royal Library at The Hague. An enlarged version of the same Easter play, including a mercator scene, was found in a hymnal (at Egmond, ca. 1491). A Delft manuscript (ca. 1496) merely states the words spoken by the Phisicus, i.e., Mercator, and has brief indications of the women's text on their way to Christ's sepulchre. In the same town, a record in the accounts of the church of St. Hippolytus informs us about the stage properties needed for a Resurrection play, as it used to be performed on Low Sunday at the end of the fifteenth century. Although records attest to a great number of performances in the vernacular of Easter and Passion plays in various towns and villages of the Low Countries, no play texts have survived.

The Maastricht *Ludus Paschalis*, the text that provides the best impression of a Dutch tradition of Easter plays, comprises eight characters: Christ, both as a gardener and as a pilgrim; two angels at the tomb; the three Marys carrying spices and ointments; and two disciples. Its story line, supplemented with various antiphons, basically concentrates on four elements: *Quem quaeritis* (Whom are you seeking) trope, *Hortulanus* (garden) scene, *Victimae Paschalis* (Easter victims), and *Peregrinus* sequence.

Christmas Plays

Bilsen—or, more precisely, Munsterbilsen—is the toponym related to a manuscript containing an *Officium Stellae* dating back to about 1130. Smits van Waesberghe, who tacitly combines the text in his recent edition of the play with the *Ordo Rachelis* of the Fleury play book, identifies Theodoric of St. Truiden (ca. 1040–1107) as its author. The Bilsen *Officium* is, in any case, the only liturgical Christmas play created in the Low Countries that has come down to us. It follows most of the tradition as it is found elsewhere. Exceptional, however, is the name of the first and most important king, Zoroastro. Two further remarkable characteristics of the play are the hexameters in the opening song of the choir and the use of rhyme in the stage directions.

References to *Magi* plays have been found in Delft, 's-Hertogenbosch, and Utrecht. In the southern Low Countries, similar plays were produced in Geraardsbergen, Gistel, and Loo. A Delft history dating back to the early eighteenth century gives a detailed description of the way a Christmas play was staged, in 1498, in St. Ursula's. *Magi* plays may also have been put on by puppeteers. In 1363, the French nobleman Jean de Blois, whose usual domicile was the province of Holland, supposedly attended such a performance in Bohemia.

Drama, Paradise Plays

The story of the creation and fall of the protoplasts, Adam and Eve, is important in Christian thinking not just as a historical beginning but also as a theological rationalization of the need for salvation, and because it served, through typological connections, as a pointer to Christ, the new Adam. The paradise play, also called Genesis play, is a dramatization of this material. In Middle High German, the paradise play is not a distinct form. Liturgical considerations and the ecclesiastical calendar dictated that the principal forms of religious drama were the Christmas, Easter, Passion, and Corpus Christi plays. However, all these could use Old Testament events to prefigure the New Testament material central to their actual liturgical function. Plays that begin with the creation stories can be gathered under the general category of paradise plays, irrespective of their main emphasis. These can then be seen as precursors of the later plays that appear in German from early modern times with the creation story as their principal or sole subject.

The earliest evidence of a German paradise play is a reference in the Regensburg city annals to the performance in 1194 of a play dealing with the creation and fall, and with the prophets. The inclusion of the prophets indicates that, as with the plays with known texts, the Genesis material was used as an opening scene, subordinated to another purpose. The oldest surviving German paradise play is the *Wiener Passionsspiel* (*Viennese Passion Play*), early-fourteenth-century Austrian, but on linguistic evidence going back to a thirteenth-century central German (Rhenish-Franconian) original. Also fourteenth century is the *Maastrichter Osterspiel*, the oldest drama of any kind in Middle Dutch, and the Kassel Fragments, discovered in 1985 in the bindings of four later manuscripts. Examples from the fifteenth century are the *Egerer Passionsspiel* (*Eger Passion Play*, Cheb, ca. 1460), the *Künzelsauer Fronleichnamsspiel* (*Künzelsaur Corpus Christi Play*, Swabian, 1479), and Arnold Immessen's *Sündenfall* (*Sin*, Low German, ca. 1480). The *Zerbster Fronleichnamsspiel* (*Zerbst Corpus Christi Play*, 1504) was apparently the last paradise play to appear before the Reformation radically altered the nature of religious drama.

The Protestant paradise play, which emerged in the sixteenth century and developed into a very broad popular tradition in both Protestant and Catholic areas, moves the story of the protoplasts firmly into the central position, with typological references to later salvation history becoming more marginal. We may mention three of the earliest. Valten Voith of Magdeburg was the author of a long and complex play entitled *Vom herrlichen Ursprung ...des Menschen* (*On the Glorious Origin...of Man*, 1538). Hans Sachs's *Tragödia von Schöpfung, Fall und Austreibung* (*Creation Tragedy, Fall and Expulsion*, 1545) is relatively brief and close to the Bible yet proved extremely influential with whole sections being taken up into later folk plays. In Zwinglian Zürich, Jacob Ruff (or Ruf, Ruff, etc.) produced his *Adam und Heva* (*Adam and Eve*, 1550), a two-day pageant of impressive proportions with a cast of over a hundred.

Typical elements of a paradise play are the fall of rebel angels, the creation, temptation, and fall of the protoplasts, their expulsion from paradise, Cain's murder of Abel, and the death of Adam. An infernal council in which the demonic powers discuss their tactics may serve as an opening scene or be inserted after the creation of Eve. Apocryphal material such as Adam's attempt to return to paradise and Seth's quest for the Oil of Life may also appear. Paradise plays must be seen in the context of the vast tradition of medieval literary adaptations of Adam and Eve material. The Latin *Vita Adae et Evae* was by far the most influential; important Adam books in German include the *Wiener Genesis* (c. 1075), the *Millstätter Genesis* (ca. 1120), the *Aneenge* (1173/1180), and Lutwin's *Eva und Adam* (early fourteenth century).

Drama, Passion Plays

Major component of the overall cycle of plays related to the Easter season including the arrest, trial, death, and Resurrection of Jesus. In the later Middle Ages in Germany, these grew into one of the most important cultural expressions of urban society. As the name indicates, the Passion play focuses on Jesus' suffering (*passio*) and death. But unlike its closely related counterpart, the Easter play, the Passion play tradition grew to encompass the entire history of salvation and may include scenes such as the Nativity, ministry of Jesus, Resurrection, Ascension, the lament of the Virgin Mary at the cross (*Marienklage* or *planctus*), as well as those Old Testament scenes viewed as reflecting on the events of the New Testament. In this sense, the term "Passion play" is more inclusive than the term "Easter play," which is limited to the events of Easter Day itself. Unlike Corpus Christi processions, which have essentially the same contents range, the Passion play productions were not tied to a specific liturgical celebration or season, and were usually performed on a large, simultaneous stage. Such productions could last up to several days—four days in Frankfurt am Main in 1492, 1498, and 1506; seven days in Bozen in 1514—and for several hours each day.

Forty-nine Passion plays in German that are extant in complete or fragmentary manuscripts, and the majority of these use some form of the word *passio* (passion) to describe their contents. These are usually separated into four linguistic and regional groups: the Rhine-Hesse plays (Frankfurt, St. Gall Alsfeld, Heidelberg, Frittlar, Friedberg), the Tyrolian plays (Sterzing, Bozen, Brixen, Hall), the Swabian-Swiss plays (Lucerne, Donaueschingen), and other individual plays. Plays date already from the early thirteenth century, but the Passion play tradition reaches its zenith in the late fifteenth and early sixteenth centuries. While the form largely died out where the Protestant Reformation established itself, in some Catholic areas—notably in the Tyrol and Lucerne—play productions continued throughout the sixteenth century and even into the early seventeenth century, under the direction of production leaders such as Benedikt Debs and Vigil Raber.

The earliest Passion play containing much German is the *Benediktbeuern Play* (early thirteenth century). Fragments of other early plays have been found in Himmelgarten, Vienna, Maastricht, Kreuzenstein, and Osnabrück. As with all medieval religious drama, much of the nomenclature is based on the modern location of the manuscript, not on its probable origin or site of the production. Other major early examples of the Passion play include the St. Gall Rhenish-Franconian Passion play (St. Gall, Stiftsbibliothek, manuscript no. 919) and the Frankfurt Director's Scroll (between 1315 and 1345). This latter manuscript, interesting as well for its unusual format, forms the earliest record of one of the most important play traditions, since we can trace Frankfurt play productions from the early fourteenth century up through the 1493 manuscript—days two and three of a four-day play—and up to the end in 1515. In addition, we have numerous records concerning the last three performances in 1492, 1498, and 1506.

The *Lucerne Passion Play* (or *Lucerne Easter Play*) dates back as early as the mid—fifteenth century, and was performed up to the early seventeenth century. Coming somewhat later than many of the other plays, it is particularly well documented. The numerous Tyrolian plays date largely from the latter part of the fifteenth century and up to the mid—sixteenth century. As with the Lucerne play, numerous performance records, as well as manuscripts of both entire plays and parts of plays, are extant. This has led to much renewed editorial activity in recent years. An upswing in research in all medieval German drama since the mid-1960s has led to a vast new array of pertinent tools for scholars: new editions of plays, especially the Tyrolian plays, but also of previously published plays (e.g., Frankfurt, Alsfeld, and Donaueschingen); a comprehensive catalog of religious plays; standardization of the nomenclature for the plays; and an exhaustive collection of performance records for all religious drama. In thematic research, this has opened up new possibilities for studying the social aspects of religious drama—whether in its depiction of specific characters, the importance of the plays to the local society, or in the anti-Jewish content of many plays. Unfortunately, the lack of English translations—only the *Benediktbeuern Passion Play*, the *St. Gall Rhenish-Franconian Passion Play*, and the *Alsfeld Passion Play* have thus far been translated into English—continues to prevent many English speakers from working in this area.

Dutch Language, Dialects

The first systematic trials to develop a transregional Dutch standard language take place in the sixteenth and seventeenth centuries, when under the influence of Renaissance ideals the desire arises to equalize Dutch to the classical languages—Latin and Greek. People start by writing grammars with which they try to lay down the norms. Afterwards one can see an accelerating growth toward a standard language in the Dutch area. That standard language increasingly supersedes the colloquial dialects. Certainly up to circa 1600, however, a more or less regionally colored language is written. Hardly any documents containing coherent authentic Old Dutch texts have survived. The oldest official texts written in a Middle Dutch dialect originate from Ghent, the capital of the county of Flanders; they date from circa 1240. Soon afterward, Holland and Brabant also switch over to the national language, followed by the other regions in the fourteenth century. In those times, the frontier between Dutch and French was in about the same place as it is nowadays; but in northern France in later times it moved slightly to the north. In those days the frontier was a rather straight line south of Brussels, from Calais to the region between Maastricht and Liège. It is much more difficult to draw the frontier with Middle Low German, because it is not possible to indicate a group of isoglosses (linguistic characteristics) that divides a potential western language from an eastern one. For the sake of convenience, one currently takes the present-day national boundary with Germany in the north, but in the south one includes the dialects of the region bounded by the Meuse and Rhine rivers, the area around Nijmegen, and the High German language boundary (the *maken/machen* isogloss), where necessary, which seems to be the most correct way in view of the cultural and political orientation of the region concerned: the origins of the county, later the duchy of Gelre, are situated there.

The earliest Middle Dutch literary codex, surviving very fragmentarily and containing the *Life of Saint Servaes* by Veldeke, originates from Limburg, the region of Maastricht. From the thirteenth century, (fragments of) similar manuscripts remain from Brabant, Flanders, and east of the Dutch language area. But the vast majority of Middle Dutch literary manuscripts date from the fourteenth century and originate in Flanders.

Middle Dutch literary works have been delivered mainly in three principal groups of dialects: Hollandish, Flemish, and Brabantish. The first two are strongly similar in a number of respects, because they have North Sea Germanic features that often remind one of English. They are as follows:

a. Unrounding of short *ü* (*iü*) to *i* in words like *stic* (compare English *stick* with German *Stück* and Brabantish *stuc*), *pit* (compare English *pit* with Brabantish *put*) and *brigghe* (compare English *bridge* with German *Brücke* and Brabantish *brugge*). In Holland one sometimes find *e* instead of *i*: *pet*, *bregghe*.

b. Rounding of *a* to *o* in front of voiceless velar fricatives as in *brocht* (compare English *brought* with German *brachte* and Brabantish *brachte*).

c. Pronouns in the second person with *j*: *jou/ju* (compare English *you* and Brabantish *u*).

d. *M* as an ending of the first person singular of the verb *zijn* (*to be*): *ic bem* (compare English *I am* with German *ich bin* and Brabantish *ic ben*).

Moreover, in the West one finds a geminated consonant in the infinitive of (Flemish) *zullen*/(Hollandish) *sellē* (English *shall*, Brabantish *selen*, eastern *so(e)llen*).

Furthermore, Flemish distinguishes itself from Hollandish because it makes no difference between the presence or absence of umlaut of former *eu*; in the first case Holland has *y*: (written *u* or *uu*): *lude*, *beduden*, otherwise *i*: (written *ie*): *bieden*, (cf. German *Leute*, *bedeuten*, *bieten*). West of Brabant one always finds *ie*, as in Flanders: *liede*, *bedieden*, *bieden*. A similar difference one finds in the case of former *ai*: Flemish *eghen* (with umlaut factor), *deel* (without such a factor), Hollandish (and Brabantish) *eighen*, *deel*; in Limburgish *ei* is found in the majority of both cases: *eigen*, *deil* (German *eigen*, *Teil*). Brabantish (like Limburgish) differs further from the western dialects with respect to umlaut of long *û* (Brabantish *vueren*, German *führen*, western *voeren*) and long *â* (long *a*) (Brabantish *greve*, *bequeme*, western *grave*, *bequame* (German *Graf*, *bequem*). Here it agrees with western German dialects.

In the extreme eastern dialects one frequently finds *a* in places where farther to the west *o* is found in words like *apen* (elsewhere *open*, German *offen*), *baven* (elsewhere *boven*, English *above*), a spelling that indicates an open pronunciation of former short *o* in open syllables. Besides, these dialects differ from the other ones in lacking vocalization of *l* between *o* and dentals: here one finds *wolde*, *gold* instead of *woude*, *goud* (see German *wollte*, *Gold*; *ou* is pronounced approximately like *owin* English *now*).

In these cases in northeastern dialects former *al* and *ol* have both become *ol*, being kept apart in the southeastern dialects as well as in German (Limburgish *ald*, German *alt*, northeastern *old*, western *oud*).

In this way it can be observed that the Middle Dutch dialects form a spectrum, the extremes of which are colored more "English" or more "German," respectively.

Dux/Herzog

The Latin word *dux* originally signified the general function of "leader," especially the leader of a military contingent; later it became the title of an office. *Herzog*, the German translation of *dux*, has a similar history. Although its etymology remains contested, the most reasonable theory suggests that *Herzog* derived from the Old High German word *herizogo*, which meant the "bringer/leader of the army (*Heer*)." Throughout its medieval history, the position of *dux/Herzog* seems to have retained a primarily military character: the duke was responsible for assembling and leading a regional contingent in battle. But the ducal office also frequently included civil, juridical, and ambassadorial functions, depending on local conditions. In the later Middle Ages, the powers of the duke underwent a process of territorialization, with the duke holding the rights and powers of lordship within a clearly defined geographical area, the *Territorialherzogtum*.

Dukes were generally recognized as deriving their public authority from their position as representatives of the king. At the same time, kings were often led to choose members of local noble families who already held de facto private wealth, power, and prestige in an attempt to harness local elite nobles to royal ends. While this policy could enable kings to rule more effectively by entrusting authority to those already in a position to wield it effectively, it also permitted these local families over time to increase their own wealth, power, and regional autonomy, sometimes to the detriment of royal authority. This tense political symbiosis between kings and dukes, although varying considerably over time and by region, remains one of the leitmotifs of the political history of medieval German lands.

E.S., Master (fl. ca. 1450–1467)

This Upper Rhenish engraver active circa 1450–1467 is named after the two Gothic letters inscribed on 18 of 318 engravings from the same group. Sixteen of the plates were also inscribed with dates, ranging from 1461 to 1467; they are the earliest "signed" and dated prints in Western art. The identity of the artist has never been successfully proven, although Erwin von Stege, mintmaster to Emperor Frederick III, was one of the possibilities considered. More recently it has been suggested that the initials may be those of a publishing house rather than of an individual. The most influential of the first two generations of northern European printmakers, E.S. seems to have been trained initially as a goldsmith, for he made frequent use of goldsmiths' punches for decorative effect on the garments, arms, and armor of his engraved figures. Plates made in his workshop were the first to use the technique of cross-hatching, among a rich variety of other burin (engraving) effects. Although several have inscriptions in the Alemannic dialect of southwestern Germany, the exact location of E.S.'s workshop has never been determined. Signed plates were printed on papers traceable to both south German and Swiss mills—the Walking Bear watermark of the city of Bern among them. Three late engravings were indulgence sheets made for the Benedictine monastery of Einsiedeln (Switzerland)—one a pioneering "reproduction" of a known painting, the epitaph fresco of Otto III of Hachberg in the cathedral of Constance (1445), while others reflect the figure style of the sculptor Nicolaus Gerhaert von Leyden, active in Strasbourg around 1460.

Ebner, Margaretha (1291–1351)

Born in 1291 in Donauwörth, near Regensburg, to a patrician family, Margaretha Ebner entered the Dominican cloister of Mariä-Mödingen at an early age and was buried there in 1351. In 1332, Heinrich von Nördlingen, her Dominican confessor, convinced her to write a record of her spiritual journey. Without the aid of an amanuensis, she wrote her *Offenbarungen* (Revelations) herself in Alemannic, a dialect of Middle High German. A lengthy manuscript for the Middle Ages (over 100 folio pages) Margaretha's *Revelations* follows a chronological description of her spiritual life from 1312 to 1348, the experiences arranged according to the liturgical calendar. The text belongs to a medieval religious genre referred to as autohagiography. In 1312 Margaretha became seriously ill and for three years endured a variety of afflictions described in the opening chapters of her book. Suffering a severe illness for an extended period of time is a feature commonly reported in medieval hagiography or autohagiography and figures prominently in the religious experiences of medieval women. Recovered, Margaretha undertook a rigorous program of asceticism, self-mortification, fasting, and flagellation. At one point she begged Mary to ask God that she be granted the miracle of stigmata. Quite in keeping with fourteenth-century piety, her devotions center on the humanity of Christ, primarily on his birth and death. Material images of both cradle and cross are, therefore, conspicuous in her devotional exercises. The religious experiences that Margaretha narrates in her writings typify those of ecstatic mystics described in a variety of texts in late medieval Europe, particularly prominent in late medieval Germany. It is also noteworthy that fifty-four letters from Heinrich von Nördlingen and other contemporaries are included in the nineteenth-century Strauch edition.

Ecbasis Captivi

An anonymous Latin poem of 1,229 hexameters, the *Ecbasis captivi* (full title: *Ecbasis cuiusdam captivi per t[r]opologiam*, "The Escape of a Certain Captive, Told Allegorically") survives in two twelfth-century manuscripts. It was discovered and first published by Jacob Grimm. Although dates throughout the tenth and eleventh centuries have been proposed, the poem was most likely composed 1043–1046. The poem is connected with Toul in its contents, Trier in its manuscript transmission. Replete with borrowings from earlier poetry, it is also intricate in narrative structure. A long inner story (ll. 392–1009, 1016—1097) is enclosed within an outer (69–391, 1010–1015, 1098–1223); both stories are encircled by a prologue (1–68) and an epilogue (1224–1229). In some ways this poem marks the start of the tradition that includes first Heinrich der Glîchezaere's *Reinhart Fuchs* and later *Reinke de Vos*.

The outer story tells of a calf who escapes one Holy Saturday only to fall into the clutches of a wolf, who takes him to his den to eat him. The calf receives a reprieve until the following day. Soon after daybreak on Easter Sunday, the calf's herd arrives outside the den. The wolf assures his two henchmen that he will win, provided that the fox has no part in the battle. At the request of his two allies, the wolf explains that his fear goes back to a dispute between his grandfather and the fox. This account makes up the inner story. Once the outer story resumes, the wolf suffers setbacks that culminate in his death through the fox's craftiness.

The inner story, which may be entitled "The Sick Lion, Fox, and Flayed Courtier," centers on a lion king and his court. When the lion falls ill, all animals except the fox assemble to suggest remedies. The wolf arranges to have the fox condemned to death for treason. Alerted, the fox piles worn-out shoes on her shoulders to convince everyone that she has traveled widely in search of a cure. The cure is to wrap the king in the wolf's hide.

Because of the poem's curious title, unusual style, and many mentions of Easter, the *Ecbasis captivi* has elicited numerous allegorical interpretations. For later beast literature it holds importance for its full depiction of the wolf-villain as a monk.

Echternach

Situated in present-day Luxembourg, thirty kilometers to the west of Trier, the medieval monastery of Echternach witnessed two distinct periods of influence. During the eighth century Echternach functioned as an important center of Insular tradition, in terms of both ecclesiastical and artistic practice. The monastery's founder, Willibrord, was born in Northumbria. At the age of twenty he joined the community of English monks at Rath Melsigi in Ireland. He was sent to Frisia in 690 and in 695 was consecrated as archbishop of the Frisian church. He benefited from the protection and patronage of Pippin II, the Carolingian mayor of the palace, and his family. Pippin's mother-in-law, Abbess Irmina, made the initial alienation of land for the foundation of a *monasteriolum* (convent?) at Echternach. The community was established between 697 and 698, the date of the initial land grant, and 704, when Willibrord began construction of an entirely new monastery on the site.

The strongest evidence for a scriptorium at Echternach during this period rests in a group of four manuscripts: a Book of Prophets and the Hieronymian Martyrology, which have been bound together since the eighth century (Paris, Bibliothèque Nationale de France, no. MS lat. 9382), the Calendar of Saint Willibrord (Paris, Bibliothèque Nationale de France, no. MS lat. 10837), and the Augsburg Gospels (Augsburg, Universitätsbibliothek, no. Cod. I.2.4°.2). These manuscripts are all written and illuminated in an Insular style and contain the names of scribes whose names and hands can also be identified in Echternach charters dating to the first quarter of the eighth century. The Echternach Gospels (Paris, Bibliothèque Nationale de France, no. MS lat. 9389) have been attributed to the same Lindisfarne scribe responsible for the Durham Gospels (Durham, Cathedral Library, no. MS A.11.17). It is not known if the Echternach Gospels came to the monastery from Lindisfarne with Willibrord in 690 or at a later time; however, the presence of this luxurious manuscript of the Northumbrian school at Echternach does attest to the artistic links between this community and the Hiberno-Saxon monasteries.

By the ninth century Echternach had become a community of canons governed by a lay abbot. With the Gorze reform (a reform of the Benedictine order and some of its practices) however, the monastery became a satellite foundation of St. Maximin's at Trier, one of the regions most powerful monasteries. St. Maximin's had become a center of the Gorze reform in 934, and in 973, at the wish of Otto I, Echternach returned to Benedictine rule. The canons were forcibly removed from the abbey and replaced by the reformed Abbot Ravanger and forty monks from St. Maximin's.

In 1028 Humbert, a monk from Saint Maximin's and a representative of the Cluniac movement, became abbot. This launched a second period of reform and a new wave of artistic activity at the monastery. In 1028 Humbert rebuilt the abbey church, which had been destroyed by fire in 1016; he is reported to have decorated it with images and painting. Under Abbot Humbert, the monastery's scriptorium took the role formerly held by Reichenau, as one of the great centers of Ottonian manuscript production and dissemination.

The Codex Aureus (Nuremberg, Germanisches Nationalmuseum, no. MS 156142/KG1138) is a luxurious gospel book dating to about 1031, and appears to have been made for the abbey itself. Its opening image of a Christ in Majesty bears stylistic and iconographic ties to that of the Sainte Chapelle Gospels made in Trier about 984 (Paris, Bibliothèque Nationale de France, no. MS lat. 8851). The sumptuous incipit pages of the Codex Aureus, with gold lettering on purple bands over green backgrounds, appear to borrow directly from the earlier manuscript. One of the most striking elements of the manuscript is its departure from the predominantly iconic approach to earlier Ottonian illumination. The arrangement of the figures in three tiers draws from Carolingian models, however; the sheer number of figures and frequent repetition of Christ on the same page represent a move toward a new narrative organization of the material.

Echternach is counted among the last great schools of Ottonian manuscript production; as such it maintained its connections with the imperial rulers into the following dynasty. A book of pericopes (Bremen, Universitätsbibliothek, no. MS b. 21) from 1039–1043, the Goslar Gospels (Uppsala, University Library, no. MS C.93) of 1047–1056, and the Speyer Gospels (Escorial, no. Cod. Virtr. 17) of 1045–1046 were all commissioned by the Salian emperor Henry III.

Eckenlied

A Dietrich epic in *Bernerton* strophes, *Eckenlied* is preserved in seven manuscript and eleven printed versions. Of these, manuscript *L*, a late-thirteenth-century Alemannic manuscript, the conclusion of which is missing; manuscript *d*, the version of the *Dresdener Heldenbuch* of 1472; and *s*, a Strasbourg printed version of 1559, best represent the three main variants of the plot. A strophe in the Bavarian *Carmina Burana* (ca. 1220) and the *Ecca* episode of the Norse *Thidrekssaga* (ca. 1250) show that the narrative was widely known in German-speaking areas by the early thirteenth century. Accurate descriptions of Tyrolian geography and loose connections to Tyrolian folklore suggest that it appeared there first.

The beginning of the story is similar in all versions: Ecke, a gigantic knight, wants to duel with Dietrich. Seburg, one of three queens at Jochgrimm, dispatches Ecke to bring Dietrich to her. Ecke forces a reluctant Dietrich to duel with and defeat him. Dietrich takes Ecke's sword, armor, and head. He then vanquishes Ecke's brother Vasolt and other giants. The texts then diverge. In complete versions, Dietrich eventually reaches Jochgrimm. In the *Dresdener Heldenbuch* (a criticism of courtly literature) he reproaches Seburg for frivolously sending Ecke to die, then throws Ecke's head at her feet. In the printed version (a traditional tale of rescue) the queens thank Dietrich with a feast, because he has rescued them from marriage to Ecke and his brothers.

Eckenlied originated as an etiological explanation for the name of Dietrich's sword Eckesachs (sharp blade). As is shown by its strophe, its close similarity to an episode in the French Arthurian prose romance *Chevalier au Papagau*, and Ecke's dispatch by a lady, it achieved its preserved form in reaction to courtly literature.

A few fragments of another Dietrich epic, involving a character named Vasolt as well as other giants, might be related to the *Eckenlied*. Since the fragments are not in *Bernerton* like all other versions of the *Eckenlied*, but in long lines suggestive of *Nibelungen-* or *Hildebrandsstrophen*, no definite connection can be established.

Education

In medieval Germany, which had a very low literacy rate, three types of schools existed: those of monasteries, cathedrals, and towns. In the early Middle Ages, from the sixth through ninth centuries, monastery schools flourished alongside those of the bishoprics. Because the latter were affiliated with the church of the bishop, they are referred to today as cathedral schools. As populations increased, economies expanded, and more people began to congregate in towns, schools were founded for the laity. While some overlap occurred as these schools came into existence, a chronological development can be discerned that progressed from the monasteries to the towns, from the religious to the secular. Throughout the Middle Ages, private tutoring also existed in Germany as an important and prevalent method of education, particularly for the nobility.

At the beginning of the ninth century, three main monastic centers of learning in Germany were St. Gall (613/614–1798), Reichenau (724–1757), and Fulda (744–1802). Also of importance were Weißenburg (635–1789), Lorsch (764–1248), Murbach (727/764), Amorbach (734–1803), Niederalteich (741–1803), Tegernsee (756/761–1803), Hersfeld (769–1556), and St. Emmeram (739–1812). All these monasteries earned renown owing to the size of their libraries, the erudition of certain monks, and the significance of their literary production. In addition to these monasteries, many others flourished throughout Germany that undoubtedly possessed libraries and schools of their own.

In the tenth and eleventh centuries, when many monasteries in Germany were struggling for survival, cathedral schools were thriving in larger towns. Cologne, Mainz, Speyer, Trier, Worms, Straßburg, Constance, Augsburg, Freising, Passau, Regensburg, Salzburg, Eichstätt, Würzburg, Bamberg, Münster, Paderborn, Hildesheim, and Magdeburg were all important educational centers. Like the monasteries, these schools were renowned because of the bishops who presided over them, the quality of their teachers, and the importance of their literary production.

In what way did cathedral schools differ from monastic ones? The answer lies not in the curriculum, which in both cases encompassed to varying degrees the study (in Latin) of the seven liberal arts (*trivium*=grammar, rhetoric, dialectic; *quadrivium*=arithmetic, geometry, music, astronomy), but in the purpose for which the boys (ages seven to twenty-one) were educated. Many monasteries of the time, St. Gall, for example, had two schools—an interior one and an exterior one, also referred to, respectively, as claustral and canonical. In general, the interior schools trained oblates as monks, whereas the exterior schools concentrated on the education of secular clerics and laymen. Cathedral schools resembled the exterior schools of the monasteries.

As monastery and cathedral schools gradually lost their patronage, town schools supplanted them. Whereas monastery and cathedral schools operated under the aegis of the church and served its interests, town schools owed their existence to the common people and catered to their more worldly needs. By the end of the fourteenth century they existed in great number throughout Germany, even in towns of moderate size. At first, town schools imitated clerical institutions and offered a similar curriculum. Only in the fourteenth century, when the number of schools multiplied along with the population, did the needs of the laity become the focus of instruction and German the medium and object of it. *Schreibschulen* (writing schools) and *deutsche Schulen* (German schools) date from this time.

Egbert (r. 977–993)

Before becoming archbishop, Egbert, archbishop of Trier, served with Archbishop Bruno of Cologne and as chancellor of the court of the Holy Roman Empire. At Trier Egbert was active in promoting manuscript and metalwork production and began work on rebuilding the cathedral, of which only the four eastern piers survive. Under Egbert there was a concerted artistic and liturgical effort to express the position of the apostolic primacy of the see of Trier in Germany. Egbert retrieved the upper half of the staff of St. Peter from Cologne and brought it back to Trier, ordering an elaborate reliquary for the object (now in Limburg an der Lahn). The gold and enamel decoration and the inscription of the reliquary establish the succession of authority from Peter to the first three bishops of Trier—Eucharius, Valerius, and Maternus—and the succession of later popes and archbishops from Peter. Egbert also was active in promoting the cults of Eucharius, Valerius, and Maternus by undertaking the construction of a new church at the abbey of St. Eucharius around 980 and by commissioning Abbot Remigius of Mettlach to compose songs to the saints. New offices in honor of the first three bishops were also composed in this period. Egbert commissioned numerous reliquaries, manuscripts, and liturgical objects. Among the most noteworthy of these are the reliquaries containing a nail from the crucifixion and the sandal of the apostle Andrew and the manuscripts bearing his name, the Egbert Psalter and the Codex Egberti (manuscript of Egbert).

Eigenkirche

A German term coined in the 1890s by the historian Ulrich Stutz, *Eigenkirche* designates a form of privately owned (*eigen*) church (*Kirche*) common in Europe between the fifth and twelfth centuries. Typically, a layman who owned a large estate would found and endow a church using his own land. As the church's legal proprietor, he would retain control over its administration. He would appoint clerics and apportion the income—partly for his private use—derived from taxing the local population and exploiting the land. Stutz hypothesized that the private church derived from a pagan Germanic practice of maintaining house cults and priests. Subsequent research has demonstrated, however, that the practice was not peculiar to the Germanic tribes. It tended to develop in all societies in which large-scale land tenure existed, including notably the later Roman Empire. In the Frankish realm, the number of *Eigenkirchen* grew in the seventh and eighth centuries until the practice threatened to overwhelm a parallel legal tradition of diocesan church ownership. Bishops claimed the lands of all the churches within their diocese as a part of the general income attached to their office.

From the ninth to the eleventh centuries, the legal rights and economic customs associated with private churches diversified. The radical decentralization of secular power in the west Frankish (French) realm encouraged all levels of the aristocracy to sponsor private foundations—especially monasteries. Private ownership often went hand-in-hand with the promotion of new reformed monastic orders.

Without abolishing private churches, the German rulers also attempted to synthesize diocesan and private structures of ownership by forming an imperial church. They drew on the precedent set by the Carolingian emperors. The Ottonian and Salian emperors exercised similar rights over all bishoprics and some monasteries as private owners were allowed to exercise over their individual foundations. By associating the legal rights of proprietors with the imperial office, the emperors protected the majority of churches from being despoiled by individual nobles. In exchange they reserved the right to select bishops and abbots and to demand military and other services from these churches.

The church reform movement of the eleventh and twelfth centuries produced the single most concerted attack on the institution of private churches. Reformers wanted to assure the purity of the priesthood by isolating it from lay practices and interference, in order to protect the purity of the sacraments. The emperor was the lay ruler whose patronage of churches most directly challenged the pope's authority over the priesthood. The reformers therefore declared the emperors' control of ecclesiastical personnel to be illegal. The reformers' offensive resulted in the Investiture Controversy (1075–1122), during which the popes and the emperors disputed the right to appoint and invest bishops and abbots within the empire. By the mid—twelfth century canon law collections had declared all private possession of churches illegal. The Roman Church limited other forms of founders' rights to a largely symbolic "law of patronage." These successes helped to consolidate the church's exclusive rights as a property owner.

Eike von Reggow (fl. 1210–1235)

Beginning about 1150 we have records of a family living in Saxony between the rivers Saale and Mulde who called itself after the village of Reppichau near the city of Dessau. Eike von Reggow (also Eike von Reppichowe) probably belonged to this family of ministerials eligible to serve in the judiciary as *Schöffe*, that is, one of a group who determines judgments in a lawsuit. He is probably the person who appears as a witness in charters from 1209 to 1233. Although these charters place him in contact with Count Heinrich of Anhalt, Margrave Dietrich of Meißen, and Landgrave Ludwig of Thuringia and it is certain that he was liegeman to Count Hoyer of Falkenstein in Quedlinburg, we know little of the events in his life and cannot even be sure he was a *Schöffe*. What we do know is that he wrote arguably the most significant text of the German Middle Ages: the *Sachsenspiegel* (The Saxon Mirror, ca. 1225–1235). This is a compendium of the customary laws of thirteenth-century Saxony. Eike's text reveals an education in the seven liberal arts (possibly Halberstadt or Magdeburg), for he had learned Latin and was highly familiar with the Bible and canon law.

The reception of Eike's book was vast. Not only was it appropriated by the rest of Germany within forty years, including High German translations —*Deutschenspiegel* (Germans' Mirror), *Schwabenspiegel* (Swabians' Mirror), but as the four hundred extant manuscript versions demonstrate, it was frequently consulted and much of it remained in force for over three hundred years, thus confirming his contribution to German jurisprudence and culture. Authorship of the *Sächsische Weltchronik* (Saxon World Chronicle, 1260–1275), a lengthy summary of world history and catalog of Roman kings up to Eike's own age, is no longer attributed to Eike.

Eike von Repgow, Legal

The author of the *Sachsenspiegel* (Mirror of the Saxons), Eike von Repgow (also Repchow, Reggau) is perhaps the greatest German legal mind of the Middle Ages. He lived in eastern Saxony and may have had an estate at Reppichau near Magdeburg. He was born about 1180 and died sometime after 1235; there are six charters, between 1209 and 1233, that list him among the witnesses. He may have been present at these proceedings because of his legal expertise. Scholarly opinions are sharply divided on several areas of his life. One is his status either as *edelfrei*, a lesser noble, or as a *ministerial*, those serf-knights unique to German society, although he was probably a member of the free lower aristocracy. Another is his authorship of the *Sächsische Weltchronik*, a Saxon chronicle in German circa 1230. Nothing about Eike's life is very certain, and much is simply conjecture. This elusive Saxon legal expert was responsible for a compilation of laws and customs called the *Sachsenspiegel*. This law code is not only unique in its scope and influence, it is also the first law book written in German, in the Middle Low German spoken in Eastphalia. As this language was predominantly oral, Eike, in writing down what was living law also invented the standard terminology to be used in the German law thereafter. *Sachsenspiegel* is a law book in two volumes. Its first volume, the *Landrecht* (common/customary law), apply

Sachsenspiegel (Dresden, Sächsische Landesbibliothek/Staatsund Universitätsbibliothek Dresden, Ms. 32), fol 11a: administration of the property of minors and widows. Photograph: Sächsische Landesbibliothek/Staats- und Universitätsbibliothek Dresden, Deutsche Fotothek: Handrick

ing to all members of the community, includes laws about inheritance, family customs, trial procedures, criminal law, and constitutional ideas about the nature of the German monarchy. It contains 675 sentences of law. The second volume, the *Lehnrecht* (feudal law), contains similar categories but is devoted to a single group: the *Ritter* (knights), an emerging mixture of freeborn lesser nobles and powerful *ministeriales*, the late medieval German gentry. The *Lehnrecht* contains 327 sentences of law.

Sachsenspiegel was enormously influential; it was illustrated in the thirteenth and fourteenth centuries, adapted to the customs and dialects of other parts of Germany, and annotated and supplemented by urban and regional legislation. As the Sachsenrecht (Saxon Law), it remained in use in German legal practice until the early twentieth century.

What were Eike's reasons for compiling the laws of the Saxons? Perhaps he wanted "to please both God and the world," thus aiding his contemporaries by a detailed description of trial procedures that he knew well, and serving God by discussing the traditional theories of the law as he understood them.

Eike strongly objected to bad laws, whether expressed in political turmoil, criminal actions, or human bondage—evils that ultimately had their origin in arbitrary action. He wished instead to uphold God's Eternal Order, the existence of good laws and the absolute necessity of freedom.

The history of Middle High German *Tristan* versions begins with Eilhart von Oberg's *Tristrant*, composed sometime between 1170 and 1190. In contrast to Gottfried von Straßburg's *Tristan* (ca. 1210), the older poem seems to have borrowed directly from a Celtic source, although a French intermediary story (*estoire*) is also possible. Hardly anything is known about the author except that he was a member of the noble family of Oberg who lived in the vicinity of Brunswick and were in the service of the bishops of Hildesheim and the Welf family. It seems highly likely that Eilhart created his *Tristrant* at the Brunswick court of his patroness, duchess Mechthild of England, who was married to Henry the Lion. Mechthild had been raised in London in a highly literate Anglo-Norman world where the Old French *Chanson de Roland* (Song of Roland) enjoyed considerable popularity. It can be assumed that she commissioned the translation of the latter into Middle High German (*Rolandslied*), and also promoted the creation of the goliardic epic *Herzog Ernst*, based on the *Chanson d'Aspremont*, and finally the composition of the *Tristrant* romance. Eilhart's text has been preserved in three fragmentary twelfth- and thirteenth-century manuscripts that contain altogether more than a thousand verses. The complete text is extant in three fifteenth-century paper manuscripts and was first printed by Anton Sorg in Augsburg as a prose version (chapbook) in 1484. This chapbook experienced a long-lasting popularity far into the eighteenth century. Eilhart's *Tristrant* was extensively used as an inspirational source for thirteenth- and fourteenth-century tapestry (e.g., Wienhausen).

In contrast to Gottfried's later version, Eilhart relies on simpler motivational elements to explain how Tristrant and the Irish princess Isalde meet and fall in love. The couple is eventually forced to leave the court and spends two miserable years in the woods until the effects of a love potion fade and each of them can return to his or her life. Tristrant marries Kehenis's sister, also named Isalde, but continues to love fair Isalde, his King's, Marke's, wife, whom he meets several times in secret. The lovers are caught flagrants delicto and are supposed to be executed. But a leper suggests that Isalde be turned over to his band to be raped by all of them, which then provides the opportunity for Tristrant to free himself and rescue his beloved mistress. Later Tristrant returns home from another adventure, mortally wounded, and calls his mistress for his rescue. When she arrives, however, he has already died, and so she also succumbs to death. Now King Marke learns about the love potion, forgives the lovers, and buries them together. Because Eilhart included more comical elements, gave a time limit to the power of the potion, and hence described love as a dangerous power undermining both King Marke's and Tristrant's marriage, this courtly romance had a more mundane and entertaining character than Gottfried's *Tristan*. Here the figure of King Arthur and his court also play a significant role.

Einsiedeln

The martyrdom of the hermit monk Meinrad in 861 established the area east of Lake Zurich in central Switzerland as a focal point for local monasticism. A Benedictine foundation was inaugurated in 934 with support from the Swabian ducal family, and in 947 the monastery was placed under royal protection by Otto I. This status, with continued substantial grants throughout the Ottonian period, made Einsiedeln an important monastic center for Central Europe. As a pivotal link in the spread of the Gorze monastic reform, Einsiedeln supplied a steady stream of monks to serve as abbots and bishops throughout the realm, particularly in neighboring Bavaria. The abbacy of Gregory (964–996) saw the building of an enlarged church and an efflorescence of book production, including illuminated manuscripts that show links to Reichenau and especially St. Gall. The monastic library also preserves important liturgical and musical manuscripts, as well as the oldest extant copy of a German monastic *consuetudines*, or list of rules, from St. Emmeram in Regensburg (ca. 980–990).

In the thirteenth and fourteenth centuries, Einsiedeln suffered repeated attacks from various sides on its possessions, losing half its land in 1350. At the same time the monastery church became the object of increasing pilgrimage. The devotion to "Our Lady of the Hermits" was directed especially toward the famous mid-fifteenth-century "Black Madonna" statue (restoration in 1933 revealed that the Virgin and Child were originally flesh-toned). Three "Einsiedeln Madonna" engravings executed by Master E.S. in 1466, when the fire-damaged church was rededicated, attest to continued Marian devotion and the importance of the church as a pilgrimage destination on the eve of the Reformation. The now wholly baroque church and monastery continue to function as Switzerland's largest Benedictine foundation.

Elisabeth von Schönau (1129–1164)

A Benedictine nun, visionary, mystic, and women's *magistra* (teacher) in the double monastery of Schönau near St. Goarshausen, Elisabeth was strongly influenced by Hildegard von Bingen and yet her accomplishments were very different in scope and originality from the renowned contemporary visionary. Elisabeth's ecstasies, visions, and auditions started in 1152. In her visions, which were always accompanied by physical and mental suffering, Elisabeth sees herself guided by an angel.

Although she had begun to set down her own spiritual experiences in writing, in 1155 Elisabeth asked her brother, Ekbert (the author of *Sermones contra Catharos*, "Sermons against the Cathars," and later the abbot of Schönau), to join her at Schönau as her personal adviser and scribe. Much of her text, including some of her less orthodox visions (such as Christ as a woman), was reinterpreted by Ekbert. Similar to Hildegard, Elisabeth was deeply concerned with the corruption in the church of her time and pleaded for reform. Elisabeth faced strong clerical criticism throughout her life.

While never canonized, Elisabeth enjoyed a widespread saintly reputation among her contemporaries. Her work, less complicated than that of Hildegard von Bingen, was uniquely successful (becoming known as far away as twelfth-century Iceland); more than 150 medieval manuscripts are extant. The twelfth-century codex 3 of the Landesbibliothek at Wiesbaden, which contains her complete work, was compiled under Ekbert's supervision.

Besides over twenty letters (most of them written between 1154 and 1164), Elisabeth's work comprises the *Liber visionum*, a collection of her visions in three parts (1152–1160), which contains topical themes of interest today for the history of religion; the *Liber viarum dei* (Book of the Ways of God), 1156–1157, patterned after Hildegard von Bingen's *Scivias* (Know the Ways); and the *Liber revelationum de sacro exercitu virginum Coloniensium*, an imaginative embellishment of the then very popular Ursula legend, which had an enormous influence on medieval hagiography and iconography. While the Latin text of Elisabeth's work was edited (by F.W.E. Roth) in 1884, a critical edition is still outstanding.

Elizabeth of Hungary (1207–1231)

Saint Elizabeth (of Hungary, also of Thuringia) was born in 1207 to Andreas II, king of Hungary, and his wife, Gertrude of Andechs-Meranien. At the age of four she was betrothed to the eldest son of Hermann, landgrave of Thuringia, and was taken to be raised at his court. The marriage took place in 1221, four years after Hermann's death and his son's succession as Landgrave Ludwig IV. Elizabeth bore two children, a son Hermann and a daughter Sophie, before her husband's departure on Crusade with Frederick II in 1227. A third child, Gertrude, was born three weeks after Ludwig's death on board ship off the coast of Italy. After her husband's death, Elizabeth left the court and moved to Marburg in the western part of Thuringia, where she established a hospital and spent the last four years of her life nursing the sick with her own hands. She was canonized in 1235, only four years after her death. The cornerstone for a new, Gothic church over her burial site was laid at that time, the testimony collected in support of Elizabeth's canonization soon augmented the bare facts of her life. She is said to have been unusually pious as a child, when she preferred praying to playing with other children and stole bread from the court kitchens to feed the poor. She was reputed to have tended the sick in her marriage bed and to have organized large-scale donations of grain from the landgraves' stores in time of famine. Popular legend too augmented the saint's image. An early story that she was chased from the Wartburg by her brothers-in-law after her husband's death is now thought to be apocryphal; it seems more likely that she left of her own volition to lead a life of piety and charity that was not possible at court. From the time of her death, she was venerated as a saint; the director of her ascetic spiritual practice during the last years of her life, Konrad of Marburg, quickly built a stone basilica over her burial site and began assembling testimony, particularly evidence of miracles, in support of her canonization. After Konrad's death in 1233, Elizabeth's powerful brothers-in-law actively supported the canonization; additional documentation accumulated at this time, including the *Libellus de dictis quatuor ancillarum*, (a brief treatise on her works) placed more emphasis on Elizabeth's earthly deeds. The pope's interest in Elizabeth's sainthood is clearly stated in the canonization documents: a new and popular saint was perceived to be a useful tool in the fight against heresy. Elizabeth's popularity in the eyes of the people seems to have relied not only on her generosity but, more specifically, on her adherence to the tenets of the new Franciscan order, which preached an ascetic lifestyle in which devotion to God was reflected in service to the less fortunate.

Two of the earliest works of art commemorating the new saint record scenes from her life. The roof panels from the great gilt shrine, probably underway by 1248, portray Ludwig's decision to take the cross, his departure from Elizabeth, the return of his bones to his wife, and Elizabeth clothing a beggar, taking the simple gray robes of a hospital worker as a sign of her poverty and devotion to others, distributing alms to the poor, feeding the hungry, and giving drink to the thirsty and washing the feet of a beggar. The nearly contemporary stained glass window, also in her church at Marburg, strengthens the emphasis on her charitable deeds by increasing their number to six, to correspond to the canonical Acts of Charity according to Matthew 25:34–36, and organizing them together in the window's left lancet. Since a restoration in 1977–1979, they have been juxtaposed to single, unrepeatable events from her life in the right lancet. All the scenes from the roof of the shrine also appear in the window in closely related compositions. In the roundel at the top of the window, Christ and the Virgin crown Francis and Elizabeth, respectively.

While later altarpieces both at St. Elizabeth's and elsewhere repeat scenes from her life (see *700 Jahre*, 1983: E, nos. 10 and 20, and II, nos. 2–4, 50–51), the preference in later works, both paintings and sculptures, is for single figures of the saint (see *700 Jahre*: II, nos. 3, 7–11, 14–15, 17–33, 40, 43–48). This type too derives from an early work, a window from the first stained glass campaign at St. Elizabeth's, circa 1240, which portrays the standing saint crowned and elegantly dressed. The single figures typically amplify this model with an attribute referring to Elizabeth's charity: a loaf of bread or a roll, a pitcher, or a garment. Frequently a beggar in smaller scale kneels at her feet awaiting her gift. Although the church dedicated to her at Marburg was not started until the day after her canonization, from the middle of the fourteenth century Elizabeth was also portrayed bearing a church model, the attribute typical of church founders and patrons (see *700 Jahre* 1983: II, nos. 57, 61–62, 64–66). Sometimes, especially in late medieval works produced in Hesse, the church is clearly identifiable as St. Elizabeth's, with its distinctive tri-conch (arched) apse and two tall facade towers.

Empire

On Christmas day in the year 800, when Pope Leo III crowned the great Frankish king Charlemagne as Roman emperor, the Roman Empire in the West, vacant since 476, was legally revived. (This empire is altogether too often still referred to erroneously as the "Holy Roman Empire" or misleadingly as the "Carolingian empire." Legally, it was neither.) Charlemagne was fully cognizant of the dangerous implications of this act and in 813 sought to create a different precedent by presenting his sole surviving son Louis to the Frankish aristocracy as his successor and by crowning him Roman emperor. After his accession in 814, however, Louis had himself crowned again at Reims in 816 by Pope Stephen IV, and then his eldest son, Lothar, in Rome in 823 by Paschal I. The popes crowned every emperor thereafter until 1531.

Until 924 they steadily conferred the crown on members of the extended Carolingian family, with only an occasional interlude (e.g., 877–881); but after 924 the western empire was again vacant until the coronation on February 2, 962, of Otto I, duke of Saxony, king of the Germans since 936, and leader of great victories over the Magyars and Slavs in 955. With this act occurred the transfer or "translation" of the empire (*translatio imperii*) from the West Franks to the heirs of the East Franks—ironically, the Saxons, whom it had taken Charlemagne so long to subjugate. From then on, until the abolition of the empire in 1806, every candidate standing for election to the throne had to be able to trace his ancestry back to Ottol I.

It was a crown well worth fighting for. Aside from the fact that the emperor enjoyed precedence over all other monarchs in Europe and that legally no other empire existed before Napoléon crowned himself emperor of the French in 1806, he presided over a rapidly growing realm thanks to the initiatives of the Franks. Whether or not Charlemagne was directly inspired by Roman claims to "the whole world" (as we are reminded in Luke 2:1), his biographer Einhard recounts with pride that he worked constantly to extend his empire and subdue foreign nations, and in fact he more than doubled the possessions he had inherited. In the Saxons and their successors, the Salians and the Hohenstaufens, he had worthy heirs. Lotharingia and Burgundy were acquired; Charlemagne's policy of conquest and conversion was now extended to the Slavs; efforts were undertaken to extend hegemony over Scandinavia, Poland, Hungary, and Bohemia; and more and more attention was devoted to Italy, the richest and most economically developed part of Europe and hence rightfully called "the garden of the Empire."

By the twelfth century, however, resistance was rising on many fronts, while the initiative in eastward expansion was passing to princes, bishops, and later the Teutonic Knights. Of the northern and eastern kingdoms, only Bohemia was incorporated into the empire, while Italy consumed more and more energy (the Hohenstaufen spent more than half their time there) in return for less and less. Although the popes have traditionally been blamed for frustrating these imperial ambitions, it was in fact the steady opposition of the Italian communes that did so, aided by the new arts of stone fortification.

The struggles with the popes from the later eleventh century onward did influence the empire in a different way, however. One of their many policies was the reversal of the sacralization of monarchy that had been developing during the previous centuries. Thus Bishop Liutprand of Cremona (d. ca. 972) had already written of the "holy emperor" and "most sacred emperor" in the tenth century. In response to these papal attempts to monopolize the sacred, Frederick Barbarossa (1152–1190) and his chancellor, Archbishop of Cologne Rainald von Dassel, began using the phrase *sacrum imperium* as a counterbalance to the *sancta ecclesia*, and after the mid-thirteenth century the full-blown term *sacrum Romanum imperium* (S.R.I.) stood in contrast to the *sancta Romana ecclesia* (S.R.E.)—the two claimants to the legacy of Rome.

There were two further significant developments in the formal nomenclature of empire in the fourteenth century. In response to French threats to retake the empire and reverse the *translatio* of the tenth century, the words "of the German Nation" came to be annexed to the phrase "Holy Roman Empire"; and then the long list of all the emperor's other titles ended with an allusion to late Roman practice, "at all times extender of the Empire" (*zu allen Zeiten Mehrer des Reiches*). Although all this terminological tinkering might be regarded as flights of fancy in the face of failure, it also represents a certain public willingness to abandon the old Roman empire, the full significance of which Petrarch finally realized in the fourteenth century. Renaissance historians have yet to grasp fully the significance of these facts, linking Germany and Italy, politics and culture, and to incorporate them into their construction of the Renaissance.

One final development of the twelfth and thirteenth centuries is worth noting: a decisive shift in the longstanding, delicate balance between the electoral rights of the princes and the claims to succession of a royal clan, in the direction of the former. In his early conflicts with Pope Alexander III (1159–1181), Frederick Barbarossa had inadvertently aided this development by arguing that the decisive moment in the making of an emperor was not coronation by the pope but election as king of the Romans by the German princes. What has deeply puzzled German historians for several generations is that as the electoral principle became ever more dominant, the circle of lay electors progressively shrank until there were only four entitled to participate (as recognized and enshrined as abiding law by Charles IV in the Golden Bull of 1356): the king of Bohemia, the count palatine of the Rhine, the duke of Saxony, and the margrave of Brandenburg. Why these four? Many explanations have been advanced, but none seems as convincing as that offered by Armin Wolf in 1983. He brilliantly argued that these were the sole surviving families that could trace their ancestry directly back to the sisters of Otto I, that in effect this was the criterion to determine the right to vote, and that by the late thirteenth century all the other families had died out. Like the right to stand for election itself, membership in the lay electoral circle depended on determinable descent from Otto I and his sisters. At the very top, the empire was very much a matter of extended family business.

But the empire was not merely German business, for the legitimacy of rulers and of rule elsewhere depended on it. In the High Middle Ages a very real question in law and political theory concerned the relationship between kings and the emperor, expressed in two questions in particular: What kind of authority did kings exercise? And did the emperor have any jurisdiction over them? The elegant solution to this conundrum was provided in the generally accepted principle, "The king is emperor in his own realm." Just to be sure, however, the rulers of Europe have long been eager to establish their connection with the imperial family of Otto I and, ultimately, of Charlemagne. Whether they are aware of it or not, this concern has lasted into the modern age. In the last hundred years it has been a commonplace that every ruler in Europe was related to Queen Victoria. Anglophiles will be crushed to learn, however, that her significance lay not in being queen of England, but instead a descendant of Otto I as a member of the house of Saxony-Coburg-Gotha (and, incidentally, empress).

In general, Middle Dutch encyclopedic writings can be characterized as translations, adaptations, or compilations of authoritative Latin encyclopedias. The following selection lists only some of the most well-known encyclopedic works. In 1266 the Flemish poet Jacob van Maerlant rendered Thomas of Cantimpré's *Liber de natura rerum* (which was written for fellow Dominicans) into Middle Dutch verse for an aristocratic lay audience: *Der naturen bloeme*. During the years 1283–1288 Maerlant worked on his *Spiegel Historiael*, a (rhymed) world chronicle based on the *Speculum Historiale* of Vincent of Beauvais. The Middle Dutch prose translation of another thirteenth-century Latin encyclopedist, *De proprietatibus rerum* of Bartholomaeus Anglicus, has survived in a printed version of the fifteenth century. An anonymous thirteenth-century Flemish author wrote a popularized cosmological treatise in Middle Dutch verse derived from different Latin sources: *De Natuurkunde van het geheelal* (The Science of the Cosmos). The encyclopedic tradition of the fourteenth century is marked by its moralistic nature. In 1330 the Brabantine poet Jan van Boendale presented a moralistic picture of humankind's history in Middle Dutch verse: *Der leken spiegel* (The Laymen's Mirror), which consists of four books, beginning with a description of God and His Creation and ending with the Day of Judgment. Book 3, Chapter 15 contains the oldest Middle Dutch poetical treatise: *Hoe dichters dichten sullen* (How Writers Should Write). Another contemporary Antwerp writer produced a prose translation of the *Livre de Sidrac*, an original thirteenth-century French encyclopedic dialogue, also known as *Livre de la fontaine de toutes sciences*. Also a product of Antwerp is the Middle Dutch (verse) translation of Albertanus of Brescia's *De amore et dilectione Dei*, known in Dutch as the *Dietsche doctrinale* (Dutch Moralistic Teachings). In 1403 Dirc van Delf, commissioned by Albrecht of Bavaria, duke of Holland, wrote a theological encyclopedia in prose for laymen: *Tafel van den kersten ghelove* (Table of the Christian faith), based on several Latin sources.

Our modern encyclopedias with their alphabetical arrangement of articles are not lineal descendants of medieval encyclopedias. To the extent that they have medieval ancestors, these would be more readily found among Latin-German glossaries that were sometimes expanded with explanatory material. The only feature that medieval encyclopedias share with their modern namesakes is the attempt to provide information on a wide variety of subjects, but this information was presented systematically rather than alphabetically. Furthermore, all the medieval German encyclopedias were translations and reworkings of Latin originals. There was nothing in medieval German comparable to the *Livre du trésor* written in French in the thirteenth century by Brunetto Latini of Florence and soon translated into other Romance languages, including Latini's native Italian.

The first German encyclopedia, possibly written in the last decade of the twelfth century, provides information on natural phenomena as part of the Kingdom of God. This work identifies itself in its opening sentence as *Lucidarius* (Beacon), a name borrowed from the *Elucidarium* of Honorius Augustodunensis, a monk from Regensburg (d. 1137). The *Imago mundi* of the same author and the *Philosophia mundi* of William of Conches (d. 1154) were the chief sources used by the German author. The *Lucidarius* consists of three sections devoted to cosmology and geography, Christian history and practices, and life after death, including the Last Judgment. Even though its later transmissions often reveal special interest in the parts dealing with geography and natural history, its original structure suggests that it was produced by a cleric for courtly audiences.

The thirteenth century saw a number of Latin encyclopedias emerge from within the new religious orders, probably intended above all as compendia of knowledge for preachers. The best-known encyclopedists were the Dominicans Thomas of Cantimpré and Vincent of Beauvais, and the Franciscan friar Bartholomew of England. During the course of the following century, vernacular versions of these encyclopedias became extremely popular, but different regions favored different texts. In England, for example, Bartholomew's *De proprietatibus rerum* in the translation of John of Trevisa became the standard source of encyclopedic knowledge. In Germany, the *Liber de natura rerum* by Thomas of Cantimpré was the source for at least five German reworkings. Of these, the *Buch der Natur* (Treatise on the Natural World) by Conrad of Megenberg (1309–1363) was by far the most important. Conrad taught in Paris from 1334 to 1342, directed the cathedral school in Vienna from 1342 to 1348, and spent the remainder of his life as a canon in Regensburg. He wrote his encyclopedia specifically for the benefit of those who could not read Latin. Thomas had continued to revise his Latin encyclopedia during his lifetime and others had done so after his death. As Conrad came into possession of later versions, he also revised his German text, deleting and expanding and drawing on other sources as he saw fit. Conrad's encyclopedia is still extant in over one hundred manuscripts, and it was printed in 1475 and six more times before the end of the fifteenth century. It continued to be the most important encyclopedia in German well into the sixteenth century.

Engelberg

At the beginning of the twelfth century, the nobleman Konrad of Sellenbüren founded in a remote mountain valley in central Switzerland the Benedictine cloister Engelberg dedicated to Mary and saints Nicholas, Leonhard, and Theodore; it was settled by monks from the cloister Muri. The foundation flourished under Abbot Frowin (ca. 1143–1178), who came from the reformed Cluniac cloister of St. Blasien in the Black Forest. Engelberg was probably a double cloister from the beginning: the women's community was subordinated to the abbot of the men's cloister, and their buildings with the chapel dedicated to St. Andreas were located close by. The Benedictine cloister still exists, although none of the medieval buildings are preserved, as the church and convent buildings were rebuilt in 1730–1745. St. Andreas, the women's convent, was moved to Sarnen (Canton Obwalden) in 1615.

A flourishing scriptorium developed under Abbot Frowin. Some forty manuscripts with patristic and contemporary theological texts are preserved from this time, most of them still in the monastic library. The hands of three or four scribes can be identified. The manuscripts' decoration varies widely in quality and type from dedication images in colored pen drawing to figural and ornamental initials. How many artists worked on the decoration is unclear as the manuscripts have hardly been studied. Artistic influences from Burgundian Cistercian and Swabian illumination are assumed.

Until the early thirteenth century a group of able monks were active in the scriptorium. About 1200, the artist known as the Engelberg Master illustrated a manuscript of the texts of Augustine (manuscript no. Cod. 14) with several initials in colored washes. As in the illumination of the period of Abbot Frowin, these initials are marked by originality and free variation on traditional pictorial formulae; the bubbly vitality of the pen drawings, which cleverly combine figural and ornamental motifs, is new. Also from the time of Abbot Heinrich I (1197–1223) is a silver gilt reliquary cross with a particle of the True Cross. On the front the Evangelists surround the crucified Christ; over his head the relic is set behind a round disk. On the back, Abbot Heinrich is portrayed as the donor, with the patron saints of Engelberg; the Virgin is in the middle. No directly related works are known, but the iconographic program and the artistic forms of the cross indicate its manufacture in an experienced, first-rate workshop, perhaps in Alsace.

While the number of monks decreased in the course of the thirteenth century, the women's community, supported by the Habsburg queen Agnes of Hungary, grew to be the largest Benedictine convent in the territory of

Rule of St. Benedict (Engelberg, Stiftsbibliothek. Cod. 72), fol 1r: Abbot Walther with Guota, *Magistra* of the women's convent, and the monk Chuono, *Photograph: Susan Marti*

the Swiss confederation. A group of manuscripts in the vernacular reveal close connections to mystical circles on the Upper Rhine in the second half of the fourteenth century. A number of works of art associated with the convent of St. Andreas are preserved: illuminated psalters (still in the library at Engelberg), textiles (some in the Textile Museum in St. Gall), and several sculptures (some in the Swiss National Museum in Zurich), including a small baby Jesus, which is still used as a devotional image in Sarnen. Most of the textiles were probably embroidered by the nuns themselves.

Engelbert of Berg (d. 1225)

A member of the noble family of the counts of Berg and Altena, Engelbert of Berg became a member of the cathedral chapter at Cologne during the episcopate of his cousin Adolf of Altena, who sat as archbishop 1193–1205. Over time he acquired the provostships of the collegiate churches of St. George, St. Severin, St. Mary in Aachen, Deventer, and Zülfen. In 1203, he was even elected bishop of Münster but declined, claiming he was too young for such an honor. In reality, he had his eye on the Cologne archiepiscopal chair. Adolf's political position in 1205 led to his being deposed, but the support of many of the prominent cathedral canons and other dignitaries of the archdiocese precipitated a schism that lasted until the Fourth Lateran Council in 1215. During the schism, Engelbert continued to support Adolf, and in 1216 the priors of Cologne elected Engelbert, who by now was cathedral provost as well as archdeacon, to be archbishop.

In 1220, just before returning to Sicily, Emperor Frederick II appointed Engelbert as regent for young Henry (VII), the not yet ten-year-old heir to the Staufen thrones. As regent, Engelbert displayed great administrative ability, though he did not always pursue policies in harmony with the emperor's intentions. He tried to create some stability in the political situation by instituting regional public peace agreements. But in his attempts to bring about closer relations with the English royal court, in line with Cologne tradition, and to bolster them by marriage projects between the Staufen king and the English royal family, he seems to have been more influenced by what was good for Cologne than by what was pleasing to Frederick II. Once war broke out anew between the English and French kings in 1224, Frederick sought to conclude a peace agreement with the Capetians. And instead of being wedded to one of the daughters of the English king, as urged by the archbishop, young Henry (VII), who was still a minor, was married to the daughter of the Babenberg Duke Leopold of Austria in November 1225.

There were also differences between the emperor in Sicily and the archiepiscopal regent concerning the treatment of King Valdemar of Denmark, who had been taken prisoner. Frederick endeavored to force Valdemar to give back former imperial areas between the Elbe and the Baltic that Otto IV and also he himself (in 1214) had granted to the Danish king.

Ultimately, Archbishop Engelbert fell victim to his own extensive family and territorial politics. He was ambushed and fatally wounded on the evening of November 7, 1225, while en route from Soest to Schwelm in Westfalia. The leader of the assailants was his cousin's son, Frederick of Isenberg, who himself had influential comrades-in-arms in his brothers, the bishops of Osnabrück and Münster. The immediate cause of the attack was the archbishop's efforts to remove a canoness foundation at Essen from the repressive actions of its lay advocates, the counts of Isenberg, but it was part of a larger policy aimed at placing as many ecclesiastical establishments as possible under the direct protection of Cologne's archbishop himself.

Engelbert's remains were buried in Cologne Cathedral on December 27, 1225, but they were ceremoniously transferred to a new grave in the cathedral during Lent 1226 in a ceremony presided over by Cardinal-bishop Conrad of Urach, then active in Germany as a papal legate. The legate also presided over a diet, during which a full investigation of the assassination was carried out. Both Walter von der Vogelweide and Caesarius of Heisterbach wrote pieces in honor of the slain prelate; the latter in fact began to collect anecdotal information that he eventually turned into a panegyric aimed at securing Engelbert's canonization as a martyr. Efforts to secure for Engelbert the martyr's crown similar to that of Thomas of Canterbury ultimately failed, however. It is noteworthy that Frederick II did not appoint another prelate to the position of regent and guardian for his son; in place of the murdered archbishop he nominated Duke Ludwig of Bavaria. The move can be seen as an effort on Frederick's part to keep the German nobility from becoming totally alienated following Engelbert's ecclesiastical regime.

The *Antichrist* from Linz is a Middle High German religious poem in strophes preserved in a thirteenth-century manuscript from the former monastery of Gleink in Trauntal. This tripartite work, written in 1170 by an anonymous author, depicts the reign of the Antichrist as a prelude to the Last Judgment. The poem comprises three sections with Latin headings: *De antichristo: Elia et Enoch*; *De signis XV dierum ante diem iudicii*; and *De adventu Christi ad iudicium*. The major segment of the poem that relates the origin, arrival, and demise of the Antichrist is nevertheless only a part of the whole. Arguably, a title more representative of the entire work may be *Von den letzten Dingen* (On the Last Things).

Because there are people who care to learn of the future, the poet tells of the Antichrist and the suffering that will befall the world. The Old Testament prophecy given by Jacob recounts the lineage of the antithetical figures of Christ and the Antichrist: the former from the tribe of Judah, which will bring forth the Virgin Mary, and the latter from the accursed tribe of Dan as depicted in the serpent metaphor. The poet offers instruction on interpreting eschatological portents of the Antichrist's coming, distinguishing divine miracles from demonic deceit and preparing wisely in perfecting vigilance. At the Mount of Olives, the Frankish king is to consummate the history of the empire and remove the final barrier to the progression of events that signal the Antichrist's reign. Although the Antichrist is to remain hidden from view until the age of thirty, he will secretly send false prophets to prepare his way. The vigilant will be able to discern them by their personal conduct and message, however, which disregard Christian charity and do violence to Christendom. The encounter with the Antichrist's cunning messengers is overshadowed by the confrontation of God's prophets, Elias and Enoch, with the Antichrist himself. The poem reveals the Antichrist's three means of false conversion: false miracles, bribes, and persecution. The conflict between good and evil escalates with each successive confrontation. When the Antichrist fails to persuade Elias that he is the Messiah, he slays both prophets with his sword and puts to death all who refuse to worship his image. The judgment and demise of Antichrist will take place on the Mount of Olives, where he is to be struck down by lightning.

After the Antichrist's reign, the poem tells of the interim before the Last Judgment and ends with Christ's testimony that the power of God the Father is unfathomable. The six strophes that form the second part of the poem, *De signis XV dierum ante diem iudicii*, render the fifteen days before the Last Judgment as a swift progression of eschatological time. The third part of the poem, *De adventu Christi ad iudicium*, introduces the themes of fire and transformation. This brief final segment tells of the awakening of the dead and the four groups who will stand at judgment before Christ as *rex iudicii*. The poet concludes the eschatological narrative by teaching that God's servants will take part in the renewal of creation: *ecce omnia novia facio* (all of this will be made new, v. 1176).

Erfurt

The early history of Erfurt is closely associated with St. Boniface, although tradition has a Benedictine cloister located on the Petersberg (Mount St. Peter) as early as 706, playing a role in missionary activity to the east. In 742 Boniface asked the pope to confirm establishment of a bishopric at Erfurt, and the church dedicated to the Virgin on the Domhügel (cathedral hill) was elevated to a cathedral. A new cathedral was begun a decade later, but in 754, Erfurt lost its bishopric to Mainz; it remained under the rule and influence of Mainz for the next millennium. Exactly how early a second church was erected on the hill next to the cathedral remains unclear, but in 836 the bones of St. Severus were transferred from Ravenna into the *altum monasterium* (high cloister). A Carolingian palace mentioned in 802 may have been located on the nearby Petersberg, and in 852 Louis the German held a *Reichstag* (imperial diet) here. The city's commercial center lay slightly to the east near the ford across the Gera.

The economy of the city in the Middle Ages was closely tied to the production and trade of woad, a plant that produces a blue dye. The city flourished from the twelfth to the fourteenth century; its favorable position for trade was enhanced when a bridge was built in 1156. The new Romanesque cathedral begun in 1154, after the collapse of the earlier building in the previous year, was consecrated in 1182. The church of St. Severus (Severikirche), rebuilt after a fire in 1079–1080, burned again in 1142 but was rebuilt quickly for a consecration in 1148. The church of Sts. Peter and Paul on the Petersberg was erected between 1103 and 1147 under the influence of the monastery church at Hirsau; only the exterior walls of the ground floor stand in anything like their original form. The so-called Schottenkirche, erected by Irish monks about 1200, preserves the only Romanesque interior in town.

By 1250, the city had achieved a measure of independence from Mainz, and in 1283, the city's tradesmen were granted a role in the city government, which they expanded in 1309–1310. The present cathedral and the church of St. Severus were rebuilt beginning about this time. The building sequence of the cathedral is particularly complex—the Romanesque building consecrated in 1182 continued to be a construction site as it was replaced, one part after another, over the course of the next three hundred years. The two towers flanking the choir were erected in the first third of the thirteenth century. A 1253 consecration is generally taken to relate to either an extension of the choir or the completion of the choir vaults, and another consecration, in 1290, marks an expansion of the choir to the east. The giant arches (*Kavaten*) that allow the extension of the choir beyond the natural profile of the hill were finished in 1329, but the transept and western section of the choir were rebuilt before work moved to the choir itself in 1349; the new choir which still possesses much of its original stained glass, was consecrated between 1370 and 1372. The Romanesque nave must have looked increasingly outdated against the light-flooded Gothic choir and the neighboring Severikirche, rebuilt between 1276 and circa 1332; it was rebuilt in the form of a late Gothic hall church in the decade between 1455 and 1465. Like the cathedral, the Severikirche is a hall church, built on the plan of the previous building.

The cathedral's long building history and the unusual location on the hill above town result in a number of unusual features. The narrow entrance to the choir and the nave that is narrower than the aisles relate to the earlier buildings on this site. The physical location to the west of town means that both the cathedral and the Severikirche are approached from the east—the choir end—rather than from the more typical west. The sculptural decora

Erfurt, cathedral, north portal, right jamb, Foolish Virgins. *Photograph: Joan A. Holladay*

tion typical of a west facade is found on the cathedral in the two doorways of the so-called Triangel (triangle), the wedge-shaped structure that projects out toward St. Severus from the north transept. Here on the jambs of the door that faces toward the east—the first that one approaches on climbing the stair from the plaza below—stand the apostles; the Wise and Foolish Virgins decorate the western portal closer to St. Severus. The expressive, energized figures are contemporary with the structure of the Triangel circa 1330.

Two works from about 1160 remain from the medieval decoration of the Romanesque cathedral: a stucco retable surrounding a three-dimensional seated figure of the Virgin and Child, and the so-called Wolfram, a bronze in the shape of a man who supports candles in his outstretched arms. The cathedral choir stalls from about 1360–1370 are richly decorated, largely with single figures. Also preserved are numerous panel paintings, reliquaries, and textiles, including the so-called Elisa-bethkassel, an elaborately embroidered chasuble of about 1300, and an embroidery with Tristan scenes from about 1380. The Severikirche preserves important stone sculptures from the fourteenth and fifteenth centuries. The sarcophagus of St. Severus, circa 1360–1370, features scenes from the life of the saint; the tomb slab with the effigy of the saint between figures of his wife Vincentia and daughter Innocentia is now installed as part of the altar dedicated to the saint in the south transept. The baptismal font with its elaborate blind tracery decoration and vault-high tracery superstructure dates from 1467; it still stands on its original site between the north inner and outer aisles near the west end. Its structure and quality suggest the work of a shop from southwestern Germany. The seated figures of angels are closely related in style to an especially fine alabaster relief of the Archangel Michael from the same year.

In addition to work on the cathedral and the Severikirche, the thirteenth century saw the establishment of the mendicant orders in Erfurt. The Franciscans settled outside the city walls in 1224, moving into the city a year later. Their church was already well advanced by 1231. Three windows from the original building were reinstalled in the new choir consecrated in 1316. Work on the nave of the new church continued through the fourteenth and fifteenth centuries. The Dominicans consecrated their cloister in 1230, a year after their arrival, and their first church in 1238. Gifts between 1240 and 1269 and indulgences dated 1263 and 1278 relate to the building of the new, five-bay choir finished in 1279. The nave proceeded more slowly, into the middle of the fourteenth century. The presence of the Dominican mystic Meister Eckhart here indicates the lively intellectual and spiritual climate; in 1303 he was elected the first provincial of the order's newly founded province of Saxony. The Augustinian Hermits made one of their earliest settlements in Germany in Erfurt in 1266. They were banned in 1273 but were reestablished by 1278, when their church is first mentioned. The present choir was begun in 1286, if not before; the date of the preserved stained glass around 1300 suggests that the choir may have been finished about this time. The nave was completed by 1335. By circa 1300, some twenty-one parish churches also dotted the city of ten thousand inhabitants.

The tradition of learning established by the schools of the mendicant orders in Erfurt was continued, in 1392, with the formation of the university. Even as the university became one of the leading scholarly centers in Germany in the fifteenth and sixteenth centuries, the city itself suffered an economic decline.

Biographical dates for the stone and wood sculptor Gregor Erhart are known only after 1494, at which time he was already in Augsburg. His wife, Anna, whom he married about 1495–1496, was the sister of the Augsburg joiner Adolf Daucher; through this family, Erhart made close connections to the Holbein family of painters. Numerous commissions after 1498 attest to Erhart's growing reputation, which peaked about 1515 in Emperor Maximilian's commission for a Madonna of Mercy in Frauenstein in Upper Austria. The sources are silent about commissions after 1525; only the pen drawings of fencing lessons from 1533 testify to further artistic activity. Erhart died in Augsburg in 1540.

Gregor Erhart translated the aristocratic, self-confident art of his father, Michel Erhart of Ulm, into a more bourgeois version. The external contours of his works become softer; their expression tends toward the melancholy. Despite these changes, Gregor's artistic forms clearly adapt those of his father, and since the scholar Emil Spaeth identified their relationship in 1922, art historians have faced the task of separating the works of the two.

Not a single signed work exists from Gregor Erhart's hand. Attributions rely on the research of Wilhelm Vöge, who recognized the relationship between the over-life-size Madonna of Mercy from cloister Kaisheim in Bavaria (formerly in the Deutsches Museum in Berlin, destroyed in 1945), documented as a work of Erhart between 1502 and 1504, and the figure of the Virgin from the high altar of Blaubeuren. Current scholarship agrees that the shrine figures and the reliefs of the Blaubeuren altar, dated 1493 and 1494, respectively, were made jointly by the two Erharts under the direction of the father. With these religious works in wood belongs the Virgin figure, over two meters tall, from the cloister of Saints Ulrich and Afra, about 1495 (Augsburg, Städtische Kunstsammlungen). The heads of a girl and boy in the Victoria and Albert Museum in London and the female nude known as the *Belle Allemande* (Beautiful German Woman) in the Louvre in Paris, all about 1510, represent an increasing tendency toward secular works after 1500. The preserved works in stone include a tabernacle for the host in the Stadtkirche in Donauwörth, dated 1503, and several epitaphs and tomb stones in Augsburg, Eichstätt, and Jettingen. A second tabernacle and a stone crucifix for the church of St. Moritz in Augsburg (1502–1507) are known only through documents.

Only a few concrete dates are known in the biography of Michel Erhart, who is always called *bildhower* (stone sculptor) in the documents. He is assumed to have been born between 1440 and 1450. Documented as a master in Ulm from 1469, he must have married the daughter of

Michel Erhart, *Schutzmantelmadonna*, (Staatliche Museen zu Berlin—Preußischer Kulturbesitz, Skulpturensammlung). Photograph: Staatliche Museen zu Berlin—Preußischer Kulturbesitz, Skulpturensammlung

Vinzenz Ensinger, a masterbuilder in Constance, about this time; this familial relationship supports the thesis that Erhart probably served as a stone sculptor's apprentice in southern Germany. Repeated appearances as a sponsor for applicants for citizenship in the city of Ulm suggest that he possessed a position of considerable trust before the city council. He seems to have died at about eighty years of age. His son Gregor and at least one other son followed in their father's profession.

Of Erhart's nine works documented in archives between 1474 and 1516, which include the high altar for Ulm Cathedral finished in 1479, only two are preserved: a sandstone epitaph for the Abbot Konrad Mirlin dated 1497 (now Augsburg, Städtische Kunstsammlungen) and five prophets created between 1517 and 1520 for a stone Mount of Olives group that originally comprised thirteen figures (Ulm, Ulmer Museum).

These works, together with an over-life-size Crucifix at St. Michael's in Schwäbisch-Hall, which is signed and dated 1494, serve as the point of departure for numerous attributions. With five further crucifixes, including one over five meters tall at St. Martin's in Landshut from 1495, a Madonna of Mercy dated about 1480 (Berlin, Bodemuseum) and an over-life-size standing Virgin from Kaufbeuren from about 1475–1480 (Munich, Bayerisches Nationalmuseum) number among the seventy major works attributed to the master by Anja Broschek. "The tightly composed figural forms" (Miller 1971:51), the radiant beauty of the virgins' faces, and the lively representation of details reveal the influence of Hans Multscher as well as Netherlandish sculptors on Erhart's aristocratic art.

The authorship of the busts on the end panels of the choir stalls in Ulm Cathedral between about 1469 and 1474 remains disputed. The high altar of Blaubeuren, however, is now considered as a joint work of Michel and his son Gregor, made while the son was active in the father's shop.

Erwin von Steinbach (fl. ca. 1285–1318)

Master builder at Strasbourg Cathedral from about 1285 until his death in 1318, Master Erwin is the most famous of this building's architects, although the extent of his contribution has been much debated. He worked on the west facade of the cathedral, and has been credited with building it to the level of the rose window, or even designing the entire west facade.

The documentary sources for Erwin's life are few, consisting of sale contracts from 1284 and 1293; tomb inscriptions for his wife, Husa, and son John, master builder of the cathedral after his father; and two inscriptions, now missing today, on the cathedral itself. Yet the legend of Erwin has persisted. Although mentioned by earlier critics, the German writer Goethe amplified Erwin's fame. His 1772 essay, "*Von deutscher Baukunst, D. M. Ervini a Steinbach*" (On German Architecture, D[ivis] M[anibus]=to the divine spirit of Ervin of Steinbach) was addressed to Erwin and attributed Strasbourg Cathedral to him as a crowning German achievement. It should be noted that Goethe credited him with the spire, which was not built, however, until the fifteenth century.

Goethe's praise of Erwin established nationalistic tones in some later scholarship. Some scholars have seen him as responsible for the idea of the *Wandfassade* (literally, wall facade), incorporating the belfry. This would mean that much of Strasbourg Cathedral's west facade was an original design that was German in origin. But most scholars today view Erwin as responsible only for building to the level of the rose window. The question is not settled, but evidence is hard to find of Erwin's dates of tenure and authorship of the drawings of the west facade, now in the cathedral museum.

Essen

The prominence of medieval Essen derived from its celebrated canonical foundation for aristocratic women, purportedly founded in circa 845–852 by Bishop Alfrid of Hildesheim (851–874). Alfrid probably also built the earlier, small chapel of St. Quintin, of which archaeological evidence was found on the north side of the foundation church; the first abbess of Essen, Alfrid's sister Gerswit, was buried there. While at the outset Essen was part of the patrimony of the Hildesheim bishops, under the Ottonians (sometime before 947), Essen gained protection, immunity—and distinction—as an independent royal foundation.

The 1943 bombings of the church during World War II necessitated repair from 1948 to 1957 but allowed for previously infeasible excavations and the ensuing clarification of the complex building history. The first church, a simple basilica dedicated to the Holy Trinity, the Virgin, and Saints Cosmos and Damien, was built circa 850–870. Partially destroyed in a fire of 946, the church was rebuilt, incorporating extensive remains of the previous structure. In the second half of the tenth century, a westwork (entrance structure) and outer crypt were added to the structure. The eleventh-century church, generally dated to the tenure of the abbess Theophanu (1039–1058), was constructed largely on the foundations of the expanded tenth-century structure. Fire necessitated the rebuilding of much of the church between 1276 and 1327, with the new structure built atop the partially razed nave, transept, and choir walls of its eleventh-century predecessor, again incorporating much of the previous building.

Golden Madonna, Essen, *Münster*. Photograph: Rheinisches Bildarchiv der Stadt Köln

The extant church, now the cathedral of Essen, bears witness to aspects of this extensive building activity. The nave and side aisles of the hall church (severely damaged during World War II), the transept, east end, and upper story of the outer crypt date to the late twelfth- and early thirteenth-century rebuilding. This Gothic campaign retained the still extant eleventh-century west atrium, west end structure, and lower outer crypt. The complex west end (the only part of the church relatively unscathed by the 1943 bombings) has received a great deal of attention, primarily owing to its formal comparison by scholars to the church of Charlemagne at Aachen. The eleventh-century western addition (*Westbau*), built in the area delineated by the tenth-century westwork, is preceded by a rectangular forecourt. On the exterior, the multistoried structure rises as an octagonal tower, while, on the interior, the elevation, which opens into the nave, presents three sides of an inscribed polygon that carries, above a first story of round arches, a two-story columnar screen.

The church of St. John the Baptist was built at the west end of the atrium preceding the foundation church. Established perhaps in the late tenth century as a baptismal church, by 1260 it was a parish church. St. John's was rebuilt a number of times throughout the Middle Ages, achieving its present form in 1471. Also tied to the city's main foundation, the church of St. Gertrude—the market church—was probably first built in the mid-eleventh century, and was replaced in the second half of the twelfth century by an aisled basilica. It too became a parish church in 1260.

The immense vitality of Essen under the Ottonians, reflected in its building history, may be gauged as well by the remarkable treasury, which includes works commissioned by the foundations abbesses, drawn exclusively from the Ottonian house. Mathilde (d. 1011), the granddaughter of Otto the Great, and Theophanu, named for her grandmother, the wife of Otto II, stand out for their extraordinary patronage. Mathilde contributed the famous Golden Madonna and the seven-armed candelabra found today within the church, as well as three processional crosses found in the Treasury; she also was responsible for the now lost Marsusschrein, which held relics purportedly given to the foundation by Alfrid. Mathilde is suspected of having been the recipient of the Kinderkrone, the late-tenth-century child's crown thought to be a gift to the foundation from Otto III. In addition to her rebuilding of the church, Theophanu commissioned a cross containing a piece of the True Cross, a much-altered reliquary with a Nail from the Crucifixion, and a sumptuous book cover.

With the advent of the Salians, Essen lost a measure of the power and autonomy that was a hallmark of Ottonian female religious foundations. Yet the currency of Essen, particularly in the late Middle Ages, is reflected not only in the Gothic rebuilding but in the numerous works, primarily reliquaries, of the fourteenth and fifteenth centuries found today in the treasury. Another fortuitous survival is the well-known fourteenth-century *Liber ordinarius*, a liturgical text that allows insight into the uses of the church's complex spaces in the late Middle Ages.

Esslingen am Neckar

An important center of wine growing and making since Roman times, Esslingen am Neckar continued to owe much of its wealth and reputation to its fine wines throughout the Middle Ages. As early as the fourteenth century, southern German wine was measured in "Esslingen buckets." First documented in 777, the town was noted as an important gathering place for those traveling between the Rheinland and Italy.

Central in the old town, built on the foundations of an eighth-century church, the basilica of St. Dionysius dates to the thirteenth and fourteenth centuries. The squared-off eastern towers are essentially Romanesque in their overall design, although the south tower does show Gothic elements in its ornament. The seven bays of the nave are also clearly transitional, while the choir is High Gothic. Its fourteenth-century stained glass, of extremely high quality, was done primarily in Esslingen workshops. The subjects depicted are from the Old and New Testaments. Highly complex pier bases show the stonemason's interest in traditional wood carving techniques: spiral

Esslingen, Church of the Virgin, east portal on south nave wall: scenes from the life of the Virgin. Photograph: Joan A.Holladay

turnings, diamond patternings, and faceting. The fifteenth-century baptismal font is attributed to the Heidelberg master Lorenz Lechler.

The Dominican church of St. Paul, on the western end of the market square, was consecrated in 1268 by Albertus Magnus. It is the oldest existing church of the mendicant orders in Germany. The long basilica has ribbed cross vaults and a polygonal choir. Its severe forms and simplified decorations reflect mendicant ideals. Important objects in the interior include a late Gothic Crucifix over the altar and a fifteenth-century Madonna and Child originally made for the Church of Our Lady (Frauenkirche).

The High Gothic Frauenkirche stands outside the old city ring, to the north. The single western tower, with its fine tracery spire, was not completed until 1494. It was begun a hundred years earlier by Ulrich von Ensingen, master builder of the cathedral of Ulm. Ulrich was succeeded by his sons Matthäus and Matthias. The upper octagon and spire were finally completed by Hans von Böblingen and his sons, Marx and Lux. Among the rich sculptural programs of the Frauenkirche are the southeastern portal representing scenes from the life of the Virgin (ca. 1350) and the southwestern portal depicting the Last Judgment (ca. 1400). The stained glass of the choir, dating to 1320–1330, was produced in Esslingen workshops.

Also at the heart of the old town is the late Gothic half-timbered Old Town Hall (Altes Rathaus), built in 1430. Carved console figures (ca. 1440) in its Bürgersaal (Citizens' Hall) depict saints, electors, and kings. Four of the oldest half-timbered houses in Germany, all dating to the fourteenth century, can be found on Esslingen's Harbor Market (Hafenmarkt, nos. 4, 6, 8, and 10). Another monument here, locally known as the "Yellow House," is a well-preserved tower residence from the second half of the thirteenth century.

Subsidiary to Esslingen's many monasteries were the so-called *Pfleghöfe*, which served as nursing and charity homes. Several of these survive from the Middle Ages. The oldest among them is the Salmannsweilder Pflughof, east of the Frauenkirche. This massive stone structure is a survivor of the Hohenstaufen period. The Speyerer Pflughof on the market square was built in the thirteenth century and the Konstanzer Pflughof in 1327.

The Old Neckar Bridge, built in 1286, connects the old city center to the former river island of Pliensau. Most of this structure, one of Europe's oldest existing bridges, fell in the nineteenth century. It has since been restored.

Only fragments of the city fortress (*Burg*) in the north, above the old town, survive today. Built under the Hohenstaufen in the twelfth and thirteenth centuries, remnants of the once vast complex include the Fat Tower (Dicker Turm), the High Guard (Hohwacht), the cable gangway, and several sections of wall. A number of gates and towers of the old city wall also still stand. Most notable of these is the Wolfstor (Wolf's Gate), first documented in 1268. The late Romanesque gate bears the lion arms of the Hohenstaufen.

Esslingen's prosperity in the Middle Ages contributed to an increasing rivalry with the dukes of Württemberg. A period of war broke out as of 1246, ending in 1454 with the defeat of Esslingen. The Swabian Federation was founded here in 1488.

Exemplum

An anecdote or short narrative, usually based on a maxim, precept, or proverb, that manifests a moral or dogmatic truth is called, following the Latin term for "example," exemplum (Middle High German *bîspel*, Middle English *bispell*, *besynan*). The exemplum shares several generic qualities with *Mären* and fables, and these similarities frustrate attempts to distinguish the forms from one another. Ulrich Boner, for example, based his *Edelstein* (1350) primarily on Aesop's fables, but he refers to the tales as *bîspel*. Some discern the exemplum from the fable by limiting exempla to narratives featuring human characters and a plausible turn of events. G.E.Lessing's *Abhandlungen über die Fabel* (1759), for example, advances this criterion. Ultimately, the function and context of the story, rather than the form, characterize an exemplum. Generally, an exemplum is a morally edifying tale within a longer didactic narrative. The exemplum illustrates, either through good or bad example, the proper moral behavior promoted in that narrative. A freestanding narrative of similar content might be identified as a *Märe* or a fable. However, in the absence of absolute generic distinctions, *Mären* and fables are often labeled exemplum as well. There are a number of antique collections of exempla, most notably Valerius Maximus's *Factorum et dictorum memorabilium* (ca. 20 C.E.), which was extremely popular in the Middle Ages. Exempla were employed by the church fathers, most notably in the *Dialogues* of Pope Gregory I (ca. 540–604). The exemplum experienced a drastic rise in popularity from the midtwelfth century onward. Exempla can be found in a wide variety of ecclesiastical works of Alain de Lille (1128–1202) or in the *Speculum ecclesiae*, attributed to Edmund of Abington (1175–1240), as well as in moralphilosophical works from this period such as John of Salisbury's *Policratus* (1159) or the various *Fürstenspiegel* (guides for nobility). Vincent de Beauvais's *Speculum historiale* (ca. 1245; the first book of his monumental *Speculum majus*) and Caesarius von Heisterbach's *Dialogus miraculorum* (ca. 1220) are two of the most popular collections of exempla in the Middle Ages. This tradition continued well into the fourteenth century with historical works like the English *Gesta Romanorum*. Exempla also had a place in miraculous tales, legends, *vitas*, and, above all, sermons. Sermons provided the primary context for exempla. The production of exempla books like the *Alphabetum exemplorum* for preachers reflects the popularity of exempla in sermons. The exempla were intended to provide illustrations of the consequences of good and evil, to invoke the fear of God, or simply to enliven a boring sermon. The excessive use of exempla in sermons and the predilection of some preachers for particularly risqué or gruesome exempla led to their gradual waning in popularity and esteem. In Canto 29 of his *Paradiso* (ca. 1315), the Italian poet Dante bemoans that in church one is more likely to hear "jests and jibes" than the gospels. During the Reformation, the Catholic Church banned many of the more questionable exempla. In the vernacular literature, we find numerous references to exempla. There are several medieval German texts in which characters relate exempla but nothing as extensive as Boccaccio's Italian *Decameron* (1348–1353) or Chaucer's (ca. 1390) *Canterbury Tales*. Wolfram von Eschenbach strings together a number of exempla in the cryptic prologue of his Middle High German grail romance *Parzival* (ca. 1210). Indeed, reference to exempla has provided literary scholars with the key to understanding many obscure passages in epic literature and courtly lyric. Many works covered under the generic rubric of the *Märe* are also included under exemplum. Chief among these are the shorter works of the Stricker, but the works of Heinrich Kaufinger, Hans Rosenplüt, and even Konrad von Würzburg are sometimes included. Some critics even read Hartmann von Aue's *Der arme Heinrich* or Rudolf von Ems's *Der guote Gerhart* as exempla.

