# Foreword

Gathering terms for an aerospace dictionary is harder than it looks. I recently studied a list of terms used by the US Air Force to describe the status of each of its component organizations. They explained, 'These actions are defined in ways that may seem arcane to the non-specialist, but each term has a specific meaning.' The terms are: Activate, Active list, Assign, Attach, Consolidate, Constitute, Designate, Disband, Disestablish, Establish, Establishment, Inactivate, Inactive list, Organize, Provisional organizations, Re-designate, Re-establish, Relieve from active duty, and Unit. I read their meanings through several times and decided not to include any in these pages.

In a previous edition I was criticised by a reviewer for using words 'which have no relevance to aerospace'. He cited as an example 'barrier pattern', a term which BAe Manchester had asked me to define! *My sole objective is to create a useful product.* To this end I have included brief entries on such words as 'generic', 'oxygen' and 'gasoline', which are not aerospace terms. Incidentally, while 'gasoline' is clearly now a preferred spelling, I have had to write quite an essay on 'kerosene/kerosine'.

I once had to defend myself against an air marshal who was offended by such rubbish (as he saw it) as 'hardware' and 'software'. Today the explosion of home computing has opened up millions to such previously unfamiliar language. Indeed, in recent years the number of software terms has begun to get out of hand. The JSF programme alone involves more than 40 software acronyms, and I have omitted most of them.

Partly for this reason, this dictionary is centred (centered) at least in mid-Atlantic, if not further west, so we have 'Petrol *Gasoline*', the brief definition appearing under the latter. Cross-references are italicised. I have used US spellings wherever they are appropriate, and

in this field they tend to predominate. Note: USA means US Army.

I have attempted to include a brief explanation of aerospace materials, even if they are known by a registered tradename. Also included are the names of many organizations, but, with a few exceptions, not armed forces, airlines, museums or flying clubs, and certainly not the names of manufacturers or particular types of aircraft, though such acronyms as TSPJ – Tornado self-protection jammer – are tempting. On the other hand, there is a grey area in which a company product appears to merit inclusion, an example being Zero Reader. I have had particular trouble with the names of spacecraft and their payloads, but this is a dictionary of aviation, not space flight.

Entries are in *strict alphabetical order*; thus MW50 appears in the place for MW-fifty. The exception is where an entry has a single alphabetical character followed by a numeral. In such cases it appears immediately after other entries featuring that single character. With a subject as complicated as aerospace, where one finds C, c, c<sup>1</sup>, c̄, c̄, (c), C\* and a host of C+numeral entries, it is difficult to decide which sequence to adopt. Greek terms are listed in Appendix 1, but some – such as Alpha and Beta – merit a place in the body of the dictionary.

On a lighter note, I read an article by Col. Art Bergman, USAF, explaining how to manage the temperamental F100 engine. I had no difficulty with his EECs, UFCs and Plaps, but I was defeated by 'The F100 needs a lot more TLC than the J79 . . .' I asked several certified F-15 drivers, and they were all mystified. I called the 527th TFTS, then the European Aggressor outfit. A charming female voice instantly said, 'Ever think of tender loving care?' On reflection, I put this meaning in the dictionary. The criterion is

## Foreword

whether or not an aerospace person might be confused without it.

One obvious problem area is at what point one should give up trying to include foreign terms. Some may think I have been over-generous to our Gallic friends, while other countries may think themselves harshly treated by being ignored. It is impossible to say 'Leave out all foreign terms and acronyms', because many have become part of the English language. Nobody would expect 'aileron' to be omitted, and before long 'Fenestron' will probably be just as universally accepted as 'fenestron'.

At a rough count the number of new entries this time is in excess of 15,000. Almost all the additions are acronyms. There is little point in again saying that acronyms are an infectious disease, especially in the world of aerospace. Whilst admitting that the incentive to abbreviate is often strong, it is self-defeating if the reader has a choice of more than 20 interpretations and does not know which one to pick.

Some acronyms, such as Cardsharp, appear contrived. Another is Tiger – Terrifically Insensitive to Ground-Effect Radar; I had to force myself to include it. In general, I have omitted acronyms which include the name of a company, an example being Caps – Collins adaptive processor system. I have attempted to indicate whether the spoken acronym or spelt-out version predominates. Thus, we have Papi before PAPI. The outstanding exception is NATO. This is always spoken as a word, but the hierarchy in Brussels still insists that it is not written Nato.

Some acronyms bear little resemblance to the actual initial letters of the original words, while a few are quite a mouthful. We have been in particular trouble with the Joint Strike Fighter. This soon spawned JSF-E&MD and JSFPO-AEP, whilst Boeing was awarded a \$28,690,212 contract to perform the JSFICPTD. This means the Joint Strike Fighter Program Integrated Core Processing Technical Demonstration and is something I have omitted. Another non-starter has to be

Direct, which the US Air Force tells me stands for Defense IEMATS Replacement Command and Control Terminal, which would be fine were it not for the fact that IEMATS stands for Improved Emergency MESSAGE Automated Transmission System. Roger Bacon, the sage of *Flight International*, has drawn attention to Boeing's 'no-tail advanced theater transport, tilt-wing super-short takeoff and landing', which creates the handy name NTATTTW/SSTOL. Clearly, we need acronyms within acronyms.

It is often difficult to decide when the name of a specific item has become a more general term which has to be included. In the 1970s the AAH (Advanced Attack Helicopter) meant the AH-64 Apache. This is a particular type of helicopter, so it had no place in these pages. However, over the years AAH has become a term applied to several of the AH-64's later competitors, so exclusion is no longer justified. In the same way Awacs is now a class of aircraft, while, even though there is only one type of AABNCP, that designation is so important it would be unhelpful to omit it.

Both the AAH and AABNCP begin with 'Advanced'. This is merely a pointless buzzword. Presumably it is intended to imply that something is the very latest, 'state of the art' and better than the competition, but – in aerospace at least – I have seldom heard of anybody designing something that was not 'advanced'. Can these items still be 'advanced' after 40 years? To me, another *bête noire* is 'integrated'. Already we have a zillion AIAs (advanced integrated acronyms). This is an advanced integrated dictionary.

There is an obvious need for a body with the clout to decree what things shall be called, because the present situation is ludicrous. Did you know that the acronym ATAC can mean 'Advanced Target Acquisition and Classification'? Fine, but ATDC stands for 'Assisted Target Detection and Classification' and also for 'Automatic Target Detection and Classification' and also for 'Automated Target Detection and Classification'. Clearly that is not enough, because ATRC stands for

## Foreword

‘Aided Target Recognition and Classification’ and ‘Automatic Target Recognition and Classification’. I did not myself invent these. And I have just noticed that the USAF, the world’s leading offender, has become dissatisfied with the mere ERT (extended-range tank). It has changed it to ERFCS, extended-range fuel-containment system. Feeble! The name could be made *far* more complicated!

In the same way, it should be simple to have an agreed abbreviation for an airspace control zone, but we are now confronted by CTLZ, CTR, CTRZ, and CTZ. In the first edition of this work I included FMEA, for which two elucidations were (and are) current: failure modes and effects analysis and failure-mode effects analysis. I now have to add FMECA – failure-mode effects and criticality analysis – and FMETA – failure-mode effects and task analysis. It is inconceivable that the authors of the two new letter-jumbles were unaware of FMEA, and I cannot comprehend the need for the two new identities. If we go on like this I fear for the sanity of whoever takes over this work when I collapse through exhaustion.

Many of the acronyms in these pages already have more than 20 meanings, and are gathering fresh ones all the time. This trend is leading to texts which, even to most aerospace people, must appear mere gobbledegook. There is no more clearly written periodical than *Aerospace*, published by the august Royal Aeronautical Society, and it strives to remain one of the few bastions of good English. They published an article which told us, ‘Currently, BASE is developing a Terprom SEM-E standard card for use in the H764G, a high-accuracy INS with embedded GPS. It

has two slots, the second being used by an Arinc, MIL-1553A/B or PANIL interface.’ Many readers were doubtless happy with this, and one was impelled to respond with, ‘May I add something to your characterisation of AQP as “an upgrade of CRM” . . . The human factors elements had to be injected into non-jeopardy Loft and LOE . . . With converging developments in CPL NVQ and recurrent CRM, the AQP may be the shape of things to come in the UK.’

A speaker at a recent conference ‘has sat on EUROCONTROL, ICAO, EUROCAE, RTAC and AEEC. In his current position as Programme Manager CNS/ATM he is involved in the CLAIRE and ISATIS using ACARS, a development study of VDL Mode 2 in France. He is evaluation manager of EOLIA and ASD manager in ProATN.’ And an advertisement tells me, ‘Group IV faxes and PCMCIA cards are only supplied with an ISDN S-Bus interface. The ISDN integration provided by the LES means that a SODA is only required at the mobile end.’ I think I need a whisky with my SODA.

### **Preface to the Cambridge edition**

This updated and enlarged new edition is the first to be published by Cambridge University Press. I would like to thank Phoenix Type-setting for doing a masterful job with mathematics and Greek symbols, and everyone at Cambridge for their diligence and infectious enthusiasm – all too rare these days in book publishing.

Bill Gunston, Haslemere, 2004

# Foreword to the Second Cambridge Edition

I am grateful to the publisher's excellent team in New York and Cambridge, not least for agreeing that a new edition is needed. The avalanche of new aerospace terms, and especially acronyms, shows no sign of abating. There is little point in my reiterating the questionable value of inventing new meanings for three-letter acronyms when the same three letters already have more than 30 different meanings relevant to aerospace. Of course, common sense shows that these cannot be presented in any particular order of importance.

One correspondent asked, 'What's the point of having so many meanings for the same set of letters? It just clutters up your book.' In my reply I asked him which ones he would delete. I am still waiting for his reply.

Obviously, it is impossible to include everything. I have given GSP a single brief line, though I have one definition of this seemingly harmless letter-combination which extends over 14 pages of text. My first explanation of EPS is 'Emergency or [confusing] electrical, power system, or supply, or source'. It was impossible to omit any of these, because all are in current use. The reader can be assured that I am not in the business of myself inventing extra meanings; there are too many already.

As far as possible I have (obviously) tried to avoid including an acronym within the explanation of an acronym. I apologise for the fifth translation of Dars. I have offered 'Deployable ARS12 (NATO).' The seeker after enlightenment may, in an ill humour, look up ARS12, where he will find it means 'Air Control Center, recognised air picture production center sensor-fusion post [ACCS] (NATO).' Quite a mouthful to be represented by three letters.

I have tried to keep down the number of

entries by combining two or more in one entry. For example, under DSU 1 offer:

- 4 Data-storage unit; R adds receptacle.
- 5 Defensive system upgrade; P adds program.

I hope that no reader seeking DSUR will angrily say that it is not there. I have also agonised over many names and functions, especially in structural analysis where I have often failed to concoct explanations which are both brief and accurate. A dictionary ought not to try to emulate a textbook.

Just as this edition was closing for press, I received a letter from Dick Gunnell, an Englishman living in the south of France. He drew my attention to a passage on page 41 of Annette Carson's classic history of aerobatics *Flight Fantastic*:

At the very same time, quietly and almost unnoticed, it seems, the word "aerobatics" entered the English language. A certain Mr E. L. Gunston wrote the following amusing letter to *The Aeroplane*, which was published in its edition of 1st January 1914:

"Since boucling and boucle is a feat which has come to stay, and which apparently is as common as sane flying, these feats performed by Pégoud, Chevillard and certain other scientific gentlemen will have to be called by a distinguishing name. Why not 'aerobatics'?"

Nice one, Mr Gunston!

My correspondent asks whether Mr E.L.G. was my father ('there appears to be a similarity in the genes'). Regretfully I must claim no known close kinship. I wonder if he invented any other terms now to be found between these covers.

Again, I would like to thank Phoenix Typesetting, and everyone concerned at Cambridge University Press, both in Cambridge and New York, for unfailing meticulous attention to detail.

Bill Gunston, Haslemere, 2009

# A

- A** 1 General symbol for area (see S).  
2 Aspect ratio (see *A*<sub>s</sub>).  
3 Amperes.  
4 Atomic weight.  
5 Moment of inertia about longitudinal axis, rolling mode.  
6 Anode.  
7 Amplitude.  
8 Degrees absolute.  
9 Amber airway, or light.  
10 IFR flight plan suffix, fitted DME and 4096-code.  
11 JETDS code: piloted aircraft, IR or UV radiation.  
12 Airborne Forces category aircraft (UK, 1944–46).  
13 Atomic (as in A-bomb).  
14 Sonobuoy standard size class, c 1 m/3 ft.  
15 Air Branch (UK Admiralty).  
16 Calibration (USAF role prefix 1948–62).  
17 US military aircraft basic mission or modified mission: attack (USAS, USAAC, USAAF, 1924–48; USN 1948–62; USAF/USN since 1962).  
18 Aircraft category, ambulance (USAAS 1919–24, USN 1943).  
19 Powered target (USAAC 1940–41).  
20 Amphibian (USAF 1948–55).  
21 Availability.  
22 Aeroplane (PPL).  
23 Altitude, followed by digits indicating hundreds of feet.  
24 Arm, as distinct from safe.  
25 Antarctic (but Tor Bergeron's classification = Arctic).  
26 Alternate [airport].  
27 Weather: hail  
28 Accepted (EFIS or nav. display).  
29 Arrival chart.  
30 Sport-parachuting certificate: 10 jumps, no accuracy demanded.  
31 Autotuned (navaid).  
32 Magnetic-vector potential.  
33 Aircraft category: free balloon (FAI).  
34 Cross-section area of wing torsion box.  
35 Common but not universal usage for aft-acting aerodynamic force; not synonymous with drag but the x-axis component of *F*<sub>a</sub>.  
36 Margin [e.g., 0.15 or 0.2] above stall speed.
- Ā** Structural resistance to buckling.  
**Ā** Wing-section axial force parallel to chord, per unit span.  
**Å** Angström ( $10^{-10}$  m), very small unit of length, contrary to SI.  
**(A)** Local time.
- a** 1 Velocity of sound in any medium.  
2 Structural cross-section area.  
3 Anode.  
4 (Prefix) atto, =  $\times 10^{-18}$ .  
5 (Suffix) available (thus, LD<sub>a</sub> = landing distance available).  
6 Ambient.  
7 Acceleration.
- ā** Average value of lift-curve slope due to angle of attack.
- ā** Kussner factor.
- A0, A<sub>0</sub>** Unmodulated (steady note) CW radio emission.  
**A0A1** Unmodulated (steady note) radio emission identified by Morse coding in a break period.  
**A0A2** Unmodulated emission identified by Morse coding heard above unbroken carrier (eg an NDB).  
**A1, A<sub>1</sub>** 1 Unmodulated but keyed radio emission, typically giving Morse dots and dashes.  
2 Flying instructor category; two years and 400 h as instructor (British Commonwealth air forces).  
**a<sub>1</sub>** Lift-curve slope for wing or other primary aerodynamic surface, numerically equal to  $dC_L/d\alpha$ .  
**A2** Military flying instructor category; 15 months and 250 h.  
**a<sub>2</sub>** Lift-curve slope for hinged trailing-edge control surface [arguably, also flap], numerically  $dC_L/de$ .  
**A2C<sup>2</sup>** Army airborne [or airspace] command and control [S adds system] (USA).  
**A2C2** Airborne airstrike command and control (GTACS); S adds system.  
**A2IPB** Automated assistance with intelligence preparation of the battlespace (USAF).  
**A3** AM radio transmission with double SB.  
**A<sup>3</sup>** Affordable acquisition approach (USAF).  
**A3H** AM, SSB transmission with full carrier.  
**A<sup>3</sup>I** Army/NASA aircrew/aircraft integration (USA/US).  
**A3J** AM, SSB transmission with suppressed carrier.  
**A<sup>3</sup>M** Advanced air-to-air missiles.  
**A<sup>3</sup>TC** Advanced automated air traffic control.
- A8-20** Airworthiness approval for classic (usually ex-military) aircraft (CAA, UK).  
**A-25** Royal Navy form for reporting aircraft accidents.  
**A400 to A755** See Arinc, ARINC.
- A-battery** Electric cell to heat cathode filament in valve (tube).  
**A-bomb** Atomic bomb, see *nuclear weapon*.  
**A-check** S-check plus routine inspection of flight-control system. For a modern airline engine, typically 750 h.  
**A-class** 1 Airspace = 18,000+ ft [5486 m] AMSL and controlled.  
2 Aircraft accident = involving loss of life or damage exceeding US\$1 million.
- A-frame hook** Aircraft arrester hook in form of an A; hook at vertex and hinged at base of each leg.  
**A-gear** Arrester gear, where type is not known.  
**A-Licence** Basic PPL without additions or endorsements.  
**A-line** Airway.  
**A-mode** Transponder sends aircraft identification code only.  
**A-sector** Sector of radio range in which Morse A is heard, hence **A-signal**.  
**A-station** In Loran, primary transmitting station.  
**A-Staff** Liquid oxygen (G).  
**A-type entry** Fuselage passenger door meeting FAA emergency exit requirements; typical dimensions 41 in  $\times$  76 in.

- AA** 1 Anti-aircraft.  
2 Airship Association [office, Folkestone CT20 3LG] (UK).  
3 Acquisition Aiding, technique for matching EM waveforms (esp for ECM).  
4 Air-to-air (ICAO code).  
5 Alert annunciator.  
6 Antenna array.  
7 Airbrokers Association (UK, 1949, became AAB).
- AA/A** Air-to-air (radar mode).
- AAA** 1 Airport advisory area.  
2 Army Aviation Association (USA), now AAAA.  
3 Antique Airplane Association [office at Airpower Museum Inc., Ottumwa, IA52501] (US).  
4 American Airship Association.  
5 Anti-aircraft artillery (triple-A).  
6 Affordable acquisition approach (usually A<sup>3</sup>, USAF).  
7 Associazione Arma Aeronautica [air force association] (I).  
8 African Airlines Association [office, Nairobi] (Int.).
- AAAA** 1 Australian Aerial Agricultural Association.  
2 Army Aviation Association of America Inc. [office, Westport, CT06880, (US)].  
3 Antique Aeroplane Association of Australia.  
4 Advanced architecture for airborne arrays.  
5 American Aviation Aerospace Alliance.  
6 Arizona Antique Aircraft Association.  
7 Aircraft Appraisal Assoc. of America [Oklahoma City, OK] (US).
- AAAC** Australian Army Aviation Corps.
- AAACF** Airline Aviation & Aerospace Christian Fellowships [a charity, Lightwater, Surrey GU18 5JS] (UK).
- AAAD** 1 Airborne anti-armour defence.  
2 All-arms air-defence (UK).
- AAADA** Atlantic Alliance of Aerospace and Dfence Associations [Halifax, Nova Scotia] (Int).
- AAAE** American Association of Airport Executives. (Washington, DC).
- AAAF** 1 Association Aéronautique et Astronautique de France. [office, Paris]  
2 Previously the Association des Assurances Aviation de France, now Afsat.
- AAAI** 1 American Association for Artificial Intelligence [Menlo Park, CA94025].  
2 Association of Australian Aerospace Industries [ACT 2608] (Australia).
- AAAM** Advanced air-to-air missile.
- AAAS** American Association for the Advancement of Sciences.
- AAASS** Australian airborne acoustic systems strategy [sonobuoy system, also rendered A<sup>3</sup>S<sup>2</sup>].
- AAATC** AAssociation of American Air Travel Clubs [office, Hallandale, FL] (US).
- AAAT** Australian Advanced Air-Traffic System [first nationwide ADS-B system in the world].
- AAAV** Azienda Autonoma Assistenza al Volo, agency for air navigation and air traffic service (Italy).
- AAAW** Air-launched, or advanced airborne, anti-armour weapon.
- AAB** 1 Association of Air Brokers, now BACA.  
2 Air Assault Brigade.
- AABM** Air-to-air battle management.
- AABNCP** Advanced airborne (national) command post (DoD).
- AAC** 1 Army Air Corps (UK, from 1 September 1957).  
2 Army Air Corps (US, 1926–March 1942).  
3 Army Aviation Centre (Middle Wallop, SO20 8DY, UK).  
4 Air Armament Center (AFMC).  
5 Aviation Advisory Commission (US).  
6 Alaskan Air Command (from 1945).  
7 All-aspect capability.  
8 Advance-acquisition contract (US).  
9 Aeronautical, or airline, administrative control, or communications (Satnav).  
10 Airborne Analysis Center.  
11 Alberta Aviation Council [office, Edmonton].
- AACA** Alaska Air Carriers Association Inc. (Anchorage AK)
- AACAS** Auto air-collision avoidance system.
- AACC** 1 Airport Associations Co-ordinating Council (Int., office, Geneva).  
2 See A2C<sup>2</sup>, A2C2.
- AACE** Aircraft alerting communications EMP.
- AACI** Aircraft and Accident Commission of Indonesia.
- AACMI** Autonomous air-combat manoeuvring instrumentation; S adds system, T training.
- AACO** Arab Air Carriers Organisation (Beirut).
- AACPP** Airport access control pilot program (TSA; note: pilot means initial or preliminary).
- AACR** Airborne analog cassette recorder.
- AACS** 1 Army Airways Communications Service [to 1946], Airways and Air Communications Service [1946–51], subsequently AF Com. Service (USAF).  
2 Airborne advanced communications system.
- AACT** Air-to-air combat test (USN).
- AACU** Anti-Aircraft Co-operation Unit (UK, various dates 1937–47).
- AAD** 1 Aging Aircraft Division (WPAFB).  
2 Assigned altitude deviation.  
3 Additional Airworthiness Directive (CAA).
- AADC** 1 Area Air-Defense Commander (USN).  
2 Analytical air-defence cell (NATO).
- AADGE** Allied air-defence ground environment (NATO, pronounced a-adge).
- AADI** Advanced area-defence interceptor.
- AADP** Advanced-architecture display processor.
- AADRM** Advanced air-breathing dual-range missile.
- AADS** 1 Advanced air-data system.  
2 Airborne active dipping sonar.  
3 Airspeed and director sensor.  
4 Aircraft activity display system (program).  
5 Advanced air-delivered sensor.
- AADV** Autonomous aerial, or air, delivery vehicle.
- AAE** 1 Above aerodrome/airport/airfield elevation.  
2 Army Acquisition Executive (USA).  
3 Asociación de Aviación Experimental [home-builders], (Spain).  
4 Agrupación Astronáutica Española [E-08006 Barcelona] (Spain).
- AAED** Advanced airborne expendable decoy.
- AAEE, A&AEE** Aeroplane & Armament Experimental Establishment (Martlesham Heath 1924–39, then at Boscombe Down to the present but from 1959 under different titles). Now called ATEC. (UK).

**AAEEA** Association des Anciens Elèves de l'Ecole de l'Air (F).

**AAES** 1 Association of Aerospace Engineering Societies (US).

2 American Association of Engineering Societies.

**AAExS** Army/Air Force Exchange Service (US, became AAFES).

**AAF** Army Air Force[s], full title USAAF, (June 1941–1947).

**AAFARS** Advanced aviation forward-area refuelling system.

**AAFBU** AAF Base Unit.

**AAFCE** Allied Air Forces Central Europe (NATO, pronounced af-see).

**AAFEA** Australian Airline Flight Engineers' Association.

**AAFES** Army and Air Force Exchange Service (US).

**AAFIF** Automated air-facility information file, compiled by DMA.

**AAFRA** Association of African Airlines.

**AAFSS** Advanced aerial fire-support system.

**AAG, A/AG** 1 Air-to-air gunnery.

2 Air Adjunct General (USAF, ANG).

3 Asociación Colombiana de Aviación Civil General (Columbia).

4 Advanced arresting gear [carriers].

**AAGE** The Association of Aeronautical Ground Engineers (UK, 1935–).

**AAGF** Advanced aerial gun, far-field.

**AAH** Advanced attack helicopter (USA).

**AAHIS** Advanced airborne hyperspectral imaging system.

**AAHM** 1 American Airpower Heritage Museum [Midland, TX].

2 Alaska Aviation Heritage Museum [Fairbanks, AK].

**AAHS** American Aviation Historical Society [Santa Ana, CA 92704].

**AAI** 1 Angle-of-approach indicator, or indication (see VASI).

2 Angle-of-attack indicator.

3 Airline Avionics Institute (US).

4 Air aid to intercept (AI was more common).

5 Air-to-air interrogator; see AAICP.

6 Arrival, or arriving, aircraft interval.

7 Airports Authority of India.

**AAIB** 1 Air Accident Investigation Branch (DETR, UK).

2 Air Accident Investigation Bureau (Singapore).

**AAIC** Air Accidents Investigation Commission (US).

**AAICP** Air-to-air interrogator control panel.

**AAII** Accelerated accuracy improvement initiative (GPS Navstar).

**AAILS** Airmedical airborne information for lateral spacing.

**AAIM** Aircraft autonomous, or acoustic airframe, integrity monitoring.

**AAIP** Analog autoland improvement program[me].

**AAIR** AmSafe aviation inflation restraint.

**AAIRA** Assistant Air Attaché (US, pronounced A-aira).

**AAIS** Association of Aerospace Industries (Singapore) [2002–].

**AAL** 1 also **a.a.l.**, Above airfield level.

2 Australian Air League [W. Marrickville, NSW].

3 Aircraft approach limitations, UK service usage specifying minima for aircraft type in association with specified ground aids.

**AAALAAW** Advanced air-launched anti-armour weapon.

**AAALAE** Association of Australian Licensed Aircraft Engineers.

**AAALB** Ailes Anciennes Le Bourget (F).

**AAALC** Autonomous approach [and] landing capability (AFRL).

**AAALS** Army Aviation Logistics School [Fort Eustis, VA23604–5414] (US).

**AAAM** 1 Air-to-air missile.

2 Azimuth-angle measuring [unit] (Madge).

3 Archive Air Museum (BAA).

**AAAMA** Association des Amis du Musée de l'Air (F).

**AAAME** Association of Aviation Medical Examiners (UK).

**AAAMP** 1 Advanced-architecture microprocessor.

2 Advanced aircraft maneuvering program.

**AAAMPV** Advanced anti-materiel/personnel/vehicles (US).

**AAARMRL** Harry G Armstrong Aerospace Medical Research Laboratory (USAF).

**AAAMS** Association of Air Medical Services [Alexandria, VA22314] (US).

**AAAN** Airworthiness approval note.

**AAANCP** Advanced airborne national command post (US).

**AA&S** Advisory and Assistance Services.

**AA&D** 1 Arrival and departure chart.

2 Aerospace and defense (industry sector).

**AA&E** Airframe and Engine, qualified engineer.

**AA&F** Arming and fuzing (ICBM).

**AAANDI** Airworthiness Assurance Non-destructive Inspection validation center [at Sandia National Laboratory, N.M.] (US).

**AA&P** Airframe and Powerplant qualified mechanic (US).

**AA&R** Assemble and recycle.

**AAAO** 1 Air-to-air operation[s].

2 Airborne area of operation.

3 Air Attack Officer (US Forest Service).

**AAAP** 1 Apollo Applications Program (NASA).

2 Acceptable alternative product (NATO).

3 Aircraft Acceptance Park (RFC/RAF, to 1918).

4 Ass. of Aviation Pilots (Mexico DF).

5 Ass. of Aviation Psychologists [Columbus, OH] (US).

**AAp** Angle of approach lights.

**AAAPA** Association of Asia-Pacific Airlines.

**AAAPP** Airborne auxiliary powerplant.

**AAAPS** Advanced aviation protection system (EW).

**AAAR** 1 Aircraft accident report.

2 Air-augmented rocket.

3 Air-to-air refuelling, or automatic aerial refuelling.

4 Antenna azimuth rate.

5 Airport acceptance rate.

6 Airport arrival rate.

7 Active-array radar.

8 After-action review.

**AAARA** Air-to-air refuelling area.

**AAARB** Advanced aerial refuelling boom.

**AAARF** Aircraft accident report form.

**AARGM** Advanced anti-radiation guided missile.

**AARL** Advanced applications rotary launcher (S adds system).

**AAR points** Ground position of intended hookups.

**AARS** 1 Automatic altitude-reporting system.

2 Attitude/altitude retention system.

3 Advance [not advanced] airborne reconnaissance system (BAE Systems).

**AARTA** Army Aviation research and technology activity (USA).

**AAS** 1 Airport Advisory Service (FAA).

2 Army Aviation School (USA).

3 American Astronomical Society [office, Washington, DC20009] (US).

4 American Astronautical Society [office, Springfield, VA22152–2323] (US).

5 Air Armament School [formerly] (UK).

6 Advanced automation system (NAS 2).

7 Aerospace Audiovisual Service [1981–, previously APS, APCS] (USAF).

8 Alternative access to [space] station (NASA).

**AASA** 1 Aging Aircraft Safety Act [Congress, 1991] (US).

2 The Airlines Association of South Africa [Springbok, Transvaal].

**AASE** Advanced aircraft survivability equipment.

**AASF** 1 Advanced Air Striking Force [in France, 1939–40] (RAF).

2 Alaskan Aviation Safety Foundation [office, Anchorage, AK99502] (US).

3 Army Aviation Support Facility (USA).

**AASM** 1 Advanced air-to-surface missile.

2 Armement air-sol modulaire (F).

3 Association of Aviation and Space Museums [Alexandria, VA] (US).

**AASU** Western rendition “Aviation army (or armies) of the Soviet Union” [to 1990].

**AAT** 1 Airworthiness approval tag.

2 Airports Authority of Thailand.

**AATA** 1 Asociación Argentina de Transportadores Aéreos.

2 Animal Air Transport Association [Fort Washington, MD] (Int.).

**AATC** 1 American Air-Traffic Controllers’ Council.

2 ANG/Afres Test Center (USAF).

3 Alabama Aviation & Technology Campus [Ozark AL36361–1209] (US).

**AATD** 1 Aviation Applied Technology Directorate (USA).

2 Advanced aviation training device (FAA).

**AATF** Airport and airway trust fund (FAA).

**AATG** Average annual traffic growth.

**AATH** Automatic approach to hover (anti-submarine helicopters).

**AATMS** Airborne air-traffic management system (Euret).

**AATS** 1 Alternate aircraft takeoff systems.

2 Access-approval test set [or system].

3 Aviation and Air-Traffic Services.

**AATT** Advanced aviation and transportation technology.

**AATSR** Advanced along-track scanning radiometer.

**AATTC** Advanced Airlift Tactics Training Center (USAF).

**AAU** 1 Aircrew Allocation Unit (UK, 1943–53).

2 Aircraft Assembly Unit (UK, WW2).

3 Association of Aerospace Universities, 21 plus 5 commercial organisations [c/o Coventry University CV1 5FB], (UK).

4 Audio amplifier unit.

5 Antenna adaptor unit (IFF).

6 Articulated audio unit (threat warning).

7 Assigned amount unit[s] [emissions].

**AAUR** All-altitude upset recovery.

**AAV** Autonomous aerial vehicle.

**AAv** See AAVN.

**AAVN** Army Aviation (UK).

**AAVS** Aerospace Audio-Visual Service (USAF).

**AAW** 1 Anti-air warfare.

2 Active aeroelastic wing.

3 Aeromedical Airlift Wing (USAF).

**AAWEX** Anti-air warfare exercise.

**AAWG** Airworthiness Assurance Working Group.

**AAWS** 1 Automatic Aviation Weather Service.

2 Advanced anti-tank weapon system.

**AAWWS** Airborne adverse-weather weapon system.

**AB** Air base (USAF).

**A/B, AB, a/b** 1 Afterburner.

2 Airbrake.

**Ab** 1 Cross-section area of spar boom.

2 Projected blade area of helicopter rotor.

**ABA** American Bar Association; IPC adds International Procurement Committee.

**ABAA** Australian Business Aircraft Association.

**ABAC** 1 Conversion nomogram, eg for plotting great-circle bearings on Mercator projection.

2 Association of British Aviation Consultants.

3 Association of British Aero Clubs and Centres, formed 1926 as Associated Light Aeroplane Clubs, reconstituted as ABAC 1946, became BLAC 1966.

4 The Association of Balloon and Airship Constructors [San Diego, CA 92169] (US).

**ABAG** Associação Brasileira de Aviação Geral (Brazilian NBAA).

**ABB** Automated beam-builder (space).

**ABBCC** Airborne battlefield control center.

**Abbey Hill** ESM for British warships, tuned to hostile air (and other) emissions.

**ABC** 1 Advance-booking charter.

2 Advancing-blade concept (Sikorsky).

3 Automatic boost control.

4 Airborne commander (SAC).

5 See Airborne Cigar.

6 After bottom [dead] centre.

**ABCA** American, British, Canadian, Australian Standardization Loan Programme.

**ABCCC** Airborne Battlefield Command and Control Center (USAF), upgraded to II and III.

**ABCT** Airfields of Britain Conservation Trust (UK).

**ABCU** Alternate [ie alternative] braking control unit.

**ABD** 1 Airborne broadband defence (ECM).

2 See next.

**ABDR** Aircraft battle damage repair.

**Abeam** Across the borders European ATM(7) systems effects (Euret).

**abeam** Bearing approximately 090° or 270° relative to vehicle.

**Aberporth** Chief UK missile test centre, formerly administrated by RAE, on Cardigan Bay, now Parc Aberporth.

**aberration** Geometrical inaccuracy introduced by optical, IR or similar electromagnetic system in which radiation is processed by mirrors, lenses, diffraction gratings and other elements.

**ABE** 1 Air-breathing engine [S adds system].

2 Aerodrome beacon.

3 Arinc 429 bus emulator.

**ABET** Accreditation Board for Engineering and Technology (US).

**ABF** 1 Annular blast fragmentation (warhead).

2 Auto beam forming (passive sonobuoys).

3 Advanced bomb family (USN).

**ABFAC** Airborne forward air controller.

**ABFI** Association of Belgian Flight Instructors [Antwerp B-2140] (Belgium).

**ABG** Air Base Group (USAF).

**ABGS** Air Bombing and Gunnery School (RAF).

**ABI** 1 Advanced[d] boundary information.

2 Airborne broadcast intelligence.

3 Advanced baseline imager (NOAA).

**ABIA** Associação Brasileira das Industrias Aero-nauticas.

**ABICS, Abics**, Ada-based interception [or integrated] control system.

**ABIHS** Airborne broadcast intelligence hardware system (hazard avoidance).

**ABILA** Airborne instrument landing approach.

**ab initio** Aircraft or syllabus intended to train pupil pilot with no previous experience [literally "from the beginning"].

**ABIP** Advisory Board of Interested Parties [EASA] (Int.).

**ABIS** All-bus instrumentation system.

**ABIT, Abit** ADS-B implementation team.

**ABITA** Association Belge des Ingénieurs et Techniciens de l'Aéronautique et de l'Astronautique [office, B-1930, Zaventem].

**ABJPAA** Association Belge des Journalistes Professionnels de l'Aéronautique et de l'Astronautique [B-1030, Brussels] (Belgium).

**ABL** 1 Airborne laser.

2 Atmospheric boundary layer.

3 Armoured box launcher.

4 Allegany Ballistics Laboratory (VS).

**ablation** Erosion of outer surface of body travelling at hypersonic speed in an atmosphere. An ablative material (ablator) chars or melts and is finally lost by vaporisation or separation of fragments. Char has poor thermal conductivity, chemical reactions within ablative layer may be endothermic, and generated gases may afford transpiration cooling. Main mechanism of thermal protection for spacecraft or ICBM re-entry vehicles re-entering Earth atmosphere.

**AB/LD** Airbrakes/lift dumpers.

**ABM** 1 Apogee boost motor.

2 Anti-ballistic missile, with capability of intercepting re-entry vehicle(s) of ICBM.

3 Abeam (ICAO code).

4 Air-burst munition.

5 Aviation business machine.

6 Asynchronous balanced mode.

7 Aircraft base maintenance.

8 Adams Bashforth-Moulton, an LMM.

**abm** Abeam.

**ABMA** US Army Ballistic Missile Agency, 1 February 1956, Huntsville.

**ABMD** Anti- [or advanced] ballistic missile defense; A adds agency, I initiative, P program, S system and T treaty (US).

**ABN** Airborne.

**ABn** Aerodrome beacon.

**Abney level** A spirit-level clinometer (obs.).

**abnormality** The presence of abnormal material forms or physical shapes that are not permitted by the engineering specification (FAA).

**abnormal spin** Originally defined as spin which continued for two or more turns after initiation of recovery action; today obscure.

**A-bomb** Colloquial term for fission bomb based upon plutonium or enriched uranium (A = atomic).

**abort** 1 To abandon course of action, such as takeoff or mission.

2 Action thus abandoned, thus an \*.

**abort drill** Rehearsed and instinctive sequence of actions for coping with emergency abort situation; thus, RTO sequence would normally includes throttles closed, wheel brakes, spoilers, then full reverse on all available engines consistent with ability to steer along runway.

**above-wing nozzle** Socket for gravity filling of fuel tanks.

**ABP** Aerodynamic balance panel.

**AB/PM** Air-base protective measure (US).

**ABPNL** Association Belge des Pilotes et Navigants techniciens de Ligne [office, B-1140 Brussels] (Belgium).

**A-BPSK** Aeronautical binary phase-shift keying.

**ABR** 1 Amphibian bomber reconnaissance.

2 Agile-beam radar.

**abradable seal** Surface layer of material, usually non-structural, forming almost gas-tight seal with moving member and which can abrade harmlessly in event of mechanical contact. Some fan and compressor-blade\*\* are silicone rubber with 20% fill of fine glass beads.

**ABRC** Advisory Board for the Research Councils (UK).

**Abres, ABRES** Advanced ballistic re-entry system[s].

**ABRU** Advanced bomb rack unit.

**ABRV** 1 Advanced ballistic re-entry vehicle.

2 Abbreviation.

**ABS** 1 Acrylonitrile butadiene styrene, strong thermosetting plastic material.

2 Anti-blocking system.

3 Anti-lock braking system.

**abs** Absolute scale of units.

**ABSA** Advanced base support aircraft.

**abscissa** 1 In co-ordinate geometry, X-axis.

2 X-axis location of a point.

**ABSL** Ambient background sound level.

**absolute aerodynamic ceiling** Altitude at which maximum rate of climb of aerodyne, under specified conditions, falls to zero. Usually pressure altitude amsl, atmosphere ISA, aircraft loading 1 g, and weight must be specified. Except for zoom ceiling, this is greatest height attainable.

**absolute alcohol** Pure ethyl alcohol (ethanol) with all water removed.

**absolute altimeter** Altimeter that indicates absolute altitude; nearest approach to this theoretical ideal is laser altimeter, closely followed by instruments using longer EM wavelengths (radio altimeter).

**absolute altitude** Distance along local vertical between aircraft and point where local vertical cuts Earth's surface.

**absolute angle of attack** Angle of attack measured from angle for zero lift (which with cambered wing is negative with respect to chord line).

**absolute ceiling** Usually, absolute aerodynamic ceiling.

**absolute density** Theoretical density (symbol  $\rho$ ) at specified height in model atmosphere.

**absolute fix** Fix (2) established by two or more position lines crossing at large angles near  $90^\circ$ .

**absolute humidity** Humidity of local atmosphere, expressed as  $\text{gm}^{-3}$ .

**absolute inclinometer** Inclinometer reading attitude with respect to local horizontal, usually by precise spirit level or gyro.

**absolute optical shaft encoder** Electromechanical transducer giving coded non-ambiguous output exactly proportional to shaft angular position.

**absolute pressure** Gauge pressure plus local atmospheric pressure.

**absolute system** Of several \*\* of units, or for calculating aerospace parameters, most important is reduction of aerodynamic forces to dimensionless coefficients by dividing by dynamic pressure head  $\frac{1}{2}\rho V^2$ .

**absolute temperature** Temperature related to absolute zero. Two scales in common use: absolute ( $^\circ\text{A}$ ) using same unit as Fahrenheit or Rankine scale (contrary to SI), and Kelvin (K) using same unit as Celsius scale.

**absolute zero** Temperature at which all gross molecular (thermal) motion ceases, with all substances (probably except helium) in solid state.  $0\text{K} = -273.16^\circ\text{C}$ .

**absorbed dose** Energy imparted by nuclear or ionising radiation to unit mass of recipient matter; measured in rads.

**absorption band** Range of frequencies or wavelengths within which specified EM radiation is absorbed by specified material; narrow spread(s) of frequencies for which absorption is at clear maximum.

**absorption coefficient** 1 In acoustics, percentage of sound energy absorbed by supposed infinitely large area of surface or body.

2 In EM radiation, percentage of energy that fails to be reflected by opaque body or transmitted by transparent body (in case of reflection, part of radiation may be scattered). Water vapour is good absorber of EM at long wavelengths at which solar energy is reflected from Earth's surface, so \*\* for solar energy varies greatly with altitude.

**absorption process** Chemical production of petrols (gasolines) by passing natural gas through heavy hydrocarbon oils.

**absorption cross-section** Absorption coefficient of radar target expressed as ratio of absorbed energy to incident energy.

**ABT** 1 About (ICAO).

2 Air-breathing threat[s].

**Abta, ABTA** Association of British Travel Agents, [office, London].

**ABTJ** Aferburning turbobjet.

**ABU** 1 Aviation bird unit (airport).

2 Avionics block upgrade.

**ABV** 1 Air-bleed valve.

2 Above (ICAO).

3 Alternative boost vehicle (BMDS).

**ABW** Air Base Wing (USAF).

**AC** 1 Aligned continuous (FRP1).

2 Aircraft commander.

3 Army co-operation (UK).

4 Aerodynamic centre (a.c. is preferred).

5 Or  $A_c$ , acceleration command.

6 Acquisition cycle.

7 Advisory circular (FAA).

8 Aircraft characteristic (JAR).

9 Automated circumferential (riveting).

10 Airworthiness circular.

11 Air carrier.

12 Air conditioner.

13 Airman certification (US).

14 Active component.

15 Area coverage (Satcoms).

16 Analyst console.

17 Approach control.

**Ac** Altocumulus cloud.

**A/C** Approach Control (FAA style).

**ac** Aerodynamic centre.

**a.c.** 1 Alternating current (electricity).

2 Aerodynamic centre of wing or other surface; often written ac.

**a/c** Aircraft (FAA = acft).

**ACA** 1 Air Crew Association (UK).

2 Aerobatic Club of America (Fort Worth, TX).

3 Advanced cargo aircraft.

4 Ammunition-container assembly.

5 Airspace coordination area (GFS).

6 Arms Control Association (US).

7 Address compression algorithm.

8 Advisory Committee for Aeronautics [1909, became ARC 1920] (UK).

9 Advanced computing architecture.

**ACAA** 1 Air-Carrier Association of America.

2 Australian Civil Aviation Authority.

3 Academic Center for Aging Aircraft (universities + DoD).

4 African Civil Aviation Agency, oversees five regional bodies (2007–).

**ACAAI** Air Cargo Agents Association of India [office, Mumbai].

**ACAAR** Aircraft communications addressing and reporting [s adds system].

**ACAB** Air Cavalry Attack Brigade (USA).

**ACAC** 1 Arab Civil Aviation Council (Int).

2 African Civil Aviation Commission [Dakar, Senegal] (Int.).

3 Aircooled air cooler.

**ACAMS** Aircraft communications and management system.

**ACAN** Amicale des Centres Aéronautiques Nationaux [F-7501b Paris] (F).

**ACAP** 1 Aviation Consumer Action Project [1971–, office, Washington, DC 20009] (US).

2 Advanced composite aircraft (helicopter) program (US).

**ACARE** Advisory Council for Aeronautical Research in Europe (Int.).

**Acars, ACARS** 1 Aircraft communications and automatic reporting system; most common interpretation.

2 Airborne communication and recording system.

3 Arinc communications addressing and reporting system.

4 Airline communication and reporting system (Rockwell Collins).

**ACAS** 1 Air-cycle air-conditioning system.

2 Assistant Chief of the Air Staff.

3 Aluminium core, aluminium skin.

4 Airborne collision-avoidance system.

5 Aircraft collision-avoidance system (ICAO is currently \*II; 2002).

6 Advisory, Conciliation and Arbitration Service (UK).

7 Airfield chemical-alarm system.

8 Aircraft analytical system (software).

**ACASS** Advanced close air support system (US).

**Acassa** Army close air support situational awareness (USA/USAF).

**Acat, ACAT** 1 Association of Colleges of Aerospace Technology [Weybridge KT13 8TT] (UK).

2 Air Carrier Ab initio Training; MPL adds Multiple crew pilot license (US).

**Acat** Army combined arms team trainer (Cobra/Apache/Scout).

**ACAVS** Advanced cab and visual system.

**ACAWS** Advisory caution and warning system.

**ACBM** Additional conventional-bomb module.

**ACC** 1 Air, or air traffic, or area, or aerodrome, or airfield control centre.

2 Active clearance control.

3 Air Combat Command (USAF, from 1 June 1992, HQ Langley AFB).

4 Air Co-ordinating Committee (US, military/civilian, 1945–60).

5 Axis-controlled carrier.

6 Avionics computer control.

7 Aeronautical Chamber of Commerce (US, 1921 on).

8 Automatic code change (IFF).

9 Aero Club of Canada [Ontario K7C 4L7].

10 Aerobatic Certificate Course (AOPA).

11 Audio control console.

**AcC** Altocumulus castellanus.

**ACCA** 1 Air Courier Conference of America [office, Falls Church, VA] (US).

2 Air Charters Carriers' Association.

**ACCC** 1 Australian Competition and Consumer Commission.

2 Aluminium [aluminum] conductor, composite core [cable].

**ACCE** Air Command and Control Element (RAF).

**accelerated flight** Although aircraft that gains or loses speed is accelerating in horizontal plane, term should be used only for acceleration in plane perpendicular to flight-path, esp. in vertical plane.

**accelerated history** Test record of specimen subjected to overstress cycling, overtemperature cycling or any other way of 'ageing' at abnormally rapid rate.

**accelerated mission endurance test** An engine or other item is subjected to a non-stop succession of simulated in-service missions.

**accelerated stall** Stall entered in accelerated flight. As common way of inducing stall is to keep pulling up nose, it might be thought all stalls must be accelerated, but in gradual entry flight path may be substantially horizontal. "High-speed stall" is possible in violent manoeuvre because acceleration in vertical plane requires wing to exceed stalling angle of attack. Stall-protection systems are generally designed to respond to rate of change of angle of attack close to stalling angle, so stick-pusher (or whatever form system takes) is fired early enough for critical value not to be reached.

**accelerate-stop** Simulation of RTO by accelerating from rest to  $V_1$  or other chosen speed and immediately bringing aircraft to rest in shortest possible distance; hence \* distance.

**accelerating pump** In piston engine carburettor, pump provided to enrich mixture each time throttle is opened, to assist acceleration of engine masses.

**accelerating well** Originally receptacle for small supply of fuel automatically fed into choke tube by increased suction when throttle was opened. Later became small volume connected by bleed holes to mixture delivery passage. Usually absent from modern engines.

**acceleration** Rate of change of velocity, having dimensions  $LT^{-2}$  and in SI usually measured in  $ms^{-2} = 3.28084 \text{ fts}^{-2}$  [reciprocal, 0.3048]. As velocity is vector quantity, \* can be imparted by changing trajectory without changing speed, and this is meaning most often applied in aerospace.

**acceleration control unit** Major element in engine fuel control unit, usually a servo sensing compressor delivery pressure to make fuel flow keep pace with demand for extra fuel to accelerate engine as throttle is opened.

**acceleration datum** Engine  $N_1$  corresponding to typical approach power, used in engine type testing for  $2\frac{1}{2}$  min. rest period before each simulated overshoot acceleration (repeated 8 or 15 times).

**acceleration errors** Traditional direct-reading magnetic compass misreads under linear acceleration (change of speed at constant heading) and in turn (apparent vertical acceleration at constant speed); former is a maximum on E–W headings, increasing speed on W heading in N hemisphere indicating apparent turn to N; Northerly Turning Error (N hemisphere) causes simple compass to lag true reading, while Southerly Turning Error results in over-reading. Simple suction horizon misreads under all applied accelerations, most serious under linear positive acceleration (t-o or overshoot), when indication is falsely nose-up and usually right-wing down (with clockwise rotor, indication is diving left turn).

**acceleration manoeuvre** High-speed yo-yo.

**acceleration-onset cueing** Simulator technique in which real acceleration is initially imparted and then reduced, usually to zero, at a rate too low for body to notice; thus trainee can even believe in sustained afterburner takeoff.

**acceleration stress** Physical deformation of human body caused by acceleration, esp. longitudinal.

**acceleration tolerance** See *g-tolerance*.

**accelerator** 1 Device, not carried on aircraft, for increasing linear acceleration on takeoff; original name for *catapult*.

2 Software for boosting throughput of digital data, especially for satellite transmission.

**accelerator pump** Accelerating pump.

**accelerometer** Device for measuring acceleration. INS contains most sensitive \* possible. Usually one for each axis, arranged to emit electrical signal proportional to sensed acceleration. Recording \* makes continuous hard-copy record of sensed acceleration, or indicates peak. Direct reading \* generally fitted in test flying but not in regular aircraft operation.

**Accept** Automated cargo clearance enforcement processing technique, computerised inspection of selected items only, to help identify high-risk items (US customs).

**acceptable alternative product** One which may be used in place of another for extended periods without technical advice (NATO).

**acceptance** One meaning is agreement of air-traffic control to take control of particular aircraft. Hence \* rate is (1) actual rate in one-hour period, or (2) the maximum that can safely be handled.

**acceptance test** Mainly historic, test of hardware witnessed by customer or his designated authority to demonstrate acceptability of product (usually military). Schedule typically covered operation within design limits, ignoring service life, fatigue, MTBF, MMH/FH and fault protection.

**acceptance trials** Trials of flight vehicle carried out by eventual military user or his nominated representative to determine if specified customer requirement has been met.

**Access** Assembly concept for construction of erectable space structures.

**access door** Hinged door openable to provide access to interior space or equipment.

**access light** Until about 1940, light placed near airfield boundary indicating favourable area over which to approach and land.

**access panel** Quickly removable aircraft-skin panel, either of replaceable or interchangeable type, removed to provide access to interior.

**accessories** Replaceable system components forming functioning integral part of aircraft. Except in general aviation, term is vague; includes pumps, motors and valves, excludes such items as life-rafts and furnishing. In case of fuel system (for example) would include pumps, valves, contents gauges and flowmeters, but not tanks or pipelines.

**accessory drive** Shaft drive, typically for group of rotary accessory units, from main engine, APU, EPU, MEPU or other power source.

**access time** 1 Time required to access any part of computer program (typically  $10^{-3}$  to  $10^{-9}$  s).

2 Time required to project any desired part of film or roller map in pictorial cockpit display (typically about 3 s).

3 Time necessary to open working section of tunnel and reach model installed (typically about 1,000 s, but varies greatly).

**ACCGS** Air Cadet Central Gliding School (Syerston, UK).

**ACCID** Notification of aircraft accident (ICAO).

**accident** Incident in life of aircraft which causes significant damage or personal injury (see *notifiable*).

**accident-protected recorder** Flight recorder meeting mandatory requirements intended to ensure accurate playback after any crash.

**accident rate** In military aviation most common parameter is accidents per 100,000 flying hours; other

common measures are fatal accidents, crew fatalities and aircraft write-offs on same time basis, usually reckoned by calendar year. In commercial aviation preferred yardsticks are number of accidents (divided into notifiable and fatal) per 100 million passenger-miles (to be replaced by passenger-km) or per 100,000 stage flights, either per calendar year or as five-year moving average. In General Aviation usual measure is fatal accidents per 100,000 take-offs.

**accident recorder** Device, usually self-contained and enclosed in casing proof against severe impact, crushing forces and intense fire, which records on magnetic tape, wire, or other material, flight parameters most likely to indicate cause of accident. Typical parameters are time, altitude, IAS, pitch and roll attitude, control-surface positions and normal acceleration; many other parameters can be added, and some \*\* on transports are linked with maintenance recording systems. Record may continuously superimpose and erase that of earlier flight, or recorder may be regularly reloaded so that record can be studied.

**ACCIS** Automated command and control information system (NATO).

**ACCISRC** See AC<sup>2</sup>ISRC [alphabetically, AC two . . .].

**acclrm** Accelerometer.

**accompanying cargo/supplies** Cargo and/or supplies carried by combat units into objective area.

**ACCP** Automatic configuration control processor.

**ACC-R** Area control centre radar.

**accredited medical conclusion** Decision by licensing authority on individual's fitness to fly, in whatever capacity.

**accredited sortie** One that puts bomb on target.

**ACCS** 1 Airborne Command and Control Squadron (USAF, NATO).

2 Air command and control system (NATO).

3 Air-cycle [modular] cooling system.

4 Airborne computing and communications system.

**ACCSA** Allied Communications and Computer Security Agency (NATO, Brussels).

**ACCTS** Aviation Co-ordinating Committee for telecommunications Services (US).

**accumulator** 1 Electrical storage battery, invariably liquid-electrolyte and generally lead/acid.

2 Device for storing energy in hydraulic system, or for increasing system elasticity to avoid excessive dynamic pressure loading. Can act as emergency source of pressure of fluid, damp out pressure fluctuations, prevent incessant shuttling of pressure regulators and act as pump back-up at peak load.

3 Device for storing limited quantity of fuel, often under pressure, for engine starting, inverted flight or other time when normal supply may be unavailable or need supplementing.

4 Portion of computer central processor or arithmetic unit used for addition.

**accuracy jump** Para-sport jump in which criterion is distance from target.

**accuracy landing** In flying training or demonstration, dead-stick landing on designated spot (= spot landing).

**accuracy of fire** Linear distance between point of aim and mean point of strikes.

**Accu-Time** Magnetron circuit capable of being precisely tuned to different wavelengths.

**ACD** 1 Automatic [or automated] chart display.  
 2 Aeronautical Charting Division (NOAA).  
**ACDA** Arms Control and Disarmament Agency.  
**ACDAC** Asociación Colombiana de Aviadores Civiles [pilots' union; Bogotá] (Colombia).  
**ACDB** Airport characteristics data-bank (ICAO).  
**AC/DC** Air refuelling tanker able both to dispense and receive fuel in flight (colloq).  
**ACDO** Air-carrier district office (US).  
**ACDP** Armament control and display panel.  
**ACDS** 1 Automatic countermeasures [or computer-controlled] dispenser [or dispensing] system.  
 2 Assistant Chief of the Defence Staff (UK).  
 3 Air-, or advanced, combat direction system.  
**ACDTR** Airborne central data tape recorder (now generally called RSD).  
**ACE** 1 Automatic check-out equipment.  
 2 Association of Consulting Engineers [London SW1H 0QL] (UK).  
 3 Air combat evaluator (CIU software).  
 4 Aircrew (or accelerated copilot) enrichment.  
 5 Allied Command Europe (NATO).  
 6 Association des Compagnies Aériennes de la Communauté Européenne [all EC7 members of IACA; office, B-1930 Zaventem] (Int.).  
 7 Advanced crew-station evaluator (helicopter).  
 8 Automated center for electronics, computer control of all phases of circuit design, development, assembly and test (Lockheed).  
 9 'Technical acknowledgement' (ACARS code).  
 10 Actuator control electronics.  
 11 Advanced-certification equipment.  
 12 Aerospace Committee (BSI).  
 13 Avionics capabilities enhancement.  
 14 Analysis [and] control element.  
 15 Agile control experiment.  
 16 Aerobatic certification evaluator.  
 17 Aviation Career Education, or Educator (US).  
 18 Aviation Combat Element of MEU  
 19 Autonomous combat [manoeuvres] evaluation.  
 20 Air-combat emulator.  
 21 Adaptive-cycle engine.  
 22 Association of Cost Engineers [Sandbach, Cheshire] (UK).  
 23 Aviation [airport] capacity evaluation (FAA 2002-).  
 24 Aviation Centre of Excellence (45 European members).  
 25 Aéro Club d'Egypte [Cairo].  
 26 Airborne Command Element (Awacs).  
 27 Airside capacity enhancement.  
**ace** Combat pilot with many victories over enemy aircraft. WW2 USAAF scores included strafing (air/ground) "victories". Number required to qualify has varied, but in modern world is usually five confirmed in air combat.  
**ACEA** 1 Action Committee for European Aerospace (international shop-floor pressure group).  
 2 Aero Club of East Africa (Kenya).  
**ACEBP** Air-conditioning engine bleed pipe.  
**ACEC** Ada-compiler evaluation capability.  
**ACED** Air cargo explosives detection; PP adds pilot program (DHS).  
**ACEE** Aircraft energy efficiency (NASA).  
**ACEL** Air Crew Equipment Laboratory (USN).

**ACEM** Aerial camera electro-optical magazine.  
**ACER** Air Corps Enlisted Reserves (USA).  
**ACES** 1 Advanced-concept escape system.  
 2 Advanced-concept ejection seat.  
 3 Air-carrier engineering support.  
 4 Aerial combat enhanced [or evaluation, or evaluator] simulation.  
 5 Advanced carry-on Elint/ESM suite.  
 6 Adaptation controlled environment system (ATC).  
 7 Airborne capability extension system.  
**ACeS** Asia cellular satellite system.  
**ACESNA** Agence Centrafricaine pour la Sécurité Navigation Aérienne. [office Bangui, Central African Rep.]  
**ACCESS** Aircraft computerized equipment support system.  
**ACET** 1 Air-cushion equipment transporter, for moving aircraft and other loads over soft surfaces, especially over airbase with paved areas heavily cratered (S adds 'system').  
 2 Automatic cancellation of extended [radar] target[s].  
 3 Affordable capable engine technology, TDP adds technology demonstrator programme [2005-] (UK).  
**acetate** Compound or solution of acetic acid and alkali. \* dope is traditionally based upon acetic acid and cellulose; was used for less inflammable properties (see *nitrate dope*).  
**ACETEF** Air-combat environmental test and evaluation facility (USA).  
**acetone** CH<sub>3</sub>.CO.CH<sub>3</sub>, inflammable, generally reactive chemical, often prepared by special fermentation of grain, used as solvent. Basis of many 'dopes' and 'thinners'.  
**ACETS, Acets** Air-cushion equipment transportation system (for post-attack airfields).  
**acetylene** CH.CH or C<sub>2</sub>H<sub>2</sub>, colourless gas, explosive mixed with air or when pressurized but safe dissolved in acetone (trade name Prestolite and others). Burns with oxygen to give 3,500°C flame for gas welding; important ingredient of plastics.  
**Aceval** Air-combat evaluation.  
**ACEX** Air-coupled electronic transducer.  
**ACF** 1 Aircraft Components Flight (RAF).  
 2 Advanced common flightdeck.  
 3 Area control facility.  
**ACFC** 1 Aircooled flight-critical.  
 2 Aircooled fuel cooler.  
**ACFD** Advanced civil flight deck.  
**AC<sup>4</sup>ISR** Adaptive C<sup>4</sup>ISR.  
**ACFR** Australian Centre for Field Robotics.  
**acft** Aircraft (ICAO), also loosely ACFT.  
**ACG** 1 Austro Control GmbH (Austria).  
 2 Airfield Construction Group (RAF, WW2).  
 3 Airport Compatibility Group.  
**ACGF** Aluminium-coated glassfibre (chaff).  
**ACGS** Aerospace Cartographic and Geodetic Service (USAF, formerly MAC).  
**ACH** 1 Advanced Chain Home (UK WW2).  
 2 Advanced compound helicopter.  
**ACH/GD** Aircraft-hand, General Duties, "lowest form of life" in RAF (WW2).  
**achieved navigation performance** The measure of uncertainty in the position element.

**achromatic** Transmitting white light without diffraction into special colours; lens system so designed that sum of chromatic dispersions is zero.

**ACI** 1 Air Council Instruction (UK).

2 Airports Council International; suffixes denote regions, thus – NA = North America [office, 1215 Geneva 16] (Int.).

3 Avionics caution indicator.

4 Armament control indicator.

**ACID** Aircraft identification.

**acid engine** Rocket engine in which one propellant is an acid, usually RFNA or WFNA.

**acid extraction** Stage in production of lubricating oils in which sulphuric acid is used to extract impurities.

**Acids, ACIDS** 1 Automated communications and intercom distribution system.

2 Air conformal ice detection system.

**ACI-E** Airports Council International – Europe.

**ACINT, Acint** Active acoustic intelligence.

**Acips** Airfoil and cowl ice protection system.

**ACIS** 1 Advanced CCD imaging spectrometer.

2 Armament, or advanced, control/indicator set.

3 Advanced cabin interphone system.

**ACJ** Advisory circular, Joint.

**ACJN** Adaptive joint C4ISR node.

**ACK** Acknowledgement of uplink (Acars).

**ack** Acknowledgement (ICAO).

**Ack-ack** Anti-aircraft (UK WW1, became passé in WW2).

**Ackeret formula** There are many, most important being, for thin wing above  $M_{DET}$ , regardless of camber,  $C_L = 4\alpha/\sqrt{M^2-1}$ .

**Ackeret theory** First detailed treatment [1925] for supersonic flow past infinite wing, suggesting sharp leading and trailing edges and low  $t/c$  ratio; favoured profiles were biconvex or trapezium (parallel double wedge).

**acknowledged program** A special-access program whose existence is admitted.

**acknowledgement** Confirmation from addressee that message has been received and understood.

**ACL** 1 Anti-collision light.

2 Allowable cabin load.

3 Aeronautical-chart legend.

4 Altimeter check location.

5 Air Cadet League of Canada.

6 ATC1 clearance[s].

**Aclaim** Airborne coherent lidar for air inflight measurement.

**Aclant** Allied Command, Atlantic (NATO).

**ACLC** The Air Cadet league of Canada [office, Ottawa].

**ACLD, ACld** Above cloud[s].

**ACLG** Air-cushion landing gear; underside of aircraft is fitted with inflatable skirt to contain ACV type cushion, suitable for all land, marsh, sand or water surfaces.

**Aclics** Airborne communications location, identification and collection system (USA).

**acclinic line** Isoclinic line linking all points whose angle of dip is zero.

**Aclos, ACLOS** Automatic command to line of sight.

**ACLS** 1 Automatic carrier landing system (Bell/USN).

2 Air-cushion landing system.

**ACLT** 1 Aircraft-carrier landing training.

2 Actual calculated landing time.

**ACLU** American Civil Liberties Union (US).

**ACM** 1 Air-combat manoeuvring, or manoeuvre [US maneuver]; EST adds expert-systems trainer, I instrumentation, R range and S simulator.

2 Air-cycle machine.

3 Anti-armour cluster munition.

4 Air Chief Marshal (not normally abbrev.).

5 Air-conditioning module.

6 Advanced cruise missile (USAF).

7 Aircraft-condition monitoring.

8 Aircraft manual.

9 Attitude-control module.

10 Air Commercial Manual (US Bureau of Air Commerce).

11 Aircraft-cabin mattress.

12 Advanced contouring machine.

13 ATC 1 communications management.

**ACMA** Advanced concepts and material applications (MoD, UK).

**ACMDS** Advanced countermeasures dispensing system.

**ACME** Advanced-core military engine.

**ACMF** Aircraft-condition monitoring function.

**ACMG** Air-Cargo Management Group (US).

**ACMI** 1 Air-combat manoeuvring instrumentation, or installation.

2 Aircraft, crew, maintenance and insurance.

**ACMP** Alternating-current motor/pump.

**ACMR** Air-combat manoeuvring range.

**ACMS** 1 Avionics, or advanced, control and management system.

2 Aircraft, also airport, condition monitoring system.

3 Armament control and monitoring system.

**ACMT** Advanced cruise-missile technology.

**ACN** 1 Aircraft Classification Number (ICAO proposal for pavements).

2 Airborne communications node, C4ISR, now called *AJCN*.

3 Academia Cosmologica Nova (G).

4 Ascension.

**ACNA** Aéro Club National d'Algérie (Algeria).

**ACNDT** Advisory Committee for Non-Destructive Testing.

**ACNIP** Auxiliary, or advanced, CNI panel.

**ACNS** Assistant Chief of the Naval Staff (UK).

**ACNSS** Advanced com/nav/surveillance system.

**ACO** 1 Airspace control, or coordination, order.

2 Airborne Control, or Communications, Officer.

3 Aerosat coordination office.

4 Advanced concepts of applications.

5 Air-combat order.

**ACOC** Aircooled oil cooler.

**acorn** 1 Streamlined body or forebody added at intersection of two aerodynamic surfaces [e.g. fin/tailplane] to reduce peak suction.

2 Streamlined body introduced at intersection of crossing bracing wires to prevent chafing.

3 Streamlined fairing over external DF loop.

**acorn valve** Small thermionic valve (radio tube) formerly added to VHF or UHF circuit to improve efficiency.

**ACOS** 1 Assistant Chief of Staff.

2 Air Crew Officers' School.

**Acost** Advisory Committee on Science and Technology (UK).

**ACostE** Association of Cost Engineers (UK).

**Acoubuoy** Acoustic sensor dropped by parachute into enemy land area.

**Acousint, acousint** Acoustic intelligence.

**acoustic** Associated with sound, and hence material vibrations, at frequencies generally audible to human beings.

**acoustic absorption factor** Rate at which acoustic energy is incident on a surface divided by that measured on inner face of material. Varies greatly with frequency.

**acoustical tailpipe** The final nozzle assembly in a hushkit.

**acoustic delay line** In computer or other EDP device, subsystem for imparting known time delay to pulse of energy; typically closed circuit filled with mercury in which acoustic signals circulate (obs.).

**acoustic feedback** Self-oscillation in radio system caused by part of acoustic output impinging upon input.

**acoustic impedance** Resistance of material to passage of sound waves, measured in acoustic[al] ohms.

**acoustic intelligence** Self-explanatory; in the past has primarily involved undersea warfare.

**acoustics** In ASW, sonar and other sensing systems relying on underwater sound; thus \* operators, \* displays.

**acoustic splitter** Streamlined wall introduced into flow of air or gas, parallel to streamlines, for acoustic purposes. Usually inserted to reduce output of noise, for which purpose both sides are noise-absorbent. Many are radial panels and concentric long-chord rings (open-ended cylinders).

**acoustic tube** Miniature acoustic/electric transducer which has replaced carbon or other types of microphone in aircrew headsets.

**acoustic tuning** Fine adjustment of shape to achieve desired aerodynamics, esp. in separation of stores.

**ACP** 1 Airborne [or airlift] command post.

2 Anti-Concorde Project.

3 Altimeter check point.

4 Armament control panel.

5 Africa, Caribbean, Pacific.

6 Audio control panel, or converter processor.

7 Aerosol collector and pyrolyser.

8 Aluminised composite propellant.

9 Acquisition Change Programme [2006-] (MoD, UK).

**ACP, Acp** Acceptance message.

**ACPA** Adaptive-controlled phased array.

**ACP(C)** Automatic communications processor (control).

**ACPL** Atmospheric Cloud Physics Laboratory.

**AC-plonk** AC2 (derogatory reference to this low rank in RAF, 1941-50).

**ACPMR** Automatic communications processor and multiband radio.

**ACPT, Acpt** Accepted.

**acquisition** 1 Act of visually identifying, and remembering location of, object of interest (specific ground or aerial target).

2 Detection of target by radar or other sensor (plus, usually, automatic lock-on and subsequent tracking).

3 Detection and identification of desired radio signal or other broadcast emission.

4 Act of reaching desired flight parameter, such as

heading, FL or IAS, or desired point or axis in space such as ILS G/S or LOC (see *capture*).

**acquisition round** AAM (1) without propulsion, and usually without wings or fins, carried to provide practice in homing head lock-on.

**acquisition scan window** 3-D block of airspace into which a VAV can easily be guided, wherein CARS or UCARS acquires it and feeds it to the RIW.

**ACR** 1 Aerial combat reconnaissance.

2 Air [or airfield, or approach] control radar.

3 Advanced cargo rotorcraft.

4 Active cockpit rig.

5 Avionics communication[s] router.

6 Aeroklub Ceske Republiky (Czech Rep.).

**ACRA, Acra** Airlift Concepts and Requirements Agency (USA/USAF).

**ACRB** Aéro-Club Royal de Belgique [B-1000 Brussels] (Belgium).

**ACRC** Aircrew Reception Centre, (UK, WW2).

**acre** Old Imperial (FPS) unit of land surface area, equal to 0.40469 ha (1 ha = 2.47105 acres). For covered area (factory buildings etc) usual SI unit is m<sup>2</sup> (= 0.000247105 acre, so 1-acre plant = 4,047 m<sup>2</sup>).

**acreage** Superficial area of flight vehicle, especially spacecraft or aerospace craft, as distinct from nose and other parts that need ablative or other special protection.

**Ac-Rep** Representative, usually of country of manufacture, accredited to accident investigation.

**Acris** Air control recording and information system.

**ACRM** Aircrew resource management.

**acrobatics** Usual term is aerobatics.

**ACRP** Airport Co-operative Research Program (TRB).

**ACRR** Airborne communications restoral relay.

**ACRS** Air Crew Refresher School (RAF WW2).

**ACRT** Additional cross-reference table.

**ACRV** Assured crew-rescue vehicle.

**ACRW** Aircraft [aeroplane] with circular rotating wing.

**acrylics[s]** Thermosetting plastic[s], usually transparent, based on polymerised esters of \* acid; original tradename Perspex (ICI, UK) and Plexiglas (Rohm & Haas, US). Since 1950 improved transparencies result from stretching moulded part prior to setting.

**ACS** 1 Attitude, or armament, or avionics, or active, or audio, or auxiliary, control system.

2 Aeroflight control system, for use by spacecraft within atmosphere.

3 Air-conditioning system.

4 Air Commando Squadron (USAF).

5 Air Control Squadron.

6 Aircraft Certification Service (FAA).

7 Airframe consumable spares.

8 Advanced crew station.

9 Aerial [ie, airborne] common sensor (USA, USN).

10 Air-combat simulator.

11 Assembly & Command Ship (Sea Launch).

**ACSA** 1 Allied Communications Security Agency (NATO).

2 Aero Club of S Africa.

3 Aeronautical Safety for Central America (Belize, Costa Rica, El Salvador, Guatemala, Honduras).

**ACSC** Air Command and Staff College (USAF, Maxwell AFB).

**ACSE** Access control and switching, or signalling, equipment (Aerosat ground station).

**ACSG** 1 Armament computer symbol generator.  
2 Aeronautical communications sub-group.

**AcSL**. Altocumulus standing lenticular.

**ACSM** 1 Advanced conventional standoff missile.  
2 Assemblies, components, spare parts and materials (NATO).

**ACSR** 1 Active control of structural response.  
2 Aeroklub Ceskoslovenske Socialisticke Republiky (Prague).

**ACSS** 1 African Centre for Strategic Studies.  
2 Aircraft collision surveillance system.

**ACSSB** Amplitude-commanded single-sideband.

**ACSSU** Air Combat Service Support Unit[s] [EAW] (RAF).

**ACSU** Air-Combat Support Unit. [as above].

**ACT** 1 Actual temperature; ISA  $\pm$  deviation.  
2 Active-control technology.  
3 Air-combat tactics.  
4 Anti-communications threat.  
5 Atlas composing terminal.  
6 Airborne crew trainer.  
7 Advanced composite technology.  
8 Additional centre tank.  
9 Advanced-coverage tool.  
10 ASR crew trainer.  
11 Active, activated, activity.  
12 Analysis control team.  
13 Allied Command Transformation, strategic force created 2003 in NATO with HQ in US.

**ACTAU, Actau** Asociación de Controladores de Transito Aereo del Uruguay.

**Act** See ACT 11.

**ACTC** Air Commerce Type Certificate (US 1934–38).

**ACTD** Advanced-concept technology demonstrator, or demonstration.

**ACTE** Association of Corporate Travel Executives (Int.).

**ACTEW, Actew** Acoustic charged transport electronic warfare, low-cost decoy system in which signals are slowed as they pass across GaAs.

**ACTI** Air-combat tactics instructor.

**ACTIFT, Actift** Advanced cockpit technology and instrument-flying trainer.

**actinic ray** EM radiation, such as short-wave length end of visible spectrum and ultraviolet, capable of exerting marked photochemical effect.

**actinometer** Instrument measuring radiation intensity, esp. that causing photochemical effects, eg sunlight; one form measures degree of protection afforded from direct sunlight, while another (see *pyrgeometer*) measures difference between incoming solar radiation and that reflected from Earth.

**action** Principal moving mechanism of automatic weapon; in gun of traditional design typically includes bolt, trigger, sear, bent, striker, extractor and ammunition feed.

**Actions** Air-combat training interoperable with NATO systems, integrated with *Raids* (see *Units*).

**action time** Duration in seconds of significant thrust imparted by solid-propellant or hybrid rocket. Several definitions, most commonly the period between the point at which thrust reaches ten per cent of maximum (or average maximum) and that at which it decays through same level. This period is always shorter than actual

duration of combustion, but longer than burn time. Symbol  $t_a$ .

**action time average chamber pressure, or thrust** Integral of chamber pressure or thrust versus time taken over the action time interval divided by the action time; symbols  $P_c$ ,  $F_a$ .

**Actis** Advanced compact thermal-imaging system.

**Activ** Air-combat training instrumented virtual range.

**activate** To translate planned organisation or establishment into actual organisation or establishment capable of fulfilling planned functions.

**activated carbon** Organically derived carbon from which all traces of hydrocarbons have been removed; highly absorbent and used to remove odours and toxic traces from atmospheres; also called activated (or active) charcoal.

**ACTIVE, Active** Advanced control technology for integrated vehicles.

**Active** Aircrew collective training through immersive virtual events (UK, MoD).

**active** 1 General adjective for a device emitting radiation (as distinct from passive). Also see \* munition.

2 The runway(s) in use.

**active aerodynamic braking** Reversed propulsive thrust.

**active aeroelastic wing** Instead of trying to prevent flexure and twist the AAW seeks to exploit it. Special F/A-18 works by LE flap control.

**active air defence** Direct action against attacking aircraft, as distinct from passive AD.

**active clearance control** Technique for maintaining an extremely small gap between fixed and rotating components of a machine (for example, by blowing bleed air around a turbine casing in a gas-turbine engine).

**active controls** Flight-control surfaces and associated operative system energised by vertical acceleration (as in gust) and automatically deflected upwards and/or downwards, usually symmetrically on both sides of aircraft, to alleviate load; thus active ailerons or tailplanes operate in unison to reduce vertical acceleration.

**active countermeasures** Countermeasures requiring friendly emissions. Subdivisions include microwave, IR and electro-optical.

**active decoy round** Rocket-launched parawing carrying an EW jammer.

**active electronically scanned array** Radar, especially for fighter, whose antenna is fixed; scanning is achieved by a progressive phase-shift from one side of the antenna to the other (or from bottom to top), the greater the shift the larger the steering angle  $\theta$ . Normally slight upward tilt deflects head-on main-lobe reflection to enhance stealth characteristics.

**active guidance** Active homing guidance.

**active homing guidance** Guidance towards target by sensing target reflections of radiation emitted by homing vehicle.

**active jamming** ECM involving attempted masking or suppression of enemy EM signals by high power radiation on same wavelengths.

**active landing gear** One in which the full suspension force is subject to control.

**active loading** LO (Stealth) generates signal to cancel that detected by hostile radar.

**active magnetic bearing** One which holds shaft in position by electromagnetic field, with no physical contact.

**active material** Many meanings, eg: 1, phosphor, such as zinc phosphate or calcium tungstate, on inner face of CRT; 2, parts of electric storage battery that participates in electrochemical reaction.

**active missile** Fire-and-forget missile carrying its own active guidance.

**active model** A computer-generated [e.g., CAD] model able to demonstrate the full range of system function.

**active munition** One having immediate effect (as distinct from a mine, which is passive).

**active noise control** Noise-suppressing or countering systems triggered by noise itself and using sound energy against itself.

**active pilot** On long-haul, the pilot fully alert to FMGS, navigation and other inputs.

**active runway** Runway currently in use (implied that flying operations are in progress).

**active satellite** Satellite with on-board electrical power sufficient to broadcast or beam its own transmissions.

**active stealth** Reduction in signature by generating tailored emissions.

**active visual camouflage** See *counter-illumination*.

**activity factor** See *blade activity factor*.

**ACTP** Advanced Computer Technology Project (UK).

**ACT-R** Air-combat training, rangeless.

**Actram** Advisory committee on transport of radioactive material.

**ACTS** Advanced communications technology satellite.

**ACT-Tilt** Active control technology for tilt-rotor.

**ACT-TO** Actual time and fuel state at takeoff.

**actual ground zero** Point on surface of Earth closest to centre of nuclear detonation.

**actuator** Device imparting mechanical motion, usually over restricted linear or rotary range and with intermittent duty or duty cycle.

**actuator remote terminal** Connects the powered flight-control unit in a distributed flight-control system, databus feeding through digital processor to close pilot analog loop and provide redundancy.

**AC2** Aircraftman, 2nd Class (RAF, most numerous WW2 rank).

**AC<sup>2</sup>ISRC** Aerospace Command and Control Intelligence, Surveillance, Reconnaissance Center (USAF).

**ACU** 1 Gas-turbine acceleration control unit.

2 Avionics [or autopilot, or audio, or auxiliary, or acceleration, or apron, or airborne, or adaptive, or annotation, or antenna] control unit.

3 Airborne computer unit.

**acute dose** Total radioactive dose received over period so short that biological recovery is not possible.

**ACV** 1 Air-cushion vehicle.

2 Escort (or auxiliary) aircraft carrier (CVE from 1943).

3 Achieved coverage volume (satellite antenna).

**ACVC** Ada compiler validation capability.

**ACW** 1 Aircraft control and warning.

2 Air Control Wing (USAF Awacs).

**ACWAR, Acwar** Agile continuous-wave acquisition radar.

**ACyc** Anti-cyclone, anti-cyclonic.

**ACZ** Airfield, or aerodrome, control zone.

**AD** 1 Airworthiness Directive (national certifying authorities).

2 Advisory route (FAA).

3 Aligned discontinuous (FRP).

4 Aerodrome (ICAO).

5 Air defence.

6 Area-denial munition.

7 Aerial delivery (ramp-door position).

8 Autopilot disconnect.

9 Air diagram, followed by number.

10 Armament Division (AFSC).

11 Air Division (USAAF, USAF).

12 Accidental damage.

13 Aerodynamic disturbance (which see).

14 Ashless dispersant.

15 Assistant Director (UK).

16 Administrative domain.

17 Air Depot (RFC, SAAF).

18 Automatic differentiation.

19 Attack display.

**AD** 1 Air defence.

2 Alarm and display.

3 Aerodrome (common UK usage).

4 Analog/digital.

**Ad** Aerodrome (DTI, CAA).

**a/d** Aerodrome [trad.abb.].

**ADA** 1 Advisory area.

2 Air-defence alert [or artillery].

3 Aeronautical Development Agency (India).

4 Air-defended area.

5 Business-aviation association (R).

6 Americans with disabilities act.

7 Avion de détection aéroportée (Awacs, F).

8 Association de Documentation Aéronautique (F).

9 Adaptive data analysis [see *VDA3*].

**Ada** Standard common high-order language for US DoD software (trademark).

**ADAAM** Air-directed air-to-air missile.

**ADAAPS** Aircraft data acquisition, analysis and processing system.

**ADAC** 1 STOL (F).

2 Active-radar seeker (F).

**Adacs** 1 Alarm distributed-access control system.

2 Airborne digital automatic collection system.

**ADAD** Air-defence alerting device, horizon-scanning IR surveillance system.

**ADAE** Air Display Association Europe (Dunston, Lincs., UK).

**ADAHRS** Air-data attitude/heading reference system.

**ADAIRS** Air-data and inertial-reference system.

**Adam, ADAM** 1 Air deflection and modulation.

2 Automated deposition of advanced (or aircraft) material (filament winding).

3 Automated data for aerospace maintenance.

4 Advanced dynamic anthropomorphic manikin.

5 Aerospace data miner.

6 Air-defence air-mobile [or air defense anti-missile] [in each case, S adds system].

7 [Also ADaM] aerostat design and manufacture [J-lens].

8 Air-defense airspace management (USA).

9 Advanced aero-engines materials [research] (UK).

**ADAMD** Air Defence and Aerospace Management Directorate (NATO).

**Adams** 1 Aircraft dispatch and maintenance safety (Int.).

2 Allied deployment and movements system (NATO).

**ADAP** 1 Aircraft Development Aid Program (US DoT).  
2 Air-defence air picture.

**Adaps** Automatic data acquisition and processing system.

**Adapt** Air traffic [services] data acquisition, processing and transfer (ATC Switzerland).

**adapter** Interstage device to mate and then separate adjacent stages of multi-stage vehicle. Often called skirt, especially when lower stage has larger diameter.

**adaptive bus** Digital data highway to which (almost) any number of inputs and outputs may be connected.

**adaptive control system** Control system, esp. of vehicle trajectory, capable of continuously monitoring response and changing control-system parameters and relationships to maintain desired result. Adapts to changing environments and vehicle performance to ensure given input demand will always produce same output.

**adaptive-cycle engine** Variable-geometry turbofan providing high specific thrust for acceleration and economical high BPR for subsonic cruise.

**adaptive logic** Digital computer logic which can adapt to meet needs of different programs, environments or inputs.

**adaptive nulling** See *Adars*.

**adaptive optical camouflage** Active, self-variable form of camouflage which, chameleon-like, alters emitted wavelengths to suit varying background tones.

**adaptive radar** Usual [not only] meaning is antenna automatically alters gain, sidelobes and directivity according to received signal.

**Adapts** Adaptive diagnostics and personalised technical support.

**ADAR** Air-deployed active receiver (ASW).

**Adario** Analog/digital adaptive recorder input/output.

**Adars** Adaptive antenna receiver system; antenna (aerial) provides gain towards desired signals arriving from within a protected angle while nulling those arriving from outside that angle.

**ADAS** 1 Airborne data-acquisition system.

2 Auxiliary (or airborne) data-annotation system (for reconnaissance film, linescan or other hard-copy print-out of reconnaissance or ECM mission).

3 Airfield damage assessment system (USAF).

4 Air-deliverable acoustic sensor.

5 Aeronautical-data access station (AFTN).

6 Advanced digital avionics system (STA.6).

7 Automated weather-observing system data-acquisition system.

**ADat-P3** Automatic data-processing [standard]-3 (NATO).

**Adats** 1 Air-defense [and] anti-tank system (US).

2 Airborne digital avionics test system.

**ADAU** Air-, or analog-, or auxiliary-, data acquisition unit.

**ADAV** VTOL (F).

**ADAWS** Action-data automated weapon system.

**ADAZ** Air-defence zone.

**ADB** 1 Automatic drifting balloon.

2 Apron-drive bridge.

3 Aircraft discrepancy book (USN).

**ADC** 1 Air-data computer.

2 Air Defense Command (USAAF, 27 March 1946), see next.

3 Aerospace Defense Command (USAF, 15 January 1968, later called Adcom, inactivated 31 March 1980).

4 Advanced design conference.

5 Analog/digital convertor.

6 Aircrew dry coverall (helicopter sea rescues).

**ADCA** Advanced-design composite aircraft (USAF).

**Adcap** Advanced capability, or capabilities.

**ADCC** 1 Air Defence Cadet Corps (UK 1939–41, became ATC).

2 Air-defence, or direction, control centre.

**ADCF** Aligned discontinuous carbon fibre.

**ADCIS** Air-defence command information system (UK).

**ADCN** Aeronautical, or aircraft, data communications network.

**Adcock aerial** Early radio D/F; avoided errors due to horizontal component by using two pairs of vertical conductors spaced ½-wavelength or less apart and connected in phase opposition to give a figure-8 pattern.

**ADCOM, Adcom** Aerospace Defense Command (USAF, inactivated 31 March 1980).

**ADCoPP** Air-defence command-post processor.

**ADCP** Advanced-display core processor.

**ADCS** Air-data computer system.

**ADCTS** Advanced distributed combat training system.

**Adcus** Advise Customs.

**Adcuts, ADCUTS** Advanced computerised ultrasonic test system.

**ADCV** Active destination-coded vehicle (baggage).

**ADD** 1 Airstream direction detector (stall protection).

2 Long-range aviation (USSR VVS strategic bombing force).

3 Allowable, or acceptable, deferred deficiency, or defect).

**ADDA** American Design Drafting Association [office, Columbia, SC29211] (US).

**ADDC** Air-defence data, or direction, centre (UK).

**ADDD** Air-defence data dictionary (UK, a mathematical model).

**Addison-Luard** Large hand-held aluminium-body computers, Type B for triangle of velocities and D for adding fourth vector, eg motion of aircraft carrier (c1928–40).

**additive** Substance added to fuel, propellant, lubricant, metal alloy etc to improve performance, shelf life or other quality.

**additive drag**  $D_{add}$ , total drag at inlet to a jet engine, mass flow times difference between inlet and free-stream plus inlet area times difference between inlet and free-stream pressures. These terms should be close to zero.

**ADDL** Aerodrome (or airfield) dummy deck landings; pronounced 'addle'.

**ADDN, Addn** Addition, additional.

**add-on contract** Extension of existing contract to cover new work in same programme.

**ADDPB** Automatic diluter-demand pressure breathing.

**ADDR** Aeroklub der Deutschen Demokratischen Republik.

**address** Electronic code identifying each part of computer memory, each bit or information unit being routed to different \*.

**address selective** Adsel.

**ADDS** 1 Airborne-decoy [or advanced digital] dispensing system.

2 Aerial delivery dispersal system.

**add time** Time required for single (binary) addition operation in computer arithmetic unit.

**ADE** 1 Automated draughting (drafting) equipment.

2 Aeronautical Development Establishment (India).

3 Ada development environment.

4 Australian Defence Executive.

5 Airframe design environment [software].

**Adecs, ADECS** Advanced digital engine control system.

**ADEG** Air traffic services data-exchange requirements group (ICAO).

**Adela** Aircraft directed-energy laser applications (AFRL).

**Adèle** Alerte detection et localisation des émetteurs (F).

**ADELTA** Automatically deployable *emergency locator* transponder, or transmitter.

**Adem** Advanced diagnostic and engine monitoring.

**Aden** Armament Development, Enfield (UK, formerly).

**ADEN** Augmented deflector [or deflecting] exhaust nozzle.

**Adeos** Advanced Earth-observing satellite.

**ADEU** Automatic data-entry unit (punched card input for STOL transport navigation).

**Adews** Air-defense EW system (USA).

**Adex, ADEX** Air defence exercise.

**ADEXP** ATS (1) data-exchange presentation message format.

**ADF** 1 Automatic direction-finding or finder. Airborne radio navaid tuned to NDB or other suitable LF/MF broadcast source. Until 1945 aerial was loop mounted in vertical plane and rotated by motor energised by amplified loop current to rest in null position, with plane of loop perpendicular to bearing of ground station. Modern receivers fed by two fixed coils, one fore-and-aft and the other transverse, suppressed flush with aircraft skin (usually on underside).

2 Australian Defence Force; (A adds Academy).

3 Air-dominance fighter.

4 Anti-icing/de-icing fluid.

5 Airline Dispatcher Federation (office, DC).

**ADFA** Australian Defence Force Academy (Campbell, ACT).

**ADFC** Aligned discontinuous fibre composite.

**ADF sense aerial** Rotatable loop null position gives two possible bearings of ground station;\*\* is added to give only one null in each 360° of loop rotation.

**ADG** 1 Auxiliary drive generator.

2 Air-driven generator.

3 Accessory drive gear, or generator.

4 Aircraft delivery group (USAF).

5 Airplane Design Group (FAA).

**ADGB** Air Defence of Great Britain (1943–44).

**ADGBS** Air-defence ground-based system (RAF).

**ADGE, Adge** Air defence ground environment, or equipment.

**ADGS** 1 Air-defence gunsight.

2 Aircraft docking guidance system.

**ADI** 1 Attitude director [rarely, display] indicator. 3-D cockpit display forming development of traditional horizon and usually linked with autopilot and other elements forming flight-director system. Most can func-

tion in at least two modes, en route and ILS, and in former can provide navigational steering indications.

2 Anti-detonant injection, such as cylinder-head injection of methanol/water, for high-compression piston engine.

3 Air Defense Initiative, partner ideas for SDI-type international joint ventures (US DoD).

4 Aerospace and Defence Industries Directorate [1 to 4] (DTI, UK).

5 Azimuth display indicator.

6 Assistant Director of Intelligence.

**adiabatic** Thermodynamic change in system without heat transfer across system boundary. In context of Gas Laws, possible to admit of exact\* processes and visualise them happening; shockwave, though not isentropic, is not\* in classical sense because thermodynamic changes are not reversible.

**adiabatic flame temperature** Calculated temperature of combustion products within rocket chamber, assuming no heat loss. Symbol  $T_c$ .

**adiabatic lapse rate** Rate at which temperature falls (lapses) as height is increased above Earth's surface up to tropopause (see *DALR, ELR, SALR*).

**ADIAE** Aerospace and Defence Industries Association of Europe (Int.).

**Adians, ADIANS** Aerospace and Defence Industries Association of Nova Scotia. [1995–].

**ADIB** Air-deployable ice beacon.

**ADID** Aircraft-data interface device.

**ADIMP** Ada improvement programme (UK).

**Adints, ADINTS** Automatic depot inertial navigation test system.

**ADIR** Air-data [and] inertial-reference (see next and *ADIRU*).

**ADIRS** 1 ADIR system.

2 Airfield damage information and reporting system.

**ADIRU** Air-data [and] inertial reference unit.

**ADIS** 1 Airport-data information system, or source.

2 Automatic data-interchange system (FAA, from 1961).

3 ADS(5) datalink interim system (Australia).

4 Airport display information system (NAS/LATCC).

**ADIT** Automatic detection, identification and tracking (USA).

**ADITT** Aerially deployable ice-thickness transponder.

**ADIVS** Air-defence interoperability validation system.

**ADIZ** Air-defence, or defense, identification zone.

**ADJ** Adjacent.

**adjacent channel** Nearest frequency above or below that on which a radio link is working; can interfere with carrier or sidebands, but \*\* simplex minimises this.

**adjustable propeller** One whose blades can be set to a different pitch on ground, with propeller at rest.

**adjustable tailplane [horizontal stabilizer]** Surface which can be reset to different incidence only on ground.

**adjuster** Mechanical input (manual, powered or remote-control) for altering a normally fixed setting, such as engine idling speed.

**Adkem** Advanced kinetic-energy missile.

**ADL** 1 Automatic drag limiter [S adds system].

2 Arbeitsgemeinschaft Deutscher Luftfahrt-Unternehmen (G).

3 Armament datum line.

4 Authorised data list.

- 5 Aeronautical data-link.  
6 Advanced distributed learning.
- ADLFP** Air-deployed low-frequency projector [Aidsid].
- ADLGP** Advanced data-link for guided platforms.
- ADLP** 1 Aircraft data-link processor.  
2 Airborne data-link protocol.
- ADLS** 1 Aeronautical data-link services.  
2 Automatic drag-limiting system.
- ADLT** Advanced discriminating, or discriminatory, laser technology.
- ADLY** Arrival delay.
- ADM** 1 Air-decoy [or defense] missile (USAF).  
2 Atomic demolition munition.  
3 Airport Duty Manager.  
4 Air-data module[s].  
5 Asynchronous data modem.  
6 Advanced development, or demonstration, model.  
7 Aeronautical data management.  
8 Admiral (not UK usage).  
9 Aircraft Design Memorandum.  
10 Aeronautical decision making.
- ADMA** Aviation Distributors & Manufacturers Association [Philadelphia, PA](US).
- ADMC** Actuator drive and monitor computer.
- Ad-Me** Advanced metal evaporated.
- administrative loading** Loading transport vehicle (eg, aircraft) for best utilisation of volume or payload, ignoring tactical need or convenience.
- Admiral's barge** Aircraft assigned to Flag Officer (FAA, colloq.).
- Admit, ADMT** Air distributed mission trainer.
- admittance** In a.c. circuit,  $1/Z$ , reciprocal of impedance, loosely 'conductivity'; made up of real and imaginary parts; symbol  $Y$ , unit siemens.
- ADMS** Airline data-management system.
- ADMU** Air-distance measuring unit.
- ADN** Ammonium dinitramide.
- ADNC** Air-defence notification centre.
- ADNL** Additional.
- ADNS** 1 Arinc data-network service.  
2 Automated digital-network system (USN).
- ADO** 1 Advanced development objective.  
2 Automatic delayed opening (parachute).  
3 Assistant Deputy for Operations.
- ADOC** Air Defence Operations Centre (UK).
- Adocs, ADOCS** 1 Advanced digital optical control system.  
2 Automated deep-operations co-ordination system (DoD, especially used by Norad).
- Adora** Analysis and definition of operational requirements for ATM(7) (Euret).
- ADP** 1 Acoustic, or air, data processor.  
2 Automatic, or airport, data processing.  
3 Air-driven pump [usually means bleed air].  
4 Engine aerodynamic design point; determined by cycle parameters.  
5 Altitude delay parameter.  
6 Aéroports de Paris.  
7 Airport development program.
- ADPA** American Defense Preparedness Association [office, Arlington, VA].
- ADPCM** Adaptive differential pulse-code modulation.
- ADPE** Automated [radar] data-processing equipment.
- ADPEO** Ashless dispersant piston-engine oil.
- ADPG** Air Defence Planning Group.
- ADPS** 1 Asars deployable processing station (USAAF).  
2 Aeronautical data-processing system [SO replaces system by Selection Office] (USAF).
- ADR** 1 Accident, or acoustic, data recorder [according to one authority, recorded].  
2 All-purpose data-stream replicator, or simplified RMCDE.  
3 Air defence region (UK).  
4 Advisory route.  
5 Airfield damage repair.  
6 Air-data reference.  
7 Active decoy round.
- Adram** Advanced dielectric radar absorbent material (Plessey).
- Adras** Aircraft data-recovery and analysis system.
- ADRC** Air defence radar controller.
- ADRD, ADR/D** Air-data reference disagree.
- ADRDE** Air Defence Research & Development Establishment (UK).
- Adrep** Accident/incident data report (ICAO).
- Adres** Aircraft documentation retrieval system.
- ADRG** Arc digital master graphics.
- ADR/Hum** Accident data recorder and health/usage monitor, installed as single integrated package with common inputs.
- Adries** Advanced digital radar imagery exploitation system, low-level target recognition.
- ADRIIS** Airport Doppler weather radar information system.
- ADRS** Airfield Damage Repair Squadron (RAF).
- ADRU** Air defence radar unit.
- ADS** 1 Accessory drive system, self-contained yet integrated package.  
2 Autopilot disengage switch.  
3 Audio distribution system (Awacs).  
4 Air-data system.  
5 Automated, or automatic, dependent surveillance [-A adds address, -B adds broadcast, -C contract, -P panel, -PDL controller/pilot data-link communications, -S system, -U unit].  
6 Aviation data server.  
7 Airborne data service[s].  
8 Aircraft, or airborne, data sensor.  
9 Air-defence ship, study or studies.  
10 Air Defense Squadron (USAF).  
11 Active dipping sonar.  
12 Acoustic detection system.  
13 Advanced deployable system[s] (USN).  
14 Automatic drilling system.  
15 Airlifter defense systems (USAF).  
16 Aufklärungsdrohnen (UAV) system (Switzerland).  
17 Area-denial submunition.  
18 Active denial system (OSD, Raytheon).  
19 Advanced detection software.  
20 Avionics display set.  
21 Aerial delivery system [paradrop kit].  
22 The address (UK usage).
- Adsam, ADSAM** Air-directed SAM (USA/USN).
- Adams** Advanced SAM systems.
- ADSC** 1 Air-defence siting computer (UK).  
2 See ADS5.
- Adsel, ADSEL** Address Selective. Improved SSR

system in which saturation in dense traffic is avoided by interrogating each aircraft (once acquired) only once on each aerial rotation instead of about 20 times. Transponders reply only when selected by discrete address code, reducing number of replies and mutual interference and opening up space for additional information (such as rate of turn) helpful to ATC computers (see *DABS*).