See [Genesis and Exodus](#).

Presumed author of the *Cantilena de miraculis Christi* (Song on Christ's Miracles), more commonly known as the *Ezzolied* (Ezzo's Song), the first vernacular German work of mature literary quality since the Old High German *Christus und die Samariterin* (Christ and the Samaritan Woman, ca. 900). The earliest connection between the name Ezzo and a hymn composed around the middle of the eleventh century is found in the *Vita altmanni*. The *Vita* (ca. 1130) describes, among other events from the life of Altmann (d. 1091), a pilgrimage to the Holy Land in which the Passau bishop took part in 1064/1065. Also participating in this pilgrimage, according to the *Vita*, was a cleric named Ezzo who wrote a *Cantilena de miraculis Christi* in German. That the *cantilena* in the vernacular by someone named Ezzo and the *Ezzolied* are one and the same thing is a virtual certainty.

The work exists in two redactions, the *Strasbourg* (Bibliothèque Nationale et Universitaire, manuscript no. germ. 278, fol. 74v. "S"), and the *Vorau* (no. 276, Chorherrenstift, parchment, fol. 128r-129v "V"). The Strasbourg manuscript contains the older and without doubt more authentic, even if fragmentary version of the two (only seven strophes are preserved), whereas the Vorau redaction contains thirty-four strophes and is clearly a revision intended for a monastic audience. Both are probably revisions of a lost "Bamberg Ezzolied" original.

The hymn presents the immutable lessons of Christianity beginning with Creation ("S" 2–4; "V" 5–8), proceeding to the Fall ("S" 5–6; "V" 9–10), moving through the Old Testament period, culminating in the mission of John the Baptist ("S" 7; "V" 11–13), concentrating on the birth of Christ and his baptism ("V" 14–17), the miracles done during Christ's public ministry ("V" 18–19), the crucifixion and its significance, including the Harrowing of Hell ("V" 20–30), and concluding with a paean to the Cross ("V" 31–34).

The *Ezzolied* is a joyous celebration of the triumph of Christ over death and Satan. Emphasized is not the suffering Christ of later Gothic centuries but, rather, the victorious Christ the King of the Romanesque.

[Ezzonids](#)

Ezzonids

The Ezzonids were a family on the lower Rhine who rose to prominence by the year 1000, only to die out within a century. Their ascendancy was enabled by political developments after the incorporation of Lotharingia into the German kingdom in 925. Royal interests in the Rhineland prevented the formation of a powerful Rhenish duchy. Particularism to the advantage of local kin groups culminated in a regional power vacuum by the 990s. In response, Emperor Otto III and his mother, Theophanu, sought the support of regional elites. Around 990, a certain Hermann was appointed count palatine along the lower Rhine. In 991, the king's sister Mathilda was married to Hermann's son Ezzo, who became count palatine after his father's death in 996. Despite contemporaries' perception that Mathilda had married beneath her, the marriage seemed a happy one. Ten children were born to the couple. Of seven daughters, five became abbesses of important religious communities, while one (Richeza) became queen of Poland by marriage. One son (Otto) became duke of Swabia, while another (Hermann) was archbishop of Cologne from 1035 to 1056. By Ezzo's death in 1034 (Mathilda died in 1025), the Ezzonids exercised power and great influence throughout the realm.

However, the fact that so many of Ezzo and Mathilda's children pursued ecclesiastical careers had serious consequences for the longevity of the family. Otto, the son intended to assume his father's mantle, died childless in 1047. Otto's brother Ludolf had predeceased Ezzo in 1031, leaving behind two sons: Henry, who soon died, and Kuno (or Konrad). In the 1050s, Kuno perished in exile in Hungary after falling from favor with Emperor Henry III and losing the duchy of Bavaria. Richeza, after the death of her husband, King Mieszko II of Poland, in 1034, returned to Germany with Kazimir and took up residence at Brauweiler (west of Cologne), where Ezzo and Mathilda had founded a monastery. Kazimir dashed any expectations that he would uphold Ezzonid power in the Rhineland by returning to Poland in 1039 to reclaim his political inheritance there. Upon the deaths of Richeza and her sisters by the 1070s, there were no living descendants of Ezzo and Mathilda to assert family authority in western Germany. For a time, Ezzo's nephew Henry held the office of count palatine. But Henry soon became embroiled in a bitter conflict with Archbishop Anno II of Cologne (1056–1075). In 1060, Henry murdered his wife in a fit of madness and spent the rest of his life in monastic custody.

Chronic struggles between royal, ecclesiastical, and aristocratic powers advanced and then broke Ezzonid fortunes; such conflicts would soon deal an immense blow to the powers of the monarchy. More controversial is the presumed development of dynastic self-consciousness among the aristocracy of eleventh- and twelfth-century Germany. Though the Ezzonids seem to have favored fixed residences and had a family burial site (Brauweiler), they did not name themselves after these places, and in general did not view their family as a patrilineal dynasty.

Fables, Dutch

In the medieval literature of the Low Countries, four fable collections are known, along with a number of stray fables found in other (literary) texts. The fable collections are called *Esopet*, *Parabelen van Cyrillus*, *Twispraec der creaturen*, and *Dye historien ende fabulen van Esopus*. All four are translations from Latin or French texts. Other fables are found, for example, in the work of Willem van Hildegarsberch; in *Van den vos Reynaerde* and *Reinaerts historie*; in the Hulthem manuscript; in the *Ridderboec* and in the *Pelgrimage van der menscheliker creaturen*.

The four fable collections can be characterized according to the ethics they represent. In the *Esopet* (containing sixty-seven Aesopic fables in verses) it is observed that evil things happen, and that the weak and the poor are usually the victims of the strong and the rich. It is also observed that nothing much can be done about it, except to try to avoid getting into trouble. People are encouraged to behave wisely and rightly, and it is made clear that bad behavior will—eventually—be punished. Although from a much later date, the collection *Dye historien ende fabulen van Esopus* (the *Esopet* was probably written in the thirteenth century, whereas *Dye historien* is a fifteenth-century text) is, in its contents and ethics, more closely related to the *Esopet* than to the other two collections (both fifteenth-century translations of fourteenth-century texts). *Dye historien* contains the history of Aesop's life, his fables and numerous other fables by Avian and Rimicius, among others. Before and after each fable the moral is given. The ethics in this collection are much more influenced by Christian thought than those of the *Esopet*, and are more explicitly directed at maintaining the social status quo, often warning people against overstepping their place.

The *Parabelen van Cyrillus* consists of four books containing dialogues between animals or between other creatures, whereby the moral is explained with the help of quotations from classical authors (both Greek and Latin), the Bible, and other works. The four books treat the four cardinal vices: stupidity, pride, greed, and intemperance (as opposed to the virtues: wisdom, humility, justice, and temperance). The author's aim is to teach readers how to lead a virtuous life in order to lessen the sinfulness of the world; he stresses especially the importance of being led by wisdom in all one's deeds. The last collection, the *Twispraec der creaturen*, contains 122 fables or dialogues (featuring diverse creatures), each concluded by a *sententia* stating the moral, and then followed by a moralization in which the moral is repeated and enlarged on by exempla, historical anecdotes, stories from the Bible, parables, and sometimes an Aesopic fable. In many of the dialogues the main character is introduced together with some facts from medieval natural science, thereby linking this collection to the medieval tradition of the exegesis (learned explanation) of nature. In the *Twispraec der creaturen* the importance of justice is strongly represented; the author stresses that everyone will eventually be rewarded or, more likely, punished for their behavior on earth.

Family

The nature and structure of medieval families changed considerably between the age of the German migrations and the church reform movement of the eleventh and twelfth centuries. Like so many other aspects of European culture, what came to be a consensus about the nuclear family as the basic cell of society was actually a synthesis of Roman, Christian, and German traditions. Although derived from the Latin word *familia*, the German term *Familie* did not appear until the sixteenth century, and by then conceptions about what constituted a family were very different from what they had been in the late ancient and early medieval worlds.

Roman law defined the *familia* in terms of both persons and property: it amounted to the people and things under the control of a *paterfamilias* (father of the family) and was therefore based on authority instead of on blood ties. A "family" in this sense need not even live in the same household. Medieval writers would eventually pick up the word and use it in much the same way in the context of manorialism to designate the serfs and other dependents of a seigneur, but the idea of the family as a domestic unit did not emerge before the Carolingian era.

The church's view of marriage and family life was equally slow to develop. Although early commentators such as Tertullian and Augustine recognized the importance of *amicitia* (friendship) and *caritas* (charity), they too employed "family" in a broad sense, not in terms of what later came to be thought of as a nuclear household consisting of a married couple and their unmarried children. What did concern the church, however, was the manner in which marriage was contracted and sexual relations practiced. By the ninth century theologians were arguing that marriage was an indissoluble union entered into by mutual consent, and by the twelfth century most agreed that marriage was also a sacrament and that the ceremony should be performed if not by a priest then at least in one's presence.

Early on, however, these legal and religious constructions of the family were not easily reconcilable with German notions, which were based more on social and economic considerations than on legal or moral concerns. Most marriages were the result of negotiations between extended families and involved the exchange of gifts. Daughters could be married as early as age twelve without their consent, and while both maternal and paternal line-age was recognized, German fathers seemed to have had nearly as much power as the Roman *paterfamilias*. Among the Jutes, the right to beat children was recognized as long as no bones were broken, and a man could legally sell his children into slavery until the age of seven.

Marriages were fully recognized only through cohabitation, consummation, and the birth of children. Indeed, the first year was often seen as a trial period after which the relationship could be terminated if children were not produced. This and other customs allowing for the dissolution of marriages were universally condemned by the church, but Frankish, Visigothic, and Burgundian law codes permitted husbands to repudiate their wives for any number of reasons including adultery, inability to have children, infirmity, sorcery, or tampering with tombs. To make matters worse in the eyes of the church, concubinage was widespread among the noble elite, as was remarriage and, not infrequently, incest and polygamy. Many such instances are related by Gregory of Tours and other Merovingian and Frankish chroniclers. Charlemagne himself had five wives and at least as many concubines.

Another important component of early medieval family life was the role of the *Sippe* (clan, or kinship group). The *Sippe* guaranteed the safety of individuals through the blood feud, or vendetta. In addition to the gifts from her husband and family that a bride was supposed to hold as her own personal property, membership in her clan provided her with a measure of protection. She could turn to them in case her husband abused her, brought unsubstantiated charges of adultery, or tried to divorce her unjustly.

Eventually the view of marriage as a primarily socioeconomic arrangement and the tendency to focus more on the relationship of the couple to their extended families rather than to each other gave way to what we now think of as the "modern" family, that is, a nuclear household characterized by strong emotional bonds and relatively constrained ideas about sexual morality. Yet there has been considerable disagreement among scholars as to when this new family structure appeared in its definitive form. Several influential studies have suggested that it was not until the late sixteenth or early seventeenth century.

Yet there is strong evidence to the contrary. As scholars such as David Herlihy and James Brundage have demonstrated, although there may have been glaring exceptions in the upper echelons of society, the monogamous nuclear family as a moral domestic unit bound by conjugal love became the norm in western Europe no later than the ninth century. Carolingian administrators regularly assessed taxes on the basis of such family units, and theologians as esteemed as Thomas Aquinas recognized that domestic love was not only natural but of a greater intensity than love extended to friends and neighbors.

Although the church was never able to eliminate entirely all forms of adultery, repudiation, and remarriage, it was nonetheless successful in establishing impediments to marriage based on consanguinity and affinity and in assimilating German society to the notion of monogamy. Naturally other factors likewise had an impact on the shape of the medieval family, the most important of which was money—wealthy households tended to be larger—as well as location (city versus countryside), inheritance patterns, farming techniques, personal preferences, and individual circumstances; yet the institutionalization of the nuclear monogamous family, which became permanently embedded in European culture, was undoubtedly the church's greatest triumph in its longstanding efforts to overcome German traditions in the legislation of morality and family life.

Fastnachtspiele

Fifteenth-century comic plays (Carnival Plays) of varying length (rarely more than five hundred verses), which reflect many aspects of early modern German society. Secular, in Middle High German decasyllabic (of ten syllables) couplets, they exist in two varieties: serial, revuelike plays, where a number of male actors pronounce monologues competing with one another (*Reihenspiele*, for the favor of a woman or for anecdotes of courage, strength, wit, and obscenity); and well-structured pieces with an intrigue (*Handlungsspiele*); dialogues occur in judgment plays, visits to a doctor, or sales transactions. Many plays are linked to a specific festival of the church year, most often to Carnival in an urban setting. While the authors use persiflage to mock peasants for the benefit of the burghers, the rustics are also portrayed as witty and sometimes superior to the other estates (*Ständesatire*). The lower clergy appears here as love-starved, and the nobility as inept, degenerate, or questionable (e.g., in the so-called Neidhart plays). Married life and its occasions for irregularity are a favorable theme, where peasants may boast virility, and their wives top their partners in verbal insults, readiness for erotic escapades, or ingenuity in avoiding to be caught.

The first traces of Carnival plays stem from Hall/ Tyrol; later centers are Nuremberg (some 120 plays), Sterzing/Tyrol, Lübeck (where only entries in a register are preserved), the Lower Rhine region, and Switzerland. It can be estimated that Carnival farces were staged in circa fifty-seven cities besides Nuremberg; unfortunately, few texts have come down to us. Subjects are the everyday life of burghers and peasants, courtly epics and chivalry (often in parody), classical mythology, biblical sources, or chapbook anecdotes (*fabliaux*, *Schwänke*, *Mären*) of unknown origins. The antics of street vendors and quacks can also be found, similar to the *mercator* episodes in passion plays, and scenes of marketing point to the many occasions for cheating. Authors were Pamphilus Gengenbach, Niklas Manuel, Hans Folz, Hans Rosenplüt (*Meistersinger*), Vigil Raber, Jacob Ayrer, the Lübeck *Zirkelbrüder*, and Hans Sachs in the next century. Many plays remain anonymous.

Some representations took place on public stages, but most were performed in houses or inns. Money was collected during some shows, while considerable support came from the municipalities interested in providing an outlet for seasonal boisterousness. Props were minimal, though: a bench, a table, a chair; goods to be bought or sold. The actors were young men working in the different crafts or sons of patricians. A herald "ushered in" the play, asking for space and silence, while the same person (then called *Ausschreier*) ended the piece, inviting audience and actors to a drink and/or dance. The Carnival plays, which need to be reedited and selectively translated, are a valuable mirror of fifteenth-century German society in all its aspects, and this despite the inevitable grotesque distortion of characters and situations. In an often inverted manner, the pieces point to the lasting significance of agriculture in spite of urban development; they opt for order, morality, and education, and persiflage ineptness, corruption, and deceit on all levels of society. In short, they teach how to avoid the Seven Deadly Sins—albeit in a very pleasant form.

Feudalism

The term *feudalism* was not known to the Middle Ages. Rather, it has been applied by later historians to various complexes or patterns of legal, social, and economic relations in medieval Europe and elsewhere. Many scholars now call into question the validity of feudalism as a concept for understanding medieval society, and reject the widespread existence of the classical feudal relationship, that of a vassal bound to a lord by ties of homage, loyalty, and military service, in return for the grant of a benefice or fief in the form of land. However, sources from medieval Germany do refer to benefices, fiefs, and (at least from the twelfth century on) feudal law, and feudalism (or its absence) has usually been regarded as an important factor in the course of medieval German history, especially at the level of the king and high aristocracy. Though debate continues about the actual nature of feudal ties, an overview of traditional views of feudalism and its consequences for German political developments is still of value.

Medieval Germany has often been labeled as feudally "archaic," especially when compared to post-Carolingian northern France. Germany shared with France the legacy of "Carolingian feudalism," in which vassalage (rooted in the Gallo-Roman practice of self-commendation and in the loyalty of the Germanic warrior band) was supposedly joined with the granting out of church land (at the command of the king) to the king's followers in benefice or precarial tenure (*precaria verbo regis*). The ability to grant such lands was important to Charles Martel in his wars with the Saracens, against whom the traditionally called-up army of freemen was not as effective as a host of professional mounted fighters who could be rewarded with grants of land in benefice. Other important moments in Carolingian feudalism have been judged to be Charlemagne's 799 Herstal capitulary, which allowed churches to grant benefices on their own (thus supposedly creating a group of *subvassals* loyal to the king through the church), as well as Charles the Bald's 877 capitulary of Quierzy, which allowed vassals participating in his Italian campaign to bequeath benefices to their heirs.

On the one hand, grants of land in benefice have been seen as tied to grants of office; legal and constitutional historians have debated whether the grant of land was a perquisite of the grant of office, or vice versa. On the other, however, the official character of Carolingian government appears to contrast sharply with the extreme localization of authority in post-Carolingian western Europe, where feudalism ostensibly put down its deepest roots, from which the Capetian kings of France would draw great strength only after the eleventh century. In Germany, the tenth-century Ottonians and eleventh-century Salians are held to have preserved official government more successfully than French rulers did during the same period. In theory, German kings did not necessarily grant offices as heritable fiefs, and could revoke a title or depose an officeholder for serious cause. Furthermore, the imperial church was a more dependable instrument of royal authority than a feudal nobility. As a consequence, many German regions saw little feudalization before the twelfth century. Local nobles continued to hold land as full property or allods (land held free of any feudal obligation).

German rulers were compelled to deal with feudal matters elsewhere, however. In 1037 in Milan, the emperor Conrad II (r. 1024–1039) ruled that no *miles* (soldiers to a lord) could be deprived arbitrarily of a benefice without judgment of peers. Inheritance of benefices was also protected by this legislation. Though the immediate goal of Conrad's decree was to gain the support of lower-ranking fighters for the king in Italian expeditions, its implications of royal protection for the rights of vassals would not have gone unnoticed in Germany. The 1037 ordinance also suggested the direction in which later Salians would go in their attempts to preserve royal authority. Although Henry III (r. 1039–1056) seemed to enjoy a relatively strong and stable kingship, German elite nobles chafed at Salian policies by the end of the reign. On the basis of extensive allodial holdings, lay nobles and churches alike had started to consolidate territorial power by the mid-eleventh century. The Salian ruler, in reaction, began to rely on the loyalty of powerful unfree retainers: the ministerials, tied to the king by bonds of legal servility, not (yet) vassalage in the usual sense. The reigns of Henry IV (1056–1106) and Henry V (1106–1125) saw royal attempts to retain power by relying on ministerials, castles, and friendly cities in the face of enormous aristocratic and ecclesiastical resistance. Feudalism was not an effective instrument for the Salians in their struggle to restore royal power battered and weakened by the Investiture Controversy. One result of the 1122 Concordat of Worms, however, was that high clerics could now be compelled to swear homage and fealty for their regalia of office, granted after election. Consequently, historians have usually seen a partial feudalization of Germany in the post-Salian period, though much evidence is Italian in origin. In 1131 in Liège, the Saxon ruler Lothar III of Supplingenburg (r. 1125–1137) performed the service of strator for the pope, i.e., leading the pontiff's horse and holding the stirrup, a traditional gesture of vassalic subordination. One of the conditions of Lothar's imperial coronation in 1133 was that he receive the lands of Matilda of Tuscany as a papal fief, and a famed Lateran painting suggested that Lothar's imperial title was held feudally from the pope. In 1136, Lothar for his part decreed at Roncaglia in Italy that *milites* (soldiers) were not to alienate their benefices and so escape their obligation of military service to their lords—who in turn owed service to the empire. The Staufan ruler Frederick I Barbarossa (r. 1152–1190) renewed Lothar's ruling with his own legislation at Roncaglia in 1154 and again in 1158. Although all three ordinances were enacted in Italy, it is likely that they found resonance in Germany as well. They have been taken as evidence for a deliberate royal strategy of using feudal ties to strengthen imperial authority.

The reign of Barbarossa saw several significant feudal moments. On his way to his imperial coronation at the hands of Pope Adrian IV in 1155, the Hohenstaufen king at first declined to perform the service of strator and marshal at his meeting with the pope in Sutri. This symbolic gesture undoubtedly recalled, by way of contrast, Lothar of Supplingenburg's willingness to humble himself before a previous pope in 1131. At the imperial court of 1157 in Besançon, papal legates presented a letter from Pope Adrian IV (1154–1159) implying that the imperial dignity had been conferred upon Barbarossa by the pope as a *beneficium*. When translated into German as *lehen* or fief by Rainald of Dassel, imperial chancellor and archbishop of Cologne (1159–1167), the feudal connotations of this word provoked an uproar among the imperial party. The pope later explained that he intended by *beneficium* to express the grant of empire only as a "good deed" (*bonum factum*), rather than a fief (*feodum*, which begins to appear frequently in twelfth-century sources). Though the Besançon incident has been interpreted variously, it betrays a sensitivity to changing feudal terminology, influenced in no small degree by the development and revival of professional and Roman law in Italy. Only a year before, in 1156, an Austrian duchy had been created and given as a hereditary benefice to Henry Jasomirgott in the edict *Privilegium minus* issued by Barbarossa. In 1180, one of the most celebrated cases of feudal law took place when Barbarossa convened an assembly of princes to depose the Welf Duke Henry the Lion (d. 1195), Barbarossa's cousin and erstwhile ally. Already charged by rivals with various misdeeds and condemned in 1179 at a court based on *Landrecht*, or customary "law of the land," Henry suffered the loss of his Saxon and Bavarian duchies by a feudal judgment of peers at Würzburg in January 1180; the fiefs were partitioned and granted out to Henry's rivals at Gelnhausen in April that year.

Significantly, one of the charges leveled against Henry was his failure to respond to a threefold summons issued "according to feudal law" (*sub feodali iure*). Henry did not, however, lose his vast allodial holdings immediately. Barbarossa could not have deposed Henry solely by imperial authority—the cooperation of the German aristocracy was needed. Historians have traditionally seen Barbarossa's concessions to nobles on this occasion as an important step in the formation of a small, privileged body of imperial princes (*Reichsfürstenstand*), though this process was by no means complete in 1180. It is also now agreed that the *Leihezwang*—the ruler's supposed obligation to grant out imperial fiefs within a year and a day—was not yet in force during Barbarossa's reign, though in this case Barbarossa did award the Welf's duchies to others fairly quickly. Despite Barbarossa's apparently successful use of feudal law to break dangerous rivals, the Staufan kings were not able to build a lasting royal authority on the basis of feudalism, just as they also failed to establish an exclusive principle of inheritance for royal succession.

The bitter struggle for the throne that broke out in 1198 between Philip of Swabia and Otto IV severely crippled the German monarchy and gave princes of the realm free rein to develop their own territorial positions based, perhaps ironically, on feudal lordship over lesser nobles. Frederick II (r. 1212–1250) was compelled to guarantee princely interests, first for ecclesiastical lords (*Confoederatio cum principibus ecclesiasticis*, 1220), then for both church and lay magnates (*Statutum in favorem principum*, 1232).

Feudal theory in Germany received its first extensive exposition in the *Sachsenspiegel* of Eike of Repgow (*Mirror of the Saxons*, ca. 1220). Divided into two main sections (treating, respectively, *Landrecht*, "law of the land," and *Lehnrecht*, or feudal law), Eike's "mirror" sets out an idealized hierarchy for the Heerschild (*clipeus militaris*) or system of military organization. In theory the Heerschild appears as a classic feudal pyramid of seven ranks, from the king at the top to ministerials at the bottom. Although the *Sachsenspiegel* does not provide a reliable portrait of medieval social hierarchies, it does

reflect a thirteenth-century interest in establishing a theoretical base for feudal law, also picked up in the later *Schwabenspiegel* (*Mirror of the Swabians*, ca. 1270). Emperors could draw little profit from such treatises, however. The double election of 1257 assured the formation of a princely college of royal electors (*Kurfürsten*), whose rights were guaranteed by Charles IV's Golden Bull of 1356. With the triumph of the electoral principle, princes used feudal law coupled with increasingly complex bureaucracies to forge the territorial states of late medieval Germany.

This commonly accepted model of the role of feudalism in German constitutional development has been seriously challenged by recent scholars, especially Susan Reynolds. In Reynolds's view, personal ties characteristic of what German scholars have called the *Personenverbandstaat* (state held together by bonds of loyalty between persons) were not nearly as important as a common set of political values shared by German kings and magnates. Even where these ties existed, they did not, in Reynolds's view, lead to vassalage territorialized in the form of fiefs. Although increasing numbers of properties might have been called fiefs in the twelfth and thirteenth centuries, Reynolds argues that this shift reflected the influence of rising professional law emanating especially from Italy; in other words, any change observed in the sources is more terminological than substantial. Free persons owed military service not because of fiefs, but because of their status in the kingdom as holders of full property, which remained the norm for types of property held in medieval Germany. Reynolds attributes the survival of allods in Germany not to a lack of feudalization but, rather, to strong government. Reynolds's conclusions will no doubt remain controversial, but they have forced historians to reconsider commonly received interpretations of medieval German history and the place of feudalism in it.

Fishing

Often also called *halieutics*, fishing was important for the Middle Ages as a source of food and livelihood, as an amusement, but also because as one of the common aspects of medieval life, it offered a source for imagery and symbolism. The rivers, streams, and lakes of Germany offered a variety and abundance of fishes, as the fourth-century catalogue shows, of the fishes in the Moselle, from Bingen to Neumagen, written by Ausonius in his *Mosella*. Alongside these natural sources of fish, there were also fish farms and fisheries, and it was a poor manor that had no fishpond (*vivarium*).

We often hear of fishing as a sport or recreation, as in the case of the Fisher King of Arthurian legend, represented by Amfortas in Wolfram von Eschenbach's courtly romance *Parzival*. Note also the role played by the fish in Hartmann's legend tale *Gregorius*. In Wolfram's romance *Titurel*, the action begins with a fishing outing by Sigune and Schionatulander, and these are only a few of the many examples one could cite.

Since the world had entered into the sign *Pisces* at Christ's birth according to the horoscope of the world, the fish was seen as the image of Christianity. According to the well-known poem of the sibyl, *ICHTHYS*, Greek for "fish," stood as an acronym for Jesus Christ, Son of God, Savior. St. Peter was the great fisherman, and the church was known as the *Sagena Piscatoris* (the Seine of the Fisherman), according to the interpretation of Matthew 13:47, or often as *Navicula Petri* (the little ship of Peter, or "*das Schiffein des Petrus*"). A person who spoke earnestly, but not always eloquently, could say that he spoke *piscatorie et non Aristotelice* (like a fisherman and not like Aristotle; cf. the historical poem *Kaiserchronik*, vv. 2561f.).

The famous scene of Thor fishing for the Midgard serpent is interpreted already by the "Old Icelandic Homily Book" (written down ca. 1200) as a reference to the image of Leviathan. The Leviathan of Job was taken throughout the Middle Ages as hell or Satan, as in the famous picture in Herrad of Landsberg's *Hortus deliciarum*, which shows God the Father fishing with Christ as bait on the hook of the cross, and there are many references to the bait and the hook in Middle High German literature and later in Luther and Schottel, for example. Of course, halieutic symbolism could also refer to love, with the *hamus* "hook"/*amor* "love" pair (*h* was not pronounced in Medieval Latin),

These terms (literally fodder, hospitality, service to the king) all refer in some way to an obligatory service or to various services claimed by medieval kings from the church in their realm, that is, the ecclesiastical institutions, and to a lesser degree from the nobility. At their core all relate to itinerant kingship and the king's right to accommodation and sustenance for himself and his retinue while traveling. This royal claim appears initially to have derived from the protection that the king provided to the church and his subjects. Like itinerant kingship, however, one finds a royal right to hospitality in many cultures.

Fodrum derived from the old Frankish word *fodar*, which meant "fodder for horses," and the *fodrum regis* referred to the duty of providing fodder to feed the horses and pack animals of the royal retinue. It retained this meaning throughout the Frankish period and in the German High Middle Ages north of the Alps. In Italy, however, in the High Middle Ages *fodrum regis* corresponded to the narrow concept of *servitium regis* north of the Alps. *Gistum regis* refers to the hospitality aspects of *servitium regis* as practiced in medieval France. *Servitium regis* in its narrow technical sense corresponds to the king's right to accommodation and upkeep. More generally, *servitium regis* encompassed a range of obligations or services owed to the king that included housing and feeding the royal court or sending provisions for the king's upkeep; for clergy to pray for the king and the realm; for officials of the bishop, abbot, and high nobles to give counsel at the royal court; and for the most wealthy and powerful to equip and supply a military contingent for the king.

In its broadest sense, *servitium regis* might include additional services exacted by the king, such as book production on royal commission, performance of diplomatic missions, maintenance of political prisons, manufacture of armor and weapons, and responsibility to maintain certain royal roads and bridges.

Beginning in the Frankish period, kings called on bishoprics and royal monasteries, along with royal properties, to provide them accommodation and upkeep. This tendency increased under the Carolingian Franks. As itinerant kingship advanced in the late ninth century, so did the intensity of the obligation to provide hospitality for the king; it reached its high point in the tenth and eleventh centuries under the Ottonian and Salian kings. The term *servitium regis* appears in charters, land registers, and narrative sources, but not frequently because it seems to have been a customary right and mainly received mention in the rare instances when the king granted an exemption from or reduction of the obligation. Initially, the *servitium regis* was paid in kind, and those obligated transferred much of the burden to their various dependents. Within episcopal and monastic communities, this obligation, which fell on bishops, abbots, and abbesses, and whose exaction could lead to abuses, played a role in establishing property divisions between these officials and, respectively, the episcopal chapters of canons or the monastic communities. Increasingly, from the eleventh century in Italy and the twelfth in Germany, money payments appeared and by the thirteenth were generally established. Likewise, under the Hohenstaufen kings, towns became the mainstay of royal accommodation along with the royal residences and household properties listed in the registry known as the *Tafelgüterverzeichnis*. In Italy, the *fodrum regis*, which obligated payments from secular nobles and the communes as well, counted as the most important royal source of income. Limited attempts to create an annual tax from it nonetheless ultimately failed. By the late Middle Ages the material basis of kingship no longer depended on the *servitium regis*, which thus lost its importance.

Hans Folz is generally known in literary history as a master craftsman, Meistersinger, and carnival playwright, and as Hans Sachs's predecessor in the Nuremberg *Meistersang* and carnival play tradition.

Folz's first recorded residence was Worms. His profession as a barber/wound dresser, or *barbierer*, is apparent from the signature, or *impressum* (*hans von wurms barwiler*), that typically appears in his writings. In 1459 Folz applied for citizenship in the city of Nuremberg, and in a Nuremberg council document of 1486 he is referred to as a *Meister*, a master artisan or craftsman. In his works, Folz demonstrates an unusual amount of formal knowledge for an artisan. He shows a relatively developed understanding of Latin and also reveals knowledge of academic medicine, alchemy, and theology in his written work. Folz was one of the most multifaceted writers of his time. Scholars identify as his extant work approximately one hundred *Meisterlieder*, from twelve to thirty-five carnival plays, forty-eight fabliaux (poems), and two prose works.

Folz published almost all his work on his own printing press between 1479 and 1488. Most of the surviving prints are accompanied by woodcuts. He was probably the earliest Meistersinger to print his own songs, although only ten survive in print; the others exist in manuscript. It is possible that Folz intended his press as a means to a second income.

Folz's work varies widely in genre and theme, but was consistently popular at several levels of Nuremberg society. Records of personal libraries and Folz's own dedications reveal that he aspired to, and achieved, an elite readership in certain works. He addressed other works directly to lower levels of Nuremberg society.

Folz was one of the earliest authors in the Nuremberg carnival play tradition, writing plays and participating in their performance. Scholars have described his uniquely vehement use of carnival obscenity and scatological themes, and have described how Folz used the carnival play medium for an anti-Jewish agenda, revealing a strategic and political mindset that is apparent in much of his work.

Folz may have chosen the simple fabliau form (a rhyme-pair poem of varying length) to express himself most easily politically, humorously, or didactically. As his fabliaux are so varied thematically—they include religious, worldly, political, and traditional themes—one may deduce that Folz was giving free range to his every interest in this particular form.

The *Meisterlieder* (songs created within a guildlike group, for which Nuremberg was particularly well known) are primarily on spiritual-religious themes, especially the Virgin Mary, the Trinity, and the Incarnation. Also noteworthy is a series of songs in which Folz criticizes his fellow Meistersingers. Early scholarship identifies Folz as the author of a far-reaching *Meistersangsreform* "reform" through these songs, but later scholars deny this and convincingly characterize them simply as complaints against overregulation by the Nuremberg Meistersinger society. Other songs form thematic series as well.

Folz wrote six texts in his capacity as a wound dresser. The existence of subsequent editions shows that Folz succeeded in finding a popular audience for these instructional works.

No comprehensive edition of Folz's works exists at present. Separate German editions of his *Meisterlieder*, fabliaux, and carnival plays vary in reliability.

Fortification

The Roman Empire was a fortified empire. It consisted of large numbers of frontier fortifications—walls, camps, castles, and the like aimed to defend the borders of the empire from outside enemies—and of walled towns, which protected most of the population. With the onset of the Middle Ages, the Roman frontier forts had begun to deteriorate. Many were attacked and destroyed by invading barbarian forces, while others fell into disuse and ruin as borders changed and the need for protection against outside enemies diminished. The old Roman town walls, on the other hand, remained extremely important and continued to be maintained, repaired, and, when needed, rebuilt. These walls would remain the most extensive and important urban fortifications until the end of the Middle Ages.

As rural regions took on more economic and social importance in the early Middle Ages, it became apparent that there was a need for more and better rural fortifications. Initially, these were made of earthen ramparts and wooden palisades. Their chief means of defense was most often their inaccessibility to invading forces, and consequently most were constructed in the most inaccessible terrain available. Additionally, while more popular in France, the Low Countries, and England, motte-and-bailey castles also began to be constructed in Germany; their large, earthen mottes surmounted by a wooden castle and surrounded by a large bailey that itself was surrounded by an earthen rampart and wooden palisade made this style of castle the most defensible of all earth and wood fortifications.

Sometime during the early eleventh century, as near as can be dated from archaeological remains, the first masonry castles began to be constructed in Europe. Again initially more popular in the western European lands, with the return of the first Crusaders, Germany began to build many stone castles. Obviously influenced by what they saw in the more arid, less forested Middle East and Byzantium, these returning Crusaders took note of the very large and very powerful defensive structures built there, and once home in Europe they mimicked the style and method of construction of these fortifications.

There were two different styles of these stone masonry fortifications that appear in Germany from the twelfth through the fifteenth centuries. The earliest and simplest style of stone castle was the tower keep, which consisted primarily of a single tall, solid building meant to house the owner's entire family, servants, and garrison. Apartments, halls, chapels, kitchens, storage chambers, and even latrines were all incorporated into the castle structure. Most often the tower keep was built in a rectangular shape, although circular and multiangular-shaped castles were also constructed. Within a short time, tower keep castles began to be replaced by the more popular castle complex style of construction. Again influenced by Crusader predecessors, this style of castle relied not solely on a large, solid keep to house all the inhabitants of the fortification but on a number of buildings, the largest and strongest of which served as the "keep," which were surrounded by high walls, flanking towers, crenellated wallwalks with machicolations (openings for releasing weapons), and extensive, secure gateways. Added protection came from their construction on the summits of precipitous hilltops and/or the digging of deep moats around the entire fortified structure.

While continuing to build both the tower keep and the castle complex types of fortifications until the end of the Middle Ages, by the fourteenth and fifteenth centuries the fortification needs of Europe had begun to change. The growth of urban areas, with their wealthy citizens needing defensive housing, necessitated urban fortifications. New town walls began to be built, while older Roman walls were enlarged and repaired. Also constructed were fortified residences. Built not unlike their rural tower keep cousins, these fortified residences were much more luxurious in their adornments, chambers, and furnishings; while still retaining as much defense capacity as possible, they did, however, surrender some traditional fortification strength for comfort. Soon these structures became popular in the countryside as well, and most late medieval fortifications are fortified residences. Eventually, too, gunpowder weapons began to change the nature of fortification construction as the large high medieval stone tower keeps and castle complexes with their long, straight walls fell quite quickly to the large cannons of besiegers. This required older castles to be adapted and new castles to be outfitted with antipowder weapon devices such as gunports, artillery towers, boulevards, and eventually bastions. But even these devices could not protect the traditional medieval fortification, and by the end of the Middle Ages a new style of fortification employing various lines of defense had begun to be built, the *trace italienne*.

Much of the earliest art made for Franciscans and related to their teachings is found in Germany. Although German Franciscan architecture has long been a subject of study, painting has only recently been shown to have been an equally rich area of Franciscan patronage. Examples of mid-thirteenth-century German panel, glass, and manuscript painting have been related to Franciscan patronage and associated with work in Italy and especially at San Francesco in Assisi.

Basel, Franciscan church (*Barfüsserkirche*, now Historisches Museum), choir interior. Photograph: Joan A. Holladay

Franciscan churches were built in the major population centers beginning in the second quarter of the thirteenth century, and some are still preserved. Many were designed in a similar reductive Gothic style that has been related variously to Parisian forms and Italian variants of them. San Francesco in Bologna, itself after Parisian models, has been identified as a major source for the early German churches, including those in Cologne. The requirement of containing large groups of people desired by the order to fulfill its teaching function through preaching has been related to the significant development of hall churches in Cologne and then throughout Germany.

These churches, like San Francesco in Assisi, were decorated with stained glass and sometimes with painted crosses—the glass after German traditions and the crosses after the Italian type of *croce dipinti*. The Wimpassing Cross, first documented in the Franciscan (Minorite) church in Vienna, was destroyed in 1945 but is known from black-and-white photos (Berger-Fix 1980:34–35). The type of *Christus patiens*, with a suffering or dead Christ figure, reflects a Byzantine type introduced in Italy by Giunta Pisano that might have appeared first in a cross made by him for the upper church at Assisi (illustration in Berger-Fix 1980:47–48). Conversely, the German type of "Bible window" with typological pairs of Old and New Testament scenes, produced by German craftsmen for the apse of the upper church at Assisi, also appeared in the stained glass of some German Franciscan churches. Artists moving back and forth over the Alps seem to have brought techniques, styles, and themes back and forth, thus creating a certain homogeneity in many works identifiable as Franciscan. In some cases a specifically Franciscan vocabulary developed earlier in Germany and was brought later to Italy. The image of St. Francis receiving the stigmata in the stained glass of the Franciscan church (*Barfüsserkirche*) in Erfurt is, for example, one of the earliest and most significant.

Some of the most significant German manuscript illumination of the thirteenth century has also been related to the Franciscans, who quickly received considerable financial support. A magnificent mid-thirteenth-century lectionary fragment now in Hamburg (Staats- und Universitätsbibliothek, no. In scrinio 1) was indisputably made for Franciscans, as indicated by a prominent image of a monk wearing the characteristic Franciscan three-knotted cord belt. An elaborately illuminated Gospel, probably made for the archbishop of Mainz and now in Aschaffenburg (Hofbibliothek, no. Ms. 13), was made by the same artist(s) also associated with the workshop of the Assisi windows. The Christological cycle of this manuscript has some of the earliest images of the Holy Family showing a range of emotional relations, with Christ from a tender embrace of his mother to extreme grief at the Lamentation; these became characteristic of Franciscan humanism in teaching and art.

A commission from the confraternity of "EnglandTravellers," dated 1424, names Master Francke. It has been suggested that, although working in a Hamburg monastery, he was a Dominican monk from Zutphen in Holland. This is the more plausible, as his intensely spiritual work differs profoundly from that of Bertram, the leading master in Hamburg. Francke's expressive linear style, figure canon, and iconography could derive from the Netherlands and certainly indicate an acquaintance, around 1415, with French work from the Boucicaut and Rohan workshops.

Netherlandish influences dominate his double-winged St. Barbara Altarpiece (ca. 1420–1425; Kansallismuseo, Helsinki), especially in the realism and dramatic force of the male protagonists. The often friezelike arrangement of the figures in the painted martyrdom scenes is sculptural in character, and the designs in the carved shrine section have therefore also, controversially, been attributed to Francke.

The commission of 1424 is thought to relate to the St. Thomas Altarpiece, completed in 1436, of which only fragments survive (Kunsthalle, Hamburg). In the closed state, the altarpiece originally showed scenes from the childhood of Christ and the martyrdom of Saint Thomas; when opened, the drama of the passion of Christ was revealed. Francke employed steep hillside settings, silhouetted against a starred red ground for the outside scenes, and a gold ground on the festive side. In this altarpiece, certain motives, such as the women under the cross in the Crucifixion, suggest direct knowledge of the courtly art of Conrad von Soest. However, Francke favored poignant drama in contrast to Conrad's more lyrical mood.

Francke's work found numerous followers in Germany, but only in paintings by Rogier van der Weyden do we find a similar emotive use of line.

Frankfurt am Main

Fires in 1867 and 1944 destroyed much of the medieval city, but remains, excavations, and earlier documentation allow an understanding of its historical importance and visual appearance. Signs of Roman occupation of the topographically protected Domhügel (cathedral hill) date

from the end of the first century C.E., but these military buildings do not seem to have comprised a proper fort. The Franks were present here from about 550; a *villa* served as the administrative center for royal lands in this area. Frankonofurd, or "ford of the Franks," is first mentioned by name in medieval documents and narrative sources in 794, when Charlemagne called a synod here to consider theological issues, including the adoptionist heresy and the use of images. The historian Orth finds it surprising that Charlemagne would have chosen this site for his synod as only a wooden *domus regis* (house of the king), rather than a proper palace, stood here. Although Charlemagne never visited Frankfurt again, it was a favorite stopping place of his successors. His son Louis the Pious undertook a new palace complex between 815 and 822–823, when he spent the winter and spring here. In its completed form, the three-part complex, as at Aachen, comprised the palace proper, which was connected by a covered walkway to a chapel; unlike Aachen, however, at Frankfurt all three buildings shared a single east-west axis. Notker Balbulus of St. Gall (late ninth century) credits Louis's son, Louis the German, with building the impressive new church, which was consecrated in 852. It shared its dedication to the Savior and the Virgin, its staffing with twelve clerics and an abbot, and the extensive gifts for its maintenance with Charlemagne's palace chapel at Aachen. On the basis of these similarities, the scholar Rexroth has suggested convincingly that the new church was intended as a substitute for the emperors palace chapel, which was in the territory of Louis's older brother, Lothar, and that it served as part of Louis's campaign to extend the areas under his influence. As part of this campaign, Louis also arranged to have Lothar's son, Lothar II, deposed in Frankfurt after the death of his father in 855.

The palace seems to have burned between 1018 and 1045; lacking an appropriate venue in which to hold court, the Salian kings largely avoided Frankfurt. Under the Staufer Konrad III (1138–1152), a new palace, the Saalhof, was erected at the south edge of the Domhügel. Part of the eastern wing and the chapel at the southeast corner today form part of the Historical Museum. On Konrad's departure on Crusade in 1147, he had his young son Henry VI elected king in Frankfurt. With the election of Frederick I Barbarossa in 1152, a tradition was established whereby the church of Louis the German became the site where the German kings were elected.

Indulgences in 1238 and 1239 indicate building underway at the ninth-century church: a Hallenkirche (hall church) only three bays long was erected between the towers and transept of the Carolingian church. A dedication of some undetermined part of the new building in 1239 mentions St. Bartholomew, with the Savior, as the church's patron saint; relics of the apostle had been acquired at the latest by circa 1167. The new building seems to have been completed by about 1265; stylistic characteristics link it to the church of St. Elizabeth in Marburg. The remaining parts of the Carolingian building were replaced in the following centuries. In the first half of the fourteenth century, a wide transept and long choir were added at the building's east end; at the beginning of the fifteenth, the towers were razed and, under the local architect Madern Gerthener, replaced by a single tower, typically seen as a sign of independent cities' selfconsciousness and pride. This must be related to two events. In 1356, in the codification of imperial law known as the Golden Bull, Charles IV had given Frankfurt the honor and the duty of holding the royal elections. Shortly thereafter, in 1372, the city council and citizens earned the right to name their own *Schultheiss* (mayor), and the city thus attained a status equivalent to that of an imperial free city (*freie Reichstadt*).

The fourteenth century was a period of financial well-being for the city, with a corresponding physical expansion and foundation of new institutions. In 1330 King Ludwig of Bavaria granted the city the right to hold a second annual fair, in addition to the fall fair documented since the late twelfth century, and the importance of Frankfurt as a trading center continued to grow throughout the fourteenth century. The boom was reflected in the building of a new city wall between 1333 and about 1350; the incorporation of the so-called Neustadt (New Town) tripled the size of the city. In 1348 the Grosse Kaufhaus (Large Market Building) was erected. In 1405–1406 the city purchased the houses known as the Römer (Roman) and the Goldener Schwan (Golden Swan) and began rebuilding them as the new town hall. Numerous religious foundations also date to this period of prosperity and growth. The church of St. Leonhard was established in 1317 where an earlier chapel to the Virgin and St. George had been built on land given to the citizens by Frederick II in 1219. A year later a wealthy patrician woman founded the Liebfrauenkapelle, a chapel dedicated to the Virgin, to the north of St. Bartholomew's, and at the end of the century, the church of St. Peter was established in the Neustadt. All these buildings, together with the church at the Carmelites, were renovated in the first third of the fifteenth century under the influence, perhaps even under the direction, of Madern Gerthener.

The official coronation site of the German kings remained at Aachen until 1562, when it was transferred to St. Bartholomew's in Frankfurt. In reality,

however, most of the elections and coronations between 1356 and 1792 took place at St. Bartholomew's.

Author ("Lady Ava") of a series of four religious Middle High German poems, written circa 1120 to 1125, transmitted in two versions known as the *Vorauer Handschrift* (manuscript "V") from the latter half of the twelfth century, and the missing fourteenth-century *Görlitzer Handschrift* (manuscript "G"). Frau Ava's work, viewed as a whole, provides a poetic rendering of the history of salvation. *Johannis*, the first poem of the series ("G" version only), begins with John the Baptist's future parents, Zacharias and his barren wife, Elizabeth, and Zacharias's failure to believe in the annunciation of the approaching birth of their son. Zacharias's lack of faith in the angelic message is punished by muteness. The poem next recounts the annunciation of Jesus to Mary, who in contrast to the doubting Zacharias, acknowledges her absolute faith in God. After the Baptist's birth and circumcision, and the restoration of speech to Zacharias through the intercession of the Holy Spirit, the exemplary character of *Johannis* highlights the need for repentance and vigilance. *Johannis*'s ascetic discipline stands in opposition to Harod's 's lasciviousness. While the king enslaves himself to erotic passion, *Johannis* struggles to uphold the rule of reason and to bridle the desires of the flesh. The poem underscores the Baptist's role as a helper to all Christians. His spiritual orientation enables him to serve God and humankind, to bear witness as a martyr, and to merit the praise of Christendom. The major poem in the series, *Das Leben Jesu* (Life of Jesus), recapitulates the annunciation to Zacharias, the mission of John the Baptist, and the machinations of Herod. After the account of Jesus' baptism in the Jordan, Ava tells of his fast in the desert and encounter with Satan, his tempter. The defeat of the devil as tempter culminates in his actual subjection during Christ's triumphal Harrowing of Hell. Following the scenes of Jesus' temptations in the desert, the narrative recounts his miracles of healing. The capture, trial, and crucifixion of Jesus place charity—the central commandment to his disciples—in the context of giving one's own life for a friend. After depicting the Resurrection and the Ascension, the poem focuses on the arrival of the Holy Spirit in the upper room and the recipients' use of the divine gifts to teach others. The main body of *Das Leben Jesu* ends with Peter winning many converts as bishop in Antioch and Rome. The transitional verses that follow constitute *Die Sieben Gaben des Heiligen Geistes* (The Seven Gifts of the Holy Spirit) and offer a catalogue of virtues given by Jesus to his disciples. The third work in the series is *Der Antichrist*. This short poem of twelve strophes relates how the Antichrist will take possession of the world and overthrow the existing social order. Ava shows that his qualities are antithetical to the seven gifts of the Holy Spirit. Those who lack the correct orientation to God will succumb to the impostor's deception. Although the Antichrist's reign will last for four and onehalf years and inflict great suffering on all Christians, the sin of pride will eventually lead to his fall and destruction. *Das jüngste Gericht*, the final poem in the series, previews the fifteen days that precede the Last Judgment and the purification of the world by fire. The second half of the poem describes the *Parousia*, the glorious second coming of Christ. Preceded by the four evangelists, he awakens the dead to reward the good and punish those who caused him suffering. As the requirements for salvation can no longer be fulfilled once Christ has returned, Ava advocates repentance and the immediate practice of redeeming virtues, particularly applicable to an aristocratic audience: protecting the poor, ransoming prisoners, holding court without bribe taking, showing mercy to those of lesser power, and generous giving of alms. After the account of the Last Judgment, the poem commemorates the beginning of the liturgical year at Easter as an appropriate time for spiritual reorientation. Ava's poems are the earliest extent work of an identifiable woman author written in German. Little is known about the author apart from some autobiographical disclosures in her work and from records of her death. Only in the final poem of the series does Ava tell something about her life. Her sons are likely to have been clerics who advised her on interpreting Scripture and other religious sources. The record of Ava's death in the necrology of the Austrian monastery of Melk notes the year 1127 and her vocation as religious recluse.

Ernst Ralf Hintz

Heinrich von Meißen, called *Frauenlob* (literally, Praise of Women), wrote Middle High German poetry in the late thirteenth and early fourteenth centuries. He died on November 29, 1318, and lies buried in Mainz. There being practically no nonliterary traces of his life, nearly all we know of him derives from his literary production. In later political poems (*Sangspruchdichtung*), Frauenlob names a series of historical personalities who provide dates for certain texts and may indicate a degree of mobility (e.g., Duke Heinrich von Breslau, King Eric of Denmark, among others); living and deceased poets of his time are named (e.g., Walther von der Vogelweide, Konrad von Würzburg, and many others) who offer hints of a relative chronology.

Frauenlob's literary production is broad, but many of the texts are extant in only one copy, thus making editing difficult. For example, numerous poems have been distorted by scribal misunderstandings and errors, and present a daunting philological challenge. Equally problematic is the question of authenticity. Owing to questionable reasoning on the part of the scholar Helmuth Thomas, the standard edition of Frauenlob's poems, edited by Stackmann and Bertau, contains an incomplete catalogue. To attain the broadest possible picture of Frauenlob's oeuvre, one must consult Etmüller's edition of 1843.

Frauenlob was comfortable composing in all genres: songs, political lyrics, disputes, and narrative poetry. Often his songs represent traditions common in the first half of the thirteenth century, employing topics such as courtly love (*minne*), nature, and religion. His series of songs, especially those on the Virgin Mary and the Trinity, are thematically and formally more ambitious. Frauenlob combines and refines traditional motives, often in a particular fashion: cryptic, encoded, aimed at a knowledgeable, elite audience. Within his *Spruchdichtung*, Frauenlob also expressed his own thoughts on poetry and his own role as a poet. Thus, on the one hand, he sees himself as a grateful successor to the great poets of the past (he especially honors Konrad von Würzburg), while, on the other hand, he presents himself as their superior: once he remarks, *ûz kezzels grunde gât mîn kunst* (from the depth of the caldron emerges my art), thereby setting himself apart from other poets.

A noteworthy composition is Frauenlob's "Dispute between Minne and the World," in which both allegorical partners—*minne* as courtly love personified—argue in learned fashion for their respective relative rank.

Frauenlob's *Leiche* are undoubtedly achievements of the highest order. He composed praises of the Crucifix, of *minne*, and of the Virgin Mary, and the melodies for each. It is because of the song to Mary, in praise of the heavenly woman, that Frauenlob received his nickname, Praise of Women, although his praise of worldly women may have also played a role. This song is Frauenlob's masterpiece: his theology, pious praise of Mary, and natural philosophy are combined in an immense concept and present a dimension of popular language praise of Mary hitherto unseen in this genre, a dimension that still today presents critical challenges. The love poem provides an unconventional concept of courtly love: *minne* is now founded in natural philosophy as a productive force of nature that unites opposites to create nature anew and to perpetuate the process of nature. The crucifix poem, finally, deals with the theological concepts of trinity, incarnation, salvation, and crucifix worship, at one unique linguistically and from the point of view of the motif.

Frauenlob marks a literary transition; he looks back on some one hundred years of tradition he knows well; intellectually he is well trained in many areas; he attempts to reapproach the great poetical topics aesthetically and substantively.

Frederick I Barbarossa (d. 1190)

Perhaps the greatest figure of the twelfth century, Frederick I Barbarossa ruled the empire from 1152 until his untimely death while on crusade in 1190. Barbarossa was an effective and sometimes brutal ruler whose reign was marked by his efforts to establish his authority in Italy, often stormy relations with the papacy, and equally stormy relations with the princes in Germany. His efforts in one area often influenced the course of events in an

Wimpfen am Berg, remains of the imperial palace, gallery. Photograph: Joan A.Holladay

other, and his reign strengthened the place of his family in the empire and laid the foundation for both subsequent successes and defeats. According to his biographer Rahewin, Barbarossa had golden hair, a reddish beard, piercing eyes, and a cheerful face. He was also a devout son of the church who honored the clergy and was a great builder of palaces and other public buildings. A "lover of warfare, but only that peace may be secured thereby," Barbarossa, Rahewin tells us further, possessed the virtues of an emperor. Indeed, his military prowess and imperial bearing would be of value for Barbarossa when his uncle, Conrad III, chose him as his successor. Barbarossa was chosen because Conrad's son was still a minor and because of Barbarossa's relations to two of the greatest families in the empire, the Staufens and the Welfs (Guelfs).

Although he was chosen for his important family connections in the German lands of the empire, one of Barbarossa's primary concerns was the establishment of his authority in Italy. Relations with Italy, and especially with Rome, formed the core of his conception of the imperial authority because without formal coronation by the pope, Barbarossa could not claim the imperial title. As a consequence he spent much time in Italy, and shortly after the death of Conrad, Barbarossa made his first trip there. His relations began on a promising note as he and Pope Eugenius III (1145–1153) agreed to respect each other's interests in the Treaty of Constance (March 23, 1153). In 1155, Frederick was crowned emperor by the English pope, Hadrian IV (1154–1159), and restored Hadrian to the throne in Rome by suppressing a revolt led by Arnold of Brescia. But cordial relations would not last as both sides failed to adhere to the terms of the treaty, and advisers for both sides, including Rainald of Dassel and Roland Bandinelli, stressed principle over compromise. In 1157, the first great conflict erupted at the imperial court in Besançon over Hadrian's declaration that Barbarossa had received the empire as a *beneficium*, or fief, from the pope. Hadrian would apologize for the use of the term, explaining it meant "favor," but too late as relations had begun to sour.

An even greater breach would emerge during the reign of Alexander III (1159–1181), the former Roland Bandinelli. A disputed election in 1159 led to a schism and the emergence of two popes, Alexander III and Victor IV (1159–1164). The prolonged schism made Barbarossa's already complex dealings with Italy more difficult. The northern Italian cities that had opposed the expansion of the emperor's authority into Italy found a natural ally in Alexander, who, in turn, found much support from the king of France. Barbarossa's activities during the schism had mixed success. In the 1160s he managed to raze the northern Italian power of Milan and force Alexander out of Italy. He witnessed the succession of a series of imperial antipopes, including Paschal III (1164–1168), who crowned Barbarossa's wife, Beatrice, empress and who was enthroned in Rome by the emperor. Frederick's invasions of Italy witnessed victories over his rivals in northern Italy and Rome, and his efforts to establish a universal power to rival Rome that had begun in 1157 with the use of the term *sacrum imperium* (holy empire) were continued with his canonization of Charlemagne in 1165. But Frederick had been excommunicated by Alexander, and support for the pope was too strong throughout western Christendom and especially in Italy. The northern Italian cities formed a league at Verona that built a castle at Alessandria that would be a key stronghold and then rallied around the rebuilt city of Milan in the Lombard League. Moreover, although the emperor managed to take the city of Rome in 1166, he did so at great cost because many of his troops and key advisers, especially Rainald of Dassel, died from malaria. He never managed to take Alessandria and was defeated by the league in 1176 at the battle of Legnano. A peace conference followed the defeat and led to the peace of Venice in 1177. The settlement lifted the excommunication and recognized the imperial bishops appointed by Barbarossa. It also established a permanent peace between emperor and pope and a fifteen-year truce between emperor and the Lombard cities. Finally, it granted Barbarossa extensive rights in the much coveted Mathildine lands of Tuscany.

Much of the conflict with Rome involved the broader concerns of imperial rights in Italy, and relations with Rome were greatly complicated by Barbarossa's Italian policies. As emperor, Barbarossa saw control of Italy as essential to his authority, and, consequently, the emperor spent much time on the peninsula, undertaking a number of campaigns there. His efforts to establish his authority in Italy were shaped by his appreciation of Roman law and the teachings of the masters at Bologna. The clearest example of the influence of Roman law on Barbarossa and the desire to establish his rights in Italy can be found in the so-called Roncaglia decrees of 1158. The decrees were pronounced during the emperor's second Italian expedition and while tensions between Frederick and Pope Hadrian remained high. The decrees, the result of a council that included a number of jurists from Bologna, listed and defined royal rights (*regalia*) in Italy. The *regalia* included, as Rahewin notes, "dukedoms, marches, counties, consulates, mints, market tolls, forage tax, wagons tolls, transit tolls, mills, fisheries, bridges," and an annual tax on land and persons. The decrees also asserted Frederick's rights to nominate and confirm the various magistrates and judges of the cities of northern Italy. Finally, the decrees instituted the newly developing law of fiefs in Italy, limiting the rights of alienation of fiefs and defining more precisely the nature of a fief. The promulgation of the Roncaglian decrees was an effort by Frederick to establish himself as the governing authority in Italy, a legal pronouncement followed by ruthless enforcement. Although an important step for Barbarossa, the proclamation of the decrees was greatly resented by the northern Italian cities and led to much conflict between them and the emperor. In fact, the animosity generated by the decrees would complicate Barbarossa's efforts in Italy, a controversy that, in some ways, would not be resolved until the peace of Venice.

Frederick's other great concern was, of course, Germany and his relations with the German princes, especially with the Welf family and its greatest scion, Henry the Lion. To avoid the conflicts of his predecessor, Barbarossa needed to work at reconciliation with the major families of the realm from the very

beginning of his reign. To satisfy the Staufen line he made his displaced cousin and son of Conrad III, the eight-year-old Frederick of Rothenburg, duke of Swabia. He granted the Baben-berger Henry Jasomirgott the duchy of Austria after earlier depriving him of his Bavarian title. But the greatest grants were made to the Welf, Henry, who was granted the duchy of Bavaria and Saxony. And as duke of Saxony, Henry was allowed to expand his authority in the north by Frederick as a means of maintaining Henry's support for the emperor. Having placated the great families, Barbarossa sought to strengthen his position and that of his family. A first step was taken when Barbarossa married Beatrix, the heiress to the county of Burgundy and parts of Provence. Barbarossa sought to expand familial and imperial lands throughout the realm, attaching Staufen territory to himself and also laying claim to possessions of other nobles when possible. Moreover, his willingness to allow Henry the Lion to fall for failure to attend imperial courts and for abuse of power as duke enabled Barbarossa to restructure the duchies of the realm, break up the larger duchies of the Lion, raise lesser noble families to higher authority, and establish feudal law in Germany. Finally, Barbarossa intervened in disputed episcopal elections and made greater use of *ministeriales* (clerics) during his reign to make his authority more effective.

Barbarossa's last great act was his participation in the Third Crusade. Long a supporter of these holy wars and a participant in the Second Crusade, Frederick took the cross at an assembly at Mainz in 1188. With great hope, Barbarossa led a large force toward the Holy Lands and enjoyed early success along the way. Unfortunately, while crossing the river Saleph on June 10, 1190, Barbarossa drowned. His army fragmented, with part returning home and part continuing on. The death of the emperor weakened the crusader army and, perhaps, undermined chances for success. Despite his unfortunate end, Barbarossa had made a lasting impact on the empire and left it at peace and in the relatively capable hands of his son, Henry VI (d. 1197).

Frederick I Barbarossa, Art

All the known artistic endeavors of Frederick I Barbarossa were politically motivated. Seeking rule over a wide geographic area and reinforcement of centers of power, he built castles in various locations, forgoing a centralized capital, while also taking advantage of Charlemagne's palace at Aachen, and of the ecclesiastical and ducal palaces of his allies. Vital to the history of medieval palace architecture, he restored Carolingian establishments at Nimwegen (1155) and Ingelheim (1160), and built new palaces at Eger (1180–1190), Wimpfen (1182), Kaiserslautern (1160), Gelnhausen (1170), Hagenau (1170–1184), and Kaiserswerth (1184). These defensive edifices all had compelling monumentality, simplified interior division, and carefully rusticated (tinted red) exteriors. Although physical remains are scant, excavations and archives disclose a penchant for strong walls, gate buildings and keeps, and palatine (royal) chapels. Local architectural and decorative idiom prevail, although German traits were exported for remote works, i.e., Rhenish/ Saxon styles at Moravian Eger.

Palaces, chapels, and churches were splendidly furnished. Kaiserslautern, described in Rahewin's imperial chronicles, was richly appointed, and the tower chapel at Hagenau, intended to house the crown and spear of Christ, reflected the spirit of Jerusalem's Holy Sepulchre. Decoration for the apse and towers added to the hall church at Ingelheim circa 1160 included head consoles and friezes with lions and lambs. Stained glass in the Landesmuseum in Wiesbaden was perhaps a part of this renovation.

Attention to ecclesiastical foundations reflects Frederick's belief in imperial guardianship of the church. Patronage of Freising Cathedral resulted in portal sculptures of Frederick and Beatrix. They sponsored expansion of the church of St. Fides at Schlettstadt and donated choir windows there after his 1162 siege of Milan. Pictorial themes of royal lineage are pervasive, perhaps most notable in two reliquaries associated with the 1165 disinterment of Charlemagne. The arm of Charles, a specific and potent symbol of imperial power, was placed in a casket reliquary of gilded silver and enamel (now in the Louvre, Paris), while preparations proceeded for the larger gilded and jeweled Charlemagne shrine in Aachen. This latter was completed fifty years later and ceremonially nailed shut by Frederick II, as a pointed imperial gesture. Both shrine programs place Hohenstaufen rulers in a lineage with Charlemagne, while glorifying connections to the church and the Heavenly Jerusalem.

Also conceived as decorative enhancement, these shrines augmented a group of previous rulers' lavish gifts to Charles's palatine chapel. To illuminate the display space for the larger reliquary, Frederick and Beatrix also donated a gilded bronze chandelier, with a design echoing the octagonal chapel plan and including images from Revelations, the life and Passion of Christ, and the Eight Beatitudes.

Frederick is thought to have added a pair of gilt and enamel armbands (known from eighteenth-century sketches) to the imperial regalia: one with images of the Birth of Christ and the Annunciation to the Shepherds, the other with the Presentation in the Temple.

Two portraits, gifts from Frederick's godfather, Otto von Cappenberg, enhance the emperor's Christian reputation: the gilded bronze head, known as the Cappenberger reliquary, which pointedly revives an antique imperial type, and a gilded silver baptismal bowl, circa 1160. The bowl commemorates Frederick's christening in an image similar to that of Constantine's Baptism on the Stavelot Triptych of circa 1150, again suggesting a lineage of Christian rulers.

Frederick II (December 26, 1194–December 13, 1250)

King of Sicily, Roman emperor, king of Jerusalem, Frederick was born on December 26, 1194, in Jesi (Ancona), the eldest child of Emperor Henry VI Hohenstaufen and Constance (daughter of Roger II and heiress to Sicily). Baptized Frederick Roger (after his grandfathers), his name signaled his two heritages, namely, rule over the empire and the Italian *regno* (reign) and their fateful fusion. The German princes elected him king of the Romans (1196), and he was crowned king of Sicily (1198) after his father's death. North of the Alps, the competing royal elections of Otto (IV) of Brunswick and Frederick's uncle, Philip of Swabia, plunged Germany into dynastic civil war. Before her own death, Constance named Pope Innocent III guardian over the four-year-old and regent of the kingdom.

As the young orphan grew into manhood, political disorder engulfed the *regno*. The child-king became a pawn of feuding native and German aristocratic factions while other outside parties pursued their own interest at the expense of the royal power. Childhood in cosmopolitan Palermo—scene of an intermingling of Arab, Norman, Italian, and Greek cultural impulses—favored Frederick's intellectual alertness, mental and emotional precocity, and polygon talents. His cheerfulness, amiability, and calculation were balanced by the capacity for mistrust, coldness, cruelty, misanthropy, a demonic temperament, and a general lack of scruples.

In June 1208, the murder of Frederick's uncle Philip paved the way for Otto's accession to royal power in Germany. Six months later Frederick attained his majority according to Sicilian law. A marriage was arranged by the pope to Constance of Aragon, sister of King Peter II; it brought Frederick the Aragonese military support that enabled him to bolster his political position in the kingdom before new danger arose. In return for various promises, including an undertaking not to interfere in Sicilian affairs, Otto IV secured imperial coronation at Pope Innocent's hands in 1209. But the new emperor's repudiation of his promise and his invasion of the kingdom triggered excommunication by the pope and papal support for a Hohenstaufen candidacy for the German and imperial crowns. In 1211 a group of German princes opposed to Otto met in Nuremberg and elected Frederick king of the Romans. In early 1212 Frederick decided to accept this election. Now he solidified the pope's support by confirming his mother's concessions regarding the Sicilian church; he also protected the dynasty's future by having his infant son, Henry, crowned co-king of Sicily.

During Autumn 1212 Frederick embarked on an unexpected and adventurous trip over the Alps to southwest Germany. Pro-Hohenstaufen princes, bishops, and towns now rallied to the support of the seemingly wondrous "boy of Apulia"; money and diplomatic support also came from Philip of France. Next Frederick moved north, where he was elected king of the Romans (for the third time) in Frankfurt and crowned in Mainz. During 1213 Frederick solidified his political and military position against Otto and confirmed various concessions to the papacy and the German ecclesiastical princes. Otto now staked his future chances on an invasion of northern France, but Philip II won a decisive victory over him at Bouvines (1214). The chastened Welf withdrew to his Saxon strongholds, where he died in May 1218.

Now crowned king of the Romans a second time at Aachen (1215), an enthusiastic Frederick made a fateful vow to go on crusade to recover the Holy Places. A year later he renewed another commitment by formally promising Pope Innocent that he would turn the government of Sicily over to his young son Henry by right after he himself received the imperial crown. Innocent's death in 1216 was followed by the election of Honorius III, a decidedly less stern pope. In 1220 Frederick engineered Henry VIII's election as co-king of the Romans, thus assuring the union of Sicily and the empire that Innocent had feared. Frederick disingenuously informed Honorius that the election had occurred at the wish of the princes; in fact, the purchase price was not inconceivable: to secure electoral support from the ecclesiastical princes Frederick promulgated the *Confoederatio* or *Privilegium cum principibus ecclesiasticis*, which contained the renunciation (at least in theory) of many royal rights in ecclesiastical territories. That same year Honorius crowned Frederick emperor in St. Peter's basilica.

For much of the next decade Frederick maintained his strong political position; despite his prior promises, the union of the imperial and Sicilian crowns meant a potential encirclement of the papacy. And now his attention could be turned to the *regno* for a five-year period of consolidation: the strengthening of fortifications and harbor facilities, establishment of a large war fleet and merchant navy, and restriction of the trading and extraterritorial privileges hitherto held by Pisan and Genoese merchants. In 1220 at Capua he promulgated assizes that included a requirement that all royal privileges granted since 1189 must be reviewed before given any further credence. In this manner, Frederick could recoup some royal rights and properties lost through usurpation or ill-advised concession. He also suppressed a Muslim revolt in Sicily and resettled many defeated Saracens in Lucera, where they established a Muslim enclave that in time became a center of royal support. To further the training of civil servants for a burgeoning royal bureaucracy, Frederick also founded the University of Naples.

His commitment to depart on crusade was postponed repeatedly as Frederick consolidated control over the *regno*. But it was never forgotten by Honorius and the papal curia. The pope even helped to arrange Frederick's marriage in 1225 to the heiress of the kingdom of Jerusalem, Isabella Yolande of Brienne. Frederick reiterated his crusade obligations: under pain of excommunication he would depart for the East before August 1227. In a related matter, Frederick promulgated, in 1226, for the Teutonic Knights the Golden Bull of Rimini, establishing the foundations of their autonomous state in Prussia. That same year the emperor attempted to convoke a diet to restore imperial rights in northern Italy, but his intentions were thwarted by the resistance of the reconstituted Lombard League under the leadership of Milan. The death of Honorius III in 1227 led to the election of Gregory IX, who as cardinal had been friendly to the emperor. But when plague struck the gathering crusaders in Brindisi during late summer 1227, the embarkation became a debacle; the emperor himself sailed but immediately became ill, returning three days later and postponing further departure to spring 1228. Yet Gregory, long impatient with the emperor's past excuses, held him strictly to the terms of his promises and excommunicated the emperor despite the latter's protestations.

Frederick nonetheless continued preparations for the voyage east despite the spiritual ban and Empress Yolande's death shortly after giving birth to Conrad (IV). In June 1228 the emperor reembarked with a small army and arrived in Acre, where he found little support from the local Syrian-Frankish baronage, the ecclesiastical hierarchy, or the military orders. Despite such handicaps, Frederick drew on his knowledge of Arabic and Muslim culture to negotiate a favorable treaty with the Egyptian sultan al-Kamil. The emperor next entered the Holy City and crowned himself king of Jerusalem, basing his title on his deceased wife's claim and on their son Conrad's minor status.

The pope's enmity did not slacken, however. War had already broken out in Italy. Since any further actions in Outremer were doomed to failure, the emperor set sail and returned to Brindisi. Frederick quickly assembled troops and swept the papal invaders back northward, taking care to halt his victorious advance at the border. Negotiations during the next year, 1230, culminated in the treaties of San Germano and Ceprano. Gregory absolved Frederick from excommunication, the territorial status quo was restored, and the emperor promised the Sicilian church freedom of prelatial elections and other privileges. But otherwise nothing was decided regarding the threatened encirclement of papal territory, papal doubts regarding the emperor's stance toward ecclesiastical liberty, and the Lombard's autonomy.

A fragile peace now restored, Frederick embarked on his most memorable legal project—the codification of royal laws for the *regno* in *Liber Augustalis*, or Constitutions of Melfi (1231). This work of synthesis organized royal enactments with a view to centralize authority, bureaucratize royal government, and weaken all other non-royal intermediate jurisdictions.

But trouble now loomed in Germany, where young King Henry's weakly executed and unsteady policy of alliance with imperial ministerials, towns, and lesser aristocrats provoked opposition and demands from the greater princes. Henry was compelled to issue the *Statutum in favorem principum* (1231), and his father had no choice but to confirm the same document a year later. In constitutional terms the autonomy of the princes was thereby somewhat strengthened, while restrictions on imperial cities were somewhat tightened. In 1232, Frederick imposed on his son an oath not to pursue in the future his former policies, but Henry nonetheless rebelled in 1234, and even allied himself with the Lombard League. When Frederick himself journeyed north in 1235, however, all resistance collapsed. Henry submitted unconditionally to his father, was stripped of his title and crown, and imprisoned for the rest of his life in various castles. He died by suicide in 1242.

Frederick now married again, this time to Isabella Plantagenet, sister of Henry III of England. The emperor proceeded to celebrate his triumphs at an

imperial diet in Mainz, where he promulgated a peace edict that created the post of high court judge and proclaimed that all rights of governance originated in the monarchy. Frederick also staged a reconciliation with the Welfs by creating the feudal principality of Brunswick-Lüneburg for Otto, nephew of Otto IV.

Frederick returned to Italy, where he waged a military campaign during 1236 against the Lombards. Winter brought the emperor north again, this time to depose the outlawed rebel Frederick II of Austria and Styria. The emperor also arranged that his son Conrad was elected king of the Romans in Vienna (1237). He journeyed back to Italy, where his political fortunes now reached their zenith; Frederick led his army to victory over the League of Cortenuova, an alliance between Maitland and Lombard. The vanquished Lombards became eager to negotiate peace, but the emperor's intransigence encouraged instead a spirit of desperate resistance among a hard core of league members. Six cities chose to fight on. His relations with Pope Gregory also worsened. Frederick's illegitimate son Enzo married at his father's urging the heiress to a large portion of Sardinia and, in a calculated affront, immediately styled himself king of that island, thereby ignoring papal claims to overlordship. In 1239, the pope excommunicated Frederick a second time, charging that the emperor had oppressed the Sicilian church, impeded crusades, and assisted rebellious Romans. The real reasons for conflict, namely, the emperor's ongoing struggle with the Lombards and his perceived threat to papal autonomy, received no explicit mention.

The struggle quickly developed its apocalyptic as well as military aspects. Detractors called Frederick Antichrist; supporters hailed him as the expected messianic ruler of the Last Day. Crucial to Frederick's propaganda was his minister Petrus de Vineia, the architect of a new high rhetorical style that rivaled the fulminations of the papal chancery. On the military front the emperor and his subordinate commanders went from strength to strength. The disputed territories of Spoleto and the March were seized, and Frederick himself conducted an invasion of papal territories farther north. After a long siege Faenze surrendered. The emperor even managed to ruin the pope's impending Easter 1241 council in Rome, where Frederick expected further condemnations: his Pisan allies won a complete naval victory near the island of Montecristo over the Genoese fleet carrying many prelates to Rome. More than a hundred prospective council participants were captured and imprisoned under harsh conditions. But this triumph soon boomeranged to Frederick's discredit, for it confirmed the pope's characterization of him as an oppressor of the church.

The struggle consumed the emperor's political and military energies to such an extent that he played no role in confronting the Mongol storm that since 1273 had swept irresistibly through the Russian principalities, Poland, Hungary, and into Germany. At Liegnitz in Silesia in 1241, the Mongols annihilated a German-Polish army, but news of the death of their Great Khan Ogotai and the expectation of a succession struggle led to their withdrawal eastward. Nonetheless, Frederick was still castigated by many German subjects for his inactivity.

When Gregory IX died in August 1241, the emperor prudently awaited further developments. The election and short pontificate of Celestine IV led to a nineteen-month interregnum until a sufficient number of cardinals elected Innocent IV in 1243. Negotiations began immediately between Frederick and the new pope. The emperor offered several concessions, but Innocent continued to distrust his commitments and to fear his ultimate intentions. For their part, both papal and imperial partisans occasionally broke the truce. Eventually, the pope's unwillingness to abandon the Lombards convinced Frederick to break off negotiations and secure his own safety through flight across the Alps to Lyon in 1244.

To that city Innocent summoned a general council to meet the following summer in order to deal with the many accusations leveled against Frederick. When the synod met, the verdict was a foregone conclusion: the pope solemnly excommunicated the emperor again and deposed him from his imperial and royal offices. Under papal pressure in 1246 and 1247, several German princes elected in succession antiking Henry Raspe of Thuringia and William of Holland, but neither ultimately had much effect on Frederick's position in Germany.

More serious, however, were the conspiracies and revolts in Italy. A plot by some Apulian officials and aristocrats was discovered and crushed in 1246. Parma unexpectedly revolted in 1247 against Frederick and stymied his impending trip to Lyon and to Germany. To retake Parma the emperor now ordered construction of a new wooden siege town named Vittoria. But a sally by the besieged while Frederick was absent hunting scattered imperial forces, destroyed the siege town, and inflicted heavy casualties in 1248. The emperor had to discontinue the siege and withdraw. His misfortunes continued during 1249. First Frederick narrowly escaped an attempted poisoning by his personal physician. Next he had his close associate, Petrus de Vineia, arrested under mysterious circumstances as a traitor. Perhaps Petrus's actual crime was official corruption; in any event, he died shortly afterward, probably by suicide. Finally, the emperor's beloved son Enzo was captured by the Bolognese, never to be released until his death two decades later.

Despite these setbacks, Frederick's position in Germany, where Conrad IV defended his interests, was still strong. And while the emperor's political and military fortunes in northern and central Italy swung back and forth, he was still a force to be reckoned with. But a decisive reckoning would not occur. While in Apulia at the end of November 1250 Frederick became seriously ill, probably with dysentery. He managed to reach Castel Fiorentino; there he made his last testament, disposing of titles and territories, received absolution and extreme unction at the hands of a loyal bishop, and died on December 13. Frederick was buried in the cathedral of Palermo.

Frederick was an object of wonderment and fear during his life, but his death marked the beginning of the end for the Hohenstaufen dynasty; his sons and grandson were overwhelmed by premature and often violent deaths. The chronicler Matthew Paris called the emperor "wonder and marvelous transformer of the world" (*stupor mundi et immutator mirabilis*). Frederick's three major constitutional documents for Germany—the *Confoederatio cum principibus ecclesiasticis*, the *Constitutio in favorem principum*, and the Mainz *Landfriede*—represented not the surrender of his political position there but, instead, the salvaging of royal prerogatives and a proper recognition of what the princes had already achieved. It was Frederick's death and the disappearance of his dynasty that created the interregnum that weakened forever the German monarchy's ability to imitate the piecemeal consolidations of English and French royal power. In Sicily, on the other hand, Frederick and his associates built on the strong royal traditions of the Norman kings and fashioned a government that rivaled other strong contemporary monarchies. Yet even there the time was not ripe for a thoroughly bureaucratic centralized state without autonomous communal, feudal, or ecclesiastical authorities. And whatever skepticism he may have possessed regarding the Catholic faith or religion in general, Frederick took great pains to stress his position as an orthodox Christian monarch.

When assessing Frederick's importance for the culture of his time, one must again note the mixed nature of his Sicilian milieu. Himself conversant in several languages, the emperor had a cosmopolitan outlook, eclectic tastes, and diverse interests in mathematics, the natural sciences, and philosophy. Frederick adopted startling Arab habits such as the harem and the traveling menagerie. He surrounded himself with intellectuals such as Petrus de Vineia, Michael Scot, and Leonardo Fibonacci. His Sicilian court witnessed the beginnings of literature in Italian *volgare* (popular tongue as opposed to Latin) as Frederick himself and his courtiers participated in a sudden flowering of lyric poetry. Architectural projects such as the stark Castel del Monte and the (now lost) Triumphal Gate in Capua expressed an originality that derived from both classical and nonclassical sources. His gold coinage—the *augustalis*—represented both a pioneering achievement of medieval European government as well as an enduring numismatic event. Finally, Frederick himself was a scientific author. His ornithological treatise on hunting with birds—the emperor's favorite sport—stressed the value of observation to correct received authority.

Frederick III (1415–1493)

Because of the early death of his parents, Duke Ernst of Austria and Cimbürgis of Masovia, Frederic III Habsburg (1415–1493) became the ward of his uncle Duke Frederick IV "with the Empty Pockets" of the Tyrol. He was able to free himself from the guardianship only in 1435 at the late age of twenty, becoming in his own right duke of Styria, Carinthia, and Carniola. His first independent act was a pilgrimage to Jerusalem the next year, where he was knighted at the Holy Sepulchre.

The unexpected deaths of his uncle Frederick and cousin King Albrecht II in 1439 improved Frederick's situation, since he became the head of the House of Habsburg. As leader of the dynasty, he assumed the guardianship for younger relatives, reversing the situation of his own youth. First, he supervised the Tyrol for his nephew Sigismund for several years. But the Tyrolean and Alsatian possessions drew him into wasteful, inconclusive wars with the Swiss Confederation. Second, he controlled King Albrecht's son Ladislaus, born after his father's death, hence the sobriquet "Posthumous." Ladislaus was not only heir to lands in lower Austria but also the crowns of Hungary and Bohemia.

Frederick's preeminent position led the electoral princes unanimously to elevate the young duke to king of the Romans on February 2, 1440. Early in his reign, in August 1441, he issued a reform proposal for the empire, indicating the new king's intention to be an active monarch. A bad sign, however, was the long delay of more than two and a half years until his coronation in Aachen. Indeed, from 1444 to 1471 Frederick did not leave his hereditary lands. Hence royal influence, especially through the royal court of justice, wasted away while the power of the cities and princes grew correspondingly. Confined to Austria, Frederick's court nonetheless attracted some of the most important lawyers of the day, like Gregory Heimburg and Martin Mair. Frederick also tried to build a court promoting the newest arts and humanistic ideas, for a time attracting the support of the famous humanist Aeneas Silvius Piccolomini, the later Pope Pius II. Frederick's own interest in numerology, alchemy, and astrology may have prompted his frequent use of the mystical motto AEIOU, which centuries later was interpreted as "All the world is subject to Austria" (*Alles Erdreich Ist Oesterreich Untertan*).

Meanwhile, as leader of the Holy Roman Empire, Frederick did have some success with the church. At first neutral in the schism caused by the Council of Basel, he soon leaned toward supporting Rome. He gained lasting success by signing the Concordat of Vienna with Rome in 1448. Although not quite as advantageous to the monarchy as contemporary agreements in France or Hungary, it allowed Frederick control of seventeen episcopal sees. That agreement regulated papal-imperial relations for the rest of the empire's duration, leading to the continuing decline of papal influence on episcopal elections. Partially financed with money provided by the pope, Frederick went to Rome, where he was crowned emperor on March 19, 1452. He was the last emperor to undergo this traditional ceremony there. On a later trip to Rome in 1468, he gained the foundation of the diocese of Vienna.

Most important for Frederick was his position in his hereditary lands. He promoted its interests, for example, by accepting as genuine the forged *Privilegium Maius* (May Privilege), which claimed broad prerogatives for the Habsburgs and Austria. Yet dynastic quarrels with his relatives and rebellions by the estates continued to squander his resources. On his return from his imperial coronation in 1452, he found Austria in rebellion. Soon besieged in Wiener Neustadt, he had to release Ladislaus from his guardianship. Again in 1462 the citizens of Vienna and then his brother Albrecht VI besieged Frederick. While Albrecht VI's unexpected death in 1463 quieted the situation, Frederick's territories remained exhausted.

And new, more energetic rivals appeared after the death of his nephew Ladislaus Posthumous in 1457. In Hungary Matthias Corvinus (r. 1458–1490) and in Bohemia George von Podiebrady (r. 1458–1471) became kings at the head of nationalistic movements. While George's influence was limited by his closeness to the Hussite heresy, Matthias of Hungary became a major force in Central Europe. Frederick at first tried to come to terms with Matthias, selling him back the famed Hungarian national Crown of St. Stephen in 1463. Matthias soon drove George from power in Bohemia. Then in 1477 Matthias went to war with Frederick, by 1485 conquering Vienna itself. In 1487 Matthias took Wiener Neustadt and lower Austria, forcing the emperor to retreat to Linz in Upper Austria.

Meanwhile in the west of the empire the dukes of Burgundy had been expanding what was once a French royal appanage into a vast territorial complex between France and Germany. Duke Charles the Rash, who hoped to transform his possessions into a kingdom, undertook negotiations with Frederick in Trier during 1473. Although the negotiations at first failed, Frederick's son Maximilian eventually gained the promise of marriage to Charles's daughter, Mary (although she had already been engaged six times). After Charles's death at the Battle of Nancy, Maximilian had to defend Mary's inheritance largely without any help from his father. Only when Maximilian was captured and held prisoner in Bruges in 1488 did Frederick arrive at the head of an imperial army and intimidate the city into freeing his son.

Slowly Frederick's position began to improve as Maximilian asserted his own authority. In 1490, Matthias Corvinus's death provided the opportunity for Maximilian to drive the Hungarian forces out of Austria. Maximilian seemed to be achieving success after success when his father, Frederick, died in Linz on August 19, 1493. He was finally interred in a magnificent tomb in St. Stephan's Cathedral in Vienna years later.

Although Frederick III had the longest reign of any German monarch, many historians have complained that he accomplished little. He has long been mocked as the *Heiliges Römisches Reiches Erzschlafmütze* (Holy Roman Empire's Arch-sleepingcap). Some say his greatest accomplishment was merely to outlive his enemies. Others maintain that while such an attitude may apply to the empire at large, in his own dynastic lands Frederick III was able to build for the future. By patiently insisting on his rights, helping to arrange his son's marriage, and insisting on his imperial prestige, Frederick helped to establish the future success of the Habsburgs,

Frederick III, Art

Architectural and artistic patronage played an important role in the political career of Frederick III. In the first years of his independent rule after 1435, work on his two major residences at Wiener Neustadt and Graz formed the most important task. This included the rebuilding of both castles and, at Graz, the erection of a major court church, today's cathedral. His election as German king in 1440 was followed by construction work in Nuremberg. This work, undertaken by the city, saw both some changes to the imperial castle and, in 1439, the commencement of the ambulatory choir of St. Lawrence as a monumental court church; for this choir Frederick donated in 1477 the central, "imperial" window. The year 1440 saw the completion of the outer walls of the nave of St. Stephan at Vienna, which became the city's cathedral in 1468; its interior construction as a stepped hall church with star vaults was undertaken in 1446 by Hanns Puchspaum, while, at the same time, the westernmost gable of the south side, known as the Friedrichsgiebel, was constructed.

A second group of projects, starting around 1445 and reaching until 1455, comprised the chapels of his residences in Graz, Vienna, and Wiener Neustadt. The last is renowned for its heraldic facade (Wappenwand). Starting in 1444, the abbey church of the Habsburg family monastery at Neuberg was completed under Frederick's sponsorship, following to the detail the classical forms of the existing thirteenth-century choir; furthermore, the collegiate church of Maria Saal and several monasteries at Wiener Neustadt were built at this time, all of them serving the representational needs of the new emperor following Frederick's elevation to that position in 1452. This period is followed by more than a decade in which, owing to political difficulties, no major building was begun. Even a project like the northern tower of Vienna cathedral was postponed until 1466, when it was begun according to the new designs by Hans Spenyng from Dresden. Also in about 1467 a sudden concentration on military architecture is evidenced by the fortification of towns and the rebuilding of castles. Another ten years later, the castle of his new residence at Linz and other fortifications were begun in anticipation of Turkish and Hungarian attacks. Frederick's sojourn at Nuremberg in 1487 finally initiated some new building activity at the castle, where the imperial lodgings in the Romanesque palace were rebuilt. Among the churches of this city, the Frauenkirche of Charles IV received a new sacristy topped by an imperial lodge. The works of art commissioned by Frederick include the Friedrichsaltar (1447) from Wiener Neustadt, now at Vienna, and his tomb monument, commissioned in 1468 and carved by Nikolaus Gerhaert van Leyden; the style of this artist influenced the sculptural cycles of several of Frederick's monuments. The architecture of his monuments is characterized by a strong tendency toward the classical style of the late thirteenth century, in allusion to the era of Emperor Rudolph of Habsburg.

Freiberg

Located on the upper Saxon "Silver Road," Freiberg was, during the Middle Ages, the largest and economically most important silver mining town of the region. A rich deposit of silver was discovered in a village named Christiansdorph in 1168, and it soon became a settlement named civitas Saxonum by the miners from the Harz region who settled there. The town was first documented as Friberch in 1218. Margrave Otto von Meißen built his fortress near it, later the Schloss (castle) Freudenstein, and by the beginning of the thirteenth century the town had a defensive wall with five towers. Craftsmen and merchants also settled and built in the prospering town and together with the miners formed what is now the Old Town. There were two periods of outstanding artistic production in Freiberg, which produced masterworks for the parish church originally belonging to the fortress.

Built from 1180 to 1212, the late Romanesque Marienkirche (Church of the Virgin), a basilica with cross-shaped columns, quickly became the most important church of the town. Often damaged by fires, it was completely rebuilt in 1484. Two sculptural groups survive from the first building: the figures of the late Romanesque Crucifixion group, from about 1225, are now installed above the entrance to the choir, and the Goldene Pforte (Golden Portal), the west front of the Romanesque building, is now on the south side of the church in the cloister. Finished about 1230, it is one of the earliest and most important German examples of a carved architectural portal inspired by French examples. Originally gilded and colored, its theme is the Last Judgment; the Resurrection of the Dead, who appear rising from their graves, occupies the outer archivolt (arch above the portal). In the center of the tympanum (curved triangle over a door) is the Virgin holding the Christ child with a globe in his hand. On the jambs (vertical sides of door) standing figures from the Old Testament and both John the Baptist and the Evangelist lead the eye of the visitor to this figure. On the innermost archivolt is the crowning of the Virgin by Christ, who also receives the Book of Life. In the next is Abraham with one child in his bosom who receives another from an angel, and following this, the Apostles with the dove representing the Holy Ghost in the middle. A Pietà (Mary holding dead Christ in her lap) of about 1430 has also been preserved; the head of Christ wears a horsehair wig of about 1480.

Following the damage resulting from a town fire in 1484, the church was rebuilt and completed in 1512. What we see today is a three-aisle Hallenkirche (hall church), forty meters long, with ribbed vaulting and ten slender eight-sided pillars. Between the inside buttresses are galleries with balconylike projections. The Marienkirche had been dedicated as a cathedral in 1480 and a collegiate chapter established. New works of art were ordered for this building, initiating another artistic high point in Freiberg between 1500 and 1520. A cycle of wooden apostle figures on the buttresses, carved about 1500, and the Wise and Foolish Virgins on the inner columns, as well as the stone "tulip chancel," are the most important of these new works.

The entire chancel and its support were carved by Hans Witten from Chemnitz in 1510, as a fantastic plant culminating in the tulip-shaped chancel from which it received its name. The four church fathers are carved within the branches on the chancel, and the tree trunk stair is supported by a young miner; a seated figure with a rosary, identified as the prophet Daniel in the lion's den and understood as a symbol for the underground work of the miners, sits at its foot. The young man in the tree perhaps refers to the legend that the original silver discovery was made after he climbed a tree to search for treasure but was given advice to descend to the ground and dig. On the top of the pulpit canopy is the Virgin with Child holding grapes in his left hand and below them, the symbols of the four evangelists. Next to this stone pulpit is a wooden pulpit of 1638 supported by two miners. In 1537 Freiberg became Lutheran, and the choir of the church was converted to a memorial burial place. Outstanding here is the three-story cenotaph for Kurfürst Moritz of Saxony, built ten years after his death in 1563; it is the first freestanding Renaissance grave monument in middle Germany.

In addition to the church, many late medieval sites remain in Freiberg. The former Thürmerei (tower) built in 1488 near the church as the quarters for the new canons as well as extensive remains of the city walls with the 1490 Kornhaus (grain house) can still be seen. The Rathaus (city hall), built in 1470–1474, has been altered many times but still has medieval rooms inside. Outside the town the mine known as the Alte Elisabeth (Old Elizabeth) is now an historic monument; first documented in the sixteenth century, it was one of those that brought wealth to the town for eight hundred years.

Freiburg

Freiburg im Breisgau (Baden-Württemberg) is a foundation of the Swabian house of the dukes of Zähringen, who established a market beneath their main castle at the edge of the Black Forest about 1120. Berthold III and his brother Konrad included existing, slightly older settlements and an east-west trade route in the regular layout of the new town, whose characteristic crossed axes are still visible in Freiburg's street plan. The founders allowed extensive privileges to merchants and tradesmen willing to settle in the new town. The growing community, which profited from nearby silver mining, soon took on the character of a city: a first city wall was established at the same time as the earliest forms of communal self-government, illustrated by the first city council charter in German-speaking lands, written before 1178. By 1200 the commune already numbered about eight thousand citizens. It was soon necessary to lay out walled suburbs; by the fourteenth century, the city's area had grown to about seventy-three hectares, or circa 175 acres.

Freiburg im Breisgau, *Münster, Vorhalle*, right wall: 5 Foolish Virgins, Grammar, Rhetoric, Arithmetic, Geometry. Photograph: Joan A.Holladay

The counts of Urach inherited the city in 1218 and from that time called themselves the Counts of Freiburg. Increasingly acute conflicts with the new lords led the city to buy its freedom in 1368 and to submit itself voluntarily to Habsburg rule. For four hundred years, Freiburg thus shared the fate of the Austrians. The university was founded here in the capital of their western "foreland" in 1457; it was the second institution of higher education in Habsburg territories after that at Vienna.

The parish church, which was almost certainly dedicated to the Virgin from the beginning, was founded to the northeast of the intersection of the two main streets. The decision to replace the modest original building, erected by Duke Konrad, about 1200 with a new, more representative structure modeled on the cathedral at Basle, was probably related to the plans of Duke Berthold V to move the dynastic necropolis here from the monastery of St. Peter in the Black Forest. From this structure the crossing and transept with its two flanking towers are still preserved. After a change of plan about 1230–1240, the nave of the basilica was executed in the High Gothic forms of the Ile-de-France. It was finished at the beginning of the fourteenth century. The western tower was also begun about 1250; its characteristic tracery spire was completed about three decades later. This first openwork spire of the Gothic was widely imitated in Germany and elsewhere. The cathedral finally achieved its present form with the completion of the extended choir, consecrated in 1513; although begun in 1354, a long hiatus delayed its completion until about 1530.

The climax of the buildings rich sculptural decoration is the program of the enclosed square porch under the tower. In this small space several themes of Christian dogma are united in a unique way. Incarnation and death of Christ, the Last Judgment, and especially the salvific meaning of the church, symbolized by the crowned Virgin on the trumeau (pillar), are at the center of this complicated program dated about 1300. Four enthroned figures of counts, on the outside of the tower, stand for earthly power and justice. Large parts of the medieval stained glass of the nave (about 1320–1330) are still preserved; the windows' proud donors—the guilds, who by this time were active in the city's political life, and the mining corporations—are represented in the lower panels. Single donors provided the means for glazing the chapels ringing the new choir: the Emperor Maximilian as the city's overlord, court functionaries situated in Freiburg, and members of the city patriciate (leaders) are depicted with their patron saints. Most of these images rely on sketches of the young Hans Baldung Grien, a student of Dürer who was called from Strasbourg in 1512 to execute the panels of the monumental high altar.

In 1827 the parish church became the cathedral of the new archdiocese created out of the former diocese of Constance. Starting in about 1220 over a dozen orders and spiritual congregations, including the Franciscans (1229) and Dominicans (1233), erected cloisters in and around Freiburg. Encouraged by the city lords, the Franciscans and Dominicans also found strong support among the patriciate. The most important of these new institutions, partly because of its artistic decoration, was the Dominican cloister, in which Albertus Magnus was active for a short time about 1240. It was also the Dominicans who oversaw the majority of the women's cloisters, most of which were located just outside the city. Among these, Alt-Adelhausen, founded in 1234, was particularly well known as a site of female mysticism; one of the central texts of this movement, the chronicle of Anna von Munzingen, was composed here in 1318. Some of the rich furnishings of these women's foundations, mostly tapestries, embroideries, and liturgical manuscripts, have been preserved.

Minor parts of the medieval fortifications still stand, but only two gate towers have been preserved in large part. The Gate of St. Martin and the Swabian Gate, which gave entry into the two main streets, were erected after 1200; they have been disfigured by modern alterations. The city's rich municipal architecture is represented by the Gerichtslaube (Judgment Loggia), the oldest council hall, which was erected in 1303 and changed later, and the Kornhaus, built in 1498 for grain storage and trading but also used for dances. After the Second World War, only the facade of this latter was reerected. Two court functionaries of Emperor Maximilian, Jakob Villingner and Konrad Stürtzel, had palaces built for themselves about 1500; these too have been rebuilt.

Freising

Originally an early palace complex of the Agilolfings, the Freising Domberg became the center of the new diocese created during St. Boniface's organization of the Bavarian church in 739. The cathedral cloister under Bishop Arbeo (764/765–783) produced a *vita* (life) of St. Corbinianus, the Frankish missionary and copatron of the church, as well as manuscripts with decorated initials. Full-scale book illumination was apparently initiated under Bishop Anno (855–875). The unusually well-preserved libraries of Freising and other foundations in the bishopric, particularly Tegernsee, Weihenstephan, and Schäftlarn (all in the Munich State Library since 1803), provide a rich basis for studying the development of script and book illumination in medieval Bavaria.

The Freising bishops had particularly close ties to the Ottonian and Salian rulers, increasing the prestige and properties of the diocese. New foundations they supported near Freising included the rededicated Benedictine abbey of Weihenstephan (1020) and the Premonstratensian church of Sts. Peter and Paul, established by Bishop Otto I (1138–1158), author of *The Two Cities* chronicle and uncle of Frederick Barbarossa.

Despite the thoroughly baroque interior of Freising Cathedral, its architectural layout and scale are those of the Romanesque church built after a fire in 1159; that church itself had preserved something of the Carolingian plan. Gothic alterations of the thirteenth and fourteenth centuries were themselves effaced by later baroque campaigns. In the latter Middle Ages, the diocese of Freising, first under its Habsburg and then Wittelsbach bishops, continued to be an important ecclesiastic and artistic center. Jan Polack's *The Death of St. Corbinianus*, made for the high altar of Weihenstephan between 1484 and 1489 (Munich, Alte Pinakothek), contains the earliest topographical view of Freising.

Friedrich von Hausen (fl. late 12th c.)

By adopting and adapting the forms and motifs of Occitan lyrics, melding them with German ones, Friedrich von Hausen (present-day Rheinhausen, now a part of Mannheim) expanded and modernized German minnesong. Better documented as an historical figure, a *ministeriale* (court clerk) of Emperor Friedrich Barbarossa, than most minnesingers, he witnessed documents from 1171 to shortly before his death as a crusader in Anatolia in 1190 and was mentioned in many contemporary chronicles. His importance as a minnesinger can be seen in many apparent borrowings from his songs by others. The death of the minnesinger qua singer is lamented, a generation or so after the fact, in several songs and in Heinrich von dem Türlin's *Crône*. However, his contemporary fame, as attested, was as a political figure. From the twelfth to the fifteenth century, whenever singers are documented historical figures, their singing is never mentioned in official historical documents, and Hausen is no exception to this rule.

Hausen's love laments exalt the lady as desirable but unattainable; his general lack of concrete imagery and hypotactic style (employing subordinate clauses) adumbrate Reinmar. However, situational references such as those detailing a love reverie while riding, set him apart from the later singer. Though his songs of love from afar parallel similar songs by, for instance, the troubadour Jaufré Rudel, they also fit what we know about his history (he was often absent from home in the service of his liege lord). Though his praise of a lady and of ladies was part of a broader courtly fiction, there are definite parallels between the love at court he discusses and the life at court he led. He wrote several crusading songs in which, in contrast, for example, to Albrecht von Johansdorf, the service of God trumps service of his lady. In his scorn for the slackers who remained at home (*Des Minnesangs Frühling* [MF], song no. 53,21), he both echoes Romance lyric motifs and touches on a topic that doubtless resonated with the actual courtiers of his day. He is the first singer for whom a song (MF no. 42,1) is transmitted in three distinct versions, which exemplifies minnesong's inherent mutability. His extended monologue in the woman's voice (MF no. 54,1, three strophes in C) presents a lady as skilled in lamenting the dilemma her intense love for her worthy suitor causes her as Reinmar's persona is in stating his (MF no. 165,10). This has led various scholars (probably incorrectly) to consider as spurious the song's ascription to Hausen.

Friends of God

This loosely knit group of men and women (*Gottesfreunde*) from diverse socioeconomic backgrounds was inspired by and supportive of the mystical tradition in the fourteenth century. Devoted to prayer, meditation, and the apostolic life, these individuals congregated in and near Cologne and in Upper Germany around renowned religious figures such as the Dominicans Meister Eckhart and Johannes Tauler and the Franciscans Otto von Passau and Marquard von Lindau. Most of the sermons, visionary literature, tracts, and letters by the Friends of God appeared anonymously. Two notable figures among the group are Heinrich von Nördlingen and Rulman Merswin.

Heinrich von Nördlingen (died after 1356) was a secular priest who served as spiritual adviser and confessor for various female religious communities in and near his native Nördlingen and to the south. His extant correspondence, primarily with Margaretha Ebner of Medingen, constitutes the earliest personal letter exchange in German and the single source of information concerning his life. In 1338 Heinrich relocated to Basel, where he made the acquaintance of Johannes Tauler and other Friends of God. Here he shared in or directed the translation of Mechthild von Magdeburg's *Fließendes Licht der Gottheit* (*Flowing Light of the Godhead*) from Low German into Alemannic.

Rulman Merswin (1307–1382) was a successful merchant in Strasbourg who at age forty was encouraged by Heinrich von Nördlingen to embrace the religious life. Merswin leased and revitalized the impoverished Grünenwörth monastery, where he spent the remainder of his life. Some of the more than twenty devotional tracts produced at Grünenworth, e.g., the *Neunfelsenbuch* (*The Book of the Nine Rocks*), survive as autographs by Merswin; Nikolaus von Löwen, Merswin's closest associate, apparently edited others. Several tracts have been attributed to a so-called *Gottesfreund vom Oberland*, who in all probability was the literary creation of either Merswin or Nikolaus, but whose identity remains uncertain.

Friesland

According to archaeological evidence the Frisians settled along the North Sea shore from about 500 B.C.E., eventually occupying the area between the mouths of the Old Rhine and Ems Rivers. At first they inhabited only the highest parts of the fertile salt marshes, which were transected by tidal inlets. To escape flooding they established their dwellings on artificially thrown-up elevations (*terpen* or *werden*).

The Frisians are first mentioned by classical authors in the context of events of 12 B.C.E. They had close contacts with the Romans, but, except for a short period, remained outside the territory of the Roman Empire. During the Migration Age they swarmed out into the lower parts of the salt marsh area and spread farther along the coast in a southern as well as eastern direction (probably scattered settlements up to the Scheldt estuary and uninterrupted settlement up to the Weser estuary). After the eighth century the North Frisian islands, the west coast of Schleswig, the district of Wursten (east of the Weser estuary), and Saterland (to the east of the Ems) were colonized. During the Migration Age frequent contacts must have existed between Frisians and Anglo-Saxons. It is uncertain, however, whether Anglo-Saxons permanently settled in the Frisian territories.

The post-Roman period is characterized by an extreme scarcity of sources, Frisian ones even lacking totally. In the Old English *Beowulf* epic a Frisian king (*Fresena cyng*) is mentioned, called Finn. It is controversial whether the story of this ruler is based on historical events. From Anglo-Saxon sources the name of the Frisian king Aldgisel has come down to us. In 678 C.E. this ruler, who supposedly resided in Utrecht, extended hospitality to archbishop Wilfrid of York. Known from Anglo-Saxon as well as Frankish sources is the name of another Frisian king (or *dux*, as he is referred to in the latter ones): Radbod (Frisian *Redbad*). Shortly before 690 the Frankish mayor of the palace, Pippin II, expelled Radbod from a district, called ceterior Fresia, on the possession of which Franks and Frisians repeatedly clashed. Its extent is not known, but it can be said with certainty that Utrecht and the famous trading center of Dorestad were part of it. After Pippin's death (714) Radbod reconquered ceterior Fresia, but after his own passing five years later the northern frontier of the Frankish empire shifted to the Vlie estuary. Nothing is known of Radbod's succession. In the course of the eighth century the Franks conquered the remaining parts of Friesland: first (734) its supposed nucleus, situated between the Vlie and the rivulet Lauwers (this is the current Dutch province of Friesland, sometimes referred to as West Lauwers Friesland), and subsequently (785), simultaneously with Saxony, the section between the Lauwers and the Weser.

Targeted archaeological research of the period of kings has been taken up only recently. Attention is focused on the northwestern part of the *terpen* area of West Lauwers Friesland (Westergo), as many gold objects from this period have turned up here, the most remarkable being a (royal?) fibula (clasp) found in Tjitsma *terp* near Wijnaldum.

Little is known of paganism in Friesland. With regard to the Christianization of the Frisians, which took place in close connection with the Frankish conquest, more information is available. In 690 Pippin assigned ceterior Fresia as sphere of activity to the Anglo-Saxon missionary Willibrord, who five years later was ordained archbishop of the Frisians by the Pope. The former Roman castellum in Utrecht was allotted to him as his residence. After Radbod's death Willibrord returned to his see, accompanied this time by another Anglo-Saxon, Boniface. In the course of time Boniface moved his activities to Hesse and Bavaria, but returned to Friesland in his old age. Soon after (754) he was killed by pagan Frisians in Dokkum (West Lauwers Friesland). After 785 a Frisian missionary, Liudger, who eventually was to be ordained the first bishop of Münster in Saxony (now Nordrhein-Westfalen), embarked on the Christianization of Friesland east of the Lauwers. The Frisian archbishopric was finally swallowed by the archbishopric of Cologne, the Frisian territories being divided among the bishoprics of Utrecht and Münster, both of them coming under Cologne, and the archbishopric of Bremen.

On the basis of archaeological research it is supposed that about 900 the *terpen* area was relatively densely populated. The main means of existence here was cattle breeding. The abundance of water resulted in an early development of navigation. From the end of the seventh until the middle of the ninth century Frisian trade flourished, reaching its zenith after the Frisians' integration into the Frankish empire. Frisian commercial activities developed in several directions, the main being England, Scandinavia (especially Sweden), and the Rhine area. Colonies of Frisian merchants are known to have existed in York, Duisburg, Cologne, Mainz, and Worms. At that time Friesland possessed Europe's most productive minting ateliers. Cloth constituted an important export commodity. It is a moot point whether the gift of *pallia fresonica* (Frisian cloths) by Charlemagne to caliph Harun al-Rasid, which is mentioned by Notker Balbulus (end of the ninth century), refers to clothes produced in Friesland or to fabrics that were sold by Frisian merchants, but were manufactured elsewhere (in Flanders or England). A heavy blow was dealt to Frisian trade by the invasions of the Norsemen. Significantly enough, the first as well as the last to have been attested was directed against Friesland (810/1007). The Frankish conquest and the subsequent integration into the Frankish empire must have entailed fundamental changes in Frisian society. Most of the Frisian elite probably regained their properties in exchange for loyalty to the Frankish king. In the ninth century several large landowners bestowed goods on Frankish imperial abbeys (e.g. Fulda, Corvey, and Echternach), strengthening thus their ties with the king. In contrast to other tribes, like the Saxons, the Frisians failed to create a tribal duchy within the Frankish empire.

The earliest Frisian legal source that has been preserved is the *Lex Frisionum*, which goes back to about 800. This text perhaps represents part of a projected codification of Frisian law, made up by order of the Frankish king. Remarkably enough, the *Lex Frisionum* includes two pagan provisions—one regarding the allowed killing of newborn children, the other concerning the death penalty for temple desecrators. The legal provisions laid down in the *Lex Frisionum* concern West Lauwers Friesland, divergent provisions for the Frisian territories between the Vlie and the Sincfal (at the current Dutch-Belgian border on the Flemish coast) and between the Lauwers and the Weser being mentioned separately.

About 1000 a large-scale land reclamation movement gained momentum, in the course of which the vast peat zones situated behind the *terpen* area were reclaimed. Probably at a somewhat later time the first dikes were built. Gradually the dikes network expanded in such a way that building *terpen* was no longer necessary. Owing to reclamation and diking, agricultural production increased, laying the basis for a relatively large prosperity.

When the Frankish empire split up, Friesland became part of the *regnum* of Germany, eventually merging into the Holy Roman Empire. During the Frankish-German period Friesland was divided into several counties. In Holland, the name emerges in the sources at the beginning of the twelfth century, when the count's power came into the hands of an indigenous, i.e., Frisian, dynasty. By this time the idea of belonging to Friesland had been completely lost in this area. The name West Friesland, however, survived in the northeastern part of the current Dutch province of North Holland (this is why the name West Friesland, contrary to what is usual in English and German language publications, should not be applied to West Lauwers Friesland). West Friesland was subjugated by the count of Holland in 1289. After this the fortunes of Friesland west of the Vlie cease to be part of Frisian history.

It is not known how exactly Friesland between the Vlie and the Weser was divided into counties. The important thing here is that in this area the counts' authority rested not with Frisian but with foreign, mostly Saxon, lords. Thus, in the eleventh century counts in West Lauwers Friesland were the Brunones, who resided in Brunswick. During the last quarter of this century the German king bestowed this part of Friesland on the bishop of Utrecht. In 1165, however, the emperor Frederick Barbarossa divided the count's authority of West Lauwers Friesland between the bishop of Utrecht and the count of Holland, the latter probably having inherited the Brunones' rights to Friesland. The resulting condominium undoubtedly hampered an effective exercise of power. Up to the middle of the thirteenth century the counts of Holland exercised some authority in West Lauwers Friesland (they, for example, appointed bailiffs), but their influence later decreased. In the territories between the Lauwers and the Weser the counts' authority was even weaker; here it vanished as early as about 1100. So to the west as well as to the east of the Lauwers, the rights attached to the count's authority, remarkably enough, failed to develop into sovereign rule. Parallel to this, feudalism did not take root in Friesland, owing to which the nobility did not develop beyond a prefeudal phase here. In the late Middle Ages already the absence of sovereign rule in the Frisian territories was known under the name "Frisian freedom."

The former counties in Friesland now disintegrated into a large number of self-governing districts (called *terrae*), the first being mentioned in 1220. The highest authority here rested with the "land community" (*universitas terrae*; known in German as *Landesgemeinde*), which seems to have been made up of the owners of farms to which a right of voting was attached. The bailiffs appointed by the counts were pushed aside now by communal judges, who changed places yearly. About 1200 and during the period 1323–1327, an alliance of, at least in principle, all Frisian territories, called *Upstallisbaem*, was in existence. Though judicial functionaries with special powers acted in its name, it failed to bring political unity. It is the more remarkable that all

territories between the Vlie and the Weser used one and the same set of laws, known as the "Seventeen Privileges" and the "Twenty-Four Statutes." According to the latest research, these were drawn up in West Lauwers Friesland but were rewritten about 1225 to make them suitable for all Frisian territories free from sovereign rule.

Though frequently stricken by feuding, the Frisian *terrae* went through a period of prosperity that lasted until about 1350. Prosperity was shared by the monasteries, which from about 1160 were founded in large numbers, presumably on the initiative of local magnates. The imperial abbey mentioned above gave up their Frisian possessions. In the absence of towns of any importance, the monasteries developed into the main centers of economic activity. They also played a prominent role in peacemaking. The prosperity of the Frisian *terrae* may also be demonstrated by the fact that among the participants of the crusades, there were remarkably many Frisians.

From about 1350 the Frisian territories suffered a severe economic crisis. Trade and navigation reached a low. The crisis was accompanied by social unrest, a decline of the monasteries, and erosion of communal institutions. During this period a social group, called (in Dutch) *hoofdelingen* or (in Latin) *capitales* or *capitanei* (literally headmen), rose to prominence. In it, prefeudal nobility appears to have amalgamated with those who distinguished themselves by extensive ownership of land and the possession of a fortified house. In the area between the Ems and the Weser, called East Friesland from the fifteenth century, the *hoofdelingen* not only absorbed the duties of the communal judicial functionaries but also took the village communities under their protection, which resulted in a disintegration of the "land communities." In the western half of East Friesland the tom Brok family managed to eclipse all its rivals, eventually acquiring a position reminiscent of that of a sovereign lord. In West Lauwers Friesland the "land communities" remained in existence, but here the internecine strife of the *hoofdelingen* resulted in an unbridled eruption of feuding. During this process two "parties" took shape, which more or less balanced each other: the Schieringers and the Vetkopers. Yet in this part of Friesland the influence of the towns, small as they were, gradually increased. In the area between the Lauwers and the Ems, which came to be called Ommelanden, both feuding and the rise of towns were checked by the neighboring city of Groningen, which managed to gain preponderance here.

A serious external threat to Frisian freedom was posed by the counts of Holland, who in 1291 assumed the title "lord of Friesland." In 1310 Count William III was recognized as lord by part of West Lauwers Friesland. His successor (William IV) failed to gain recognition, however. In 1345 he invaded this part of Friesland but was defeated (battle of Staveren). The boorish Frisians, who did not bother to ask ransoms, killed the count and many of his knights. In 1398 the then count of Holland, Albert, duke of Bavaria, subjugated West Lauwers Friesland, immediately making a start with feudalization of this area. After a year his rule collapsed, owing to a rebellion started by the *Schieringers*. The dukes of Burgundy, since 1433 counts of Holland, took up their predecessors' plans to conquer Friesland but never executed them. They were also unsuccessful in winning over the emperor to confer on them the title "king of Friesland."

According to the Seventeen Privileges, the Frisians owed their laws as well as their freedom to Charlemagne. On several occasions during the fourteenth and fifteenth centuries, they produced a false diploma ascribed to this ruler, in which the privileges they claimed were circumscribed. In 1417 the Schieringer "party" acquired a privilege from Sigismund, king of the Romans, by which the Frisians were recognized as being directly under imperial rule (German *reichsunmittelbar*). Thus for the first time they were officially freed from all claims to rule by sovereign lords. But this privilege had barely any practical consequences, as the empire was too weak to offer the Frisians protection and the Frisians failed to fulfil their financial commitments to the empire.

In East Friesland the power of the tom Brok family collapsed in 1427. After a short period of recovery of the "land communities" another *hoofdeling*, Ulrik Cirksena, won ascendancy. In 1464, at his request, he was made count in East Friesland by Emperor Frederick III. Thus eventually an indigenous dynasty managed to acquire the position of sovereign lord here. In 1480 the same emperor enfeoffed the burgomasters and council of Groningen with the Ommelanden, a decision that was never implemented, however.

In 1491 the burgomasters and council of Groningen won influence in the northeastern part of West Lauwers Friesland (Oostergo). When the Schieringers subsequently invoked the help of Emperor Frederick III, this ruler and his successor, Maximilian I, did promulgate new privileges but failed to offer active assistance. As a result some Schieringer leaders secretly appealed to Maximilian's stadtholder-general in the Netherlands, Albert duke of Saxony. By shrewd maneuvering this prince brought most of West Lauwers Friesland under control, after which he persuaded Maximilian and the electors of the Holy Roman Empire to commission him to be the ruler of the whole of Friesland. To save the fiction of the Frisians' imperial immediacy, the title conferred on him was not that of a count but of a gubernator and potestate (1498). Nevertheless, this event meant the end of Frisian freedom in West Lauwers Friesland. In 1515 Albert's successor sold his rights to Friesland to the count of Holland, the future emperor Charles V, an option that had been included in the 1498 commission. Thus West Lauwers Friesland became part of the Habsburg Netherlands, without any trace left of imperial immediacy. In 1536 the Ommelanden and Groningen subjugated themselves to the same prince and consequently were absorbed into the Netherlands as well. East Friesland stayed out of reach of the house of Habsburg, eventually not becoming part of the Dutch but of the German state.

The indigenous laws of the Frisians have been handed down in several law manuscripts, written in Old Frisian. From the thirteenth century canon and, to a lesser extent, Roman law penetrated Friesland. In West Lauwers Friesland indigenous law was abolished in 1504, after which, apart from some unimportant exceptions, Roman law ruled here. In East Friesland and the Ommelanden the main indigenous law texts were translated into Low German. Here indigenous law was recodified in a modernized form, respectively about 1520 and in 1601. Some earlier law texts of the Frisians have won fame for their highly poetic form.

Both documents and signed paintings allow us to trace the career of Rueland Freauf, who divided his time between Passau and Salzburg. In the earliest records, in the 1470s, he is working for St. Peter's in Salzburg. The modern scholar Alfred Stange assumes that he received his training in Salzburg, perhaps with Conrad Laib, but also notes the influence of the anonymous Bavarian painters known as the Master of 1467 and the Master of the Tegernsee Tabula Magna. In 1480, Freauf acquired citizenship in Passau, where in the next four years he completed the frescoes in the Rathaus (town hall), now lost, that a Master Ruprecht had begun a decade earlier.

In May 1484, Frueauf was called back to Salzburg to discuss the altar planned for the Franciscan church, but in August two donors, offering substantial sums for the altar's execution, managed to direct the commission to Michael Pacher. How these events are to be interpreted is a matter of debate. Stange sees the loss of the commission as a hard blow for Frueauf and the reason for his disappearance from the written records for three years, and proposes that he spent this time on a study trip, trying to update his style. Another scholar, Grete Ring, by contrast, thinks it unlikely that Frueauf was ever a candidate for the commission and that being asked to deliver an expertise on such an important project was an honor.

In any case, we next encounter Frueauf in Nuremberg, where, in 1487, he dated and signed a panel with his initials. Stange sees the influence of the Dutch painter known as the Master of Flémalle in Frueauf's work after this date, without proposing that his travels took him all the way to the Low Countries. By 1490, Frueauf was back in Salzburg, working on a major commission. In this year and the following he initialed and dated two of eight scenes intended to serve in the wings of an altarpiece. Scenes from the Passion—Christ in the Garden of Gethsemane, the Flagellation, the Road to Calvary, and the Crucifixion—were visible at the sides of the sculptured shrine when the altarpiece was open, while scenes from the life of the Virgin—Annunciation, Nativity, Adoration of the Magi, and Assumption—occupied the outsides of the wings (Vienna, Kunsthistorisches Museum, nos. 1397–1400).

In 1497 Frueauf is mentioned again as citizen of Passau, as is his son, the painter Rueland Frueauf the Younger. A year later the father's citizenship was revoked for failure to pay his debts, but it was soon reinstated on the recommendation of well-placed friends. From the last decade of Frueauf's life comes the initialed but undated portrait of Jobst Seyfried (Vienna, Kunsthistorisches Museum), the only preserved evidence of Frueauf's work in this genre.

This group of autograph works allows a clear definition of Frueauf's innovative style. Painted in bright colors with hard outlines, his figures are tall and slim. Individualized facial types convey a variety of expressions, which are heightened by dramatic gestures and lively drapery patterns. His figures tend to fill the foreground, prohibiting a view into the background, another device for concentrating the emotional impact of the works. On the basis of similarities to Frueauf's known paintings, a number of other works have been attributed to him; most common among these are twelve Passion scenes from an altarpiece, probably from circa 1480 (Regensburg, Historisches Verein), and a large, late panel representing Christ as Man of Sorrows (*Schmerzensmann*) (Munich, Alte Pinakothek, no. 10681).

The biographical facts surrounding Ulrich Fuetrer (also recorded as Füeterer, Füetrer), a fifteenth-century painter and writer, remain sketchy. Born about 1420 in Landshut, near Munich (Bavaria), Fuetrer most likely had some rudimentary education, for his knowledge of Latin is reflected in his writings. His name appears in Munich's accounting books, listing him as a decorative painter in 1453. Between 1476 and 1478, Fuetrer participated in a large commission of the annexation of Munich's city hall. He became a homeowner in 1482 (in today's Residenzstraße). Fuetrer might have died as late as 1502, but his death probably took place about 1496, shortly after some scandalous events took place in his house, for which his wife was banished from the city.

While the overall contour of his life remains uncertain, Fuetrer is best known for his writings, which fix him at the court in Munich during Albrecht IV's tenure. Evident in his literary works is his historiographic interest in the deeds and origins of chivalry. Fuetrer's major work, dedicated to Albrecht, *Das Buch der Abenteuer* (*The Book of Adventures*, 1473–1481/1487), is a reworking of some fifteen popular knightly romances of the thirteenth century written in a verse form also employed by Wolfram von Eschenbach (known as Titurel strophes), and contains *Der Trojanerkrieg* (*Trojan War*), *Merlin*, and other tales about the Holy Grail. This work also serves as a historical compendium about his patron Albrecht, who belonged to the house of Wittelsbach. Further works include *Die Bayerische Chronik* (*Bavarian Chronicle*, 1478–1481), a prose *Lanzelot* (ca. 1467), and a verse version of this latter work (ca. 1484–1487).

While archaeological remains indicate Frankish-Merovingian habitation, Fulda achieved renown with Boniface's founding of the celebrated Benedictine monastery in 744. The interpretation of rich textual sources, coupled with analysis of extant structures and archaeological evidence, reveals a lively, evocative building history inaugurated with Fulda's auspicious beginnings. The first abbot, Boniface's disciple and friend Sturm, erected the first church to the Savior. Boniface consecrated the main altar of the church, a basilica with a nave and side aisles, terminated to the east by a semicircular apse, in 751. In 754 Boniface died a martyr's death in Friesland and was interred at Fulda; speedy recognition of his sanctity drew many to the site.

In 791 Abbot Baugulf (779–802) undertook a larger church, and work began under the direction of the monk Ratgar. Conforming to the axis of Sturm's church, the transeptless east end with a large semicircular apse was complete in 802 when Ratgar succeeded as Abbot. Under Ratgar, the rebuilding took on a grandiosity that enraged the monastic community, who complained to Charlemagne. Although relieved of his office in 817, Ratgar was able to articulate his architectural vision of Fulda's primacy as the resting place of the martyred Boniface through powerful reference to Old St. Peter's occidented (westernized) structure. Continuing from Baugulf's beginnings, the immense church had a nave and side aisles, and, to the west, a spacious projecting transept and large semicircular apse. With Ratgar's dismissal, Abbot Eigil (818–822) completed the structure, including crypts under the choirs. With the placement of St. Boniface's relics in the west apse, the church was consecrated in 819. The structure remained relatively intact until 1704; the extant baroque cathedral incorporates aspects of Ratgar's plan and sizable portions of his western construction.

Eigil also built the small church to the Archangel Michael within the monastic cemetery. Of this centrally planned chapel, a round structure with eight columns and an eastern nichelike apse atop a crypt, only the crypt remains. This extraordinary structure centers on a squat column topped by an ionizing (spiraled), reused, eighth-century capital, which visually supports a tunnel vault. An ambulatory-like structure, later subdivided, surrounds this central space. While often, and with reason, categorized an "imitation" of the Holy Sepulcher (a meaning perhaps obtained in later years and forms), Otfried Ellger has argued that this chapel, the eventual burial site of Eigil, reflects instead adherence to Antique sepulchral types, Fulda's commitment to the liturgical remembrance of its dead, and Eigil's desire to promote unity in the community after the unrest under Ratgar.

Destroyed in the tenth century, by the first half of the eleventh century the upper chapel was rebuilt in similar form, using remains of the old structure. Under Abbot Ruthard (1075–1096), the chapel received a second floor and was given a basilica-like cruciform shape through the construction of a two-story nave, without aisles, to the west, preceded by a tower, and transeptlike arms to the north and south. Consecrated in 1092, this structure still carries traces of possibly eleventh-century frescoes. In 1315, the west tower and nave roof were heightened. St. Michael's remains today, despite an overzealous "restoration" in the 1930s and damage during the Second World War, as testimony to aspects of Fulda's changing medieval building history.

Prince-bishops, or ecclesiastical princes—church officials bestowed with secular powers—played a major role in medieval Germany. Although in some other parts of Europe bishops continued to administer extensive lands and some fairly autonomous temporal jurisdiction beyond the High Middle Ages (e.g., the bishops of Durham on the Scottish border), it was a distinctive feature of German history that so many prelates including some abbots and abbesses continued to exercise so much temporal authority down to the end of the Old Reich. While some bishops from the very outset were firmly subject to their overlords (e.g., three sees dependent on the archbishops of Salzburg, and the four dioceses created in 1243 for the Prussian lands of the Teutonic Knights, or *Deutschorden*), by 1500 around four dozen governed their own principalities (called *Hochstifte*, or, in the case of archbishoprics, *Erzstifte*), and many of them were eligible to sit in the Prälatenbank of the College of Princes of the Reichstag, as it took on definitive form in the fourteenth and fifteenth centuries.

Bishops had become progressively more powerful and wealthy in the disintegrating western Roman Empire, especially in Gaul, and either eagerly or reluctantly took up the office of "defender of the city" (*defensor civitatis*) recorded in Emperor Justinian's (d. 565) law code. The Carolingian dynasty, as it ascended in the eighth century, coopted these powerful prelates, and then extended to other bishops rights, lands, and comital responsibilities in the governance of the expanding realm. The Saxon dynasty (Ottonians) continued this heavy reliance on churchmen, so much so that the historian Leo Santifaller called it the Church System of the Reich (*Reichskirchensystem*). Although Timothy Reuter and others have questioned the usefulness of such a rigid term and its supposed uniqueness by comparison with royal reliance on the church elsewhere in Europe, it did come to pass that because of the nature of the empire, which had passed to the Saxons in 962, things turned out differently for the German church in the long run. The Investiture Controversy, or Gregorian reform, of the eleventh century (both misleading labels) culminated in the Concordat of Worms of 1122, according to which the emperor effectively surrendered control over the church in Italy and Burgundy in return for even greater control over the church in Germany than any of his royal counterparts legally enjoyed in their realms. Thus the emperor had the right to decide disputed elections of bishops and abbots in Germany (as opposed to the pope in the rest of Europe), and a bishop could not be consecrated until the emperor had invested him with his princely regalia. On the face of it, the emperors remained firmly in control.

Yet by 1300 prince-bishops were more clearly than ever pursuing their own policies and creating principalities with varying degrees of independence. Older interpretations have blamed the "loss" of imperial "control" on papal intransigence, the ambitions of the Hohenstaufen in Italy at the expense of Germany, the resistance of the Italian communes, the new stone fortifications in Europe that made conquest of castles and towns much more difficult, and the failure to develop specifically imperial institutions for the administration and enforcement of justice. Other historians have stressed the fundamental ungovernability from the top of such a large, expanding, and diverse empire. Recently, some historians such as Benjamin Arnold have argued that where we have tended to see conflict between emperors and princes and the failure of royal policies, we should instead discern patterns of cooperation and also royal successes, such as the surmounting of the problem of the dukes and the transformation of the title of duke in the twelfth century. All these arguments offer important insights and contain some truth. The indisputable fact nevertheless remains that in agreements made with the ecclesiastical and the secular princes in 1220 and 1232, respectively, Frederick II systematically extended to all of them rights and privileges that had been granted fitfully to individual princes over the course of several centuries. He thereby laid the legal foundation for the full emergence of principalities.

What prince-bishops would be able to do with those rights was another matter entirely. Ironically, it was in this period that their principalities largely ceased to grow. They had always depended first and foremost on royal largesse, which now became thinner and more complex (e.g., pawns). In addition, they faced revolts on the part of the burghers in their cathedral cities, leading to the withdrawal of the archbishops of Cologne to Bonn, those of Trier to Koblenz, those of Mainz to Aschaffenburg, and so on. Finally, they faced their greedy secular counterparts, who in the fourteenth and fifteenth centuries nibbled at their territories with an eye to gobbling them up, which in many cases they did in the course of the Reformation and which became one of the central factors precipitating the Thirty Years' War in 1618 (in the so-called ecclesiastical reservations clause of the Peace of Augsburg of 1555).

Three prince-archbishops stood out from all the rest. The Rhenish archbishops existing at the time of the *translatio imperii* (succession of the empire) in 962—Mainz, Cologne, and Trier—became the archchancellors of different parts of the empire and, ultimately, the three ecclesiastical electors of the empire enjoying precedence over the secular electors. Of the three archbishops, the archbishop of Mainz was the most important: head of the largest province in the Western church and arch-chancellor for Germany, he also had the additional right of convening and presiding over the College of Electors. Legally, he was the leading prince of the Holy Roman Empire.

Such powerful prince-bishops as these and their confreres in Münster, Osnabrück, and Salzburg (who survived for centuries between powerful Bavaria and Austria) were not necessarily pleasing to the prince-bishops of Rome, who raised few objections to talk of secularization in the eighteenth century. When secularization did come to pass in 1803, the last remaining rivals of the prince-bishops of Rome were eliminated, thereby paving the way for the unrestrained, restored papal monarchy of the nineteenth century—until it, too, was gobbled up by nascent Italy in 1871, for which the popes were unwilling to grant forgiveness until 1929.

Gandersheim

The oldest family foundation of the Liudolfing (eventually Ottonian) dynasty, Gandersheim was established in 852 by Count Liudolf and Countess Oda, in part as a result of Louis the German's missionary policy in Saxony. Located south of Hildesheim, the institution for female canonesses was amply endowed by the Ottonian and Salian houses, whose members held the position of abbess until 1125. Like Quedlinburg, the royal foundation of Gandersheim served as a center of political, liturgical, and historical consciousness for the Ottonian house. The canony received imperial protection from Otto I during the abbacy of Gerberga of Bavaria, teacher and patroness of Hrotsvitha, whose works include a history of the foundation, the *Primordia coenobii Gandeshemensis*. Otto II and Theophanu placed their daughter Sophia in Gandersheim, and their magnificent purple-and-gold marriage charter, now in Wolfenbüttel, was at some point also deposited there. Sophia's election as abbess in 1001 was the catalyst for the *Gandersheimer Streit*. This dispute between Hildesheim and Mainz over privileges, control of the canony, and seething political rivalries entangled the temporal and spiritual elite of the realm before its final resolution in 1030.

During the Investiture Controversy, the royal connection made Gandersheim a bastion of imperial support against the Saxon nobility. The following centuries were a continuous struggle against monastic reformers, the encroaching Hildesheim bishopric, and the increasingly powerful Welf family, who finally gained control of the abbacy in 1402. Despite economic decline and the change to Protestantism, Gandersheim remained a noble and independent foundation until its dissolution in 1810. Long a repository for precious art objects, the Romanesque church attained its present form, including the western "women's gallery," in the 1160s, though the building likely retains many features of its Ottonian predecessor.

Gardens and Gardening

The plan of St. Gall (816/820), a drawing of the layout for an ideal monastery, shows four separate gardens that correspond roughly to the main functions of gardens in the Middle Ages. The plan contains a vegetable garden, a physic garden, an orchard, and an enclosed cloister garden for meditation.

Whether adjacent to a peasant's hut or to the kitchen of a manor house, the ubiquitous kitchen garden with its wattle fence was essential for growing food and seasonings. Medicinal gardens likewise provided herbal treatments for the sick. In both types, plants were ideally grown in narrow, raised beds surrounded on all sides by paths for easier access. Larger estates and monasteries also had orchards where better fruit varieties were cultivated by grafting.

In patrician homes and larger estates the pleasure garden (*Lustgarten*) served as a place for dining, conversing, and social gatherings. Enclosed by a wall, fence, or rose hedge, the most elaborate of these gardens contained trellises, arbors, pergolas, a grassy mead with benches of turf or stone, raised beds for growing ornamentals, aromatic herbs, topiary plants, a fountain or well, perhaps a birdbath or dovecote, and some fruit or shade trees. Cloister gardens were usually divided into quarters by paths leading to a central fountain or shrub area. As a symbol of earthly and heavenly paradise, the garden provides the setting for significant episodes in courtly romances and a theme for numerous religious allegories.

The early Middle High German *Genesis* and *Exodus*, two distinct and substantial verse epics based on the Bible, bear grand witness to the revival of German literature in the latter half of the eleventh century and at the beginning of the twelfth. Vernacular literature in the Old High German period, roughly 750–1050, had been full of promise in its variety of genres and approaches, but its production was isolated and sporadic, its history marked by severe discontinuity. Beginning around 1050, German literature again found its voice, no doubt significantly on the eve of the Investiture Controversy and the ensuing radical transformation of medieval German politics, society, and religiosity. The *Genesis* and *Exodus* poems are among the most important products of this new literary flourishing. Their poetic form and narrative techniques likely provided models or at least examples for subsequent authors, most important, those who began to turn to secular subjects after the middle of the twelfth century. If there is any continuity in German-language literature, its beginnings are to be sought here in these works. Beyond their obvious and uncontested literary-historical value, the *Genesis* and *Exodus* poems offer religious and social historians fascinating and sometimes unique insights into a turning point of German history. Historians would well profit from a better acquaintance with this too frequently neglected and often falsely characterized literature.

The *Genesis* and *Exodus* exist in different redactions, which are preserved in two codices, both illustrated with line drawings. The Vienna Codex is the older, perhaps from before 1150. It contains the full *Genesis* (6,062 lines) with seven illustrations, a prose translation of the *Physiologus*, the popular medieval bestiary, and an incomplete version of the *Exodus*, up to line 1,480 in the Millstatt equivalent. Now preserved at Klagenfurt, the Millstatt Codex is from the late twelfth century and is one of the most extensively illustrated vernacular manuscripts of the period. It begins with the *Genesis*, including eightyseven illustrations inspired by the iconographic plan of the Vienna Codex. A rhymed *Physiologus* follows, including thirty-two drawings, and then a full version of the *Exodus* (3,316 lines). Five shorter religious works complete the codex, which is clearly arranged as a compilation of sacred history, beginning with the *Genesis* account of the creation of the orders of angels and closing with a fragmentary poem on the Heavenly Jerusalem. There are occasionally subtle and interesting differences between the Vienna and Millstatt versions of *Genesis* and *Exodus*, which appear to descend, independently of each other, from a lost archetype. For the most part, the discrepancies arise from the Millstatt redactor's attempts to modernize his material by changing linguistic forms and vocabulary and purifying rhymes. A third, partial version of the *Genesis*, the story of Joseph and his brothers, may be found as part of the *Vorau Books of Moses*, which are transmitted in the late-twelfth-century Vorau Codex.

The manuscript collections that preserve *Genesis* and *Exodus* offer clues to their reception and later interpretation. Art historians, for example, have argued that the illustrations point to the archiepiscopal court of Salzburg or perhaps to Regensburg and the Welf dynasty, specifically to Duke Henry the Lion (ca. 1129–1195), an important patron of vernacular literature. Linguistic evidence, however, proves that the poems themselves were composed much earlier than the codices. Both the *Genesis* and the *Exodus* are written in the Bavarian-Austrian dialect of early Middle High German. The Vienna version of *Genesis* is particularly archaic, suggesting an origin as early as 1050–1075. The *Exodus* is more recent, perhaps from around 1110–1130. The poetic form of the poems supports the proposed dating. Both are written in rhymed couplets with roughly four stressed syllables in a line. This scheme is followed more closely in the younger *Exodus*; the Vienna *Genesis* is far from regular in its metrical form and its rhymes are impure. Historical allusions in the poems are unfortunately too ambiguous to offer more precise conclusions about the date of composition.

The *Genesis* and *Exodus* are both anonymous, as are almost all vernacular poems from this period, and we are even uncertain whether the *Genesis* had a single author or was a collective effort. The religious matter of the poems, their authors' knowledge of Latin works, and indeed the very fact that they were written down at all show that the poets were churchmen, but whether lay priests or monks is unclear. Since the dominant trends in religiosity at this time were monastically inspired, this distinction, the subject of long debates, is perhaps irrelevant.

More tantalizing and pertinent is the question of the nature of the audience for whom these works were intended. The use of the vernacular would have been unlikely for a traditional monastic audience, which typically had recourse to the vernacular written word only in pedagogical settings. Regardless of how one judges the aesthetic merits of the *Genesis* and *Exodus* poems, they are clearly artistically ambitious works and far from being ancillary aids to translation. The eleventh-century institution of lay brethren associated with monasteries and their fast-growing numbers and importance in the second half of the eleventh century allow the speculation that the *Genesis* and *Exodus* may have been conceived for this interested, but incompletely "Latinized," audience. The *Genesis* was perhaps used as Lenten reading; the *Exodus* might have been connected with the Paschal liturgy. There is a marked interest in secular matters in both works, and the *Exodus*, especially, shows an intimate and enthusiastic knowledge of military affairs. The *Exodus* poet even addresses his audience as *mîne hêrren* (line 2907), or "my lords," possibly suggesting a lay audience at a secular court outside the monastery. Whoever the intended audience of these works, we may be certain of this much: The poets were clearly attempting to reach a wider spectrum of listeners than had been the case for the sophisticated Latin literature produced in the German-speaking lands prior to the Investiture Controversy. While there is nothing in the *Genesis* or *Exodus* to tie them to specifically Gregorian reform tenets, their transmission in the vernacular of monastic thinking and spirituality should be seen as an offshoot of the more general ecclesiastical attempt to reform the laity, which was initially favored by both the papal and the imperial parties. The *Genesis* and *Exodus* authors' basic approach to their material is essentially identical. Their main source is the Vulgate Bible, and their goal is to give narratively coherent adaptations. Despite this similarity of conception, the *Genesis* and *Exodus* poems sometimes differ significantly in their narrative strategies, in part because of their authors' interpretative intentions, but also because of the nature of the biblical books they used as their sources. The *Genesis* is initially strongly episodic, discursive, and homiletic. In typical monastic fashion, the author frequently pauses to amplify his material, drawing on his knowledge of theological and hermeneutic common-places. Thus he happily describes in detail the functions of the parts of the human body, or he explains the origins of the various human races as a result of the herbs eaten by the sons of Cain and how slavery and human inequality arose from Noah's curse of his son Ham. The author consistently interprets his material as a foreshadowing or prefiguration of Christian truth. For instance, he explains the colors of the rainbow instituted by God after the Flood as signifying the blood and water that flowed from Christ's side at the crucifixion, which in turn signify the sacramental mixing of water and wine and the grace of Baptism. Isidore of Seville and the Venerable Bede (or his German adapter and transmitter Hrabanus Maurus) are ultimately the principal sources here; some have also detected the influence of the Virgilian biblical epic of Avitus (d. 518).

The episodic style changes as the *Genesis* author relates the history of Abraham, Isaac, Jacob, and most especially Joseph, whose story accounts for almost half of the text. Extraneous and nonessential elements—anything distracting from the narrative flow—are carefully excluded. The author develops an adroit epic style that is especially alive to the modern reader through its skillful characterizations and its anachronistic projection of the author's medieval surroundings into the world of the patriarchs. We hear, for example, of "retainers," "courtly feasts," "bold heroes," "ministerials," and "knights" (*guote chnechte* as well as the first literary use of the courtly term *rîter*).

The *Exodus* poet's ostensible purpose is typological, not homiletic. He states in his final lines that like Moses, we should flee from the Egypt of this world to journey to our true homeland, the heavenly Jerusalem. But the *Exodus* is not an extended allegory. Its author restricts himself to the first fifteen chapters of the biblical Exodus, avoiding theological commentary to focus on the conflict between Pharaoh and Moses. The poet clearly takes pleasure in constructing his bellicose narrative. Pharaoh's description of the Israelites, for example, could as well stem from a later secular poet: "They are good knights and well know how to battle" (*si sint guote chnehte, geturen wole vehten*, 11. 95–96). These military elements have led Dennis Green to argue rightly that the *Exodus* breathes of the crusading spirit. Indeed, the presence of vernacular lay culture within the framework of a deep Latinate religiosity, much like the Crusaders' volatile mixture of piety and violence, is the essence of the fascination of *Genesis* and *Exodus*.

Georgslied

The sole surviving Old High German narrative hymn, "Georgslied" (Song of George) is preserved in one copy, a later addition also containing the Old High German scratched gloss "Kicila Verse" (Gisela's Verse) from the tenth (or early eleventh) century, composed of circa fifty-nine four-beat lines with interior rhyme, in ten strophes, perhaps incomplete at the end. Parchment and writing are damaged, the text in part illegible; scribal idiosyncrasies (especially transposition of letters) further encumber deciphering. A following entry *nequeo Vuisolf* (I, Wisolf, can't), is widely thought to be the complaint of a scribe frustrated by his task, i.e., writing down the "Georgslied." However, the hand of Wisolf does not match that of the "Georgslied." The hymn, probably composed at or near the end of the ninth century (perhaps in or near Prüm or Reichenau) in connection with a celebration of St. George (for a church benediction, transfer of relics, or feast day on April 24), widely venerated in southwestern Germany, relates his trial, steadfastness (strophes 1–2), prison sentence, miraculous deeds (strophes 3–4), triple martyrdom and resurrection (strophes 5–7), raising a dead man, conversion of Queen Elessandria, and banishment of Abollin, the hell dog (strophes 8–10). Three variable refrains conclude each strophe (lacking in strophe 10), and were probably sung by a congregation in response to a cantor chanting the stanzas. Most episodes can be traced to various extant Latin prose legends surrounding St. George, but no one source contains all the elements of the Old High German rendition.

Gerhoh of Reichersberg (1093–1169)

Bavarian canon, controversialist, reformer, and correspondent with emperors and popes, Gerhoh, provost of Reichersberg, was a prolific writer and an important figure in twelfth-century literature and religion. Gerhoh was a strong advocate of continued reform of the church and was a vocal critic of the worldliness and wealth of the ecclesiastical hierarchy. Although critical of ecclesiastical abuses, Gerhoh was equally critical of secular abuses of power and was an important supporter of Innocent II in the papal schism of 1130 and a supporter, after initial neutrality, of Alexander III during the schism of that pope's reign. Gerhoh was also a representative of the new apostolic spirituality and the new urban milieu emerging in twelfth-century Europe. A canon and active preacher, Gerhoh's teaching offered an ideal of radical reform rooted in Gregorian ideals of the world. His definition of simony, the selling of indulgences, threatened the prebendary (grant-giving) system of the church and opened him to accusations of heresy in the autumn of 1130. He was saved from a heretic's fate only by the protection of powerful reform-minded members of the ecclesiastical hierarchy. But Gerhoh's criticism was not limited to the secular and religious elite; it extended to the representatives of the "new learning" including Peter Abelard, Gilbert de la Porée, and Peter Lombard. Finally, Gerhoh was a theologian of some note and author of a number of important treatises including *Liber de aedificio Dei* (On God's House) and *Libellus de ordine donorum Spiritus sancti* (On the Order of the Gifts of the Holy Spirit). His most interesting theological work, however, can be found in his apocalyptic treatises, *De investigatione Antichristi* (The Investigation of Antichrist) and *De quarta vigilia noctis* (The Fourth Watch of the Night). In these works he develops a theology of history that posits the imminent end of time in his own day. He provides an outline of history based on the church's successful *struggle* against various antichrists culminating in the age of Pope Gregory VII. It was in the years following the reign of Gregory that the times of trouble and turmoil—evident for Gerhoh in the rampant simony and worldliness of many clerics and in the struggles between the pope and the emperor, Frederick Barbarossa—preceding the appearance of Antichrist occurred. Indeed, Gerhoh's work suggests that the biblical prophecies forewarning of Antichrist had been fulfilled and that his coming was imminent.

German Language, Dialects

A dialect is a distinctive speech form used only by a subset of the speakers of a language. Dialects are usually defined by region, sometimes also by class (British "received pronunciation") or ethnicity (African American English).

In the early Middle Ages, i.e., before around 1000, German was spoken not only in western Germany but also in Switzerland, Alsace, and parts of Austria. Early in this period, German was also spoken—at least by the Frankish ruling class—in much of northern France and by the Lombards in northern Italy. This huge area was settled at different times by various Germanic tribes whose movements are sometimes difficult to trace. Their "West Germanic" dialects differed not only from the North Germanic of Scandinavia and the East Germanic of the Goths, but also from each other. They are not lineal descendants of a uniform "Proto-German" (*Urdeutsch*), and, like the modern dialects, they are not "corrupt" forms of some earlier, "purer" language.

The oldest attestations of German proper are of German words incorporated in Latin texts. Soon we also find glosses (*Abrogans*) and connected texts (Old High German *Isidore*), all written by clerics who normally wrote in Latin. Manuscript spellings are often ambiguous: *uuir*, usually *wir* (we), also represents *vuir* (fire). Despite many inconsistencies, it is clear that several dialects were written. Traditionally, they are classified by the effects of the Second or High German Consonant Shift (*zweite Lautverschiebung*), completed by about 700. Listing first those dialects most affected, we may distinguish:

Upper German, consisting of:

Alemannic (the southwest, including Switzerland and most of Alsace), important texts include the translations known as the Murbach Hymns and translations with commentaries by Notker Labeo of St. Gall.

Bavarian (Bavaria and an increasing portion of Austria). Important texts include the poem *Muspilli* and a version of the Lord's Prayer from a monastery at Freising.

Middle German, including:

East Franconian (Würzburg, Bamberg), used for the Fulda translation of the Syrian monk Tatian's Life of Christ, or Gospel Harmony (*Evangelienharmonie*). Of all older dialects, this most resembles modern standard German. From the twelfth century onward, it is usually classified as Upper German. Rhenish Franconian (Mainz, Frankfurt, Lorsch, Worms) is the language of the ninth-century (trilingual) Oaths from Strasbourg. The subdialect South Rhenish Franconian is exemplified by Otfrid's Gospel poem.

West Franconian in northern France, perhaps also Luxembourg and Lorraine. No surviving texts are unambiguously in this dialect, and by Carolingian times, the ruling class may have adopted Rhenish Franconian.

Middle Franconian, including Mosel Franconian (Trier) and (at least later) Ripuarian (Cologne).

Low German, containing:

LowFranconian (lower Rhine), known from some psalm translations.

Old Saxon (modern Lower Saxony), best known from the poem *Heliand*.

Upper and Middle German are collectively called High German. Low German was not affected by the consonant shift; Germanic *p t k* remain as [p^h t^h k^h]. But Upper German dialects have [f s x] in some situations, [pf ts kx] in others; [x] is the sound written <ch> in modern *machen* (make). Examples, in characteristic Old High German spellings: *offan* [offan] "open," *uuazzar* [wassar] "water," *mahhôn* [maxxo:n] "to make" (<: indicates a long vowel), *phad* [pfad] "path," *aphul* [apful] "apple," *zuei* [tsweij] (not [tswaij]) "two," *chorn* [kxorn] "grain"—Middle German has [f s x] and [ts] as in Upper German, but has [K^h] rather than [kx], and many varieties have [p^h] rather than [pf]: Rhenish Franconian *korn*, *appul*, *pad*.

A further difference is that Germanic *b d g* usually yield Upper German [p t k]: Bavarian and Alemannic *kepan* (give), *tak* (day). Rhenish Franconian writes rather *geban*, *dag*, while Mosel Franconian and Low German have *geven*, *dag*.

Almost until the present, German dialects have continued to diverge. Alemannic and Bavarian of the eighth or ninth century look nearly identical. Yet their modern descendants—Swiss, Swabian, Alsatian, and Bavarian dialects—are instantly identifiable and not necessarily mutually intelligible. Notker's careful Alemannic orthography (ca. 1000) already differs sharply from Bavarian and indicates development toward the tricky consonantism of modern Swiss German.

Migration produced further change. Already before 1000, German settlers moved east and south. For centuries, the ever-increasing size of the German-speaking world favored divergence. Low German was eventually spoken in Königsberg (Kaliningrad) and beyond, but it differed from varieties farther west. New "East Middle German" dialects developed when settlers from Upper and West Middle Germany colonized Thuringia, Upper Saxony, and Silesia, blending their dialects and creating new forms. Other colonial dialects (e.g., isolated Bavarian pockets in northern Italy) differed because they preserved archaic forms that had been replaced elsewhere.

Sometimes even shared developments split dialects apart. Beginning before 1200, [i:] in many dialects became a diphthong: [mi:n] "my" > [mein], later [main] or [mdin]. But German already had [ei] in words such as *ein* (one). Almost everywhere (though not in modern standard German), older [ei] made way for the new by changing first to [ai], then variously to [oa], [a:], [y:], or [e:]. Although the High German consonant shift still provides a convenient way to classify dialects, it is the sheer number of later unshared changes (especially in the vowel system) that sometimes makes neighboring dialects difficult or even impossible to understand.

But not all changes led to greater diversity. By the twelfth century, many Alemannic (and perhaps already some Bavarian) dialects had abandoned Upper German [kx p k] <Germanic/k b g/, using [k^h b g] as in Franconian. This created a large new area of fairly uniform speech. When secular courtly literature arose shortly before 1200, it is perhaps no accident that the most significant courtly epics were written by Alemannic or East Franconian authors. Like the courts themselves, Gottfried von Strasbourg and the knight Hartmann von Aue (Alemannic) and Wolfram von Eschenbach (East Franconian) favored a more-than-regional language and style. Their model of courtly language was followed, if not always exactly, by many epic and lyric poets from other regions. But this model never became obligatory (the normalized spelling of modern editions is misleading); scribes even a few years later used more modern forms without compunction.

Another unifying force was the use of German for civil records after 1250. Though each city or court at first used something resembling the local dialect, the usage of certain chanceries gained increasing prestige and was widely imitated. Luther himself claimed to write the "common German language," created, he believed, by the chanceries of Duke Elector Frederick of Saxony and Emperor Maximilian, and his language became the basis for the modern standard written language. Yet the spoken dialects were long unaffected by chancery German (which was far from uniform) or even by Luther's language. It is telling that the Luther Bible had to be retranslated into Low German, the last edition appearing in 1621.

Gernrode

Situated at the foot of the northeastern edge of the Harz mountain range just south of Quedlinburg (Sachsen-Anhalt), Gernrode was established as a foundation of canonesses in 959 by Gero, the foremost margrave in Ottonian Saxony. The canonry and its church served as a memorial for his two sons and as a family burial site; Hathui, Gero's widowed daughter-in-law, served as the first abbess, and Gero himself was interred there in 965. In 961 Gernrode received papal immunity from John XIII and royal protection and immunity from Otto I. The foundation's importance in the Ottonian period is indicated by its series of abbesses from the royal house, including Otto II and Theophanu's daughter Adelheid, who at one point ruled over Quedlinburg, Gernrode, and Gandersheim simultaneously.

The church, begun in 959, is the best surviving example of Ottonian architecture. The east end comprises a windowless apse, choir, and short transept with pronounced absidioles (projecting chapels). Underneath is a so-called hall crypt that, uncommonly, integrates features of ring- and cross-shaped crypts as well. A small adjacent *confessio* held the arm relic of St. Cyriacus, to whom the church was rededicated after Gero obtained the relic during a pilgrimage to Rome in 961. The unusual galleries above the aisles have been linked to Theophanu's presence in Quedlinburg, but in fact their origin and use remain

Gernrode, St. Cyriacus, view of westwork. *Photograph: Adam S.Cohen*

unclear. Another rare feature in the nave is the Holy Sepulcher in the south aisle, dated to circa 1080. Containing a sarcophagus and decorated with high and low relief sculpture, this small space was used for enactment of an Easter play. As a result of rebuilding in 1130, the original appearance of the church's west facade is uncertain; although the imposing towers are Ottonian, the west choir and crypt belong to the twelfth century.

Named with his father, Johann, among the stone masons of Frankfurt in 1387, Gerthener had taken over his father's shop by 1391. In 1395 he was taken onto the city payroll. In 1415 he calls himself "*der stadt frankenfurd werkmeister*" (master of the works of the city of Frankfurt), a position he had probably already held for some time. Most of his documented career was spent working on the church of St. Bartholomew: he was appointed head of the works in 1408. After finishing the transept here, he designed and, in 1415, began building the single tower that stood as a symbol of the city's independence. An octagonal story topped by a dome and an elaborate lantern surmounts the two lower stories on a square plan. The tracery decoration and especially the corner buttresses become increasingly ornate with each succeeding story. On the two portals we see the innovative uses of tracery forms, specifically hanging tracery and tracery vaults, that would become hallmarks of Gerthener's style.

In addition to his work on St. Bartholomew's, Gerthener was also involved in other projects in and around Frankfurt. In 1399 he guaranteed his work on the Alte Brücke (Old Bridge) across the Main, and in 1411 his work on the city wall is documented. Gerthener's mastery of the forms of late Gothic architecture, plus his visibility as head of the works on the coronation cathedral, drew his work to the attention of other patrons, and by the 1410s his reputation reached outside the city. Payments to Gerthener in 1407 from the funds of the so-called Gelnhausen tax, to which only King Ruprecht von der Pfalz (1400–1410) had access, may have been in compensation for the so-called Ruprechtsbau (Ruprecht building) at Heidelberg castle and/or the sacristy at Speyer Cathedral, begun in 1409. Gerthener's name appears in 1414–1415 in the financial records of the church of St. Katherine in Oppenheim, where he designed the west choir. The variety of the unusually fanciful tracery patterns in the tall windows and other details recall Gerthener's work in Frankfurt. In 1419 he was called to Strasbourg, where, with other masters, he advised on the continuation of the cathedral facade.

Other works sometimes associated with Gerthener fall into two groups: those on which his participation is assumed on the basis of his city positions and attributions on the basis of stylistic affinities with his secured works. Into the former category fall work on the town hall (the Römer), adapted from two patrician houses beginning in 1405, and the trade hall for linen, flax, and hemp products, the Leinwandhaus. Work on the city fortification system underway circa 1400 would also have been expected of the city's *Werkmeister*. This variety in the production of the medieval builder/architect—repair or rebuilding of existing structures, design and erection of both functional buildings, like bridges and fortification towers, and what we might today think of as "high" architecture, seen especially in churches—is typical of the era. The career of Peter Parler, for example, with whom Gerthener may have worked in Prague during his travels as a journeyman, also exhibits this diversity.

The high quality and use of architectural forms similar to those at Frankfurt produce general agreement that Gerthener was also at work on the so-called Memorienpforte (portal to the memorial chapel) at Mainz Cathedral about 1425. At Frankfurt, work on the church of the Virgin (Liebfrauenkirche), that of the Carmelites, and St. Leonhard's, all dated between 1415 and circa 1430, is sometimes associated with Gerthener on the basis of stylistic similarities to his documented works.

Three payment records indicate that Gerthener was also active as a sculptor. The sweet expressions and smoothed volumes of both the faces and the draperies of the two male saints on the cathedral side of the Memorienpforte are typically considered to exemplify his style. Other works sometimes assigned to Gerthener on stylistic grounds include the tympanum with the elaborate, multifigured scene of the Adoration of the Magi above the south portal of the Liebfrauenkirche in Frankfurt (ca. 1425), and the tomb of Anna von Dalberg (d. 1410) in the church of St. Katherine in Oppenheim. The art historian Kniffler argues that the epitaph of Siegfried zum Paradies, now in St. Nikolaus in Frankfurt (ca. 1420), and that of Johann II von Nassau (d. 1419), archbishop of Mainz, are more likely to be the master's own work.

Somewhat more problematic attributions are a print with the depiction of the Holy Grave (Berlin, Staatliche Museen Preussischer Kulturbesitz, Kupferstichkabinett), whose figures are close in style to those of the Memorienpforte, and a large-scale drawing with the design for Gerthener's tower at St. Bartholomew's (Frankfurt, Historisches Museum). Whether these are works by the master himself or by those who worked with him closely, Gerthener was an inventive artist of unusual energy and breadth.

A monastic, mystic author, Gertrud the Great (*die Große*) entered the monastery of Helfta (near Eisleben) at the age of almost five. Her *Vita* (Life) presents her as a precocious child keenly interested in studying and eventually acquiring a comprehensive liberal arts education in Helfta. Under its abbess Gertrud von Hackeborn, the Helfta monastery had developed at that time into a center of culture and learning. Together with her older sisters in the community, Mechthild von Hackeborn (the abbess's sister) and the Beguine Mechthild von Magdeburg, Gertrud was instrumental in making Helfta into the focal point of thirteenth-century mysticism.

Gertrud's mystical conversion experience happened when she was twenty-five (on January 27, 1281). From a lukewarm monastic, avid in the pursuit of secular literature, she was turned into an ardent lover who dedicated herself wholeheartedly to a Christ-centered spirituality. Some eight years later, during Holy Week of 1289, Gertrud suddenly felt "violently compelled" by the Spirit to write the memorial of this pivotal experience (to be found in Book II of the *Legatus*, "Herald").

Gertrud never held an important office in her monastery. She spent her life studying theology (influences of Bernard of Clairvaux, William of St. Thierry, Hugh of St. Victor, and others are noticeable) and writing exegetical and spiritual texts in which scriptural and liturgical references abound, and where even nature plays a role. She also collaborated on Mechthild von Hackeborn's work, the *Liber specialis gratiae* (Book of Special Grace). Moreover, Gertrud functioned as a much sought-after pastoral counselor both of her sisters and of lay people. Gertrud died on November 17 at the age of forty-five or forty-six, but details of her death are not known. Gertrud von Helfta has been venerated as a saint first by the Benedictine Order (since 1674) and since 1734 officially by the entire Roman Catholic Church. She was also made the patron saint of the West Indies.

Presumably only a portion of Gertrud's writings has been preserved. Numerous prayer books that were published in many languages since the sixteenth century under the names of St. Gertrud and Mechthild (latest English edition, Philadelphia 1955) are not authentic. The *Legatus divinae pietatis* and her brief *Exercitia spiritualia*, consisting of prayerful meditations based on Scripture and the liturgy, are commonly listed as Gertrud von Helfta's works. The *Legatus* (The Herald of God's Loving-Kindness) consists of five parts: Books 3–5, roughly based on material provided by Gertrud, were composed by a sister in the Helfta community; Book 1 constitutes Gertrud's *vita* written after her death. Only Book 2 was written by Gertrud's own hand. Together with the equally authentic *Spiritual Exercises*, these two texts are unique jewels of medieval mysticism.

Gertrud's work was composed in Latin. An early fifteenth-century Middle High German translation, *ein botte der göttlichen miltekeit* (its oldest manuscript is dated 1448) is a deliberately shortened version of Books 3–5 of the *Legatus*. The manuscript tradition of Gertrud von Helfta's work is meager. Of the *Legatus*, eight complete or partial fifteenth-century manuscripts are known. No manuscript is extant of the *Spiritual Exercises*. Its survival was made possible by the first publication of Gertrud von Helfta's Latin work in 1536 by the Carthusian Johannes Lanspergius of Cologne. Since then, most early editors and translators found it necessary to attach to Gertrud's work an initial *apologia* attesting to the orthodoxy of her writings.

To separate Gertrud von Helfta's specific way of thinking from the general mystical and intellectual atmosphere of Helfta, interpretation must focus on the *Exercitia* and her own Book 2 of the *Legatus*. Gertrud's "confessions" show her as profoundly humble. Yet simultaneously she sees all human beings invested with regal dignity through Christ's incarnation. Invisibly stigmatized and mystically united to Christ through an exchange of hearts, Gertrud encounters the divine as a self-confident woman. Her distinctive characteristic is her inner freedom (*libertas cordis*), which leaves her little patience with petty ecclesiastical regulations. The dominant tone of Gertrud von Helfta's work is that of intense joy, as best expressed in her mystical *jubilus* (*Exercitia*). Her God-language is notable for its imaginative inclusiveness. The theology of the Sacred Heart is to be credited more to the general Helfta community than to Gertrud.

Gesta Romanorum

An anonymous collection of pious exempla (didactic tales), *The Deeds of the Romans* were in wide circulation from the early fourteenth century in Latin and various vernacular versions, mostly German, but also English and other languages. Scholars are divided about its country of origin, though this is likely to be England or Germany. The title (also *Romanorum historia*, *History of the Romans*) seeks to lend authority by emphasizing both the antiquity and the spiritual nature of the work.

Each "chapter" contains an exemplary story, generally set in classical Rome, with emperors as principal players in many. This is followed by a moral, invariably introduced by the invocation *carissimi* (dear ones; in the German version, *ir lieben*). Most commonly, the moral is typological, the characters being seen as representative of Christ, Mary, or the Church. Each chapter has a title that occasionally picks up on a motif from the story, more usually from the moral: "On the Sin of Conceit" (De peccato superbie); "On Forbidden Love" (De amore inordinato); "On Perfecting Life" (De perfectione vite); "On the Reign of the Heavens" (De regno celesti), and so on. The narrative style is sober and succinct; the anecdotes may be as short as one hundred words with morals of a similar length, though some of the tales are many times longer. The selection varies widely. In total there are almost three hundred exempla in the *Gesta Romanorum* tradition, though none of the manuscripts contain all of these and the German versions have considerably fewer. Two hundred fifty Latin and forty-four German manuscripts testify to the vast popularity of the work, and its influence on subsequent German literature was immense. It is the direct source for numerous motifs in sacred and secular literature alike. The poet Lessing's story of the three rings in classic drama, *Nathan the Wise* (1779), became familiar in the German tradition through this medium, as did material of Jewish origin such as the legend of the animals that drank from Noah's vine and gave wine its properties. The *Gesta Romanorum* appeared in a series of printed editions from the late fifteenth century.

Glosses, Old High German

The term "Old High German glosses" is understood to signify Old High German words or phrases (including parts of words) entered in Latin manuscripts to translate or explain Latin words or phrases, or make difficult grammatical and syntactical constructions transparent. Written with ink or scratched on the parchment with a stylus in order not to change the appearance of the manuscript (dry point glosses), they are placed between the lines (interlinear), in the margin (marginal), or within the text as a part of its form (context). In some manuscripts the glosses are in code. They vary in frequency from a few isolated glosses to word-for-word glossing, which represents the final step before actual translation. After a text had been glossed, the glosses together with their Latin *lemmata* (head words in a glossary) could be excerpted to form a glossary (*glossae collectae*). Such glossaries could then be rearranged alphabetically or according to subject matter (class glossaries). Alphabetical or class glossaries may also be derived from Latin-Latin glossaries. There are almost 1,200 glossed manuscripts extant, which contain about 220,000 Old High German glosses, consisting of roughly 21,000 different words (including proper names). Latin and vernacular glossing went on in most monasteries. For vernacular glossing some important centers can be singled out: Echternach, Fulda, Mainz, Würzburg; Murbach, Reichenau, St. Gall; and Benediktbeuren, Freising, Regensburg. The most frequently glossed texts were the Bible; works of some pagan and early Christian poets (Vergil, Horace, Persius, Juvenal, Prudentius, Arator, Alcimius Avitus, Juvenius); works of some ecclesiastical authors (Augustine, Orosius, Boethius); school texts (Priscian, Euthyches, Donatus); works of ecclesiastical instruction (Gregory the Great) and church law (*Canones*). The glosses are the richest source material for the history of the German language from the beginning of written records in the eighth century to the early eleventh century. They are equally important for the cultural history of the Carolingian and Ottonian Middle Ages. In addition, they allow us a glimpse into the activities of the medieval classroom.

Golden Bull

The Golden Bull, or *Bulla Aurea*, named after its gold imperial seal, originated in Emperor Charles IV's desire for a broad imperial reform, hoping for an imperial peace and regulating coinage and tolls. At two different imperial courts, the first on January 10, 1356, in Nuremberg and the second in Metz on December 25, Charles instead promulgated a more narrowly focused reform. The "law book," as Charles called it, largely confined itself to regulating the election of the king and promoting the powers of the new electoral princes.

Concerning the election of the "king of the Romans," since the mid-thirteenth century fewer and fewer princes had been allowed to take part. The Golden Bull formally limited participation to seven electoral princes (*Kurfürsten*), specifically the three archbishops of Mainz, Cologne, and Trier, the king of Bohemia, the duke of Saxony, the margrave of Brandenburg, and the count Palatine by the Rhine. All other princes and prelates, as well as the pope, were excluded from direct collaboration. Proper procedures for an election were carefully spelled out. And a simple majority of four votes was sufficient for succession. The duly elected king of the Romans had the explicit right to become emperor of the Romans, to be crowned by the pope in Rome. Any papal rights to approve the candidate or to become regent or vicar of the empire during a vacancy were ignored.

Second, the Golden Bull codified many privileges of the seven electoral princes, who as "pillars" of the empire took on a new status as a "college" above the estates of the clergy, nobility, and townspeople. They were to meet yearly to advise the emperor (although that provision did not really succeed in practice). To prevent any possible trouble about dividing up electoral votes, their territories were made indivisible by inheritance. If an electoral dynasty died out, its vote and territory escheated, i.e., fell back to the king. Electoral princes gained full rights to capital justice as well as to the regalia or control of local mining, tolls, coinage, and the supervision of Jews. The law tried to constrain the growing power of city governments, which were forbidden to readily accept new citizens or to make alliances with one another against the princes. Seven copies of the document survive, preserved by several of the electoral princes, and by the cities of Frankfurt and Nuremberg. The Golden Bull can be considered as the foundational constitutional document of the Holy Roman Empire from the late Middle Ages to its end in 1806. While it technically ended the legal possibility of a hereditary kingdom, many emperors, like Charles IV himself, were later able to get their sons elected kings to succeed them through the control of electoral votes and influence on the electors. And while the Golden Bull strengthened the dominance of the electoral princes, other magnates soon sought similar rights.

Goslar

The economic importance of Goslar (Lower Saxony) was based on the silver deposits in the nearby Harz Mountains that were exploited from 968. As a consequence, Emperor Henry II erected in the years 1005–1015 the palatine complex, which was subsequently rebuilt under his successors of the Salian dynasty. Its center forms the palace hall, largely reconstructed in 1868–1879, flanked on either side by the double-storied chapels dedicated to St. Ulrich and Our Lady (now demolished), both of which displayed Byzantine elements in their architectural scheme. To the west of the palatine complex, the Romanesque collegiate church of St. Simeon and St. Jude, erected in 1047–1050 and demolished in 1819, served as the imperial court church. Only its northern porch, which now houses the imperial throne, has survived.

The imperial palatine complex was surrounded at a distance by monastic units. The church at Georgenberg, demolished for military reasons in 1527 but known through archaeological evidence, was a copy of Charlemagne's celebrated palatine chapel at Aachen. North of the town, the Augustinian monastery of Reichenberg was founded in 1117, and the church, today a ruin, was erected following the scheme of Hirsau. The parish church of Frankenberg became the western termination of the medieval town. After the foundation of an Augustinian nunnery, the original basilica with its western gallery for the territorial lord was vaulted. The church of St. Stephan in the eastern part of the town, mentioned for the first time in 1142, was also originally a Romanesque basilica; it was rebuilt after a fire in 1728. At the northern margins of the town, and connected to one of the town gates, the church of the Benedictine nunnery Neuwerk was founded circa 1175 by the imperial provost Volkmar of Wildenstein. Originally planned with groin vaults, the church, a cruciform basilica, was finally completed with heavy rib vaults.

At the center of the town is the market with the town hall and the main parish church of St. Cosmas and St. Damian, which was mentioned as *ecclesia forensis* (market church) in 1151. Like the monastic churches of the town, this church is a cruciform basilica that was vaulted in the thirteenth century. In the late Middle Ages, Goslar acquired the status of an imperial city and developed its own territory. Around 1500, the renewed wealth is reflected in rebuilding projects at the churches and the fortification. Major reconstructions in late Gothic forms are still to be seen at the Frankenberg church and at St. Jacobi. The prestigious project of rebuilding the main parish church according to plans from Strasbourg, however, never materialized; its already constructed late Gothic south wall was finally demolished in the nineteenth century. The town hall, a double-storied building with its open market hall on the ground floor and an adjoining chapel, was erected as the western front of the market. Other monuments of this time are the houses of several guilds, for example, the Kaiserworth, erected in 1494 on south side of the market. The civic architecture of this time displays a richly decorated timber construction. The town hall preserves the Goslar Evangeliary (or gospel lectionary), a manuscript in the Byzantine manner of the so-called *Zackenstil* (zigzag style) from the mid-thirteenth century.

Introduction

Originally a derogatory term used to describe northern European architecture made before the fifteenth century, the word *Gothic* first appears in the works of the art historian Giorgio Vasari (1511–1574) and other humanist writers of the Italian Renaissance. In these writings architecture like that of Milan Cathedral is denigrated as the work of the Goths, the invaders who destroyed ancient Rome and the standards of classical art, which were being revived by Italian architects. These barbarian Gothic invaders were equated with the Germans by Vasari and other Italian Renaissance writers. Perhaps because of this early association of the Gothic with Germany, German writers have long identified the Gothic as a particularly German style. As early as the sixteenth century, Strasbourg Cathedral was described as representing the high cultural level of the German people and was referred to as the eighth wonder of the world. By the twentieth century even German popular culture perceived some works of German Gothic art, such as the figure of Uta from Naumburg (memorialized with her husband, Ekkehard II, in a statue as cathedral founder), as embodiments of the German national spirit. Although the Gothic style was identified with Germanic invaders by Renaissance writers, the term has always described an art and architecture actually developed in France in the twelfth and thirteenth centuries. As the term *Gothic* was refined in art historical usage, French art and architecture became the standard for Gothic stylistic development. Thus its adaptation to other countries has always been somewhat problematic. German artworks do not always follow normative Gothic (i.e., French) development. This was especially the case during the twelfth and thirteenth centuries, when Germany developed independent artistic styles such as the *Zackenstil* (jagged style), and many German works of sculpture and architecture show combinations of Romanesque and Gothic elements, leaving art historians uncertain how to classify them.

Architecture

As the Gothic style spread from northern France in the late twelfth century, it assumed different forms, creating myriad styles rather than one universalizing ideal. Early German Gothic, i.e., Gothic in German-speaking lands, encompasses various building types and forms, in which Romanesque values were often retained. Elements such as pointed arches, ribbed vaults, and linear articulation emphasizing verticality, thinness, and openness ran counter to the Romanesque of the cathedrals at Speyer, Mainz, and Worms and the hall at Goslar, where the power and continuity of imperial traditions were expressed in monumental volumes, blocky solidity, and solid wall planes. Gothic elements occurred first in the western areas of Germany (Limburg an der Lahn, Cologne, Bonn) and in the restrained architecture of the Cistercians (Maulbronn, Lilienfeld). By the second quarter of the thirteenth century, the luminous diaphanous work of French Gothic began to be imported wholesale, first in what is termed "High Gothic" (Liebfrauenkirche, Trier; St. Elizabeth, Marburg), then in the rayonnant (Strasbourg and Cologne Cathedrals). German masons were sent to study the latest buildings in France, referred to as *opus francigenum* (ca. 1290, *Chronicle* of Burchard von Hall, cited in Frisch 1971:56), or learned in cathedral building workshops. By the fourteenth century, however, German master masons had developed an inventive Gothic vocabulary far beyond French precedents. But German Gothic was never a unified style; the many regional variations have been grouped together historiographically mostly for nationalistic reasons, whereas in the Middle Ages connections were produced through relationships of geography, patronage, politics, and economics.

Beginnings of Gothic.

Around 1200 on the Lower Rhine, Gothic elements appeared in the upper stories of buildings begun as Romanesque. In Cologne, responding to northeastern French Gothic forms, Gross St. Martin incorporated linear shafts and ribbed vaults, while St. Gereon (1219–1227) included pointed arches, thin double-wall construction, tracery, and flying buttresses. At the time of their expansion into Germany, the Cistercians built first in Romanesque style but often included pointed arches and ribbed vaults, disseminating them throughout Europe to earn the historians' appellation "missionaries of Gothic." By the thirteenth century, they adopted details from the Gothic of northeastern France, while retaining their orders ground plans and the sculptural roundedness and mural surfaces of early German Gothic.

The chapel of St. Michael's, Ebrach (ca. 1200), as well as at Maulbronn the south walk of the cloister (ca. 1220–1230), the entrance porch or *Paradies* (ca. 1210–1220), and the monks' refectory (ca. 1220) used trefoil arches, diagonally planted supports, and banded shafts *en délit* (detached colonnettes, or small columns) inspired by northeastern French practice from the regions of Noyon and Soissons. The refectory of Maulbronn is especially open with its slender columns and tall lancets. At Lilienfeld the ambulatory is impressively Gothic, perhaps responding to requirements of its patron, Margrave Leopold VI.

Early Cathedral and Great Church Gothic.

While German cathedrals were rebuilt slowly in the thirteenth century, builders produced a "gothicized" Romanesque hybrid, retaining a ceremonially

weighty cathedral architecture. Two of the most powerful cathedrals, Bamberg (1220s-1230s, perhaps begun circa 1212), erected under Bishop Ekbert of Andechs-Meranien (1203–1237), and Naumburg, with blocky piers, mural surfaces, and ribbed vaults spanning the double bays of Romanesque Italo-German design. After midcentury, openwork towers modeled on those of Laon were added to both cathedrals, their Gothic airiness appropriate for high appendages. With Gothic detailing, the south transept arm of Strasbourg (ca. 1230–1240) is similarly powerful. Begun in 1209, the choir of Magdeburg Cathedral reveals an idiosyncratic adaptation. It becomes increasingly Gothic as the elevation rises, using thin angle shafts, crocket capitals, and five-part ribbed vaults with dogtooth ornament, all derived from northeastern France. As several of these elements occur at Maulbronn, the same designer has been suggested. Mixed with reused materials, some previously donated by Otto the Great, this architecture manifests rich, sculptural power. However ungainly by French standards, it emphasizes the meaning of its venerable past at the expense of a simple style-consciousness. German Gothic means more than French-derived forms adopted for their own sake. During the first quarter of the thirteenth century several Rhenish churches were built, drawing on Gothic architecture from nearby regions. St. Georg at Limburg an der Lahn (1213–1235) incorporated flying buttresses and four gories, inspired principally by Laon Cathedral, but its seven-tower grouping also acknowledged regional building as at Neuss and Gross St. Martin in Cologne; it thus demonstrates the difficulty of separating related traditions. The nave of the Münster at Bonn (upper stories, ca. 1220–1230) drew from the cathedrals of Lausanne (ca. 1190–1230) and Geneva (late 12th c.) for its double-wall skeletalization and emphasis on width.

High Gothic.

By circa 1230, German plasticity and mural surfaces yielded to the lightness of French style, embraced in the Liebfrauenkirche (Church of the Virgin) at Trier (ca. 1227–1233) and St. Elizabeth's at Marburg (1235–1283). Perhaps designed by one master using the same foot-measure, both show knowledge of Reims work and Gothic verticality. The plan of Trier, however, responds to the diagonally planted chapels of Braine, extended on all four sides to create a centralized structure that, here as elsewhere, signifies the dedication to Mary. Along with proportions based on the square (design *ad quadratum*), the plan represents an ideal form. The beautiful unity of the Liebfrauenkirche was echoed at

Marburg, Church of St. Elizabeth, interior, view to east. Photograph: Virginia Jansen

midcentury in the west choir of Naumburg, famous for its moving founders' statues placed like the apostles at the Sainte-Chapelle, Paris. The church of St. Elizabeth at Marburg was erected over her grave in her hospital chapel. Built by the Order of Teutonic Knights, involving both papal and imperial interests, it influenced a series of dynastic churches in German as well as Polish, Bohemian, and Hungarian regions. The design combined regional elements of a trefoil (like a three-pointed leaf, or clover) ground plan and hall church type with details from Reims and Cambrai to produce a light-filled structure.

Rayonnant Gothic.

By 1240, French rayonnant style transformed Gothic architecture, intensified by prestigious association with the French monarch Louis IX. Its refinement, linear delicacy, and greater integration eradicated German massing, laying the ground for the dramatic changes of late Gothic. The style quickly spread to Metz and Strasbourg (naves ca. 1235–1275). The width of Strasbourg nave, supported on the earlier Romanesque foundations, reflects a spatial majesty, but the design follows the latest fashion from Paris, Saint-Denis, Troyes, and Auxerre. The same design—without triforium—appears later in the naves of the Münster at Freiburg and the church of St. Lorenz in Nuremberg.

With the cathedral of Cologne (begun 1248; nave and towers unfinished until the nineteenth century), German masons demonstrated such full command of the rayonnant style that may scholars regard Cologne as a French cathedral built on German land and associated its French forms with the archbishop's connections to the French king and political opposition to the deposed Emperor Frederick II. The ground plan and elevation with full upper glazing follow Amiens and Beauvais, but the statues adossed to columns in the choir and other elements recall Parisian work, particularly the Sainte-Chapelle. Like it, the dematerialized structure serves equally as a dazzling housing for the reliquary of the Three Magi and as a temple of episcopal power. Narrow proportions and great height create staggering verticality, while pinnacles and tracery fragment surfaces throughout. Nearby Cistercian Altenberg also reveals a thorough knowledge of both Cologne and French buildings, such as Tours and Royaumont, where the burials of members of the French royal house served as a model for Altenberg's patrons, the counts of Berg. Likewise the choir of Regensburg Cathedral (1273–ca. 1310) reflects knowledge

of French architecture.

Soon German designs outpaced their French models. The west facade of Strasbourg Cathedral (ca. 1277), partly designed by Erwin of Steinbach, is covered in openwork paneling composed of brittle tracery, far surpassing the rayonnant design originally planned (drawing ca. 1265), based on the transept facades of Notre-Dame, Paris. The layered effects of multiple screening emphasize a design freedom fully developed in late Gothic architecture. Related are the west facade of Cologne (begun mid-14th c.) and the south wall of the nave at St. Katherine's, Oppenheim (ca. 1317–1328).

Other Gothic Architectures.

During this time new religious orders of the mendicant friars vowed poverty, preached to the growing urban population, and built plain structures with unarticulated walls and simple tracery windows. Naves followed either the Cistercian two-story elevation, as in the Dominican church at Regensburg (ca. 1270s, choir begun ca. 1245) and the Minorite

Altenberg, east end, view from southeast. Photograph: Virginia Jansen

(Franciscan) church at Cologne (ca. 1248), or the Italian open two-story timber-roofed type. The Franciscan church at Freiburg im Breisgau (begun ca. 1280–1300) and the Dominican church at Colmar (nave, ca. 1325) exemplify this latter type. The unvaulted nave of the Dominican church at Gebweiler (ca. 1306) is even simpler—with plain walls, cylindrical piers, no bay division nor capitals. Without large towers or a transept, the most significant external features in friars' churches are the high gable roof and tall windows.

German builders also began to construct Gothic hall churches, in which the aisles are as tall as the central nave. The hall church is often seen to typify German Gothic as distinguished from the basilica form of French cathedrals; it became perhaps the most significant type in late Gothic German architecture. It is inaccurate to understand the type as native, however, even in the Romanesque examples of Westphalia and Bavaria; such a nationalistic perspective ignores many instances in France, Spain, and Italy. Its identification with town parish churches is also incorrect, given that both Romanesque cathedrals, as for example at Paderborn, and Gothic cathedrals exist in the hall church form. In northwestern Germany, the earliest Gothic example is the cathedral of Minden (1267–1290). With three square bays typical of Westphalian Romanesque, the nave displays Gothic openness and architectural details. At Verden (1272–1313) the hall format was extended to the choir, a solution exploited in the late Gothic period. The hall choir of Cistercian Heiligenkreuz, Austria (ca. 1288–1295), employs the traditional square format of three bays updated with rayonnant tracery, whereas the continuously molded piers beckon toward Late Gothic.

The Marienkirche (Church of St. Mary) at Lübeck (ca. 1260–1330) emulated cathedral architecture in brick (*Backsteingotik*) with its tall, vaulted volumes, flying buttresses, ambulatory with chapels, and two-towered west facade (begun 1304), which had the tallest towers completed in the Middle Ages. With its stunning scale and site at the market square, whose public scribes gave their name to the Briefkapelle (ca. 1310) at the southwest corner of the church, the Marienkirche symbolized this leading city of the Hanseatic League. Although brick forms are generally simplified, its choir piers, moldings, and vaulting shafts copied the complicated profiles of rayonnant stonework enhanced by colored glazed bricks. The combination of diagonally placed chapels and ambulatory may be related to Quimper Cathedral (Brittany, ca. 1239) and the Vrouwerk (Church of the Virgin) in the abbey of Sint Pieter in Ghent (ca. 1250), both cities like Lübeck with distant trading connections. The progeny of Lübeck's Marienkirche include the nearby Cistercian abbey of Doberan, Schwerin Cathedral, and the church of St. Nikolai in Stralsund (all before 1300), as well as the Marienkirche in Rostock, St. Nikolai in Wismar, and the Marienkirche in Stralsund. The immense scale and tall towers of these great brick churches attest to the wealth, power, and civic pride of their merchant communities, indicative of major social changes in the late thirteenth and fourteenth centuries. These forces continued to drive the most ambitious German building projects in the subsequent late Gothic period.

Ivories

Fine ivory carvings were created in Germany this period, but they are difficult to localize and workshops remain undocumented, although certainly a production center existed at Cologne. Style and iconography were long believed to originate in Paris, where foreign artisans trained. But outsiders imitated French style, and Parisian carvers worked abroad. Rapid diffusion of portable ivory goods and ideas in the early thirteenth century increased international similarities.

The scholar Koechlin labeled almost all ivories Parisian, neither correlating types nor comparing to other media. Gaborit-Chopin saw affinities among various Parisian carvings and similar relationships in the Rhineland. Little, finally, studied similarities with metal-work and monumental sculpture, strengthening discernment of German products.

Some wood and ivory carvings were known products of metal workshops, and some goldsmiths carved ivory. Romanesque-era carving workshops in Cologne continued into the mid-thirteenth century, but Gothic-era shops and markets changed, as in Paris, with less independent shops and workers.

Secular and religious ivories are related to the circa 1300 wooden choir stalls at Cologne Cathedral and to local painting, stained glass, and enamels. Diptychs of Christ and the Virgin (New York, Metropolitan Museum of Art) and of St. Martin (Cleveland Museum of Art) are related to mid-fourteenth-century Cologne sculpture. A fourteenth-century Virgin and Child type bears physical characteristics of coeval Cologne citizens: broad forehead, wide-set eyes, small mouth, and double chin.

Certain masters are named for cities now housing their works rather than their work sites. The master of Kremsmünster carved crowded, high-contrast compositions linked to monumental sculpture in Mainz from circa 1400. The Berlin master (1350–1375) created works of mannered elegance, comparable to Cologne painting.

Elegant French and German Gothic Madonnas gradually become more aristocratic and maternal, like monumental Virgins at St. Denis and Sainte-Chapelle. While ivories were once generally believed to reflect earlier monumental sculpture, neither is surely first, nor is either more expressive, grand, refined, or original.

By 1300, shallower carving, schematization, and iconographic uniformity are general rather than local trends. By 1350, a distinctive Rhenish type—with ovoid head, high forehead, pointed chin, undulating drapery, and sinuous line—relates to regional sculpture, giving way by 1400 to a newly homogenized international style, reflecting links between European courts and cities.

German iconography and motifs spread throughout Europe. Revered relics of the Magi in Cologne inspired images of the Three Kings wearing gloves. Two passion motifs from Rhenish mystical writings—Mary helping Christ carry the cross and blood issuing from the crucified Christ's side becoming a sword that pierces Mary's heart—quickly circulated through European monasteries. Later medieval items for personal devotion—statues, plaques, diptychs, and booklets—were also used for commemorative rites at cult centers. Themes derived from Bible stories, often arranged in registers like portal sculpture.

Chivalric motifs, for example, scenes from the story of Parzival, adorned luxury goods like tablets and mirror backs, were common in the late Gothic era. They were also known earlier, however, as a Tristan casket from about 1200 in the British Museum attests. Other secular items include combs, writing tablets, and games, with themes of romance, the hunt, and lyric poetry.

Manuscript Painting

Some scholars identify German painting of the thirteenth century as Gothic only in works of the later part of the century that display identifiably French characteristics related to Parisian court style. But earlier works, of the midcentury, begin to display the influence of sculpture: bodies are more solid and massive with a new plasticity, or *Körperlichkeit*, a characteristic that may also distinguish a change from Romanesque to Gothic. Before this time German painting style was more influenced by Byzantine features, which underlay the sharply pointed and occasionally zigzag lines of the *Zackenstil*, a transitional style between Romanesque and Gothic.