**ADSI** Air-defence systems integrator (UAV).

**ADSLA** Allied Data-Systems Interoperability Agency [Brussels] (NATO).

**Adsid** Air-delivered seismic detection sensor.

**ADSK** Air-droppable, or air-dropped, survival kit.

**ADSL** Aerosuisse Dachverband der Schweizerischen Luftfahrt [aeronautical society; CH-3001 Bern] (Switzerland).

**ADSM** Air defence suppression missile.

**adsorption** Removal of molecules of gas or liquid by adhesion to solid surface; activated carbon has very large surface area and is powerful adsorber.

**ADSP** 1 Advanced digital signal processor.

2 Automatic dependent surveillance panel.

3 Aeronautical Data and Safety Service (Inmarsat).

**ADSS** 1 Aeronautical decision support system, providing instant paperless access to manuals, maps and emergency procedures.

2 Automatic dependent surveillance system.

3 Aeronautical Data and Safety Service (Inmarsat).

**ADSU** 1 Air-data sensor unit.

2 Automatic dependent surveillance unit.

**ADT** 1 Approved departure time.

2 Automatically deployable transmitter.

3 Air-data transducer.

4 Air-data [or advanced, or alphanumeric, display] terminal.

5 Automatic detection and tracking.

6 Active-denial technology.

7 Accessories drive train.

8 Ada development toolkit.

**ADT<sup>3</sup>, ADT3** Air defence tactical training theatre.

**ADTC** Armament Development Test Center (USAF, Eglin AFB).

**ADTN** Administrative data-transmission network.

**ADTS** 1 Air-defence threat simulator.

2 Approved departure times.

**ADTU** Air-data transfer unit.

**ADU** 1 Alignment display unit (INS).

2 Auxiliary display unit.

3 Avionics [or annotation] display unit.

4 Air-data unit.

5 Actuator drive unit, in digital FCS.

6 Audio distribution unit.

7 Activity display unit (ESM).

8 Air Disarmament Unit (RAF).

9 Aircraft Delivery Unit (UK).

**ADV** 1 Arbeitsgemeinschaft Deutscher Verkehrsflughafen eV [Federal German Airports Association; D-70624 Stuttgart] (G).

2 Air-defence variant.

**ADV, Adv** 1 Advise, or advisory area.

2 Advance (UK usage).

**advance** 1 To \* throttle = to open throttle, increase power.

2 In piston engine, to cause ignition spark to occur earlier in each cycle.

3 Forward movement of propeller (see *propeller pitch*).

**advance, angle of** See *propeller pitch*.

**advanced** Generalised (overworked) adjective meaning new, complicated and typifying latest technology.

**advanced aerobatics** Flight manoeuvres with no limits apart from airframe/pilot limits.

**advanced airfield, base** Base or airfield, usually with minimal facilities, in or near objective area of theatre of operations.

**Advanced aviation training device** Synthetic trainer for procedures [FAR Pts 61 and 141] and various instrument and system checks.

**advanced common flightdeck** Retrofit, initially on FedEx DC-10s, based on MD-11.

**advanced flow-control procedure** Any of six theoretical or experimental techniques for ATC in high-traffic airspace.

**advanced high-frequency material** New coatings [currently classified] for LO aircraft which eliminate the need for laborious maintenance between missions.

**advance/diameter ratio** Ratio between distance aircraft moves forward for one revolution of propeller(s), or helicopter rotor, under specified conditions, and propeller diameter. Expressed as

$$J = \frac{V}{nD}$$

where V is TAS, n rotational speed and D diameter.

**advanced stall** Stall allowed to develop fully, yet usually with some lateral control. Many definitions claim longitudinal control must remain, but nose-down rotation is invariably automatic (see *g-break, stall*).

**advanced tactical targeting** Air-to-air system using Link-16, SADL and other links from TTNT to share information about surface emitters (USAF).

**advanced trainer** Former military category, more powerful and complicated than ab initio/primary/basic trainer and capable of simulating or performing combat duties when fitted with armament.

**advance ratio** See *advance/diameter ratio*.

**advancing blade** In rotary-winged aircraft in translational flight, any blade moving forward against relative wind. Each blade advances through 180° of its travel, normally from dead-astern to dead-ahead.

**ADVCAP** Advanced capability.

**advection** Generally, transfer by horizontal motion, particularly of heat in lower atmosphere. On gross scale, carries heat from low to high latitudes.

**advection fog** Fog, generally widespread, caused by horizontal movement of humid air mass over cold (below dew point) land or sea.

**Advent** Adaptive versatile engine technology (USAF).

**adversary aircraft** Fighter specially purchased and configured to act role of enemy in dissimilar air-combat training.

**adverse rudder** Inputs rolling moment opposite to that commanded by lateral-control system.

**adverse sideslip** Sideslip resulting from kinematic coupling.

**adverse yaw** Negative yawing moment due to roll at high C<sub>L</sub>, problem with sailplanes.

**Adviser** Airborne dual-channel variable-input severe environment recorder (RCA).

**Advisor** Annotated digital video for intelligent surveillance and optimised retrieval (EC aviation security).

**advisory** Formal recorded helpful message repeatedly broadcast from FAA AAS centre to all local aircraft. Abb: ADVY, ADZ, ADZY.

**advisory circular** The printed form of information for pilots (FAA).

**advisory light** Displayed by aircraft (esp. carrier-based) to show LSO status (gear, hook, wing, speed and AOA).

**advisory route** Published route served by Advisory Service, but not necessarily by ATC (1) or separation monitoring and usually without radar surveillance.

**Advisory Service** FAA facility to provide information on request to all pilots, and advice to those who need it. Abb: ADVS.

**Advon** Advanced echelon.

**ADW** 1 Area-denial weapon.

2 Agent-defeat warhead.

**ADWC** Air Defense Weapons Center (Tyndall AFB).

**ADWES** Air-defence weapons-effects simulation, or simulator.

**ADZ** Advise (ICAO).

**AE** 1 Aviacion del Ejército [army aviation] (Peru, etc).

2 Augmentor ejector.

3 Aluminium-epoxy [paint].

4 Atmosphere, or atmospheric, explorer.

5 Avionics environment.

**A<sub>e</sub>** Effective area of antenna aperture.

**AEA** 1 Aeronautical Engineers Association.

2 Aircraft Electronics Association Inc [office, Independence, MO] (US).

3 Association of European Airlines [office, B-1050 Brussels] (Int.).

4 Aircrew equipment assembly.

5 Aerial Experiment Association (US, 1907–09).

6 Airborne electronic attack (V adds Variant).

7 All-electric airplane/aeroplane.

**AEAF** Allied Expeditionary Air Force (WW2).

**AEB** 1 Avionics equipment bay.

2 Air Efficiency Board (UK).

**AEC** 1 Atomic Energy Commission (USA, 1946–74).

2 Automatic exposure control.

3 Aviation Executives Club [Miami Springs, FL].

**AECB** Arms Export Control Board (UK).

**AECC** Aeromedical Evacuation Control Centre

**AéCF** Aéro Club de France [F-75116 Paris] (F).

**AECM** Active ECM.

**AECSMA** Association Européenne des Constructeurs de Matériel Aérospatial (Int., in April 2004 merged into ASD5).

**AéCS** Aéro Club de Suisse.

**AECU** Audio [or advanced] electronic control unit.

**AED** 1 Alphanumeric entry device.

2 Air Engineering Department (TAG).

3 Automated [or automatic] external defibrillator.

4 Algol extended for design.

5 Aviation Environmental Divisions [1 to 4] (DETR, UK).

**AEDC** Arnold Engineering Development Center (USAF, mainly air-breathing propulsion systems, at Tullahoma, Tenn).

**AEDO** Aeronautical engineering duty officer (USN).

**AEDS** Atomic energy detection system (global, run by AFTAC).

**AEEC** 1 Airlines Electronic Engineering Committee [office, Annapolis MD21401] (US and Int.).

2 Association of European Express Carriers.

**AEELS** Auto Elint emitter-locator system.

**AFEMA** Australian Electrical & Electronic Manufacturers Association Ltd [Canberra, ACT].

**AEF** 1 American Expeditionary Force (WW1, WW2).

2 Air, since 2003 Air and Space, Expeditionary Force (USAF).

3 Aerospace Education Foundation [office, Arlington, VA22209] (US).

4 Air Experience Flight (RAF).

5 Armament Engineering Flight (RAF).

6 Aviation Environment Federation [London EC4V 3DT] (1975–, UK).

**AEFB** AEF (2) Battlelab.

**AEFT** Auxiliary external fuel tank[s].

**Aegis** 1 Advanced engine/gearbox integrated system.

2 CGN ship class (USN).

3 Airborne early-warning ground-integration segment.

**AEH** Airborne emergency hospital.

**AEHF** Advanced e.h.f. (S adds satellite).

**AEHP** Atmospheric-electricity hazards protection.

**AEHS** Aircraft Engine Historical Society [Brownsboro AL35741-9998] (US).

**AEI** Associazione Elicotteristica [helicopters] Italiana [office, I-20145 Milan], (Italy).

**A,IGT** Aerospace Innovation and Growth Team, [May 2002] (UK).

**AE-I** Aircraft Engineers International (Int.).

**AEIS** Aeronautical en-route information service (ICAO).

**AEJPT** Advanced European [military] jet-pilot training (proposal).

**AEL** 1 Aeronautical Engine Laboratory [S Philadelphia], (USN).

2 Advanced Engineering Laboratory (Australia).

**AELS** 1 Augmentor/ejector lift system.

2 Airborne electronic-library system.

**AEM** 1 Air Efficiency Medal (UK).

2 Automatic emergency mode.

**AEMB** Airborne electromagnetic bathymetry.

**AEMCC** Air and Expedited Motor Carriers Conference (trade association, [office, Alexandria, VA22314] (US).

**AENA** Aeropuertos Españoles y Navegación Aérea (Spain).

**AEO** 1 Air Electronics Officer [aircrew trade], (RAF).

2 Air Engineer Officer (USAF).

3 All engines operating.

**AEOSOP** See *Aesop*.

**AEP** 1 Airports Economic Panel (ICAO).

2 Autometric edge product.

3 Alternate (ie, alternative) engine program (JSF).

4 Audio-entertainment player.

5 Autopilot engage panel.

6 Architectural Evolution Plan [2007] (USAF).

**AEPDS** Advanced electronic processing and distribution system (satellite).

**AEPO** Aeronautical Enterprise Program Office (WPAFB).

**AEPT** Air engineer procedures trainer.

**AER** Area expansion ratio in wind tunnel; ratio of

cross-sections at start of diffuser to down-stream end at first bend.

**A/E/R** Ailerons, elevators, rudder.

**AERA** 1 Association pour l'Etude et la Recherche Aeronautique et Cosmique (F).

2 Automated en-route ATC.

**Aerad** Commercially published but universally used flight guide and chart system (UK).

**Aerall** Association d'Etudes et de Recherches sur Aéronefs Allégés (F), since 2003 Air and Space.

**aeration** Contamination of fuel by bubbles of gas, e.g., air.

**AERC** Aviation Education Resource Center (US).

**AERE** Atomic Energy Research Establishment (UKAEA, Harwell).

**aerial** 1 Pertaining to aircraft, aviation or atmosphere.

2 Part of radio or radar system designed to radiate or intercept energy, with size and shape determined by wavelength, directionality and other variables (US = antenna).

**aerial array** Assembly of aerial elements, often identical, usually excited from same source in phase and dimensioned and positioned to radiate in pencil beam or other desired pattern (not necessarily phased-array).

**aerial common sensor** Next-generation airborne sensor for tactical reconnaissance, Imint and Sigint (USA).

**aerial delivery system** Complete system for air transport and delivery to surface recipient (usually without aircraft landing).

**aerial supervision module** Aircraft housing both air attack and leadplane pilot.

**aerial survey** Use of aerial cameras and/or other photogrammetric instruments for the making of maps, charts and plans.

**aerial swimming vehicle** A micro air vehicle with major dimensions not exceeding 150 mm (6 in), able to cruise at  $c10 \text{ ms}^{-1}$  propelled by aft-mounted reverse-camber flapping wings. Generally synonymous with delphinopter.

**aerial work** General aviation for hire or reward other than carriage of passengers or, usually, freight; includes agricultural aviation, aerial photography, mapping and survey, cable and pipeline patrol and similar duties usually not undertaken to full-time fixed schedule.

**aerial work platform** Small railed platform for one or two occupants, mounted on vehicle by Z-type [less often scissors] elevating linkage and often providing electric or hydraulic power for occupants.

**AERO** Air Education and Recreation Organisation (UK, office Camberley).

**aero** Concerned with atmospheric flight.

**aeroacoustics** Science and technology of acoustics caused by, and effect upon, aerospace systems. A more general definition is interaction between sound and gas flow, esp. sound generated by the flow.

**aeroballistics** Science of high-speed vehicles moving through atmosphere in which both ballistics and aerodynamics must be taken into account. Often asserted aerodynamics and ballistics are applied separately to different portions of flight path, but both act as long as there is significant atmosphere present.

**Aerobatic catalogue** Derived from *Aresti*, simplified scheme for planning and scoring aerobatic routines (FAI).

**aerobatic oil system** In modern combat aircraft liable to experience prolonged zero-g, meaning is lube system with

multiple scavenge ports round all engine bearing chambers leading back to tank in which synthetic gravity is maintained by rapid rotation.

**aerobatics** Precise and largely standardised manoeuvres, unnecessary in normal flight, executed to acquire or demonstrate mastery over aircraft, for entertainment, or for competition (US = acrobatics). BS: "Evolutions voluntarily performed other than those required for normal flight", which would include a gentle 360.

**aerobic propulsion** Requiring oxygen.

**aerobiology** Study of distribution and effects of living matter suspended in atmosphere (small insects, spores, seeds and micro-organisms).

**aerobrake** 1 Aerodynamic brake for use in extremely low-density atmospheres at Mach numbers of 5 to 25. Typically can be deployed as a saucer shape, concave side facing direction of travel.

2 Deceleration by holding nose high after landing.

**Aero-C** Message and data-reporting satellite service for satcom aircraft.

**aerocapture** Technique harnessing drag of atmosphere of planet (especially Mars) to slow spacecraft to planetary orbital speed.

**Aeroclinoscope** Instrument with semaphore-like arms for indicating wind direction [and, roughly, atmospheric pressure] (obs.).

**aeroconical canopy** Form of parachute canopy suitable for use at all aerospace Mach numbers.

**aerocryptography** Representation of aerobatic manoeuvres by 2-D symbols.

**aerodone** Basic aerodyne, glider relying upon natural stability and having no moving control surfaces. Examples are paper dart and chuck glider, most simple free-flight models, and aeroplanes which continue to fly after being abandoned by their crews.

**aerodonetics** Science of gliding flight, with or without use of control surfaces.

**aerodontalgia** Toothache caused by major changes in ambient atmospheric pressure.

**aerodontia, aerodontology** Branch of dentistry dealing with problems of flying personnel.

**aerodrome** BS.185, 1940: 'A definite and limited area of ground or water (including any buildings, installations and/or equipment) intended to be used, either wholly or in part, in connexion with the arrival, departure and servicing of aircraft.' Becoming archaic (see *airfield, airport, air base, strip*, etc).

**aerodrome elevation** *Airfield elevation*.

**aerodrome FIS** *Airfield FIS*.

**aerodrome traffic zone** Airspace up to 2,000 ft (609 m) a.a.l. and within 2.5 nm of centre of longest runway or 2,000 ft/609 m of boundary (general aviation). Permission req<sup>d</sup> for entry, and for manoeuvring within\*.

**aerodynamic axis** Imaginary line through aerodynamic centres of every longitudinal element in solid body moving through gaseous medium. In wing, runs basically from tip to tip, but in swept or slender delta can be an acutely curved, kinky line often having little practical application.

**aerodynamic balance** 1 Method of reducing control-surface hinge moment by providing aerodynamic surface ahead of hinge axis (see *Frise aileron, horn balance*).

2 Wind-tunnel balance for measurement of aerodynamic forces and moments.

**aerodynamic-balance panel** Shelf fixed to control surface ahead of the hinge axis, contained inside fixed structure.

**aerodynamic braking** 1 Use of atmospheric drag to slow re-entering spacecraft or other RV.

2 Use of airbrakes or parachute (drag chute) in passive \*\*.

3 Use of reversed propulsive thrust (propeller or jet) in active \*\*.

**aerodynamic centre** In two-dimensional wing section, point about which there is no change of moment with change in incidence; point about which resultant force appears to rotate with change of incidence. In traditional sections about one-quarter back from leading edge (25% chord) and in symmetrical section lies on chord and thus coincident with CP. Also called axis of constant moments. Abb: a.c. ac or (incorrectly) AC.

**aerodynamic chord** Reference axis from which angle of attack of two-dimensional aerofoil is measured. Line passing through (supposed sharp) trailing edge and parallel to free-stream flow at zero lift at Mach numbers appreciably below 1 (see *chord, geometric chord, MAC*).

**aerodynamic coefficient** Aerodynamic force (lift or drag, or moment) may be reduced to dimensionless coefficient by dividing by characteristic length (which must be same parameter for all similar bodies, and in a wing is invariably area) and by dynamic head (symbol  $q$ ). Traditional divisor is  $\frac{1}{2}\rho V^2 S$ , where  $\rho$  is air density,  $V$  velocity and  $S$  area, ensuring that units are consistent throughout; if area is  $m^2$  then  $V$  must be  $ms^{-1}$ . The  $\frac{1}{2}\rho V^2$  term, difference between pitot and static pressure, is accurate only at low speeds; if  $M^2$  (square of Mach number) is too large to ignore, a different expression must be found for dynamic head, such as H-p (pitot minus static). (See *force coefficients, moment coefficients, units of measurement*).

**aerodynamic damping** In flight manoeuvres rotation of aircraft (about c.g. or close to it) changes direction of relative wind to provide restoring moment which opposes control demand and arrests manoeuvre when demand is removed. As altitude increases, combination of increasing TAS (for given EAS) and reduced airflow deflection angles results in \*\* being progressively decreased, although control demand moment and aircraft inertia do not change. Thus at high altitude pilot must apply greater opposite control movements to arrest rotation.

**aerodynamic disturbance** Generalised euphemistic term in SR-71 and similar flight reports covering inlet unstarts and related phenomena.

**aerodynamic efficiency** Most common yardstick is lift/drag ratio ( $L/D$ ). In general \*\* maximised when resultant forces are as nearly as possible perpendicular to direction of motion; tend to be reduced as speed is increased, since lift-type forces may be presumed to remain substantially constant while drag-type forces may be presumed to increase in proportion to square of speed.

**aerodynamic force** Force on body moving through gaseous medium assumed to be proportional to density of medium ( $\rho$ ), square of speed ( $u^2$  or  $V^2$ ), characteristic dimension of body (such as length  $L^2$  or area  $S$ ) and  $R_n$  (Reynolds number raised to power  $n$ ). This broad relationship sometimes called Rayleigh formula. Body assumed to be wholly within homogenous gas, reasonably compact and streamlined (eg not a sheet of paper) and to have smooth surface.

**aerodynamic heating** As speed of body through gaseous medium is increased, surface temperature increases roughly in proportion to square of speed. Effect due variously to friction between adjacent molecules in boundary layer, to degradation of kinetic energy to heat and to local compression of gases. Maximum temperature is reached on surfaces perpendicular to local airflow where oncoming air or gas molecules are brought to rest on surface. At Mach 2 peak stagnation temperature is about 120°C and at Mach 3 about 315°C; at hypersonic speeds temperature can swiftly rise to 3,000 or 5,000°C in intense shockwave around nose and other stagnation points, causing severe radiation heating, ionisation and dissociation of flow. Adiabatic temperature rise is approximately given by  $\Delta T = (\frac{V}{100})^2 \text{°C}$ , where  $V$  is speed in mph; alternatively a poorer approximation is  $41 M^2$  where  $M$  is Mach number.

**aerodynamic mean chord, AMC, MAC, c** Chord that would result in same overall force coefficients as those actually measured. Essentially, but not necessarily exactly, same as mean of aerodynamic chords at each station; very nearly same as geometric mean chord.

**aerodynamic overbalance** Excessive aerodynamic balancing of control surface such that deflection will immediately promote runaway to hard-over position.

**aerodynamic pitch** The distance a propeller blade would move forward in one revolution if slip were zero, symbol  $\lambda$

**aerodynamic twist** Variation of angle of incidence from root to tip of aerodynamic surface, to obtain desired lift distribution or stalling characteristic (see *wash-in, wash-out*).

**aerodynamics** Science of interactions between gaseous media and solid surfaces between which there is relative motion. Classical \* based upon Bernoulli's theorem, concept of boundary layer and circulation. Reynolds number, Kármán vortex street, turbulent flow and stagnation point. High-speed \* ( $M^2$  too large to be ignored) assumes gas to be compressible and introduces critical Mach number, shockwave, aerodynamic heating, and relationships and concepts of Prandtl, Glauert, Ackeret, Busemann, Kármán-Tsien and Whitcomb. At Mach numbers above 4, and at heights above 80 miles (130 km), even high-speed \* must be modified or abandoned because of extreme aerodynamic heating, violent changes in pressure and large mean free path (see *superaerodynamics*).

**aerodynamic trials** Flight tests to clear a modification which changes the shape of a vehicle.

**aerodyne** Heavier-than-air craft, sustained in atmosphere by self-generated aerodynamic force, possibly including direct engine thrust, rather than natural buoyancy. Two major categories are aeroplanes (US = airplanes) and rotorplanes, latter including helicopters.

**aeroelasticity** Science of interaction between aerodynamic forces and elastic structures. \* deflections are increased by raising aerodynamic forces, varying them rapidly (as in gusts and turbulence) and increasing aspect ratio or fineness ratio. All \* effects tend to be destabilising, wasteful of energy and degrading to structure.

**aeroembolism** Release of bubbles or nitrogen into blood and other body fluids as a result of too-rapid reduction in ambient pressure. May be due to return to sea-level from much increased pressure ('caisson sickness', 'the bends')

or from sea-level to pressure corresponding to altitude greater than 30,000 ft (about 10,000 m). Potentially fatal if original, increased, pressure is not rapidly restored.

**aeroflight mode** Atmospheric flight, by aerospace vehicle (eg, Space Shuttle).

**aerofoil (US = airfoil)** 1 Solid body designed to move through gaseous medium and obtain useful force reaction other than drag. Examples: wing, control surface, fin, turbine blade, sail, windmill blade, Flettner rotor, circular or elliptical rotor blade with supercirculation maintained by blowing. Some authorities maintain \* must be essentially 'wing-shaped' in section.

2 A specific meaning is a gas-turbine rotor blade, without root, for fusion to a ring or disc.

**aerofoil section** Traditionally, outline of section through aerofoil parallel to plane of symmetry. This must be modified to 'parallel to aircraft longitudinal axis' in variable-sweep and slew wings, and 'perpendicular to blade major axis' in blades for rotors, turbines and propellers. None of these sections may lie even approximately along direction of relative wind, although usually assumed to. Also called *profile*.

**aerofoil boat** Wing-shaped surface-effect marine craft (or low-altitude aircraft).

**aerogel** Colloid comprising solution of gaseous phase in solid phase or coagulated sol (colloidal liquid).

**aerograph** Airborne meteorological recording instrument; aerometeorograph.

**Aero-H** Long-haul cockpit and pax communications, telephony (9.6 kbps), fax (4.8) and data (2.4). H + offers voice codes and better multichannel performance for oceanic use.

**Aero-I** Short-/medium-haul and corporate communications, telephony (4.8 kbps) and fax/data (2.4).

**aero-isoclinic wing** Aerofoil which, under aeroelastic distortion, maintains essentially uniform angle of incidence from tip to tip.

**Aero-J** Medium-gain satcom service for continental use.

**aerójumble** Aeronautical artefacts in jumble sale.

**Aero-L** Low-gain satcom service, two-way data exchange at 0.6 kbps.

**Aerolite** Trade name, low-density bonded sandwich structure based on phenolic-resin-bonded flax fibres (Aero Research, later CIBA).

**aerolite** Stony meteorite, richer in silicates than metals.

**aerology** Study of atmosphere (meteorology) other than lower regions strongly influenced by Earth's surface.

**aerol strut** Early oleo strut relying for energy absorption and damping upon both air and oil.

**Aero-M** Single-channel satcom service.

**aerometeorograph, aerometeorograph** Airborne instrument making permanent record of several meteorological parameters such as altitude, pressure, temperature and humidity.

**aerometer** Instrument used in determining density of gases, esp. atmosphere.

**aero mission gear** Video and data communications package for helicopters.

**aeronaut** Pilot of aerostat.

**Aero Mini-M** Service for small corporate and GA, 2.4 kbps data, fax and voice.

**aeronautica** Aeronautical artefacts, esp. those in auction sale.

**aeronautical** Pertaining to aeronautics.

**aeronautical chart** Chart prepared and issued primarily for air navigation. Chief categories include Sectional (plotting), Regional, Radio, Flight Planning, en-route low and high altitude, SID, STAR, TMA, IAP, Great Circle and Magnetic. Most are to conformal projection (esp. Lambert's); non-aeronautical topographic features generally excluded.

**aeronautical Earth station** Satcom or navsat station in an aircraft.

**aeronautical fixed service** Network of ground radio stations.

**aeronautical fixed telecommunications, network** National teleprinter network outputting weather forecasts, airfield status and flight plans.

**aeronautical ground station** Satcom or navsat station on Earth's surface (conceivably, on ship).

**Aeronautical Information Circular** Official publication printed on white paper [admin. matters], green [maps and charts], pink [safety issues], yellow [operations and facilities] and mauve [temporary changes, esp. airspace restrictions] (UK CAA).

**Aeronautical Information Documents Unit** Produces all flight-planning documents for UK military aircrew (RAF Northolt).

**aeronautical information overprint** Overprint on military or naval map or chart for specific air navigation purposes.

**Aeronautical Information Publication** Periodically issued for all civil pilots by national aviation authorities, UK being titled A.I.Circular, see above.

**aeronautical light, beacon** Illuminated device approved as aid to air navigation.

**aeronautical mile** Nautical mile (British Admiralty standard 6,080 ft = 1.85318 km); defined as length of arc of 1° of meridian at Equator.

**aeronautical mobile service** Voice radio linking aircraft and ground stations. AMS(R) serves routes [generally means airways] while AMS(OR) serves off-route airspace.

**aeronautical multimunications** See *multicomunications service*.

**aeronautical satellite** Satellite provided to assist aircraft by improving navigation, communications and traffic control. Abb. aerosat.

**aeronautical topographic chart/map** Chart or map designed to assist visual or radar navigation and showing features of terrain, hydrography, land use and air navigation facilities.

**aeronautics** Science of study, design, construction and operation of aircraft.

**Aéronavale** Air arm of French Navy.

**aéronef** Aircraft, any species (F).

**Aeronet** Secure closed-community information net, not linked to Internet (SITA).

**aeroneurosis** Chronic disorder of nervous origin caused by prolonged flying stress.

**aeronomy** Study of upper atmosphere of planets with especial reference to effects of radiation, such as dissociation and ionisation.

**aeropause** Vague boundary between atmosphere useful to aircraft, and space where air density is too low to provide lift, or air for air-breathing engines, or aerodynamic forces for stability and control. One definition suggests boundary is layer from "12 to 120 miles"; upper limit meaningful for hypersonic aircraft only.

**aeroplane (US = airplane)** BS.185, 1940: 'A flying machine with plane(s) fixed in flight'. Modern definition might be 'mechanically propelled aerodyne sustained by wings which, in any one flight regime, remain fixed'. Explicitly excludes gliders and rotorplanes, but could include MPAs, VTOLs and convertiplanes that behave as \* in translational flight.

**aeroplane effect** Error in radio DF caused by horizontal component of fixed aerial or trail angle of wire (arch.).

**Aeropop** Aeronautical message switching system.

**aeropulse** Air-breathing pulsejet.

**aeroresonator** Resonant air-breathing pulsejet.

**aeros** Aerobatics, plural of aero. (colloq.).

**aerosat** Aeronautical satellite.

**aeroservoelasticity** Study of aeroelasticity in aircraft with automatic control systems.

**aeroshell** High-drag aerodynamic-braking heatshield for returning spacecraft or planetary lander.

**aerosol** Colloid of finely divided solid or liquid dispersed in gaseous (esp. air) continuous phase. Natural examples: smokes, dustclouds, mist, fog. In commercial product active ingredient is expelled as aerosol by gaseous propellant.

**aerospace** 1 Essentially limitless continuum extending from Earth's surface outwards through atmosphere to farthest parts of observable universe, esp. embracing attainable portions of solar system.

2 Pertaining to both aircraft and spacecraft, as in 'aerospace technologies'.

3 Activity of creating and/or operating hardware in aerospace, as in 'the US leads in aerospace'.

**aerospace craft** Vehicle designed to operate anywhere in aerospace, and especially both within and above atmosphere.

**aerospace data miner** Analyses fleet performance (eg of all aircraft of one type).

**aerospace forces** National combat armoury capable of flying in atmosphere or rising into space, including all satellite systems and strategic ballistic missiles.

**aerospace medicine** Study of physiological changes, disorders and problems caused by aerospace navigation. Among these are high accelerations, prolonged weightlessness, vertigo, anoxia, ionising radiation, Coriolis effects, micrometeorites, temperature control, recycling of material through human body, and possibility of developing closed ecological systems to support human life away from Earth.

**aerospace plane** Colloquial term for space vehicle which can re-enter, manoeuvre within atmosphere and land in conventional way on Earth's surface. Generally assumed to be manned and to include some air-breathing propulsion.

**aerospace relay mirror system** Mirror [s] suspended under airship at 65,000 ft (19.8 km) to relay beam from ground-based laser to track and possibly kill objects in space (AFRL).

**aerospace warfare** Conflict within and above atmosphere.

**aerostat** Lighter-than-air craft, buoyant in atmosphere at a height at which it displaces its own mass of air. Major sub-groups are balloons and airships. In airships aerodynamic lift from hull can be significant, but not enough to invalidate classification under this heading.

**aerostatics** The mechanics of gases at rest, in mechanical equilibrium.

**aerostation** Operation of aerostat.

**aerostructure** 1 The wing [s], engine [s] and tail of a flying boat (term now rare).

2 The supporting and controlling surfaces of an aeroplane (also rare).

3 Today the term is usually synonymous with airframe.

**aerothermal flow** Slipstream past hypersonic vehicle in upper atmosphere.

**aerothermodynamic border** Region, at height around 100 miles (160 km), at which Earth atmosphere is so attenuated that even at re-entry velocity aerodynamic heating is close to zero and can be neglected, as also can drag.

**aerothermodynamic duct** Athodyd, early name for ramjet. Aerothermodynamic in this context does not necessarily conform to definition given below.

**aerothermodynamics** Study of aerodynamic phenomena at velocities high enough for thermodynamic properties of constituent gases to become important.

**aerothermoelasticity** Study of structures subject to aerodynamic forces and elevated temperatures due to aerodynamic heating.

**aerotitis** Pain in the ear caused by pressure difference.

**aero-tow** Tow provided for glider by powered aircraft. Not normally applicable to banner or other towing.

**Aeroweb** Trade name, range of structural and noise-attenuating bonded honeycomb sandwich materials.

**Aerozine** Trade name, family of liquid fuels based on MMH or UDMH.

**AES** 1 Aeromedical evacuation system (USAF, MAC).

2 Auger electron spectroscopy.

3 Air Electronics School.

4 Aircraft (or aeronautical) Earth station (satellites).

5 Air EuroSafe, dedicated non-profit.

6 Armament Experimental Station (RFC).

7 Aerodrome emergency service.

8 Atmospheric Environmental Service (Canada).

9 Airborne emitter system.

10 Advanced encryption standard.

**AESA** Active electronically scanned, or scanning, array/antenna/aperture.

**AESC** Aft equipment service centre (on aircraft).

**Aecon** Aerospace and Electronics Systems Conference (Int.).

**AESF** Avionics electrical systems flight (RAF).

**AESI** Association of European Space Industries [merged April 2004 into ASD5].

**Aesop** 1 Automated engineering and scientific optimisation program (multivariable design tool).

2 Airborne electro-optical special-operations payload.

**AESS** 1 Airborne electronic-surveillance system.

2 Aircraft-environment surveillance system (radar, TCAS, EGPWS).

3 Aerospace and Electronic Systems Soc. [office, New York, NY].

**AESU** Aerospace Executive Staff Union (Singapore).

**AET** 1 Airfields Environmental Trust (UK).

2 Aerosol explosive thermobaric.

**AETA** Association des Anciens Elèves de l'Ecole d'Enseignement Technique de l'Armée de l'Air (F).

**AETB** Alumina-enhanced thermal barrier.

**AETC** Air Education & Training Command (USAF, Randolph AFB, established 1 July 1993).

**AETE** Aerospace Engineering and Test Establishment (Cold Lake, Alberta).

**AETG** Aircraft Environment Task Group [2004–] (Balpa).

**AETMS** Airborne electronic terrain mapping system (3-D colour-coded in real time, plan or elevation).

**AETW** AET (2) washed.

**AEU** 1 Airborne, or antenna, electronics unit.  
2 Auxiliary equipment unit.

**AEW** 1 Airborne early warning.  
2 Air [or airborne] electronic warfare.  
3 Air Expeditionary Wing (USAF).  
4 Aircraft empty weight.

**AEWC, AEW&C, AEW + C** Airborne early warning and control.

**AEW/EW** Airborne early warning and electronic warfare.

**AEWF** Airborne Early-Warning Force (NATO).

**AEWS** Airborne electronic-warfare system; hence AEW<sup>2</sup> means system of systems.

**AEWTF** Aircrew Electronic-Warfare Tactics Facility (NATO).

**AF, a.f.** 1 Audio frequency, sounds audible to average human ear (20 to 16,000 Hz). In simple radio communications RF carrier is modulated so that it “carries” AF superimposed upon basic waveform.  
2 Aerodynamic force.  
3 Auto-flight.  
4 Airway facilities.

**a/f** 1 Airfield.  
2 Airframe.

**AF<sup>3</sup>** Anti-fire fighting foam.

**AFA** 1 Air Force Association [office, Arlington, VA 22209–1198 (US)].  
2 Air Force Act (UK).  
3 Aircraft Finance Association [office, Washington DC] (US).  
4 Association of Flight Attendants [office, Washington DC 20005–4006] (US).  
5 Audio-frequency amplifier.  
6 Air Force Academy [Colorado Springs, Est. 1 April 1954] (USAF).  
7 Air Freight Association [Washington DC] (US).  
8 Academia de Força Aérea (Brazil).

**AFAA** 1 Air Force Audit Agency (1 July 1948, Norton AFB, later Washington DC).  
2 Airline Flight Attendants’ Assoc., Buellton CA.

**AFAC** Airborne forward air controller.

**AFADS** Air Force Air Demonstration Squadron (USAF Thunderbirds).

**AFAES** Aviation facilities and aircraft engineering support (MoD, UK).

**AFAF** Australian Federation of Airfreight Forwarders [office Sydney].

**AFAFC** Air Force Accounting and Finance Center (Lowry AFB).

**AFAITC** Armed Forces Air Intelligence Training Center (Denver).

**AFAL** Air Force Armament Laboratory (Eglin AFB).

**AFALC** Air Force Acquisition Logistics Center (Wright-Patterson AFB).

**AFAMC** See *AMC*(5).

**AFAMRL** See *AAMRL*.

**AFAP** Australian Federation of Air Pilots [office South Melbourne, Vic. 3205] (Australia).

**AFAPD** Air Force application[s] program, or protocol, development.

**Afarmade** Asociación Española de Fabricantes de Armamento y Material de Defensa y Seguridad [E-28006 Madrid] (Spain).

**AFARPS** See *ARPS*.

**AFAS** Aircraft in the future air-traffic management system.

**AFASD** Air Force Aeronautical Systems Division, formerly part of AFSC, HQ Wright-Patterson AFB, now Aeronautical Systems Center.

**AFATC** Air Force Air Transport Command (1942–47).

**AFATL** See *AFAL*, Tadded Testing.

**AFaVL** Air Force Avionics Laboratory, now Wright Laboratory (Wright-Patterson AFB).

**AFB** 1 Air Force Base (USAF).  
2 Air Force Board (RAF).

**AFBCA** Air Force Base Conversion Agency (Arlington, Va, established 15 November 1991).

**AFBMD** Air Force Ballistic Missile Division, became BMO.

**AFC** 1 Air Force Cross (decoration).  
2 Aircraft flyaway cost.  
3 Aramid-fibre composite.  
4 Automatic-feedback control, for interlocking coherent systems.  
5 Audio, or automatic, frequency control, or compensation.  
6 After [1973] fuel crisis.  
7 Aeronautical Frequency Committee (office Annapolis, MD).  
8 Automatic flare control.

**AFCAA** 1 Air Force Cost Analysis Agency (Arlington, Va, established 1 August 1992).  
2 Air Force Computer Acquisition Center (Hanscom AFB, part of AFCC).

**AFCAC** African Civil Aviation Commission (Int., established 1969).

**Afcap** Air Force contract augmentation program.

**AFCAS, Afcas** Automatic flight control augmentation system.

**AFCC** 1 Air Force Communications Command (HQ Scott AFB, formed from AFCS 15 November 1979, became AFC<sup>4</sup>A 28 May 1993).  
2 Office of the Chief of Staff (USAF).

**AFCCCCA** See *AFC<sup>4</sup>A*.

**AFCE** Automatic flight control equipment, linked Norden bombsight to autopilot.

**AFCEA** Armed Forces Communications & Electronics Association, [office, Fairfax, VA 22033–3899]; [European office, Brussels B-1140] (US, Int.).

**AFCEE** Air Force Center for Environmental Excellence (Brooks AFB, established 23 July 1991).

**Afcent, AFCENT** Allied Forces, Central Europe (Brunssum, Netherlands).

**AFCESA** Air Force Civil Engineer Support Agency (Tyndall AFB, established 1 August 1991).

**AFC<sup>4</sup>A** Air Force Command, Control, Communications and Computer Agency (Scott AFB, established 28 May 1993).

**AFCI** Arc-fault circuit interruption.

**AFCLC** Air Force Contract Law Center (Wright-Patterson AFB).

**AFCMC** Air Force Contract Maintenance Center (Wright-Patterson AFB).

**AFCMD** Air Force Contract Management Division (Kirtland AFB, was part of AFSC).

**AFCMR** Air Force Court of Military Review.

**AFCO** Armed Forces Careers Office (UK).

**Afcoms, AFCOMS** Air Force Commissary Service, became Defense Commissary Agency (Kelly AFB).

**AFCP** Advanced flow-control procedure (ATC).

**AFCPMC** Air Force Civilian Personnel Management Center (Randolph AB).

**AFCL** Air Force Cambridge Research Laboratories became part of ESC.

**AFCS** 1 Automatic flight-control system.

2 Air Force Communications Service, became AFCC, then part of AFC<sup>3</sup>A.

3 Active-facility control system.

**AFCWC** Air Force Combat Weather Center (Hurlbeirt Field, FL).

**AFD** 1 Air Force Department (UK, MoD).

2 Adaptive flight display.

3 Advanced flight deck.

4 Autopilot flight director.

**A/FD** Airport/facility directory (US).

**AFDA** Association of Finnish Defence and Aerospace industries (1994–).

**AFDAS** Aircraft fatigue-data analysis system.

**AFDC** 1 Autopilot flight-director computer; S adds system.

2 Automatic formation drone control (USN).

3 Air Force Doctrine Center (Langley AFB, Va, established 21 July 1993).

**AFDK** After dark.

**AFDMR** Director of Military Requirements (USAAF).

**AFDPS** Automated flight-processing system.

**AFDS** 1 Autopilot [and] flight-director system.

2 Air Fighting Development Squadron (RAF, WW2).

3 Advanced flight-deck simulator.

4 Autonomous flight, or freeflight, dispenser system.

**AFDTC** Air Force Development Test Center (Eglin AFB).

**AFDX** 1 Andio-frequency digital bus [Ethernet].

2 Avionics full duplex, or fast-switched, Ethernet.

**AFEC** Air Force Experimentation Center [2004–, Ottawa], (Canada).

**AFEE** Airborne Forces Experimental Establishment (UK, June 1942 Sherburn-in-Elmet, January 1945 Beaulieu Heath, to September 1950).

**AFEI** Association for Enterprise Investigation (US).

**AFEP** Air Force education plan (USAF).

**AFEPS, Afeps** Acars front-end processing system.

**AFESA** Air Force Engineering and Services Agency (USAF).

**AFEW** Air Force Electronic Warfare Center (USAF).

**AFEWES** Air Force electronic-warfare evaluation simulator.

**AFFA** Department of Agriculture, Fisheries and Forestry – Australia.

**AFFAA** Air Freight Forwarders Association of America [office, Washington, DC].

**AFFDL** Air Force Flight Dynamics Laboratory (USAF, at AFWAL).

**AFF** 1 Autonomous formation flight.

2 Airmet fax forecast.

3 Automatic, or automated, flight following.

**AFFF, AF<sup>3</sup>** Aqueous film-forming foam.

**affinity group** Collection of people having a common interest, that interest often being solely an \*\* charter, at an attractive fare.

**affirmative** R/T response meaning 'yes' [replaced by a-firm].

Afford Aetermate [i.e., alternative] fuel facility for research and development [Ottawa] (Canada).

**affordable moving surface target engagement** Fuses multiple GMTI and SAR to give accurate direction to inexpensive air/ground munitions.

**AFFS** 1 Airborne firefighting system [replaces Maffs].

2 Aircraft flight-following system [satellite].

**AFFSA** Air Force Flight Standards Agency (Andrews AFB, established 1 October 1991).

**AFFAA** Air Freight Forwarder Association of America (office, Wash. DC).

**AFFMA** Air Force Frequency Management Agency (Arlington, Va, established 1 October 1991 by renaming AFFM Center).

**AFFSCE** Air Forces Flight Safety Committee, Europe (Int.).

**AFFTC** Air Force Flight Test Center (Edwards AFB from 1948).

**AFG** 1 Aerospace focus group.

2 Airfoil group (LGB).

3 Arbitrary-function generator.

**AFGE** American Federation of Government Employees.

**AFGL** Air Force Geophysics Laboratory (Hanscom AFB).

**AFGS** Autonomous flight-guidance system.

**AFGWC** Air Force Global Weather Central.

**AFH** 1 Above field height.

2 Airframe flight hours.

3 Advanced fibre heater.

**AFHF** Air Force Historical Foundation [Andrews AFB, MD20331–7002] (US).

**AFHRA** Air Force Historical Research Agency (at AFHR Center, Maxwell AFB, established 12 September 1949).

**AFHSO** Air Force History Support Office (Bolling AFB, Washington DC, established 30 September 1994).

**AFI** 1 Assistant flying instructor.

2 Authorised Flying Instructor, proposed by FAA 1995 to succeed CFI(2).

3 Authority format identifier.

4 Africa/Indian Ocean region.

**AFIA** 1 Air Force Inspection Agency (Kirtland AFB, established 1 August 1991).

2 Aerial Firefighting Industry Association (US).

**AFIC** AFI(1) course.

**AFIF** Australian Federation of International Forwarders [NSW 2035] (Australia).

**AFIG** Aviation Fuels International Group [part of AFTC] (Dubai).

**AFIL** Air-filed [after takeoff] flight plan.

**AFIO** Association of Former Intelligence Officers (US).

**AFIRMS** Air Force integrated readiness measurement system.

**AFIS** 1 Airfield/aerodrome/airport automatic flight-information service; O adds officer.

2 Air Force Intelligence Service (Washington DC).

3 Airborne, or airline, flight-information system [= VHF datalink].

4 Automated fingerprint identification system.

5 Airline inFlight Information System.

**AFISC** Air Force Inspection and Safety Center (Norton AFB).

**AFISDO** Air Force Information Systems Doctrine Office (Keesler AFB).

**AFISQ** AFIS(1) officer.

**AFIT** Air Force Institute of Technology (Wright-Patterson AFB, administered by AU, Maxwell).

**AFITAE** Association Française des Ingéieurs et Techniciens de l'Aéronautique et de l'Espace (F).

**AFIWC** Air Force Information Warfare Center.

**AFK** Aramid-fibre composite (G), also called **SfK**.

**AFL, afl** Above field level.

**AFLC** Air Force Logistics Command (Wright-Patterson AFB).

**AFL-CIO** American Federation of Labor, Congress of Industrial Organizations.

**AFLM** Air Force Logistics Management Center (AU, Gunter Annex).

**AFLMA** Air Force Logistics Management Agency (Maxwell AFB, established 30 September 1975).

**AFLO** Airborne force liaison officer, stationed at departure airfield.

**AFLSA** Air Force Legal Services Agency (Bolling AFB, established 1 September 1991).

**AFLSC** Air Force Legal Services Center (Washington DC, became LSA).

**AFM** 1 Air Force Medal (RAF and Commonwealth air forces).

2 Air Force Manual (USAF).

3 Aircraft/airplane/approved flight manual.

4 Atomic-force microscopy.

5 Airfield friction meter.

6 Affirmative.

7 Aircraft fleet management.

8 Note, USAF Museum is The Air Force Museum (TAFM).

**AFMA** 1 Armed Forces Management Association (US).

2 Anti-fuel-misting additive.

**AFMC** 1 Aluminium-filled metal ceramic.

2 Air Force Materiel Command (Wright-Patterson AFB, activated 1 July 1992).

3 Auxiliary fuel-management computer.

4 Avionics flight-management computer.

**AFMF** The AF Museum Foundation Inc (WPAFB).

**AFMEA** Air Force Management Engineering Agency (Randolph AFB, established 1 November 1975).

**AFML** Air Force Materials Laboratory.

**AFMOA** Air Force Medical Operations Agency (Bolling AFB, established 1 July 1992).

**AFMPC** Air Force Military Personnel Center (Randolph AFB, TX).

**AFMS** 1 Automatic, or advanced, flight-management system.

2 Auxiliary fuel-management system.

**AFMSA** Air Force Medical Support Agency (Brooks AFB, established 1 July 1992).

**AFMSS** Air Force mission-support system (aircraft, UAVs, guided munitions, many armed forces worldwide).

**AFMSTT** Air Force Modeling and Simulation Training Toolkit.

**AFN** ATS(1) facilities notification.

**AFNA** Air Force News Agency (Kelly AFB, established 1 June 1978).

**Afnor** Association Française de Normalisation [standardization] (F).

**Afnorth** Allied Forces Northern Europe.

**Afnorthwest** Allied Forces NW Europe (High Wycombe, UK).

**AFNWSP** Air Force nuclear-weapons surety plan.

**AFO** 1 Aerodrome/airport fire officer.

2 Announcement of [space] flight opportunities.

**AFOAR** Air Force Office of Aerospace Research.

**A-FOD tyre** Tyre designed to avoid picking up material causing FOD.

**AFOG** Air Force Operations Group (Washington DC, established 26 July 1977).

**AFOLTS** Automatic fire overheat logic test system.

**AFOMS** Air Force Office of Medical Support (Brooks AFB).

**AFOR** Aviation forecast, a visual flight (GA) weather service (Europe, not UK).

**AFOSI** Air Force Office of Special Investigations (Bolling AFB, established 1 August 1948).

**AFOSP** Air Force Office of Security Police (Kirtland AFB).

**AFOTC** Air Force Operational Test Center [Elgin AFB] (USAF).

**AFOSR** Air Force Office of Scientific Research (Bolling AFB).

**AFOTEC** Air Force Operational Test and Evaluation Center (Kirtland AFB, three [previously five] detachments, established 1 January 1974).

**AFOVRN** Air Force over-run, standard 1,000 ft of approach lights (USAF).

**AFP** 1 Alternative flight plan.

2 Air Force Publication.

3 Acceleration along flight path.

4 Area forecast panel.

**AFPA** Automatic flight-plan association (an electronic system).

**AFPC** 1 Air Force Personnel Center (Randolph AFB, established 1 October 1995).

2 Advanced Fighter Pilot Course.

**AFPCA** Air Force Pentagon Communications Agency (Washington DC, established 1 October 1984).

**AFP costs** All flight personnel.

**AFPEO** Air Force Program Executive Office (Washington DC, established 1 November 1990).

**AFPM** Association Française des Pilotes de Montagne.

**AFPOA** Air Force Personnel Operations Agency (Washington DC, established 15 August 1993).

**AFPRB** Armed Forces Pay Review Body (UK).

**AFPRO** Air Force Plant Representatives Office.

**AFPSS** Airborne-force protection surveillance system (USAF).

**AFP turn** After passing fix.

**AFQ** Association Française des Qualiticiens.

**AFQI** Air Force Quality Institute (Air University, Maxwell).

**AFR** 1 Air:fuel ratio.

- 2 Air Force Regulation (USAF).  
 3 AF Reserve is called Afres.  
 4 AESA-fed reflector.
- AFRA** 1 Active front-end receiver assembly.  
 2 Aircraft Fleet Recycling Association (US + European countries).
- AFRAA** African Airlines Association (Int.).  
**AfrATC** African Air Traffic Conference (Int.).  
**AFRBA** Air Force Review Boards Agency (Andrews AFB, established 1 June 1980).  
**AFRC** Air Force Reserve Command: (U adds Unit).  
**AFRCC** Air Force Rescue Co-ordination Center.  
**AFRCU** Air/fuel ratio control unit.  
**AFREA** Air Force Real-Estate Agency (Bolling AFB, established 1 August 1991).  
**Afres, AFRES** Air Force Reserve (Robins AFB, established 14 April 1948).  
**AFRFW** Air Force Research Flying Wing[s].  
**AFRL** Air Force Research Laboratory.  
**AFROC** Air Force Requirements Oversight Council.  
**AFROTC** Air Force Reserve Officers Training Corps.  
**AFRP** Aramid-fibre reinforced plastic[s].  
**AFRPL** Air Force Rocket Propulsion Laboratory (Edwards AFB).  
**AFRS** Auxiliary flight-reference system.  
**AFRSI** Advanced flexible reusable surface insulation (Shuttle).  
**AFRTL** Auto-flight rudder-travel limit.  
**AFS** 1 Aeronautical fixed service (ICAO).  
 2 Auxiliary Fire Service (UK, WW2).  
 3 Aerodrome/airport/airfield fire service.  
 4 Air Force Station, or speciality (USAF).  
 5 Advanced Flying School (RAF).  
 6 Automatic, or automated, flight system (ie, AFCS[1]).  
 7 Automatic frequency selection.  
 8 Air Facilities Service (FAA to 1962).  
 9 Airborne file server.  
 10 Aviation Flight Standards (FAA division).
- AFSA** Air Force Services Agency (San Antonio, TX, established 5 February 1991).  
**AFSAA** Air Force Studies and Analyses Agency (Washington DC, established February 1991).  
**AFSAC** Air Force Security Assistance Center (Wright-Patterson AFB).  
**Afsarc** Air Force Systems Acquisition Review Council.  
**AFSAT** See AFSATS.  
**Afsat** Association Française des Sociétés d'Assurance Transports [aerospace insurance; office, F-75082 Paris] (F).  
**Afsatcom** Air Force satellite communications.  
**AFSATS** Air Force Security Assistance Training Squadron (AETC, Randolph AFB).  
**AFSC** 1 Air Force Systems Command (ARDC retitled 1 April 1961; inactivated 1 July 1992 on formation of AFMC).  
 2 Air Force Safety Center (Kirtland AFB, AF Safety Agency renamed 1 January 1996).  
 3 Air Force speciality code.  
 4 Aggregate friction surface coat (runway).  
 5 See *AFSPC*.
- AFSCF** Air Force Satellite Control Facility (global network).
- AFSCO** Air Force Security Clearance Office (Washington DC).  
**AFSD** 1 Air Force Space Division, usually called SD, formed as unit of AFSC 1960, incorporated into AFSPC 1982.  
 2 Airframe, or aircraft, full-scale development.  
**AFSE** Avionics fast-switched Ethernet.  
**Afsinc, AFSINC** Air Force Service Information and News Center (Kelly AFB).  
**AFSK** Audio frequency-shift keying.  
**AFSOC** Air Force Special Operations Command, (Hurlburt Field, Fla., established 22 May 1990).  
**Afsouth, AFSOUTH** Allied Forces, Southern Europe (Naples).  
**AFSPA** Air Force Security Police Agency (Kirtland AFB, established February 1991).  
**AFSPC** Air Force Space Command (Peterson AFB, established 1 September 1992).  
**AFSS** 1 Association Française des Salons Spécialises.  
 2 Active flutter-suppression system.  
 3 Advanced fire-support system.  
 4 Air Force Security Service.  
 5 Automated flight service station.  
**AFSTC** Air Force Space Technology Center (Kirtland AFB).  
**AFT** 1 Advanced flying training.  
 2 Airframe fatigue test.  
 3 Aft-fuselage trainer.  
**AFTA** 1 Avionics fault-tree analyser.  
 2 Advanced fuels testing [and] analysis.
- Aftac, AFTAC** Air Force Technical Applications Center (Patrick AFB, established 1 May 1960).  
**AFTC** Arabian Fuels Technology Centre [especially concerned with aviation] (Dubai).  
**AFTENC** Air Force tactical exploitation of national capabilities.
- afterbody** 1 Rear part of body, esp of transonic supersonic or hypersonic atmospheric vehicle.  
 2 Portion of flying-boat hull or seaplane float aft of step, immersed at rest or taxiing.
- afterbody angle** In side elevation, acute angle between keel of *afterbody* (2) and (a) undisturbed water line or (b) longitudinal axis.
- afterburn** Undesired, irregular combustion of residual proellant in rocket engine after cut-off.
- afterburner** Jetpipe equipped for afterburning; in the case of a turbofan, reheat in the core flow only, see *augmentor*.
- afterburning** Injection and combustion of additional fuel in specially designed jetpipe (afterburner) of turbojet to provide augmented thrust. Fuel, usually same as in engine, burns swiftly in remaining free oxygen in hot exhaust gas. Downstream of turbine, combustion can reach temperature limited only by radiant heat flux on afterburner wall and rate at which fuel can be completely burned before leaving nozzle. Nozzle must be opened out in area, with con-di profile to give efficiently expanded supersonic jet. Can be applied esp. effectively to turbofan or leaky turbojet, with greater proportion of available oxygen downstream of turbine. Very effective in supersonic flight, but less efficient at low speeds and very noisy (UK = reheat).
- afterchine** Rear chine along afterbody (2).
- aftercooling** Cooling of gas after compression, esp. of air

or mixture before admission to cylinders of highly blown PE designed for operation at high altitudes.

**after-flight inspection** Post-flight inspection.

**afterglow** 1 Persistence of luminosity from CRT screen, gas-discharge tube or other luminescent device after excitation removed (of importance in design of many radar displays).

2 Pale glow sometimes seen high in western sky well after sunset due to scattering of sunlight by fine dust in upper atmosphere.

3 Transient decay of plasma after switching off EM input power.

**Afterm** AFTN terminal.

**aft-fan engine** Turbofan in which the fan is a free-running assembly behind the core, driven by a turbine linked only by the gas flow.

**aft flap** Auxiliary curved flap mounted behind USB (Coanda) flap to complete turning of USB flow to beyond 90°.

**aft flight deck** Rear area of aircraft flight-deck floor where this is at upper level above main floor. Not necessarily occupied by aircrew.

**AF<sup>3</sup>, AF3** See *AFF*.

**AFTI** 1 Advanced fighter technology integration.

2 Auxiliary fuel-tank integration.

**AFTIL** Airways Facilities Tower Integration Laboratory (FAA).

**aft limit of CG** Rearmost position of CG permitted in flight manual, pilot's notes, certification documentation or other authority. That at which stability in yaw and/or pitch, and static and manoeuvre margins, are still sufficiently good for average pilot to handle most adverse combination of circumstances in safety. CCV concept is leading to revolution in which much reduced, or negative, natural stability is held in check by AFCS.

**aft-loaded wing** Supercritical wing, in which centre of pressure is exceptionally far aft because of lift generated by cambered trailing edge.

**AFTN** Aeronautical Fixed Telecommunications Network (Int. from 1970).

**AFTNS** Aircraft flight-track and noise system, displays 3-D position and noise of all aircraft near airport.

**AFTO** Air Force Technical Order (USAAF, USAF).

**AFTGCC** Aerospace Flight-Text Radio Co-ordination Council.

**AFTS** 1 Advanced Flying Training School.

2 Air/fuel test switch.

3 Aerobatics Flight Training School (Compton Abbas, UK).

**aft wing** In oblique-(slew-)wing aeroplane, wing pointing rearward.

**AFU** Advanced Flying Unit.

**AFUC** Average flyaway unit cost [see unit cost].

**Afuta** Association Française des Usagers du Transport Aérien (Paris).

**AFV** 1 Armoured fighting vehicle.

2 Automatic flyback vehicle.

**AFVA** Association Française de la Voltige Aérienne.

**AFW** Active flexible wing.

**AFWA** Air Force Weather Agency (Offutt AFB, Nebraska).

**AFWAL** Air Force Wright Aeronautical Laboratory.

**AFWC** Air Force Wargaming Center (established 1986 at Maxwell AFB).

**AFWL** Air Force Weapons Laboratory.

**AFWR** Atlantic Fleet Weapons Range.

**AFWWS** Air Force Weather Weapon System.

**AG** 1 Air gunner.

2 Availability guarantee.

3 Assault glider (US, WW2).

4 Reconnaissance Wing (G).

5 Antenna group.

6 Adjutant-General (USA).

7 Arrestor gear.

**A/G** Air-to-ground.

**A<sub>g</sub>** Minimum resolvable area within patch illuminated by radar.

**AGA** 1 Airfields, ground aids and routes, main output of AIP(1).

2 Air/ground/air communications.

**AGACS** Automatic ground-to-air communication system [= data-link], not yet achieved.

**Agard, AGARD** Advisory Group for Aerospace (formerly Aeronautical) Research and Development (NATO).

**AGAQ** Association des Gens de l'Air du Québec.

**Agars** Advanced general-aviation research simulator (at CAI [1]).

**AGAS** Affordable guided airdrop system.

**Agate** Advanced general-aviation transport experiments (NASA/industry).

**Agatha** Air/ground anti-jam transmission from helicopter or aeroplane (F).

**AGATMS** Action Group for Air Traffic Management Safety (Europe).

**AGB** Accessory gearbox.

**AGBR** Affordable ground-based radar.

**AGC** 1 Automatic gain control, property of radio receiver designed to vary gain inversely with input signal strength to hold approximately constant output.

2 Affinity-group charter.

3 Adaptive gate centroid (radar tracking algorithms).

4 Active generalised control, digital protected FBW system of Rafale.

5 Active geometry [or geometric] control.

**AGCAS** Automatic ground collision-avoidance system.

**AGCS** 1 Advanced guidance and control system[s].

2 Air/ground communication system.

**AGCU** APU(1) generator control unit.

**AGD** 1 Axial-gear differential.

2 Air generator drive (ie, windmill).

**AGDA** Air-sport association (Guatemala).

**AGE** 1 Aerospace ground equipment (military inventory category).

2 Auxiliary ground equipment (Sigint).

3 Automated ground equipment (space).

**A-gear** Arrestor gear.

**age-hardening** Many metal alloys, especially high-strength aluminium alloys, need time to harden after heat treatment, usually in order that partial precipitation may take place; preferably accomplished at room temperature or chosen higher value.

**ageing (US = aging)** Time-dependent changes in microstructure of metal alloys after heat treatment. Some merely relieve internal stress but most improve mechanical properties.

**Agent Defeat** Programme to create an air-delivered

weapon able to destroy chemical and biological agents without causing their dispersal (DoD).

**AGEPL** Association Général des Elèves Pilotes de Ligne (F).

**AGES** Air/ground engagement system [also AGES II]; (AD adds air defense).

**AGETS, Agets** Automated ground engine-test system.

**AGFS** Aviation gridded forecast system (demo 1995).

**AGI** 1 Advanced [or, post 1995, authorized] ground instructor (FAA).

2 ADNS/GDSS interface.

**Agilite camera** Hand-held, for photographing surface targets, especially ships (RAF).

**AGIFORS, Agifors** Airline Group, International Federation of Operational Research Societies [Int., offices, Frankfurt-am-Main, G, and Harmondsworth, UK].

**AGIL** Airborne general illumination light.

**Agile** 1 Aircraft ground-induced loads excitation (simulates rough runways).

2 Airborne gyrostabilized IR light equipment.

3 Advanced garment integrated life-support ensemble.

**agile manufacturing** Rapid response to fluctuation in demand.

**Agility** Agile information transfer ability, active Satcom antennas.

**agility** 1 Loosely, manoeuvrability, esp. of air-combat fighter.

2 In particular, ability of fighter to change state quickly, to fly different mission.

**AGIMS** Air/ground information-management system.

**AGINT, Agint** Advanced GPS inertial-navigation technology.

**AGIS** Air/ground intermediate system.

**AGL, agl** 1 Above ground level.

2 Airborne gun-laying (radar).

3 Airfield ground lighting.

4 Automatic grenade launcher.

5 Arbeitsgemeinschaft Luftwaffe [D-31675 Bückeburg] (G).

**AGLT** Airborne, or aircraft, gun-laying turret.

**AGM** 1 Air-to-ground guided missile (inventory category, USAF, USN).

2 Missile range instrumentation ship (US code).

**AGMA** American Gear Manufacturers' Association (US).

**AGMC** Aerospace Guidance and Metrology Center (AFSC).

**AGN** Again.

**AGNA** Advisory Group of National Authorities (EASA).

**Agnis** Azimuth guidance for nose-in stands; also rendered as approach guidance nose-in to stand or aircraft guidance nose-in system.

**AGO** 1 Air-to-ground operator [also ago].

2 Andes Geophysical Observatory, Santiago.

**agonic line** Line joining all points on Earth's surface having zero magnetic variation. Two \*\* exist, one sweeping in curve through Europe, Asia and W Pacific and other roughly N-S through Americas.

**AGOS** Department of aviation, seaplanes and experimental construction (USSR).

**Agpanz** Agricultural Pilots' Association of New Zealand.

**agplane** Agricultural aircraft (colloq).

**AGPO** Angle gate pull-off (radar).

**AGPPE** Advanced general-purpose processor element, a USAF common module.

**AGR** Air/ground router.

**Agra** Automatic-gain ranging amplifier.

**agravic** Hypothetical environment without gravitational field. Unrelated to weightless free-fall in gravitational field, or to possible points where net gravitational field of all mass in universe is zero.

**agravic illusion** Apparent movement of human visual field in weightless flight due to minute displacements of structure in inner ear.

**AGREE** Advisory Group on Reliability of Electronic Equipment (DoD/NATO).

**AGRI** Air/ground radar imaging.

**agricultural** Colloq., of hardware, essentially primitive and crude, but not necessarily ineffective or obsolescent.

**agricultural aircraft** Aircraft designed or converted for agricultural aviation.

**agricultural aviation** Branch of general aviation concerned with agriculture, specif. crop spraying, dusting, top dressing, seeding, disease inspection and, apart from transport, work with livestock.

**AGRMS** Air/ground router management system.

**AGRRM** Air/ground router regional manager.

**AGS** 1 Airborne ground, or air-to-ground, surveillance.

2 Aeronautical ground station (satcom).

3 Aircraft Generation Squadron (POMO).

4 Air Gunnery School.

5 Aircraft General Stores (spare parts).

6 Alliance [airborne radar] ground surveillance (NATO).

**AGSS** 1 Aerial gunner and scanner simulator.

2 Acars ground-system standard (AEEC).

**A/G Stn** Air/ground station.

**AGTA** Airline Ground Transportation Association Inc. (US).

**AGTC** Airport ground-traffic control.

**AGTFT** Anti-jam GPS technology flight test.

**AGTS** 1 Automated guideway transit system (airport terminal).

2 Air [or aerial] gunnery target system.

3 Air/ground test station.

**AGTY** Frequency agility.

**AGU** 1 American Geophysical Union [Washington DC20009] (US).

2 Airlink gateway unit (satcoms).

3 Airborne guidance unit (UAV).

**AGV** 1 Automated guided vehicle, part of most FMS (6); S adds system.

2 Avion à grande vitesse [= hypersonic] (F).

**AGWCP** Advanced guided-weapon control panel.

**AGZ** Actual ground zero.

**Ag-Zn, Ag/Zn** Silver/zinc electrical storage battery.

**AH** 1 Artificial horizon.

2 Or  $A_H$ , attitude hold.

**Ah, A-h** Ampere-hour.

**AHA** Aviation and hazard analysis.

**AHAF** Association of Hong Kong Air Freight Agents (Kowloon).

**AHARS** Airborne heading/altitude reference system.

**AHB** Attack Helicopter Battalion (USA).

**AHC** 1 Assault Helicopter Company (USA).

- 2 Attitude/heading computer.
- AHD** Ahead.
- AHE** Aerospace Hardware Exchange.
- Ahead** 1 Attitude, heading and rate of turn indicating system.
- 2 Advanced hit efficiency and destruction, program-mable gun submunition.
- AHF** Aircooled, heavy fuel.
- AHFM** Alternate [ie, alternative] or advanced h.f. material [Northrop Grumman].
- AHI** Aviation Health Institute (UK).
- AHIP** Army helicopter improvement program (USA).
- AHM** 1 Anti-helicopter mine.
- 2 Airplane health management.
- 3 Aircraft heavy maintenance.
- AHMOS** Active health-monitoring system.
- AHMS** Advanced health management system.
- AHWS** Armed-helicopter weapon system.
- AHMR** Aircraft health-monitor recorder.
- AHP** Army heliport (USA).
- AHQ** Air headquarters.
- AHRS** Attitude/heading reference system pronounced A-hars.
- AHRU** Altitude/heading reference unit.
- AHS International** Previously the American Helicopter Society [office, Alexandria, VA22314] (US).
- AHSA** The Aviation Historical Society of Australia [office, South Melbourne].
- AHSNZ** Aviation Historical Society of New Zealand, Inc. [office, Wellington].
- AHSW** Aural high-speed warning.
- AHT** 1 Automated hover trainer.
- 2 The Airship Heritage Trust [office, London SE3 9EL] (UK).
- AHTR** Auto horizontal-tail retrimming after landing.
- AHU** Aircraft Holding Unit, for military aircraft temporarily surplus to requirements; also said to mean Aircrew HU.
- AHWG** Aviation Health Working Group (UK Parliamentary Committee 2002).
- AI** 1 Airborne interception (radar).
- 2 Artificial intelligence.
- 3 Air-data/inertial.
- 4 Attitude indicator.
- 5 Alternative interrogator.
- AIA** 1 Aerospace Industries Association of America Inc. [Washington, DC20005-3924] (US).
- 2 Associazione Industrie Aerospaziali [see AIAD].
- 3 Associazione Italiana di Aerotecnica.
- 4 Académie Internationale d'Astronautique.
- 5 Atelier Industriel de l'Air (F).
- 6 Air Intelligence Agency (USAF, Lackland AFB, established 1 October 1993).
- 7 Advanced-information, or imagery, architecture.
- 8 Aviation Insurance Association (Hasbrouck Heights, NJ).
- AIAA** 1 American Institute of Aeronautics and Astronautics [office, Reston, VA20191-4344] (US).
- 2 Aerospace Industry Analysts Association (US).
- 3 Area of intense air activity.
- AIAC** Aerospace [previously Air] Industries Association of Canada [office, Ottawa K1P 5Y7] (Canada).
- AIACS** Association of International Air Courier Services [office, Leatherhead, Surrey] (UK).
- AIAD** Associazione Industrie Aerospaziali e Difesa [office, Rome 2001-00184] (Italy).
- AIAEA** All-India Aircraft Engineers Association.
- AIAH** Advanced integrated avionics, or aircrew, helmet.
- AIANZ** The Aviation Industry Association of New Zealand, Inc. [General Aviation, office in Wellington] (NZ).
- AIB** 1 Accidents Investigation Branch [from 1988 AAIB] (UK).
- 2 Aeronautical Information Bureau.
- 3 Airfield, or aerodrome, identification beacon.
- AIBU** Advanced interface blanker unit.
- AIC** 1 Aeronautical Information Circular (CAA).
- 2 Advanced industrial countries.
- 3 Air-inlet control[ler], or computer.
- 4 Aluminium/iron/cerium.
- 5 Automatic integrity check (MLS).
- AICAA** Associazione Italiana Costruttori Amatori d'Aerei (homebuilders).
- AICBM** Anti-ICBM.
- AICC** Aviation Industry CBT Committee (Int.).
- AICCA** Australian International Cabin-Crew Association.
- AICES** Association of International Air Courier and Express Services (office UK).
- AICGS** Advanced imagery common ground station.
- AICMA** Association Internationale des Constructeurs de Matériel Aérospatial.
- AICQ** Associazione Italiana Cultura Qualità [member of IAQG].
- AICS** 1 Automatic inlet, or intake, control system.
- 2 Airborne integrated communications system.
- 3 Airborne wireless intercom system.
- AID** 1 Aeronautical Inspection Directorate (UK, 1913-).
- 2 Altered-item drawing.
- 3 Agency for International Development (US).
- 4 Airport information desk (FAA).
- 5 Accident/incident/deficiency.
- AIDA** 1 Associazione Italiana di Aerofilatelia [philately]; office, I-20148 Milan] (Italy).
- 2 Aeronautical integrated data-exchange (EL adds economy line).
- 3 Artificial-intelligence discrimination architecture.
- AIDAA** Associazione Italiana di Aeronautica e Astronautica.
- AIDC** Air-traffic services interfacility data communications.
- Aidews** Advanced integrated defensive EW system.
- AIDN** Australian Industry & Defence Network.
- Aids, AIDS** 1 Airborne/aircraft/automatic/advanced integrated data system/suite.
- 2 Acoustic-intelligence data system.
- 3 Aircraft intrusion detection system (temporary parking area).
- AIDU** Aeronautical Information Documents Unit [for military aircrew; address, RAF Northolt].
- Aieda, AIEDA** Association Internationale des Avocats et Experts en Droit Aérien.
- AIEF** Air Intelligence Exploitation Facility (USAF).
- AIEM** Airlines International Electronics Meeting.
- AIEU** Aircraft integrated electronics unit.
- AIEWS** Advanced integrated EW suite (USN).
- AIFF** Advanced identification friend or foe.

- AIFS** Advanced indirect fire system[s].
- AIG** Acas implementation group.
- Aigasa** Associazione Italiana Gestori Aeroporti e Aeroportuali.
- AGT** Aerospace Innovation and Growth Team [industry and Government] (UK 2004-).
- AII** 1 Anti-icing/anticing inhibitor.  
2 Airspace infringement initiative (Eurocontrol).
- AIDED** Active integrated inlet-duct engine demonstration.
- AIRS, AIP<sup>S</sup>** Advanced IR imaging seeker.
- AIL** 1 Airworthiness Information Leaflet.  
2 Aeronautical Instrument Laboratory (USN, from 1943).
- ail** Aileron.
- AILA** Airborne, or automatic, instrument landing, or instrumented low, approach; S adds system.
- ailavator** Control surface functioning as aileron and elevator (see *elevon*).
- aileron** 1 Control surface, traditionally hinged to outer wing and forming part of trailing edge, providing control in roll, ie about longitudinal axis. Seldom fitted to aircraft other than aeroplanes and gliders, and in recent years supplemented or replaced by spoilers, flaperons, elevons and tailerons, while in some high-speed aircraft conventional \* are mounted inboard to counter \* reversal.  
2 Effectiveness of lateral-control system, as in phrase 'to run out of \*'.  
**aileron centring device** Another name for a wing leveller. Typically incorporates two springs, able to overcome friction and air loads.  
**aileron drag** Asymmetric drag imparted by aileron deflection, greater on down-going aileron (see *differential \**, *Frise \**).  
**aileron droop** Rigging of manual ailerons so that in neutral position both are at a positive angle relative to the wing.  
**aileron reversal** As aircraft speed increases, deflection of aileron can twist wing sufficiently to reduce, neutralise and finally reverse rolling moment imparted to aircraft. Many aircraft designed for Mach numbers higher than 0.9 either have no traditional outboard ailerons or else lock these except at low speeds.  
**aileron reversal speed** That at which pilot input is reduced to zero.  
**aileron roll** See *slow roll*.  
**aileron wedge** See *wedge*.
- AILS** 1 Airborne information for lateral spacing.  
2 Automatic ILS.
- AIM** 1 Aeronautical [until 1995 Airmen's] Information Manual (FAA).  
2 Air intercept missile (inventory category, USAF, USN).  
3 Aerospace industrial modernisation programme (US).  
4 Aluminium/iron/molybdenum.  
5 Automatic inflation modulation.  
6 Advanced intelligent management.  
7 ATC/IFF beacon Mk XII.  
8 Accelerated introduction of materials.  
9 See *AIMD*.  
10 Aircraft integrity monitoring.  
11 Arts (3) interface module.
- AIMAS** Académie Internationale de Médecine Aéronautique et Spatiale [also IAASM; office, Montreal].
- aim-bias** Error between aiming point and centre of dispersion area of statistically valid number of projectiles.
- AIMD** Aircraft intermediate maintenance department.
- aim dot** Basic command reference symbol in gunsight or HUD: can show where bullets would hit if gun fired, but usually also gives other indications.
- AIMDS** Aircraft integrated monitoring and diagnostic system.
- AIME** Autonomous integrity monitored extrapolation.
- AIMES** Avionics integrated maintenance expert system (McDonnell Douglas).
- Aim/Far** Aeronautical Information Manual, Federal Aviation Regulations.
- AIMIS, Aimis** Advanced integrated modular instrumentation systems (USN).
- aim-off** Angular allowance when firing at moving target with unguided projectile, usually because of sightline spin resulting in target changing apparent position during projectile's flight, but in air-to-air combat possibly because of lateral air drag (eg in firing at aircraft abeam at same speed and heading, when sightline spin is zero).
- AIMS** 1 Attitude indicator measurement system.  
2 ATCRBS, IFF, Mk 12 transponder, System.  
3 Aircraft identification monitoring system (DoD, interceptors).  
4 Automated integrated manufacturing system.  
5 Airplane, or aircraft, information-management system [reports problems to maintenance staff].  
6 Airborne integrated management system.  
7 Airport information management system [vast range of data].  
8 Advanced imaging multispectral system.  
9 Aircraft integrated monitoring system [accident-related and life data].  
10 Advanced integrated MAD system.  
11 Airspace information monitoring system [major airports, G].
- AIMV** Aluminium/iron/molybdenum/vanadium.
- Aimval** Air intercept missile evaluation (USAF/USN).
- AIN** Airline identification number.
- AINS** 1 INS with prefix advanced, aided, area or airborne.  
2 Associazione Internazionale Nomo nello Spazio (I).
- AINSC** Aeronautical industry service communications.
- AIO** Action information organization (mainly warships, in relation to aircraft).
- AIOA** Aviation Insurance Offices Association [ office, Guildford GU2 5QJ] (UK).
- AIP** 1 Aeronautical Information Publication[s], or package.  
2 Asars, [1], improvement program.  
3 Anti-surface-warfare improvement program[me].  
4 Air-independent propulsion.  
5 Australian industrial participation.  
6 Associação Industrial Portuguesa.  
7 Airport Improvement Program (DoT).
- AIPA** Australian and International Pilots' Association.
- AIPII** Association Internationale pour la Protection de la Propriété Intellectuelle (Int.).
- AIPT** Advanced image-processing terminal.
- AIR** 1 French aerospace material specification code.  
2 Air intercept[or] rocket (inventory category, USAF).

3 Air-inflatable retarder (similar to ballute).

4 Air-intercept radar.

5 Advanced integrated recorder.

6 Aerospace Information Report (SAE).

**air** Air near Earth's surface usually taken to be (% by volume): nitrogen 78.08; oxygen 20.95; argon 0.93; other gases (in descending order of concentration, carbon dioxide, neon, helium, methane, krypton, hydrogen, xenon and ozone) 0.04. In practice also contains up to 4% water vapour. ISA SL pressure at 16.6°C is 10.332 kg m<sup>-2</sup> (= 761.848 mm Hg) and density 1.2255 kg m<sup>-3</sup>.

**air abort** Abort after take-off.

**Airac** Aeronautical information regulation and control, system for disseminating air navigation information (Notams).

**Airad** Airmen advisory (local).

**AI radar** Airborne interception radar, carried by fighter for finding and tracking aerial targets.

**Air Adviser** RAF officer charged with assisting commander of a multiservice Task Force [e.g. Falklands 1982].

**air attack** An experienced firefighter who not only provides the IC(8) with an overview but also knows how best to allocate resources.

**air-augmented rocket** Usual form of this propulsion system is for first stage of combustion, or primary rocket propellant or gas-generator, to yield fuel-rich range of products which then combine in second stage of combustion with atmospheric air (normally induced through ram intake). Objective is to increase specific impulse, by using oxygen from atmosphere, and also burn time and vehicle range.

**air bag** Rapidly inflated flexible bag to cushion VL of UAV or other object.

**airband** Those frequencies used for aeronautical voice communications.

**air base** 1 Loosely, military or general-aviation airfield (term used mainly by popular media).

2 In photogrammetry, line joining two air stations.

3 Length of (2).

4 Scale distance between adjacent perspective centres as reconstructed in plotting instrument.

**air bearing** Gas bearing using air as working fluid.

**air-bearing table** Table supported on single spherical air bearing and thus free to tilt, without sensible friction, to any attitude within design constraints.

**air-blast switch** Electrical circuit-breaker in which arc formed on breaking circuit is blown away by high-velocity air jet.

**air-blast transformer** In this context, as in some other electric and electronic equipment dissipating large heat flux, air-blast signifies forced air cooling.

**air bleed** See *Bleed* (2).

**air block** Rectilinear volume of atmosphere between designated FLs over published geographical area.

**airblown seal** A seal between two rotating assemblies, usually of labyrinth type, fed with air at pressure slightly higher than surroundings, thus excluding oil or other contaminants.

**airborne** Sustained by atmosphere or vertical component of propulsive thrust. Implication is that vehicle is not above sensible atmosphere; term not normally used in connection with spaceflights not involving aerodynamically supported vehicles, but applicable to wingless jet-lift devices.

**airborne alert** Generally, long-duration mission flown by strategic bomber, in all respects ready to make real attack, to reduce reaction time and remove possibility of destruction by ICBM or SLBM attack on its base. Until World War 2 'air alert' was method of deploying interceptor (pursuit) forces, keeping them on sustained flight in likely combat area under ground vector control.

**Airborne Cigar** Powerful transmitters on which RAF bombers broadcast misleading instructions to German night fighters in WW2.

**airborne early warning, AEW** Use of aircraft to lift powerful search radar to greatest possible height to extend line-of-sight coverage (very approximately, LOS radius in statute miles is square root of 1.5 times observer's height in feet). Modern AEW can give a PPI covering 170,000 sq miles, throughout which two low-level aircraft in close formation can be individually distinguished against ground clutter.

**airborne fog blind** Translucent blind or hood admitting light to cockpit or flight deck whilst removing external visual cues.

**airborne force** Force constituted for airborne operations.

**airborne gunlaying turret, AGLT** Bomber-defence gun turret incorporating automatic provisions for aim-off and other corrections when engaging aerial targets.

**airborne interception, AI** Use of aircraft to find, and close with, another aircraft; specifically, use of fighter to intercept, challenge by IFF and, if dissatisfied, destroy another aircraft.

**airborne operation** Movement of combat forces and logistic support into combat zone by air.

**airborne radio relay** Use of airborne relay stations to increase range, flexibility or security of communications.

**airborne target handover system** Coded data-link enabling aircraft to hand over target (usually on ground) to a friendly station, without voice.

**Air Box** Air Ministry (RAF, colloq.).

**airbrake** Passive device extended from aircraft to increase drag. Most common form is hinged flap(s) or plate(s), mounted in locations where operation causes no significant deterioration in stability and control at any attainable airspeed. Term not normally applied to flaps, drag chute or thrust-reverse systems.

**airbreathing** Aspiring air, specifically aircraft propulsion system which sustains combustion of fuel with atmospheric oxygen. Imposes constraints on vehicle speed and height, but invariably offers longer range than rocket system for same vehicle size or mass.

**airbridge** 1 Elevated metal 'bridges' linking logic gates on an integrated circuit chip.

2 See *bridge*.

**Air Britain** Despite name, international enthusiast body, formed 1948, now has (Historians) added to title [office Dunstable, UK].

**Airbrokers Association** Formed 1949, became BAC1 [office London].

**airburst** Detonation of explosive device well above Earth's surface. Almost all nuclear weapons are programmed for optimised airburst height, which varies with weapon and target.

**AIRC** Airline[s] Industrial Relations Conference [Washington, DC] (US).

**air carrier** Organization certificated or licensed to carry passengers or goods by air for hire or reward.

**air cartography** Aerial survey, esp. aerial photography for purpose of mapmaking.

**Air Cavalry** Helicopter-borne attack/reconnaissance ground troops (USA).

**AIRCMM** Advanced infra-red countermeasures munition.

**aircom** Traffic on an Acars link (SITA).

**AIRCON** Air communications network, specif. serving US air carriers. Characterised by wide geographical extent, very large information flow, 'on-line, real time, full-time' storage, and computer-compatible electronic switching.

**air conformal ice detection system** Measures thickness and characteristics by scattering of light from fibre optics.

**air controller** In military operations, an individual trained for and assigned to traffic control of particular air forces assigned to him within a particular sector.

**air control team** Team organised to direct CAS3 strikes in the vicinity of forward ground elements.

**air-cooled** Heat-generating device, esp. piston engine, maintained within safe limits of temperature by air cooling. Invariably cooling is direct, in case of piston engine by radiating heat to air flowing between fins around cylinder head and barrel, or around hot rotor casing(s) of RC engine.

**air corridor** 1 Defined civil airway crossing prohibited airspace.

2 Restricted air route in theatre of military operations intended to afford safe passage for friendly air traffic.

**aircraft** Device designed to sustain itself in atmosphere above Earth's surface, to which it may be attached by tether that offers no support. Two fundamental classes are aerodynes and aerostats. Aircraft need have no means of locomotion (balloons are borne along with gross motion of atmosphere, while kites are tethered and lifted by motion of atmosphere past them), or any control system, nor means for aerodynamic or aerostatic lift (eg. jet VTOL aircraft need be no more than jet engine arranged to direct efflux downwards). Free-falling spacecraft qualifies as aircraft if, after re-entry, its shape endows it with sufficient L/D ratio to glide extended distance, irrespective of whether or not it can control its trajectory.

**aircraft cabin mattress** Unpacked from storage bag, converts two facing seats + intermediate table into foam bed.

**aircraft cable** Specially designed tensile cable, usually either solid wire or any of eight built-up constructions, used for operating flight control and other mechanical systems.

**aircraft carrier** Marine craft, traditionally large surface vessel, designed to act as mobile base for military aircraft.

**aircraft categories** 1 For genealogical purposes, family tree of possible classifications.

2 For certification purposes, subdivision of aeroplanes (most important family of aircraft) on basis of performance. In UK aeroplanes certificated before 1951 are categorised as No Performance Group Classification; after 1951 subdivided into Performance Group A, large multi-engined; Performance Group C, light multi-engined; and Performance Group D. Also Group X for

large multi-engined aeroplanes built outside UK before specified date.

**aircraft certificate** In US all aeroplanes (airplanes) and most other aircraft except models are categorised and licensed according to four classes of certificate, each having status of legal document: airworthiness, production, registration and type.

**aircraft commander** See *commander*.

**aircraft communications and automatic reporting system** Monitors and records many parameters, mainly engine data.

**aircraft container** See *container*.

**aircraft dispatcher** In US air transport, official charged with overseeing and expediting dispatch of each flight. Traditional post analogous to train dispatcher of US railroads. Today duties include provision of met. information, flight planning, arranging unloading and loading, stocking with consumables, apron servicing and other turnaround tasks, calling for large staff.

**aircraft dope** See *dope*.

**aircraft fabric** See *fabric*.

**aircraft fuel** See *gasoline, kerosene*.

**Aircraft Holding Unit** Accepted new aircraft off production, or in-service aircraft after major overhaul or repair, and tested them before allocation to operating unit (RAF, RN).

**aircraft integrated data system** Supplements 'black box' by monitoring and recording many additional engine and system parameters.

**aircraft lifting bag** Usually made of stout neoprene woven fabric, inflated to assist recovery of disabled or crashed aircraft; among other terms are pneumatic elevator and pneumatic aircraft jack.

**aircraft log** One or more volumes recording detailed operating life of individual aircraft, listing daily and cumulative flight time, notifiable irregularities or transient unserviceability of any part, all inspections, overhauls, parts replacement, modification and repair.

**Aircraftman, Aircraftwoman** RAF/WRAF non-commissioned rank, with junior and senior grades, having no bearing on trade in which rank-holder is qualified.

**aircraft management simulator** Essentially the same as a pre-1960 simulator, equivalent to a modern FFS but without 6-axis motion or synthetic external scenes; capable of training on all cockpit instruments and systems.

**aircraft missile** Missile launched from aircraft.

**aircraft mover** Apron vehicle for towing or pushback.

**aircraft network interface unit** Provides link between aircraft satcoms system and passenger [or possibly crew] PCs.

**aircraft pallet** See *pallet*.

**aircraft performance monitoring** Software calculates deviation(s) from specific range caused by aerodynamic deterioration of airframe.

**aircraft prepared for service** See *weight*.

**aircraft rocket** Missile launched from aircraft.

**aircraft system controller** Avionics subsystem performing flight engineering control and monitoring functions to automate hydraulic or electric or fuel or ECS or other system.

**aircraft unit-load device** See *Unit load*.

**aircrew** Crew required to operate aircraft in flight, esp. crew, numbering more than one, of military aircraft.

Large civil aircraft normally operated by flight crew and cabin crew; \* is not used.

**aircrew equipment assembly** Standard modular fitting incorporating PEC and various other items carried on flying clothing, forming single 'umbilical' for military flight-crew member.

**air cushion** Volume of air at pressure slightly above local atmospheric, trapped or constantly replenished by suitably arranged air jets (possibly issuing from base of flexible skirt) to support ACV.

**air data** Parameters derived from measurements of the air mass surrounding the aircraft.

**air-data computer** Digital computer serving as central source of information on surrounding atmosphere and flight of aircraft through it. Typical ADC senses, measures, computes or transmits (to AFCS and other aircraft systems) pressure altitude, OAT and total temperature, Mach number, EAS, angle of attack, angle of yaw and dynamic pressure. All are corrected for known errors and converted into signals of form required by supplied systems. ADC may have 60 to 90 output channels, most used throughout each flight.

**air defence** Defence against aerial attack, ie attack by aircraft, atmospheric missiles and RVs entering atmosphere from space.

**air defence identification zone** Defined airspace within which all traffic must be identified, located and controlled (*ADIZ*).

**air defence operations area** Geographical area, usually large, within which air and other operations are integrated.

**air defence region** Geographical subdivision of an AD area.

**air defence sector** Geographical subdivision of an AD region.

**Air-Dek** PSP (1), a US registered name.

**air despatcher** Person trained to supervise release or ejection of cargo [or parachutists] from aircraft in flight.

**air distance** Distance flown through the air, ie with respect to atmosphere.

**air distributed mission trainer** Features Ro-Ro cockpit to enable aircrew to receive individual or networked training on various aircraft types.

**Air Division** Largest administrative unit in USAF below Air Force.

**air dominance** Unquestioned military supremacy in aerospace.

**air drag** Drag.

**air drill** 1 Training or display by group of military aircraft which repeatedly change formation or perform manoeuvres.

2 Drill driven by high-pressure air.

**air-driven horizon** Artificial horizon in which gyro is driven by one or more high-velocity air jets, usually arranged to impinge on cups machined in periphery. In most, instrument case is connected to vacuum line, often generated by venturi, and jets are atmospheric air. Performance reduced at altitude and by contamination by foreign matter blocking or penetrating filter.

**airdrome** Incorrect corruption of aerodrome.

**airdrop** Delivery of personnel or cargo from aircraft in flight, usually by parachute.

**airdrop platform** Platform designed to carry large indivisible loads for airdrop or LAE.

**AIRE** Atlantic Interoperability initiative to Reduce Emissions [2007–, FAA, EC] (Int.).

**Airep** Air report, in plain language, either spoken weather report by airborne aircrew or written air weather report.

**Airex** Patented low-density polyetherimide foam.

**air exchange** Release of a proportion of the air in closed-circuit tunnel on each pass and its replacement by fresh cooler air from atmosphere; hence, \* system, control doors, cooling etc, and \* rate expressed as % of tunnel airflow. Purpose is to regulate tunnel temperature and overall static pressure level.

**air expeditionary force** Multi-arms force quickly assembled to meet needs of a local commander and sent to a crisis point within hours (US).

**airfield** Land area designated and used, routinely or in emergency, for takeoff and landing by full-scale aerodyne(s). Definition excludes aerostats and model aircraft, but admits VTOLs and RPVs. No facilities need be provided.

**airfield elevation** Height above MSL, usually of highest point on runway or other used surface.

**airfield FIS** Flight-information service provides information to, but not control of, aircraft using that airfield.

**airfield surface movement indicator** Airfield surveillance radar.

**airfield surveillance radar** Radar on or near airfield with scanner well above ground level rotating continuously to give fine-definition PPI display, especially showing aircraft on ground and vehicles.

**air-filed** Flight plan sent by aircraft in flight.

**airflow** Air flowing past or through body. For immersed solids moving through air, major factors are speed (IAS, EAS, CAS, TAS), angle of attack or yaw, dynamic head, OAT and total temperature. For turbine engine, \* normally mass flow, ie mass per unit time passing through engine.

**airfoil** *Aerofoil*.

**air force station** Usually means location of an air force unit where there is no airfield.

**airframe** BS.185/1940: 'A flying machine without the engines', today BS.185 has added 'power driven'. Better definition is: assembled structure of aircraft, together with system components forming integral part of structure and influencing strength, integrity or shape. Includes transparencies, flush aeriels, radomes, fairings, doors, internal ducts, and pylons for external stores. In case of ballistic rocket vehicle would not include thrust chambers of liquid-propellant engines, nor separable solid motors, but could include payload fairings. Items where argument exists include: RVs; MAD booms; rigid refuelling booms; mission equipment carried demonstrably outside structure proper (eg, AWACS aerial); and podded engine cowlings. Airframe usually includes landing gear, but not systems, equipment, armament, furnishings and other readily removable items.

**airframe attributable** Accident or notifiable incident caused by defect or malfunction in airframe.

**airframe parachute** Large parachute deployed from aerodyne in emergency to provide ground impact at not over 30 ft/s.

**airframer** Loosely, company or other organization whose primary business is manufacture of aircraft.

Arguably, includes assembler of aircraft from major sections manufactured by partners.

**airframe tuning** Modifying the structure to move natural frequencies [especially of the occupied regions of the fuselage] away from the forcing frequencies of the propeller[s] or rotar[s].

**air/fuel ratio** Ratio by mass of air to fuel in air-breathing engine or other combustion system. With hydrocarbon fuels ratio usually in neighbourhood of 16:1.

**air gap** 1 Clearance between stationary and moving portions of electrical machine, crossed by magnetic flux.

2 Air space between poles of magnet.

3 Gap left in core of chokes and transformers used in radio or radar circuits to prevent saturation by d.c.

**air-gap** Traditional type of piston-engine spark plug; or gas-turbine igniter in which c25,000V is required to make a spark jump through fuel/air mixture from electrode to body.

**airglow** Quasi-steady radiation, visible at night, due to chemi-luminescence in upper atmosphere energised by solar radiation. Today often taken to embrace radiation outside visible range.

**air gunner** Member of aircrew assigned, for whole or part of mission, to manning guns to defend aircraft [today's nearest equivalent = DSO (2)].

**air hardening** Age hardening at room temperature.

**airhead** 1 Designated area in hostile or disputed territory needed to sustain air landing; normally objective of airborne assault.

2 Air supply and evacuation base in theatre of operations.

3 In undeveloped region, nearest usable airfield.

4 CTOL base for support of dispersed VTOL operation.

**air hostess** Stewardess.

**air inlet, air intake** Admits air to duct inside aircraft, esp. to engine.

**air interception** Radar or visual contact between a friendly and another aircraft.

**air interdiction** Air attack on enemy forces sufficiently far from friendly forces for integration with the latter not to be required; esp. attack on enemy supply routes rather than theatre forces. Differs from BAI in that it interferes with enemy's major operational movement and prevents movement of forces into battle area.

**air lag** See *lag*.

**air/land warfare** Simultaneous warfare on land and in airspace above.

**air launch** Release from aircraft of self-propelled or aerodynamically lifted object: missile, target or other aircraft (manned or RPV) previously attached to it (not towed).

**The Air League** UK air-minded association; not abb, founded 1909, in 1932–70 added : of the British Empire [office, London SW1H 9NS] (UK).

**air lever** On early aeroplanes, hand throttle governing engine airflow (not fuel) See fine adjustment..

**air liaison officer** Tactical air force or naval aviation officer attached to surface forces.

**airlift** 1 Carriage by air of load, esp. by means other than routine airline operation.

2 Transport operation (usually military) in which aircraft make round-trip flights to transport large load such as army division or refugee population.

3 Continuing, open-ended logistic supply operation, such as Berlin \*, 1948–49.

**airlifter** Aeroplane [usually large] designed primarily for cargo, esp. military.

**airline** 1 Certificated air carrier.

2 Public image of air carrier, created by house logo, aircraft livery and advertising, even where no such single carrier may exist.

3 Any great-circle route.

4 Ground supply pipe conveying air at typically 80 lb/in<sup>2</sup>.

**airline quality rating** Monthly scores of passenger satisfaction for largest US carriers.

**airliner** Not defined, but generally applied to large passenger aircraft operated by scheduled carrier; usage UK rather than US and becoming dated.

**air load** Aggregate force exerted on surface by relative airflow. In case of aerofoil or control surface, force exerted on three-dimensional entity, not on just one of its surfaces.