Gradual from Cloister Wettingen (Aarau, Kantonsbibliothek, MsWettFm 1, fol. 17v). Photograph: Joan A.Holladay

This Gothic plasticity of human forms appeared in all painting media and can be seen earliest along the Rhine in Cologne, as in the wall painting of the octagon at St. Gereon and in the Aschaffenburg Gospels likely made in Mainz (Aschaffenburg, Hofbibliothek, Ms. no. 13); it later appears to the east, as, for example, in the stained glass at Naumburg. Direct relations of the Mainz manuscript and Naumburg glass to the sculptural workshop that produced the founder figures at Naumburg support the influence of Gothic sculptural forms. By the late thirteenth century the illuminations of Johannes von Valkenburg display the elegant courtly forms that had originated in Paris but that were also reflected in court art in England and elsewhere.

By circa 1300, a number of distinctive regional styles had developed, and works from Cologne, Regensburg, and Constance are easily distinguished from one another. While secular ateliers had largely replaced the monastic scriptoria where book production had been localized up through the thirteenth century, some cloisters, including women's houses, continued producing illuminated manuscripts for their own use, for gifts, and perhaps for sale. An inscription in a gradual from 1300 (Osnabrück, Domschatz) gives the "virgin" Gysela von Kerzenbroeck, probably a nun at the Cistercian cloister Rulle in Westphalia, credit for writing, illuminating, notating, and decorating the book "with golden letters and beautiful images." In the middle of the fourteenth century, Loppa de Speculo, a nun at the Franciscan convent of St. Klara in Cologne, wrote and decorated an antiphonary (Stockholm, Royal Library, no. A172) and wrote and notated another (Cologne, Wallraf-Richartz Museum, 23 fragments), which was decorated by several hands.

The production of both lay and monastic workshops concentrated on books for the mass—graduals, missals, antiphonaries, and lectionaries—and for private devotions—psalters and prayerbooks. Increasingly, however, new secular book types also appeared. Isolated examples in the thirteenth century—the Berlin *Eneide* (Staatsbibliothek Preussischer Kulturbesitz, Ms. 282) and the Munich *Tristan* (Bayerische Staatsbibliothek, Cgm. No. 51) and *Parzival* (Bayerische Staatsbibliothek, Cgm. No. 19)—are followed by a veritable explosion in the numbers of secular texts after about 1300, suggesting new interests of readers and patrons. Manuscript collections of love poems organized by author (*Liederhandschriften*) were assembled and illuminated in Constance and Zurich; one or more workshops in Zurich seem to have specialized in the production of *Weltchronik* (world chronicle) manuscripts. Likewise, Regensburg in the early fourteenth century may have been a center for the production of copies of Thomas von Zerklare's *Der Welsche Gast*.

As in more traditional, religious book types, the decorative program of these new books as a whole helped to orient readers to their place within the text. Illuminations might signal especially important text passages, while a spectrum of initials of different sizes and levels of decoration highlight major and minor text divisions. Although the decoration of religious manuscripts tended to follow set patterns, each of these new book types presented special problems to the manuscript's designer or illuminator, and a wide variety of solutions in the placement and types of images is visible. The colored drawings illustrating the *Sachsenspiegel* (Law of the Saxons), for example, occupy their own column alongside the text, while the full-page, painted author portraits of the *Liederhandschriften* precede each author's oeuvre. Framed images illustrating the *Weltchronik* or the *Willehalm* are inserted into the text column; the gold leaf that is so ubiquitous in images and initials in high-quality religious manuscripts appears only in these texts and others concerned with the history of salvation and the related fields of imperial history and law.

Metalwork

In the thirteenth century, production of metalwork shifted from the renowned monastic workshops of the twelfth century to goldsmithing shops in flourishing towns where there was an increasing demand for liturgical items. Centers of production were primarily in the Upper Rhine region—Westphalia, Lower Saxony, and north Germany, with Cologne continuing as a leading city in the craft. The ranks of patronage, previously composed of imperial rulers, nobility, and clergy, were swelled by new groups: provincial rulers, patrician families, civic fraternities, and even private individuals. In this secular context guilds controlled the education of the apprentice goldsmith, the conditions by which a craftsman could become a master, and the quality of manufacture: the earliest surviving guild records are from Strasbourg (1363). The triple-aisled house shrine, based firmly on twelfth-century traditions, as well as other liturgical objects common to the Romanesque period—anthropomorphic arm and head reliquaries, chalices, crosses, and book covers—continued to be made.

Increasingly intimate spiritual practices and the emphasis on the transubstantive (consecrated) host led to the development of inventive forms of reliquaries, particularly the Gothic pointed spire, and monstrances (procession items to display the host) embellished with such architectural motifs as pointed arches, pier buttresses,

Reliquary bust of St. Pantalus from treasury of Basel cathedral (Basel, Historisches Museum). *Photograph: Joan A.Holladay*

pinnacles, and finials. These forms reflected stylistic developments in the architecture of the Île-de-France. The fourteenth century saw elaborate innovations in enameling techniques, metal etching, and cast silver decoration, producing an increasingly elegant and precious illusion of depth painted in glittering light and shadow, replacing the Romanesque preference for repoussé copperwork and decorative gems. Figure styles reflected a newly expressive naturalism, with fully rounded forms and soft, fluid drapery. From the fourteenth century the demand for secular gold and silverwork increased, and goldsmiths were required to use an identifying town mark. In the mid—to late fifteenth century, goldsmiths began to add their own maker's mark. During the late Gothic period the production of secular goldsmiths' work increased, and goldsmiths received large commissions from town councils for municipal treasuries.

Panel Painting

Although religious images painted on wooden panels constitute one of the leading art forms of the Renaissance in northern Europe, few examples remain to mark the mid-thirteenth-century transition from the late Romanesque to the Gothic in this medium. Of these, some are liturgical objects. Others adhere closely to types found in Italy. The Wimpassing Crucifix (now destroyed), probably made by an artist from Salzburg, was based on Italian painted crucifixes, and its commission was associated with the activity of Franciscans north of the Alps. The style of this painted crucifix resembles that of manuscripts produced in the Würzburg region of Germany in the 1260s. Such correspondence between the styles of illuminated manuscripts, wall paintings, and painted altar

Wimpassing Crucifix, destroyed. Photograph: Kunsthistorisches Museum, Vienna

pieces is found in the local schools throughout Central Europe. Another example is the altarpiece from the Wiesenkirche in Soest, circa 1240, which is remarkably close to the Byzantinizing style of Goslar manuscripts. Many more diptychs, triptychs, and larger altarpieces remain from the following centuries, but their styles continue the relationship to other media and the art of other regions found in thirteenth-century practice. In the fourteenth century, altarpieces of the Cologne school, such as the diptych with the Virgin and Child and the Crucifixion, now in Berlin, combine elements of English and French painting with those of Italian art and show a correspondence to manuscript illumination. Indeed, in the fourteenth century the development of the painted altar-pieces of Central Europe was affected by the presence of Italian painters as well as their work. This same combination of elements led to the development of the distinctive, highly elegant sculptural styles of works such as the altarpieces at Klosterneuburg, Heiligenkreuz, and Hohenfurth, and eventually to the work of painters such as Konrad von Soest, Master Francke, and Stephan Lochner in the fifteenth century.

Sculpture, Introduction

Contemporary with the introduction of the Gothic style in German sculpture in the first half of the thirteenth century is the veritable explosion in the numbers of objects decorated with figural sculpture and the new sites where it occurs. Portals develop in complexity, and choir stalls, choir screens, altarpieces, and fonts now regularly bear elaborate programs in sculptured relief. Single figures, installed on altars where they served as the focus of personal devotions, and tombs bearing an image of the deceased begin to appear in significantly greater numbers. The numbers of objects preserved allow, in addition to the study of their forms and functions, a good view of the stylistic variety of German sculpture in the period after the French-influenced portal decoration at Bamberg and the work of the so-called Naumburg Master and before the homogenizing tendencies of the International, or Soft, Style. Although most of the artists remain anonymous—and we know precious little about those who have been identified by name—a number of distinct regional styles can be easily recognized. Thus the elegant, sophisticated look of Cologne sculpture of circa 1300 is easily distinguished from the sweeter, more approachable one of Upper Rhenish sculpture of the same date, as well as from those of Regensburg, Munich, and the Baltic. In this the situation parallels that in painting of the period; in fact, the stylistic features typical of a given region are often common to the two media.

Sculpture, Devotional Images

Around the year 1300, a number of new iconographic innovations began to appear in German sculpture. Most

Röttgen Pietà (Bonn, Rheinisches Landesmuseum). Photograph: Rheinisches Bildarchiv der Stadt Köln

characteristic of these are the Pietà, the Man of Sorrows, and Christ and the Sleeping St. John, a subject derived from the Last Supper. Additional themes sometimes included in this group are the Madonna of Mercy (*Schutzmantelmadonna*), Christ as a Child, and Mary in Childbed.

The term *Andachtsbild*, commonly translated as "devotional image," was originally coined by German scholars studying specifically this group of sculptures. Erwin Panofsky, in a seminal article on the Man of Sorrows (1927), expanded the group by including two-dimensional works of the same subjects; he identified this group in essentially negative terms as neither hieratic (priestly) cult images nor scenic narratives. He further described them as works designed to stimulate, or allow for the possibility of, contemplative meditation.

Later scholars have generally employed Panofsky's broadened definition of a devotional image, although his distinction based on function oversimplified the issue. Subsequent research does give evidence also of liturgical use for some devotional images; moreover, the increasing realization that both icons and narrative scenes could also be designed to stimulate compassionate meditation means that this devotional function can no longer be claimed exclusively for devotional images.

Other scholars focused on the sources and meanings of these new themes. Earlier attempts to trace their subjects to poetry or passion plays have been discredited on chronological grounds; it seems more fruitful to regard the production of these works as an integral part of Gothic religious practice, with its increasing variety of observances spread among a range of social classes and organizations. Most recently, Hans Belting has examined the reception of devotional images within collective religious experiences, while Johanna Ziegler has argued for a return to the study of Pietàs and their impact as tangible, sculptural objects. These works thus remain at the core of continuing debates about the nature of Gothic religiosity.

Sculpture, Early Altarpieces

Sculpted altarpieces with movable wings, frequently also including painted components, are a German invention, which became extremely important for later medieval and Renaissance art throughout Europe. These altarpieces first appear in North German and Rhenish art in the years around 1325. The sources for such altarpieces are debated. Since many of the early altarpieces contain sections for relics as well as sculpted wings, it has been argued that winged altarpieces derive from elaborate relic cabinets kept in the sacristies of some thirteenth-century Gothic churches. These cabinets have sculpture or painting on the doors and relics contained within, a similar arrangement to the earliest altarpieces. The relic cabinet at Doberan dated to

1275 seems to be especially closely related to the winged altarpiece made for the altar of this church between 1310 and 1320. It has been argued that an enlargement of the relic collection during this period (1275–1310) encouraged a new and more public presentation in which the relics would be more closely linked to the celebration of the Eucharist. Many other early folding altarpieces are found in Cistercian churches, which did not have crypts and therefore needed to find a different place for the relics.

Liturgical practice may also account for the first appearance of the winged altarpiece. The possibility of opening and shutting the wings allowed for different programs to be shown at different liturgical seasons. Early examples include the altarpieces at Altenberg, Marienstatt, and Oberwesel, and the *Klarenaltar*, made for the Franciscan nuns and now in the cathedral at Cologne.

Sculpture, Interior Programs

Interior sculpture was frequently linked, stylistically and programmatically, with exterior portals. The Judgment Pillar at Strasbourg, a floor-to-ceiling column in the south transept, with trumpeting angels and a seated Christ (1230s), has a figure style similar to the *Muldenfaltenstil* (trough-fold, or soft style) of the south transept facade and judgment iconography tied to the Solomon figure of the exterior. In the Judgment Pillar, architecture and sculpture are integrated in a particularly skillful way, indicating the important role of interior elements in the total development of German Gothic sculpture.

An especially accomplished set of interior figures is the group of founders in the west choir of Naumburg Cathedral (1240s). While the Naumburg figures' placement may be derived from the apostle figures of the Sainte-Chapelle in Paris, their lively expressive style and iconography, which reflect the integration of local nobility with the church, are uniquely German. The west choir at

Strasbourg, cathedral, interior, south transept, Judgment pillar. Photograph: Joan A. Holladay

Naumburg is separated from the nave by a choir screen, or *Letzner*, decorated with narrative reliefs and sculpted in a style similar to that of the founder figures. The direct emotional effect of the founders can be seen in the life-size crucifix on the choir screen, whose arms are stretched out so that a visitor passes under them on the way into the choir. A related choir screen and interior figure group are found at Meißen (mid-thirteenth century).

In the late thirteenth century, interior programs that reflect both rayonnant architecture and the interior figures of Louis IX's Sainte-Chapelle (1244–1248) in Paris begin to appear in Germany. Documents tell us that the church at Wimpfen-im-Tal was to be built *opere francigeno* (in the French style), and the rayonnant architecture is accompanied by a program of interior figures (ca. 1280). At Cologne, figures of Christ, the Virgin, and the apostles are adossed to the choir piers (1280–1300); this also represents a direct response to the Sainte-Chapelle in Paris. The figure style at Cologne is courtly with piquant faces, and bodies in an elegant Gothic sway clothed in voluminous robes with beaklike drapery folds. The architecture reflects the new rayonnant style, and the interior figures, a college of apostles like the Sainte-Chapelle, are part of an elaborate ensemble, which originally included a choir screen and a sculpted altar that contained relics similar to the elaborate interior setting of Louis IX's project.

Sculpture, Portal Programs

The Gothic portal, a combination of sculptured figures and architectural elements in the new Gothic style, was created initially in France, where the two elements developed concurrently. In Germany, Gothic architectural elements and sculptural style were employed independently, resulting in portals quite different from French models and responding to specific German artistic needs. A considerable group of twelfth- and thirteenth-century Ger

Trier, Church of Our Lady, west portal, prophets from jambs (Staatliche Museen zu Berlin—Preußischer Kulturbesitz, Skulpturensammlung). Photograph: Joan A.Holladay

man portals have Romanesque architectural settings but sculptural styles that show a variety of French early Gothic elements. The earliest group shows the influence of French early Gothic models in the figure style and includes the tympanum from the church of St. Cecilia in Cologne, circa 1160 (now in the Schnütgen Museum), reflecting the west facade at Chartres. French High Gothic figure style appears in German lands in a detailed Virgin portal on the south transept of Strasbourg Cathedral (1230s). The portal has two semicircular tympana, representing the Death of the Virgin and her Coronation, accompanied by impressive jamb figures of Synagogue and Ecclesia. Programmatically, devotion to the Virgin is characteristic of Gothic ideas, and stylistically the *Muldenfaltenstil*, or soft-fold style (also trough-fold), is derived from the workshops of Chartres's north transept. The fluid, elegant postures of the figures and the highly expressive faces at Strasbourg reflect German sensibilities. The arrival of a workshop trained at Reims at Bamberg Cathedral to complete the Princes Portal (*Fürstenpforte*, ca. 1235) provides another important stimulus to German Gothic sculpture. The program represents a compressed version of the north transept facade at Reims, and figures of the apostles and prophets at Bamberg are stylistically close to their counterparts at Reims but display a non-French emotional aspect. The north transept porch at Magdeburg Cathedral (ca. 1245) reflects French stylistic influences but less directly.

The combination of Gothic rayonnant architecture with Gothic sculptural style occurs in the triple west portals at Strasbourg (ca. 1280–1300). The program, a Passion in the center tympanum, Christ's 's Infancy on the left, and a Last Judgment on the right, is designed for the location and reflects the tensional relationships between bishop and chapter, town and mendicant orders. The style represents a continuation of the earlier Strasbourg lodge but also new influences from Paris. Later examples of the rayonnant portal appear at the cathedral of Freiburg-im-Breisgau (ca. 1290–1295) and at Worms Cathedral (ca. 1280).

German cathedral sculpture continues into the fifteenth century with portals such as that at Ulm Cathedral that includes Hans Multcher's Man of Sorrows (1429), which has an emotional impact like an *Andachtsbild* and reflects the *weicher Stil*, or soft style, so prevalent in German sculpture of circa 1400.

Sculpture, Tombs

Although burial inside churches was generally forbidden, from the earliest times exceptions were granted for persons of high status: nobles, religious, rulers, founders, and donors were interred in the crypt—the most important burial site for its proximity to the bones of the local saint, as well as in the choir and aisles. A tomb marking the burial site was placed into the floor flush with the paving, slightly raised on a low base, or on an elevated *tumba*. The deceased was usually portrayed on the tomb top, in low or high relief, sometimes in the round, in inverted relief, or engraved. The most typical material was stone or, less frequently, bronze; the tomb of Heinrich III of Sayn (d. 1247; now in the Germanisches Nationalmuseum in Nuremberg) is an unusual example in wood. From the end of the eleventh century, tomb sculpture represented one of the most important types of medieval sculpture.

In the early Christian period general prohibitions against imagery and the rigorous resistance to figural cult images worked against the use of figural sarcophagi like those known to the Etruscans and Romans. This trend

Tomb of Dean Johannes von Pocza (d. 1414), from Meissen cathedral, now All Saints' Chapel. Photograph: Joan A.Holladay

continued into the High Middle Ages. The bronze tomb in low relief for the antiking Rudolf of Swabia (d. 1080) in Merseburg Cathedral represents the earliest preserved example of figural tomb sculpture in Germany. Its composition and execution contrast with those of the abbesses of Quedlinburg from the first third of the twelfth century; their massiveness, symmetry, and ornamental decoration embody the Romanesque style. Increasing plasticity characterizes the subsequent development of the figural tomb relief. Whereas the bronze relief for the archbishop of Magdeburg Frederick of Wettin (d. 1152; Magdeburg Cathedral) still has a closed, compact form, the figures of Duke Henry the Lion and his wife, Mathilda, on the oldest preserved double tomb (1230–1240; Braunschweig Cathedral) display deep folds and movement in the positioning of the body if not, as in the works of the slightly later Naumburg Master, in the face.

Typical of medieval tomb sculptures is ambivalence in the stance of the figure. Most frequently the effigy, which derives from jamb sculptures, is portrayed as if a standing figure were tipped over on its back. Only the pillow under the head, folds over the body and on the background slab, and relaxed body parts suggest a recumbent position, but in many cases these are combined with elements that indicate standing: a console under the feet, tubelike folds running from waist to feet, and gestures such as blessing. The dead person always appears in ideal form and age; individual portrait character first appears in isolated tombs of the fourteenth century, then more frequently in the fifteenth. Until this time, only the inscription links the tomb to a specific person. An important element of the inscription is the date of death, on which yearly anniversary masses would be said. In addition to clothing that marks the social standing and official position of the deceased, insignias, architectural and heraldic details, and animals—lions, dogs, dragons, and snakes—are often included; their iconographic meaning is often ambivalent. Their placement at the foot of the dead person usually refers to the triumph over evil but may characterize the person represented in a more specific way.

The thirteenth century saw the formation of nearly all the tomb types used for the rest of the Middle Ages. The type of commemorative—as opposed to liturgical—tombs developed in the mid-thirteenth century at St. Denis was taken over but modified. An example is the tomb of the German king Rudolf von Habsburg (d. 1291) in the cathedral at Speyer, whose face no longer represents an ideal, noble type but shows instead the beginnings of an interest in individual physiognomy. The tomb of Bishop Wolfhard von Roth (d. 1302) in Augsburg Cathedral goes even further, portraying him with the sunken features and closed eyes of a dead man. Although north of the Alps the deceased was always portrayed lying down, this unusual effigy shows, for the first time, a corpse; it remained isolated and without following. Only in the fifteenth century in southern Germany do we find a series of tombs, such as those of apothecary and mayor of Straubing Ulrich Kastenmeyer (d. 1431; Straubing, St. Jakob) and Deacon Bernhard von Breidenbach (d. 1497; Mainz Cathedral), that represent the commemorated in the process of dying rather than as dead.

Around 1330, production of tombs picked up and local features became more marked. The transition from a simple stance, as in the tomb of Archbishop Peter von Aspelt (d. 1320; Mainz Cathedral), to the harmonious, dynamic S-curve, as in that of Archbishop Matthias von Bucheck (d. 1328; Mainz Cathedral), represents the essential development of this period. The rituals of the burial ceremony played an important role in the further evolution of figural tombs; the monuments commemorating the landgraves of Hesse (Heinrich I, d. 1308, and Heinrich the Younger, d. 1298; Otto I, d. 1328) in the south conch at St. Elizabeth's in Marburg are the first examples of *pleurant* (weeping) tombs in Germany. In addition to the mourners around the tomb base, accompanying figures, such as praying monks, censuring (dispensing incense) angels, and angels holding the soul of the deceased in the form of a tiny naked figure, remind the living of their duties to commemorate the dead liturgically. From the middle of the fourteenth century, the increasing negation of the horizontal position—the effigy comes more and more to resemble a standing figure seen from the front—and the lack of space resulting from the growing number of commissions led to the vertical installation of tomb slabs. From this developed the framed standing image, well illustrated in the series of tombs of the archbishops of Mainz, as well as the epitaph, a representation of the deceased in a scenic relief mounted on the wall and thus independent of the actual burial site.

Several new features mark fifteenth-century tomb sculpture. Social change gave rise to a new group of tomb patrons among members of the middle class. The broader figures typical of the soft style (also trough or soft fold) begin to appear in tomb sculpture as well, as, for example, in the tomb of Archbishop Konrad von Daun (entombed 1434; Mainz Cathedral). And in tomb sculpture as elsewhere, the names of individual artists, such as Nicolaus Gerhaert von Leyden and Madern Gerthener, begin to be associated with their works.

Stained Glass

Stained glass windows dating from the twelfth century and earlier can be found in Germany and Central Europe, but the great period of production in this region begins in the middle of the thirteenth century. In France extensive production of stained glass, like the introduction of Gothic architecture, begins in the twelfth century, but neither the style of architecture nor the figure style and treatment of space associated with the term *Gothic* appears in Germany until after 1250. Furthermore, although stained glass was commissioned for great monasteries and bishops' churches, much of the Gothic stained glass in Central Europe is found in structures built by the new religious orders such as the Franciscans and the Dominicans, as well as in parish churches.

Musical angels (Cologne, Schnütgen Museum). Photograph: Joan A. Holladay

Among the first major stained glass programs are those of the mid-thirteenth century found, for example, in the Middle Rhine and Lower Saxony, and including examples at Marburg, Freiburg im Breisgau, Naumberg, Basel, Goslar, and Lohne. Although many occur in Gothic churches based on French models and some even show French inspiration in their figure types, most belong to the late Romanesque in their reference to Byzantine models, as in the *Zackenstil* (zigzag style), and their lack of three-dimensional spatial niches. But Gothic concerns were introduced in the Middle Rhine, from Strasbourg in the second half of the thirteenth century. It is in the fourteenth century at Freiburg, Esslingen, Königfelden, Cologne, and Regensburg that figures standing in ornamental niches begin to dominate, and in their poses, their three-dimensional bodies, and drapery forms show clear adherence to the concerns of French artists. Nevertheless, in the middle of the fourteenth century in Austria, the elements of Romanesque style still persisted in many centers. In a last development in stained glass toward the end of the fourteenth century at centers like Ulm and Augsburg, large scenes that encompass the entire glass surface began to appear.

Currently scholars working in this field address a series of problems including those of technology, condition, restoration, and the related problems of attributing and localizing windows long since moved from their original sites. Other issues include workshop organization, patronage, including that of religious orders, the relationship of stained glass to manuscript illumination, the relationship between the styles of Central Europe and Byzantine and French art, specifically Paris, and the presence of Central European glaziers in Italy. Also of interest are issues of iconography: the depiction of donors, the use of Old and New Testament cycles, the Tree of Jesse, life cycles of new saints such as Saint Elizabeth and Saint Francis of Assisi, and the use of moral themes including the Wise and Foolish Virgins.

Textiles

The history of German textiles in the Gothic period is largely a continuation of Romanesque traditions, with significant contributions to the history of tapestry-woven wall hangings and linen and wool embroideries. Silks and

Late Gothic tapestry: Wild people with Fabulous Animals, Switzerland, ca. 1430–1440 (Zurich, Schweizerisches Landesmuseum, LM-1178). Photograph: Schweizerisches Landesmuseum, Neg. 45462

other luxury textiles were still primarily produced around the Mediterranean and in the Byzantine and Islamic east.

Linen and wool embroideries were produced during the Romanesque period, but during the Gothic period Lower Saxony, Hesse, and Westphalia developed highly accomplished embroideries for the altar and church furnishings that came to be known as *opus teutonicum* (German work). Particularly notable is a large group of "whitework" pieces done in linen, occasionally with a dyed ground, but more often made with undyed linen. This technique is sophisticated in its utilization of a variety of stitches to create a subtle pictorial relief. Many of these pieces are associated with convents in Hesse and Westphalia, and their manufacture is usually attributed to the nuns of these regions. Notable examples are the altar cloth and Lenten cover from the Premonstratensian convent at Altenberg an der Lahn, now in New York City (Metropolitan Museum of Art) and Cleveland (Cleveland Museum of Art). The Lenten cloth in Cleveland dates from the second quarter of the fourteenth century and measures 60¾ by 147½ inches. A large central quatrefoil depicts the Crucifixion while surrounding quatrefoils illustrate the Resurrection, the four evangelists, and several saints. The fourteenth-century altar cloth in New York, measuring 62½ by 150 inches depicts Christ in Majesty flanked by saints. A particularly large group of linen embroideries is preserved at Kloster Lüne near Lüneburg.

More colorful wool embroideries were produced in several regions, but the needleworkers of Lower Saxony appear to have been the most prolific. In addition to decorations for the altar that represent the Life of the Virgin, the Passion, and other sacred themes, the embroiderers of Lower Saxony were fond of secular themes, such as romances. A large but partially fragmentary wall hanging at Wienhausen produced in the early fourteenth century measures 91¾ by 159 inches. With colorful dyed wools on a linen ground, it depicts twenty-three scenes from the story of Tristan in three horizontal registers alternating with four registers of coats of arms.

During the late fourteenth century, Bohemian embroiderers produced many highly accomplished orphreys (gold embroidered trim) for vestments, altar frontals, and other ecclesiastical pieces in silk and metallic thread. The Bohemian embroideries, produced at a time when Prague was a European cultural capital, are stylistically more closely linked to Paris than to German centers. Unlike the monastic products in linen and wool, the Bohemian pieces were likely produced by professional embroiderers working in organized guilds.

The early history of European tapestry production in the Romanesque period is known in large part through the German examples at Halberstadt. German tapestries, produced primarily in Nuremberg and the Upper Rhine beginning in the middle of the fourteenth century, are equally significant to the history of tapestries in the late Gothic period.

In keeping with the role of Nuremberg as a major artistic center, it appears that by the late fourteenth century, more than one workshop was active, producing accomplished tapestries in wool, usually on a linen warp. One of the earliest to be preserved, from about 1380, illustrates the Twelve Wise Men, each surrounded by a banderole (banner) inscribed with words of wisdom. This was probably a civic commission, made for the Small Council Chamber of the Town Hall. Most tapestries produced in Nuremberg had religious themes, but secular themes continued to appear through the fifteenth century.

By the fifteenth century, significant tapestry workshops had developed in the Upper Rhine at Basel and Strasbourg. These workshops favored such secular themes as wild men and allegories of love and virtue. Following the lead of Nuremberg and the Upper Rhine, tapestries were produced at Cologne and other German centers, but by about 1500 the German workshops could no longer compete with the high-quality products of Flemish workshops, and the distinguished history of medieval German tapestries comes to a conclusion.

Introduction

Like most names for period styles, the term *Late Gothic* (German, *Spätgotik*) originated in the nineteenth century as historical categories were established in keeping with the emerging paradigms of the new discipline of art history. Unlike most such designations, the notion of a Late Gothic era was controversial from the start. Even today consensus in usage is lacking. Generally, the term describes a style that dominated north of the Alps during the fourteenth, fifteenth, and early sixteenth centuries. English-language literature usually treats the Late Gothic as the final decorative phase of Gothic, with variants produced all over Europe at different times during the late Middle Ages. German-language scholarship considers the *Spätgotik* a style distinct from both the earlier French Gothic and the contemporary Italian Renaissance. The term *Northern Renaissance* as a period designation never gained currency among German-speaking art historians. Nationalist and even racist motivations color much of the early scholarship that extolled the Late Gothic as distinctly Germanic. In more recent writing, the term is used in recognition of stylistic plurality. Perception of a Late Gothic style that lasted into the sixteenth century and employed neither the classical forms of Italy nor the detailed verism of the Netherlands facilitates a consideration not only of elaborate and innovative architectural forms, especially in vaulting and tracery, but also of exuberant, emotionally expressive painting and sculpture that often served devotional purposes. According to some observers, in German areas the Late Gothic persisted into the mannerist and baroque eras, passing over the Renaissance. It has been suggested that lay patrons of the bourgeois class employed and expanded Gothic vocabulary in an attempt to maintain an earlier style that would link them to ecclesiastical power and feudal authority.

Architecture

After the middle of the thirteenth century, when French Gothic rayonnant forms fundamentally affected European architecture, much German building reflected the greater unification and dissolution of the wall surface and increased complication of tracery patterns. Beginning in the early fourteenth century, German masters added to these more lightweight designs open spatial effects and intricate vaulting patterns and forms that emphasized a sense of diagonal movement throughout the structure. These features were particularly seen to full advantage in smaller churches rather than large cathedrals, although there too the new *Sondergotik*, or Late Gothic style, appeared in architectural details and restricted parts, such as chapels, apart from the main ritual spaces. The term *Sondergotik* is often simply used as a synonym for Late Gothic architecture in Germany, but *sonder*, meaning "special" or "unusual," highlights the striving for dramatic effects. One of the earliest buildings to show these changes was the church of the Holy Cross (*Heiligkreuzkirche*) at Schwäbisch Gmünd, which Henrich Parler, perhaps called from the cathedral workshop at Cologne, redesigned in the 1320s. It shows the typical elements of German Late Gothic: slim, unarticulated columns that allow spatial openness and unity, dynamic tracery patterns and vaults (those in place now date from the late fifteenth century), emphasis on horizontal expansion of space rather than verticality, a compact exterior profile, and a building type, the hall church, that allows emphasis on these traits. A classic rendering of the open hall type is seen in the parish church of St. Mary, known as the *Wiesenkirche*, in Soest, begun probably by 1313. It is a nearly perfect example in plan, openness, and unity, with its continuous moldings from arches to pier framing virtually unobstructed space, and exposing the tall windows and their thin vertical mullions capped by rich, geometric patterns. Such a definition of Late Gothic, however, fits only certain buildings in the period, and may thus reflect a modern ideal of unity (*Gerstenberg*), in which Late Gothic is construed as an extreme antithesis to the clearly articulated model of High Gothic. The actual history was much more varied. For example, the church of St. George in Dinkelsbühl (built 1448–1499) maintains rigidly defined aisles rather than opening up diagonal vistas. Moreover, the interest in lateral spaciousness as opposed to soaring heights is probably related to the typically smaller size of buildings or, if large, to their simplification (e.g., St. Mary at Straslund) compared with the normally very large, highly articulated structure of cathedrals. The diminution in scale and lack of complication are surely due to the municipal sponsorship of the churches built at this time, a reflection of the burgeoning prosperity of cities, which nevertheless lacked the enormous feudal wealth of the long-established cathedrals, most of which had been recently rebuilt. Contemporaneous secular buildings also use the decorative elements of the style, as exemplified by the splendid, spacious Vladislav Hall (built 1493–1503) of Prague castle by Benedikt Ried or, now that merchant wealth could afford the display, by town halls and their council chambers at Basel, Braunschweig, Lübeck, Nördlingen, Straslund, and other municipal structures. Thus, at least some of the stylistic features associated with the Late Gothic should be attributed to economic, social, institutional, and liturgical factors.

Although Late Gothic architecture is found throughout Europe, Late Gothic developments in German-speaking areas were strongly imprinted by the work of the Parler family. The word *Parler* or *Parlier* was a professional designation before its use as a family name. Derived from the French *parler*, to speak, it specified the intermediary between the master of the works and the stone masons on the site, the foreman. In cities such as Basel and Strasbourg, the masons had organized into guilds with other members of the building trade—plasterers and carpenters, for example—as early as the thirteenth century. By 1402, the stone masons of Strasbourg were represented by their own guild; their statutes of 1464, together with those of the stonemasons of Trier (1397), Erfurt (1423), Regensburg (1440), and other cities, are known. Like the so-called Regensburg Ordinance of 1459—a transregional document legislating the activities of the often itinerant masters across a wide area between Strasbourg and Vienna—the provisions of these local documents protected their members, regulated their work, and stipulated practices of apprenticeship. Eventually the profession was governed by the four main

building lodges of the Empire, at Strasbourg, Cologne, Vienna, and Bern.

The church of the Holy Cross at Schwäbisch Gmünd is the benchmark work of the Parler family patriarch Heinrich, but the real progenitor of Late Gothic style was his son Peter. Peter's work at Prague after 1356 produced the vocabulary that influenced two centuries of Gothic architecture in central Europe. Almost a complete manual of design is shown: dynamic patterns of all kinds—in tracery, in vaulting, and in three-dimensional features that create movement in the piers and elevation. Some historians have posited that many of his forms were derived from the English Decorated Style, even hypodiosizing that Peter Parler may have traveled in England, but others derive his work largely, or even solely, from continental prototypes. In any case, his display of forms inaugurated a sense of artistic competition for future masons, especially when a succession of designers was employed on a project, as was often the case. Their designs of piers, moldings, tracery, and vault patterns became increasingly intricate and exuberant. The increasing self-consciousness of their art signaled a change in their professional and social status, marked by the passage in modern terminology from the term "master mason" to "architect." Moreover, the complex work encouraged the development of drawings, many of which still survive. In fact, the vault surface became flattened, which acted as a drawing board for Late Gothic experimentation with complicated vaulting design.

In the cathedral of St. Vitus at Prague, Peter Parler's tracery designs take on agile, curvilinear forms, moving far beyond the developed geometric complication of even Schwäbisch-Gmünd and Cologne, showing twisting curvilinear tracery patterns, and all manner of continuous curving intersections and double-cusped figures. The vaulting designs in the various chapels amount to a pattern book; the south porch includes an openwork vault with so-called flying ribs, where the ribs cross space but the cells are not filled in so that spatial interpenetration results. The profile of the high choir vault is high and shallow, effecting a sense of weightlessness, as its simple but ingenious design moves continuously across the borders of the bays rather than defining them. Integration and movement are also pronounced in the elevation, particularly in the diagonally planted tabernacles and splay of the upper elevation bordering the vaulting shafts of each bay, an idea derived from the swinging cornice—which shoots out around each group of vaulting shafts—of the choir at Schwäbisch Gmünd, and taken up later in St. Lawrence, Nuremberg. At Prague, however, it allows for an exterior passage around the pier at these upper stories, related to several French examples. Pier moldings slide into the plinth rather than articulated shaft bases. All these effects are employed in the interests of greater integration and surprising effect rather than clear definition.

Late Gothic of the fifteenth and sixteenth centuries developed features such as these, emphasizing spectacular visual effects that challenged expectations in building. Extravagant examples may be seen in the faceted net vault, intersecting and dying moldings, and dynamic projecting cornice in the choir at St. Lawrence, Nuremberg (built 1439–after 1464); the spiraling shafts around the pier core of the north choir aisles at Braunschweig cathedral (built 1469); the cellular vaults at St. Mary, Danzig (built 1484–1502); and the star vault with startling curving, intersecting, and broken ribs at St. Barbara at Kutná Hora (Kuttenberg) in Bohemia (choir vaults built 1499, nave vaults built 1540–1548). The church of the Virgin (*Frauenkirche*) at Ingolstadt boasts chapel vaults of the most elaborate florid sort from circa 1520. The rich, precious visionary quality of what François Bucher has termed "micro-architecture" arises from the use of similar features. Examples include the 1467 font at St. Severus, Erfurt; the oratory built by Benedikt Ried for King Vladislav in one of the south chapels of Prague cathedral between 1490 and 1493, which is covered with stone carving treated as growing branches; the swelling, curvilinear gallery of 1492–1496, known as the Simpertus arch, by Burkhard Engelberg in the church of Saints Ulrich and Afra, Augsburg; the 1493 eucharistic tabernacle by Adam Kraft in St. Lawrence, Nuremberg; and the one of 1511–1525 at Nördlingen.

On the exterior the domination of the churches was manifested by the enormously high pitched roof and by towers, which rose higher and higher, many of which were topped with filigree-like openwork spires. Impressive towers can be seen, for example, at Freiburg im Breisgau (built 1275–ca. 1340); St. Stephen's cathedral, Vienna, whose tower, begun ca. 1359 but built mainly 1407–1433, rises to a height of ca. 418 feet (137 meters); Ulm, where the tower designed first by Ulrich von Ensingen in 1392 and later revised by Matthäus Böblinger was completed in the nineteenth century; Strasbourg cathedral, where von Ensingen and Johannes Hültz, working in succession between 1399 and 1439, raised the north tower to 142 meters; and the cathedral at Bern, where the tower erected between the 1480s and 1521 (finished in the 1890s) may reflect the earlier intentions of von Ensingen's son Matthäus Ensinger, who was master of the works here from 1420 until 1446.

At the same time, however, simplicity reigned in the piers and elevation, with a focus on the windows and most especially the vaults. The most elaborate tracery and curving vaulting ribs set usually on thin, octagonal or columnar piers are used at Schwäbisch Gmünd, as well as in the churches of Hans von Burghausen at Landshut—St. Martin, built 1392–1407 and later, and the *Spitalkirche* (Hospital Church), completed in 1407—and Salzburg, where he began the spectacularly open Franciscan church in 1408. Similar forms appear at the following six churches: St. Martin at Amberg, begun in 1421; St. George at Nördlingen, erected between 1427 and 1505; St. Michael at Schwäbisch Hall, built between 1427 and 1456 (in the nave and especially in the tall, open choir of 1495); St. John, Dingolfing, begun in 1467; the *Frauenkirche* (Church of the Virgin) in Munich (built 1468–1488); and the church of St. Anne, begun in 1499 at Annaberg, rich from the silver mines. Ribs are often faceted with razorsharp edges; at times they are broken off just beyond intersection with other ribs or criss-cross them, and vault moldings often disappear into the body of the pier, denying the clear articulation of earlier Gothic architecture. All these features aid in the construction of a hovering, ethereal, mystical space.

Metalwork

The fourteenth through sixteenth centuries witnessed a tremendous expansion of metalworking in the German regions. In addition to a continuation and increase of traditional applications, new forms and techniques were developed, and new centers of production arose. Perhaps most significantly, changes in trade and economic conditions led to a growing demand for domestic and utilitarian objects for use by an increasingly affluent merchant

Reliquary Bust of Charlemagne (Aachen, cathedral treasury). Photograph: Rheinisches Bildarchiv der Stadt Köln

and urban middle class. Despite this varied patronage and function, late Gothic metalwork is almost universally characterized by a great degree of lavish decoration and ornamental profusion, paralleling stylistic tendencies in sculpture and architectural decoration.

Changes in the cult of relics and the rise of the cult of the Eucharist necessitated the development of new forms of liturgical furnishings, such as monstrances, ostensoria (display vessels), relic monstrances, and a wide array of figural reliquaries. The increasing desire for more direct visual contact with relics and the Host, after the institution of the Feast of Corpus Christi in 1264, led to the development of the monstrance. This can be seen in the silver monstrance made circa 1500 in Nuremberg for the parish church at Memmelsdorf. The Late Gothic period also witnessed the greatest proliferation of figural reliquaries, particularly reliquary busts. Fine examples include the reliquary bust of Charlemagne (ca. 1349) in the cathedral treasury at Aachen and Hans von Reutlingen's reliquary bust of St. Lambert (1508–1512) in the treasury of the cathedral of Liège. Paralleling this desire for a more tangible reliquary form, a number of lavish, multifigural narrative reliquaries were produced, such as the St. Simeon reliquary from the second third of the fourteenth century (Aachen, cathedral treasury).

Aside from the development of the monstrance, little changed in the function of liturgical tools. However, the numerous chalices and other liturgical appurtenances produced during the fourteenth and fifteenth centuries show an increase in elegant, decorative forms. Late-fourteenth and fifteenth-century chalices reveal abundant figural and foliate decoration on the knob and the base. During the later fifteenth and sixteenth centuries the decorations on the knob became increasingly elaborate, as seen in the gold chalice of 1494 from the friars' church in Braunschweig.

During the fifteenth century, secular objects became more abundant and lavishly decorated. The silver casket, made in 1438 by Hans Schesslitzer and Peter Ratzko to hold the state jewels in the Heiliggeistkirche (Church of the Holy Spirit) in Nuremberg is entirely covered with the Nuremberg coat of arms, illustrating a rise in lavish, secular patronage, civic self-awareness, and interest in heraldry. Luxury items, such as jewelry, particularly rings and pendants, mirrors, and containers, grew in popularity as burghers increasingly imitated court usage. Vessels made for great state and corporation meetings grew in size and ornamentation, as can be seen in the two silver gilt ewers with enameled wild men adorning their lids, produced around 1500 for the Order of Teutonic Knights (New York, Cloisters). Tankards and ewers were particularly popular among the burghers and civic guilds by the late fifteenth century. Characteristic of the type is the spectacular gilded and enameled silver ewer of 1477 from the Rathaus (town hall) of Goslar, with its decorative bands of foliage, musical angels, and dragon-shaped handle. Another form characteristic of the early sixteenth century is the double goblet (*Doppelpokal*), replete with bulbous ornamental forms, as seen in examples at Nuremberg, Zwolle, and Karlsruhe. The elaborate table ornament and drinking vessel, known as the Schlüsselfelder Ship, produced in Nuremberg in 1503, possibly by the father of Albrecht Dürer, illustrates both the taste for sumptuous utilitarian objects and the ability of the late Gothic goldsmiths to satisfy the demand.

Increases in living standards and the rise of a successful middle class facilitated an expansion of production of metal household objects. Paralleling the tendencies in painting and sculpture, kitchen and table utensils show marked gains in elegance and refinement. Utilitarian objects, such as door knockers, eating utensils, weights, and measures were often cast in baser metals such as bronze, brass, iron, and zinc. The last was commonly used for tankards, pitchers, and pilgrims' badges, although the Schöner Brunnen (Beautiful Fountain) of 1408 in the marketplace in Braunschweig attests to more lavish and decorative uses of even the so-called baser metals. Ever more elaborate iron door hinges, gates, and grilles indicate the tendency toward more complex pattern and profuse decoration in virtually all Late Gothic metalwork. German metalsmiths particularly excelled in the production of elaborate locks, with Nuremberg achieving status as the principal center.

Only in large, physically and economically secure cities could metalwork in costly materials be extensively developed. The high degree of craftsmanship seen in reliquaries produced in Aachen during the fourteenth and fifteenth centuries attests to the prominence of local metalsmiths. During the late Gothic period, Nuremberg stands out as one of the principal centers of metalwork in Europe, as seen in the shrine of St. Sebaldus (1519) by Peter Vischer the Elder. Prior to the mid-fourteenth century, the major brass casting areas in the German lands had been in Lower Saxony and the Rhine-Maas region. By the end of the century, Nuremberg had become the principal center of brass and bronze production. Important bronze foundries also existed in northern Germany, as evinced by the immense tabernacle of the Marienkirche (Church of the Virgin) in Lübeck.

Painting

Although much of that written about the Late Gothic era concerns architecture, painting from 1430 to 1500 underwent a sweeping change in the German-speaking lands. In the first half of the period, the art of the southern Netherlands—Robert Campin and Jan van Eyck—was influential. Later, the style of Rogier van der Weyden was even more widespread.

The contrast of the Upper and Lower Rhine with Lucas Moser and Stefan Lochner appears at the beginning of this change. Although nothing is known of Moser's life, his famous Magdalen Altar (1432) from the church of the Magdalen in Tiefenbronn, has an inscription that has never been satisfactorily interpreted: "Weep, art, weep, yourself deplore. No one loves you anymore. 1432 Lucas Moser, painter from Weil, master of this work, pray to God for him." The main panels of the outside show scenes from the life of the Magdalen from the *Legenda aurea*. In the gable is shown the conversion of the Magdalen as she washes Christ's feet; the central panels represent the voyage of the Magdalen to Marseilles with companions, the appearance of the Magdalen to the prince and princess in the palace above her sleeping companions, and the last communion of the Magdalen. The predella, or lower panel, shows Christ flanked by the wise and foolish Virgins.

The origin of Stefan Lochner in the Lake Constance region is certain, but his style shows little connection to the art of the area. Instead it is closer—especially in the soft modeling of forms—to the art of the Veronica Master of Cologne and the Westphalian painting of Conrad van Soest. Lochner's Last Judgment (ca. 1435), probably his earliest work in Cologne, served as a model for many later artists. His most famous painting, done for the chapel of the city council of Cologne, is the so-called *Dombild*, or Adoration of the Magi (1440–1445), now in the cathedral. St. Ursula, who was martyred in Cologne in the third century, stands with her companions on the left wing, and St. Gereon, the patron saint of Cologne, and his companions occupy the right wing. A limited palette of colors—red, blue, yellow or gold, and green for the ground—is used. The Annunciation on the outside of the wings is cooler in color. His Madonna in the Rose Bower, circa 1450 (Cologne, Wallraf-Richartz-Museum), shows rounded forms and circles throughout, with its gentle, religious spirit. The Presentation in the Temple of 1447 (Darmstadt, Landesmuseum) was given by the Knights of the Teutonic Order for their church, St. Catherine in Cologne. Lochner has added many people—men, women, and choirboys—to the scene. At the right, a frontal figure dressed as a member of the Teutonic Order faces the viewer; he holds a sign with the date and at one time probably held in his right hand a reliquary in the shape of a cross.

To the south, the Master of the Darmstadt passion, active between 1435 and 1450, was almost the only German artist to orient himself on the works of Jan van Eyck. His altar from Bad Orb is now in Darmstadt. His rich color, chiaroscuro lighting, and surface texture are all Eyckian. His tendency toward linear style and deeper color range, however, set him apart from his contemporaries. In Ulm, Hans Multscher, who became a citizen in 1427 and died in 1467, made paintings that show an interest in religious sculpture. The wings of his Wurzach Altar from 1437 (Berlin, Gemäldegalerie) show heavy, expressive figures casting shadows and painted in strong color.

Farther south, Konrad Witz (ca. 1410–1446), from Swabia, established himself in Basel in 1434. His earliest work, the Heilspiegel Altarpiece (Altar of Human Salvation), circa 1435, is now in the Kunstmuseum, Basel. The figures are short in proportion but solid and rounded with angular drapery folds with reflected light on the edges. His last known work, the Miraculous Draught of Fishes, the central panel of the Altarpiece of St. Peter, 1444 (Geneva, Musée d'Art et d'Histoire), gives a wonderful view of the Swiss countryside. The eye is led into the scene by forms seen underneath the surface of the water, providing a harmonious unity of man and nature.

About the same time, in 1446, Johann Koerbecke was recorded in Münster. He died in 1491. In the altarpiece he painted in 1457 for the monastery of Marienfeld, his figures have solidity and vigorous movement, and the draperies more weight and texture. The work of Koerbecke and his contemporaries exemplifies the transformation of the International Style into a more angular and severe style in the first half of the fifteenth century.

In Austria, Konrad Laib became a Salzburg citizen in 1448 and adopted Netherlandish compositions as in the Crucifixion, 1449 (Vienna, Österreichische Galerie, Belvedere). The Death of the Virgin, circa 1450, by the Master of Schloss Liechtenstein shows the influence of Tournai painters, but with more elongated figures.

In the later fifteenth century, the work of Rogier van der Weyden with its linear, rhythmic compositions within a spatial setting found a closer following than earlier styles. In Cologne, not far from the Netherlandish border, the Netherlandish style was strong, but some of the Cologne style remains. The anonymous Master of the Life of Mary, active circa 1460–1495, is named after a large altarpiece from 1463 with eighteen panels representing scenes from the life of the Virgin (Munich, Alte Pinakothek); he also painted a panel for the church of St. Ursula in Cologne (London, National Gallery). Although his figures show the immobility of Dierec Bouts, the sky is gold and there is little focused light to cast shadows. Another anonymous painter, the Master of the St. Bartholomew Altarpiece, created his earliest work, the Book of Hours of Sophia von Blyant, circa 1475, in Utrecht or Arnhem. Around 1480 he arrived in Cologne, where he created his mature works. Among them, the St. Thomas Altar of 1499 (Cologne, Wallraf-Richartz-Museum) and the St. Bartholomew Altar (Munich, Alte Pinakothek) of circa 1503, after which the artist is named, exemplify his style of intricate drapery folds and a wide range of mixed colors, especially in the costumes—a striking contrast to the works of the Master of the Life of Mary.

On the Upper Rhine, the outstanding painter of the time was Martin Schongauer, although his reputation today depends on his prints. His father, a goldsmith, moved to Colmar in 1440. Close to Rogier van der Weyden, he leaves only one dated painting, the Virgin and Child in a Rose Bower of 1473 (Colmar, church of St. Martin). Monumental in conception, the figures are broader than Rogier's. His influence spread far beyond the region where he worked. In Schongauer's generation, one of the most original engravers was the anonymous Housebook Master, so-called from a manuscript of 1475 in Waldburg-Wolfegg Castle, who invented a new method of engraving called drypoint. He was also a talented painter whose *Lovers* (1479) in Gotha is more linear and delicate in light and modeling. Friedrich Herlin was the main follower of Netherlandish ideas in Nördlingen. He arrived there in 1459 and in 1462–1465 painted the St. George Altarpiece for the city church (Nördlingen, Städtisches Museum). Sharper modeling and lesser atmospheric quality give to Herlin's imitation of Flemish style a flattened space and provincialism. The Family Altarpiece of 1488 (Nördlingen, Town Hall) is his most mature work. The Virgin holds the Child in a position close to that found in the paintings of Memling, and there is a greater unity of form and spatial arrangement than in his earlier paintings.

Hans Pleydenwurff moved to Nuremberg about 1450 and died at the height of his career in 1472. His Descent from the Cross from the Breslau Altar, 1462 (Nuremberg, Germanisches Nationalmuseum), lacks a transition between foreground figures and background landscape. The flattened composition is emphasized by the patterned gold brocade as sky. In his late Crucifixion (Munich, Alte Pinakothek) of circa 1470, the composition is based on Rogier's types under the cross and a wide landscape. After the death of Pleydenwurff, Michael Wolgemut, Albrecht Dürer's teacher, married Pleydenwurff's widow and inherited the shop. Dürer's *Apocalypse* (1498) was the first woodcut series on which all future printed interpretations of the *Apocalypse* were based.

Michael Pacher, born near Brixen in today's Italy and died 1498, invented a style that was not dependent on Rogier. His St. Wolfgang Altar, completed 1479–1481, is still in the church for which it was made, the church of St. Wolfgang on the Abersee in Austria. Covering a sculptured inner shrine are two sets of wings with paintings. The sculpted pinnacles and canopies rise thirteen feet into the church vaults. The outer shutters have four scenes from the life of St. Wolfgang. When these wings are open, eight panels of the life of Christ are seen. The inner shutters show scenes from the Life of the Virgin. Pacher's style shows diagonal lines that take deep plunges into space along the lines of the architecture. The figures become smaller from foreground to far distance. He paints sweeping draperies, and the foreground figures are giants seen from below.

Rueland Frueauf the Elder was the leading master in Salzburg and Passau after 1470. In the 1490s his Rogier-influenced style changed to a calmer mode often referred to as a classicizing trend in Late Gothic art. His Annunciation from an altar of the Life of the Virgin, 1490 (Vienna, Österreichische Galerie), shows monumental forms similar to those of Michael Pacher, with a Flemish base that created a clear style with even lighting. Since the forms of Late Gothic architecture had reduced the wall area of churches available for paintings, works in this medium played a lesser role, and artists made elaborate altarpieces with folding wings, sometimes combining wood carving and paintings. The spread of mysticism across Germany gave to the gospel story, especially the Passion of Christ and devotional images, an expressive interest.

Sculpture

From the later fourteenth through the early sixteenth century there was a tremendous demand for all types of sculpture throughout Germany. Unlike the previous period in which much of the sculpture was cut in stone and destined to adorn a fixed architectural setting, Late Gothic sculpture was characterized by its diversity of both materials and uses. Fueled by a waxing lay and civic pa

Tilman Riemenschneider, Altar of the Holy Blood, central shrine and wings, Rothenburg ob der Tauber, Church of St. James (Jakobskirche). Photograph: Joan A.Holladay

tronage, sculpture increasingly embodied personal, social, and religious aspirations. Ambitious clerics, nobles, and above all, burghers, embellished their churches, their residences, and their cities. Individual and communal faith was manifested pictorially in the form of an altarpiece, holy statue, or memorial, such as a tomb or epitaph. Only the advent of the Protestant Reformation, with its fundamental questioning of the role of religious art and its attendant iconoclasm beginning in about 1520, stanching this demand, which may have already peaked around 1500. Ulm Münster (1377–1531) possessed fifty-two endowed altars; the cathedral at Constance had sixty-three altars. Even small parish churches were enriched with a carved and, often, painted retablo as well as a wealth of secondary art.

As needs changed so did the character of the sculptor's workshop. The fifteenth century witnessed the rise of numerous large ateliers headed by a single master who was usually, although not always, a sculptor. Exceptions include the Syrlins—joiners active in Ulm and Blaubeuren—and painter Michael Wolgemut of Nuremberg. The production of an altarpiece required the collaboration of sculptors, painters, and joiners. Tilman Riemenschneider of Würzburg is credited with carving no fewer than 143 altarpieces and other sculptures in wood and stone for patrons throughout Franconia. Rothenburg ob der Tauber alone possessed seven of his altars. To handle this demand, Riemenschneider is documented training twelve apprentices between 1501 and 1517 who supplemented the other highly skilled artisans in his workshop. For some of the most successful masters, such as Hans Multscher or the Erharts of Ulm, it is often difficult differentiating between the master's own hand and those of followers mimicking his forms. Increasingly many of the most talented masters developed personal styles that distinguished their creations or, at least, the style of their workshops, from those of their peers. Riemenschneider's grave, dignified saints contrast instantly with Master H.L.'s (d. ca. 1533, known for the altar in the Breisach Münster) agitated figures with the marvelous calligraphic excesses of their swirling draperies as in his Coronation of the Virgin altarpiece in the Münster at Breisach.

The artistic production of any individual workshop was shaped by its geographic location and its access to adequate materials for carving. The wealthy towns of Bavaria, Franconia, Swabia, and the Rhine demanded more sculpture than most other regions of Germany. Sculptors in southern Germany had ready supplies of limewood and, in the Alps, pine, while masters like Heinrich Douermann in Kalkar or Bernt Notke in Lübeck worked in oak. Although the same florid effects found in limewood sculpture form the later fifteenth century may be achieved in the denser oak, as in Klaus Berg's apostles in Güstrow Cathedral, its soft and elastic character permits easier, more virtuoso carving, especially cross-grain. It could be polychromed (colored) or just lightly stained. Unlike Italy, Germany lacked indigenous marble other than the bright red-flecked stone found in limited quantities around Salzburg. Sculptors resorted instead to using either sandstone or limestone, especially for funerary monuments and other projects that demanded durability. Westphalia's coarse, whitish baumberger sandstone is quite different from the finer brownish sandstone of Strasbourg. Quarries near Eichstätt yielded exceptionally fine-grain Solnhofen limestone that was well suited for small, highly detailed and polished reliefs, such as those by Hans Daucher of Augsburg. Only a few towns other than Nuremberg and Augsburg could sustain metal sculptors such as the Vischer family, who pioneered the use of brass for everything from small statuettes to monumental shrines, like the tomb of Saint Sebaldus in Nuremberg, for patrons across Europe.

German sculpture underwent dramatic transformations during this period. The "Soft Style" of the beautiful virgins, like the Krumauer Madonna (ca. 1400; Vienna, Kunsthistorisches Museum) with its gentle sway and delicate features, yielded to the growing naturalism of Hans Multscher and other masters influenced by Netherlandish art. Multscher's Madonna and Child (1437) in the parish church in Landsberg conveys a better suggestion of a weighty body

moving beneath the heavy robes. Idealization is replaced by a strong individualization. Particularly effective is Christ's delicate gesture of balancing himself as he clutches Mary's robe with his right hand. Multscher's powerful Man of Sorrows (1429), with its emphasis on the convincing physical wounds and spiritual agony of Christ, commands the attention of all who enter through the main portal of the Münster in Ulm. Nicolaus Gerhaert von Leyden, the Netherlandish master who was active along the Upper Rhine and around Vienna, proved to be a catalyst to this nascent trend toward ever greater naturalism. His bust of a man (1463–1467; Strasbourg, Musée de l'Oeuvre Notre-Dame) shows a man (the artist?) captured in a moment of reflection. The fingers of his right hand press into the yielding flesh of his chin. In the epitaph of Konrad von Busang (1464; Strasbourg Cathedral), the pious canon's prayer is transformed into an intimate mystical encounter with Mary and the playful Christ child who reaches out to touch the old man's hands. Gerhaert's statues, many of which were subsequently destroyed, inspired Master E.S. and, to a lesser degree, Martin Schongauer of Colmar, whose engravings made Gerhaert's style accessible to a broad audience. As the quality of prints improved from the 1460s, sculptors increasingly borrowed their compositions. Even inventive masters like Riemenschneider or Veit Stoss of Nuremberg occasionally turned to a Schongauer engraving for inspiration. With the concurrent rise in demand for elaborate altarpieces, sculptors often needed such models for the carved reliefs or painted panels of the wings. Michael Pacher of Bruneck, Michel Erhart of Ulm and his son Gregor in Augsburg, Riemenschneider, Stoss, Nikolaus Hagenower of Strasbourg, Niklaus Weckmann of Ulm, the Dauchers of Augsburg, Master H.L. at Breisach, and Hans Leinberger of Landshut are among the masters who produced large and ever more intricate altarpieces for churches through southern Germany and the Tyrol. There were far fewer examples of this complexity in the north, although the original corpus of works has been reduced sharply by Protestant iconoclasm and wars. Bernt Notke of Lübeck's high altars for Århus Cathedral (1479) in Denmark and the Heilig-Geist-Spital (1483) in Tallinn (Revel) are far simpler in design and lack the complex superstructures and architectural frames of the southern altarpieces. His creativity is revealed better in his moving Crucifixion group (1477) in Lübeck Cathedral and his St. George slaying the dragon (1489) in Stockholm (Storkyrka).

Sculptors during this period diversified their art. While most of their work was destined for a church setting, they carved fountains such as the Schöner Brunnen (Beautiful Fountain) of circa 1385–1396 or Peter Flotner's Apollo Fountain of 1532, both in Nuremberg; statues for city halls and public buildings like Multscher's Charlemagne figure of circa 1427–1429 in Ulm or Adam Kraft's Weighing House relief of 1497 in Nuremberg; or the various house madonnas by Kraft and Stoss in the same city. Portrait sculpture, including medals, statuettes either carved in fruitwood or cast in bronze or brass, and allegorical reliefs became popular, especially in Augsburg and Nuremberg during the opening decades of the sixteenth century. This trend toward collectible personal sculpture and secular public projects would continue especially as the Reformation threatened religious art and sculptors' livelihoods.

Gothic Language

Gothic is the earliest attested of the Germanic languages, with the exception of scattered inscriptions. Although most of the manuscripts are of the sixth century, the texts are for the most part of the fourth century, when Wulfila (311–ca. 381), bishop of the Goths, devised an alphabet and translated the Bible into his native tongue. Though some have complained that it is overly literal, it is a splendid translation and reveals his careful thought in almost every word. Besides the translation of the Bible, we have a number of other precious fragments, such as the *Skeireins*, a commentary on the Gospel of John, some deeds concerning property of the Gothic Church in Italy, some remarks on Gothic pronunciation and some sentences in Gothic (a Salzburg-Vienna manuscript), and the like. Recently, some lead plates inscribed in Gothic, inserted in graves for apotropaic (prevention) purposes, have been found in Hungary.

The manuscripts containing Gothic have offered numerous problems to scholars. The best known of them is the *Codex argenteus*, or Golden Manuscript, preserved in the library of Uppsala University in Sweden. One of the most precious manuscripts in the world, thanks to the rarity of the language and the adornment, it is written in gold and silver ink on purple parchment, presumably for Theodorich the Great. (A reconstituted page of this manuscript can be seen at www.lang.uiuc.edu/LLL/lll.html) Most of the other manuscripts of biblical Gothic are palimpsests, that is, manuscripts in which the Gothic has been scraped off and another text has been written over the Gothic. This, coupled with the fact that nineteenth-century scholars treated the manuscripts with reagents such as nutgall, makes them quite difficult to decipher.

Gothic has had enough influence on Old High German that authorities such as Wrede have spoken of that language as "gotisiertes Westgermanisch" (West Germanic Gothic). For example, words like *Kirche* (church), *Pfaffe* (minister), *Engel* (angel), and *Teufel* (devil) are said to show Gothic influence, and the use of *ther wīho atum* (the Holy Breath) instead of *ther heilago geist* (the Holy Ghost/Spirit) is thought to show Gothic missionary activity in Germany. The *Codex argenteus* itself is thought to have been brought to Germany from Italy under Charlemagne, and many works, such as that of Walahfrid Strabo, reveal knowledge of the Goths and Gothic, as is also shown in the famous Salzburg-Vienna Alcuin manuscript.

Gothic is important also for the textual criticism of the New Testament. It is the oldest extant representative of the so-called Byzantine version. This, along with Wulfila's well-known fidelity to the original text and his care in translating, makes Gothic the most important witness to that most important version.

As the oldest well-attested Germanic language, as well as almost the only extant witness to East Germanic, Gothic is of primary importance in the reconstruction of Proto-Germanic and in the understanding of many of the processes of the other Germanic languages. It remains the foundation stone of comparative Germanic linguistics.

Gottfried von Straßburg (fl. 1210)

The greatest poet of the German Middle Ages, Gottfried is known for his Middle High German *Tristan* romance, a fragment of just under twenty thousand lines composed in rhymed couplets. Gottfried may also be the author of two poems in the famous Manesse manuscript (University of Heidelberg library) under Ulrich von Liechtenstein's name. Falsely attributed to him are three other poems that are found in various manuscripts. The contours of his biography remain vague owing to lack of historical evidence. Ulrich von Türling and Heinrich von Freiberg, two thirteenth-century writers of continuations of his fragment, name Gottfried explicitly as its author. That the majority of the earliest manuscripts were probably produced in Alsace or even directly in Strasbourg (he is known by the German form Straßburg) locates Gottfried in this medieval cultural center.

Our clearest picture of him is provided by the romance itself. Its date of composition—generally put at around 1210—is based mainly on mention in its so-called literary excursus of the poets Heinrich von Veldeke and Reinmar von Hagenau as being deceased, and of Hartmann von Aue, Bligger von Steinach, and Walther von der Vogelweide as still living. Gottfried's remarkable erudition—so evident throughout the romance—in French, German, and classical Latin literature; rhetoric and poetics; theology; law; and music as well as the elegance and artistry of his language and style are a sure indication of a humanist cathedral school education.

Though familiar with several versions of the Tristan story, Gottfried claims allegiance to only one: Thomas of Britain, of whose work only the latter part, which Gottfried did not get to, has survived. Until recently, only two small fragments overlapped with Gottfried's version, thus hampering a precise determination of Gottfried's reliance on Thomas. In 1995, however, a new fragment of Thomas's work surfaced that coincides with key scenes in Gottfried, namely, Tristan's and Isolde's reactions to the love potion, their arrival in Cornwall, and the wedding night. Initial assessments have led scholars to revise the prevalent (though not unanimous) assumption of Gottfried's fairly high degree of faithfulness to Thomas. For one thing, Gottfried innovated more than was previously thought; for another, it is now supposed that Gottfried drew on a greater number of sources. Among these, Eilhart von Oberge has gained particular significance because of common elements not found in the new Thomas fragment.

Though it shares numerous features with chivalric Arthurian romance, Gottfried's *Tristan* has more accurately been termed a courtier romance, since its hero acts more often in the capacity of courtier and artist than of knight, and since the narrative action tends to occur in the worldly, political arena of the court, rather than to depict knights on marvelous quests for adventure. Not only is Gottfried thoroughly acquainted with, he also details and explores various facets of the decorum, mores, and material culture of the court.

What follows is a highly condensed summary of the romance. It begins with a prologue in which Gottfried's narrator persona sets a discriminating tone by describing the audience of "noble hearts" to whom he specifically addresses his work. This elite group distinguishes itself by seeking not merely joy but by accepting both joy and sorrow, sweetness and bitterness into their lives. Gottfried offers them his love story as a palliative for the pain they suffer from love, and introduces his hero and heroine as the epitome of true lovers. The first strophes of the prologue create the acrostic *GDIETÉRICHTI*. *Dietèrich* is assumed to be Gottfried's patron (an otherwise unknown Dietrich), the *G* may be short for "Gottfried," and the *TI* stands for Tristan and Isolde.

The plot opens with an account of Tristan's parents, Riwalin and Blanche-flur. Riwalin of Parmenie journeys to Cornwall, where he intends to refine his manners and his knightly skills at the court of the highly reputable King Marke. He and Marke's sister Blanche-flur fall in love and conceive a child. Blanche-flur steals away with Riwalin to Parmenie, where they marry. Riwalin's death in battle at the hand of his overlord Morgan causes Blanche-flur to die of grief on giving birth to Tristan. To protect Tristan from Morgan, Riwalin's loyal marshal Rual has Tristan grow up as his child, though he sees to it that Tristan receives an education befitting a future ruler.

At age fourteen Tristan is kidnapped by Norwegian ship merchants but is later released on the shores of Cornwall. He meets King Marke, who takes Tristan into close favor on the basis of his dazzling accomplishments in hunting, musical performance, and foreign languages. Not until Rual arrives after a three-and-a-half-year search are Marke and Tristan enlightened as to their relationship as uncle and nephew.

Tristan is knighted in a ceremony whose portrayal is extraordinary for its literary value and its contravention of reader expectations. Initially dispensing with literal depiction, Gottfried cloaks events in allegory instead. From here he shifts to a metapoetic level, where his narrator persona expresses (ironically) an inability to prepare Tristan appropriately for the ceremony. A eulogistic critique of style follows of the five contemporary German poets and minnesingers mentioned above; one unnamed poet (in all likelihood Wolfram von Eschenbach) receives scathing criticism. Now thoroughly "tongue-tied," however, the poet requests inspiration to complete his task in a two-part invocation: first to Apollo and the Muses, then to the supernal Christian God. Only after distinguishing Tristan from his compatriots by delineating his special inborn virtues does Gottfried descend to the literal level and describe the presentation of sword, spurs, and shield. In disdaining to tell of the tournament that concludes the ceremony, Gottfried both distances himself from and gets in a sly dig at contemporaries who go on and on about such spectacles in great detail. The literary excursus is significant for its unique vernacular contribution to literary criticism.

The next episodes involve Tristan in trials of battle, in politics, and at court. His journey to Parmenie includes an attempt to legitimize his right to hold his father's fief. The encounter between Tristan and his would-be overlord, Morgan, goes awry, however, and Tristan ends up killing Morgan and acquiring his lands by force.

Upon Tristan's return to Cornwall, he learns that Marke is not an autonomous ruler but has been obliged since childhood to pay tribute to King Gurnemanz of Ireland. Taking up their cause, Tristan delivers Marke's kingdoms from further subjection by killing Gurnemanz's envoy, Morolt. During their judicial duel, one of Tristan's blows leaves a piece of his sword lodged in Morolt's skull. By his turn, Morolt has wounded Tristan with his poisoned sword, informing him that only his sister, Queen Isolde of Ireland, can cure him of its fatal effect. Tristan sets off for Ireland disguised as the minstrel/merchant "Tantris," and gains access to the queen by means of his sweetly compelling musical performance. She cures him in exchange for tutoring her daughter, the princess Isolde, whom he educates in letters, music, and courteous manners. After his return to Cornwall, intrigues brew against him by barons envious of his position as Marke's heir. To appease them, Marke reluctantly agrees to marry Princess Isolde, hoping this venture will fail because of the hostility between the two countries. But Tristan, who heads the bridal quest, succeeds. First he kills the dragon who has been terrorizing the Irish countryside, a prerequisite to winning Isolde's hand. The dragon's tongue, however, which Tristan has cut out as proof, is poisonous, and causes Tristan to sink, unconscious, into a bog. Mean-while, the cowardly Irish steward, having found and appropriated the carcass of the dragon, has claimed Isolde as his reward, much to the dismay of the royal family. Through concerted efforts, the queen and her daughter find "Tantris," and the queen cures him anew.

A combination of events leads to Princess Isolde's discovery of Tristan's identity, and she almost slays him in revenge for Morolt. Spared, Tristan conveys Marke's offer of marriage and, after assisting the queen in thwarting the steward with his testimony, Tristan sails for Cornwall with Princess Isolde and Brangaene, her maid, in tow. Brangaene is in possession of a love potion given her by the queen, who wishes to ensure her daughter's happiness with her new husband, King Marke. But Tristan and Isolde inadvertently drink the potion together on their voyage, sealing their eternal love for each other. Though they consummate their love on the ship, loyalty forces Tristan to deliver Isolde to Marke, whom she weds. On the wedding night, Brangaene stands in for Isolde in order to conceal Isolde's loss of virginity. Fearing treason, Isolde attempts to have Brangaene murdered, but Brangaene demonstrates her discretion and trustworthiness, and continues to help the lovers carry on their clandestine affair.

When the Cornish steward Marjodo chances to discover their adulterous relationship, he relates "rumors" of it to Marke, who embarks on a series of attempts designed to catch the lovers out. Finally, the growing threat to the king's reputation and authority by the rumors induces Marke to force Isolde to undergo an ordeal of the hot iron. In this famous episode, the king desires the queen to destroy the rumors. She performs this feat with such calculating ingenuity and winning courtesy that the iron does not burn her when she carries it. Thus she restores both her own and the king's honor.

At court the lovers, unable to restrain their display of mutual affection, provoke Marke to banish them. They take refuge in a cave of lovers whose qualities bear mention. Each of the architectural elements of the cave is allegorically appropriate to a true lover's environment: the white, smooth wall means love's integrity, the cave's width is love's strength, its green floor love's constancy, and the crystal bed love's purity. Moreover, the door to the cave is constructed so as to admit only true lovers. Miraculously, the lovers need not eat, but subsist solely on love and love's gazes. One day, Marke happens upon the cave

while hunting. Anticipating detection, Tristan places a sword between Isolde and himself before they fall asleep together. The sword's position convinces Marke of their innocence, and he has them fetched back to court. There Isolde plans a rendezvous with Tristan in the garden in the face of increased surveillance by her husband. Marke discovers them while they are sleeping, but Tristan awakens in time to see him depart. Realizing that they must part company, Tristan and Isolde say a tender farewell, and Tristan flees Cornwall before Marke returns with his councillors. Tristan seeks combat in an attempt to divert himself (albeit unsuccessfully) from the pain of separation from Isolde. He travels to Arundel, a coastal duchy, where he assists the inhabitants to a victory. On meeting its ruler's daughter, Isolde of the White Hands, Tristan spirals into confusion; her beauty and her name remind him of his Isolde. Isolde of the White Hands meanwhile falls in love with Tristan. Their proximity to each other at court causes Tristan to waver in his original love, and the romance breaks off as he laments the unfairness of his situation. The dialectic and the nature of Gottfried's concept of love, his unorthodox relationship to Christianity, his attitude toward courtliness, and the interplay between narrator excursions and narrative action are only some of the many aspects of the romance that have served both to stimulate and to vex scholarly attempts at interpretation. And yet, despite the obstacles caused by the abundant ambivalences and ironies and, quite simply, the alterity (uniqueness) of the work, Gottfried continues to delight and seduce his readership, leaving the impression of a brilliant poet, an aesthete of aloof yet discerning eye, and a superb master in absolute control of his art.

Gottfried von Straßburg, *Tristan*, Illustrations

Represented in some thirty-five art works in the German-speaking region, the Tristan story is rivaled only by the Charlemagne/Roland material among secular literary motives in the visual arts. Beyond the sheer number of artifacts, two things distinguish the iconography of Tristan from that of other romance materials: the popularity of the subject in nonbook settings and noncyclical works, and the thematic uniformity of Tristan pictorializations. The most popular motive in noncyclical works is the "orchard scene," in which Tristan and Isolde deceive Marke, who spies on them from a tree. The standard depiction of the scene was influenced by the iconography of the Fall of Man: a man and a woman under a tree, with Marke visually analogous to the serpent in the tree. In general, however, the meaning of the Fall of Man was not transferred to the orchard scene, which became an iconic representation of love and lovers, albeit perhaps with different significances in different contexts. Despite considerable variation in choice and number of scenes, the Tristan narrative cycles in the German language area are strikingly uniform in their basic response to the story, regarding Tristan as an exemplary knight and the love of Tristan and Isolde as an exemplary love—risky, perhaps, but ultimately triumphant, and never obviously depicted as sinful or antisocial. Among the most note-worthy of the numerous nonbook Tristan cycles from the German region area are the three Wienhausen wall hangings, the Erfurt embroidery, and the Runkelstein murals. Compared with the number of nonbook artifacts, the number of illuminated Tristan manuscripts is surprisingly small. Most spectacular is the Munich codex (Bayerische Staatsbibliothek, no. Cgm 51) of circa 1240, with approximately 118 miniatures. Other illuminated Gottfried texts are considerably later: one in Cologne (Historisches Archiv der Stadt, no. W88*), with nine line drawings, dates from 1323; another in Brussels (Bibliothèque Royale, no. 14697), with 92 large drawings, is a product of the Diebolt Lauber workshop (first third of fifteenth century). Eilhart's text is illustrated in a Swabian manuscript of 1465–1470 (Heidelberg, Universitätsbibliothek, no. Cpg 346) and the prose version, *Tristan und Isalde*, is illustrated with closely related woodcuts in two incunabula (pre-1500 printed books).

Gottschalk of Orbais (ca. 803–ca. 868)

A Saxon monk, theologian, and poet, Gottschalk was one of the most controversial religious figures in western Europe in the ninth century. He had been offered as a child to the monastery of Fulda by his parents. Upon adult-hood he demanded his release, on the ground that he himself had not taken the vows of profession, and the word of another could not be binding on him. This embroiled him in a controversy with his abbot, Hrabanus Maurus, who kept the young Gottschalk in the monastery by force. Eventually the synod of Mainz (829) ruled that Gottschalk must remain in the monastic state, but at least allowed his transfer to the less hostile monastery of Orbais.

Gottschalk was a talented theologian. He developed a doctrine of double predestination that went several steps further than Augustine, teaching that from birth the elect were destined for salvation and wrongdoers to damnation. This called into question the power of divine grace in the world and roused the hostility of other leading Carolingian theologians. His old enemy Hrabanus Maurus, by then archbishop of Mainz, secured Gottschalk's condemnation at another synod of Mainz in 848. He refused to recant his beliefs, and was excommunicated and imprisoned by Archbishop Hincmar of Reims at the monastery of Hautvillers. His treatise "De praedestinatione" (On Predestination) was rediscovered in 1930. This work, along with Gottschalk's extant poetry, reveals its author as a man of deep learning and piety.

An early courtly crusader romance from the end of the twelfth century, *Graf Rudolf* is dated 1170–1173, based on lines in the "Db" fragment where the king of Jerusalem tells about the Roman emperor who serves a rich king as cupbearer. Approximately 1,400 lines of the poem in fourteen fragments from a single manuscript are extant (Braunschweig, Stadtbibliothek, no. 5 and Göttingen, Universitätsbibliothek, no. Cod. Ms. philol. 184,7); the beginning and conclusion are missing. The dialect is Middle German, possibly from Hesse or Thuringia. The names Gilot, Beatrise, Bonifait, Appollinart, and Bonthard point to a French model. The second half (from a fragment "E") has much in common with the Old French *Beuve de Hantone*, which was composed later than the dates posed for *Graf Rudolf*.

The Christian Rudolf appears at the beginning as a military commander, fighting against the Saracens in the service of a Christian king of Jerusalem, performing brilliantly at Ascalon. For reasons not specified, he quarrels with this king and deserts to the Muslim Sultan Halap, who is clearly a worthier person. Initially Rudolf is imbued with typical Crusader enthusiasm, Later the only concession that he makes to his fellow Christians in combat is that he strikes them with the flat of his sword instead of the edge. Rudolf easily moves back and forth between the heathen and Christian worlds with no condemnation from the author. The author describes at length splendid ceremonies and magnificent objects evoking the exotic atmosphere of the East. The two sides seem to be divided by political and military antipathy rather than religious differences; what unites them are the courtly values accepted by the Crusaders as well as the Muslims.

The second half of the poem is a love story in which Rudolf woos the Sultan's daughter in typical courtly fashion. When he is imprisoned on a mission for her father, the princess travels to Constantinople, where she learns about Christianity and requests baptism. There is no indication that this baptism is the result of love for Rudolf or of any religious feelings concerning Christianity. Her conversion and adoption of the Christian name of Irmengard does not seem to make much difference to Rudolf, although undoubtedly it will simplify their future life together in Flanders. Rudolf escapes from prison, finds Irmengard in Constantinople, marries her, and they return to Flanders with their servants Beatrise and Bonifait. Bonifait is killed trying to defend the sleepers from twelve robbers. The story ends with Rudolf deeply mourning Bonifait.

[Crusades](#)

Born between 1445 and 1450 in Schmidmühlen near Regensburg, this master builder and sculptor in both stone and wood spent his career in Munich. Here he acquired the status of master in 1477, repeatedly held the office of head of the painter's guild, and occupied an especially privileged position at the court of the dukes of Bavaria. The strength of his sensual temperament is apparent in the peculiar style of his early wood sculpture, suggesting almost grotesque movements, which gives way to calmer forms only in his late works. The series of preserved architectural and sculptural works, of which only the epitaph of Ulrich Aresinger from 1482 (Munich, St. Peter's) is signed and dated, allows the conclusion that Grasser completed at least a six-year apprenticeship as a builder and stonecutter before the "quarrelsome, confused, and deceitful" journeyman appeared unexpectedly in Munich about 1474 (Frankl 1942:257).

Only one of Grasser's architectural projects still stands—the ingenious extension added to the church of the Virgin in Schwaz in Tyrol between 1490 and 1502. Three other monuments are known through documents: the cloister Mariaberg near Rorschach from 1487, the tabernacle for the host at Freising Cathedral from 1489,

Erasmus Grasser, Morris Dancer (Munich, Münchner Stadtmuseum. Photograph: Münchner Stadtmuseum/Dorothee Jordens-Meintker)

and the well-room with accompanying chapel at the salt works at Reichenhall. Likewise four sculptures or groups are documented from the oeuvre of *maister Erasem schnitzer* (Master Erasmus wood-carver). Of the original sixteen Morris Dancers carved for the Altes Rathaus (old town hall) in Munich about 1480, ten are preserved today in the city museum. Seven mourners from a Lamentation group in limestone dated 1492 are preserved in Freising Cathedral. Wood figures of the Virgin and Saints Leonhard and Eligius, carved between 1502 and 1505, and the altar of St. Achatius (1503–1506) are to be found in the church at Reichersdorf in Upper Bavaria (Otto 1988:31–37).

The attributed works are more numerous. A multifigured altar of the Holy Cross from about 1482 at the church of the Assumption at Ramersdorf and a similar small-scale monstrance altar from about 1483, now in the Bavarian National Museum in Munich, reveal a knowledge of Netherlandish carved altarpieces. The often-cited influence of Nicolaus Gerhaert von Leyden on Grasser's style is visible in three groups representing the Virgin and John the Evangelist under the cross: at the church of St. Leonhard at Traidendorf in the Oberpfalz (after 1470), from the church of St. Wolfgang in Munich (now Bavarian National Museum, 1485–1490), and at St. Arsadius in Immünster (about 1500). The high-quality wood figure of a Throne of Grace (*Gnadenstuhl*) in Schliersee, from about 1480, depends closely on an engraving of the same subject by the anonymous Master E.S.

Certainly one of the great popes of the medieval Church, Gregory lent his name to the eleventh-century reform of the Church, known as the Gregorian reform or the Investiture Controversy. He was born Hildebrand around 1025 in southern Tuscany (Soana?), or, less likely, Rome, to a well-to-do family, but came to Rome as a young child. In his letters as pope, Gregory mentions that he had grown up in the bosom of the Roman Church and refers to the special guardianship of the Apostle Peter, as well as to a Roman palace, the Lateran, where he attended school with upper-class children.

January 1047 is the first verifiable date for him; however, he accompanied Pope Gregory VI (1045–1046) into exile in Germany after the latter's deposition by Henry III at the synod of Sutri (Italy), December 20, 1046, and spent some time among the canons of Cologne cathedral. There is no evidence, whatsoever, that he became a monk at Cluny. In early 1049, Hildebrand returned to Rome with Pope Leo IX (1049–1054), was made subdeacon, and rector/administrator of the abbey of St. Paul's Outside the Walls. He worked on behalf of the papacy as legate to France, Germany, and Italy, was elevated to the position of archdeacon in late 1058 or early 1059, and perhaps was responsible for the coronation of Pope Nicholas II in the latter year.

During the funeral of Pope Alexander II, on April 22, 1073, Hildebrand was acclaimed as Pope Gregory VII in a tumultuous election by the Roman clergy and people, an election that was only subsequently formalized by the cardinals. Gregory interpreted his election as a special call by God to continue without hesitation the fight for what he defined as *iustitia* (justice), meaning the restoration of the Church to what Gregory and his collaborators saw as her proper place in the world order. He linked the battle against simony and for celibacy of the clergy—the chief characteristics of Gregorian reform—with a marked emphasis on papal primacy based on the primacy of the Roman Church. Although this primacy included the subordination of all temporal Christian governments to the papal authority, it applied first of all to the ecclesiastical hierarchy. In Gregory's view, all Christians, including kings and emperors, owed the papacy unquestioned obedience because the pope alone would never deviate from the Christian faith, given his mystic connection with Saint Peter, whose successor he was. Obedience to God became obedience to the papacy.

Gregory's attitude had profound consequences in the realm of politics. In France and, especially, Germany, direct papal intervention in the appointment of bishops and the prohibition of their investiture with ring and staff (1078) created severe tensions. Despite some initial problems, there was no hint of this tension with Germany at the outset of Gregory's pontificate. Gregory saw in Henry IV the future emperor and always thought highly of Henry IV. In a letter of December 1074 he suggested that Henry IV was to protect Rome and the Roman Church during a papal expedition to the Holy Land that Gregory envisioned in the company of the Empress Agnes, Henry's mother, and Countess Matilda of Tuscany. But his attitude changed. In December 1075, by letter and messenger (who may have threatened excommunication orally), the pope blamed Henry harshly for the customary royal appointment of bishops to the Italian bishoprics of Milan, Fermo, and Spoleto as well as for the king's continued contact with those of his advisers who had been previously excommunicated.

In response, on January 24, 1076, at the diet of Worms, Henry IV and the vast majority of the German bishops replied in even harsher terms. They renounced their obedience to "Brother Hildebrand," and the king called on Gregory to abdicate. The Romans were asked to elect a new pope. North Italian bishops immediately joined their German colleagues. The letters reached Gregory during the Lenten synod (February 14–20, 1076), and he replied immediately, declaring Henry excommunicated and deposed as king. In his prayer to the Apostle Peter, he also absolved all of Henry's subjects from their oath of fealty.

The effect of Henry's excommunication was tremendous. Never before had a pope deposed a king, even though Gregory assumed that he had historical precedents on his side. Then, as now, the deposition of Henry was the most hotly debated action of Gregory's papacy. He had pursued to its logical conclusion his conviction that papal primacy pertained not only to the spiritual, but to the secular sphere. Church reform now became a struggle over dominance between the pope and his princely as well as his episcopal opponents in the civil war that raged intermittently throughout Henry's reign.

In order to save his crown, Henry finally submitted to Gregory at Canossa (January 28, 1077), thus implicitly recognizing papal claims to supremacy. Gregory excommunicated Henry for a second time at the Lenten synod of 1080, when he recognized Rudolf of Rheinfelden as king. However, after the absolution of Canossa, Henry had reasserted himself; the new excommunication had little effect, and the king was victorious in the civil war. A royal synod at Brizen formally deposed Gregory (June 25, 1080) and elected Wibert of Ravenna (anti-)pope. He was eventually enthroned as Clement III after the successful conclusion of Henry's Italian campaign in March 1084. Gregory had fled to the Castello S. Angelo. He was freed by his Norman vassal, Robert Guiscard, in May and accompanied him to Salerno where he died on May 25, 1085. Pope Paul V canonized Gregory in 1606, and his feast day, May 25, was expanded from Salerno to the entire Church in 1728.

The history of papal primacy cannot be imagined without Gregory, especially, but not only, with regard to his views on secular power. In his lifetime, he attempted to translate his own religious experience, with its mystical core, into historical reality. Concepts which he grasped intuitively were legally and theoretically elaborated in the twelfth and thirteenth centuries, resulting in what is known as the papal monarchy.

Grimbergse Oorlog, De

This Middle Dutch (Brabantine) poem is named after its main theme, the war (*oorlog*) between the clan of the Berthouts, petty lords of Grimbergen (near Brussels) and the dukes of Brabant. Two anonymous poets wrote the extensive poem (more than twelve thousand lines in rhymed couplets) around 1350, about two hundred years after the events described in it. The poem combines references to verifiable historical facts with fictitious stories from the epic tradition, and glorifies the virtues of knightly warfare and noble bravery at a time when nobility had been defeated by peasants (Battle of Courtrai, 1302) and gunpowder.

The original work, perhaps commissioned by the lord of Wezemaal, survives only in three eighteenth- and nineteenth-century transcriptions, based on medieval manuscripts that are known to have existed but are now lost. Around 1500 the poem was rewritten, and this second version survives in two seventeenth- and eighteenth-century transcriptions. The importance of the poem is indicated by the fact that, shortly after 1500, a prose version, based on the second rhymed version, was made. Twenty manuscripts (sixteenth to eighteenth century) of the prose version are known, of which thirteen actually survive.

After a long introduction, describing the ancestry of the dukes of Brabant, beginning with the Trojans, and depicting the origins of their conflict with the Berthouts, the poem narrates the war between the dukes of Brabant—Godfried I, Godfried II, and Godfried III—and the lords of Grimbergen—Wouter II and his sons Wouter III and Gerard II. This war—fought between 1141 and 1159—was ultimately lost by the lords of Grimbergen, who then became loyal vassals of the Brabantine ducal house.

Guelph Treasure

The history of the group of reliquaries known since the nineteenth century as the Guelph Treasure (German, *Welfenschatz*) is intimately linked to that of the Guelph family and to their foundation in the palace at Braunschweig. About 1030, when the Countess Gertrude established the church dedicated to the Virgin, John the Baptist, and Saints Peter, Paul, and Blasius, she also took responsibility for the building and its contents. Four elaborate metalwork objects—a portable altar and two reliquary crosses, all in the Cleveland Museum of Art, and the arm reliquary of Saint Blasius (Braunschweig, Herzog Anton Ulrich-Museum), the earliest known example of this reliquary type—are inscribed with her name. When Henry the Lion, her great-great-great-grandson, rebuilt the church, by then dedicated primarily to St. Blasius, between 1173 and 1188, he also contributed a group of relics to its treasury. The early-thirteenth-century chronicler Arnold of Lübeck relates that Heinrich had acquired these relics, including a second relic of St. Blasius, from the Emperor Manuel in Constantinople on his return from Crusade in 1173 and that he had had them mounted in expensive reliquaries. Inscriptions on the arm reliquaries of Sts. Theodore and Innocent associate them with Heinrich; a golden cross and a reliquary in the form of a church with five towers are known today only through the documents. Heinrich's son, the Emperor Otto IV, specified in his will of 1218 that, with a single exception, all his and his father's relics were to be held in perpetuity by the church of St. Blasius.

The earliest inventory of the treasury, made in 1482, lists 138 reliquaries, of which 81 can be identified today. They include numerous portable altars, a dozen arm reliquaries, and reliquary crosses, as well as types of reliquaries that became popular at a later period: head reliquaries, monstrances and ostensoria (vessels for display), and three examples of plenary reliquaries, in which relics are set into the cover of a book containing all the mass readings for the church year. Some of these objects were given by later family members, others by canons of St. Blasius and other church officials.

In addition to the significance of its individual objects and their documented association with a specific family and the church that played an important role in its dynastic identity, the Guelph Treasure is important for its role in bringing the issue of the alienability of cultural patrimony to public attention in the 1930s. The treasury had remained more or less intact at St. Blasius until 1671, when Duke Rudolf August of Braunschweig-Wolfenbüttel gave it, without the permission of the chapter, to his Catholic cousin, Duke Johann Friedrich of Hanover, in exchange for his help in suppressing the city of Braunschweig. In 1866, when Prussia annexed the kingdom of Hanover, the treasury was designated the private property of King George V, who took it with him into exile in Austria. The German government and the city of Hanover both failed to purchase the objects when George's grandson offered the entire treasury for sale in 1928, and in 1930, it was purchased by a consortium of art dealers, who allowed the works to be sold individually. After the Cleveland Museum of Art purchased a number of key pieces, including three of Gertrude's original four donations, in 1931, the state of Prussia succeeded in acquiring the remaining forty-four objects for the Kunstgewerbemuseum (Museum of Decorative Arts) in Berlin.

Gurk

The village of Gurk in the Austrian province of Carinthia was first mentioned in the ninth century. Tradition holds that the cathedral, formerly the seat of the bishops of Gurk, was founded by Countess Hemma of Freisach-Zeltschach, following the death of her husband and son in battle. The current structure was begun around 1140 by Bishop Romanus I. It consists of a nave and side-aisles with a crypt and a twin-towered facade with a gallery over the porch. It is in this west gallery that the most important of the thirteenth-century frescoes can be found, although additional frescoes, including a St. Christopher near the main altar, and stained glass are also part of the building's decoration.

The extensive and superb fresco cycle of the two-bay vaulted gallery has drawn much attention from scholars, for it is possibly the most important remaining monument of mid-thirteenth-century Austrian wall painting, especially among those painted in the so-called *Zackenstil* (or zigzag style, see below). As described by Otto Demus, the program is extensive and well organized. Within the space, divided into two groin-vaulted bays, are depictions of the Earthly Paradise in the east and the Heavenly Jerusalem in the west with the Four Rivers of Paradise and Jacob's Ladder between them. Scenes include the Annunciations to the Virgin and Saint Anne, the Entry into Jerusalem, and the Journey of the Magi. On the west wall is a depiction of the Transfiguration with light from three windows, a series of medallions with saints below, and, formerly in the apse, a Christ in Majesty with Saints. In addition, in the quadrants of the east vault are scenes of the Fall of Man. Perhaps most significant and striking of all of the images is the Virgin and Child Enthroned as the Throne of Solomon, in which the standing child caresses the Virgin's chin, as she does his. This image connects the fresco cycle to other mid-century paintings, and, along with the details of the style of all of the paintings, raises the thorny problem of the dating of the cycle.

The initial difficulties in dating lie with attempts to reconcile the frescoes with existing documentation. Two donors are depicted: Bishop Otto I, who probably consecrated the chapel in 1214, the only year in which he was bishop, and Dietrich II who was bishop from 1253–1278. In addition, records mention a *Heinricus pictor de Gurk* fourteen times between 1196 and 1226. Some scholars have argued for the earlier date around 1214, in part because of suggestions that the frescoes were repaired later in the thirteenth century, which would account for the second dedication. But, more recently, others have argued convincingly for a date around 1250 or slightly later, and this date can be upheld on the basis of style and iconography. The image of the Virgin and Child as the Throne of Solomon, which has been called a *Glykophilousa*, is a type which appears with variations in Central Europe in the second half of the thirteenth century and the early fourteenth century, for example, in the fresco cycle of the court chapel at Stein an der Donau. Here, the Virgin and Child caress each other's chins in a reference to the Song of Solomon, which underscores the meaning of the lion-based throne.

A similar image appears in a window at Strasbourg usually dated to the middle of the thirteenth century. The style of this window belongs to the version of the *Zackenstil* found at Gurk, a style characterized not only by the angular zigzag style of the drapery, but also by distinctive facial and hair types. Of the examples of this style found in Austria, including those at Krems from around 1277 and Göss of the 1280s, Gurk appears to be the earliest. While the *Zackenstil* first appears to the north in Saxony, a particular version has been associated with manuscripts and stained glass of the Middle Rhine and Regensburg areas in the 1250s. It also appears in manuscripts associated with the monastery of St. Florian in Austria, some of which are strikingly similar to Gurk in the facial types as well as in the abundant, fractured, and angular drapery. Such correspondences argue for the later date of the fresco cycle at Gurk at the time of the cathedral's second consecration, a date which also clarifies the history of the *Zackenstil* in Central Europe.

Credited with the invention of printing with movable metal type, Johann Gutenberg probably learned metal-working from his father's family who worked for the archbishop's mint. Gutenberg lived in Strasbourg from about 1428 to 1448, when he returned to Mainz where he had been born. There, he produced the Gutenberg Bible, the first major printed book. He died in Mainz on February 3, 1468.

Gutenberg's historical significance arises from his role in the development of printing. Records of lawsuits during his residence in Strasbourg point to his early experiments with the craft. The heirs of one of his partners, for example, sued to be included in the partnership. Testimony mentions "materials pertaining to printing," including a press, *Formen* (a word for type), and a purchase of metal. These items suggest that Gutenberg was working out the printing process, but no printed material has survived to support this theory.

After Gutenberg returned to Mainz, his efforts at printing continued. Another lawsuit, the so-called Helmasperger Instrument of 1455, connects Gutenberg with the Gutenberg Bible. Johann Fust, a Mainz businessman, sued Gutenberg to recover loans made in 1450 and 1452 for expenses incurred in making equipment, paying wages, and purchasing parchment paper and ink for "the work of the books." This document combined with analysis of the paper and its watermarks, the ink, and typography in the Gutenberg Bible lead to the conclusion that Gutenberg, aided by several assistants, including future printers Peter Schoeffer, Berthold Ruppel, and Heinrich Kefer, printed this Bible between 1450 and 1455.

Attribution of other printed books to Gutenberg is more problematic. He probably continued printing in Mainz. He has been connected with several works in the so-called "B36" group that used a larger and less refined Gothic font than the Gutenberg Bible. He has also been associated with a Mainz press that produced a Latin dictionary known as the *Catholicon* in 1460. However, the aesthetic and technical quality of the Gutenberg Bible makes this book the high point of his achievement.

Hadewijch (fl. mid-13th c.)

In the final line of her twelfth vision, the thirteenth-century Brabant mystic Hadewijch writes: "By that abyss I saw myself swallowed. And there I received certainty about my being received, in this form, in my beloved, and my beloved also in me." The line not only provides a glimpse into the ecstatic experience of the author, but also suggests the aesthetic sense which imbues all of Hadewijch's writings. Indeed, her letters, visions, and poems have recently been praised as eminent in the literature of the *minnemystiek* (love mystic) tradition for their description of an unmediated experience of the divine, which is perfected in *minne*, or love, and not in ecclesiastical worship. During her lifetime as a Beguine, however, Hadewijch was forced into exile and her literary reputation into obscurity.

Although there is a paucity of biographical information about Hadewijch, her writings in the vernacular Middle Dutch convey the imaginative force with which she appropriated the courtly love tradition to reveal her desire for union with love. Addressed variously as a persona and as an abstraction, love represents for Hadewijch both the experience of the divine and the achievement of perfection offered by that experience. Her letters and poems encourage her readers to devote themselves to love as a principle of engagement in both spiritual and mundane matters, while the visions record the account of her progression into love as a sublime experience. The three manuscripts of her writings illustrate the skill with which Hadewijch crafted enthralling examples of the language of love.

Hadlaub was one of the best known Middle High German courtly love poets. His contributions to late-medieval *Minnesang* are characterized by a full command of the classical tradition and an obviously playful experimentation with new aspects of the form. Hadlaub demonstrates a clear familiarity with the poetry of Gottfried von Neifen, Ulrich von Winterstetten, and Konrad von Würzburg, although he does not quite reach their artistic mastery. He imitated many famous examples of courtly love poetry, including Walther von der Vogelweide's women songs, Neidhart's peasant satires, Steinmar's love parodies, as well as the latters fall and harvest songs. A major thematic innovation can be found in Hadlaub's song about household worries and the financial miseries which make it difficult for the father to feed his wife and children (no. 7). He also developed a new type of dawn song (no. 51) in which he describes an entire lovers tryst from early evening to early morning.

Hadlaub is mentioned once in a 1302 Zurich document. Three of his lays (*Leiche*) and fifty-one of his songs are included in the famous Manesse songbook, better known as the "Large Heidelberg Song Manuscript" (*Große Heidelberger Liederhandschrift*), which represents the most important collection of Middle High German courtly love poetry. In one poem (no. 8), Hadlaub sings a song of praise about the collector and patron Rüdiger Manesse (d. 1304) and his son Jakob, indicating that he might have worked as a scribe or in another capacity for them. In several of his semi-ironic love songs, Hadlaub mentions the names of those people in upper Zurich society who supported him as a composer of courtly poetry. In modern times, Hadlaub has been immortalized by the Zurich writer Gottfried Keller, who published a charming novella, *Hadlaub*, in 1878.

Halberstadt

The first attempts to Christianize the northern foothills of the Harz mountains were undertaken from the religious center at Osterwieck (Seligenstadt) at the time of Charlemagne (d. 814). Under Charlemagne's son and successor, Louis the Pious, the center of missionary activity was transferred to Halberstadt, and the bishopric there was formally founded and subordinated to the see of Mainz. The rapid rise of the bishopric, especially in the tenth century, slowed sharply as a result of the conflict of the Emperors Henry IV (d. 1106) and Henry V (d. 1125) with the Saxons, and, in 1179, Henry the Lion destroyed the city in the clash between Emperor Frederick I Barbarossa and Bishop Ulrich.

Halberstadt lies at the junction of important trade routes and was formed from several smaller settlements. The central area around the cathedral was already walled in the Carolingian period; originally, it comprised only the church with the cloister at the south and the bishops residence to the north. The present-day cathedral plaza (*Domplatz*) took shape around the year 1000 with the inclusion of the Church of the Virgin in the now ovalshaped fortified area around the cathedral. The houses of the canons were arranged along the long sides of the plaza; the bishop's residence had been moved to the northwest corner of the plaza slightly earlier, and the two churches opposed one another at the ends. Already in the tenth century, a market settlement with the city's parish church, St. Martin, was located to the southeast of the cathedral fortification; the city hall (*Rathaus*), which was also in this area, was destroyed in the Second World War, as were most of the once numerous half-timbered buildings in the old town. The other settlements were integrated within the city walls by the fourteenth century.

Today's cathedral building is the third on this site. The oldest, a Carolingian church, characterized by three aisles, a transept-like cross arm, and a shortened rectangular altar area, was enlarged in the second quarter of the ninth century with the addition of a chamber crypt and a three-part choir; these changes probably correspond to the shift from a mission church to a cathedral. The church was enlarged a second time before 859, when a transept and a long choir ending in a rounded apse were added over a ring crypt with side galleries and a cross-shaped, exterior axial chapel; the arrangement reflects that at the abbey church at Corvey. At the opposite end of the building a west-front (*Westwork*-like) structure was attached in place of an earlier burial or memorial church; the unidentified tombs were retained in the new structure.

After the collapse of the Carolingian church in 965, the eastern parts were reerected in their old form, the nave was lengthened, and a *Westwork*, or west front, with two towers added. The decision to replace this building was probably due to ambition and desire for modernity: a Gothic structure was begun in 1236–1239 with a western two-tower façade. The west portal sculpture is unusual in that the Last Judgment, so frequently represented in this position, is abbreviated and portrayed in small relief figures. The portal originally opened onto a three-aisled open narthex, or vestibule.

After the erection of the western bays of the nave, work stopped until the second quarter of the fourteenth century; the new campaign began in the east with the erection of the chapel to the Virgin. This elegantly proportioned chapel, with its unusually fully preserved stained glass cycle and its high-quality sculptured figures from the original building, illustrates particularly clearly the medieval sense of space. The next part to be completed, the ambulatory, is equipped with altar niches rather than the radiating chapels typical of cathedral choirs. Also uncommon are the galleries in the transept; their design probably arose from liturgical as well as musical needs. The building was dedicated in 1491 with the completion of the three-aisle, extremely tall, nave without a triforium, or upper gallery.

Above the rood screen, dated 1510, the important wood Crucifixion group from the previous building was installed; it probably dates before 1220. The relief sculpture represents the dead Christ framed by the mourning figures of Mary and John, with the unusual addition of two seraphim or cherubim. The supporting beam is decorated on both sides with busts of apostles and prophets in high relief. The completeness and nearly original installation of the five-figure group gives an authentic impression of the sculptural decoration of medieval churches.

Halberstadt cathedral possesses one of the largest treasuries to have survived from the high and late Middle Ages. Among its holdings are some of the oldest preserved European woven textiles, from the twelfth and thirteenth centuries. A so-called sacristy cupboard from the late Romanesque period, which served to store altar objects and reliquaries, is of exceptional art historical importance as its doors are decorated with some of the earliest paintings on wood panel.

The Church of the Virgin was established as part of a foundation of Augustinian canons in 1005. The three-aisle eastern crypt of the first building has been partially excavated in the area of the present building's crossing; the choir above probably ended in a truncated apse. The two lower levels of the western towers changed their orientation from that of the earliest building, revealing new planning. The larger church building in its present form was begun in the second quarter of the twelfth century and apparently finished in the late thirteenth. The three-aisle basilica with a transept lacks a crypt. The side choirs are as long as the main choir; all three end in rounded apses. This simple structure corresponds to a nearly complete renunciation of architectural sculpture. The eastern towers, added later in the corners between nave and transept, and the three-part sanctuary allow comparison with the nearby collegiate church at Hamersleben and point to influence from Hirsau. About 1170, the so-called baptismal chapel was erected adjacent to the south side of the *Westbau*, or west front (entrance structure), in the mature forms of the Lower Saxon High Romanesque. In the first half of the fifteenth century, the Chapel of St. Barbara, with its high-quality vault paintings and thematically related altar retable, or ledge, was built and decorated.

The tall choir screens separating the crossing from the transept arms are the most important decorative elements in the Church of the Virgin. Soon after 1200 these wall-like dividers, originally decorated only with simple moldings, were given stucco figural decoration that belongs among the most significant works of German sculpture of this period. These reliefs, which still preserve much of their original polychromy, or colors, show the apostles in two groups of six, seated under arcades with a palmette (palm leaf ornamentation) frieze above and below. One group centers around Christ, the other around the Virgin, an arrangement that follows models from the minor arts. The individualized figures show a close relationship to those of the choir screen at Hildesheim. The program of the choir screens and the lost rood screen almost certainly culminated in a crucifixion group. Only the crucifix itself, from about 1230, is preserved.

The present Church of St. Martin was erected between the second half of the thirteenth century and the middle of the fourteenth over an earlier building about which little is known. Whereas the earliest, eastern parts with a choir polygon and low, straight side choirs presume the erection of a basilical nave, the nave was actually completed as a three-aisle hall church. The use of a hall church type, as well as the massive *Westbau*, or western front, facing the cathedral, might be understood as signs of the city's self-consciousness. The most valuable object preserved from the church's original decoration is a bronze baptismal font from the beginning of the fourteenth century. On the west exterior wall stands a stone image of Roland from 1433, replaced in 1686; it originally stood in front of the city hall.

SEE ALSO

Halle

The city owes its name (older German, *hal*, "salt-mine") and its existence to the unending wealth of the salt springs and salt production that is attested to here at least from the Iron Age. In 806, during a military expedition against the Sorbs, Charlemagne's son, King Charles, had a fort erected here on the east shore of the Saale river; its exact location is not known. The center of the flourishing settlement, which came into the possession of the archbishop of Magdeburg in 968, was the Old Market (*Alter Markt*) where important trading roads met. Further settlements developed around the castle and the salt works.

As a result of continued economic growth, the city underwent substantial restructuring and considerable expansion after 1120; at the same time, the citizens gained increasing autonomy from the bishop. A new three-layered city wall secured the city, whose market place represented a political and administrative, economic, religious, and representational center. After a lengthy conflict, the city, which had been governed by a council, lost its political independence to the archbishop at the end of the fifteenth century, and he erected a fortified castle, the Moritzburg, as a symbol of his power. Paradoxically, only a short time later, Halle enjoyed an unusual cultural flowering under the guidance of the archbishop of Magdeburg, Cardinal Albrecht of Brandenburg, a humanist and friend and patron of the arts and an adversary of Martin Luther.

The so-called *Dom* (cathedral), although never a bishop's church, was founded as a Dominican church, which Cardinal Albrecht converted into a collegiate foundation at the beginning of the sixteenth century. Its present name derives from the fact that Albrecht made this one of the preeminent artistic and spiritual centers in central Germany. The Dominicans, who had settled in Halle in 1271, had finished their towerless and transeptless hall church with a polygonal choir about 1300. Some two hundred years later, with the change in function, Cardinal Albrecht transferred the *Hallesche Heiltum* here; at the time, this was the largest relic collection in Germany. Subsequent alterations to the building produced a completely new and magnificent appearance. Cardinal Albrecht took with him most of the lavish decorative elements, together with the relic collection, however, when he left Halle in 1541.

In the area of the present market Church of the Virgin originally stood two medieval churches, both with imposing paired western towers: St. Gertrude's in the west and St. Mary's in the east. The older church, St. Gertrude's, oriented toward the salt works, is documented in the eleventh century. Its pair of western towers dates from the late medieval period. The Church of the Virgin was erected on the new market place at the time of the city's expansion in the twelfth century and acquired its towers in a late Romanesque building campaign. Between 1529 and 1554, the two churches were torn down, with the exception of their towers, and a new building, a three-aisle hall church, erected between them. The towers of St. Mary's were increased in height. The church was begun before the Reformation, but was decorated afterwards; the complete renunciation of figural imagery reflects a Protestant aesthetic.

In 1184, the archbishop of Magdeburg established a foundation of Augustinian canons on the site of an older parish church, where an arterial road near the Old Market pierced the city wall. The collegiate church, a cross-shaped basilica, was replaced by the present high Gothic structure, begun in 1388 in the area of the choir. The three-aisle hall church dedicated to Saint Moritz, with a single, unfinished tower in the center of the west facade, was erected according to the unified plan of the architect Conrad of Einbeck in several building campaigns continuing into the sixteenth century. The east end, characterized by three apses *en echelon*, the center one closing with

Halle an der Saale, Church of the Virgin, nave vaults. Photograph: Joan A. Holladay

a 5/8 polygon, faces the city and, therefore, receives the richest decoration: ornate filigreed sculptural decoration culminates in the upper reaches of the wall. The high-quality figural decoration from the period of construction, the middle of the fifteenth century, has been lost. The plan of the east end and the specific forms of the *choir facade* derive from the circle of the Parlers, especially the cathedral at Prague circa 1370–1380. It is of unusual importance as the first of a group of similar *choir facades* in this area of central Germany.

Several signed, and sometimes dated, large-scale works document the sculptural activity of Conrad of Einbeck: the figures of Saint Maurice, the *Schmerzensmann* (Suffering Man), a Virgin in sorrow, Christ being scourged, and the supposed self-portrait of the artist. In striking contrast to contemporary works in the Soft Style, these combine willful, personalized forms, a solid realism characterized by individualized facial features and heightened expression, and rough, massive body shapes.

Giebichenstein castle lies on the bank of the Saale to the north of the old town near important historic trade routes and in the middle of an old settlement where extensive salt production is confirmed since the late Bronze Age. A castle probably existed here from the tenth century; with the foundation of the archbishopric of Magdeburg in 968, it came into the possession of the archbishops, who made this their main residence from 1382. Excavations in the upper castle, erected on a porphyry cliff, have suggested that the earliest stone structure on this site dates no earlier than the twelfth century. Only the gate tower still stands; it once guarded access to the palace building, an elaborate tower with living quarters, and a high Romanesque chapel. The fortress-like lower castle with walls and five towers was expanded in the middle of the fifteenth century. The importance of the castle declined with the move of the

archbishop's house-hold to the newly erected Moritzburg at the edge of the city in 1503.

The Moritzburg was erected inside the city walls between 1484 and 1517 as protection against the citizens and a symbol of the Church's dominion over the town. This fortified castle served as an administrative center and residence for the archbishops of Magdeburg. The building forms point to the influence of the Albrechtsburg in Meiß^{en}. The fortress-like structure comprises three wings, a defensive wall, and four massive corner towers; it is surrounded on three sides by banks and moats and, on the river side, by an enclosure. The different functions of the interior—defense, living, trade, and administration—were clearly divided among the three wings. The archbishop's palace, with its characteristic windows, was especially richly decorated, as was the chapel of Mary Magdalene, where niches held altars on which the reliquaries of the *Hallesche Heiltum* were exhibited until their removal to the cathedral in 1520–1521. Partially destroyed by fire in 1637, the castle is now used as a museum.

Hamburg

Later a leading Hanseatic city, Hammaburg became a Christian missionary center for northern Europe as well as a military fortress from which Frankish troops set out to conquer the area. Around 810, Charlemagne's troops established a fortified settlement and a church near the point where the Alster River flows into the Elbe. The oldest known documentation of this settlement, referred to as Hammaburg (*Hamma*, mud flat), dates from 834. Under Louis the Pious, the settlement was elevated to an archbishopric. The mission church became a cathedral, and its first archbishop, Ansgar, a Benedictine, was installed in 831. Later a monastery was added to the early cathedral. During this early period, the presence of the archbishop and some measure of prosperity among the military of the settlement attracted a small number of German merchants who traveled north in search of precious stones, particularly amber, and metals.

Hammaburg's first 250 years were punctuated by military defeats which left it in ruins on at least three separate occasions. In 845, the Danes laid waste to the settlement. As a result, the archbishop moved to Bremen where better security could be provided. Hammaburg was destroyed again in 983 by the Slavs. Archbishop Adalbert, teacher of Henry IV, sought to restore Hammaburg as the center of Christian missionary work. He met there with Danish and Slavic princes and declined a call to become pope in order to continue his work in northern Europe. Whatever progress Adalbert achieved in restoring the frontier settlement was undone, however, when Hammaburg was attacked by Slavic tribes from Mecklenburg in 1066 and reduced to ashes in 1072.

Present-day Hamburg developed from a cluster of small agricultural villages, some of which were fortified or settled over one hundred years before Hammaburg was established. One neighboring village on the Alster, home to farmers and fishermen, many of whom also worked as artisans, merged with Hammaburg and the two became the "Free City" of Hamburg under the aegis of the counts of Schauenburg. These Holstein lords, who took control of the area in 1111 and are credited with the founding of Hamburg, ushered in a new era of growth. They fostered colonization of the town and established a port on the Alster River that was used as a transfer point for shippers and merchants. On May 7, 1189, Count Adolf III received from Emperor Frederick I Barbarossa independence rights and privileges for the town and harbor of Hamburg, its citizens, and their ships. During the twelfth century, the cathedral, which maintained its original status in spite of the bishop's continued residence in Bremen, became the center of a market place that attracted traveling merchants and artisans. By the end of the century, merchants came not only from Westphalia and Bavaria, but also from the Netherlands and Italy.

In the early thirteenth century, the new town faced continual raids from Danish warriors, local feudal lords, and Slavic tribesmen. The citizens' response was to build larger fortifications and to organize themselves into militia groups. Although the city was autonomous, the merchants had to continually repurchase their right to remain self-governing. They paid large sums to the Danish king, the dukes of Saxony, the dukes of Holstein, the archbishop, and the Holy Roman emperor as well.

By 1300, Hamburg had built a fortress at the mouth of the Elbe River to protect its maritime interests. During the fourteenth century, Hamburg's population ranged between seven and eight thousand people. City merchants applied for and obtained membership in the Hanseatic League in 1321. Originally, Hamburg was the North Sea port for Lübeck. In spite of continuous harassment by pirates and feudal lords, the merchants carried on extensive trade in salt, grain, furs, amber, metals, and crafted items. Trading partners included England, Scandinavia, Russia, and Mediterranean countries, as well as the Rhineland, Bavaria, and Austria.

By about 1400, Hamburg's military forces had defeated and executed the pirates who lived along the coast between the Elbe and Weser Rivers, and her merchants had bought strategically located islands in the Elbe to prevent others from building fortifications there against the city.

Hammer of Witches

In 1484, Henry Krämer (1430–1505), called Institoris, a Dominican inquisitor for southern Germany, helped convince Pope Innocent VIII to issue the bull *Summis desiderantes*. This bull established the use of the Inquisition to hunt down supposed witches. Armed with such papal support, Krämer returned to Germany. He probably had some small success at first with witch trials in Constance, but in Innsbruck he ran into difficulty. After briefly cooperating, the local authorities ordered him and his Inquisition to leave the Tyrol. Disappointed with these efforts, Krämer, with the help of Jacob Sprenger, codified his vast knowledge of witch-hunting lore into a handbook, the *Malleus Maleficarum*, or *The Hammer of Witches*, published in 1486 or 1487.

The handbook was immediately popular and went through dozens of editions over the next centuries. The book was clearly organized and replete with citations by church fathers, observed phenomena, and anecdotal evidence. It laid out a program for dealing with what the authors saw as the threat of witchcraft. The first part of the book asserted the reality of witches and explained how they were dangerous to the Christian community. The middle sections described the various powers of witches. Witches, the handbook asserted, could prevent sexual intercourse, kill babies, change people into beasts or deprive a man of his "virile member." They could also cause cows to stop giving milk, destroy crops with hailstorms, and kill with lightning. The concluding sections of the handbook prescribed various remedies against witchcraft and examined how to put on trial, torture, convict, and pass sentence on a witch.

Although it acknowledges that witches could be either male or female, the *Hammer* is extremely hostile toward women. In Krämer's view, since women were more credulous, impressionable, surreptitious, and, especially, more carnal than men, they were more prone to evil superstition and sexual temptation by the Devil.

Although his fellow Dominicans censured Krämer in 1490, his misogynistic and superstitious ideas spread throughout continental Europe. The *Hammer* laid a foundation for the "Witch craze," or period of witch hunting, which would last well into the eighteenth century, costing thousands of lives and causing much suffering.

Hanseatic League

The league, also known as the Hansa, was the major trade association of the Baltic and North Sea regions and northern Europe in general from the mid—twelfth to the mid—seventeenth century. The main focus of the voluntary organization was the promotion and protection of trade among league towns. The league used a variety of methods to guarantee its commercial success, including diplomacy and trade blockages. It also negotiated favorable treaties with trading partners outside the league to further the interests of the association. The Hanseatic League numbered as many as 180 member towns and had trade contacts throughout Germany, Scandinavia, England, France, Italy, and Spain. But in its period of greatest power and influence there were roughly between fifty-five and eighty towns in a much more tightly knit and more disciplined association. The league began a period of decline in the fifteenth century because of internal differences, a lack of a dependable military protector (particularly after the defeat of their military ally the Teutonic Order, or *Deutschorden*, at Tannenberg in 1410), and broader changes in Europe. It maintained a role in northern trade until 1669, however, when the last diet was held in Lübeck.

The league was founded in 1160 in the town of Lübeck as an association of merchants designed to protect international commerce and to secure privileges in foreign countries. It was a successful alliance and grew dramatically over the next two centuries, evolving from an association of merchants to an association of towns. In 1356 the first Hansa diet was held in Lübeck, and the organization was now a tightly knit association of towns. Other important member towns included Lüneburg, Riga, Rostock, Tallinn, Stralsund, and Wismar. There were member towns in Prussia, Saxony, Westphalia, and much of northern Germany. The geographic diversity was one of the group's strengths because the numerous towns brought a variety of goods to trade. But the wide geographic distribution of member towns was also a fundamental weakness that contributed to the organization's ultimate demise. There were differing goals among the towns, particularly between the Wendish and the Prussian, that undermined the uniformity of purpose necessary for the commercial league lacking a strong military. One of the great weapons of the league, the trade blockage, broke down on several occasions as Wendish or Prussian towns refused to participate in it. Despite this fatal flaw, the league was a success because it maintained order and cooperation among its members.

The unity and size of the league brought it much benefit, and it also gained much advantage by the wide array of goods traded by its member towns. Hansa towns provided valuable raw materials such as copper, timber, and wax to its trading partners. They also exported important foodstuffs including dried or salted fish—especially cod and herring—grain, and furs. They imported such things as wool from England and cloth from Flanders.

Hartlieb, Johannes (fl. 2d half of the 15th c.)

Hartlieb studied medicine in Padua, where he became a master in 1437 (probably) and doctor in 1439. Before 1440 in Austria, perhaps in Vienna or Graz, he translated Andreas Capellanus's *De amore* (On Love) for Duke Albrecht VI, the first work which can be attributed to him with certainty. From 1441, he served Dukes Albrecht III and his son, Siegmund, of Bavaria-Munich as court physician. For Albrecht and his wife, Anna of Braunschweig, he adapted the romance of Alexander and the legend of St. Brendan (1450–1457), the latter for Anna only.

Upon his return from a diplomatic mission to Margrave Johann of Brandenburg in 1456, he wrote, at the margrave's request, the *Buch aller verpoten Kunst* (The Book of all Forbidden Art), a catalogue and repudiation of all forms of black magic. Between 1460 and 1467 he translated Book 2 of Caesarius of Heisterbach's *Dialogus miraculorum* (*Dialogue on Miracles*) for the Munich patrician Hans Püterich, as well as the treatise, *Secreta mulierum* (*The Secrets of Women*), ascribed to Albertus Magnus, and the gynecological treatises attributed to Trotula of Salerno for Duke Siegmund. His scientific and medical works also include an herbal of unknown date and a list of drug prices for the city of Munich from 1453. Treatises previously attributed to him, now thought to be inauthentic, include books on mnemonics, lunar prognosis, onomatopoeia, geomancy, chiromancy, and baths.

[Brendan](#); [Magic](#)

Of the four major writers of the High Middle Ages during the Hohenstaufen dynasty—Hartmann von Aue, Walther von der Vogelweide, Wolfram von Eschenbach, and Gottfried von Straßburg—Hartmann von Aue stands out as the most prolific and diverse. His works include a verse treatise on love, *Die Klage* (The Lament, ca. 1180), two Arthurian epics, *Erec* (ca. 1180) and *Iwein* (ca. 1200), two verse tales, *Gregorius* (ca. 1190) and *Armer Heinrich* (Poor Heinrich, ca. 1195), and eighteen poems—some spurious—spread out over much of his writing career.

Both Gottfried von Straßburg, author of *Tristan*, and Wolfram von Eschenbach, author of *Parzival*, mention Hartmann in their works, and their comments reveal the esteem in which he was held by contemporary writers. As the poet who introduced the Arthurian romance into German-language literature, Hartmann influenced not only his literary generation but those who followed, well into the thirteenth century.

Like all of the major writers of the period, very little is known about Hartmann's life, and what is known must be gleaned from comments in his works, as nothing has come down to us in contemporary documents. Setting aside the question of whether Hartmann speaks in his works in an autobiographical or a literary voice, current thinking generally agrees on a rough sketch of Hartmann's life. In *Poor Heinrich* Hartmann calls himself a *dienstman*, consigning himself in an unembarrassed way to the class of *ministeriales*, an important, emerging, diverse class of court functionaries dependent for their living on the largesse of the nobility. Whether Hartmann came from a family that was in the ascendant or one that had fallen from free indentured status, is uncertain. By designating himself a *rîter* (knight) in the prologues to *Poor Heinrich* and *Iwein*, Hartmann reveals his knowledge of country life, the backdrop not only of his Arthurian romances, but also his verse tales and poetry.

Where Hartmann obtained the education he speaks of in *Poor Heinrich*, and whose traces are evident throughout his writings, is not known. Such an education could only have been obtained at a cathedral school or in a monastery; the setting of the monastery in *Gregorius* and discussions of the life and education there would favor the latter supposition. It appears that, in addition to Latin, Hartmann knew Old French, the language of Chrétien de Troyes and the influential French courtly culture. His allusions to classical works and to church philosophers confirm that Hartmann was one of the most learned poets of the age.

Hartmann must have had a wealthy, and thus powerful, patron, for writers of Hartmann's *ministerial*-knightly class were dependent on the court not only for the expensive outfitting of a knight, but also for costly writing resources, access to a courtly audience, and the availability of precious manuscripts of the French sources that Hartmann must have read. Numerous attempts made to pinpoint Hartmann's homeland have been inconclusive. His Alemannic language—a dialect covering a swath from northern Switzerland, southwestern Germany, and south-eastern France, that is, modern Alsace—and a few scant descriptions in his works point to modern southern or southwestern Germany as his home. Two powerful families, the Zähringer and the Hohenstaufen, have been posited as Hartmann's patrons, and the Zähringer, with their seat near Freiburg at the crossroads of French and German culture, seem more likely. Finally, it should be no surprise that even the dates of Hartmann's life are disputed, but the period from around 1160 to shortly after 1210 would seem to have encompassed most of his years.

The chronology of Hartmann's writings is also disputed. However, some consensus has been reached: the *Lament* and some of the lyric poetry belong to an early phase, followed by the Arthurian romance *Erec*. Most critics agree that a dramatic metamorphosis then took place in Hartmann's life, something that shaped the themes of his next two works, *Gregorius* and *Poor Heinrich*, and some of his later poetry. Finally, toward the end of his life, Hartmann again turned to the Arthurian epic, this time to *Iwein*. (The beginning of *Iwein* may, however, have been written earlier and set aside, possibly during the presumed upheaval in the poet's life.)

The *Lament* may trace its heritage to the contemporary scholastic *disputatio*, a learned argument between two university professors, or to legal cases or classical models of disputation. The stichomythic (rapid dialogue exchange) give-and-take between the heart and body in the third part of the work points ahead to the debate between the abbot and the young knight-to-be in *Gregorius*, and to alternating dialogue in *Erec* and *Iwein*. Whatever the origin of the work, this early writing bears the imprint of Hartmann's education, whether in a monastery or a church school.

After the body and the heart exchange reproaches and offer their defenses in the *Lament*, and after the stichomythic exchange between the two, the body, having seen the wisdom of the heart's arguments, redirects its attention in the final exchange to the courtly lady in question. A striking feature of the *Lament* is the heart's paradigmatic explanation of what makes up courtly love. Ethical attributes that form the underpinnings of *Minnesang* find echoes in some of Hartmann's poetry, and, coupled with a Christian ethic, resonate throughout Hartmann's works in the striving of the heroes toward betterment and self-fulfillment.

Of all of Hartmann's writings, his lyric poetry has raised the most contention among critics. The nineteenth-century Romantic/positivist viewpoint held that the lyrics mirrored Hartmann's life and could thus be grouped in chronological fashion, tracing first Hartmann's obeisance to the concepts of *minne* (courtly love), then, his disillusionment with and subsequent rejection of it in poetry praising common women, and, finally, to an ethical-spiritual substitution for *minne*, as represented in his *Kreuzlieder* (crusading songs).

What can be said is that Hartmann's poems—eighteen in the canon, but some of these are spurious—can be divided thematically: (1) traditional *Minnesang*; (2) complaints, whether by a man or a woman—the latter being called a *Frauenklage*; (3) songs of anti-*minne*, comprising a rejection of the high ideals of *minne* and a turn to more worldly love for fulfillment; and (4) crusading songs. Taken as a whole, much of Hartmann's lyrical poetry reads like the poetry of his age, and influences from earlier *Minnesänger* are apparent. At times he uses some stunning imagery, and his anti-*minne* songs and crusading songs strike the reader as honest and bold; they certainly must have influenced his contemporaries, including Walther von der Vogelweide. But Hartmann is a more conventional, conservative poet than others of his time, disdaining the erotic and the comical.

Hartmann most likely composed his *Erec* sometime in the 1180s, when he was in his twenties, shortly after the *Lament*, and contemporaneously with some of his lyric poetry. Although the legend of King Arthur had nationalistic overtones in England and France, mirroring the court of Henry II Plantagenet, king of England and of large parts of western France through his marriage to Eleanor of Aquitaine, this nationalism gave way to the trappings of courtly society and chivalry when Hartmann introduced the large-scale Arthurian romance in Germany.

Though he may have also used other sources, written and oral, Hartmann based *Erec* largely on Chrétien de Troyes's *Erec et Enide* and acknowledged that fact in line 4629. It would be more appropriate to call *Erec* a reworking, or an adaptation, rather than a translation, however, for Hartmann took great liberties with his French model and expanded Chrétien's version by over 3,000 lines: 10,192 versus 6,958.

The differences between the two *Erecs* illuminate the disparate intentions of the two authors and highlight the similarities and dissimilarities of the two courtly societies. What strikes the reader of both works is Hartmann's focus on courtly society, and its concomitant etiquette of chivalry, and on the relationship between *Erec* and *Enide*. One can justifiably call Hartmann didactic, moralistic, and possibly even preachy, for, behind the Arthurian façade, he had a point to make. Both *Erec* and *Enide* are guilty of failing to understand their roles in a courtly society. It is their perilous journey that leads them to the awareness that courtly love is more than just physical attraction; it entails a mutually supportive relationship integrated into and supportive of a courtly society. While *Erec* is not a *Fürstenspiegel* (a sort of primer for the education of a prince), Hartmann would probably not have been disappointed had all knights turned out like his hero.

Hartmann also modeled *Gregorius* after a French prototype, the popular *La Vie du Pape Saint Grégoire*. *Gregorius* shows similarities with varying versions, leading to the conjecture that an *Ur-Gregorius* existed at some point. Whatever the exemplar of *Gregorius*, Hartmann's use of it, as with *Erec* and *Iwein*, amounts more to a reworking or adaptation than a strict translation. Compared to the extant Old French versions, *Gregorius* is between one-third and one-half again as long, showing once more that, for Hartmann, the French original served mainly as a foundation on which he could use his poetic skill to erect a vastly different structure.

Gregorius followed *Erec* and the *Lament*, perhaps toward the end of the 1180s, and this positioning of the work has led to one aspect of its interpretation, i.e., that *Gregorius* is "anti-*Erec*" or anti-chivalric, a rejection by a more mature author of his earlier work, namely *Erec*. The thread of individual self-realization, a kind of *rite de passage*, ties Hartmann's major works together. *Gregorius*, moving from infancy through boyhood to manhood and finally to a

conscious middle age of insight and wisdom, comes closest among Hartmann's characters to the *Bildungsfigur* (character undergoing formative changes) of Wolfram von Eschenbach's *Parzival*.

Perhaps the interpretive focus should not, as some scholarship suggests, rest so heavily on the incest of Gregorius' parents, and on his own incest with his mother—for these acts, due to mitigating circumstances, seem pardonable to both medieval and modern thinking—or even on his own *superbia* (pride) at leaving the monastic world, but rather on the journey that Gregorius undertakes, both physically and spiritually, on the path that is mentioned both in the prologue and toward the end of the tale, when Gregorius seeks to do penance in the wilderness. This path may be seen as the path we all take in life.

(Like Erec early on,) the knightly Gregorius leads an exemplary life, an indication that *Gregorius* is not an antichivalric work. He falls, as Erec does, but differently, and, like Erec, he must come to an understanding of what has happened to him. He takes the initiative, directs his mother's actions, and sets out to do penance, for, after all, as the prologue and ending make clear, none is so stricken with sin that he cannot rise again, cleansed, and attain grace. Heinrich von Aue, the protagonist in *Poor Heinrich*, like Erec and Gregorius, has reached what appears to be the pinnacle of success and happiness, only to fall. In his case, leprosy, which must be seen as a curse from God, strikes him down. Unlike Erec and Gregorius, Heinrich, at the beginning of the story, does not have to set out on a path to attain his goal; he has already reached it. Because of the narrator's praise of Heinrich, readers may wonder initially what brought about the knight's fall, but the narrator's comparison of Heinrich with Absalom and the many repetitions of the adjective "worldly" reveal that hubris and the pursuit of worldly things bring about Heinrich's predicament. From the onset of Heinrich's leprosy till the change "in his old way of thinking," he takes a number of positive steps, but he also missteps, and readers must determine if or why Heinrich deserves the salvation granted to him at the end of the story.

When Heinrich disposes of much of his worldly goods and moves in with the family of one of his tenants, Hartmann introduces his most controversial character, a girl of eight who, for three years, rarely departs from her afflicted master's side. Heinrich ends up calling her his "bride," and she ultimately agrees to sacrifice herself for him, for she has learned that only the blood of a willing virgin can save him. The controversy revolves around her motivations: is she selfless or selfish? Is her willingness to sacrifice herself only an arrogant pursuit of salvation? Or is she motivated out of love for her parents and for Heinrich? After all, since the pursuit of salvation recurs in Hartmann's works, and, since salvation was a teaching of the Church, can she be faulted for pursuing what appears to her, a girl without means, as the only road to salvation?

The fairy-tale ending of the story (his healing), in addition to the girl's virtual disappearance from the action, and the couple's ultimate salvation leave some readers dissatisfied. Has Heinrich actually earned his happiness? Do his actions at the end reveal a real change of heart? Not for this reason alone does *Poor Heinrich* remain the most controversial of Hartmann's major works. Where it fits in the chronology of Hartmann's work is also uncertain. It seems to mitigate, with its happy ending, the somberness of *Gregorius*, and point ahead to *Iwein*, Hartmann's return to the Arthurian theme.

The large number of manuscripts and fragments of *Iwein*, its being most often mentioned among Hartmann's work by contemporary writers, and the many depictions of scenes from it in frescoes and tapestries, all point to its popularity. As with *Erec*, Hartmann based *Iwein* on a work by Chrétien de Troyes, *Yvain: Le Chevalier au lion*, and, as in *Erec*, Hartmann greatly expanded upon the French original, by about twenty percent; 8,166 lines versus 6,818. Nevertheless, in *Iwein*, Hartmann followed Chrétien's plot line more closely adding mainly dialogue and authorial reflection.

The theme in *Iwein*, as in *Erec*, is the reconciliation of individual actions and individual love with chivalric ideals and a higher, ethical love. Like Erec, Iwein undergoes a series of adventures before and after his marriage to Laudine. Some critics have questioned Iwein's behavior when he kills Ascalon, Laudin's husband; others have criticized the later adventures as being too inconsequential to fit in the overall structure of the epic. But even more than with *Erec*, Hartmann juxtaposes courtly society with one man's actions, and what is a more requisite component of chivalric society than adventures and quests?

Hartmann treats the court of King Arthur in *Iwein* differently than he presented it in *Erec*. In the earlier work he toned down or eliminated much of Chrétien's criticism of the court, but in *Iwein* the court not only plays a more essential role, but the reader gets glimpses of a courtly society where all is not well. This change in tone could be due to an older Hartmann's lifelong experience at court, but whatever the reason, the court's flaws underline the ethical and moral perfectibility of the individual. From Erec via Gregorius and Heinrich and finally to Iwein, this is the thread that connects Hartmann's major works, for, as with many great writers, Hartmann had an ethical ideal and set out to show how it might be attained.

Heiligenkreuz

A Cistercian monastery located in the Vienna Woods of Lower Austria, Heiligenkreuz (Latin, *Sancta Crux*) was founded in 1135–1136 by Margrave Leopold III of Babenberg (canonized in 1485) at the request of his son Otto, then abbot of Cistercian Morimund and later bishop of Freising. Its first abbot, Gottshalk, came from Morimund, and throughout the medieval period, Heiligenkreuz retained its close connections with Burgundian France. Laid out on a geometric plan reminiscent of Fontenay, the architecture of Heiligenkreuz monastery is severe but harmonious. In the extant building, the Romanesque nave, with its alternating wider and narrower piers, broad expanse of wall and banded rib vaults, remains from the first church, consecrated in 1187. The transept and modest portal were added around 1200. The church's east end was elongated by the addition of a chevet, described as a hall, consisting of three aisles of equal height, consecrated in 1295. A large body of late thirteenth-century stained glass is preserved at Heiligenkreuz, including examples of typical Cistercian grisaille (grayish) patterns, and more unusually, intensely colored images in multifoil frames. The stained glass in the wellhouse represents members of the Babenberg family, while the lancets in the choir depict prophets. The chapterhouse served as the burial place for members of the ducal house, including the last Babenberg duke, Frederick II the Wrangler (d. 1246).

Heiligenkreuz was a center of Cistercian activity in Austria, sending monks to Zwettl in 1138, Czikador in Hungary (1142), Baumgarten (1142), Marienberg in Hungary (1194), Lilienfeld (1206), Goldenkron in Bohemia (1263) and Neuberg in Styria (1327). Heiligenkreuz housed an important scriptorium, noted both for its scholarship and for its restrained Cistercian style of figured initials and illustrations in red and brown inks with wash. A few late-thirteenth century missals also exhibit the unique angular *Zackenstil*. Under the patronage of Bohemian margrave Premysl Ottokar (1251–1276), scholarship flourished, particularly in the person of Gutolf (active 1265–1293), noted historian, jurist, and philologist, and later abbot of Marienberg. The large medieval library remains on the site, which functions today as a monastery, seminary, and college. A panel in the monastery museum gives a name to the early fifteenth-century painter known as the Master of Heiligenkreuz, but this wandering artist associated with the imperial court had no particular connection to the convent.

Heiligenleben

The prose collection *Heiligenleben* (Lives of the Saints, ca. 1405–1420) reflects the ideals and intentions of the so-called *Wiener Schule* (Viennese School, Nikolaus von Dinkelsbühl, Thomas Peuntner) and the Melk Reform (1418) of the southern German Benedictine cloisters during the reign of Emperor Sigismund (1410–1437) and Duke Albert V of Austria (1404–1439). Non-noble laymen "converts" needed German prose to participate in the assigned reading of the day, with emphasis on a loving God and praise and consideration for all the German-speaking areas in the empire, their bishoprics, founders of religious orders, and their patrons. Production of the *Heiligenleben* (containing 250 legends), and its spread through Austria, Bavaria, and Swabia, was also part of an effort to keep the peace, avoid and later survive the Hussite Wars, and end the religious controversy leading to the Great Schism, a goal achieved by 1436.

The sixteen parchment manuscripts of the *Heiligenleben* indicate they were distributed through Austria, Bohemia, Hungary, and Germany. About half of the monastic manuscripts are located in reformed Benedictine cloisters. Others have been found in Dominican women's cloisters, which adopted the reforms as well. As other orders joined, each received a copy of the *Heiligenleben*. The manuscripts of single legends, such as *Katharina* (1421, the oldest dated manuscript), *Klara von Assisi*, *Sebald*, *Oswald*, *Allerseelen*, or *Gregorius auf dem Stein*, often show a closer dependency on the source texts than does the complete copy of the *Heiligenleben* of 1431 from Nürnberg, the primary German text. The original is probably an Austrian text, which contains the original version of *Katharina* with its youth story, a part that was later left out. Later, in Germany, the legend of *Birgitta of Sweden* was added. Of the approximately two hundred manuscripts, half belonged to monasteries and the rest to wealthy nobility, merchants, and clergy. The manuscripts were often produced in workshops and contained illustrations. The *Heiligenleben* appeared also in contamination with the *Alsatian Legenda aurea* (in the southwest) and even with the *South Middle Netherlandic Legenda aurea* (in the northwest of Germany).

Literary sources for the *Heiligenleben*, include the *Passional*, the *Märtyrerbuch*, and, for *Katharina*, also the *Legenda aurea*. Other sources were verse epics and legends (Hartmann's *Gregorius*, the Münchner *Oswald*, *Georg* by Reinbot von Durne, Eberhard's von Erfurt *Heinrich und Kunigunde*, and *Alexius A*). By 1430, a so-called *Heiligenleben Redaction* in three volumes with 365 legends was created, which served as a productive source for reading and copying. Forty-one printings of the *Heiligenleben* were produced in southern and northern Germany between 1471–1521.

The *Heiligenleben* became a secondary source for *Der maget krone* (1473/1475) and for the *Passienbüchlein von den vier Hauptjungfrauen* in the Low German version printed by Simon Koch in Magdeburg in 1500. Meisterlieder were made of *Alexius* by Jörg Preining in Augsburg (1488), of *Dorothea* by Michael Schrade, and by Hans Sachs (1518) of the miracle of *Katharinas Bräutigam*. Painters, such as Dürer and Cranach used the stories for their paintings as well.

This Middle Dutch poet, also known as Hein van Aken, is mentioned as an author in a number of Middle Dutch texts.

One, *Van den coninc Saladijn ende van Tabaryen* (Of King Saladijn and of Tabaryen), is an adaptation of the French courtesy book *l'Ordene de chevalerie* (The Chivalric Order). The text has been shortened by over two hundred verses and its metrical form has been altered as well. The Old French source is continuous text in paired rhyme, but the Middle Dutch adaptation is stanzaic, with the rhyme scheme *ABABABAB*. The contents of the two are similar: Hughe van Tabaryen, who is a prisoner of war, makes Sultan Saladijn a knight and talks to him about the essence of knighthood. In the final line of the poem, the author's name is revealed: Hein van Aken. This text is the only one to mention Heinric's surname.

In the past, scholars have attributed other works to this author, but their evidence is weak. The translator of *Die Rose* ("The Rose"), for example, calls himself *van Brusele Henrecke* (Henrecke from Brussels, 1. 9901). In *Der leken spiegel*, Jan van Boendale mentions a certain "Van Bruesele Heyne van Aken" (Book III, cap. 17, 1. 91). This line has been used to argue that the translator of *Die Rose* is Hein van Aken, but the argument is not convincing. Two other Middle Dutch texts have wrongly been attributed to Hein van Aken: the second part of an adaptation of *Li miserere* by the Renclus de Moiliens (in which the Christian name *Heinrec* is mentioned), and the *Vierde Martijn*, a stanzaic poem following the *Martijns* by Jacob van Maerlant, which a modern editor supposed contained a reference to Saladijn.

The *Roman van Heinric ende Margriete van Limborch* (Tale of Heinric and Margriete of Limborch) is a very colorful and long epic text (ca. 22,000 lines in twelve books). The entire text has come down to us in two codices, presently in Brussels and Leyden. The latter codex contains an epilogue in which the poet calls himself Heinric. The notion that Heinric is identical with the translator of *Die Rose*, is a proposition that has never been proven. *Margriete van Limborch* was probably written between 1291 and 1318 and was meant for the Brabantine court. The work is an original Middle Dutch composition into which a large number of well-known medieval literary motifs have been incorporated. Margriete, the daughter of Duke van Limburg, gets lost during a hunt and eventually finds herself at the court in Athens where the count's son, Echites, falls in love with her. After many adventures, the couple marries. A number of subplots are interwoven into this basic story, including one which deals with Margriete's brother Heinric, who travels around from place to place looking for his sister. A tale about Evax, who seeks Echites, and descriptions of entire sieges and wars are also included in the epic.

Heinrich der Glíchezâre (fl. late 12th c.)

Heinrich, the Alsatian author of *Reinhart Fuchs* (*Reynard the Fox*, last decade of the twelfth century), was the first to utilize myriad tales about the adventures of the clever fox and his opponents already treated satirically in the Latin poem *Ysengrimus* and the various branches of the French episodic narrative *Roman de Renart*, several of which were his principal sources, to form an extended animal epic. The appellation often attached to his name in scholarship, *Glíchezâre* (hypocrite), was surely intended by him to refer to Reinhart, as a fragment of the work from the beginning of the thirteenth century makes clear, but in the two very similar manuscripts, both written between 1320 and 1330, that preserve the whole work (with a small lacuna, or gap) it seems to be part of his own name. Several brief German didactic poems witness that Heinrich's version continued to be read to some extent in later centuries, but the French branches were independently shaped into a longer narrative in French and in Dutch, and the Dutch version(s) became the basis for the Low German *Reynke de Vos* and the Middle English *Reynard the Fox*.

The lacuna in *Reinhart Fuchs* is intentional; the narrative breaks off (in one manuscript with the words *et cetera*) just before Ysengrin the wolf is castrated, and picks up again with his laments. Heinrich, however, was not as prudish as a later medieval editor. His explicit account can be reconstructed from a didactic song attacking false oaths by Der Marner that clearly utilizes it. In a way, such explicitness is unusual; such details are generally hinted at rather than stated. Nevertheless, it was apparently his own invention—his known sources do not contain the episode, though *Reynke de Vos* has a distant parallel, as does its source.

All versions of the material utilize beasts in two ways: essentially, in that animals behave according to their nature (as understood in the Middle Ages), and allegorically, in that the animals portray human vices. Even where allusions to human institutions and actions are clear, the animals are never totally anthropomorphized. But, they all can speak, and they interact as if their differences were less consequential than their similarities. Almost all the versions, although perhaps not all branches of the *Roman de Renart*, criticize the misuse of office, be it secular or clerical. Heinrich demonstrates, through the implications of the episodes he adds to those he adapts from his sources, an intimate knowledge of local politics in the late twelfth century; the position discernible in his work is opposed to the Hohenstaufen, imperial one. He also is knowledgeable in the intricacies of Germanic law, adjusting his French sources where necessary to make the trial scene at the end of the work accord with his audience's understanding of legal procedure.

Heinrich der Teichner (ca. 1310–1377)

Heinrich's epithet reflects regional affiliation, presumably to the Teichentäler near Kallwang in Austria. Heinrich was a wandering poet and later settled near Vienna. His oeuvre consists almost entirely of short didactic poems. Contemporary poet Peter Suchenwirt referred to him as a *schlechter lay* (a simple layman). This estimation coincides with Heinrich's self-stylization. Although he draws from a variety of scholarly sources, he never stresses his own learning. Reminiscent of Wolfram von Eschenbach, Heinrich even claims to be illiterate, *nach den puechstaben bin ich aller chunst beschaben* ("I lack all the skills of the letters").

Heinrich's literary program emulates the tradition of the *sermo humilis*, the lowly, everyday language of divine truth. He consistently cites the Bible, the church fathers, such as Augustine, and Gregory, sermons by Bernard de Clairvaux, Berthold von Regensburg and others, and common proverbs. Presumably composed between 1350–1365, all of the 798 poems attributed to Heinrich promote Christian morals with practical and unadorned language and images.

Heinrich's poems comprise a genre in themselves: the *Teichnerreden*. The *Teichnerreden* end with the signature verse, *also sprach der Teychnaer* ("thus spoke the Teichner"). This signature verse became a literary convention, and some of the poems attributed to Heinrich are probably the work of imitators and predecessors.

Heinrich also composed longer poems, including a hymn in praise of the Virgin Mary, a *vita* of the martyr Dorothea, and the legend of Crescentia. He also wrote *Roßhaut*, the strange tale of a man who slaughters his only horse in order to make a gown for his wife, who wishes to rival the beautiful duchess. Some of Heinrich's works may have been commissioned by an Order of Lay Brothers.

Heinrich is believed to be buried at St. Coloman in Vienna. The expensive manuscripts and wide distribution of his work testify to his popularity during his lifetime.

Heinrich von dem Türlin (fl. first half of the 13th c.)

The author of *Diu Crône* (The Crown), a 30,000-line Middle High German Arthurian romance in rhymed couplets, with triplets marking the end of each section, may also have written *Der Mantel* (The Cloak), a fragment of 994 lines, the authorship of which is rather uncertain.

Heinrich lived in the first half of the 13th century. The *Crône* must have been completed by ca. 1230. The date is linked to Rudolf von Ems's *Alexander*, where Heinrich's work receives favorable mention as *Allr Aventure Krône* ("Crown of all Adventures"). Of Heinrich's biographical background, virtually nothing is known with certainty. The previously accepted connection with the family name *von dem Türlin* (meaning "of the doorway") in the Carinthian town of St. Veit seems untenable. From his work we can identify only his name, his language (Bavarian-Austrian), the degree of his education (extensive knowledge of French and Latin, and some Italian), and possibly his social status (hardly a knight). Internal evidence also suggests strong ties with the area of the Eastern Alps. Since his work has been shown to be uniquely syncretistic and thus dependent on numerous French and German literary sources, only a major court with strong dynastic connections to France could have enabled him to embark on a project of such scope. As potential patrons, recent research has considered the Counts of Görz and Otto of Andechs-Meran.

Diu Crône belongs to a later group of Arthurian romances often referred to as "postclassical." Apart from recasting much of the *matière de Bretagne* (Breton, i.e., French, material), it takes a new and innovative approach to the aesthetics of romance: in its form, as an unprecedented venture into the medium of the fantastic; in its theme, because of its new emphasis on *Fortuna* (fortune); and in its structure, by departing from the standard two-part scheme of Chrétien's classic form of romance.

The work is also unique in making Gawein the central hero. In a plot that synthesizes the exploits of a great many Arthurian heroes, Gawein turns into an almost operatic superhero and savior figure who makes their adventures part of his own mission. In essentially three narrative sequences, he rescues Arthur's court from the threat of losing Ginover, undergoes a sequence of adventures structured around his own role in the Grail romance, and finally—like a second Parzival—reaches a somewhat anticlimactic zenith in delivering the living dead at the Grail castle.

As a protégé of Lady Fortune (*Sælde*), Gawein's *raison d'être* is the preservation of Arthur's court. Instead of pursuing a search for spiritual perfection, Heinrich's new type of hero operates in the secular context of a model court. Arthurian romance, as redefined by Heinrich, turns into a romance of society, stressing the stability of a central court as an indispensable basis of chivalrous existence. Heinrich's view of Arthur's court, no longer utopian, rather aims at a mythic model whose basis is fragile and ultimately doomed.

[Arthurian Literature, German](#); [Rudolf von Ems](#)

Heinrich is believed to be the author of *Vom Priesterleben* (On the Life of Priests) and *Von des todes gehugde* (On the Remembrance of Death), both written after 1150. Although the virtual identity of lines 397–402 in *Vom Priesterleben* with lines 181–186 in *Von des todes Gehugde*, as well as the closely related subject matter, suggest that the two poems were written by the same individual, the matter of common authorship continues to be the subject of lively speculation.

At the end of *Von des Todes gehugde*, in the midst of a description of Paradise, the following verses appear: "Lord God, bring to that place [i.e. Paradise] for the glory of your mother and for the sake of all your saints Heinrich, your humble servant, and the abbot Erkenfried" (1029–1033). These few lines represent a biographical hint, and from them a most ingenious biography has been constructed for Heinrich. He has been identified as a *conversus*, a lay brother associated with a monastery. The monastery in question was assumed to be the Benedictine monastery of Melk in Austria, since an abbot Erkenfried governed that monastery 1122–1163. Because of the sharpness of the poet's attacks and the depth of his acquaintanceship with courtly life, Heinrich was thought to be a noble who, becoming progressively repelled by the world and rejected by ungrateful children, withdrew to a monastery as an older man. There, he seemed to have immersed himself in studies and found it as his duty to admonish all classes of society, particularly disreputable priests, regarding their duties as Christians.

Unfortunately, this biography is not accurate. Abbot Erkenfried of Melk could scarcely be Heinrich's patron since the two poems exhibit verse and rhyme techniques that reflect a period later than 1163 (e.g., a very high percentage of pure rhymes and a minimum of overlong lines of twelve to fourteen syllables). In addition, the contents of the poems underscore concerns such as the validity of sacraments administered by unworthy priests, and display conventions regarding court customs and the secular love lyric of a time more accurately located within the last quarter of the twelfth century. In the final analysis, there is only reasonable certainty that the author of both works was a layman, possibly a *conversus*, who demonstrated in his writings many manifestations of the popular piety movement of the twelfth century. These included his diatribes against dishonorable priests, criticisms of violations of sumptuary laws, invectives against the pride of the nobility, and general hostility toward worldly affairs when they interfered with performing one's Christian duty.

The Heinrich of *Von des todes Gehugde* and *Vom Priesterleben* is a layman who speaks about theological matters on an equal level with members of the clergy. He not only addresses a noble lay audience in the one work, he represents the interests of this group to a clerical audience in the other. His writing affirms the worth of the lay nobility and its view of the vital role it plays within the Christian order, a role that is becoming a dominant one in relation to the clergy. This confidence and positive selfimage finds its quintessential expression in the secular tales of the courtly period, in which society is improved by the actions of members of the nobility and not by representatives of the institutionalized Church. The path to salvation begins to lead not solely through priests, but, primarily, through the good works of each individual.

[Versification](#)

A contemporary of Albrecht von Johansdorf and Hartmann von Aue, Heinrich von Morungen represents the pinnacle of "classical" *Minnesang* around 1200. He is considered to be one of the most important lyric poets writing in German during the courtly period, and perhaps the most important Minnesänger after Reinmar and Walther von der Vogelweide.

Traces of dialect in Morungen's poems show him to be from central eastern Germany. Morungen's family probably came from a manor near Sangershausen in Thuringia. The poet named as *Her Heinrich von Morunge* in the famous Heidelberg *Minnesang* manuscript is commonly identified with a certain *Hendricus/Henricus de Morungen*, who is mentioned in two documents from between 1213 and 1218 that bear the seal of the margrave Dietrich of Meissen. In one of the documents, Morungen is described as a retired soldier (*miles emeritus*), who has received for his good service a yearly pension of ten marks. He apparently gave this pension to the cloister of St. Thomas in Leipzig. According to later sources, Morungen died in the monastery in 1222. Since Dietrich of Meissen was the son-in-law of Hermann of Thuringia, patron of Wolfram von Eschenbach and others, the records thus place Morungen at a court that was a center of literary activity in the German-speaking area in the early thirteenth century. Since Morungen hailed from an area controlled by the Hohenstaufen family, it is quite possible that Heinrich could have learned his craft at the court of Frederick I Barbarossa. As a poet, then, Morungen could possibly have appeared and/or performed at the court of Meissen contemporaneously with poets such as Walther von der Vogelweide.

While it is not known whether Morungen was a professional poet, he was one of the first Latin-educated secular poets (*Minnesänger*) in Germany; probably there was no other poet of the time who owed so much to the Latin poet Ovid. Morungen's adaptations of classical Ovidian themes influenced such younger contemporaries, as Herbort von Fritzlar. Morungen's poems are dated approximately twenty years before the documents that show his name. Characteristic is his formal style, artistically advanced, yet owing much to the style of the earlier French troubadors. Formal stylistic connections to the school of Friedrich von Hausen (such as rhymed strophes and dactyls) and Morungen's later influence on Walther von der Vogelweide suggest that Morungen wrote before 1200. Although a definitive chronology has not been established, 115 strophes, arranged in 35 poems, are attributed to Morungen.

Morungen is known primarily, not for his style, but for his use of images and symbols. The images grow out of the senses; foremost among these is sight: mirrors, windows, dreams, colors, dawn and twilight. As a visual person (*Augenmensch*), Morungen describes love that centers around vision and the contemplation of the beloved. It is a woman's beauty, not her virtue, that awakens in men the desire for love. Morungen does not, however, focus on physical sensuality; rather it is the act of seeing, or of beholding physical beauty, that enables the looker to perceive actual or true love, a perfect happiness, an absolute love. The looker, like Narcissus, loses and forgets himself as he beholds the beauty before him; moreover, this experience also enables him to create his own identity as a subject. This act of creating the subject is epitomized in the poem *Mir ist geschehen als einem kindelîne* ("It happened to me like a child," no. 145, 1), known as the "Narcissus Song" (*Narzissuslied*) for its allusions to this myth. Here the speaker/lover/subject overcomes his narcissism by distinguishing himself from the object of his affections, and by speaking about his desire in the language of the text. Through the poem and through language, the act of looking transcends a purely erotic level of reflection, approaching a more existential one. Thus, looking also functions as a metaphor for the poetic process, for the search for truth and its representation through language. In this way, Morungen raises *Minnesang* from a purely social purpose to an art form, thereby creating an aesthetic of service to women (*Frauendienst*).

Motifs that previously played a relatively minor role in *Minnesang*, particularly those that show love as enchantment or a magic force that pulls human beings into its sphere, take on a central role. Classical in origin (Ovid), such motifs closely connect Morungen's lyric to the concept of love portrayed in the early courtly epic of the late twelfth century. In Veldeke's *Eneit* and in Gottfried's *Tristan*, for example, courtly love (*minne*) is a magical and sometimes deadly power. As the lyric subject, Morungen experiences the same fate as the epic heroes—submission through the magic of love despite the threat of sickness, madness, or death. This magic arises from the beauty of the beloved; she is the moon, the stars, the sun, who sends down her light from afar. In the poem known as the *Venus-Lied*, the lady is a noble Venus ("*ein Venus here*," no. 138, 33), whose beauty shines like the sun from a window. This beauty can inspire pure joy, and the word *wunne* (joy) appears often in Morungen's poems. (A notable example is *In sô hôher swebender wunne* ["In joy floating so high," no. 125, 19].) The beloved can also be a sweet murderess in the poem *Vil süeziu, senftiu tôterinne* ("Very sweet, soft murderess," no. 147, 4), who inspires a love that will last into the next world beyond death. The intimate connection between love, death, and sorrow brings this love very close to a mystical experience; there is an obvious link to Gottfried here as well. But in the conflict it reveals between reality and dream or fantasy, the experience of the lover also harkens back to the metaphor of Narcissus, whose fascination with his own projection has deadly results.

Although Morungen cannot be said to have a school of his own like that of Friedrich von Hausen, one can find thematic and stylistic evidence of his influence on Walther von der Vogelweide. Interestingly, Morungen himself is the hero of a ballad, "On the Honorable Morunger" (*Vom Edlen Möringer*), that dates from the middle of the fifteenth century.

Heinrich von Neustadt (fl. first half of the 14th c.)

An author of three works of uncertain chronology, this Middle High German author of the 13th-14th centuries probably came from Wiener Neustadt (Lower Austria). He received a master's degree (*magister*) in medicine, probably at an Italian university, and spent most of his life in Vienna, where he is documented in 1312.

Apollonius von Tyrland, Heinrich's novel of 20,600 verses contained in four manuscripts, is based on a third-century Latin history of the kings of Tyre, *Historia Apollonii Regis Tyri*, and, ultimately, on a lost late Greek novel.

Prince Apollonius, shipwrecked far from home, wins the hand of a princess. Seemingly dead after giving birth to a daughter, she is given a ship's burial, but is revived by a physician after being thrown ashore. The little girl is abducted by pirates. It takes Apollonius sixteen years full of travels and many adventures to reunite his family. Thereafter, he establishes the Round Table two hundred years before Arthur, conquers Jerusalem, and finally becomes emperor.

Heinrich's work is an example of a late medieval sentimental novel in verse, with an emphasis on adventures, miracles, strange countries, and exotic scenery. It is influenced by earlier German epics such *Iwein*, *Parzival*, *Wolfdietrich*, and *Alexander*.

Von Gottes Zuokunft, a religious poem of about 8,000 verses, is preserved in six manuscripts. Part One is an allegorical explanation of the incarnation of Christ based on the Latin religious tract *Compendium Anticlaudianum* (ca. 1300). Part Two gives an account of Christ's life, death, and resurrection; Part Three deals with the Last Judgment.

Visio Philiberti, Heinrich's adaptation of a French visionary tale, describes an argument between a hell-bound soul and the body. It is contained in only one manuscript of *Von Gottes Zuokunft*, and possibly was intended to be a part of it.

Uncertainty surrounds the poet Heinrich von Veldeke, known primarily for his *Eneasroman* (The Story of Aeneas), but known also as the composer of *St. Servatius* and several love lyrics. Heinrich finished only about fourfifths of his *Eneide* between 1170 and 1175, because someone purportedly stole his manuscript from a wedding celebration at Cleve. Through the intervention of Hermann, count of Thuringia, he regained access to it

Eneide (Vienna, Österreichische Nationalbibliothek, Cod. 2861), fol. 21V; Eneas's departure from Dido, Death of Dido. Photograph: Bildarchiv, ÖNB Wien

and completed it about 1185. Heinrich's works remain elusive due to a dearth of adequate critical research; and the literature that attempts to outline the circumstances of his life and his creative activity is also inconclusive. Nevertheless, he is considered the father of German vernacular literature of the Middle Ages, a model for immediate contemporaries and later imitators alike.

Heinrich must have been born in the first half of the twelfth century, perhaps in a place called *Veldeke* or *Velker Mole* near Hasselt and Maastricht in what was, at the time, Limburgian Belgium. Early witnesses recorded his identity variously as *Heinrich*, *Heynrijck*, *Hainrich*, or *Heinric*, from (*van* or *von*) *Veltkilche(n)*, *Veldeckh*, *Veldeg*, and *Veldig*, as well as *Veldeke*. Some poets referred to him as "Lord" and "Master," indicating that he was a noble and educated. There was, in fact, a Veldeke family of the lesser nobility in the Maastricht region. Heinrich may have been related to and served the counts of Loon. Reminiscences of other authors and texts in his own work are evidence of his familiarity with ancient and contemporary literature, suggesting that he might have studied in a cathedral or monastery school. He was knowledgeable in the literatures and languages of Germany, of France, and of antiquity, employing the *Straßburg Alexander*, the Old French *Roman d'Eneas* and Virgil's *Aeneid* as models for his own version of the epic. He was also acquainted with Dictys and Dares, Ovid, and Servius. Both German and Dutch scholars claim him as their own.

Whether or not the original language of Veldeke's major work was Old Limburgian or a more universal German literary language has occupied a great deal of time and effort among Veldeke scholars. Ludwig Ettmüller published the first edition of the *Eneasroman* in 1882 based upon the larger number of Upper German manuscripts. Ettmüller believed the original to have been transcribed in a lowland dialect, but he did not think it was possible to reconstruct the original text. Some thirty years later, Otto Behaghel attempted a *Rückübersetzung* (a translation back to the older language), as did Gabriele Schieb and Theodor Frings in the 1960s. All existing versions of the epic, however, are Middle German, Upper German, or High German (*Oberdeutsch* and *Hochdeutsch*).

Whatever the original language, the works influence reached exclusively to Upper German regions rather than to Veldeke's supposed home in Limburg. Gottfried von Straßburg acknowledges Heinrich as the first graft upon the stem of German literature, and his influence can be traced in a number of later German authors. In addition, one of his sources seems to have been the *Straßburg Alexander*, composed in an Alemannic dialect (and thus Upper German). The *Eneide* also bears a close, but problematic, relationship to the German *Tristan* of Eilhart von Oberge. The question of language is known in Veldeke studies as "The Veldeke Problem." Though no one has unequivocally settled the question, the interpolation of a Limburg dialect seems to be the invention of Ettmüller rather than an actual fact. Veldeke apparently sought the widest possible German-speaking audience for his work.

Among scholars, the most widely-discussed critical topics concerning the *Eneasroman*, include the romances of Eneas with Dido and Lavinia, and the comparison of these to the Old French versions and to Virgil. For instance, for pursuing his fate and the will of the gods, Virgil does not blame Aeneas for abandoning Dido. The Old French and Middle High German authors portray her love as undisciplined, unsanctioned by society, and unrequited by Eneas, but do so more sympathetically than does Virgil. Veldeke demonstrates even more compassion for Dido than does the French poet. In both vernacular versions, the poets expand upon the relationship of Virgil's Aeneas and Lavinia, providing a commentary on ideal love, Lavinia's "legitimate" love, overcoming the "illicit" love of Dido and Eneas. According to the critical literature, the love theme then blends with the notion of governing (*Herrschaft* und *Liebe*), and finally modulates until notions of peace and of rulership prevail.

Commentators have related various portions of the text, especially those known as the *Stauferpartien*, to the rule of Frederick I Barbarossa. These include references to the great *Hoffest* at Mainz in 1184 and the finding of Pallas's grave by the emperor. At least one scholar, however, believes the work may have been written, at least initially, on behalf of Henry the Lion. Although critics debate many details of this work, they agree that Veldeke refined and expanded upon his model, and in general created an important work of art. Finally, Veldeke was the first to imitate French models in composing love songs in the German vernacular.

Of less interest and importance is Heinrich's *St. Servatius*, a work that exists in total in a manuscript of the fifteenth century in a New Limburgian dialect. A fragment remains of an Old Limburg version, though there is also an Upper German *Servatius*. As with the *Eneasroman*, text and critical problems have significantly hampered understanding of this work. Like the *Eneide*, the transcription of Heinrich's lyric poetry is entirely Upper German, though the impurity of his rhymes in these poems and songs points to less care and perhaps a greater affinity for his mother tongue than does his romance.

Heinrich von Veldecke, *Eneide*, Illustrations

The Berlin manuscript of Heinrich von Veldecke's *Eneide* (Berlin, Staatsbibliothek, no. Ms. germ. fol. 282) is not only one of the earliest illuminated German manuscripts, but also one of the most studied. Two later illuminated *Eneide* manuscripts have received little of the scholarly attention they deserve.

The Berlin codex, made in the Regensburg area in the 1220s to circa 1230, attempts an unusually ambitious synthesis of picture and text: seventy-one picture pages (most in two registers) alternate with text pages so that readers generally have pictures and text before them at the same time.

Much more than other early schemes for the illustration of vernacular texts, such as the scattering of a relatively few pictures through the text, as in the Heidelberg *Rolandslied*, or the clustering of pictures in isolated groups, as in the Munich *Parzival* and *Tristan* manuscripts, the layout of the Berlin *Eneide* suggests an intended simultaneous reading of pictures and text. However, the picture in view does not always correspond to the text on the opposite page, and the pictorial narrative sometimes diverges from the text. Despite the large body of scholarship on the codex, its text-picture relationship still needs considerable study.

A different approach to illustration is found in Heidelberg, Universitätsbibliothek, Cpg 403 (Alsace [Strasbourg?], 1419), where thirty-eight colored pen drawings and accompanying rubrics introduce the chapters into which the scribe has divided the text. Spaces for six additional images were never filled. Vienna, Österreichische Nationalbibliothek, Cod. 2861 (Swabia, 1474), represents yet another approach. Here an abridged version of Veldecke's *Eneide* is combined with a prose chronicle of the emperors and popes. The *Eneide* is illustrated with 152 colored pen drawings, grouped together in sets of four to six per page and accompanied by short, simple rubrics.

Fifteen poems that appear in two manuscripts now in Vienna, one (Nationalbibliothek, manuscript no. 2887) from the seventeenth century, and the other, just a fragment of poem XV (manuscript no. 19799) from the early fourteenth century, are ascribed to a Seifried Helbling, based on a reference in poem XIII. These poems are often identified as the "Smaller Lucidarius" (*der kleine Lucidarius*), a title that was suggested by the inscription to poem I and by the fact that many of the poems adhere to a model somewhat like the Latin *Elucidarius* of Honorius Augustodunensis i.e., a didactic dialogue between the poet/master and his young servant.

While the author's true identity is in question, the poems (eight of which are political in nature) can be dated with some degree of accuracy by events mentioned in them. Thus the oldest poem was written between 1282 and 1283; it mentions that the two sons of the Roman emperor Rudolf I were sharing the reign of Austria and Styria. Albrecht and Rudolf II shared this position from December 27, 1282 to June 1, 1283, when Albrecht assumed the rule of Austria. The last poem was written about 1299. In poem no. IX, written after 1298, the poet claims to be sixty years old. The poet writes with obvious knowledge of the geography of Lower Austria and Vienna and in the dialect of this region. While his knowledge of persons and events is considerable, he always appears as the outsider, the observer watching and reporting on the affairs of state. He may have been a retired politician, a knight, or a retired clerk who had held a position with the Kuenring family or at the court of the duke of Austria.

In addition to didactic and political poems, the corpus includes poems in praise of the Virgin Mary and poems of repentance and supplication; other topics include the Last Judgement, hunting, a love allegory, historical accounts, satire directed against women, and social criticism. There is also a poem in the tradition of *Psychomachia* describing a battle between the forces of good and evil. Besides citing *Lucidarius*, the poet refers to Konrad von Haslau, Freidank, Wolfram von Eschenbach, Walther von der Vogelweide, der Stricker, Neidhart von Reuenthal, Helmbrecht, Wernher der Gartenæse, and Steinmar.

Heldenbücher

Collections of narrative poetry in the vernacular became more and more specialized as the Middle Ages progressed. During the fifteenth and sixteenth centuries the terms *Heldenbuch* (Book of Heroes) and *Riesenburg* (Book of Giants) became common designators for collections of heroic poetry. Modern usage generally associates the terms with collections restricted largely to heroic materials.

A manuscript collection from Strasbourg from sometime after the middle of the fourteenth century (lost in the bombardment of the city in 1870), containing a prose introduction, *Ortnit*, *Wolfdietrich*, *Der Rosengarten*, *Laurin*, *Sigenot*, and the Stricker's *Pfaffe Amis*, seems to have been the basis for the first printed *Heldenbuch*, printed by Johann Prüß around 1483, also in Strasbourg. The printed version added a rhymed preface and omits the non-heroic *Pfaffe Amis*. This collection was reprinted by a variety of printers over the next century and became for many the *Heldenbuch*. There are versions from Augsburg (1491), Strasbourg (1509), Augsburg (1545), Frankfurt (1560), and again in Frankfurt (1590). The prose that appears variously at the beginning and end of these collections presents an interesting overview of the heroic "history" as it was understood by the collectors of this literature at the end of the Middle Ages.

Three additional collections are often included under this term. The first is Lienhart Scheubel's *Heldenbuch*, which probably originated in Nuremberg although it has long been in Vienna, where it was known as the *Piaristenhandschrift* because of its having been found in the library of the Piarist house in Vienna. The manuscript is dated to 1480–1490, and it contains *Virginal*, *König An-teloy*, *Ortnit*, *Wolfdietrich*, the *Nibelungenlied*, and *Lorengel*. This is the only such collection to include the *Nibelungenlied*.

The so-called *Dresdener Heldenbuch* (Dresden Book of Heroes) is probably also a product of Nuremberg and is dated 1472. One of the scribes identifies himself as Kaspar von der Rhön, which has led to the identification of this manuscript as Kaspar von der Rhön's *Heldenbuch*. This extensive collection includes *Ortnit*, *Wolfdietrich*, *Eckenlied*, *Rosengarten*, *Meerwunder*, *Sigenot*, *Wunderer*, *Herzog Ernst*, *Laurin*, *Virginal*, and the *Jüngeres Hildebrandslied*. Many texts, especially those written by the anonymous second scribe, are drastically condensed by the omission of what the scribe called "unnecessary words." Each text is prefaced by an illustration, all of which have been severely damaged by poor storage.

The grandest collection known under this rubric is the *Ambraser Heidenbuch* (Book of Heroes from [Castle] Am-bras), a sumptuous parchment manuscript prepared to order for the emperor Maximilian I by the customs clerk Hans Ried in Bozen (Bolzano) in the years from 1503–1516. The term *Heldenbuch* is something of a misnomer for this collection, if we associate it strictly with heroic poetry, since most of the twenty-five texts in this stately volume are not what is now called *Heldendichtung* (heroic poetry). Fifteen of these texts, including *Kudrun* and *Moritz von Craûn*, are known only from this collection. Here is also the only nearly complete text of the *Erec* by Hartmann von Aue. Hans Ried modernized the language, but he seems to have copied good early texts so that the manuscript retains its importance as a source in spite of its late date and relatively modern language.

Helmarshausen

The Benedictine monastery at Helmarshausen was founded on the Diemel River in 997 by a Count Eckhard and his wife, Mathilda. Although Otto III established it as an imperial abbey under Corvey, in 1017 Meinwerk, bishop of Paderborn, took it into control of his diocese, where it remained throughout the High Middle Ages. In 1107 it received relics of St. Modualdus as a gift from its feudal lord, the count of Norheim. A church of the Holy Sepulchre based on that in Jerusalem was erected over a baptismal church on the hill known as Kurkenburg and consecrated in 1126. At the foot of the hill were the monastic buildings, including the abbey church of Saints Mary and Peter, which in its early form had apses at each end and a crypt at its west end. The western apse was transformed into a towered Romanesque western entryway at the time of the third reconstruction. The high point of the monastery's history was in the late twelfth century, after which it suffered from political frictions with Paderborn; in 1223 it put itself under the protection of the archbishop of Cologne.

Helmarshausen is best known for its illustrious metalworker, Roger of Helmarshausen, named as the maker of the portable altar (*scrinium*) commissioned by Henry of Werl, bishop of Paderborn, and preserved at Paderborn Cathedral. Roger seems to have been part of an artistic capability that, while undocumented, is traditionally believed to have been active at the abbey. Numerous illuminated manuscripts are also attributed to the workshops of the abbey. Artistic activity is believed to have spanned the middle two decades of the twelfth century; still later the dedicatory preface of the Gospels made for Henry the Lion documents that the monk Herimann of Helmarshausen was permitted by his abbot to script the text of the luxurious manuscript. Several illuminated manuscripts of the late twelfth century are painted in the style of earlier illuminations associated with Helmarshausen, but combined with more modern styles, as, for example, in Ms. 142 of the cathedral treasury at Trier (Kaufmann, 1992). Since the abbey was no longer thriving at that time, it is unlikely that they were made there, and Braunschweig, the residence of Henry the Lion, has been suggested as a possibility (Klössel 1995).

Henry I (ca. 876-July 2, 936)

King of East Francia/Germany (*König von Ostfranken*), Henry I (Heinrich I.) was born in ca. 876, the third son of Otto, duke of Saxony (ca. 830/40–912), a Liudolfing, and Hadwig (d. ca. 903), daughter of Henry of *Ostfranken*, a Babenberger. Henry was named after his maternal grandfather. (The name Henry was rare in the ninth century; its oldest form is *Haimeric* [lord of the house].)

About 900 Henry married Hatheburg (ca. 876–ca. 909) in order to gain her inheritance of Merseburg and other lands in East Saxony. Hatheburg was a widow; the local clergy objected to the marriage as she was said to have planned to become a nun. Their opposition did not deter Henry, however. They had one son, Thankmar (906–937). The marriage was dissolved in 909. Not long after, Henry married Mathilde (born ca. 894/897) of the family of Widukind of Saxony, Charlemagne's adversary. Though hardly love at first sight, contemporary sources noted a powerful attraction between the couple. Mathilde would become an influential wife and a formidable dowager before she died in March 968. Their eldest son Otto was born on November 23, 912, seven days before the death of the grandfather whose name he bore. There were four more children; Gerberga (919–968), Henry (922–955), Hadwig (923–958), and Brun (925–965).

Upon the death of his father in 912, Henry became duke of Saxony; there was immediate trouble with Conrad I (*Konrad I.*), king of East Francia since 911. Conrad distrusted Henry's power in Saxony. In addition, a long-standing feud existed between them over the execution in 906 of the Babenberger Adalbert, Henry's maternal uncle. Conrad's success in consolidating control over Saxony was minimal, however. When he died in late December 918, he requested his brother Eberhard to offer the crown to his former rival. Following several months of negotiations, Henry was chosen king at Fritzlar on May 5, 919. He was forty-three years old.

Henry declined to be crowned by the Church, as was the Carolingian custom, for reasons that are not altogether clear and have been debated by historians ever since. His first actions were designed to extend his rule beyond the Carolingian kingdom of the Saxons and the Franks into the southern areas of East Francia. In Bavaria Duke Arnulf had declared himself king but eventually abandoned his ambitions. Henry wisely left Arnulf in control of Bavaria, demanding only that Arnulf acknowledge Henry's status as king. In Swabia the situation was more complicated. Burchard II, who had only recently become duke, acknowledged Henry as king in 919 and promptly defeated his Burgundian rival Rudolph II in battle. In 922 the two made peace, and Rudolph married Burchard's daughter, persuading his father-in-law to help him gain the crown of Italy. This adventure ended in Burchard's death in 926. Henry was now in a position to impose a settlement in Swabia, and he appointed Hermann (a Conradiner) as duke. Henry also made a pact of friendship with Rudolph II. In return for the Holy Lance, a valuable relic which the German king coveted, Rudolph was allowed to keep the area of Basel which he already controlled.

Diplomacy, military pressure, and waiting patiently for the right moment to put his plans into action characterized Henry's dealings with the West Frankish king Charles the Simple (d. 929) and his opponents, Robert (d. 923) and Raoul (d. 936). Henry also secured the submission of the volatile area of Lotharingia and its duke Gilbert (Giselbert), who married Henry's daughter Gerberga in 928.

Now in his fifties, Henry issued a charter in 929 detailing the dower rights of his wife, the clerical education of his youngest son, Brun, and the marriage of his son Otto. The chosen bride was an Anglo-Saxon princess called Edith (ca. 912–946), a daughter of Edward the Elder, who arrived in Saxony with a younger sister, Adiva. The marriage between Otto and Edith took place sometime early in 930, when Henry undertook a lengthy circuit of his kingdom.

Henry's greatest accomplishment, however, was his decisive action against the Magyars who had been attacking East and West Francia since about 900. In 924 Henry's soldiers captured a Magyar chief, and, for his safe return, Henry demanded a nine-year truce, also securing a yearly tribute. During this truce, Henry created a mounted troop of soldiers to fight the Magyars and tested his new model army against the Slavs. He may also have built fortifications (*Burgen*) on the Elbe frontier. In March 933 Henry met with the invading Magyar forces at the battle of Riade, which ended in victory for Henry's new cavalry. There was to be peace on the Elbe frontier for a number of years.

By 935 Henry had achieved many of his goals: his relations with the dukes were based on contracts of friendship; he had defeated the Magyars, and his diplomacy had secured a modicum of peace on his Western frontier. After a long illness, Henry held a diet at Erfurt where he designated his eldest son by Mathilde as his successor. The future Otto I was then 24, married with two children, and a well-trained soldier. Henry I died on July 2, 936, at Memleben. He was buried in the Abbey Church of Quedlinburg where his tomb can still be found.

Modern historians have given Henry an important place in the history of early medieval Germany, crediting him with laying the foundations upon which his son Otto the Great created his empire. Tenth century writers noted his prowess as a warrior and his physical beauty and charm. In the twelfth century, Henry and Mathilde were perceived as the ancestors of the kings of Europe. Henry was also surrounded by legends and stories. Perhaps the most enduring of these is the tale about his receiving the crown while hunting birds. Thus, Henry I would enter the popular imagination under the name "the Fowler" (*der Vogler*).

Henry II, Art

As is the case with his political agenda and accomplishments, Henry's artistic patronage is often compared to Otto III's; elements of both continuity and innovation are manifest. Two sumptuous manuscripts, a Book of Gospels and a book of pericopes, or epistle and gospel readings (Munich, Staatsbibliothek, manuscripts no. clm. 4454 and 4452), reveal Henry's continued patronage of Reichenau. The magnificent Bamberg *Apocalypse* (Bamberg, Staatsbibliothek, Manuscript no. bibl. 140) was also thought to have been commissioned by Henry. That the manuscript was, in fact, created for Otto indicates the stylistic continuity of Reichenau manuscript illumination in the service of successive patrons.

Henry's seals and bulls are also essentially based on Otto III's, but the inscription *Renovatio Regni Francorum* (For the Renown of the Rulers of the Franks) on Henry's royal bull suggests a conscious move away from Otto's "Roman" policy toward one aimed at the consolidation of the German realm. In this regard, it may be significant that Henry's direct artistic patronage was spread more widely throughout the realm than any of his predecessors.

The greatest number of objects commissioned by Henry come from his home duchy of Bavaria. His Sacramentary (mass and prayer book) from St. Emmeram in Regensburg (Munich, Staatsbibliothek, Clm. 4456) contains, unusually, two ruler images. The first, essentially based on Byzantine iconography, shows Henry crowned directly by Christ, and holding the Holy Lance, the symbol of rule and the realm's most precious relic. Like the other miniatures of the manuscript, the second ruler image is based on the Carolingian models from the *Codex aureus* (golden manuscript) of Charles the Bald, housed in St. Emmeram. While both are powerful pictures of Henry's royal might, these images retreat from the overt expressions of Christocentric kingship found in images of Otto III. A Gospel manuscript from St. Emmeram was sent by Henry to the abbey of Montecassino, likely after his visit in 1022 (Rome, Vatican, Ottob. 74). He also substantially supported the recently founded Bavarian cloister of Seeon, which produced a number of illuminated manuscripts on Henry's behalf, many for his new cathedral in Bamberg.

The founding in 1007 of the new diocese of Bamberg, which was as much the work of his wife Kunigunde, provided the fulcrum for much of Henry's patronage. In addition to the Sacramentary, other Regensburg manuscripts, and the Seeon books, Henry transferred the library of Otto III to Bamberg, including numerous Reichenau manuscripts. He and Kunigunde also enriched the cathedral with precious silk embroideries decorated with complex iconographic programs, likely made in Regensburg and still in the cathedral.

Other important commissions show that Henry did not ignore other parts of the realm. Objects like the *ambo* (pulpit) in Aachen, richly decorated with jewels and ivories, and the Basel *Antependium* (altar decoration), indicate flourishing centers of goldsmith work in the western part of Germany. In their number, luxury, and complexity, the objects associated with Henry II and Kunigunde were meant to express the couple's sanctity, which would lead them to be revered as Germany's only imperial saints.

Henry III (1046–1056)

Henry III, son of the Emperor Conrad II (d. 1039) and Queen Gisela, daughter of Duke Hermann II of Swabia, was born on October 28, 1017 and died at age 39 on October 5, 1056. Made duke of Bavaria at age ten, Henry was elevated by his father and the German magnates to the kingship of Germany in the following year (1028). He shared the throne with his father until Conrad's death in 1039. In 1036, as part of a move to secure the northern frontiers of the empire and perhaps control the Saxon nobility, Henry married his first wife, Kunigunde, daughter of King Cnut of Denmark. Their daughter Beatrix (d. 1060) later became abbess of the Ottonian foundation of Quedlinburg. Kunigunde died in 1038.

The year before his father's death, Henry had also obtained the kingship of Burgundy and duchy of Swabia, the latter of which he held until 1045. In 1043, after assuming sole kingship of Germany in 1039, he married his second wife, Agnes of Poitou (d. 1077), daughter of Duke William V of Aquitaine, with whom he had three daughters and a son. One daughter, Adelheid (d. 1095), became another abbess of Quedlinburg; the other two, Mathilda (d. 1060) and Judith (Sophia, d. 1092/1096), were married, respectively, to Rudolf of Rheinfelden and King Salamo of Hungary and later King Wladyslaw of Poland. Crowned Holy Roman Emperor in 1046, Henry ruled as king and emperor until his death in 1056, when he was succeeded by his young son Henry IV (1050–1106).

Henry III's assumption of full royal powers in 1039 was a smooth one, since the transition had been prepared over a decade before by Henry's elevation to cokingship during his father's lifetime and by his direct control of the duchies of Bavaria and Swabia and the kingdom of Burgundy. The addition of the southeastern duchy of Carinthia to the regions under his direct rule in 1039 only enhanced his already strong political hold on the southern portion of the German realm. He had also arrived at the pinnacle of royal power after a careful process of practical political and military training which rendered him familiar with both the protocols of royal justice and court business and the demands of military campaigns and the battlefield: in short, with the business of medieval rule. These experiences also prepared him to begin building the vital networks of personal connections with other magnates that enabled so much of royal rule in medieval Germany.

Ecclesiastics, such as the historian Wipo and the polymath Berno of Reichenau, ensured that Henry not only received a basic literary education but also absorbed the ideals of theocratic kingship and participated, to a degree, in contemporary currents of religious revival and reform.

Honored with the epithets *spes imperii* (hope of the empire) and *amicus pacis* (friend of peace), Henry III showed his commitment to the ideals of peace and justice early in his reign with his proclamation of public peace and forgiveness of his opponents. At gatherings in Constance (1043), Trier (Christmas 1043), Menfö in Hungary (1044), and Rome (1046), Henry exhorted, begged, and ordered his audiences to keep the peace and to forsake revenge upon enemies by following their king's example. Despite Henry's emphasis on and general success in establishing peace within his kingdom—a success which has led historians to consider his reign the "highpoint of early medieval imperial rule"—his reign was not without both internal and external political crises.

Internally, Henry's aggressive assertion of royal prerogatives and control met with particularly stiff local resistance in Lotharingia and Saxony. In Saxony, Henry exploited royal and imperial domains more intensively than had his predecessors, established a new palace at Goslar, and exercised tighter control over ecclesiastical affairs in the region, all of which set him at odds with the regional nobility and, especially, the noble family of the Billungs. In contrast to the opposition of the Saxon nobility, which simmered until the reign of Henry's son and only erupted in the Saxon War (1073–1089), the nobility of Lotharingia presented Henry with a formidable rival in the person of Godfried the Bearded, Duke of Upper Lotharingia. After Henry had ignored the duke's legitimate claim to the duchy of Lower Lotharingia, deprived Godfried of his rule, and engaged in a program of ecclesiastical appointments designed to contain or weaken Godfried's power, the duke and his allies revolted in 1044. Defeated in 1049, the duke took refuge in Italy, where, in 1054, he married, without the king's approval, the heir to the margraviate of Tuscany, Beatrix, the former wife of the most powerful ruler in Italy, margrave Boniface. Fearing Godfried's potential control of both Lotharingia and northern Italy, Henry entered Italy in 1055 and captured Beatrix and her daughter Mathilda, while Godfried escaped north to Lotharingia. He submitted to Henry in the following year.

Externally, Henry III was occupied by a series of wars against the kings of Bohemia and Hungary. Taking advantage of political disorder in Poland, King Vratislav I of Bohemia (1034–1058) invaded Poland, thus challenging Henry's overlordship of the German kingdom. After a disastrous initial campaign in August of 1040, Henry emerged victorious over the Bohemians in 1041 and compelled their king to pay tribute and recognize German hegemony. Henry then responded to Hungarian attacks upon the southern frontier with a series of expeditions in 1042, 1043, and 1044, which resulted in victory and the submission of Hungary to Germany at Menfö. According to one scholar (Egon Boshof), Henry's aim was simple: the reduction of Germany's eastern neighbors from independent states to kingdoms subordinate to German rule. Relations with Capetian France in the West, though generally amicable, suffered a setback in 1043–1046, when Henry's marriage to Agnes of Poitou increased anxieties about an alliance between the German kingdom and Aquitaine and provoked an abortive French invasion of Lotharingia.