**air lock** 1 Small chamber through which personnel must pass to enter or leave larger chamber maintained at atmospheric pressure significantly different from ambient. Provided with two doors in series, never more than one door being open at a time.

2 Unwanted volume of air or other gas trapped at high point in liquid system in such a way as to prevent or degrade proper operation.

**air log** Instrument for measuring air distance flown.

**air mail** Mail prepaid and sent by air where there is an alternative, cheaper surface route. European letters and postcards travel by air if this speeds delivery; no separate \*\* service.

**Airman** Aircraft maintenance analysis.

**airman** 1 Loosely, any aviator, aeronaut or man who navigates by air.

2 Tradesman certificated by appropriate licensing authority to work on aircraft.

3 Air force rank category (but not a rank) below NCO, equivalent to Army 'other ranks'.

4 (Capital A) lowest uniformed rank in USAF, with class subdivisions.

**Air Maneuver** Buzzword suggesting helicopters can have an effect in rapid battlefield movement (UK but US spelling).

**airmanship** Skill in piloting aircraft. Embraces not only academic knowledge but also qualities of common sense, quick reaction, awareness and experience. RAF view: "ask 100 pilots to define, will get 100 different answers."

**Air Marshal** Armed Federal officer riding incognito as ordinary passenger on flights by US carriers to deter terrorism. In view of prior existence of RAF rank, confusion would be reduced by standardizing on Sky-Marshal.

**air mass** Very large parcel of atmosphere which at lower levels exhibits almost uniform characteristics of temperature and humidity at any given level. According to Bergeron classification, grouped according to origin (Arctic, Polar, Tropical, Equatorial), subdivided into Continental or Maritime within each group, and then again into warm (w) or cold (k).

**Airmec** International Aircraft Maintenance and Engineering Exhibition and Conference.

**Airmen Advisory** Notice to Airmen (see *NOTAM*)

normally issued locally, often verbally during pre-flight or in-flight briefing.

**AIRMET, Airmet** 1 In-flight weather advisory category less severe than SIGMET but potentially hazardous to simple aircraft flown by inexperienced pilot (US).

2 Telephone weather service (CAA UK).

**air meter** 1 Instrument on testbed [e.g., for engines] for measurement and recording of airflow mass per unit time.

2 Confusingly, a 1935 dictionary offers "A type of portable anemometer," which measures velocity.

**air mile** 1 Aeronautical mile = nautical mile.

2 One mile flown through the air, following Hdg. at TAS; wind must be added to give distance along Tr. at G/s. Hence \* per gallon.

**air mileage unit, AMU** Mechanical calculating instrument, 1942–55, to derive continuous value for air distance flown. Output, more accurate and reliable than air log, was fed to air mileage indicator (AMI) and often other instruments.

**air-minded** Of general public, concerned to further aviation for prosperity, defence or sport.

**air ministry** In many countries, national department charged with administering military (sometimes all) aviation. In UK, replaced by MoD (RAF).

**Airmis** Airline management information system, EDP for smaller airlines.

**airmiss** Incident reported by at least one member of aircrew who considers there was "definite risk of collision" between two airborne aircraft (US). See *airprox*.

**airmobile, air-mobile** Ground troops equipped and trained for insertion by air, making conventional landing (fixed or rotary wing).

**air-mobile band** Band of communications frequencies assigned to air-mobile forces.

**air-mobile operation** Operation by ground forces carried in air vehicles.

**Air Mounting Centre** Airfield for army traffic (South Cerney, UK).

**air movement** Military air transport operation involving landing and/or airdrop.

**air movement table** Detailed schedule of utilisation of aircraft load space, numbers and types of aircraft, and departure places and times.

**AIMS** Airport interference monitoring system.

**Air National Guard, ANG** Part-time voluntary auxiliary to USAF equipped with fighter, tactical strike and transport aircraft, organised as self-contained arm by each state.

**air nautical mile** See *air mile*.

**air navigation** Art of conducting aircraft from place of departure to predetermined destination, or along intermediate routes (eg to follow precise tracks in surveying). Originally pure pilotage (contact flying); by 1918 moved into nautical realm of dead reckoning and celestial observation (astro-nav); by 1960 all \*\* relied upon ground and airborne aids, except in gliders and simple light aircraft.

**Air Navigation Commission** Body charged with setting standards and operating practice. Reports to the Council, see next.

**Air Navigation Council** Governing body of ICAO.

**air navigation facility** Navaid; surface facility for air navigation including landing areas, lights, any apparatus or equipment for disseminating weather information, for

signalling, for radio direction-finding, or for radio or other electronic communication . . . (FAA). Today add 'for electronic position-finding.'

**Air Navigation Orders** Statutory instruments decreeing laws of civil air operations, including flight-crew licensing (UK).

**AIRO** Airborne IR observatory.

**air officer, Air Officer** 1 Loosely, officer commissioned in an air force.

2 Specif., officer of Air Rank in RAF.

**air/oil strut** Telescopic member utilising properties of air and oil to absorb compressive shocks (rarely, tensile) with minimal or controlled rebound.

**air operator** One who engages in flying for hire or reward, hence \* Certificate.

**air phone** HF air/ground telephony.

**airplane** Aeroplane (N America).

**Airplane Design Group** Class of aircraft, from I to VI, according to weight, dimensions, turning circle and other factors affecting airport requirement (FAA).

**air plot** 1 Continuous air navigation graphic plot constructed (usually on board aircraft) by drawing vectors of true headings for lengths equivalent to air distances flown, today archaic.

2 Similar plot constructed for airborne object derived from visual or radar observation of its flight.

3 Automatic or manually constructed display showing position and movements of airborne objects (if in a ship, relative to the ship).

**air pocket** Sudden and pronounced gust imparting negative vertical acceleration; down-draught. Suggest archaic.

**airport** Airfield or marine base designated and used for public air service to meet needs of quasi-permanent community. There need be no facilities for aircraft replenishment or repair, customs facilities, nor scheduled service; but there must be facilities for passengers and/or cargo. Community served can be mainly or even exclusively employees of one company (eg at oilfield).

**airport advisory area** Area within 5 miles of geographical centre of uncontrolled airport on which is located FSS so depicted on appropriate sectional aeronautical chart (FAA)

**airport advisory service** Terminal service provided by FSS located at airport where control tower is not operating.

**airport code** Three-letter code identifying all commercial airports (eg, LHR, JFK, LAX).

**airport commission** Board of management of most US airports.

**Airport-G** Airport integrated research and development project for operational regulation of traffic guidance (Euret).

**airport information desk** Unmanned facility at local airport provided for pilot self-service briefing, flight planning and filing of flight plans (FAA).

**airport marker** See *marker*.

**airport movement area safety system** Uses surface and airspace radar linked to predictive software to warn of future conflict on runway, taxiway or apron.

**airport of entry** Airport provided with customs facilities through which air traffic can be cleared before or after international flight.

**airport runway configuration** Current runways in use for takeoffs and landings, changes notified in advance.

**airport surface detection/movement** See *ASDE, ASMI*.  
**airport surveillance radar** Approach-control radar used to display position of all traffic in TMA [up to 60 miles/100 km] providing range/azimuth but not height (FAA).

**airport traffic area** Unless otherwise designated (FAR Pt 93), airspace within 5 miles of geographical centre of airport with TWR operating, extending up to, but not including, 3,000 ft AAL (FAA).

**airport traffic control service** ATC service provided by airport TWR for aircraft operating on movement area and in vicinity (FAA).

**airport traffic control tower** Facility providing airport ATC service (FAA).

**air position** Geographical position airborne aircraft would occupy if entire flight was made in still air; point derived by plotting Hdg. and TAS.

**Air Proving Ground Command** USAAF/USAF establishment at Eglin AFB for testing weapons, became AFDTC June 1957.

**air-position indicator, API** Instrument which continuously senses Hdg. and TAS (usually not allowing for compressibility error) to indicate current air position.

**airprox** Unintended near-miss by two airborne aircraft, considered sufficiently dangerous to be reported (UK term for airmiss).

**air rage** Anti-social behaviour [usually caused by alcohol or drugs] by airline passenger.

**air raid** Aerial attack on surface target, esp. against civil population.

**Air Rank** Senior to Group Captain; Air Officer, equivalent to naval Flag Officer.

**Air Refuelling Control** Office responsible for planning route [including choice of flight levels] and arranging optimum locations for tankers, if over US including CARF clearance (RAF).

**air refuelling control point** Location in space at which boom-type tanker is 1,000 ft higher than receiver, heading on reciprocal 9 to 11 miles away laterally and 22 to 29 miles away longitudinally, whereupon 180° turn inwards is started.

**air report, AIREP** Meteorological report sent by aircraft in flight.

**air-riding seal** Air or gas seal around a rotating shaft in the form of a [usually refractory] element which in operation lifts just clear of the shaft surface and runs on a cushion of air induced dynamically.

**air route** Defined airspace between two geographical points, subject to navigational regulations. See *airway*.

**air route surveillance** Surface radar giving display(s) showing geographical position and height of all traffic along designated civil route (usually airway).

**air route traffic control centre, ARTCC** Facility providing ATC service to aircraft operating on IFR flight plan in controlled airspace and principally during en route phase (FAA).

**air-run landing** Final deceleration in ground effect followed by vertical landing (fixed-wing V/STOL).

**air-run take-off** Vertical take-off followed by horizontal acceleration in ground effect (fixed-wing V/STOL).

**AIRS, Airs** 1 Airborne integrated reconnaissance system (USN).

2 Advanced inertial reference sphere, or system.

3 Airline inventory redistribution surplus.

4 Aircrew incident-reporting system.

5 Advanced IR seeker.

6 Atmospheric IR sounder (on Aqua EOS).

7 Airborne IR surveillance.

8 Alliance icing research study (Int.).

**Air Safety Report** Filed by crew after a flight in which they encounter an untoward or potentially dangerous situation, which may be partly or entirely of their own making.

**Airsar** Airborne synthetic-aperture radar.

**airscape** Broad vista of sky, not necessarily including Earth's surface, from aerial viewpoint.

**air scoop** Colloq. ram intake, esp. projecting from exterior profile of aircraft.

**airscrew** BS.185, 1951: 'Any type of screw designed to rotate in air'. Word never common in US, but in UK used in early days of powered flight to denote rotary aerodynamic device intended to impart thrust. From about 1920-50 explicitly denoted tractor device ('propeller' being 'an airscrew joined to the engine by a shaft in compression'). Today redundant. See *fan, propeller, rotor, windmill*.

**airscrew-turbine engine** Turboprop.

**air/sea rescue, ASR** Use of aircraft to rescue life in danger at sea, esp. permanently established service for this purpose (UK, RAF: US, USCG).

**airship** BS.185 1951: "A power-driven lighter-than-air aircraft". Thus need not be provided with means for controlling its path, though if \* is to be of use such means must be provided. Traditional classes are: blimp, a small non-rigid; non-rigid, in which envelope is essentially devoid of rigid members and maintains shape by inflation pressure; semi-rigid, non-rigid with strong axial keel acting as beam to support load; and rigid, in which envelope is itself stiff in local bending or supported within or around rigid framework.

**airshow** A previously publicised event at which aircraft are displayed on the ground and in flight; the public may or may not be admitted, and the principal purpose may be either product marketing or entertainment.

**airside** 1 All parts of airport containing aircraft.

2 For passengers, beyond departure customs, prior to arrival customs.

**air snatch** 1 Recovery of passive body from atmosphere by passing powered aircraft, esp. recovery of space payload descending by parachute.

2 Recovery of human being from hostile territory or sea by passing aircraft unable to hover (see *Fulton*).

**air sounding** 1 Measurement of atmospheric parameters from sea level to specified upper level by transmitting or recording instruments lifted by rocket or aircraft (esp. balloon).

2 Record thus obtained.

**airspace** Volume of atmosphere bounded by local verticals and Earth's surface or given flight levels. May be controlled or uncontrolled, but always an administrative unit defined by precise geographical or Earth-referred locations.

**airspace denial** Military mission flown by fighter to destroy all hostile aircraft entering particular airspace, usually that above friendly troops.

**airspeed, air speed** Relative velocity between tangible object, such as raindrop or aircraft, and surrounding air. In most aircraft measured by pitot-static system

connected to airspeed indicator (ASI) to give airspeed indicator reading (ASIR). When corrected for instrument error (IE), result is indicated airspeed (IAS). When corrected for position error (PE), result is rectified airspeed (RAS). Most ASIs calibrated according to ideal incompressible flow ( $\frac{1}{2}\rho V^2$ ), so from RAS subtract compressibility correction to give equivalent airspeed (EAS). Finally density correction, proportional to difference between ambient air density and calibration density ( $1.225 \text{ gm}^{-3}$ ), applied to give true airspeed (TAS). This sequence ignores errors, usually transient, due to major changes in angle of attack (eg, in manoeuvres). Some ASIs calibrated to allow for compressibility according to ISA SL, indicating calibrated airspeed (CAS). Confusion caused by fact most authorities now use 'calibrated airspeed' to mean ASIR corrected for IE and PE; CAS thus defined would have to be corrected for density and compressibility. Thus since 1980 CAS must be regarded as ASIR + IE + PE; if allowing for compressibility then at ISA/SL CAS = TAS.

**airspeed indicator, ASI** Instrument giving continuous indication of airspeed.

**airspeed transducer** In flight testing, or performance measurement of unmanned vehicle in atmosphere, transducer giving electrical signal proportional to airspeed. In simple systems signal is d.c. voltage.

**airsplint** Lightweight splint, inflated for rigidity.

**air spotting** Correcting adjustment of friendly surface bombardment based on air observation.

**airspray nozzle** Fuel burner in gas-turbine engine which itself mixes fuel spray with primary air, avoiding smoke from fuel-rich combustion and incidentally reducing required fuel feed pressure.

**AIRSS** 1 Advanced IR suppressor, or suppression, system.

2 Alternative IR satellite system (USAF).

**air staging** Gas-turbine combustion chamber having variable geometry to redistribute air under different engine operating conditions.

**air staging unit** Military unit stationed at airfield to handle all assigned air traffic calling at that airfield.

**airstairs** Passenger and/or crew stairway forming integral part of aircraft and, after use, folded or hinged up and stowed on board.

**Airstar** Airborne surveillance and target-acquisition radar.

**airstart, air start** Action of starting or re-starting aircraft main propulsion or lift engines in flight.

**air-starter unit** Apron vehicle or trailer providing air at 2.8–3.5 bar.

**airstream, air stream** 1 Moving air mass, esp. that penetrates and divides more stationary mass.

2 Loosely, any localised airflow.

**airstrip** Prepared operating platform for aeroplanes, usually from STOL to CTOL, distinguished from airfield by either: hasty construction under battlefield conditions; lack of permanent paved surfaces; lack of permanent accommodation for personnel or hardware; or lack of facilities, other than temporary fuel supply or ATC.

**air superiority** Degree of airspace dominance sufficient to prevent prohibitive enemy interference with one's own operations.

**air-superiority fighter** Combat aircraft designed specif. to clear airspace of hostile aircraft.

**air supremacy** Degree of air superiority sufficient to prevent effective enemy interference with one's own operations.

**air surface zone** Restricted area established to protect friendly surface vessels and aircraft and permit ASW operations unhindered by presence of friendly submarines.

**air surveillance** Systematic observation of airspace by visual electronic or other means to plot and identify all traffic.

**air survey** See *aerial survey*.

**AIRT** Air-intercept radar training.

**air taxi** Aircraft below 12,500 lb TOGW, licensed to ply for hire for casual passenger traffic.

**air taxiing** Positioning helicopter or other VTOL or STOVL aircraft by short translational flight at very low altitude. Standardised \*\* manoeuvres form part of VTOL flying instruction.

**air terminal** Facility in city centre at which passengers can check in for flights and board coach to airport.

**air time** Elapsed time from start of takeoff run to end of landing run.

**Airto** Association of Independent Research & Technology Organisations (UK).

**air-to-air** From one aerial position to another, esp. between one airborne aircraft and another.

**air-to-ground** Between aerial position, esp. airborne aircraft, and land surface.

**air-to-surface** Between aerial position, esp. airborne aircraft, and any part of Earth's surface or target thereon.

**air-to-underwater** Between aerial position, esp. airborne aircraft, and location below water surface, esp. flight profile of ASW weapons and operating regime of ASW detection systems.

**AIRTP** Air Troop.

**Air Track Landing** Early form of ILS developed by NBS and Washington Institute of Technology.

**air traffic** Aircraft operating in air or on airport surface, exclusive of loading ramps and parking areas (FAA); aircraft in operation anywhere in airspace and on manoeuvring area of aerodrome (BSI). To air carriers 'traffic' has entirely different meaning, but this is never qualified by 'air'.

**air traffic clearance** See *clearance* (1).

**air traffic control radar beacon system** Beacons along airways which trigger responses from airborne transponders providing identity, location and [usually] FL of equipped traffic. See *secondary radar*.

**air traffic control centre** Unit combining functions of area control centre and flight information centre.

**air traffic control service** Service provided for promoting safe, orderly and expeditious flow of air traffic, including airport, approach and en route ATC service.

**air traffic engineer** Maintains nav aids and airport communications systems.

**air traffic service assistant** Provides admin. & support, such as flight-plan acceptance and preflight briefing for pilots.

**air train** Aerial tug towing two or more gliders in line-ahead.

**air-transportable hangar** Modular lightweight hangar erected over temporary site, such as crashed repairable aircraft.

**air-transportable units** Military units, other than

airborne, whose equipment is all adapted for air movement.

**air transportation oversight system** Method of checking air-carrier safety procedures and programmes (FAA).

**air transport operation** BS.185 1951: 'The carriage of passengers or goods for hire or reward'; this eliminates all military air transport, business flying and several other classes of \*\*\*.

**air trooping** Non-tactical air movement of personnel.

**air-tube oil cooler** Oil cooler in which air passes through tubes surrounded by oil.

**air turnback** 1 Point at which mission already airborne is abandoned, for any reason.

2 Specif., point at which non-Etops aircraft has to abandon planned flight.

**air umbrella** Massive friendly air support over surface operation or other air activity at lower level.

**air vane** 1 Small fin carried on pivoted arm to respond to local changes in incident airflow; arm usually drives potentiometer pick-off sending signal of angle of attack or yaw.

2 Powered surface to control trajectory of ballistic vehicle in atmosphere (see *jet vane*).

**air vector** In DR navigation, Hdg. and TAS (air plot).

**air volume** In aerostat, volume of air displaced by solid body having same size and shape as envelope or outer cover. Volume used in airship aerodynamics.

**air ward system** Aircraft used for surveillance, fisheries or customs patrol, police duties, reconnaissance and similar tasks.

**airway** BS.185, 1951: 'An air route provided with ground organisation'. Most civil air routes are flown along ICAO IFR airways, typically 10 nm wide with centreline defined by point-source radio nav aids spaced sufficiently close for inherent accuracy to be less than half width of airway at midpoint. Each airway has form of corridor, of rectangular cross-section well above Earth. Airspace within is controlled, and traffic separated by being assigned different levels and from ATC having position reports and accurate forecasts of future position (typically, by ETA at next reporting point). In general, made up of a series of route segments each linking two waypoints.

**airway beacon** Light beacon located on or near airway (see *NDB*).

**airways-equipped** Equipped with functioning statutory avionics and instruments (eg, two pressure altimeters) to satisfy ICAO requirements for flight in controlled airspace.

**airways flying** Constrained to dogleg along centrelines of airways instead of flying direct to destination.

**airway traffic control** Civil air traffic control formerly exercised on 'airways' basis; today no separate system for designated airways.

**Air Wheel** Wheel/tyre combination introduced by Goodyear after World War 1, characterised by small wheel and fat tyre to absorb landing shocks.

**air work** In flying instruction, student air time as distinct from classroom time.

**airwork** Today usually one word, to explore aircraft's handling or perform tests or demonstrations in flight.

**airworthiness** Fitness for flight operations, in all possible environments and foreseeable circumstances for which aircraft or device has been designed.

**airworthiness circular** A message broadcast by the certifying authority giving new information, usually on a specific type of aircraft.

**Airworthiness Directive, AD** Message from national certifying authority requiring [often immediate] mandatory inspection and/or modification.

**Airworthiness Notice, ND** Not mandatory, but strong recommendation or advice.

**airworthy** Complying with all regulations and requirements of national certifying authority.

**airybuzzer** Aeroplane (colloq.).

**AIS** 1 Aeronautical Information Service [AG adds automation group] (ICAO, and UK unit at LHR [Heathrow] which published AICs).

2 Advanced [or airborne] instrumentation subsystem (ACMR).

3 Avionics intermediate shop.

4 Academic instructor school.

5 Aircraft indicated (air) speed (IAS is preferred).

6 Automated information system.

7 Airport information service.

8 Automatic identification system.

**A12G** Department of Air Intelligence, Technical [MoD, RAF] (UK).

**AI'S** Advanced IR imaging seeker.

**AISA** 1 Ada instruction set architecture.

2 Aerospace Industry Subcontractors Association [office, Montreal] (Canada).

**AISAP** AIS(1) Automation panel.

**AISD** Airlift Information Systems Division (Scott AFB).

**AISFS** Avionics integration support facilities.

**AISIS** Airborne integrated Sigint system.

**aisle** Longitudinal walkway between seats of passenger aircraft.

**aisle height** Headroom along aisle.

**aisle stand** Pilot's instrument panel mounted on pillar in all-glazed nose [as in B-29].

**AIT** 1 Alliance Internationale de Tourisme (Int.).

2 Assembly, integration and test.

3 Airborne integrated terminal [G adds group].

4 Atmospheric intercept [or] testbed [or technology].

5 Automated information transfer.

6 Avanced intelligence tape.

**AITAL, Aital** Asociación Internacional de Transportes Aéreos Latinoamericanos (Int.).

**AITFA** Association des Ingénieurs et Techniciens Français des Aéroglisseurs (hovercraft) (F).

**AITS** Advanced information technology services [JPO adds Joint Program Office] (DoD).

**AIU** 1 Analog, or aircraft, or armament, or avionics, interface unit.

2 Astro-inertial unit.

3 Airborne-installation unit.

4 Auto-ignition unit.

5 Audio integration unit.

**AIV** 1 Accumulator isolation [or isolator] valve.

2 Aviation-impact variables (program).

**AIVSC** Aviation Industry Vocational Standards Council (UK).

**AIWS** Advanced interdiction weapon system, a stand-off ASM.

**AIX** Advanced interactive executive.

**AIZ** Aerodrome/airfield information zone.

**AJ** Anti-jam.

**A<sub>j</sub>** Nozzle throat area [occasionally AJ, often confusingly called jetpipe area].

**AJA** Aft jamming antenna.

**Ajacs, AJACS** Advanced Joint Air Combat System [stealthy transport] (USAF).

**Ajax unit** Device for providing artificial feel in pitching plane as function of stick displacement, altitude and airspeed.

**AJB** Audio junction box.

**AJCN** Adaptive, later advanced, joint C4ISR node.

**AJE** Augmented-jet ejector; VL adds vertical lift.

**AJJ** Adaptive-jungle jammer, sophisticated ECM self-adapting to variable enemy transmissions.

**AJM** Anti-jam modem.

**AJPAE, Ajpae** Association des Journalistes Professionnels de l'Aéronautique et de l'Espace [F-75116 Paris] (F).

**AJPO** Ada Joint Program Office.

**AJPS** Afeps journal processing system.

**AJS** Attack, Jakt, Spaning, attack, fighter, recon (Sweden).

**AJSP** Association des Journalistes Scientifiques de la Presse d'Information [F-75008 Paris] (F).

**AJT** Advanced jet trainer.

**AK** Nitrogen tetroxide; suffix number gives percentage (Russia).

**A/K** Aluminium/Kevlar (armour).

**AKU** Avionic[s] keyboard unit.

**AL** 1 Approach and landing chart (FAA).

2 Spec prefixes for methanol or water/methanol (AL-24 piston engines, AL-28 gas turbines).

**Al** Aluminium [US aluminium].

**AL** 1 Approach/land, operative mode for airborne system.

2 Airline.

3 Autoland.

**ALA** 1 Alighting area (ICAO, marine aircraft).

2 Asociación de Lineas Aéreas (Spain).

3 Approach and landing accident[s].

**ALAA** Aviation Légère de l'Armée de l'Air (F).

**ALADC** Australian Light Aircraft Development Council.

**Aladdin** Algorithm adaptive and diminished dimension.

**ALAE** Association of Licensed Aircraft Engineers [1981-, office Bagshot, Surrey GU19 5AQ] (UK).

**ALAFS** Advanced lightweight aircraft fuselage structure [or system].

**ALAM** Advanced land-attack missile.

**ALAR** Aircraft [or approach and] landing accident reduction.

**Alarm** 1 Air-launched anti-radiation missile.

2 Automatic light-aircraft readiness monitor.

**Alarms** Airborne laser-radar mine sensor.

**ALARR** Air-launched, air-recoverable rocket.

**ALAT** Aviation Légère de l'Armée de Terre (F).

**Alats** Advanced laser targeting system.

**ALAVIS** Advanced low-altitude IR reconnaissance system.

**ALB** 1 Air/land battle.

2 Aircraft lifting bag, for recovery after belly landing, etc.

**albedo** 1 Percentage of EM radiation falling on unpolished surface that is reflected from it, esp. percentage

of solar radiation (particularly in visible, or other specified, range) reflected from Moon or Earth.

2 Radiation thus reflected.

**ALBM** 1 Air-launched ballistic missile.

2 Air/land battle management (Lockheed).

**ALBT** Air-launched ballistic target.

**ALC** 1 Air Logistics Command [now Air Mobility Command] (USAF).

2 Air Logistics Center.

3 Automatic level, or levelling, control (radio).

4 Air logic control, for automated systems.

5 Ambient light[ing] control.

**ALCA** Advanced light combat aircraft.

**ALCAC** Air Lines Communications Administrative Council (US).

**Alcam** Air-launched conventional attack missile.

**ALCC** 1 Airborne launch control centre.

2 Airlift control centre.

**ALCE** Airlift control element (MAC).

**Alclad** Trade name (Alcoa) of high-strength light alloys (usually sheet) coated with corrosion-resistant high-purity aluminium. Originally developed for marine aircraft.

**ALCM** Air-launched cruise missile.

**alcohol** Large family of hydrocarbons containing hydroxyl groups, esp. methyl alcohol CH<sub>3</sub>OH (toxic) and ethyl alcohol (ethanol, C<sub>2</sub>H<sub>5</sub>OH, potable), both used as fuels, anti-detonants and rocket propellants.

**Alcoseal** Range of film-forming foam compounds for extinguishing fires involving water-miscible solvents; \* VSA has vapour-suppressing additive.

**ALCS** 1 Active lift control system, to reduce peak wing stresses in gusts.

2 Airborne launch-control system.

**Alcusing** Light alloy (aluminium, copper, silicon).

**ALD** 1 Arbitrary landing distance, standard comparison distance along runway, from touchdown to stop, using specified landing technique; used in determining field-length requirements.

2 Available landing distance.

3 JETDS code: piloted aircraft, countermeasures, combination of purposes.

4 Air-launched demonstrator [missile].

**ALDCS** Active-lift distribution control system.

**Alder** Advanced laser devices and effects research.

**Aldis** 1 Patented hand signalling lamp with optical sight, trigger switch (kept on throughout use) and second trigger to tilt mirror to deflect light beam intermittently down to target.

2 Airport land-dues information system.

**ALDP** Airborne laser designator pod.

**ALDS** Airborne laser defensive system.

**ALE** 1 Aviazione Leggera Esercito (Italian army aviation).

2 Automatic [radio] link establishment.

**ALEA** 1 Airborne Law Enforcement Association [office, Tulsa, OK74101] (US).

2 Air Line Employees Association, International [office Chicago] (Int).

**Aleastrasyl** Refractory material for re-entry heat shields, a resin-impregnated silica fabric.

**ALEK** See *anchor-line extension kit*.

**Alerfa** Alert phase of SAR operation.

**Alert** 1 Attack [and] launch early response [or reporting] to theater (USAF).

2 Air-launched extended-range transporter.

**alert** 1 Specified condition of readiness for action, esp. of military unit.

2 Warning of enemy air attack.

3 ATC action taken after 30 min "uncertainty" period (5 min in case of aircraft previously cleared to land) when contact cannot be established.

4 Response by manufacturer and/or certifying authority to unacceptable incidence of service failures by hardware item.

**alert area** Airspace which may contain high volume of pilot-training activities or unusual type of aerial activity (FAA).

**Alerte** Anti-aircraft laser enemy ranging and targeting equipment.

**Alerter** Hand-held device which vibrates/flashes to warn deaf people [e.g., staff, pax] of fire.

**alerting centre** Centre designated by appropriate authority to perform functions of RCC where none exists (BS.185).

**alerting service** Service provided to notify and assist all appropriate organisations capable of aiding aircraft in need of search or rescue.

**alert-level standard** Agreed reliability performance below which special and urgent action must be taken (eg 0.3 IFSD per thousand engine hours).

**alerting unit** Encoding-altimeter device which, in potentially dangerous flight conditions, triggers a warning.

**alert phase** Aircraft seriously overdue.

**Alerts** Airborne-laser EW receiver training system.

**ALES** 1 Autonomous Link-Eleven system.

2 Electro-exploded aluminium, an exceedingly fine powder (IR flares).

**Alex** 1 Automated launching of expendables (EW).

2 Electro-exploded aluminium, an extremely fine powder (IR flares).

**ALF** 1 Auto/lock-follow (target tracker).

2 Auxiliary landing field.

3 Aloft.

4 Airborne, or adaptive, or advanced, low frequency; EAS adds electro-acoustic sonar, S sonar.

**Alfa, ALFA** Aéroports de langue Française associés.

**Alfed** Aluminium Federation [office, Birmingham B15 1TN] (UK).

**Alfens** Automatic, or advanced, low-flying entry, or enquiry, notification system (UK NATS/MoD).

**Alfensops** Automated low-flying and flight-planning enquiry and notification system operations centre (UK).

**ALFH** Advanced lightweight flying helmet.

**Alflex** Automatic-landing flight experiment (J).

**ALFS** Airborne, or air-dropped, low-frequency sonar.

**ALG** 1 Autonomous landing guidance.

2 Advanced landing ground.

3 Along.

4 Also Ali, altimeter.

**AlGaAs** Aluminium/gallium arsenide.

**algae** Primitive plants (thallophytes) which elaborate food by photosynthesis, investigated as human food for extended space travel.

**algal corrosion** Degradation caused by algae and other

microorganisms, especially those dwelling at fuel/air interface.

**Algol** Algorithmic language.

**algorithm** 1 Established method of computation, numeric or algebraic.

2 Computation with steps in preassigned order, usually involving iteration, for solving particular class of problem.

**ALGP** Aviation Loan Guarantee Program (US, post 11-9).

**ALH** 1 Advanced light helicopter.

2 Active laser homing.

**ALI** 1 Advanced land imager.

2 Automatic line integration.

3 Aegis Leap intercept.

4 Aerospace Lighting Institute (US).

5 Air/land integration.

**ALIA** International Association of Lawyers Jurists & Experts in Air Law [office, Rome].

**aliasing** Wide variety of errors possible when breaking down image into pixels, such as irregular edges or tendency of small polygons to blink on/off; hence anti-\*

**ALIC** 1 Aerodrome/airfield/airport locator indicator code.

2 Aircraft launcher interface computer.

**Alicat** Advanced long-wave IR circuit and array technology.

**Alice** 1 Air-launched integrated countermeasure[s], expendable.

2 Alcatel integrated control environment.

**alidade** Optical sight [microscope or telescope] used to read linear scale on mensuration system.

**alien interference** On weather radar, by other radars in scanning area.

**alight** To land, esp. of marine aircraft on water.

**alighting channel** Part of water aerodrome navigable and cleared for safe alighting or taking off.

**alighting gear** See *landing gear*.

**align** 1 In INS, to rotate stable platform before start of journey until precisely aligned with local horizontal and desired azimuth.

2 In radio, radar or other equipment having resonant or tuned circuits, to adjust each circuit with signal generator to obtain optimum output at operating frequencies.

3 Normal meaning of word is relevant to erection of airframe jiggings, lasers often being used when structures are large.

**aligned mat** Intermediate semi-prepared composite structure in which strong and/or stiff reinforcing fibres (rarely whiskers) are arranged substantially parallel in two-dimensional mat.

**alignment time** In INS or guidance system, minimum time required to spool-up gyros and align platform, preparatory to allowing significant movement of vehicle.

**ALIMS** Automatic laser inspection and measurement system.

**ALIS, Alis** 1 Airline interactive services.

2 Airport luggage identification system.

3 Autonomic logistics information system.

**Alithalite** Range of medium-density general-purpose Al-Li alloys (Alcoa).

**ALJEAL, Aljeal** Association of Lawyers, Jurists and Experts in Air Law (Int.).

**ALJS** Airborne-laser jamming system.

**alkali metal** Group of metals in First Group of Periodic Table characterised by single electron in outermost shell which they readily lose to form stable cation (thus, strongly reactive). Lithium, sodium, potassium and caesium (cesium) are important in electrical storage batteries and as working fluids in closed-circuit space power generation.

**alkylation** Addition of alkyl group (generally, radical derived from the aliphatic hydrocarbons); important in manufacture of aliphatic (petrols) having high anti-knock (octane) rating.

**ALL** Airborne laser laboratory.

**ALLA, Alla** Allied Long Lines Agency (NATO).

**all-black** Made entirely of [not necessarily black] composite material

**all-burnt** Rocket propulsion system which has consumed all propellant (where there are two, which has consumed all of either); specif., time and flight parameters when this occurs.

**all-call** Transponder Mode-S broadcast interrogation, thus \* address, \* reply.

**ALLD** Airborne laser locator designator.

**alleviation** Reduction of structural loads (eg wing bending moment) in vertical gusts by active controls.

**alleviation factor** Numerical multiplier of calculated vertical acceleration or structural load on encountering gust, taking into account fact gust is not sharp-edged and aircraft is already rising before peak intensity is reached. Later refined by making it a function of the ratio of mean chord to gradient distance, aspect ratio and mass parameter.

**alleviation lag** Time difference between actual and ideal response of a GAC active control system.

**alleviation technique** Method of reducing heat flux on atmospheric re-entry by controlling plasma sheath surrounding vehicle.

**all-flying tail** Term formerly used to describe variable-incidence tailplane used as primary control surface in pitch, separate elevators serving merely as additional part of surface or as a means of increasing camber.

**Al-Li** Aluminium-lithium alloys.

**Alliance ground surveillance** Programme for reconnaissance aircraft (NATO 1980, approved 1993, operational possibly 2010).

**allithium** Generic name for aluminium-lithium alloys; also (capital A) trade name.

**ALLM** Aft lower-lobe module (AEW radar).

**all-moving tail** All-flying tail.

**'all out'** Signal signifying glider or other towrope taut, towed vehicle ready for takeoff.

**allowable deficiency** Missing, damaged, inoperative or imperfectly functioning item which does not invalidate C of A and does not delay scheduled departure (eg, rudder bias system, fuel flowmeter and almost any item not part of structure or aircraft system). In US called despatch deviation or MEI (1).

**allowance** 1 Intentional difference between dimensions (with tolerances permitted on each) of mechanically mating parts, to give desired fit.

2 Calculated quantity of fuel beyond minimum needed for flight carried to comply with established doctrine for diversion, holding and other delays or departures from ideal flight plan.

3 In sheet-metal construction, extra material needed to form bend of given inside radius and angle.

**alloy** Mixture of two or more metals, or metal-like elements, often as solid solution but generally with complex structure. Small traces of one element can exert large good or bad influence. Most aircraft made principally of alloys of aluminium (about 95%, rest being copper, magnesium, manganese, tin and other metals) or titanium (commercially pure or alloyed with aluminium, vanadium, tin or other elements), with steels (alloys of iron) at concentrated loads.

**all-shot** Aerial target hit by every round from one gunnery pass.

**all-speed aileron** Lateral-control surface operable throughout flight envelope, as distinct from second aileron group on same aircraft operable at low speeds only.

**'all systems go'** Colloq., absence of mechanical malfunction; not authorised R/T procedure.

**ALLTV** All light-levels TV.

**all-up round** Munition, especially guided missile, complete and ready to fire.

**all-up weight** See *AUW*.

**all-ways fuze** Fuze triggered by acceleration in any direction exceeding specified level.

**all-weather** Former category of interceptor which could not, in fact, fly in \*\*. Strictly true only for aircraft with triplex or quad AFCS and blind landing system plus ground guidance.

**all-wing aircraft** Aerodyne consisting of nothing but wing. Some aeroplanes of 1944–49 were devoid of fuselage, tail or other appendages, and approached this closely.

**ALM** 1 Air loadmaster.

2 Air-launched munition[s]; IPT adds integrated project team.

3 Aircraft line maintenance.

4 Air and littoral manoeuvre (DSTZ).

**ALMD** Airborne laser mine-detection; S adds system.

**ALMS** 1 Aircraft landing measurement system, typically using IR beams and geophones to produce hard-copy print-out of final approach and touch-down.

2 Air lift management system (software).

**ALMV** Air-launched miniature vehicle [A-sat].

**Alnico** Permanent-magnet materials (iron alloyed with Al, Ni, Co – hence name – and often Cu) showing good properties and esp. high coercive force.

**Alnot** Alert notice.

**ALNZ** The Air League of New Zealand Inc. [office, Wellington].

**ALO** Air Liaison Officer.

**ALOC** Air line of communication, airlift for spare parts (USA).

**Alochrome** Surface treatment for light-alloy structure to ensure good key for paint: chemical cleaning, light etching and final passivating.

**Alodine** Proprietary treatment similar to Alochrome.

**Aloft** Airborne light-optical-fibre technology.

**Alofts** Active low-frequency towed sonar [H adds helo].

**AION, ALON** Aluminium oxynitride.

**along and across** Configuration of track position display unit in which separate windows show continuous reading of distance to go (along) and distance off track (across), usually driven by Doppler.

**alongside** Of a carrier, in port.

**ALOS** Advanced land-observing, or observation, satellite.

**ALOTS** Airborne lightweight optical tracking system [precision photograph of ballistic vehicles].

**ALP** 1 Aircraft landing permit.

2 Aegis Leap program.

**AIP** Aluminium powder.

**ALPA** 1 Airline Pilots Association [Washington, DC20036] (US, Canada).

2 Air Line Pilots Association International [Herndon, VA20172–1169] (Int.).

**Alpas** Air Line Pilots' Association of Singapore.

**Alpax** Aluminium alloy containing c13 per cent Si, for intricate castings (1932).

**alpha** Angle of attack of main wing ( $\alpha$ , AOA).

**Alpha eta rho** International aviation fraternity (office at St Louis University, Cahokia IL).

**alpha exit** The first available runway turnoff.

**alpha floor** Mainly to protect against windshear, system which automatically applies full power if AOA exceeds preset value, and earlier if rate of change of TAS/GS passes preset thresholds.

**alpha hinge** 1 Crossed-spring pivot (eg in tunnel balance).

2 Confusingly, drag hinge.

**alpha max** The maximum attainable AOA with stick fully back.

**alphanumeric** Character representing capital letter or numeral portrayed in precisely repeatable stylised form either by electronic output (computer peripheral or display) or printed in same form for high-rate reading by OCR system.

**alpha particle** Nucleus of He atom: 2 protons, 2 neutrons, positive charge.

**Alpha prot** Short for protection, the maximum attainable stick-free AOA. Auto trim stops there, because there is no reason to maintain this condition.

**alpha speed,  $\alpha$ -SPD** Safe stall-margin speed (auto-throttle mode setting).

**alpha vane** Transducer measuring AOA.

**Alply** Trade name (Alcoa) of sandwich comprising polystyrene foam between two sheets of aluminium.

**ALQA** Automatic link quality analysis.

**ALQDS** All quadrants.

**ALQR** Air-launch quick reach.

**ALR** 1 Alerting message [S adds Service].

2 Aircraft (or airborne) liferaft.

3 JETDS code: piloted, countermeasure, passive.

4 Arbeitsgruppe für Luft und Raumfahrt (Switzerland).

**ALRAAM** Advanced long-range air-to-air missile.

**Alrad** Airborne laser ranger and designator.

**ALRI** Airborne long-range radar input.

**Alround** Translated= association of aerospace SMEs (G).

**ALS** 1 Approach light system (FAR Pt 1).

2 Airfield, or aerodrome, lighting system (CAA).

3 Alert-level standard.

4 Automatic takeoff and landing system (RPV).

5 Advanced launch system, HLLV for SDI (US).

6 Air [or airborne] launch system.

7 All-weather landing system, or (Matcals) subsystem.

8 Augmented, or acquisition, logistics support.

9 Application layer structure.

10 Advanced life support.

**ALSC** Advanced logistic systems center (ALFC).

**ALSCC** Apollo lunar-surface close-up camera.

**ALSCU** Auxiliary level sense control unit [fuel transfer].

**ALSEP** Apollo lunar-surface experiment[s] package.

**ALSF** Approach lights, sequenced flashing.

**ALSIP** Clear.

**ALSL** Alternative landing ship, logistic (UK RAF).

**AL/SL** Weapon capable of being air-launched or surface-launched (ie from surface vessel) (USN).

**ALSS** 1 Air-launched saturation system [missile].

2 Advanced logistic support site[s].

**ALSTG** Altimeter setting (ICAO).

**alt, ALT** 1 Altitude [especially barometric], or altimeter.

2 Alternate [i.e., alternative] airfield or destination].

3 Automatic altitude hold.

4 Attack light torpedo.

5 Approach and landing tests (Shuttle).

6 Automatic, or airborne, link terminal.

7 Airborne laser tracker.

**ALTA** 1 Association of Local Transport Airlines [office, Washington DC] (US).

2 Asociación Latinoamericana de Transportadores Aéreos [C adds cargo].

3 Airborne [or advanced] lightweight tactical antenna.

**Altair** ARPA long-range tracking and instrumentation radar.

**ALTBMD** Active layered theatre ballistic-missile defence.

**alternate** 1 Incorrectly, has come to mean “alternative” in flight operations; alternative destination, designated in flight plan as chosen if landing not possible at desired destination.

2 As applied to landing gear, flaps, etc, means using emergency power such as electrically driven pump(s).

**alternate hub airport** Secondary civil airport at large traffic centre.

**alternating light** Intermittent light of two or more alternate [correct usage] colours.

**Alternative simplified credit** Laws enabling companies to claim benefit [currently 12 per cent] on qualified research spending (US).

**alternator** A.c. generator.

**ALTF** Automatic launch test facility, carries out confidence check on XPDR as aircraft taxis to runway.

**ALTG** Air and Land, or Air/Land, Technology Group (UK MoD).

**Alt Hold** Altitude-hold mode.

**altigraph** Recording altimeter; generally aneroid barograph, and thus subject to inaccuracy in pressure/height relationship assumed in calibration.

**altimeter** Instrument for measuring and indicating height. Pressure \* is aneroid barometer or atmospheric pressure gauge calibrated to give reading in height. Sensitive \* has stack of aneroid capsules, refined drive mechanism to multiply capsule movements with minimal friction or free play, and setting knob to adjust to different SL or airfield pressures (or to read zero at airfield height). In servo-assisted \* mechanism is replaced with more accurate electrical one (see *engine* \*, *radio* \*).

**altimeter errors** Apart from servo-assisted altimeter, all pressure altimeters suffer significant lag, so rapid reversal

of climb and descent will give a reading up to 200–300 feet in arrears; called lag or hysteresis. There are errors in drive friction and lost motion. Static pressure sensed is subject to PE(2) and compressibility errors, and to transient excursions during manoeuvres. Most significant, parameter measured depends on atmospheric pressure variation, temperature variation and variation in lapse rate between departure airfield and aircraft height (see *altimeter setting*).

**altimeter fatigue** Supposed tendency of aneroid system to become ‘set’ in distorted position in long flight at high altitude; this error, not confirmed by most authorities, is called fatigue or, confusingly, hysteresis.

**altimeter lag** See *altimeter errors*.

**altimeter setting** For safe vertical separation all altimeters in controlled airspace must be set to uniform datum. Standard is 1013.25 mb (see *ISA*) throughout most en route flying. Instrument then registers vertical separation between aircraft and pressure surface 1013.25 mb, usually below local ground level and may be below local SL or MSL. Second common setting is QNH, at which reading is difference between aircraft height and MSL. Third common setting is QFE, at which reading is difference between aircraft height and appropriate airfield height AMSL; thus at that airfield instrument reads zero. Two other settings, QFF and QNL, seldom necessary. See next.

**altimeter setting region** Geographical area for which the lowest value of QNH is broadcast hourly by control centres.

**altimeter switch** Triggered by reaching preset altitude, one application to trigger explosive charge.

**altimetric valve** Device sensitive to increasing cabin altitude (ie, falling pressure) and set to release drop-out oxygen at given level.

**altitude** 1 Vertical distance of level, point or object considered as point, measured from MSL (normally associated with QNH) (DTI, UK). In this dictionary meanings are given for 17 other measures of \*.

2 Arc of vertical circle, or corresponding angle at centre of Earth, intercepted between heavenly body and point below it where circle cuts celestial horizon.

3 In spaceflight, distance from spacecraft to nearest point on surface of neighbouring heavenly body (in contrast to “distance”, measured from body’s centre).

4 In aircraft performance measurement and calculation, pressure \* shown by altimeter set to 1013.25 mb.

**altitude acclimatisation** Gradual physiological adaptation to reduced atmospheric pressure.

**altitude chamber** Airtight volume evacuated and temperature-controlled to simulate any atmospheric level.

**altitude clearance** Clearance for VFR flight above smoke, cloud or other IFR layer.

**altitude datum** Local horizontal level from which heights or altitudes are measured (see *true altitude, pressure altitude, height*).

**altitude delay** 1 Deliberate time-lag between emission of radar pulse and start of indicator trace, to eliminate altitude hole or slot.

2 See next entry.

**altitude-delay parameter** Time delay which elapses between pilot nose-up command and establishment of positive climb, esp. during landing approach. ADP is

serious in large aircraft with pitch control by tail surfaces, not canard, and without DLC.

**altitude hole** Blank area at centre of radial (eg PPI) display.

**altitude line** On environmental plot, line joining points of minimum range at which WX main beam intersects ground.

**altitude power factor** In piston engine ratio of power developed at specified altitude to power at same settings at ISA SL.

**altitude parallax** In altitude (2), angle between LOS from body to observer (assumed on Earth’s surface) and LOS from body to centre of Earth.

**altitude recorder** Altigraph.

**altitude reservation, ALTRV** Airspace utilisation under prescribed conditions, normally employed for mass movement or other special-user requirements which cannot otherwise be accomplished (FAA).

**altitude ring** Continuous return across WX display at range equivalent to aircraft’s altitude.

**altitude sensing unit** Capsule-based unit in engine fuel system sensing aircraft speed/altitude.

**altitude sickness** Malaise, nausea, depression, vomiting and ultimate collapse, caused by exposure to atmospheric pressure significantly lower than that to which individual is acclimatised.

**altitude signal** In airborne radar operating in forward search mode, unwanted return signal reflected by Earth directly below.

**altitude slot** Blank line at origin of SLAR display.

**altitude switch** Barometric instrument which makes or breaks electric circuit at preset pressure altitude; contacting altimeter.

**altitude testing** Testing an item [e.g., a gas-turbine engine] in a facility capable of reproducing inlet ram total temperature and pressure appropriate to the test altitude and Mach numbers, and also the appropriate exit static pressure.

**altitude tunnel** Wind tunnel whose working section can simulate altitude conditions of pressure, temperature and humidity. In view of advantages of high pressure and driest possible air, conditions chosen usually compromise.

**altitude valve** In some carburettors, progressively closed by aneroid to reduce fuel flow at high altitudes.

**ALTN, Altin** 1 Alternate airfield.

2 Alternating (two-colour light).

**altocumulus, Ac** Medium cloud, about 12,000 ft in groups, lines or waves of white globules.

**aliostratus, As** Stratiform veil 6,000–20,000 ft with ice-crystal content of variable thickness (giving mottled appearance) but usually allowing Sun/Moon to be seen.

**ALTP** Air Line Transport Pilot licence; confusingly, now often called ATPL.

**ALTR** Approach/landing thrust reverser.

**ALTRV** Altitude reservation.

**ALTS** Altimeter setting.

**ALTV** Approach and landing test vehicle.

**ALU** Arithmetic and logic unit.

**Alumel** Ni-Al alloy or coating.

**Alumigrip** Trade name of paint used on airframe exterior.

**Alumilite** Trade name for sulphuric-acid anodizing process for aluminium and alloys.

**alumina** Aluminium oxide  $Al_2O_3$ , occurring naturally but also manufactured to close tolerance in various densities. Hard, refractory, white or transparent ceramic.

**aluminium (N America, aluminum), Al** Metal element, density about 2.7, MPt 661°C, BPt 2,467°C, most important structural material in aerospace, commercially pure and, esp., alloyed with other metals (see *duralumin*).

**aluminium alloys** Most important of so-called light alloys; 3,500+ used in aerospace. most recent families being 2000 Al-Cu, 5000 Al-Mg, 6000 Al-Mg-Si, 7000 Al-Zn and 8000 Al-Li. The strongest are not corrosion-resistant, and need coating with [typically aluminium-epoxy] paint.

**aluminium-cell arrester** Lightning arrester/conductor in which insulating film of aluminium plates breaks down and conducts at high applied voltage.

**aluminium dip brazing** Method of metallising printed-circuit boards, by closely controlled dipping in molten aluminium.

**aluminum** Aluminium (N America).

**Alvin** Air-launched vehicle investigation (MALV).

**ALVRJ** Air-launched low-volume ramjet.

**ALW** Air/land warfare.

**ALWS** Airborne laser warning system.

**ALWT** Airborne (or advanced) light weight torpedo.

**AM** 1 Air Ministry (defunct in UK).

2 Aircraft mover.

3 Airspace management.

4 Or a.m., amplitude modulation.

5 Air Marshal.

6 Confusingly, ambient.

7 Asynchronous machine.

8 Airlock module.

**am** 1 Ambient.

2 Attometre,  $10^{-18}$ m.

**a.m.** Ante-meridian, before noon.

**AM-2** Standard military prefab airstrip or landing mat, of 0.16 in aluminium (US).

**AM<sup>3</sup>** Affordable multi-missile manufacturing [program] (US).

**AMA** 1 Air materiel area (USAF).

2 Aerospace Medical Association [office, Washington, DC] (US).

3 Advanced mobility aircraft.

4 Adaptive multifunction antenna.

5 Area minimum altitude.

6 American Management Association.

7 Academy of Model Aeronautics [office Washington, DC] (US).

**AMAC** Airborne multi-application computer.

**AMACH** Mach number (data-processing).

**AMACUS** Automatic microfilm aperture card updating system (Singer).

**AMAD** Airframe-mounted accessory [or auxiliary] drive.

**AMAGB** Airframe-mounted accessory gearbox.

**amagnetic** Having no magnetic properties.

**AMAL** Air Medical Acceleration Laboratory (USN).

**AMARC** Aerospace Maintenance and Regeneration Center [the Boneyard] (US DoD).

**AMARV** Advanced manoeuvring re-entry vehicle.

**AMAS** Automated manoeuvring attack system.

**Amascos** Airborne maritime situation control system.

**Amass** Airport movement-area safety system (FAA).

**Amatol** High explosive (AMmonium nitrate And TOLuene).

**AMB** 1 Air Mobile Brigade.

2 Airwarp Modernization Board (1957–58).

3 Agile multi-beam.

4 Active magnetic bearing.

**Ambac** R-Nav system (see *Mona*).

**AMBE** Advanced multi-band excitation.

**Amber** 1 Colour identifying global groups of airways aligned predominantly N–S.

2 Colour = caution, also called yellow.

3 Day/night training equipment, often called two-stage amber, in which pupil pilot is denied visual cues outside cockpit by wearing blue-lens glasses while cockpit transparency is amber; two stages together cut off 99% of light, while allowing pupil to see blue instruments and instructor to see amber outside world (obsolete).

**ambient** Characteristic of environment (eg that around aircraft but unaffected by its presence).

**ambit** Radar search by missile for target.

**AMBL** Air Maneuver Battle Lab (USAF).

**AMC** 1 Aerodynamic mean chord.

2 Acceptable means of compliance.

3 Avionics Maintenance Conference [Annapolis, MD21401] (US and Int.).

4 Air Materiel Command (USAF).

5 Air Mobility Command (USAF, 1 June 92).

6 Automatic modulation control.

7 Air management computer.

8 Authorised maintenance centre.

9 Advanced mission computer.

10 Advanced microelectronics converter.

11 Air Mounting Centre.

12 Advanced mobility concept (USA).

13 Airspace management cell [Langen] (Eurocontrol).

14 ATC 1 microphone check.

**AMCA** Airborne mission control aircraft (USAF).

**AMCC** Air Movements Co-ordinating Centre (NATO).

**AMC-C<sup>2</sup>IPS** AMC (5) C<sup>2</sup> information-processing system.

**AMCD, AMC&D** Advanced mission computer[s] and displays [program] (USN).

**AMCM** Airborne mine countermeasures.

**AMCOM, Amcom** Aviation and Missile Command (USA); MAT adds multimode airframe technology.

**AMCP** Aeronautical mobile communications panel.

**AMCS** 1 Adaptive microprogrammed control systems (IBM).

2 Airborne missile control system (aircraft-mounted).

3 Airborne mine countermeasures system.

**AMCTS** Air maneuver collective training system.

**AMD** 1 Aerospace Medical Division (USAF, Brooks AFB).

2 Automatic map display.

3 (rare) Air mileage distance.

4 Angular-momentum desaturation.

5 Amend[ed].

6 Archway metal detector.

7 Aerospace, Maritime and Defence (industrial association, S. Africa).

**AMDA** Airlines Medical Directors Association [office, St Paul, MN].

**Amdar, AMDAR** Automated mission data airborne recording.

**AMDB** Airport-mapping database.

**AMDP** Air Member for Development and Production (UK, WW2)

**AMDS** 1 Automatic manoeuvre device system.

2 Anti-missile discarding sabot.

**AMDSS** Airborne mine-detection and survival system (USN).

**amdt** Amendment (FAA).

**AMDWS** Air and missile defense work station (USA, USAF).

**AME** 1 Authorised medical examiner.

2 Alternate [alternative is meant] mission equipment.

3 Air Mobility Element (USAF).

4 Angle-measuring equipment.

5 Amplitude-modulation equivalent, or equipment.

6 Aircraft, multi-engine [L adds land, S sea].

7 Aviation Maintenance Engineers Association [Fredericton, NB, Canada].

**AMEA** Aircraft Maintenance Engineers Association (US).

**AMEC** Advanced multifunction embedded computer.

**AMeDAS** Automated met data-acquisition system (J).

**AMEL** 1 Active-matrix electroluminescent [D adds display].

2 Aircraft maintenance engineer's licence.

**amended clearance** Clearance altered by ATC while flight en route, typically requesting change of altitude or hold, to avoid future conflict unforeseen when clearance filed.

**American National** Family of 60° screw (bolt) threads, basically divided into National Coarse (NC), National Fine (NF) and National Special (N), which have in part superseded SAE and ASME profiles.

**AMES** 1 Airborne mission-equipment subsystem.

2 Advanced multiple-environment simulator.

**Ames** Major NASA laboratory, full title Ames Research Center, Moffett Field, Calif., mainly associated with atmospheric flight (from 1939).

**AMET** 1 Advanced military engine(s) technology.

2 Accelerated mission endurance test.

**AMF** 1 Allied [Command Europe] Mobile Force [-A adds Air].

2 Armé Marin & Flygfilm (Sweden).

3 Airborne maritime and fixed [radio stations].

**AMFA** Aircraft Mechanics Fraternal Association [office, St Ann, MO] (US).

**AMFI** Aviation Maintenance Foundation International [office, Basin, WY] (US).

**AMF-JTRS** Airborne and maritime fixed-station joint tactical radio system (USAF/USN).

**AMFP** Adaptive matched-field processor, or processing.

**AMG** 1 Antenna mast group.

2 Aero mission gear.

**AMGCS** Advanced movements guidance control system (airport).

**AMHF** American Military Heritage Foundation.

**AMHMS** Advanced magnetic helmet-mounted system.

**AMHS** Aeronautical message handling system.

**AMI** 1 Airline modifiable information.

2 Avionics midlife improvement.

**A/MI** Airspeed/Mach indicator.

**AMICS** Adaptive multidimensional integrated control system.

**AMID** 1 Airborne mine[field] detection [ARS adds and reconnaissance system, S adds system].

2 Airport management and information display [S adds system].

**Amids, AMIDS** 1 Advanced missile-detection system.

2 Airport management information and display system.

**AMII** Air manoeuvre information infrastructure.

**AMIK** Automatic target-recognition system (Sweden).

**AMIMU** Advanced multisensor inertial measurement unit.

**amino** Group -NH<sub>2</sub> which can replace hydrogen atom in hydrocarbon radical to yield amino acids; these play central role in metabolic pathways of living organisms; thus of interest in space exploration.

**AMIPS** Adaptive multiple-image projector system.

**AMIR** 1 Air Mission Intelligence Report, detailed and complete report on results of air mission.

2 Anti-missile infra-red.

**AMIRS** Advanced multirole IR sensor.

**AMIS** 1 Anti-materiel incendiary submunition.

2 Aircraft-movement identification section.

**AMIZ** Australian Maritime Identification Zone [up to 1,000 n.m. planned].

**AMJ** Advisory material joint.

**AMK** 1 FAA-approved airplane modification kit.

2 Anti-misting kerosene.

**AML** 1 Adaptive manoeuvring logic.

2 Aeronautical Materials Laboratory (USN, established 1935).

3 Admiralty Materials Laboratory (Holton Heath).

4 Approved model list (FAA).

**AMLCD** Active-matrix [or advanced multifunction] liquid-crystal display.

**AMM** 1 Aircraft maintenance manual.

2 Aircraft maintenance and modification.

3 Anti-missile missile.

**AMMC** Aeronautical materiel management center.

**AMMCS** Airborne multiservice/multimedia communications system.

**ammeter** Instrument for measuring electric current (d.c. or a.c., or both in case of 'universal testers') with reading usually given in amperes.

**AMMF** Approximate model-management framework[s].

**AMMM** Affordable multi-missile manufacturing [program].

**ammo** Ammunition (UK colloq.).

**Ammod, AMMOD** Automatic man-made object detection (UAV).

**Ammonal** High explosive (AMMONium nitrate + ALuminium, and often finely divided carbon).

**ammonia** NH<sub>3</sub>, gas at ISA SL, pungent, toxic, present in atmosphere of Jupiter (ice crystals and vapour) and more distant planets (frozen solid). Ammonium chloride in 'dry batteries', nitrate in many explosives, perchlorate plasticised propellants in large solid rocket motors, sulphate soldering and brazing flux and in dry cells, and several compounds in fireproofing.

**AMMP** Attack-mission management processing.

**AMMTIAC** Advanced Materials Manufacturing Training and Information Analysis Center (USAF).

**ammunition** Projectiles and propellants for guns; increasingly, guided weapons are logistically treated as \* but term normally excludes them.

**ammunition quality** Coefficient of, symbol  $r$ , =  $\frac{P}{mW}$  where P is hit probability of each shot, m is mass of projectile and W is required average hits for kill.

**ammunition tank** Compartment or container housing ammunition for airborne automatic weapon, usually in form of belt arranged in specified way; reloadable, usually when removed from aircraft.

**AMNS** Airborne mine-neutralization system. (USN)

**AMNTK** Aircraft engine design office (R).

**AMO** 1 Air Ministry Order[s].

2 Air mass zero, test condition for solar arrays and other space hardware.

3 Approved maintenance organization.

4 Airspace Management Officer.

5 Air and marine operations (US CBP).

**AMOC** 1 Air & Marine Operations Center (US Customs Service at March AFB).

2 Alternative methods, or means, of compliance (FAA).

**AM1** Single-crystal material for HPT blades.

**Amors** Airborne multifunction optical radar system.

**amortisation** Fiscal process of writing-down value of goods and chattels over specified period. Typically, transport aircraft \* over five, seven or ten years, after which book value is zero. Rate exerts major influence on DOC.

**AMOS** Automatic meteorological observation system, or observing station.

**Amosa** Association of Aviation Maintenance Organisations in Southern Africa (Johannesburg).

**AMOSP** Airborne multimission optronic sablized payload.

**AMOSS, Amoss** Airline maintenance and operations support system [self-diagnoses in flight and tells ground computer].

**AMP** 1 Assisted maintenance period (aircraft carrier).

2 Avionics master plan (USAF).

3 Advanced mission planning, update of CPGS [A adds aid, S adds system].

4 Audio management panel.

5 Aerospace materials program.

6 Advanced modular processor.

7 Avionics, or aircraft modification, or modernization program[M].

8 Atomic materialization process.

9 Application message protocol.

10 Advanced manoeuvre program [me].

11 Air Member for Personnel (UK).

12 Accelerated maturation program.

13 Air mobility platform.

**amp** Ampere[s].

**AMPA** Advanced mission-planning aid.

**Ampac** Air-mobility precision-approach capability.

**AMPD** Advanced multi-purpose display[s].

**ampere** SI unit of electric current (quantity per unit time), symbol A; named for A.M. Ampère but no accent in unit except in F. Hence: ampere-hour (1 A flowing for 1 h); ampere-turn (unit magnetising force, 1 A flowing round 1 turn of coil).

**AMPG, a.m.p.g.** Air-miles per gallon, air distance flown per gallon of fuel consumed. UK gallon was Imp; distance

was statute miles (not "air miles"). In US, st. mi. and US gal (0.83267 Imp gal). New unit must be found; SI suggests air metres per litre, unless fuel measured by mass (see *AMPP*, *NAMP*).

**amphibian** Aerodyne capable of routinely operating from land or water. In US occasionally amphibion.

**amplidyne** D.c. generator whose output voltage governed by field excitation; formerly used as power amplifier in airborne systems.

**amplification factor** In thermionic valve (radio vacuum tube), ratio of change in plate voltage to change in grid voltage for constant plate current (UK, plate = anode).

**amplifier** Device for magnifying physical or mechanical effect, esp. electronic circuit designed to produce magnified image of weak input signal whilst retaining exact waveform.

**amplitude** 1 Maximum value of displacement of oscillating or otherwise periodic phenomenon about neutral or reference position.

2 Angular distance along celestial horizon from prime vertical (ie due N-S) of heavenly body, generally as it rises or sets at horizon.

**amplitude modulation** MCW or A<sub>2</sub> emission in which AF is impressed on carrier by varying carrier amplitude at rate depending on frequency, and depth of modulation depending on audio amplitude.

**amplitude modulation equipment [or equivalent]** Processes info. and carrier separately and reconstructs them to make equivalent AM signal.

**AMPP, a.m.p.p.** Air miles per pound (of fuel), air distance flown for each pound avoirdupois of fuel consumed, former measure of specific range (see *AMPG*, *NAMP*).

**AMPS** 1 Advanced multi-sensor payload system.

2 Aviation mission-planning system (USA).

3 Automatic message-processing system.

**AMPSS** Advanced manned precision strike system.

**AMPT** 1 Air miles per tonne [of fuel].

2 Advanced missile propulsion technology [generally means airbreathing].

**AMPTE** Active Magnetospheric Particle Tracer Explorer(s).

**AMR** 1 Airport movement radar.

2 Atlantic Missile Range, military (DoD) range originally run by Pan Am and RCA from Patrick AFB and also serving NASA's KSC at Cape Canaveral.

**Amraam, AMRAAM** Advanced medium-range AAM.

**AMRC** Aerospace Maintenance and Regeneration Center [previously MASDC].

**AMRDEC** Aviation and Missile RD&E Center [Redstone Arsenal] (USA).

**Amrics** Automatic management radio and intercom system.

**AMRL** 1 Aerospace Medical Research Laboratory (USAF).

2 Aeronautical and Maritime Research Laboratory [Melbourne, Vic. 3001] (Australia).

**AMRS** Advanced maintenance-recorder system.

**AMS** 1 Aeronautical Mobile Service, radio-communication service between aircraft or between aircraft and ground stations.

2 Air Maintenance Squadron (USAF).

3 Aircraft management simulator [or system].

4 Academy of Military Science (USA).

5 Air [or aerospace, or aircraft] material specification.  
 6 Advanced missile system (USN).  
 7 Apogee and manoeuvring stage.  
 8 Automated message switch.  
 9 Airborne maintenance subsystem.  
 10 Avionics, or airspace, management system, or service.  
 11 Altitude management [and alert] system.  
 12 American Material Standard.  
 13 American Meteorological Society [office, Boston, MA02108] (US).  
 14 Automatic marking system, or subsystem.  
 15 Automatic meteorological system.  
 16 Apron management service.  
 17 Automated manifest system.  
 18 Aviation Manpower and Support (USMC).  
 19 Aircraft Maintenance Standards (CAA).  
 20 Aerospace Material Specification[s] (SAE).

**AMSA** Advanced manned strategic aircraft.  
**AMSAA** Army Materiel Systems Analysis Activity (USA).  
**Amsam** Anti-missile SAM (1).  
**Amsar, AMSAR** 1 Airborne multimode, or multirole, or multipurpose, solid-state, active-array radar.  
 2 Airborne multifunction steerable-array radar.  
**Amsat** Amateur radio-satellite organization [Silver Spring, MD20910-4703] (Int.). **Amsat UK**, office, Henfield BN5 9YB.  
**AMSC** Automatic message-switching centre.  
**AMSD** Aircraft Maintenance Standards Department (CAA).  
**AMSE** Automatic message-switching equipment.  
**AMSG** Air Mobility Support Group (USAF).  
**AMSL, a.m.s.l.** Above mean sea level.  
**AMSO** Air Member for Supply and Organisation (UK, WW2).  
**AMSR** Advanced microwave scanning radiometer.  
**AMS(R)S** Aeronautical mobile satellite (route) service.  
**AMSS** 1 Advanced multi-sensor system (EW, SOJ, AEW).  
 2 Aeronautical mobile satellite service [P adds panel].  
 3 Airborne mission-support system.  
 4 Automatic message-switching system (AFTN).  
**AMST** Advanced medium STOL transport.  
**AMSTE** Affordable moving surface-target engagement.  
**AMSU** 1 Aircraft-motion sensor, or sensing, unit [digital FCS].  
 2 Air-motor servo unit.  
 3 Advanced microwave sounding unit.  
**AMT** 1 Accelerated mission test[ing].  
 2 Aircraft [or aviation] maintenance technician.  
 3 Advanced metal-tolerant tracker [or tracking system].  
 4 Air maneuver [and] transport, C-130/C-17 capability plus V/STOL (USA).  
 5 Association for Manufacturing Technology (US).  
 6 Aviation Maintenance Technology [Vincennes University, IN 47591-0086] (US).  
**amt** Amount.  
**AMTC** Aerospace Medicine Training Centre.  
**AMTD** 1 Aircrew maintenance-training device.  
 2 Adaptive moving-target detector, detection, or device.

**AMTE** Adjusted megaton equivalent.  
**AMTI** Airborne, or air, moving-target indicator, or indication.  
**Amtorg** Former organisation for importing and licensing US products (USSR).  
**Amtos, AMTOS** Aircraft-maintenance task-oriented support [second S adds system].  
**AMTS** 1 Adaptive marked-target simulator.  
 2 Aeronautical message transfer service.  
 3 Aerial, or air-to-air, missile target system.  
**AMTT** See *AMT* (3).  
**AMU** 1 Air mileage unit.  
 2 Astronaut maneuvering unit.  
 3 Aircraft maintenance unit; F adds facility.  
 4 Audio-, or avionics-, management unit.  
 5 Antenna-matching unit.  
 6 Auxiliary memory unit.  
 7 Air Mobility Unit (USAF).  
**AMUST** Airborne manned/unmanned system technology; -D adds demonstration.  
**AMUX** Audio multiplexer.  
**AMW** Air Mobility Wing (USAF).  
**AMWD** Air Ministry Works Department [airfield and building construction, formerly] (UK).  
**AMWM** Aircraft maintenance wiring manual.  
**amyl** Family of univalent hydrocarbon radicals, all loosely C<sub>3</sub>H<sub>11</sub>, esp.: amyl acetate (banana oil) solvent and major ingredient of aircraft dopes; and amyl alcohol, in lacquers.  
**AN** 1 Air navigation.  
 2 Prefix to designation codes of US military hardware denoting "Army-Navy"; now rare, though code system remains.  
 3 Airworthiness Notice.  
 4 [or A/N] alphanumeric.  
**A<sub>n</sub>** Acceleration normal to flight path, usually along OZ axis.  
**AN<sup>2</sup>** Product of gas-turbine annulus area at turbine rotor-blade mid-length and square of rotational speed.  
**ANA** 1 Air Navigation Act.  
 2 Association of Nordic Aeroclubs (Int).  
 3 Association of Naval Aviation Inc. [53 chapters, office Alexandria, VA] (US).  
 4 Aeroportos e Navegacao Aerea (Portugal).  
**ANAAA** Association of N American Air Ambulances [office, Blackwood, NJ] (US, Canada).  
**anabatic wind** Wind blowing uphill as result of insolation heating slope and adjacent air more than distant air at same level.  
**ANAC, Anac** 1 Automatic nav/attack control(s).  
 2 Civil aircraft certification authority (Brazil).  
**Anacna** Associazione Nazionale Assistenti e Controllori della Navigazione Aerea [office, I-00181 Rome] (Italy).  
**anacoustic region** Extreme upper level of atmosphere (say, 100 miles above Earth) where mean free path too great for significant propagation of sound.  
**ANAE** Académie Nationale de l'Air et de l'Espace [Toulouse] (F).  
**ANAEM** Aircraft noise and aviation emissions mitigation.  
**anaglyph** Picture, generally photographic but often print-out from some other system, comprising stereoscopic pairs of images, one in one colour (eg red) and other

in second colour (eg blue). Viewed through corresponding (eg blue/red) spectacles, result appears three-dimensional.  
**analog computer** 1 Computational device functioning by relating or operating upon continuous variables (in contrast to digital computers, which operate with discrete parcels of information). Simplest example, slide-rule.

2 Electronic computer in which input data are continuously variable values operated upon as corresponding electrical voltages. Actual hardware can be coupled directly in so that, for example, control response, angular movement and aeroelastic distortion of control surface can be investigated in situ and in real time.

**analog/digital converter, ADC** Device for converting analog output into discrete digital data according to specified code of resolution; also called digitiser and, esp. for linear and rotary movement, encoder.

**analog output** Transducer signal in which amplitude (typically quasi-steady voltage) is continuously proportional to function of stimulus.

**analyser** In piston engine installations, device intended to indicate mixture ratio by sampling composition of exhaust gas (hence EGA, exhaust-gas \*). Some for static-test purposes depend on chemical absorption of carbon dioxide, but airborne instrument uses Wheatstone bridge to measure variation in resistance due to proportion of carbon dioxide in gas.

**analysis** Stress analysis.

**ANAO** Australian National Aerospace Organization [office Yagoona, NSW].

**anaprop** Anomalous propagation.

**ANASA** Azerbaijan National Aerospace Agency.

**Anasics** Alaska National Airspace System Interfacility Com. System.

**Anazot** A resin foam for fuel-tank protection.

**ANB** 1 Air Navigation Bureau (ICAO).

2 Adaptive narrow beam(s).

**ANC** 1 Air navigation charges.

2 Air Navigation Commission, or Council (both ICAO).

3 Army/Navy/civil (US).

4 Aviate/navigate/communicate.

5 Active, or acoustic, noise cancellation, or control.

**ANCA** Airport Noise and Capacity Act [Congress] (US).

**Ancat** Abatement of nuisance caused by air transport.

**ANCB** Association Nationale Contre les Bangs (super-sonic) (F).

**anchor-centred** Also anchor charge, anchor grain: solid rocket propellant charge in which initial combustion surface has cross-section resembling radial array of anchors, flukes outward.

**anchor light** Riding light.

**anchor line, cable** Cable running along interior of airdrop aircraft to which parachute static lines (strops) are secured.

**anchor-line extension kit** Assembly arranged to extend anchor line to allow airdropping through rear clamshell doors or aperture with such doors removed.

**anchor nut** Large family of nuts positively securable by means of screwed or bolted plate projecting from base (see *nut, nutplate, stiffnut, stopnut*).

**ANCOA** Aerial Nurse Corps of America.

**ANCS** Active noise control system.

**AND** 1 Active-nutation damping.

2 Aircraft nose-down.

3 Army/Navy drawing.

**ANDA** Associazione Nazionale Direttori di Aeroporto (I).

**ANDAG** Associazione Nazionale Dipendenti Aviazione Generale (I).

**ANDB** Air Navigation Development Board (US 1948-57).

**Anderson shelter** Small air-raid shelter assembled from sheet galvanized-steel pressings in pit and covered with deep layer of earth (UK, WW2).

**AND gate** Bistable logic function triggered only when all inputs are in ON state; in computers used as addition circuit, performing Boolean function of intersection. Hence AND/OR gate, AND/NOR, AND/NOT.

**AND pad** Standard Army/Navy drive accessory pad.

**ANDR** Air, or airborne, navigation data recorder.

**androgynous** Mating portions of docking system which are topologically identical (eg US and Soviet docking faces).

**ANDS** 1 Automatic navigation differential station.

2 Accelerate N, decelerate S, mnemonic for NTE (2).

**ANDVT** Advanced narrow-band digital voice terminal.

**anechoic** Without echoes; thus, \* facility, \* room, in which specially constructed interior walls reduce reflections to infinite number of vanishingly small ones. Chamber can be designed to operate best at given wavelength, with sound, ultrasound, ultrasonic energy, microwaves and various other EM wavelengths. Mobile facilities used for boresighting nose radar of combat aircraft.

**anemogram** Record produced by anemograph.

**anemograph** Instrument designed to produce permanent record of wind speed (ie recording anemometer) and, usually, direction. Dines \* incorporates weathercock vane carrying pitot and static tubes.

**anemometer** Instrument for measuring speed of wind, usually 10 m (32.8 ft) above ground level. Robinson Cup \* has free-rotating rotor with three or four arms each terminating in a hemispherical or conical cup.

**anemoscope** Instrument for checking existence and direction of slow air currents.

**ANEPVV** Association Nationale d'Entraide et de Prévoyance du Vol à Voile [gliding; office, F-75006 Paris] (F).

**nergolic** Not spontaneously igniting; thus, most rocket-propellant combinations comprising two or more liquids. Opposite of hypergolic.

**aneroid** Thin-walled airtight compartment designed to suffer precisely predictable and repeatable elastic distortion proportional to pressure difference between interior and exterior. Most are evacuated steel capsules in form of disc with two corrugated faces which can approach or recede from each other at centre. To increase displacement a stack can be used linked at adjacent centres. Common basis of pressure altimeter, ASI and Machmeter.

**aneroid altimeter** Pressure altimeter; aneroid barometer calibrated to read pressure altitude.

**aneroid altitude** Pressure altitude.

**ANFCMA** Associazione Nazionale Famille Caduti e Mutilati dell'Aeronautica (I).

**ANF** Anti-navire futur (F).

**ANG** Air National Guard (US); B adds base.

**angels** 1 Historic military R/T code word for altitude in thousands of feet; thus, 'angels two-three' = 23,000 ft.

2 Distinct, coherent and often strong (40 dB above background) radar echoes apparently coming from clear sky. Probable cause strong pressure, temperature or humidity gradient in lower atmosphere giving even sharper gradient in refractive index.

**Angit** Aircraft next-generation identification transponder.

**angled deck** Aircraft-carrier deck inclined obliquely from port (left) bow to starboard (right) stern to provide greater deck space, greater catapult capacity and unobstructed flight path further from island than with axial deck, with safe parking area towards bow.

**angle of . . .** In general, see under operative word.

**angle of attack indicator** Instrument served by \*\*\* sensing system.

**angle of attack sensing system** Incorporated in aircraft, esp. aeroplane, to trigger stall-warning, stall-protection system or other desired output, and possibly serve an indicator. Sensing unit (SU) comprises freely pivoted vane or series of pitot tubes set at different angles of incidence and each connected to different supply pipe to give dP output. SU on wing leading edge, to sense movement of stagnation point, or on side of fuselage, repeated on opposite side to eliminate error due to sideslip. SU anti-iced and must allow for changes in aircraft configuration.

**angle of depression** Acute angle between axis of oblique camera and horizontal.

**angle of downwash** *Downwash* (I).

**angle off** Acute angle between own-fighter sightline and longitudinal axis of target aircraft.

**angle of incidence indicator** Instrument giving continuous reading of angle of foreplane, horizontal tail (especially tailplane where not primary pitch control) or wing, where incidence variable.

**angle of view** Angle subtended at perspective centre of camera lens by two opposite corners of format.

**Anglico** Air/naval gunfire liaison company (USMC).

**ANGR** Air navigation (general) regulation[s] (UK).

**ANGRC** Air National Guard Readiness Center.

**ANGSA** Air National Guard support aircraft.

**Angström Unit** Å or AU, unit of length equal to  $10^{-10}$  m, formerly used to express wavelengths of light; nearest SI is nanometre; 1 nm =  $10^9$  Å.

**angular acceleration** Time rate of angular velocity of body rotating about axis which need not pass through it; unit  $\text{rad/s}^2$ .

**angular displacement** 1 Angular difference between two directions or axes, esp. between reference axis of hinged or pivoted body and same axis in neutral or previous position.

2 In magneto, angular difference between neutral position of rotor pole and later position giving highest-energy spark (colloq., E-gap).

**angular distance** 1 Angular displacement.

2 Smaller arc of great circle joining two points expressed in angular measure.

3 In all sine-wave phenomena (radio, radar, astronomy, etc), number of waves of specified frequency between two points (numerically multiplied by 360 or  $2\pi$  depending on whether unit is degree or radian).

**angular measure** 1 SI unit of plane angle is radian (rad), angle subtended by arc equal in length to radius of circle

on which arc centred. Thus one revolution =  $2\pi$  rad, and 1 rad =  $57.296^\circ$ . Degree ( $^\circ$ ) defined as 1/360th part of one revolution, itself subdivided into 60 minutes ( $'$ ) each subdivided into 60 seconds ( $''$ ); pedantically distinguished from units of time by calling them arc-minutes and arc-seconds. Thus 1 rad =  $57^\circ 17' 45''$ . For small displacements milliradian (mrad) to be used; roughly  $3' 26\frac{1}{4}''$ ; thus  $1' = 0.2909$  mrad.

**angular momentum** For rigid body of significant mass (not elementary particle), product of angular velocity and moment of inertia; or, if axis of rotation at some distance from it (as in axial turbine blade), mass, instantaneous linear velocity and radial distance of CG from axis. Thus,  $L = I\omega = mvr$ .

**angular resolution** Angular distance between LOS from radar, human eye or other "seeing" system to target and LOS from same system to second target which system just distinguishes as separate object; usually only a few mrad, esp. if targets are pinpoints of light against dark background.

**angular speed** 1 Loosely, angular velocity.

2 Rate of change of target bearing, esp. as seen on PPI.

**angular velocity** Symbol  $\omega$ , time rate of angular displacement of body rotating about axis which need not pass through it. Preferred measure is  $\text{rad s}^{-1}$  or  $\text{mrad s}^{-1}$ ; in traditional engineering most common is rpm. Multiplied by radius gives *tip speed*, or peripheral speed.

**anharmonic** Not harmonic, irregular.

**anhedral** 1 Negative dihedral, smaller angle between reference plane defining wing (such as lower surface or locus of AMCs) which slopes downward from root to tip, and horizontal plane through root. In early aircraft dihedral considered desirable as means to natural stability, esp. in roll; in some, and many modern gliders, wing flexure converts static \* into dihedral under 1 g in flight. Tendency to design modern wing with \* to counter excessive roll response to sideslip or side gusts, esp. in high-wing or supersonic aircraft. VG aeroplane angle may be varied with sweep. In the new century the term appears to be dying, replaced by dihedral with a minus sign

2 Some authorities define as 'absence of dihedral' (from Greek root of prefix *an* = not), and suggest "cathedral" for downward-sloping wing.

**ANIAF** Associazione Nazionale Imprese Aerofotogrammetriche (I).

**Anics** Alaskan NAS(2) interfacility communications system.

**ANIE** Associazione Nazionale Industrie Elettrotecniche ed Elettroniche (I).

**aniline** Phenylamine, aminobenzene,  $\text{C}_6\text{H}_5\text{NH}_2$ , colourless, odorous amine, MPt  $-6^\circ\text{C}$  (thus, normally liquid), BPT  $184^\circ\text{C}$ , turns gradually brown on exposure to air, reacts violently with RFNA or other strong nitric acids with which often used as rocket propellant.

**anion** Negative charged ion or radical, travels towards anode in electrolytic cell.

**anisotropic** Exhibiting different physical properties along different axes, esp. different optical properties or, in structural material, different mechanical properties, esp. tensile strength and stiffness.

**ANIU** Aircraft network interface unit.

**ANK** Automatic navigation kit.

**ANL** 1 Auto noise limiter (communications).

2 Automatic noise levelling.

**ANLP** Arinc network layer protocol.  
**ANLS** Automatic navigation launch station.  
**ANM** AFTN notification message.  
**ANMI** Air navigation multiple indicator.  
**ANMPG** Air nautical miles per gallon.  
**ANMS** 1 Aircraft navigation and management system.  
 2 Automatic navigation mission station (UAV).  
 3 Automated noise monitoring system.  
**ANN** Applied neural network.  
**ann** Annunciator.  
**annealing** Heat treatment for pure metal and alloys to obtain desired physical properties by altering crystalline microstructure. Usually involves heating to above solid-solution or critical temperatures, followed by gentle cooling in air. General aim to make metal less brittle, tougher, more ductile and relieve interior stress.  
**annotation** Identifying and coding reconnaissance outputs, such as visual-light photographs, IR print-outs, ECM records, etc, with digital data: date, time, place, unit, altitude, flight speed, heading and data specific to reconnaissance system.  
**annual** Annual mandatory inspection of aircraft, or renewal of C of A.  
**annual variation** Amount by which magnetic variation at specified place on Earth varies in calendar year. In UK about  $-7(\text{min})$ , reducing local variation to zero in year 2140.  
**annular combustion chamber** In gas-turbine engine, chamber [including flame tube(s) and liners] entirely in form of body of revolution, usually about major axis of engine.  
**annular gear** Ring gear or annulus, gearwheel in which teeth project inwards from outer periphery. In annulus gear there is no centre, teeth being carried on open ring (which in turboprop/turbopan reduction gears may be resiliently mounted and torque-reacted by torque-signalling system). When shaft-mounted, teeth usually on one side only of flat or conical disc.  
**annular injector** Rocket (or possibly other engine) injector in which liquid fuel and/or oxidant is sprayed from narrow annular orifice. In bipropellant engine numerous such orifices spaced around chamber head, alternately for fuel and oxidant.  
**annular radiator** Cooling radiator shaped as body of revolution to fit around axis of aircraft engine, esp. between propeller and piston engine having circular cowl.  
**annular spring** Has form of ring distorted radially under load. Sometimes called ring spring, esp. when given tapered cross-section and used in multiple, in an inter-meshing stack, to resist load along axis of symmetry.  
**annular wing** Wing in form of body of revolution, designed to operate in translational flight with axis of symmetry almost horizontal.  
**annulus drag** Most often refers to base drag of annular periphery around propulsive jet nozzle which incompletely fills base of vehicle, esp. ballistic rocket rising through atmosphere.  
**annunciator** 1 In gyrocompass (remote compass), indicator flag visible through window of cockpit instrument; with a.c. supply on and gyro synchronized with compass detector, indication should hover between dot and cross, never settle on either.  
 2 In aircraft system, esp. on aircraft having flight deck

rather than cockpit, panel or captioned warnings often distributed on schematic diagram of system.

3 In a CDU, the alpha and numeric keys providing part of the operator interface.

4 Subsystem of autopilot for auto or manual switching between compass and directional gyro.

**ANO** Air Navigation Order, UK statutory instrument for enactment of ICAO policy defining laws, licensing and similar fundamental issues regarding aerial navigation (see *ANR*).

**anode** In electrical circuit (electrolytic cell, valve, CRT), positive pole, towards which electrons flow; that from which "current" conventionally depicted as emanating.

**anodic treatment** See next.

**anodising** Electrolytic (electrochemical) treatment for aluminium and alloys, magnesium and alloys and, rarely, other metals, coated with inert surface film consisting mainly of oxide(s) as protection against corrosion. Electrolyte usually weak sulphuric or chromic acid.

**ANOE** Automated nap of the Earth.

**anomalous period** Time between successive passages of satellite through perigee.

**anomalous year** Earth's orbital period round Sun, perihelion to perihelion: 365 d 6 h 13 m 53.2 s, increasing by about 0.26 s per century.

**anomalous dispersion** Local reversal in rule that medium transparent to EM radiation diffracts it with refractive index that falls as wavelength increases; discontinuities in absorption spectrum make index increase as wavelength increases.

**anomalous propagation** Of wave motions, esp. EM radiation of over 30 kHz frequency or sound, by route(s) grossly different from expected, usually because of atmospheric reflection and/or refraction, sharp humidity gradients and temperature inversion.

**anomaly** 1 Difference between mean of measured values of meteorological parameter at one place and mean of similar values at all other points on same parallel (in practice, mean of similar values at other stations near same parallel).

2 In general, deviation of observed geodesic parameter from norm or theoretical value.

3 Specif. local distortion of terrestrial magnetic field caused by local concentrations of magnetic material used in aerial geophysical surveys and ASW (see *MAD*).

**Anoms** Airport noise and operations monitoring system.

**ANORAA** Association Nationale des Officiers de Réserve de l'Armée de l'Air (F).

**Anova** Analysis of variance, especially in monitoring flight-crew performance under different adverse or stress conditions.

**anoxaemia** Hypoxaemia, deficiency in oxygen tension (loosely, concentration) of blood.

**anoxia** Absence of oxygen available for physiological use by the body (see *hypoxia*).

**ANP** 1 Aircraft nuclear propulsion; general subject and defunct DoD programme.

2 Air navigation plan (ICAO).

3 Actual [or achieved] navigation performance.

**ANPA** 1 Aircraft Nuisance Prevention Association (J).

2 Advanced notice of proposed amendment.

3 See APA (13).

**ANPAC** Associazione Nazionale Piloti Aviazione

Commerciale (Rome); other Italian associations include ANPAV (Assistenti di Volo), ANPCAT (Professionale Controllori & Assistenti Traffico Aereo), ANPI (Paracadutisti d'Italia), ANPIC (Piloti Istruttori Civili), ANPiCo (Piloti Collaudatori), and ANPSAM (Piloti Servizi Aerei Minori; also *API*).

**A-NPR, ANPRM** Advance notice of proposed rule-making (FAA).

**ANR** 1 Air Navigation Regulation.

2 Active [or acoustic] noise reduction.

**ANRA** Association Nationale des Résistants de l'Air; résistant, a tough hard worker; [office F-75996 Paris] (F).

**ANRS** Automatic navigation relay station.

**ANRT** Association Nationale de la Recherche Technique (F).

**ANS** 1 Air Navigation School.

2 Airborne [or air, or area] navigation system.

3 Artificial neural system.

4 Ambient-noise sensor.

5 Answer.

**ANSA** Advisory group, air navigation services (G).

**Anser** Autonomous navigation sensing experimental research.

**ANSI** 1 American National Standards Institution, vital for software.

2 Air navigation services institute [CAA] (Finland).

**Ansir** Awareness of national security issues and responses (FBI, US).

**ANSP** Air navigation service provider.

**AN<sup>2</sup>** AN-squared, a fundamental gas-turbine parameter in which A is total cross-section area of the gas path through the rotor blades and N is ppm.

**ANSV** Agenzia Nazionale per la Sicurezza del Volo [accident investigation authority] (I).

**Ansyn** Analysis by synthesis.

**ANT** 1 Autonomous negotiation [or negotiating] team.

2 Air-navigation trainer (simulator).

3 Antrieb [powerplant] neuer Technologie (G).

**ant** Antenna.

**ANTAC** Association des Navigants Techniciens de l'Aviation Civile (Belg.).

**Antares** Antenna advanced inertial reference for enhanced sensors.

**ANTC** Advanced Networking Test Center (US).

**antenna** US term for aerial (2), portions of broadcasting EM system used for radiating or receiving radiation. Plural antennas, not antennae.

**antenna azimuth rate** Rotational speed, rpm or rad/s.

**anthophyllite** Crystalline mineral, essentially (Mg, Fe) Si O<sub>3</sub>.

**anti-aircraft, AA** Surface-based defence against aerial attack. Suggested historic word; better to introduce SA, surface-to-air, as prefix for guns as well as missiles, together with associated radars and other peripherals.

**anti-aircraft artillery, AAA** Guns and unguided-rocket projectors dedicated to surface-to-air use with calibre 12.7 mm (0.5 in) or greater.

**anti-air warfare, AAW** All operations intended to diminish or thwart hostile air power, eg air defence and interdiction against enemy airfields.

**anti-aliasing filter** Inserted in output of analog-to-digital converter to screen out multiples of the digital sampling frequency.

**anti-balance** Opposing, counteracting or reducing balance, esp. in dynamic system.

**anti-balance tab** Tab on control surface mechanically constrained to deflect in same sense as parent surface to increase surface hinge-moment (ie, to make it more difficult to move in airstream); opposite of servo tab.

**anti-ballistic missile, ABM** System designed to intercept and destroy hypersonic ballistic missiles, esp. RVs of ICBMs. Speed of such targets, smaller radar cross-section, possible numbers, use of ECM and decoys, nuclear blanketing of large volumes of sky, ability to change trajectory, enormous distances, and need for 100% interception, make ABM difficult.

**anti-blocking system** Prevents aircraft from making simultaneous or conflicting radio transmissions.

**anti-buffet** Describes measures adopted on atmospheric vehicles, esp. high-speed aircraft, to reduce or eliminate aerodynamic buffet. Almost always auxiliary or locally hinged surface moved out into airflow to reduce buffet which would otherwise be caused by configuration change, eg opening weapon-bay doors. Thus \* flap, panel, comb, rake, slot.

**anticer** Device or material intended to prevent ice from forming. See *anti-icing*.

**anticing** See *anti-icing*.

**anti-clutter** Any of many techniques intended to reduce clutter.

**anti-collision beacon** High-intensity [so-called strobe] flashing red light[s] carried by most aircraft, to be visible at great distance from any aspect.

**anti-coning** In most helicopters, and some other rotorcraft, \*\* device fitted to prevent main rotor blades from reaching excessive coning angle (being blown upwards, eg by high wind at zero or low rotor rpm on ground), from which they could fall and exceed root design stress when suddenly arrested. Usually fixed range of angular coning permissible between \*\* device and droop stop.

**anti-corrosion** Measures taken depend on environment (see *marinising*), and working stress and temperature of hardware; apart from choice of material and surface coating (Alclad, anodising, painting with epoxy-based paint, etc), special agents can be introduced to fuels, lubricants, seals, hydraulic fluids and interior of stored device (inhibiting).

**anti-cyclone, anticyclone** Atmospheric motion contrary to Earth's rotation. Large area of high pressure, generally with quiet, fine weather, with general circulation clockwise in N hemisphere and anticlockwise in S; divided into 'cold' and 'warm' each group being subdivided into 'permanent' and 'temporary'.

**anti-dazzle panel** 1 Rearwards extension around top of instrument panel or cockpit coaming to improve instrument visibility and at night prevent reflection of instruments from windscreen.

2 On aircraft with natural metal finish, areas of exterior painted with non-reflective black or dark blue to prevent bright reflections being visible to crew.

**anti-drag wire** Structural bracing filament, usually incorporated within wing, intended to resist forwards ('anti-drag') forces, usually from trailing edge at root to leading edge at tip.

**anti-freeze** Most important agent ethylene glycol (CH<sub>2</sub>OH.CH<sub>2</sub>OH), usually used as aqueous solution with minor additives. Neat 'glycol' (there are many) remains

liquid over more than twice temperature range of water, and freezes not as solid ice but as slush.

**anti-friction bearing** Loose term applicable to bearing suffering only rolling friction (ball, needle, roller) but esp. signifying advanced geometry and high precision.

**anti-frosting** Measures taken to prevent frost (ice condensing from atmosphere and freezing as layer of fine crystals), esp. on windscreen; typically raise temperature by hot air or fine electrical resistance grids or conductive films.

**anti-g** Measures counteracting adverse effects of severe accelerations in vertical plane. See *g-suit*.

**anti-glare** Against optical glare, generally synonymous with anti-dazzle but esp. dull non-reflective painted panels on airframe and propeller blades.

**anti-gravity** Yet to be invented mechanism capable of nullifying local region in gravitational field.

**anti-g suit** See *g-suit*.

**anti-g valve** See *inverted flight valve*.

**anti-icing** Measures to prevent formation of ice on aircraft; required on small vital areas where ice should not be allowed to form even momentarily (see *icing, de-icing*).

**anti-icing correction** Applied to aircraft, esp. advanced aeroplane, performance with various forms of ice-protection operative. Esp necessary when engine air bleed exerts significant penalty in degraded take-off, climb-out, overshoot and en route terrain-clearance calculations. Required numerical values usually given in flight manual as percentage for each flight condition.

**anti-icing inhibitor** Fuel additive preventing freezing of water precipitated out of fuel at high altitude.

**anti-knock rating** Measure of resistance of piston engine fuel to detonation (1) (see *octane rating*).

**anti-lift** In direction opposite to lift forces, eg loads experienced by wing on hard landing with lift dumpers in use. Thus \*\* wire (landing wire), structural bracing filament, usually within wing, to resist downloads.

**anti-missile** Against missiles, specif system intended to intercept and destroy hostile missiles (which may or may not include guided devices, artillery shells, bullets, mortar bombs and other flying hardware). In large-scale defence against ICBM attack, anti-ballistic missile.

**anti-misting kerosene** Jet fuel chemically and physically tailored so that, on sudden release to atmosphere (from ruptured tanks in a crash), it spreads in the form of droplets too large to form an explosive mixture with air.

**antimony** Element, abb. Sb, existing in several allotropic forms, most stable being grey metal with brittle crystalline structure. Widely used in aerospace in small quantities: with tin and other metals in bearings and applications involving sliding friction, with lead in storage batteries, as acceptor impurity in semiconductors, in type metals and electronic cathodes.

**antinode** 1 Points on wave motion where displacement (amplitude) is maximum.

2 Locations in aircraft structure where flexure (due to vibration or aeroelastic excitation) is maximum.

3 Either of two points in satellite orbit where line in orbit plane perpendicular to line of nodes, and passing through focus, intersects orbit (thus, essentially, points in orbit midway between nodes).

**anti-oxidant** Fuel additive which prevents formation of oxides and, esp. peroxides during long storage.

**antipode** Point on Earth, or other body, as far as

possible from some other point or body; specif. point on Earth from which line through centre of Earth would pass through centre of Moon.