Known for his largely successful attempts to expand and enforce royal and imperial prerogatives within the German kingdom, Henry III is perhaps most famous for his zealous support of efforts to purify the clergy and for his decisive action in reforming the Roman papacy. Like his predecessors, Henry had used clerics extensively both as administrative functionaries in his *Hofkapelle* and as loyal agents who, once established in bishoprics throughout Germany and Italy, enabled him to strengthen the network of allies used to control the empire's territories. But, touched by the contemporary ideals of a clergy free from the heretical taint of simony (which came to be defined as the acquisition of ecclesiastical office through any form of recompense) and sexual impurity, Henry vigorously forbade simoniacal elections, granted free elections to abbeys and churches, and took measures to raise the moral caliber of the clergy, efforts which brought him praise from monastic reformers like Peter Damian.

His most famous acts, however, came in 1046 when he entered Italy, deposed the three competing popes, Gregory VI, Benedict IX, and Sylvester III, at synods in Sutri and Rome, and appointed a succession of German bishops as popes: Clement II and Damasus II, both of whom died soon after their elections. Although his bold action at Sutri was criticized by some as an inappropriate invasion of the ecclesiastical sphere by a secular ruler, Henry was nonetheless widely recognized for his efforts to rid the papacy of corruption. His selection in 1048 of Bishop Bruno of Toul, who would become Pope Leo IX (1049–1054), ushered in a new era of the papacy and of ecclesiastical reform.

Born on November 11, 1050, the future Emperor Henry IV was the much longed-for son and heir of Emperor Henry III and Agnes of Poitou. He was baptized by Archbishop Hermann of Cologne at Easter 1051. Abbot Hugh of Cluny, who had come specially from Burgundy at the invitation of the emperor, lifted the baby from the font, thus becoming his godfather and, apparently, also naming him. Elected king at Tribur in November 1053, Henry was crowned July 17, 1054, at Aachen and betrothed the next year to Bertha, a girl of his own age and daughter of the count of Turin. He was not even six years old when his father died on October 5, 1056, at the palace of Bodfeld in the Harz mountains.

On his deathbed, Henry III had entrusted his heir to Pope Victor II (1055–1057), the former bishop of Eichstätt and imperial chancellor. Victor managed to obtain recognition of little Henry's succession to the throne. Nominally, Henry IV began his reign in 1056. The guardianship lay in the hands of his pious mother, the Empress Agnes, until April 1063, however, when a faction of conspirators, led by Archbishop Anno II of Cologne, abducted the young king, who tried to save himself by jumping overboard into the Rhine. Anno now became the leading influence at court, replacing another bishop, Adalbert of Bremen. Anno had good relations with ecclesiastical reformers in Rome and reversed an earlier imperial policy which had supported the election of Bishop Cadalus of Parma as (anti)pope Honorius III. In collaboration with Peter Damian a papal legate, Anno and the German court recognized, instead Pope Alexander II (1061–1073), who had been elected by Hildebrand (the future Gregory VII) and other reformers.

Henry IV began to govern in his own name at age six in March 1056. In July 1066 he married Bertha of Turin but tried to divorce her three years later. He desisted in face of the remonstrations of Peter Damian, who had been sent to Germany by the pope as a legate.

Henry's relationship with several German nobles was tense from the beginning of the reign. His troubles increased from about 1068, when he began to try to recover the crown lands, originally in the hands of the Ottonian rulers, in eastern Saxony and Thuringia. Essentially continuing his father's policies, Henry strengthened and expanded them, forcing the Saxons to build and maintain fortifications that were garrisoned with southern German *ministeriales*. This policy provoked Saxon resistance, playing into the hands of Otto of Norheim. Otto had forfeited the duchy of Bavaria in 1070 and formed an alliance with Magnus Billung, the duke of Saxony, and other magnates who had made their fortunes under Ottonian emperors during their eastward expansion. Together with the region's bishops, and with massive support from the Saxons in general, the magnates confronted Henry IV in the summer of 1073 at Goslar. They demanded that the castles he had recently built should be razed, that lands unjustly confiscated should be restored by the council of princes, and that the king should stay in Saxony and dismiss his low-born advisers and instead follow the princes' advice. Henry, who had also lost the support of the south German dukes, was besieged by the Saxon army and barely escaped from his fortress, the Harzburg, to find protection in the town of Worms. The Harzburg was stormed by the Saxons, but their army was defeated in September 1075. By the end of the year, however, Henry seemed to have mastered the situation. At Christmas the nobles elected his son Conrad their king.

At the request of the higher clergy of Milan, who had defeated the Pataria reform movement in the spring of 1075, Henry nominated the imperial chaplain Tedald as archbishop of Milan instead of Atto, who had the support of Pope Gregory VII and the Pararia. Gregory expressed his furious opposition in a letter (December 8, 1075) and in a verbal message, perhaps threatening the king with excommunication. From Worms, where nobles and ecclesiastics met jointly in a diet on January 24, 1076, came the reply. The German bishops, who resented papal claims of hierocracy and centralization, renounced their obedience to the pontiff, whom they called "Brother Hildebrand," and claimed his election had been illegal; Henry IV called upon Gregory to resign, and the Romans were asked to elect a new pope. The north Italian episcopate supported these measures immediately.

From the Lenten synod he was holding in Rome from February 14–20, 1076, Gregory deposed Henry, absolved his subjects from the oath of fealty, and excommunicated the king. Many of the bishops then deserted Henry, joining forces with the Bavarian and Saxon opposition. By October 1076, at the meeting of Tribur, the king had to accept their terms and to declare his submission to the pontiff. Unless Henry was absolved from his excommunication by February 1077, the assembly of Tribur threatened, they would proceed with the election of a new king. The German princes invited Gregory to come as an arbitrator to a diet that was to be held at Augsburg in February 1077. With no way out, Henry decided in mid-December 1076 to meet Gregory, who had already left Rome on his way to Augsburg in northern Italy. With his wife Bertha and his two-year-old son Conrad, Henry managed to cross Mount Cernis in severe winter weather. When he learned of the king's arrival, Gregory withdrew to the fortress of Canossa, owned by Countess Matilda of Tuscany. Thanks to the mediation of Henry's godfather, Abbot Hugh of Cluny, of Matilda, and of Adelheid of Turin (mother of the queen), Gregory reconciled Henry IV with the Church on January 28, 1077. Henry was forced to appear barefoot and dressed in a penitent's hair shirt for three days in a row in the inner courtyard of the castle requesting permission to enter before he was absolved by the pope.

In fact, though not in theory, when he reconciled Henry with the church, Gregory again recognized Henry as king. At the Lenten synod of 1080, however, the pontiff recognized Rudolf of Rheinfelden, whom the German opposition had elected in March 1077 despite the absolution of Canossa, as king. Henry was once again excommunicated, but, this time, ineffectively. At the synod of Brixen, June 1080, Henry and the princes nominated Archbishop Wibert of Ravenna to replace Gregory, whom the synod then deposed. The death of Rudolf, and military as well as political successes, enabled Henry to enter Rome in March 1084 when Wibert was consecrated Pope Clement III. On Easter Sunday, Henry IV was crowned emperor. Meanwhile, Gregory, freed by his vassals from his place of refuge, the Castello S. Angelo in Rome withdrew to Salerno, where he died in May 1085.

After his return to Germany, Henry at first was able to consolidate his position. With the death of Clement III in 1100 the end of the schism in the Church seemed possible. However, the negotiations between Henry IV and Pope Paschal II (1099–1118) always ended in failure, since Henry refused to give up his right to invest bishops with the ring and staff, the one demand on which Paschal insisted.

The collapse of these negotiations with the papacy lay behind the rebellion of Henry V against his father in late 1104. Through a ruse, the younger Henry captured Henry IV in late 1105. At Ingelheim on December 31, 1105, Henry IV was forced to abdicate. He managed to flee, however, and attempted to regain power. He died at Liège on August 7, 1106, eventually to be buried in the cathedral of Speyer.

A contemporary, albeit anonymous, biographer most movingly bemoaned the death of the emperor, the protector of the poor, opening with the words of Jeremiah 9.1: "Oh that my head were waters, and mine eyes a fountain of tears, that I might weep day and night for the slain daughter of my people."

Henry the Lion (1129/1131–August 6, 1195)

Duke of Saxony and Bavaria (*Heinrich der Lowe, Herzog von Sachsen und Bayern*), Henry the Lion was born 1129/1131, the son of the Welf Henry the Proud (*Heinrich der Stolze*) and Gertrude, daughter of Lothar III. His father died in 1139, dispossessed of all his titles in his feud with Conrad III, but the Empress Richenza, Henry's grandmother, and Count Adolf of Holstein secured the boy's northern inheritance. Henry was enfeoffed with Saxony in 1142. (Bavaria had already been granted to Conrad III's half-brother Henry of Babenberg [Heinrich Jasomirgott]). Henry became a tough soldier and a ruthless politician, particularly in his Saxon lands and in his relationship to the Archbishopric of Bremen, and participated in the Wendish Crusade in 1147. Frederick I Barbarossa of Swabia, Henry's cousin, became king in 1152. Henry accompanied Frederick to Italy in 1154–1155, and, during the coronation riots in Rome, saved his cousin's life. In 1156 Frederick returned Bavaria to Henry, but without the East Mark, which became Austria. Frederick granted that fiefdom to his uncle Henry Babenberg in the *Privilegium minus* (Lesser Privilege).

Over the next twenty years Henry supported Frederick but also expanded his own power. He founded Munich in 1157 and Lübeck in 1159, and married Mathilda of England (daughter of Henry II and Eleanor of Aquitaine) in 1165. Henry also built the cathedral and the castle in Brunswick (Braunschweig), was in Italy twice, and went on a pilgrimage to Jerusalem in 1172.

In 1176, at Chiavenna, Frederick demanded Henry's support for his war with the papacy and the Italian communes, but the Saxon duke refused to help without a substantial reward. Frederick's war ended in defeat, and he had to make peace with the pope in 1177. Upon his return to Germany, Frederick began legal proceedings against his cousin. For non-appearance at his trial, Henry was outlawed at the diet of Würzburg in 1180. He had few allies, and an imperial army defeated him in Saxony. In 1181 Henry was deposed from all his possessions and exiled; he and his family fled to his father-in-law, Henry II, in England, where he remained until 1185. Saxony was split between the Archbishop of Cologne and the Ascanian counts of Brandenburg. Bavaria went to a member of the Wittelsbach family.

When Frederick went on crusade in 1189, he exiled his cousin again; but Mathilda stayed in Brunswick, where she died that year. Henry returned to Germany upon the news of his cousin's death. He was finally pardoned by Henry VI and spent his remaining years in Saxony. Henry the Lion died on August 6, 1195 and was buried in the cathedral at Brunswick beside his wife.

A man who fascinated his contemporaries, Henry the Lion was one of the most controversial German princes of the twelfth century. Italian historian Acerbus Morena, who met him in 1163, described him as of medium height, but strong and agile, with dark eyes and hair. Henry was arrogant and ruthless, but his dealings with Frederick in the 1180s show that he could seriously over-play his hand.

Some historians have celebrated him as the champion of nationalism and the expansion eastward, while others have chided him for deserting Frederick I at a crucial time in the empire's history. It is perhaps time to lay the old controversies to rest.

Henry the Lion, Art

Henry the Lion inherited his Saxon lands and ducal title through his mother, Gertrude, sole heir of the dynasty of the Brunonen and daughter of the emperor Lothar of Supplinburg. Through his father, the Guelph (Welf) Henry the Proud, he inherited the ducal title to Bavaria and the rich family legacy of the Guelphs in south Germany and Italy. His great uncle Welf V, for example, had married Mathilda of Tuscany, and two female ancestors were wives of the Carolingian rulers Louis the German, king of the East Franks, and the emperor Louis the Pious, whose son Charles the Bald was king of the West Franks. Henry's wife and the mother of his children was Mathilda, the daughter of Henry II of England. Frederick I Barbarossa, heir of the Swabian Hohenstaufen dynasty and emperor, was his first cousin on the Guelph side. But because of the complex nature of German politics and particularly Henry's ancestors' enduring history of changing alliances for political gain, his kinship with Barbarossa did not insure their being allies. Indeed, since they had been competitors for the imperial title, which Henry failed to get despite his superior claim and wealth in land holdings and power, they were destined to be enemies. When Henry failed to support Barbarossa in his Italian campaigns, the emperor used his power to strip Henry of his title and lands in Bavaria.

Throughout his life Henry's activities centered on his domains in the north, where he took up the fixed residence in Braunschweig of his Brunonen forebears. He expanded his political control into the Wagrian lands of the heathen Obodrites and Polabians, whom he more or less successfully Christianized; for his efforts, which amounted to a crusade, he received papal support and indulgences but criticism from the twelfth-century chronicler Helmut of Bosau. He secured revenue sources by developing institutions as he found them into well-functioning administration. He also supported the growth of trade and a mercantile class throughout his north German lands. Henry used a considerable part of his wealth to expand and adorn his palace, Dankwarderode, its chapel St. Cyriacus, the larger palace church eventually dedicated to St. Blasius, where he and Mathilda were buried, and religious institutions in Braunschweig and the region.

Henry the Lion was a remarkable patron of architecture and the arts. In this he continued in the tradition of the Brunonen who had had the metalwork objects made that formed the initial core of the "Guelph Treasure," to which Henry added prodigiously. He commissioned works in Cologne and Hildesheim, where he could get the highest-quality craftsmanship at that time, and it is believed that he also eventually established his own workshops in Braunschweig. Most of the works he had made were for liturgical use at St. Cyriacus, St. Blasius, and elsewhere. High points of Henry's patronage include the objects commissioned in Cologne, including the portable altar of 1150 signed by Eilbertus and the dome reliquary of 1185; the Wilton chalice, paten, and fistulae given by Henry to Count Berthold III of Andechs and thought to have been made in Hildesheim around 1172; and the Oswald reliquary and other objects from the same workshop that may have been in operation in the 1180s in Hildesheim or Braunschweig.

Henry and Mathilda also commissioned monumental works in bronze. Already in 1166 Henry had arranged for casting the over-life-size bronze lion that was installed on a high stone pier between Dankwarderode and St. Blasius; here it functioned as a symbol of his personal power and his family's strength. For St. Blasius, Mathilda commissioned the cast-bronze altar dedicated to Mary in 1189, and the sixteen-foot-high, seven-armed candelabra of the same period, also made for St. Blasius. The candelabra recalled the Jewish temple in Jerusalem, as did elements of the architecture of Henry's expanded nave of St. Blasius, and were probably intended to recall the pilgrimage of the ducal couple to Jerusalem.

Henry the Lion had sumptuous books made for liturgical use in church and house chapel. Of these the famous Gospels of Henry the Lion, now preserved in the Herzog August Bibliothek in Wolfenbüttel (Cod. Guelf. 105 Noviss. 2°), is the most lavishly decorated with colorful and decorative Gospel scenes as well as two images where Henry and Mathilda are presented. They are depicted on the dedication page (fol. 194) giving the Gospel manuscript to St. Blasius and the Virgin, and again on the coronation page (fol. 171v), receiving crowns from Christ in the company of illustrious members of their families. Many early Mass books are also preserved, including a once lavishly decorated Missal, which traveled the same route as the Gospels through Bohemia, and is now in Brno in the Czech Republic (Universitni Knihovna, no. Ms. R. 396).

Henry the Lion's use of art as a means of shaping the memory of himself and his family has recently been revealed as a fertile topic. In shaping their own *memoria* in the visual arts and architecture they commissioned, the Guelphs followed on what had already been established in the writing of their family history. The *Historia Welforum*, written circa 1170 by an anonymous Swabian cleric in the entourage of Henry's uncle Duke Welf VI, already suggests the family's sense of its own self-importance. This skill in molding the memory of the Guelphs through art was advanced also by Henry's son, the emperor Otto IV, and his grandson, Otto the Child, who continued to commission art that further enhanced the positive memory of their family.

Henry the Raspe (d. 1247)

In the course of his prolonged struggle with the papacy, the emperor Frederick II Hohenstaufen faced opposition within Germany, including the creation of an anti-king. Frederick's rival, Pope Innocent IV, at the Council of Lyons in 1245 declared Frederick deposed because of perjury, oppression of the Church, and alleged heresy, and called for the election of a new king. Henry Raspe, landgrave of Thuringia and imperial regent since 1242, was elected (anti-)king by the archbishops of Cologne and Mainz with the support of the archbishop of Trier in May 1246.

Henry received great support from Innocent IV during his short reign. Indeed, it was Innocent and his legate who had engineered his election, and it was Innocent who provided Henry with the grant of some 25,000 marks of silver. Although he had significant backing from Rome and won a battle near Frankfurt against Frederick's son Conrad, Henry's impact on Germany and on Frederick's reign was limited. He did, for a short time, unite the duchies of Austria and Styria to the imperial authority, but this association ended with his death. It was his death in February 1247, after a very brief reign, and his appearing to be a papal tool that limited his impact on Germany and Frederick.

Henry VI (1165–1197)

At the tender age of three, Henry VI Staufen was already an elected and crowned king. His father, Emperor Frederick I Barbarossa, not only had him participate in the imperial government, but even tried to get him elected coemperor. Scholars, such as Godfrey of Viterbo, provided the young king's education, according to several songs that appear in medieval collections of *Minnesang* (courtly love poetry). His father granted Henry the belt of knighthood at the famous tournament at Mainz during Pentecost 1184. By that autumn, Henry had become betrothed to Constance, eleven years his senior and the aunt of King William II of Sicily. During Barbarossa's disputes with Pope Urban III, Henry successfully conducted military campaigns against the papal states; but Urban's successor, Clement III, promised to crown him emperor. Henry took over the regency while Barbarossa went off upon the third Crusade in the spring of 1189.

When Barbarossa died in July 1190, Henry should have quietly succeeded to his father's inheritance. But several obstacles soon arose. For example, the Welf Henry the Lion, Duke of Saxony, had returned from exile in England and defied the royal armies by reclaiming his old power in the north. The sudden death of King William II of Sicily in November had, in Henry's view, left his wife Constance as the heir to that rich kingdom. When the Sicilians, with papal cooperation, elected William's illegitimate cousin, Count Tancred of Lecce, as king, Henry resolved to attack that kingdom after being crowned emperor in Rome. Finally, after coming to a truce with the Welfs and turning to Italy, Henry found that Pope Celestine III had replaced Clement.

Meanwhile, the city leaders of Rome had been pressuring the pope to destroy Tusculum, a city which had been loyal to and garrisoned by the Staufen, but which the Romans considered a rival. The aged pope-elect demanded that the king abandon Tusculum before any imperial coronation. With Tusculum torn down stone by stone, the Romans gladly cheered the papal consecration of Celestine on Easter Sunday, April 14, and the imperial coronation of Henry on Easter Monday. The new emperor then turned to the conquest of Southern Italy and Sicily. But, after a few successes, he failed at a siege of Naples, largely because of the summer heat and the effects of diseases like dysentery, cholera, and malaria on his troops. Although Henry survived a bout with sickness, many others died, and the army retreated northward. Meanwhile, the Empress Constance briefly became a prisoner of Tancred, king of Sicily.

Back in Germany, Henry faced new problems, especially as he tried to solve a quarrel over the see of Liège by naming his own candidate. Another candidate, Albert of Louvain, brother of the Duke of Brabant, had the backing of Pope Celestine, however, and was consecrated bishop. Five days later, German knights murdered him, and many blamed Henry for instigating the deed. Encouraged by the Welfs and the papacy, widespread opposition to Henry began to organize itself into open rebellion.

At this juncture, Henry was rescued by the capture of the English king, Richard the Lionhearted, who was returning from a Crusade in December 1192, Henry forced Richard's captor, Duke Leopold V of Austria, to turn the king over to imperial control; he then demanded a huge ransom for Richard's freedom. By the time Richard was released in February 1194, Henry had extorted 150,000 marks, which he divided with Leopold, as well as Richard's pledge of England as a fief of the empire with a yearly tribute of five thousand marks. Although the promised payments were never entirely realized, Henry used the large ransom to finance his invasion of Sicily.

His efforts were aided by the death of Tancred in February 1194, leaving only an infant son as heir, and Henry and his armies quickly conquered Sicily. On Christmas day 1194 he celebrated his kingship in the cathedral in Palermo. The next day, in Jesi on the mainland, Henry's wife gave birth to his own son and heir, the future Frederick II.

Through ruthless policies, Henry quickly secured his rule in Sicily. An alleged plot against him gave the emperor an excuse to banish the usurper's family to Germany, and, allegedly, in Byzantine fashion, to blind the infant former king as well as some officials. The Sicilian treasury was carried to Henry's castle, Trifels, in Swabia by more than 150 pack animals. By Easter 1195 the emperor had proclaimed his wife as regent for the Sicilian lands and set one of his powerful ministerials in place as viceroy; arranged the betrothal of his brother, Philip of Swabia, to Tancred's widow, Irene, a Byzantine princess; installed Philip as margrave of Tuscany (including the oft-disputed Mathildine lands); and begun to proclaim and organize a Crusade to the Holy Land.

Returning to Germany, Henry convinced many other princes to participate in the Crusade. He also nearly managed to get his young son recognized as king of the Romans by right of inheritance instead of by election. Henry suggested what is known as the *Erbreichsplan*, a proposal to ensure that the royal, and hence imperial, title would be inherited in the Staufen dynasty. In return, for secular princes, Henry promised to make fiefs held by the crown inheritable in the female line; for spiritual princes, he promised not to practice the *spolia*, a king's exploitation of the temporal powers and royal rights during a vacancy. At first, most of the princes accepted the plan, but, when Henry returned to Italy, they began to express their dissatisfaction. Even more, the Roman Curia opposed both the idea of uniting the crown of the Holy Roman Empire with that of Sicily and of giving up papal prerogatives in the imperial coronation process. By November 1196 Henry offered the pope what he claimed was more than any other emperor had ever done, the so-called *höchstes Angebot* (highest offer). But by the end of the year, Henry had given up on the inheritance plan, and the princes elected his son as king the old-fashioned way.

Back in Sicily during the spring of 1197, Henry barely escaped an attempted assassination, plotted probably with the tacit knowledge of the pope and Henry's own wife. Henry crushed the rebellion, executing some of the rebels in a brutal fashion. At the beginning of September, the main Crusader fleet set off for the Holy Land, where they gained promising victories. Later that month however, the emperor was taken seriously ill. He died at the age of only thirty-one on September 28, 1197, in Palermo. Revolts in Sicily and Italy and civil war in Germany over control of the crown soon gravely weakened the monarchy.

Both contemporary and historical opinion on Henry has been severely divided between those who viewed his death as a blessing or as a curse. His critics worry he might have established world dominion had he lived long enough; his advocates note the breakdown of German imperial authority after his death. Certainly, his death provided the opportunity for Innocent III to seize the leadership of Christendom. Overshadowed by the reputations of his father and son, Henry VI's short reign is nonetheless remarkable both for its successes and its flaws.

Heraldry is a system of personal and hereditary family devices (English "coat of arms" or "shield"; German *Wappen* or *Schild*) which developed in western Europe in the twelfth century and was thereafter regulated by the heralds. There have been other such systems in other times and places, including ancient Egypt, Assyria, China, Japan, India, Mexico, Greece, the Roman Empire, and Islam, but similarities do not necessarily imply either influence or historical continuity.

The history of western preheraldic emblems in the first millennium remains poorly defined, despite substantial research conducted by German, Austrian, and Scandinavian scholars. These scholars consider that the premillennial figures and colors adorning Germanic fighters' shields, weapons, and banners, later to be instrumental in the development of medieval Germanic heraldry, constituted a Germano-Scandinavian emblematic scheme that either articulated a clanish/tribal structure or was used by the elite nobles for their individual symbols. To this controversy about the meaning of early emblematic signs, French and British scholars bring a third ingredient, the military, to which they ascribe the origin of medieval heraldic practice. As personal armor developed, toward the end of the eleventh century, to the point where warriors were encased in mail from head to foot, the problem of personal recognition became acute and prompted the decorative paintings on shields to evolve into known individual devices ultimately functioning as marks of recognition. These marks are said to be heraldic when, by the mid-twelfth century, they became hereditary to particular families.

The first armorial devices appeared in the aristocratic lineages of Luxemburg (1123), Meulan and Vermandois (ca. 1136), Saxony (the Guef lion on the seal of Henry the Lion in 1144, and on that of his kinsman Welf of Tuscany in 1152), and Anjou and Flanders (ca. 1160). Originally confined to the nobility, heraldry extended to men of knightly and ministerial ranks who tended to derive their arms from the aristocratic families in whose ministeriality their families belonged. Heraldry, thus, came to symbolize the bonds forged between the various ranks of aristocratic society and to be emblematic of birth and station. When it became necessary to differentiate within a family, that is, to set apart the shields of cadet branches, marks of cadency (*Beizeichen*) were used for this purpose. These marks consisted of variations on the main coat of arms, which thus remained an emblem of common and continuous lineage.

At first depicted on shields and military equipment, such as the helmet with crest and mantling and the surcoat (or tunic), heraldic devices were soon displayed on seals. This custom led, during the thirteenth century, to the adoption of armorial bearings by women, churchmen, urban and religious corporations, and commoners, such as craftsmen, burghers, and peasants. Individuals

Zurich Roll of Arms, detail: Coats of arms of Austria, Bavaria, Saxony, Styria, and Teck (upper row) and Asperg, Heiligberg, Wildenberg, Kirchberg, Walsee, and Vaz (lower row) (Zurich, Schweizerisches Landesmuseum, AG-2760). Photograph: Schweizerisches Landesmuseum, Neg. 16748

could chose and adopt family arms without the permission of a superior authority, as long as they did not infringe on the rights and devices of others. Princely grants of arms, the earliest of which was made by the Emperor Ludwig of Bavaria in 1338, began to be common by the second half of the fourteenth century but never precluded an individual's right to adopt armorial bearings.

Heraldic emblems, as hereditary signs of identity, came to serve as marks of property as well, and their use extended to tombs, effigies, objects, monuments, and other works of art. The medieval memorial shield developed out of the custom, documented from the twelfth century on, of hanging a knight's armor, especially his shield, above his tomb in a church. In time, actual shields increasingly were replaced by wooden ones—either painted or carved, and inscribed with the date of death, the name of the dead knight, and a formula in the vernacular: *dem Got Genedig sey* (May God be merciful to him).

If heredity characterized medieval heraldry so did the precise rules and terminology ("blazon") which, systematized by heralds from the mid-thirteenth century onward, governed the presentation and description of heraldic devices. These included ordinaries and lines of partition (figures constituted by the geometric division of the shield), tinctures (colors, metals, and furs), and charges (objects, animals, and plants). Heralds were originally members of the domestic household, serving as *jongleury* and messengers. They rose to prominence through the part they came to play in the staging and ceremony of tournaments which, from the thirteenth century, required the compilation of rolls recording the participants' arms. In imperial Germany, rolls appeared in the fourteenth century: the *Wappenrolle von Zürich* (Swiss, ca. 1340), Claes van Heynen or Heinenszoon's *Gelre Roll* (Netherlandish, ca. 1375), and the *Wappenbuch* by Konrad Grünenberg (German, 1483). On the occasion of the Council of Constance, 1414–1418, the German Ulrich von Richenthal produced the occasional roll called *Konzilschronik* in which he registered the coats of all who attended the council. In the *Gelre Roll*, the finest of all the armorial books of the Middle Ages, recording knightly coats from all over Europe, we encounter a master of heraldic erudition. Such mastery demanded a knowledge of genealogy and blazon, a command of the entire literary and historical culture of chivalry, an understanding of the laws of nobility and inheritance, and a knowledge of the mystical properties ascribed to plants, beasts, birds, colors, and metals. Such charges could be made to bear symbolic and allegorical meaning, and to tell a story. Canting arms, particularly common in early German heraldry, play with names. Thus in the Zurich Roll, Affenstein's *argent* shield is charged with a red ape (*affe*) *gules* breaking a stone (*stein*).

Capable of learned exposition, literate and visual, practical and ideological, heraldry evolved into a twofold science, recording genealogical information, and manipulating a body of signs into which its practitioners, both bearers and heralds, infused a broad variety of symbolic and historical meaning. The whole range of human experience and values and the historical mythology of chivalry itself was translated into a visual symbolic system that bridged the written word and its iconographical expression. Buttressed by the heralds' textual production, heraldic emblems conveyed messages of pride in chivalric virtues, martial achievements, and family connections. Ultimately, medieval coats of arms, because of their representational significance, became assigned to practically every important person, real or mythological, from Hector of Troy, through King David and Charlemagne, to King Arthur and the knights of the Round Table.

Herbort von Fritzlar (fl. 1190–1217)

Herbort's rhymed courtly epic, *Liet von Troye*, the earliest surviving German version of the Trojan War story, is based on the *French Roman de Troie* by Benoît de Sainte-Maure. In the *Liet von Troye* the author Herbort names himself, refers to his education, and states that his work was commissioned by the landgrave Hermann of Thuringia (1190–1217) and that his French source was provided by Count Frederick of Leiningen. Nothing else is known of his life. The *Liet von Troye* is variously dated between 1190–1217. One complete manuscript and three fragments are known, with sufficient variations to indicate parallel versions of the text.

Recent research views Herbort as an author of considerable character who makes a vigorous and complex statement at the interface of clerical learning and secular, aristocratic culture. He abbreviates his French source and draws on Latin rhetoric and learning, with plays on numbers, references to the seven liberal arts, and echoes of school authors. Herbort departs from the *Roman de Troie*, for example, in raising the moral status of the Greek Achilles. He plays down the courtly festivities of the French version and deploys irony and humour in presenting love as a destructive malady rather than a source of virtue, and warfare as unredeemed, even grotesque, suffering instead of an idealized chivalric enterprise. His point of view is that of a clerical author somewhat distanced from the military and erotic values of courtly culture.

A German treatment of the life of Pontius Pilate has also at times been attributed to Herbort.

Herlin, Friedrich (1430–1500)

The life of the wealthy painter and polychromer Friedrich Herlin, also known as *Hirlein* and *Herlein*, is richly documented in written sources. Born in Rothenburg ob der Tauber, Bavaria, in 1430, he soon achieved a supra-regional importance; when he became a citizen of Nördlingen in 1467, the city conceded him freedom from taxes for several years. The *Familienaltar* (family altar), which he painted in 1488 (Nördlingen, Stadtmuseum), shows Herlin with nine children; two of his sons took up the profession of their father, and a daughter married the painter Bartholomäus Zeitblom of Ulm. Herlin died in 1500.

In three signed and dated altars in Nördlingen (1462, St. Georg), Rothenburg (1466, St. Jakob), and Bopfingen (1472, Stadtkirche St. Blasius), Herlin combines painted panels, characterized by warm, saturated colors and naive realism, testifying to the influence of Roger van der Weyden, with cycles of wooden shrine figures. A fourth altar commission, from 1471, is known only through documents, while the epitaph for the Müller family, which represents a Crucifixion, names Herlin in the inscription (1463, Nördlingen, Stadtmuseum).

Among the attributed works, four small panels dated 1459 from the Church of the Savior in Nördlingen (Munich, Bayerisches Nationalmuseum; Nördlingen, Stadtmuseum) and eight panel paintings dated 1459, probably from cloister Kaisheim (Bavaria; now Karlsruhe, Kunsthalle), represent Herlin's early altar paintings. Some painted epitaphs are attributed to the painter as autograph works: the Fergen epitaph, dated 1467, represents an enthroned Madonna (Rothenburg, St. Jakob), and the Genger epitaph, dated in the following year, portrays the *Ecce Homo* (Christ with the crown of thorns; Nördlingen, Stadtmuseum).

The painter's long-term association with the joiner Hans Waidenlich allows recent scholarship to recognize in Herlin an early example of a painter-entrepreneur active across regional borders. While Herlin and Waidenlich worked together on numerous, important, large-scale commissions, other artists—such as Nicolaus Gerhaert and Simon Lainberger—were hired to execute the wooden figural sculpture of the altar shrines.

[Nicolaus Gerhaert von Leyden](#); [Rothenburg ob der Tauber](#); [Zeitblom, Bartolomäus](#)

Hermann von Fritzlar is known as a hagiologist (chronicler of saints), who wrote the first prose legendary in German, the *Heiligenleben* (Lives of the Saints), in 1443/ 1449. He is also the author of mystical sermons, tractates, and similar pieces, which he composed before the *Heiligenleben* and partially integrated into the legendary.

The *Heiligenleben* also includes the *Bartholomäus* sermon by Eckhart Rube from the anonymous Dominican collection of sermons *Paradisus anime intelligentis* (in two manuscripts from Erfurt) with the saint's life added at the end. From the *Postille* of the Dominican Heinrich von Erfurt (in six manuscripts) the legendary incorporated ten sermons from the Christmas cycle. Two other sermons were borrowed: from Gerhard von Sterngassen, a Dominican, *Antonius*; and from Hermann von Schildesche, an Augustinian, the *Heiligkreuzauffindung* (Finding the Holy Cross). Besides these thirteen sermons by master preachers, which all fit into the church calendar of the *Heiligenleben*, starting with Advent, the remaining seventy-five feast days are devoted to saints' legends, which Hermann von Fritzlar composed using collections such as the *Legenda aurea*, the *Passional*, the *Väterbuch*, and the *Märtyrerbuch* as sources.

In the prologue to the *Heiligenleben*, Hermann von Fritzlar writes an exemplum about a secret "friend of God" (*Gottesfreund*), achieving a *Unio mystica* (mystical union). At the center of his philosophy (and religion) is the belief that "God is born in the soul." He expands on this theme in the *Annunciation of Mary*, noting that he purposely started the legendary in the last week of March, when the *Annunciation of Mary*, was celebrated, as if to be in the right spirit to write this mystical work. In the sermon on the *Annunciation (Maria Verkündigung)*, he mentions his other work, the tractate *Die Blume der Schauung* (The Blossom of the Vision), which he had published anonymously, and in which he had written more about this topic than on all other central Christian teachings. Three later manuscripts exist of *Die Blume der Schauung*, in Nürnberg, Köln and Gent.

Another treatise on the same topic of *Geburt des Wortes (Gottes) in der Seele* (The Birth of the Word [of God] in the Soul), as a *Programmschrift* (treatise) of Meister Eckhart and mysticism, exists in two Swabian manuscripts in Augsburg and is integrated into the *Heiligenleben*, in three parts after *Barbara, Lucia, and Thomas*.

Of the ten manuscripts of the *Heiligenleben*, only the Heidelberg codex is complete. The illustrated Salem codex is in fragments, the *Darmstädter Legendar* is a reworking, and the others are selections of one of three legendary, either very early (manuscripts in Trier and Halberstadt) or later (Berlin, Göttingen, and Dessau). In the *Darmstädter Legendar* of 1420, seventy-one legends are the same as in the *Heiligenleben*, but only thirteen are exact copies. Of the learned sermons, only *Antonius* was retained. The saints' legends were sorted into four thematic groups: male, female (mostly martyrs), and the rest following the church calendar in two groups. The *Heiligenleben* of Hermann von Fritzlar also served as a partial source for new verse legends of the fifteenth century: *Katharina* (manuscript in Bielefeld), *Dorothea* (Brussels, originally from Braunschweig), and the so-called *Alexius K*.

Hermann von Sachsenheim (ca. 1366–1458)

A contemporary of Oswald von Wolkenstein and steward to the Counts of Württemberg, Sachsenheim found patronage at the Rottenberg court of Mechthild of the Palatinate, wife of Albrecht VI of Austria, Composed in the last decade of his life, his works survive in fifteen manuscripts and five editions of the fifteenth and sixteenth centuries. His oeuvre features mastery of vernacular literary traditions, drastic rhetorical swings between the sophisticated and the colloquial, and frequent allusions to contemporary events.

In *Die Mörin* and *Der Spiegel*, both anti-*Minnereden*, or anti-love-poems, the narrator is judged by a Court of Love, at which Lady Aventure, Wolfram of Eschenbach's personification of storytelling, presides. In *Der Spiegel*, Lady Aventure condemns him to death for infidelity. Only the pleas of the twelve attending personifications make possible his release into the custody of Lady Fidelity and his return to Swabia. In *Die Mörin* the narrator is kidnapped and transported to the wondrous realm of Venus Mynn (*Unminne*, or the figure of "Un-Love" personified), her craven consort, Tannhäuser, and her brutal henchwoman, the *Mörin*, to be tried for oath-breaking. The narrator reminds the audience that he is the author and "writes in" (nominates) Aventure as judge for his appeal. After a tournament in honor of Lady Dishonor, the narrator swears a false oath to win his release. Sachsenheim's other works include *Das Schleiertüchlein*, a combination of *Minnerede*, or love poem, and pilgrim's narrative, which tells of a sorrowful knight, who, while still a squire, falls in love with a noble lady and, as a gesture of devotion, journeys to the holy places of the East. The lady's veil, sanctified with her blood, is a symbol of courtly and spiritual devotion.

In *Die Grasmetze* the contrast between the knight's elaborately courtly language and his failure as a lover reverses the clichés of the pastourelle. *Die Unminne* presents a diatribe in verse against the antithesis of Minne and its prominence in Sachsenheim's world. *Der goldene Tempel* combines an allegory of the heavenly Jerusalem with a gloss of the Church and its chancel as the embodiment of a universal community of believers. *Jesus der Arzt* is a brief, medical allegory of spirituality in verse.

Herrad von Hohenburg (fl. late 12th c.)

The abbess Herrad of the Augustinian convent Hohenburg (Landsberg), today, Sainte-Odile, near Strasbourg, whose name appears in documents between 1178 and 1196, is famous for her monumental compilation *Hortus deliciarum* (Garden of Delights). This encyclopedic work of 324 folio pages contains some sixty poems by various medieval Latin poets, such as Hildebert of Lavardin, Petrus Pictor, and Walther of Châtillon, a number of songs with their musical notations, various prose texts excerpted from the Bible, biblical commentaries, historical chronicles, church laws, the liturgy, and scholarly studies. Philosophical and legal statements by Peter Lombard and scientific observations by Isidor of Seville are also extensively copied in the *Hortus*, often accompanied by German glosses.

The manuscript was richly illuminated and is nearly unparalleled in medieval book production. The 153 miniatures, often taking up a whole page, illustrate the meanings of biblical texts, aspects of Christian belief, and the arts. In many respects the *Hortus* served as an encyclopedia, structured by the principles of the divine plan for the salvation of mankind.

Although the original manuscript burned in a fire in the Strasbourg library in 1870, older copies and descriptions provide a good idea of the splendor and learnedness of the *Hortus*. The abbess Herrad initiated and supervised the production of the manuscript, which was to instruct the women in the convent on how to reach paradise through a virtuous life on earth. Many leading twelfth-century scholars, such as Honorius Augustodunensis, Rupert of Deutz, and Peter Comestor, are well represented in the *Hortus*.

Apart from her considerable editorial work, Herrad also contributed to the significant expansion of her convent in political and economic terms.

Albrecht Classen

Herrand von Wildonie (ca. 1230–1278/1282)

A Middle High German author of songs and narratives, Herrand II of Wildonie was descended from an important Styrian family holding the hereditary office of high steward of Styria. The family seat was the now ruined castle of Alt Wildon, near Graz, Austria, on the River Mur. He was born circa 1230 and died about 1278/1282. Herrand was married to Perhta, daughter of Ulrich von Lichtenstein. He was active politically in the Interregnum years, first for Bela of Hungary, then Ottokar of Bohemia, and finally for Rudolf of Habsburg.

His literary oeuvre comprises three extant courtly love songs and four short narratives (*maere*). The songs are contained in the famous Heidelberg manuscript named for the family which commissioned the collection of love songs, or *minnesang* (University Library, no. cpg 848, the "Manesse Codex"). On fol. 201rv, is a miniature of the poet with an incorrect coat of arms. The narratives are also contained in another famous manuscript in Vienna (National Library, no. Ser. Nov. 2663), the *Ambraser Heldenbuch* (Book of heroes from Ambras [Castle]), fol. 217ra-220va.

Herrand's songs are considered largely conventional in nature, but his short narratives show him to be a leading writer in this genre's "post-Stricker" phase. The texts all seem to deal with constancy and loyalty, arranged in contrasting pairs. The first pair, *Die treue Gattin* (The Faithful Wife) and *Der betrogene Gatte* (The Betrayed Husband), present, respectively, a wife moved by such intense love and devotion that she disfigures her face to match her old and injured ugly husband and a young wife who tries to deceive her old husband with a younger lover.

The second pair of stories, *Der nackte Kaiser* (The Naked Emperor) and *Die Katze* (The Cat), deals with, first, the obligation of the ruler to carry out his duties conscientiously—the negligent Emperor Gornäus, cast down in a lowly position and replaced by an angel, must witness the latter's exemplary success until he acknowledges his former errors and be reinstated by his Doppelgänger—and, then, the vassal's obligation to remain faithful to his overlord—a dissatisfied tom cat does the rounds among a series of incongruous partners only to return in the end to his cat queen. In a time of great political upheaval, after the deaths of the last Babenberg Duke of Austria (1246) and the last Staufener Emperor (1250), these apparently generalized political admonitions must have been particularly pointed. These four distinct narratives document their author's literary modernity, whereas the content of these narratives points to a conservative stance by the author and a dialectic possibly aimed at the "classless" didacticism of Der Stricker. There is evidence that Herrand's work was known outside Styrian aristocratic circles.

Hans Heselloher contributed materially to the fifteenth-century revival of Neidhart von Reuenthal (d. ca. 1236), whose depiction in lyric poems of the hostile encounter between the world of the court and the world of the peasant (*dörper*) had become legendary. So popular was Neidhart, especially in the later Middle Ages, that poets wrote *Neidharte*, literature fictitiously ascribed to Neidhart himself. One sign of a sort of Neidhart cult was the reburial of the poet at St. Stephen's Cathedral in Vienna between 1350 and 1400. Imitation of Neidhart's style and themes in every imaginable genre was the mark of his continuing veneration. Two examples from Heselloher's century are the comic peasant epic *Der Ring* (The Ring), ca. 1400, by Heinrich Wittenwiler and the anonymous collection of Neidhart-inspired songs and merry tales *Neidhart Fuchs* (The Fox), which appeared as an early German printed book (1491/1497). One dancing tune included in the latter was composed by Hans Heselloher, who is so closely associated with Neidhart von Reuenthal that scholars dub him the "second Neidhart."

Heselloher was a Bavarian nobleman who presided as county court judge. A very small corpus of his poetry—less than ten songs—has come down to us, the most famous being the immensely popular song *üppiklichen dingen* ("[Regarding] trifling goings-on"), which concerns a peasant brawl at a dance. It is unclear why, and when, Heselloher began to compose works in the Neidhart tradition (*Neidhartiana*), but he became Neidhart's truest disciple. Heselloher imitated, for instance, the familiar Neidhartian role of the socially superior singer/narrator as fictive participant in boorish festivities, skipping to the beat of an eponymous tune, here "the Heselloher" (*den Heselloher*). Neidhart and his followers dwelt on the class conflict between the nobility and the peasantry, mocking the latter as upstart yokels who, in their gaudy manner of dress, crude behavior and bearing of arms, foolishly aspire to a higher station in society. By so emulating Neidhart, Heselloher carried forth the peasants' satire (*Bauernsatire*, *Bauernspott*), blending two poetic postures: the ironic, humorous stance of the "lyric I" as ineffectual Lothario, and the poetic persona as aggressive vituperator who heaps crude invective (in dialect) on his villager rivals.

Heselloher faithfully reproduces the scenery of Neidhart's so-called "Winter Songs" (*Winterlieder*), for example, in the poem *Wes sol ich beginnen?* ("What am I to do?"). The lyric voice laments the passing of summer, and, with it, the loss of joy. He can find no girl to love him. Then, he spots pretty girls who, to the singer's woe, soon flirt with peasant boys, dressed up as elegantly as if they were noblemen. A high-spirited sort of wooing dance breaks out, at which Heselloher is left to lament his own inadequacies, to curse the vainglorious rustics who are his rivals for love, and to be ridiculed himself by a beautiful girl: *ey, essellocher, es stat nit schon, /das du dich selbs singst dar an!* ("Ho, Heselloher, it doesn't look good/ for you to sing your own praises!").

However one judges the merits of the songs of Hans Heselloher, they bear eloquent witness to the vivacity and adaptiveness of the Neidhart tradition in German medieval literature.

Hildebrandslied

An Old High German fragmentary heroic lay of sixty-four lines, "The Lay of Hildebrand" was composed in Germanic alliterative verse and entered on the first and last leaves of the Kassel Codex Theol. fol. 54, probably in Fulda in the fourth decade of the ninth century. The lay begins in expected narrative fashion ("I have heard it told" *ik gihorta dat seggen*), but breaks off in mid-line, probably near the end of the poem. It is generally held that two scribes copied the text from an earlier manuscript: the bulk was copied by scribe A (the apprentice), whose writing was larger and more erratic; scribe B (the master), using a more even, compact stroke, tried to provide a corrective model in lines 30a–40a of the second page.

Part of the Dietrich cycle of legends, the lay tells of the battlefield encounter between Hildebrand and his son Hadubrand. Forced by Odoacer to flee the country with Dietrich and leave behind his wife and new-born son, Hildebrand returns after thirty years in exile, only to meet his own son, now grown to a man, and a warrior in his own right. Believing his father to be dead, Hadubrand rejects the peace gestures of Hildebrand, and refuses to accept that his adversary is his father. The Germanic warriors sense of honor and the allegiance of Hildebrand and Hadubrand to opposing masters make combat inevitable for both; but only Hildebrand truly senses the tragedy which is about to unfold. The poem ends abruptly with the battle in full force; because of the missing lines, the outcome of the encounter is left to the reader's imagination, though later German and Norse sources point to either a reconciliation or to Hildebrand slaying his son.

Discussion continues to center on the transmission of the text, as well as its curious High-Low German dialect mixture. Though the historical setting is the late fifth century Ostrogothic Kingdom (Dietrich became Western Roman ruler in 493), the names ending in *-brand* have prompted scholars to posit Lombardic origins for the lay. As part of the Dietrich cycle, the lay would have been current in several oral (and probably written) German versions from the seventh to the ninth centuries. The presence of both High and Low German features led to early speculation that the extant text was written in a border dialect of German. Current theory now holds that the text reflects an only partially successful attempt to translate a High German original into Low German, a view reiterated in a recent exhaustive treatment of the work by Rosemarie Lühr (1982: 148–56). New research, however, presents convincing evidence in support of an Old Low Franconian written version as the basis for the existing High Germanized text.

Hildegard von Bingen (1098–1179)

Benedictine, visionary, author, composer, and Germany's first female physician, Hildegard was the tenth child of Hildebert and Mechthild von Bermersheim. She was raised by the recluse Jutta von Spanheim at the Benedictine monastery of Disibodenberg (near Bingen) and made her monastic profession between 1112–1115. In 1136 she was elected *magistra* (mistress) of the Disibodenberg women's community which had by then become quite large.

While aware of a "shadow of the living light" (*umbra viventis lucis*) from childhood on, Hildegard had her first clear vision in 1141 at the age of 43. She understood her insights as divine revelations concerning the meaning of Scripture and obeyed the command to write. The Cistercian Pope Eugene III officially recognized her visionary gift at the Trier Synod in 1147/1148.

That same year, Hildegard founded her own Benedictine women's monastery, St. Rupertsberg (opposite Bingen), whose abbess she became, and in 1165, a second monastery in Eibingen (today, the Abbey St. Hildegard).

Between 1160–1170, Hildegard undertook four public preaching tours to German cities and monasteries, as far away as Bamberg and Swabia. Known as the *prophetissa teutonica* (German, female prophet), she was consulted by and corresponded with popes, kings, including Frederick I Barbarossa, abbots and abbesses, and many other renowned contemporaries, among them, Bernard of Clairvaux. In composing her complex visionary, exegetical, speculative, and scientific works, Hildegard was at first assisted by her former teacher, the monk Volmar of Disibodenberg, and from 1177 on, by Guibert of Gembloux, who is also the author of a partial *vita* of the Benedictine nun. Her complete *vita* was written by the monks Gottfried and Theoderich between 1177–1181. Listed in the *Martyrologium romanum* (list of martyrs) since the fifteenth century, Hildegard is venerated as a saint in Germany.

Hildegard von Bingen's most famous work *Scivias* (Know the Ways) (1141–1151) constitutes the first part of her trilogy of visions whose second and third parts are the *Liber vitae meritorum* (Book of Meritorious Life) (1158–1163) and the *Liber divinorum operum* (Book of Divine Works), the latter also entitled *Liber de operatione dei* (Book of the Works of God, [1163–1173]). In these works she speaks both of what she was given to see and of a divine voice interpreting these visions to her. Hildegard also conducted comprehensive studies of natural science and medicine, which she described in *Physica* (*Subtilitatum diversarum naturarum creaturarum libri novem*). Nine books on the nature of various creatures and *Causae et curae* (Afflictions and cures, between 1150–1160). Several hundred letters of her correspondence have been preserved as well as many musical compositions including some seventy-seven liturgical songs, and a drama, the *Ordo virtutum* (The Order of Virtue). Hildegard also wrote two *vitae*, a treatise against the contemporary Cathars, and a linguistic essay on a *lingua ignota* (unknown language).

Hildegard's visionary and prophetic work deals with complex theological, anthropological, and ecclesiological issues. Her idea of the church and society was a strictly hierarchical one. Anchored in the Benedictine liturgical tradition and the Bible, Hildegard was familiar with the church fathers as well as with the writings of her contemporaries, Honorius Augustodunensis, Rupert von Deutz, and Bernard of Clairvaux.

Hildegard von Bingen was well known in her own century. Manuscripts of her works, especially some containing resplendent illuminations made under her own supervision, stem from the twelfth century. Thereafter, forgotten for centuries, her work was finally published in the extensive series of medieval Latin works, *Patrologia latina* (Vol. 197, 1855) and by Joannes Baptista Pitra (*Analecta*, Vol. 8, 1882). The twentieth century gave rise to a revival of Hildegard's work through studies and translations initiated by the Benedictine nuns of Eibingen, notably by the meticulous manuscript study of Marianne Schrader and Adelgundis Führkötter: *Die Echtheit des Schrifttums der heiligen Hildegard von Bingen. Quellenkritische Untersuchungen*, 1956 (On the Authenticity of the Writing of St. Hildegard von Bingen: Source Studies). Extended concentrated research in Hildegard von Bingen's voluminous work began in Germany around 1979 in the context of the 800-year celebration of her death. Since then, she has become probably the *most* studied and the best known of all medieval women writers, not only among literary and feminist scholars, but also among theologians, historians, and musicologists. Unfortunately, her literary and musical works have sometimes been popularized and misinterpreted beyond recognition.

Hildesheim

Ludwig the Pious founded the diocese of Hildesheim in 815, erecting a baptistry on the site now occupied by the cathedral. In 872 the cathedral was consecrated in honor of the Virgin, who is credited as having a specific role in its establishment. According to an eleventh-century chronicle, Ludwig first came upon the site in the course of a hunt. His chaplain performed the mass, but afterwards was unable to remove the relics of the Virgin from the rosebush on which he had placed them. This event was taken as a sign of the Virgin's favor and prompted the transfer of the bishop's seat from Elze to Hildesheim. The "thousand-year-old rosebush" continues to grow outside of the choir's apse.

The cathedral building went through a series of reconstructions throughout the course of its history. A 1013 fire caused only minor structural damage but brought about the loss of many of the cathedral's treasures. A fire in 1046 destroyed the cathedral, which was then rebuilt

Gospels of Bishop Bernward (Hildesheim, Dom-Museum, DS 18), fol. 16v: Bernward offering this manuscript at the altar. Photograph: Dom-Museum Hildesheim (Engelhardt)

under Bishop Hezilo between 1055 and 1061. The triple-aisle, cross-shaped plan was augmented by the addition of an apse, western façade, and square tower during the course of the eleventh century, while subsequent renovations continued on into the nineteenth century. On March 22, 1945, the cathedral was completely destroyed in an air raid. The current cathedral, a reconstruction of 1950–1960, has been built according to the plan of Bishop Hezilo.

Hildesheim's rich artistic heritage is largely the legacy of Bernward, who served as thirteenth bishop of Hildesheim from 993 until his death in 1022. He was responsible not only for smaller scale artistic output, commissioning books and metalwork, but for the construction of a new monastery. The monastery of St. Michael's was founded in 996 with monks Bernward brought with him from Cologne. In doing so, Bernward created a diversified community, with the secular canons of the cathedral maintaining connections to the court, while he established a place in his see for a more pure form of Benedictine monasticism. Bernward laid the foundation stone for Saint Michael's church in 1001 and consecrated the structure shortly before his death. The abbey church was completed under Bishop Godehard in 1031. St. Michael's tower groupings and westwork refer to earlier Carolingian architecture, but the second transept and apse lend an increased sense of balance to the structure. The building was renovated after a fire at the end of the twelfth century, and it was at this time, following the canonization of Bernward, that the western crypt was deepened to accommodate a new tomb chamber for the saint. Like the cathedral, the abbey church was destroyed in 1945 and reconstructed the following decade.

Bernward's teacher and biographer Thangmar wrote that Bernward's early education included instruction in metal craft as well as book illumination. None of the remaining Hildesheim works can be attributed to his hand, but the quality and variety of works produced under his patronage speak to his early training and the importance he placed on the visual arts.

Hildesheim possesses one of the earliest extant freestanding sculptures of the seated Virgin and Child. The gilded lindenwood sculpture is of the Throne of Wisdom type, with the Christ child seated frontally on the Virgin's lap, and has been dated to 1000–1010. Although this date could place the sculpture among those works commissioned by Bernward, no record of the work's provenance remains.

A Saxon aristocrat by birth, Bernward maintained close ties to the court. In 987 he became a member of the imperial chapel and chancellery, and at the request of the Empress Theophanu, he became one of the two primary teachers of her eight-year old son, Otto III. In 1006–1007 he supported Henry II in his war against Baldwin IV of Flanders. Court patronage did not greatly affect Hildesheim's artistic activity, but court art does seem to have presented a model for Bernward, particularly in the area of manuscript illumination. The images of the 1015 Bernward Gospels derive much of their iconography from a Carolingian Gospel Book now known as the Prague Gospels (Prague, Cathedral Library, Cim. 2) (Mayr-Harting 1991:1,104). New in Bernward's manuscript, however, is the image of a crowned Virgin in the frontispiece. This *Maria Regina* constitutes the first such image of a crowned and enthroned Virgin in Ottonian art. It shares certain iconographic qualities with contemporary ruler portraits, such as the portraits of Otto III in the Aachen Gospels (Aachen, Cathedral Treasury) and the Gospels of Otto III (Munich, Bayerische Staatsbibliothek, Clm 4453), which were in turn modeled after images of Christ in Majesty.

Bernward sent the leader of his scriptorium, Guntbald, to Regensburg, then a major ecclesiastical center that had benefited from contact with the cathedral schools in Northern France. Henry Mayr-Harting finds evidence for the Regensburg influence on Hildesheim art in stylistic similarities between books such as the 1011 Guntbald Gospels and the 1014 Sacramentary of Guntbald and those of the Regensburg school. Further, Mayr-Harting suggests that Regensburg provided Hildesheim with a schematized model for visual and theological representations of Christ (1991:1,101).

An inscription in the Bernward Gospels consigns the work to St. Michael's, the designated site for many of the bishop's commissions, such as the silver candlesticks and the bronze doors of 1015 (now in the cathedral). The doors were striking on both technical and iconographic levels. Each cast in a single piece, they were the first monumental bronzes since antiquity. They provide examples of Bernward's affinity for representations of the human Christ and demonstrate the sophisticated manner in which he communicated his theological messages. Each of the bronze doors had eight fields, the left valve representing Old Testament scenes, such as the presentation of Eve, the Temptation, the Fall, and the murder of Abel and the judgment of Cain. These images were to be contrasted with those on the right door: New Testament scenes, including the Nativity, the Adoration of the Magi, and the Presentation in the Temple. In this typological pairing Eve was shown to be the woman who closed the doors to Paradise, bringing about the fall of man and giving birth

to the child who would commit the first act of murder, while the other, Mary, opened the doors in giving birth to the child who would provide salvation to mankind.

Hirsau

The importance of Hirsau (Baden-Württemberg) rests in its role in the Cluniac religious reform movement and the establishment of an architecture that reflected this reform. The earliest tradition holds that a monastery was founded by the local count at this site near Calw in the Black Forest in the ninth century. The monastery stood empty by about 1000, but, during a visit in 1049, Pope Leo IX made the decision to resettle it. In 1065 twelve monks and their abbot transferred here from Einsiedeln. In 1075, during a visit to Rome, Abbot William, who had arrived from St. Emmeram in Regensburg in 1069, learned about the Cluniac reform and decided to institute its new, more stringent practices in Hirsau. The success of the reform led not only to the foundation of a number of dependent monasteries, both in southern Germany and further east, but to the need for a larger church and cloister; these were built on the opposite side of the river between 1082 and William's death in 1091.

Although the church of Saints Peter and Paul was destroyed in the seventeenth century, its basic forms are known through earlier drawings, the ruins, archaeological excavations, and the numerous churches built under its influence. The church was modeled on the second church at Cluny, and a number of its forms had already been predicted at the Church of All Saints at Schaffhausen, which itself was influenced by Hirsau. Unusual at this date, when the High Romanesque was already taking form at Speyer and Mainz, for example, were the flat, unvaulted ceiling, the use of simple columnar supports, the unarticulated wall surface, and the lack of a crypt. In these features, the church not only reflected the spiritual severity associated with the reform, it articulated its anti-imperial allegiance to the pope in the Investiture Controversy. The dedication of the church to Peter and Paul, its unusually large scale, and the simplicity reminiscent of the Holy City's Early Christian basilicas also highlighted the visual reference to and support of Rome.

[Investiture Controversy](#); [Romanesque Art and Architecture](#); [Schaffhausen](#)

In the Middle Ages, history was ordinarily defined as *rerum gestarum narratio* (stories of deeds) or as only containing *res verae quae factae sunt* (things which truly happened) and, at least formally, distinguished from *fabulae—quae nec factae sunt nec fieri possunt* (fables—which are neither factual nor possible) (Isidore of Seville, d. 636, *Etymologica*, 1,44,5).

In practice, however, a clear-cut delimitation of historiography did not exist, partly because, at that time, the distinction between fact and fiction was based on criteria other than ours today. In addition, history was not then an independent discipline, but studied and pursued within the frame of literature, especially as part of the subjects *grammatica* (grammar) and *rhetorica* (rhetoric), and *ars poetica* (poetic art). Thus, saints' lives (*vitae*), for example, were considered part of historiography, and vernacular texts, such as epics about Charlemagne or the Crusades, were sometimes presented and regarded as veracious histories. Nevertheless, within this broad field, several important historiographic genres developed in the course of time, such as *Annales*, *historiae*, *chronica* and *gesta*. The boundaries between these genres are not distinct, yet each has its own characteristics.

Annals, for example, are usually unpretentious strings of meteorological, military, and biographical facts. In histories, the narrative aspect prevails; in chronicles, the chronological setting of facts in a universal, regional or local scope predominates; and in *gesta*, the deeds and actions of prominent figures take a central place. These genres flourished in the Low Countries, especially in the format of regional and national chronicles, written in Latin, from the tenth century onward. Beginning with the thirteenth century, the genres appear in Middle Dutch as *historie*, *kronie*, and *yeeste*.

Historiography, German

In the twentieth century, modern historiography on medieval Germany underwent several crucial developments, at times conditioned by political developments and ideological agenda. Through the 1920s, Western historians remained influenced by positivist views of history which asserted that objective historical truth could be achieved "as it really was" (Leopold von Ranke). Also influential was the conviction that a natural law of state evolution had led to the rise of the nineteenth-century liberal-democratic state. Especially in Germany, a strong tradition of legal and constitutional history arose, which saw the medieval state as an imperfect predecessor of the modern one.

A reaction against evolutionary views of European state formation set in during the 1920s and 1930s in France and Germany. French historians began to see the totality of society as an object of study in its own right, and as an alternative to conventional political and institutional history. This social historical approach became the hallmark of the French "new history" (*Nouvelle Histoire*), best known in medieval history circles as that practiced by Marc Bloch, Georges Duby, and other members of the school of historians associated with the journal *Annales E. S. C.* Similar developments took place in Germany. The most important German-language practitioner of the new social history was the Austrian Otto Brunner, whose study on *Land und Herrschaft* (Land and Lordship) remains a controversial classic. In it, Brunner argued that medieval society could not be analyzed in intellectual categories applied to the modern state. Instead, a new methodology of medieval history had to be forged from the language and content of medieval sources themselves. Unfortunately, Brunner and his ideas willingly served the academic and political agenda of emergent Nazi ideology, which sought to reject traditional constitutional history as part of the liberal legacy of the failed Weimar republic. It is ironic that Otto Brunner and Marc Bloch, contemporary pioneers of social history, respectively benefited from and fell victim to the Nazi regime.

Other German medievalists continued their work during the war years without actively collaborating with Hitler's state, though controversy remains regarding the extent to which their scholarship was guided by the prevailing political ideology. In the post-war years Walter Schlesinger, Karl Bosl, Friedrich Prinz, and others focused attention on issues of lordship and status. Another ongoing initiative of tremendous importance has been the critical source work of the *Monumenta Germaniae historica* (MGH, or Monuments of German History) in Munich, in recent decades under the leadership of Horst Fuhrmann, and later, Rudolf Schieffer.

One of the most influential post-war scholars was Gerd Tellenbach, who, in the 1950s, inspired a group of young historians working at Freiburg, the Freiburg working group, to devote energy to prosopography, or, the study of persons. Distinct from traditional biography, this new method of *Personenforschung* was applied to medieval necrologies and memorial books, which contain tens of thousands of names of individuals, entered by monks obligated to pray for them. Members of the Freiburg working group asked new questions of these sources in an attempt to uncover kin groups' perceptions of themselves.

Karl Schmid, a brilliant pupil of Tellenbach and one of the most productive German historians in the twentieth century, argued that the way in which aristocratic families defined themselves changed from the early to the High Middle Ages. Before the eleventh century, individuals viewed themselves as belonging to broad horizontally defined kin-groups, with no firmly defined boundaries, in which blood relation to other family members through women was just as important as ties through males. After ca. 1050, however, as noble families began to name themselves after their castles, individuals began seeing themselves as members of vertical patrilineal dynasties, with their family identity tied to a physical site. This shift in self-consciousness was accompanied by the rise of primogeniture. Though Schmid's thesis is problematic in many respects, it exerted a powerful and creative influence on the practice of medieval social history. Georges Duby acknowledged his intellectual debt to it and admired Schmid's work.

The lasting influence of the Freiburg group on medieval German historiography is undeniable. From the 1960s through the 1980s, Karl Schmid's colleagues and students continued to work on noble self-consciousness and related social historical themes. Schmid's friend and collaborator Joachim Wollasch turned to the study of necrologies, and was among the first medievalists to use computer-assisted analysis in the field of prosopography. Otto Oexle's work has focused on relations between the living and the dead, while Gerd Althoff, the best-known popularizer of medieval history in contemporary Germany, has written extensively on ritual as a means of communication and power.

Significantly, German medievalists have tended to resist tendencies in Germany to renationalize history in recent years. Even before 1990, some strains of West German historiography began to reject the pluralistic approach of the critical historians of the 1970s; such renationalization of modern German history received a tremendous impetus from German unification. Most medieval historians in Germany have not shared this narrow politicization. Michael Borgolte, for example, has argued for the expansion of a strongly pluralistic approach to the writing of German medieval history, recalling the social historical method of Otto Brunner.

In terms of volume, English-language scholarship on medieval Germany cannot compete with what has been written on medieval English and French topics by British and North American scholars. However, those who have devoted themselves to medieval German history have achieved important results. The British historian Geoffrey Barraclough brought an awareness of medieval Germany to a wider audience in the immediate post-war period. Karl Leyser brilliantly set medieval German developments within the context of critical and profound issues of importance for all medieval European history. More recently, Benjamin Arnold has produced several studies attentive to the details of regional political developments, while Timothy Reuter, who spent many years at the MGH, has been able to bring the best of both English and German historical approaches to the study of Germany. Finally, the American John Freed has published several important works on ministerials and is noted for applying to medieval German history the methods of social history practiced by other North American medievalists.

Hochzeit, Die

A longer allegorical poem, somewhat reminiscent of the "Song of Songs," a biblical allegory which suggests the wedding of the church to Christ, *Die Hochzeit* (The Marriage) begins with the story of a powerful king who has sent his disobedient servants into an abyss, from whence they continue to make trouble. The king decides to marry a beautiful maiden in order to produce an heir and to assure the proper order of things (Latin *ordo*). After the maiden gives her agreement to the king's messenger, preparations for a gorgeous wedding are begun, and the maiden then comes to her bridegroom for the splendid festival. Throughout the narration of the story, the poet explains the allegorical interpretation of almost all the elements; in almost every aspect, *Die Hochzeit* is not a consistent, single allegory, but rather a seemingly random, disconnected discussion. Nevertheless, the significance of each event invariably has reference to true Christian living and to the proper order of things—in sum, a moral, perhaps anagogical exegesis, in the manner of typical biblical exegesis in sermons, but here of the poet's own fictional story.

Die Hochzeit is a lengthy work, almost 1100 lines in stanzas of varying length. Found after *Vom Rechte* in the Millstatt manuscript, the text is in poor condition. The poem is usually dated to 1160.

Hohenzollern

The Hohenzollern dynasty is perhaps best known for the exploits of its Brandenburg-Prussian line in modern times. The medieval origins of the Hohenzollern dynasty, are, however, somewhat misty. The Zollern took their name from a castle on the northern slope of the Swabian Alb, south of Tübingen, between the Neckar and the Danube. The earliest reference to the counts of Zollern comes from about 1061 when two brothers, "Burchardus et Wezil de Zolorin," were killed in battle. It is generally agreed that Count Frederick I (ca. 1085–1115) was the son of Burchard and the ancestor of the later counts of Zollern.

By the middle of the twelfth century, the Zollern were associated with the Hohenstaufens. Count Frederick II (ca. 1125–1145) appeared at the Stauffer *Landtagat Königstuhl* in 1140. About this time, the first major division within the dynasty occurred. Frederick II's brother Burkhard established a cadet line of Zollern-Hohenberg. At the second *Landtagat Königstuhl* (1186), the counts of both Zollern (Hechingen) and Hohenberg were represented.

The counts of Hohenberg held lands on either side of the older Zollern domains, and effectively blocked further expansion into the Neckar valley. Initially, the Hohenberg line showed promise, seizing Rottenburg in 1124. To the south, they extended their domains across the Neckar to Schramberg. By the later Middle Ages, however, the Hohenberg lands had been splintered among several branches, and by the end of the fourteenth century, most of their territories had fallen to the counts of Württemberg and Habsburg. The dynasty died out completely in 1486.

The counts of Zollern-Hechingen fared much better. Count Frederick III (d. ca. 1200) served under the Hohenstaufen emperors Frederick I Barbarossa and Henry VI. The later enfeoffed him with the burgravate of Nuremberg in 1191/1192. Burgrave Frederick I established the Hohenzollern dynasty firmly on Franconian soil. After his death, the Zollern lands were divided by treaty in 1204. Burgrave Conrad I (ca. 1186–1261) received the burgravate while the Swabian inheritance went to his younger brother, Frederick I. The Swabian line was for many years restricted to the older family holdings in the Alb. Only in the sixteenth century, with the acquisition of Sigmaringen (1534) were the counts able to extend their domains beyond the Danube and, not until the year 1623, were they raised to the princely estate.

The reign of Burgrave Conrad I marks the beginning of an aggressive policy of territorial formation by the Franconian Hohenzollern. Through his wife, Conrad acquired the lands of the counts of Anenberg in middle Franconia. These estates later constituted the core of the *Lond unter dem Gehrig*, or *Unterland*. Conrad also obtained the imperial fief of Creussen, the first acquisition in what would become the *Land ober dem Gehrig*, the *Oberland*.

Expansion continued under Frederick III (1261–1297). Through his wife, Elizabeth, Frederick claimed a part of the massive territorial complex assembled by the Dukes of Andechs-Merian in Franconia. By terms of the treaty of Langenstädte (1260), the Merianer inheritance was divided between the Hohenzollerns (Bayreuth and Cadolzburg) and the counts of Truhendingen and Orlémünde. In 1272 Frederick played a key role in the negotiations leading to the election of Rudolf of Habsburg as emperor. In return for his support, Frederick II was enfeoffed with the imperial court *Landgericht* of Nuremberg by Rudolf I in 1273.

Imperial loyalty played a leading role in Hohenzollern politics during the fourteenth century. In the double election of 1314, Burgrave Frederick IV (1300–1332) sided with Louis the Bavarian. The burgrave was later praised by Louis as the "savior of the Empire" (*salvator imperii*) for helping defeat Frederick of Austria at Mühdorf in 1322. In one of his last acts, Frederick obtained advocacy rights over Ansbach in 1331. Frederick's eldest sons, Johann (1332–1257) and Conrad (d. 1334), ruled the Franconian lands as co-regents until the latter's death. In 1340 Johann was able to acquire the Orlémünde inheritance, including Kulmbach and much of the upper Main valley. After 1346, Johann assumed the position of regent (*Statthalter*) in Brandenburg. Two younger brothers became bishops: Frederick of Regensburg and Berthold of Eichstätt. The youngest brother, Albrecht the Handsome (d. 1361), ended up as a knight at the court of Edward III of England and fought on the English side during the Scots' war and the early phases of the war with France.

Johann II's son Frederick V (1357–1398) emerged as one of the strongest supporters of the Luxembourg emperor Charles IV. Charles' attempts to construct a Luxembourg stronghold in Franconia and the Upper Palatinate brought him into close contact with the Hohenzollerns, whose lands he hoped to acquire. Marriages were proposed between Frederick's eldest daughters and Charles' sons Wenceslas and Sigismund. These plans came to naught after the birth of Frederick's sons, but the burgrave was able to acquire a number of imperial fiefs along the Bohemian border, including Hof. Charles also raised the Hohenzollerns to the princely estate in 1363.

The Franconian lands were divided between Frederick's sons. Johann III (1398–1420) received the *Oberland* and served as an advisor to King Wenceslas. He later was with Sigismund of Hungary at the battle of Nikopolis (1396). Frederick IV (1398–1440), regent of the *Unterland*, also fought alongside Sigismund, and later helped him put down a rebellion in Hungary in 1409. In 1411, Sigismund named Frederick administrator (*Hauptmann und Verweser*) in the Mark of Brandenburg. After 1415, he exercised all princely rights and was named elector in 1417. Margrave Frederick I sought with limited success to reassert princely authority over the towns and nobility in Brandenburg. After 1426, he devoted most of his energies to Franconian affairs, appointing his son Johann, "the Alchemist," regent in the Mark. Frederick took part in four campaigns against the Hussites (1420, 1422, 1427, and 1431) and later helped negotiate the peace settlement of 1433. He was also involved in the negotiations at the Council of Constance and was able to acquire extensive privileges for the margraves over the bishoprics in the Mark.

Frederick I was succeeded in the Mark by his eldest son Frederick II (1440–1470). Frederick II was able to reconquer Uckermark and Neumark and acquired Kottbus in Lusatia. He used newly acquired ecclesiastical privileges (1447) to establish the basis for a territorial church. In 1440, Frederick founded the Order of the Swan, after the Burgundian order of the Golden Fleece. Membership in the *Schwannenorden Bruderschaft* was initially limited to thirty nobles selected from the Mark. After 1457, the order was extended to Franconia by Albrecht Achilles.

Frederick I's lands in Franconia were divided between his younger sons, Albrecht Achilles (1440–1486) and Johann the Alchemist. After the latter's death (1464) and the retirement of Margrave Frederick II (1470), Albrecht Achilles took charge of the *Oberland* and the Mark. Albrecht Achilles was unusually well educated, charming, skillful in tournaments, debates, and on the dance floor, and in general "the darling of the south German nobility" (Hintz, *Die Hohenzollern*). He extended the size and scope of the *Schwannenorden* to include Franconian nobles and political allies. Indeed, his attachment to the ideals of knighthood led him to set up a "round table" at his court in Ansbach.

In Franconia, Albrecht sought to extend his authority over the prince-bishoprics of Würzburg, Bamberg, and Eichstätt, as well as over the imperial cities, in order to create a revived Duchy of Franconia. Nuremberg successfully resisted Albrecht during the five-year *Städtekrieg* (Cities' War, 1453–1458), while Bamberg and Würzburg were able to deal the margrave a losing blow at Roth in 1460. The entrance of the dukes of Bavaria into the conflict signaled the failure of Albrecht's plans, and, in the Peace of Prague (1463), he abandoned claims over the cities and the ecclesiastical estates.

In the Mark, Albrecht issued a carefully considered court order (*Hofordnung*, or rules of the court) in 1470, but he was unable to prevent the towns from reasserting their autonomy. He sought, without success, to extend his authority over Pommerania and Silesia. In the latter case, he was named ruler (*Oberster Hauptmann*) after the death of King Sigismund in 1437. He supported Albrecht II of Habsburg and later the claims of his son, Ladislas Postumus, but with the accession of George Podiebrad in 1457, plans for establishing Hohenzollern lordship in Silesia were put off.

Albrecht's most lasting legacy was the *Dispositio Achillea* (1473) which regulated the succession in the Hohenzollern lands. The *Dispositio* established a principle of primogeniture in the Mark and secundogeniture in Franconia, which would be followed from then on. Younger sons were required to seek a vocation in the church.

Albrecht Achilles was succeeded in the Mark by Johann Cicero (1486), who founded the University of Frankfurt an der Oder in 1498. Following the terms of the *Dispositio Achillea*, Johann's eldest son Joachim I (1499–1515) reigned in Franconia until he went mad and was deposed. While their cousins in the Mark were counted among the most vigorous opponents of Martin Luther, Casimir of Brandenburg-Kulmbach (1515–1527) and his brothers, Georg the Pious (1527–1542) and Albrecht, grand master of the Teutonic Knights (*Deutschorden*), were early supporters of the Reformation. After embracing the Lutheran reform, Albrecht secularized the *Ordensland*, becoming the first duke of Prussia. The Franconian lands, Prussia and Jägerndorf in Silesia, were united under Georg Friedrich of Ansbach-Bayreuth (1543–1603), who was instrumental in acquiring Jülich-Cleve for the Hohenzollern. The Franconian line died with him, and from 1603 until the end of the old *Reich*, Ansbach and Bayreuth were ruled by a cadet branch of the electoral line.

While Brandenburg emerged as a leading Protestant state, the Swabian line of Hohenzollerns remained Catholic until their extinction in 1886.

Holbein, Hans, the Elder (ca. 1465–1524)

Hans Holbein the Elder was one of the most important German artists of the late Gothic period. He combined characteristic elements of South German painting (especially that of Ulm and Augsburg) with influences from Netherlandish art. Particularly well-known are his altarpieces made for a wide variety of religious institutions and his approximately 200 drawings done either in silverpoint or ink. In addition to his paintings, Holbein also provided designs for woodcuts, sculpture, stained glass, and metal works. His contributions to the art of this period include an unusually sensitive use of color and careful study and use of physiognomy and gesture as vehicles for expression and narrative.

Documentary evidence for Holbein's life and work is scant. He was born in Augsburg about 1465, probably to the tanner Michel Holbein and his wife. No documents exist regarding his training and activities as a journeyman, but stylistic evidence points to a trip to Cologne and possibly to the Netherlands. The first signed and dated extant altarpiece by Holbein is the St. Afra Altar, made in 1490 for the Benedictine church of Sts. Ulrich and Afra in Augsburg. A document from 1493 labels Holbein a citizen of nearby Ulm, where he worked with the sculptor Michel Erhart in making an altarpiece for the Benedictine monastery in Weingarten. However, Holbein was back in Augsburg the following year, and he appears regularly in the city's tax records until 1514.

During these years in Augsburg, Holbein trained one apprentice and his two sons, Hans the Younger and Ambrosius; he also engaged his brother Sigmund and the Augsburg artist Leonhard Beck in his workshop. Holbein received many commissions during this period: between 1499 and 1512, from the Dominican convent of St. Katherine's in Augsburg for various panels including an altarpiece and epitaphs; around 1500, for the high altar at the Dominican church in Frankfurt; in the early 1500s, for the high altar at the Cistercian church in Kaisheim; in 1509, for an altar in the convent of Hohenburg (near Strasbourg); and, between 1508 and 1510, for the silver altar commissioned from several artists for Augsburg cathedral.

Scholars disagree as to whether Holbein actually moved away from Augsburg after 1514, or if he simply was traveling extensively. In any case, he is known to have worked in Lucerne, Switzerland, and in the Alsace region, including at the Antonine monastery at Isenheim. He continued to receive commissions from Augsburg, as attested by his St. Sebastian Altar from 1516 for St. Katherine 's and the panel representing "The Fountain of Life," commissioned by the Augsburg merchant Georg Königs-berger and completed in 1519. Holbein's death in 1524 is noted in the painters' guild records.

County in the coastal area between Meuse and Vlie.

Formation (9th c.–12th c.)

A certain Gerulf, mentioned in a charter from 889, is generally considered to have been the ancestor of the counts of Holland. He probably was a descendant of the legendary Frisian king Radbod. Gerulf exercised comital (ducal) authority in the northern part of what later became the county of Holland. His son (?) Dirk I, mentioned in charters from 921 until 928, possessed comital rights in the Carolingian counties Tesselgouw and Kennemerland in the north and probably also in the region on both sides of the Old Rhine and in *Masaland*. Presumably, the Frankish king had all coastal counties united under one count in order to strengthen his defenses against the Vikings.

From the beginning, the comital family was related to the high Carolingian aristocracy. Dirk II (d. 988) married Hildegard of Flanders, who was of Carolingian birth. His son Arnulf married Liutgard of Luxemburg. These matrimonial alliances with distinguished princely families can be regarded as an indication of the political importance of the county and the prestige of the comital family, probably as a consequence of descending from the royal house of Friesland (King Radbod).

During the reign of Dirk's successors, the centre of comital authority shifted to the south. Dirk III (993–1039) built a stronghold in Vlaardingen. When Dirk came into conflict with some merchants, whose trade with England he was hindering by levying tolls on the Merwede, the German emperor sent an army led by Godfried I of Lower Lotharingia to support the merchants. Dirk, however, succeeded in defeating the imperial troops. His sons, Dirk IV (1039–1049) and Floris I (1049–1061), continued their father's politics of southward eastward expansion, which led to several clashes with the emperor. In one of these battles, Dirk IV was killed.

When Floris I died in 1061, the emperor seized the opportunity to rid himself of these rebellious counts and granted their territories to the bishop of Utrecht. Floris' wife Geertruid, who remarried to Robrecht of Flanders (called "the Frisian"), initially was able to maintain her position as countess, but in 1070 she and her son Dirk V were driven from power by the bishop. In 1076 Dirk V came back with the help of his stepfather, Robrecht the Frisian, and re-conquered his territories, with the exception of the northern part, which would later be called Western Frisia. His son Floris II (1091–1121) received the county of Holland as a fief from the Utrecht bishop. In 1101 he became the first count to be called *comes de Holland*. The name *Holland* afterwards was gradually extended to the environs of Dordrecht in the south and to Kennemerland, Amstelland, and Waterland in the north.

The country consisted of a large sandy area along the coast and extensive peat bogs further inland. About the year 1000, only a small portion of the land was inhabited. The population was concentrated on the coastal sand dunes with outlying settlements along the river banks. From the eleventh to the thirteenth centuries, however, the peat bogs were systematically reclaimed. A network of ditches was constructed in order to lower the water level, thus providing arable farmland. The first reclamations can be traced in Kennemerland. By the year 1300, virtually all of the peat bogs had been reclaimed and settled.

When Floris II died young in 1121, his son Dirk, VI was still a child. Floris' wife, Countess Petronilla, emerged as a strong ruler who defended her son's interests very well. In 1127, after the murder of Charles the Good, she intervened in Flanders, trying to obtain the Flemish county for her son. In this, she did not succeed, but a year later she managed to obtain a part of Zeeland—Walcheren and the Bevelanden (called *Zeeland Bewesterschelde*)—as a fief from the count of Flanders. This was the beginning of a long dispute about rights to that territory, which was not settled until the fourteenth century. In 1133, Petronilla founded the abbey of Rijnsburg, probably as a burial place for her second son, Floris the Black, who had been killed in a fight near Utrecht. Thereafter, most counts and their families were buried there, although their ancestors had all been buried in the abbey of Egmond, north of Alkmaar.

Development (12th c.-13th c.)

In the course of the twelfth and thirteenth centuries, the county of Holland developed into a powerful and independent principality. The counts constantly tried to enlarge their power and influence. Gradually they surpassed the bishops of Utrecht—who lost power after the Concordat of Worms (1122)—and assumed rights formerly exercised by the emperor. This process was a lengthy and complicated one. In 1156, for example, the count did not succeed in having his candidate elected bishop of Utrecht. Frederick I Barbarossa instead appointed Godfried of Rhenen, who proved to be an ardent supporter of the emperor. Count Floris III (1157–1190) was forced to behave as a loyal imperial vassal when, in 1165, in his struggle with the bishop regarding dominion of Frisia, he had to submit to an imperial judgment. In this case, both the count and the bishop claimed authority in Westergo and Ostergo. Frederick agreed to a *condominium* (collaborative dominium) by count and bishop together, which lasted until the middle of the thirteenth century. At the same time, Floris battled Philip of the Elzas in Flanders in an attempt to put an end to the Flemish suzerainty over Zeeland *Bewesterschelde*. Floris was captured and subsequently forced to accept the humiliating Treaty of Bruges (1167), which determined that authority in that part of Zeeland would be shared by Holland and Flanders. Floris III was present at Legnano in 1176 and also took part in the Crusade of 1190. He died in Antioch, a few weeks after the emperor.

Dirk VII (1190–1203), like other counts, tried to enlarge his territory and increase his influence. These efforts put him into conflict with his neighbors on several occasions. In 1197 he defeated the count of Gelre, with whom he had struggled over the election of a new bishop in Utrecht. In Brabant his campaign was less successful. Duke Henry I turned out to be a formidable adversary, and Dirk had to recognize him as suzerain for Dordrecht. Dirk also clashed with his brother William, who had joined the rebellious Western Frisians in 1195. After Dirk's death in 1203, the country endured a severe crisis as both William and Lodewijk of Loon, who had married Dirk's daughter Ada, claimed to be his rightful successor. Each of the two pretenders to the throne succeeded in rallying a number of influential adherents. After a few years, however, William managed to win the whole country over to his side.

In the first half of the thirteenth century, the influence of the dukes of Brabant in Holland remained strong, particularly in light of several matrimonial alliances. William I, for example, who had been married to Aleid of Gelre during the war of succession in 1220 married Mary, daughter of Henry I of Brabant. Four years later, his son Floris IV wed Machteld, another daughter of Henry's. Relations between the comital family and their Brabant relatives remained close. After the death of Floris IV at a tournament in Corbie in 1234, the regency was occupied by, respectively, Floris' brothers William and Otto, the bishop-elect of Utrecht, but from circa 1240, Machteld of Brabant came into prominence once more. She and her son William II maintained close connections with their Brabant relatives, especially Henry II, which turned out to be an important factor in William's election as Roman king in 1247. William II used his influence as king to consolidate power in his own territories. In 1253, for example, he tried to solve a conflict with Flanders by enfeoffing a part of that county to his brother-in-law John of Avesnes, who claimed rights to the lordship of Flanders. In 1256 William led an army to West Frisia in an attempt to subjugate the Frisians. When his horse fell through the ice, William was killed by the Frisians, who, unfortunately, did not recognize their king.

Especially in the second half of the thirteenth century, the urban population of Holland increased. The towns developed into regional market centers, but before 1300, only Dordrecht grew into a commercial center of interregional importance. The comital administration developed considerably during this period. Following the example of Flanders, bailiffs were appointed in new administrative areas: South Holland around Dordrecht; North Holland between Haarlem, Leiden, and Gouda; Delfland and Schieland between Delft and Rotterdam; and Kennemerland, north of Haarlem. Later, other bailiwicks were added. A comital council slowly emerged from a larger group of advising vassals and the influence of the nobility increased. The prince could only realize his political aims by cooperating with his nobles, who were themselves constantly competing for their own family interests.

Floris V (1264–1296) succeeded in solving two of Holland's major traditional issues: relations with the Sticht of Utrecht and the submission of the Frisians. Due to severe financial problems, the Utrecht bishop in 1274 was forced to mortgage some border castles, and Floris was able to penetrate into the Sticht and extend his power considerably by annexing the lands of Amstel and Woerden to his territories.

the conquest of Western Frisia took more time and energy. Only after three major military campaigns—1276, 1282, and 1289—did the Frisians accept the count as their legitimate lord. In 1289 Floris successfully negotiated a series of treaties with his former enemies. His political wisdom was evident in his decision to cede to the Frisians some autonomy. About the same time, Floris ordered one of his clerks to write a chronicle to demonstrate, among other things, the legitimacy of comital power in Frisia. This chronicle is known as the *Rijmkroniek* by Melis Stoke. Jacob of Maerlant, who had earlier written a *vorstenspiegel* (princes primer) for the young Floris, used some passages of Stoke's text in his famous *Spiegel Historiae*. The self-confidence and status of the prince was also expressed in the construction of the *Grote Zaal* (big hall) in The Hague, a city which had been a comital residence since the time of Floris IV. The building was constructed around 1290 after the example of the English royal hall. It was an imposing building, which would impress foreign visitors for centuries.

Floris V was not successful in solving the ongoing conflict over Zeeland. In 1290 the issue once again came to a war, in which Floris V was captured and forced to acknowledge Flemish suzerainty. In 1295 he tried to cancel the treaty and to settle the problem once and for all. Although he had always been an ally of the English king, in the first months of 1296, he allied himself with the French. Edward I of England could not tolerate this new alliance and ordered some nobles in Holland to kidnap the count. They succeeded in capturing Floris during, a hunting party near Utrecht. When the conspirators were on their way with the count to England, the company was stopped by some countrymen. Some confusion arose in which the count, who tried to escape, was killed. A political crisis followed the death of Floris V, which was only averted when John of Avesnes, count of Hainault, Floris' nephew, assumed power in 1299. In 1303, however, he could not prevent an invasion of Flemish troops, who were encouraged by their victory at Kortrijk in 1302. It was only after the defeat of the Flemish army at Zieriksee that peace was restored.

During the reign of William III (1304–1337), who mostly remained in Hainault, comital prestige and power grew enormously. William was generally accepted as an arbitrator in international conflicts and married his children to distinguished partners. His oldest daughter, Margaret, married the Roman king, Louis of Bavaria, in 1324. In 1323, the conflict with Flanders was settled definitively to William's advantage. In Holland he delegated much of the administration of the country; extended the authority of the noble council; and improved financial accounting..

His son William IV (1337–1345), a chivalric character and an enthusiastic Crusader, organized a full-scale and expensive attack on Frisia in 1345. It was a total disaster, and the count was killed along with a great part of his noble army. As William had no legitimate children, the emperor then enfeoffed his wife Margaret with comital power in Holland and Zeeland.

Bavaria and Burgundy (14th c.–15th c.)

Margaret's reign witnessed the rise of conflicting interests, polarizing in parties which later would become known as *Hoeken* and *Kabeljauwen*. The *Kabeljauwen* kidnapped Margaret's son William from Hainault and declared him the rightful count. Margaret and the *Hoeken* were then defeated in a brief civil war, and William managed to restore full authority. In 1358 William either went insane or was seized with a cerebral hemorrhage. Since he could no longer govern his counties, he retired to a castle in Hainault, and his brother Albert took power.

Albert of Bavaria's reign covered the second half of the fourteenth century. During that period, he grew into one of the most influential princes of the Low Countries. He married his daughter Catherine to William of Gulik, and Joan to Wenceslas, king of Bohemia. Even more notable was the famous double wedding celebrated in Cambrai (1385), called "one of the most brilliant spectacles of the age," when John of Nevers married Margaret of Bavaria, Albert's third daughter, and Margaret of Burgundy wed William of Bavaria, Albert's eldest son and heir to the throne. William received the county of Ostrevant and was appointed governor in Hainault. From that moment on, Albert increasingly remained in The Hague, where a small but thriving court, consisting of musicians, poets, rhetoricians, heralds, and a range of other artists, became a center for cultural and artistic life.

At home, Albert aimed at a balance of power to check party conflicts. Initially, he seemed to have succeeded, but, as his son William became more independent after 1385, struggles flared up again. In the summer of 1393 William fell in disgrace and some leading nobles were banished from Holland. Although William reconciled with his father in 1394, and both parties were active in the full-scale military campaigns against the Frisians in 1396, 1398, and 1399 (partly to confirm the reconciliation), the party spirit remained latent. In 1401 William bequeathed Frisia to his father and started preparations for military actions against his major enemy, the lord of Arkel. This war lasted until 1412.

During Albert's reign, Holland was transformed economically from a largely agrarian and rural society to an urban, commercial, and industrial one. This transformation was caused largely by changes in the physical geography of the countryside. A rising sea level, combined with a slow settling down of the soil, hampered the cultivation of cereals and compelled many farmers to switch over to industrial crops or cattle breeding. This led to a sharp rise of urban immigration. Several towns were enlarged, and an increasing part of the population became involved in export industries, such as the manufacture of textiles (Leiden, Amsterdam) and the brewing of beer (Haarlem, Delft, Gouda), and in foreign trade and shipping. The sea became more and more threatening. Dikes repeatedly had to be strengthened because of the danger of inundation. From the beginning of the fifteenth century, windmills were used to provide drainage.

Due to the continuing wars in the last decade of Albert's reign, Holland's financial and fiscal situations underwent a change. The need for regular income as well as extraordinary revenues increased. The towns were indispensable as a source of extra money. Therefore, the five big cities in Holland (Haarlem, Leiden, Delft, Gouda, and Amsterdam) became an important factor in politics. By 1425 their alliance was formalized in the Estates of Holland. Albert's son William VI (1404–1417) was closely attached to France and Burgundy. After his death, he was succeeded by his only child, Jacqueline. Her reign can be regarded as a transitional period to the reign of the Burgundians. From the beginning, she was unable to obtain full recognition, because her uncle, John of Bavaria, also claimed comital authority. John was supported by Sigismund, the Roman king, and a revived *Kabeljauwparty*. Jacqueline could rely on the *Hoeken*, but her husband, John, Duke of Brabant, a first cousin of Philip of Burgundy, was of little support to her. Personally, as well as politically, their marriage was a fiasco.

In 1419 the treaty of Woudrichem was concluded, by which John of Bavaria obtained actual power over a large part of Holland. After his sudden death in 1425, Jacqueline once again tried unsuccessfully to claim power. By the second quarter of the fifteenth century, Philip the Good had succeeded in absorbing Holland into his own political domains. In 1433, three years before her death, Jacqueline formally renounced the throne.

During the Burgundian reign, Holland was administered by governors, originating in the Hainault nobility. By the middle of the fifteenth century a specialization within the comital council had been established. Financial (*Rekenkamer*) and legal (*Hof van Holland*) departments, both seated in The Hague, were split off. Partisanship within the nobility, connected with faction struggle in the urban patriciate, flared up occasionally, especially in 1440–1445 when the governor, William of Lalaing, favored the *Hoeken*. The governorship of John of Lannoy (1448–1462) enjoyed a period of relative peace. When Charles the Bold was killed in battle against the Swiss (1477), the Estates forced the young duchess, Mary, to grant a "great privilege" which left effective control of political authority in the hands of the Estates. A few years later, Mary's husband, Maximilian, had to suppress several uprisings in the towns.

During the fifteenth century, the towns further developed into important centers of trade and industry. After two wars with the Hanseatic League, Holland was victorious. By 1500, a significant proportion of all Baltic trade and shipping had fallen into Holland's hands.

Holy Lance

The *Heilige Lanze* is part of the royal insignia of the medieval empire; today, it is housed in Vienna. Both its origin and its arrival in Germany are controversial; it is not, however, the "holy lance" discovered by crusaders in 1099.

According to Liudprand of Cremona (*Liber Antapodosis*, 4, 24.25) the lance, containing a nail from Christ's cross, was given by Count Samson to Rudolph II of Burgundy circa 922. Probably in 926, after the failure of his Italian campaign, Rudolph presented the lance to the German king Henry I in return for Burgundian control over Basel.

Otto I began the lance's association with Saint Maurice by building a new monastery in Magdeburg in honour of this Roman-Burgundian warrior saint. Otto also carried it into battle at Birten (939) and at the Lech (955). Thus, the lance reflected the king's status as chief warrior of the realm.

Next to nothing is known about the life of Lupold Hornburg, whose four rhymed orations (*Reimreden*) and one strophical song are preserved in the *Hausbuch* (house book) of Michael de Leone, canon and protonotary in Würzburg. Compiled circa 1350, the manuscript names Rothenburg ob der Tauber as Hornburg's hometown.

All four *Reimreden* deal with the political circumstances of 1347/1348. Preaching as a layman, Hornburg denounces the defective rule of clerical and secular princes in his *Landpredigt* (rural sermon), alluding both to the late emperor, Louis the Bavarian, and the new king, Charles IV. In an extensive complaint about the era's bad times, he interprets contemporary plagues as divine warnings against the generally wicked behavior of the mighty, makes apocalyptic insinuations, and ends with a wish for a strong emperor.

Des Reiches Klage (complaint about the empire) is largely based on a poem by East Franconian cleric Otto Baldemann, which, in turn, is an augmented translation of Würzburg archdeacon Lupold von Bebenburg's Latin *Ritmaticum* (rhymed work). In a dream, the poet meets a lady who reveals herself as the Roman Empire personified. She gives a short survey of the empire's glorious history from Julius Caesar to Henry II, presenting Charlemagne as the ideal ruler, and then deploras the current reign of kings, pope, and princes. The lady urges the poet to deliver her lament to the assembly of princes in Passau in July 1348, which Hornburg reports having done. The appearance of the "false Waldemar," a pretender to the throne of Brandenburg, in the summer of 1348, gave Hornburg the occasion to further complain about bad times and rulers in *Der Zunge Streit* (dispute of the tongue), in which he claimed that both princes and the emperor were obliged to serve the empire and not their own interests.

The fourth *Rimrede* is considered an early specimen of the *Ehrenrede*, a genre more common in the late fourteenth century. Probably composed in September 1347, it is a eulogy upon the death of Franconian nobleman Konrad von Schlüsselberg, whom Hornburg praises as a dutiful, unselfish knight. As the manuscript indicates, the three strophes of *Von allen Singern* ("On all the Singers") are cast in the *Langer Ton* (long verse) of Der Marner, a thirteenth century *Spruchdichter* (poet). In the first stanza, Hornburg lists twelve poets, mostly thirteenth century *Spruchdichter*, repeating the enumeration in the third stanza. The second strophe praises Reinmar (von Zweter) as the best of them. Hornburg's song is the first to name twelve poets no longer living, but they correspond only partially with the *Meistersinger's* twelve old masters.

Housebook, Master of the (fl. ca. 1470–1500)

Also known as Master of the Amsterdam Cabinet, this anonymous printmaker, draftsman, and painter was active in the Middle Rhine area from circa 1470 to about 1500. His various names are derived from two groups of works attributed to him with certainty: parts of *The Medieval Housebook* (Schloss Wolfegg, Private Collection) and a group of eighty-nine drypoint engravings, eighty of which are today in the print cabinet at the Rijksmuseum in Amsterdam. Although his style was very influential in Germany, it has proved difficult to decide exactly which other works may be attributed to the Master and to identify him. Newer research has focused on a description of his working style. The drypoint group includes religious subjects, as well as others reflecting courtly life of the late Middle Ages.

Master of the Housebook. *The Young Man and Death* (Amsterdam: Rijksmuseum). Photograph: Rijksmuseum-Stichting Amsterdam

Humorous subjects are characterized by their naturalism and spontaneous character. Dated from circa 1470 to 1490, the engravings display a development from small size and simple and hesitant drawing in the early sheets to an assured spatial representation and a more refined technique in the later ones.

The illustrations in the so-called *Housebook* are mainly technical drawings connected with sections on mining and military affairs. Preceding this section are drawings of the planets of the royal children, and of courtly scenes. The best of the planet drawings, Mars, Sol, and Luna, are most often attributed to the Master because of their similarities to his drypoints. The attribution of the remaining drawings is controversial since, although some show similarity to his earlier work, there are stylistic differences in the drawing.

A few drawings and miniatures as well as paintings, including the *Pair of Lovers* in Gotha and the altarpieces of the Passion in Speyer and the Life of the Virgin in Mainz, have been wholly or partially attributed to him. He may also have provided designs for stained glass which reflect his work in the prints and the *Housebook*.

The name Hrabanus derives from the Old High German word for "raven"; Maurus is a nickname he acquired later, perhaps from his teacher Alcuin, and it pays tribute to his dutiful piety as a disciple: Saint Maurus was Saint Benedict's favorite pupil. For his encyclopedic learning and the energy he manifested in administration and teaching, Hrabanus Maurus was dubbed in early modern times *praeceptor Germaniae* (the teacher of Germany). Born at Mainz around 780 of noble Frankish parents, Hrabanus was given as a child to the monastery of Fulda. There, he was ordained deacon (801) before being sent for further education under Alcuin at Tours. He returned to Fulda, first as head of the cloister school and later as abbot (822–842). Upon resigning as abbot, he went into seclusion near Fulda at Petersberg. Later, he was named archbishop of Mainz (847), an office he held until his death on February 4, 856.

Hrabanus made a major contribution in educating young men, such as Otfrid von Weippenburg, Lupus of Ferrières, and Walafrid Strabo, who became the foremost churchmen, scholars, and poets of the next generation. Unfortunately, he is also remembered for one major failure in mentoring: he first forced Gottschalk of Orbais, a monk at Fulda, to take the tonsure against his will and later persecuted him, with severe beatings and imprisonment, for his beliefs on predestination.

Many of Hrabanus' numerous writings are derivative compilations. He sought to make available the scholarship of earlier eras by taking extracts from original works and knitting them together into a coherent whole, so that students and churchmen who did not have extensive libraries at their disposal could find in his works the essentials they needed for building their faith and extending their intellectual training.

De institutione clericorum (On the education of the clergy) is typical of Hrabanus' oeuvre in being replete with excerpted material. The first book sets forth the various ecclesiastical grades, liturgical vestments, and instruction to be given to catechumens; the second deals with liturgy; and the third focuses on liberal education, especially with the goal of training preachers.

Hrabanus wrote biblical commentaries on the historical books of the Old Testament (Pentateuch), some prophets (Jeremiah and Ezekiel), one of the Gospels (Matthew), and the epistles of Paul. In his exegeses, Hrabanus consistently excerpts patristic writers, such as Isidore and Bede, and supplies little of his own writing apart from allegorical and mystical interpretations.

Hrabanus's erudition and writing ability perhaps culminated in his encyclopedic *De rerum naturis* (later called *De universo*), in which he relies on Isidore's *Etymologies* as both source and inspiration. As in his exegeses, Hrabanus distinguishes himself from his predecessor by supplying allegorical explications.

Among his poems, the most successful was the *De laudibus sanctae crucis*, the first book of which contains a collection of twenty-eight *carmina figurata* (pattern or figure poems) that are arranged to form intricate designs. The second book offers a prose paraphrase.

Most of his other poems are conventional compositions in distichs and hexameters, but he also wrote rhythmic poetry and hymns.

Hrabanus, although not original, was an erudite and prolific scholar, whose efforts in extracting and synthesizing the writings of earlier interpreters served well the needs of his contemporaries and successors.

Hrosvit of Gandersheim (10th c.)

Born in the fourth decade of the tenth century, Hrosvit lived and wrote in the Gandersheim Abbey in Saxony, during the abbey's "Golden Age" under Gerberga II's rule. Her name, "Strong Voice (or Testimony)," expresses her poetic mission; the glorification of Christian heroes, both secular and religious. The subject of her poems are the Ottonians and the whole Liudolf dynasty as well as the saints and martyrs of the Christian church. Writing in Latin, mostly in leonine hexameters and rhymed, rhythmic prose, Hrosvit chose hagiographic plots for her legends and plays and contemporary and near-contemporary events for her secular epics.

Her works are arranged in three books, organized generically and chronologically, and delineated as such by prefatory and dedicatory materials. Book One contains eight legends (*Marian, Ascencio, Gongolf, Pelagius, Basilius, Theolphilus, Dionysius, and Agnes*); all but *Pelagius*, which she claims to have composed based on an eyewitness report, are based on biblical, apocryphal, and hagiographic texts.

Book Two, Hrosvit's best-known and most controversial work, contains six dramas, based, she claimed, on the comedies of Terence. For his alluring, but morally perilous, mimetic powers, she said she wished to substitute the glorious and morally beneficial ideals of militantly chaste Christianity. She chose the dramatic form, she argued, because the sweetness of Terence's style attracted many readers who, in turn, became corrupted by the wickedness of his subject matter. Of her six plays, two (*Dulcitiuus* and *Sapientia*) deal with the martyrdom of three allegorical virgins during the persecution of Christians under Diocletian and Hadrian; two concern the salvation of repentant harlots (*Abraham* and *Paphnutius*); and two (*Gallicanus* and *Calimachus*) are conversion plays.

Her two extant epics in Book 3, narrate the rise of the Ottonian dynasty (*Gesta Ottonis*, or Deeds of the Ottonians) and the foundation of the Gandersheim Abbey (*Primordia*). Throughout all her works, Hrosvit extols the ideals of monastic Christianity and exhorts her audience and readers to imitate and emulate her saintly models.

Hugo von Langenstein (fl. late 13th c.)

In the late Middle Ages, religious literature, both hagiographic or legendary, gained tremendously in popularity. The famous *Martina* legend was first composed by Hugo von Langenstein, who was born into a family of lower nobility in the vicinity of Constance. Together with his father, Arnold, and three brothers, he joined the Teutonic Order and is mentioned in documents produced in Basel and Freiburg im Breisgau between 1271 and 1298. Inspired by the Dominicans—possibly his own sister Adelheid—Hugo wrote *Martina*, completed in 1293, in the form of a Latin *vita* (saint's life). It consists of 32,588 verses and has come down to us in one manuscript.

In it, Hugo outlined the basic Christian principles using the story of the Roman woman martyr Martina as his narrative framework. According to the *vita*, when Martina turned Christian and refused to pray to pagan gods, Emperor Alexander Severus ordered her to be tortured. But, with the help of God's grace, she survived all punishments, thereby converting many people to Christianity. Eventually, she was beheaded and, later, became a highly regarded martyr.

The extensive didactic sections in Hugo's *Martina* are partly based on Pope Innocence III's *De miseria conditionis humanae* (On the Misery of the Human Condition) and Hugo Ripelin of Strasbourg's (d. before 1270) treatise on "the true theology," *Compendium theologiae veritatis*, among other writings. The text probably served as reading material during dinner in the convents of the Teutonic Order and is, therefore, divided into 292 sections. Although *Martina* was aimed at providing theological teaching, Hugo also discussed the proper ways to lead one's life and dealt with such topics as salvation, the coming of the antichrist, and Christian virtues.

Konrad von Würzburg exerted considerable influence on Hugo von Langenstein's writing. *Martina* seems to have been well known among the Teutonic Knights in succeeding centuries, and Johannes von Saaz (Tepl) reflects certain aspects of Hugo's text in his dialogic prose dispute between the devil and a farmer in "The Plowman from Bohemia" (*Ackermann aus Böhmen*, ca. 1401).

Hugo von Montfort (1357–April 4, 1423)

The Styrian poet Hugo von Montfort lived in a transitional period between the Middle Ages and the Renaissance. Hugo wrote in the style of traditional courtly love poetry, *Minnesang*, but his songs also reflected his personal life, his relationship with his three wives, and the literary scene of his time. Moreover, Hugo specifically addressed the question of what literary genres were available to him and how to use them for his lyrical compositions. Hugo was the second son of the powerful Count Wilhelm III of Montfort-Bregenz and founded, through his marriage with Margarete von Pfannberg (1373, d. 1392), a new family branch of the Montforts. Because of his social status, he received an excellent education and was thoroughly familiar with classical and medieval literature. His texts refer not only to medieval German heroic and courtly poetry, but also indicate his familiarity with the French *Roman de la Rose* (completed in ca. 1370). Throughout his life, Hugo held many influential posts as administrator and judge in the Hapsburgian lands of Styria, Tyrol, and Bregenz. He also participated in a Crusade against the heathen Prussians in 1377 and took an active part in the management of his own large estates. In 1396 Hugo married Clementia von Toggenburg, who died in 1400, and in 1402, Anna von Neuhaus, who survived her husband by at least five years. Between 1413 and 1415, Hugo served as governor of Styria for Duke Leopold IV, who also sent him to the Council of Constance in 1414. The wealth of extant historical documents pertaining to Hugo provides a picture of his life in great detail. In his *Rede* (didactic poem) no. 31, composed in 1401, Hugo takes stock of his oeuvre, listing seventeen other *Reden*, three poetic letters, mostly addressed to his wives, and ten love songs. In the following years he composed three *Reden*, three letters, and one song—a sum of thirty-eight pieces comprising 3,694 verses. Hugo commissioned a scribe to copy his texts in a manuscript, today housed in the Heidelberg University Library (manuscript no. cpg. 329). Since he was not musically inclined the musician Bürk Mangolt created the melodies for his songs (see no. 31, 177). Insofar as Hugo's texts dealt mainly with personal concerns and refrained from ideological, religious, and military themes, they seem not to have reached a wide audience and were quickly forgotten after his death. Like Oswald von Wolkenstein, Hugo was independently wealthy and did not need to rely on his poetry for income. Both in his more traditional dawn songs and in his highly innovative songs idealizing the happiness of married life, the poet deliberately turned from political reality into the ideal of his private life and emphasized the transitoriness of human existence.

[Minnesang; Oswald von Wolkenstein](#)

Documented (1290) as teacher (*magister/rector scholarum*) of St. Gangolfstift in Teuerstadt near Bamberg, Hugo composed twelve works, seven of which survive. Among his four Latin texts, aids for teaching and preaching, the *Registrum Multorum Auctorum*, listing some eighty authors from classical antiquity to the Middle Ages, established a canon of Latin literary learning which was still observed as late as the seventeenth century.

The surviving work in Middle High German, *Der Renner*, about 24,600 verses, lives on in seventy manuscripts, and was printed at Frankfurt am Main in 1549. This gnomic text rivalled Wolfram von Eschenbach's *Parzival* in popularity for some time. Its thematic scope made the *Renner* a forerunner of the *Narrenliteratur* of Heinrich Wittenweiler and Sebastian Brant. The schema of the seven cardinal sins (medieval German, *hōchvart/* Latin, *superbia, gîtikeit/avaritia, frâz/gula, zorn/ira, niû/ invidia, unkiusche/luxuria, lazheit/accedia*) structured a vision of late medieval *societas Christiana* (Christian society) ruled by greed, as demonstrated in commerce and usury. The *Renner* documents an anxious view of early capitalism, a system seen to be deriving its impetus from Satan. Striving for money in this text separates the foolish rich from the wise and willing poor.

The *Renner's* stylistic diversity exemplifies the art of gnomic writing in the vernacular, Biblical examples, folk narrative, well worn fables, and quotations from classical and medieval authorities are used to support the author's attempt to lead fellow Christians from sin to virtue. For the literary and social historian, this extensive gnomic text provides a rich source for research into (late) medieval mentality. It portrays a deep ambivalence in Christian morality in relation to social roles of women, in the relationship of Christians to Jews, and in the view of *litterati* (the educated) regarding *illitterati* (the uneducated), and peasants (*rustici*) in particular. The *Renner* is an important representative of a popular literary genre which has left deep traces in the cultural memory.

Hunting and Hunting Literature

Hunting, often called *cynegetics*, was important in the Middle Ages as a form of recreation, as a means of procuring food, and as a source of symbolism. Although most people hunted, it became more and more the prerogative of the knight and the noble. Hunting was inextricably interwoven with forestry especially as the clearing of the land reduced the free forest, and the nobles set up forest preserves, a situation familiar to us from the stories of Robin Hood. If falconry be considered as a part of hunting, the part that hunting played in the life of the knight is extended greatly. Most of our literature, though written by court clerks (*ministeriales*), is about knights, and hunting, trapping, and fowling are reflected throughout the literature; in fact, they penetrate all aspects of the knight's life and seem as natural as the use of the telephone today. Thus it is that the Middle High German language itself reflects the importance of hunting. The word *bejagen* (to chase down) is used over sixty times in *Parzival*, often with the meaning of "to win love."

There are many hunting scenes in Middle High German literature, such as the death of Siegfried in the *Ni-belungenlied* and the dismemberment of the deer in *Tristan*. Both the patron saint of the hunter, Saint Hubert, and Saint Eustace have stories connected with the hunt of the stag, and courtly love poetry (*minnesang*) is filled with the falcon theme. In iconography we find the theme of the Unicorn Chase, particularly in German art, with the unicorn (Mary) chased by a hunter with three dogs, named after the three cardinal virtues, Faith, Hope, and Charity.

It was quite natural, then, that extended metaphors and allegories using hunting should develop. The extensive European literature on hunting is reflected in German hunting poems: *Der entflogene Falke*, *Das Königsberger Jagdgedicht*, *Die verfolgte Hindin*, *Die Brackenjagd*, *Die Jagd der Minne*, *Drei Hunde als Beschützer*. The major allegory of the chase in Middle High German literature is Hademar von Laber's *Jagd* ("The Hunt"), a sustained allegorical stag chase of the fourteenth century. Other authors of hunting poems include Burkhard von Höfenfels, Mechthild von Magdeburg, Peter Suchenwirt and Hugo von Montfort. In Old High German we find fragments of hunting poems, such as *Hirsch und Hinde* (Buck and Deer) and Notker Labeo's (d. 1029) famous exaggeration concerning the boar in his *Rhetoric*.

There were also German tracts dealing with the technical aspects of hunting, such as the *De arte bersandi*, the *Beizbüchlein*, *Die Lehre von den Zeichen des Hirsches*, the *Vogel Buech*, the *Puech zu der Waidmanschaft*, as well as translations of (mostly Latin) tracts, such as those of Petrus de Crescentiis and Albertus Magnus, all edited in *Quellen und Studien zur Geschichte der Jagd*. Although Frederick II's *De arte venandi cum avibus* (On the Art of Hunting with Birds), is a treatise on falconry, the emperor was interested in all types of hunting.

The animals of the chase,—the bison, the bear, the hare, the stag and the boar—were studied intensively, and their habits were well-known. This familiarity led to the extension of the animal fable inherited from antiquity in works such as *Reineke Fuchs* (Reynard the Fox), along with characteristics attributed to each animal, such as cunning to the fox, shyness to the hare, stupidity to the bear, etc. Also inherited from antiquity, but extended in medieval times, was the *Physiologus*, a work devoted to allegorizing the characteristics attributed to each animal. Animals of the chase, especially fictitious animals such as the dragon, were frequently used as symbols.

In religious literature, Satan was often represented as a fowler or a hunter, but also as an animal, such as a lion. The same treatment was accorded to Christ, who might also be represented as a hunter or as a lion (the Lion of Judah). Mary, the Mother of Christ, was often called "turtledove." Each of the implements of hunting—the snare, the bow, the arrow, the trap—as well as the dog and the horse, might also have been allegorized.

The hunt, as an integral and important part of medieval life, can be found everywhere, as witnessed by the number of words in modern German which derive from hunting terminology (German, *Weidmannssprache*).

Introduction

Twentieth-century scholars' understanding of the Gothic as a primarily French phenomenon has often led to the perception of German art and architecture, particularly of the thirteenth and fourteenth centuries, as a provincial, underdeveloped, or even misunderstood variant of the French standard. If German art of this period does frequently adopt French precedents, always varying the model so that their German character is never in question, one of the areas in which it is truly innovative is in the development of new themes and subjects. While some of these make brief appearances in the twelfth century or even earlier, it is in the late thirteenth and early fourteenth that a wealth of new themes come into their own. The Wise and Foolish Virgins, for example, after its first, modest appearance circa 1140 at the royal abbey of St. Denis outside Paris, is given a more prominent role on the lintel of the Gallus Portal at Basel Cathedral some thirty to forty years later; a century later still it begins to appear in large scale as the major subject of easily visible door jambs. A number of these subjects arise or become popular in the charged mystical climate along the Upper Rhine; the lives of nuns recorded in the Dominican convents of this region and elsewhere indicate both the strongly visual character of their visions and some of the specific motifs that appear in works of art at the same time. Other subjects, such as the equestrian figure, can be associated with political motives, while still others have been related to the changing roles of women or new devotional practices.

Acts of Charity

Also known as the Acts of Mercy, this series of six kindnesses performed for Christ is described in Matt. 25:34–36: "Then the king shall say to them that shall be on his right hand: Come ye blessed of my Father, possess you the kingdom prepared for you from the foundation of the

Basel, *Münster*, north side, Gallus Portal. *Photograph: Joan A. Holladay*

world. For I was hungry, and you gave me to eat; I was thirsty, and you gave me to drink; I was a stranger, and you took me in; naked, and you covered me; sick, and you visited me; I was in prison, and you came to me."

To these six deeds, caring for the hungry, the thirsty, strangers and the homeless, the naked, the sick, and the incarcerated, a seventh was added after the middle of the twelfth century: burying the dead. The Acts were typically portrayed as two-figure scenes with one of three figures in the active role: an anonymous Samaritan, a particular saint noted for his or her charity, or Christ himself. In the earliest known example, the six reliefs flanking the Gallus portal on the north side of Basle cathedral (about 1170), the Acts are accomplished anonymously. At the church of St. Elizabeth in Marburg, the saint known for her charity to others performs the deeds in the left lancet of the mid-thirteenth century window dedicated to her life. Christ himself, identified by the cruciform halo, is the main actor in the window from the narthex (entrance structure) at Strasbourg cathedral (ca. 1320–1325). As in the biblical text, visual representations of the Acts are often associated with the image of heavenly reward, typically the Last Judgment. The sequence seems to have been especially preferred in the area of the Upper Rhine; in addition to the cycles at Basle and Strasbourg, the subject was represented in the reliefs of the lost mid-thirteenth-century rood screen at Strasbourg cathedral and in a north transept window from Freiburg cathedral circa 1250.

Anna Selbdritt

The cult of Saint Anne (German, Anna) permeated Europe; however, it was in the Low Countries that the veneration of Saint Anne evolved into a true mother cult. At the end of the thirteenth century, Saint Anne's depiction with the Virgin Mary as a child expanded to include the Christ Child. This representation, particularly popular in Germany, forms the *Anna Selbdritt* (literally, Anne in a threesome). Saint Anne takes over Joseph's position in the Holy Family and becomes the matriarch of Christ's lineage, creating an earthly Trinity in contrast with the divine Trinity.

Jacobus de Voragine popularized the story of Saint Anne and her extended family through the *Golden Legend* (*Legenda aurea*, ca. 1255–1266). Jan van Denemarken (d. ca. 1545) and Peter Dorlant (1454–1507),

Annaselbdritt, from an early fourteenth-century Psalter. Engelberg, Stiftsbibliothek, Cod. 60, fol. 42r. Photograph: Susan Marti

working in Antwerp, shaped their versions of her life from the *Golden Legend*, and their works spread throughout the Low Countries after being translated into vernacular. Johannes Trithemius (1462–1516), one of the writers most dedicated to promulgating Saint Anne, presented her as a guide for the moral life of both men and women. He believed Saint Anne's power as the mother of Mary and grandmother of Jesus was almost unlimited.

Devotion to Saint Anne thrived at the local level. Pope Sixtus IV established her feast day in 1471, but many German dioceses had approved her feast day centuries before Rome. Churches, cloisters, chapels, hospitals, pilgrimage sites, and even bells were named after Sant Anne and give evidence to the popularity of her cult.

The growing debate surrounding the Immaculate Conception was a contributing factor to the popularity of Saint Anne and particularly of her image in the *Anna Selbdritt*. By focusing on Anne's exemplary life, the special privileges attending Mary's conception could be more persuasively presented. The elimination of Joachim, like Joseph before him, implied the unsullied purity of Mary's conception. Saint Anne's legend became increasingly complicated in reference to Mary's perpetual virginity and Christ's lineage. St. Anne was accorded two more daughters, by other husbands, contributing to the development of the Trinubium (Anne's three marriages) and the Holy Kinship.

The multiplication of confraternities, brotherhoods, and guilds during the fifteenth and sixteenth centuries contributed to Saint Anne's cult. The earliest and most respected confraternity dedicated to Saint Anne was in Bremen in 1328. Its limited membership consisted of archbishops, priests, knights, and nobles. Many guilds called upon her, although she was primarily associated with the miner's and carpenter's guilds. Carpenters believed she created the first tabernacle through the birth of Mary. The poor, and particularly women, called on her for assistance during childbirth, at marriage and death, and in cases of barrenness and illness.

As devotion to Saint Anne diminished throughout Europe in the sixteenth century, the image of the *Anna Selbdritt* disappeared. The Council of Trent

forbade the representation of the Trinubium in 1543–1563. The Holy Kinship, an expansion of the Trinubium, disappeared as well. Saint Anne's role was considered "misplaced devotion," though not strictly forbidden. Martin Luther, who had made his vows to Saint Anne on entering the priesthood, rejected her in 1525.

Arma Christi

The term *Arma Christi* (literally, weapons of Christ), refers to a representation of the instruments of the Passion.

Arma Christi from the Passional of Abbess Kunigunde. Prague, National and University Library, Ms. XIV A 17, fol. 10r. Photograph: Národní knihovna; Czech National Library

As early as the fourth century, the Holy Cross was venerated as a symbol of Christ's triumph over Satan. During the Carolingian period, artists added other objects associated with the Passion, notably the lance, crown of thorns, scourge, and rod with sponge.

By the Gothic period, the *Arma Christi* had become a common artistic theme used in a wide range of contexts. The objects were still given offensive overtones when depicted as weapons used by Christ to combat Satan, as well as defensive nuances when displayed on a shield as a coat of arms. Most often, however, the *Arma Christi* were associated with the sufferings of the Passion and were employed to provoke empathetic veneration of Christ's torments. In this guise, the *Arma Christi* appear both as the primary subject and as amplifications of other themes; often appended to a Man of Sorrows or a Crucifixion, they were also depicted in conjunction with the Christ Child, the Madonna and Child, the *Pietà*, and the Last Judgment.

In keeping with the increasingly elaborated accounts of Christ's ordeal that characterize Gothic representations of the Passion, artists continued to expand the range of *arma* to include the pillar of the Flagellation, tools for erecting the Cross, pincers, hammer, nails, ladder, dice, and the Five Wounds. As a compilation of objects associated with the various incidents of the story, these representations refer to multiple narratives in a single image. This artistic shorthand could thus encapsulate and convey the totality of Christ's sufferings.

Dance of Death

This theme (German, *Totentanz*) depicts the figure of Death, shown as a skeleton or a decaying corpse, leading a parade of living figures to their deaths. The living figures who fall prey to Death include both young and old, wealthy and poor, royalty and clergy, and thus serve to remind the viewer of the inevitability of death. In its earliest forms, this theme appears in late fourteenth-century French dramas and may have also been performed as part of Church liturgy. Popular interest in this theme may have resulted from the Black Death and the epidemic of 1373. By the fifteenth century, the theme had become extremely popular throughout Europe and was represented in a variety of media, including manuscripts, mural paintings, sculptures, and prints.

The theme of the Dance of Death is related to the thirteenth-century French legend, "The Three Living and The Three Dead." In this tale, three young noblemen meet three figures of Death who warn the youths against human vanity and speak about the transience of life. Similarly, many Dance of Death images include the warning words of the figure of Death as he leads the living away. Images like this are meant to encourage the viewer to repent and to lead a more pious life. Because the living figures in the Dance of Death represent all sectors of society, these images also served to critique the clergy and the wealthy and powerful. In any case, the figure of Death is a mocking and derisive figure, the great equalizer, who comes to dance away with the living, regardless of their status or position.

Equestrian Figures

Life-size, freestanding ancient Roman equestrian sculptures were known in Germany throughout the Middle Ages. The bronze example in Augsburg is likely to have been there since Roman times; the famous "Theodoric" brought from Ravenna to Charlemagne's court in Aachen was also likely an ancient Roman example renamed, as was the Marcus Aurelius figure in Rome, later known as Constantine. The image of an equestrian emperor was also produced by medieval craftsmen as early as the Metz Charlemagne figure of the ninth century, but in miniature, probably because the technique of casting monumental figures had gone out of practice and perhaps even been forgotten.

Instead of monumental figures, early medieval equestrians appeared mainly in miniature, on seals and coins, and not associated with the emperor but rather with high nobility. Local rulers were also depicted as equestrian figures in stone relief, first in Italy, on the Broletto facade in Milan, but later also in Zurich. The figures may be related to similar French stone relief equestrians that appeared on churches in southwest France, often identified as Constantine. The identification and placement of these figures has related them to a judicial function since courts of law were held in their close proximity. These features may link them with later examples.

The revival of monumental, freestanding life-size equestrian sculptures after ancient Roman fashion was achieved in the mid-thirteenth century, most likely related to the Italian-born Emperor Frederick II, who was closely associated with the German patrons responsible for their production in Bamberg Cathedral by Bishop Egbert of Andechs Meran and by the archbishop of Magdeburg for the Old Market square.

Gnadenstuhl

The distinctive form of Trinity representation known as the *Gnadenstuhl* (Throne of Grace) consists of an enthroned God the Father holding, in his outstretched hands, the Crucifix. This image has its origins in the early twelfth century and expresses God's acceptance of His Son's sacrifice. It is thus fundamentally eucharistic and is first represented in an early twelfth-century Cambrai Missal (Cambrai, Bibliothèque municipale manuscript no. 224 [234]) illustrating the canon of the mass prayer *Te igitur*, where God is petitioned to accept the eucharistic sacrifice. Equally early is its depiction on a Hildesheim portable altar (London, Victoria and Albert Museum). It achieves monumental form in a large painted altarpiece of circa 1250–1270 from the St. Maria zur Wiesenkirche in Soest (Berlin, Stiftung Preussischer Kulturbesitz, Gemäldegalerie).

The dove of the Holy Spirit hovers above or between the two figures, adding a Trinitarian meaning to the

Gnadenstuhl, from an early fourteenth-century Psalter. Engleberg, Stiftsbibliothek, Cod. 60, fol. 194. Photograph: Susan Marti

eucharistic image. In the thirteenth century, the *Gnadenstuhl* appears on an engraved paten from Walcourt of circa 1230 by Hugo d'Oignies (Namur, Soeurs de Notre Dame, Trésor d'Oignies) and at Psalm 109, the Sunday Vespers psalm, in a number of Mosan Psalters, where the dove flies sideways with one wingtip in the mouth of each figure, literally illustrating the Nicene Creed formulation that the spirit proceeded equally from the Father and the Son. It was here in the Mosan region (which was part of the Holy Roman Empire) that the office and feast of the Trinity were established first in the tenth and eleventh centuries. The Trinitarian meaning of the image is also stressed in its appearance at the litany in the two early thirteenth-century psalters of Hermann of Thuringia and Elizabeth of Hungary (Stuttgart, Württembergische Landesbibliothek, manuscript no. H.B.II and Cividale, Museo archeologico nazionale, manuscript no. CXXXVI) for it is in the litany that the creed is found.

Holy Graves

The play *Quem quaeritis*, documented from the tenth century, reenacted the events of Easter morning. Three clerics dressed as the three Marys approached the "angel" who asked them, "Whom do you seek?" (*Quem quaeritis?*) before inviting them to verify for themselves that the crucified Christ had risen. The contemporary biography of Bishop Ulrich of Augsburg (d. 973) talks of burying a Host on Good Friday in an otherwise undefined "grave" (*Grab*), from which it was secretly removed on Easter morning. At other sites a crucifix was substituted for the Host. Like these early plays, the oldest preserved Holy Grave, a late-eleventh-century structure at Gernrode, gives visible form to these historical events.

The Gernrode group predicts in general terms the form and iconography of the more numerous Holy Graves of the thirteenth and fourteenth centuries: a room-sized architectural structure, with sculptural decoration depicting the conversation of the three Marys with the angel at Christ's empty tomb. Likewise the location in the south aisle is taken up by many of the later works.

Between 1260 and 1350, a number of Holy Graves appeared in the region of the Upper Rhine. That at Constance, which Peter Kurmann has redated to circa 1260, is the earliest preserved. Located in the tenth-century chapel of St. Mauritius, itself a copy of the rotunda of the Holy Sepulchre in Jerusalem, the Holy Grave retains the dodecagonal form of its exemplar. Small sculptural figures between the gables on the outside narrate scenes from the early life of Christ; those on the inside depict the three holy women buying salve from the apothecary and meeting the angel at the empty tomb. A wooden figure of the Magdalen from the Dominican women's convent at Adelshausen from the last quarter of the thirteenth century and an over-life-size Christ figure from Maria

Holy Grave from Strasbourg cathedral (Strasbourg, Musée de l'Oeuvre Notre-Dame). Photograph: Joan A.Holladay

Mödingen from the last third indicate that the more standard form of Holy Grave appeared about the same time. Influenced by contemporary tombs for well-placed clerics and laypeople, these groups included a life-size effigy of the dead Christ lying atop the sarcophagus under an architectural canopy. Against the back wall stand the three Marys, typically accompanied by the angel. The nearly simultaneous appearance of the Constance work and the more usual type suggests that the attempts by the scholars Schwarzweber and Forsyth to distinguish sharply between Holy Sepulchres—typically an architectural structure without sculptural decoration—and Holy Graves, with life-size figures, are overdone. What seems more important is that for about a century, these groups, like many of the other objects now commonly known as *Andachtsbilder*, answered the needs of pious Christians for visual images of the truths of their faith. That the Holy Graves served as the object of devotions and the stimulus for mystical participation in the events of Christ's life is documented in the so-called *Schwesternbuch* (nuns' book) documenting the religious practice of the nuns of St. Katharinenthal. The Holy Grave there probably belonged to yet another type: a wooden box, which contained a removable effigy, usually smaller than life-size, of the dead Christ. The interior lids of these boxes were often decorated with painted or relief figures of the Marys and angel or angels. The scholar Beyer identifies ten examples of the permanent, large-scale Holy Graves in Strasbourg in the fourteenth century; whether that of the 1330s in the St. Catherine chapel in the cathedral is before or after the similar monument in the cathedral at Freiburg im Breisgau (ca. 1130) is a matter of nationalist debate. Examples of the portable box type are preserved from the cloister at Lichtental (Karlsruhe, Badisches Landesmuseum), at the Maigrauge convent in Fribourg (Switzerland), and in the Schweizerisches Landesmuseum in Zurich. Both the stone and the wooden Christ figures frequently contained recesses in the chest or side for deposit of the Host between Good Friday and Easter.

Holy Kinship

A development of the iconography of *Anna Selbdritt* (Anna with Mary and the Christ child), the image of the Holy Kinship included St. Anne's extended family. This image grew as an alternative to the Tree of Jesse, giving Saint Anne the central role. This form, developed in the twelfth century, became extremely popular in Germany during the fourteenth and fifteenth centuries. The image grew out of the interest not only in the Immaculate Conception but in

reference to Mary's perpetual virginity and the extension of Christ's lineage to include various of his apostles. The Holy Kinship was elaborated in response to a reference in Matt. 12:46–50. Saint Jerome dismissed the reference to the "brothers of the lord" by explaining that brothers were equivalent to "the sons of my mother's sisters" at the time of the Gospels' composition. In one of his Bible commentaries, Haimo of Auxerre (fl. ca. 840–860) concluded that Anne must have had other daughters. This, in conjunction with the three Marys who witnessed Christ's resurrection, contributed to the development of the images of both the Trinubium and the Holy Kinship. The reasoning proceeds as follows: after Joachim's death, following the old law, Anne married his brother Cleophas and gave birth to Mary Cleophas, whose sons include James the Younger, Simon, Joseph the Righteous, and Judas. Upon Cleophas' death, Anne married Salome and had another daughter, Mary Salome. Mary Salome is the mother of Jacob the Elder and John the Evangelist. The three marriages of Saint Anne make up the Trinubium, her extended family, the Holy Kinship. The Gospel of Matthew traces Christ's male genealogy down through his earthly father, Joseph, but the Tree of Jesse imagery, derived from the Gospel in the twelfth century, eliminates Joseph in favor of the Virgin. The Holy Kinship provides a wholly female alternative, maintaining the format of the Tree of Jesse with Saint Anne as its source. Esmerentina, Saint Anne's mother, became the source in a later development, supported by the Carmelites, which allowed the inclusion of Elizabeth, John the Baptist, and Saint Servatius. Sometime in the fourteenth century, the image of the Holy Kinship became entwined with the idea of a *Hortus Conclusus*, the closed garden that is a symbol for Mary's virginity. Saint Anne is surrounded by her daughters and their children within the garden. The respective husbands look over the wall or are not present. In Germany the veneration of Saint Anne resembled a mother cult that permeated all levels of society. Saint Anne commanded universal appeal. Confraternities of the wealthy and middle classes believed her to be a member of their class, while the poor thought of her as their protector, calling on her during childbirth, marriage, death, barrenness, and illness. Saint Anne's popularity grew along with the expansion of guilds. She was primarily associated with the carpenter's guild and with miners. In many areas of Germany, popularity of her name was greater than that of Mary. Devotion to Saint Anne diminished throughout Europe in the sixteenth century. The Council of Trent forbade the image of the Trinubium in 1543–1563. The Holy Kinship, an expansion of the Trinubium, disappeared as well.

Johannesschüssel

The Gospels of Matthew (14:6–11) and Mark (6:21–28) relate the beheading of John the Baptist. King Herod was so pleased with the dance of his wife's daughter Salome on his birthday that he offered her whatever she wanted. Coached by her mother, who was angered that John had forbidden her marriage with her brother-in-law, she asked for the head of the Baptist on a salver. Herod had John beheaded and the head brought to the girl, who presented it to her mother.

As early as the tenth or eleventh century, the isolated image of the Baptist's head on the plate or platter (German, *Schüssel*) had appeared in Byzantine painting, where it served as an attribute of Saint John. The use of the image in western Europe begins in the thirteenth century. Among the large numbers of relics, including numerous relics of the Baptist, brought back to Europe by western Crusaders after the sack of Constantinople in 1204 was a large round silver plate, one of two found near the old

Johannesschüssel (Munich, Bayerisches Nationalmuseum). Photograph: Joan A. Holladay

imperial palace. Beginning in the thirteenth century, the image of the Baptist's head on a platter begins to appear both on seals and in life-sized sculptures in the round. The use on seals, especially those associated with members of the Order of the Knights of St. John, contributed to its spread. The sculptures are mostly found in southern Germany, Austria, and Tyrol. No single type predominates: the salver may be either flat or footed, the head may lie flat with the neck stump exposed or may be tilted up slightly for better visibility. The isolation of a particularly dramatic detail from a larger scene and their use in private devotional exercises place these works in the category of *Andachtsbilder* (devotional images), a characteristic subgroup of German Gothic sculptures.

Man of Sorrows

Representing a half-length portrait of Christ after his crucifixion, the Man of Sorrows (German, *Schmerzensmann*; Latin, *Imago Pietatis* [Image of Piety]) image contains elements which refer simultaneously to both his life and death. Although the wounds in his hands and side are evident, and he is shown with his eyes closed and his head dropped to the side, he stands erect and, in some variations, points to the wound in his side.

It is difficult to determine precisely the origins and development of this theme, but Panofsky and others have shown that it was originally a Byzantine motif, which was known and used in Italy by the twelfth century. The image type was popularized throughout western Europe in the fourteenth and fifteenth centuries, in part due to the efforts of the Carthusians who claimed that they owned the earliest image of this type in their titular church in Rome. According to the myth promoted by the Carthusians, the seventh-century pope St. Gregory had commissioned this image in order to record accurately a miraculous vision of the Man of Sorrows that had appeared to him during the performance of the Mass. For this reason, worshippers and pilgrims who said prayers before this image were offered generous indulgences. Although the Carthusian's image had probably originated in Constantinople and arrived in Rome around 1380, the popularity of this cult inspired the replication of this image in devotional prints and other pilgrim trinkets that served to spread the theme to the rest of Europe.

Even in some of its earliest examples, the Man of Sorrows was seen in several variations—with other characters from the Deposition scene or with other holy figures. In most of the earliest western forms of the image, the top and arms of the cross complete with its placard are shown behind Christ. In other depictions of the theme, Christ is shown with the *Arma Christi*, the implements of the Passion, such as the whipping scourge and the crown of thorns that make reference to his suffering as well as his eventual triumph. At times, the Man of Sorrows is held by angels on either side, or he is shown between the Virgin Mary and John the Baptist. In a later development of the theme, the Man of Sorrows appears as part of the Trinity; he is held by God the Father, and the Holy Spirit appears as a dove.

As several art historians have shown, many of these formal variations on the theme should be understood as artistic responses to the late medieval desire for a more direct and personal relationship with devotional images. Because of the half-length presentation of the Man of Sorrows, the medieval viewer was presented with a closeup portrait of Christ that was highly descriptive in its detail and could thereby bring the viewer closer to the actual experience of the Passion.

Mass of Saint Gregory

A legend that became popular in German art in the first quarter of the fifteenth century, the Mass of Saint Gregory reports that Pope Gregory I (ca. 540–604) had a parishioner who doubted the real presence of Christ in the elements of the Mass. After praying, the pope and the congregation had a vision of the suffering Christ within the chalice. The origins of the legend seem tied to the church of Santa Croce in Gerusalemme in Rome, where Pope Gregory was reputed to have said Mass and where there was a wonder-working image of Christ, supposedly donated by Gregory. This image of Christ and the story of the pope saying Mass were conflated in Germany into a depiction of Gregory's vision represented in a variety of media, including panel paintings and early printed books. The iconography of the legend was somewhat flexible and used many elements from other passion imagery, especially the *Arma Christi* (Weapons of Christ) and the Man of Sorrows.

A devotional image, the Mass of Saint Gregory celebrated the miracle of transubstantiation, and connected the Passion of Christ with the celebration of the Mass. The subject was particularly popular at sites with Corpus Christi or other eucharistic relics including Andechs on the Amersee, which possessed three hosts used by Saint Gregory, and Weingarten Abbey, which possessed a relic of the Holy Blood and which had an extremely early depiction of the legend on a manuscript leaf from the twelfth century. Images of the Mass of Saint Gregory sometimes carried indulgences, which were supposed to reduce the owner's time in purgatory and undoubtedly added to the image's popularity.

Palmesel

The name *Palmesel* refers to the donkey on which Christ rode into Jerusalem on Palm Sunday. Representations of

Palmesel from the region of Constance (Gottlieben?) (Basel, Historisches Museum). Photograph: Joan A.Holladay

this subject were usually three-dimensional wood sculptures, large if not life-sized, and outfitted with wheels so that they could be pulled in reenactments of the events of Palm Sunday. While Palm Sunday processions are known from the seventh century in Europe, the earliest mention of the use of an effigy or image in this paraliturgical context is in the *vita* (life) of Saint Ulrich, Bishop of Augsburg (d. 973). The oldest preserved sculptural example, from about 1200, is from the central Swiss village of Steinen. This example is typical in that Christ sits upright, his gaze directed forward; his right hand is raised in a gesture of blessing, and he holds a book or, more typically, the donkey's reins in his left.

While the Palm Sunday procession with a *Palmesel* is documented in fourteenth-century Essen, its use was more typical in southern Germany, Austria, and Switzerland, and most of the fifty-odd preserved objects can be localized to these regions. In Zurich, for example, the *ordo* of Konrad von Mure, written about 1260, records the long-standing annual procession (*Liber ordinarius* 1995:237–241). A procession of clerics and townspeople went to the elevation known as the Lindenhof to meet a second group accompanied by the *Palmesel*. Palms were distributed in front of the sculpture as the whole group made its way back to the *Grossmünster* (church).

The tradition of the Palm Sunday procession and the making and use of *Palmesel* groups continued right up to the Reformation.

Pestkreuz

With the development of devotional images known as *Andachtsbilder* in the Late Middle Ages, there arose in the Rhineland a new image of the crucified Christ, so terribly tortured and scarred as to appear stricken with the plague. These violently dramatic and graphic devotional images were therefore referred to as plague crosses (*Pestkreuze*). The plague-stricken appearance of Christ does not, however, seem to have been inspired by the

Pestkreuz, Cologne, Sta. Maria im Kapitol. Photograph: Rheinisches Bildarchiv der Stadt Köln

calamitous epidemics of the Black Death which ravaged Europe in the mid-fourteenth century. Rather, it can be seen as stemming from the rising preoccupation with the Passion, as seen in the increasingly elaborate descriptions of the torments of Christ. Already present in the thirteenth-century works of Pseudo-Bernard and Pseudo-Anselm, these traits of relentless and violent narrative description of the Passion became more common in the fourteenth century, as seen in the Passion Tract of Heinrich of St. Gall, the *Christi Leiden in einer Vision geschaut* (Christ's Passion as seen in a Vision), and Ludolph of Saxony's *Vita Christi* (Life of Christ). These texts, intended to inspire an increasingly emotional, subjective meditative experience, expound in great detail upon Christ's suffering.

A crucial text in this imagery was the book of Isaiah, which describes "the man of sorrows...thought as it were a leper" (53:4). The authors of the late medieval Passion tracts interpolated this passage into their accounts of Christ's suffering, so that Christ is beaten and tormented to the point of appearing leprous. The staggeringly sadistic details of the torments of Christ were particularly related to the Flagellation, as suggested in Isa. 1:6 and 63:1–2. The recitation of these passages during Holy Week rendered familiar this notion of Christ as *quasi leprosus*. This, coupled with the widespread circulation of violent narrative Passion texts based on this Old Testament imagery, may account for the frequency of such imagery in the North.

Possibly due to influence from the Cologne mystics, the *Pestkreuz* originated in the Rhineland. Examples include: Santa Maria im Kapitol (Cologne, dated 1304); Schnütgen-Museum (Cologne, ca. 1370, from Borken, Westphalia); San Giorgio dei Teutonici (Pisa, ca. 1315); St. Quirin (Neuss, ca. 1370, formerly in the MariaAblaß-Kapelle, Cologne); and the Hospice de Brioude (Haute-Loire, mid-fourteenth century). The influence of the dramatic crucifixion images, such as the *Pestkreuze*, can be seen in the mid-fourteenth-century writings of Bridget of Sweden (*Revelationes*, book 4). By the fifteenth century this type of image appears to have largely fallen from favor. However, the sporadic continuation of the *Pestkreuz* type can be seen in Matthias Grünewald's Isenheim Altarpiece of circa 1510.

Pietà

Also known as the *Vesperbild*, the *Pietà* presents an image of the Virgin Mary, seated with the crucified Christ in her lap. While there exist two-dimensional depictions of this theme, the term *Pietà* usually refers to representations that were sculpted in the round and intended for devotional contemplation. The first *Pietàs* were created for German convents around the beginning of the fourteenth century. In part, this theme appears to have been motivated by the writings of German mystics, such as Mechthild of Hackeborn (1247–1289), who encouraged her readers to meditate on Christ's wounds as he lay in his mother's lap. Around 1300, the Good Friday vespers began to include a meditation on this theme, resulting in the term *Vesperbild* to describe the sculpted images. By the later fourteenth century, the *Pietà* became popular in France, but it did not appear in Italy until after 1400. By the fifteenth century, the theme became widespread throughout Europe.

Often, sculptures of the *Pietà* were located on the secondary altars of churches, in close proximity to worshippers. Many of them were believed to work wonders. Viewers of such works were meant to meditate on the five wounds of Christ, which were understood to have healing and redemptive powers. In some cases, the host was kept inside the wound in Christ's side. In addition to meditating on the Passion and suffering of Christ, the *Pietà* image was also intended to focus attention on the suffering of Mary. Visually, the depiction of Mary holding her dead son recalls images of the Virgin and Child, and the miracle of the Incarnation. In this way, Mary's grief is made more poignant as her maternal role is emphasized. In addition, the theme draws a parallel between the Incarnation and the Passion of Christ, as two integral aspects of Redemption.

Several scholars have examined the theme of the *Pietà* in comparison to the narrative scene of the Lamentation. These studies help to clarify the

particular character of the *Pietà* as a private devotional theme. Where the Lamentation shows many mourners and a dramatic outpouring of grief, the *Pietà* presents a still and solemn configuration, a private moment between a mother and her dead son.

The earliest style of *Pietàs* in Germany was rather harsh and grim, showing a rigidly posed, upright Christ placed on the lap of his agony-stricken mother. However, with the International Style in the second half of the fourteenth century, the *Schöne Pietà* became more popular, employing a gentler and more tender mood as well as more delicate modeling. In later works, Christ was usually placed diagonally across Mary's lap or on the ground with his head resting in Mary's lap.

Saint John on the Bosom of Christ

The Gospel account of the Last Supper (John 13:23–25) relates how the apostle, "whom Jesus loved," rested his head on Christ's breast. In this sculptural group, the central pair of Christ and Saint John the Evangelist has been isolated from the rest of the apostles, and all indications of setting have been excluded in order to force concentration on and identification with the emotions and interactions of the main characters. In these aspects, this subject fits well with the typical definition of the German *Andachtsbild*, or devotional image.

Like other *Andachtsbilder*, the group of Christ and Saint John first appeared about 1300, probably in the heightened spiritual context of certain Dominican and Cistercian nuns' convents in southern Germany, along the Rhine, and in the area of Lake Constance. The numerous preserved examples of this subject indicate its widespread popularity, which must have derived from its numerous overlapping meanings relevant to the lives of

St. John on the Bosom of Christ (Stuttgart, Württembergisches Landesmuseum). Photograph: Joan A.Holladay

monastics and, especially, nuns. Both the Evangelist and the Baptist were understood as models of virginity, and sculptures of the two figures were sometimes installed as pendants on symmetrically placed altars. Sermons and commentary also identified the Evangelist as the bridegroom of the marriage at Cana, whom Christ called to the contemplative life, and as the bride of the Song of Songs, the embodiment of the loving soul in mystical union with God. The joining of the two figures' right hands as in the marriage rite reinforces this idea of bridal union. John thus presents himself as a model for the nun's identification as she strives for the ideal union of the soul with God.

Scholars have identified two slightly different versions of this subject. A group in Cleveland, perhaps the earliest preserved version of this subject, dating from about 1280, and a slightly later group, now in the Württembergisches Landesmuseum in Stuttgart, are characterized by the strictly vertical figure of Christ. In the far more popular version of the subject, deriving from the work carved by Master Heinrich of Constance for the Dominican nuns' convent at St. Katharinenthal (now in the Museum Mayer van den Bergh in Antwerp), the poses, gestures, and drapery configuration create a more tender interaction between the two figures. The subject also appears in stained glass and mural and manuscript painting.

Schreinmadonna

A hollow sculpted image of the Virgin and Child that opens to form a triptych (French, *Vierge Ouvrante*), *Schreinmadonnas* of wood and, less frequently, ivory ranged from a quarter-meter to a meter-and-a-half in height. They proliferated in central Europe from the twelfth to the early sixteenth century and experienced a brief revival as replicated collectors' pieces in the nineteenth century. Most published scholarship has concentrated on establishing types, chronologies, dating, and authentication.

Open, the figures frequently reveal a second carved image of the *Gnadenstuhl*, the vertical representation of the Trinity in which God the Father holds Christ in his outstretched arms. Less often, they display narrative scenes, and, rarely, a combination of the two. Several German examples from the late fourteenth and fifteenth centuries represent the Virgin as the *Madonna Misericordia*, extending her cloak to protect the faithful as they gather to adore the Trinity. The Schreinmadonna expressed notions associated with *Maria Mediatrix*, *Maria Ecclesia*, and *Maria Thesaurus*. The faithful gained visual access to the Godhead through the Virgin; the figures thus portrayed the Church's function as mediator between God and humankind and as administrator of grace. A vast range of metaphors for the Virgin as the container of the Trinity proliferated in late medieval hymns and verses. The materialization of these notions in the carved figures was criticized by Jean Gerson in 1402 and Johannes Molanus in 1570. Concerns centered around a possible literal reading of the figures that could lead to the misunderstanding that the entire Godhead sprang from the Virgin.

Schutzmantelmadonna

In images of the *Schutzmantelmadonna*, also known as the *Mater Misericordiae* and the Madonna of Mercy, the Virgin Mary takes a variety of figures under the protection of her robe. While the type appears suddenly in Central Europe and Italy in the late thirteenth century, figures with a sheltering mantle occur in antiquity. In Europe and Byzantium, legends of the Virgin and her mantle as the protectors of Constantinople appear in the early Middle Ages. By the twelfth century, references to the Virgin's mantle appear in such Cistercian sources as the writings of Bernard of Clairvaux.

Images depicting the Virgin with her robe spread probably began at the church of the Blachernae in Constantinople, which held her mantle as its major relic. But these images lack the sheltered human figures. In the thirteenth century, two forms of the Virgin with supplicants appear. Some scholars argue that one type, a seated Virgin with Child, was invented in Europe, citing Duccio's Madonna of the Franciscans as the earliest example. But the closest comparisons to Duccio's tiny panel are in slightly earlier Armenian and Cypriote works, suggesting that this version was invented in the East, although the presence of the Cistercians and other Western orders in Constantinople between 1204 and 1261 may have inspired this motif. It is the standing Virgin without the child who shelters figures under her mantle that dominates Central Europe. A version of this formulation also appeared in an Armenian Gospel of 1270, although there are reports of slightly earlier images of this Virgin in Italy. By the 1330s the standing type appeared throughout Central Italy. Over the centuries, it became associated with plague monuments in Central Europe, as well as with the Rosary. The *Schutzmantelmadonna* has persisted to the modern era in a variety of media. Most notable are images produced around 1500 by South German sculptors, including Gregor and Michel Erhart.

Sorrows of the Virgin

Although the New Testament barely mentions the Virgin Mary's presence at the Crucifixion, medieval commentators greatly expanded her role. The Virgin's sufferings at the sight of her Son's multiple torments became a standard fixture in the increasingly detailed and elaborated versions of the Passion, transmitted during the late Middle Ages through Passion plays, Passion tracts, devotional imagery, etc. The Virgin served as a mediatory figure whose sufferings enhanced the emotional impact of the story, and whose compassionate response served as a model for worshippers seeking an affective understanding of Christ's ordeal. Ultimately, the *Mater dolorosa*, or sorrowing mother, became herself an object of adoration, a mother whose own ordeal would enhance her sympathy for individual supplicants.

Gothic artists depicted the sorrows of the Virgin within the context of Passion scenes and as an independent subject. Motifs and themes particularly popular in Germany include Mary's *spasmo*, or swoon by the Cross; the *Mater dolorosa*—either alone or combined with a Man of Sorrows; the *Pietà*, in which the symbolic sword of compassion piercing Mary's chest is derived from the High Priest Simeon's prophecy to Mary in Luke 2:34–35; and the multiple sorrows of the Virgin. The last three were invented by German artists, who were possibly inspired by the Dominican mystic movements encouragement of affective devotion. The widespread popularity of this veneration in Germany is demonstrated by the large number of surviving images of the Virgin's sorrows in a range of media from crude woodcuts and small ivories, to monumental wall paintings, stained glass, and altarpieces.

Throne of Solomon

This iconographic subject is based on the biblical accounts (2 Chron. 9:17–20; 1 Kings 10:18–20) that describe the ivory and gold throne with six steps leading up to it. Two lions were positioned on each step with two additional lions placed on either side of the throne. In the Middle Ages, the throne of Solomon became associated with the Virgin and Child as the seat of wisdom (*sedes sapientiae*). It was also connected with the idea of judgment, either the Last Judgement or justice dispensed by secular monarchs.

Many representations of the Throne of Solomon come from German-speaking areas, especially the upper Rhineland and Austria. They date primarily from the Gothic period. An early example is a wall painting in the bishop's chapel of the Cathedral of Gurk dated 1210–1220. One of the most famous and prominent depictions is on the central portal gable of the west facade of Strasbourg cathedral dated in the late thirteenth century. Most of these images elaborate the association with the Virgin and the Incarnation. They add Virtues, who are interpreted as steps leading to the Throne, prophets, whose prophecies refer to the virtues of the Virgin, and doves, as gifts of the Holy Spirit. The lions on the steps represent the Apostles, while the two lions beside or just beneath the throne are *terror demonum* and *terror inimicorum* of the Last Judgment. This characteristically German iconographic theme thus becomes a *summa* of the Christian idea of salvation.

Wise and Foolish Virgins

The theme of the Wise and Foolish Virgins had appeared in Gothic sculpture from its very beginnings. On Abbot Suger's new façade for the church of the royal abbey at St. Denis (1137–1140), small figures of the virgins in low relief are arranged vertically on the doorposts of the central portal. Oriented to the image of the Last Judgment in the tympanum above, the Wise Virgins appear on Christ's right, on the left doorpost, with their hapless counterparts opposite, on his left (Latin, *sinister*) side. Arranged thus, the Virgins function as the ultimate metaphor for preparedness for entry into heaven, symbolized architecturally in the church building beyond the door. According to the parable in Matt. 25:1–13, five of the ten virgins waiting for the bridegroom had brought oil for their lamps; the other five came unequipped. When the bridegroom opened the door to allow them access to the wedding, only those whose lamps were burning were prepared to enter.

In the portrayals of this theme in art, the Wise Virgins carefully hold their lamps upright; as those of the Foolish Virgins are not burning, they are allowed to hang or fall. The separation of the women into two distinct groups is further dramatized by their physical appearance: the Foolish Virgins, disheveled with open hair, form a decided contrast to their calmer, better groomed sisters.

The theme makes its earliest appearance in German-speaking lands circa 1180 on the so-called *Galluspforte* (Portal of St. Gall) on the north side of the cathedral at Basel. Still small in scale, the virgins have now been moved into the lintel, where the proximity to the Last Judgment in the tympanum immediately above highlights the logical relationship between the two subjects. Six relief panels at the sides of the door represent the Acts of Charity, another metaphor for preparing oneself for the Last Judgment, also drawn from the Gospel of Matthew (25:34–36).

With the appearance of Gothic portal formats and programs in this region, the Wise and Foolish Virgins take on a new importance. Unlike French portals (Sens, Chartres, Notre-Dame in Paris) where the virgins only appear in small scale, on the west façade at Strasbourg cathedral (ca. 1280), large-scale figures occupy the jambs of the right portal. The figure of Christ as the Bridegroom, who had separated the two groups on the Basel lintel, appears here with his charges; his position on the innermost jamb not only makes visible the allusion to Christ as the door (John 10:9), but he seems to lead the Wise Virgins, on the right jamb behind him, into the church. For the sake of symmetry, a corresponding male figure, not present in the biblical text, was invented for the group opposite: the Prince of the World (*Fürst der Welt*) or the Tempter, wearing courtly dress and a crown of roses, stands on the outermost jamb. From this position, he offers the Foolish Virgins an apple with a seductive gesture, luring them away from the heavenly realm of the Church and back out into the world. In case his negative role is not clear enough, his elegant robe is open at the back, revealing the toads and snakes that consume his corrupted flesh. Similar twelve-figure groups were included in the interiors of the west porch at Freiburg im Breisgau (1280–1285) and Basel (1280s). Stylistic similarities also link these three groups.

Two eastern German versions of this theme from after the turn of the century depart from the courtly elegance of the Upper Rhine groups. Exaggerated poses and dramatic gestures of mourning characterize the Foolish Virgins at Magdeburg (ca. 1240–1250) and Erfurt (ca. 1350). Although these ten-figure groups are located on the north portals of their respective churches, it is not clear that this is the original installation at Magdeburg.

The scholar Helga Scieur has related the appearance of this theme in large scale on the Strasbourg cathedral façade to problems with local women in these years. In particular, the Beguines—women who chose a life of piety and charity outside the official institutions of the Church—provided a threat to ecclesiastical authority. Together with the personifications of the Virtues in female form on the jambs of the left façade portal, the Wise and Foolish Virgins would have provided an especially potent form of address to a female audience and a moralizing message to all viewers about the importance of one's own actions for personal salvation. At Bern, too, (ca. 1475), the use of this theme on the jambs of the cathedral's west façade portal has been related to local concerns, but the social, political, and religious contexts that may help to

Strasbourg, cathedral, west façade, right portal, right jamb: Christ and the Wise Virgins. *Photograph: Joan A.Holladay*

account for the use of this theme at other sites have not yet been investigated. Less well known and well researched are the Romanesque and Gothic painted versions, which also typically appear in association with other eschatological themes.

Ingelheim

The terrace on the left bank of the Rhein between Mainz and Bingen was the site of an important Carolingian palace. Jacobsen suggests that the church of St. Remigius documented in 742, which stood some five hundred meters away, may have been the chapel of an earlier palace (1994:30), but the structure for which Ingelheim is best known was erected under Charlemagne and his son Louis the Pious. Excavations conducted by Christian Rauch between 1909 and 1914, by Walter Sage in the 1960s, and ongoing since 1993 have revealed the plan of this ambitious structure. A heavy gate opened at the center of a curving wall onto a large semicircular forecourt at the east. Access to the second, square courtyard, around which the ceremonial and living quarters were arranged, was gained through the straight line of buildings opposite the entrance. At the southwest corner of the second court stood the *aula regia* (royal hall).

In addition to the scale of the complex, a number of specific features reveal the political ambitions of its patrons. A colonnade in imitation of ancient architecture ran along the curved inner wall of the semicircular forecourt. The large scale of the *aula regia*, its plan, and the arrangement of the windows in the apse suggest that it was modeled after the *aula palatina* (palace hall) erected by the early Christian Emperor Constantine at Trier. The cycle of paintings in the *aula*, documented by the ninth-century poet Ermoldus Nigellus, contributed to the palace's political message. Walther Lammers has reconstructed the two apparently separate but related parts of the cycle. One, depicting paired scenes from the lives of seven ancient rulers from Babylon, Africa, Greece, and Rome, he thinks, was painted in the nave. In the second, five Christian rulers were also given two images each: a single ceremonial image was accompanied by a narrative scene from that ruler's life. Depicted in this series was Constantine, Theodosius, Charles Martel, his son Pepin the Short, and his son Charlemagne. The second cycle was likely located in the single apse on the buildings south end. After his description of the sequence of Christian rulers, Ermoldus notes that this is the site from which the emperor ruled (1884:66). Like other aspects of the palace, the decorative cycle too may depend on ancient models; the combination of single figures and narrative occurred in the naves of the great early Christian churches in Rome—Old St. Peter's and St. Paul's outside the Walls.

The dating of the palace and its decoration is not entirely clear. Charlemagne's biographer Einhard refers to the king's building activities at Ingelheim and notes the splendor of the palace he erected here. Ermoldus's attribution of the painted cycle to Louis the Pious would seem to be clear, and most authors consider that Louis continued work on the palace begun by his father. Whether it was started early in Charlemagne's rule or at the end of his life is disputed, however. Jacobsen argues that the palace would have been brought to some degree of completion by the time Charlemagne spent Christmas there in 787 and held a royal assembly the following spring (1994:29–31) and that Ingelheim thus provides important evidence of an early date for Charlemagne's campaign to revive antique art and architecture to legitimize his own reign. Likewise Jacobsen dates the painted cycle in the *aula regia* to the years between 787 and 800 on the grounds that Charlemagne's imperial coronation in the latter year would certainly have closed the narrative cycle if it had been executed after this date.

The association of the palace at Ingelheim with Charlemagne and its importance in the emperor's artistic politics made it an attractive monument for later rulers wishing to ally themselves with the image of their predecessor. A palace church is first documented in 997, when Otto III gave it to the newly founded nuns' cloister at Aachen; excavations have located the single-aisled building with a transept and rounded apse in the south arm of the second, square courtyard, and ceramic finds have suggested that it may have been newly erected, perhaps by the emperor himself, about this date.

Frederick I Barbarossa renovated the palace in the early years of his reign. Referring to Charlemagne and his palace at Ingelheim, Frederick's biographer Rahewin mentions the role of these and other buildings in "hold[ing] the gift and the memory of such a great emperor in honor" (1986:712–713). The fact that Frederick visited Ingelheim only four times also supports the thesis that his goal in these renovations was not the practical one of greater comfort but, rather, part of his larger campaign claiming political descent from Charlemagne.

In 1354, the emperor Charles IV, who also drew widely on the image of his predecessor, established a foundation of Augustinian canons in the palace at Ingelheim as a dependency of the one he had founded at the Karlshof in Prague. Frederick and Charles IV also decorated their palaces at Hagenau and Prague, respectively, with painted cycles of their forebears and predecessors in office, perhaps under the influence of the painted cycle in the Carolingian palace.

International Style

In contrast with the distinctive regional styles of the first half of the century, a pan-European quality characterizes works of the years around 1400. From Poland to northern Italy, from the Netherlands to Prague and Vienna, figural works in both two- and three-dimensional media share a lyrical quality created by sweet expressions and swinging, rhythmic drapery folds described by sinuous lines. These stylistic features give rise to the other common name for this style, the Soft Style (*Weicher Stil*); German scholars also use the term *der schöne Stil* (the far, or beautiful, style). Usually counted among the wellknown practitioners of this style are André Beauneveu and the Limbourg brothers, all of whom worked for John, Duke of Berry, the brother of the king of France, as well as Lorenzo Monaco, active in Florence. Artists working in the Soft Style in German-speaking lands tend to remain anonymous, although the name Hans von Judenburg has been associated with a number of wood sculptures from Styria in southeast Austria, and the role of the later members of the Parler family in the development of the style seems to have been crucial. German painters whose work is typically associated with the International Style include the Master of St. Veronica and Konrad von Soest.

Although we use the word "style," these works also reveal preferences for certain subjects and formats. Gold ground images of the half-length Madonna holding her child tenderly before her are a favorite subject in panel painting. Examples include the closely related panels known as the Madonna of Roudnice, dated after 1380 (Prague, National Gallery, Inv. Nr. 0 7102), and the Madonna of the Church of the Trinity C^{esk} Bude ^{ov}ovice, a Prague work from circa 1410 or earlier (now Hluboká nad Vltavou, Southern Bohemian Ales^o-Gallery (Inv. Nr. 0/2). Preferred subjects in sculpture include the full-length standing Madonna with Child, known as the *schöne Madonna*, and the *schöne Pietà*, in which the Virgin supports the broken body of her dead son in her lap. In the latter, the youthful sweetness of the Virgin often seems at odds with the sorrow one would expect at this event.

Schöne Madonna, Würzburg, Marlenkapelle. Photograph: Joan A.Holladay

Scholarship on the International Style has concerned itself largely with two questions—sources for the style and the relationships between works. Already in 1923, the art historian Pinder suggested sources for the *schöne Madonnen* in Bohemian sculpture and painting of the era of Charles IV, while noting that both the basics of the style and certain details were already present in works like the late thirteenth-century Madonna at Magdeburg cathedral. He also identified centers of sculptural production in Prague and Salzburg, as well as on the Rhine and along the Baltic coast, and tried to trace the stylistic filiations between various works. Assigning even a general regional provenance to many works of this style remains difficult, however, as it is complicated by both the mobility of artists and the portability of their works.

Investiture Controversy

The Investiture Controversy refers to a late phase of eleventh-century Church reform, lasting from ca. 1078–1122. Sometimes, however, the term is used incorrectly to cover the entire period of reform from the 1050s to 1122, the date of the Concordat of Worms. The term describes the struggle between the papacy (*sacerdotium*) and the European monarchies (*regnum*) over the participation of the ruler in the making of bishops and abbots through the handing over of the ring and crosier (bishop's staff) with the words "receive the church." The wording of this phrase shows that an investiture referred to the bishopric or abbey in general and did not distinguish between the office and the rights and property that came with it.

The term "investiture" did not occur before the second half of the eleventh century, but the custom reached back to the tenth. The investiture ceremony differed according to place and time, but the handing over of the symbols of ring and staff—they had been sent to the royal court after the death of the previous bishop—often occurred in conjunction with the commendation of the candidate to the king and a promise of fealty. Both ceremonies had been described as homage (*hominium* or *homagium*) since the late eleventh century. In many sources these terms are implicitly included when only investiture is mentioned.

Investiture should not be confused with election or consecration, although investiture was the single most important factor in the success of a candidate. For many years popes did not object to investiture, which was seen as the natural and customary expression of secular influence and power. The ceremony assured rulers of the loyalty of the wealthy and politically powerful bishops and abbots who were required to fulfill the *servitium regis*, or obligations to royalty, consisting of property fees, hospitality, military support, and court attendance. In the Empire, the Ottonian and early Salian rulers at times added to those obligations the rights and properties of counties.

Pope Gregory VII pronounced the first general legally binding prohibition of investiture by any lay person at the Roman Council of November 1078. No cleric was allowed to obtain the investiture of a bishopric, abbey, or church from the hands of the emperor or king, or any layman or lay woman. The prohibition was strengthened at the Lenten synod of 1080. Gregory's successors continued to uphold these decrees, which Pope Urban II expanded to include homage at the Council of Clermont in 1095. Under Pope Paschal II the reference to homage was omitted in the case of England, but, apart from a short period in 1111/1112, when his hands were tied by the privilege Henry V had extorted from him, Paschal, too, insisted on strict prohibition of investiture. He succeeded in obtaining the acceptance of these principles in France (1107) as well as England (1105/1106). The settlement of the dispute for the Empire had to wait until 1122.

When Gregory VII deposed and excommunicated King Henry IV for the first time in February 1076, the investiture prohibition had not yet been fully formalized, but Henry's investiture of bishops in Milan, Fermo, and Spoleto doubtless was the provocation behind his excommunication. Beginning in the tenth century, German kings and emperors had relied to such an extent on the collaboration with ecclesiastics (Ottonian-Salian Church system) that the prohibition of investiture, which had assured them of the control of bishoprics and abbeys, threatened to undermine the monarchy entirely. At the assembly of Worms in January 1076, the German and Italian episcopate, with a few exceptions, had remained united behind the king. However, the investiture prohibitions, the election of the anti-king Rudolf of Swabia (March 15, 1077), and the final condemnation of Henry IV by Gregory VII (March 7, 1080) forged a powerful coalition between the noble opponents of the monarchy and papal adherents among bishops and abbots. Negotiations and battles between the two parties, which varied only temporarily in composition, followed upon one another for nearly thirty years. Not until 1109 (*Tractatus de investitura*) were there any signs of compromise. Henry's nomination of Archbishop Wibert of Ravenna at the synod of Brixen (June 25, 1080; consecration in St. Peter's Basilica as Clement III, March 24, 1084) transformed the Investiture Controversy into a struggle between *regnum* and *sacerdotium*, as evidenced by the numerous polemical writings edited in the *Libelli de Lite*.

The Investiture Controversy in France was much less dogmatic than in the Empire. The French kings Philip I (1059–1108) and Louis VI (1098–1137), as well as the nobility, also used the wealth, power, and property of bishoprics and abbeys in order to strengthen their own positions, but their situation was very different than either Germany or England. The kings and nobles of France divided among themselves the secular influence over the French church. Only about twenty-five French dioceses out of a total of about seventy-seven were open to royal influence. The tensions between Rome and Philip I were acute, but the issues in this case were the introduction of ecclesiastical reform and Philip's marital problems. Philip's excommunication and the interdict pronounced against him were purely pastoral punishments and had nothing to do with investiture. In France the investiture prohibitions of 1077/1078, first pronounced by the legate Hugh of Die, were only a minor additional irritant in the exercise of royal influence in those dioceses where the Capetians had always had to anticipate difficulties. Both popes and kings were always willing to compromise on investiture when absolutely necessary.

As exemplified in writings of the canonist Ivo of Chartres at the turn of the century, the argument for a differentiation between the temporalities and spiritualities connected to bishoprics and abbeys slowly gained ground. This differentiation would allow a king to invest an ecclesiastic with the temporalities (secular rights and property) of a see not by the ring and crosier, but by using some other symbol. Ring and staff had come to be understood as spiritual symbols that were not to be touched by the hands of laymen. It appears that, at the meeting between Pope Paschal II and the French kings at St. Denis (April 30–May 3, 1107), an agreement was reached on this basis. If a candidate were elected canonically, the king could invest him with the temporalities of his see. The king renounced the use of investiture, but in the case of a bishop, the bishop would promise fealty.

William I (1066–1087) brought to an end the English isolation from continental developments. However, papal willingness to compromise postponed a struggle over investiture till the time of Henry I (1100–1135) and Archbishop Anselm of Canterbury. As an exile, Anselm had been present at the Roman synod of 1099 where Urban II had repeated the prohibition of investiture and homage. Anselm considered himself bound to obey the papal decrees and, therefore, refused to accept investiture from Henry I. After negotiations beginning in Normandy in July 1105, Henry I declared that he would no longer insist on investiture but would continue to require the homage of prelates. Relying on the papal right to grant dispensation, Paschal II allowed Anselm of Canturbury in March 1106 to consecrate bishops who had done homage to the king but had not been invested by him. This compromise was criticized at an assembly in August 1107.

Isidore

Also known as the "Old High German Isidore and Mon(d)see/Vienna Fragments," this group of very early Old High German (OHG) texts and fragments are the sole surviving OHG theological prose tracts. Copied in a parallel translation opposite the Latin original on the same leaf (similar to the OHG *Tatian* with bilingual Latin/OHG on opposite manuscript leaves), the texts are: "Isidore": *De fide catholica ex veteri et novo testamento contra Iudaeos* by Isidore of Seville (d. 636), a treatise arguing against Jewish and for Christian beliefs, and the "Mon(d)see Fragments": snippets of four works: Isidore's *De fide*, the gospel of Matthew, an anonymous religious Latin tract, "*De vocatione gentium*," two sermons: one anonymous, and one by Augustine (sermon no. 76). As the OHG texts are Bavarian copies from circa 800/810, the original translations are thought to be from the late eighth century/circa 800, perhaps in the area of the western South Rhenish Franconian dialect (in or near Metz or Murbach). Considered by modern scholars to be prose of high stylistic quality, the texts were translated in connection with imperial church politics, possibly under Archbishop Hildebald of Cologne (785–818), who directed the monastery at Mon(d)see from 803. These very early OHG linguistic specimens were excerpted for some of the "Murbach-Oxford glosses" from the 820s.

Itinerant Kingship

The concept of itinerant kingship (German, *Reisekönigtum*) refers to a method of government whereby a king carries out all of the functions and symbolic representations of governing, by periodically or constantly traveling throughout his dominion. Although especially well-documented and studied for the Frankish-Carolingian and the German realms of medieval Europe, itinerant kingship existed throughout Europe during most of the Middle Ages. It even existed beyond the geographical and cultural boundaries of Europe, lasting in some places beyond the end of the European Middle Ages. Itinerant kingship thus designates a method of government found widely in premodern societies and determined by various economic, social, political, religious, and cultural factors. Societies having this kind of rulership display certain common characteristics: a largely natural economy; the dominance of peasant farmers by warriors or a particular clan; governmental authority deriving from personal relationships and often from feudal relations; magical or sacred conceptions of rulership; and, often, only a marginal reliance on written administrative government. In such societies, kings or chiefs moved constantly throughout their territories making their presence felt and reinforcing the personal bonds of their rulership.

The use of itinerant kingship in medieval Germany and the frequency of the royal progress or perambulation varied greatly according to governmental structure and administrative institutions. Merovingian and Carolingian kings traveled extensively, although not constantly. They resided for long periods of time in favored residences. Moreover, the Carolingian kingdom and empire at its height governed through using representatives or written instructions sent out from court. The East Frankish Carolingian kings, and especially their Ottonian and Salian successors, however, traveled almost constantly, rarely staying in one place longer than a few days or weeks or, at most, a month, and they used the written word in governing less than the Carolingian Empire. These kingdoms, based on a highly personal kingship, lacking centralized institutions, and depending only marginally on written records, used the royal itinerary as an essential method of governance. It became the crucial vehicle for manifestation of the royal will and the integration of a large and structurally diverse realm.

During the late Ottonian and early Salian periods, the king's initial perambulation of the realm (*Umritt*), on which he gathered assent from the regional assemblies of nobles to his election and received their homage, held great importance for taking real and symbolic possession of the kingdom upon accession. Thereafter, the Ottonian and Salian kings used the annual cycle of the royal itinerary, first, to convey the sacral nature of their kingship through solemn liturgical displays and wearing the crown, and, second, to execute the political and judicial aspects of their kingship by rewarding vassals and punishing enemies and by holding court and dispensing justice. The planning and organization of the itinerary depended largely upon the material resources along the chosen route. These included royal properties and the *fodrum*, *gistum*, and *servitium regis* (literally, fodder, hospitality, service for the king), primarily of royal churches, but sometimes of secular nobles. Itinerant kingship reached its high point under the Ottonian and Salian kings. The Hohenstaufen kings continued it to a lesser degree, but the onus of royal accommodation and support had shifted by then to the towns.

A Flemish poet, Maerlant came from Bruxambacht, or, the "Freedom of Bruges" (*het Brugse Vrije*). His oeuvre, which shows strong didactic tendencies, clearly indicates that he was well educated, even though his exact place in society is unclear. He probably received minor orders and held several positions as a clerk (*clerc*). In the late 1350s, Maerlant moved northward to the island of Voorne (in the estuary of the River Maas in the southern part of the county of Holland), taking his name from the village Maerlant (near Brielle) on that island. He became sexton (*cofter*, *custos*) of the local church of St. Peter (if *Coster* is not his family name), a profession that agreed perfectly with his activities as an author. During his stay in Maerlant he was possibly a tutor to young Floris V (d. 1296), count of Holland. Around 1270 he returned to Flanders, to Damme, near Bruges, earning his livelihood as a civil servant (in toll regulations) and continuing his writing. Tradition (unproved) has it that he was buried after his death ca. 1290 "under the bells" of the church of Our Lady in Damme.

Some of Maerlant's works are only known from references in his other works, such as the *Sompnarijs* (a book on dream interpretation), the *Lapidarijs* (a book on the mineral qualities of stones), and a *vita* (life) of St. Clare of Assisi. Maerlant's authorship of some works is still a matter of dispute, but his oeuvre amounted to at least 225,000 lines in coupled rhyme.

The oldest surviving work is *Alexanders Geesten* [Deeds of Alexander (ca. 1260, 14,277 verses)]. Maerlant wrote this history of Alexander the Great on a commission from Aleide van Avesnes, to whom he gives the pseudonym *Gheile* in an acrostichon (series of first letters in lines of a poem which spell words). The text is a translation and adaptation of the *Alexandreis* of Walter of Châtillon, which Maerlant took from a manuscript with glosses, but the poet used a broad range of additional sources, including the *Historia Scholastica* (Scholastic History) of Petrus Comestor, Lucanus's *De Bello Civile* (Civil War), Ovid's *Metamorphoses*, Virgil's *Aeneid*, the *Disciplina Clericalis* (Clerical Discipline) of Pedro Alfonso, the *Secreta Secretorum* (Secret of Secrets), and Honorius of Autun's *Imago Mundi* (Image of the World).

For Albrecht of Voorne, Maerlant wrote *Merlijn* in 1261. The text encompasses two separate tales: the *Historie van den Grale* (History of the Grail, 1607 verses) and *Boek van Merline* (Book of Merlin, 8485 verses), which were adaptations of Robert de Boron's *Joseph d'Armathie* (Joseph of Arimathia) and *Roman de Merlin* (Tale of Merlin). The *Torec* (ca. 1262) is Maerlant's second Arthurian romance. This text (about 3,800 verses) has only been handed down to us in an abridged form, included in the vast *Lancelot Compilation* of The Hague.

Maerlant's *Historie van Troyen* (ca. 1264, 40,880 verses) renders the history of the Trojan War, from its preparatory stages to its aftermath. Among the sources he used were the *Roman de Troie* of Benoît of St. Maure, the *Achilleid* of Statius, the *Aeneid* of Virgil, Ovid's *Metamorphoses* and his own *Alexanders Geesten*. In addition, he incorporated the complete *Trojeroman* of Segher Diengotgaf into his text. The patron behind this work is not yet known, but it is likely the *Historie van Troyen* was intended for a noble audience.

The "Mirror of Princes," the *Heimelijckheid der Heimelijckheden* (ca. 1266, 2,158 verses), was possibly written for the young count of Holland, Floris V, and is a translation of the *Secreta Secretorum* of Pseudo-Aristoteles. (Maerlant's authorship of this text is sometimes disputed.) *Der naturen bloeme* [Flower of Nature (ca. 1266, 16,670 verses)], the first bestiary in the vernacular, assimilated Aristotle's books on biology. Maerlant derived his text from his immediate source, the *Liber de Natura Rerum* (Book of Natural Things) by Thomas of Cantimpré. The bestiary was commissioned by the nobleman Nicolaas of Cats (d. 1283).

In 1271 Maerlant finished his *Scolastica*, an abridged adaptation of Petrus Comestor's *Historia Scolastica*. To this book, of some 27,000 verses, he added an adaptation of Flavius Josephus' *De Bello Iudaico* (On the Jewish War). Maerlant considered the total text of almost 35,000 verses as a single work. Probably commissioned by a noble patron, it was intended to serve an audience of noble laymen (*illiterati*). Even though it was not a translation of the Bible, the *Scolastica* marked the beginning of the popularization of the Bible in the Dutch language.

In the early seventies Maerlant wrote *Sente Franciscus Leven* (10,545 verses). This fairly literal translation of the *Legenda Maior* of St. Bonaventure is perhaps the first *vita* of Saint Francis in the vernacular. Maerlant wrote it at the request of the *fratres minores* (Order of the Lesser Brothers) in Utrecht. During his career as a poet, Maerlant composed several shorter stanzaic poems. These lyrical texts with a didactic aim show a fervent devotion to the Virgin Mary and a strong critical attitude towards society.

Maerlant's *magnum opus* is undoubtedly his *Spiegel Historiae*. He worked from 1283 until 1288 on this world chronicle, dedicated to Count Floris V of Holland. The major source by this text is Vincent of Beauvais's *Speculum Historiale* but Maerlant consulted and absorbed many more sources, among them the Vulgate, the *Secreta Secretorum*, *De Hormesta Mundi* of Orosius, *De Origine et Rebus Gestis Getarum* of Jordanes, two works by Martin of Braga (the *Liber de Moribus* and the *Formulae vitae honestae*), Paulus Diaconus's *Historia Miscella*, the *Historia Regum Britanniae* by Geoffrey of Monmouth, as well as the Crusade chronicles by Albert of Aken and (probably) William of Tyre. As it has come down to us, the *Spiegel Historiae* (ca. 91,000 verses), is not solely from the hand of Maerlant. He had planned a work in four parts (which he called *partieën*), and he wrote the first, the third, and three "books" of the fourth part. He had postponed work on the second part, containing the years 54–367 C.E., and never was able to complete it. Apart from the lacuna of the second part and the remaining "books" of part four, Maerlant wrote a history from the Creation to the year 1113. The *Spiegel Historiae* was completed by two of his younger contemporaries, Philip Utenbroeke and Lodewijc van Velthem. The latter added a fifth part, bringing the history to the year 1316.

The extent and diversity of his oeuvre, and his exceptionally erudite and critical style, marks Jacob van Maerlant as a leading author of his time whose stature extended beyond his Dutch homeland.

A Brabantine poet and a native of Tervuren, a small town between Leuven and Brussels, Jan van Boendale spent most of his working life as secretary to the aldermen of the city of Antwerp. In this position he dealt with all levels of society, an experience that affected his writing. His oeuvre consists of some seven works, although some of those texts cannot definitively be attributed to him. Boendale wrote several versions of some of his works, mainly updates of his historiographic texts, which were then dedicated to other patrons.

His first work, the *Brabantsche yeesten* (Brabantine Deeds), is a chronicle in coupled rhyme, dealing with the history of the Brabantine ducal house in the period from ca. 600 to ca. 1350. This chronicle is divided in five parts ("books"), of which the first four describe the history of Brabant before Boendale's own lifetime, and the fifth is devoted to the three dukes contemporaneous with him: Jan I (d. 1294), Jan II (d. 1312), and Jan III (d. 1355). This voluminous work of some 16,000 lines was not written in one effort; the first version dates from ca. 1316, the fifth from 1347, and a sixth version may have been written around 1351, each one providing an updated version of the history of the duchy. This does not imply that Boendale was completely original in his chronicle. Large parts of his text were copied from the *Spiegel historiael* (Mirror of History) by Jacob van Maerlant—whom Boendale elsewhere called "the father of all Dutch poets"—and the anonymous *Chronica de origine ducum Brabantiae* (Chronicle of the Origins of the Duchy of Brabant); only when writing about his own lifetime is Boendale original.

After completing a second version of the *Brabantsche yeesten* in 1318 he used the text in 1322 as the source for a very short rhyme-chronicle, the so-called *Korte kroniek van Brabant* (374 lines). He later wrote a second version of this text too, in the years 1332–1333.

But between 1325–1330, he composed an extensive didactic poem of more than 20,000 lines, called *Der leken spiegel* (The Layman's Mirror). In using this title, Boendale explicitly addresses an audience of non-readers (*illiterati*), offering them an encyclopedic text, dealing with cosmology, the nature of human body and soul, the history of the Old and New Testaments, church history, devotional practice, etc. The poem is structured according to the *Heilsgeschiede* (divine plan) and divided into four books. Books one and two deal with God's Creation, the structure of the universe, and the course of history; book three is concerned with the present, and book four with the future. *Der leken spiegel* contains the oldest poetical treatise in Dutch: in book three, chapter fifteen, Boendale presents, under the title *Hoe dichters dichten sullen ende wat si hantieren sullen* (How writers should write and what they should pay attention to), his views on literature. This is not a treatise on technical aspects of poetry, but a declaration by a self-conscious author concerning the cultural responsibilities inherent in authorship. Here, Boendale presents his ideas on, among other topics, the prerequisites of true authorship, the value of literary tradition, and the relationship between genre and fictionality.

Between 1330–1334 Boendale wrote his *Jans teesteye* (Jan's testimony), a dialogue in some 4100 lines of coupled rhyme. In this polemic-didactic dialogue the participants are "Jan," Boendale's *alter ego*, and "Wouter," probably a fictitious person, playing the role of the pupil. The topic of discussion is *grosso modo*, the quality of life in their time. Jan takes a positive, but not uncritical position; Wouter's position is negative: he is the "praiser of times past" (*laudator temporis acti*).

Shortly after 1340 Boendale wrote *Van den derden Eduwaert*, describing in 2,018 lines the role of the English king Edward III (d. 1377) in continental European politics. The poem was not only a tribute to this king, whom Boendale probably had met in person; it was first and foremost a panegyric to Duke Jan III of Brabant, an ally of the English king at the outbreak of the Hundred Year's War in 1337.

Boendale's authorship of two poems is disputed. The first is the very short *Hoemen ene stat regeren sal* (18 lines, before ca. 1350), a poem advising officials on "how to rule a town." The poem is known in several versions, some written on the tie-beams of city halls, including those in Brussels and Emmerich. The oldest known version is incorporated in a manuscript of *Der leken spiegel* (Brussels, Koninklijke Bibliotheek, manuscript no. 15.658, fol. 122r).

The second disputed poem is called the *Boec van der wraken* [The book of punishment (5,870 lines, ca. 1346)]. Reacting to the conflict between Pope Clemens VI and the German emperor Louis of Bavaria, in which he chose the imperial side, Boendale has written a pamphletlike poem around the theme of God's punishment for human sinfulness, with strong eschatological overtones. A second, updated version was written in 1351.

Typical of Boendale's historiographic works is his orientation on Brabantine history, apparent in the recurrent *origo*-motive (the tracing back of the origin of the ducal house to the Trojans) and the *reditus*-motive (the dukes of Brabant as the true inheritors of Charlemagne). Boendale's didactic perspective revolves around the theme of the *ghemeyn oirbaer* ("the common good"), which is the basis for his social criticism. Boendale criticizes clergy, aristocracy, and commoners alike, but evidently tends to identify himself with his urban environment. This somewhat intermediate position shows itself clearly in the dedications of his poems. Though often explicitly intended for a broad audience of laymen, many of the manuscripts contain dedications to members of the aristocracy, including Willem van Bornecolve, alderman of Antwerp, Rogier van Leefeldale, viscount of Brussels, and Duke Jan III of Brabant.

Jan van Boendale is an example of what is called the Antwerp School, a designation for the explosive literary output of Antwerp in the first half of the fourteenth century. When cities began to emerge as centers of literary activity in the late thirteenth century, Antwerp was the third most culturally important town of Brabant (after Brussels and Leuven). In Antwerp this increased literary activity resulted in a rather homogeneous group of texts, which included, besides Boendale's works, the *Sidrac*, the *Melibeus*, and the *Dietsche doctrinale*. The *Sidrac* is an extensive encyclopedic and didactic dialogue in prose, translated from French in 1318. The *Melibeus* (1342) is a translation of the *Liber consolationis et consilii* (Book of Consolation and Counsel) by Albertanus of Brescia (d. after 1246). In 3,771 lines, a moralizing dialogue between allegorical characters is presented.

The *Dietsche doctrinale* (German Doctrine 1345) is another translation of a misogynistic didactic text by Albertanus of Brescia, *De amore et dilectione Dei et proximi et aliorum rerum et de farma vitae* (On God's love...). This work of some 6,650 lines, divided in three "books," deals with love and friendship, virtues and vices, and closes with an interesting section on the nature of God. It thus presents a compendium of laymen's ethics. The thematic similarities between the *Melibeus*, the *Dietsche doctrinale*, and Boendale's oeuvre—that history is a framework for laymen's ethics as well as the central concept of the "common good"—has sometimes led to the attribution of these two texts to Jan van Boendale.

Jan van Ruusbroec, a Brabantine mystic, was born in 1293 in the village of Ruisbroek southeast of Brussels. When he was eleven, he went to live in the city with a relative, John (Jan) Hinckaert (d. 1350/1358), who was a canon of the collegiate church of St. Gudula. The boy attended the school attached to the church, and after the required studies, he was ordained a priest in 1317 and became a chaplain there. In Brussels he began to compose his first treatises on mystical life, among which were some of his most important writings: *Die geestelike brulocht* (The Spiritual Espousals) and *Vanden blinkenden steen* (The Sparkling Stone).