**antipodes** Regions on Earth diametrically opposite each other.

**anti-radiation missile** Missile designed to home on to hostile radars.

**anti-rolling** In rigid airship, measures intended to prevent rolling of any part relative to hull or envelope.

**anti-rumble panel** Small anti-buffet panel necessary on grounds of noise.

**anti-snaking strip** In early high-subsonic aircraft, strip of cord or metal attached to one side of rudder or elsewhere to prevent snaking (yawing oscillations).

**anti-solar point** Point on celestial sphere 180° from Sun; projection to infinity of line from Sun through observer.

**anti-sound** Sound generated to cancel out unwanted noise.

**anti-spin parachute** Streamed from extremity of aeroplane or glider to assist recovery from spin; most common location is extreme tail.

**antistatic** Measures taken to reduce static interference with radio communications, traditionally by trailed \*\* wire, released from \*\* cartridge, which serves as pathway for dissipation of charge built up on aircraft. See next.

**anti-static additive** Fuel additive which increases electrical conductivity and thus speeds up dissipation of static electricity built up during refuelling.

**anti-submarine warfare** See *ASW*.

**anti-surface improvement program** Combines sensors, datalinks and displays presenting integrated precision tactical picture.

**anti-surge measures** 1 To prevent aerodynamic surging in axial compressor, eg redesign further from surge line, use of variable stators, blow-off valves and interstage bleeds.

2 Valves and baffles in oil cooler to maintain steady oil flow.

**anti-torque drift** Inherent lateral drift of helicopter due to side-thrust of tail rotor; often countered by aligning main rotor so that tip-path plane is tilted to give cancelling lateral component.

**anti-torque pedals** Common name for foot pedals of helicopter.

**anti-torque rotor** Tail rotor of helicopter, or any other rotor imparting thrust (moment) neutralising that of main rotor.

**antitrade wind** Semi-permanent winds above surface trades, generally at height of at least 3,000 feet, especially in winter hemisphere, moving in opposite direction (ie westerly).

**anti-transmit/receive** Pulsed-radar circuit which isolates transmitter during periods of reception.

**antivibration loop** Closed-loop servo system designed to suppress structural or system vibration.

**Antle** Affordable near-term low emissions (EEFAE).

**ANTMS** Airport noise/track monitoring system.

**ANU** Aircraft nose-up.

**ANUA** Associazione Nazionale Ufficiali Aeronautica (I).

**Anvar** Agence Nationale de Valorisation de la Recherche [Paris F-75436] (F).

**anvil cloud** Cumulonimbus.

**Anvis** Aviator's night-vision system, see next.

**Anvis/Hud** Adds head-up display for safe NOE helicopter flight at night.

**ANVR** Association of travel agents (Neth.).

**ANW** Airborne networking waveform.

**ANZUK, Anzuk** Australia, New Zealand, UK, and SE Asia defence.

**ANZUS, Anzus** Australia, New Zealand and US (1951 defence pact).

**AO** 1 Administrative Operations, major US Federal budget heading.

2 Artillery observation.

3 Aircraft operator.

4 Anti-oxidant.

5 Airplane, observation (USA 1956–62).

6 Announcement of opportunity (NAS, NASA).

**AOA** 1 Aerodrome Owners' Association (UK 1934–, became next).

2 Airport Operators Association [London SW1H 9JJ] (UK).

3 Angle of attack (units, thus “6 AOA”).

4 Angle of arrival (ECM).

5 Air Officer i/c Administration (RAF).

6 Airborne optical adjunct (ABM).

7 Amphibious operating [or operations] area (DoD).

8 At or above (FAA).

9 Abort once around, ie after one orbit.

10 Analysis of alternatives.

**AOAC** Autonomous operation from aircraft carrier (UAV).

**AOB** 1 At or below.

2 Angle of bank.

3 Automatic optical bench (for testing optically tracked missiles).

4 Air Observer (Bombardment).

5 Angle off boresight.

6 Air order of battle.

7 Air-dropped oceanic [or Arctic Ocean] buoy.

**AOC** 1 Air Officer Commanding.

2 Air Operator's Certificate (CAA UK).

3 Autopilot omni-coupler.

4 Aerodrome, or airport, obstruction, or obstacle, chart.

5 Assumption of control message (ICAO).

6 Adaptive optical camouflage.

7 Association of Old Crows [electronic warfare, Alexandria, VA22314-1652] (US).

8 Airline, Operations Center (US).

9 Air Operations Command (Vietnam AF) and co-located Air Operations Centers (USAF).

10 Airport [also Airline] Operational Commission (US).

11 Air/oil cooler.

12 Aeronautical operational control (Acars).

13 All other configurations.

14 Acceleration-onset cueing.

15 Attitude and orbit control [S adds system].

16 Airline, or aircraft, operational control, or communications.

17 Air and space Operations Center (US Air Combat Command).

**AOCC** Airline Operation Control Center (US).

**AOCI** Airport Operators Council International, Inc (Int., office Washington DC).

**AOCM** Airborne, or advanced, optical counter-measures.

**AOCP** Airborne operational computer program.

**AOCS** 1 Attitude and orbit control system.

2 Airline Operational Control Society, [office, Coraopolis, PA] (US).

**AOD** 1 Aft of datum (c.g.).

2 Airport Operations Director.

3 Airport operational data [B adds base].

4 Age of data [C adds clock, E adds ephemeris] (GPS).

5 Area of display.

6 Above Ordnance datum (Newlyn, see *sea level*).

7 Audio on demand.

8 Air operations directive (NATO).

**AODB** Airport operational data-base.

**AOE, AoE** Airport of entry.

**AOFR** Aluminium oxide fibre-reinforced.

**A of R** Area of responsibility.

**AOG** Aircraft on ground, code inserted in message (eg for spare parts) indicating aircraft unable to operate until remedial action taken.

**AOHE** Air/oil heat exchanger.

**AOI** 1 Arab Organization for Industrialization.

2 Area of interest.

3 Airborne, or aircraft, overhead interoperability [O adds office, TF adds task force].

**AOK** “All OK” [Astronaut].

**AOM** 1 Annual operational maintenance.

2 Aircraft operating manual.

**AOO** Analysis of options.

**AO1** Automated observation without precipitation discriminator.

**AOP** 1 Airborne (or air) observation post.

2 All other persons (airline costings).

3 Airline operational procedure.

4 Aeronautical OSI profile.

5 Advanced onboard processor.

6 Amraam optimisation program.

**AOPA** Aircraft Owners & Pilots Association [formed 1939 as US organization with office Frederick, MD 21701; now global with offices in 36 states, UK office London SW1V 4QQ]; LA adds legislative action.

**AOPAA** Aircraft Owners & Pilots Association of Australia.

**AOPF** Active optical proximity fuze.

**AOPG** Aerodrome Operators' Group (UK).

**AOPT** Accurate [or advanced] optical position transducer.

**AOPTS** Air Operations Planning and Tasking System[s].

**AOR** 1 Atlantic [previously Azores] Oceanic Region, [suffix -E or -W].

2 Average operational reliability.

3 Area of responsibility.

**AOS** 1 Acquisition of signal (telecommunications, telemetry).

2 Airborne optical sensor [A adds adjunct, P processor, T telemetry].

**AOSC** Asset-optimization service contract.

**AOSP** Advanced on-board signal processor.

**AOST** Astronaut operational skill training.

**AOSU** Airfield Operations Safety Unit.

**AOT** 1 All-operators Telex [issued by prime supplier].

2 Air Officer, Training (RAF).

- AOTD** Active optical target detector.
- AO2** Automated observation from unattended ASOS.
- AO2A** AO-augmented, from an attended ASOS.
- AOU** Area of uncertainty.
- A<sub>ov</sub>** Area of overlap [twin-rotor helicopter].
- AOW** All-operators wire [AOT is preferred].
- AOY** Angle of yaw.
- AP** 1 Armour-piercing [-DS adds discarding sabot, -E explosive, -F finned, -I incendiary, -T tracer; there are other suffixes].  
 2 Ammonium perchlorate (solid rocket fuel).  
 3 Air Publication (UK).  
 4 Airport (ICAO, Acars).  
 5 Autopilot.  
 6 Aviation regiment (USSR).  
 7 Allied publication (NATO).  
 8 Advance[d] procurement.  
 9 Airframe parachute [S adds system].  
 10 Action Panel [materials R&D].  
 11 Array processor.  
 12 Anti-personnel.  
 13 Anomalous propagation.  
 14 Approach [apch preferred].  
 15 Assessment Phase (UK).  
 16 Automotive [i.e., automatic] picture [transmission].  
 17 Aeroklub-Polski [Warsaw PL-00-071] (Poland).  
 18 Aluminised phosphor.
- Ap** Approach light[s].
- A/P** 1 Autopilot.  
 2 Airplane(s).  
 3 Airport.  
 4 Aim point.
- APA** 1 Airline Passengers Association (US).  
 2 Airport (or airfield) pressure altitude.  
 3 Allied Pilots' Association [Fort Worth, TX76155-2512] (US).  
 4 Army Parachute Association (UK).  
 5 Autopilot amplifier.  
 6 Automatic plotting aid.  
 7 Aerobatic practice area.  
 8 Accidents to private aviation [now Saga].  
 9 Altitude preselect/alert[er].  
 10 Aviation Policy Area.  
 11 Aerodromes Protection Agency, found necessary to fight closures (UK).  
 12 Airline performance analyses.  
 13 Associazione Pionieri dell' Aeronautica [previously ANPA, pilots with brevet before 2 Aug. 14; I-00192 Rome] (Italy).  
 14 Airline Professionals Association [pilot union] (US).
- APAC** Association of Professional Aviation Consultants (UK).
- APACCS** Aerial-port command and control systems (USAF).
- Apacs** Atlas prompting and checking system.
- APADS** Advanced precision air-delivery system.
- APAG** Allied Policy Advisory Group (NATO).
- Apals** Autonomous precision-approach and landing system.
- AP/AM** Anti-personnel/anti-material (last word often spelt materiel).
- APAMA** Asia/Pacific Aviation Media Association.
- APAP** Approach-path alignment panels.
- Apapi** Abbreviated Papi.
- APAR** Active phased-array radar (Canada, G, Neth.).
- APATC** Allied publication air traffic control.
- Apatsi** Airport/air-traffic system interface.
- APAW** Air-portable avionic workshop (RAF).
- APB** 1 Auxiliary power-breaker.  
 2 Aviation Policy Board (US Congress 1947-48).  
 3 Automated passenger bridge.
- APC** 1 Association of Parascending Clubs.  
 2 Approach power control (or compensator).  
 3 Armament practice camp (RAF).  
 4 Avionics planning conference.  
 5 Aviation Press Club (Belg.).  
 6 Area positive control.  
 7 Aeronautical passenger communications.  
 8 Aeronautical public correspondence [public telephone].  
 9 Autopilot computer [also A/PC].  
 10 Adaptive packet compression.
- APCA** Association Professionnelle de la Circulation Aérienne (F).
- APCB** Advanced plenum-chamber burning.
- APCC** Air Pollution Control Center (EPA, US).
- apch, apchg** Approach, approaching (FAA).
- APCI** The Aviation Postcard Club International [Old Coulsdon, CR5 1QB, UK] (Int.).
- APCO** Air Pollution Control Office (EPA, US).
- APCR** Armour-piercing, composite rigid.
- APCS** 1 Air Photo and Charting Service (USAF, Orlando AFB).  
 2 Approach-power compensation system.
- APCTA** Associação Portuguesa dos Controladores de Tráfego Aéreo [office, Lisbon P-1800] (Portugal).
- APD** 1 JETDS code: piloted aircraft, radar, DF/reconnaissance/surveillance (usually SLAR).  
 2 Aerial position, digital (usually 4,096 pulses per 360°).  
 3 Avalanche photo-diode.  
 4 Amplifying photo-diode.  
 5 Airports Policy Divisions [1 to 3] (DETR UK).  
 6 Air Procurement District.  
 7 Air Passenger Duty (UK).
- APDMC, A/PDMC** Aircraft and products, or aircraft-propulsion, data-management computer.
- APDS** Air-picture display system; multi-radar C<sup>2</sup>.
- APDZ** Active parachute drop zone.
- APE** 1 Airline pallet extender.  
 2 Airborne polar experiment, study of ozone depletion (R).
- APEC** Asia-Pacific Economic Co-operation.
- APEP** Armour-piercing, enhanced penetration.
- aperiodic** Of any dynamic and potentially oscillatory system, so heavily damped as to have no period; unable to accomplish one cycle of oscillation; thus \* magnetic compass, \* electric circuit.
- aperture** 1 Diameter of objective of optical instrument, either direct length or function of it; also angular \*, minor angle subtended at principal focus by extremes of objective diameter; numerical \*,  $n \sin u$ , where  $n$  is refractive index between lens and object and  $u$  is objective angular radius (half angular aperture); and relative \* (f-number) relating focal length to objective diameter.  
 2 In radio or radar aerial, either greatest dimension; or, with unidirectional aerial, greatest length across plane perpendicular to direction of maximum radiation, close to

aerial, through which all radiation is intended to pass (ie all except diffuse stray radiation).

**aperture card** Standardised unit in microfilm filing, comprising frame of microfilm mounted in card border; stored, retrieved and projected automatically.

**aperture management** Design of radar cavities and apertures to eliminate multiple reflections.

**Apex** 1 Advanced project for European information exchange, linking all major EC airframe companies.

2 Advanced passenger, or purchased, excursion fare, one of many forms of air carrier fare and flight coupon.

3 Application Executive.

**apex** 1 Highest point in canopy of parachute in vertical descent.

2 In a plan view of a wing, the point where the projected leading edge cuts the aircraft centreline.

**APF** 1 Association des [female] Pilotes Françaises [F-75116 Paris] (F)..

2 Adhesive polymer film.

**APFA** Association of Professional Flight Attendants (US).

**APFC** Air-portable fuel container [or cell].

**APFD** Autopilot flight director.

**APFSDS** Armour-piercing fin-stabilized discarding sabot.

**APG** 1 JETDS code: piloted aircraft, radar, fire control.  
2 Automatic program generator, requires only component and netlist input.

3 Aberdeen Proving Ground, MD (USA, but used by other US services).

4 Air Platforms Group (DSTL, UK).

5 Airplane General [mechanic category] (US).

**APGC** Air Proving Ground Command (USAF, defunct).

**APGM** Autonomous precision-guided missile [or munition].

**APGS** Auxiliary power generation system.

**APHAZ** Aircraft proximity hazard[s], panel investigating airproxes filed by controllers [as distinct from [JAWG]].

**aphelion** Point in solar orbit furthest from Sun.

**Aphids** Advanced panoramic helmet interface demo system.

**API** 1 Air-position indicator.

2 Armour-piercing incendiary.

3 American Petroleum Institute [office, Washington DC].

4 Associazione Pilote Italiane [women pilots; office, I-00198 Rome] (Italy).

5 Application program[ming] interface.

6 Air-photo interpreter.

7 Airframe/propulsion integration [also A/PI].

8 Aim-point initiative.

9 Ascent-phase intercept.

10 Application programming interface.

11 Application implementation.

12 Advance[d] passenger information.

**APICS** Automatic pressure indication and control system.

**APIHC** Armour-piercing incendiary hard core.

**apiquage** According to a 1935 authority "Rotation of an aircraft about its lateral axis in the sense which decreases its angle of incidence (there is no English equivalent)."

**APIRG** African region Planning and Implementation Regional planning Group (ICAO).

**APIRS** Aircraft piloting inertial reference system, or strapdown sensor.

**APIS** 1 Apogee/perigee injection system.

2 Automatic priority interrupt system, for large computer systems with multi-programming.

3 Aircraft parking information system [docking guidance].

4 Air passenger information system.

**APKWS** Advanced precision-kill weapon system (USA).

**APL** 1 Acceptance performance level.

2 Applied Physics Laboratory of JHU.

**APLA** Asociación de Pilotos de Lineas Aéreas (Arg.).

**aplanatic** Free from spherical aberration.

**APLS** 1 Automated ply laminating system.

2 Articulated patient loading system.

**APM** 1 Aluminium powder metallurgy.

2 Aircraft performance monitoring.

3 Aviation de Patrouille Maritime (F).

4 Assistant programme manager.

**APMS** Automatic performance-management system (also, in US, rendered as advanced power management system) or automated performance measurement system.

**APN** 1 JETDS code: piloted aircraft, radar, navaid.

2 Aircraft procurement, Navy (US).

3 Arinc packet network.

4 Aircraft pallet net.

**APNA** Association des Professionnels Navigants de l'Aviation [F-75015 Paris] (F).

**A.P.970** See *Av.P.970*

**apoapsis** Point in orbit furthest from primary; apocentre.

**apoastron** Furthest point in orbit round star.

**APOB, Ap Ob** Airplane observation [of weather].

**apocynthion** Point in lunar orbit furthest from Moon.

**APOD** Airport of debarkation.

**APOE** Air (or aerial) port of embarkation.

**apogalacticon** Furthest point in orbit round galaxy.

**apogee** Point in geocentric (Earth) orbit furthest from centre of Earth (in near-circular polar orbit equatorial bulge could result in satellite being closer to surface at equatorial apogee than at polar perigee).

**apogee motor** Apogee kick motor or kick motor, small rocket designed to impart predetermined (sometimes remotely controllable) velocity change ( $\Delta V$ ) to satellite or spacecraft to change orbit from an apogee position.

**Apollo Applications Program, AAP** Much altered and largely defunct NASA programme intended to make maximum and earliest post-Apollo use of Apollo technology. Major portion evolved into Skylab; other AAP being built in to various plans for future manned and unmanned spaceflight, include Shuttle missions.

**apolune** Apocynthion of spacecraft departed from Moon into lunar orbit.

**APOR** Automated purchase order rescheduling system.

**apostilb** Non-SI unit of luminance equal to  $1/\pi$  international candle (candela)  $m^{-2}$  or  $10^{-4}$  lambert (see *luminance*).

**Apota** Automatic-positioning telemetering antenna.

**APP** 1 Approach (DTI, UK).

2 Approach control office (ICAO).

3 Approach pattern.

4 Association des Pilotes Privés (F).

5 Association of Priest Pilots (US).

6 Autopilot panel.

**APPA** 1 Associação de Pilotos e Proprietários de Aeronaves [office, São Paulo] (Brazil).

2 Association des Pilotes Privés Avions (F).

**apparent precession** Apparent tilt of gyro due to rotation of Earth; vertical component = topple, horizontal = drift.

**apparent solar day** Length of Earth day determined by two successive meridian passages of apparent Sun; longer than sidereal day by time taken by Earth to turn additional increment to nullify distance travelled in solar orbit during this day. Basis of most human timescales, being divided into 24 h, hour being thus defined.

**apparent wander** Apparent precession.

**APPC** Advanced program-to-program communications.

**APP CON** Approach control (FAA).

**Apple** 1 American pilots participating in local education.

2 Aircraft precise-position location equipment.

**Appleton layer** F layer (F<sub>1</sub> and F<sub>2</sub>) of ionosphere, most useful for reflection of EM radiation (see *F-layer*).

**Appleyard scale** Circular slide-rule.

**application-specific integrated circuit** Self-explanatory, an ASIC is designed specifically for one application, and expects to be made by the million in order to play its role in what may be a giant system. Of course, the same i.c. may later find other applications.

**appliqué** Adhesive in the form of thin foils or polymer-based film, usually on aircraft external surface.

**APPP, AP3** Airport Privatization Pilot Program (FAA from 1996).

**APPR** Approach.

**approach** BS.185: 'To manoeuvre an aircraft into position relative to the landing area for flattening-out and alighting'. Now subdivided into various categories, each of which needs pages of explanation defining circumstances, clearances and procedure. Following are brief notes. VFR \* may be made with no radio at uncontrolled airport or airfield. Visual \* may be made in IFR by pilot in contact with runway either not following other traffic or else in visual contact with it, with ceiling at least 500 ft above minimum vectoring altitude and visibility at least three miles. Various types of instrument \* are admissible in IFR with radio TWR authorization: straight-in, circling, precision (with g/s and runway centreline guidance) and parallel (two parallel ILS runways, or, in military aviation, two parallel runways, each with PAR). In certain circumstances pilot may receive clearance for contact \*, even in IFR. ILS \* is most important IFR precision \*. If required and available, pilot can be 'talked down' in GCA or RCA, his only necessary equipment being primary instruments and operative R/T.

**approach area** Airspace over designated region of terminal area controlled by approach control unit (in some cases serving two or more airfields).

**approach beacon** 1 Historically, short-range track beacon (see *BABS*).

2 Today, beacon giving fix before or after approach gate (rare).

**approach control** BS.185: 'A service established to provide ATC for those parts of an IFR flight when an aircraft is arriving at, or departing from, or operating in

the vicinity of, an aerodrome'. DTI (Air Pilot): 'ATC service for arriving or departing IFR flights'. FAA adds 'and, on occasion, VFR aircraft'.

**approach control radar** ACR, radar at approach control facility displaying PPI positions (and, in advanced models, height or alphanumeric data) of all aircraft within its range (which is not less than radius of furthest point in the controlled airspace).

**approach coupler** Electronic linkage between aircraft ILS receiver and autopilot and hence to AFCS; thus aircraft can make 'hands off' approach.

**approach fix** From or over which final approach (IFR) to airport is executed (FAA). On projected centreline 3–5 miles from threshold.

**approach glide** "A glide preliminary to alighting" (B.S., 1940).

**approach gate** Point on final-approach course 1 mile beyond approach fix (ie further from airport) or 5 miles from landing threshold, whichever is greater distance from threshold (FAA).

**approach indicator** Ambiguous: could mean ILS or other cockpit instrument or any of several visual systems on ground indicating angle of approach.

**approach lights** 1 In modern large airfields, any of several systems of lights extending along projected centreline of runway in use towards approaching aircraft to provide visual indication of runway location, distances, alignment, glide path slope, and, probably, transverse horizontal.

2 In smaller or older airfields, one or more lights (often green) at, or extending from, downwind end of landing area to show favourable direction of approach.

**approach noise** Measured on extended runway centreline 1 nm (one nautical mile = 6,080 ft = 1,853 m) from downwind end of runway, with aircraft at height of 370 ft (112.58 m). [See *Noise*].

**approach operations** Flight operations within approach area, esp. those of aircraft arriving or departing, designated as IFR or VFR.

**approach plane** Approach surface, sloping plane below which no aircraft should penetrate; in UK \*\* to grass airfield extends at inclination of 1:30 in all directions from periphery of landing area.

**approach plate** Flight-planning document relevant to specific airfield, giving details of minimum heights, safe headings and weather minimums (UK = minima), and including horizontal map and often also vertical profile for approach to each instrument runway.

**approach power** That used on landing approach, often about 58 percent MTO.

**approach power compensator** Autothrottle, esp. on combat aircraft. The APCS [S adds system] was devised to hold constant AOA (3) during carrier landings.

**approach radar** See *PAR, GCA, SRE*.

**approach receiver** 1 ILS receiver.

2 Historically, radio receiver 'capable of interpreting the special indications given by an approach beacon installation'.

**approach sequence** Order in which aircraft are placed while awaiting landing clearance and in subsequent approach. In busy TMA traffic drawn in blocks from alternate landing stacks.

**approach speed** Usually means IAS.

**approach surveillance radar** Approach control radar.

**approach with vertical guidance** Navaid category at present in two classes: APV 1 provides vertical guidance within 20 m (65.6 ft), and includes GPS and WAAS; APV 2 refines this to 8 m (26 ft), and includes Egnos and Galileo (ICAO).

**appropriation** Act of Congress enabling a Federal agency to spend money for a specific purpose.

**approval** 1 Of manufacturer of aerospace hardware, approval by delegated national authority to design, manufacture, repair or modify such hardware, subject to specified conditions and inspection.

2 Of item of aerospace hardware, certificate issued by delegated national authority that item is correctly designed and manufactured and will thus be likely to perform within its design limits satisfactorily. In case of complete aircraft, C of A, or Type Certificate.

3 Of flight plan, signature by ATC officer or other responsible person that proposed plan does not conflict with pilot's qualifications, aircraft equipment, expected met conditions and expected air traffic, and that flight may proceed.

**approval flight** Required to authorise historic aircraft [usually military] to do one more year flying at airshows.

**approval note** Issued by importing country to cover aircraft with foreign C of A.

**Approved Life** The life of a past or functioning item [either total or between overhauls] authorised by the certifying authority.

**APPSS** Association of Police and Public Security Suppliers.

**APPT** Air-platform propulsion technology; R adds research.

**APQ** JETDS code: piloted aircraft, radar, combination of purposes.

**APQA** Association Québécoise des Transporteurs Aériens Inc. [office, Dorval, PQ; Canada].

**APR** 1 JETDS code: piloted aircraft, radar, passive detection.

2 Airman performance report.

3 Automatic [or auxiliary] power [or performance] reserve.

4 Air-photo reader.

5 Actual performance reserve.

6 Aerostat programmable radar.

**APRA** Air Power Association, previously the Air Public Relations Association [1947–, office Milton Keynes] (UK).

**APRL** 1 Aeronautical Telecommunications Network profile requirements list.

2 Aeroklub Polskiej Rzeczypospolitej Lusoewi [aero club, Warsaw] (Poland).

**APRO** 1 Airline Public Relations Organization [office, Crawley] (UK).

2 Aerial Phenomena Research Organization [1952–] (Int.).

**APRA** Air Power Association, previously the Air Public Relations Association (UK, 1947–).

**APRL** ATN(1) profile requirement list.

**APRO** Airlines Public Relations Organization (UK).

**Aprodeas** Association pour la Promotion et le Développement d'actions de formation pour les Entreprises Aéronautiques et Spatiales (F).

**apron** 1 Large paved area of airfield for such purposes as: loading and unloading of aircraft; aircraft turnaround

operations; aircraft modification, maintenance or repair; any other approved purpose other than flight operations.

2 In engine cowling, any portion hinged down to act as walkway or servicing stand.

3 In ejection seat, lower forward face behind occupant's lower legs.

4 In vehicle fuelled with corrosive liquid, corrosion-resistant panel surrounding, and especially beneath, relevant supply hose coupling.

5 Fairing round front of main landing gear, forming underside of nacelle in flight.

**apron capacity** Nominated number of transport aircraft to be accommodated on particular apron area in designated positions.

**apron-drive bridge** Passenger loading bridge comprising telescopic sections pivoted to terminal, extended and positioned by steerable powered chassis supporting free end. See *bridge* and next.

**apron-drive unit** Self-propelled vehicular support for free end of passenger jetty (jetway), usually provided with two heavy-duty wheels steering through at least 180°.

**Aprt** Airport.

**APRX** Approximate[ly].

**APS** 1 Aircraft prepared for service; standard weighing condition, or condition at which weight is calculated: comprises aircraft in all respects ready to take off on mission of type for which it was designed, complete with all stores, equipment (such as passenger reading material), fuel, crew and all consumable items, but with no revenue load.

2 Appearance-potential spectroscopy.

3 JETDS code: piloted aircraft, radar, search and detection.

4 Adaptive-processor system, or sonar, or sonobuoy.

5 Armament practice station (UK).

6 Auxiliary power system.

7 Aerial Port Squadron (USAF).

8 Advanced planning and scheduling.

9 Airborne-platform subsystem.

10 Armament, or air-vehicle, planning system.

11 Advanced fighter-crew protection system.

12 AIS(1) processing system.

13 Airframe/propulsion/steering.

14 Air Pictorial Service, formed 1951, now AAS(6).

15 Airline Pilots Security Alliance (US, 2002–).

16 Aircraft/altitude/attitude position sensor.

17 Autopilot system [also A/PS].

18 Advanced polar system [satellite].

19 Advanced passenger screening.

**APSA** Airline Pilots' Security Alliance (gun lobby, US).

**APSE, Apse** Ada programming support environment.

**APSG** After passing.

**APSI** Aircraft, or airframe, propulsion-system integration.

**apsides** Plural of *apsis*.

**apsis** Extreme point of orbit, apocentre (furthest) or pericentre (nearest).

**APSP** Advanced programmable signal-processor.

**APSS** Aviation Preservation Society of Scotland [1974–; East Fortune EH39 5LF] (UK).

**APST** Aircraft propulsion systems trainer.

**APT** 1 Automatically programmed [machine] tool.

2 Automatic picture transmission, datalink from satellite vidicon.

3 Automatic, or automated, powerplant test [U adds unit].

4 Advanced passive technology.

5 Airport.

6 Aircrew procedure[s] trainer.

**Apt** Airport.

**APTA** American Public Transportation Association.

**APTS** 1 Automatic picture-transmission system.

2 Airport, port and terminal security.

**APTT** Aircrew part-task trainer.

**APTU** Aerodynamic and Propulsion unit.

**AP-25** C of A (R).

**APU** 1 Auxiliary power unit; /GCU adds generator control unit.

2 Weapon release unit (R).

3 Automatic pull-up.

**APUC** 1 APU controller.

2 Average program unit cost.

**APV** 1 Autopiloted vehicle.

2 Accumulated project value.

3 Approved.

4 Approach with vertical guidance.

**APVO** See *IA-PVO*

**APW** 1 Automatic pitch warning, required on aircraft [eg, SR-71] with possible low or negative pitch stability.

2 Aircraft, or airborne, proximity warning; I adds indicator, S system.

**APXS** Alpha-proton, or particle, X-ray spectrometer.

**AQAD** Aeronautical Quality-Assurance Directorate (MoD-PE, now Qinetiq, UK).

**Aquabrasive 330** Sand/water mix for high-velocity stripping of markings or sealant from airfield paved surfaces.

**AQAP** Allied quality-assurance publication (NATO).

**AQB** Advanced quadrature band.

**AQC** Aviator Qualification Course [or Certificate] (USA).

**AQD** Operational airline quality determination programme.

**AQF** Avionics qualification facility.

**AQL** 1 Agreed quality level [material specifications, dimensional tolerance, etc].

2 Advanced quick look (Guardrail).

**AQP** 1 Advanced qualification program [US commercial pilots].

2 Avionics qualification procedure.

**A-QPSK** Aeronautical quadrature phase-shift keying.

**AQR** Airline quality rating.

**AQS** Advanced quality system.

**AQ-SAP** Acquisition special-access program.

**aquaplane** To run wheeled vehicle, esp. landing aircraft, over shallow standing water at so high a speed that weight is supported wholly by dynamic reaction of water; tyres, out of ground contact, unable to provide steering or braking. An empirical formula is  $V_a = 9\sqrt{p}$  where  $V_a$  is aquaplaning speed in knots and  $p$  is tyre pressure in lb/in<sup>2</sup>.

**aqueous** Pertaining to water, thus \* solution.

**Aqueous film-forming foam** Typically 3 to 6 per cent halon/Halotron/BCF or other firefighting agent and 97 to 94 per cent water.

**Aquila** Code address of EQD.

**AQZ** Area QNH zone.

**AR** 1 Air [aerial, airborne] refuelling.

2 Air receive.

3 Aspect ratio.

4 Alternative route.

5 Army [or Air] Regulation.

6 or A/R, altitude reporting.

7 Air radar.

**A/R** Approach/reverse (nozzle mode).

**AR** Aspect ratio (US).

**ARA** 1 Aircraft Research Association [Bedford MK41 7PF] (UK, 1953–).

2 Airborne-radar approach.

3 Airspace restricted area.

4 Airborne Research Australia.

5 Alternative reference area.

6 Air-refuelling area (RAF).

7 Avanced Ram analysis [M adds method].

8 Anti-radar attack (UAV).

9 Advisory radio area.

10 Atmospheric research aircraft (FAAM 3).

**ARAC** Aviation Rulemaking Advisory Committee (FAA).

**Arades** Automatic radar evaluation system and jammer test set.

**Araldite** Trade name (Ciba) of two-component (resin + hardener) epoxy-based adhesive used in airframe structural bonding.

**ARALL, Arall** Aramid/aluminium laminate(s).

**aramid fibre** Man-made fibre of extraordinary tensile strength, so named because of its chemical and physical similarity to spider-web fibre; see *Kevlar*.

**Aramis** 1 Area multiple intercept system (radar).

2 Advanced runway arrivals management to improve airport safety and efficiency (Euret).

**AR&M** Availability, reliability and maintainability.

**AR&TF** Aircraft Repair and Transportation Flight (RAF).

**ARAS** Auto refuelling assembly system.

**ARASP** Advanced radar airborne signal processor.

**ARATCC** Air Route Air-Traffic-Control Center (FAA).

**ARB** 1 Air Registration Board, then Airworthiness Requirements Board, now Airworthiness Review Board, part of EASA. (UK).

2 Air Research Bureau (BRA, ICAO).

3 Air Reserve, or Rescue, Base (USAF).

4 Arbitrary waveform generator.

**arbitrary landing distance** See *ALD*.

**arbitrated loop** A database topology which can link <128 nodes in a shared ring.

**ARBS** 1 Angle/rate bombing system [or set].

2 Airline Representative Board Sweden.

3 Air, or advanced, refuelling boom system.

**ARC** 1 Aeronautical Research Committee [1920–45], then Council [1945–79] (UK).

2 JETDS code: piloted aircraft, radio, communications.

3 Ames Research Center (NASA).

4 Area reprogramming capability (EW).

5 Arc, position of compass rose on EFIS.

6 Air Race Classic (US from 1977, for female pilots only).

7 Airport runway configuration.

8 Automatic radial centring (VOR).

9 See *Air Refuelling Control*.

**arc** Ground track of aircraft flying constant DME distance from navaid.

**Arcads** Armament control and delivery system.

**Arcal** Aircraft, or airborne, radio control of airfield lighting.

**Arcan** Aeronautical Radio of Canada.

**arc and plug** See *plug aileron*.

**ARCC** 1 Airworthiness, or airframe, Requirements Co-ordinating Committee (UK).

2 Aeronautical Rescue Co-ordination Centre (RAF Kinloss, UK).

**ARCH** Agricultural remotely controlled helicopter.

**Archie** Colloq., anti-aircraft gunfire, 1915–18 (allegedly from ‘Archie! Certainly not’, music-hall song; archaic).

**archway** Airport-gate detector requiring passenger to pass through sensitive magnetic field, usually alongside baggage screening; also called AMD or WTMD.

**ARCM** Anti-radiation countermeasures.

**Arcmas** Automatic real-time cable monitoring and analysis system.

**arc-minute, arc-second** See *angular measure*.

**ARCO, Arco** Airborne remote control officer (RPVs).

**ARCP** 1 Air refuelling control point.

2 Aerodrome Reference Code Panel (ICAO).

**ARCS** 1 Acquisition radar and control system.

2 Aerial rocket control system.

3 Airline request communication, or computer, system.

**ARCSS** Autonomous rendezvous and capture sensor system.

**Arctic air mass** Major class of air mass most highly developed in winter over ice and snow, although surface temperature may be higher than that for Polar masses.

**Arctic minimum** Densest of standard model atmospheres assumed in aircraft performance calculation.

**Arctic smoke** Surface fog essentially caused by very cold air drifting across warmer water.

**ARCTS** Automated radar-controlled terminal system.

**ARD** 1 Anti-radar drone.

2 Atmospheric re-entry demonstrator.

3 ATC-related delay.

4 Advanced requirement[s] definition.

**ARDC** Air Research and Development Command (USAF, established 1 February 1950, became Systems Command 1 April 1961).

**ARDC model atmosphere** Devised by ARDC, published 1956 (see *model atmosphere*).

**Ardec** Armament Research Development and Engineering Center (USA).

**ARDF** Airborne radio direction-finding.

**Ardhan** Association pour la Recherche de Documentation sur l’Histoire de l’Aéronautique Navale (F).

**ARDS** Airborne radar demonstration system, links J-Stars, Astor, Orchidée.

**ARDU** Aircraft Research & Development Unit (RAAF).

**ARE** 1 Airborne radar extension (surveillance C-130).

2 Altitude-reporting equipment (towed target).

3 Admiralty Research Establishment.

4 Algebraic Riccati equation for LQR [1724].

**area** SI unit of plane area is square metre (m<sup>2</sup>); to convert from ft<sup>2</sup> multiply by 0.092903; from hectares by 10<sup>4</sup>; from sq yd by 0.836127.

**are** Non-SI unit of area = 10<sup>-2</sup>m<sup>2</sup>.

**area, aerospace surfaces** See *gross wing* \*, *net wing* \*, *disc* \*, *equivalent flat-plate* \*, *control-surface* \*.

**area bombing** Bombing in which target occupies large area, such as built-up area of city, with aiming point loosely defined near centre (when expression was current, WW2, marked at night by TIs or TMs).

**area defence system** In general, anti-aircraft or AAW system capable of providing effective defence over large area (dispersed battlefleet, task force, ground battlefield or large tract of country containing several cities) rather than point target.

**area-denial munition** Explosive device, usually dispensing cluster bombs each with time-delay fuze, to deny area to enemy ground forces.

**area-increasing flap** Wing flap which in initial part of travel moves almost directly rearwards to increase wing chord, without significant angular movement.

**area loading** Mass divided by gross projected area W/S [lifting-body aircraft].

**area navigation, R-nav, RNAV** Navaid that permits aircraft operations on any desired course within coverage of station-referenced navigation signals or within limits of self-contained system capability (FAA); thus, does not constrain aircraft to preset pathways.

**area-navigation route** Established R-nav route, pre-defined route segment, arrival or departure route (including RNAV SIDs and STARs). Route, based on existing high-altitude or low-altitude VOR/DME coverage, which has been designated by Administrator and published (FAA).

**area ratio** 1 In rocket thrust chamber, usually ratio of idealised cross-section area at nozzle to minimum cross-section area at throat; also called expansion ratio. In general, chambers designed to expand products of combustion into atmosphere have \*\* 10:1 to 25:1; those for use in upper atmosphere may exceed 50:1; SSME for Space Shuttle has \*\* 157:1.

2 For a wing, S/b<sup>2</sup>, area divided by span squared, reciprocal of aspect ratio.

**area rule** Formulated by Richard T. Whitcomb at NACA in 1953. For minimum transonic drag at zero lift aircraft should be so shaped that nose-to-tail plot of gross cross-section areas should approximate to that of ideal body for chosen flight Mach number. Thus, addition of wing should be compensated for by reduction in section of body (which gave some early area-ruled aircraft “wasp waists”, which are generally undesirable). Obviously, streamlines cannot be sharply deflected; it is not possible to have perfect area-ruling both with and without bulky external stores. In 1954–55 rules extended to Mach 2 by plotting cross-section area distributions on sloping axes approximately aligned with Mach angle.

**area sterilization** Seeding part of sky with chaff of such extent and density that radar operation is impossible.

**AREF, ARef** Air Refueling Squadron (USAF), also ARS.

**Arens** A remote control system in which push/pull commands are transmitted by a steel cable tightly surrounded by a guiding coil spring, the whole sliding in a tube.

**Arento** National telecommunications organisation (Egypt).

**ARES** 1 Adaptable radar-environment simulator.

2 Airborne radar emitter simulator.

3 Aerial regional scale environmental survey.  
 4 Advanced route evaluation system.  
 5 Affordable responsive spacelift [Space Command] (USAF).

**Aresa** Association des Radio-Electroniciens de la Sécurité Aérienne (F).

**Aresti** International procedures devised by José \* for governing competitive aerobatics to set formula stipulating competing aircraft, set and free manoeuvres, [rendered graphically], judging and marking, now replaced by Aerobatic Catalogue.

**ARF** 1 Air Reserve Forces; suffix PDS adds personnel data systems (US).  
 2 Airborne relay facility, or facilities.  
 3 Air Reconnaissance Facility.  
 4 Airlink risk factor.

**ARFA, Arfa** Allied Radio-Frequency Agency (NATO).  
**Arfab** Allied radio frequency allocation board (NATO).  
**ARFAC** Australian Royal Federation of Aero Clubs.  
**ARFC** Aerospace Reconstruction Finance Corporation (US Government).  
**ARFF** Airfield [or airport or aircraft] rescue and fire-fighting (vehicle).  
**AR5** NBC hood and respirator (UK, RAF, RN).  
**ARFOR** Area forecast (Int. Met. Figure Code, ICAO).  
**ARG** 1 Amphibious Ready Group, with air assets (USMC).  
 2 Aeronautics Research Group (EREA).  
 3 Airfield Research Group [1977-; Thetford IP24 2AB] (UK).  
**ARGMA** Army Rocket and Guided Missile Agency (USA, now Miradcom).  
**argon** Most widespread inert gas in atmosphere; typical sea-level about 0.934%. Used in some fluorescent lamps and filament bulbs and as constituent of breathing mixtures, but most important in steel and titanium production and to prevent oxidation in welding.  
**Argos** National space-based navigation system (F).  
**ARGS** Anti-range-gate stealing.  
**argument** Angle or arc (astronomy). Thus \* of perigee, angular arc traversed from ascending node to perigee as seen by observer at near focus, measured in orbital plane in satellite's direction of travel.  
**Argus** Advanced remote ground unattended sensor.  
**ARH** 1 Active radar homing.  
 2 Anti-radar homing.  
 3 Anti-radiation homing.  
 4 Armed reconnaissance helicopter.

**ARHMP** Accelerated radiation-hardened micro-electronics production, or protection.

**ARI** 1 Aileron/rudder interconnect.  
 2 Airborne, or aircraft, radio installation (UK).  
 3 Airpower Research Institute (US).  
 4 Aviation restructure initiative.  
 5 Additional requirement[s] for import.  
 6 Azimuth/range indicator.  
 7 Aviation Research Institute (USA, not connected with 3).

**ARIA** Apollo (later Advanced) range instrumentation aircraft.

**ARIARDA, Ariarda** Army Research Institution Aviation R&D Activity (USA).

**ARIC** Airborne radio and intercom control.

**Aries, ARIES** 1 Airborne research integrated experimental system [flight instrumentation] (NASA Langley).  
 2 Airborne recorder for IR and EO sensors.  
 3 Aeronautical reporting and information-exchange system.  
 4 Airborne reconnaissance integrated electronics suite.

**ARINC, Arinc** Aeronautical Radio Inc, with subsidiary Arinc Research. Non-profit research organisation responsible for aeronautical radio standards and widespread ground aids, esp. communications, across Pacific and in other regions. The authority publishes numerous specifications for avionics, notably:

400	Basic design guidelines.
404A	Specifications for packaging.
429	Initial standard digital data highway [latest version 42913]. See 600.
500	baseline specifications for analog equipment.
578	Standards for VOR.
600	Standards of basic technologies and packaging.
629	Standards for 2 Mbit/s databases.
700	Specifications for digital equipment.
708	Standards for weather radar.
755	Standards for multimode receivers.

**Arinc communications and reporting system** VHF link between aircraft systems and ground-based computer, plus messages generated by menu-driven CDU.

**ARIP** Air refuelling initial point.

**ARIS** Anti-resonance isolation system.

**arithmetic unit** Heart of typical digital computer; portion of central processor where arithmetical and logic functions are performed; invariably contains accumulator(s), shift and sequencing circuitry and various registers.

**ARJA** Association Suisse Romande des Journalistes Aéro & Astronautique (Switz.).

**ARJS** Airborne radar jamming system.

**ARL** 1 Aeronautical Research Laboratories (Australia).  
 2 Aerospace research laboratories (US, OAR).  
 3 Air Resources Laboratory (NOAA).

**AR-L** Air [or airborne] reconnaissance-low.

**Arlat** Association of Registered and Licensed Aeronautical Technicians [Pretoria, South Africa].

**ARM** 1 Anti-radiation missile.  
 2 Atmospheric radiation measurement (US Dept of Energy).  
 3 Advanced radar mode[s].

**arm** 1 To prepare explosive or pyrotechnic device so that it will operate when triggered.  
 2 Horizontal distance from aircraft or missile reference datum to c.g. of particular part of it.  
 3 See *tail arm*.

**Armak** Aeronautical certification authority (R).

**armament** Carried on combat aircraft specifically to cause injury, by direct action, to hostile forces. Excludes radars, laser rangefinders (unless they cause optical injury by intent), illumination devices, detection or tracking devices, defoliating sprays, smokescreen generators and, unless filled with napalm, drop tanks.

**Armat** Anti-radar missile, Matra.

**armature reaction** In d.c. generator or alternator, distortion of main field by armature current, factor

fundamental to machine design, and speed/voltage regulation.

**ARMC** Area Regional Maintenance Center.

**ARM/CM** Anti-radiation missile countermeasures.

**ARMED** Anti-radiation missile, decoy.

**armed** System switched to function upon command; thus, eg, when pneumatic escape chute (slide) is \* it extends immediately passenger door is opened.

**armed decoy** Aerodynamic vehicle launched by penetrating bomber to generate additional target for hostile radars, send out its own countermeasures and, if it finds hostile aerial target, home on it and destroy it.

**armed reconnaissance** Mission flown with primary purpose of finding and attacking targets of opportunity.

**ARMET** Area forecast, upper winds and temperatures (ICAO).

**arming** Closing an electrical circuit [or in any other way] enabling a device or system to function when required. A typical system is a thrust reverser.

**arming vanes** One name for slipstream-driven windmill used in some aerial bombs, mines and other stores to unscrew safety device or in some other way arm device as it falls.

**ARMMAC** Active remote maintenance monitoring and control (ILS, VOR etc).

**armour** Typical materials used in airborne armour include thick light alloys, titanium alloys, boron carbide and several filament-reinforced composites.

**armourer** Trade for military ground crew specialising in armament.

**arm restraint** In some types of ejection seat, automatic straps or arms energised during firing sequence to hold occupant's arms securely against aerodynamic forces until he is released from seat.

**ARMS, Arms** 1 Aircraft reporting and monitoring system, combines DMU, FDIU, FDR and AIDS.

2 Airport remote monitoring system.

3 Aviation reconfigurable manned simulator.

4 Airborne reconnaissance and marine surveillance.

5 Aerospace relay mirror system.

**Armstrong line** Pressure equivalent to about 63,000 ft, 19,200 m, at which human blood boils.

**ARMTS** Advanced radar maintenance training set.

**army co-operation** Major elements were: reconnaissance [including photography], artillery observation, contact patrols, supply dropping and, occasionally, tactical co-operation (archaic).

**ARN** Active reduction of noise.

**Arnd** Around.

**ARNG, ArNG** 1 Army National Guard (USA).

2 Arrange.

**ARNO** Azimuth/range not operating.

**Arnold Engineering Development Center, AEDC** Large USAF installation in Tennessee charged with aerodynamic development, especially of air-breathing propulsion.

**ARO** 1 Air Traffic Services reporting office.

2 Aspheric reflective optics.

3 Airport reservation office, for arranging GA traffic slots.

4 Aerial refueling operator.

5 Aircraft Recovery Officer.

6 Army Research Office (US).

7 Airfield, or airport, reporting office.

**AROD** 1 Aerodrome runway and obstruction data.

2 Airborne remotely operated device.

**AROG** Auto roll-out guidance (after blind Cat 3b landing).

**aromatic** Hydrocarbon petrol (gasoline) fuels containing, in addition to straight-chain paraffins (kerosenes), various linked or ring-form compounds such as toluenes, benzenes and xylenes. Some cause rapid degradation of natural or synthetic rubbers.

**AROS** African Regional Organization for Standardization.

**Arosys** Adaptive-rotor system.

**ARP** 1 Air report (written).

2 Aero-Rifle Platoon (infantry section of Air Cavalary).

3 Air raid precautions (UK, WW2).

4 Aerospace, or aeronautical, recommended practice (SAE).

5 Aerodrome reference point (ICAO).

6 Aluminium-reinforced polyimide.

7 Attack reference point (appears in practice to mean IP) (US).

8 Applied research programme.

9 Anti-runway penetrator.

10 Airworthiness review programme.

11 Antenna rotation period.

12 Aviation regulatory proposal (Australian).

13 Anti-rotation period (radar).

14 Air-data reference panel.

**ARPA, Arpa** Advanced Research Projects Agency, created 1958, became Darpa.

**ARPC** 1 Air Reserve Personnel Center (USAF, Denver, Colorado).

2 Ascending ring-plane crossover (Saturn).

**ARPDD** Automatic [or airborne] radar periscope detection and discrimination.

**ARPS** 1 USAF Aerospace Research Pilots' School, Edwards AFB, Calif.

2 Advanced radar processing subsystem (AEW).

**ARPT** Airport.

**ARPTT** Air-refueling part-task trainer (USAF).

**ARQ** Automatic error correction [repeat request].

**ARR** 1 Arrival message.

2 Airborne radio relay.

3 Air-refuelling receiver.

4 Air-traffic-control radar recording.

**array** Transmitting or receiving aerial (antenna) system made up of two or more (often 20 or more) normally identical aerials positioned to give enormously multiplied gain in desired direction.

**ARRC** Allied Command Europe Rapid-Reaction Corps [HQ, D-41179 Mönchengladbach] (NATO).

**ARRCOS** Arrival co-ordination system.

**arrested landing** Normal fixed-wing landing on aircraft carrier, engaging arrester cable.

**arrested-propeller system** In aircraft with free-turbine turboprop engines, system for bringing one or more propellers to rest and holding them stationary while gas generator continues to run. Should not cause turbine overheat condition; speeds up turn-round and sustains on-board power without causing danger to passengers or others near aircraft.

**arresting barrier** Runway barrier.

**arresting gear, arrester gear** Fixed to aeroplane landing

area to halt arriving aircraft within specified distance. Many systems qualified for use on aircraft carriers, rough battlefield airstrips (in this case, mainly by light STOL machines) and major military runways. In nearly all cases involves one or more transverse cables traversed by hook on arriving aircraft. Kinetic energy of aircraft dissipated by cable pulling pistons through hydraulic cylinders or rotary brakes, driving fan through step-up gears or towing heavy free chains.

**arresting hook, arrester hook** Strong hook hinged to some land-based and most carrier-based aeroplanes for engagement of arresting gear; usually released by pilot from flight position to free-fall or be hinged under power to Engage position.

**arresting unit** Energy-absorbing device on one, or usually both, ends of arrester wire.

**ARRGp** Aerospace Rescue and Recovery Group (USAF).

**arrival** 1 In flight planning, calculated time when destination should be reached (see *ETA*); may be determined by plotting straight line from last waypoint to overhead destination, but professional pilots refine this to take account of approach procedures.

2 Inbound unit of traffic (ie one aircraft approaching destination airfield).

3 Colloq., derogatory description of a particular landing.

**arrival runway** At major airfield, runway currently being used only by arrivals (2).

**arrival stall** Caused by attempting to line up on landing approach by rudder alone, without bank, causing inner wing to stall. Trying to recover by aileron aggravates situation.

**arrival time** Time at which inbound aircraft touches down (BS, FAA); airlines sometimes use different definitions, esp. time at which first door opened.

**ARRM** Affordable rapid-response missile [D adds demonstrator].

**ARROW** 1 Aircraft routing right of way (not spoken as word) (US).

2 Checklist for documents carried: Airworthiness, Registration, Radio license, Operational limitations, Weight/balance. Suffix-C adds Charts [outside local area].

**arrow engine** piston engine having three, or multiples of three, cylinders arranged with one (or one row) vertical and others equally inclined on either side. Also called broad-arrow or W (if inverted, M or inverted-arrow).

**arrow stability** Weathercock stability stemming from simple distribution of mass and side areas.

**arrow wing** 1 Markedly swept wing; in his Wright Brothers lecture in 1946 von Kármán used \*\* exclusively, and 'swept wing' did not become universal until 1948.

2 Modern meaning is wing with inboard section [with subtly curved profile] with LE sweep close to 80° and outer panels of more conventional form, eg sweep 30°–50°.

**ARRS** Aerospace Rescue & Recovery Service (USAF).

**ARRW** Aerospace Rescue & Recovery Wing (USAF).

**ARS** 1 Special air report (written).

2 Atmosphere revitalisation subsystem.

3 Auto-relight system.

4 Attack radar set.

5 Air Rescue Service (from 1996 ARRS).

6 American Rocket Society (became AIAA in 1962).

7 Attitude retention system (XV-15 FCS).

8 Automated retrieve system.

9 Aeroplane Repair Shop (RAF 1918–45).

10 Automated radar summary, charts issued hourly showing local echoes.

11 Active ranging system [airborne laser].

12 Air control centre. Recognised air picture production centre, Sensor fusion post [ACCS] (NATO).

13 Active radar seeker.

**ARSA** 1 Airport radar service area (in US reclassified 1993 as Class C airspace).

2 Apron, or advisable, radar service area.

3 Aeronautical Repair Station Association [office, Alexandria, VA22314-2903] (US).

**ARSAG, Arsag** Aerial Refueling Systems Advisory Group (US).

**Arrips** Aerial refuelling store integrated power system [RAT1].

**Arsis** Aircraft rotation, scheduling and information system.

**ARSR** Air-route surveillance radar, ARTCC radar to detect and display aircraft en route between TMA's.

**ART** 1 Actuator remote terminal.

2 Air Reserve Technician (Afres).

3 Airborne-radar technician.

4 Adaptive-resonance theory.

5 Auto reserve thrust.

**Artac** The Alliance of Independent Travel Agents (UK, office Malborne, Peterborough).

**Artads** Army tactical data system (USA).

**Artas, ARTAS** Air-traffic control radar tracker and server.

**ARTCC** Air-route traffic control center (FAA).

**ARTCS** Advanced radar traffic control system (FAA).

**ARTD** Applied research technology demonstrator.

**Artes** Advanced research in telecommunications (CNES, ESA).

**ARTF** 1 Alkali-removable temporary finish.

2 Aircraft Recovery and Transportation Flight (RAF and USAF).

**Arthur** Any AFCS (F, colloq.).

**ARTI, Arti** Advanced rotorcraft technology integration.

**article** Generalised term for one aircraft, especially one operated by the CIA.

**articulated blade** In rotorplane, rotor blade connected to hub through one or more hinges or pivots.

**articulated rod** In radial piston engine, any connecting rod pivoted to piston at one end and master rod at other.

**artificial ageing** Ageing of alloy at other than room temperature, esp. at elevated temperature.

**artificial feel** In aircraft control system, esp. AFCS, forces generated within system and fed to cockpit controls to oppose pilot demand. In fully powered system there would otherwise be no feedback and no "feel" of how hard any surface was working. Simulates ideal response while giving true picture of surface moments insofar as response curve of each surface and their harmonisation are concerned. System invariably strongly influenced by dynamic pressure *q*. Generates force for each surface according to optimised law [not necessarily same for all axes] and prevents pilot from damaging aircraft by primary control (but rarely takes into account rapid trimmer movements).

**artificial gravity** Simulated gravitational effects (but not field) in space environment. Obvious method involves rotation about axis, which introduces Coriolis forces.

**artificial horizon** 1 Primary cockpit flight instrument which, often in addition to other functions, indicates aircraft attitude with respect to horizon ahead.

2 Simulation of Earth horizon (planet's limb) for use as uniform and accurate sensing reference in near-Earth spaceflight (Orbital Scanner is programme generating data for this ideal).

**artificial satellite** Man-made satellite of planetary body.

**artillery observation** Assisting friendly artillery by reporting where shots are falling.

**Artima** Aircraft reliability through intelligent materials application (Acare).

**ARTIP, Artip** Advanced radar-technology insertion program (US).

**Artist** Advanced radar technology integrated systems testbed.

**art. obs.** Artillery observation (RFC, RAF, WW1).

**ARTS, Arts** 1 Automated, or automatic, radar terminal system (FAA, from 1966).

2 Aircraft-recovery transport system (after belly landing, etc.).

3 Automated remote tracking station.

4 All-round thermal surveillance.

5 All-purpose remote transport system (USAF).

6 Advanced radar target system (UK).

**ART/S** Aerial refuelling tank system.

**ARTT** Above real-time training.

**ARU** 1 Attitude retention unit (helicopter height-hold).

2 Auxiliary readout unit (ECM).

3 Aviation Research Unit, part of ARI (7).

4 Audio reproducer unit.

**ARV** Air recreational vehicle.

**ARW** 1 Air Refueling Wing (USAF).

2 Advanced radar warning: E adds equipment, S system.

**AS** 1 Aerospace Standard; major standards are 9001 and 9010 (SAE).

2 Air Station, HQ of unit[s] not directly equipped with aircraft (USAF).

3 Anti-submarine; less often, anti-ship (both also A/S).

4 Airlift Squadron (USAF).

5 Anti-skid (also A/S).

6 Air start, pneumatic service vehicle.

7 Altimeter setting.

8 Anti-spoofing.

9 Aerosystems [engineer branch] (RAF).

**As** 1 Structural aspect ratio.

2 Altostratus.

**A<sub>s</sub>** 1 Web average burning surface area of solid rocket.

2 Cross-section area of stringer.

**AS3, AS<sup>3</sup>** Aviation Services and Suppliers (US).

**ASA** 1 Anti-static additive [fuel].

2 American Standards Association.

3 Airline Suppliers Association [non-profit, monitors supply of parts to detect counterfeit items, 1996-] (US).

4 Army Security Agency (USA).

5 Advanced system architecture.

6 Air-services agreement, between operators and/or governments on particular routes.

7 Autoland status annunciator.

8 Aircraft, or airborne, separation assurance.

9 Airborne shared-aperture.

10 Aviation Safety Authorities; SC adds Steering Committee.

11 Advertising Standards Authority (UK).

12 See SAA (12).

**ASAA** 1 American Society of Aviation Artists (founded 1986).

2 Acars system access approval

**ASAAC** Allied Standard[s] Avionics Architecture Council (NATO Europe).

**ASAC** 1 Asian Standards Advisory Committee.

2 Aviation Security Advisory Committee.

3 Airborne surveillance, airborne control, comprises autonomous radar, datalink, C<sup>2</sup>, navigation/guidance.

4 Australian Sport Aviation Confederation, Inc. [office, Deakin West, ACT 2600] (Australia).

5 Air, later (6-03) Aviation, Security Advisory Committee (TSA).

**ASaC** Airborne surveillance and control.

**AS/Ac** Air search/air cued.

**ASAG** Air Security Advisory Group (TSA).

**ASAI** Automated subsystem of aeronautical information, linked with FDR(1)/RDP(1).

**ASALM** Advanced strategic air-launched missile.

**AS&C** Airborne surveillance and control.

**ASAP** 1 Airborne shared-aperture program (fighter radar).

2 Australian Society for Aero-historical Preservation.

3 Advanced survival avionics program (USAF).

4 Aviation Security Action Plan, audits national standards for counter-terrorism (ICAO).

5 Aviation Safety Action Partnership, ot Program [Int.].

6 Aggressor space applications project.

7 Aerospace Safety Advisory Panel (NASA).

8 Association of Star Alliance Pilots.

9 American Society of Aerospace Pilots (Schaumburg IL).

10 Airline, or aviation, Safety Action Program (FAA).

**ASAR** Advanced synthetic-aperture radar.

**ASARG** Autonomous synthetic-aperture-radar guidance; P adds program.

**ASARS** 1 Advanced synthetic-aperture-radar system.

2 Airborne search and rescue system.

**ASAS** 1 All-source analysis system; RW adds remote workstation.

2 Airborne, or aircraft, separation assistance system [part of Mermoz effort] (Int.).

**ASAT** 1 Aviation situation-awareness trainer.

2 Advanced subsonic aerial target.

3 See next.

**A-sat** Anti-satellite.

**Asata** Asociación de Aviadores de Trabajos Aéreos (Spain).

**ASB** 1 Air Safety Board (UK, and US 1938-40).

2 American Standard Beam (structural sections).

3 Assembly section breakdown (airframe).

4 Alert service bulletin.

5 Airline Stabilization Board (US).

**asbestos** Fibrous silicate minerals once used for thermal insulation and as reinforcement in composites such as Durestos.

**ASBM** Air-to-surface ballistic missile, = ALBM.

**ASBS** Automated self-briefing system.

**ASC** 1 American Standard Channel (structural sections).

2 Aeronautical Systems Center (Wright-Patterson AFB).

3 Ascend, ascending (ICAO).

4 Aviation Statistic[s] Center (Ottawa, Canada).

5 American Society for Cybernetics.

6 Aircraft-system controller.

7 Air Service Command (USAAF, defunct).

8 Air Support Command (RAF, defunct).

9 Aviation Safety Council (Taiwan).

10 Airborne strain counter.

11 Aerospace planning chart.

12 Airborne surveillance and control.

13 Airport Security Council [JFK International] (US).

14 Alternative simplified credit.

**Ascap** Automatic SSR-code assignment procedure.

**Ascas** Automated security-clearance approval system.

**ASCB** 1 Avionics synchronized control bus; commercial counterpart to MIL-1553B (Sperry).

2 Avionics, or aircraft, standard communications bus.

**ASCC** 1 Air Standards Coordinating Committee (US, UK, Canada, Australia, NZ).

2 Alternate Space Control Center, run by USN 1988–2005 (USAF).

**ASCCA, ASC<sup>2</sup>A** Air and Space Command and Control Agency (USAF).

**ASCE** American Society of Civil Engineers.

**ascending node** Point at which body crosses to north side of ecliptic.

**ascent** Rise of spacecraft from body other than Earth.

**ASCIET** All-Service Combined Identification Evaluation Team (US).

**ASCI** American standard code for information interchange, 7-bit plus 8th bit for parity in serial transmissions.

**ASCL** Advanced sonobuoy communications link.

**ASCM** 1 Anti-ship cruise missile.

2 Advanced spaceborne computer module.

**Ascon** Airport surveillance and control [system] (Alcatel).

**Ascot, ASCOT** 1 Airspace control and operations training [simulator].

2 Aerial-survey control tool.

**ASCP** Air-supply and cabin-pressure control[ler].

**ASCS** Aircraft-systems central system.

**ASCSII** Aerospace sensor component and subsystem investigation and innovation (USAF).

**ASCTU** Air-supply controller/test unit.

**ASCU** Armament station control unit.

**ASD** 1 Accelerate/stop distance.

2 Aeronautical Systems Division (AFSC, USAF).

3 Aerospace Systems Directorate (NASA, Ames).

4 Average Sortie Duration.

5 Aircraft, or airborne, or air, situation display.

6 AeroSpace and Defence Industries Association of Europe [formed 27 April 2004 by merger of Aecma, EDIG, Eurospace and SBAC, office Brussels B-1200] (Int.).

**ASDA, ASDa** 1 Accelerate/stop distance available.

2 Association Suisse de Droit Aérien (now ASDAS) (Switzerland).

**Asdar** Aircraft-to-satellite data relay.

**ASDAS** Association Suisse de Droit Aérien et Spatial (Switzerland).

**ASDC** 1 Alternative Space Defence Centre.

2 Armament signal data converter.

**ASDCS** Airspace surveillance display and control system (WSMR).

**ASDE** 1 Airport surface, or airfield surveillance, detection equipment (from 1952).

2 Air situation data exchange (NATO).

**ASDF** Air command and control Simulation and Demonstration Facility.

**ASDI** Aircraft situation display indicator.

**Asdic** Armed Services Documents Intelligence Center (US).

**asdic** Sonar, from “Anti-Submarine Detection Investigation Committee”; UK term originally (1925) applied to high-energy sound systems carried in surface vessels.

**ASDL** 1 Airborne self-defence laser.

2 Aeronautical satellite data-link.

**ASDR** 1 Avionic systems demonstrator rig.

2 Airport surface detection [ie, surveillance] radar.

**ASDS** Aircraft-sound description system.

**ASE** 1 Airport support equipment.

2 Amalgamated Society of Engineers (US).

3 Autostabilization equipment.

4 Allowable steering error (HUD).

5 Auto slat extension (DC-10).

6 Aircraft survivability, or self-protection, equipment.

7 Aero servo-elastic [mode].

8 Altitude setting, or altimetry-system, error.

9 Airplane, single-engine; see *ASEL*, *ASES*.

**Asean, ASEAN** Association of SE Asian Nations.

**Asecna** Agence Pour la Sécurité de la Navigation Aérienne (Africa & Malagasy) office Dakar, Senegal.

**ASEDP** Army Space Exploration Demonstration Program (USA).

**ASEE** American Society for Engineering Education [office, Washington, DC20036] (US).

**ASEG** All-Services Evaluation Group (USN).

**ASEL** 1 Airplane, single-engine, land.

2 A-weighted sound exposure level.

**Asema** Advanced special electronic mission aircraft (USAF).

**AS/EN.9100** Based on ISO.9001–2000, sets quality, safety and technology standards in air transport [1977–] (IAQG).

**ASEP** ACCS [Allied command and control system] surveillance exploratory prototype (NATO).

**ASES** Airplane, single-engine, sea.

**ASET** 1 Aircraft survivability equipment trainer (threat simulator).

2 Automatic scoring electronic target; A adds aircraft.

**Asetma** Asociación Sindical Española de Tecnicos de Mantenimiento de Aeronaves [E-28042 Madrid] (Spain).

**ASETS** Airborne seeker evaluation test system.

**ASF** 1 Air Safety Foundation.

2 Aviation Sans Frontières [humanitarian, non-profit; office Paris – Only] (Int., F).

3 Aircraft Servicing Flight (RAF).

4 Aeromedical staging facility/facilities.

**ASFA** Aviation Safety Foundation of Australia.

**ASFC** English translation “aero-sports federation of China” [office, 100061 Beijing] (China).

**AS4** Structural graphite/epoxy composite (Hercules).

**ASG** 1 Airborne system, gun (DoD hardware code).

2 Piloted aircraft, special/composition, fire control (JETDS).

3 Air Safety Group [Bluntisham PE17 3LE] (UK).

4 Arinc signal gateway.

5 Acoustic-signal generator.

6 Aviation Study Group [1992–, OX1 3JA] (UK).

**ASGC** Airborne-surveillance ground control.

**ASH** 1 Advanced, or assault, support helicopter (USA).

2 Active seeker homing.

**ASHC** Assault Support Helicopter Company (USA).

**ashless dispersant** Lubricating-oil additive which stops the oil from ashing when overheated.

**ASHM** Aft-station HUD monitor.

**ASHrae** American Society of Heating, Refrigerating and Air-Conditioning Engineers.

**ASI** 1 Airspeed indicator.

2 Air Staff Instruction (usually plural, ASIs).

3 Aviation Safety Institute [office, Worthington, OH] (US).

4 Agenzia Spaziale Italiana.

5 Aviation Society of Ireland [1963–; office Dublin 15] (Ireland).

6 Arinc standards interface.

7 The Aeronautical Society of India.

8 Augmented spark igniter.

9 Air-system interrogator.

10 Avionics system integration.

11 Associazione Sindacale Intersind [I-00185 Rome] (Italy).

12 Aircraft station interface.

**a-Si** Amorphous silicon, atoms arranged haphazardly, not in lattice.

**ASIA** Association Suisse de l'Industrie Aéronautique [CH-5400 Baden].

**ASIAS** Aviation Safety information analysis and sharing (FAA).

**ASIC** 1 Application-specific integrated circuit.

2 Australian Securities and Investment Commission.

**ASICC** Australian Space Industry Chamber of Commerce [Sydney, NSW 2001] (Australia).

**ASID** American Society for Information Display.

**ASIF** Aviation security infrastructure fee (TSA).

**ASIG** 1 Airports Special-Interest Group (UK local-government association).

2 Aircraft Service International Group.

3 Air Safety Investigation Group.

**Asims** Advanced Sita message server.

**ASIP** 1 Aircraft structural-integrity program (USAF).

2 Airborne signals intelligence payload.

**ASIR** Airspeed indicator reading.

**ASIS** 1 Air Safety Investigating System (Australia).

2 Abort-sensing and implementation system.

**Asist, ASIST** Aircraft/ship integrated secure and traverse.

**ASIT** Adaptable surface-interface terminal.

**Asival** Assessment of the ATM(7) system configuration subject to validation (Euret).

**A6013** A weldable Si/Al alloy (Alcoa).

**A629** In the new century, this is the latest standard data bus. Not only is it 20 times faster than A429 (predecessor) at 2 Mbytes/s, but it can accommodate up to 131 terminals, each able to transmit to, and receive from, any of the other 130 (Arinc).

**ASJ** Automatic search jammer.

**ASK** 1 Automatic shift-keying.

2 Available seat-km.

**ASL** 1 Above sea level (UK = AMSL).

2 Authorised service life.

3 Atmospheric Sciences Laboratory (WSMR).

**ASLA** Air Services Licensing Authority (NZ).

**ASLAE** Association of Singapore Licensed Aircraft Engineers [S-1232] (Singapore).

**ASLAET** Australian Society of Licensed Aircraft Engineers and Technologists [office, Mascot, NSW] (Australia).

**Aslar** Aircraft surge launch and recovery (USAF).

**ASLE** Advanced service-life extension.

**ASlib** Association of Special Libraries and Information Bureau [not plural]; (UK 1951–).

**ASLO** Accident-Site Liaison Officer.

**ASLP** Air-sol longue portée (long-range ASM) (F).

**ASLR** Air/surface, or air-to-surface, laser ranger.

**ASLS** 1 Air Surveillance Liaison Section.

2 Aircraft structural life surveillance.

**ASLV** Augmented satellite launch vehicle (India).

**ASM** 1 Air-to-surface missile; NZ has used \* to mean anti-ship missile.

2 Available, or aircraft, seat-miles (often a.s.m.).

3 Advanced systems monitor (in cockpit).

4 American Society for Metals.

5 Autothrottle servo-motor.

6 Apron-services management.

7 Aircraft schematic[s] manual.

8 AirSpace management.

9 Air separation module.

10 Aerial supervision module.

11 Anonymous subscriber messaging.

**ASMA** 1 Aerospace Medical Association, often **AsMA** [office, Alexandria, VA22314-3579] (US).

2 Air Staff management aid (UK).

**Asmac** Aero Space Museum Association of Calgary [Alberta T2E 8A5] (Canada).

**ASMD** 1 Anti-ship missile defense (USN).

2 Air, space and missile defense (USN).

**ASME** The American Society of Mechanical Engineers (office New York).

**ASMET, Asmet** Accelerated simulated missile, or mission, endurance test.

**A-SMGCS** Airport, or airfield, or advanced, surface-movement guidance and control system.

**ASMI** Airfield surface movement indicator.

**ASMK** Advanced serpentine manoeuvrability kit.

**ASMO** Arab Standardization and Metrology Organization.

**ASMP** Air-sol moyenne portée (medium-range ASM); A adds amélioré = improved.

**ASMR** Advanced short/medium-range.

**ASMS** 1 Advanced strategic-missile system (previously Abres).

2 Airport surface-management system.

**ASMT** Air-supply mission technology.

**ASMU** Avionics system management unit.

**ASN** Abstract syntax notation, protocol for message handling; can be followed by identity number.

**ASNA** Aviation Safety and Noise-abatement Act (US).

**ASNI** Ambient sea-noise indication.

**ASNT** American Society for Non-destructive Testing [office, Columbus, OH 43228-0518] (US).

**ASO** 1 Air-support operations, see *ASOC*.

2 Acoustic-systems, or sensor, operator.

**ASOC** 1 Air-Support Operations Centre (RAF), Center (GTACS).

2 Air Sovereignty Operations Centre.

**Asops** Airport-security operational process simulation.

**ASOS** Automated surface observation, or observing, system; at uncontrolled airfields gives voice readout of useful data.

**ASP** 1 Armament status panel.

2 Aircraft servicing platform [or pan].

3 Automated small-batch production.

4 Audio selector panel.

5 Airbase survivability program (US).

6 Adaptive, or advanced, or aircraft, or airborne, signal processing, or processor.

7 Aircrew services package.

8 Application service provider.

9 Altimeter setting panel.

10 Airborne surveillance platform.

11 Airfield[s] systems planning (ICAO).

12 Arrival sequencing program.

13 Aircraft systems processor.

14 Antenna scan[ning] period.

15 AFS(1) planning.

16 Airspace policy.

17 Accelerated share purchase.

**ASPA** Asociación Sindical de Pilotos Aviadores (Mexico).

**Asparcs** Air-surveillance and precision-approach radar control system (USMC).

**ASPC** See *CSPA*.

**ASPCU** Air supply/pressurization control unit.

**ASPE** Speed of sound in EDP.

**aspect change** Changing appearance or signature of reflective target as seen by radar, caused by attitude changes.

**aspect ratio** General measure of slenderness of aerofoil in plan. For constant-section rectangular surface, numerical ratio of span divided by chord, discounting effects due to presence of body or other parts of aircraft. For most wings  $** A$  is defined as  $b^2/S$ , where  $b$  is span measured from tip to tip perpendicular to longitudinal axis (slew or VG wing as nearly as possible transverse) and  $S$  is gross area. Structural  $** A_s$  generally defined as  $b^2 \sec^2 \Lambda$  or  $\frac{A}{\cos^2 \Lambda}$ , where  $\Lambda$  is  $\frac{1}{4}$ -chord sweep angle. Confusingly,  $A_s$  is now losing ground to  $R_A$ . Effective or

equivalent  $**$  increased by fitting end-plates (eg horizontal tail surface on top of fin), but there is no universally applicable formula. Optimum  $**$  usually means that giving minimum wing weight, but this is seldom the best overall. Generally, faster aircraft have lower  $**$ ; shorter field length demands higher  $**$ . Sailplanes and man-powered aircraft need extremely high  $**$ , from 20 to 40.

**Aspen** Aerospace planning and execution network (USAF).

**Asph** Asphalt.

**Aspire** 1 Advanced supersonic propulsion integration and research (NASA).

2 Asia and South Pacific initiative to reduce emissions.

**Aspis** Advanced self-protection integrated suite.

**ASPJ** Advanced, or airborne, self-protection jamming, or jammer.

**ASPO** 1 Army Space Program Office (USA).

2 Avionics Systems Project Officer (USAF).

3 Aviation Strategic Planning Organization (Australia).

**ASPP** Airfield [originally aeronautical fixed] Service Planning Panel (ICAO).

**ASPR** Armed Services Procurement Regulations (US).

**Aspro** Airborne associative [from "advanced signal"] processor.

**ASPS** 1 Airborne self-protection system.

2 Advanced self-protection suite.

**ASPSS** Aircraft self-protection security system.

**ASQC** American Society for Quality Control.

**ASQF** Assurance-specific qualification facility, alternative form of PACF for Satnavs (ICAO).

**ASRAAM, Asraam** Advanced short-range AAM.

**ASR** 1 Air/sea rescue [see *ASR apparatus*].

2 Aerodrome, airfield, airport, or approach, surveillance radar.

3 Air Staff Requirement (UK).

4 Altimeter setting region.

5 Automatic send/receive.

6 Acceleration, or accelerating, slip reduction.

7 Air Safety Report, of hazardous event.

8 Alternate system[s] review (USAF).

**Asrad** Advanced short-range air defence.

**ASR apparatus** Term for that dropped to survivor(s), including 3 canisters containing dinghy, food, radio etc.

**ASRC** Alabama Space and Rocket Center, Huntsville.

**ASRgn** Altimeter setting region.

**ASRM** Advanced solid rocket motor (NASA).

**Asroc** Anti-submarine rocket.

**ASRP** Aviation Safety Reporting Program (FAA/NASA, from 1976).

**ASRS** 1 Aviation safety [&] reporting system (NASA, 1975-).

2 or **AS/RS** Automatic storage/retrieval system.

**ASRT** 1 Air support radar team.

2 Autonomous scout rotorcraft testbed (DoD).

**ASRTE** Avion station relais de transmissions exceptionnelles, also rederec Astarte (F).

**ASRWSP** Airport surveillance radar with weather systems processor.

**ASS** 1 Attitude-sensing system.

2 Airlock support subsystem.

3 Air Signallers' School (RAF).

4 Anti-shelter submunition.

5 Aviation support ship.

6 Atmospheric sounding system.

**ASSA** 1 Aeronautical Society of South Africa, more usually in Afrikaans: LKV.

2 Aviation system of systems architecture (US).

**ASSAD, Assad** Union of aviation-engine producers (R, CIS).

**assault aircraft** Aeroplanes and/or helicopters which convey assault troops to their objective and provide for their resupply.

**assembly** 1 Completed subsystem, portion of airframe or other part of larger whole which itself is assembled from smaller pieces.

2 Process of putting together parts of functioning item of equipment, engine, subsystem, portion of airframe or other aerospace hardware (other than complete aircraft,

buildings, docks, large launch complexes and similar major structures, for which preferred term is *erection*).

**assembly drawing** Engineering drawing giving no information on manufacture but necessary for correct assembly; shows geometric relationships, assembly sequence, necessary tooling (jigging), fits and tolerances, and operations required during assembly.

**assembly line** Essentially linear arrangement of work stations in manufacturing plant for assembly or erection of finished product or major component (eg wing). Modern aircraft produced in such small numbers optimum erection-shop layout often not linear. High-rate production (eg car engines or radio sets) parts travel on belt or overhead conveyor from station to station (see *transfer machines*).

**ASSET** Aero-Space Structure Environmental Test; USAF research programme.

**Asset** Airborne sensor system for evaluation and test (Northrop).

**asset** Item or group of items from a nation's military inventory, especially those serving front-line function.

**ASSG** Acoustic-sensor signal generator.

**assigned amount** In emissions legislation, the maximum permitted.

**Assist** Affordable space systems intelligent synthesis technology (USAF/NASA).

**assisted takeoff, ATO** Aerodyne takeoff with linear acceleration augmented by accelerator, by self-propelled trolley, by rockets attached to aircraft or by other means not forming part of normal flight propulsion. Criterion is use of external force; mere downward slope, giving component of weight in takeoff direction, does not qualify.

**ASSM** Anti-ship supersonic missile.

**associated (VOR, Tacan)** VOR and Tacan/DME facilities either co-located or situated as closely as possible; subject to maximum aerial (antenna) separation of 100 ft in TMAs when used for approach or other purposes requiring maximum accuracy, or 2,000 ft elsewhere.

**associative processor** Digital computer processor operating wholly as ancillary to another, usually larger, installation. Normally has no parent computer. Future ATC computer installations may use powerful large-memory sequential machine to resolve conflicts and exercise overall control, supplemented by \*\* working in parallel seeking potential conflicts.

**ASSR** 1 Airport surface-surveillance radar.

2 Approach-control secondary surveillance radar.

3 Air-security screening records (TSA).

**ASSRP** Air and Space Scientific Research Program (AFRL).

**AS<sup>3</sup>, ASSS** 1 Active-search sonobuoy system.

2 Airport surface-surveillance system.

**ASST** 1 Anti-ship surveillance and tracking, or targeting.

2 Advanced supersonic transport.

**ASSTC** Aerospace Simulation and Systems-Test Center.

**assured destruction** Concept of measurable inevitable damage inflicted on enemy heartlands for purposes of deterrence and arms limitation.

**ASSV** Alternate-source select[or] valve.

**ASSW** 1 Anti-surface-ship warfare.

2 Associated with (met. report).

**AST** 1 Advanced supersonic transport (or technology).

2 Advanced simulation technology.

3 Atmospheric surveillance technology.

4 Air Staff Target (UK).

5 Accelerated service test.

6 Airborne surveillance testbed.

7 Avionics system trainer.

8 Atlantic Standard Time.

9 Applied signal technology.

10 Air surveillance terminal.

**ASTA** 1 American Society of Travel Agents [office, NY City].

2 Airport surface-traffic automation [S adds system] (FAA).

3 Aircrew synthetic-training aid[s].

**astable** Not having a stable state.

**Astamids** Airborne standoff minefield-detection system (passive IR).

**AST&L** American Society of Transportation and Logistics [Lock Haven, PA 17745-1419] (US).

**Astar** Airborne search/track, or target, attack radar.

**Astarte** Avion station relais de transmissions exceptionnelles (F).

**astatic** Without specific orientation or direction.

**ASTC** Aviation Security Training Centre [B-1931 Zaventem] (Int.).

**ASTE** 1 Association pour le Développement des Sciences et Techniques de l'Environnement (F).

2 Advanced strategic/tactical expendables [mainly IR sources].

**astor** 1 Automation system[s] for terminal and en-route control.

2 Advanced small turbine-engine core.

3 Advanced strategic/tactical expendable[s] (IR decoy).

**Aster** Advanced spaceborne thermal emission and reflection radiometer.

**Asterix** All-purpose structure Eurocontrol radar info. exchange.

**asteroid** Minor planet, esp. fragments (mostly much less than 50 miles across) orbiting between Mars and Jupiter; thus, small body, such as artificial satellite, in solar orbit.

**ASTF** 1 Aeropropulsion Systems Test Facility (at AEDC, commissioned September 1985).

2 Airspace system task force.

**ASTI** Airport surface-traffic indicator.

**Astia** Armed Services Technical Information Agency (US).

**ASTM** American Society for Testing & Materials. [West Conshohocken, PA19428] (US).

**ASTO** Arab Satellite Telecommunications Organization (Int.).

**ASTOL** Alternate (alternative is meant) STOL.

**Astor** Airborne stand-off radar.

**ASTOS, Astos** The Association of Specialist Technical Organisations [SMEs] for Space [office, Amersham HP6 6DZ] (UK).

**Astovl, ASTOVL** Advanced Stovl.

**ASTP** 1 Apollo-Soyuz Test Project (US, USSR).

2 Advanced Space Transportation Program (NASA).

**ASTR** Attack store; usually (and very confusingly) means which type of AAM is selected, not air/ground weapon.

**Astra, ASTRA** 1 Applications of Space Technology to Requirements of Civil Aviation (ICAO panel); 1986

renamed Application of Space Techniques Relating To Aviation, later still Space replaced by Satellite.

2 Air staff training programme.

3 Association in Scotland to Research into Astronautics [office, Anderson, Glasgow G3] (UK).

4 Advanced stability training and research aircraft [previously systems training aircraft] (ETPS).

5 Attitude steering turn-rate azimuth.

6 Alternative abb. for Aviation Strategic Planning Organization (Australia).

**Astral** Air-surveillance and targeting radar L-band.

**Astras** Airport surface-traffic awareness system (ICAO), confusion with ASTA[2].

**Astraea** Autonomous systems technology related airborne evaluation and assessment [UAV] (UK).

**Astrid** Airborne system for target recognition, identification and designation.

**astrionics** Space electronics.

**Astro** 1 Air support to regular operations (police helicopters).

2 Autonomous space transport robotic operations, or -and robotic orbiter (Darpa).

**astrobiology** Science of possible life on planets other than Earth, or elsewhere in space (note, in R means 'space medicine').

**astrocompass** Non-magnetic instrument, gives direction of true North relative to celestial body which must emit light and be of known direction (see *astronavigation*).

**astrodome** Optically transparent dome in roof of large aircraft 1935–50 through which navigator could take astro fixes using sextant.

**astro fix** Fix obtained by sighting two or more stars of known direction using sextant or astrocompass.

**astrogation** Navigation in space, suggest colloq.

**astro-inertial** Navigation by means of inertial system updated or corrected by astro fixes.

**astronaut** One who navigates in space; ie who travels in space. Specif. [capital A], one selected for space flight by NASA.

**astronautics** Science of study, design, construction and operation of spacecraft.

**astronavigation** 1 Navigation of aircraft or spacecraft by measuring declination, right ascension and/or other angular positions of stars and other celestial bodies whose location on celestial sphere is known.

2 Navigation of spacecraft by any means (usage ambiguous).

**astronics** Astrionics.

**astronomical twilight** Period between day and night when Sun's centre between 12° and 18° below sea-level horizon (see *civil twilight*, *nautical twilight*).

**Astronomical Unit, AU, A.U.** Unit of linear distance based on mean distance between Earth and Sun; accepted value was 149,598,500 km, but IAU definition is now  $1.496 \times 10^{11}$  m.

**astronomy** Science of celestial bodies other than Earth. Not included in this definition are celestial phenomena, such as polarisation of stellar light and other measures concerned more with radiation than with 'bodies'. Thus, subdivision radar \*, X-ray \*, IR \*, UV \* etc.

**astrophysics** Physics of observable universe, esp. states of matter and energy generation and transfer.

**astroseismology** Study of earthquakes on bodies other than Earth.

**astro-tracker** Automatic sextant capable of searching celestial sphere for particular luminous body, identifying it and determining orientation in terms useful for navigation, and of repeating sequence with same and at least one other celestial body. Corrects and updates INS in long-range aircraft.

**ASTS** 1 Association Suisse pour les Techniques Spatiales (Switz).

2 Advanced screening technology systems.

**ASU** 1 Aeromedical staging unit.

2 Altitude (or, confusingly, attitude) sensing unit.

3 Approval for service use.

4 Aircraft storage unit (UK).

5 Aircraft starting unit.

6 Acoustic simulation unit.

7 Avionics switching unit.

8 Anti-surface.

9 Analyser sub-unit.

**Asupt** Advanced simulator for undergraduate pilot training.

**ASUW, ASuW** Anti-surface [or anti-surface-unit] warfare aircraft category (USN).

**ASV** 1 Air-to-surface vessel. WW2 airborne search radar. Incorrectly rendered as anti-surface vessel. See *ASVW*.

2 Aerial swimming vehicle.

**ASVEH** Air-surveillance vehicle.

**ASVR** Aircraft-systems verification [now changed to validation] rig.

**ASVS** Airborne separation video system.

**ASVW** Anti-surface vessel warfare, today's term.

**ASW** 1 Anti-submarine warfare [AC adds analysis center, AS area system, DS data system, SOW stand-off weapon and T trainer].

2 Aft-swept wing.

3 Confusingly, also used in US for anti-ship warfare, and in UK (WW2) for air/sea warfare.

4 Acquisition scan window (UAV).

**ASWA** Aeronautical Society of Western Australia Inc. [Perth South].

**ASWAC** Airborne surveillance, warning and control [S adds system] (India).

**ASWDU** Air/Sea Warfare Development Unit (RAF/RN).

**ASWE** Admiralty Surface Weapons Establishment (Portsmouth, UK).

**ASWOC** ASW [1] operations centre.

**ASWT** Air-to-surface weapons technology.

**ASXV** Air-launched expendable sound velocimeter.

**asymmetric flight** Flight by aerodyne in sustained grossly asymmetric condition of lift, weight, thrust or drag, esp. flight by multi-engined aircraft in which at least one engine at substantial distance from axis of symmetry is inoperative.

**asymmetric loading** Flight by aircraft, esp. aerodyne, in which c.g. is located at substantial distance from vertical line through centre of lift with aircraft in level attitude and trimmed for normal horizontal flight (eg strike aircraft unable to release one of two heavy stores carried on out-erwing pylons).

**asymmetric warfare** Conflict between a high-tech nation and a primitive one.

**asymptote** Limiting position of tangent to curve, where

lines meet at infinity. Thus, asymptotic, where slope of plotted curve becomes parallel to either x or y axis.

**asynchronous** Not synchronised, not in frequency or phase.

**asynchronous computer** Electronic computer, usually digital, in which operations do not proceed according to timing clock but are signalled to start by completion of preceding operation.

**ASZ** Air surface zone (NATO, USAF).

**AT** 1 Advanced trainer (USAAF category, 1924–48).

2 Anti-tank.

3 Autogenic training.

4 Autothrottle [also A/T].

5 Air transmit.

6 Armament trainer (F-22).

7 Air transport (role of tanker).

8 All traffic.

9 Advanced targeting.

**AT**<sup>3</sup> See *ATTT*.

**ATA** 1 Air Transport Auxiliary, UK ferry organization 1940–45; also the Association, 1946– [office, Chipping Sodbury BS17 6XG].

2 Air Transport Association of America [scheduled carriers, office, Washington DC20004-1707] (US).

3 Actual time of arrival.

4 Advanced tactical aircraft.

5 Air Transport Association (UK).

6 Automatic target-acquisition.

7 Aero Testing Alliance (F, G, Neth.).

8 Aviation Training Association [office, High Wycombe, HP13 6LS] (UK).

9 Airport traffic area.

10 Airline-tariff analysis.

11 Advanced testbed[s] for avionics.

12 Aerial tactics area.

13 Air Traffic Alliance [Airbus, EADS, Thales, 2003–] (Int.).

**ata** Atmosphere[s] pressure; 1 ata [atm in UK] = 101.325 kPa = 14.6959 lb/in<sup>2</sup>.

**ATAAC** Anti-torpedo air-launched countermeasure[s].

**ATAAS** Advanced terminal area approach spacing.

**ATAB** Air Transport Allocations Board, joint agency in theatre of operations which assigns priorities to loads.

**ATAC** 1 Air Transport Association of Canada [office, Ottawa].

2 Applied-technology advanced computer (airborne EW).

3 Air-transportable acoustic communication[s], expandable buoy.

**ATACC** Advanced tactical air command center (USMC).

**ATACMS** Army tactical missile system[s] (USA).

**Ataco** Air Tactical Control Officer.

**ATAF** 1 Allied Tactical Air Force (NATO).

2 Association Internationale des Transporteurs Aériens [acronym from previous title; F-75008 Paris] (F).

**ATAFCS** Airborne target acquisition and fire-control system.

**ATAG** Air Transport Action Group, coalition pressing for better infrastructure [CH-1215 Geneva 15] (Int.).

**Atags** Advanced-technology anti-g suit (USAF).

**ATAL, Atal** 1 Automatic test application language.

2 Appareillage de TV sur aéronef léger (F).

**ATALS** Army Transportation and Logistics School (USA).

**ATAM** Air-to-air Mistral.

**ATAOS** Autonomous tactical attack and observation system.

**ATAP** Advanced tactical-, or target-, attack penetrator.

**ATAR** 1 Air-to-air recognition (device).

2 Air-to-air recovery.

3 Advanced threat-alert and response; CE adds critical experiment (USAF).

4 Association des Transporteurs Aériens Régionaux (F).

**Atares** Air-transport and air-refuelling exchange of services (European Air Group).

**Atars** 1 Automatic traffic-advisory and resolution service (UK).

2 Advanced tactical air-reconnaissance system.

3 Aircrew training and rehearsal support (USAF).

**ATAS, Atas** 1 Air Traffic Advisory Service, provides separation between known aircraft in IFR on certain routes (UK DTI).

2 Advanced target-acquisition sensor.

3 Air-to-air Stinger.

4 Automated talking advisory system (FAA).

5 Advanced tactical airborne system.

**ATATS** Automatic target-acquisition and tracking-system.

**Ataws** Advanced tactical air-warfare system.

**ATB** 1 Advanced-technology bomber.

2 Air-Transport Bureau (ICAO).

3 Aerospace Technology Board.

4 Automated ticket and boarding pass.

5 Advanced-technology blade (HP turbine).

6 Air turn back [mission abandoned while en route].

**ATBM** Anti-tactical, or anti-theater, ballistic missile.

**ATC** 1 Air traffic control; C adds centre.

2 Air Training Corps (replaced ADCC in 1941; HQ Air Cadets, RAF College, NG34 8HB) (UK).

3 Air Training Command (USAF, from 15 April 1946).

4 Air Transport Command, formed from Air Ferrying Command 1 July 1942, became MATS.

5 Approved Type Certificate, first issued (by DoC) in 1927.

6 Advanced-technology component (DoD).

7 Aerospace Technical Council (AIAA).

8 Air transport conference (travel agencies).

9 Automatic [usually EW] threat-countering.

10 After top centre.

11 Acoustic-torpedo countermeasures.

12 Automatic tuning control.

13 Astronomy Technology Centre (Edinburgh, UK).

14 Airport traffic control (US DoC 1938).

15 Auxiliary, or ancillary, terrestrial component. [= CGC].

**ATCA** 1 Air Traffic Control Association of America [1955–, office Arlington, VA22201] (US).

2 Air Traffic Conference of America.

3 Allied Tactical Communications Agency (NATO, Brussels).

4 ATC Assistant (UK).

5 Advanced tanker/cargo aircraft (USAF).

**ATCAC** ATC Advisory Committee (US Congress).

**Atcap** 1 ATC Automation Panel (ICAO).

2 Army Telecommunications Automation Program (USA).

**Atcare** ATC analysis and recording environment.

**Atcas** 1 ATC administration system.

2 ATC automation system.

**ATCC** ATC centre/center (UK/US).

**ATC clearance** Authorization by ATC for purpose of preventing collision between known aircraft for aircraft to proceed under specified conditions in controlled airspace (FAA).

**ATCCC, ATC3** ATC Command Center (FAA).

**ATCCTS** 1 ATC communications training system.

2 ATC control-tower simulator.

**ATCE** Air training centre of excellence.

**ATCEU** ATC Evaluation Unit (Hurn, UK).

**ATCGS** ATC ground segment [of satellite link].

**ATCI** ATC investigation of airprox.

**ATCMFT** ATC multifunction trainer.

**Atco, ATCO** 1 ATC officer.

2 Air-taxi and commercial operator.

**Atcom** Aviation and Troop Command (USA).

**ATCOMS, Atcoms** ATC operations, or and operational, management system[s].

**ATCPA** Air Taxi & Commercial Pilots Association (office, Washington DC).

**ATCPS** ATC procedures simulator.

**ATCPT** ATC procedural trainer.

**ATCR** 1 Air Training Command Regulation[s] (USAF).

2 ATC room[s].

**ATCRBS** ATC radar-beacon system (FAA).

**ATCRS** ATC radar simulator.

**ATCRU** ATC radar unit (UK).

**ATCS** 1 ATC Service (UK), or simulator.

2 Active thermal-control system, or subsystem.

3 Automated tower control system.

**ATCSCC** ATC System (originally Services) Command Center (FAA, Herndon, VA).

**ATCSS** ATC signalling system (air/ground datalink tested 1958 as alternative to voice).

**ATCT** ATC (14) tower; S adds simulator.

**ATD** 1 Actual time of departure.

2 Airline-, or aviation-, transmitted disease.

3 [translated] Aviation technical division (USSR, R).

4 Automatic threat detection; S adds system.

5 Applied Technology Directorate (USA).

6 Along-track distance.

7 Advanced-technology demonstrator.

**ATDA** Augmented target docking adaptor.

**ATDC** Automatic, or assisted, target detection and classification.

**ATDI** Aviation Training and Development Institute (IATA).

**ATDL** Advanced, or Army, tactical, or air-transport, datalink (USA).

**ATDMA** Advanced time-division multiple access.

**ATDRR** Autonomous airborne tactical data radio relay.

**ATDS** 1 Airborne tactical data system.

2 Air-turbine drive system.

**ATDU** Air Torpedo Development Unit (RAF Gosport 1940–46) later Helston, now defunct.

**ATE** 1 Automatic test equipment.

2 Aircraft test and evaluation (UK).

3 Actual time en-route.

4 Advanced technology and engineering (also AT&E).

5 Air traffic engineer [inspects and maintains nav aids].

**ATEC** 1 Aviation Technician Education Council (US).

2 Automatic test-equipment complex.

3 Air[craft] Test & Evaluation Centre [Boscombe Down, previously A&AEE] (QinetiQ).

**Atecma, ATECMA** Agrupación Técnica Española de Constructores de Material Aeroespacial [E-280015 Madrid] (Spain).

**Ategg, ATEGG** Advanced turbine engine gas-generator.

**Atems, ATEMS** Advanced threat-emitter simulator.

**Atepsa** Asociación Técnicos y Empleados de Protección e Seguridad a la Aeronavegación (Argentina).

**ATER** 1 Advanced triple ejector rack.

2 Air Test and Evaluation Review [MoD] (UK).

**ATES** Aircraft Test and Evaluation Sector (QinetiC/DRA, Boscombe Down).

**ATESS** 1 Aerospace and telecommunications engineering support services.

2 Advanced tactics and engagement simulation subsystem.

**ATF** 1 Advanced tactical fighter.

2 Aviation turbine fuel.

3 Actual time of fall.

4 Amphibious task force.

5 Adaptive terrain-following.

6 Altitude test facility.

7 Air traffic flow.

8 Aerodrome, or airport, traffic frequency.

9 Air-transport force.

10 Anechoic test facility.

**Atfero** Atlantic Ferry Organisation (UK, 1940–42).

**Atflir, Atfir, ATFLIR, ATFIR** Advanced targeting forward-looking IR.

**ATFM** Air traffic flow management; U adds unit.

**ATFPS** Air traffic flow planning system.

**ATFS** Authentic tactical flight simulator, or simulation.

**ATG** 1 Amphibious task group.

2 Air-traffic generator.

3 Adversary Tactics Group (USAF).

**ATGS** Air Tactical Group Supervisor, an experienced firefighter who provides aerial C<sup>2</sup> and also feeds information to the IC(8).

**ATGW** Anti-tank guided weapon.

**ATH** 1 Autonomous terminal homing.

2 Air-transportable hospital.

3 Automatic target handoff.

**Athlete** All-terrain hex-legged extraterrestrial explorer (NASA).

**athodyd** Aero-thermodynamic duct. The essential features are that it is open at both ends and has an internal profile such that flow velocity inside is lower than the free-stream velocity, thus facilitating burning of fuel, or in some other way adding energy. The term is generally taken to be synonymous with *ramjet*.

**Athos** Airport tower harmonised controller system (Euret).

**A/THR** Autothrottle mode.

**ATHS** Airborne, or automatic, target handover, or handoff, system.

**ATI** 1 Air, or airline, transport instrument [standard panel sizes].

2 Anti-trust immunity [DoT] (US).  
 3 Air Technical Intelligence (USAAF, USAF).  
**ATIC** Avionics Test and Integration Complex (Edwards AFB).  
**ATIF** 1 Aeronautical telecommunications network trials infrastructure (ICAO).  
 2 All-source track and identification fusion.  
**ATIG** Air Technical Intelligence Group, of FEAF (1945–6).  
**Atigs** Advanced tactical inertial guidance system.  
**ATILO** Air technical-intelligence liaison officer.  
**ATIMS** Airborne target-information management system.  
**ATIMU** Advanced tactical inertial-measurement unit.  
**ATIR** Air-traffic incident report.  
**ATIRCM** Advanced threat, or theatre, IR countermeasures.  
**ATIS** 1 Automatic, or automated, terminal information service (ICAO, FAA); continuous broadcast of recorded non-control information in selected high-activity terminal areas (to improve controller effectiveness, and relieve congestion by automating repetitive transmission of routine information).  
 2 Airfield-terminal information system.  
 3 Air-traffic information service, or server, or system.  
**ATISD** Air Training Information Systems Division (Randolph AFB).  
**ATITA** Air Transport Industry Training Association (UK).  
**ATITB** Aviation and Travel Industry Training Board (NZ).  
**ATK** Aviation turbine kerosene; F adds fuel.  
**ATKHB** Attack Helicopter Battalion (USA).  
**ATk** 1 Available tonne-kilometres.  
 2 Anti-tank.  
**ATL** 1 Airborne, or advanced, tactical laser.  
 2 Auto-trim loop.  
 3 Acquisition, technology and logistics (DoD).  
 4 Automatic tape layer, or tapelaying.  
**ATLA** Air Transport Licensing Authority (Hong Kong, formerly).  
**Atlantic** Airborne targeting low-altitude navigation thermal imaging and cueing.  
**Atlas** 1 Abbreviated test language for avionics systems.  
 2 Advanced tactical low arresting system (overrun barrier).  
 3 Advanced tactical light arresting system (Aerazur cable/drum).  
 4 Advanced-technology lidar system.  
 5 Airborne topography and land-use assessment system.  
 6 Azimuth target-intelligence and acquisition system (Israel).  
 7 Antenna-testing laboratory automated system (NAS Patuxent).  
 8 Aircraft total lightning advisory system.  
**Atlass** Advanced technology low-altitude surveillance system.  
**ATLB** Air Transport Licensing Board (UK).  
**Atlis** Automatic tracking laser illumination system.  
**ATLND** Automatic takeoff and landing (UAV).  
**ATM** 1 Air-turbine motor.  
 2 Air transport movement, or management.

3 Air tasking [previously base] message, request for a particular combat mission to be flown (RAF).  
 4 Anti-tactical missile.  
 5 Anti-tank missile, or mine, or munition.  
 6 Asynchronous transfer, or transmission, mode.  
 7 Airspace, or air, [and] traffic management [C adds centre, MG management group].  
 8 Aileron trim motor.  
 9 Air-targeting mode.  
**atm** Atmospheres pressure (UK usage, see *ata*).  
**ATMA** 1 Association Technique Maritime et Aéronautique (F).  
 2 Active tuned mass absorber.  
**Atmac** Air Traffic Management Advisory Committee (RTCA).  
**ATMDC** Air Traffic Management Development Centre [Christchurch BT23 6DF] (UK).  
**ATMG** Arms Transfer Management Group (US DoD).  
**Atmos** Ammunition, toxic material open space.  
**atmosphere** 1 Gaseous envelope surrounding Earth, subdivided into layers (see *atmospheric regions, model atmosphere*). For composition see *Air*.  
 2 Gaseous or vaporous envelope surrounding other planets and celestial bodies.  
 3 Theoretical model atmosphere providing standard basis for performance and other calculation.  
 4 Any of group of units of pressure all approximately equal to pressure of atmosphere on Earth at sea level. Most important is Standard \* (abb. *ata* on European continent, *atm* in UK) equal to  $101,325 \text{ Nm}^{-2} = 101,325 \text{ Pa} = 101.325 \text{ kPa} = 1,013.25 \text{ mb} = 1.01325 \text{ bars}$  or hectopièze =  $14.6959 \text{ lbf in}^{-2} = 761.848 \text{ mm (29.994 in) Hg at } 16.6^\circ\text{C}$ . Second is Metric \* (also *ata*) equal to  $0.98642 \text{ Standard *}$  and defined as  $0.981117 \text{ bars (981.117 mb, ie acceleration due to } 1 \text{ g) or } 14.223 \text{ lbf in}^{-2}$ . Third is Technical \* (*at*), usually identical with Metric. Fourth is bar (*b*),  $1000 \text{ mb} = 750.07 \text{ mm Hg} = 14.5038 \text{ lbf in}^{-2}$  (see *pressure*).  
**atmospheric absorption** Absorption of EM radiation due to ionisation in atmosphere. Apparent loss of signal or beam power may be much greater, as result of diffraction and dispersion by vapour and particular matter.  
**atmospheric boundary layer** Generally defined as Earth's surface up to 5,000 ft or 1.5 km.  
**atmospheric braking** Use of air drag, esp. of upper atmosphere on re-entering spacecraft or RV, converting very high kinetic energy into heat.  
**atmospheric circulation** Gross quasi-permanent wind system of Earth, based on bands between parallels of latitude.  
**atmospheric constituents** See *air*.  
**atmospheric diffraction** Of importance chiefly with sound waves, which can be substantially changed in direction and intensity distribution by changes in air velocity and density. Effect with most EM radiation is small.  
**atmospheric duct** Almost horizontal layer or channel in troposphere apparently defined by values of refractive index within which EM radiation, esp. in microwave region, is propagated with abnormal efficiency over abnormally great distances.  
**atmospheric electric field** Intensity of electrostatic field of Earth varies enormously, but on fine day may be about  $100 \text{ V m}^{-1}$  at SL falling to around  $5 \text{ V m}^{-1}$  at 10 km height.

Air/Earth current continuously degrades \*\*\*, believed that thunderstorms reinforce it.

**atmospheric entry** Re-entry, or entry of extraterrestrial bodies such as meteors.

**atmospheric filtering** Use of upper zones of ionosphere and mesosphere to filter out ICBM decoys from true warheads, it being supposed that latter will have higher density, better thermal protection and increasingly divergent trajectories, while decoys decelerate more violently, fall behind and burn up.

**atmospheric pressure** See *atmosphere* (4), *atmospheric regions*.

**atmospheric refraction** Bending of EM radiation as it passes through different layers of atmosphere, esp. obliquely. Affects radio and radar, esp. when directionally beamed; visibly manifest in air over, say, hot roadway in sunshine when objects seen through this air 'shimmer'; in astronavigation \*\* makes apparent altitude of celestial bodies falsely great.

**atmospheric regions** Layers of Earth's atmosphere differ in different model atmospheres; following notes are based on ISA. Lowest layer, troposphere, extends from SL to about 8 km (26,000 ft) at poles, to 11 km (36,090 ft) in temperate latitudes, and to 16 km (52,000 ft) over tropics. Throughout this region ISA characteristics of temperature, pressure and relative density are precisely plotted. Assumed lapse rate is  $6.5^{\circ}\text{C km}^{-1}$  and at tropopause, taken in ISA to be 11 km (36,090 ft), temperature is  $-56.5^{\circ}\text{C}$ . From tropopause stratosphere extends at almost constant temperature but falling pressure to 30 km, stratopause, above which is mesosphere. Here there is reversed lapse rate, temperature reaching peak of about  $10^{\circ}\text{C}$  at 47.35–52.43 km, thereafter falling again to minimum of  $180.65^{\circ}\text{K}$  at mesopause (79.994–90.000 km). Above this is ionosphere, extending to at least 1,000 km, where temperature again rises through  $0^{\circ}\text{C}$  ( $273^{\circ}\text{K}$ ) at about 112 km and continues to over  $1,000^{\circ}\text{C}$  at 150 km and to peak of about  $1,781^{\circ}\text{C}$  at 700 km. Between 100–150 km lies E (Kennelly-Heaviside) layer; at 200–400 km is F (Appleton) layer, which at night is single band but by day divides into F1 and F2, F2 climbing to 400–500 km on summer day. E and F layers are reflective to suitable EM radiation striking at acute angle. Above ionosphere is open-topped exosphere, from which atmospheric molecules can escape to space and where mean free path varies with direction, being greatest vertically upward. Other \*\* are based upon composition, electrical properties and other variables.

**atmospheric tides** Produced by gravitational attraction of Sun and Moon. Latter exerts small influence, equal to equatorial pressure difference of 0.06 mb, but solar \*\* has 12 h harmonic component (apparently partly thermal) of 1.5 mb in tropics and 0.5 in mid-latitudes.

**atmospheric turbulence** See *gust*, *CAT*.

**ATMRP** Air traffic management research program[me].

**ATMS** 1 Air-traffic management system[s].

2 Advanced-technology microwave sounder.

**ATN** 1 Aeronautical telecommunications network.

2 Air-traffic network.

**atnavics** Air-traffic navigation integration and co-ordination system (USA).

**ATNM** Air-traffic network management.

**ATNP** ATN(1) panel.

**ATNS** Air-traffic [and] navigation services.

**ATO** 1 Air task, or tasking, order.

2 Assisted takeoff.

3 Abandoned takeoff.

4 Abort to orbit, ie cannot avoid making a complete orbit.

5 Airborne tactical officer.

6 Auto [reporting of] time over[head].

7 Authorization, or authority, to offer.

8 Air Traffic Organization (FAA, November 2003–).

**ATOA** Air Taxi Operators Association (UK).

**Atoc(s)** Allied tactical operations centre(s) (NATO).

**A to F** Authority to fly.

**ATOL** 1 Air travel organiser's (or operator's) licence (UK, a major function is to protect passenger after bankruptcy of carrier).

2 See ATOLS.

**Atol** Advanced trainer on localizer.

**Atoll** Assembly/test oriented launch language.

**ATOLS** Automatic takeoff and landing system (UAV).

**ATOM** Aileron trim offset monitor.

**atom bomb** Colloq., fission bomb; very loosely, any NW (see *nuclear weapon*).

**atomic materialization** Growth of thin-film coating by bombardment with ions and clusters [IR stealth].

**atomic number** Symbol Z, number of protons in atomic nucleus or number of units of positive electronic charge it bears.

**atomic weight** Mass of atom of element in units each 1/12th that of atom of carbon 12 (refined to 12.01115 on 1961 table). Numerical value for each element is same as atomic mass.

**atomising** Continuous conversion of solid or liquid, esp. high-pressure jet of liquid, into spray of fine particles. Also called atomisation.

**ATOP** 1 Airline training orientation program (US).

2 Advanced Technology [or Technologies] and Oceanic Procedures (FAA), Lockheed Martin).

**Atops** Advanced transport operating systems (NASA).

**ATOS** 1 Automated technical-orders system.

2 Air Transportation Oversight System (FAA).

**ATP** 1 At time, place.

2 Actual track pointer.

3 Authority, or authorization, to proceed.

4 Aviation technical regiment (USSR).

5 Application transaction program (SNA).

6 Airborne [USAF, Advanced] targeting pod.

7 Air-transport pilot [ALTP is preferred].

8 Advanced tow placement, manufacturing process for precise composite structure.

9 Air-turbine pump.

10 Allied technical publication.

11 Attack plot.

12 Acceptance-test procedure.

13 Aeronautics Test Program (NASA).

**ATPAC** Air-Traffic Procedures Advisory Committee (US).

**ATPCS** Automatic takeoff power control system.

**ATPI** Air Travel Price Index (BTS).

**ATPL** Airline [or air] transport pilot's licence; ALTP licence; /H adds endorsement for helicopters [required to be PIC of civil aircraft  $\geq 20,000$  kg MTOW].

**ATR** Air, or airline, transport radio, Arinc system of standardizing dimensions of airborne electronics boxes,

thus ATR, ½ATR, ¼ATR etc; broadly defined by Arinc 404, has also been said to mean air-transport[able] rack[ing].

- 2 Air Transport Rating.
- 3 Automatic, or aided, target recognition.
- 4 Airport terminal resources.
- 5 Air-traffic requirements.
- 6 Anti-transmit receive.
- 7 Analog tape recorder.
- 8 Advanced tactical radar.
- 9 Armed turn[a]round.
- 10 Attained turn-rate.
- 11 Advanced threat resolution, a baggage-screen workstation.
- 12 Automated time-recording.
- Atran** Automatic terrain recognition and navigation, cruise-missile guidance, Goodyear from 1949.
- ATRB** Advanced Technology Review Board.
- ATRC** 1 Air transport, or traffic, regulation center (US).  
2 See next.
- ATR/C** Automatic, or aided, target recognition and classification.
- ATRD** Active towed radar decoy.
- Atrel** Air-transportable reconnaissance exploitation laboratory (RAF).
- ATRH** Advanced tandem-rotor helicopter.
- Atrif** Air Transportation Research International Forum [office, Sterling, VA20164] (Int.).
- ATRJ** Advanced threat radar jammer.
- ATRP** Air-Transport Regulation Panel (ICAO).
- ATS** 1 Air Traffic Services, thus \* route (ICAO).  
2 Applications technology satellite, wide research programme.  
3 Suomen Avaruustutkimusseura Ry (Finnish astronomical society).  
4 Automatic throttle system.  
5 Armament training station (UK, WW2).  
6 Aircrew training system (USAF).  
7 Automatic test system (or station) for LRU check away from aircraft.  
8 Aviation training ship (RN).  
9 Air-turbine starter.
- 10 Acoustic tracking system.
- 11 Accelerator test stand [U adds upgrade].
- 12 Agile target system.
- 13 Auxiliary Territorial Service (UK WW2, became WRAC).
- 14 Advanced tracking system (radar extractor/tracker).
- 15 Automated trajectory server.
- 16 Airborne telephony server.
- ATSA** 1 Aviation and Transportation Security Act (US, 19 November 2001).  
2 Airline and travel services architecture.  
3 Air-Traffic Services Agency (Bulgaria).  
4 Air traffic service assistant.
- ATSAB** Air Transportation Systems Advisory Board [proposed] (FAA).
- Atsaw, ATSAW** Airborne traffic situational awareness.
- ATSB** 1 Air Transportation Stabilization Board (FAA).  
2 Australian Transport Safety Board [at Canberra, ACT].
- ATSC** 1 Air Technical Service Command (USAAF).

2 Air Traffic Services Cell, or communication (FAA/DoD).

- AT/SC** Autothrottle/speed control.
- ATSCC** Air Traffic Service Command Center.
- ATSD** Air-traffic situation display.
- ATSG** Acoustic test signal generator.
- ATSGF** ATS(1) geographic filter.
- ATSM** ATS(1) message [P adds processor].
- Atsocas** Air-traffic services outside controlled airspace.
- Atsora** Air traffic service[s] outside regulated airspace. Comprises RAS, RIS, FIS and non-radar procedural services.
- Atsos, ATsos** Air Traffic Safety Oversight Service [monitors AT08] (FAA, 2004-).
- ATSS** Air Transport Security School (UK, RAF).
- ATSSD** Air Traffic Services Standards Department (CAA, UK).
- ATSU** Air-traffic services unit.
- ATSy** Air Transport Security Section (RAF).
- ATT** 1 Automatic attitude hold (AFCS).  
2 Advanced tactical [or theater] transport.  
3 Advanced theater threat.  
4 Automatic target tracking.
- Att** Tail-on-tail aerodynamic influence coefficient.
- attach** To place temporarily in a military unit.
- attached shockwave** Caused by supersonic body having leading edge or nose sufficiently sharp or pointed not to cause shock to detach and move ahead of it. Critical values of M at which shock will just remain attached; eg for cone of 30° included angle shock will detach below 1.46; for 30° wedge M is 2.55 because wedge exerts larger obstructing effect on airflow. In most supersonic aircraft aim is to keep most shocks attached, especially at engine inlets.
- attack aircraft** Combat aircraft, usually aeroplane but sometimes helicopter, designed for attacking surface targets of tactical nature; missions include CAS (3) and interdiction.
- attack, angle of** Angle  $\alpha$  between wing chord or other reference axis and local undisturbed airflow direction. There are several ways of measuring this crucial parameter. One is absolute angle of attack. Another is \*\*\* for infinite aspect ratio, which assumes two-dimensional flow. Effective \*\*\* varies greatly with aspect ratio; modern wings of low aspect ratio have no stall in conventional sense even at  $\alpha = 40^\circ$ . Some authorities in UK cause confusion by using 'angle of incidence', which already has clear meaning unconnected with angle of incident airflow.
- attack avionics** Navigation and weapon-aiming systems, often integrated into single 'fit' for particular attack-aircraft type.
- ATTC** 1 Automatic takeoff thrust control.  
2 Aviation Technical Test Center (USA, Ft Rucker).  
3 Aircraft Tactics Training Center (USAF).
- attention-getter** Prominently positioned caption in cockpit, or esp. flight deck, triggered by onboard malfunction or hazardous situation (eg potential mid-air collision) immediately to flash bright amber or red. Less strident caption, warning light or other visual and/or aural circuit also triggered, enabling crew to identify cause and, if possible, take remedial action. Where CWS is fitted first task is to trigger \*\* while routing appropriate signal to captioned warning panel or other more detailed information.

**attenuation** Loss of signal strength of EM radiation, esp. broadcast through atmosphere, due to geometric spread of energy through volume increasing as cube of distance, loss of energy to Earth, water vapour, air and possibly ionised E and F layers.

**attenuation factor** Ratio of incident dose or dose rate to that passing through radiation shield.

**ATTG** Automated tactical target graphic[s].

**AT<sup>3</sup>, AT3, AT- three** See ATTT.

**Attinello flap** Blown flap.

**ATTTTB** Air Transport and Travel Industry Training Board (UK).

**attitude** Most, if not all, aircraft \* described by relating to outside reference system three major axes OX/OY/OZ (see *axes*); \* of flight relates these mutually perpendicular co-ordinates to relative wind; \* with respect to ground relates axes to local horizontal.

**attitude control system, ACS** Control system to alter or maintain desired flight attitude, esp. in satellite or spacecraft to accomplish this purpose in Earth orbit or other space trajectory. Typical \*\*\* uses sensing system, referred to Earth's limb, star or other 'fixed' point or line, and imparts extremely small turning moments to structure by means of gas jets or small rocket motors. In some cases passive \*\*\* used (PACS), or vehicle stabilized by spin about an axis, with portions despun if necessary.

**attitude gyro** Loosely, gyro instrument designed to indicate attitude of vehicle. Specif., instrument similar to artificial horizon but with 360° freedom in roll and preferably 360° freedom in pitch. Also applicable to conventional horizon with restricted indications of movement in aircraft not intended for aerobatics.

**attitude jet** 1 Reaction jet imparting control moments to aircraft at low airspeed (see *RCS*).

2 Sometimes applied to small thrusters or attitude motors used for same purpose on spacecraft.

**attitude motor** Small rocket motor used to control attitude of space vehicle (see *thruster, reaction control engine*).

**attitude reference symbol** Usually an inverted T giving heading and pitch attitude in HUD symbology.

**ATTLA** Air transportability test-loading agency (US).

**ATTMA** Advanced technology [or tactical, or theater] transport mission analysis.

**ATTN** Attention.

**atto** Prefix,  $\times 10^{-18}$ , symbol a; thus, 1 am (attometre) = 0.000000000000000001 m.

**attributes** Inherent characteristics of a finished part that determine its capability.

**attrition** Wastage of hardware in operational service, esp. of combat or other military aircraft.

**attrition buy** Additional increment of production run ordered to make good anticipated attrition over active life of system.

**attrition rate** Usually means average [actual or predicted] loss per year.

**attrition ratio** Many meanings, none of which compare losses with those of enemy.

**ATTS** Air-transportable towed system.

**ATTT** Advanced tactical targeting technology.

**ATTU** 1 Atlantic to the Urals (NATO).

2 Advanced Tactics and Training Unit (RAF Valley).

**ATU** 1 Antenna, or automatic, tuning unit.

2 Aerial [or aircraft] target unit.

**ATUA** Air Transport User's Association (UK).

**ATUC** Air Transport Users' Council [London WC2B 6TE] (UK).

**Atugs** Armed tactical unattended ground sensor.

**ATV** 1 Associazione Tecnici di Volo Aviazione Civile (I).

2 Automated transfer vehicle, also called space tug.

3 Atmospheric test vehicle.

4 Aircrew training vessel (UK MoD).

**ATVA** Active tuned vibration attenuator, or absorber.

**AT-Vasi** Abbreviated T-Vasi, ten light units on one side of runway in single 4-unit wing bar plus 6-unit bisecting longitudinal line.

**ATVC** Ascent thrust-vector control.

**ATVP** Aerospace technology validation programme (UK).

**ATVS** Advanced TV seeker.

**ATW** Advanced tactical workstation.

**Arw** Wing-on-tail aerodynamic influence coefficient.

**ATWGS** Advanced tactical weapon guidance system.

**A2I2** Accelerated-accuracy improvement initiative (Navstar/GPS).

**ATWS** Active tail-warning system.

**ATZ** Aerodrome traffic zone.

**AU, a.u.** Astronomical Unit[s].

**AU** 1 Air University (Maxwell AFB, USAF, founded 15 March 1946).

2 Utility aircraft (USA, USAF, 1956–62).

**AUAP** Andrews University Air Park [Berrien Springs, MI 49104-0001] (US).

**AUC** See ATUC.

**audio box, audio control** Governs voice communication and broadcast throughout aircraft and by telephone to ground crew.

**audio frequency** Frequency within range normally heard as sound. Limits vary widely with individuals but normally accepted 15 Hz to 20 kHz, upper limit being depressed with advancing age.

**audio integration unit** Interlinks 'classic' cockpit with TCAS, EGPWS and other newer audio systems.

**audiometer** Instrument for measuring subject's ability to hear speeches and tones at different frequencies.

**audio oscillator** Multi-valve (tube) or multi-transistor stage in superheterodyne receiver serving as local oscillator and amplifier (detector).

**audio panel** Cockpit panel controlling all communications systems.

**audio speed signal** Aural indication of vehicle speed, either on board or at ground station; usually has pitch proportional to sensed velocity, indication being qualitative only (see *aural high-speed warning*).

**audio warning** Loud warning by horn, buzzer, bell or voice tape in headphones or cockpit loudspeaker indicating potential danger. Examples: incorrect speed (usually sensed airspeed) for regime, configuration or other flight condition; potentially dangerous excursion of angle of attack; ground proximity; incorrect configuration (gear up, wings at maximum sweep, etc).

**Audist** Agence Universitaire de Documentation et d'Information Scientifiques et Techniques (F).

**audit** Comprehensive detailed examination of airframe structure of aircraft in line service, esp. after fatigue problems encountered on type.

**AUEW** Amalgamated Union of Engineering Workers (UK).

**AUF** 1 Airborne use of force (USCG).

2 Australian Ultralight Federation [Canberra ACT].

**AUFP** Average unit flyaway price.

**auger in** To crash, esp., to fly into ground.

**augmentation** 1 Boosting propulsive thrust by auxiliary device, esp. by afterburning in both core and bypass flows of turbofan.

2 Percentage of thrust added by (1).

3 Increasing inadequate natural flight stability of aerodyne by on-board system driving control surfaces (rarely, ad hoc auxiliary surfaces).

4 Enhancing target signature of radar, optical, IR or other radiation by means of corner reflectors, Luneberg lenses or other \* devices.

5 Enhancement of fluid flow by ejector effect, esp., of lift airflow in powered-lift aircraft.

**augmentation choke** Pilot-controlled modulating valve in blowing system of CCW for roll control.

**augmentation ratio** Ratio of total fluid flow to mass flow of primary ejector flow of hot gas in ejector-lift system.

**augmented deflector (or deflected) exhaust nozzle** Nozzle of V/STOL jet engine downstream of augmentor and capable of deflecting flow through at least 90°C.

**augmented turbojet, turbofan** Engine equipped with afterburning (reheat) to augment thrust, esp. at transonic or supersonic flight speed. Turbofan augmentation may be in hot and/or cold flows, latter offering greater density of free oxygen.

**augmentor** Afterburner for turbofan, with burning in hot and cold flows; US often augmentor.

**augmentor ejector** Main lifting system in *ejector lift*.

**augmentor wing** General term for STOL aeroplane wing in which engine thrust is directly applied to augment circulation and thus lift. Countless variations, but most fundamental division is into external and internal blowing. Former typically uses engine bleed air (rarely, total efflux) discharged at sonic speed through one or more narrow slits ahead of large double or triple-slotted flaps which, because of blowing, can be depressed to unusually sharp angle. Second method uses either engine bleed air or total efflux to blow through flap system itself (or propulsion engines are distributed across main flap, in some schemes there being as many as 48 small engines). Internal blowing makes flow separation impossible and gives large downwards component of thrust, but is difficult to apply and may severely compromise aircraft in cruise (see *jet flap, blown flap, externally blown flap, upper-surface blowing*).

**AULD** Aircraft unit-load device.

**AUM** 1 Air-to-underwater missile (USA DoD weapon category).

2 All-up mass.

**AUP** 1 Advanced unitary penetrator.

2 Avionics upgrade program.

3 Airspace use plan.

4 Active unmanned vehicle phenomenology (AFRL).

**AUR** 1 All-up round.

2 Airplane [aircraft, aeroplane] upset recovery.

**AURA** 1 Advanced UHF radar.

2 Autonomous unmanned reconnaissance aircraft.

**aural acquisition** Acquisition of target by IR seeker head as confirmed by pilot's headset.

**aural high-speed warning** System triggered by sensed flight speed, usually presented as EAS, significantly above

allowable maximum. In transport aircraft typically triggered 10 kt above  $V_{mo}$  and 0.01 Mach above  $M_{mo}$ . Not usually made to do more than warn crew.

**aural null** Condition of silence between large regions where sound is heard, eg in early radio DF system, in some types of beacon passage ('cone of silence') and several ground-test procedures.

**Aurora** Automatic recovery of remotely-piloted aircraft.

**aurora** Luminescence in upper atmosphere, esp. in high latitudes, associated with radiation and/or particles travelling along Earth's magnetic field and at least partly coming from Sun. Exact mechanism not yet elucidated, but 12 classes identified, based on appearance and structure.

**AUS** Airspace Utilisation Section, part of ATC service (CAA DAP).

**AUSA** Association of the US Army [office, Arlington, VA22201] (US).

**Ausac** Australian Aviation Council [umbrella organization for aerospace industry].

**AUSI** Architecture user of system integration.

**Ausrire** Anglicization of 'all-union scientific research institute of radio equipment' (R).

**Austaccs** Australian automatic command and control system.

**austenitic steel** Ferrous alloys with high proportions of alloying elements and with microstructure transformed by heat treatment to consist mainly of solid solution of austenite (iron carbide in iron, face-centred). Used to make highly stressed aerospace parts, such as turbine discs.

**AuTC** Autothrottle control.

**AUTEC** Atlantic Undersea Test and Evaluation Center (USN with UK help, in British territory).

**AUTH, Auth** Authorized, or authority.

**authority** 1 Organisation empowered to pronounce hardware properly designed, constructed and maintained, and to issue appropriate certificates.

2 Extent to which functioning system is permitted to control itself and associated systems. Greater \* demands greater inherent or acquired reliability, typical means of acquiring reliability being to increase redundancy and provide alternative control channels or in some other way provide for failure-survival.

**Authorization** Act of Congress establishing a Federal agency or procedure (US).

**authorised medical examiner** Doctor approved by national licensing authority to issue/renew/refuse aircrew medical certificates.

**Auto-Acas** Automatic air-collision avoidance system.

**Autob** Automatic observation and reporting of weather.

**Autocarp, Auto-CARP** Automatic computed air release point.

**autoclave** Pressure chamber which can be heated; oven which can be pressurized. Large \* can accept major structural parts of aircraft for adhesive bonding operations.

**auto coarse pitch** System used on a few multi-piston engine aircraft to minimise drag after engine failure.

**Autodin** Automatic digital network (USAF).

**autodyne oscillator** Multi-electrode valve or transistor stage of superheterodyne receiver serving as both local oscillator and amplifier or detector (demodulator).

**autofeathering** System for automatically and swiftly

feathering propeller when engine fails to drive it; usually triggered by NTS.

**autoflare** Flare [1] commanded by autopilot.

**autogenic training** Psycho-physiological technique carried out by subject according to prescription by qualified therapist, to reduce stress.

**Autogiro** Registered name of Juan de la Cierva autogyros, 1924-45.

**autogyro** Rotorplane in which propulsion is effected by horizontal-thrust system, eg propeller, and lift by rotor free to spin under action of air flowing through disc from below to above (ie, autorotating). Some can achieve VTOL by driving rotor in vertical phases of flight, but true \* is STOL.

**auto-hover** Automatic hover, usually at low altitude, by helicopter or other VTOL aircraft, using radio altimeter and AFCS.

**auto-igniting propellant** Hypergolic.

**auto-ignition** 1 Of gas turbine engine, auxiliary system which senses angle of attack or other aerodynamic parameter and switches on igniter circuits before engine is fed grossly disturbed airflow which would otherwise pose combustion-extinguishing hazard. In some aircraft flight in rough air with full flap, or flight at high AOA, can cause intermittent or total flame-extinction, and there are other flight conditions (eg violent manoeuvre) when turbulent flow across intake triggers \*, indicated by cockpit lights.

2 Specific meaning, ignition of premix fuel/air because of high compression (OPR 45+).

3 Of combustible material, spontaneous combustion.

**auto-ignition temperature** At which auto-igniting materials spontaneously combust in air; design factor in some rocket engines and gas generators.

**autokinesis** Sensation of movement of a distant light that is stared at.

**Autoklean** Patented (UK) lubricating-oil filters based on compressed stack of strainer discs and spacers.

**Autoland** 1 Loosely, AFCS capable of landing aeroplane hands-off and qualified to do so in total absence of pilot visual cues.

2 Specific systems developed in UK by Smiths Industries and GEC-Marconi-Elliott.

**Autolycus** ASW detection system operating by sensing minute atmospheric concentrations of material likely to have come from diesel submarine running submerged (UK).

**Automap** Trade name for map and/or track guide projection system, esp. for single-seat combat aircraft.

**Automated Radar Terminal System** Shows terminal controller basic information on all collaborating traffic. \* I largely overtaken by \* II, and by III which tracks/predicts secondary-radar targets. \* IIIA adds primary targets. All forms now modular and programmable. (FAA).

**automated trajectory server** A ground system which relies on its software to manage flight-path requests from pilots and controllers. (FAA/NASA).

**automatic boost control, ABC** On piston engine servo system which senses induction pressure and so governs boost system that permissible limits of boost pressure cannot be exceeded. These were among first airborne closed-loop feedback systems.

**automatic coarse pitch** See *Automatic pitch coarsening*.

**automatic dependent surveillance** Global system to

compensate for lack of radar coverage over oceans and remote areas, involving automatic regular polling of navids of each aircraft so that ATC can always monitor its position and ensure safe separation. Satellites appear to be essential for implementation.

**automatic-direction finder** See *ADF*.

**automatic drag-limiting system** Propeller subsystem which, via a torquemeter signal, increases [coarsens] pitch whenever a negative, or predetermined low positive, torque is experienced by the drive shaft, thus preventing excessive drag following engine failure.

**automatic extension gear** Landing gear which extends by itself, typically by sensing airspeed and engine rpm, should pilot omit to select DOWN.

**automatic feathering** Autofeathering.

**automatic flagman** Electronic installation in ag aircraft to provide precise track guidance on each run in conjunction with ground beacons.

**automatic flyback vehicle** Unmanned shuttle between Earth and spacecraft.

**automatic frequency control** 1 Radio receiver which self-compensates for small variations in received signal or local oscillator.

2 By different method, self-governing of a time base.

**automatic gain control** See *AGC*.

**automatic landing** Safe, precisely repeatable landing of advanced aeroplane, helicopter or other aerodyne in visibility so restricted that external visual cues are of no assistance to pilot. Basis of present systems is high-precision ILS, approach coupler, triplexed or quad AFCS, autothrottle, autoflare and ground guidance after touchdown.

**automatic manoeuvre device system** Automatically schedules high-lift devices, especially on variable-sweep aircraft; usually governed by AOA.

**automatic manual reversion** Fully powered flight-control system may be so designed that no ordinary pilot could control aircraft manually; if not, \*\*\* on one, two or three axes allows pilot to drive surfaces giving control in those axes after malfunction of powered system can no longer be accommodated by failure-survival.

**automatic mixture control** In piston engine, subsystem which automatically adjusts flow rate of fuel to counteract changes in air density, or which controls intake airflow by restricting carburettor air-intake duct by amount inversely proportional to altitude until wide open at height usually around 15,000 ft.

**automatic observer** Self-controlled group of sensors for recovering parameters during flight test.

**automatic parachute** 1 Parachute pulled from its pack by static line [usual meaning].

2 Parachute opened by barometric device at preset pressure altitude[s].

**automatic pilot** See *autopilot*.

**automatic pitch-coarsening** Facility built into propeller control system causing it to increase pitch automatically, normally from fine-pitch setting to typical cruise angle, when called for by operating regime. This is normally another name for a CSU, and quite distinct from auto coarse pitch.

**automatic power reserve** Special increased-thrust rating available on commercial turbofan engines only in emergency, and triggered automatically by loss of power in other engine in same aircraft.

**automatic pull-up** Preprogrammed steep climb by (1) aircraft in TFR flight following failure of one pitch channel, or (2) aerial target at start of parachute recovery.

**automatic RDF** See *ADF*.

**Automatic Recall** In a time of extreme tension, this would have come into effect if an attacking bomber carrying NW reached the Go-No-Go Line without having received the PRM (USAF, RAF, 1960–90).

**automatic reverse pitch** Facility built into propeller control system causing it to reduce pitch automatically past fine-pitch stop through zero to reverse (braking) position, upon receipt of signal from microswitch triggered when main gears compress shock struts on landing. Very rare for reverse pitch to be obtainable without deliberate selection by pilot, though with \*\*\* pilot may select in air, leaving auto system to send operative signal.

**automatic riveter** Machine for drilling holes through parts to be joined, inserting rivet and closing (heading) it.

**automatic roll-out guidance, AROG** Steering guidance after automatic landing in blind conditions (ideally extended from runway turnoff to terminal parking).

**automatic search jammer** ECM intercept receiver and jamming transmitter which searches for and jams all signals having particular signatures or characteristics.

**automatic selective feathering** 1 Airborne subsystem which, in the event of engine failure in multi-engined aircraft (invariably aeroplane), decides which engine has failed and takes appropriate action to shut down and feather propeller.

2 Similar system which, when pilot presses single feathering button, routes signal automatically to failed engine and propeller.

**automatic slat** Leading-edge slat pulled open automatically at high angle of attack by aerodynamic load upon it. All slats were originally of this type.

**automatic synchronization** In multi-engined aircraft (invariably aeroplane), subsystem which electrically locks rpm governors of all engines to common speed.

**automatic terminal information service** See *ATIS*.

**automatic threat centering** Ability of EW system to detect, identify, locate and respond to each hostile emission without human intervention.

**automatic touchdown release** Device incorporated in sling system for external cargo carried below helicopter or other VTOL aircraft which releases load as soon as sling tension is released.

**automatic tracking** Although this could have meaning in system constraining aircraft to follow preset tracks over Earth's surface, universal meaning is property of directionally aimed system to follow moving target through sensing feedback signal from it. Applications found in (1) air-superiority fighter, in which essential to lock-on and track aerial target automatically, by means of radar, IR, optics or other system; and (2) ground tracking station, which may need to follow satellite, aircraft, drone target or other moving body in order to sustain command system, interception system, data-transmission system or other directionally beamed link.

**automatic VHF D/F** Ground D/F system in which, instead of requiring manual turning of aerial array to find null position, signal from aircraft causes aerial to rotate automatically to this position, direction being at once

displayed as radial line on CRT of the equipment. Also called CRT D/F, CRT/DF.

**automatic voice advice** In terminal ATC, computer-generated voice message broadcast to two or more aircraft warning of potential conflict. Intended primarily for VFR traffic and for all traffic not under immediate control, and intended to relieve controller of function that appears to be safely automated.

**automatic voice alerting device** Uses digitized human voice to warn of impending or hazardous situation, warnings being arranged in order of priority.

**autonomous** 1 Of aircraft or other vehicle, not needing GSE.

2 Of an SSR, not co-located.

3 Of airborne equipment, not needing external sensors; not linked to other aircraft systems (though possibly under pilot control), eg \* reconnaissance pod.

**autonomous formation flight** Saving up to 20% fuel by copying geese and using accurate GPS to place at least one wingtip in tip vortex of preceding aircraft (NASA/Boeing/UCLA).

**autonomous landing guidance** Based upon sensors or other devices in the aircraft.

**autonomous logistics information system** Monitors all significant functioning parts of an organism, predicts expected life and gives advance warning of failure.

**autonomous vehicle** Vehicle, especially unmanned aircraft, which completes mission without external help.

**autopilot** Airborne electronic system which automatically stabilizes aircraft about its three axes (sometimes, in light aircraft, only two, rudder not being served), restores original flight path following any upset, and, in modern \*, preset by pilot or remote radio control to cause aircraft to follow any desired trajectory. In advanced aircraft \* is integral portion of AFCS and can be set by dial, push-button or other control to capture and hold any chosen airspeed, Mach, flight level or heading. In advanced combat aircraft \* receives signals from sensing and weapon-aiming systems enabling it to fly aircraft along correct trajectories to fire guns or other ordnance at aerial target or lay down unguided bombs on surface target.

**autopilot-disconnect** Advanced autopilots are automatically disconnected by control overloads generated within aircraft and by certain other disturbances likely to reflect wish of pilot, eg triggering of stall-protection stick-pusher.

**autopilot flight-director computer** This governs the AFD system, which controls the trajectory of the aircraft in the horizontal plane. It outputs to the FBW control system.

**Autoplan** Portable EDP which digitises navigation plan and combines output with other CPGS data to provide attack-aircraft pilot with complete nav/ECM/weapon-aiming information.

**auto power reserve** See *automatic \*\**.

**autopsy** Searching examination of crashed aircraft to discover cause, esp. to detect fatigue failure.

**autorotation** 1 Loosely, condition in which airflow past aircraft causes whole aircraft or significant part of it to rotate. Propeller in this context is not significant, though windmilling propeller is autorotating.

2 In helicopter, descent with power off, air flowing in reverse direction upwards through lifting rotor(s), causing it to continue to rotate at approximately cruise rpm. Pilot preserves usual control functions through pedals, cyclic

and collective, but cannot grossly alter steep 'glide path'. Rate of descent may exceed design ROD for landing gear, but is reduced just before ground impact by sudden increase in collective pitch; this increases lift, trading stored rotor kinetic energy for increased aerodynamic reaction by blades, and should result in gentle touchdown.

3 In aeroplane, descent in stalled condition, with general direction of airflow coming from well beyond stalling angle of attack but in grossly asymmetric condition (see *spin*).

4 In aeroplane, descent in unstalled condition under conditions apparently not greatly different from straight and level but with stabilized spiral flight path (see *spiral dive*, *spiral stability*). Distinct case of \* which purist might argue is incorrect usage.

5 In helicopter flying training, range of manoeuvres designed to increase confidence and remove fear of power failure; all power-off descents, but differ in whether they are NPR (no power recovery) or terminated at height well above ground by restoring at least partial power. In latter case \* terminated either by run-on-landing (running \*), run-on climb-out or moderate-flare climb-out.

**auto-separation** Automatic (often barometric) release of occupant from ejection seat.

**Autosevocom** Automatic secure-voice communications (DoD).

**autostabilizer** Loose term for autopilot, esp. with authority on pitch axis only.

**Autosyn** Trade name for remote-indicating system in which angular position of indicator needle precisely follows rotary sensing device moved by fluid level, mechanical displacement or other parameter which must be remotely measured. Sensor and indicator are essentially synchronous electric motors.

**autosynchronization** Automatic synchronisation.

**autothrottle** Power control system for main propulsion engines linked electro-mechanically to AFCS and automatic-landing system so that thrust is varied automatically to keep aircraft on glide path and taken off at right point in autoflare; in general \* will also call for reverse thrust at full power in conjunction with automatic track guidance (roll-out guidance), though this may be left to discretion of pilot.

**autotracking** Signal processing technique that enables a target to be automatically acquired and tracked by means of its own image, which can be received at any operating wavelength (usually microwave or optical).

**autotrim** Aircraft trim system automatically adjusted by autopilot or other stabilising system to alter or maintain aircraft attitude according to pilot demand or changed distribution of weight or aerodynamic load. Usually governs pitch only, the autopilot commanding the elevator and the autotrim the tailplane (stabilizer).

**Autovon** Automatic voice network (USAF Communications Service).

**AU2GN** French designation of R.R.58 alloy.

**AUVS** Association for Unmanned Vehicle Systems [I adds International] (Washington, DC US).

**AUW, a.u.w.** All-up weight; actual aggregate weight of particular laden aircraft at moment of weighing. For generalized equivalent, more precise term should be used (MRW, MTOW, etc), but AUW has advantage of being not explicit and thus can be used to mean 'total weight of aircraft, whatever that happens to be'. Should never be

used to mean MRW or MTOW. If latter are not known, preferred term meaning 'maximum allowable weight' is gross weight.

**AUWE** Admiralty Underwater Warfare Establishment (UK).

**AUWG** Airspace Users Working Group.

**AUX** Auxiliary.

**auxiliary bus** Secondary electrical bus serving one or more devices and often maintained at voltage different from that of main bus.

**auxiliary fin** Generally, small additional fixed fin carried, not necessarily to enhance directional stability, well outboard on tailplane.

**auxiliary fluid ignition** In rocket engine, use of limited supply of hypergolic fluid(s) to initiate combustion of main propellants.

**auxiliary inlet, auxiliary intake** Extra inlet to [invariably gas-turbine] engine to admit extra air when needed [normally only on takeoff]. Also called supplementary air inlet and, most commonly, suction-relief door.

**auxiliary parachute** Pilot parachute.

**auxiliary power unit, APU** Airborne power-generation system other than propulsion or lift engines, carried to generate power for airborne system (electronics, hydraulics, air-conditioning, avionics, pressurization, main-engine starting, etc). In general, term restricted to plant deriving energy from on-board source and supplying constant-speed shaft power plus air bleed. This would exclude a RAT or primitive windmill-driven generator. Some \*\*\* can provide propulsive thrust in emergency (see *MEPU*).

**auxiliary rigging lines** Branching from main parachute rigging lines to distribute load more evenly around canopy.

**auxiliary rotor** In a classical helicopter [one main rotor], the rotor provided to counter drive torque and control fuselage azimuth. This is preferably called the tail rotor.

**auxiliary tank** Fuel tank additional to main supply, esp. that can readily be removed from aircraft (see *reserve tank*, *external tank*, *drop tank*).

**AV** 1 Air vehicle.

2 Audio-visual.

3 Aft vectoring (nozzle mode).

**AVA** 1 Automatic voice advice.

2 Applied vector analysis.

3 Aeropark Volunteers Association [Derby DE24 0ED] (UK).

**AVAD** Automatic voice alert[ing] device.

**AVADS** Autotrack Vulcan air-defense system (USA).

**aval, Aval** Available.

**availability** 1 Symbol A, proportion of time aircraft is serviceable and ready for use, expressed as decimal fraction over period or as number of hours per day or days per month. Also expressed as  $\frac{\text{uptime}}{\text{uptime} + \text{downtime}}$ .

2 Period which must elapse between purchase of aircraft, usually second-hand, and handover to customer.

**avalanche** 1 Any of several processes involving ions or electrons in which collisions generate fresh ions or electrons which in turn go on to have their own collisions. In \* tube electrons or other charged particles are accelerated in electric field to generate additional charged particles through collisions with neutral gas atoms or molecules. In semiconductor devices \* effect occurs when potential in

excess of critical voltage is applied across p-n junction, enormously multiplying liberation of charge carriers.

2 Aerobatic manoeuvre devised by Randal Porteous involving rapid rotation about all axes in combined stall turn and flick roll.

**AVAQ** Association des Villes Aéroportuaires du Québec [office, Montreal].

**AVAS** Air-vehicle avionics suite.

**Avasi** Abbreviated Vasi.

**AvBatt, AVBATT** Aviation Battalion (USA).

**AvBM** Aviation business machine, PC + com. terminal.

**AVC** 1 Automatic volume control (see AGC).

2 Automatic variable camber.

3 Active visual camouflage.

4 Attitude/velocity/control subsystem.

5 Avionics ventilation computer.

6 Active vibration control.

**Avcat** Originally Aviation Carrier [ship] Turbine, kerosene tailored to raise flashpoint above 60°C, freeze ≤ 48°C; US = JP-5, NATO = F43 (F44 with FS11 additive), see *kerosene*.

**Avcatt** Aviation combined-arms tactical trainer; -A adds aviation reconfigurable manned simulator (USA).

**AvCIR** Aviation crash injury research (CGASC).

**AVCR** Airborne video-cassette recorder.

**AVCS** Advanced vidicon camera system (carried by satellites).

**AVD** 1 Air Vehicles Directorate (AFRL).

2 Atmospheric-vehicle detection.

**AVDA** Asociación Venezolana de los Deportes Aereos [air sport], (Venezuela).

**Avdas** Airborne-vehicle data-acquisition system.

**Avdel** Trade-name for large range of rivets/fasteners (Textron).

**A-VDV** Aviation of airborne forces (USSR).

**AVE** 1 Airfield visitor enthusiast (PFA).

2 Airborne-vehicle equipment.

3 Aéronef de validation expérimentale (UCAV, F).

**AVEN, Aven** Axi-symmetric vectoring engine, or exhaust, nozzle.

**Aveppa** Asociación Venezolana de Pilotos Privados y Proprietarios de Aeronaves (Venezuela).

**average flyaway unit cost** Recurring manufacturing cost, all GFE costs, avionics, production support services and cost of tooling, manufacturing and pre-delivery maintenance.

**average procurement cost** Average flyaway unit cost plus GSE, training and technical aids, spares support and data, handbooks, technical representatives and logistic support.

**AVD** 1 Air Vehicles Directorate (AFRL).

2 Atmospheric-vehicle detection.

**AVET** Adaptive versatile engine technology.

**AVG** 1 Average (ICAO).

2 American Volunteer Group (China, WW2).

3 Aircraft escort vessel (later ACV, then CVE).

**Avgard** Additive to JP-1 and other jet fuels to produce anti-misting kerosene (ICI trade name).

**Avgas** Aviation gasoline, range of piston engine petrols today being narrowed to 100LL (blue, max. 2.4 ml/Imp gal TEL) and 115 (purple, max. 5.52 ml/Imp gal TEL).

**AVGS** Advanced video guidance sensor (MSFC).

**AVHRR** Advanced very-high resolution radiometer.

**AVI** Air-vehicle integration; D adds design.

**Aviaregister** List of all civil aircraft (R, CIS).

**aviation** Operation of aerodynes (but only a pedant would insist on "aerostation" for aerostat).

**aviation medicine** Study of all effects of aviation on the human body.

**Aviation Policy Area** Proposed rules for residential and commercial density in environs of airports with 2,300+ ft runway (US).

**Aviation Security Advisory Committee** Headed by V-P Al Gore, convened 1996 to improve security on US commercial flights, made numerous recommendations to combat terrorism, all rejected by US carriers.

**aviator** Operator of an aerodyne, esp. pilot. As term archaic, difficult to define; nearest modern equivalent is aircrew member.

**aviatrix** Female aviator.

**Aviatrust** Original (1923) central aviation industry management organisation (USSR).

**Aviavnito** Aviation department of Vnito, all-union amateur scientific/technical research organisation (USSR).

**AVIC** Aviation Industries of China [created 26 June 1993, in 1999 divided into AVIC I (54 enterprises and 30 research institutes) and AVIC II (79 and three), [office, Beijing 100009] (China).

**Avics, AVICS** Air-vehicle interface and control system.

**Avid** Air-vehicle integration design.

**aviette** Man-powered aircraft.

**avigation** Aerial navigation (suggest undesirable word). Hence also avigator.

**Avim** Aviation intermediate-level maintenance (USAF).

**Avimid** Thermoplastic (strictly 'pseudo-') polymer composite, marketed as K-III fabric and tape (Du Pont).

**avionics** Aeronautical (not aviation) electronics, not necessarily by definition restricted to aerodynes. Term implies equipment intended for use in air; purely ground-based equipment could be argued to be outside category.

**Aviox** Registered name for high-solidity polyurethane surface coatings.

**AVIP** Avionics integrity program (USAF).

**AVIRIS, Aviris** Airborne visible and IR imaging spectrometer.

**Avlan** Avionics local-area network.

**AVLC** Aviation VHF link control.

**AVLF** Airborne very low frequency.

**AVM** 1 Airborne, or airframe, vibration monitor.

2 Air Vice-Marshal.

**A-VMF** Naval air force (USSR, R).

**AVN** Aviation system standards (FAA).

**AVNDTA** Aviation development test activity (USA).

**AVNF** Air-vehicle near field.

**AVNIR, Avnir** Advanced visible and near-IR radiation.

**AVNL** Automatic video noise limiter, or limiting.

**AVO** Avoid verbal orders.

**AVOD** Audio/video on demand.

**Avogadro number** The number of molecules of a substance in one mole (2).

**avoid curve** Plot of TAS/height below which a helicopter may not survive total engine failure.

**Avoil** Aviation [lubricating] oil.

**AVOL** Aerodynamic visual, or aerodrome visibility, operational level.

- Avometer** Pioneer hand-held tester for electrical systems.
- Avoss** Aircraft vortex spacing system, to permit reduced landing intervals.
- Avpac** Aviation packet communication.
- AVPH** Air-vehicle prognostics and health.
- Avpin** Aviation-specification isopropyl nitrate.
- Avplex** Avionics planning and execution.
- Av.P.970** Aviation Publication 970, *Manual of Design Requirements for Aircraft*, now called DAR.1 (UK).
- Avpol** Aviation-specification petrol/oil/lubricant.
- AVR** 1 Active vibration reduction.  
2 Additional validation requirement[s].
- AVRA** Automatic visual-range assessor.
- Avradar** Aeronautical, or aviation, R&D activity (USA).
- AVRS** Airborne video-recording system.
- AVS** 1 Advanced vertical strike.  
2 Advanced vision, or visionics, system.  
3 Air-vehicle specification.
- Avsat** Aviation satcom service.
- Avsec, AVSEC** Aviation Security Panel (ICAO).
- AvSP** Aviation safety project (NASA).
- AVSS** 1 Analog voice switching system.  
2 See *Avoss*.
- AVT** 1 Automatic video tracker.  
2 Augmented, or avanced, vectored thrust.  
3 Analog voice terminal.
- Avtag** Aviation turbine-engine gasoline, see *fuel*.
- Avtoc** Aviation tactical-operations center, if A2C<sup>2</sup>C unavailable (USA).
- Avtops** Aviation tactical-operations center (USA, USAF).
- AVTR** Airborne video-tape recorder.
- Avtur** Aviation turbine-engine fuel, see *fuel*.
- AVUM** 1 Aviation unit-level maintenance (USA).  
2 Air-vehicle unit maintenance.
- AVVI** Altitude and vertical-velocity indicator.
- AW** 1 All-weather (usually not literally true).  
2 Airway; often A/W, but AWY is preferred.  
3 Automatic [gun] weapon.  
4 Confusingly, airborne early warning.  
5 Airlift Wing (USAF).  
6 Airworthiness.
- A<sub>w</sub>, Aw** Aircraft total wetted area.
- AWA** Aviation/Space Writers Association [office, Chester, NJ] (US/Int.).
- Awacs, AWACS** Airborne warning and control system.
- AWADC** Advanced wideband analog-to-digital converter; T adds technology.
- Awads** All-, or adverse-, weather aerial delivery system.
- AWAM** Association of Women in Aviation Maintenance (US).
- Awans** Aviation weather and notice-to-airmen system (FAA, from 1976).
- Awards** 1 Aircraft wide-angle reflective display system.  
2 All-weather airborne reconnaissance drone sensor.
- Aware** Advanced warning of active-radar emission[s].
- Awas** Automated weather advisory system.
- AWB** 1 Airway bill, air waybill.  
2 Above-water battlespace.
- AWBA, Awba** Automated wing-box assembly.
- AWC** 1 Accumulated water condensate.  
2 Air Warfare Centre (RAF Waddington; see AWFC).  
3 Aviation Weather Center (NOAA).  
4 Air Wing Commander (USN).
- AWCCV** Advanced-weapon-carriage configured vehicle.
- AWCLS** All-weather carrier landing system.
- AW/CN** Awaiting collection (RAF).
- AWCS** Automatic, or airborne-, weapons control system.
- AWD** 1 Airworthiness Division (CAA, UK).  
2 Air-warfare destroyer (ship).
- Awdats** Automatic-weapon, or air-warfare, data-transmission system.
- Awdrey** Atomic-weapon detection, recognition and estimation of yield.
- AWDS** 1 All-weather delivery, or distribution, system.  
2 Automated weather [forecast] distribution system
- AWE** 1 All-up weight, equipped; generally = OWE.  
2 AWE Hunting Brae, previously Atomic Weapons Establishment [Aldermaston, RG7 4PR] (UK).  
3 Aircraft/weapon/electronic (AFMSS module).  
4 Advaned weapons elevator (CV).
- AWES** Atomic-weapons effects simulator; AWESS = signature simulator.
- AWFC** Air Warfare Center (USAF).
- AWFCS** All-weather flight-control system.
- AWG** 1 JETDS Code: piloted aircraft, armament, fire-control.  
2 Airlines Working Group (CAA, UK).  
3 Arbitrary waveform generator.  
4 Aural-warning generator.  
5 American Wire Gauge.
- AWH** All-weather helicopter.
- AWI** 1 Aircraft weight indicator, on-board system also often indicating c.g. position, usually by sensing deflections of landing-gear shock struts.  
2 All-weather intercept.  
3 Air weapons instructor.  
4 Airframe/weapons integration.
- Awiator** Aircraft wing with advanced-technology operation (Airbus).
- AWICS** Airborne wireless intercom system.
- AWIGWG** Aircraft wire and inert-generator working group.
- AWIM** Airport weather information manager.
- AWIN, Awin** Aviation weather information [S adds system] (NASA/Boeing).
- Awips** Advanced weather interactive processing system (FAA).
- AWIS** Automatic weather information system.
- AWL** Above water level.
- AWLS** All-weather landing system.
- AWM** 1 Average working man (in defining aircrew sleep patterns).  
2 Aircraft wiring manual.  
3 Audio warning mixer.
- AWMDS** Automatic wing-sweep and manoeuvre devices system.
- AWNIS** Allied worldwide naval information system.
- AWO** All-weather operations.
- AWOP** All-weather Operations Panel (ICAO).
- AWOS** Automated, or airport, weather-observing, or automatic weather-observation, system.
- AWP** Aerial work platform.

**AWPA** Australian Women Pilots' Association [office, Crafers, SA].

**AWPG** Advanced weather products generator.

**AWR** Airborne weather radar.

**AWRA** Augmentor-wing research aircraft.

**AWRE** Atomic Weapons Research Establishment [Aldermaston, now AWE] (UK).

**AWRS** 1 Airborne weather reconnaissance system (USAF).

2 Automatic weather reporting system.

**AWS** 1 Air Weather Service (USAF, formerly part of MAC, now an FOA, Scott AFB).

2 Audible (or advanced) warning system.

3 Automatic wing sweep.

4 Air ward system.

5 Area weather system.

6 Aircraft Warning Service (USA/USN, 1942 – 46).

**Awsacs, AWSACS** All-weather stand-off aircraft (or attack) control system (USN).

**AWSAS** All-weather stand-off attack system.

**AWSO** Aviation-warfare systems operator.

**AWT** 1 Airborne wideband terminal.

2 Atmospheric wind tunnel.

**AWT** Tail-on-wing aerodynamic influence coefficient.

**AWTA** Advise what time available.

**AWTSS** All-weather tactical strike system.

**AWW** All-, or alert, weather watch.

**Aww** Wing-on-wing aerodynamic influence coefficient.

**AWX** All-weather interceptor.

**AWY, awy** Airway (ICAO, FAA).

**AX** 1 Avionics, avionics control (USAF).

2 Int. classes of hot-air balloons, from AX3 [20,000 cu ft, 566 m<sup>3</sup>] to AX9 [140,000 cu ft, 3,935 m<sup>3</sup>].

**AXAF** Advanced X-ray astrophysics facility.

**AXBT** Air- [or aircraft-] launched bathythermograph.

**axes** Aircraft attitude is described in terms of three sets of \*. First set are reference \*, also called *body* \*, three mutually perpendicular directions originating at c.g. (point O and defined as longitudinal (roll) axis OX, measured positive forwards from O and negative to rear; transverse (pitch) axis OY, measured positive to right and negative to left; and vertical (yaw) axis OZ, measured positive downwards and negative upwards. Position of O defined at design stage in what is considered most likely location for real c.g. in practice. Second, single, \* is wind \*: direction of relative wind, drawn through O, has angle determined by flight velocity, angle of attack and angle of sideslip. Third \* are those known as inertia \* and are imaginary lines about which aircraft would actually rotate in manoeuvres. These need not be same as reference \*, although OY and OZ inertia axes are usual closely co-incident unless aircraft is asymmetrically loaded. Principal inertia \*, however, may often depart substantially from geometrically drawn fore-and-aft axis OX (see inertia coupling). Purists distinguish between stability axes for aircraft (a special set of body axes) and those for tunnel testing.

**AX-5** Space suit for post-1989 Shuttle operations (NASA).

**axial cable** 1 In non-rigid airship, main longitudinal member linking supporting cables, in framework carrying crew and engines.

2 In rigid airship, essentially straight cable sometimes linking extreme nose and tail of hull and central fittings of radial or diametral wires.

**axial compressor** Compressor for air or other fluid with drum-shaped rotor carrying one or more rows of radial blades in form of small aerofoils (airfoils) arranged to rotate around central axis, with row of stationary stator blades (vanes) between each moving row. Compressed fluid moves through alternate fixed and moving blading in essentially axial direction, parallel to axis of rotation, temperature and pressure increased at each stage.

**axial cone** In rigid airship, fabric cone at front and rear of each gas cell providing flexible gas-tight connection between cell and axial cable.

**axial cord** In parachute, central rigging line joining apex to eyes formed at lower extremities of rigging lines.

**axial deck** In ship carrying or serving as operating platform for aircraft, flight deck aligned fore and aft.

**axial engine** Usually, piston engine in which axes of cylinders are parallel to crankshaft and/or main output shaft. Also, loosely, axial-flow engine.

**axial firing** Fixed to fire directly ahead (usually on helicopters).

**axial-flow engine** Gas-turbine engine having predominantly axial compressor, esp. one in which airflow is essentially axial throughout (ie, not reverse-flow).

**axial focusing** In supersonic wind tunnel, focusing of shockwaves reflected from tunnel wall on to principal axis. Usually condition to be avoided, typically by minimising such reflections or so shaping working section that they are dispersed in different planes.

**axial velocity ratio** In an axial-flow engine, ratio of axial flow velocity  $V_a$  to turbine rotor blade velocity  $U$ ,  $V_a/U$ . Also called flow coefficient.

**axis of rotation** In rotorplane, apparent axis about which main lifting rotor rotates: line passing through centre of tip-path circle and perpendicular to tip-path plane. May be widely divergent from mechanical axis on which hub is mounted, especially in articulated rotor.

**axis of symmetry** Usually aeronautical \*\*\* determined by geometrical form, but in some cases dictated by mass distribution.

**Ay** 1 Direct sideforce, changing heading without bank or sideslip.

2 Any lateral acceleration.

**AYY** A half-width cargo container for upper deck of a narrow-body aircraft.

**Az** Generalised symbol, azimuth.

**Az-El, Azel, Az/El** Radar presentation giving separate pictures of azimuth (PPI display, or chosen sector) and elevation (such as side view of glide path).

**azication** Azimuth indication.

**azimuth** 1 Horizontal bearing or direction; thus \* angle.

2 Rotation about vertical axis (yaw is preferred term where motion is that of whole aircraft).

3 Bearing of celestial body measured clockwise from true North, often called \* angle and qualified true, compass, grid, magnetic or reference, depending on measure used.

**azimuth aerial** Ground radar aerial rotating about vertical axis, or sending out phased-array emission rotating about such axis, intended to measure target azimuth angles.

**azimuth compiler** Portion of SSR system, often optional or absent, which provides accurate azimuth information more accurately than the normal plot extractor.

**azimuth control** In rotorplane, cyclic pitch.

## azimuth error

## Azusa

**azimuth error** Radar bearing error due to horizontal refraction.

**azimuth marker** Scale used on PPI display to indicate bearing, including electronically generated references when display is offset from central position.

**azimuth stabilized** PPI display which does not rotate, despite changes in heading of vehicle.

**AZM** Azimuth.

**az-ran, azran** General term for target tracking or navigational fixing by means of azimuth and range; more commonly called  $R\theta$  or rho-theta.

**AZRN** Azimuth range.

**Azusa** C-band tracking system operating on short baseline and giving continuous signals of two direction cosines plus slant range (and thus giving 3-D fix and instantaneous velocity). From Azusa, Calif.

# B

- B** 1 Pitching moment of inertia.  
2 Blue (ICAO).  
3 Base (of semiconductor device).  
4 Aircraft category, bomber (USAS, USAAC, USAAF, USAF 1924→, USN 1941–43 and 1962→; UK role prefix).  
5 Total aircraft noise rating (Belgium, Netherlands).  
6 Boron.  
7 Magnetic flux density, or induction.  
8 Prefix for nuclear bombs (US).  
9 Degrees Baumé.  
10 Beginning [precipitation].  
11 Hourly cost.  
12 Airspace near airport up to 1,000 ft AGL (FAA).  
13 Beacon.  
14 Rotorcraft category: cannot maintain flight after failure of one engine.  
15 Receiver bandwidth.  
16 Sport-parachuting vertificate: 25 jumps, 10 landing ≤50m of target.  
17 Byte[s].  
18 Susceptance.  
19 Luminance [B for brightness].  
20 Bar, or bi-directional [airfield lighting].  
21 Helicopter-rotor tip-loss factor.  
22 Aircraft category, airship (FAI).  
23 Often used for leftward side force [Z-axis component].
- b** 1 Wing span.  
2 Bars (unit allowed within SI).  
3 Barns (unit allowed within SI).  
4 Engine bleed mass flow.  
5 Number of blades in helicopter main motor.  
6 Bit[s].  
7 Propeller axial slipstream factor.  
8 Pitch of stringers or other panel stiffeners.
- B̄** Induced-drag factor.
- B<sub>1</sub>, B<sub>2</sub>** 1 Graduation ratings from CFS.  
2 Used together with  $b_2$  as coefficients defining density of turbulence in gust calculations.
- b<sub>1</sub>** Control-surface hinge moment.  
**b<sub>2</sub>** Rate of change of surface hinge moment  $dCH/de$ .
- B2B** Business to business.  
**B2C** Business to consumer.  
**B<sub>2</sub>H<sub>6</sub>** Diborane rocket propellant, usually combined with OF<sub>2</sub>.  
**B4** Aviation petrol (G, WW2).
- B-category** Aircraft used as non-flying trainer.  
**B-class** 1 Military and civil prototype or experimental aircraft, not certificated but flown by manufacturer under special rules and with SBAC numerical registration (UK).  
2 Terminal or control area near large airport (ICAO 1990, and US 1993).  
**B-code** In flight plan, have DME and transponder with 64-code without encoding altitude.  
**B-display** CRT or other display in which horizontal axis is bearing and vertical axis is range.  
**B-licence** Commercial pilot's licence (not ALTP).  
**B-line** 90° to the runway.
- B-power supply** Plate circuit that generates electron current in CRT or other electron tube.  
**B-rating** Twin-engine pilot rating.  
**B-slope** B-display.  
**B-station** In Loran, transmitter in each pair whose signals are emitted more than half a repetition period after next succeeding signal and less than half an r.p. before next preceding signal of other (A station).  
**B-Stoff** Hydrazine hydrate (G).  
**B-vehicles** Non-flying vehicles in RAF service.
- BA** 1 Braking action (ICAO).  
2 Budget authority.  
3 Base Aérienne (air base, F).  
4 Breathing apparatus.  
5 Formerly the British Association for the Advancement of Science [office, London SW7 5HE] UK.
- B-A gauge** Bayard-Alpert ionisation gauge.  
**b.a.** Buffer amplifier.
- BAA** 1 The British Airports Authority (1964–86) is today known as BAA plc, not written in full [130 Wilton Road, London SW1V 1LQ] (UK).  
2 Broad-area announcement.  
3 Broad Agency Announcement (Darpa).  
4 Bombardiers' Alumni Association (US).  
5 See BAeA.
- BAAC** 1 British Association of Aviation Consultants (office, London SW1V 1EJ] (UK).  
2 British Aviation Archaeological Council, concerned with aircraft relics and documents, not with studying archaeological sites from the air; [office Oulton Broad, Suffolk NR32 3NH] (UK).
- BAAEMS** British Association of Airport Equipment Manufacturers and Services [office, High Wycombe, Bucks].
- BAAHS** Bay Area Airline Historical Society (San Francisco region).
- BAAI** Balloon and Airship Association of Ireland.  
**BAAS** Broad-area aerial surveillance.  
**Babbitt** (incorrectly, babbitt) Family of soft tin-based alloys used to make liners for plain bearings.  
**babble** Incoherent cross-talk in voice communications system.  
**Babinet point** One of three points of zero polarisation of diffuse sky radiation.  
**BABOV** Bureau Aanleg Beheer en Onderhoud van Vliegvelden (airfield plans and maint.) (Neth.).  
**Babs, BABS** Beam-approach beacon system. Outmoded secondary radar system which provided fixed-wing aircraft with lateral guidance and distance information during landing approach.  
**BAC** 1 Blood alcohol content.  
2 Bureau of Air Commerce [1926–38, became CAA] (US).  
3 Beryllium aluminium composite.
- BACA** 1 Baltic Air Charter Association [successor to Air Brokers Assoc., office London EC3A 8BH] (UK).  
2 British Air Charter Association [1946, became BIATA 1951] (UK).  
**BACE** Basic automatic checkout equipment (USN).

**BACEA** British Airport Construction and Equipment Association.

**Bacimo** Battlespace atmospheric and cloud impacts on military operations (USAF).

**back** 1 Of drag curve, aeroplane flight below V<sub>MD</sub>, in which reduction in speed results in increased drag.

2 Of propeller or rotor blade, surface corresponding to upper surface of wing.

3 Rear cockpit of tandem two-seat aircraft, especially combat type (hence GIB).

**back beam** In any beam system, especially ILS localizer, reciprocal beam on other side of transmitter.

**back bearing** Direction observed from aircraft holding steady course of fixed object over which it has recently passed; reciprocal of track.

**backboard** 1 Multilayer circuit board.

2 Specially narrow stretcher (litter) for carrying injured passengers along aisles.

**back burner** To be on \* = not urgent, temporarily shelved.

**back contamination** Contamination of Earth by organisms introduced by spacecraft and crews returning from missions.

**back course** Course flown along back beam, on extended centreline of runway away from airfield.

**backdrive** Where controlled device drives control input, eg thrust levers in Autothrottle mode, or when active motor [e.g. for tailplane] drives failed unit.

**backed-off** Jet engine slid out of fuselage on rails for maintenance, ready to be at once re-installed.

**backfire** Premature ignition of charge in piston engine cylinder such that flame travels through still-open inlet valve(s) and along induction manifold.

**backfit** Retrofit (US usage).

**background** Ambient (usually supposed steady-state) level of intensity of a physical phenomenon against which particular signal is measured. If signal amplitude never exceeds that of background, it cannot be detected. Thus: \* clutter (radar), \* count (radiation), \* luminance, \* noise (this has two meanings: noise in electronic circuit, and ambient level of aural noise at airport or elsewhere). See *microwave* \*.

**background check** Post -9/11 investigation of personnel (US Dept. of Justice).

**backing** 1 General effort by hardware manufacturer to support his products after they reach customer.

2 Change in direction of prevailing wind in counter-clockwise direction viewed from above; thus, from S to SE.

**backing up** Rearwards taxiing of freight aircraft to loading dock, using reverse thrust.

**backlash** In any mechanism, lost motion due to loose fitting or wear.

**backlobe** Radiation lobe from an antenna in the reverse direction to the main beam.

**backlog** In manufacturing programme, items sold but not yet delivered

**backout** Any reversal of countdown, usually due to technical hold or fault condition.

**backpack** 1 Personal parachute pack worn on back (usually thin enough for wearer to sit comfortably).

2 Any life-support system worn on back of user.

**backpacker** Passenger in cheapest seat(s).

**backplane** Standard STD or STE bus mounting board on which computer boards and other modules are

attached by multiple push-in connectors. Most \* accommodate 10 boards and have 20 edge connectors.

**backplate** Fixed disc behind single-sided centrifugal compressor.

**back porch** In electronic display, esp. TV, brief (eg 6  $\mu$ ) interval of suppressed video signal at end of each line scan.

**back-pressure** 1 Pressure in closed fluid system opposing main flow.

2 Ambient pressure on nozzle of rocket or other jet engine or any other discharge from fluid system.

**backscatter** 1 Backward scatter.

2 Signal received by backward scattering.

**back-shop** In manufacturing plant, first shop to close on rundown of programme.

**backside** Moon face turned away from Earth.

**backstagger** Backward stagger.

**backswep** Swept.

**backswing** Linking manoeuvre between tailslide from zero airspeed with fuselage vertical and start of [upright or inverted] down-45 line.

**backtell** Transfer of information from higher to lower echelon.

**backtrack** 1 In aircraft operation, to turn through about 180° and follow same track in reverse direction (as allowance must be made for wind, not same as turn on reciprocal).

2 Having landed on runway in use, to turn through 180° and proceed along runway in reverse direction.

**back-up** 1 Complete programme, hardware item or human crew funded as insurance against failure of another.

2 Type of hardware item which could, even with degraded system performance, replace new design whose technical success is in doubt.

3 System funded to augment one already in operation (thus, BUIC).

4 Information printed on reverse of map or other sheet to supplement marginal information.

**backward compatibility** The ability of a new or modified system to operate in old [precursor] system.

**backward extrusion** Extrusion by die so shaped that material being worked flows through or around it in reverse direction to that of die.

**backward scatter** Electromagnetic energy (eg, radio, radar or laser) scattered by atmosphere back towards transmitter. In some cases whole hemisphere facing towards transmitter is of interest; in radar, attention usually confined to small amount of energy scattered at very close to 180° and detected by receiver.

**backward stagger** Stagger such that the upper wing of a biplane is mounted further back than the lower.

**backward tilt** Tilt such that blade tips are to rear of plane of rotation through centroids of blade roots.

**backward wave** In a TWT, any wave whose group velocity is opposite to direction of electron travel.

**backwash** Slipstream.

**BACM** Bootstrap air-cycle machine.

**BACN** Battlefield airborne communications node.

**Bacon cell** Hydrogen/oxygen fuel cell.

**BAC (1/1)** Open signal modulation used by Galileo navsats (EU).

**BACS** Bleed-air control system.

**BAD** 1 Boom-avoidance distance; thus \* (A) is boom-

avoidance distance measured along track on arrival and \* (D) is same on departure.

2 Bomber Division (R).

3 Biological agent defeat.

4 Behind-armour damage.

**BADD** Battlefield awareness and data dissemination.

**BADGE, Badge** Base air-defence ground environment (Japan).

**BADL** Bulk acoustic delay line.

**BAeA** British Aerobic Association [White Waltham SL6 3NJ] (UK).

**BAeF** British Aerophilatelic Federation [Enfield EN3 5NX] (UK).

**BAF** 1 Bleed-air failure.

2 Incorrectly, Belgian Air Force.

**BAFF** British air forces in France (1939–40).

**bafter** 1 Loosely, any device intended to disturb and impede fluid flow.

2 Shaped plates fixed around and between cylinders of air-cooled piston engine to improve cooling.

3 Surface, usually in form of a ring, plate or grating, arranged inside liquid container to minimise sloshing.

4 In two-stroke piston engine, deflector incorporated in crown of piston.

5 Partial obstruction inside pitot tube to minimise ingress of liquid or solid matter.

**BAFO** 1 British Air Forces of Occupation.

2 Best and final offer.

**BAG** British Airports Group [SBAC, London SW1H 9EU] (UK).

**bag** See *body bag*.

**baggage** Checked-in possessions of a passenger, normal limits  $\leq 900 \times 700 \times 400$  mm ( $36 \times 28 \times 15$  in),  $\geq 350 \times 230 \times 150$  mm ( $14 \times 9 \times 6$  in),  $\leq 34$  kg (75 lb), no trailing cord or loose binding nor sharp projections.

**bag tank** Liquid container, especially fuel tank, constructed of flexible material not forming part of airframe.

**BAH** Belgian Aircraft Homebuilders [office, B-1000 Brussels] (Belgium).

**BAI** 1 Battlefield air interdiction.

2 Board of Auditors, International (NATO).

**BAIG** British Aviation Insurance Group.

**bail** To loan aircraft or other possession, freely but under contract, to facilitate accomplishment of specific objective; in particular, loan by owner government of military hardware to industrial contractor engaged in particular development programme for that government.

**Baillie beam** Extra-precise Lorenz beam for Babs.

**bail out** To abandon dangerously unserviceable aircraft, esp. in midair, by parachute. Not yet used in connection with spacecraft.

**bailout bottle** Emergency personal oxygen supply, usually high-pressure gox, attached to aircrew harness or ejection seat.

**Bairstow number** Mach number.

**bakes** Back-course (ILS).

**Bakelite** Trade name for a phenol-formaldehyde resin plastic.

**bake out** In high-vacuum technology, heating to promote degassing.

**Baker-Nunn** Large optical camera used for tracking objects in space.

**BAL** 1 Office of air force training (Switzerland).

2 Bombe à guidage laser (F).

**balance** 1 State of equilibrium attained by aircraft or spacecraft.

2 Mechanism for supporting object under test in wind-tunnel and for measuring forces and moments experienced by it due to gas flow.

3 Mass or aerodynamic surface intended to reduce hinge moment of control surface.

**balance area** In aerodynamically balanced control surface, projected area ahead of hinge axis.

**balance beam** Large SLAR antenna arranged axially above fuselage on centreline with mass disposed fore and aft of c.g.

**balance circuit** In a WCS, subsystem which prevents, or warns of impending lateral asymmetry due to unbalanced weapon load.

**balanced approach** Optimum approach path referred to ground, taking in such factors as noise, ATC routing, cutbacks, land-use planning and preferential-runway rules.

**balanced field length** 1 Hypothetical length of runway for which TODa = EMDa (and sometimes, in addition, TORa).

2 Under CAR.4b, unfactored TOD to 50 ft following failure of one engine at  $V_1 = EMD$  to and from  $V_1$ , on dry surface.

**balanced modulator** Modulator whose output comprises sidebands without carrier.

**balanced signature** One which achieves optimal matching of IRS and RCS.

**balanced support** Logistic supply based on predicted consumption of each item.

**balanced surface** Control surface whose hinge moment is wholly or partially self-balanced (usually by means of mass or area ahead of hinge axis or by tabs).

**balance rod** Mass distributed along or within leading edge of helicopter rotor blade.

**balance station zero** Imaginary reference plane perpendicular to longitudinal axis of aircraft and at or ahead of nose, used in determinations of mass distribution and longitudinal balance.

**balance tab** Tab hinged to, and forming part of, trailing edge of control surface, and so linked to airframe that it is deflected in opposition to main surface, and thus reduces hinge moment. Action is thus similar to that of servo tab.

**bale out** See *bail out*.

**ball** 1 Small spheroid, or other laterally symmetric shape, in lateral glass tube of ball-type slip indicator.

2 Arbitrary unit of slip, equal to one ball-width.

**ball ammunition** Bullets of solid metal, containing no explosive, pyrotechnic or AP core.

**ballast** 1 In aerodynamics, mass carried to simulate payload, and permit c.g. position to be varied (usually in flight).

2 In aerostats, mass carried for discharge during flight to change vertical velocity or adjust trim.

**ballast carrier** In transport aircraft, holder for metal ballast weights with locking plungers mating with floor rails.

**ball bearing** Any shaft bearing in which inner race is supported and located by hardened spheres.

**ball inclinometer** Ball turn-and-slip.

**ballistic camera** Photographic camera which, by means

of multiple exposures on same plate or frame of film, records trajectory of body moving relative to it.

**ballistic capsule** Capsule enclosing environment suitable for human crew or other payload and moving in \* trajectory.

**ballistic flight** Ballistic trajectory; arguably, not flight.

**ballistic galvanometer** Undamped galvanometer which, when an electrostatic charge is switched through it, causes large initial swing, taken to be proportional to quantity of electricity passing.

**ballistic missile** Wingless rocket weapon which, after burnout or cutoff, follows \* trajectory.

**ballistic parachute canopy spreader** Device for accelerating deployment of drag canopy in certain types of ejection seat.

**ballistic range** Research facility for investigation of behaviour of projectiles or of bodies moving through gaseous media at extremely high Mach numbers; usually comprises calibrated range along which test bodies can be fired, sometimes into gas travelling at high speed in opposite direction.

**ballistic recovery system** Large parachute deployed [sometimes fired by rocket] from above c.g. of [usually small] G A aircraft.

**ballistic re-entry** Non-lifting re-entry.

**ballistic trajectory** Trajectory of wingless body, formerly propelled but now subject only to gravitational forces and, if in atmosphere, aerodynamic drag.

**ballistic tunnel** High-Mach tunnel into which free projectiles are fired in opposition to gas flow (see \* *range*).

**ballistic vehicle** Vehicle, other than missile, describing a \* trajectory. Term usually not applied to spacecraft but to vehicles used in proximity of Earth and at least mainly within atmosphere.

**Ballistic Wind[s]** Research into variation of wind with altitude (USAF).

**ballistic wind** Theoretical constant wind having same overall effect on a \* projectile as varying winds actually encountered.

**ballizing** Forcing a hard oversized ball through a hole with a small fatigue crack, to bring crack region into compression.

**ball lightning** Rare natural phenomenon, materialising during electrical storms, having appearance of luminous balls which often appear to spin, eject sparks, travel slowly and eventually disappear (sometimes with explosion).

**ball mat** Standard squares or rectangles of tough flooring containing pattern of protruding freely-rotating balls facilitating omnidirectional movement of containers or pallets.

**ballonet** Flexible gastight compartment inside envelope of airship (rarely, balloon) which can be inflated by air to any desired volume to compensate for variation in volume of lifting gas and so maintain superpressure and alter trim.

**ballonet ceiling** Maximum altitude from which pressure aerostat with empty ballonet(s) can return to sea level without loss of superpressure.

**ballon sonde, ballonsonde** The original French term for a *sounding balloon*. See *registering balloon*.

**balloon** Aerostat without propulsion system.

**balloon barrage** Protective screen of balloons moored by steel cables around target likely to be attacked by enemy aircraft.

**balloon bed** Area of ground prepared for mooring of inoperative captive balloon.

**balloon fabric** Range of fabrics of mercerised cotton meeting specifications for covering lightplanes and, impregnated with rubber, aerostats.

**ballooning** Colloq., sudden unwanted gain in height of aeroplane on landing approach due to lowering flaps, GCA instruction or, most commonly, flare at excessive airspeed.

**balloon master** Person in charge of launch of free-flight balloons, including liaison with ATC.

**balloon reflector** In electronic warfare, confusion reflector supported by balloon(s).

**balloon tank** Tank for containing liquid or gas constructed of metal so thin that it must be pressurized for stability. Such tanks have formed airframe of large ICBMs.

**balloon tyre [tire]** Not defined but generally taken to mean tyre of larger than normal section (profile) and less than normal pressure.

**ball screwjack** Screwjack in which friction is reduced by system of recirculating bearing balls interposed between fixed and rotating members.

**balls-out** Maximum possible power (colloq.).

**ball turn-and-slip** Flight instrument whose means of indicating slip is a ball free to move within liquid-filled curved tube having its centre lower than its ends.

**ball turret** Ventral gun turret on certain large aircraft of 1942–45 – notably B-17, B-24 – having part-spherical shape.

**ballute** Balloon-parachute; any system of inflatable aerodynamic braking used for upper-atmosphere retardation of sounding rockets or slowing of spacecraft descending into planetary atmospheres.

**BALO** Brigade Air Liaison Officer.

**Balpa, BALPA** The British Air Line Pilots' Association; 1937-, trade union [office Harlington UB3 5BG] (UK).

**balsa** Wood of extremely low density (s.g. about 0.13), originally grown in W. Indies and Central America.

**Balt, BALT** Barometric altitude.

**Baltnet** Monitors airspace over Estonia, Latvia, Lithuania.

**BAM 1** Bundesanstalt für Material Prüfung (G).

2 Bird avoidance module.

**Bambi basket** Deployed under helicopter, esp. for recovery [esp. from water] of exhausted or injured.

**BAMS 1** Brassboard airborne multispectral sensor.

2 Broad-area maritime surveillance (USN).

**BAMTRI** Beijing Aeronautical Manufacturing Technology Research Institute.

**BAN** Beacon alphanumeric (part of FAA ARCTS).

**banana case** The curved casing of an accessory gearbox wrapped around the compressor or fan case of a gas-turbine engine.

**band 1** Designated portion of EM spectrum, usually bounded by frequencies used for radio communication.

2 A (usually small) portion of EM spectrum containing frequencies of absorption or emission spectra.

3 Strip of stronger material built into non-rigid aerostat envelope to distribute stress from mooring line, car or other load.

4 Group of tracks on magnetic disc or drum.

**band-elimination filter** Filter that eliminates one band of EM frequencies, upper and lower limits both being finite.

**B&GS** Bombing and gunnery school.

**bandit** Air contact (5) known to be hostile.

**band of error** Band of position.

**band of position** Band of terrestrial position, usually extending equally on each side of position line, within which, for given level of probability, true position is considered to lie.

**B&P** Bid and proposal.

**bandpass** Width, expressed in Hz, of band bounded by lower and upper frequencies giving specified fraction (usually one-half) of maximum output of amplifier.

**bandpass filter** EM wave filter designed to reduce or eliminate all radiation falling outside specified band of frequencies.

**B&S** Brown and Sharpe.

**bandwidth** 1 Number of Hz between limits of frequency band.

2 Number of Hz separating closet lower and upper frequency limits beyond which power spectrum of time-variant quantity is everywhere less than specified fraction of its value at reference frequency between limits.

3 Range of frequencies between which aerial performs to specified standard.

4 In EDP and information theory, capacity of channel.

5 Band of position, usually expressed in nm on each side of PL (1) or track.

**bang** Sound caused by passage of discontinuous pressure wave in atmosphere (*sonic bang*).

**bang-bang** Any dynamic system, especially one exercising control function, which continually oscillates between two extreme 'hard-over' positions. Also called flicker control.

**bang out** To eject (colloq.).

**bang valley** Land or sea area under track where supersonic flight is permitted (colloq.).

**banjo** Structural member having form of banjo, with open ring joined to linear portion (on either or both sides) projecting radially in same plane. Typically used to link spar booms on each side of jet engine or jetpipe aperture.

**bank** 1 Attitude of aerodyne which, after partial roll, is flown with wings or rotor not laterally level. Held during any properly executed turn.

2 To roll aerodyne into banked position.

3 Linear group of cylinders in piston engine.

4 Pool of trained aircrew, esp. pilots, for whom no jobs are immediately available.

**bank and turn indicator** Turn and slip indicator.

**banner cloud** Cloud plume extending downwind of mountain peak, often present on otherwise cloudless day.

**banner** 1 Large fabric strip towed behind aircraft, usually bearing advertising statement readable from both sides.

2 Fabric sleeve placed over propeller blade, usually saying FOR SALE.

**banner sleeve** Tow target in form of long tube inflated by slipstream, usually called sleeve target.

**banner target** Air-to-air or ground-to-air firing target in form of towed strip of flexible fabric like elongated flag.

**banter** Critical comment on a pilot's performance by his peers who are watching.

**BAO** Battlefield air operations, Afsoc field kit.

**BAOR** British Army of the Rhine.

**BAP** 1 Bomber aviation regiment (USSR).

2 Bank-angle projection.

3 Be a pilot (US GA initiative).

4 Bombe anti-personnel (F).

**BAPA** British Aeromedical Practitioners Association.

**BAPC** 1 British Aircraft Preservation Council [1967-, office Manchester M3 4FB] (UK).

2 British Association of Parascending Clubs.

**Bapta** Bearing and power-transfer assemblies (comsat).

**BAR** Base allowance for quarters (US armed services).

**BAR** 1 See \* UK.

2 Broad Area Review.

**bar** 1 Unit of pressure, allowed within SI and standard in meteorology and many other sciences. Equal to  $10^5 \text{ Nm}^{-2} = 14.5037 \text{ lb/in}^2$ . In units contrary to SI,  $10^6 \text{ dynes cm}^{-2}$  or 750.08 mm; 29.53 in of Hg. One bar (1,000 mb) is Normal Atmospheric Pressure.

2 Metal [usually gold] bar(s) across ribbon of medal to show decoration has been awarded twice (thrice); in written form, each bar appears as a star \*.

**baralyme** Trade name for mixture of barium and calcium hydroxides used to absorb  $\text{CO}_2$ .

**Barb** Boosted anti-radar bomb (S Africa).

**barbecue manoeuvre** Deliberate intermittent half-rolls performed by spacecraft to equalise solar heating on both sides.

**barber chair** Chair capable of gross variation in inclination.

**barber-pole instrument** Indicator using rotating spirals, such as PVD (2).

**barbette** Defensive gun position on large aircraft projecting laterally and providing field of fire to beam.

**BARC** Bhaba Atomic Research Centre [NW warheads] (India).

**Barcap** Barrier combat air patrol between naval strike force and expected aerial threat.

**Barcis** British airports rapid control and indication system.

**bar code** Geometric patterns, no two alike, printed on document (eg flight coupon) and read by light pen connected to computer storing data (eg stolen ticket numbers).

**bare base** Airfield comprising runways, taxiways and supply of potable water.

**bare engine** Generally means engine without fuel/oil/water or any auxiliary devices such as APU, cabin compressor or vectored nozzle(s).

**barf bag** Sick bag.

**Barif** Bureau of Airlines Representatives in Finland.

**Barig** Board of Airlines Representatives in Germany.

**bar** 1 Unit of area for measuring nuclear cross-sections. Equal to  $10^{-28} \text{ m}^2$  or  $10^{-22} \text{ mm}^2$ . Symbol b.

2 Non-hardened hangar for single aircraft, eg SR-71.

**barnstormer** Formerly, itinerant freelance pilot who would operate from succession of unprepared temporary airfields giving displays and joyrides.

**baro** Barometric.

**baro-corrected** Pressure altitude corrected to local atmosphere.

**barogram** Hard-copy record made by barograph.

**barograph** Barometer giving continuous hard-copy record.

**barometer** Instrument for measuring local atmospheric pressure.

**barometric altimeter** Pressure altimeter.

**barometric altitude** Pressure height.

**barometric element** Transmitting barometer carried in radiosonde payload, variation in aneroid capsules causing shift in frequency of carrier wave.

**barometric fuze** Fuze set to trigger at preset pressure height.

**barometric pressure** Local atmospheric pressure.

**barometric pressure control** Automatic regulation of fuel flow in proportion to local atmospheric pressure.

**barometric pressure gradient** Change in barometric pressure over given distance along line perpendicular to isobars.

**barometric tendency** Change in barometric pressure within specified time, usually the preceding three hours.

**barometric wave** Any short-period meteorological wave in atmosphere.

**barosphere** Atmosphere below critical level of escape.

**barostat** Device for maintaining constant atmospheric pressure in enclosed volume.

**barostatic relief valve** Automatic regulation of fuel flow by spilling back surplus through relief valve sensitive to atmospheric pressure.

**barothermograph** Instrument for simultaneously recording local temperature and pressure.

**barotrauma** Bodily injury due to gross or sudden change in atmospheric pressure.

**barotropy** Bulk fluid condition in which surfaces of constant density and constant pressure are coincident.

**barrage** AA artillery fire aimed not at specific targets but to fill designated rectilinear box of sky.

**barrage balloon** Captive balloon forming part of balloon barrage.

**barrage jamming** High-power electronic jamming over broadest possible spread of frequencies.

**barrel** 1 Of piston engine cylinder, body of cylinder without head or liner.

2 Of rocket engine, thrust chamber of nozzle, esp. of engine having multiple chambers.

3 Any portion of airframe of near-circular section, even if tapering; thus Canadair made the CF-18 nose \*.

4 Highly dangerous area with strong defences against attacking aircraft.

5 Non-SI unit of volume, = 42 US gal - 0.15899m<sup>3</sup>.

**barrel engine** piston engine having cylinders with axes disposed parallel to engine longitudinal axis and output shaft.

**barrelling** 1 Various methods of using rotating drum filled with abrasive [usually powder] to remove burrs and other surface imperfections from workpiece.

2 Colloq., to make fast low pass over ground location; to barrel in.

**barrel roll** Manoeuvre in which aerodyne is flown through 360° roll while trajectory follows horizontal spiral such that occupants are always under positive acceleration in vertical plane relative to aircraft.

**barrel section** 1 Portion of transport aircraft fuselage added in *stretching*. Alternatively called plug section (but see *barrel (3)*).

2 Parallel length of control rod.

**barrel wing** Wing in form of duct open at both ends and with longitudinal section of aerofoil shape.

**barrette** Array of closely spaced ground lights that appear to form a solid bar of light.

**barricade** Barrier (USN).

**barrier** Net mounted on carrier (1) deck or airfield

runway to arrest with minimal damage aircraft otherwise likely to overrun. Normally lying flat, can be raised quickly when required.

**barrier crash** Incident involving high-speed entry to \* with or without damage. Usually applied to carrier operations.

**barrier pattern** Geometrical pattern of sonobuoys so disposed as to bar escape of submerged submarine in particular direction.

**barring** Slowly turning gas-turbine engine by hand.

**bar stock** Standard form of metal raw material: solid rolled or extruded with round, square or hexagonal (rarely, other) section.

**Barstur, BARSTUR** Barking Sands Tactical Underwater Range (USN, Kauai, Hawaii).

**BAR UK** Board of Airline Representatives in the UK [office, London].

**barycentre** Centre of mass of system of masses, such as Earth/Moon system (barycentre of which is inside Earth).

**barye** Unit of pressure in CGS system. Equal to 10 Nm<sup>-2</sup> = 1 dyne cm<sup>-2</sup> or 1.4503 × 10<sup>-3</sup> lb/in<sup>2</sup> or 10<sup>-6</sup> bar (hence alternative name of microbar).

**BAS** 1 Bleed-air system.

2 Base allowance for subsistence (US armed forces).

3 Barrier arresting system.

**BASA** Bilateral Aviation Safety Agreement (FAA + foreign government).

**Basar** Breathing air, search and rescue (for diver in helo crew).

**BASE** Cloud base height AMSL (ICAO).

**BaSE** Battlespace synthetic environment.

**base** 1 Locality from which operations are projected or supported.

2 Locality containing installations to support operations.

3 In an object moving through atmosphere, any unfaired region facing rearwards (eg rear face of bullet or shell, trailing-edge area of wedge aerofoils, and projected gross nozzle area of rocket engine after cutoff).

4 Substance constructed of ions or molecules having one or more pairs of electrons in outer shells capable of forming covalent bonds.

5 Loosely, substance that neutralises an acid.

6 In transistor, region of semiconductor material into which minority carriers are emitted (hence, usually, between emitter and collector).

7 Underside of cloud. With cloud having grossly irregular undersurface, surface parallel to local Earth surface below which not more than 50 per cent of cloud protrudes, and which can be taken as upper limit of VFR. In mist or fog \* intersects Earth.

**Basea, BASEA** British Airport Services & Equipment Association [500+ members, office Bournemouth BH8 8EZ] (UK).

**base area** Aggregate area of unfaired rearward-facing surface of aerodynamic body.

**base check** Examination in flight of crew on completion of conversion to new type.

**base drag** Drag due to base area experiencing reduced pressures.

**base height** Minimum height AGL authorised on low-level training sortie, in peacetime typically 200 ft, 91 m.

**base leg** In airfield circuit, extends from end of downwind leg to start of turn on to finals.

**base line, baseline** 1 Yardstick used as basis for comparison, specif. known standard of build for functioning system, such as combat aircraft, against which developed versions can be assessed in numerical terms. Hence, \* aircraft.

2 Geodesic line between two points on Earth linked by common operative system, eg between two Loran, Decca or Gee stations.

3 In many types of visual display and pen recorder, line displayed in absence of any signal.

**base metal** 1 Major constituent of an alloy.

2 Metal of two parts to be joined by welding (as distinct from metal forming joint itself, which is modified or added during welding process).

**base pressure** Local aerodynamic pressure on base area of body moving through atmosphere.

**base surge** Expanding toroid surrounding vertical column in shallow underwater nuclear explosion.

**base/timing sequencing** Automatic sharing of transponder between several interrogators or other fixed stations by use of coded timing signals.

**BASF** Boron-augmented solid fuel.

**BASH, Bash** Bird/aircraft strike hazard (USAF team).

**BASI** Bureau of Air Safety investigation (Australia).

**Basic** British American Security Information Council (office DC).

**basic aircraft** Simplest usable form of particular type of aircraft, from which more versatile aircraft can be produced by equipment additions. In case of advanced aircraft, such as combat and large transports, \*\* includes IFR instruments, communications, and standard equipment for design mission.

**basic cloud formations** Subdivision of cloud types into: A, high; B, middle; C, low; D, clouds having large vertical development (International Cloud Atlas, 1930).

**basic commercial pilot's licence** Awarded after 220 h including 100 as P1, allows holder to do aerial work including VFR pleasure passenger flights in aircraft up to 5,700 kg. Suffix (A), aeroplanes; (H), helicopters.

**basic cover** Aerial reconnaissance coverage of semi-permanent installation which can be compared with subsequent coverage to reveal changes.

**basic encyclopedia** Inventory of one's own or hostile places or installations likely to be targets for attack.

**basic flight envelope** Graphical plot of possible or permissible flight boundaries of aerodyne of particular type. Cartesian plot with TAS or Mach number as horizontal and altitude or ambient pressure as vertical. Boundaries imposed by insufficient lift, thrust or structural strength (and sometimes by social and other considerations); see *basic gust* \*, *basic manoeuvring* \*.

**basic gross weight** Operating weight empty.

**basic gust envelope** Specified form of graphical plot for each new aerodyne design showing permissible limits of speed for passage through vertical sharp-edged gusts of prescribed strength (traditionally  $\pm 25, 50$  and  $66 \text{ ft sec}^{-1}$ ). Result is V-n diagram, with EAS as horizontal and gust load factor n as vertical. See *gust envelope*.

**basic load** 1 Load (force) transmitted by structural member in condition of static equilibrium, usually in straight and level flight (1 g rectilinear), at a specified gross weight and mass distribution.

2 Aggregate quantity of non-nuclear ammunition,

expressed in numbers of rounds, mass or other units, required to be in possession of military formation.

**basic manoeuvring envelope** V-n diagram with EAS as horizontal and manoeuvring load factor as vertical. See *manoeuvring envelope*.

**basic operating platform** See *bare base*.

**basic operating weight** *Operating weight empty*.

**basic research** See *pure research*.

**basic runway** Runway without aids and bearing only VFR markings: centreline dashes or arrows, direction number and, if appropriate, displaced threshold.

**basic 6** The instruments on a blind-flying panel.

**basic supplier** Nominated supplier of hardware item in absence of specific customer option.

**basic T** In traditional cockpit instrument panel, primary flight instruments (ASI, horizon, turn/slip and VSI) arranged in a standard T formation.

**basic thermal radiation** Thermal radiation from Quiet Sun.

**basic trainer** American military aeroplane category used for second stage in pilot training (after primary), with greater power and flight performance. Formerly also 'basic combat' (BC) category, which introduced armament and closely paralleled flight characteristics of operational type; called 'scout trainer' by Navy and redesignated 'advanced trainer' (obs).

**basic weight** Superseded term formerly having loose meaning of mass of aircraft including fixed equipment and residual fluids.

**basic wing** Aerofoil of known section used as starting point for modified design, often with wholly or partly different section.

**basket** 1 Radar-defined horizontal circular area of airspace into which dispensed payloads (eg anti-armour bomblets) are delivered by bus (5). More loosely, volume of sky designated to receive free-fall object(s).

2 Car suspended below aerostat for payload, not necessarily of wickerwork construction.

3 Drogue on a flight-refuelling tanker hose.

4 Across-board sample of aircraft types in calculation of airport charges.

**basket tube** Form of construction of liquid-propellant rocket thrust chamber in which throat and nozzle is formed by welded tubes, usually of nickel or copper, through which is pumped liquid oxygen or other cryogenic propellant for regenerative cooling.

**BASO** Brigade air support officer.

**Bassa** British Airlines Stewards and Stewardesses Association.

**BAT** 1 Boom-avoidance technique.

2 Beam-approach training.

3 Bureau of Air Transportation (Philippines).

4 Brilliant anti-tank (submunitions).

5 Bombe[s] d'appui tactique (F).

6 Blind-approach technique (WW2).

7 See *Bat-Cam*.

8 Binary-actuator technology.

**BATA** British Air Transport Association, formerly UKASC [office, Artillery House, London SW1P 1RT] (UK).

**Batap** B-type application to application protocol.

**Bat-Cam** Battlefield air targeting-camera autonomous micro air vehicle.

**Batco** The British Air Traffic Controllers' Association (UK, 1961–).

**BATDU** Blind-Approach Training and Development Unit (UK became WIDU).

**Bates** Battlefield artillery target-engagement system, UAV-integrated (UK).

**BATF** Beam Approach Training Flight (RAF).

**bath tub** 1 Bath-shaped structure of heavy plate or armour surrounding lower part of cockpit or other vital area in ground-attack aircraft.

2 Temporary severe recession in production in manufacturing plant or programme, or between programmes; named from appearance on graphical plot (US, colloq.).

3 Graphical plot of equipment's service life: burn-in, useful life, wearout.

**bath tub fitting** Fishplate (US).

**bath y thermograph** Sonobuoy dropped ahead of others to measure water data at various depths.

**Bat mav** Battlefield air tactical micro air vehicle.

**BATOA** British Air Taxi Operators' Association.

**batonet** Tubular or rod-like toggle forming link between rigging line and band on fabric aerostat envelope.

**BATR** Bullets at target range (shows location in HUD).

**BATS** 1 Ballistic aerial target system.

2 Bathymetric and topographic survey.

**batsman** Member of crew of aircraft carrier [rarely, other landing place] charged with guiding landing aircraft by hand signals.

**batt** 1 Ceramic filler formed from chopped-strand mat.

2 Battery.

**batten** 1 Wood or metal strip used in interlinked pairs as ground control lock.

2 Wood or metal strips arranged radially from nose of non-rigid airship to stiffen fabric against dynamic pressure, or, where applicable, mooring loads.

3 Flexible strips used in lofting drawing.

**battery** Enclosed device for converting chemical energy to electricity. Most aerospace batteries are secondary (rechargeable), principal families being Ni/Cd (nickel, cadmium), Ag/Zn (silver, zinc) and lead/acid. Fuel cells are batteries continuously fed with reactants.

**battery booster** Starting coil.

**battle climb** A climb to near ceiling [c 16,000 ft] in the shortest time, routine training for the RAF and other air forces prior to WW2.

**battle damage** In-flight damage caused directly by enemy (not, eg, by collision with friendly aircraft).

**battlefield air interdiction** Air/ground sortie(s) tasked with restricting enemy's tactical movement and preventing him bringing up reserves to reinforce battle in progress.

**battle formation** Any of several formations characterised by open spacing and flexible interpretation.

**battleship model** Any model or rig used for repeated development testing, usually statically, in which major elements not themselves under test are made quickly and cheaply from 'boilerplate' material to withstand repeated use. Thus battleship tank.

**battleship tank** Tank for liquid propellant for static testing of rocket engines having same capacity and serving same feed system as in flight vehicle but made of heavy steel or other cheap and robust material for repeated outdoor use.

**battlespace** 1 Earth atmosphere and near space, region of human conflict.

2 3-d space in which actual conflict is taking place.

**bat turn** Maximum-rate turn in air combat (colloq.).

**bat wing** Becoming common term for BWB projects.

**BAUA** Business Aircraft Users' Association [1961–; office, Farnborough GU14 6XA, merged 2004 into BBGA] (UK).

**BAUAG** British Airports Users' Action Group.

**baud** Unit of telegraphic signalling speed, equivalent to shortest signalling pulse or code element. Thus speed of 7 pulses per second is 7 bauds (pronounced 'boards'); abbreviation Bd.

**baulk** 1 Aborted landing due to occurrence in final stages of approach (typical causes would be aircraft on airfield taxiing on to runway or a runaway stick-pusher in landing aircraft).

2 Verb, to obstruct landing of an approaching aircraft and cause it to overshoot.

3 Physical limiter on available movement of an inceptor, e.g. to prevent inadvertent operation of landing gear or reverser.

**baulked landing** See *baulk* (1).

**Baumé** Density scale of petroleum products; for S.G. less than 1, °B =  $\frac{140}{S.G.} - 1$ .

**BAWS** Biological aerosol, or agent, warning system, or sensor.

**bay** 1 In aerodyne fuselage or rigid airship hull, portion between two major transverse members such as frames or bulkheads.

2 In biplane or triplane, portion of wings between each set of interplane struts; thus, single-\* aircraft has but one set of interplane struts on each side of centreline.

3 In any aircraft or spacecraft, volume set aside for enclosing something (eg, engine \*, undercarriage \*, bomb \*, cargo \*, lunar rock \*).

**bayonet** Electronic subsystem permitting radar of strike aircraft to home on designated ground target and providing azimuth for release of weapons equipped with radiation sensors.

**bayonet exhaust** Formerly, form of piston engine exhaust stack designed to reduce noise.

**BAZ** 1 Bundesamt für Zivilluftfahrt Zentrale (Austria).

2 Back azimuth unit, MLS addition used for departure and overshoots.

**BAZL** Bundesamt für Zivilluftfahrt, Federal office for civil aviation (Switzerland).

**BB** 1 Back bearing.

2 Battleship (USN).

3 Bulletin board [S adds system] (US).

4 Base band.

**BBAC** British Balloon and Airship Club. [1965–; office, Bedminster BS3 4NH] (UK).

**BBAL** Association of smaller GA companies [D-53757 St Augustin] (G).

**BBC** 1 Broad-band chaff.

2 Before bottom centre.

**BBGA** British Business and General Aviation Association [formed 2004 by merger of BAUA and Ganta; office Aylesbury HP18 9RT] (UK).

**BBHS** Battle of Britain Historical Society.

**BBI** Bit bus interface.

**BBL** 1 Billion barrels liquid.

- 2 Bring-back load.  
**BBM, BBm** Back beam.  
**BBMF** Battle of Britain Memorial Flight (RAF).  
**BBN** 1 Basic backup network for future civil nav aids (FRN).  
 2 Baseband node.  
**BBOE** Billion barrels oil equivalent.  
**BBSU** British Bombing Survey Unit.  
**BBU** Battery back-up unit.  
**BBW** 1 Brake by wire.  
 2 Bring-back weight.  
**BC** 1 Boron carbide armour.  
 2 Back course.  
 3 Bus (2) controller.  
 4 Bomber Command (RAF, USAAF).  
 5 Basic combat trainer category (USAAC, 1936–40).  
 6 Patches [of cloud] (ICAO).  
 7 Bottom of cylinder.  
 8 Become, becoming.  
**BCA** 1 Board of Civil Aviation (Sweden).  
 2 Baro-corrected altitude.  
 3 Best cruise altitude.  
 4 Belgian Cockpit Association, also called ABPNL.  
 5 British Cargo Alliance [carrier pressure group, office London].  
**BCAA** British Cargo Airline Alliance.  
**BCAC** British Columbia Aviation Council.  
**BCAM** Best cruise altitude/Mach.  
**BCAOC** Balkan Combined Air Operations Centre (NATO).  
**BCARs** British Civil Air, or Airworthiness, Requirements.  
**BCAS** Beacon-based collision-avoidance system.  
**BCASC** British Civil Aviation Standing Conference, now BATA.  
**BCATP** British Commonwealth Air Training Plan (1939–45).  
**BCBP** Bar-coded boarding pass.  
**BCBS** Bomber Command Bombing School (RAF).  
**BCC** British Chambers of Commerce, representing 126,000+ businesses.  
**BCD, bcd** 1 Binary coded decimal.  
 2 Bulk chaff dispenser.  
**BCE** Battlefield control element.  
**BCF** Bromochlorodifluoromethane (fire extinguishant).  
**BC/FC** Beam control, fire control [ABL<sub>1</sub>]  
**BCFG** Fog patches.  
**BCFR** Bomber Command Forward Relay (RAF).  
**BCH** Binary coded hamming.  
**BC<sup>3</sup>I** Battlefield command and control communications and intelligence.  
**BCIU** Bus control and interface unit.  
**BCKG** Backing (ICAO).  
**BCL** Braked conventional landing (V/STOL).  
**BCM** 1 Basic combat manoeuvring, series of manoeuvres simulating interceptions and close dogfights.  
 2 Best cruise Mach number.  
 3 Background clutter matching.  
 4 Back-course marker.  
**BCMG** Becoming.  
**BCMP** Bird control management plan.  
**bcn** Beacon.  
**BCO, bco** Binary coded octal.  
**BCOB** Broken cloud[s] or better.  
**BCP** 1 Battery command post.  
 2 BIT control panel.  
 3 Break[ing] cloud procedure.  
**BCPL** See *Basic commercial pilot's licence*.  
**BCPR** Broad – coverage photo-reconnaissance (USAF satellites).  
**BCPT** Basic communications procedures trainer, for AEOs.  
**BCR** 1 European Community Bureau of Reference (co-ordinates R & D).  
 2 Battle casualty replacement.  
 3 Bombing, combat and reconnaissance.  
 4 Business concept review.  
**B/CRS** Back course.  
**BCRU** Battery charger regulator unit.  
**BCS** 1 British Computer Society.  
 2 Beam control system, esp. for laser on platform subject to jitter and atmospheric turbulence.  
 3 Block check sequence.  
 4 Buoy communication system.  
**BCSG** Bus-computer symbol generator.  
**BCST, bcst** Broadcast.  
**BCSV** Bearing-compartment scavenge valve.  
**BCT** Brigade Combat Team (USA).  
**BCU** 1 Bird control unit (on airfield).  
 2 Bus control unit.  
**BCV** Belly cargo volume.  
**BCW** Binary chemical warhead.  
**BD** 1 Blowing dust.  
 2 Baud (correct abbreviation is Bd).  
**B/D** Bearing and distance.  
**Bd** Baud.  
**bd** Candle (unit of luminous intensity), abb.  
**BDA** Bomb (or battle) damage assessment.  
**BDAC** Bilateral Defence/Defense Acquisition Committee [being negotiated from 2002 to resolve problems caused by US refusal to disclose information to UK defence partners].  
**BDC, b.d.c.** 1 Bottom dead centre.  
 2 Bomb detection chamber.  
**BDFa** British Disabled Flying Association [office, Biggin Hill] (UK).  
**BDHI** Bearing/distance/heading indicator.  
**B/DHSl, BDHSl** Bearing/distance horizontal-situation indicator.  
**BDI** 1 Bearing/distance indicator.  
 2 Association of defence industries (G)  
 3 Bomb-damage intelligence.  
**BDL** Bistable-diode laser.  
**BDLI** Bundesverband der Deutschen Luft- und Raumfahrtindustrie eV [German aerospace industry association; office, Bonn D-53179] (G).  
**BDM** Buhr design method.  
**BDMIPG** British Defence Manufacturers Industrial Participation Group.  
**BDMIS** Business data management and invoicing.  
**BDOE** Barrels per day oil equivalent.  
**BDP** Bitsync descrambler preprocessor.  
**BDR** 1 Battle-damage repair.  
 2 Basic dispatch rate, or reliability [percent].  
**BDRY** Boundary.  
**BDS** 1 Comm-B designation subfield.  
 2 Boost defence segment.

3 Bypass-duct splitter.

**BDTF** Bomber Defence Training Flight (RAF).

**BDX** Beacon-data extractor, or extraction.

**BE** Business engineering.

**Be** *Beryllium*.

**BEA** 1 British European Airways 1946–72.  
2 Bureau Enquêtes Accidents (F).

**BEAB** British Electrotechnical Approvals Board.

**beaching** Pulling marine aircraft up sloping beach, out of water to position above high tide.

**beaching gear** Wheels or complete chassis designed to be attached to marine aircraft in water to facilitate beaching and handling on land.

**beacon** 1 System of visual lights marking fixed feature on ground (see *aeronautical light*).  
2 Radio navaid (see *fan marker, homing beacon, NDB, LFM, marker beacon, Z marker*).

3 Radar transceiver which automatically interrogates airborne transponders (see *radar beacon, ATCRBS*).

4 Portable radio transmitter, with or without radar reflector or signature enhancement, for assisting location of object on ground (see *crash locator beacon, personnel locator beacon*).

**beacon buoy** Self-contained radio beacon carried in emergency kit. Floats on water.

**beacon characteristic** Repeated time-variant code of some visual light beacons, esp. aerodrome beacons emitting Morse letters identifying airfield.

**beacon delay** Time elapsed between receipt of signal by beacon of transponder type (eg, in DME) and its response.

**beacon identification light** Visual light, emitting characteristic signal, placed near visual light beacon (pre-1950) to identify it.

**beacon skipping** Fault condition, due to technical or natural causes, in which interrogator beacon fails to receive full transponder pulse train.

**beacon stealing** Interference by one radar resulting in loss of tracking of aerial target by another.

**beacon tracking** Tracking of aerial target by radar beacon, esp. with assistance from transponder carried by target.

**bead** 1 Corrugation or other linear discontinuity rolled or pressed into sheet to stiffen it.  
2 Thickened edge to pneumatic tyre shaped to mate with wheel rim and usually containing steel or other filament reinforcement.  
3 Unwanted blob of weld metal.

**braded** See *bead* 1

**beading** Rolling or pressing sheet to incorporate beads.

**beadseat** Profiled seating on wheel for bead (2), hence \* life, on expiry of which wheel must be reprofiled.

**bead sight** Ring and bead sight.

**Be/Al** Beryllium-aluminium.

**beam** 1 Structural member, long in relation to height and width and supported at either or both ends, designed to carry shear loads and bending moments.  
2 Quasi-unidirectional flow of EM radiation.  
3 Quasi-unidirectional flow of electrons of particles, with or without focusing to point.  
4 Loosely, on either side of aircraft; specif. direction from 45° to 135° on either side measured from aircraft longitudinal axis and extending undefined angle above and below horizontal. Hence, \* guns (firing on either

side), or surface object described as ‘on the port \*’ (90° on left side).

**BEAMA** British Electrical and Allied Manufacturers’ Association [London SE1 7SL] (UK).

**beam approach** Early landing systems in which final approach was directed by beam (2) from ground radio aid (see *BABS, ILS, SBA*).

**beam attack** Interception terminating at crossing angle between 45° and 135°.

**beam bracketing** Flying aircraft alternately on each side of equisignal zone of radio range or similar two-lobe beam.

**beam capture** To fly aircraft to intercept asymptotically a beam (2), esp. ILS localizer and glide path.

**beam compass** 1 Drawing instrument based on beam parallel to drawing plane having centre point and carrier for pen or other marker.  
2 Panel instrument providing radio and magnetic heading information.

**beam direction** In stress analysis, direction parallel to both plane of spar web, or other loadbearing member, and aircraft plane of symmetry.

**beam-index display** Full-colour CRT using single gun and no shadow mask, computer switching to illuminate spots of red, blue or green phosphor according to instantaneous beam position.

**beam jitter** Continuous oscillation of radar beam through small conical angle due to mechanical motion and distortion of aerial.

**beam rider** Missile or other projectile equipped with beam-rider guidance.

**beam-rider guidance** Radar guidance system in which vehicle being guided continuously senses, and corrects for, deviation from centre of coded radar or laser beam which is usually locked on to target. Accuracy degrades with distance from emitter.

**BEAMS** British Emergency Air Medical Service.

**beam slenderness ratio** Length of structural beam divided by depth (essentially, divided by transverse direction parallel to major applied load).

**beam softening** Progressive reduction in gain of ILS demand signal.

**beamwidth** Angle in degrees subtended at aerial [antenna] between limiting directions at which power [DoD states “RF power”, NATO states “emission power”] of radar beam has fallen to half that on axis. Often defined for azimuth and elevation. Symbol  $\Theta$ . Determines discrimination.

**bean counting** Notional procedure of accountants whose sole interest is the balance sheet.

**beany hat** Soft brimmed hat, favoured by glider pilots.

**Bear** Electronic-warfare officer, usually in defence-suppression aircraft.

**beard radiator** piston engine radiator mounted under the engine.

**bearer** Secondary structure supporting removable part such as fuel tank or engine.

**bearing** 1 Angular direction of distant point measured in horizontal plane relative to reference direction.  
2 Angular direction of distant point measured in degrees clockwise from local meridian, or other nominated reference. Such measure must be compass, magnetic or true. True \* is same as azimuth angle.

3 Mechanical arrangement for transmitting loads

between parts having relative motion, with minimum frictional loss of energy or mechanical wear.

**bearing chamber** Annular chamber surrounding shaft bearing, in gas-turbine engine as far as possible in cool location and incorporating low-friction sealing.

**bearing compass** Portable and hand-held, used for determining magnetic bearing of distant objects.

**bearingless rotor** Helicopter rotor in which all control is effected by flexibility in the blade attachments.

**bearing-only launch** Missile is launched along approximate known bearing of target and seeker is switched on to search sector ahead, thereafter following various commands depending on whether or not target is acquired.

**bearing plate** Simple geometric instrument for converting bearings of distant objects into GS (1) and drift.

**bearing projector** Powerful searchlight trained from landmark beacon or other point towards nearby airfield (obs).

**bearing selector** See *omni*.\*.

**bearing stress** In any mechanical bearing, with or without relative movement, load divided by projected supporting area.

**bear pads** Horizontal plates added to prevent helicopter skid sinking into snow. See *ski pad*.

**bear paws** Short skis [fixed-wing aircraft].

**beat** 1 Vibration of lower frequency resulting from mutual interaction of two differing higher frequencies. Often very noticeable in multi-engined aircraft.

2 One complete cycle of such interference.

**beat frequency** Output from oscillator fed by two different input frequencies which has frequency equal to difference between applied frequencies. (Other outputs have higher frequencies, such as sum of applied frequencies.)

**beat-frequency oscillator** Oscillator generating signals having a frequency such that, when combined with received signal, difference frequency is audible. Such \*\* is heterodyne, used in CW (1) telegraphy. Another is super-heterodyne, in which local \*\* produces intermediate frequency by mixing with received signal.

**beat reception** Heterodyne reception, as used in CW (1) telegraphy.

**beat-up** 1 Aggressive dive by aircraft to close proximity of surface object.

2 Repeated close passes in dangerous proximity to slower aircraft.

**Beaufort notation** System of letters proposed by Rear-Admiral Sir Francis Beaufort (1805) to signify weather phenomena.

**Beaufort scale** System of numbers proposed by Beaufort to signify wind strength, ranging from 0 (calm) to 12 (hurricane).

**beaver tail** Tail of fuselage or other body which has progressively flattened cross-section.

**beavertail aerial** Radar aerial emitting flattened beam having major beam width at 90° to major axis of aerial.

**BEC** Boron-epoxy composite.

**BeCA** Belgian Cockpit Association.

**BECEMG** Becoming.

**becquerel** SI unit of radioactivity; Bq = 1 disintegration /s, =  $2.7 \times 10^{-11}$  Ci.

**Be/Cu** Beryllium-copper.

**bed** See *zeolite*.

**Beddown** Process of introducing major new weapon system to combat duty, esp. aircraft (eg B-2) at first operating base.

**BEEF, Beef** Base emergency engineering force (USAF). **beefing up** Strengthening of structural parts, either by redesign for new production or by modification of hardware already made. Thus, beef (= added material), beefed (US colloq.).

**beehive** Small formation of bombers with close fighter escort (RAF pre-1945).

**beep box** Station for remote radio control of activity or vehicle, such as RPV (colloq.).

**beeper** 1 Personal radio alerting receiver.

2 RPV pilot.

3 Manual two-way command switch, eg electric trimmer or cyclic-stick thumbswitch for fuel valve control.

**BEES, Bees** Battle-force electromagnetic interface evaluation system.

**before-flight inspection** Pre-flight inspection (NATO).

**behavioural science** Study of behaviour of living organisms, especially under stress or in unusual environments.

**Beier gear** Infinitely variable mechanical transmission accomplished by stacks of convex discs intermeshing with stacks of concave discs, drive ratio being varied by bringing parallel shafts closer together, for extreme ratios, or further apart.

**bel** Unit for relative intensity of power levels, esp. in relation to sound. One bel is ratio of power to be expressed divided by reference power, expressed as logarithm to base 10. Numerically equal to 10 decibels.

**BELF** Breakeven load factor (BLF also common).

**Belgospace** Trade association for space industry companies and organisations [B-1050 Brussels] (Belgium)

**Belleville washer** Washer, usually of thin elastic metal in form of flat or convex/concave disc, which offers calibrated resistance to linear deflection of centre, perpendicular to plane of washer.

**Bell-Hiller stabilizer** Two masses on short arms attached to hub of two-blade main rotor of helicopter in plane of blades, crossing at 90°.

**Bellini-Tosi** First directional radio stations, using triangular loop antennas.

**bellows** Aneroid capsule(s).

**belly** Underside of central portion of fuselage.

**belly-in, belly landing** To make premeditated landing with landing gear retracted or part-extended; belly-in is a verb.

**below minima** Weather precludes takeoff or landing.

**BEMT** Helicopter blade-element momentum theory.

**bench** Static platform or fixture for manual work, system testing or any other function requiring firm temporary mounting (need not resemble a workshop\*).

**bench check** Mandatory manual strip, inspection, repair, assembly and recalibration of airborne functional parts, made at prescribed intervals and by station and staff certificated by airworthiness authority and/or hardware manufacturer.

**bench engine** For bench testing, not cleared for flight.

**bench test** Test of complete engine or other functional system on static testbed or rig.

**bend** To damage an aircraft, especially in a crash, hence bent (UK colloq.).

**bend allowance** Additional linear distance of sheet material required to form bend of specified radius.

**bending brake** Workshop power tool for pressing metal sheet without dies.

**bending moment** Moment tending to cause bending in structural member. At any section, algebraic sum of all moments due to all forces on member about axis in plane of section through its centroid.

**bending relief** Design of aircraft to alleviate aeroelastic deflection, especially of main wing (eg, by distributing mass of fuel and engines across span).

**bending stress** Secondary stresses (eg, in wing skins and spar booms) which resist deflection due to applied bending moments.

**bends** Acute and potentially dangerous or lethal discomfort caused by release of gases within a mammalian body exposed to greatly reduced ambient pressure. Thus, a hazard of high-altitude fliers and deep-sea divers (see *aeroembolism, decompression sickness*).

**bent** 1 Feature of many gun mechanisms, engaging in cocked position with sear.

2 Signal code indicating that facility is inoperative (DoD).

3 Transverse frame capable of offering vertical support and transmitting bending moment.

4 Damaged in an accident (colloq.).

**bent beam, bent course** Radio or radar beams significantly diverted from desired rectilinear path by topographic effects, hostile ECM or other cause.

**benzene** Liquid hydrocarbon,  $C_6H_6$ , s.g. 0.899, with characteristic ring structure forming base of large number of derivatives. Used as fuel or fuel additive, as solvent in paints and varnishes, and for many other manufactures.

**benzine** Mixture of hydrocarbons of paraffin series, unrelated to benzene. Volatile cleaning fluid and solvent.

**benzol** Benzene  $C_6H_6$ .

**BEP** Back-end processor; MS adds management system.

**BER** 1 Beyond economic repair.

2 Bit error rate, also b.e.r.

**BERD** Business enterprise research and development.

**Berline** Single-engined transport aircraft (F).

**Bermuda triangle** Region at base of stiffener bonded to composite sheet subject to high stress.

**Bernoulli's theorem** Statement of conservation of energy in fluid flow. Basis for major part of classical aerodynamics, and can be expressed in several ways. One form states an incompressible, inviscid fluid in steady motion must always and at all points have uniform total energy per unit mass, this energy being made up of kinetic energy, potential energy and (in compressible fluid) pressure energy. Making assumptions regarding proportionality between pressure and density, and ignoring gravity and frictional effects, it follows that in any small parcel of fluid or along a streamline, sum of static and dynamic pressure is constant, expressed as  $p + \frac{1}{2} \rho v^2 = k$ . Thus, if fluid flows subsonically through a venturi, pressure is lowest at throat; likewise, pressure is reduced in accelerated flow across a wing.

**BERP, Berp** British experimental helicopter main rotor programme.

**Berp rotor** RAE 9648 profile inboard, 9645 outboard, broad tip 9634.

**BERR** Business enterprise and regulatory reform.

**Berry Amendment** Prohibits use of appropriated funds to purchase items [e.g. speciality metals] unless they are certified as US products.

**beryllium** Hard, light, strong and corrosion-resistant white metal, m.p. about  $1,278^\circ C$ , density about 1.8. Expensive, but increasingly used for aerospace structures, especially heat sinks and shields.

**BES** Best estimate.

**b.e.s.** Best-endurance speed.

**bespoke software** Designed for a specific application.

**best-climb speed** Usually  $V_{IMD}$ .

**best-economy altitude** Narrow band of altitudes where specific range is maximum.

**best-endurance speed** Always  $V_{IMD}$ .

**best-fit parabola** Profile of practical parabolic aerial capable of being repeatedly manufactured by chosen method. In many cases \*\*\* is made up of numerous flat elements.

**best-range speed**  $V_{IMR}$ ; speed at which tangent to curve of speed/drag is a minimum; hence where speed/drag is a maximum and fuel consumption/speed a minimum.

**BET** Best estimate of trajectory.

**BETA, Beta** Battlefield exploitation and target acquisition.

**beta** 1 Sideslip ( $\beta$ ).

2 Angle of sideslip.

**beta-dot,  $\dot{\beta}$**  First-order derivative used to model delay in rate of change of sidewash at vertical tail.

**beta-1,  $\beta_1$**  Yaw pointing angle (zero sideslip).

**beta-2,  $\beta_2$**  Lateral translation (constant yaw angle).

**BET-AB** Rocket-accelerated free-fall deep-penetration bomb (USSR, R).

**beta blackout** Communications interference due to beta radiation.

**beta control** Control mode for normally automatic propeller in which pilot exercises direct command of pitch for braking and ground manoeuvring. Also called beta mode.

**beta lines,  $\beta$ -lines** Arbitrary lines drawn roughly parallel to compressor surge line to assist off-design performance calculations.

**beta mode** See *Beta control*.

**beta particle** Elementary particle emitted from nucleus during radioactive decay, having unit electrical charge and mass  $1/1,837$ th that of proton. With positive charge, called positron; with negative, electron. Biologically dangerous but stopped by metal foil.

**beta strips** Low-intensity strip lights on skin of military aircraft to assist close formation flying at night.

**beta target** The trapezoid on a PFD.

**beta vane** Transducer measuring yaw (sideslip) angle.

**BETT, Bett** Bolt extrusion thrust-terminator.

**bev** Billion electron volts. No longer proper term;  $10^9$  ev is correctly 1 Gev.

**bevel gear** Gearwheel having teeth whose straight-line elements lie along conical surface (pitch cone); thus, such gears transmit drive between shafts whose axes intersect.

**bevelled control** Flight-control surface whose chordwise taper in thickness is increased close to the trailing edge.

**BEVS** Boom [for air-refuelling] enhanced visual system.

**BEW** Bare engine weight.

**BEXR** Beacon extractor and recorder.

**bezel** Sloping part-conical ring that retains glass of

watch or instrument; esp. rotatable outer ring of pilot's magnetic compass.

**BF** 1 Block fuel.

2 Blind-flying; thus \* instrument, \* panel.

3 Base Flight (USN)

4 Below freezing.

5 Bomber/fighter category (USN, 1934–37).

6 Blue Force [many suffixes].

**BFA** 1 Balloon Federation of America.

2 Battlefield Airlifter (RAAF).

**BFAANN** British Federation Against Aircraft Noise Nuisance.

**BFCU** Barometric fuel control unit.

**BFDAS** Basic flight-data acquisition system.

**BFDK** Before dark.

**BFE** 1 Buyer-furnished equipment [MS adds management system].

2 Basic flight envelope.

**BFG** British Forces in Germany.

**BFL** 1 Basic field length.

2 *Balanced field length.*

**BFM** Basic fighting/fighter/flight manoeuvring (or manoeuvres).

**BFN** Beam-forming network [satcoms].

**BFO** 1 Beat-frequency oscillation, or oscillator.

2 Battlefield obscuration.

3 Bits falling off.

**BFOM** Basic flight-operations management.

**BFoV, BFOV** Binocular field of view.

**BFP** 1 Blind-flying panel.

2 British Flying Permit (ultralights).

3 Best-fit parabola.

4 Blown fuse-plug (tyre).

**BFR** 1 Biennial flight review, for renewal of pilot licence (FAA).

2 Before.

**BFRP** Boron-fibre reinforced plastics.

**BFS** 1 Bundesanstalt für Flugsicherung (= ATC, G).

2 Back-up flight system.

**BFT** 1 Basic fitness test[ing].

2 Blue Force Tracking; I adds Initiatives.

**BFTS** 1 Basic flying training school.

2 British Flying Training School (US 1941–44); A adds Association (from 1948, office Coulsdon, Surrey).

3 Bomber/Fighter Training System (USAF).

**BFU** Accident-investigation office (G).

**BG** 1 Bomb, or Bombardment, Group (USAAC, USAAF, USAF).

2 Bomb glider, aircraft category (USAAF 1943–46).

3 See \*lighting.

**BGA** The British Gliding Association [1929–; office, Leicester LE1 4SE] (UK).

**BGAN** Broadband global area network.

**BGFOO** British Guild of Flight Operations Officers.

**BGI** 1 Basic ground instructor.

2 Bus grant inhibit.

**BG lighting** Blue/green.

**BGM** Designation code; multiple launch environment surface-attack missile, = cruise missile.

**BGN** Begin, begun.

**BGP** Border gateway protocol.

**BGR** Best glide-ratio.

**BGS** 1 Blasting grit, soft, such as Carboblast.

2 Bombing and Gunnery School.

**BGW** Basic gross weight; not normally defined.

**B/H** Curves of magnetic flux density plotted against magnetising force.

**BHA** 1 Brazilian Helicopter Association.

2 Bird-hit area, dangerous during migrations.

**BHAB** British Helicopter Advisory Board [office Fair Oaks Airport, GU24 8HX] (UK).

**BHGA** British Hang Gliding Association, now BHPA.

**BHGMF** British Hang Glider Manufacturers Federation.

**BHI** Bureau Hydrographique International.

**BHN** Brinell hardness number.

**BHO** Black-hole ocarina (tactical IR suppressor).

**b.h.p., bhp** Brake horsepower.

**BHPA** British Hang gliding and Paragliding Association [formed by merger 1992, office Leicester LE4 5PJ] (UK).

**BHRA** British Hydromechanics Research Association.

**BHS** Baggage-handling system.

**BI** 1 Burn-in.

2 Basse intensité.

**BIA** Bomb-impact assessment; M adds modification.

**BIAM** Beijing Institute of Aeronautical Materials.

**BIAS** Battlefield-illumination airborne system.

**bias** Voltage applied between thermionic valve (vacuum tube) cathode and control grid.

**biased fabric** Multi-ply fabric with one or more plies so cut that warp threads lie at angle (in general, near 45°) to length.

**bias error** Any error having constant magnitude and sign.

**bias force** Output of accelerometer when true acceleration is zero.

**bias ply** Tyre [tire] construction with alternate layers of rubber-coated cord extending under the bead at alternate angles; tread usually circumferentially ribbed.

**bias temperature effect** Rate of change of bias force, usually in g °C<sup>-1</sup>.

**BIATA** British Independent Air Transport Association; formed 1946 as BACA.

**BIBA** British Insurance Brokers Association.

**Bibby coupling** Drive for transmitting shaft rotation without vibration, using multiple flexural cantilevers linking adjacent discs.

**Bicep** Battlefield integrated-concept emulation program.

**Bices, BICES** Battlefield information collection and exploitation systems.

**biconvex** Presenting convex surface on both sides. Such wings usually have profile formed from two circular arcs, not always of same radius, intersecting at sharp leading and trailing edges. Inefficient in subsonic flight.

**BICP** Back-up integrated control panel [see BUIC].

**bicycle** Form of landing gear having two main legs in tandem on aircraft centreline.

**BID** 1 Baggage information display.

2 Blast-initiation detector [establishes precise location of warhead detonation].

**bid** Formal request to receive fuel from a tanker (RAF).

**bidding** 1 Phase in procurement process in which rival manufacturers submit detailed proposals with prices.

2 Competitive procedure within air carrier's flying staff for licence endorsement on new type of aircraft.

**BIDE** Blow-in door ejector (engine nozzle).

**bidirectional cable** Runway emergency arrester cable which can stop aircraft from either direction.

**BIDS, Bids** Battlefield [or baggage] information distribution [or display] system.

**BIFA** British International Freight Association [office Feltham TW13 7EP] (UK).

**BIFAP** Bourse Internationale de Fret Aérien de Paris.

**BIFET** Bistable field-effect transistor (gate).

**BIFF, Biff** 1 Battlefield identification friend or foe.

2 British Industrial Fasteners Federation.

**bifilar** Suspension of mass by two well separated filaments; mass normally swings in plane of filaments.

**BiFOV** Binocular field of view.

**bi-fuel** 1 Bipropellant.

2 More rarely, heat engine which can run on either of two fuels but not both together.

**bifurcated** Rod, tube or other object of slender form which is part-divided into halves; fork-ended.

**bifurcation** 1 Point at which duct [eg jetpipe] splits into two, usually left/right.

2 Analysis of steady states, a \* occurring when stability changes from one state to another as an input [eg, control-surface angle] is altered.

**Big BLU** Proposed large [30,000-lb, 13.6-tonne] deep-penetration bomb (USAF).

**big bone** Very large indivisible part of airframe structure, such as a spar or monolithic bulkhead.

**Big Chop, the** Killed (RAF, colloq.).

**Big Ear** Battle group exploitation airborne radio.

**Big F** Commander (Flying) on carrier (RN).

**bigraph** Two-letter code for airfield name painted on local buildings, eg gasholders.

**Bigs** Bilingual ground station (Acars).

**Bigsworth** Chartboard, transparent overlay, Douglas protractor, parallel rules, all integrated (obs).

**big-ticket item** Subject of a high-value contract (US).

**Bihrlé** See *CAP* (7).

**bilateral** Agreement between two parties.

**bilateration** Position determination by use of AF signal beamed to vehicle, which re-radiates it to original ground station and to second at surveyed location giving known delay path. Can be used for control of multiple vehicles beyond LOS.

**Bill, BILL** Beacon illuminator, or illuminating, laser (ABL).

**billet** Rough raw material metal form, usually square or rectangular-section bar, made by forging or rolling ingot or bloom.

**bill of material** List of raw material and/or parts needed to make something.

**billow** Inflation of each half of Rogallo wing.

**BIM** 1 Ballistic intercept missile.

2 Blade inspection method (helicopters).

3 Blade integrity monitor.

4 British Institute of Management.

**bimetallic joint** Joint between dissimilar metals.

**bimetallic strip** Strip made of sandwich of metals, usually two metals chosen for contrasting coefficients of thermal expansion. As halves are bonded together any change in temperature will tend to curve the strip. Principle of bimetallic switch and temperature gauge.

**bi-mono aircraft** Monoplane having detachable second wing for operation as biplane.

**bin** 1 Electronic three-dimensional block of airspace.

All airspace in range of SSR or other surveillance radar is subdivided into \*, size of which is much greater than expected dimensions of aircraft. Thus presence of an aircraft cannot load more than one (transiently two)\* at a time.

2 Upright cylindrical receptacle, esp. some early gun turrets.

**BINA** British Isles and North Atlantic.

**binary actuator** Patented technique in which fluid is controlled by valve driven by spring-loaded armature with either of two positions within magnetic field.

**binary code** Binary notation.

**binary munition** One whose filling is composed of two components, mixed immediately before release or launch.

**binary notation** System of counting to base of 2, instead of common base of 10. Thus 43 (sum of  $2^5$ ,  $2^3$ ,  $2^1$  and  $2^0$ ) is written 101011. All binary numbers are expressed in terms of two digits, 0 and 1. Thus digital computer can function with bistable elements, distinction between a 0 or 1 being made by switch being on or off, or magnetic core element being magnetised or not.

**binary phase modulation** Radar pulse-compression technique in which the phases of certain echo segments are reversed.

**binary switch** Bistable switch.

**binaural** Listening with both ears.

**bind** Noun, boring duty; verb, to complain incessantly (RAF, traditional).

**BINDT** British Institute of Non-Destructive Testing (office, Northampton).

**bingo** 1 As an instruction, radioed command to aircrew (usually military) to proceed to agreed alternative base.

2 As information, radioed call from aircrew (usually military) meaning that fuel state is below a certain critical level (usually that necessary to return to base). Thus calls “\*fuel” or “Below\*”. See next entries.

3 In some single-seat aircraft, alarm [usually bell] in headset at \* fuel point.

**Bingo 1** External tanks are empty.

**Bingo 2** At start of what must be last practice engagement.

**Bingo 3** Must break off combat area and recover to base, but with margins not present at Chicken.

**binor** Binary optimum ranging. Binary code modified for range measurement and minimising receiver acquisition time.

**BINOVC, BinOvc** Break[s] in overcast.

**BIO** Biotechnology Industry Organization (US).

**bioastronautics** Study of effects of space travel on life forms.

**biochemical engineering** Technology of biochemistry.

**biochemistry** Chemistry of life forms.

**biodegradable** Of waste material, capable of being broken down and assimilated by soils and other natural environments.

**biodynamics** Study of effects of motion, esp. accelerations, on life forms.

**BIOG** British Industry Offset Group [DMA, SBAC] (UK).

**biological agent** Micro-organism causing damage to living or inanimate material and disseminated as a weapon.

**biological decay** Long-term degradation of material due to biological agents.

**biological warfare** Warfare involving use as weapons of biological agents, toxic biological products and plant-growth regulators.

**biomedical monitoring** Strictly 'biomedical' is tautological, but term has come to denote inflight monitoring of heartbeat, respiration and sometimes other variables, esp. of astronauts in space.

**biometric recognition** Identification of individual humans by their unique features, eg eye iris, finger/hand-print.

**biometry** Geometric measurement of life forms, esp. humans.

**bionics** Study of manufactured systems, esp. those involving electronics, that function in ways intended to resemble living organisms.

**bio-pak** Container for housing and monitoring life forms, usually plants, insects and small animals, in space payload. May be recoverable.

**biophage** Literally, destructive of life : CBW defence payload.

**BIOS** British Intelligence Objectives Sub-committee (1944 – 46).

**biosatellite** Artificial satellite carrying life forms for experimental purposes.

**biosensor** Sensor for measuring variables in behaviour of living systems.

**biosphere** Location of most terrestrial life: oceans, surface and near-surface of land, and lower atmosphere.

**bioterrorism** Loosely, germ warfare; hence bioweapons.

**Biot-Savart** Law for computing induced velocities in a vortex filament.

**biowaste** All waste products of living organisms, esp. humans in spacecraft.

**BIP** 1 Borescope inspection port.

2 Baggage improvement program (IATA).

**biphase coding** Standard coding for both the 1553B and A629 [which see] data buses, also known as Manchester coding. In this protocol a 1 is signified by a change of signal from positive to negative during the bit period, and a 0 [zero] is signalled by a change from negative to positive.

**biplace** Two-seat (US, F usage).

**biplane** Aeroplane or glider having two sets of wings substantially superimposed (see *tandem-wing*).

**biplane interference** Aerodynamic interference between upper and lower wings of biplane or multiplane.

**biplane propeller** Propeller having pairs of blades rotating together in close proximity, resembling biplane wings.

**BIPM** Bureau International des Poids et Mesures.

**biopropellant** 1 As adjective, rocket which consumes two propellants – solid, liquid or gaseous – normally kept separate until introduction to reaction process. In most common meaning, propellants are liquid fuel and liquid oxidiser, stored in separate tanks.

2 As noun, rocket propellant comprising two components, typically fuel and oxidiser.

**BIR** Biennial infrastructure review.

**BIRD** Banque Internationale pour la Reconstruction et le Développement.

**bird** Any flight vehicle, esp. aeroplane, RPV, missile or ballistic rocket (colloq.).

**bird gun** Gun, usually powered by compressed air, for

firing real or simulated standard birds at aircraft test specimens to demonstrate design compliance.

**BIRDiE** Battery integration and radar display equipment (USA).

**birdie** Spurious radar echo, usually from PRF harmonics.

**bird impact** Birdstrike; design case for all aerodynes intended for military or passenger carrying use (see *standard bird*).

**bird ingestion** Swallowing of one or more birds by gas-turbine or other air-breathing jet engine, with or without subsequent damage or malfunction (see *ingestion certification*).

**birdnesting** Tendency of chaff to stick together in tight bundles, hence forming **bird(s) nests**.

**bird strike, birdstrike** Collision between aerodyne and natural bird resulting in significant damage to both. Certification requirements for large turbofan engines include the ability to continue to give useful thrust after ingesting a single large bird [in 2002, one weighing 3.629 kg/8.0 lb, but with more severe demands being discussed] or various numbers of smaller birds, whilst running at maximum takeoff power.

**Birmabright** Trade name of many British alloys of Al, Mg and Mn.

**BIRMO** British IR Manufacturers' Organisation.

**birotative** Having two components on the same axis rotating in opposite directions, or in the same direction at different speeds.

**BIS** 1 British Interplanetary Society [1933–; office, London SW8 1SZ] (UK).

2 Board of Inspection and Survey (US Navy).

3 Burn-in screening.

4 Boundary intermediate system.

5 Biometric identification system.

**bis** Second version of product, equivalent to Mk 2 (F,I,R).

**BISA** Battlefield Information System Application (GBAD, UK).

**Bise** Cold, dry wind in S France.

**bi-signal zone** Portions of radio-range beam on either side of centreline where either A or N signal can be heard against monotone on-course background.

**BISMS** BIS(4) management system.

**BISPA, Bispa** British Iron and Steel Producers Association.

**BISS** Base and installation security system.

**BIST, Bist** Built-in self-test.

**bistable** Capable of remaining indefinitely in either of two states: thus, bistable switch is stable in either on or off position (see *flip-flop*).

**bistatic radar** Radar whose transmitter and receiver are at different locations when seen from the target.

**BIT** 1 Built-in test.

2 Bureau International du Travail (ILO).

**bit** Unit of data or information in all digital (binary) systems, comprising single character (0 or 1) in binary number. Thus, capacity in bits of memory is  $\log_2$  of number of possible states of device. From 'binary digit'.

**Bitching Betty** UAV voice system which reminds operator of fuel state and other important factors.

**BITD** Basic-instruments training device.

**BITE, bite** Built-in test equipment.

**BIT/Fi** Built-in test and fault isolation.

**bit rate** Theoretical or actual speed at which information transmission or processing system can handle data. Measured in bits, kbits, Mbits or Gbits per second.

**bitube** Single automatic weapon with two barrels.

**BIU** Bus interface unit.

**biz** Business (colloq.).

**bizav** Business aviation.

**bizjet** Business [executive] jet aircraft.

**b<sub>J</sub>** Span of CC blowing slit.

**BJA** Baseline jamming assets.

**BJSJ** British Joint Service Designation.

**BJSJ** British Joint Services Mission.

**BK, bk** Break [in transmission].

**BKEP** Boosted kinetic-energy penetrator.

**BKN** Broken [clouds].

**BKSA** British Kite Soaring Association.

**BL** 1 Buttock line.

2 Base-line (hyperbolic nav).

3 Bulk loader.

4 Between layers.

5 Blowing [DU adds dust, SA sand, SN snow].

**BLA** Pilotless aerial vehicle (R).

**blabbermouth** Foam monitor.

**BLAC** British Light Aviation Centre (50a Cambridge St. London SW1V 4QQ).

**Black** 1 SAO security classification.

2 Code, runway is unusable.

**black** 1 Big error of judgement or faux pas (RAF, as in "he put up a \*").

2 With all externally visible lighting switched off [interceptor squadrons] (USAF).

**black aluminium** Carbon-fibre composite (colloq.).

**black ball** 1 Traditional form of artificial horizon based on black hemisphere or bi-coloured sphere.

2 Suspended on mast in signals area: TO and landing directions may differ.

**black body** Theoretical material or surface which reflects no radiation, absorbs all and emits at maximum rate per unit area at every wavelength for any given temperature. In some cases wavelength is restricted to band from near-IR through visible to far-UV.

**black-body radiation** EM spectrum emitted by black body, theoretical maximum of all wavelengths possible for any given body temperature.

**black box** 1 Avionic equipment or electronic controller for hardware device or system, removable as single package. Box colour is immaterial (colloq.).

2 In particular, flight-data or accident recorder, usually Day-Glo scarlet or orange.

**blackier-than-black** In TV system, portion of video signal containing blanking and synchronizing voltages, which are below black level (with positive modulation) and prevent electrons from reaching screen.

**black hole** 1 IRCM design giving engine efflux (esp. of helicopter) or other heat source greatest protection.

2 Approach to land in near-absence of external visual cues.

**black hot** TV or IR display mode giving negative picture (warm ship looks black against white sea).

**blackjack** Hand tool for manually forming sheet metal; has form of flexible (often leather) quasi-tubular bag filled with lead shot too small to cause local indentations.

**Black Label** Hardware used in first-build or prototype

that is not only physically representative but is also cleared for flight.

**black level** In TV system, limit of video (picture) signal black peaks, below which signal voltages cannot make electrons reach screen.

**black men** Ground crew [Schwarze Männer] (Luftwaffe).

**black metal** See *black aluminium*.

**blackout** 1 In war, suppression of all visible lighting that could convey information to enemy aircraft.

2 Fadeout of radio communications, including telemetry, as result of ionospheric disturbances or to sheath of ionised plasma surrounding spacecraft re-entering atmosphere.

3 Fadeout of radio communications caused by disruption of ionosphere by nuclear explosions.

4 Dulling of senses and seemingly blackish loss of vision in humans subjected to sustained high positive acceleration. In author's experience, more a dark red, not very unlike red-out.

**blackout block** Block of consecutive serial numbers deliberately left unused.

**black picture** See *black hot*.

**bladder tank** Fluid tank made of flexible material, especially one not forming part of the airframe.

**Blade** Bristol Laboratory for Advanced Dynamics Engineering.

**blade** 1 Radial aerofoil designed to rotate about an axis, as in propeller, lifting rotor, axial compressor rotor or axial turbine. Also see stator \*.

2 Rigid array of solar cells, especially one having length much greater than width.

3 Operative element of windscreen wiper.

**blade activity factor** Non-dimensional formula for expressing ability of blade (1) to transmit power; integral between 0.1 and 0.5 of diameter of chord and cube of radius with respect to radius. Loosely, low aspect ratio means high activity factor.

**blade aerial** Radio aerial, eg for VHF communications, having form of vertical blade, either rectilinear, tapered or backswept.

**blade angle** 1 In propeller or fan blade, angle (usually acute) between chord at chosen station and plane of rotation.

2 In helicopter lifting rotor, acute angle between no-lift direction and plane perpendicular to axis of rotation.

**blade angle of attack** Angle between incident airflow and blade (1) tangent to mean chord at leading edge at chosen station.

**blade articulation** Attachment to hub of helicopter lifting rotor blades by hinges in flapping and/or drag axes.

**blade back** Surface of blade (1) corresponding to upper surface of wing.

**blade beam** Hand tool in form of beam incorporating padded aperture fitting propeller or rotor blade; for adjusting or checking blade angle.

**blade centre of pressure** Point through which resultant of all aerodynamic forces on blade (1) acts.

**blade damper** Hydraulic, spring or other device for restraining motion of helicopter lifting rotor blade about drag (lag) hinge.

**bladed spinner** Zero stage of part-height blades added to spinner ahead of fan of turbofan; proposed by Rolls-

Royce, \* is unshrouded and not separated from fan by stators, otherwise similar in principle to TF39 of 1966.

**blade element** Infinitely thin slice (ie having no spanwise magnitude) through blade (1) in plane parallel to axis of rotation and perpendicular to line joining centroid of slice to that axis. Thus, blade is made up of infinity of such elements from root to tip, usually all having different section profile and blade angle. \*momentum theory deals with the rotor of a hovering helicopter.

**blade face** Surface of blade (1) corresponding to under-side of a wing. With propellers, called thrust face.

**blade inspection method** Spars of helicopter main-rotor blades are pressurized, loss of pressure warning of crack (Sikorsky).

**blade loading** Of helicopter or autogyro, gross weight divided by total area of all lifting blades (not disc area).

**blade loading coefficient** Helicopter rotor thrust coefficient divided by solidity,  $C_t \sigma$ .

**blade passing noise** Component of internally generated noise of turbomachinery, caused by interaction between rotating blades and wakes from inlet guide vanes and stationary blades. Generates distinct tones at blade-passing frequencies, which in turn are product of number of blades per row and rotational speed.

**blade root** 1 Loosely, inner end of blade (1).

2 Where applicable, extreme inboard end of blade incorporating means of attachment (see *blade shank*).

**Blades** Battlespace laser detection system (AEFB/AFRL).

**blades!** Verbal call to pull piston engine through specified number of propeller blades before start.

**blade section** Shape of blade element.

**blade shank** Where applicable, portion of blade of non-aerofoil form extending from root to inboard end of effective aerofoil section. Unlike root, \* of propeller is outside spinner.

**blade span axis** 1 Axis, defined by geometry of root pitch-change bearings, about which blade is feathered.

2 Axis through centroids of sections at root and tip.

**blade station** Radial location of blade element, expressed as decimal fraction of tip radius (rarely, as linear distance from axis of rotation, from root or from some other reference).

**blade sweep** Deviation of locus of centroids of all elements of blade from radial axis tangential to that locus at centre. Was marked in early aircraft propellers, usually towards trailing edge (ie, trailing sweep); leading sweep, in which tips would be azimuthally ahead of hub, is rare.

**blade tilt** Deviation of locus of centroids of all elements of blade from plane of rotation. Again a feature of early aircraft propellers, more common form being backward tilt, visible in side view as propeller flat at back and tapered from boss to tip in front.

**blade tip grinding** Precise grinding of the tips of an assembled axial compressor rotor. In some engines the final trim is by allowing the tips to rub inside the casing.

**blade twist** 1 Unwanted variation in pitch from root to tip caused by aerodynamic loads.

2 Natural twist which reduces blade angle from root to tip.

**blade/vortex interaction** Between each helicopter main-rotor blade and the vortex created by its predecessor, a principal cause of slap.

**blade width ratio** Ratio of mean chord to diameter.

**BLAGF** British Light Aviation and Gliding Foundation (London W8).

**BLAM** Barrel-launched adaptive munition(s).

**blank** 1 Workpiece sheared, cut, routed or punched from flat sheet before further shaping.

2 Action of cutting part from flat sheet, esp. by using blanking press and shaped die.

3 Round of gun ammunition without projectile.

4 All-weather cover tailored to engine inlet or other aperture, forming part of AGE for each aircraft type.

**blanket** 1 Layer of thermally insulating material tailored to protect particular item, typically refractory fibre housed in thin dimpled stainless steel. Term is not normally used for noise insulation.

2 Layer of heating material supplied with electrical or other energy.

**blanket cover** Fabric cover for aircraft machine-sewn into large sheet, draped over structure, pulled to shape and sewn by hand.

**blanketing** 1 Suppression, distortion or other gross interference of wanted radio signal by unwanted one.

2 In long-range radio communication, prevention of reflection from F layers by ionisation of E layer.

**blanketing frequency** Signal frequency below which radio signals are blanketed (2).

**blank-gore parachute** Parachute having one gore left blank, without fabric.

**blanking** 1 Using press and blanking die to cut blanks (1).

2 In electron tube or CRT, including TV picture tubes, suppression of picture signal on fly-back to make return trace invisible.

**blanking cap** Removable cap fitted to seal open ends of unused pipe connections or other apertures in fluid system.

**blanking plate** Removable plate fitted to seal aperture in sheet, such as unused place for instrument in panel.

**blanking signal** Regular pulsed signal which effects blanking (2) and combines with picture signal to form blanked picture signal. Sometimes called blanking pulse.

**blanks** See *blank 4, blanking plate*.

**Blasius flow** Theoretically perfect laminar flow.

**blast** 1 Loosely, mechanical effects caused by blast wave, high-velocity jet or other very rapidly moving fluid.

2 Rapidly expanding products from explosion and subsequent blast wave(s) transmitted through atmosphere.

**blast area** Region around launch pad which, before final countdown of large vehicle, is cleared of unnecessary personnel and objects.

**blast cooling** In rotating electrical machines and other devices, removal of waste heat by airflow supplied under pressure.

**blast deflector** Structure on launch pad or captive test stand to turn rocket or jet engine efflux away from ground with minimal erosion and disturbance.

**blast fence** Large barrier constructed of multiple horizontal strips of curved section, concave side upwards, which diverts efflux behind parked jet aircraft upwards and thus reduces annoyance and danger at airfields.

**blast/fragmentation** Warhead, common on AAMs and SAMs, whose effect combines blast of HE charge and penetration of fragments of rod(s) or casing.

**BlastGard** Proprietary honeycomb materials in which

compartments are part-filled with various foams or expanding materials which attenuate blast and serve as a flame barrier.

**blast gate** See *waste gate*.

**blast line** Chosen radial line from ground zero along which effects of nuclear explosion (esp. blast effects) are measured.

**blast-off** Launch of rocket or air-breathing jet vehicle; usually, from ground or other planetary surface (colloq.).

**blast pad** Area immediately to rear of runway threshold across which jet blast is most severe. Constructed to surface standards higher than overrun or stopway beyond.

**blast pen** Small pen, enclosed by strong embankments on three sides, but open above, for ground running jet or rocket aircraft or firing missile engines.

**blast pipe** see *blast tube*.

**blast tube** Refractory tube linking rocket combustion chamber or propellant charge with nozzle, where these have to be axially separated.

**blast valve** Valve in air-conditioning and other systems of hardened facilities which, upon sensing blast wave, swiftly shuts to protect against nuclear contamination.

**blast wave** Shock wave (N-wave) of large amplitude and followed by significant (4 ata; 40 kPa or more) overpressure. Travels at or above velocity of sound and causes severe mechanical damage. Centred on explosions (local \*\* caused by lightning); attenuation and effective radius depend on third or fourth power of released energy.

**blast-wave accelerator** Concept for launching small payloads into space by accelerating them along an evacuated tube incorporating a long series of circumferential shaped charges pointed towards the muzzle.

**Blaugas** German gas used for airship lift and fuel; mixture of ethylene, methylene, propylene, butylene, ethane and hydrogen; literal meaning, blue gas.

**BLC** Boundary-layer control, especially gross control of airflow around lifting wing to increase circulation and prevent flow breakaway.

**BLD** 1 DSB, double sideband.

2 Berufsverband Luftfahrt-Personal in Deutschland eV (G).

**BLDG, Bldg** Building (cloud).

**BLE** Boundary-layer energiser.

**bleed** 1 To allow quantity of fluid to escape from closed system.

2 To extract proportion (usually small) of fluid from continuously flowing supply; eg compressed air from gas-turbine engine(s).

3 To allow fluid to escape from closed system until excess pressure has fallen to lower level or equalised with surroundings.

4 To remove unwanted fluid contaminating system filled with other fluid, eg \* air from hydraulic brakes.

5 To allow speed or height of aircraft to decay to desired lower level, thus \*-off speed before lowering flaps.

6 To allow electronic signal or electrical voltage to decay to zero (eg, \* glide path during flare in automatic landing).

**bled air** Compressed air bled from main engines of gas-turbine aircraft. Uses can include cabin and seal pressurization, anti-icing and environmental control.

**bleed and burn** Vertical lift system in which fuel is burned in a vertical combustion chamber fed with air from main

engine (extra airflow may or may not be induced by ejector effect).

**bleeder resistor** Resistor permanently coupled across power supply to allow filter capacitor charge to leak away after supply is disconnected (see *bleed-off relay*).

**bleeder screw** Small screw in tapped hole through highest point of hydraulic or other liquid system to facilitate bleeding (4) air or vapour.

**bleeding** 1 Expulsion of every trace of air or other gas from an enclosed liquid system.

2 Extraction of bleed air.

**bleeding edge** Edge of map or chart where cartographic detail extends to edge of paper.

**bleed-off relay** In laser, discharges capacitors when switched off, to render accidental firing impossible.

**blended** Aerodynamic (arguably, also hydrodynamic) shape in which major elements merge with no evident line of demarcation. Thus, aeroplane having \* wing/body (see next two entries).

**blended-hull seaplane** Marine aeroplane, generally called in English flying boat, in which planing bottom is blended into fuselage. Involves dispensing with chine, sacrificing hydrodynamic behaviour in order to reduce aerodynamic drag.

**blended wing/body** Aircraft in which wing/fuselage intersections are eliminated. Today important for reasons of *stealth*.

**blend point** In aerodynamic shapes having rigid and flexible surfaces mutually attached (eg Raevam, variable inlet ducts, flexible Krügers), point in section profile at which flexibility is assumed to start.

**BLEU** Blind Landing Experimental Unit (Bedford, UK).

**BLF** Breakeven load factor.

**BLG** 1 Laser-guided bomb (F).

2 Body (-mounted) landing gear.

**BLI** Belgische Luchtvaart Info.

**blimp** Non-rigid airship (from 'Dirigible Type B, limp', colloq. until made official USN term in 1939).

**blind** 1 Without direct human vision.

2 Without external visibility, e.g. in dense cloud.

3 Of radar, incapable of giving clear indication of target (eg see \* *speed*).

**blind bombing** Dropping of free-fall ordnance on surface target unseen by aircrew.

**blind bombing zone** Restricted area (strictly, volume) where attacking aircraft know they will encounter no friendly land, naval or air forces.

**blind fastener** See *blind rivet* [though need not have rivet-like form].

**blindfire** Weapon system able to operate without visual acquisition of target.

**blind flying** Manual flight without external visual cues.

**blind-flying panel** Formerly, in British aircraft, separate panel carrying six primary flight instruments: ASI, horizon, ROC (today VSI), altimeter, DG and TB (turn/slip).

**blind landing** 1 Landing of manned aircraft, esp. aerodyne, with crew deprived of all external visual cues.

2 Landing of RPV unseen by remote pilot except on TV or other synthetic display.

**blind nut** Nut inserted or attached on far side of sheet or other member to which there is no access except through bolt hole.

**blind rivet** Rivet inserted and closed with no access to far side of joint. Apart from explosive and rare magnetic-pulse types, invariably tubular.

**blind speed effect** Characteristic of Doppler MTI systems used with radars having fixed PRF which makes them blind to targets whose Doppler frequencies are multiples of PRF (see *staggered PRF*).

**blind spot** 1 Not reached by radio or radar, for whatever reason.

2 Region of airfield hidden from tower.

**blind toss** Programmed toss without acquisition of target (eg on DR from an offset).

**blind transmission** Station called cannot talk back.

**bling** Monolithic bladed ring forming one rotor stage of a compressor or turbine [gas-turbine].

**blink** 1 Of light or other indicator, to be illuminated and extinguished, or to present black/white or other contrasting colour indication, more than 20 times per minute.

2 In aircraft at night in VFR, manually to switch off navigation lights (typically, twice in as many seconds) as acknowledgement of message.

**blinker** Light or indicator that blinks (1), eg to confirm oxygen feed. See *doll's eye*.

**Blip, blip** Background-limited IR performance.

**blip** 1 Visible indication of target on radar display. Due normally to discrete target such as aircraft or periscope of submarine; in ground mapping mode, term used only to denote strong echo from transponder.

2 Spot, spike or other indication on CRT due to signal of interest.

3 To control energy input to early aeroplane by switching ignition on and off as necessary (normally, on landing approach).

4 To operate bang/bang control manually (eg, electric trim).

**blip driver** Operator of synthetic trainer for SSR or other surveillance radar with rolling ball or other means of traversing system co-ordinates to give desired blip (1) position and movement (colloq.).

**blip/scan ratio** Also written blip: scan, an expression for probability of detection of a target by radar.

**blisk** Axial turbine rotor stage (rarely, compressor stage) in which disc [US = disk] and blades are fabricated as single piece of material.

**Bliss** Bi-level integrated system synthesis.

**blister** 1 Streamlined protuberance on aerodynamic body, usually of semicircular transverse section and often transparent to selected EM wavelengths.

2 See *blister spray*.

**blister aerial** Aerial projecting from surface of aircraft and faired by dielectric blister.

**blister hangar** Prefabricated and demountable hangar having arched roof and fabric covering.

**blister spray** Arching sheet of water thrown up and outwards above free water surface on each side of planing hull or float. Compared with ribbon spray, has lower lateral velocity, rises higher, is clear water rather than spray, and is much more damaging.

**blister spray dam** Strong strip forming near-vertical wall projecting downwards along forebody chine of hull or float.

**blivet** Flexible bag for transporting fuel, usually as helicopter slung load.

**BLK** 1 Block.

2 Black.

**BLM** 1 Background luminance monitor.

2 Bureau of Land Management, Federal agency responsible for firefighting in wild regions (US).

**BLN** Balloon.

**BLO** Below clouds (ICAO).

**blob** Local atmospheric inhomogeneity, produced by turbulence, with temperature and humidity different from ambient. Can produce angels (2).

**block** 1 In quantity production, consecutive series of identical products having same \* number. In World War 2 aircraft production a \* might number several hundred; with large spacecraft and launch vehicles, fewer than ten. In general, products of two \* normally differ as result of incorporation of engineering changes.

2 In research, groups of experimental items subjected to different treatment for comparative purposes.

3 In EDP, group of machine words considered as a unit.

4 In aircraft (usually commercial) operation, chocks (real or figurative) whose removal or placement defines the beginning and end of each flight.

**blockbuster** Large thin-case conventional bomb [British term for German = land mine, 1940–45] (colloq.).

**block check sequence** Cyclic code used as reference bits in error-detection procedure.

**block construction** Arrangement of gores of parachute such that fabric warp threads are parallel to peripheral edge.

**block diagram** Pictorial representation of system, other than purely electrical or electronic circuit, in which lines show signal or other flows between components, depicted as blocks or other conventional symbols.

**blocker** See *inlet* \*.

**blocker door** In installed turbofan engine, hinged or otherwise movable reverser door (normally one of peripheral ring) which when closed blocks fan exit duct and opens peripheral exits directing airflow diagonally forward.

**block fuel** Fuel burned during block time.

**block-hour cost** DOC for one hour of block time.

**blockhouse** Fortified building close to launch pad for potentially explosive vehicles, from which human crew manage launch operations or perform other duties (eg photography).

**block in** To park transport aircraft at destination. Term spread from commercial to military transport use.

**blocking** 1 In wind tunnel, gross obstruction to flow caused by shockwaves at Mach numbers close to 1, unless throat and working section designed to avoid it (see *choking*).

2 Use of struts and wedges to prevent movement of loose cargo or cargo inside container.

3 Use of form block.

**blocking capacitor** Capacitor inserted to pass AC and block DC.

**blocking layer** Barrier layer in photovoltaic (ie solar) cell.

**blocking oscillator** Any of many kinds of oscillator which quench their output after each alternate half-cycle to generate sawtooth waveform.

**blocking up** To use shaped masses behind sheet metal being hammered.

**block letter** Suffix to aircraft serial number, equivalent to USAF *block number* (USN).

**block number** See *block* (1).

**block out** To move off blocks, esp. at start of scheduled flight.

**block shipment** Rule-of-thumb logistic supply to provide balanced support to round number of troops for round number of days.

**block speed** Average speed reckoned as sector distance divided by block time.

**block stowage** Loading all cargo for each destination together, for rapid off-loading without disturbing cargo for subsequent destinations.

**block template** Template for making form block.

**block time** Elapsed period from time aircraft starts to move at beginning of mission to time it comes to rest at conclusion. Historically derived from manual removal and placement of blocks (chocks). Normally used for scheduled commercial operations, either for intermediate sectors or end-to-end.

**block upgrade plan, programme** Introduction of successive groups of modifications, each in a particular FY or production block.

**Blocktube** Patented mechanical control in which command is transmitted by push/pull action of steel cable on which are threaded guidance rings running inside a tube.

**blood-albumen glue** Adhesive used in aircraft plywood, made from dry cattle blood albumen.

**blood chit** 1 Form signed by aircraft passenger before flight for which no fare has been paid (eg, in military aircraft) indemnifying operator against claims resulting from passenger's injury or death (colloq.).

2 Plastic or cloth message, usually in several languages, promising reward if bearer is helped to safety. Often includes representation of bearer's national flag (colloq.).

**blood wagon** Ambulance.

**bloom** 1 Ingot from which slag has been removed, sometimes after rough rolling to square section.

2 Of ECM chaff, to burst into large-volume cloud after being dispensed as compact payload.

**blooming** 1 In surface-coating technology, to coat optical glass with layer a few molecules thick which improves optical properties (by changing refractive index and/or reducing external reflection).

2 In CRT, defocusing effect caused by excessive brightness and consequent mushrooming of beam.

3 In atmospheric laser operations, defocusing or undesired focusing of pulses or beam caused by lens-like properties in atmosphere (see *blob*).

**BLOS** Beyond, or below, line of sight.

**blossom effect** Sudden apparent growth in size of aircraft on collision course as distance approaches zero.

**blow** 1 Rupture in case of solid rocket during firing.

2 To activate blowing system.

**blowback** 1 Type of action of automatic gun in which bolt, or other sliding breech-closure, is never locked and is blown back by combustion pressure on its face, or by rearwards motion of empty case, inertia sufficing to keep breech closed until projectile has left muzzle.

2 Improper escape of gas through breech during firing of gun, due to ruptured case, faulty breech mechanism or other malfunction.

3 Closure, or partial closure, of spoiler or speed brake

due to aerodynamic load overcoming force exerted by actuation system.

**blowback angle** Maximum angle to which a spoiler can be extended under given  $q$  (dynamic pressure) without blowback (3).

**blowby** 1 Loss of gas leaking past piston-engine piston ring.

2 Increasingly used to mean seepage past rings of lubricating oil.

**blowdown** 1 Pilot input or pfcu force overcome by aerodynamic load on control surface, the latter being either prevented from moving or returned to neutral position.

2 In captive firing of liquid rocket, expulsion of residual propellant[s] by gas [usually nitrogen] after burnout or cutoff.

**blowdown period** Period in cycle of reciprocating IC engine in which exhaust valve or port is open prior to BDC.

**blowdown tunnel** Open-circuit wind tunnel in which gas stored under pressure escapes to atmosphere, or into evacuated chamber, through working section.

**blowdown turbine** Turbine driven by piston engine exhaust gas in such a way that kinetic energy of discharge from each cylinder is utilised.

**blower** 1 Centrifugal compressor with output (from NTP input) at between 1 and 35 lb/sq in gauge (6.9–240 kN m<sup>-2</sup>).

2 Centrifugal fan used on piston engine, esp. on radial engine, to improve distribution of mixture among cylinders.

**blower pipe** In an airship, duct through which propeller slipstream is rammed to pressurize ballonets.

**blow-in door** Door free to open inwards against spring upon application of differential pressure (eg, in aircraft inlet duct).

**blowing** Provision for discharging high-pressure, high-velocity bleed air from narrow spanwise slit along wing leading edge, tail surface or ahead of flap or control surface. Greatly increases energy in boundary layer, increases circulation and prevents flow breakaway.

**blowing coefficient** For jet or blown-flap or blown aerofoil,  $\frac{MV_j}{qS}$

**blown** 1 Supercharged [piston engine].

2 Failed [electrical fuse].

3 See next.

**blown flap** Flap to which airflow remains attached, even at sharp angles, as result of blowing sheet of high-velocity air across its upper surface (see *boundary-layer control, supercirculation*).

**blown periphery** Parachute in which part of peripheral hem becomes blown between two rigging lines in another part of canopy, and attempts to inflate inside-out.

**blown primer** Percussion cartridge primer which blows rearward out of its pocket, allowing primer gases to escape.

**blow off** 1 Explosive or other enforced separation of instrument pack or other payload from rocket vehicle or other carrier. Hence, \*\* signal.

2 Controlled reduction [if necessary to zero] of deflection of flap, tab or [rare] control surface because of aerodynamic load.

**blow-off valve** 1 Safety valve set to open at predetermined  $dP$  at chosen point in axial compressor casing to

allow escape of part of air delivered by stages upstream. Common in early axial gas turbines to prevent surging and other malfunctions, especially during starting and acceleration.

2 One-way valve in top of fuel tank to enable escape of air displaced during pressure fuelling.

**blowout** 1 Flameout in any fuel/air combustion system caused by excessive primary airflow velocity.

2 In particular, afterburner flameout.

**blowout disc** Calibrated disc of thin metal used to seal fluid system pipe, rocket combustion space or any other device subject to large dP. If design dP limit is exceeded, \*\* ruptures. Also called safety diaphragm.

**BLR** 1 Bundersverband der Luftfahrt Zubehör und Raketenindustrie eV (G).

2 Beyond local repair.

3 Bomber, long-range category (USAAC 1934–36).

**BLS** Blue-line speed.

**BLSN** Blown snow (ICAO).

**BLSS** Base-level supply sufficiency.

**BLT** Bilinear transform.

**BLU** 1 Bande latérale unique, = SSB.

2 Bomb, live unit (US).

**BLUE** Friendly.

**Blue airway** Originally in US, N–S civil airway.

**Blue angels** Principal formation aerobatic team (USN 1953–).

**blue box** Pre-1945 Link trainer (colloq.).

**Blue Core** Versatile wireless technology which, with Bluetooth, enables almost anything to be done remotely.

**Blue Flag** Command post exercise emphasising tac-air warfare C<sup>3</sup> management (USAF).

**Blue Force** In military exercise, forces used in friendly role.

**Blue Force Tracking** Methods devised after 9–11 of combining space and airborne sensors, GPS and advanced com. to give real-time picture of every individual on battle area.

**blue ice** Formed when water or lavatory fluids leak at high altitude; on descent, large pieces can cause damage to the aircraft or on ground.

**blue key** Blue annotation or image on original map or diagram which does not show in subsequent reproduction.

**blue line** Computer-generated track for attack aircraft across hostile territory, minimising exposure to defences.

**blue-line speed** For multi-engined aircraft, best rate of climb airspeed after failure of one engine (usually thus marked on ASI), usually called  $V_{YSE}$ .

**Blue List** Schedule of standard units of measurement (ICAO).

**blue-on-blue** Mistaken engagement between friendly fighters.

**Blue Paper** Notice of proposed amendment (BCARs).

**blue-pole** S-seeking pole of magnet.

**blueprint** Drawing reproduced on paper by ammonium ferric citrate or oxalate and potassium ferrocyanide to give white lines on blue background. Seldom used today, but word has common loose meanings: any drawn plan; any written plan of campaign or course of action.

**blue room** Toilet, esp. on commercial transport.

**Blue sector** That half of ILS localiser beam modulated at 150 Hz (right of centreline).

**blue-sky** Research considered [perhaps in ignorance] to have no goal.

**blue suit** US Air Force; usually in contradistinction to white suit = contractor personnel (colloq.).

**Bluetooth** Low-power short-range radio link for mobile [eg pax] devices and for WAN/LAN access points.

**blue water** Oceanic, far from land, as distinct from brown.

**bluff body** Solid body immersed in fluid stream which experiences resultant force essentially along direction of relative motion and promotes rapidly increasing downstream pressure gradient. Causes flow breakaway and turbulent wake. Broadly, bluff is opposite of streamlined.

**BLUH** Battlefield light utility helicopter (UK).

**blunt** A \* trailing edge or rear face of body causes turbulence immediately downstream, but main airflow cannot detect that body or aerofoil has come to an end and thus continues to behave as if in passage over surface of greater length or chord.

**blushing** Spotty or general milkiness or opacity of doped or varnished surface, caused by improper formulation, too-rapid solvent evaporation or steamy environment.

**BLW** Below (ICAO).

**BLZD** Blizzard.

**BM** 1 Bus monitor.

2 Bubble memory.

3 Battle management.

41 Back marker.

5 Ballistic missile.

**BM, B.M.** Bending moment.

**B/M** Boom/mask (switch).

**BMAA** British Microlight Aircraft Association [office, Deddington OX15 0TT] (UK).

**BMC** 1 Basic mean chord.

2 Battle management center.

**BM/C<sup>2</sup>** Battle management/command and control.

**BM/C<sup>3</sup>** Battle management/command, control and communications [I adds intelligence].

**BM/C<sup>4</sup>I** As above, plus computers.

**BMCE** Base maintenance certifying engineer.

**BMD** 1 US Air Force Ballistic Missile Division (later SAMSO).

2 Ballistic-missile defence.

**BMDS** Ballistic-Missile Defense System (DoD).

**BMDO** Ballistic Missile Defense Organisation (USAF).

**BME** 1 Basic mass empty.

2 Bulk memory element.

**BMEC** Battlespace Management Evaluation Centre, BAE Systems facility at Farnborough.

**BMEP** Brake mean effective pressure.

**BMEW** Basic mass empty weight.

**BMEWS** Ballistic-missile early-warning system.

**BMF** Ministry of Finance (G).

**BMFA** British Model Flying Association [office, Leicester LS2 8RE] (UK).

**BMFT** Ministry for research and technology (G).

**BMH** Basic mechanical helmet.

**BMI** Bismaleimide, high-temperature-resistant resin adhesive.

**BMO** Ballistic Missile Office [became BMD] (USAF).

**BMR** Bearingless main rotor.

**BMS** 1 Bureau Militaire de Standardization (F).

2 Building, budget, business or battle- management system.

3 Ballistic-missile sensor.  
 4 Battle-management shelter (RAF).

**BMTC** Basic Military Training Center (USAF Lackland AFB).

**BMTOGW** Basic mission takeoff gross weight.

**BMTS** Ballistic-missile target system.

**BMUP** Block Modification Upgrade Program (USN).

**BMV** Brake metering valve.

**BMVBW** Ministry of Transport and Construction [D-53175 Bonn] (G).

**BMV<sub>g</sub>** Bundesministerium der Verteidigung [Ministry of Defence; D-53003 Bonn] (G).

**BMVIT** Ministry of Transport, Innovation and Technology (Austria).

**BN** 1 Night bomber (F, obs).  
 2 Boron nitride.

**B/N** Bombardier/navigator.

**Bn** Beacon.

**B<sub>n</sub>** Receiver noise bandwidth.

**BNAE** Bureau de Normalisation de l'Aéronautique et de l'Espace (F, office, Issy-les-Moulineaux).

**BNASC** Belgian National AIS (1) Centre.

**B/NB** Bid or no bid.

**BNEA** British Naval Equipment Association.

**BNFAAB** See BAH.

**BNG** Boosted, not guided.

**BNH battery** Bipolar nickel/hydrogen.

**BNK** Bureau of new construction (USSR).

**BNL** Brookhaven National Laboratory.

**B<sub>NN</sub>** Null-to-null bandwidth.

**BNR** Binary.

**BNRID** Basic net radio interface device.

**BNS** Boundary notation system.

**BNSC** British National Space Centre, formed 1985 as successor to British Space Development Co. [office, London SW1W 9SS] (UK)

**BO** Boom operator.

**Bo** 1 Boundary lights.  
 2 *Boron*.

**BOA** 1 Basic ordering agreement.  
 2 Bulle Operationnelle Aéroterrestre (F).

**boarding** Noun, one passenger.

**boarding card, boarding pass** Document issued at check-in which admits passenger to aircraft.

**boarding status** Current stage reached at gate, ending with 'closing'.

**boardroom bomber** Former WW2 or similar warplane converted for executive use.

**boards** Speed brakes (colloq.).

**boat seaplane** Flying boat (US).

**boat-tail** Rear portion of aerodynamic body, esp. body of revolution, tapered to reduce drag. Taper angle must be gentle to avoid breakaway.

**BOB** Bureau of the Budget (US).

**bobbing** Rare fluctuation in strength of radar echoes allegedly due to alternate attenuation and reinforcement of successive pulse waves.

**BOBS, Bobs** Beacon-only bombing system.

**bobweight** Mass inserted into flight-control system, usually immediately downstream of pilot's input, to impart opposing force proportional to aircraft linear or angular acceleration.

**BOC** 1 Bottom of climb.  
 2 Binary offset carrier.

3 Binary operating code.

**BOD** 1 Biochemical, or biological, oxygen demand.  
 2 Beneficial occupancy date.

**bod** Male of lowly rank (RAF WW2).

**Bode plot** Gain or decibel magnitude and phase angle against system frequency [usually expressed in rad/s].

**Bodie** Severe test of gas-turbine engine: soak to maximum carcass temperature, slam deceleration to flight idle, then slam to MTO.

**body** 1 Any three-dimensional object in fluid flow.  
 2 In most aircraft, central structure: hull of marine aircraft or airship, fuselage of aeroplane or helicopter, \* of missile.  
 3 Any observable astronomical object, esp. within solar system.

**body axes** Outlined by G.H. Bryan in 1903, orthogonal reference axes, fore/aft or longitudinal [called X], transverse or lateral [Y] and vertical [Z]. Problem: they have their origin at the c.g., which has no fixed location. See other axes: *principal, stability, wind*.

**body bag** 1 Occupied by pilot of hang glider, instead of open harness: reduces drag and keeps occupant warm.  
 2 Container for corpse in transit.

**body burden** Aggregate radioactive material (not dose received) in living body.

**body English** Guiding the flight of an aerodyne, usually a glider, by shifting the c.g. of one's body.

**body gear, body landing gear** Main landing gear retracting into fuselage.

**body lift** Lift from fuselage of supersonic aircraft or missile at AOA other than zero.

**body of revolution** Body (2) having circular section at any station and surface shape described by rotating side elevation about axis of symmetry. Ideal streamlined forms are generally such.

**body plan** Full-scale elevations and sections of aircraft body in lofting.

**body sensor** Biomedical sensors worn by astronauts or aircrew to measure parameters such as body temperature, pulse rate and respiration.

**body stall** Gross flow breakaway from core engine and afterbody in installed turbofan.

**BOE** Black-out exit; predicted time in manned re-entry at which communications will be resumed.

**boe** Barrels of oil equivalent; thus boe/d = boe per day.

**boffin** Research scientist, esp. senior worker on secret defence project (colloq).

**bog** To taxi across ground so soft that landing gear sinks in and halts aircraft (see *flotation*).

**bogey** Air contact (5) not yet identified, usually assumed to be enemy (UK spelling often bogy).

**bogie** Landing gear having multi-wheel truck on each leg.

**bogie beam** Pivoted beam linking front and rear axles of bogie to each other and to leg.

**bog in** To become stuck in soft airfield surface.

**bogy** See *bogey*.

**BOH** Break-off height.

**BOI** 1 Board of Inquiry.  
 2 Basis of issue.

**boiler** Gas-turbine used as a core engine in high-ratio turbofan, as source of hot gas for tip-drive rotor or fan-lift system or any other application calling for central power source (colloq.).

**boilerplate** Non-flying form of construction where light weight is sacrificed for durability and low cost (see *battleship*).

**boiloff** Cryogenic propellant lost to atmosphere through safety valves as result of heat transfer through walls of container (which may be static storage or tank in launch vehicle).

**BOK** Bureau of special designers (USSR).

**BOL** 1 Bearing-only launch.

2 Bottom of loop [engine s.f.c.].

3 Blade [of compressor or turbine rotor] overtight leakage.

**bold-face procedures** Emergency procedures, written in flight manual in bold-face type.

**bolllard** Mooring attachment in form of short upright cylinder on marine aircraft hull or float bow.

**bollock** APFC (colloq.).

**bolometer** Sensitive instrument based on temperature coefficient of resistance of metallic element (usually platinum); used to measure IR radiation or in microwave technology (see *radiometer*).

**BOLT** Build, operate, lease, transfer.

**bolt** 1 In advanced airframe structure, usually precision fitted major attachment device loaded in shear.

2 In firearm, approximately cylindrical body which oscillates axially behind barrel feeding fresh rounds, closing breech and extracting empty cases (see **breech-block**).

**bolter** 1 In carrier (1) flying, aircraft which fails to pick up any arrester wire and overshoots without engaging barrier.

2 Verb, to perform 1; in the US, boltering.

**Boltzmann constant** Ratio of universal gas constant to Avogadro's number;  $1.380546 \times 10^{-23} \text{ J}^\circ\text{K}^{-2}$ .

**Boltzmann equation** Transport equation describes behaviour of minute particles subject to production, leakage and absorption; describes distribution of such particles acted upon by gravitation, magnetic or electrical fields, or inertia. Boltzmann-Vlasov equations describe high-temperature plasmas.

**BOM** 1 Bill of material.

2 Burst overspeed margin.

**bomb** 1 Transportable device for delivery and detonation of explosive charge, incendiary material (including napalm), smoke or other agent, esp. for carriage and release from aircraft.

2 Streamlined body containing pitot tube towed by aircraft and stabilized by fins to keep pointing into relative wind in region undisturbed by aircraft.

**bomb aimer** Aircrew trade in RAF (formerly) and certain other air forces.

**Bomb Alarm System** Automatic system throughout Conus for detecting and reporting nuclear bursts.

**bombardier** Aircrew trade. bomb aimer, in USA and USAF (formerly).

**bombardment ion engine** Rocket engine for use in deep space which produces ion beam by bombarding metal (usually mercury or caesium) with electrons.

**bomb bay** In specially designed bomber aircraft, internal bay for carriage of bombs (in fuselage, wings or streamlined nacelles).

**bomb-burst** Standard manoeuvre by formation aerobatic teams in which entire team commences vertical dive, usually from top of loop, in tight formation; on

command, trailing smoke, members roll toward different azimuth directions and pull out of dive, disappearing at low level 'in all directions'.

**bomb damage assessment** Determination of effects on enemy targets of all forms of aerial attack.

**bomb detection chamber** Explosion-containment chamber in which objects, such as cargo containers, can be subjected to a complete simulated air-travel environment.

**bomb door** Door which normally seals underside of bomb bay. Can slide rearwards, sideways and upwards, open to each side or rotate through 180° about longitudinal axis to release stores from its upper face.

**bombed out** Forced to leave home because of serious damage caused by air attack (UK).

**bomber** Aircraft designed primarily to carry and release bombs. Term today reserved for strategic aircraft.

**Bomber Box** Secure teletalk link between Bomber [later Strike] Command HQ and crews on alert in cockpits [1958-68] (RAF).

**Bomber Command Forward Relay** Special unjammable v.h.f. and u.h.f. transmitters which would have launched an attack with NW (RAF).

**Bomber Controller** The individual who, so ordered by the Prime Minister, would have ordered an attack with NW (RAF).

**bomber-transport** Former category of military aircraft capable of being used for either type of mission.

**bomb fall line** Bright line on HUD along which free-fall bombs would fall to the ground if they were released.

**bomb impact plot** Graphical picture of single bombing attack by marking all impact of detonation centres on pre-strike vertical reconnaissance photograph(s).

**bombing angle** Angle between local vertical through aircraft at bomb release point and line from that point to target.

**bombing errors** 1 50% circular error: radius of circle, with centre at desired mean point of impact, which contains half missiles independently aimed to hit that point (see *CEP (1)*).

2 50% deflection error: half distance between two lines drawn parallel to track and equidistant from desired mean point of impact which contain between them half impact points of missiles independently aimed to hit that point.

3 50% range error: half distance between two lines drawn perpendicular to track and equidistant from desired mean point of impact which contain between them half missiles independently aimed to hit that point.

**bombing height** Vertical distance from target to altitude of bombing aircraft.

**bombing run** Accurately flown pass over target attacked with free-fall stores.

**bombing teacher** Primitive classroom rig in which pupil uses actual bombsight in simulated environment.

**bombing up** Loading one or more bombers with bombs.

**bomblet** Small bomb, usually of fragmentation type, carried in large clusters and released from single streamlined container.

**bomb line** Forward limit of area over which air attacks must be co-ordinated with ground forces; ahead of \*\* air forces can attack targets without reference to friendly ground troops.

**bomb park** Semi-permanent deck area on carrier

devoted to storage of ordnance, tanks and other stores [today often eliminated].

**bomb rack** Formerly, attachments in bomb bay or externally to which bombs were secured; provided with mechanical or EM release, fuzing and arming circuits and sometimes other services. Replaced by universal store carriers tailored to spectrum of weapons.

**bomb release line** Locus of all points (often a near-circle) at which aircraft following prescribed mode of attack must release particular ordnance in order to hit objective in centre.

**bomb release point** Particular point in space at which free-fall ordnance must be released to hit chosen target.

**bomb-release safety lock** Manually activated by captain, allowed Nav Radar to release NW [RAF V-bombers].

**bombsight** Any device for enabling aircraft to be steered to bomb release point, esp. one in which aimer sights target optically and releases bombs by command.

**bomb site** Urban area completely cleared of rubble after WW2 (UK).

**bomb trolley** Low trolley for carriage of ordnance from airfield bomb stores to aircraft (and often equipped to raise bombs into position on bomb racks).

**bomb truck** Originally [1943–45], bomber engaged in carpet or non-precision bombing. Today, deliverer of ordnance to a target marked by a laser in another aircraft or on ground.

**bomb winch** Manual or powered winch for hoisting bombs from trollies into or beneath racks.

**bonding** 1 Structurally joining parts by adhesive, esp. adhesives cured under elevated temperature and/or pressure.

2 Joining together all major metal parts of an aircraft, especially an aircraft not of all-metal construction, to ensure low-resistance electrical continuity throughout. Even where metal structures are squeezed together by bolts or rivets a bond of copper strip or braided wire must link them reliably. Bonding is necessary for Earth–return systems and to dissipate lightning strikes and other electrical charges safely with no tendency to arcing or spark formation.

3 Legal agreement linking a pilot to an airline who pays for his tuition.

**bonding noise** In older aircraft, radio interference caused by relative movement between metal parts bonded (2) together.

**Bondolite** Low-density sandwich of balsa faced with aluminium.

**Bone** B-one next enhancement.

**bonedome** Internally padded rigid protective helmet worn by combat aircrew (colloq.).

**boneyard** Graveyard of unwanted aircraft, usually stripped of potential spares (colloq.). Particularly refers to AMARC, Arizona.

**bonker** Small rocket giving high thrust for a fraction of a second designed to impart powerful disturbing blow to extremity of airframe in investigation of aerodynamic/structural damping.

**bonnet** Valve hood in aerostat envelope.

**BOO** Build, own, operate.

**boob** Noun, error; verb, to make mistake (RAF 1935–).

**Boolean algebra** Powerful and versatile algebra compatible with binary system and with functions AND, OR and NOT.

**boom** 1 Any long and substantially tubular portion of structure linking major parts of an aircraft (esp. linking the tail to the wing or to a short body).

2 Longitudinal structural members forming main compression and tension members of a wing spar, having large section modulus as far as possible from wing flexural axis.

3 Device used in some air-refuelling tanker aircraft in form of pivoted but rigid telescopic tube steered by aerodynamic controls until its tip can be extended into a fuel-tight receptacle on receiver aircraft.

4 Sound heard due to passage of shockwaves from distant supersonic source, such as SST flying high overhead.

5 Spanwise pipe conveying ag-liquid to spraying nozzles; hence \* width, \* pivots.

**boom avoidance** Technique of flying aircraft for minimal boom (4) disturbance on ground.

**boom avoidance distance** Distance along track over which \*\* technique is enforced. Hence, BAD (departure) and BAD (arrival).

**boom carpet** Strip of Earth's surface along which observers hear sonic boom from supersonic aircraft.

**boomer** 1 Operator of refuelling boom (5) in tanker aircraft (colloq.).

2 USN submarine armed with ballistic missiles [FBMS] (colloq.).

**Boomerang** Aerobatic manoeuvre comprising near-vertical ascent with rotation about longitudinal axis, near-stalled apex with rotation about transverse axis, followed by near-vertical descent with rotation about vertical axis.

**boom microphone** Voice microphone carried on cantilever boom (slender structural beam) pivoted at side of headset so that it can be moved away from the mouth for avoiding unwanted speech broadcasting.

**boom receptacle** Flight refuelling socket on military aircraft with which a boom (3) forms a fuel-tight connection despite motion and changes of orientation relative to tanker.

**boom throw-forward** Distance along track from origin of shockwave to ground impact.

**boom trough** See *boom well*.

**boom well** Recess in deck plating of marine-aircraft float or hull to take end-fitting of struts or booms (1).

**boondocks** Open land area remote from habitation, esp. when site of forced landing.

**boost** 1 Any temporary augmentation of thrust or power in a mechanical or propulsive system.

2 Excess pressure, over and above a datum, in induction manifold of piston engine as result of super-charging. Datum is usually one standard atmosphere.

3 Jettisonable booster rocket for unmanned vehicle (UK, colloq.).

4 Fast-burning portion of a boost/sustain motor.

**boost control** Control system, today invariably automatic, for maintaining suitable boost pressure in aircraft piston engine and, in particular, for avoiding excessive boost.

**boost/cruise motor** Rocket motor having very large but brief thrust for vehicle launch followed by lower but long-duration thrust for aerodynamic cruise.

**boosted controls** Aeroplane flying control surfaces in which balance is reduced and pilot input augmented by

brute force, usually by hydraulic jacks. Much simpler and cruder than a powered flying-control system (see *servo*).

**booster** 1 Boost rocket.

2 Sensitive high-explosive element detonated by fuze or primer and powerful enough to detonate a larger main charge.

3 LP compressor, with from one to five stages, downstream of an HBPR fan and rotating with it to supercharge the core airflow into the HP spool. In the US such an engine is often called a mixed-twin-spool turbofan.

**booster APU** APU capable, usually in emergency only, of augmenting aircraft propulsion.

**booster coil** Battery-energised induction coil to provide a spark to assist piston engine starting.

**booster magneto** Auxiliary magneto, often turned by hand, for supplying hot sparks during piston engine starting.

**booster pump** 1 Centrifugal pump, often located at lowest point of a liquid fuel tank, to ensure positive supply and maintain above-ambient pressure in supply line. In integrao wing tanks usually mounted outside the tank on back of rear spar web.

2 Auxiliary impeller in cryogenic propellant system to maintain system pressure and prevent vaporization upstream of main pump.

**booster rocket, booster stage** See *boost rocket*, though \* *stage* implies a large long-burning stage for a large vehicle.

**booster stages** *Booster* (3).

**boost/glide vehicle** Aerodyne launched under rocket thrust and accelerated to hypersonic speed in upper fringes of atmosphere, thereafter gliding according to any of various predetermined trajectories over distances of thousands of miles.

**boost motor** See *boost rocket*.

**boost phase** Initial phase of launch and rapid acceleration of missile or other short-range aerodynamic vehicle fitted with boost rockets.

**boost pressure** See *boost* (2), *international* \*, *override* \*.

**boost pump** *Booster pump*.

**boost rocket** Rocket motor, usually solid propellant and sometimes used in multiple, used to impart very large thrust during stages of launch and initial acceleration of missile or other vehicle launched from ground or another aerial vehicle. Almost all kinds of \*\* burn for a few seconds only, and in some cases for only a fraction of a second. Sometimes case and chamber forms part of vehicle, but most boost rockets are separate and jettisoned after burnout.

**boost rocket impact area** Area within which all \*\* should fall during launches on a given range.

**boost separation** Process by which boost rocket thrust decays and becomes less than drag, causing rearward motion relative to vehicle and subsequent progressive unlocking, possibly relative rotation, and detachment.

**boost/sustain motor** Rocket comprising fast-burning high-thrust portion followed by slow-burning low-thrust portion.

**boost vehicle** SDI term for space or long-range missile launcher.

**boot** 1 Flat array of flexible tubes bonded to leading edge of wings, fins and other aircraft surfaces to break up ice. Fluid pressure is alternately applied to different sets of tubes in each boot to crack ice as it forms.

2 Shroud or vizor enabling cockpit radar to be viewed in bright sunlight.

**bootie** 1 Protective cover for pitot tube, usually with streamer.

2 Soft fabric overshoe worn before walking on aircraft skin or entering engine duct.

**bootstrap** Noun, hoisting gear to remove disabled engine or lift replacement engine to pylon or [trijet] to tail engine position; and verb, to perform lifting operation. Can also be applied to modules.

**bootstrap exploration** Using each space mission to bring back information to help subsequent missions, esp. in lunar exploration (colloq.).

**bootstrap operation** Dynamic system operation in which once cycle has been started by external power, working fluid maintains a self-sustaining process. A gas turbine, once started, sustains bootstrap operation because the turbine keeps driving the compressor which feeds it. Thus, \* cycle \cold-air unit), \* mainstage engine pump (turbine being fed by propellants delivered by pump), etc.

**Boozer** Code name for British ECM [two-colour warning lights] carried by Mosquito aircraft in 1944.

**BOP** 1 Balance of payments, esp. with regard to national participation in multinational programme.

2 Basic operating platform (bare base airfield).

3 Bit-oriented protocol.

**BOPS** 1 Burn-off per sector; fuel burned on each sector, or segment, or stage (all three words are used in flight-planning documents) in commercial transport operation.

2 Beam-offset phase shifter (Awacs).

**bops** Billions of operations per second.

**BOR** Basic operational [or operating] requirement.

**Bora** Cold, squally wind (Adriatic, Aegean).

**Boram** Block-orientated random-access memory.

**boresafe fuze** Projectile fuze rendered safe by interrupter until projectile has cleared gun muzzle.

**borescope** Slender optical periscope, usually incorporating illumination, capable of being inserted into narrow apertures to inspect interior of machinery.

**borescope port** Circular ports, fitted with openable caps, through which borescopes may be inserted (esp. in aircraft engines).

**boresight** 1 Verb, to align gun or other device by means of optical sighting on a target.

2 Noun, precise aim direction of gun, directional aerial/antenna, camera, etc.

**boresight camera** Optical camera precisely aligned with tracking radar and used to assist in alignment of aerial [antenna].

**boresight coincidence** Optical alignment of different adjacent devices, such as radar waveguide, reflector, passive interferometer and IR or optical camera.

**boresight line** Optical reference line used in harmonising guns and other aircraft weapon launchers.

**boresight mode** Radar is locked at one chosen angle between dead ahead and  $-2^\circ$  or  $-3^\circ$ .

**boresight test chamber** Anechoic chamber containing movable near-field test targets and aeriels, capable of being wheeled over nose of radar-equipped fighter aircraft.

**BORG** Basic Operational Requirements Group (ICAO).

**boring** Process of accurately finishing already-drilled

hole to precise dimension, usually by using single-point tool.

**boron, Bo** Element, either greenish-brown powder, density 2.3, or brown-yellow crystals [2.34], MPt 2,300°C. Used as alloying element in hard steels, as starting point for range of possible high-energy fuels, and above all as chief constituent of boron fibre.

**boron doping** Addition, finely divided, to increase  $I_{sp}$  of solid rocket motor.

**boron/epoxy** Composite plastic materials comprising fibres or whiskers of boron in matrix of epoxy resin.

**boron fibre** High-strength, high-modulus structural fibre made by depositing boron from vapour phase on white-hot tungsten filament. Used as reinforcement in aerospace composite materials.

**Borsic** Boron fibre coated with silicon carbide. Structurally important as reinforcement in matrices of aluminium and other metals.

**bort** Side, hence \* number = serial painted on fuselage (R).

**Boscombe** Aeroplane & Armament Experimental Establishment, Boscombe Down, Wiltshire, England.

**bosom tank** Detachable (usually jettisonable) fuel tank scabbed on under fuselage.

**Boss, BOSS** 1 Ballistic offensive suppression system (EW).

2 Battlefield optical surveillance system.

3 Bureau of State Security (S Africa).

4 Bio-optic synthetic systems (inspired by optics of life forms).

**boss** 1 In traditional wooden or one-piece metal propeller, the metal mounting comprising front and rear steel plates joined by numerous bolts passing through the thickened, non-aerodynamic central portion.

2 In a casting, locally thickened area to provide support for shaft bearing, threaded connection or other load.

3 Squadron commander, often initial cap (RAF).

4 Leader of aerobatic team.

**BOT** 1 Boom-operator trainer.

2 Brakes-off time.

3 Build, operate [or own], transfer.

**BoT** Board of Trade.

**BOTB** British Overseas Trade Board.

**Bottlang** Commercially produced loose-leaf binder describing European VFR airfields.

**bottle** A JATO rocket (filled or empty case) (colloq.).

**bottle to throttle** Stipulates interval between alcohol and flying (colloq.).

**bottom dead centre** Position in piston engine in which centre of crankpin is precisely aligned with axis of cylinder, with piston at bottom limit of stroke; at BDC piston cannot exert a turning moment on crankshaft.

**bottom rudder** In aeroplane in banked turn, applying rudder towards lower side of aircraft; among other things this will lower the nose.

**bottom shock** On underside of supersonic aerofoil.

**bottom-up** See *requirements capture*.

**boucing the boucle** Looping the loop [anglicised French, pre-1914, see comment at end of preface].

**bought it** Killed (RAF colloq.).

**bounce** 1 In air combat, to catch enemy aircraft unawares; to intercept without being seen.

2 In piston engine poppet valve gear, elastic bounce of valves on their seats.

**bounce table** Vibration test machine.

**bouncing bomb** Air-dropped weapon designed to skip across water surface [several types].

**boundary layer** Layer of fluid in vicinity of a bounding surface; eg, layer of air surrounding a body moving through the atmosphere. Within the \*\* fluid motion is determined mainly by viscous forces, and molecular layer in contact with surface is assumed to be at rest with respect to that surface. Thickness of \*\* is normally least distance from surface to fluid layer having 99 per cent of free-stream velocity. \*\* can be laminar or, downstream of transition point, turbulent.

**boundary-layer bleed** Pathway for escape of \*\* adjacent to engine inlet mounted close beside fuselage wall. Bleed is either open or ducted, and removes stagnant \*\* which would otherwise reduce ram pressure recovery and propulsion system performance.

**boundary-layer control** Control of \*\* over aircraft surface to increase lift and/or reduce drag and/or improve control under extreme flight conditions. BLC can be effected by: passive devices, such as vortex generators; ejecting high-velocity bleed air through rearward-facing slits; sucking \*\* away through porous surfaces; use of engine slipstream to blow wings or flaps.

**boundary-layer duct** Duct to carry \*\* from \*\* bleed to point at which it can advantageously be dumped overboard.

**boundary-layer energiser** Low sharp-edged wall normal to airflow across aerodynamic surface (eg immediately upstream of aileron).

**boundary-layer fence** Shallow fence fixed axially across swept wing to reduce or check spanwise drift of \*\* and its consequent thickening and proneness to separation.

**boundary-layer noise** Major source of noise inside aircraft.

**boundary-layer scoops** Forward-facing inlets designed to remove thick \*\* upstream of engine inlet or other object.

**boundary-layer separation** Gross separation of \*\* from boundary surface, space being filled by undirected, random turbulence.

**boundary light** Visible steady light defining boundary of landing area.

**boundary marker** Markers, often orange cones, defining boundary of landing area.

**bound vortex** 1 Circulation round a wing.

2 Vortex embracing any solid body or touching a surface.

**Bourdon tube** Flat spiral tube, either glass filled with alcohol or metal filled with mercury, whose radius increases (rotating the centre) with increasing temperature.

**Boussinesq** Formula giving distance along uniform tube necessary for laminar, viscous, incompressible flow to become fully developed.

$$x = \frac{0.26 U_m r^2}{\nu} = 0.25 rR.$$

where  $U_m$  is mean velocity,  $r$  tube radius,  $\nu$  kinematic viscosity and  $R$  Reynolds number.

**BOV** Blow-off valve.

**BOVC** Base of overcast.

**BOW** Basic operating weight [OWE is more precise].

**bow** Rhyming with cow, nose of airship or marine hull or float.

**bow** Rhyming with go:

1 Curvature along length of turbine blade or other slender forging, or curvature due to instability in structural compression member.

2 Curved member forming tip of wing or other aerofoil, esp. one with fabric covering.

**bow cap** Structure forming front end of airship hull or envelope. Alternatively, nose cap.

**Bowen-Knapp camera** High-speed strip-film camera used in vehicle flight testing.

**bowser** 1 Airfield fuel truck, roadable and self-propelled; unpropelled, \* trailer.

2 Used as adjective, specially modified to contain overload or ultra-long range fuel, hence \* wing, \* fuselage.

**Bow's notation** Conventional system of representing structural forces and stresses by letters and/or numbers in graphical stress analysis (rhymes with slow).

**bow stiffeners** Longitudinal stiffeners arranged radially around nose of aerostate envelope (esp. blimp or kite balloon) to prevent buckling under aerodynamic pressure. Alternatively called battens.

**bow wave** 1 Shockwave from nose of supersonic body, esp. one not having sharply pointed nose.

2 Shockwave caused by motion of planetary body through solar wind.

3 Form of wave caused by bows of taxiing marine aircraft.

4 Form of wave caused by landplane nosewheels running through standing water.

**box** 1 Tight formation of four aircraft in diamond (leader, left, right, box).

2 Structural heart of a wing comprising all major spars, ribs and attached skins (often forming integral tankage), but usually excluding leading and trailing edges, secondary structure and movable surfaces.

3 Major sections of fuselage, especially where these are of rectilinear form and thus not describable as *barrel sections*.

4 Aircraft structure formed from two or more lifting planes (wing or tail), linked by struts and bracing wires. In early aviation no other form could compete for lightness and strength.

5 Airlifter cargo compartment, simplified to basic rectilinear form and dimensioned overall.

6 Above-floor removable cargo container, with various standard dimensions.

7 Container of lights in visual ground guidance system, thus 4 \* VASI.

**box beam** Hollow beam (1) of essentially square or rectilinear cross section.

**box connector** Multi-circuit connector having four-sided box sockets, with linear pin engagements (2 or 3 rows, up to 240 circuits).

**boxer** piston engine having two crankshafts and [e.g. four or six] parallel cylinders in rectilinear formation.

**box girder** See *box spar*.

**boxing** Process of assembling major airframe sections in erection jig; includes fuselage *box* (3) sections.

**boxkite** Kite in form of rectangular- (often square-) section box, open at mid-section and at ends. Structurally related to early biplanes in form of *box* (4).

**box position** Rear aircraft in *box* (1).

**box rib** Rib assembled from left and right sides

separated by a peripheral member following profile of aerofoil.

**box sizing** Part of GAMM in which an aircraft fuselage cross-section is selected and optimum cargo box length determined for groupings of vehicles or other large loads.

**box spar** Spar assembled from front and rear webs separated by upper and lower booms.

**box tool** Tangential cutting tool incorporating its own rest, used on automatic turning machines.

**box wing** *Diamond wing*.

**Boyle's law** In an ideal gas at constant temperature, pressure and volume are inversely proportional, so that  $PV = f(T^\circ)$  and  $P/\rho = RT$ .

**BP** 1 Bite processor.

2 Bottom plug.

3 Braided pultruded.

4 Boron phosphide.

5 Beam pointing.

**b.p.** 1 Bypass (jet engine); thus, \* ratio.

2 Band-pass filter.

**BPA** 1 British Parachute Association, successor to British Parachute Club (1956, office Leicester).

2 Blanket purchase agreement.

3 Beam-pointing accuracy.

**BPC** 1 Gas-turbine barometric pressure control.

2 Benchmark pricing guide.

3 British Purchasing Commission (WW2).

4 Basic primer concept (paint).

**BPCU** Bus power control unit.

**BPDMSS** Base, or basic, point-defense missile system.

**BPE** 1 Best preliminary estimate.

2 Bomber penetration evaluation.

**B Per T** Squadron for testing heavy aircraft (AAEE, WW2).

**BPF** 1 Band-pass filter.

2 Blade-passing frequency.

3 British Pacific Fleet (WW2).

**BPI** 1 Boost-phase intercept[or].

2 or **bpi**, bits per inch (EDP).

**BPIIS** Boost-phase intercept system.

**BPL** Band-pass limiter.

**BPLI** Boost phase launch[er] intercept.

**BPM** Binary phase-modulation.

**BPP** Breakthrough [in] propulsion physics (NASA).

**PPPA** British Precision Pilots Association; affiliated to FAI, orienteering without nav aids, assisting handicapped/paralegic pilots (office Saxmundham).

**BPR** Bypass ratio.

**BPS** Balanced pressure system: buried glycol pipes trigger alarm if stepped on.

2 Bistable phosphor storage.

3 Bytes per second.

4 See next.

5 Ballistic protection system.

**bps** Bits per second (EDP).

**BPSK** Binary phase-shift keying.

**BPt** Boiling point.

**BP<sub>v</sub>L** Union of aircraft maintenance engineers [D-53815 Neunkirchen] (G).

**BQ** Ground-launched controllable bomb [ie, SSM] (USAAF 1942-45).

**Bq** Becquerel[s].

**BR, Br** 1 Bomber-reconnaissance.

2 Mist (Metar code).

- 3 Bearing.
- 4 Baggage reconciliation.
- 5 Bridge.
- 6 1553B bus request.
- 7 British.

**br** Reference length.

**BRA** 1 Bureau des Recherches Aériennes (ICAO).

- 2 Barrel-roll attack.
- 3 Bomb-rack assembly.
- 4 Braking action; F,G,N,P add fair, good, nil, poor.
- 5 Beam rotational, or reference axis.
- 6 Basewide remedial assessment.

**BRAAT** Base recovery after attack training.

**BRAC** Base realignment and closure.

**brace position** Adopted for ditching or crash-landing: shoes removed, bent forward with arms protecting head.

**Bracis** Biological, radiological and chemical information system (UK).

**bracket** Limits of time/distance/altitude for one pre-planned in-flight refuelling.

**bracketing** 1 Obsolete method of flying a radio range in order to establish correct quadrant and hence direction to next waypoint.

2 In flak or other artillery, establishing a short and an over along desired line and then successively splitting resulting 'bracket' in half.

**bracket propeller** Variable-pitch (usually two-position) propeller in which each blade is pivoted and automatically adopts a fine or coarse setting according to the position of a sliding mass at the root.

**Braduskill** 'Slow kill' technique proposed in SDI for gradual closure on hostile satellites.

**BRAG** Batteries Research Advisory Group.

**Brahms** Baggage reconciliation and handling management system.

**brake** 1 Device for removing energy from a moving system to reduce its speed or bring it to rest. Energy withdrawn may be rejected to atmosphere (airbrake, speed brake) or absorbed in heat sinks (wheel brake, propeller or rotor brake). The inceptor can be a handgrip or pedals.

2 In sheet-metalwork, a power press for edging and folding.

**brake by wire** Pilot's demands are transmitted to wheel brakes as electrical signals.

**brake horsepower** Power available at output shaft of a prime mover. Generally synonymous with shaft horsepower [preferred] and torque horsepower.

**brake mean effective pressure** A measure of MEP in an operating piston engine cylinder calculated from known BHP (BMEP is to be expressed in kPa or bars and derived from power in kW).

**brake-up** Aeroplane nose-over caused by harsh braking (colloq.).

**braking action** Measure of likely adhesion of tyres to runway, thus \* advisory warns of snow, ice or other hazard.

**braking coefficient** Braking force coefficient.

**braking ellipse** Elliptical orbit described by spacecraft on entry to a planetary atmosphere. If continued, successive ellipses are smaller, due to drag; purpose of manoeuvre is to dissipate re-entry or entry energy over a much greater time and distance and thus reduce heat flux.

**braking force** Linear force exerted by a braked vehicle (ie, aircraft) wheel.

**braking force coefficient** Coefficient of friction between wheel and fixed surface (whether rolling or sliding).

**braking nod** Nose-down pitch of aircraft when wheel-braked, or nose-up pitch when brakes released at full power, esp. maximum angular movement thus imparted.

**braking parachute** Parachute streamed from aircraft to increase drag, increase dive angle or reduce landing run.

**braking pitch** Predetermined propeller pitch to give maximum retardation, either windmilling drag or reverse thrust under power.

**braking rocket** Retrorocket.

**branch** 1 In electrical system, portion of circuit containing one or more two-terminal elements in series.

2 In computer program, point at which \* instructions are used to select one from two or more possible routines.

3 In crystal containing two or more kinds of atom, either of possible modes of vibration, termed acoustic \* or optical \*.

**branch pipe** Pipe conveying exhaust gas from piston engine cylinder to manifold or collector ring.

**brass** Alloys of copper with up to 40 per cent zinc and small proportions of other elements.

**brassboard** Functioning breadboard model of avionic system; also adjective and verb.

**brassed off** See *brownd off*.

**BRAT** 1 Benchtop reconfigurable automatic tester.

2 Beyond line of sight reporting and tracking.

**Brat** 1 Bomb-responsive anti-terrorist.

2 Graduate of RAF Apprentice School, Halton (colloq.).

**Bratt-DaRos** Method of solving problems of inertial coupling.

**Bravo exercise** Combat mission called off at point when aircraft ready to taxi.

**Brayco** Also Braycote, trade names of turbine fuels and lubricants (BP).

**Brayton cycle** Thermodynamic cycle used in most gas turbines: diagram comprises compression and expansion curves joined by straight lines representing addition or rejection of heat at constant pressure. The so-called 'open cycle'.

**brazier-head rivet** Light-alloy rivet having head shallower but of larger diameter than round-head.

**brazing** Joining metals by filling small space between them with molten non-ferrous metal having a melting point above a given arbitrary value (originally 1,000°F = 538°C).

**breadboard** Preliminary assembly of hardware to prove feasibility of proposed system, without regard to packaging, reliability or, often, safety. May be laboratory rig or flyable system. Often adjective or verb.

**break** 1 Point at which pilot senses stall of wing.

2 Breakaway (1) (colloq.).

3 Chief meaning in modern air combat: to make maximum instantaneous turn to destroy hostile fighter's tracking solution. Used as noun or as verb.

4 In carrier flying, point at which aircraft turns sharply left across bows and on to downwind leg.

5 Word inserted by harassed controller to indicate that following words are for a different recipient.

**breakaway** 1 Point at which aircraft breaks off trajectory directed against another object, such as stern attack on enemy aircraft or gun-firing run on ground target.

2 Altitude at which pilot abandons approach in bad weather.

3 In nuclear explosion, point in space or time at which shockfront moves ahead of expanding fireball.

**breakaway thrust** Engine power needed to initiate movement and reach taxiing speed.

**breakdown book** Record of physical changes introduced during maintenance, servicing or repair.

**breakdown drawing** Isometric or perspective drawing showing parts separated from each other by being displaced along one or more axes. Often called exploded drawing.

**breakdown potential** Dielectric strength.

**breaker strip** 1 Linear narrow de-icing element, either thermal or mechanical, arranged along leading edge (eg of wing or engine inlet strut) to split ice accretion into two parts.

2 See *stall strip*.

**break-even load factor** Load factor at which a particular flight, service, aircraft type or overall airline operation shows a net profit.

**break-even point** 1 In any commercial aircraft operation, load factor at which total revenue equals total cost.

2 In manufacture, number of sales required to cover investment.

**breakin, break-in** First bench run of new type of engine or other device, or following major overhaul.

**break lock** To use ECM or other countermeasure to make hostile tracking system (eg IR or radar) cease to track friendly or own aircraft.

**breakoff phenomenon** Mental state experienced by crews of high-altitude aircraft and spacecraft of being divorced from other humanity.

**break-out** Point at which flight crew receive first forward visual cues after an approach through cloud.

**breakout force** Minimum force required to move pilot's flying controls (each axis considered separately). If not measured at zero airspeed, airspeed must be quoted.

**breakout panel** One panel in aircraft canopy through which occupant[s] can escape in emergency.

**breakpoint** 1 In system responding to high-frequency input, the corner frequency (as seen on a Bode plot) where  $f = 1/2T\pi$ .

2 In EDP, point in program or routine at which, upon manual insertion of \* instruction, machine will stop and verify progress.

3 Sudden change in slope of graphic plot, eg point at which payload has to fall from maximum value in plot against range. Also called *knee*.

**break price** Quantity at which unit price changes.

**breakthrough propulsion physics** NASA project searching for a way to travel at a significant fraction of the speed of light.

**break-up** Separation of single radar blip into discrete parts each caused by a target.

**break-up circuit** Electrical circuit linking airborne portions of break-up system.

**break-up shot** Artillery shot designed to break into small fragments upon leaving muzzle and thus travel only a short distance.

**break-up system** System designed to break unmanned vehicle, such as ballistic missile, space launcher or RPV, into fragments sufficiently small to cause minor damage if they should fall on inhabited area.

**break X** To break (2) at point of minimum range for launch of own AAM, where X symbol appears on cockpit display.

**breather** 1 An open pipe connecting interior of device, such as piston engine to atmosphere to dissipate moisture or oil vapour.

2 A centrifuge to which air carrying finely divided lubricating oil is piped at the start of the return circuit; all oil is centrifuged out for re-use, the hot air being expelled.

**breathing** 1 Flow of air and exhaust gas through piston engine, esp. the way this is limited by constraints of flow path.

2 Flow of air and/or gas into and out of aerostat in course of flight.

3 Very small air and oil vapour flow through breather holes or ducts provided to equalise pressure inside and outside an engine.

4 Generally, escape of air from all volumes as aircraft climbs, to be replaced by [usually more humid] air on descent.

**breech** In a gun, end of barrel opposite muzzle, through which shot is normally loaded.

**breech-block** Rigid metal block normally serving to insert and withdraw shell cases, resist recoil force on fired case and seal breech during firing; usually oscillates in line with barrel axis.

**breeches piece** Tubular assembly, often shaped like pair of shorts, serving to bifurcate jetpipe or join two jetpipes into common pipe.

**breeze** In Beaufort scale, ranges from light\* (4 mph) to fresh\* (24 mph).

**Breguet formula** Rule-of-thumb formula for giving flight range of classical aeroplane, and reasonably accurate for all types of aerodyne; range given by multiplying together  $L/D$  ratio, ratio of cruising speed divided by  $sfc$ , and  $\log_e$  of ratio of aircraft weight at start and finish expressed as decimal fraction greater than 1. Units must be compatible throughout.

**BREMA, Brema** British Radio and Electronic-equipment Manufacturers Association.

**bremsstrahlung** Electromagnetic radiation emitted by fast charged particles, esp. electrons, subjected to positive or negative acceleration by atomic nuclei. Radiation has continuous spectra (eg, X-rays).

**brennschluss** Cessation of operation of rocket, for whatever cause.

**BREO** On-board avionics (R).

**Brétigny** Location, southwest of Paris, of Centre des Essais en Vol (CEV).

**brevet** Flying badge worn on uniform, especially denoting qualification as flight-crew member.

**BRF** Short approach is required or desired (ICAO).

**BRG, Brg** *Bearing* (2).

**BRH** Bundesrechnungshof [Federal audit office] (G).

**BRHZ** Mist, haze.

**BRI** Basic-rate interface.

**brick** Portable data store which transfers mission data to aircraft systems (colloq.).

**bridge** Permanently installed pedestrian connector linking terminal with aircraft. Almost all are covered, and provided with powered movement controlled from the free end. The movement usually includes vertical elevation, lateral traverse and telescopic linear extension, and the terminal end may be able to interface with one level

for arrivals or another for departures. Apron-drive bridges are controlled by steerable powered wheels at the free end, running over the apron surface. A variant is the over-the-wing bridge, which with the more common ADB enables a rear-fuselage door to load/unload from the same terminal walkway. So-called glass walls are becoming popular. Noseloaders are parallel to the parked fuselage and have a fixed outer end provided with a short section at 90° to mate with the aircraft door. Commuter bridges provide covered access at ground level. Other names are passenger-boarding or passenger-loading \*, airbridge or jetlink; Jetway is a tradename.

**bridgehead** End of apron-drive bridge which abuts aircraft; hence \* cab.

**bridge-type stick** In side-by-side cockpit, control columns linked by pivoted connector.

**bridle** 1 Towing linkage, other than expendable strop, transmitting pull of catapult to two hard points on aircraft.

2 Assembly of electric cables or fluid system pipes which, after disconnection, can be removed from supporting structure (eg, landing gear) as a unit.

3 Rigging attached to two or more points on aerostat, esp. blimp, to distribute main mooring pull.

**brief** To issue all relevant instructions and information in advance of flying mission (not necessarily military), static test, war game or other operation involving human decision-taking.

**bright display** Normally, display which can be viewed clearly without a hood in brightest daylight.

**brightness control** Facility provided in radar, TV and other display systems for adjusting CRT bias to control average brightness.

**brilliant** Describes munition having both guidance (smart) and programmable software; in practice also means with ability to guide itself to target without external help.

**Brinell hardness** Measure of relative hardness of solids, expressed as numerical value of load (either 500 kg or 3,000 kg) and resulting area of indentation made by hard 10 mm ball.

**bring-back weight** Weight at which combat aircraft recovers to airbase or carrier, with remaining fuel and unexpended ordnance.

**BRITE** 1 Broadcast request imagery technology experiment (satellites).

2 Basic research in industrial technologies for Europe [Int.].

3 Boston rocket ionospheric tomography experiment.

4 Bright radar indicator tower equipment.

**BritGFO** British Guild of Flight Operations Officers.

**British Parachute Association**, controlling the sport in the UK (office Leicester).

**British Thermal Unit** Obsolete [from 1995] measure of heat: quantity required to raise temperature of 1 lb of water from 63° to 64°F; six definitions, all close to 1 Btu = 1,055 J.

**brittle fracture** Fracture in solid, usually metal, in which plastic deformation and energy dissipated are close to zero. Contrasts with ductile fracture, and is rare except at very low temperatures.

**BRKG, BRKS** Breaking, breaks (ICAO).

**BRM** British Rotorcraft Museum, see IHM.

**B-RNAV, B-RNav** Basic area navigation, accurate 95

per cent of time to 5 nm (9.3 km); was VOR/DME, now increasingly GPS.

**Broach** Bomb, Royal Ordnance, augmented charge.

**broach** Cutting tool having linear row(s) of teeth, each larger than its predecessor.

**broad-arrow engine** In-line piston engine having three banks of cylinders with adjacent banks spaced at less than 90°; W-engine.

**broadband aerial** Aerial [antenna] capable of operating efficiently over spread of frequencies of the order of ten per cent of centre frequency.

**broadband GAN** Worldwide secure shared IP service providing 144 kbit/s.

**broadcast** Radio transmission not directed at any specific station and to which no acknowledgement is expected.

**broadcast control** Air interception in which interceptors are given no instructions other than running commentary on battle situation.

**broad goods** Carbon-fibre and other fibre-reinforced sheet as delivered in the bale.

**broadside array** Aerial array in which peak polarization is perpendicular to array plane.

**Broficon** Broadcast flight-control (originally fighter control) management of tac-air warfare (USAF).

**broken clouds** Sky coverage between 'scattered' and 'continuous', defined by ICAO as five-tenths to nine-tenths, UK usage 5–7 oktas.

**broken field** Covered by craters and debris, especially on runway.

**broolly** Parachute.

**bromine** Br, toxic liquid, density 3.1, BPt 59°C, used in a range of aerospace products.

**bronze** Alloys of copper and tin and/or aluminium.

**Bronze C** First qualification for glider pilot (BGA).

**browned off** Discouraged, bored (RAF WW2).

**brown job** Member of friendly army (RAF, WW2).

**brownout** Often hypenated, near-zero surface visibility because of blown sand or topsoil.

**brown water** Littoral, close inshore.

**BRP** Braked retarded parachute [S adds super].

**BRS** 1 Best-range speed.

2 Baggage reconciliation system.

3 Ballistic recovery system.

**BRSL** Bomb-release safety lock.

**Br-Staff** Avgas or benzole (G).

**BRT** 1 Brightness.

2 Bomb retarding tail.

**BRTF** Battery repair and test facility (artillery, guided weapons).

**BRU** Bomb release unit, normally complete interface between hardpoint and munition.

**brush discharge** See *Corona discharge*.

**brush seal** Ring of fine wire bristles continuously rubbing on erosion-resistant [ceramic] sleeve on rotating shaft.

**BRW** Brake release weight, ie at start of takeoff run.

**BS** 1 Commercial broadcasting station.

2 British Standard, thus \* parts.

3 Bomb (or bombardment) squadron (USAAC, USAAF, USAF).

4 Blowing snow.

**b/s** Bits per second.

**BSB** British Satellite Broadcasting.

- BSC** 1 Beam-steering computer (EW).  
2 Bird-scaring cartridge.
- BSCU** Brake-system control unit.
- BSDH** Bus shared-data highway.
- BSI** 1 British Standards Institution [formed 1901 as Engineering Standards Committee; office London W4 4AL] (UK).  
2 Bus system interface [U adds unit].
- BSIN** Alternative for BSI (2).
- BSL** 1 British Standard family of light alloys.  
2 Base second level (servicing).
- BSM** Breakaway support mast.
- BSN** Backbone subnetwork.
- BSP** 1 Barra side processor.  
2 Board support package.
- BSPL** Band sound pressure level; sound pressure level in bands each one-third of an octave wide from 50 to 10,000 Hz.
- BSPR** Boost/sustainer pressure ratio (rocket).
- BSPS** Beam-steering phase-shifter (Awacs).
- BSS** 1 British Standard Specification.  
2 British Standard family of steels.
- BSSM** British Society of Strain Measurement [Surrey Research Park, GU2 5YG] (UK).
- BST** 1 British Summer Time.  
2 TSB [French language].
- bst** Boresight.
- BS/TA** Battlefield surveillance and target attack.
- BS/TS** Boost-phase surveillance and tracking satellite (or system), for detection of enemy launches, tracking of BVs and PBVs and kill assessment (SDI).
- BSU** 1 Beam-steering unit.  
2 Bypass switch unit.  
3 Baggage-screening unit.
- BSV** Burner staging valve.
- BSW** British Standard Whitworth [screwthreads].
- BT** 1 Burn time (rocket).  
2 Basic trainer (USAAF, USAF category 1930–47).  
3 Bomber/torpedo (USN category, 1942–45).  
4 Bathymograph.
- b<sub>t</sub>** Span of horizontal tail.
- BT<sub>A</sub>** 1 Beam transfer Assembly (BC/FC)  
2 Bonus tax allowance (US).
- BTB** Bus tie breaker.
- BTC** 1 Bus tie connector, or contactor.  
2 Before top centre.  
3 Belgocontrol Training Centre, Brussels.  
4 Business Travel Coalition (US).
- BTF** Buried-target fuze.
- BTH** Beyond the horizon (radar).
- B<sub>3dB</sub>** 3-decibel bandwidth.
- BTI** Battlefield target identification; D adds device, S system. The USA has used BTID to mean battlefield target identification.
- BTL** 1 Between cloud layers.  
2 Biomass to liquid.
- BTM** 1 Bromotrifluoromethane (extinguishant).  
2 Burn, then mix.
- BTMU** Brake-temperature monitor unit
- BTN** Between [also BTW, BTWN].
- BTO** Bombing through overcast (WW2).
- BTP** 1 Bureau Trilatéral de Programmes (Eur).  
2 British Transport Police.
- BTR** 1 Bus tie relay.  
2 Better (ICAO).
- BTS** 1 Bureau of Transportation Statistics (US).  
2 Border and Transportation Security [DoT] (US).
- BTsVM** On-board [digital] computer (R).
- BTT** Basic training target [aircraft].
- Btu** 1 British Thermal Unit (alternatively, BTU, BThU).  
2 Bus, or basic, terminal unit.
- BTV** 1 Boost [rocket motor] test vehicle.  
2 Ballistic test vehicle.  
3 Brake to vacate.
- BTVOR** Weather broadcast terminal VOR.
- BTW, BTWN** Between.
- BTX** 1 Telephone information system (G).  
2 Benzene, toluene, xylylene.
- BU** 1 Break-up, thus a guided-weapon \* unit.  
2 Back-up.  
3 Broken up.
- BUA** Beijing University of Aeronautics & Astronautics [subsidiary of AVIC; 100183 Beijing] (China).
- BuAer** Bureau of Aeronautics (USN, 1921–59).
- BUB** Back-up battery/batteries.
- bubble** 1 Continuous ovate-blister film of fuel from airspray-type burner at low flow rate.  
2 Region of continuous EW protection.
- bubble horizon** Bubble turn and slip.
- bubble memory** Computer memory whose bits are distributed among microscopic voids (bubbles) in a 3-D volume of solid.
- bubble sextant** Sextant in which local horizontal is established by a bubble device. Often called bubble octant, because arc is usually not greater than 45°, restricting altitude to 90°.
- bubble turn and slip** Primitive flight instrument in which lateral acceleration is indicated by sideways displacement of bubble in arched glass tube of liquid.
- BUCD** Back-up command destruct.
- buck** Dolly or transport frame, with or without wheels and usually making no provision for inverting (rolling over) contents, tailored to carry complete engine or other major equipment item.
- bucket** 1 In US, a turbine rotor blade.  
2 Principal member of most types of thrust reverser, two buckets normally rotating and translating to block path of efflux and divert it diagonally forwards. Alternative (UK) = clamshell.  
3 Graphical plot having basic U shape resembling \*, notably produced by adding one plot of negative slope (eg operating and servicing cost against MTBF) to a related plot of positive slope (eg capital cost against MTBF).  
4 A new [2004] buzzword meaning subdivision or part (USAF).
- bucket brigade** Integrated-circuit device, comprising MOS transistors connected in series, serving as shift register by transferring analog signal charge from one storage node to next.
- bucket shop** Retail outlet (shop) offering non-IATA passenger tickets at cut prices.
- bucking** Repeated succession of stalls and recoveries, deliberate or otherwise.
- bucking bar** Shaped bar held against shank in manual riveting.
- buckling** Lateral deflection of structural member under

compressive load; state of instability or unstable equilibrium, but may be purely elastic.

**buckling coefficient** In an overstressed panel, overall \* is given by  $K_E = (\pi\kappa/b)^2$ , where  $\kappa$  is the bending radius of each skin/stringer element and  $b$  is stringer pitch.

**BUCS** Back-up control system.

**buddy** Aircraft providing preplanned in flight assistance to another, specifically by providing fuel to an aircraft of similar type [as distinct from normal tanker] or by laser-marking a target. Hence \*\* refuelling.

**buddy lasing** Designation of a target by one aircraft for attack by another.

**buddy pack** Flight-refuelling hose reel and drogue packaged in streamlined container for carriage by standard weapon rack; thus, aircraft A can refuel buddy B flying identical aircraft (formerly colloq.).

**BUF** Back-up facility.

**buffer** 1 In radio, low-gain amplifier inserted to prevent interaction between two circuits.

2 Amplifier stage having several inputs, any of which may be connected to output.

3 In EDP, temporary store used to smooth out information flow between devices, esp. between I/O and main processor or core store.

**buffer air** Air fed under pressure to buffer regions surrounding gas-turbine shaft-bearing compartments to ensure that lubricating oil does not seep away through the labyrinth seals. Hence **buffer air seal**, **buffer compartment**.

**buffer distance** In nuclear warfare, horizontal distance (expressed in multiples of delivery error) which, added to radius of safety, will give required acceptable risk to friendly forces; alternatively, vertical distance (expressed in multiples of vertical error) added to fallout safe height to ensure that no fallout will occur.

**buffet** Irregular rapid oscillation of structure caused by turbulent wake. \* in aeroplanes may be caused by excessive angle of attack (due to low airspeed, extreme altitude or excessive  $g$ ) or, in subsonic aircraft, an attempt to fly at too high a Mach number.

**buffet boundary** For any given aircraft and environment, plot of limiting values of speed and altitude beyond which buffet will be experienced in unaccelerated flight. Also defined as condition at which a 'significant' region of separated flow appears.

**buffet boundary parameter**  $M^2C_L$ , product of lift coefficient and square of Mach number, at which buffet becomes unacceptable.

**buffet inducer** Small projection, usually in form of strake, intended to induce buffet (usually as warning in advance of dangerous buffet affecting major part of aircraft).

**buffet margin** For any given aircraft and environment, highest vertical acceleration ( $g$ ) which can be sustained without exceeding given buffet severity (in some cases severity is zero).

**buffet threshold** For any given aircraft and environment, point at which buffet is first perceptible, expressed in terms of speed, altitude and vertical acceleration ( $g$ ).

**buffing** Process for polishing sheet metal by rotary tool of soft fabric impregnated with fine abrasive.

**BUFR** Binary universal format.

**bug** 1 Heading marker on navigational instrument.

2 Fiducial index, esp. on flight instrument, having

appearance of \*. Can be painted, Chinagraph or removable by peeling.

3 Clandestine monitoring device, esp. for audiosurveillance.

4 To install and conceal (3).

5 System malfunction or other fault, esp. one not yet traced and rectified; hence, to debug (colloq.).

**Bug-E** Battlefield universal gateway equipment, translator between SADL and other tactical datalinks (USAF).

**bug-eye canopy** Small canopy (usually two, left and right) over each projecting pilot's head in large aircraft (1942–50).

**bugged** Value marked by bug (2).

**bugging** Riding a ground vehicle, eg trike unit, pulled by kite.

**bugle bag** Sick bag (colloq. among cabin crew).

**bug out** Eject (colloq.).

**bug speed** Speed at which ASI needle passes *bug* (2), usually  $V_{REF}$ .

**BUIC** Back-up interceptor control; add-on to SAGE system [see BICP].

**build** Growth in received radio signal; opposite of fade.

**build standard** Detailed schedule of all possible variable or unresolved items in aircraft or other complex hardware in stage of development or pre-production. Original \*\* may list features of airframe, development state of engines, system engineering and, esp. equipment fitted or absent; altered as aircraft is modified.

**built-in hold** Pre-planned hold during countdown to provide time for defect correction or other activity without delaying liftoff.

**built-up section** Structural members having section assembled from two or more parts, rather than rolled, extruded, hogged from solid or forged. Reinforced composites are not regarded as built-up; essentially parts should be assembled by joints and could be unfastened.

**bulb angle, bulb flange** Structural sections, usually used as booms, having circular or polyhedral form. Nearly all were rolled from strip and had eight to 12 faces after assembly, complete \*\* being built up from one to five segments.

**bulk cargo** Homogenous cargo, such as coal. Today also means cargo carried loose; has come to mean cargo or baggage not contained in standard container or pallet.

**bulk erasure** Erasure of complete magnetic tape by powerful field.

**bulkhead** Major transverse structural member in fuselage, hull or other axial structure, esp. one forming complete transverse barrier. Certain \*, such as pressure \* in aircraft fuselage and tank \* in rocket vehicle, must form pressure-tight seal.

**bulk-injection** In piston engine injection of fuel into induction airflow upstream of distribution to individual cylinders.

**bulk loader** Self-drive belt conveyor vehicle for loading bulk cargo.

**bulkmeter** Instrument, esp. in refuelling of aircraft, for measuring liquid flow, typically as mass per second or as summing indication of total mass passed. Some \* measure volume and require density correction for each liquid handled.

**bulk modulus** Elastic modulus of solid under uniform compressive stress over entire surface, as when immersed

in fluid under pressure; numerically, stress multiplied by original volume divided by change in volume.

**bulk out** To run out of cargo space while still within allowed weight.

**bulk petroleum products** Liquid products carried in tankcars or other containers larger than 45 gal (55 US gal).

**bullet** 1 Gun-fired projectile intended to strike target, having calibre less than 20 mm (0.7874 in).

2 Streamlined fairing having form of quasicircular nose or forepart of body of revolution. If rotating, called spinner.

3 Aluminium or steel peg at top of hot-air-balloon rip line.

**bull gear** Largest gear in train, esp. large gear on which aerial of surveillance radar is mounted.

**bull session** Informal discussion on serious aviation topics, between engineers and/or aviators.

**bull's eye** 1 Circular thimble.

2 Ring used to guide or secure rope.

3 Cockade having concentric rings (colloq.).

**bump** 1 See *Gust* (1).

2 Sensation experienced in flight through gust (1). See *bumps*.

3 To form sheet metal on bumping hammer.

4 Thrust bump.

5 See *bumping*.

6 Confusingly, in view of 5, to upgrade a passenger to a higher class.

**bumper** Also called tail\*, a strong skid or shock-absorbed wheel unit to protect the underside of the rear fuselage of a nosewheel-type aircraft.

**bumper bag** Padded or inflated bag beneath lowest point of aerostat to absorb shock of ground impacts.

**bumper rocket** Pre-1955, first stage of two-stage launch vehicle.

**bumper screen** On spacecraft, protective screen intended to arrest micrometeorites and other macroscopic solids.

**bumper wheel** Wheeling machine.

**Bumpf** One of earliest of 35 English-language safety mnemonics: brakes, undercarriage, mixture, pitch, fuel/flaps; G added gills/gyros.

**bumping** Practice of denying a fully booked and confirmed passenger the right to board an overbooked flight; officially called IBR (involuntary boarding refusal). Bumped pax qualify for DBC.

**bumping hammer** Power hammer for bumping.

**bump rating** Increased engine thrust rating (beyond GM or average TO) cleared for short periods; fixed-wing equivalent of contingency.

**bumps** 1 Repeated uncommanded excursions in the vertical plane caused by atmospheric turbulence. Term particularly applies to passage through gusts (2) of exceptional severity.

2 Landings, from circuits and \*.

**Buna** A synthetic rubber mass-produced in G, WW2 (tradename).

**bunching** 1 In traffic control, tendency of vehicles (esp. aircraft) to reduce linear separation, esp. to dangerous degree.

2 In klystron, separation of steady electron stream into concentrated bunches to generate required very high frequency in oscillatory circuit.

**bund** 1 Earth bank constructed at airfield to reduce environmental noise.

2 Fuel/ammo dump sufficient for one day's operations from a STOVL hide, replenished daily from Logspark (RAF).

**bungee** Elastic cord comprising multiple strands of rubber encased in braided (usually cotton) sheath.

**bunny suit** Electrically heated [usually blue] suit for high-altitude unpressurized aircraft (US, colloq.).

**bunt** 1 Severe negative-g manoeuvre comprising first half of outside loop followed by half roll or second half of inside loop.

2 In surface-attack missile trajectory, negative-g pushover from climb to dive in terminal phase near target.

**BuOrd** Bureau of Ordnance (USN)

**buoyancy** Upthrust due to the displaced surrounding fluid just sufficient to support a mass. Thus, in aerostat, condition in which aircraft mass equals mass of displaced air. In marine aircraft at rest, mass of aircraft equals mass of water displaced (in this case, as with all aerodynes, displaced air mass is usually ignored).

**buoyant spacecraft** Spacecraft designed to operate as aerostat in planetary atmosphere.

**Buoy communication system** VHF links via satellite from buoys to improve com. over Gulf of Mexico (FAA).

**BUP** Block upgrade programme.

**Buran** Strong NE wind (Russia, Central Asia).

**burble** 1 Turbulent eddy in fluid flow, esp. in proximity to, or caused by, a bounding surface.

2 Brakedown of unseparated flow (not necessarily with laminar boundary layer) across aircraft surface, esp. across top of wing. First region of separated flow due to excessive angle of attack or to formation of shockwaves at  $M_{crit}$ .

**burble point** 1 Angle of attack at which wing first suffers sudden separation of flow.

2 Mach number at which subsonic wing first suffers sudden separation of flow due to shockwave formation.

**Bureau Veritas** International organisation for certifying companies [eg, to ISO 9000] and surveying and underwriting vessels, including aircraft.

**buried engine** Engine contained within air frame, esp. without causing significant protuberance. Normally applied to jet engine inside wing root.

**burn** 1 Operation of rocket engine, esp. programmed operation for scheduled time. Thus, first \*, second \*.

2 Operation of main flame in burner of hot-air aerostat, Thus, a 20-second \*.

3 Authorized destruction of classified material, by whatever means.

**burner** 1 In gas turbine, device for mixing fuel or fuel vapour with swirling primary airflow with minimal axial velocity to sustain stable combustion; generally synonymous with fuel nozzle, fuel injector.

2 Afterburner (colloq., R/T).

3 Incorrectly, though common in US, gas-turbine combustion chamber.

4 In liquid or hybrid rocket, device for injecting and/or mixing liquid propellants to sustain primary combustion; more usually called injector.

5 Stainless-steel vaporizing coil and jet of hot-air balloon.

**burner can** Combustion chamber in engine of can-annular type [UK = flame tube].

**burn in** 1 To enter data in EDP core store so that it will subsequently resist nuclear explosion effects and other hostile action.

2 To operate avionic and other electronic equipment under severe overload conditions to stabilize it before operational service and reduce incidence of faults.

**burnish** To smooth and polish metal surface by rubbing (usually with lubricant) with convex surface of harder metal.

**burn-off** In aeroplane (esp. commercial transport) operation, fuel burned between takeoff and critical position for establishing terrain clearance.

**burnout** 1 Termination of rocket operation as result of exhaustion of propellants. Also called all-burnt.

2 Mechanical failure of part subject to high temperature as result of gross overheating, esp. rocket case or chamber.

**burnout plug** In certain rocket motors, esp. storable liquid and hybrid types, combustible plug which, when ignited, releases and fires liquid propellant.

**burnout velocity** Vehicle speed at burnout (theoretically, highest attainable for given trajectory).

**burnout weight** Mass of vehicle at burnout, including unusable fuel.

**burn rate** In solid rocket, linear velocity of combustion measured (usually in millimetres per second) normal to burning surface. Symbol  $r$ .

**burn-rate constant** Factor applied to \*\* calculations dependent upon initial grain temperature.

**burn-rate exponent** Pressure exponent  $n$  in burn rate law  $r = aP_c^n$ .

**burn table** Refractory surface in tail of plume target on which jet fuel is burnt.

**burn-through** Operation of radar in face of jamming and similar ECM, esp. by virtue of high transmission power to overcome interference.

**burn-through range** Limit of range at which \*.\*\* operation can yield useful information, if necessary in emergency short-life operation at abnormally high power.

**burn time** Duration in seconds of rocket motor burn. Burn time starts when chamber pressure has risen to 10% of maximum (or averaged maximum during level portion of thrust curve) and ends when pressure drops to 75%. Alternative criterion is to draw tangents to level portion and descending portion of thrust curve and measure time to point at which curve is cut by bisector of angle between tangents. Symbol  $t_b$ .

**burn-time average chamber pressure** Integral of chamber pressure versus time taken over burn time interval divided by burn time. Symbol  $\bar{P}_c$ .

**burn-time average thrust** Integral of thrust versus time taken over burn time interval divided by burn time. Symbol  $\bar{F}_b$ .

**burnup** 1 On entry to atmosphere from space, partial or complete destruction due to kinetic heating.

2 In nuclear reactor, esp. thermal fission reactor, percentage of available fissile atoms that have undergone fission.

**BURR** Basic unscheduled removals rate.

**Burro** Broad-area unmanned responsive resupply operations.

**burst** In colour TV, transmission of small number of cycles of chroma sub-carrier in back-porch period (in military systems this signal not always used).

2 One round (payload) of ECM dispensed from attacking vehicle; can be active jammer or flare.

3 Period of fire by automatic gun[s].

4 See *turbulent* \*.

5 Catastrophic failure of a rotating part, especially turbofan fan hub.

**burst controller** *Burst limiter*.

**burst criteria** Design of fan disc to ensure that it will survive any overspeed condition.

**burst diaphragm** Diaphragm sealing fluid system and designed to rupture either upon command or at pre-determined dP.

**burst height** Height at which nuclear weapon is programmed to detonate.

**burst limiter** Preset control of number of rounds to be fired in burst (3).

**burst order** Detonation of missile warhead by command.

**BUS** 1 Break-up system (of unmanned vehicle upon command).

2 Backscatter ultraviolet spectrometer.

**bus** 1 Spacecraft carrier vehicle for various payloads.

2 In EDP, main route for power or data. Alternatively, trunk.

3 Busbar.

4 In ICBM, carrier vehicle for MIRV payloads.

5 In any delivery system, carrier vehicle for multiple warheads or submunitions

6 A particular aeroplane (affectionate usage, UK c 1910-30).

**busbar** In electrical system, main conductor linking all generators and/or batteries and distributing power to operative branches.

**Busemann biplane** Aeroplane, so far not built, in which at supersonic speed shockwaves and flows around upper and lower wings would react favourably.

**Busemann theory** First theory for two-dimensional supersonic wing to take into account second-order terms (1935).

**bush** Open-ended drum tailored to fit inside hole, eg to reduce its diameter, act as shaft bearing or serve as electrical insulation (see *grommet*).

**bush aircraft** Aerodyne tailored to utility service in remote (eg Canadian Arctic) regions.

**bushie** Bush pilot (Australia).

**bush pilot** Operator (often also owner) of bush aircraft, usually freelance jobbing professional.

**business aircraft** Aerodyne tailored to needs of business management and executives of government and other organisations.

**Business Class** Airline passenger category between Tourist and First; no universal definition of seat pitch or services provided.

**business engineering** BE, a business integration strategy based on net value to the business, not functional optimisation.

**business jet** Rapidly growing class of business aircraft, abb. bizjet, subdivided by passenger seating into: micro <5, light <7, super light <10, midsize <12, super-midsize <19, and large 20+.

**bast** A failure to comply with instruction to fly at assigned FL.

**buster** R/T command [usually said at least twice] "Fly at

maximum continuous power”, normally to effect interception.

**butterfly** Distorted figure-8 pattern, looking like a butterfly, flown by orbiting combat aircraft on weapon-guidance, EW or, rarely, AWACS duty.

**butterfly tail** Comprises two oblique (dihedral in region 25°–45°) fixed stabilizer surfaces each carrying a hinged surface, the latter operating in unison as elevators or in opposition as rudders; also called V tail.

**butterfly valve** Fluid-flow valve in form of pivoted plate, usually having circular form to close a pipe.

**butt joint** Sheet joint with edge-to-edge contact without overlap, with jointing strip along either or both sides.

**buttock lines** Profiles of intersection of longitudinal vertical planes with surface of solid bodies, esp. aircraft fuselages and marine floats. Zero \*\* is that on axis of symmetry. Used in lofting, these lines do not necessarily correspond with structural members.

**button** Extreme downwind end of usable runway (colloq.).

**button contact** Electrical connector in which a plunger is pressed against the surface of a convex disc [button]; this ensures clean separation, e.g. on launch of a missile.

**buttonhead rivet** Rivet with approximately hemispherical head; used where tensile load may be high.

**butt rib** Compression rib at joint between outer and inner wing, or wing and fuselage.

**butts** Facility for testing aircraft guns [rare, singular].

**BUV** Backscatter ultraviolet.

**BuWeps** Bureau of Weapons, combined BuAer and BuOrd in 1959 (USN).

**Buys Ballot’s law** Professor Buys Ballot postulated that an observer with back to wind in N hemisphere has lower pressure to left (in S hemisphere, to right). True for any isobar pattern.

**buy the farm** To be killed in a crash, not excluding military action (colloq.).

**buzz** 1 Oscillation of skin or other structure at frequency high enough to sound as a note.

2 Oscillation of control surface at high frequency.

3 Loosely, any single-direction-of-freedom vibration at audible frequency.

4 Wake-interaction noise generated by turbo-machinery, esp. large fans, at 900–4,000 Hz.

5 High-frequency, often violent, pulsation of airflow at supersonic air-breathing engine inlet.

6 To fly aircraft, esp. one of high performance and manoeuvrability, in way designed to harass another aircraft or ground target. Transitive, thus “to \* the control tower”.

7 Collective noun for micros.

**buzz liner** Sound-absorbent liner to fan duct or other surface bounding wake-interaction noise.

**buzz number** Extra-large individual aircraft number (can be unit number or aircraft serial), readable from a distance.

**buzz-saw noise** Buzz (3) from shock system of fan with supersonic flow over blades, composed of discrete tones at multiples of  $N_1$ .

**BV** 1 Bureau Veritas.

2 Bleed valve.

3 Boost vehicle.

4 Present visibility.

**BVA** Bleed-valve actuator.

**BVCU** Bleed-valve control unit.

**BVD** Battlespace visualization display.

**BVI** Blade/vortex interaction (helicopter).

**BVID** Barely visible impact damage.

**BVIS** Baggage vector interface server, provides routing system for host systems of all carriers at one airport.

**BVOR/BVortac** Weather broadcast VOR or Vortac.

**BVQI** Bureau Veritas Quality International.

**BVR** 1 Beyond visual range.

2 Best-value rate.

**BVTRU** Bleed-valve transient reset unit (controls BVs during transients).

**BVU** On-board computer (R).

**b<sub>w</sub>** Wing span [alternative to b].

**BW** 1 Biological warfare [or weapons].

2 Bomb (or bombardment). Wing (USAAC, USAAF, USAF).

3 Bandwidth; also B/W.

**BWA** Blast-wave accelerator.

**BWAN, B-Wan** Back-up WAN.

**BWB** 1 Blended wing/body.

2 Bundesamt für Wehrtechnik und Beschaffung [MoD procurement office] (G).

**BWC** Biological and Toxin Weapons Convention, 1972.

**BWEA** British Wind Energy Association [a major programme is to evaluate impact of wind farms on radars].

**BWEC** Bristol and West of England Consortium [academia, industry, Government] (UK).

**BWER** Bounded, or boundary of weak echo region [of thunderstorms].

**BWFT** Ministry of research and technology (G).

**BWO** Backward-wave oscillator.

**BWPA** British Women Pilots’ Association [1955–; office, Weybridge KT13 0QN] (UK).

**BWRA** British Welding Research Association.

**BX** Base Exchange, today AAFES.

**BXA** Bureau of Export Administration (US).

**BY** Blowing spray.

**BYD** Beyond.

**BYS** Base-year dollars.

**BYG** Blue/yellow/green.

**Bygrave** Slide rule for solving vector triangles, esp. from sextant readings (obs.).

**bypass** 1 Capacitor connected in shunt to provide low-impedance alternative path.

2 Alternative flow path for fluid system.

**bypass duct** Annular space surrounding engine core through which bypass air flows; in modern turbofans usually called fan duct. May be short, or extended back to a mixer.

**bypass engine** Air-breathing jet engine in which air admitted at inlet may take either of two flow paths (see *bypass turbojet*).

**bypass ratio** In bypass turbojet or turbofan, numerical ratio of mass flow in bypass duct divided by that through core, ie cold jet divided by hot. Some have defined as total mass flow divided by core mass flow; this is incorrect, and would always yield numbers greater than 1. BPR is normally measured at TO power at S/L.

**bypass turbojet** Turbojet in which mass flow through LP compressor stages is slightly greater than that through HP stages, excess being discharged along bypass

duct. Also called leaky turbojet. In principle difference between this and turbofan is purely of degree; turbofan has much higher bypass ratio (greater than 1) and probably at least two shafts. In general subsonic engines may be considered turbofans and supersonic engines bypass turbojets.

**byte** 1 Group of bits normally processed as unit.

2 Sequence of consecutive bits forming an EDP word, thus an 8-bit \*, which gives  $2^8 = 256$  possible combinations.

**BZ** Benactyzine.

# C

- C** 1 Degrees Celsius.  
 2 Coulomb[s].  
 3 Yawing moment of inertia.  
 4 Compass heading/bearing/course.  
 5 Capacitance, capacitor, capacity (electrical).  
 6 Ceiling, or bottom of cloud layer.  
 7 Thermal conductance.  
 8 Any constant.  
 9 Aggregate fuel consumption.  
 10 Carrier-wave power in watts.  
 11 Basic mission, cargo (USAS, USAAC, USAAF, USAF since 1925, USN since 1962, UK mission prefix since 1941).  
 12 JETDS code: air-transportable, carrier-wave, common use.  
 13 Fighter category (F).  
 14 Prefix: ground service connection (BSI).  
 15 Viscous-damping coefficient.  
 16 Council (ICAO).  
 17 Customs available.  
 18 Clear, clears, clearance delivery (ATC).  
 19 Cell of storm.  
 20 Continental (air mass).  
 21 Circling landing minimum.  
 22 Dirigible class (USN 1914–16).  
 23 Sport-parachuting certificate; 50+ jumps, 20 landing  $\leq 20\text{m}$  of target.  
 24 Heat capacity per mole.  
 25 Chemical concentration.  
 26 Site of Contrôle d'Aérodrome office [large black on yellow sign] (F).  
 27 Aircraft category: aeroplanes (FAI).  
 28 Centre (runway identification).
- c** 1 Chord [needs defining in each case].  
 2 Speed of light in vacuum,  $= 2.997925 \times 10^8 \text{ms}^{-1}$ .  
 3 Collector of semiconductor device.  
 4 Prefix, centi ( $\times 10^{-2}$ , non-SI).  
 5 Compass.  
 6 Prefix, circa, = approximate.  
 7 Subscript, convective, convection.  
 8 Specific heat.
- C'** Lowey's function.  
**c'** Thrust specific fuel consumption.  
 $\bar{C}$  Mean aerodynamic chord [US usage].  
 $\bar{c}$  Geometric mean chord; sometimes  $C$ .  
 $\bar{c}$  Aerodynamic mean chord; sometimes  $\bar{C}$  [UK usage].  
 $\bar{C}_b$  Chord length ratio.
- (c) Astronomical Unit, see AU.  
**C\*** 1 Characteristic exhaust velocity of a rocket.  
 2 Weighted linear combination of pilot's pitch-control input to aircraft pitch-rate and normal acceleration. In 1964 refined to  $C^{*(0)=g+12.4q}$  where t is time in s, g normal acceleration and q pitch rate in rad/s.
- C0 to C9** See *cloud types*.  
**C1, C2** Avion de chasse [fighter] with 1 or 2 seats (F).  
**c<sub>1</sub>** Mean chord of wing from root to tip.  
**C1A** Cr/Al oxidation/oxy-sulphuration coating.  
**C<sup>2</sup>** 1 Also called C-squared = command and control; BMC adds battle-management communications, I adds interface or intelligence, IPS information-processing subsystem, ISR intelligence, surveillance and reconnaissance [to which C adds center], IT interoperability trial, MC mobile-capable, P processing, RAD robotics assets display, S status, SIM simulation, SS or S<sup>2</sup> switching system, V vehicle, and W warfare.  
 2 Camouflage and concealment, thus C2D (usually not C<sup>2</sup>D) is camouflage, concealment and deception.  
**C<sup>3</sup>** 1 Also called C-cubed = command, control and communications; CM adds countermeasures, I intelligence, and ISRSS intelligence, surveillance, reconnaissance and space systems.  
 2 Crash-crew chart[s], detailed airfield plan[s] carried on RIV.  
 3 Coated carbon/carbon.
- C<sup>3</sup>D, C3D** Cross-cockpit collimated display.  
**C4** Plastic explosive based on RDX/PETN.  
**C<sup>4</sup>** Command, control, communications and computers; addition of I and ISR as above, C4ISR previously being called ACN(3); IFTW adds information for the Warrior.  
**c/4** Wing or tail surface quarter-chord line.  
**C-band** EM frequencies 3.9–6.2 GHz, now covered by Bands S and X (see *Appendix 2*)  
**C-certificate** The first [most junior] awarded to a glider pilot. In 1929 the requirement was 5+ min, landing at a place not lower than point of departure; in 1952 raised to 15+ min.  
**C-channel** C = circuit-mode, provides full duplex, voice 9.6 kbit/s, data 10.5, assigned in pairs uplink/downlink.  
**C-check** A-check plus thorough inspection of structure, removing fairings where necessary, plus test of systems. For modern airline engine, 24 months.  
**C-clamp** Headset.  
**C-class** Controlled airspace near busy airport, usually a radar service area.  
**C-code** IFR flight-plan suffix: no-code transponder and approved area navigation.  
**C-cycle** One complete flight simulated in engine development or test.  
**C-display** Rectangular display in which horizontal axis is target bearing and vertical axis is its angle of elevation.  
**C-duct** Half a fan duct forming part of an engine pod cowl, usually pivoted at the top for access to the core.  
**C-licence** Permits ground engineer to inspect and rectify engines.  
**C-Lite** Small polycarbonate fin on wingtip for guidance on crowded airfields and showing if wingtip lights are illuminated.  
**C-mode** Transponder transmits altitude.  
**C power supply** Between cathode and grid, for grid bias.  
**C-scope** C-display.  
**C-spar** Structural member along helicopter rotor blade between D-nose and main spar or I-beam, closed at front, open at rear.  
**C-stars** Carriage, stream, tow and recovery (AMCS3).  
**C-stoff** Rocket propellant (fuel+coolant), hydrazine hydrate plus methyl alcohol, often plus water, usual percentages 30/57/13 (G).

**C-wing** Blended wing/body.

**CA** 1 Controller Aircraft; holder of this office is also Deputy Chief of Defence Procurement (UK).

2 Controlled airspace.

3 Cabin attendant[s] (airline costings).

4 Conversion angle.

5 Circuit analog.

6 Cruiser, gun armed [can have SAM secondary armament] (USN).

7 Cetyl alcohol, a lubricant.

8 Control advises.

9 Conflict alert.

10 Component availability.

**CIA** 1 Coarse acquisition (GPS).

2 Course acquisition.

**CAA** 1 Civil Aviation Authority [1972–, said to mean ‘campaign against aviation’; London WC2B 6TE] (UK).

2 Civil Aeronautics Authority [1938–40] (US).

3 Civil Aeronautics Administration [1940–58, part of Department of Commerce, became FAA] (US).

4 Civil Aviation Administration (Israel).

5 Conformal-array antenna, or aerial.

6 Chromic-acid anodizing.

7 Cargo Airline Association (US).

8 Component application architecture.

9 Continued airworthiness assessment (FAA).

**CAAA** 1 CAA(1) Approved.

2 Commuter Airlines Association of America, also called C3A or C-triple-A, and now the RAA.

3 Canadian Aviation Artists Association.

**CAAC** Civil Aviation Administration of China, from 1964.

**CAACU** Civilian Anti-Aircraft Co-operation Unit (UK, various dates 1950–71).

**CAADRP** Civil Aircraft Airworthiness Data Requirements [originally Recording] Programme (UK).

**CAAFI** 1 Commercial aviation alternative fuels initiative (Int.).

2 CAA(1) of the Fiji Islands.

**CAAFU** CAA(1) Flying Unit, originally for navaid calibration, now examines candidates for licences.

**CAAG** CFIT/ALAR Action Group (FSF).

**CAAM** Continued airworthiness assessment methodologies (FAA).

**CAAP** Common avionics architecture for penetration.

**CAARC** Commonwealth Advisory Aeronautical Research Council (Int., office in London).

**CAARP** Cooperatives des Ateliers Aéronautiques des la Région Parisienne (formed 1965).

**CAAS** 1 Computer-assisted approach sequencing.

2 Common avionics- [sometimes translated as aviation] architecture system.

3 Civil Aviation Authority of Singapore.

**CAASA** Commercial Aviation Association of Southern Africa [office, Johannesburg].

**CAASD** Center for Advanced Aviation System Development (Mitre Corp.).

**CAASP** Common avionics architecture system program (USSOF).

**CAASS** Computer-aided aircrew scheduling system (USAF).

**CAATER** Co-ordinated access to aircraft for transitional environmental research (EU).

**CAATS** 1 Computer-assisted aircraft trouble-shooting.

2 Canadian automated ATC system.

3 Computer-aided aerodrome training suites.

**CAAV** CAA of Vietnam.

**CAAVTS** Compact airborne automatic video tracking system.

**CAAZ** CAA of Zimbabwe.

**CAB** 1 Civil Aeronautics Board (US, 1940–84).

2 Common avionics baseline.

**cab** 1 Structure containing cockpit of large aircraft, often excluding nose.

2 Airport tower, especially workplace of controllers.

**CABA** Consolidated agile-beam antenna.

**cabane** Structure of braced struts used to carry load above fuselage or wing, such as upper wing of biplane or parasol wing, engine nacelle or bracing wires to wingtips.

**cabin** 1 Enclosure for aircraft occupants; today excludes cockpit or flight deck.

2 Occupied part of simulator, with or without motion.

**cabin altitude** Altitude corresponding to pressure inside cabin.

**cabin blower** In some pressurized aircraft, shaft-driven cabin blower, also called cabin supercharger.

**CabinCall** First certificated system allowing use of mobile phone, initially on business aircraft.

**cabin crew** Staff who attend to passengers in flight.

**cabin distribution system** Links CTV with passenger and crew telephone and data terminals.

**cabin file server** Links CMU to ISVSs and POSTs.

**cabin fog** Caused when cold dry input hits warmer humid cabin air.

**cabin pressure** Ambiguous; can mean absolute pressure inside aircraft or pressure differential (dP) between cabin and surrounding atmosphere.

**cabin supercharger** See *cabin blower*.

**cabin telecommunications unit** A complex PBX for satcoms, to Arinc 746.

**cable** 1 Non-SI unit of length, =  $2.19456 \times 10^{-2}$ m,

2 Traditional term for filament for winch or other surface launch of glider, irrespective of material.

**cable cutter** One-shot guillotine, powered by cartridge, on wing leading edge to cut barrage cables.

**cable-drag drop** Low-level airdrop with load extracted and arrested by ground cable installation.

**cable hover** Design requirement for ASW helicopter autopilot while dunking.

**cable-strike protection** See *wire-strike protection system*.

**cabotage** Freedom of air transport operator to pick up or set down traffic in (usually foreign) country for hire or reward.

**cabrage** Rotation of aeroplane about lateral axis to increase angle of attack (obs.).

**cab-rank patrol** Close air-support technique in which instead of striking designated targets or targets of opportunity, aircraft loiter awaiting assignments from surface forces.

**CABS** Centre for Airborne Systems (DRDO).

**cabs, CABS** Cockpit air-bag system [USA/Simula].

**CAC** 1 Combat Air Command.

2 Combat-assessment capability.

3 Computer acceleration control.

4 Centralised approach control.

5 Caution advisory computer.

6 Coarse acquisition code.

**CACA** National certification authority (Poland).

**Cacas** Civil Aviation Council of the Arab States.

**CAC<sup>3</sup>, CACCC** Combat air command and control center.

**C/A code** Coarse acquisition code (GPS).

**CACP** Cabin-air, or area, control panel.

**CACRC** Commercial aircraft composite repair committee [formed by US airframers and operators 1991, administered by the SAE].

**CAC<sup>2</sup>S** Common aviation command and control system (USMC).

**CACTCS** Cabin-air conditioning and temperature control system.

**CACU** Coast Artillery Co-operation Unit (RAF c1926–).

**CAD** Computer-assisted design [CAM adds computer-assisted manufacturing, D adds drafting].

2 Cushion-augmentation device [US = LID].

3 Cartridge-actuated [or activated] device; /PAD adds propellant-actuated device.

4 Close-in air defence.

5 Computer-aided dispatch.

6 Component advanced development.

7 Civil Aviation Department (Hong Kong).

8 Chemical agent defeat.

9 Continuous [i.e., 24-hour] airborne deterrent.

**Cadal** Communications automation and data-link.

**CADC** 1 Computerised air-data centre (Elbit).

2 Central air-data computer.

**CAD-DET** Pronounced 'Cadet', close air-defence detachment engagement trainer [22 MoD sites] (UK).

**CADS** Canadian dollars.

**CADE** Computer-aided design evaluation.

**CADEA** Confederación Argentina de Entidades Aeroportivas.

**cadence braking** Rapidly repeated jabs on pedals or other input.

**cadensicon** Measures fuel density and permittivity as it enters aircraft tank.

**Cades, CADES** Computer-aided design and evaluation system.

**Cadets** Computer-assisted documentation education tutorial system.

**CADF** 1 Commutated-aerial (or antenna) direction-finder, or finding.

2 China Aviation Development Foundation (Taiwan).

**Cadin** Czech aeronautical data-interchange network.

**Cadiz** Canadian air-defence identification zone.

**CADM** Clustered airfield defeat, or dispensed, munition(s).

**Cadmat** Computer-assisted, or augmented, design, manufacture and test.

**cadmium** Symbol Cd, soft white metal, density 8.7, MPt 321°C, major uses electroplating, NiCd batteries, CdS IR detectors and fusible alloys.

**CADO** Central Air Documents Office (USA).

**CADP** Central annunciator display panel.

**CADRE, Cadre** 1 Communications-actuated data-retrieval equipment.

2 Center for, now College of, Aerospace Doctrine, Research and Education (Air University, Maxwell AFB).

**cadre** 1 Adjective: formed from regular and reserve personnel.

2 Initial, incomplete military unit, deploying new hardware for first time.

**Cads, CADS** 1 Cushion-augmentation device[s] to increase jet lift near ground.

2 Concept and design study/studies.

3 Computer-aided debriefing system.

4 Controlled aerial delivery system [without aircraft having to land].

**CADSI** The Canadian Association of Defence and Security Industries.

**CADWS** Close air-defence weapon system[s].

**CAE** 1 Computer-aided, or assisted, engineering.

2 Component-application engineer.

3 Control-area extension.

**Caé** Commission d'Aérologie (WMO).

**CAEA** Confederación Argentina de Entidades Aeroportivas [federation of air sport, office BA] (Argentina).

**CAEDM** Community/airport economic-development model.

**CAEE** Committee on Aircraft Engine Emissions (ICAO).

**CAEM** Cargo-airline evaluation model.

**CAeM** Commission for Aeronautical Meteorology (WMO).

**CAEP** Committee on Aviation Environmental Protection, or Protocol (ICAO).

**Caepe, CAEPE** Centre d'Achèvement et d'Essais de Propulseurs d'Engins (F).

**CAER** See **EARC**.

**Caerat, CAERAT** Common American/European Reference Aeronautical Telecommunications [F adds facility, NF network facility].

**Caesar, CAESAR** 1 Component and engine structural assessment and research.

2 Coalition aerial surveillance and reconnaissance (NATO).

3 Captor active electronically scanned array radar.

**caesium** In N America cesium, symbol Cs, gold-colour soft metal, density 1.9, MPt 28°C, used in glasses (but the hydroxide dissolves glass), highly reactive and toxic.

**CAEW** Compact, or conformal, airborne early warning.

**CAF** 1 Canadian Armed Forces.

2 Citizen Air Force (South Africa).

3 Confederate Air Force [US, from 1961, now called Commemorative AF, Midland, TX].

4 Chinese Air Force.

5 Cleared as filed.

6 Cyprus Airsports Federation [Nicosia 2122].

7 Charities Aid Foundation (UK).

**CAFAC** CAF(1) Air Command.

**CAFAC** Commission Africaine de l'Aviation Civile (Int.).

**CAFATC** Canadian Air Transport Command.

**CAFDC** Collection, analysis, fusion and dissemination.

**cafda** Commandement Air des Forces de Défense Aérienne (F).

**CAFH** Cumulative airframe flight hours.

**CAFI** Commander's annual facilities inspection.

**CAFMS** Computer-assisted force management system.

**CAFT** 1 Combined advanced field team (evaluated new captured hardware in WW2).

2 Civil Airworthiness Flight Testing (ETPS).

**C/Aft** CNS/ATM focus team.

**CAFU** Civil Aviation Flying Unit (UK).

**CAG** 1 Carrier air group (USN).

2 Civil Air Guard (UK, 1937–39).  
 3 Circulation aérienne générale (F).

**CAGE** 1 Commercial and governmental entity.  
 2 Commercial avionics GPS engine.  
 3 Combined arms gateway environment.

**cage** 1 To orientate and lock gyro into fixed position relative to its case.  
 2 Housing for bearing balls/rollers/needles.

**caged switch** Protected against inadvertent operation by spring-loaded hinged box.

**CAGR** Compound average, or annual, growth rate.

**CAGS** Central attention-getting system.

**CAH** Cabin-attendant handset.

**CAHC** The Canadian Aviation Heritage Centre [McGill university Macdonald Campus, Montreal H9X 3V9].

**CdHgTe** Cadmium mercury telluride.

**CAHI** Central Aerodynamics and Hydrodynamics Institute (Moscow, founded 1 December 1918).

**CAHS** Canadian Aviation Historical Society.

**CAI** 1 Civil Aeromedical Institute (FAA).  
 2 Computer-aided instruction (see *CFI*).  
 3 Close approach indicator (STOVL carrier landing).  
 4 Czech Astronomical Institute.  
 5 Caution annunciator/indicator.  
 6 Component analysis and integration.  
 7 Composites affordability initiative (USAF).

**CAIG** Cost analysis improvement group (DoD).

**CAIMS** Central aircraft information management, or maintenance, system.

**Cains** Carrier aircraft (since 1982, also aligned) inertial navigation system.

**CAIP** Civil aircraft inspection procedure[s].

**CAIR** Confidential aviation incident reporting [P adds programme].

**Cair** System for humidifying First and Business on long-haul (CTT).

**CAIRA** See *IAARC*.

**CAIS** 1 Common Ada [or APSE] interface set.  
 2 Common airborne instrument, or instrumentation, system.

**CAIV** Cost as an independent variable [each decision taken on basis of (cost of program)].

**cAk** Continental Arctic air mass, very cold.

**cal** Calorie.

**CALCM** Conventional [i.e., not nuclear] air-launched cruise missile.

**calculated altitude** Celestial altitude calculated but not observed.

**CALda** Canadian Airline Dispatchers Association [Milton, ON].

**Calea** Canadian Airline Employees Association [Mississauga, ON].

**Cale gear** Shock-absorbing system in carrier arrester wire anchors.

**CALF, calf** Common affordable lightweight fighter.

**Calfab** Computer-aided layout and fabrication.

**Calfax** Patented quick-release panel fastener, latch opened or closed by 540° rotation.

**calf-garters** Automatic leg-restraint straps in certain ejection seats.

**caliber** US unit of length, = 10<sup>-2</sup>in.

**calibrated airspeed** IAS corrected for ASI system errors; ‘true indicated airspeed’, but see *airspeed*.

**calibrated altitude** Not normally used, but signifies pressure altitude or radar height corrected for instrument errors.

**calibrated club propeller** Club propeller whose drive torque has been measured and plotted against rpm; thus, can serve as dynamometer.

**calibrated focal length** Equivalent focal length adjusted to equalise positive and negative distortion over view field.

**calibration card** Graphical or tabular plot of instrument errors (other than compass); usually displayed near instrument.

**calibration test** Static run of bipropellant rocket engine to check propellant mixture ratio and performance.

**calibrator** Device for measuring instrument errors.

**calibre** Bore (ID) of tube, esp. diameter of largest cylinder that fits inside (thus, in rifled barrel, touches highest points of opposing lands).

**caliper** Instrument for measuring or checking thickness, diameter or gap; with internal or external measuring points on tips of pivoted or sliding arms.

**calipher** Caliper.

**Calipso** Cloud aerosol lidar and IR pathfinder satellite observation[s].

**Callback** Confidential reporting system to attempt to record civil (especially air carrier) incidents caused by human failures (FAA via NASA).

**call fire** Fire against specific target delivered as requested.

**call for fire** Request, by FAC or other observer, for fire on specific target and containing target data.

**calling** See next.

**calling out** Spoken data readout by crew member or ground observer to assist pilot or other crew member; thus, co-pilot’s speed/altitude checks on instrument approach.

**call mission** CAS (3) mission at short notice by pre-briefed pilot with pre-armed aircraft, target assigned after take-off.

**call number** 1 In EDP, number code identifying subroutine and containing data relevant to it.

2 Aircraft serial number, its identity on radio [general usage] (US).

**callout notes** On engineering drawing, written notification of special features (eg material, process, tolerance or equipment installation).

**Calls** Computer-aided language learning system.

**callsign, call sign** Pronounceable word(s), sometimes with suffix number, serving to identify a communications station (such as an aircraft). Civil aircraft \*\* are ICAO phonetic letters and numbers derived from international registration; ground station \*\* are name of airport followed by type of station (tower, departure, clearance delivery, etc).

**calm** No sensible wind.

**CALNS, Calns** Common air-launched navigation system.

**calorie** Unit of quantity of heat, contrary to SI; International \*, cal<sub>IT</sub> = 4.1868 J by definition, 15°. \* = 4.1855 J, thermochemical \* = 4.184 J.

**calorific value** Quantity of heat released by burning unit mass of fuel; kJ/kg = 0.429923 Btu/lb; kJ/m<sup>3</sup> = 0.200784 Btu/Imp. gal.

**Calorizing** Heating steel part surrounded by aluminium

(liquid or granules); gives protection in high-temperature use.

**Calow** Contingency and limited objective warfare.

**Calpa** Canadian Air Line Pilots' Association [office, Brampton, ON].

**Calrod** Electric heater [many types] fitting inside shafts of FCS or other mechanisms.

**Cals, CALS** 1 Computer-aided logistics support.

2 Computer-aided acquisition and logistic [or lifetime] support.

3 Continuous acquisition and life-cycle support.

4 Carrier aircraft-landing system.

**Calsel** Proposed *Selcal* modification in which signal is combined with a gating tone to produce automatic receiver function.

**CALT** China Academy of Launch-vehicle Technology, Beijing.

**Caltech** California Institute of Technology, Pasadena, name since 1920, founded 1891 as Throop Polytechnic Institute.

**Calthrop** Patented designs of aircrew parachute, c1917-.

**CalVer** Calibration verification.

**Calvert lighting** Original system of crossbar approach lighting.

**CAM** 1 Cockpit angle measure (flight deck vision limitations expressed as angles).

2 Catapult armed merchantman (UK ships, 1941-43).

3 Chemical-agent munition (or monitor).

4 Circulation aérienne militaire (F).

5 Computer-assisted manufacture, or computer-aided manufacturing.

6 Conventional attack missile.

7 Content-addressable memory.

8 Counter-air missile.

9 Centre of Aviation Medicine (RAF).

10 Commercial, or Contract, Air Mail routes (US, from 1926).

11 Cockpit audio monitoring.

12 Cabin assignment module (CIDS, later FAP).

13 Civil Aeronautics Manual (US).

14 Control-actuator mechanism.

15 Continued airworthiness management.

**cam** Rotating or oscillating member having profiled surface to impart linear motion to second member in contact with it.

**CAMA** Civil Aviation Medical Association (US, office Oklahoma City).

**CAMAA** Commercial application of military airlift aircraft (USAF).

**camber** 1 Generally, curvature of surface in airflow.

2 Curvature of aerofoil section, locus of points measured along centreline or upper or lower surface at 90° to camber line itself, positive when centreline is arched in direction of lift force (see *upper \**, *lower \**, *centreline \**, *conical \**, *reflex \**, *mean \**, *local\**).

3 Centreline of aerofoil.

4 Inclination of landing wheels away from vertical plane.

**cambered blade** Helicopter main-rotor blade incorporating camber, instead of having symmetric profile.

**cambered Krüger** Krüger having flexible profile to increase camber when open.

**cambered wing** Wing section whose centreline is not coincident with chord.

**CAMBS** Command active multi-beam sonobuoy.

**Camden** Co-operative air and missile defense exercise network.

**CAMDS** Chemical agent munitions disposal system.

**CAME** Continuing airworthiness management exposition.

**CAMEA** Canadian Aircraft Maintenance Engineers' Association.

**Camel** Cartridge-activated miniature electromagnetic

**Camera axis** Perpendicular to film plane through optical centre of lens system.

**camera gun** Camera, usually colour cine, aimed at target with aircraft gun and operated by gun-firing circuit; used to provide combat confirmation, intelligence information and, with unloaded gun(s), as training aid.

**camera obscura** Dark room equipped with lens projecting image of external scene on to wall or floor (formerly used as bombing target with roof lens for recording of bomb release position).

**camera recorder** One or more cameras arranged to provide continuous film of instrument panel or similar data source.

**camera tube** TV converter of optical scan into electrical video signals (Orthicon etc).

**CAMF** Christian Airmen's Missionary Fellowship, became MAF.

**camfax** Camera facsimile, especially for synoptic charts.  
**cam follower** Driven member in sliding or rolling contact with cam.

**CAMI** 1 Computer-aided (or -assisted) manufacturing and inspection.

2 Civil Aerospace Medical Institute [originally CARI], Oklahoma City (US).

**Camic, CAMIC** Civil Aviation Management Institute of China.

**Camir** Centre for Aviation Maintenance and Inspection Reliability (US).

**CAML** Cargo-aircraft minelayer.

**cam lobe** Profiled projection from straight or circular baseline.

**Camloc handle** Patented self-tightening latch for cowlings and skin access panels.

**CAMMS** Co-operative aggregate mission-management system, for multiple UAVs.

**CAMM2** Computer-aided maintenance-management system, Version 2.

**CAMOA** Continued airworthiness management organisation approval.

**Camos** Computer-aided meteorological observing system.

**camouflage** Attempt to change appearance to mislead enemy, esp. by concealment with portable material or painting to reduce visual contrast with background.

**camouflage detection photography** Use of film whose spectral response differs from that of human eye (eg IR-sensitive).

**campaign fire** An enormous forest or other fire calling for the assembly of large resources.

**Campbell diagram** Plot of natural frequencies against rpm for rotating part.

**Camps** Civil-aircraft missile protection system, [i.e., protection against missiles].

**cam ring** Ring inside crankcase of radial piston engine geared to crankshaft and having sequence of lobes to operate inlet and exhaust valves of all cylinders in that row.

**CAMS** 1 Combat aviation management system (USA).  
2 Control and monitoring system.

**camshaft** Shaft equipped with cams aligned with valve gear of cylinders of in-line piston engine.

**Camsim** Canadian airspace management simulator.

**CAMU** Central avionics management unit (databus).

**CAN** 1 Committee on Aircraft Noise (ICAO).

2 Correio Aereo Nacional [national air mail] (Brazil).

**can** 1 Individual flame tube of can-annular combustion chamber.

2 Complete combustion chamber of multi-combustor engine.

3 Five-sided box projecting into integral wing tank to accommodate slat track.

4 Controlled-environment weapon container.

**Canadian break** Max-rate 360° turn.

**can-annular** See *canular*.

**canard** 1 Tail-first aerodyne, usually with auxiliary horizontal surface at front (foreplane) but vertical surface (fin, rudder) at rear.

2 Foreplane or nose yaw control fitted to \* (1).

**cancel** 1 To terminate complete R&D or hardware programme.

2 To countermand order.

3 To deactivate activity (eg, \* reverse thrust).

**C&C** 1 Command and control.

2 Cross & Cockade International [society; Bristol BS16 2TL, but founded in US in 1959] (UK).

**C&DH** Communications and data-handling.

**candela** SI unit of luminous intensity 1/683 W/sr [monochromatic at 5.4 x 10<sup>14</sup> Hz], abb. cd; [in US sometimes called candle].

**candle** 1 Former unit of luminous intensity (based on Harcourt pentane lamp).

2 Of parachute canopy, to become so constrained by rigging lines as to fail to deploy.

**candlepower** Former measure of rate of emission of light by source, usually in given direction, abb. cp; see *candela*, *luminous flux/intensity*.

**C&M** Care and maintenance.

**C&W** Control, or caution, and warning.

**CANES** Codes addresses numériquement à nombre d'entrées sélectionnable, = PCM (F).

**CAN 5** Committee on Aircraft Noise, rules for new aircraft types (ICAO).

**canister** Preferred term for tubular TEL(4) for SAMs.

**canned cycle** Complete routine for particular computerised process, such as drilling and reaming a hole in NC machining.

**cannibalise** To dismantle aircraft or other hardware to provide spare parts.

**cannibalisation rate** Actual number of item in given period.

**canning** Loading gun ammunition into magazine tank, box or drum.

**cannon** Generally, gun of calibre 20 mm [0.7874 in] or greater.

**Cannon plug** Vast range of electrical connectors (trade name, ITT Industries).

**canular** Annular combustion chamber containing

separate flame tubes, each of which may have a ring of burners.

**canoe fairing** Boat-shaped covering over tracks for area-increasing flaps and other wing movables.

**canoe radar** Aircraft radar whose radome has canoe-like shape.

**canonical time unit** Time required for hypothetical satellite in geocentric equatorial orbit, with centre of satellite coincident with surface of Earth, to move distance subtending 1 radian at centre: 13.447 minutes.

**canopy** 1 Fairing, usually transparent, over flight crew or, in lightplane, all occupants, which does not form part of airframe and slides or pivots for entry and exit.

2 Rarely, transparent fairing over flight crew which does form part of airframe and is not used for entry/exit.

3 Main deployable body of parachute.

4 Another name for the envelope of a balloon.

**CANP** 1 Collision-avoidance notification procedure.

2 Civil air [or aircraft or aviation] notification procedure, tells military of low-level [≤305m, 1,000ft] civil activity (UK).

**CANS** Civil air navigation school.

**Canso** Civil Air-Navigation Services Organization (Int., based Netherlands).

**cant angle** 1 Angle between centreline of winglet and local vertical [OZ axis], seen from head-on.

2 Angle between biplane interplane strut and local vertical, seen from head-on.

**Cantass** Canadian towed-array sonar system.

**canted deck** Angled deck.

**canted nozzle** Nozzle of jet engine, usually turbojet or rocket, whose axis is fixed and not parallel to centreline of engine or motor or to line of flight, but passes close to vehicle c.g.

**cantilever** Structural member, such as beam, rigidly attached at one end only. Thus \* wing is monoplane without external struts or bracing wires.

**cantilever ratio** Semi-span divided by maximum root depth.

**Canukus** Standards agreed by Canada, Australia, New Zealand, UK, US.

**CAO** Combined Air [now Air and Space] Operations [C adds Center, CC Command Centre, CS Center for Space].

**CAOOA** Civil Air Operation Officers Association of Australia [office, Melbourne].

**CAP** 1 Civil Air Patrol (US, from 1941, office at Maxwell AFB).

2 Combat air patrol or carrier air patrol.

3 Continuing Airworthiness Panel, and study group on \*\* problems (ICAO).

4 Chloroacetophenone (tear gas, also called CN).

5 Civil Air Publication (various countries).

6 Contractor assessment program (US).

7 Consolidation by atmospheric pressure, an advanced powder metallurgy process (Cyclops).

8 Combat ammunition production (USAF).

9 Crew alert[ing] panel.

10 Control anticipation parameter [which see].

11 Capacity.

12 Contact approach.

13 Club Aviazione Popolare [homebuilders, office, Varese] (Italy).

**cap** 1 Extreme nose structure of aerostat (see *bow* \*).

2 See *flight* \*.

3 Various portions of parachute system (see *petal* \*, *tear-off* \*, *vent* \*).

4 Tension boom in form of flat strip attached along top or bottom edge or spar or around rib.

5 Upper limit on a proposed budget.

**CAPA** 1 Central airborne performance analyser.

2 Coalition of Airline Pilots' Associations (US).

**capability insertion** Improvement.

**Capac** Canadian Association of Primary Air Carriers [office, Winnipeg].

**Capa cartridge** Rocket-propelled explosive bird-scarer.

**capacitance** In electrical system, ratio of charge to related change in potential. Basis of fuel measurement system which gives readout of fuel mass irrespective of aircraft attitude. SI unit is farad.

**capacity** In an EDP installation, number of bits storable in all cores, registers and other memories.

**capacity payload** Payload limited by volume, number of seats or other factor apart from mass.

**capacity safety valve** Device on carrier catapult (dial-to-aircraft weight) to prevent overloading cylinder or strop/tow bridle.

**capacity ton-mile, CTM** Unit of work performed by transport aircraft with capacity payload.

**Capas, CAPAS** Computer-assisted performance-analysis system.

**cap cloud** Forms above, or enshrouding, a peak or ridge-line.

**Capdi, CAPDI** China Aeronautical Project and Design Institute [100001 Beijing] (China).

**CAPE, Cape** 1 Convective available potential energy.

2 Computer-aided parametric engineering.

**Cape Canaveral** On E Florida coast (US), at one time called Cape Kennedy; site of KSC.

**Cape Town treaty** First international agreement on financing of purchases of aircraft and engines [ratified 2006] (Int.)

**capillary drilling** ECM technique using nitric acid fed through glass tube containing platinum cathode; can rapidly etch precision holes as small as 0.19 mm (0.0075 in).

**CAPP** Computer-aided programme planning, or planning project.

**capped** Subjected to legal upper limit (slot[3] allocation).

**capping membrane** Flexible sheet hastily placed over filled bomb crater.

**capping strip** See cap (4).

**CAPPS, Capps** Computer-assisted passenger pre-screening system. CAPPS-2, or -II was new-generation replacement, in turn replaced by Secure Flight (TSA).

**Capre** Capability reconnaissance.

**Capri** Compact all-purpose range instrument, made by RCA.

**CAPRS** Community air-passenger reporting system (EC7).

**CAPS, Caps** 1 Computer antenna pointing system (Satcom).

2 Conventional armaments planning system (NATO).

3 Computer-assisted passenger screening.

4 Civil-aviation purchasing service.

5 Civil, or commercial, airliner protection system, against terrorist SAM.

**Capsin** Civil-aviation packet-switching integrated network.

**Cap/strike** Mission is primary CAP (2), secondary strike; strike ordnance jettisoned to engage in air combat.

**capstrip** See cap (4).

**capsule** 1 Small hermetically sealed compartment (eg aneroid).

2 Sealed compartment or container for instrumentation in space or other adverse environment.

3 Small manned spacecraft.

**CAPT** Coverage analysis and planning tool (Eurocontrol).

**capt.** Captain.

**captain** 1 Very loosely, any PIC.

2 More correctly, officer in charge of military, naval or commercial aircraft having flight crew numbering more than one; not normally used with two-seat combat aircraft. Usually \* is PIC but in RAF in WW2 could have any aircrew trade, in today's MR [e.g. Nimrod] \* is Tac Nav, and in AAC helo \* is Gunner [missile operator] regardless of rank. Airline \* has status of rank with four gold stripes.

**captain's bars** Parallel lights under tanker fuselage to assist receiver's station-keeping (USAF).

**captain's discretion** Undefinable. Most airline captains are permitted to ignore some rules, such as number of hours on duty, or limitations on flight time.

**caption** Small rectangular display bearing name of airborne system or device, visible when lit from behind.

**caption panel** Array of 20–60 captions, usually serving as CWP or alerting device giving indication of failure on broad system basis.

**captive balloon** Balloon secured by cable to surface object or vehicle.

**captive firing** Firing of complete vehicle, normally unmanned rocket, while secured to test stand.

**CAPTS** Co-operative area passive tracking system, provides air and surface surveillance with target ident and precise position (with ASDE, ASTA, ATCRBS, TCAS).

**capture** 1 In flying aircraft or space vehicle, to control trajectory to acquire and hold given instrument reading.

2 In flying aircraft, to control trajectory to intercept and then follow external radio beam (eg ILS, radio range).

3 In ATC or air-defence system, to acquire and lock-on to target.

4 In interplanetary (eg Earth-Moon) flight, eventual dominant gravitational pull of destination body.

5 In automatic or self-governing system not always operative (eg yaw damper), limits of aircraft attitude and angular velocity within which its authority is complete.

**capture rate** Data rate in kbits/s or Mbits/s.

**CAR** 1 Civil Air Regulations (FAA, US).

2 Civil Airworthiness Regulations (CAA, UK etc).

3 Caribbean (ICAO).

4 Conformal-array radar.

5 Crew/aircraft ratio.

**car** 1 Nacelle housing crew and/or engines suspended beneath aerostat.

2 Loosely, payload container attached to or within aerostat, esp. airship.

**CARA** 1 Computer-aided requirements analysis.

2 Combined-altitude radar altimeter.

3 Cargo and rescue aircraft.

**Carabas** Coherent all-radio-band sensing.

**carabiner** Karabiner.

**Carad** 1 Civil aerospace R & D.

2 Civil aircraft research and demonstration programme (UK).

**CA RAM** Circuit analog radar absorbent material.

**carangifoil** Corrupted from carangiform [fish-like] and aerofoil to describe airships whose envelope is a vertical two-dimensional shape with this cross-section.

**Carat** Cargo agents reservation airway-bill insurance and tracking system.

**carat** Non SI unit of mass, = 0.2g.

**carb air** See carburettor air.

**carboblaster** Lignocellulose blasting abrasive (BGS); used to clean gas path of running gas turbine and made from crushed apricot stones.

**carbbronze** Copper alloys containing 8 per cent tin (and trace of phosphorous).

**carbon** Possibly most important element in aerospace, primary constituent of hydrocarbons [e.g., fuels], carbon/graphite fibre and even diamond [heat sink], symbol C, density [graphite] 2.3, MPt various to 3,600°C.

**carbon/carbon** Composite material: pyrolysed carbon fibres in pyrolysed carbon matrix.

**carbon fibre** Range of fine fibres pyrolysed from various precursor materials (eg PAN) and exhibiting outstanding specific strength and modulus. Used as reinforcement in CFRP.

**carbonising, carbonitriding** See *Nitriding*.

**carbon microphone** Contains packed carbon granules whose resistance, and hence output signal, is modulated by variable pressure from vibration of sound diaphragm.

**carbon oxides** Gases produced upon combustion of carbon-containing fuel: principally carbon monoxide CO, carbon dioxide CO<sub>2</sub> and wide range of valence bond variations. CO<sub>2</sub> present in Earth atmosphere (3 parts in 10<sup>6</sup>); percentage much higher in exhaled breath.

**carbon seal** Sliding seal between moving machinery (eg turbine disc) and fixed structure; oil removes heat.

**carbon tetrachloride** CCl<sub>4</sub>, liquid, BPt 24.89°C, s.g. at 20°C 1.595.

**carbureter** See *carburettor*.

**carburetion** Mixing of liquid fuel with air to form optimum mixture for combustion.

**carburettor** Device for continuously supplying engine, esp. Otto-cycle piston engine, with optimum combustible mixture. Many forms exist, some with choke tube and others injecting liquid fuel direct into cylinders (in which case injection pump can assume \* function). Not fitted to most steady-burning devices such as gas turbines and heaters.

**carburettor air** Induced, usually via ram intake, along separate duct; intake normally anti-iced. If fitted, a \* control provides a choice of cold air, or air heated by various means.

**carburettor icing** Caused by depression in venturi of choke tube giving local reduction in temperature.

**carburising** Prolonged heating of fully machined steel part in atmosphere rich in CO or hydrocarbon gases to give hard, tough outer layer.

**carburising flame** Oxy-acetylene flame having excess acetylene.

**Carcinotron** Backward wave oscillator; TWT for generating microwaves in which electron beam opposes direction of travel of a wave guided by a slow-wave structure.

**CARD** Civil aviation research and development (NASA, DoT).

**Card** Aerobatic-team formation resembling 4 (\* 4) or 5 (\* 5) playing cards.

**card compass** Simple compass with magnets attached to pivoted card on which bearings are marked.

**CARDE** Canadian Armament Research and Development Establishment.

**Cardec** Civil-Aviation R & D Executive Committee.

**cardinal altitudes, cardinal FLs** Altitudes or FLs forming an odd or even multiple of 1,000 ft.

**cardinal point effect** Increased intensity of radar returns when target surface is most nearly perpendicular to LOS, esp. in case of surface features.

**cardinal points** Bearings 09 (E), 18 (S), 27 (W) and 36/0 (N).

**cardioid** Heart-shaped; profile of cam or plot of radio signal strength against bearing.

**cardioid reception** Obtained by combining dipole and reflector or vertical aerial with loop in correct phase.

**CARDP** Civil-Aviation R & D Program Board.

**Cards, CARDS** 1 Computer-assisted radar-display system.

2 Computer-aided reporting and diagnosis system.

**Cardsharp** Capabilities and requirements demo *CBASS* [‘sea bass’] high-alt. recon. program.

**CARE** Center for Aviation Research and Education (US).

**Caree** China Aviation Radar and Electrical Equipment Institute.

**carefree handling** AFCS provides reliable protection against stall, departure or overstress.

**Careri** China Aeronautical Radio Engineering Research Institute.

**Cares** Cratering and related effects simulation.

**caret inlet** Left and right engine inlets each in front view having form of parallelogram with centrelines meeting below a/c.

**CARF** Central altitude reservation facility; ATC facility for special users under altitude reservation concept (FAA, from 1956).

**cargo** Useful load other than passengers or baggage, but including live animals. In military aircraft, all load other than human beings and personal kit and weapons.

**cargo conversion** Passenger or other non-cargo aircraft permanently converted to carry freight (see QC [2]).

**cargo net** Webbing or rope net for restraining cargo on pallet or igloo.

**CARI** Civil Aeromedical Research Institute (FAA 1959, became CAMI 1965).

**Carlack** Proprietary range of cleaner, waxes and polishes.

**car launch** Use of towing motor vehicle to launch glider.

**car lines** Steel wires or multistrand cables passing from hot-air-balloon load ring down and under basket and back up to load ring.

**CARMS** Civil Aviation Radio Measuring Station (DoT, UK).

**carnet** Document facilitating crossing frontier by air without customs dues on aircraft; credit card valid for aviation fuel and certain services; sometimes includes medical certificates.

**CARNF** Charges for airports and route navigation facilities (ICAO).

**Carnot cycle** Ideal reversible thermodynamic cycle: isothermal compression, adiabatic compression, isothermal expansion, adiabatic expansion.

**Carousel** Pioneer family of civil INS.

**carousel** 1 Circulatory conveyor system to which baggage is delivered in arrival terminal.

2 Large structural ring on which rotating wing of tilt-rotor aircraft is mounted.

**CARP** Computed air release point.

**carpet** 1 Graphical plot of three variables having appearance of flexible two-dimensional surface viewed obliquely.

2 Strip of Earth's surface subjected to sonic boom.

**carpet bombing** Level bombing, using one or more aircraft, to distribute bombs uniformly over target area.

**Carquals** Carrier qualification tests (USN).

**carrel** Computer-based pilot-training aid: cockpit, keyboard interface and instructor system displays.

**carrier** 1 Aircraft carrier.

2 EM wave, usually continuous and constant amplitude and frequency, capable of being modulated to transmit intelligence.

3 Electronic charge \*, either so-called hole or mobile electron.

4 Substance chosen to carry trace element or trace of radioactive material too small to handle conveniently.

5 Operator of commercial aircraft engaged in transport of passengers and/or freight for hire or reward.

**carrier air group** Two or more aircraft squadrons operating from same carrier (1) under unified command.

**carrier-on-board delivery** Air delivery of personnel, mail and supplies to carrier (1) at sea.

**carrier suppression** Communications system in which intelligence is transmitted by sidebands, carrier being almost suppressed.

**carrier task force** One or more carriers (1) and supporting ships intended to be self-sufficient in prolonged campaign.

**carrier vehicle** Parent body or bus of SBI, can be equipped with mid-course sensors independent of SBI (SDI).

**carry-on baggage** Brought on board by passenger. Some airlines [eg, Aeroflot] make passenger carry all baggage.

**carry the can** Accept, or be awarded, blame for something (RAF).

**carry through** Wing spars and other linking structure inside fuselage (esp. of mid-wing aircraft).

**carry trials** Programme intended to prove carriage and release of fired, dropped or jettisoned stores.

**CARS** 1 Coherent antistrokes Raman spectroscopy.

2 Crew-awareness rating scale.

3 Community aerodrome radio station.

4 Contingency airborne reconnaissance system [MISU] as as in *Carsmisu*.

5 Common automatic recovery system.

**Carsmisu** Contingency airborne reconnaissance systems [and] mission intelligence systems upgrade.

**CART** Combat aircraft repair team.

**Cartesian co-ordinates** System of three mutually perpendicular planes to describe any position in rectilinear space.

**cartridge** Portable container of solid fuel or propellant, with self-ignition system, for propulsion of projectile or supplying pressure to one-shot system.

**cartridge starter** Main-engine starting system energised by reloadable cartridges.

**cartwheel** 1 Aerobatic manoeuvre involving rotation about Z (yaw) axis, at very low airspeed, with that axis approximately horizontal.

2 Crash on ground involving rotation with wings near vertical plane.

**carve-out** Removal of black or otherwise classified program from oversight by security or contract-oversight organization (DoD).

**CAS** 1 Chief of the Air Staff.

2 Collision avoidance system.

3 Close air support.

4 Calibrated, or computed, airspeed (see *airspeed*).

5 Corrected airspeed (obs.).

6 Control [or command] augmentation system (or sub-system).

7 Controlled airspace (CAA).

8 Commission for Atmospheric Sciences.

9 Crisis action system (US JCS).

10 Cockpit avionics system (FSA[3]/CAS).

11 Control actuation section (missiles).

12 Contract Administration Service (or standard[s]).

13 Cost allocation schedule.

14 Combined antenna system.

15 Controlled-access service (satnav).

16 Crashworthy armoured seat.

17 Ceramic abradable seal.

18 Computer-aided software, or support.

19 Cable arresting system.

20 Control actuation system (Goodrich).

21 Crew alerting system.

22 The Croydon Airport Society [1978-] (UK).

23 Co-operative applications satellite.

**CASA, Casa** Civil-Aviation Safety Authority (Australia).

**CASB** Canadian Aviation Safety Board.

**CASC** Combined acceleration and speed control.

**Cascad** Close air support cargo dispenser.

**Cascade** 1 Combat air surveillance correlation and display equipment.

2 Contribution for assessment of common ATM(7) development in Europe (Euret).

**cascade** Array of numerous (eg six or more) sharply cambered aerofoils superimposed to handle large gas flow (eg to turn flow round corner of tunnel circuit). \* theory is also relevant in the design of rotating machines with numerous radial stator and rotor blades.

**cascade reverser** Thrust reverser incorporating one or more cascades to direct efflux diagonally forwards.

**cascading failure** Mechanical failure in which each break triggers the next.

**CASCC** Close air support coordination and control.

**Case, CASE** 1 Computer-assisted, or aided, software engineering.

2 Controlled-airspace synthetic environment.

3 Close air support enhancement.

**case** 1 Outer layer of carburised, nitrided or otherwise case-hardened steel part.

2 Cartridge or shell case housing propellant.

3 Envelope containing solid rocket propellant and withstanding structural and combustion loads.

**case-bonded** Solid propellant poured as a liquid into motor case (3) and cast in situ.

**case chute** See *case ejection*.

**case ejection** Method of disposing of non-consumable case (2), usually stored on board or discharged through chute under assumed positive acceleration.

**case hardening** Heat treatment, usually in a controlled atmosphere, to increase hardness in and near surface of a workpiece, e.g. bearing balls.

**casein** Cold-water glue manufactured from dehydrated milk curd.

**caseless ammunition** Gun ammunition in which case (2) is consumed upon firing.

**casevac** Casualty evacuation.

**Casex** Combined anti-submarine exercise.

**CASF** 1 Composite Air Strike Force (TAC).

2 Contingency aeromedical staging facility.

**CASI** 1 Canadian Aeronautics and Space Institute (Ottawa).

2 Commission Aéronautique Sportive Internationale (Int.).

**Casid** Committee for Aviation and Space Industry Development [1991–; office Taipei] (Int. for Taiwan).

**Casits** Close air support integrated targeting system[s].

**casik** Container for transport and storage of nuclear fuel or radioactive material.

**CASM** Cost per a/c, or available, seat-mile.

**Casom** Conventionally armed stand-off missile.

**Casp** 1 Canada/Atlantic storms program.

2 Commercial airborne security patrol[s] (at KSC).

**Casper** Composite-aircraft spare parts with enhanced reliability.

**CASS** 1 Command active sonobuoy system.

2 Crab-angle sensing system.

3 Consolidated automated support system (USN).

4 Commercial air service standards.

5 Close air support system.

6 Continuing analysis and surveillance system (FAA).

7 Cargo accounts settlement system (IATA).

8 Cockpit access security system.

**Cassegrain** Optical telescope using two parabolic mirrors in series.

**cassette** Standard tape container, eg for recording mission data.

**CASST** Civil aviation safety strategic team.

**CAST, Cast** 1 Civil Aircraft Study Team.

2 Commercial Aviation Safety Team (FAA).

3 Chinese Academy of Space Technology (People's Republic).

4 Complete aircraft static test.

5 Command and staff trainer.

6 Conformal-array seeker technology.

7 Cyclic auto self-test.

8 Commercial Aviation Safety Team (US).

9 Centre for Analysis of Strategies and Technologies (Moscow, R.).

10 Centre for Aviation Safety Technology (CAAC, China).

**CAS-T** Controlled airspace (temporary) (CAA).

**cast-block engine** Piston engine with each linear row of cylinders arranged in a single cast block.

**castellated nut** Typically, hexagon nut with six radial slots for split-pin or other lock.

**Castigliano** Fundamental structural theorems relating loads, deflections and deformation energy.

**casting** Forming material by pouring molten into shaped mould.

**Castor** Corps airborne stand-off radar (UK).

**cast propellant** Solid rocket propellant formed into grain by casting.

**CASU** Compact air-supply unit.

**casual pay parade** One-time payment to a group of personnel for a specific purpose (RAF).

**casualty** Aircraft which suffers damage or sudden severe unserviceability, hence \* action, \* maintenance.

**CASWS** Close air support weapon system.

**CAT** 1 Clear-air turbulence.

2 Comité de l'Assistance Technique.

3 Combat aircraft technology.

4 Computer automatic [or aided] testing.

5 Crisis action team.

6 Cockpit automation technology.

7 Compressed-air [wind] tunnel.

8 Computerized axial tomography (baggage screen).

9 Commercial air transport (category).

**Cat** 1 Aircraft-carrier catapult (colloq.).

2 See *Categories*.

**CATA** 1 Canadian Air Transportation Administration.

2 Control automation and task allocation.

**Catac** Commande Aérienne Tactique (F fighter command).

**Catalin** Cast phenolic thermosetting plastic.

**catalyst** Substance whose presence permits or accelerates chemical reaction, itself not taking part.

**catalyst bed** Porous structure through which fluid passes and undergoes chemical reaction (eg HTP motor).

**cat & trap** Catapult launch and arrested landing.

**Cataphos** Chlorinated phosphate rubber-based paint for marking taxiways, aprons, etc, yellow or white.

**catapult** Device for externally accelerating aeroplane or other vehicle to safe flying speed in short distance. Those on ships, especially surface warships, were originally operated by compressed air, then hydraulic, and now by steam pressure from main ship propulsion. See *LEM(3)*.

**catastrophic instability** Irrecoverably divergent loss of stability at dynamic head sufficient to break primary structure.

**Cat-bird** Co-operative avionics, or airborne, testbed aircraft.

**CATC** 1 College of Air Traffic Control (Hurn, UK).

2 Commonwealth Air Transport Council (UK/Int., office London SW1P).

3 Canadian Aviation Training Centre [primary flying training for Canadian Forces, Southport, Manitoba] (Canada).

**Cat-C** Carrier air-traffic control officer.

**Catca** Canadian Air Traffic Control Association [office, Ottawa].

**CATCC** Carrier air traffic control centre.

**catcher** Small fence-like strips around leading edge of sharply swept or delta-wing naval aircraft; designed to engage barrier.

**CATCS** Central Air Traffic Control School (RAF Shawbury).

**CATE** Conference on Co-ordination of Air Transport in Europe.

**Cat E** 1 Category E for an aircraft, a write-off [now Cat 5].

2 For repaired runway crater, profile allows 4.5 in (114 mm) rise in first 12 ft (3.66 m).

**categories** 1 For flight crew, licence authorisation to qualify on all aircraft within broad groups (eg light aircraft, glider, rotary-wing).

2 For certification of aircraft, grouping based on usage (eg transport, experimental, aerobatic).

3 In bad-weather landings, operational performance \* are defined by runway visible range and decision height:

Cat 1 or I: DH 60 m [200 ft], RVR 800 m [2,600 ft].

Cat 2 or II: DH 30 m [100 ft], RVR 400 m [1,300 ft].

Cat 3a or IIIa: DH 0, RVR 200 m [700 ft but 650 ft is closer conversion].

Cat 3b or IIIb: DH 0, RVR 50 m [150 or 165 ft].

Cat 3c or IIIc: DH 0, RVR 0.

4 For aircraft damage and repairability: Cat 1, undamaged; Cat 2, repairable on unit; Cat 3, repairable by 2<sup>nd</sup> echelon or MU; Cat 4, by manufacturer; Cat 5, a write-off.

5 For runway repairs, see *rough field*.

6 For airfield conflicts, A = near-collision demanding extreme action, B = significant potential of collision; C = ample time to avoid collision (FAA).

7 For runway/taxiway dimensions and bearing strength, coded A to F (ascending order).

**Category 2 box** Rectangular box or window in HUD defining permissible Cat 2 deviation of localiser and G/S.

**catenary** Curve described by filament supported at two points not on same local vertical.

**catering vehicle** Removes and replenishes galley; conventional truck with scissor lift, elevating body usually not including cab.

**Caterpillar Club** Private club formed by Irvin Air Chute Co and open to all who have saved their lives by using parachute of any kind.

**CAT-EVS** CAT(1) enhanced vision system.

**CATH, Cath** Compact air-transportable hospital.

**cathedral** Anhedra (pronounced cat-hedral).

**cathode** 1 Positive terminal of source of EMF (eg battery).

2 Electrode at which "positive current" leaves solid circuit.

3 Negative terminal of electroplating cell.

4 In CRT and similar tube, source of electron stream.

**cathode-ray oscillograph, cathode-ray oscilloscope, CRO** CRT built into device including amplifier, power pack and controls for graphic examination of waveforms and other research.

**cathode-ray tube, CRT** Vacuum tube along which electrons (cathode rays) are projected, deflected by pairs of plates creating electric field (deflected toward positive) and impact on screen coated with electroluminescent phosphor.

**cathode tuning indicator** Triode amplifier and miniature CRT giving visual indication, by closure of well-defined shadow area, of changes in carrier amplitude too small to detect aurally. Also called Magic Eye.

**CATIA, Catia** Computer-aided 3-D interactive analysis [anglicized from next].

**Catia** Conception assistée tridimensionnelle interactive d'applications (F).

**Catic** (CATIC) China National Aero Technology Industrial Corporation.

**cation** Positively charged ion, travelling in nominal direction of current (pronounced cat-ion).

**CATM** Captive air training missile.

**CATO** Civil air traffic operations (or officer).

**catoptric beam** Visible light concentrated into parallel beam by accurate reflector.

**CATP** Commonwealth Air Training Plan, originally *BCATP*.

**Cats, CATS** 1 Combined Aerial Target Services (MoD, UK).

2 Corporate air travel survey.

3 Contracted Airborne Training Services (Canada).

4 Consequence assessment tool set.

5 Computer assistance tools (Phare).

**Catsa, CATSA** Canadian Air Transport Security Authority

**CATSE** Capacity of the air-transport system in Europe (ECAC).

**cat shot** Launch of naval aircraft by catapult.

**cat's whisker** Delicate current pickoff, eg from gyro.

**CATT** Combined arms tactical trainer (giant installation at Warminster, UK).

**CATTS** Central Air Traffic Training School (RAF Shawbury, UK).

**catwalk** Narrow footway along keel of airship.

**CAU** 1 Cold-air unit.

2 Canard actuation unit.

3 Communication[s] access unit.

**CAUFN** Caution advised until further notice.

**Caul** Thin sheet defining surface of composite structure during ATP(8).

**caution note** Written on approach chart, usually warning of high ground.

**caution speeds** Speeds published in Flight Manual as limit for each configuration.

**Cautra, CAUTRA** Co-ordinateur automatique du trafic aérien Français.

**CAUWG** Commercial Ada users working group.

**CAV** *Common aero vehicle*.

**cavalry charge** Aural-warning clarion call usually signifying autopilot disconnect.

**cavitation** Transient formation and shedding of vapour-pressure bubbles at surface of body moving through non-degassed liquid, or of vacuum cavities at surface of body moving through other fluid. Collapse of cavities is violent, causing extreme implosive pressures.

**cavity magnetron** Magnetron having resonant cavities within cylindrical anode-encircling central cathode.

**cavity resonator** Precisely shaped volume bounded by conducting surface within which EM energy is stored at resonant frequency.

**Cav-OK** Ceiling and visibility OK (for VFR), or better than predicted [said as written].

**CAVU** Ceiling and visibility unlimited [ $\geq 10$  km].

**CAW** 1 Canadian Auto Workers [major aerospace union].

2 Circle of Aviation Writers.

**cAw** Continental Arctic air mass, warmer than land surface.

**CAWC** Combined air-warfare course.

**CAWDSG** Combat-aircraft wing-design steering group.

**CAWP** 1 Central annunciator warning panel.

2 Cockpit assessment working party.

- CB** 1 Circuit breaker.  
 2 Chlorobromo-type fire extinguishants.  
 3 Citizens' band radio.  
 4 Centre of balance (or c.b., C-B).  
 5 Chemical/biological.  
 6 Centre/center barrel (major portion of fuselage).  
 7 Construction Battalion (USMC 'Seabees', USN).  
 8 Chaff block.
- C<sub>B</sub>** Lift proportionality constant for circulation-controlled wing.
- C<sub>b</sub>** Cumulonimbus.
- CBA** Capabilities-based assessment.
- CBAA** Canadian Business Aircraft Association [office, Mississauga, ON].
- CBACS** C-band airborne communications system.
- CBASS** Common broadband advanced sonar system ['sea bass'].
- CBAST** Computer-based advanced skills, or systems, trainer.
- CBC** 1 Carbon/BMI composite.  
 2 Common booster core.
- CBD** 1 Central business district of city.  
 2 Chemical/biological defence.
- CBDC** Chemical and Biological Defence Centre (Porton Down, UK).
- CBDP** Chemical and Biological Defense Program (DoD).
- CBDS** Chemical and biological detection system.
- CBE** CAIS(2) bus emulator.
- CBERS** China/Brazil Earth-resources satellite programme.
- CBF** Coalition Blue Force; SA adds situational awareness (US).
- CBG** Carrier Battle Group (USN).
- CBH** Chemical/biological hardening.
- CBI** 1 Computer-based instruction.  
 2 Component burn-in.  
 3 Confederation of British Industries.  
 4 China/Burma/India (theatre WW2).  
 5 Chemical/biological incident; RF adds Response Force (USMC).
- CBIM** Cloudbase information manager.
- C-BIT** Continuous built-in test.
- C-bite** Continuous built-in test equipment.
- CBL** 1 Control by light [registered name].  
 2 Conveyor-belt loader (cargo).  
 3 Crowd barrier line.
- CBLS** Carrier, bomb, light store.
- CBM** 1 Chlorobromomethane.  
 2 Confidence-building measure[s].  
 3 Chronological bus monitor[ing].
- C<sub>b</sub>M, C<sub>b</sub>MAM** Cumulonimbus mammatus.
- CBMS** Chemical and biological mass spectrometer.
- CBN** Cubic boron nitride.
- CBO** Congressional Budget Office (US).
- CBOM** Common bill of material.
- CBP** 1 Contact-burst preclusion.  
 2 Customs and Border Protection, merger of US Customs Service and Border Patrol as part of DHS2 (2003-).  
 3 Code of Best Practice.
- CBR** 1 California Bearing Ratio; system for assessing ability of soft (ie unpaved) surfaces to support aircraft operations; contains terms for aircraft weight, tyre characteristics, landing gear configuration and rutting after given numbers of sorties.  
 2 Chemical, biological, radiological warfare.  
 3 Common bomb rack.  
 4 Center-barrel [3] replacement.  
 5 Cloud-base recorder.
- CBRN** Chemical, biological, radiological and nuclear; E adds explosive.
- CBS** 1 Cavity-backed spiral.  
 2 Central Bulletin Service (NATS AIS).
- CBSF** Common baggage service facilities.
- CBSIFTCB** Common preflight cockpit check for glider: controls, ballast, straps, instruments, flaps, trim, canopy, brake [airbrakes].
- CBSS** Coarse-beam steering system.
- CBT** Computer-based training.
- CBTE** Carrier, (or conventional) bomb triple ejector.
- CBU** Cluster bomb unit.
- CBW** 1 Chemical and biological (or bacteriological) warfare.  
 2 Combat Bombardment Wing (USAAF).
- CBX** Control, or copilot control, box (UAV).
- C by C** Correctness by instruction (ATC).
- CC** 1 Central or countermeasures, computer.  
 2 Critical crack.  
 3 Coastal Command (RAF).  
 4 Communications (UK role prefix).  
 5 Composite command (USAF).  
 6 Circulation controlled (wing or rotor).  
 7 Compass course.  
 8 Co-ordinating committee.  
 9 Counterclockwise.  
 10 C-check.  
 11 Cape Canaveral.  
 12 Component command (DoD).
- C/C** Carbon/carbon [also rendered as C-C].
- C<sub>c</sub>** 1 Equivalent centreline chord.  
 2 Cirrocumulus.
- CC<sup>3</sup>** Counter-C<sup>3</sup>.
- CCA** 1 Cooled cooling air.  
 2 Current cost accounting.  
 3 Carrier-controlled approach.  
 4 Continental Control Area (US + Alaska at 14,500+ ft AMSL).  
 5 Close-combat attack [helos] (US).  
 6 Common-cause analysis.
- CCAA** Camara de Comercio de la Aeronautica y Afines [Montevideo, Uruguay].
- CCAFS** Cape Canaveral Air Force Station.
- CCAM** Centre of excellence for Composites and Advanced Materials (NIAR).
- CC&D** 1 Camouflage, concealment and deception.  
 2 Common command and decision.
- CCAOU** Central Counties Air Operations Unit (UK).
- CCAQ** Consultative Committee on Administrative Questions (ICAO).
- CCAS** Centralised crew-alerting system.
- CCAT** Carrier control approach trainer.
- CCATE** Common-core automatic test equipment.
- CCB** 1 Configuration-change, or -control, board (software).  
 2 Converter circuit-breaker, or [Boeing usage] control breaker.  
 3 Common-core booster.

- CCC** 1 See **C<sup>3</sup>** with suffixes.  
 2 Customs Co-operation Council (ICAO).  
 3 Combat Control Centre.  
 4 Central command control.
- CCCA** Conference of city-centre airports (UK, 1996–; office, London).
- CCCD, C<sup>3</sup>D** 1 Cross-cockpit collimated display.  
 2 Counter-C<sup>3</sup> (Italy).
- CCD** 1 Camouflage, concealment and deception.  
 2 Charge-coupled device, or diode.  
 3 Cursor-control device.  
 4 Computerised current density.
- CCDA** Cockpit-control driver actuator.
- CCDP** Code of Conduct on Defence Procurement.
- CCDTV** Charge-coupled device television.
- CCDR** Contractor cost data report (US).
- CCE** 1 Communications control equipment.  
 2 Commission des Communautés Européennes (Int.).  
 3 Cryogenically cooled electronics.  
 4 Change compositive explorer.
- CC89** Cabin Crew 89 (trade union, UK, office, Slough).
- CCF** 1 Central control function.  
 2 Combined Cadet Force (UK).  
 3 Chopped carbon fibre.
- CCFG** Compact constant-frequency generator.
- CCFL** Cold-cathode fluorescent lamp.
- CCFP** Collaborative convective forecast product, from Aviation Weather Center, esp. concerned with severe weather (US).
- CCG** 1 C-code generator.  
 2 Computer control and guidance.  
 3 Communications control group.  
 4 Computer control group (Paveway).
- CCH** Close-combat helicopter.
- CCI** 1 Commission for Climatology (WMO).  
 2 Chambre de Commerce Internationale (Int.). See **ICC**.  
 3 Continuous capability improvement.
- CCIA** Comitato Coordinazione Industria Aerospaziale (I).
- CCID** Composite combat identification (JIADS).
- CCIG** Cold-cathode ion gauge.
- CCII** Command, control and information infrastructure (UK).
- CCIL** Continuously computed impact line; HUD snapshoot presentation with fully predicted bullet flight profile with various range assessments.
- CCIP** 1 Continuously computed impact point; HUD display for air-to-ground weapon delivery with impact point indicated for any manual release from laydown to steep dive. See also *Delayed\**.  
 2 Critical-component improvement program.  
 3 Common-configuration implementation program (USAF).
- CCIP/IP** With preliminary designation of an initial point.
- CCIR** 1 Comité Consultatif International des Radiocommunications (UIT), assigns wavebands, frequencies.  
 2 Commission Consultatif Internationale pour la Radio.
- CCIRM** Collection, co-ordination and intelligence requirements management.
- CCIS** Command and control information system[s].
- CCISR** Command and control intelligence, surveillance and reconnaissance.
- CCITT** Comité Consultatif International pour Télégraphie et Téléphone.
- CCL** Climate-change levy.
- CCLRC** Council for the Central Laboratory of the Research Councils (UK, by Royal Charter 1995–).
- CCM** 1 Conventional cruise missile.  
 2 Counter-countermeasures.
- CCMA** Comité de Compradores de Material Aeronautico de America Latina (Int.).
- CCMS** 1 Communication control and management system (Scope Command).  
 2 Content compilation management system.
- CCN** Contract change notice.
- CCO** 1 Chief corporate officer.  
 2 Chief of Combined Operations.  
 3 Catapult control officer.
- CCOA** Centre de Conduite des Operations Aériennes (Taverny, F).
- CCOC** Combustion-chamber outer casing.
- CCP** 1 Cutter-centre path (machining).  
 2 Coherent countermeasures processor.  
 3 Combat correlation parameter (simulator).  
 4 Corrosion-control programme.  
 5 Control and correlation processor.  
 6 Common cockpit processor.
- CCPC** 1 Civil Communications Planning Conference (NATO).  
 2 Command and control personal computer (USA/USMC).
- CCPDS** Command and control processing and display system.
- CCPR** Cruise compressor pressure ratio.
- CCQ** Cross-crew qualification.
- CCR** 1 See **ACC** (1).  
 2 Circulation-controlled rotor.  
 3 Configuration-change report, required each time a Part or Data-base No. changes.  
 4 Constant-current regulator.
- CCRA** Canadian Customs and Revenue Agency.
- CCRI** Climate Change Research Initiative (NOAA).
- CCRP** Continuously computed release point; HUD display for air-to-ground weapon delivery with steering command and auto weapon release in any attitude from laydown to OTS, system controlling entire firing sequence and triggering release or firing mechanism automatically.
- CCS** 1 Communications control system (aircraft R/T and i/c selection and audio routing).  
 2 Conformal countermeasures system.  
 3 Computer and computation subsystem (ACMI).  
 4 Combat Control Squadron (USAF).  
 5 Cargo community system, electronically links shippers, airports, forwarders and carriers.  
 6 Cabin-communication system.  
 7 Common carriage system [external weapons].  
 8 Communications countermeasures set.  
 9 Common-core system.  
 10 See next.
- CCS-C** Command and control system, consolidated.
- CCSL** Cirrocumulus, standing lenticular wave.
- CCSS** Command and control switching system.
- Cct** Airfield circuit.

**CCTS** 1 Co-ordinating Committee for Telecommunications by Satellite.

2 Cabin cordless-telephone system.

3 Combat Crew Training Squadron (USAF).

**CCTV** 1 Closed-circuit TV.

2 Colour cockpit TV; 'S' adds sensor.

3 Crew/cargo transfer vehicle.

**CCTW** Combat Crew Training Wing (USAF).

**CCTWT** Coupled-cavity travelling-wave tube.

**CCU** 1 Cockpit, communications, central, cursor or common control unit; TSD adds tactical-situation display.

2 Control and compensation unit.

**CCV** 1 Control-configured vehicle.

2 Command and control vehicle.

3 Chamber coolant valve.

**CCW** 1 Counter-clockwise.

2 Circulation-controlled wing.

**CCWS** Common controller workstation (CAATS/MAATS).

**CD** 1 Certification demonstration.

2 Concept demonstration.

3 Clearance delivery (US, not UK).

4 Controlled-diffusion.

5 Convergent/divergent.

6 Cycle-dependent.

7 Capacitor-discharge.

8 Cold.

9 Compact disk.

10 Circular dispersion.

11 Civil Defence (UK, WW2).

12 Chrominance difference.

13 Carrier detect.

14 Coast Defence (RAF 1926 - c40).

**Cd** Cadmium.

**cd** Candela(s).

**Cd, C<sub>d</sub>** Total drag coefficient.

**Cd<sub>0</sub>** Zero-lift drag coefficient.

**CD-2** Common digitiser 2 (FAA).

**CDA** 1 Centre for Defence Analyses (UK).

2 Controlled-diffusion aerofoil.

3 Concept-demonstration aircraft.

4 Continuous-descent, or constant descending, approach, or arrival.

5 Cognitive decision-aiding.

6 Co-ordinating design authority.

7 Cruciform detector array.

8 Contrôle d'Aérodrome [international title of FSS1].

**C/DA** Climb and dive angle.

**CDAA** Circularly disposed aerial (antenna) array.

**CDAI** Centre de Documentation Aéronautique Internationale.

**CDAT** Critical-defect assessment technology.

**CDB** 1 Cast double-base rocket propellant, allows case-bonding, varied formulation and charge configuration, low smoke emission etc.

2 Central [ATC] data bank, or base.

3 Common database [often preceded by CE4].

**CDBP** Command Data Buffer Program (USAF).

**CDBR** Cabin databus repeater.

**CDC** 1 Course and distance calculator.

2 Concorde Directing Committee (Comité Direction Concorde).

3 Cour des Comptes [general accounting office] (F).

4 Cabin-display computer.

5 Centre[s] for Disease Control and Prevention (US).

**CDCN** Controller of Defence Communications Network (UK).

**CDD** Credible delicious decoy.

**CDDT** Countdown demonstration test.

**CDE** 1 Chemical Defence Establishment (UK).

2 Concept development effort.

**CDF** 1 Clearance delivery frequency.

2 Core-driven fan [s adds stage].

3 Core-distributed interactive-simulation facility.

**Cd<sub>F</sub>** Drag coefficient for zero lift.

**Cd<sub>f</sub>** Fuselage drag coefficient.

**CD5B** Colour-coded 5-bar approach light system.

**CDFNT** Cold front.

**Cd<sub>fric</sub>** Frictional drag coefficient, usually close to *Cd<sub>F</sub>*.

**CDFS** Core-driven fan stage.

**CDG** Configuration-database generator.

**CDH** Constant delta height.

**CDI** 1 Course-deviation indicator.

2 Collector diffusion isolation.

3 Capacitor-discharge ignition.

4 Compass director indicator.

5 Collateral duty inspector (US).

6 Chief of Defence Intelligence (UK).

7 Classification, discrimination and identification.

**Cdi** Coefficient of induced drag.

**CDIP** Continuously displayed impact point (HUD).

**CDIRRS** Cockpit display of IR reconnaissance system.

**CDIS** Central control function display.

**CDIU** Circuit-mode data interface unit.

**CDL** 1 Configuration data list (JARs).

2 Chief of Defence Logistics (UK).

3 Common datalink.

4 Cabin-discrepancy log.

**CDL, C<sub>DL</sub>** Lift-dependent drag coefficient, sub-critically equal to induced-drag coefficient.

**CDM** 1 Collaborative decision-making.

2 Clean development mechanism.

3 Control display and management.

**CDMA** Code-division multiple-access.

**CDMATC** Collaborative decision-making ATC.

**CDMC** Cranfield Disaster-Management Centre (UK).

**Cd<sub>min</sub>, Cd<sub>min</sub>** Minimum drag-coefficient.

**CDMLS** Commutated-Doppler microwave landing system.

**CDMS** CDM1 and CDM3 system.

**CDMT** Central design and management team.

**CDMVT** 'Cadbury's Dairy Milk, very tasty', one of countless mnemonics, in this case meaning course→deviation→magnetic→variation→true (RAF WW2).

**CDN** 1 Co-ordinating message (ICAO).

2 Certificat de Navigabilité (C of A, F).

**CDNU** Control, display and navigation unit (helicopter).

**Cdo** Commando (Unit).

**CDOPS, C-dops** Coherent-Doppler scorer.

**CDP** 1 Central data processor.

2 Countermeasures dispenser pod.

3 Critical decision point.

4 Chief of Defence Procurement (UK).

5 Contract-definition phase.

6 Concept-demonstration phase, or program[me].

7 Cockpit-display player (F-22).

- 8 Continuous-data program.
- C<sub>dp</sub>** Coefficient of profile drag.
- CDPI** Crash data position indicator.
- CDR** 1 Critical design review.  
2 Customer departure record[s].  
3 Conditional route.
- CDRA** Carbon dioxide removal assembly.
- CDRB** Canadian Defense Research Board.
- CDRL** Contract data requirements list.
- CD-ROM** Compact-disk read-only memory.
- CDRS** 1 Control and data retrieval system.  
2 Container-design retrieval system (USAF).  
3 Cockpit display and recording system.
- CDS** 1 Controls and displays, or control/display, subsystem.  
2 Chief of Defence Staff (UK).  
3 Coefficient of slush drag, derived from spray impingement drag, basic precipitation drag and wheel geometry.  
4 Container, or covert, delivery system (USAF).  
5 Cabin distribution system (Satcom).  
6 Concept-definition study.  
7 Cockpit-design simulator.  
8 Component documentation status.  
9 Common display system.  
10 Cockpit development station.  
11 Countermeasure[s] dispensing system.
- CdS** Cadmium sulphide/sulfide, IR detector.
- CdSe** Cadmium selenide.
- CDSS** Center for Defence/Defense and Security Studies (Univ. of Manitoba).
- CDT** 1 Central [US] Daylight Time.  
2 Crew duty time.  
3 Controlled departure time.
- CDTC** Controlled descent through cloud.
- CDTF** Coast Defence Training Flight (RAF to 1935).
- CDTI** Cockpit display of traffic (ATC) information.
- CD trainer** Cockpit-drill trainer.
- CD-TR-TV** Con-di, thrust-reverser thrust vector.
- CDU** 1 Control and display unit.  
2 Cockpit, or console, or combined, display unit.  
3 Has been interpreted as central display unit.
- C<sub>Dv</sub>** 1 The speed-damping derivative.  
2 Vertical damping derivative [helicopter].
- CDVE** Commandement de vol électrique = fly by wire (F).
- CDVS** Cockpit-door video surveillance; S adds system.
- CDW** Community Development Worker (RAF).
- CDWS** Common defense weapon system (USN/USMC helicopters).
- C<sub>D0</sub>** Drag coefficient at zero lift.
- CE** 1 Concurrent engineering.  
2 Computing element.  
3 Chemical energy.  
4 Common environment.  
5 Communications electronics [engineer branch] (RAF).
- C<sub>e</sub>** Specific fuel consumption (R).
- CEA** 1 Code of European Airworthiness.  
2 Commissariat à l'Énergie Atomique (F).  
3 Circular-error average.  
4 Combined electronics assembly.  
5  
6
- 7
- CEAA** Commandement des Ecoles de l'Armée de l'Air (F).
- CEAC** 1 Commission Européenne de l'Aviation Civile (Int.).  
2 Committee for European Aerospace Cooperation (Int.).
- CEAM** Centre d'Expériences Aériennes Militaires (F, Mont de Marsan).
- CEAS** Confederation of European Aeronautical Societies renamed Council of European Aerospace Societies [2007, Brussels] (Int.).
- CEAT** Centre d'Essais Aéronautiques de Toulouse (F).
- CEATS** Central European Air-Traffic Service[s] (Vienna).
- CEB** 1 Combined-effects bomblet.  
2 Curve of equal bearings, from NDB.  
3 Commercial engine bulletin (FAA).
- CEC** 1 Cooperative-engagement capability.  
2 Communications and Electronics Command (USA).  
3 Continental entry chart.  
4 Centre d'Entraînement au Combat (F).  
5 Crew ejectable cabin.
- CECAI** Conference of European Corporate Aviation Interests (Int.).
- CECC** Cenelec Electronic Components Committee (Int.).
- CEcom** Communications and Electronics Command (USA).
- CEconite** Weatherproof fabrics for skinning light aircraft.
- CED** 1 Continued engineering development.  
2 Competitive engineering definition.
- Cedam** Combined electronic display and map; derived from Comed.
- Cedap** Cockpit-emergency directed-action program.
- CEdle** Compact efficient direct-lift engine.
- Cedocar** Centre de Documentation de l'Armement [F-00460 Armées] (F).
- CEE** 1 Cabin emergency evacuation.  
2 Commission on rules for Electrical Equipment (Int.).  
3 Centro de Estudios Espaciales [Chile].
- Ceesim** Combat electromagnetic-environment simulator.
- CEF** 1 Cost-effectiveness factor (materials).  
2 Contrast-enhanced filter.  
3 California Engineering Foundation.
- CEFA** Cooperation for Environmentally Friendly Aviation (EU).
- CEFH** Cumulative engine flight-hours.
- CEI** 1 Critical engine inoperative.  
2 Council of Engineering Institutions (UK).  
3 Commission Electrotechnique Internationale.  
4 Combat efficiency improvement.  
5 Cabin equipment interface.
- ceil** Ceiling.
- ceiling** 1 Of aircraft, greatest pressure height [density altitude] that can be reached (see *absolute* \*, *absolute aerodynamic* \*, *service* \*, *zoom* \*).  
2 Of cloud, height above nearest Earth's surface of lowest layer of clouds or obscuring phenomena that is reported as 'broken,' 'overcast' or 'obscuration' and not 'thin' or 'partial' (FAA).  
3 Height above nearest Earth's surface of cloud base

below 6000 m/20,000 ft covering 50+ per cent of sky (ICAO).

4 Amount above which FFP contract cannot be implemented.

**ceiling balloon** Small free balloon, whose rate of ascent is known, timed from release to give measure of ceiling (2).

**ceiling climb** Aircraft flight authorised for express purpose of measuring ceiling (1).

**ceiling height indicator** Device for measuring height of spot produced by ceiling projector.

**ceiling light** See *ceiling projector*.

**ceiling projector** Source of powerful light beam projected vertically to form bright spot on underside of cloud.

**ceiling unlimited** Sky clear or scattered cloud, or base above given agreed height (in US 9,750 ft, 2,970 m).

**ceiling zero** Fog.

**ceiliometer** Device for measuring ceiling (2), esp. ceiling projector, in later types a lidar, whose beam oscillates about horizontal axis like metronome, linked with photo-cell with readout in tower.

**CEL** 1 Centre d'Essais des Landes (F).

2 Capacitatively-enhanced logic, speed enhanced by incorporation on to chip of capacitor(s).

3 Component evolution list.

**Celar** Centre Electronique de l'Armement (F).

**celestial altitude** Altitude (2) of heavenly body or point on celestial sphere.

**celestial body** Meaning arguable, but normally all bodies visible or supposed other than Earth and man-made objects. Diffuse bodies (eg nebulae) often called 'structures'.

**celestial equator** Great circle formed by extending Earth equatorial plane to celestial sphere.

**celestial fix** See *astro fix*.

**celestial guidance** Guidance of unmanned vehicle by automatic star tracking.

**celestial horizon** Great circle formed on celestial sphere by plane passing through centre of Earth normal to straight line joining zenith and nadir.

**celestial mechanics** Science of motion of celestial bodies.

**celestial meridian** Meridian on celestial sphere.

**celestial navigation** See *astronavigation*.

**celestial pole** Terrestrial pole projected upon celestial sphere.

**celestial sphere** Imaginary hollow sphere of infinite radius centred at centre of Earth (for practical purposes, at eyes of anyone on Earth).

**celestial triangle** Spherical triangle on celestial sphere, esp. one used for navigation.

**cell** 1 Combination of electrodes and electrolyte generating EMF; basic element of battery.

2 Portion of structure having form of rigid box, not necessarily completely enclosed.

3 In biplane or other multi-wing aircraft, complete assembly of planes, struts and wires forming structural box.

4 Gasbag of aerostat, esp. in airship having multiple bags in outer envelope.

5 In EDP, elementary unit of storage.

6 Self-contained air mass of violent character (eg TRS).

7 In military operations, smallest tactical aircraft element flying together (often three); another definition is

a small unit of airborne military aircraft which can if necessary operate independently.

8 Compartment forming an element of large internal bomb bay.

**Cellophane** Early cellulose-base transparent plastics film.

**cell-textured** See *textured visuals*.

**cellular logic image processing** Each pixel has its own dedicated logic element to which are attached its eight adjacent pixels in parallel architecture. Thus each instruction is executed by all processing elements simultaneously.

**cellule** Cell (3) or assembly of two or more wings on either side of centreline.

**Celluloid** Early transparent plastics film from nitro-cellulose treated with camphor.

**cellulose** Carbohydrate forming major structural constituent of plants; precursor of many aeronautical materials.

**cellulose acetate** Thermoplastic from cellulose and acetic acid; used in rayon, film, lacquer, etc.

**cellulose dope** See *dope*.

**cellulose nitrate** Thermoplastic from cellulose and nitric acid; used in explosives, dopes and structural plastics.

**Celsius** Scale of temperature, symbol °C. Unit is same as SI scale K, but numbers are lower by 273. Until 1948 called Centigrade.

**CELT** Combined emitter location (or locator) testbed.

**CELV** Complementary expendable launch vehicle, ie in addition to Shuttle (US).

**CEM** 1 Centre d'Essais de la Méditerranée (F).

2 Combined-effects munition (cluster dispenser).

3 Conventional enhancement modification.

4 Concept evaluation model.

5 Core exhaust mixer.

6 Control-, or contract, equipment manufacturer.

7 Computational electromagnetics.

8 Controlled-emissivity material.

**Cementite** Iron carbide; carbon form in annealed steel.

**Ceminal** Cost/effective manufacturing in new aluminum (aluminium) alloys (US).

**CEMS** Centre d'Etudes de la Météorologie Spatiale (F).

**CEMT** Conférence Européenne des Ministres des Transports.

**CEN** 1 Centre d'Etudes Nucléaires (F).

2 Comité Européen Normalisation [Int. standards].

**CENA** Centre d'Etudes (formerly d'Expérimentation) de la Navigation Aérienne (F).

**CENC** China-Europe Global Navigation Satellite System Technical Training and Co-operation Centre (from September 2003).

**Cenelec** Comité Européen pour la standardisation de l'Électrotechnique (Int.).

**Senipa** Centro de Investigaçao e Prevençao de Acidentes Aeronáuticos (Braz.).

**cenospheres** Microscopic hollow ceramic spheres.

**Senrap** Center radar processing (terminal ATC).

**Centag** Centre Army Group (NATO, formerly).

**centi** Prefix,  $\times 10^{-2}$  (one hundredth), symbol c (non-SI).

**Centigrade** See *Celsius*.

**centilitre** Cl, 0.01 litre, measure of volume contrary to SI.

**centimetre, centimeter** 0.01 metre; measure of length contrary to SI.

**centimetre Hg** Used as unit of pressure = 1.33 kPa.

**centimetric radar** Radar operating on wavelengths around 0.01 m, with frequencies 3–30 GHz.

**centipoise** See *viscosity*.

**centistoke** See *viscosity*.

**CENTO, Cento** Central Treaty Organization (1955–80, Iran, Iraq, Pakistan, Turkey, UK, US).

**central altitude reservation** See *CARF*.

**centralised fault display system** Avionics system accessing all on-board BITE systems to extract and display data and initiate maintenance tests.

**centralised servicing** Establishment of one unit and site for all routine maintenance on station, breaking previous intimate relationship between crew chief and each aircraft (RAF).

**central warning panel** See *CWP (1)*.

**centrebody** Streamlined body in centre of circular, semi-circular or quasi-circular supersonic intake (inlet) to cause inclined shock.

**centre controls** To move primary flight controls from deflected to neutral position.

**centre engine** Engine on centreline of multi-engined aircraft.

**centreline** 1 Principal longitudinal axis; usually also axis of symmetry (eg of aircraft, missile, runway).

2 In aerofoil section, line joining leading and trailing edges and everywhere equidistant from upper and lower surfaces, all measures being normal to line itself.

**centreline aircraft** See *centreline engine[s]*.

**centreline camber** Ratio of maximum distance between chord and centreline (2) to chord.

**centreline closure** Compressor, or [more often] turbine-blade rub caused by slight radial displacement.

**centreline engine[s]** Any engine on longitudinal centreline of multi-engine aircraft [engines hung on side of fuselage or in wing roots are excluded]. The pilot does not need a multi-engine rating.

**centreline gear** Main landing gear on aircraft centreline.

**centreline lighting** On runway, flush lights at 50 ft (15 m) intervals terminating 75 ft (23 m) from each threshold.

**centreline noise plot** Plot of aircraft noise, usually EPNdB, along runway centreline extended (usually 6 st miles, 9.6 km) in each direction covering approach and climb-out.

**centreline tank** *Centre tank 1* [not 2].

**centre of area** See *centroid*.

**centre of buoyancy** Point through which upthrust of displaced fluid acts; e.g. in case of aerostats and marine aircraft afloat.

**centre of burst** Mean point of impact.

**centre of dynamic lift** In aerostat, point on centreline through which lift force due to motion through atmosphere acts.

**centre of gravity, c.g.** Point through which resultant force of gravity acts, irrespective of orientation; in uniform gravitational field, centre of mass. For two-dimensional forms, centroid.

**centre of gravity limits** In nearly all aircraft, esp. aerodynes, published fore and aft limits for safe c.g. position; in case of aeroplanes expressed as percentages of MAC.

**centre of gravity margin**  $H_n$ , distance along aircraft major axis from c.g. to neutral point, expressed as % SMC.

**centre of gravity travel** Fore and aft wander of c.g. in

course of flight due to consumption of fuel, release of loads, etc.

**centre of gross lift** In aerostat, usually centre of buoyancy.

**centre of gyration** For solid rotating about axis, point at which all mass could be concentrated without changing moment of inertia about same axis.

**centre of lift** Resultant of all centres of pressure on a wing or other body.

**centre of pressure** Point through which all mass of solid body could act without changing dynamics in translational motion; loosely, but not always correctly, called c.g. Alternative title, centre of inertia.

**centre of pressure, c.p.** On aerofoil, point at which line of action of resultant aerodynamic force intersects chord. Almost same as aerodynamic centre, but latter need not lie on chord. In general, c.p. is resultant of all aerodynamic forces on surface of body.

**centre of pressure coefficient** Ratio of distance of c.p. from leading edge to chord.

**centre of pressure moment** Product of resultant force on wing (or section) and distance from c.p. to leading edge (or leading edge produced at aircraft centreline). Inapplicable to very slender wings.

**centre of pressure moment coefficient** As above but divided by dynamic pressure; not same as coefficient of moment.

**centre of pressure travel** 1 Linear distance through which c.p. travels along chord over extreme negative to positive operating range of angles of attack, ignoring compressibility in subsonic flow.

2 Linear distance through which c.p. travels along chord over complete aircraft operating range of Mach numbers (supersonic aircraft only).

**centre of thrust** Thrust axis, for one or multiple engines.

**centre of twist** The axis about which a solid body rotates when under an applied torque.

**centre punch** Hand tool for making accurate conical depressions.

**centre section** In most winged aircraft, centre portion of wing extending symmetrically through or across fuselage and carrying left and right wings on its tips. Certain aircraft have wing in one piece, or in left and right halves joined at centreline; such have no \*\*, though some authorities suggest it is then wing inboard of main landing gear.

**centre tank** 1 Most commonly, a fuel tank inside the fuselage in a system having additional tanks in the wings.

2 A tank inside the inboard part of each wing, usually structurally part of the single main inter-spar box, and separated from the main tank by a rib.

**centrifugal breather** Centrifuge filter for removing oil from air vented overboard from interior of engine, often after passage through porous segments.

**centrifugal clearance** Radial clearance between rotating mass and surrounding fixed structure at peak rotating speed.

**centrifugal clutch** Freewheels at low speed, but takes up drive as speed is increased. At full power slip tends towards zero. Main purpose is to prevent excessive load on gear teeth.

**centrifugal compressor** Rotary compressor in form of disc carrying radial vanes to accelerate working fluid radially outward to leave periphery at very high speed, this being converted to pressure energy in fixed diffuser.

**centrifugal separator** See *centrifuge filter*.

**centrifugal twisting moment** Moment tending to rotate propeller blades towards zero pitch (opposing coarsening of pitch).

**centrifuge** 1 Device for whirling human and other subjects about vertical axis, mainly in aerospace medicine research.

2 Device for imparting high unidirectional acceleration to hardware under test.

3 Device for imparting high unidirectional acceleration to mixtures of fluids with or without particulate solids to separate constituent fractions.

**centrifuge filter** Action, inherent in turbofans and some other machines, which in rotating fluid flow causes unwanted particulate solids to be centrifuged outwards away from core.

**centring, centering** Radial and, usually, also axial constraint of floated gyro to run equidistant at all points from enclosure.

**centring control** System which, on demand, centres a variable in another system.

**centripetal** Acceleration toward axis around which body is rotated; usually equal and opposite to centrifugal (see *coriolis*).

**centrisep** Centrifugal separator (*centrifuge filter*).

**centroid** In geometrical figure (one, two or three dimensional), point whose co-ordinates are mean of all co-ordinates of all points in figure. In material body of uniform composition, centre of mass.

**Centrospas** [also rendered *Tsentro-*] Ministry for defence, emergencies and natural disasters (R).

**CEO** 1 Chief executive officer of corporation or company.

2 Crew Earth observation.

**CEOA** Central Europe Operating Agency (NATO pipelines).

**CEOC** Colloque Européen des Organisations de Contrôle (Int.).

**CEOI** Common electronic operating instructions.

**CEOS** Committee on Earth Observation Satellites (Int.).

**CEP** 1 See *circle of equal probabilities*; also called circular error probable.

2 Concurrent evaluation phase.

3 Chromate-enriched pellet.

4 Common engine program.

**CEPA** 1 Commission d'Evaluation Pratique d'Aéronautique (F).

2 Common European Priority Area.

**Cepana** Commission d'Examen Permanent des Matériels Nouveaux d'Aéronautique (F).

**CEPME** College for Enlisted Professional Military Education (USAF AU).

**CEPr** Centre Essais de Propulseurs (Saclay, F).

**CEPS** Central European pipeline system (NATO).

**CEPT** 1 Conférence Européenne des Postes et Télécommunications (Int.).

2 Cockpit emergency procedures trainer.

**CER** 1 Cost-estimating relationship.

2 Certified emission reduction[s].

**ceramal** See *cermet* (from ceramic + alloy).

**ceramel** See *cermet* (from ceramic metal).

**Cerap** Combined Center Radar Approach Control.

**CERCA** Commonwealth and Empire conference on Radio for Civil Aviation.

**Cerdec** Communication-Electronics Research, Development and Engineering Center (USA).

**Ceres** 1 Clouds and Earth's radiant-energy system.

2 Computer-enhanced radio emission surveillance (UK).

**CERFP** Chemical, biological, radiological, nuclear or high-yield explosive enhanced response force package.

**ceria glass** Amorphous semiconductor glass doped with cerium dioxide.

**cerium** Reactive metal, Ce, density 8.2, MPt 799°C.

**Cerma, CERMA** Centre d'Etudes et de Recherches de Médecine Aéronautique (F).

**cermet** 1 Composite material attempting to combine mechanical toughness of metal with hardness and refractory qualities of ceramics. Early examples cemented carbides, eg tungsten carbide sintered with cobalt.

2 Incorrectly, part made of ceramic bonded to metal.

**CERNAI** Study Commission on international air navigation (Brazil).

**CERP** Centre-Ecole Régional de Parachutisme.

**Cerrobase** US lead-bismuth alloy, MPt 125°C.

**Cerrobend** US bismuth-tin-lead-cadmium alloy, MPt 68°C.

**Cerromatrix** US lead-tin-antimony alloy, MPt 105°C.

**CERS** 1 Centre Européen de Recherche Spatiale (see *ESRO*).

2 Carrier evaluation and reporting system.

**CERT** 1 Centre d'Etudes et de Recherches de Toulouse (ONERA).

2 Committee on Energy Research and Technology (European Community).

**Certico** Committee on Certification (ISO).

**Certificate of Airworthiness** Issued to confirm each individual aircraft is airworthy, renewed at intervals (CAA). Also issued for basic type of aircraft, called Type certificate in US.

**Certificate of Compliance** Issued to confirm functioning part of aircraft has been made/overhauled/repared correctly (CAA).

**Certificate of Experience** Document required by private pilot showing flying as PIC in each preceding 13-month period (CAA UK).

**Certificate of Maintenance** Issued upon completion of major overhaul or other routine work affecting airworthiness (CAA).

**Certificate of Release [for Service]** Issued after heavy maintenance.

**Certificate of Test** Document issued on release of refurbished or overhauled item.

**certification** For aircraft, issue of ATC (4) for US, C of A for UK or equivalent by national certifying authority, stating type meets all authority's requirements on grounds of safety. Other aircraft certificates include Production and Registration.

**certification pilot** Test pilot employed by national certification authority to evaluate all types of aircraft proposed for use by operator in that country, from whatever source.

**certification test** Test conducted by certification authority prior to issue of certificate.

**CES** 1 Catapult-end speed.

2 Civil Engineering Squadron (USAF).

- 3 Consumables, expendables and standard hardware.  
 4 Combat environment simulation.
- Cesar** Computing environment StralCom architecture.
- CESE** Communications equipment support element.
- cesium, caesium** Extremely soft silver metal, highly reactive, used as working fluid as jet of charged ions in space thrusters.
- CESR** Centre d'Etude Spatiale des Rayonnements (space radiation).
- CEST** 1 Convertible-engine system technology.  
 2 Centre for the Exploitation of Science and Technology (UK).  
 3 Central European Summer Time.
- CESTA** 1 Continuous engineering services and technical assistance.  
 2 Centre d'Etudes des Systèmes et des Technologies Avancées (F).
- CET** 1 Combustor exit, or engine, temperature.  
 2 Core-engine test.  
 3 Calculated estimated time [surely tautological]; A adds arrival, D departure, O overflight.  
 4 Central European Time.
- CETA** Crew and equipment translation aid.
- cetane rating** Numerical scale for ignition quality of diesel fuels.
- CETO** Center for Emerging Threats & Operations (2002, USA).
- CETPS** Cooperative engagement transmission processing set.
- CETS** Contractor engineering technical services.
- CETT** Core engine to test (date).
- CEU** Checklist entry unit.
- CEV** 1 Centre d'Essais en Vol [Brétigny, Istres, Cazaux] (F).  
 2 Crew exploration vehicle, due for manned spaceflight 2014– (NASA).
- CEWI** Combat electronic warfare [and] intelligence.
- CF** 1 Centrifugal force.  
 2 Concept formulation.  
 3 Carbon-fibre.  
 4 Charge [or change] field.  
 5 Centrifuge filter.  
 6 Controlled fragmentation.  
 7 Change frequency, or constant frequency.  
 8 Course to selected fix.  
 9 Communications Flight.  
 10 Conversion Flight.
- C<sub>f</sub>, c<sub>f</sub>** 1 Measured thrust coefficient of rocket.  
 2 Skin friction coefficient (see  $CD_{fric}$ ).
- C<sub>f</sub>** Cubic feet.
- cf, c<sub>f</sub>** Flap chord.
- c<sub>f</sub>** Local skin-friction coefficient.
- C<sub>f</sub><sup>o</sup>** Theoretical thrust coefficient of rocket.
- CFA** 1 Cross- (or crossed-) field amplifier.  
 2 Chief flight attendant.  
 3 Caribbean Federation of Aeroclubs (Int.).
- CFAC** 1 Constant-frequency alternating current.  
 2 Combined-Forces Air Component [C adds Commander] (USAF).
- CFAO** Conception et fabrication assistée par ordinateur (F).
- CFAR** Constant false-alarm rate (ECM).
- CFAS** 1 Commandement des Forces Aériennes Stratégiques (F).  
 2 Federal office for space (Switzerland).
- C-Fast** Counter-force autonomous surveillance and targeting (USAF).
- CFAWC** Canadian Forces Aerospace Warfare Center [at CFB Trenton].
- CFB** 1 Cruise fuel burn.  
 2 Canadian Forces Base.
- CFC** 1 Cycles to first crack (structures).  
 2 Cold fog clearing.  
 3 Carbon-fibre composite.  
 4 Central fire control.  
 5 Core-failure clutch.  
 6 Centennial of Flight Commission (US).  
 7 Chlorofluorocarbon.
- CFCF** Central flow control facility (FAA 1).
- CFD** 1 Chaff/flare dispenser; C adds computer, CU control unit, IU interface unit, S system.  
 2 Centralized fault display (IU adds indicator or interface unit, S adds system).  
 3 Computational fluid dynamics.  
 4 Continuous fire detectors, or detection.
- CFE** 1 Contractor-furnished equipment.  
 2 Central Fighter Establishment (RAF).  
 3 Conventional Forces in Europe (Treaty).
- CFES** Continuous-flow electrophoresis in space.
- C<sub>Fex</sub>** Excess-thrust coefficient.
- CFF** 1 Cost plus fixed fee, sometimes CPFF.  
 2 Critical flicker frequency (electronic displays).
- CFFT** 1 Critical flicker fusion threshold.  
 2 Cockpit and forward-fuselage trainer (F-22).
- CFFTS** Canadian Forces Flying Training School.
- CFG** Customer focus group.
- C<sub>fg</sub>** Gross thrust coefficient of a [usually subsonic] jet engine propulsive nozzle.
- CFI** 1 Chief flying instructor (UK).  
 2 Certificated flight instructor (US).  
 3 Call for improvement[s] (DoD).
- CFII** Civilian, or certificated, flight instrument instructor (US).
- CF/IMS** Contaminant and fluid-integrity measuring system.
- CFIT** Controlled flight into terrain.
- CFK, C<sub>f</sub>K** CFRP (G), usually KfK.
- CFL** Cleared flight level.
- CFM** Common functional module.
- cfm** Cubic feet per minute.
- CFMO** Command flight medical officer.
- CFMT, C/F/M/T** Celsius, fahrenheit, magnetic, true.
- CFMU** Central Flow, or Flight, Management Unit (Eurocontrol).
- CFO** 1 Coherent-fibre optics.  
 2 Chief Financial Officer.  
 3 Central Forecast Office.
- C433** Very strong al-alloy for lower wing skin (Alcoa).
- CFP** 1 Cost plus fixed price.  
 2 Communications-failure procedure.  
 3 Cold-front passage.
- CFPD** Command flight-path display.
- CFR** 1 Co-operative Fuel Research.  
 2 Crash fire rescue.  
 3 Code of Federal Regulations.  
 4 Contact flight rules.  
 5 Call for release.  
 6 Company-funded research.

**CFROI** Cash-flow return on investment.  
**CFRP** Carbon-fibre reinforced plastics.  
**CFS** 1 Central Flying School (RAF).  
 2 Cabin file server.  
 3 Chlorofluorosulphonic acid, suppresses contrails.  
 4 Customer fleet service.  
**CFSO** Command flight safety officer.  
**CFSP** Common foreign and security policy (EU).  
**CFT** 1 Conformal fuel tank.  
 2 Contractor flight test.  
**CFTC** Carbon-fibre thermoplastic composite[s].  
**CFTR** Cold-fan thrust reverser.  
**CFTS** Contracted Flying Training and Support (Canadian DnD).  
**CFU** 1 Colony-forming unit, measure of bacteria per cubic metre of cabin air.  
 2 Cartridge-firing unit (countermeasures).  
**CF weight** Contractor-furnished.  
**CFWS** Central Flow Weather Service; U adds Unit.  
**CG** 1 Cargo glider, USAAF 1941–47  
 2 Lethal gas phosgene.  
 3 Guided-missile cruiser (USN).  
 4 Commanding General.  
 5 Coast Guard.  
**C<sub>g</sub>** Ratio of actual/ideal propulsive thrust.  
**c.g.** Centre of gravity.  
**CGA** Coevolutionary genetic algorithm[s].  
**CGAC** Combination, or combined, generator and air-conditioner (trailer mounted).  
**CGAO** Conference of General-Aviation Organizations (UK).  
**c.g. arm** Arm (2) obtained by adding all individual moments and dividing sum by aircraft total mass.  
**CGAS** Coast Guard Air Station (US).  
**CGASC** Cornell-Guggenheim Aviation Safety Center (US).  
**CGB** Central gearbox.  
**CGC** Complementary ground component [European counterpart of ATC 15].  
**CGCC** Centre of gravity control computer.  
**CGF** Computer-generated [usually armed hostile] forces.  
**CGH** Guided-missile/helicopter cruiser (USN).  
**CGI** 1 Chief ground instructor.  
 2 Computer-generated image, or imagery.  
**CGIVS** CGI (2) visual system.  
**CGL** Circle guidance light[s].  
**c.g. limits** Forward and aft limits, usually expressed as percentage MAC, within which aircraft c.g. must fall for safe operation.  
**CGM** Computer-graphics metafile[s] [sometimes CGMFL].  
**CGM load** Combined gust and manoeuvre load.  
**CGN** Guided-missile cruiser, nuclear (USN).  
**CGP** Coal-gasification plant, eg for jet fuel.  
**CGPM** Conférence Général Poids et Mesures [Int.].  
**CGRO** Compton gamma-ray observatory.  
**CGS** 1 Centimetre, gramme, second system of units, superseded by SI.  
 2 Central Gunnery, or [later] Gliding, School (RAF).  
 3 Computer-generated simulation.  
 4 Common ground segment, or station.  
 5 Chief of the General Staff (UK).  
**CGT** 1 Consolidated ground terminal.

2 Command generator tracker.  
**CGV** Computer-generated voice.  
**CGW** Combat gross weight.  
**CH** 1 Channel (ICAO).  
 2 Compass, or course, heading.  
 3 Critical height.  
 4 Chain home.  
**CH** 1 Hinge, or rotor drag force, coefficient.  
 2 High cloud.  
**Ch** 1 Channel.  
 2 Hinge-moment coefficient, hinge moment divided by control-surface area and chord aft of hinge axis and by  $q$ .  $Ch\delta$  and  $Ch\infty$  are derivatives with respect to control deflection and AOA of main surface.  
**ch** Cheval-vapeur, see cv.  
**CHAA** Canadian Historic Aircraft Association [Windsor, PO].  
**Chals, CHAALS** Communications high-accuracy airborne location system (USAF).  
**CHAD, Chad** Chart amendment document.  
**chaff** Radar-reflective particulate matter or dipoles sized to known or suspected enemy wavelengths (ECM).  
**chaff dispenser** Tube, gun, projector or other system for releasing chaff either in discrete bursts or in measured stream, manually or upon command by RWS.  
**chafing patch** Local reinforcement of aerostat envelope where likely to suffer abrasion.  
**Chag, CHAG** Chain arrester gear.  
**chain** 1 Geographical distribution of radio navaid stations linked together and emitting synchronised signals (eg Decca, Loran).  
 2 Obsolete unit of length = 22 yd = 20.1168 m.  
**chain arrester** Aircraft hook picks up wire attached to heavy chain on each side of runway.  
**chain gun** High-speed automatic cannon with external power supply and open rotating bolt.  
**Chain Home** The original string of interlinked radar stations constructed round east and south England from 1937. Chain Home Low added radars able to detect low-altitude targets.  
**chain radar beacon** Beacon having fast recovery time, thus can be interrogated by many targets up to prf.  
**chain reaction** In fissile material or other reactant, process self-perpetuating as result of formation of materials necessary for reaction to occur. Nuclear chain reaction arranged in weapons to have optimum uncontrolled (accelerating) form.  
**CHAIR, chair** Control handling aid for increased range (target aircraft).  
**chairborne** Condemned to desk job (originally said of RAF pilots).  
**chair chute** Parachute permanently incorporated into seat (not necessarily ejection seat, but removable).  
**chalk** Loosely, one load, especially stick or squad of troops, often 6–10.  
**chalk number** In military logistics, number assigned one complete load and carrier vehicle; hence chalk commander, chalk troops.  
**challenge and response** Basic method of working through any procedural cockpit check, nav (mil) or first officer (civil) reading each item after satisfactory response to previous item.  
**Chals** Communications high-accuracy locating system; -x adds exploitable.

**chamber** In liquid rocket engine, enclosed space where combustion takes place, between injectors and throat. In solid rocket, enlarging volume in which combustion takes place, varying in form with design of motor.

**chamber pressure** See *burn time average, action time average, MEOP*.

**chamber volume** In liquid rocket, total volume as defined; solid motor varies during burn.

**chamfered** Bevelled (edge or corner, eg of sheet).

**champ** Cargo-handling and management planning [s adds system].

**Champs** Common helicopter aviation mission planning system (USN/USMC).

**Chan** Channel.

**Chance** Complete helicopter advanced computational environment.

**Chance light** Formerly, mobile airfield floodlight illuminating landing area and apron.

**chandelle** Flight manoeuvre (see *stall turn*); another definition, not necessarily synonymous with stall turn, is a manoeuvre in which speed is traded for altitude whilst reversing flight direction (see also *Immelmann*).

**changeover point** Ground position and time at which aircraft switches from using one ground-based navaid to another, not necessarily at midpoint of leg.

**channel** 1 Band of frequencies in EM spectrum, esp. at radio nav/com frequencies (thus 20 \* allotted to ILS in all countries, each with published frequency for loc and g/p).

2 Single end-to-end 'route' in dynamic system, esp. one exerting control authority (eg collective pitch in helicopter AFCS).

3 Structural member of channel form (eg top-hat or U).

4 In EDP, several meanings: any information or data highway, one or more parallel tracks treated as unit, portion of store accessible to given reading station.

5 In semiconductor device (eg transistor), flow bypassing base.

6 Pathways for energetic ions or atoms along crystal lattices.

7 In airport terminal, single routing for departing or arriving passengers.

8 Takeoff and alighting path at marine airport.

**channel nut** One forming integral part of channel (3).

**channel patch** Channel-shaped reinforcement to aerostat envelope to anchor rigid spar.

**channel section** See *channel* (3).

**channel wing** Wing curved in front elevation to fit closely round lower half of propeller disc.

**Chapi, CHAPI** Carrier, colour or compact helicopter approach path indicator.

**char** Ablative material charred and eroded during re-entry (see *ablation*).

**characteristic** Sense (up or down) in which barometric pressure changes in preceding 3 h.

**characteristic curve** 1 Curve of atmospheric sounding results plotted on Rossby diagram.

2 Curve of primary characteristic of aerofoil when plotted (see *characteristics*).

**characteristic exhaust velocity, C\*** Measure of rocket performance, numerically  $g_0 A_e / W_p$  multiplied by integral of chamber pressure over action time.

**characteristic length** 1 In rocket, ratio of chamber volume to nozzle throat area.

2 In rocket, length of cylindrical tube of same diameter as chamber, having same volume as chamber.

3 Convenient reference length (eg chord).

**characteristics** 1 Of aerofoil, primary \* are: coefficients of lift and drag, L/D ratio, cp position and coefficient of moment, each plotted for all operating AOAs.

2 In electronics, relationships between basic variables (eg anode current/voltage, anode current/grid voltage) for valves (tubes) and correspondingly for transistors.

**characteristic velocity** 1 Sum of all changes in velocity, positive and negative all treated as positive, in course of space mission.

2 Velocity required for given planetary (esp. Earth) orbit.

**charge** 1 Total mass of propellant in solid rocket.

2 Propellant of semi-fixed or separate-loading ammunition.

3 To fill high-pressure gas or cryogenic (eg Lox) container.

4 Quantity of electricity, measured (SI) in Coulombs.

**chargeable** Malfunction (eg IFSD) clearly due to fault in design, workmanship, material or technique by supplier.

**charging point** Standard coupling through which aircraft fluid system is replenished or pressurized.

**Charles' law** Perfect gas at constant pressure has volume change roughly proportional to absolute temperature change.

**Charlie** Preplanned landing-on time in carrier operations.

**Charlière** Common term for a gas balloon (pre-c1850).

**charm** Composite high-altitude radiation model.

**Charme** Concept d'helice pour avions rapides en vue d'une meilleure économie (12-blade single rotation propfan).

**Charpy** Destructive test of impact resistance of notched test bar.

**chart** Simplified map, typically showing coasts, certain contours, woods, water, and aeronautical information (symbols vary and not yet internationally agreed).

**chart board** Rigid board, suitably sized for chart or topographic map; often provided with protractor on parallel arms.

**charted approach** Visual flight to destination authorised to radar-controlled aircraft on IFR flight plan.

**charted delay** In Loran, published delay.

**charts** Compact hydrographic airborne rapid total survey.

**chart table** Chart board mounted in aircraft.

**Chase** Coronal helium abundance Spacelab experiment.

**chase** To accompany other aircraft, esp. one on test, to observe behaviour and warn of visible malfunction; hence \* plane, \* pilot.

**chassis** 1 Rigid base on which electronics are mounted; for airborne equipment, mates with racking.

2 Landing gear. In WW2 the accepted UK term was undercarriage, but the author recalls many cockpits where \* was used because there was no room for the longer word.

**Chats** Counter-intelligence Humint automated tool system.

**chatter** 1 Multiple conversations or signatures, most being of no interest, all heard on same frequency.

2 High-frequency vibration energised by intermeshing gear teeth.

3 [also **chattering**] any small uncommanded repeated operations, e.g. by hydraulic jack.

**CHB** Common high band[width]; DL adds datalink.

**CHC** Chance, traditionally 30–40% likelihood of precipitation.

**CHD** Crutching heavy-duty (stores carrier).

**CHDO** Certificate-holding district office (FAA).

**cheatline** Bold line[s], usually horizontal, painted at artistically pleasing level along side of aircraft.

**check** 1 To verify flight progress (eg ETA \*).

2 To examine pilot for proficiency.

3 Examination conducted in (2).

4 Programmed investigation of aircraft for malfunction (before-flight \*, after or post-flight \*, etc).

5 Programmed procedural routine from entering cockpit to start of flight (cockpit \*).

6 To reduce in-flight trajectory variable (\* rate of descent).

**Checked Flag** Provides designated bases and procedures for overseas training deployments (USAF, TAC).

**checker team** Responsible for maintenance of all runway/taxiway/apron markings.

**check finals!** Last brief vital actions before landing (items not standardized).

**check in** 1 Several meanings, esp. to call up tower to establish frequencies and procedures at start of cockpit check.

2 For airline passenger, to report at designated \* desk, have page of flight coupon torn off, hand over hold baggage and be assigned seat.

**checking station** 1 Designated and marked location used in rigging airframe. Also called checking point.

2 Reference station on propeller blade, typically at 42 in radius on lightplanes.

**checklist** Written list of sequenced actions taken in check (5), usually printed on plastics or laminated pages. Usually also includes emergency actions, V-speeds and short- or soft-field procedures.

**check-out** 1 Programmed test by user immediately before operational use of missile, radar or other system.

2 Sequenced tasks to familiarise operator with new hardware.

**check point, checkpoint** 1 See *waypoint*.

2 Geographical point happening to offer precise fix.

3 Planned strategic review of major industrial programme for government customer, esp. collaborative.

4 Predetermined geographical location serving as reference for fire adjustment or other purpose.

5 Mean point of impact.

**check six!** Look astern for hostile fighters.

**check valve** One-way valve in fluid line.

**cheese aerial (antenna)** Shaped roughly like D in side elevation with quasi-circular or parabolic reflector and flat parallel sides nodding in elevation; propagates more than single mode.

**cheesed** Thwarted, disgruntled; occasionally \* off (RAF colloq., WW2).

**chemical fuel** Has ambiguous connotation excepting common fuels; hence, 'exotic' fuel, esp. for air-breathing engines.

**chemical laser** Strictly, one in which chemical reaction occurs, eg perfluoromethane/hydrogen.

**chemical milling** Use of acid or alkaline bath to etch metal workpiece in controlled manner.

**chemical munition** Non-explosive ordnance operating by chemical reaction: incendiary, smoke, irritant or lethal gas, defoliant, flare or flash, dye marker etc.

**chemical propulsion** Propulsion by energy released by chemical reaction, eg fuel + oxygen, with or without air breathing.

**chemical rocket** Rocket operating by chemical reaction; not ion, photon or nuclear.

**chemical warfare** Use of major chemical munitions, esp. irritant or lethal gases.

**chemosphere** Region of upper atmosphere (say 15–120 miles, 24–190 km) noted for photochemical reactivity.

**chequered flag** 1 Black/white, various meanings including race winner.

2 Red/yellow, do not move off blocks until ATC permits.

3 See *Checkered Flag*.

**cherl** Change in Earth's rate (tangential velocity) of rotation with latitude.

**Cherry rivet** Tubular rivet inserted blind and closed by internal mandrel (shank) which then breaks and is removed.

**chest-type parachute** Pack stored in aircraft separate from harness, to which it is secured by quick clips on chest.

**cheval du bois** 'Wooden horse' = swing [1] (F).

**cheval vapeur** Metric horsepower, 1 cv = 0.98632 hp = 0.7355 kW; reciprocals 1.01387, 1.35962.

**chevron mixer** Sawtooth nozzle.

**Cheyenne Mountain** Location of USAF/Norad Space Command HQ.

**CHF** 1 Commando helicopter force.

2 Swiss franc[s].

**CHG** 1 Change, ie modifying previous message; CHGD, changed.

2 Charge.

**CHI** Computer/human interface.

**Chicken** See *State chicken*.

**chicken bolts** Temporary fasteners used in metal airframe assembly.

**chicks** 1 Fighters, especially airborne group under unified local command (USN).

2 Fighters in group round air-refuelling tanker.

**chiefy** Flight sergeant in charge of erks (RAF, colloq.).

**Chili** Dry southerly wind (N. Africa).

**chilldown** Pre-cooling of tanks and system hardware before loading cryogenic propellant.

**chilled** Stage at which design is almost frozen [change accepted reluctantly].

**chilled casting** Made in mould of metal, usually ferrous, giving rapid cooling and thus surface hardness.

**chime** Melodious warning of imminent announcement to passengers, typical output 120 W.

**Chimp** Common-good high-grade Infosec module [programmable]. **chin** Region under aircraft nose; hence \* blister, \* intake, \* radome, \* turret.

**china-clay** Technique for distinguishing regions of laminar and turbulent boundary layer from changed appearance of thin coating of \* suspension.

**China Lake** California desert home of NAWS.

**chine** In traditional marine aircraft hull or float, extreme side member running approximately parallel to keel in side elevation. In supersonic aircraft, sharp edge forming lateral extremity of fuselage, shedding strong vortex and

merging into wing. On a landing-wheel tyre, a sharp-edge lip for shedding water.

**chined tyre** Tyre, esp. for nosewheels, with chines to depress trajectory of water or slush.

**chin fairing** On centreline on underside of leading edge [T-tail].

**chin fin** Fixed destabilizing fin under nose.

**Chinook** Warm dry westerly wind on E side of Rocky Mountains. In Europe, called Föhn.

**chin turret** A gun or sensor turret mounted under the nose of a pre-1950 bomber or an attack helicopter.

**chip** 1 Single completed device separated from slice, wafer or other substrate of single-crystal semiconductor.

2 Metal fragment, visible to eye, broken from engine or other machinery.

**chip chart** Rectangles of paint showing colours available.

**chip detector** Device, often permanent magnet, for gathering every chip (2), usually from lube oil.

**Chips** Cosmic hot interstellar plasma spectrometer.

**chips** Killed; from to have had one's \* (RAF colloq, WW2).

**chip width** Length of PN code bit,  $T_c$ .

**Chirp** Confidential human-factors incident reporting procedure (or programme) (CAA).

**chirp** 1 Radar/communications pulse compression or expansion (colloq.).

2 Particularly, pulse compression by linear FM.

**CHIS** Center hydraulic isolation system.

**chisel window** Small oblique nose window for LRMTS or camera.

**CHL** Chain Home Low.

**ch.lat.** Change of latitude (pronounced sh-lat).

**ChLCD** Cholesteric liquid-crystal display.

**ch.long.** Change of longitude (pronounced sh-long).

**chlorine** Cl, toxic green/yellow gas, density 3.2, MPt -101°C, present in vast range of aerospace products.

**Chobert** Tubular rivet inserted blind and closed by withdrawal of re-usable mandrel.

**Choc** Combined hydrocarbon filter and catalytic ozone converter.

**chock** Portable obstruction placed in front of and/or behind landplane wheel(s) to prevent taxiing.

**chocks away** Traditional signal to ground crew to remove chocks [usually one arm waved over head side to side].

**chock-to-chock** See *block time*.

**choke** 1 Inductance used to offer high reactance at chosen frequency to pass d.c. or lower a.c. frequencies only.

2 In typical car (auto) engine, manual control for reducing inlet airflow to enrich mixture when cold, rare in aviation.

**choked flow** Flow of compressible fluid in duct [eg tunnel or jet-engine nozzle] in which local Mach number has reached 1 and velocity cannot be increased significantly by increasing upstream pressure.

**choked inlet** Containing normal shock and suffering choked flow.

**Chol, CHOL** Common [or Collins] high-order language.

**cholesteric** LCD with layers each aligned in preferred, different direction.

**chomp** Changeover (from one waypoint VOR, NDB etc to next) at midpoint (of leg).

**Chop** Countermeasures hands-on program[me].

**chop** 1 Changeover point.

2 Change of operational control, precisely promulgated time.

3 To get the \*, sudden termination (of human life, project, place on flying-training course, etc. colloq.).

4 To close throttle(s) completely and suddenly.

5 Atmospheric turbulence, esp. CAT, categorised as mild (also called light), moderate (or medium) and severe (or heavy).

**chopped fibre** Reinforcing fibre chopped into short lengths.

**chopped random mat** Chopped fibre made into mat (two-dimensional sheet) with random orientation.

**chopper** 1 Rotary-wing aircraft, esp. helicopter (colloq.).

2 Mechanical device for periodically interrupting flow, esp. light beam, or switching it alternately between two sources.

3 Device for modulating signal by making and breaking contacts at frequency higher than frequencies in signal.

**chop rate** Rate of aircraft or crew loss on operations, or wastage rate in flying training (colloq.).

**chord** 1 Straight line parallel to longitudinal axis joining centres of curvature of leading and trailing edges of aerofoil section.

2 Some authorities prefer the line joining the trailing edge to the stagnation point on the leading edge.

3 Loosely, breadth of wing or other aerofoil from front to rear.

4 Boundary members of structural truss.

5 In the new century this is the preferred spelling of what was previously called miniature detonating cord.

**chord direction** In stress analysis, usually parallel to chord at aircraft centreline (of wing, or wing produced to centreline).

**chord length** Length of chord (1), not measured round profile.

**chord length ratio** At any radius, the total chord length of all the blades of a propeller divided by the diameter.

**chord line** See *chord* (1). Ambiguously, sometimes line tangent at two points to lower surface (see *geometric chord*).

**chord plane** Plane containing chord lines of all sections forming three-dimensional aerofoil (assuming no twist).

**chord position** Defined by location of quarter-chord point and inclination to aircraft x-y plane, point being defined on primary centreline co-ordinates.

**chord wire** Wire tying vertices of airship frame.

**chordwise** Parallel to chord (normally also to longitudinal axis).

**chosen instrument** Carrier selected as national monopoly [can be private company].

**CHP** Controlled-humidity preservation.

**CHR** Cooper-Harper rating.

**CHRG** Charges.

**Christmas tree** Aircraft temporarily set aside as source of spare parts, but to be eventually returned to service.

**chromate enriched pellet** Small source of antifungal chemical in integral-tank low point (possible water trap).

**chromate primer** Anti-corrosive, antimicrobial surface treatment, esp. for water traps in airframe.

**chromatic aberration** Rainbow effect caused by simple lens having different focal length for each wavelength.

**chrome steels** Steels containing chromium; often also with vanadium, molybdenum etc.

**chromic acid** Red crystalline solid,  $H_2CrO_4$ , used in solution as cleaner and etchant, as electrolyte [eg, Alcrome] for Cr plating and anodising, and for crack detection.

**chromic paint** Coating which changes colour (usually white-grey-blue-black) as temperature increases.

**chromium** Cr, hard silvery metal taking brilliant polish, density 7.2, MPt 1,860°C.

**Chromoly** Alloy steels containing chromium and molybdenum.

**chromosphere** Thin (under 15,000 km) layer of gas surrounding Sun's photosphere.

**chronograph** Device for producing hard-copy readout of variable against time, with particular events recorded, typically by pen and disc or drum chart.

**chronometer** Accurate portable clock with spring drive and escapement.

**CHS, CH/S** Common hardware and software.

**CHT** Cylinder-head temperature. A \* instrument usually displays a reading taken from the cylinder thought to run hottest.

**chuck** Rotating vice (US "vise") for gripping tool or workpiece.

**chuck glider** Small model glider [not necessarily a toy] launched by hand.

**chuffing** Pulsating irregular rocket combustion.

**chum** Chart update module.

**chutai** Squadron (J).

**chute** 1 Parachute (colloq.).

2 Axial/radial ducts around engine periphery to guide fan air into afterburner or engine airflow through silenced nozzle.

3 Duct for ventral crew escape or discharge of ECM, leaflets etc. Not to be confused with *escape slide*.

**CI** 1 Chief instructor.

2 Compression, or continuous, ignition.

3 Catalytic ignition [see *CIS (6)*].

4 Certificate of Interest, signed by intending purchaser, unless rescinded becomes binding contract after stipulated period.

5 Cubic inches [strongly deprecated].

6 Configuration item.

7 Cabin interphone.

8 Counter-intelligence.

9 Chief inspector.

10 Competitive intelligence, primarily for multinational corporations.

11 Control indicator.

12 Continuous improvement.

**Ci** 1 Cirrus.

2 Curie[s].

**ci** Cubic inches (not recommended).

**CIA** 1 Contractor interface agreement.

2 Central Intelligence Agency (US, 1947 on).

3 Commission Internationale d'Aérostation (FAI).

4 Captured in action.

**CIAA** 1 Consorzio Italiano di Assicurazioni Aeronautiche [aviation insurers] (office, Rome).

2 Centre International d'Aviation Agricole.

**CIACA** Commission International des Aéronefs de Construction Amateur (FAI).

**CIAM** 1 Computerised integrated and automated manufacturing.

2 Commission Internationale d'Aéromodélisme (FAI).

3 Central Institute of Aviation Motors (R).

**CIANA** Latin American commission for air navigation (office Madrid, from October 1926).

**CIAP** Climatic Impact Assessment Program (US DoT).

**CIARA** See *IAARC*.

**CIAS** Comitato Interministeriale Attività Spaziali (I).

**CIASE** China Institute of Aeronautic Systems Engineering.

**CIB** Controlled image base.

**CIC** 1 Combat information center (USA, USAF).

2 Commander-in-Chief [UK usage, C-in-C].

3 Corrosion-inhibiting compound.

**Cicas** Check-in counter allocation system, displays logo and flight details at each counter.

**C(I)CT** Completion of interim certification testing.

**CICU** Central interface control unit.

**CID** 1 Combat identification.

2 Check-in display.

3 Category-interaction.

**CIDA** Co-ordinating installation design authority.

**Cidef** Conseil des Industries de Défense Français [F-75782 Paris] (F).

**CIDIN, Cidin** Common ICAO data-interchange network (Int.).

**CIDS** 1 Cabin interface [previously intercommunication or interphone] data, or distribution, system, with microprocessor control for speakers, lamps, PA, entertainment systems, safety signs, crew intercom, etc, to facilitate changes in interior layout.

2 Check-in display system.

**CIE** 1 Commission Internationale de l'Eclairage (= ICI).

2 Centro de Investigaciones Espaciales (Arg.).

**CIEA** Commission Internationale d'Enseignement Aéronautique (FAI).

**CIEM** Computer-integrated engineering and manufacturing.

**CI-F** Customs inspection fee (TSA).

**CI-F** Control indicator, front.

**CI-FMS** Computer-integrated flexible manufacturing systems.

**CI-FRR** Common IFR room (New York, civil/military).

**CIFS** 1 Computer-interactive flight simulation.

2 Close-in fire support.

**CIG** 1 Computer image-generation.

2 Control/indicator group.

3 Commission Internationale de Giraviation (FAI).

4 Ceiling.

**CIGAR** Many US mnemonics begin: Controls, instruments, gas, attitude [trim/flaps], run-up [mags., carb. heat, etc].

**Cigar** *Airborne Cigar*.

**cigar** Aeroplane from which wings have been removed (colloq.).

**cigarette-burning** Solid propellant ignited at one end across entire section and burning towards other end.

**Cigars** Mnemonic reminding pilot of vital actions before takeoff: controls, instruments, gas, attitude indicator, run up, seat belt (US, WW2).

**CIGFTPR** Controls-instruments-gas-flaps-trim-prop-run-up (US).

**CIGS** Chief of the Imperial General Staff [now CGS] (UK).

**CIGSS** Common imagery ground/surface standards.

**CIGTF** Central Inertial Guidance Test Facility (USAF).

**CIIP** Critical information infrastructure protection.

**CIJ** Close-in jamming.

**CIL** 1 Candidate-items list.

2 Command Information Library (NIMA).

**CIM** Computer-integrated manufacturing.

**CIMA** 1 Chartered Institute of Management Accountants (UK).

2 Commission Internationale de Micro Aviation (FAI).

**Cimact, CIMA** Civil/military air-traffic management co-ordination tool (Eurocontrol).

**CIME** Commission Intergouvernementale des Migrations Européennes (Int., arranges mass flights, eg for refugees).

**CIMT** Configuration integration management team.

**Cimtic** C<sup>4</sup>I and munitions test improvement contract.

**CIMTIG** Chartered Institute of Marketing Travel Industry Group (office Westerham, UK).

**CINA** Commission Internationale de la Navigation Aérienne (Int., office Paris, 1922-).

**Cincat** Capacity increase through controller assistance tools (Euret).

**Cinch** Compact inertial navigation combining HUD.

**CINS** Compact INS.

**CIO** 1 Central Imagery Office (US).

2 See *AFL-CIO*.

3 Chairman in office.

4 Chief information officer.

**CIOD** Counterspace and Information Operations Division (USAF).

**CIOS** Combined Intelligence Objectives Subcommittee (US/UK, WW2).

**CIP** 1 Cold iso-pressing (beryllium).

2 Component [or communications] improvement program(me).

3 Commission Internationale de Parachutisme (FAI).

4 Commercially important passenger.

5 Command input potentiometer.

6 Capital investment plan (FAA).

7 Critical infrastructure protection.

8 Common integrated processor.

9 Common imagery, or core-integrated, processor [see next].

**CIPM** Common integrated processor manager.

**CIPR** 1 Cubic inches per revolution.

2 Continuous in-flight performance recorder.

**CIR** 1 Constant, or continuous, infra-red (heat source on target).

2 Cockpit image recorder.

**CIRA** 1 Cospar International Reference Atmosphere.

2 Centro Italiane Ricerche Aerospaziali (I).

**CIRC** Central information reference and control.

**Circ, circ** Circling or circulating.

**circadian rhythm** Change in physiological activity on approximate 24 hour cycle.

**Circe** Cossor interrogation and reply cryptographic equipment, enabling all participating nations to have own secure cryptographic IFF.

**Circle** Circuit (US); can also be an instruction to join stack.

**circle marker** On unpaved airfield, white circle indicating centre of landing area.

**circle of confusion** Image of any distant point on lens focal plane (eg on film).

**circle of equal probabilities, CEP** Radius of circle within which half the strikes (eg bullet impacts on single aiming point) fall or within which probability is equal that one bullet, bomb or RV will fall inside or outside. Also called circular error probable.

**circle of latitude** On celestial sphere through ecliptic poles, perpendicular to ecliptic.

**circle of longitude** On celestial sphere parallel to ecliptic.

**circle of origin** Normally, Equator or Prime Meridian.

**circle of position** Circle on Earth's surface centred on line joining centre of Earth to heavenly body, from which altitude of body is everywhere equal. Sometimes called circle of equal altitude.

**circuit** 1 Basic element in pilot training, short flight comprising takeoff and precisely executed \* back to landing, if necessary ready for repeated \*. In US often circular, but in UK and most other countries rectilinear, comprising takeoff, straight climbout [upwind leg] to [typically] 300 m/1,000 ft, turn 90° [in either direction, but usually L] on to crosswind leg, second 90° turn on to downwind leg, passing airfield parallel to active runway, third 90° turn with power off on to descending second crosswind leg [often called base leg] followed by 90° turn on to finals. Depending on circumstances, \* may be followed by immediate takeoff called touch-and-go [if the aircraft is brought to rest, called stop-and-go] for second \* or by taxi back to downwind end of runway for next takeoff; \* can be L-hand or R-hand. US term pattern, circle or traffic circle.

2 List of airshows [usually annual] at which particular aircraft regularly appear.

3 Closed loop of electrical conductors.

**circuit analog absorber** Large family of RAM (2) in which outer resistive sheet is given an imaginary part to its admittance, by laying it down in form of many discrete elements such as dipoles, crosses and meshes. See *frequency-selective*.

**circuit breaker** Switch for opening circuit (3) while carrying large electrical load.

**circuit length** Length round closed-circuit wind tunnel traversed by streamline always equidistant from walls.

**circuits and bumps** Repeated circuits (1) with landing [or at least a touch-and-go] at end of each (colloq.).

**circular approach** Precision training manoeuvre, chiefly associated with carrier flying, where circuit (1) is circular.

**circular dispersion** Diameter of smallest circle within which 75 per cent of projectiles strike.

**circular error probable** See *bombing errors* (1).

**circular isotropic** Aerial (antenna) radiation polar equal in all directions (normally in azimuth).

**circularisation** Refinement of satellite orbit to approach perfect circle, usually at given required height.

**circular mil** Area of circle of one mil (1/1,000 inch) diameter =  $5.067 \times 10^{-10} \text{m}^2$  ( $7.85 \times 10^{-7} \text{in}^2$ ).

**circular mil foot** Unit of resistivity; resistance of one foot of wire of one circular mil section, equal to ohm-mm  $\times 6.015 \times 10^5$ .

**circular milliradian** Conical beam or spread of fire having angle (not semi-angle) of one milliradian.

**circular nose** Control surface whose leading-edge section is semicircle about hinge axis.

**circular velocity** At given orbital height, velocity resulting in circular orbit,  $V_c = \sqrt{Rg}$  where R is radius from Earth centre.

**circulation** 1 Rotary motion of fluid about body or point; vortex.

2 Ideal flow around (not past) circular body, with streamlines concentric circles and velocity inversely proportional to radius (body needed to avoid infinite V at centre).

3 Streamline flow around body of any form, defined as integral of component of velocity along closed circuit with respect to distance travelled around it. Wing lift created by \* superimposed on rectilinear flow past surface (see *bound vortex*, *Magnus*, *Zhukovsky*).

4 Gross motions of planetary (eg Earth) atmosphere.

**circulation controlled** Wing, rotor blade or other aerofoil in which external power is used to enhance lift, typically by high-velocity tangential blowing of various kinds.

**circulator** Non-reciprocal device in microwave circuit to produce phase-shift as function of direction of wave flow (see *duplexer*).

**circulatory flow** Rectilinear flow past lifting body inducing circulation (3) (see *Zhukovsky*).

**circumaural** Fitting around the ear.

**Circus** Small formation of bombers with much larger fighter escort, objective being to lure enemy fighters to combat (RAF, WW2).

**circus** 1 Large loose formation of fighters, usually with distinctive individual markings, flown by aces (G, WW1).

2 Loosely, group of itinerant aircraft entertaining public and offering rides (1919–39).

**CIRF** Consolidated intermediate repair facility.

**CIRM** Comité International de Radio Maritime.

**CIRO** Centre Interarmée de Recherches Opérationnelles (F).

**Cirpas** Centre for interdisciplinary remotely-piloted aircraft studies (USN).

**Cirris** Cryogenic infrared radiance instrument for Shuttle.

**cirrocumulus** Cc, layer of globular cloud masses at about 6,000 m/20,000 ft. Also known as mackerel sky.

**cirrostratus** Cs, high milky-white or grey sheet cloud, 7,000 m/23,000 ft.

**cirrus** Ci, high white cloud; detached, fibrous, silky, 7,500–12,000 m/25,000–40,000 ft.

**Cirstel** Combined IR suppression and tail-rotor elimination.

**CIRTEVS, CIRTVS** Compact IR TV system.

**CIS** 1 Combat identification system.

2 Computer interface system.

3 Communications, or command, or combat, or corporate, information systems.

4 Co-operative independent surveillance.

5 Cluster ion spectrometer.

6 Chemical ignition system.

7 Control indicator set, or suite.

8 Commonwealth of Independent States, of former USSR; CST adds Collective Security Treaty.

9 Cargo-inspection system, usually PFNA or X-ray.

10 Cycles in service (FAA).

11 Common Industry Standards (ADIAE).

**cislunar** Between Moon's orbit and Earth.

**CISPR** Comité International Spécial des Perturbations Radiophoniques [radio interference].

**CISS** Configurable integrated surveillance system.

**CIT** 1 Compressor inlet temperature (flight envelope limit).

2 Central integrated testing.

3 Cranfield Institute of Technology.

4 Control in turbulence [mode].

5 Critical-item test.

6 The Chartered Institute of Transport [1919–, received charter 1926; office, London W1N 4DP] (UK).

7 Near or over a city.

8 Combined interrogator and transponder.

9 Commission for Integrated Transport (UK think tank).

**CITA** 1 Commission Internationale de Tourisme Aérien.

2 Confederación Interamericana de Transportadores Aéreos.

**CITE** 1 Computer integrated test equipment (USAF).

2 Compression-ignition and turbine engine (fuel).

**CITEJA, Citeja** Comité International Technique d'Experts Juridiques Aériens (1925–47, now part of ICAO).

**Citeps** Central integrated test experimental parameter subsystem.

**CITES** Convention on International Trade in Endangered Species.

**CITIS** Contractor integrated technical information system.

**CITS** 1 Central integrated test system, or subsystem (eg Shuttle).

2 CAS (3) integrated targeting system.

3 