The *Spiritual Espousals* is the most famous and most translated of his works. It describes the entire path to a mystic life from a humble beginning to complete development and indicates the risks and possible deviations at each stage. According to Ruusbroec, the essence of mystical life is the direct and passive experience of God. To describe the different stages, he uses three terms in the *Espousals* which recur in all his treatises: *dat werkende leven* (the active life), *dat innighe leven* (the interior life), and *dat schouwende leven* (the contemplative life). Each is a way to live one's relation with God. In the active life, love manifests itself in the exercise of virtue; in the interior life, a new dimension of love is discovered: to adhere intimately to the Beloved; finally, in the contemplative life, the loving person is elevated above him- or herself and introduced into the most intimate life of God, the love of the Father, Son and Spirit in one divine being. Ruusbroec strongly emphasizes the point that, at each level, the higher life does not neglect, let alone reject, the lower life. A person who has discovered the interior life should not despise the active life. And, one who has been introduced into the contemplative life should not disdain God nor active service to his neighbor. Just as the interior life does not replace the need for an active life, but inspires and purifies it, the contemplative life enhances and elevates both.

Whereas the *Espousals* is famous for its all-encompassing view, Ruusbroec's small treatise, *The Sparkling Stone*, is a masterpiece of conciseness. It briefly describes the three lives of the *Espousals* and then concentrates on the highest of the three, the contemplative life.

In 1343 Ruusbroec, together with John Hinckaert and Frank of Coudenberg (d. 1386), another Canon of St. Gudula, left Brussels to live a contemplative life in Groenendaal (Green Valley), a site in the Wood of Soignes about ten kilometers south of Brussels. To cope with the juridical problems, resulting from their living together as a religious community without belonging to an established order or following a recognized rule, the group, which had meanwhile increased, became a provostry of canons regular of St. Augustine. Ruusbroec was the first prior of the newly founded monastery.

In Groenendaal he continued his work as a writer. There, he finished his largest work, *Van den geesteliken tabernakel* (The Spiritual Tabernacle). As the number of the manuscripts still preserved indicates, this treatise must have been very popular in its time. For the modern reader, access is difficult because the *Tabernacle* is a continuous allegory on some passages from the biblical books, Exodus and Leviticus, which describe the construction of the tabernacle and give ritual prescriptions during Israel's stay in the desert. The link between material image and spiritual reality may seem somewhat farfetched today, but the way in which Ruusbroec masters the complex whole of image and reality is astonishing.

In Groenendaal Ruusbroec not only wrote books, but also met people who came to him with their questions about a life of prayer. Among the most famous was Geert Grote (1340–1384), the founder of the religious movement, the Modern Devotion. Very rarely, Ruusbroec left Groenendaal to visit those who were not allowed to leave their monasteries. At an advanced age, he traveled on foot to a monastery of Carthusians to help them with some difficulties concerning his description of the highest stages of mystical life. This visit gave rise to one of his last works, *Boecksken der verclaringhe* (Little Book of Enlightenment). By means of another tripartition, *enecheit met middel* (unity with intermediary), *sonder middel* (without intermediary), and *sonder differentie* (without difference), he tries to explain to his friends that—though the distinction between Creator and creature is eternal—there is a moment in mystical life when nothing of the opposition between the beloved "you" and the loving "I" is left.

In 1381 Ruusbroec died in Groenendaal at the age of eighty-eight, but his works have survived him. During his lifetime, some were translated from the Brabantine Middle Dutch into High German for the *Gottesfreunde* (Friends of God) in Strasbourg and Basle, and into Latin. About the middle of the sixteenth century his *Opera Omnia* (entire works) were translated into Latin by a Carthusian in Cologne, Laurentius Surius (1523–1578). This was the basis for many later translations into modern languages, including German and Spanish. Ruusbroec's influence is evident in the first generations of the Modern Devotion: the canons regular of the Windesheim Chapter, Gerlach Peters (d. 1411), Hendrik Mandé (d. 1431), and Thomas à Kempis (1379/1380–1471). Another member of the Modern Devotion, Hendrik Herp (d. 1477), was so deeply influenced by Ruusbroec that he earned the name of "Herold of Ruusbroec." Through him, Ruusbroec's influence reached France through Benedict of Canfield (1562–1610) and John of Saint Samson (1571–1636). Born in England, Benedict passed much of his life in France, where he became a Capuchin. There, he introduced Ruusbroec to mystical circles, for example, to one Madame Acarie (1566–1618). John, blind from his early youth, joined the Carmelites and became one of the most outstanding mystical writers of his order.

Jans Enikel (fl. second half of the 13th c.)

Author of the Middle High German *Weltchronik* (World Chronicle) and the *Fürstenbuch* (Princess Book), which were probably written in the final quarter of the thirteenth century, Jans Enikel identifies himself in the *Weltchronik* as *Johans der Jansen enikel* (the grandson of Jans). He mentions that he owns a house and, in the *Fürstenbuch*, he emphasizes his status as a Viennese citizen (*ein rehter Wiener*). He, therefore, probably belonged to the upper levels of Viennese society.

The *Weltchronik* is a rhymed chronicle of some 28,000 lines. It was apparently quite popular, since it is found in thirty-nine manuscripts, either in pure form or mixed in with other chronicles. Beginning with the biblical Creation of the world and the story of Adam, the author narrates in anecdotal style the stories of biblical, Greek, and Roman figures, continuing into contemporary times with a catalogue of the popes and the emperors, and ending with Frederick II. The narrative technique is similar to that of the *Kaiserchronik*, while the narrative material itself is from different sources. In particular, there is a large amount from the apocryphal material of the Jewish tradition.

The *Fürstenbuch* is less widely transmitted, with four complete manuscripts and three fragments. It contains, in over 4,000 lines, the story of the founding of Vienna, followed by the history of the Austrian rulers from Markgraf Albrecht to Herzog Frederick II. The narrative breaks off with the events of the battle of Leitha (1246). Like the *Weltchronik*, the narrative style of the *Fürstenbuch* is anecdotal in nature.

The little research that has been done on Jans Enikel indicates a certain amount of freedom and creativity in his use of sources and models. The *Weltchronik* was particularly influential for subsequent chronicles, specifically the *Christherre-Chronik* and the chronicle of Heinrich von München.

Jewish Art and Architecture

Jewish art centered on ritual objects whose ephemeral nature, along with the vicissitude of *Ashkenazis* (a geocultural term describing the German Jewish community) has led to the disappearance of almost all examples. The existence and form of various objects can be expanded on from descriptions of pillages and images in contemporary manuscripts.

Art in the synagogue centered around the external decoration of the Torah scrolls. The wooden staves of the scrolls were decorated. Crowns of precious metals were placed over the scrolls, which were protected by a sheath or cloth. A metal pointer completed the dressing of the Torah. Attention was lavished on curtains for the wooden Torah ark. A pattern emerged with a valance embellished with various temple accessories. Perpetual lamps located in front of the ark were of metal and were star-shaped—a form that was to become popular for Sabbath lamps.

Ritual objects for the home included hanging Sabbath lamps. Wine, blessed prior to the Sabbath meal, was placed in beakers made of precious metals, and decorated with biblical scenes. Lamps and spice boxes required for the ceremony ending the Sabbath were also decorated: the earlier turret shape of the former later changed to towers or steeples. The latter were made of glass, but metals such as silver and gold were also used. Passover plates were decorated with ritual scenes relating to the festival. Lamps used during the Festival of Lights evolved from

Machzor Mecholl Haschana (Dresden, Sächsische Landesbibliothek/Staats- und Universitätsbibliothek Dresden, Ms. A 46a), fol. 202v: Moses receiving the tablets of the law. *Photograph: Sächsische Landesbibliothek/Staats- und Universitätsbibliothek Dresden, Deutsche Fotothek: R.Richter*

clay examples to ones of metal, which could be hung against the wall.

Manuscript production included liturgical books such as the Torah, Bibles, codices containing the obligatory prayers and additional poetry for Sabbath and the cycle of festivals (*Machzorim*) and text read at the Passover meal (*Haggadot*), rabbinical writings such as the *mishneh* Torah, marriage contracts, medical treatises, fables, and bestiaries. Jews were excluded from craft guilds, so not much is known about Jewish scribes and illuminators, except when the names of the former were included in colophons. While no specific style developed, script, iconography, and some motifs were specifically Jewish. Absence of capital letters in Hebrew writing led to evolution of bold initial word panels. Micrography was popular, with incorporation of the text into carpet pages. Portraying God in human form was strictly prohibited. The practices of using bird or animal heads on human forms, and of portraying heads from behind or with faces left blank, developed in the thirteenth and fourteenth centuries. By the fifteenth century, complete representations of humans were no longer avoided. A specific iconography based on biblical and midrashic concepts, ritual, and custom evolved for decorating the *Mahzor* (prayer book) and *Haggadah* (book with Exodus text), with a stress on folklore and humor in the latter.

Communal buildings included ritual baths, community halls, schools, and hospitals. The heart of a Jewish community was the synagogue, whose architecture was defined by the requirements of religious law and local authorities. Exteriors were unpretentious, though the interiors could be quite sumptuously decorated. Liturgical requirements necessitated a Torah ark placed on the axis and a reading platform. The sexes were separated during prayer, at first with a curtain, and later by addition of an annex. Two principal building types evolved: two naves separated by columns, or a single nave. Vaults frequently were five-partite. Decoration of sculptured reliefs, frescoes with animal and floral motifs, and stained glass windows became increasingly popular.

Introduction

Jews traveled throughout Germany as merchants in the late Roman Empire and early Middle Ages. Jews may even have settled in cities such as Cologne as early as the fourth century, though there are few substantive records of permanent Jewish settlement in Germany before the ninth and tenth centuries, when a number of Jewish families, the most prominent the Kalonymos family from Lucca, likely made their way to the Rhineland from Italy.

From the ninth to eleventh centuries, the most important Jewish community was in Mainz. In the 960s and 970s, there is mention of royal protection for Jews in Magdeburg and Merseburg. Jews settled in Regensburg in the tenth century, and Cologne, Worms, Trier, and Speyer in the eleventh century. In general, Jews found homes in old episcopal and trade centers. The famous invitation of the Bishop of Speyer to the Jews of Mainz in 1084 offered protection and numerous privileges for settling in the city at the same time that it made clear the economic benefit that the bishop intended to reap through their businesses. The charter was thus indicative of the later development of medieval German Jewry. Similar charters were offered to Jews in other cities, such as Worms in 1090. Due to the favorable economic conditions, autonomous self-government, and strong systems of education bolstered by the settlement of important scholars, the Rhineland communities flourished in the High Middle Ages.

Initially, Jews settled in cities and were first involved in international and later, during the eleventh century, in regional business. In the twelfth and thirteenth centuries, Jews were also involved in the collection of tolls and taxes, as well as money handling and credit, in large part due to restrictions prohibiting them from other occupations. Some Jews practiced as doctors, and many also were employed in the service of the Jewish community itself, as teachers, rabbis, and butchers, for example. Despite occupational restrictions, there are traces of Jews in a vast diversity of occupational positions in the later Middle Ages, such as "engineers," glassblowers, barbers, bookmakers, printers, gold and silversmiths, traders of many products (precious metals, leather, textiles, wine, fruit, vegetables, saffron, weapons), handworkers, weapon makers, innkeepers, servants, and furriers.

In the ninth century there were only a few dozen Jewish families in Germany, probably a few hundred in the tenth century. It has been estimated that there were as many as 4,000 to 5,000 Jews by the end of tenth century, and 20,000 to 25,000 on the eve of First Crusade (1096) at the end of the eleventh century. At the end of the Middle Ages, the largest Jewish communities included Regensburg (with more than 500 Jews), and Nürnberg (with more than 200 Jews). In the largest Jewish communities, however, Jews typically comprised no more than 1 to 3 percent of the total city population. The number of Jewish communities, each rather small in size, increased dramatically during the second half of the thirteenth and the first half of the fourteenth centuries, before the massacres and persecution of the Jews during the Black Death (1348–1350). Jews were dispersed throughout Germany in the fourteenth and fifteenth centuries, and there were numerous small Jewish communities and traces of Jews in areas outside larger cities and in rural areas. In the High Middle Ages, Jewish settlement was particularly wide-spread in the Rhineland, Upper Germany, and Franconia, though much thinner in Bavaria and the north. After the thirteenth century there was a thick settlement in the east, in places such as Silesia, Moravia, and Lower Austria. During the fifteenth century there was a substantial growth in the number of communities in the southwest, particularly in Baden Württemberg and parts of Bavaria.

Internal Development

The Jewish community often consisted of a small number of Jews who entered into an association based on consensus through binding oaths in order to protect the rights of its members from external authority and to regulate internal communal life according to a shared body of Jewish law, primarily as brought down in the Talmud and the various medieval codifications of Talmudic law, rabbinic *responsa* (commentaries), and local or regional ordinances and customs. Such associations could be oligarchic and ineffectual, relying as they did on indirect authority and the revocation of particular, typically ritual, services.

The Jewish community in medieval Germany was, in a certain sense, a state within a state. On the one hand, the Jewish community possessed the privilege of self-government; on the other hand, Jewish autonomy depended heavily on the toleration, and often assistance, of the civil government. The result was that Jews functioned within two systems of government that could be overlapping or contradictory. Try as they might, leaders of the Jewish community at times even had difficulty in keeping legal cases that had primarily to do with Jewish law from Christian or civil courts.

Although the individual local community, especially before the end of the fourteenth century, came to regard itself as an autonomous jurisdictional area, communities often joined together to enact specific regulations or to judge particular legal cases. Throughout the Middle Ages there were a number of important rabbinic synods that attempted to create centralized authority and legal observance. Of particular importance were the combined synods of the three Rhineland communities Speyer, Worms, and Mainz, known as *SHUM*. Between 1196 and 1250, ordinances were discussed and approved regarding a broad array of topics such as trial procedures, debts, taxation, the ban of excommunication, sumptuary laws, synagogues, and relations with non-Jews.

Although some Jewish communities had strict laws regarding the settlement of other Jews, membership in the community was typically automatic once an individual resided in that city for more than twelve months, had bought a house, begun extensive business, or settled his whole family.

The community was governed by a community council, comprised originally of wealthy and scholarly members of the community and convened for religious and "civil" functions in order to initiate and regulate communal policy, and protect the community and its economic, judicial, and diplomatic interests. The council heard cases between local and foreign Jews, cases regarding informants, information about the declaration and collection of taxes, and at times might oversee the distribution of charity. In larger communities a body of offices, at times modeled after local non-Jewish structures, dispensed important administrative functions. There were, for example, such positions as the supervisor of charity, tax assessors, as well as positions requiring the upkeep of the cemetery or the synagogue. The number of members serving on the council varied from city to city, as did the exact procedures for electing them. Most cities appointed between seven and fourteen members. In some places, councilmen were elected by a majority vote of all residents, in other communities through an indirect election committee. Generally, in theory at least, the length of tenure of office was one year; practically, however, officers were not typically removed from office as long as they continued to fulfill their duties. Elections often required the additional approval of the civil or ecclesiastical authority and often stipulated that the person elected pay an election fee and take an oath of fealty to the civil authority. Smaller communities had only a few leaders, or *parnasim*, who oversaw the numerous administrative functions within the Jewish community and between the Jewish and non-Jewish authorities.

The instability and dramatic results of the pogroms following in the wake of the Black Death had a profound effect on the Jewish communities in Germany. In response to disintegrating communal structures, the position of the rabbi became more formalized or "professionalized," since the rabbi was the chief person who could interpret and apply the body of Jewish law. At the end of the fourteenth century, Rabbi Meir ben Baruch Halevi of Vienna adopted a policy of ordaining students in order to permit them to establish an academy and perform vital rabbinic functions. Such ordination became popular in the fifteenth century and made the rabbi the primary agent in the reconstitution of the shattered Jewish communities.

The Jewish community entailed more than just Jewish people. A number of physical structures typically made up a Jewish quarter, if they did not yet constitute an official Jewish ghetto. In addition to living spaces, there were synagogues, ritual baths, and cemeteries. In the later Middle Ages we also find in the larger Jewish communities such as Mainz traces of a bakery and a slaughterhouse.

The Jewish household often included several generations of extended family and servants, even though the core Jewish family in medieval Germany may have averaged less than two children. Women played a central role within the Jewish family and community and they possessed a number of legal rights, particularly regarding marriage and divorce. Women could also play important roles in business matters, especially widows, who often continued their husbands' trades. In fact, Jewish women frequently headed their families: 22.6 percent of all family heads on the Mainz list of Jews martyred during the First Crusade, for example, were women.

Jewish learning took place at a number of levels. Both private and community instruction was available at the elementary and advanced levels—for children and for Talmudic students. Talmudic students studied in a *yeshivah*, a small association of students and a prominent scholar, that resembled in some external ways the early universities of the Middle Ages. Throughout the Middle Ages, *yeshivot* (plural) were organized, as well as housed and financed, by particularly prominent rabbis who attracted a following of students, who wandered from *yeshivah* to *yeshivah* in search of instruction, legal decisions, and local customs. Unlike the Jewish academies of Babylonia in the Talmudic period, German *yeshivot* were typically small, ranging in size from several to perhaps as many as 100 students. Students were instructed in a variety of textual methods and with a number of sources, particularly the Talmud, important medieval commentaries, and the decisions of other prominent rabbis, as well as local customs. Throughout the Middle Ages, German Jews engaged and created legal works, liturgy, chronicles, books of customs, and biblical and Talmudic commentaries. Some Yiddish and German works were also produced and undoubtedly circulated, though these seem to have been more significant only toward the end of the Middle Ages. Some Jews were also involved in mystical speculation and writing, such as the *Hasidei Ashkenaz*, or German Pietists, who flourished at the end of the twelfth century, particularly in some of the Rhineland communities and in Regensburg.

External Relations

Throughout the Middle Ages there were serious points of conflict between Jews and Christians and deadly attacks against Jews by Christians in Germany. Among the most notorious physical attacks were the massacres associated with the First Crusade, in which Christians murdered thousands of Jews, particularly in the Rhineland communities, and the accusations of well-poisoning and subsequent pogroms against and expulsion of the Jews during the Black Death in the middle of the fourteenth century. Less well-known are the attacks against Jews in the late thirteenth and first half of the fourteenth centuries, particularly in south Germany, as well as the eventual and almost systematic expulsion of the Jews from a variety of German cities in the fifteenth, and German territories in the sixteenth century. Both ecclesiastical and secular authorities persecuted the Jews at times. In 1012, for example, the Jews of Mainz were expelled by Henry II, and after the first third of the thirteenth century, when Jews were granted imperial privileges of protection as serfs of the chamber, they became easy and frequent targets of financial extortion, forced to pay weighty taxes and make substantial contributions to the crown. The anti-Jewish stance of the church could be even more destructive. The archbishop of Mainz, for example, sought to expel the Jews of Mainz as early as 937, and the Fourth Lateran (papal) Council (Rome, 1215) legislated severe restrictions against Jews that were taken up throughout Germany. Jews were, for example, restricted in their travels and their social interaction with Christians and were forcibly distinguished from Christians by required articles of dress, such as the Jewish hat or the yellow patch. They were also at times subject to heavy Christian missionizing and forced conversion. Anti-Jewish sentiment could be generated among the populace as well as the elite. Political and social segregation within the cities and professional marginalization were combined with popular negative perceptions, which cast Jews as culprits in theft, sorcery, host desecration, and ritual murder (as in Würzburg in 1147 and Fulda in 1235).

It would, however, be a mistake to suggest that Jews and Christians in medieval Germany never had normal relations. Often Jews and Christians shared cultural and social, if not religious, identity. Even where Jews lived in physically separated areas from Christians there were unavoidable points of contact in business and everyday life. Although it is difficult to document such interaction, the proliferation of both Jewish and Christian calls for the social and cultural separation of Jews and Christians indicates that there was significant interaction between the two groups on a daily basis and at a variety of levels.

In the end the Jews were unique in an otherwise homogeneous Christian culture, and yet the history of their development and interaction with their Christian neighbors reflected many of the more general historical developments in medieval Germany.

As in most cases of medieval German literature, hardly anything is known about the author, except for some self-references in his courtly romance, *Wilhelm von Österreich*. He mentions that he was born in Würzburg and worked as a scribe, perhaps for the counts of Hohenberg and Haigerloch, especially Count Albrecht von Haigerloch (d. 1298). He also expresses his thanks to a citizen of Esslingen, Dieprecht, for helping him with his work. *Wilhelm von Österreich* was completed in May of 1314 and was dedicated to the Dukes Leopold and Frederick of Austria. It appears to have been rather popular, since it has come down to us in a large number of manuscripts (in Gießen, Gotha, The Hague, Heidelberg, etc.). In total, there are ten complete manuscripts and ten fragments extant.

Wilhelm von Österreich is a biographical romance combining chivalrous with amorous adventures providing a mythical-historical background for the ruling House of Hapsburg. Duke Leopold of Austria and the heathen king Agrant of Zyzia make a pilgrimage to the holy site of John of Ephesus to pray for an heir. They meet by chance and make their sacrifices together. Leopold's wife delivers a son, Wilhelm, and Agrant's wife has a daughter, Aglye. The goddess Venus awakens love in both children through dreams and instigates Wilhelm to leave home on a search for Aglye. After exotic travels he meets Aglye, and the children fall in love. Her father, Agrant, separates them, however, because he wants to marry his daughter to a heathen prince. The lovers exchange an extensive correspondence that documents the high level of literacy that members of the higher aristocracy could acquire in the later Middle Ages. Aglye is twice promised as wife to heathen princes, but Wilhelm kills them both in battles and jousts. Only after he has liberated Queen Crispin of Belgagan's kingdom of monsters are the lovers able to meet again. Soon afterwards a massive battle involves the heathen and Christian forces, which concludes with the Christians' victory and the heathens' baptism. Finally, King Agrant agrees with the marriage of Aglye and Wilhelm, to whom a son is born called Friedrich. Wilhelm dies thereafter when he is ambushed by an envious brother-in-law. Aglye's heart breaks when she hears the news and dies as well.

Wilhelm experiences a large number of allegorical adventures throughout his quest for his beloved. These, and other aspects, are often commented on by the narrator, who fully enjoyed the use of the so-called *geblümter Stil* (flowery style). Johann von Würzburg refers to Gottfried von Straßburg, Wolfram von Eschenbach, and Rudolf von Ems as his literary models. He also knows Albrecht's *Jüngerer Titurel* and other thirteenth century romances.

Wilhelm von Österreich displays a surprising openness toward the heathen culture, although the paradigm of Christianity as the only true religion is not abandoned in favor of global tolerance. Johann von Würzburg enjoyed considerable success with his work, which glorifies the House of Austria and combines the exotic world of the Orient with the world of Arthurian romance. The text was copied far into the fifteenth century and discussed by other writers such as Püterich of Reichertshausen and Ulrich Fuetrer. Anton Sorg printed a prose version in 1481 and 1491 in Augsburg, which was also reprinted, probably in Wittenberg in 1530–1540. Wilhelm and Aglye, the main characters in the romance, are portrayed in the fifteenth-century frescoes on Castle Runkelstein as ideal lovers, next to Tristan and Isolde, and Wilhelm of Orleans and Amelie.

Biographical details concerning one of the most original and influential scholars of ninth-century Carolingian Europe are sparse. John Scottus (Eriugena) left Ireland for the Continent probably in the 830s and by the 840s was attached to the west Frankish court of Charles the Bald (r. 840–877). His career oscillated between the court and the ecclesiastical and intellectual centers of northeastern France, especially Soissons, Laon, and Reims. John's major work, the *Periphyseon* (On Predestination), an engaging, complex, and original philosophical meditation embracing elements from the Augustinian, Neoplatonic, Greek and Latin patristic, and liberal arts traditions, is justly regarded as his masterpiece and as the most impressive speculative work between Augustine and Abelard. John Scottus's intellectual and pedagogical interests ranged widely. His earliest works, glosses on the grammar of Priscian (sixth century), on Martianus Capella's allegory of the liberal arts, *The Marriage of Philology and Mercury*, and on the Bible, introduced John's students to both human and sacred wisdom. His reputation as a keen scholar led the bishops of Laon and Reims to ask him to counter the views of Godescalc (Gottschalk), a Saxon monk, who argued that humans were predestined by God to both salvation and to damnation. In his *Periphyseon*, John demonstrated that humans were predestined for salvation, but not damnation, and seemed to suggest that evil was not real. This approach prompted widespread condemnation of John, who was lumped together with other Irish scholars for seeming to privilege dialectic over biblical truth. John's career as a teacher and author might well have ended at mid-century had not Charles the Bald continued to patronize and protect him. John's early works show an unusual and deepening familiarity with the Greek language and with the works of Byzantine theologians. In the aftermath of the predestination controversy he translated a series of seminal Greek works into Latin, none more important than those of Pseudo-Dionysius, a sixth-century Neoplatonist mistakenly revered in the Middle Ages as the first-century Athenian disciple of the apostle Paul. He also translated works by Maximus the Confessor, Gregory of Nyssa, and Epiphanius of Salamis, and thereby opened up conduits to the Greek tradition of mystical theology. His translations influenced the development of his own thought. He commented on the Pseudo-Dionysius's *Celestial Hierarchy* and wove Byzantine theology into the *Periphyseon*. The popularity of John's homily on the prologue to the gospel of St. John (more than fifty-five manuscripts survive) is owed to the medieval misattribution of the homily to Origen and John Chrysostom, an understandable confusion given the patently Greek flavor of the homily. Charles the Bald's emulation of Byzantine court ceremony and dress offers a political parallel to John Scottus's scholarship, especially since the scholar also participated in the life of the court. Much of the poetry he composed and recited in Greek and Latin at the court of Charles and Irmintrudis, his queen, celebrated the important religious feast days and battlefield victories. John Scottus died apparently while at work on an unfinished commentary on the gospel of John. The surviving manuscript contains notes in Scottus's own hand.

Born in German and Czech-speaking Bohemia, Tepl (also known as Johannes von Saaz or Johannes Henslini de Sitbor) has been identified as the author of the *Ackermann aus Böhmen* (The Bohemian Plowman) by means of the acrostic IOHANNES, and by the signature de Tepla ("of Tepl") in a letter accompanying the work sent to friend Peter Rothirsch of Prague. Appointments as rector of the Latin school and notary of the cities of Saaz and later Prague-Neustadt show Tepl to have been literate in both Czech and Latin as well as German. Besides the *Ackermann aus Böhmen*, only a few German and Latin verses, plus parts of a Latin votive office (1404), have been identified as Tepl's work. It is unclear whether the *Czech Tkadlecek* (ca. 1407), a text similar to the *Ackermann* in which a weaver laments the loss of his unfaithful sweetheart, might also have been composed by him. The *Ackermann* is preserved whole or in part in sixteen manuscript editions, mostly of upper German provenance, as well as in seventeen early printed editions. The Pfister edition of 1460 is one of the two earliest printed books in German.

The work, an audacious debate with death, is framed as a legal proceeding in which a grief-stricken widower, a "plowman of the pen" (i.e., a scribe) brings a complaint against the justice and justification of death in God's world order. The plowman bewails the loss of his virtuous young wife, Margaretha and rails at Death's cruelty and unfairness. In sixteen rounds of spirited debate, the plowman condemns Death while defending life, love, and man, God's finest creation. Death, in his turn, denies any dignity of man and any right to life, vaunting, instead, his own power and arbitrariness. Only in chapter 33 is the argument silenced when God is called on to deliver a verdict in the case. Because the plaintiff has fought well, God awards him honor, but gives the victory to Death by affirming the status quo. The work ends with an impassioned prayer for the soul of Margaretha.

The emotional verisimilitude of the argumentation and the correspondence of biographical data in the text to certain facts of Tepl's life have raised the question whether the work might not have been precipitated by an actual bereavement of the author, perhaps his first wife, the mother of his two oldest children. Records show Tepl to have been survived by a widow, Clara (possibly a second wife), and five children. The autobiographical thesis seems to be at odds, however, with the tone of the author's letter to Rothirsch, which emphasizes the stylistic devices and rhetorical strategies deployed in the work. More significant than the unresolved autobiographical issue is the controversy over whether the arguments and style place the work further within the realm of late medieval or of early humanist thought. Although thematically and formally the *Ackermann* remains largely indebted to earlier medieval traditions, stylistically its language echos that of Johann von Neumarkt's chancellery German, which shows the strong influence of the Latin rhetorical forms of Italian humanists.

Judith, Empress (ca. 800–843)

Adulated as a Rachel, vilified as a Jezebel, Empress Judith (r. 819–840) has likely suffered more than any other Carolingian from a polarized historiography. Primarily known as the second wife of Emperor Louis the Pious (r. 814–840) and mother of King Charles the Bald (r. 840–877), she assumed a commanding role in the volatile world of ninth-century Frankish politics, earning the respect of many, and the enmity of many more.

Presented at the February, 819, Aachen assembly by her parents (Welf, count of Alemannia, and the Saxon noble-woman Heilwig), a beautiful Judith caught the recently-widowed emperor's eye; they were married immediately. Judith gave birth in 821 to a daughter, Gisela, but did not pose a real threat to her three stepsons until producing a rival male heir, Charles, on June 13, 823. From that day forth she strove to procure a stable future for her son (and herself) by arranging advantageous marriage alliances, installing relatives in key imperial offices, and using her proximity to her husband on behalf of several influential courtiers. She achieved her greatest successes in Louis's territorial grants to Charles in 829 (Alemannia), 832 (Aquitaine), and 837 (Neustria), followed by the actual crowning of Charles as "king" in August, 838. Among such auspicious occasions, however, lay a series of rebellions in 830 and 833–834, each led by Louis's eldest son, Lothar, in an attempt to assert his own imperial authority. He and his followers focused much of their hostility on Judith, accusing her in 830 of adultery and sorcery (charges later cleared by her oath of innocence at Aachen on February 2, 831), and banishing her to Poitiers. They exiled her again in the later revolt to a convent in Tortona, Lombardy. Lothar's overconfidence and the ephemeral help of his brothers (Louis and Pepin) assured his failure in both instances, however, leaving Judith and Charles several years to consolidate their position (and according to some accounts, to wreak revenge) before Louis died on June 20, 840.

Civil war ensued, despite Louis's revised division of the empire in 839 between Lothar and Charles. In the end, it was the help of Louis the Bavarian (who had married Judith's sister, Emma, in 827) that made possible Charles's and Judith's victory over Lothar at Fontenoy on June 25, 841. Afterward, Charles further shored up his power base, benefiting particularly from his mother's activities in Aquitaine from her base in Bourges. On December 13, 842, Judith witnessed the strategic marriage of her son to Ermentrude (niece of Adalard, count of Tours). Charles soon enhanced this declaration of independence by dispossessing his mother of her lands and placing her in "retirement" at Tours, probably in February, 843. She died there two months later, on April 19, 843, comforted, perhaps, that her consistent efforts on behalf of her son had changed the course of Carolingian history.

Acclaimed by several contemporary writers for both her beauty and erudition, Judith also fostered Carolingian learning. She arranged for Walafrid Strabo to tutor Charles from 829 to 838, and commissioned the second book of Freulf of Lisieux's important *Chronicle*. Hrabanus Maurus's dedication of a commentary on the biblical books of Judith and Esther, as well as a figure poem to Judith also testifies to her literary patronage, and has supported the contention that she may have personally supervised the creation and expansion of Louis the Pious's court library.

Judith the Welf (ca. 1100–1130/1131)

Judith was born about the year 1100, the daughter of the Welf (also Guelf) Duke Henry IX the Black of Bavaria and his wife, Wulfhilde, the elder daughter of Duke Magnus of Saxony (from the Billunger family). When Magnus died in 1106, Wulfhilde and her sister, Eilika, wife of the Ascanian count Otto of Ballenstedt, inherited his lands. Judith's siblings were Henry the Proud, Conrad the Cistercian, a hermit who lived in the Holy Land and died about 1126, Sophie, who married Duke Berthold III of Zähringen, Mathilda, who married Margrave Diepold IV of Vohburg, Wulfhilde, who married Count Rudolf of Bregenz, and Welf VI.

About 1120, Judith married Frederick II of Staufen who had followed his father as duke of Swabia in 1105. The marriage was part of a calculated policy aimed at expanding Welf family power into southwestern Germany through union with the Staufen and Zähringer. Their children were Bertha, who became the wife of Duke Matthew of Lorraine, and Frederick Barbarossa, born in 1122.

The marriage of a Staufen to a Welf princess augured well for a close alliance between the two powerful Swabian dynasties, but events proved otherwise. When the last Salian emperor, Henry V, died childless in 1125, there were several candidates for the German throne: as nephew of Henry V, Frederick II of Staufen had the best right of blood; Margrave Leopold III of Austria and Count Charles of Flanders also sought support. The ecclesiastical princes, headed by Archbishop Adalbert I of Mainz, rejected Frederick's claims and promoted the election of Lothar of Supplinburg, duke of Saxony, who was proclaimed king at Mainz.

At first, the Bavarians objected out of loyalty to Duke Frederick, their kinsman, but in time they were won over to the side of Lothar. The cause of their defection was the promise given by the archbishop of Mainz and his supporters that Henry the Black's son, Henry the Proud, should marry Lothar's only daughter, Gertrude, then ten years old. As Lothar had no sons, she was the sole heiress to the extensive possessions amassed by her father. Above all, the marriage gave young Henry the expectation of inheriting Lothar's Saxon dukedom and the crown itself as well, should Lothar become king.

Duke Henry the Black died in 1126 and was succeeded by Henry the Proud. The latter's marriage to Gertrud of Supplinburg in 1127 produced but one child, Henry the Lion, who was born in 1129/1130. That same marriage, and the betrayal that lay behind it, turned Duke Frederick II into a bitter adversary of both King Lothar and of his Welf kinsfolk.

In the struggle during the years following 1125, Judith of Welf was personally involved in the defense of Speyer in 1129. She died on February 22, 1130/1131, and was buried at the cloister at Lorch. After her death, Frederick II married Agnes of Saarbrücken. The marriage to Judith had not resulted in the harmonious coexistence of the Hohenstaufens and the Welfs, but it did produce a king and emperor. Moreover, Frederick II used a precious gold reliquary cross from Byzantium that he had acquired through his Welf wife, Judith, to buy two of his numerous castles. From his mother, Frederick Barbarossa acquired the provostship at Öhningen.

Kaiserchronik

"The Chronicle of Emperors" was composed circa 1150. It represents the first appearance in German of the traditional Latin genre, the historical chronicle, and it provides the model for all other vernacular chronicles that followed. Sixteen complete manuscripts and twenty-five fragments attest to the phenomenal popularity of the work. Further evidence of its importance is provided by numerous revised versions and continuations. Arranged in rhyme pairs, 17,283 verses relate the history of the emperors of the Roman and Holy Roman Empire from Caesar to Konrad III (1138–1152). The narrative abruptly breaks off at Christmas, 1146, after describing the crusade preaching of Bernard of Clairvaux (1090–1153), and it is not clear whether the poet intended to carry on with his writing at some later point, or whether he considered the work complete for all practical purposes. Indeed, this is but one of many questions about dating and authorship that remain unanswered.

Most scholars are in agreement, however, that the *Kaiserchronik* as it now exists was completed by a Regensburg cleric around 1147. Nonetheless, given the current state of research, other questions regarding the beginning date of composition—suggestions range from 1126 to the early 1140s—and whether one or more poets were involved in the writing must remain open.

In the prologue, the poet addresses his audience and says that he is going to impart something of value to attentive listeners. Just who comprised the audience is not certain, but, given the use of the vernacular language, it is highly likely that the target group was composed of members of the feudal nobility and ministerials, possibly even members of a cloister who were not versed in Latin. The poet announces that he will not only be portraying emperors, but also those popes who played a role in the empire will be profiled. Further, he will present both good and bad emperors and popes. Thus, it seems clear that the main purpose, and thus the usefulness, of the *Kaiserchronik* was to depict rulers, both pagan and Christian, who could be taken as worthy role models by the secular nobility of the poet's time.

The chronicle is a mirror of medieval Christian society and its firmly-held belief system. Replete with fanciful tales and distortions of history, spurious emperors, nonexistent relationships, the work is brimming with fascinating episodes—real or imagined—from the lives of the—real or imagined—Roman emperors. Whether real or fictitious, however, was of little import in the grand scheme of medieval things. For the medieval individual there was only one history—the history of salvation that began with the Creation. The actions and maneuvering of mere humans were of little consequence, except insofar as they were part of the divine scheme and furthered the divinely-ordained order on earth. Thus, more important for the poet and his audience was not whether the chronology presented in the work was correct, for example, but rather how the secular and ecclesiastical rulers carried out their responsibilities toward society.

The so-called *Anonymi chronica imperatorum* (Anonymous Chronicle of the Emperors), composed in 1112–1114 at Würzburg (?) on the command of Emperor Henry V, is preserved in a single illustrated manuscript (Cambridge, Corpus Christi College manuscript no. Lat. fol. 373). The text is based on the *Chronica universale* (Chronicle of the Universe) of Ekkehard von Aura and the chronicle of Sigebert of Gembloux. New research shows that the part following the year 1106 was probably written by Bishop Otto of Bamberg. The three books of the *Kaiserchronik* beginning with *De origine Francorum* (On the Origin of the Franks) contain sixteen drawings showing the dynastic line of succession (*Amtsgenealogie* or *Sukzessionsreihe*) from Pippin and Charlemagne up to Henry IV; they are done in brown and red ink and follow the representational stereotype of the seated frontal king known from coins and seals. All the drawings are accompanied by the beginning of the corresponding text.

The only colored illumination, on folio 83r, shows Pope Pascal handing the scepter and orb to Henry V, labeled *HENRICUS QUINTUS*, on the occasion of the coronation in 1111, or perhaps the transfer of the insignia in Mainz by Archbishop Ruthbart in 1106. At the end of Book 3 (fol. 95v), another drawing represents the marriage of Mathilda of England and Emperor Henry V in 1114. Genealogy, coronation, and marriage are the main subjects of interest for the illuminator as well as the author.

Kaufringer, Heinrich (fl. early 15th c.)

The author composed twenty-seven short verse couplet narratives (*Maeren*), religious tales (*Bîspeln*), and sermonlike discussions in the late fourteenth and early fifteenth centuries. The most important manuscript, the closest to the author's original, was written in 1464. Kaufringer lived, as far as we can tell on the basis of the family name, the poet's language, his rhyme schemes, and references to specific towns in his novellas, in the area of Augsburg and Landsberg am Lech in the border region between Bavaria and Swabia. The prior of the Landsberg Pfarrkirche (ca. 1369–ca. 1404) Heinrich Kaufringer and his son (same name), who is documented once in 1404, are both good candidates as the novellas' potential author. There is, however, no absolute certainty for the identification of either of them.

It has been speculated that the author was a craftsman like Hans Rosenplüt and Hans Folz in Nuremberg, a merchant, or a cleric. We can only say with certainty that he defended viewpoints typical of an urban dweller with rather conservative attitudes and who favored political unity and harmony within the city. He often refers to his literary model, Heinrich der Teichner

Kaufringer's *Maeren* are preserved in a Munich manuscript (no. cgm 270) from 1464 (no. 1–17), and in the Berlin manuscript (no. mgf 564) (nos. 18–27) from 1472. One narrative is also contained in a second Munich manuscript (no. cgm 1119) from the second half of the fifteenth century. Most of the texts are signed by Kaufringer, which allows us to determine in all likelihood which of the narratives were, in fact, written by him. The production of the Munich manuscript (cgm 270) seems to have been organized by Kaufringer himself. In six sermon-like texts Kaufringer versified older German prose works. One of them he even based on a sermon by Berthold of Regensburg, and one on Heinrich Seuse's *Büchlein der ewigen Weisheit* (Book of Eternal Wisdom). The narratives deal with topical issues of daily life and are of didactic, though humorous, nature. Kaufringer argued for a rational approach to theological questions, urged his listeners to fulfill their duties, but to resist unfair demands by the authorities.

The majority of Kaufringer's *Maeren*, however, are of erotic nature, in which women generally win over their husbands with the help of their intelligence (*gescheidkait*) and thus manage to protect their secret lovers. At times Kaufringer emphasizes moral behavior, which can also include violence to defend one's own reputation and honor (*Die unschuldige Mörderin*, The innocent Murderess).

Kleve

The nucleus of the urban development of Kleve is the Schwanenburg castle (Swan Mountain) of the counts of Cleves, situated prominently on a cliff. After the dynasty's extinction in 1368, Kleve became part of the large territorial complex of the counts of Mark, who, after 1417, were known as the dukes of Cleves. The latter, supported by the dukes of Burgundy, created an important political unit in the Lower Rhineland. The Romanesque palace of the counts, built around 1100, was demolished in 1771; its donjon, which collapsed in 1439, had, by 1453, been replaced by the late Gothic *Schwanenturm* (Swan Tower).

Below the castle, the town was founded in 1242; under Count Dietrich VIII, the two were connected by a larger ring of fortifications in 1341. In the same year, the Romanesque parish church, or *Stiftskirche*, was demolished and subsequently rebuilt as a princely court church to which an existing collegiate chapter was transferred, and, in 1347, the founder was interred in the choir. Construction of the nave was completed by 1394, the twotowered western façade by 1425–1426. Largely destroyed by bombing in 1944, the main body of the church was reconstructed by 1956, the western towers only being finished by 1970. The church, a pseudo-basilica with blind clerestory (tall windows), was influential in the genesis of late Gothic church architecture of the Lower Rhineland and served as the prototype of a number of related buildings in other residences of the Cleve dynasty (Kranenburg, Kalkar). To the north, the ducal memorial chapel, the adjoining sacristy, and the ducal lodge are attached to the choir. As a brick building, partly covered by tufa (a porous stone), with its architectural details (portals, tracery, and pillars) executed in sandstone, the monument represents a major step in the development of building economy and technology, a development characterized by the existence of a general entrepreneur who subcontracted the different tasks to independent artisans.

The Franciscan church, originally the parish church of the lower town and in 1285 converted by Count Dietrich VII into a monastic church, is of typological interest as an asymmetrical hall church in which the northern aisle is reduced to a mere sequence of niches (*Wandpfeilerkirche*).

The rich court culture at Kleve manifested itself beautifully in the book of hours produced in the second quarter of the fifteenth century for Catherine of Cleves (now New York, Pierpont Morgan Library).

Klosterneuburg

The monastery of Klosterneuburg on the Danube just north of Vienna was founded on the site of a Roman settlement circa 1114 by Margrave Leopold III of Babenberg and his wife, Agnes, daughter of German Emperor Henry IV. In 1133, Leopold gave the site to the Augustinian canons, led by Hartmann, who departed from Klosterneuburg in 1140 to be bishop of Brixen, and was later canonized. Under the diverse influences of the reform of Bishop Konrad of Salzburg and the Hirsau traditions of Agnes's Saxon heritage, Klosterneuburg developed a unique liturgy and a preeminence among Austrian monastic houses.

Typical of the Augustinian practice, Klosterneuburg was a double foundation, with the larger male convent dedicated to Mary and a separate, more cloistered space, for the canonesses dedicated to Mary Magdalene. It was probably the canonesses who developed the unique "Klosterneuburger style" of musical notation featuring Laon neumes on four lines with a distinctive four-line clef.

The three-aisle Romanesque basilica was consecrated in 1136. Its refurbishing after a fire in 1158 brought the cloister into its first golden age, led by Abbot Wernher (1168–1185; 1192–1194). The magnificent ambo of Nicholas of Verdun was dedicated in 1181; its three arcaded tiers of gold enamel work display salvation history in typological imagery. Also from the late twelfth century is a great bronze seven-armed candlestick, now displayed in the well house. The famous Klosterneuburger Easter play from circa 1200 (Ms. 574) may not ever have been performed at the convent, but it became part of its literary tradition. The important Klosterneuburg scriptorium produced a medieval library of more than 2,000 manuscripts, still housed on the site.

Despite another fire in 1330, the cloister blossomed again under Abbot Stephan von Siemdorf (1317–1335). At this time, the choir was vaulted in the Gothic style, and Nicholas's ambo transformed into an altarpiece by the addition of four panels in the elegant Italianizing style of the Vienna school. Propst Stephan also commissioned the stained glass program of the cloister windows, featuring scenes from the life of Christ and portraits of the notable figures from the convent's history.

The monastery was reformed in 1418 under Abbot Georg Münstinger, inspired by the spiritual movement of the Augustinian canons of Raudnitz. An increasing number of canons attended the University of Vienna, and the convent became a center for scientific learning, particularly cartography. The convent produced significant chronicles, including the *Kleine Klosterneuburger Chronik* (Short Klosterneuburg Chronicle). Its financial records document the activities of major illuminators of the Vienna court school of the mid-fifteenth century, including Masters Nicholas and Michael. The Babenberger ducal family was always closely tied to Klosterneuburg, where one of their residences was located. By the thirteenth century, there is evidence of pilgrimage to the graves of Leopold and Agnes in the chapterhouse, culminating in Leopold's canonization in 1485.

Notable gothic paintings in the cloister include the 1456 Mary Magdalene Altar by the Albrechtsmeister, the 1489–1493 Babenberger *Stammtafel*, a painted genealogy of the Babenberg founders, and panels by Rueland Frueauf the Younger illustrating the life of St. Leopold. The present church building boasts a baroque interior and an medievalizing exterior heavily restored by Friedrich von Schmidt in the nineteenth century.

Koblenz

Located at the confluence of the Moselle and Rhine rivers, Koblenz was the sight of a Roman fort erected by Emperors Augustus and Tiberius between 10 and 37 C.E. to protect the region from Germanic attacks. The city was destroyed by the Franks in 259–260 and rebuilt as a walled city, parts of which still stand, in the fourth century under Emperor Constantine (323–337). In the first half of the ninth century, the city developed as a religious and political center. As a secondary residence for Emperor Louis the Pious and his successors, the city served as the site for important political councils; the Treaty of Verdun in 842, and the Treaty of Meerssen 860, which divided the empire, were signed here.

The church of St. Kastor was built in the Carolingian style outside the city walls; it was consecrated in 836 by Archbishop Hetti and Emperor Louis the Pious. It is debated whether the church was destroyed during the Norman invasion of 882. The Carolingian church of St. Mary, located within the city walls, was constructed in the latter half of the ninth century and was renamed the church of St. Florin in 940 when Emperor Henry I, the church's benefactor, presented to it the relics of St. Florin.

After Emperor Henry II presented the city of Koblenz and St. Kastor to Archbishop Poppo of Trier in 1018, a great building phase began. From the eleventh to early thirteenth centuries, St. Kastor was reconstructed in Romanesque style on its Carolingian foundations. The choir was rebuilt from 1147 to 1158; it was destroyed in 1198, rebuilt and consecrated in 1202. Reconstruction of St. Florin in the Romanesque style began around 1100; its choir was completed in Gothic style in the mid-fourteenth century. The double-tower facades of St. Kastor and St. Florin ushered in this tradition in the Rhineland. The *Liebfraukirche* (Church of the Virgin), first mentioned in 1182, is on the site of a fifth- or sixth-century pagan structure. Construction began in the late twelfth century in Romanesque style; a late Gothic choir, constructed between 1404 and 1430, was added to the original Romanesque choir. The west facade is characterized by two imposing towers dating from the thirteenth century.

The city experienced marked growth in the early thirteenth century. In 1216, Archbishop Theoderich von Wied invited the Teutonic Knights to Koblenz. Their first settlement in the Rhineland was located next to St. Kastor on the land at the confluence of the Mosel and Rhine; they named the area the *Deutsches Eck* (German Corner). Dominican and Franciscan settlements were first mentioned in 1233 and 1236, respectively. The Dominican basilica, destroyed during World War II, was the oldest Gothic church on the Middle Rhine. The Franciscan church, with its early Gothic choir, met the same fate.

Because of regional political conflicts and instability, Archbishop Arnold of Isenberg initiated a tax around 1250 to expand the city wall. The project was continued by Archbishop Henry von Vinstingen, who constructed a castle with additional taxes. The castle, strategically located buttressing the Moselle, was begun in 1277, and expansion continued through the eighteenth century. Situated close to an earlier Roman bridge, the *Balduinsbrücke* (Baldwin's Bridge) over the Moselle was begun in 1332 and completed in 1363.

Located west of the confluence of the Moselle and Rhine Rivers is Fort Ehrenbreitstein, whose construction began in the tenth century. The structure, almost all of which still exists, was received by Archbishop Poppo in 1020; it was greatly expanded in the mid twelfth century under Archbishop Hillin and served as the main protection for the city through the nineteenth century.

Koerbecke, Johann (ca. 1420–1491)

A contemporary of Stefan Lochner and Konrad Witz, this painter contributed to the transition from the international Gothic style to a more realistic one, inspired by Netherlandish art. Koerbecke was probably born circa 1420 in Coesfeld (Northrhine Westphalia). He is first recorded in Münster in 1443, when he purchased a house. He led an important workshop there until his death on June 13, 1491.

Koerbecke's sole documented work is the Marienfeld Altarpiece, for which he received payment in 1456. Installed on the high altar of the Marienfeld monastery church in 1457, it originally consisted of a carved shrine and painted wings with scenes from the life of the Virgin and the Passion. In the seventeenth century, the wings were sawn into sixteen panels, now located in several collections (Avignon, Musée Calvet; Berlin, Gemäldegalerie; Chicago, Art Institute; Cracow, National Museum; Madrid, Thyssen Collection; Moscow, Pushkin Museum; Münster, Westfälisches Landesmuseum; Nuremberg, Germanisches Nationalmuseum; Washington, National Gallery). They reveal knowledge of works by important painters of the preceding generation in Westphalia and Cologne. Koerbecke's Crucifixion is inspired by Conrad von Soest's paintings of that subject, his Presentation is an interpretation of Stephan Lochner's 1447 version (Darmstadt, Hessisches Landesmuseum), and his Resurrection is based on Master Francke's 1424 *Englandfahrer Altarpiece* (Hamburg, Kunsthalle). Koerbecke's volumetric figures and detailed, naturalistic treatment of interiors and landscapes derive from Netherlandish art.

Other attributed works are the wings of the Langen-horst Altarpiece with eight scenes from the Passion (Münster, Westfälisches Landesmuseum), ca. 1445, and three panels from an altarpiece with scenes from the life of Saint John the Baptist: the baptism of Christ and Christ with Saint John (Münster, Westfälisches Landesmuseum), and the beheading of the Baptist (The Hague, Meermanno-Westreenianum Museum), ca. 1470. A wing with Saints John the Baptist and George, and a fragment with Saint Christopher, survive from the Freckenhorst Altarpiece of ca. 1470–1480 (Münster, Westfälisches Landesmuseum).

Königsfelden

The Franciscan cloister was erected between 1309 and 1330 near the village of Brugg (Canton Aargau, Switzerland) on the site where the German king Albrecht was murdered on May 1, 1308. His widow, Queen Elizabeth, and his daughter, Queen Agnes of Hungary, provided the major support for the construction of the memorial site and family necropolis. In order to provide perpetual services for the dead, a Franciscan women's convent was erected to the south of the church; a small number of Franciscan priests who ministered to the nuns' spiritual needs lived in the convent buildings to the north of the church. During the Reformation, the cloister was suppressed (1528) and the buildings adapted to secular uses and renovated several times. Still standing are the church, most recently restored in 1982–1986, and parts of the former women's cloister (much rebuilt). The stained glass windows of the choir are widely known.

In plan and elevation, the church represents a building type characteristic of the Dominican province of upper Germany in the early fourteenth century: a three-aisled, flat-roofed basilica is separated by a choir screen from the long vaulted choir in which three rectangular bays precede the 5/8 polygon of the apse. In the nave a simple marble cenotaph from the period of the original building campaign stands over the crypt in which a number of Habsburg family members were buried. The architectural membering of the choir is more complex than that of the

Königsfelden, choir, detail of axis window, Flagellation and Crucifixion. Photograph: Joan A.Holladay

simple nave and the eleven tall triple-lancet windows with high Gothic tracery still have the largest part of their original stained glass. All the windows were donated by members of King Albrecht's family, who are represented as donors in the bottom panel of their respective windows. The axis window represents scenes from Christ's Passion; it is flanked by windows portraying the Incarnation and appearances after the Crucifixion. Also in the polygon is a window with scenes from the lives of John the Baptist and Catherine and one with episodes from the life of Saint Paul. Windows along the straight walls of the choir portray the twelve apostles as single figures. Closest to the entrance to the choir are narrative windows devoted to the lives of Francis and Clara; next to them are windows with scenes from the *vitae* or "lives" of Saints Nicholas and Anna. Little is left of the colored glass of the nave. Franciscan and Habsburg preferences determined the choice of scenes and iconographic details.

The arrangement of the images was carefully planned: the high altar stands on the exact spot on which King Albrecht was murdered, and only in the windows directly over it are scenes portrayed in which blood flows or murder is committed. The window with scenes from the life of Saint Clara is on the south side, toward the women's cloister; the Francis window is installed on the side of the men's convent on the north. The windows, among the highest quality examples on the Upper Rhine, are in an elegant, courtly style; they are attributed to a workshop from Strasbourg and/or Constance. Maurer dates the planning and execution of all the windows in the years 1325–1330; Schmidt, relying on style and costume, supposes that the four western windows, with their differentiated compositions and the figures' modern coiffures and robes, were donated and planned with the other windows, but finished only in the decade between 1340 and 1350.

The rich original furnishings of the church can be reconstructed from different sources. Only a Venetian altar diptych dated about 1290 and two embroidered antependia, or hangings, are preserved; all three pieces are now in the Historical Museum in Bern.

Konrad von Heimesfurt (fl. first half of the 13th c.)

The only author known to us—besides Konrad von Fuß esbrunnen—to write religious narratives in the vernacular at this time. His two works, *Von unser vrouwen hinvar* (*Transitus Mariae*, Ascension of Mary) and *Diu urstende* (*Resurrectio*, Resurrection), written in verse around or before 1225 and around 1230, respectively, address audiences not knowledgeable in Latin. Konrad names himself in both works and identifies himself as a cleric. It is generally assumed that he was associated with the bishopric of Eichstätt. *Hinvar* consists of 1,209 verses and is transmitted in three manuscripts, six fragments, and as an interpolation in a manuscript containing Phillip's *Marienleben*. There is only one extant manuscript of *Diu urstende*, which consists of 2,162 verses. With the exception of the fifteenth-century Berlin manuscript of *Hinvar*, the writing surface for all manuscripts is parchment.

The main source for *Hinvar* is the *Transitus Mariä* by Pseudo-Melito of Sardis. The plot centers on the death of the Virgin, as foretold by Gabriel, with Christ by her side and the apostles who had been miraculously summoned to Jerusalem for the occasion. It tells of her burial disrupted by Jews in the valley of Josaphat and of her resurrection and assumption witnessed by the apostles. The text ends with a plea for Mary's intercession on behalf of mankind. The overtly religious subject matter is introduced by a prologue reminiscent of courtly romance. The use of hunting imagery, the praise of constancy, the poet's mention of his modest station and talents, and his assurance that humility is more pleasing to God than *superbia* all suggest familiarity with courtly literature.

Konrad's longer narrative, *Diu urstende*, extends well beyond the confines of the title, as indicated in the prologue. It begins with the New Testament account of Christ's entry into Jerusalem and ends with extensive testimonials of the events surrounding Pentecost based on the *Gospel of Nicodemus*. The text consists of six major episodes. The first, third, and fifth are short sections based on biblical sources. They provide the historical framework for Christ's Crucifixion and entombment, his Ascension, and the Descent of the Holy Spirit. Sections two, four, and six are expanded versions of apocryphal sources in which the poet sets his own emphasis through frequent use of dialogue and textual changes. In the trial scene he juxtaposes various groups of supporters with the accusers while Jesus himself remains silent. Part four tells of the Resurrection and the liberation of Joseph of Arimathaea while part six is devoted to lengthy interrogations aimed at bearing witness to Joseph's liberation, Christ's Resurrection and Ascension, and, most importantly, Christ's harrowing of Hell, which allows the virtuous heroes of the Old Testament to share the benefits of the Gospel. But rather than ending on this triumphant note, the poet resumes his theme from the conclusions of parts two and four by polemicizing against the Jews, whose stubbornness in the face of all the witnesses will lead to their damnation.

Konrad von Heimesfurt was known to Rudolf von Ems and subsequent authors relied on his works in their own writings. *Hinvar* influenced Reinbot von Durne and Lutwin. Heinrich von München, Gundacker von Judenburg, Hawich der Kellner, a prose translation of the *Gospel of Nicodemus* transmitted in a manuscript group known as "E," and a verse narrative, *Befreiung der Altväter* ("Liberation of the Old Fathers"), all attest to the popularity of *Diu urstende* in the fourteenth and fifteenth century.

Born in Muri, a town in Aargau, Switzerland, Konrad began his studies at the Benedictine monastery there and went on to Zurich and possibly even on to universities in Bologna and Paris. Ordained a priest in 1244, Konrad served as the director of the cathedral school in Zurich until 1271. As of 1246, he also served as the canon of the cathedral and, in 1259, he took on the newly created position of cantor. Konrad produced numerous works in Latin, many of which reflect his role as school director. His *Novus Graecismus* ("New Greek," ca. 1250), for example, is an adaptation and expansion of Eberhard von Béthune's (d. 1212) rhyming grammar book *Graecismus*. Konrad's *Libellus de naturis animalium* (Little Book on the Animals of Nature, ca. 1255), provides an allegorical exposition of the natural history found in books 11 and 12 of Isidore of Seville's *Etymologiae*. The book also treats various medieval technologies, for example, manuscript preparation. Celebrated in the nineteenth century as the "first heraldic poem," Konrad's *Clipearius Teutonicorum*, (ca. 1264), is now recognized as a catalog of heraldic devices designed to help scribes identify various insignia. Konrad's *Fabularius* (ca. 1273), an alphabetized compendium of medieval knowledge and his most influential work, covers history, literature, mythology, hagiography, poetics, and grammar. Konrad also composed the *Summa de arte prosandi* (ca. 1276), a treatise on the composition of letters and official documents. Some of Konrad's works reflect his position as cantor, i.e., his *Liber Ordinarius*. Konrad enjoyed a close relationship with King Rudolf of Hapsburg and composed the *Commendatitia Rudolphi regis Romanourm* (1273) in commemoration of the king's victory at the battle of Marchfeld. No historical evidence exists, however, to support Konrad's relationship to the Manesse family or to Johannes Hadlaub, as portrayed in Gottfried Keller's *Züricher Novellen*. Konrad died on March 30, 1281, in Zurich.

Included among the "twelve old masters" revered by Meistersingers, Konrad produced one of the largest and most varied oeuvres in all of Middle High German literature. Initially neglected by modern scholars as an epigone and mannerist, critics are now examining Konrad's work in its own context. Konrad embodies a turn in German literature, he was neither noble (Song 32, line 189: *wære ich edel*, if I were noble) nor a part of the court. Konrad plied his trade in the cities and wrote for the wealthy bourgeoisie and the urban nobility. Archives, official documents, and Konrad's works themselves provide us with an extraordinary amount of information about his life and patronage. Born in Würzburg, Konrad began as a wandering poet, spent time in Strasbourg and eventually settled in Basle. Konrad wrote two lays. *Got gewaltec waz du schickest* (Powerful God, what you send) is a religious lay in praise of the Virgin and the Trinity. *Vênus diu feine diust entslâfen* (Elegant Venus has fallen asleep) is a secular lay treating courtly love. Unfortunately, the melodies to both of these have been lost. Konrad's shorter love lyric consists primarily of nine summer songs and eleven winter songs characterized by floral metaphors and the *jârlanc* introduction (nos. 5, 6, 10, 13, 17, 21, 23, 27). Konrad also produced three dawn songs (nos. 14, 15, 30), as well as exempla (nos. 18, 24, 25), maxims, and religious poetry. In Konrad's short lyric, one finds all the qualities of literary mannerism. For example, in song 26 every single word is part of a rhyming pair: *Gar bar lîr wîr walt, kalt snê we tuot: gluot sî bî mir*. The excessive, albeit impressive rhyme schemes especially in songs 26, 27, 28 and 30, ultimately obscure the meaning and emotion of the poetry and Konrad's use of traditional imagery often undermines the originality of his stylistic innovations. Konrad's allegory, *Die Klage der Kunst* (Art's Complaint), appeals for patronage and support of "true art" (*rehte kunst*). His hymn in praise of the Virgin Mary, *Die goldene Schmiede* (The Golden Smith), draws on and synthesizes an extraordinary range of medieval images and symbols. This work may have been commissioned by the Strasbourg Bishop Konrad von Lichtenberg. Other religious-oriented works include Konrad's verse legends. *Silvester* (1260) was commissioned by Liutold von Roeteln, the legend of *Alexius* (1265), by Johannes von Bermeswil and Heinrich Iselin, and Konrad composed the story of Pantaleon (1258) for Johannes von Arguel. The patronage of Konrad's earliest narrative work, *Das Turnier von Nantes* (The Tournament of Nantes, 1257–1258) is unknown, but critics suspect that it was written for someone affiliated with the Lower Rhine region. The tournament takes place at the Arthurian capital of Nantes and pits the German princes under the leadership of Richard of England against the French princes, under the leadership of the king of France. This poem was probably intended to win the support of the lower German princes for the recently crowned king of the Romans, Richard, earl of Cornwall (May 17, 1257). Konrad's fragment, *Schwannritter* (Swan Knight), also seems to have been written during this period. The tale is related to the French *Chevalier au Cygne* (1200) and the Lohengrin story found at the end of Wolfram von Eschenbach's *Parzival* (1210). Undoubtedly, Konrad's *Mâren* (lyric novellas) are the most impressive and wellknown works in his oeuvre. *Das Herzemaere* relates the popular tale of the jealous lord who feeds his wife the heart of her beloved knight. Konrad's introduction to this story recalls the work of Gottfried von Straßburg. This reference serves to underscore Gottfried's conspicuous influence on Konrad's style. In *Der Welt Lohn* (Worldly Reward), Konrad describes Wirnt von Grafenberg's (the poet of the courtly verse novel *Wigalois*) encounter with *Frau Welt* (Lady World). Although no certain source has been identified for this tale, it belongs to the *contemptus mundi* (contempt of the world) tradition. After gazing upon the infested backside of *Frau Welt*, Wirnt rejects the world, takes up the cross, and achieves martyrdom in the Holy Land. The dark comedy *Heinrich von Kempten* (also called *Otte mit dem Bart*, Otto with the Beard, 1261), illustrates the benefits of loyalty. Composed for the dean of Strasbourg Cathedral, Berthold von Tiersberg, the story plays on the traditions of the ill-tempered Emperor Otte (probably Emperor Otto II). Critics dispute the authorship of other *Mâren* attributed to Konrad (*Die halbe Birne*, Half of the Pear, *Der Mvnc als Liebesbote*, The Monk as Gobetween, etc.). Konrad composed three romances. *Engelhard*, set in the time of Charlemagne, tells a tale of fidelity (*triuwe*) in friendship. Engelhard and Dietrich resemble one another almost exactly and develop a close friendship at court in Denmark. Dietrich leaves the court to assume his position as the duke of Brabant but returns to Denmark to help Engelhard win the hand of Engeltrud, the daughter of the king of Denmark. Later, Dietrich is stricken with leprosy. Reminiscent of Hartmann von Aue's tale, *Der Arme Heinrich*, the poem culminates after Dietrich reveals that the blood of Engelhard's children is the only remedy for his illness. In *Partonopier und Meliur* (1277), Konrad draws on the extremely popular French romance *Partonopeus de Blois* (1200). While out hunting, Partonopier chances on a boat that takes him to the invisible island castle of the heiress of the Byzantine imperial throne, an enchantress named Meliur. At the castle, invisible hands tend to the youth. Partonopier lies with the invisible Meliur each night. Meliur plans to marry him when he comes of age under the condition that he does not look upon her before the appointed time. After a year has passed, Partonopier, plagued by doubts, chances to look upon Meliur and she rejects him. A year later, the pair is reconciled. Partonopier wins Meliur's hand through knightly prowess and becomes the Byzantine emperor. The romance comprises a mix of several different traditions, including: fairy tales, antique epics, *matière de Bretagne* (tales of Bretagne), and the *chansons de geste* (songs of heroic deeds). Similar motifs appear in *Die Königen von Brennenden See* (The Queen of the Burning Lake, 1220–1240), Egenolf von Staufenberg's courtly tale, *Ritter Peter* (1310), and in Thüring von Ringoltingen's verse tale *Melusine* (1456). Konrad's last and greatest endeavor, *Trojanerkrieg* (The Trojan War, 1281) surpasses, with its 40,424 verses, Herbert von Fritzlar's Middle High German rendition of the fall of Troy, *Liet von Troye* (1190–1217) in both length and quality. Benoît de Sainte-Maure's *Estoire de Troie* is the main source for both German works. Konrad's narrative includes the birth of Paris and Achilles, relates the tale of Jason and Medea, the kidnapping of Helen and the preparation for war. Konrad's tale breaks off in the middle of the siege of Troy. The poem, concluded by a lesser, anonymous poet, was well received. The exact nature of the relationship of Konrad's *Trojanerkrieg* to the *Göttweiger Trojanerkrieg* (1270–1300) has not yet been determined. However, at the very least, Konrad's *Schwannritter* seems to have influenced the anonymous poet of *Göttweiger Trojanerkrieg*, erroneously attributed to Wolfram von Eschenbach. Konrad died in Basle either on August 31 or between October 8–22, 1287. He and his wife, Bertcha, had two daughters, Gerina and Agnese. He was buried in Basle. Konrad von Würzburg was highly esteemed by contemporaries and successors. He is depicted dictating his work in the Codex Manesse. Hugo von Timberg praises Konrad in *Der Renner* (11. 1202–1220), and Frauenlob (Heinrich von Meîßen) mourns him with the lament that art itself had died with the passing of Konrad: *ach kunst ist tût!* (313, 15–21).

Many of Adam Kraft's (also Krafft) stone sculptures are still in situ in Nuremberg where he lived and worked from 1490 until his death in 1508. His major monument is the towering eucharistic tabernacle in the church of St. Lorenz. The complex tracery, composed of crocketed finials (projecting ornaments) and slender attenuated filaments that form interlacing circles and intertwining nodding ogee (or S-shape curved) arches, has attracted the admiration of viewers for its expressive fantasy, delicate intricacy, and technical perfection. Art historians have lauded the tabernacle as a work that develops the late Gothic stylistic vocabulary to its fullest. At the base, nearly life-size figures of Adam Kraft and two members of his workshop appear to support the structure on their shoulders as they kneel and look out to meet the gaze of beholders.

Kraft's six stations of the cross once punctuated the way leading from the church of St. Sebald to the parish cemetery outside the city walls. Today the reliefs are housed in the Germanisches Nationalmuseum (Nürnberg), and copies replace the originals. The reliefs exhibit extremes of human pathos at close range, showing Christ falling under the weight of his cross as he endures the various tortures of his grimacing tormentors while grief-stricken women watch.

Kraft also carved epitaphs on or in Nuremberg churches. The largest is the mural-like Schreyer-Landauer epitaph on the exterior of St. Sebald representing the *Via Dolorosa* (The Way of the Cross), entombment, and Resurrection. The Pergensdorf epitaph and the Rebeck epitaph, both today in the Frauenkirche, as well as the Landauer epitaph in the church of St. Egidien, present variants of the coronation of the Virgin. The Kraft workshop likewise sculpted various reliefs, heraldic decorations, and house signs, including house Madonnas, for public buildings and private homes.

Transmitted in a sole manuscript dating from the first quarter of the sixteenth century and contained in the *Ambras Heldenbuch* (Book of Heroes from [Castle] Ambras), *Kudrun* is an anonymous Middle High German heroic narrative poem in 1,705 four-verse strophes with "AABB" rhyme scheme. The strophes are arranged in thirty-two *âventiuren*, or cantos, and relate the story of various generations of the family of Ger, an Irish king. Most scholars agree that the work was originally written down relatively soon after the appearance of the *Nibelungenlied*, probably between 1230 and 1240. In all likelihood, its roots lie in the same oral-formulaic tradition as the *Nibelungenlied*.

From a thematic perspective, *Kudrun* may be divided into three sections. The Hagen-section (*âventiuren* 1–4) deals with the abduction of the young Prince Hagen of Ireland by a devilish griffin; his escape and youthful adventures in an otherworld populated by marvelous beasts and three abducted princesses; his eventual return to Ireland and succession to the throne, where he gains notoriety as a *Vâlant aller künige* (Satan of all Kings). The "Hilde" section (*âventiuren* 5–8) tells the story of Hagen's daughter, Hilde, and her voluntary "abduction" by Hetel and Wate from the virtual captivity in which she is held by her father; Hagen's pursuit; the ensuing battle against the "abductors," and the subsequent reconciliation of the warring parties. The "Kudrun" section (*âventiuren* 9–32), which constitutes the main body of the work, describes the abduction of Kudrun, daughter of Hetel of Hegelingenland and Hilde of Ireland, by Hartmut of Normandy and his father, Ludwig; the slaughter of the Hegelings on the Wülpensand in the first rescue effort; Kudrun's many years of deprivation in Norman captivity; her rescue by Herwig, her later husband, and his ally, the indomitable and irascible Wate; once again the section culminates in a final reconciliation between warring parties, following the destruction of the elder Norman dynasty, and punctuated by a total of four marriages. Some scholars have speculated that the section dealing with Hilde represents the oldest part of the epic, and that the Hagen and Kudrun sections are actually later additions. All three parts involve abductions that initially disturb the order of society, but are ultimately resolved, allowing general harmony to be restored. Successful marriages as a conclusion are certainly of major significance in the epic, and the positive role of women in establishing and maintaining a balance within society is more prevalent in *Kudrun* than perhaps any other work of the Middle High German period.

With its emphasis on reconciliation and continuity, *Kudrun* has been justifiably regarded as an "answer" to the *Nibelungenlied*, with which the poet was undoubtedly familiar. The "spirit" of the epic is devoid of the deep tragedy associated with the latter, on both the individual and collective level. Kudrun's forgiving demeanor has been contrasted with the vengeful actions of Kriemhild, her inner stature being regarded as exemplary, and her heroic suffering interpreted as a "poetic projection and surmounting of the everyday degradation of medieval woman" (Nolte, 1985). A particularly problematic area in *Kudrun* research is the issue of generic categorization. While the epic conforms in some ways to the "criteria" employed to designate German "heroic epic," it also has much in common with MHG *Spielmannsepik* (the predominance of the wooing expedition and the burlesque elements revolving around the giant-like Wate figure), and courtly romance (fairy-tale motifs and the basic cyclical structure: joy/order -> sorrow/disorder -> joy/ order). It is perhaps most appropriate to view *Kudrun* as an eclectic work that has drawn on various oral and narrative traditions to present a positive alternative to its great predecessor by allowing the feminine element to predominate over the masculine (without, however, negating the latter).

Kunigunde (d. 1033)

The daughter of Count Siegfried of Luxembourg and Hadwig, Kunigunde (?-1033) married (998–1000) Duke Henry IV of Bavaria, who became King Henry II of Germany in 1002. On August 10, 1002, Archbishop Willigis of Mainz at Paderborn anointed and crowned Kunigunde queen. On February 14, 1014, Henry II and Kunigunde received imperial coronation in Rome from Benedict VIII. Pope Innocent III canonized her on March 29, 1200. Kunigunde played a significant role in government. During Henry's struggle for the throne she intervened with two of his opponents, and she served as the king's representative twice during wars against the Poles and at the reinstatement of her brother, Henry V, as duke of Bavaria. About one-third of Henry II's charters record Kunigunde's intervention and others designate her as coregent (*consors regis*). In 1007, Kunigunde donated properties from her marriage gift for the foundation of the bishopric Bamberg. This ignited a rebellion of her brothers, especially Bishop Dietrich of Metz. As compensation, Henry II granted Kunigunde a dower, the royal residence at Kassel and royal properties surrounding it. On these she founded the nunnery, Kaufungen. On Henry II's death (July 13, 1024), Kunigunde directed the government until the election of Conrad II, to whom she transferred the rule (*regalia*). She withdrew to Kaufungen, entered the monastic community, and lived there until her death, after which she was buried next to Henry II in Bamberg. Due to their childless marriage, a legend arose that they had a virginal marriage, and another claimed that Kunigunde, unjustly accused of adultery, confirmed her innocence by walking on red-hot plowshares. An anonymous *vita* (saint's life) of Kunigunde appeared in 1199 for her canonization and her cult spread widely in the late Middle Ages.

[Conrad II](#); [Henry II, Art](#)

Der von Kürenberc is the earliest named German lyric poet. His poems are preserved only in the famous Heidelberg University library *Minnesang* manuscript "C," where he is grouped among the barons. He is possibly a member of the Kürenberg family who had a castle near Linz, Austria, during the mid-twelfth century. He is part of what is known as the Danube or indigenous school, showing very little French influence.

Fifteen stanzas have been preserved. The basic metrical unit is the four-beat half-line; the long lines formed of two such halves are combined in rhyming couplets. There are two stanza patterns: the predominant one of four long lines, which is the basis of the so-called Nibelung stanza, or *Nibelungenstrophe*, and that where a rhymeless line is inserted as the odd fifth half-line. Several are so-called "Women's stanzas," or *Frauenstrophen*, written from the woman's point of view. In one poem, a lady stands at night on battlements, listening to a knight singing from among the crowd, in *kürenberges wise* (*Minnesangs Frühling* [MF], no. 8,1). In another poem, the lady is compared with a falcon: women and falcons are easily tamed, if one entices them rightly, they will seek the man (MF 10, 17).

Kürenberc makes dramatic and effective use of the *Wechsel*, or lyrical dialogue, alternating speeches of identical length. Frequently the speeches do not make contact; the man and woman talk past each other. In a *Wechsel*, he parodies the figure of the lover who so idealizes the lady that he stands beside her bed and does not dare wake her up, much less think of enjoying her favors (MF 8, 9–15). He has a dramatic sense of situations; his lyrics often tell little stories. His best known song has the falcon as its subject, *Ich zôch mir einen valken*, for which many widely differing interpretations have been proposed (MF 8,33). A person rears a falcon for more than a year, trains and adorns it with gold wire and silken jesses. The falcon flies away "into other lands." Later, the person sees the falcon, still with the gold and the silk, and says: *Got sende si zesamene, die geliep wellen geme sin* (God bring those together who wish to be lovers!). The poem might be the literal story of the loss of a falcon or the falcon might be a symbol for a messenger of love, or for the yearning of lovers, or for an unfaithful lover. If the woman is speaking, the poem may be identified as *Frauenstrophen*, if a man, as a *Botenlied*. If it is first the man and then the lady, it is a *Wechsel*.

Der von Kürenberc introduces several elements that appear in later *minnesang*: the message and messenger taken from medieval Latin epistle form; the need for secrecy and fear of spies, *merkære* (slanderers) and *lügenære* (liars); the submissive role of the man.

Lahn River

The Lahn valley lay at the center of the medieval *Lahngau* (district), which formed part of the constitutional structure of Germany in the tenth through the twelfth centuries. The river originates in the southern Rothaargebirge (on the east slope of the Westerwald) atop the Lahnkopf, about 610 meters above sea level, and from thence flows in a generally southwesterly direction before emptying into the Rhine River at Niederlahnstein, some seven miles above Koblenz. It separates the Westerwald and the Taunus schist massifs. For the most part the course is narrow and winding; the direct distance from the source to the exit is only 82 kilometers; the actual length is 245 kilometers (about 152 miles) because of the many bends and turns. It is fed by several tributaries as well, including the Dill, the Elbbach, and the Gehlbach on the right, and the Ohm, the Solms, the Weil, the Ems, the Aar, the Dörsbach, and the Mühlbach on the left.

During the Middle Ages, various towns grew up along its banks. The foundations of a fortification at Marburg date to the tenth century, while the present fortress was begun about 1140; market privileges were extended to the inhabitants of the settlement that grew up around its base at about the same time. About 1450, the town had an estimated 3,200 inhabitants and three churches, including St. Elizabeth's Church, resting place for the relics of St. Elizabeth of Hungary. The choice of Marburg in part rested on the fact that since 1122, the town was in the possession of the Ludowings, who in 1131 were elevated to the status of landgraves of Thuringia.

Downstream from Marburg lay Gießen, which lay near the eastern extent of the archdiocese of Trier in the Middle Ages. A twelfth century collegiate church dominated the town of Wetzlar; and the magnificent St. George's Church at Limburg, built in the Gothic transitional style between 1210 and 1250, rose alongside the river as well. The small town of Nassau was the cradle of the counts of Laurenburg, who took the name of Nassau in the twelfth century and produced a king, Adolf, at the end of the thirteenth century.

The numerous castles and fortifications above the river point to the complicated territorial history of the region, but also to the significance of the Lahn valley in commercial geography: e.g., the Martinsburg near Oberlahnstein was a customs castle (*Zollburg*) belonging to the archbishop of Mainz dating from the fourteenth and fifteenth centuries. The *Burg Lahneck*, a fortress belonging to the archbishop of Mainz, is mentioned in 1224. Niederlahnstein, on the other hand, is mentioned as early as 1047, and received town privileges in 1332. The neighboring Oberlahnstein appears in 997, but did not acquire town privileges until after 1500.

During the fourteenth century, the archbishopric of Trier asserted a greater presence in the Lahn region, as witnessed by the fortress Baldwinstein, which was built in 1320 to rival that of Schaumburg by Baldwin of Luxemburg, archbishop of Trier.

Lambach

Located between Salzburg and Linz in Upper Austria, Lambach is best known for its baroque monastery originally built at the end of the eleventh century and containing an extensive cycle of some of the most significant and well-preserved Romanesque frescoes in Germany and Austria. It is also known for its important monastic scriptorium and library. The excellent site may have been in use from an early time, and references to it first appear in late eighth-century texts with subsequent mention of a church dedicated to the Virgin. The monastery present today may have been constructed on the same site after the founding of a chapter of secular canons in Lambach by Count Arnold II around 1050, following the deaths of his wife and some of his children in a single disaster, the nature of which eludes historians. The count's third son, Adalbero, named bishop of Würzburg in 1045, transformed this community into a Benedictine monastery in 1056. Adalbero was deeply involved in the power struggle over investiture between Henry IV and Pope Gregory VII. As a result, he was expelled from his bishopric in 1085 and retired to Lambach where he died in 1090. Adalbero's political and reformist interests affected his activities at Lambach. There he installed monks and an abbot, Ekkebert, from Münsterschwarzach, who followed the monastic reform movement begun at the Gorze monastery, which not only adhered to a strict discipline, but also recognized the authority of the bishop in monastic affairs.

The fresco cycle lies in the west choir of what may originally have been a double-apse church. Although the ceiling of the fresco cycle was rediscovered in the nineteenth century, it was only in 1956 that the work began that led to the full uncovering of twenty-three scenes after more than a decade of restoration. The frescoes had been preserved when the west choir, the main choir of the church, was blocked off for the installation of an organ in the seventeenth century. Although it is likely that what remains is only a portion of the original, scholars studying the frescoes have attempted to work out its program. They have tied the official consecration of the high altar in the west choir to the Virgin, and another consecration to John the Evangelist in 1089 by Altmann of Passau and Adalbero, and to the events surrounding its foundation to the execution of the frescoes as well as their iconography. In addition to four individual Old Testament figures, the frescoes depict the childhood and early career of Christ, with an unusually extensive series of scenes of the story of Herod. Scholars have suggested that among other messages in the frescoes, such images constitute a commentary on the kingship issues at the heart of the Investiture Controversy. Scholars have noted a variety of textual sources for the iconography, including the writing of Josephus and the Lambach play of the three Magi. As Demus has argued, the painters probably came from Salzburg, for similarities have been noted between the style of the frescoes and a group of manuscripts illuminated there, but the artists also drew on an apparent knowledge of north Italian and even Byzantine art at Venice.

Land Ownership

No abstract concept of absolute ownership of property (such as existed in Roman law) seems to have existed in the early Middle Ages. Rather, what defined a person's rights to an object was his or her ability to use it, draw some benefit from it, and to alienate it freely to another. In the past, this immediate possession of the land has been termed *gewere*, a later Saxon term equivalent to the English *seizin*; however, this use has been questioned in recent scholarship.

Words such as *eigen* (from a Germanic root implying "have") and *alodis* (combination of Frankish *al* or "full" and *od* or "thing possessed") initially designated the practical possession of either a movable object or a piece of land. From the Carolingian era on, such words as *allodium*, *possessio*, *praedium*, and *proprietas* were applied (often indiscriminately) to landed property, both inherited and acquired by gift or purchase. *Hereditas*, *patrimonium*, and related terms indicated inherited land. *Hantgemal*, which occurs only about forty times in medieval sources, seems to indicate a special ancestral property indicative of a kin group's free status.

Landed property was the steadiest source of income for medieval lords, since a piece of land consisted not simply of soil, but rather of resources on the land, including the serfs who worked it (*mancipia*). Initially, medieval Germany's substantial free peasantry made up the majority of landowners (though not possessing the majority of land owned). Women in Germany, when compared with women elsewhere in medieval Europe, enjoyed extensive property rights. Like men, they could receive property by inheritance, purchase, or gift (often as a marriage gift from their husbands), and could dispose of this property, although the presence of a man as legal advocate was expected at the time of transaction.

Land could also be given away. It was the gift of choice to churches and religious communities, transferred typically for the salvation of the souls of the donor and his or her kin. Specific conditions might be attached to the gift, such as the expectation of burial rights (*sepultura*), or the beneficiary's obligation to pray for the donor and celebrate a yearly memorial anniversary. The actual use of the property (*usus fructuarius*) might be reserved to the donor until his or her death. Consent of kin to an alienation was often sought in order to forestall later challenges.

Land could be "loaned" to others as well. Precarial agreements, in which a person would convey land to another and receive it back for the term of his or her life, were popular. A landowner might grant property to another as a benefice (*beneficium*) or (from the twelfth century on) a fief (*feodum*), without such a grant being necessarily connected to vassalage or acts of homage or fealty. Roman law commentators developed the distinction between the lord's *dominium directum* and the tenant's *dominium utile*, but such legal theory was probably not felt in Germany until the thirteenth century, when in many regions a fief could be alienated without the lord's consent.

Landfrieden

Royal enactments aimed to ensure peace, *Landfrieden* "peace of the land," or "peace associations" recur throughout the medieval German era. While making and keeping peace was arguably the central task of medieval kingship, its forms and successes changed considerably over time. The incursions of the Northmen (Norse), Saracens, and Magyars of the ninth and tenth centuries threatened to wreck the Carolingian achievement, and the mounted knights who had arisen to repel the invaders were rapidly becoming part of the problem because of their ability to terrorize and subjugate those whom they were supposed to protect. Beginning in the 980s, the bishops of the West Frankish realm undertook measures to restrain knights and establish peace. Originally two distinct initiatives called the Peace of God and the Truce of God, which gradually melded, they ruled out-of-bounds for combat certain sacred times as well as certain categories of people, threatened excommunication to violators, and organized the common people under the leadership of parish priests to enforce these provisions. The Peace of God was proclaimed by Pope Urban II at Clermont in 1095 and became part of the general legislation of the church in the twelfth century.

In Germany, great disorder prevailed during the reign of Henry IV because of his minority (until 1065), Saxon rebellions, and his struggles with the popes. Small wonder, then, that peace legislation was enacted in at least four German dioceses in the 1080s and in the duchies of Saxony and Bavaria in 1084 and 1094, respectively. To reassert royal authority in the face of all these implicit challenges (including the pope's), Henry IV himself issued the first imperial *Landfrieden* at Mainz in 1103, and thereafter it was considered to be the most effective type of royal legislation in Germany until the enactment of the "Eternal Peace of the Land" (*Ewiger Landfrieden*) by the Reichstag in 1495. From Frederick Barbarossa's first *Landfrieden* of 1152 onward, it was accepted that enforcement was left to regional and local authorities, significantly both a sign and an accelerator of the "territorialization" of Germany. Beyond these common features, however, the *Landfrieden* was no less complex in its patterns than in its origins. Some were valid for the entire empire (e.g., those of 1152, 1235, and 1495), others for particular regions. Some sought to prohibit feuding absolutely (e.g., 1152), others to restrict it (e.g., 1179, where Barbarossa had to retreat from his earlier position). Nor was the crown the only authority to enact such peaces. Princes, nobles, towns, and even peasants decreed all kinds of peace and formed peace associations all through the later Middle Ages. The most famous of them was probably that of three Alpine cantons in 1291, which grew into the Swiss Confederation.

The fact that such public measures were undertaken at so many levels for 400 years in Germany is a distinctive feature of its history and attests to the limited success of these initiatives. The right of feuding came to be restricted, not abolished, at least not until 1495—and even that could not be really effectively enforced until the eighteenth century. The right of escort (*Geleit*) was therefore an important issue in the late Middle Ages; the Golden Bull of 1356 devotes no fewer than twenty paragraphs to this issue for the imperial electors alone. As for the causes of this endemic violence, it is customary to fix most of the blame on the knights, the "robber barons" (*Raubritter*) of the late Middle Ages. Although the passion for liberty and rights pervaded all of medieval European society, it ran amok in Germany. Churchmen, princes, burghers, and peasants all wanted their independence and readily resorted to declarations of feud to secure and defend their rights—thus the famous feud that the city of Vienna announced against its overlord, Emperor Frederick III, in 1462. And the "peace association" sworn by the inhabitants of Uri, Schwyz, and Unterwalden in 1291 looked to the Habsburgs like revolt against their lawful overlords, for which both sides were prepared to fight to the death again, and again, and again.

Landshut

The settlement at Landshut (Bavaria) developed around a bridge over the Isar River where two major trade routes crossed, one along the Isar and the other between the Inn River and Regensburg. The local historian, Veit Arpeck, writes that Ludwig I, son of Otto von Wittelsbach, duke of Bavaria, reacted to robberies in the area by establishing a guard post midway along the road. This point was referred to as *Hut und Schutz des Landes* (shelter and protection of the land), eventually, as Landshut. Fertile meadows provided good grazing for dairy cattle and encouraged settlement of the surroundings. In 1204, Ludwig I began building the town of Landshut and a residential castle there. The castle, with its Romanesque chapel dedicated to St. George, the *Georgskapelle* (ca. 1230), was named Trausnitz in the fifteenth century and converted into a Renaissance building during the sixteenth. Minnesinger Neidhart von Reuenthal spent several years in Landshut around 1215, and beginning in 1247, Tann

Landshut, St. Martin, interior view to east. Photograph: Virginia Jansen

häuser also lived there. In 1232, Ludmilla, widow of Ludwig I, founded the Cistercian cloister, Seligenthal, with its chapel dedicated to Saint Afra (*Afrakapelle*). Dominican and Franciscan cloisters were also founded in Landshut in 1271 and 1280, respectively.

Landshut became the central city of the Wittelsbach dukes and thus a center of regional government between 1225 and 1503. A building in which town meetings were held was mentioned in 1331. As the meetings outgrew this first small building, they moved to the Dominican house, then to the Franciscan, and finally, in 1380, to a large building in the center of town that forms the middle section of the present city hall (*Rathaus*). Important buildings built or rebuilt after the fire of 1342, and residences such as those on Altstadt Street have been preserved since medieval times and provide a model of medieval architecture and craftsmanship. The number of construction projects initiated before 1400 attests to Landshut's rapid growth during the fourteenth century when construction began on the Gothic basilica St. Jodok and on the church of St. Nikola. In 1407, construction of *Heiliggeistkirche* (Church of the Holy Spirit) began. Structural problems in the Romanesque church of St. Martin were exacerbated by the fire of 1342, and the church was rebuilt starting in 1380. The new church, a late Gothic hall church with a brick spire more than 130 meters high, was completed in 1500. While the foundation of St. Martin's was being cleaned in 1979, walls, columns, and much of the Romanesque portal of the older church were discovered just beneath the floor of the present building.

As the ducal residence and capital of an expansive duchy that included two-thirds of medieval Bavaria, Landshut flourished under the patronage of the three "rich" dukes of Bavaria-Landshut: Heinrich, Ludwig, and Georg (1392–1503). While the original castle served as the center of government, a second castle, Burghausen, was constructed to provide a quieter, private home for the noble families. The early fifteenth century was marked by civil unrest with which the duke dealt severely. The midcentury was punctuated in 1444 by an outbreak of plague that killed thousands of people in the city. Although Jewish residents were protected under Heinrich, they were driven from Landshut after his death in 1450 in spite of the significant contribution they had made to the city's economic prosperity. In 1472, Duke Ludwig founded Bavaria's first university in Landshut where it remained until 1826 when it moved to Munich. The learned Dr. Martin Maier served not only as foreign minister and minister of culture for the duchy, but as the first chancellor of the university as well. A monument of red marble carved by Hans Beierlein of Augsburg for Dr. Maier's grave is located just inside the main entrance to St. Martin's. The marriage of Ludwig's son, Georg, to Hedwig of Poland in 1475 provided the setting for what is remembered as the most glamorous of all medieval feasts. Every four years, the wedding procession, known as the *Landshuter Hochzeit*, is reenacted.

Important fifteenth-century religious art from Landshut, stained glass round windows from 1477 depicting Duke Heinrich and the Virgin Mary originally belonging to the *Georgskapelle* and a Gothic altar from the same period, are housed in the church of Jenkofen. Under the leadership of Duke Georg (1479–1503), the city continued to develop as a cultural center. In 1489, the first paper mill in Bavaria was constructed in Landshut, and in 1493, the city boasted twenty-two goldsmiths. Numerous artisans, including Nikolaus Alexander Mair, were active in the city around 1500. Duke Georg died without male heirs, and the war that ensued for sovereignty ended in the dissolution of Bavaria-Landshut as an independent duchy and the unification of all of Bavaria under the sovereignty of Bavaria-Munich in 1505. Nevertheless, Landshut continued to be an important center of learning, art, and government.

Langmann, Adelheid (ca. 1312–1375)

Born to a politically and socially powerful family in Nuremberg around 1312, at the age of thirteen, Adelheid Langmann was betrothed to Gottfried Teufel, who died shortly afterward. Following what she describes as a lengthy spiritual struggle, around 1330, Adelheid entered the Franconian Dominican cloister of Engelthal. Regarded as a particularly prosperous and renown cloister, Engelthal housed the daughters of many of the prominent burghers of the area. Among them was Christina Ebner, whose widespread praise included bishops and kings. Adelheid was cloistered at Engelthal in 1350 when King Charles IV (later Emperor Charles) visited the monastery for spiritual advice. She was educated in Latin and learned to read and write in her vernacular German dialect. Shortly after Christina wrote her spiritual autobiography, Adelheid recorded her visions and revelations along with a lengthy prayer dedicated to the Trinity. Her *Revelations*, extant in three manuscript variations, were written in a Bavarian dialect and chronicle her spiritual life from 1330 to 1344. While the content is essentially autohagiographical, representing the religious experiences of its author, there are stylistic similarities and thematic parallels with the mystical lives narrated in the convent chronicles of Helfta, Toss, Unterlinden, Diessenhoven, and Adlehausen. Influenced by biblical sources, especially the Song of Songs, Adelheid's ecstatic mysticism reflects the bride mysticism of the Middle Ages. Her texts, as well as several other manuscripts written by Dominican cloistered women in Southern Germany, were rediscovered and edited by nineteenth-century scholars interested in the linguistic history of German.
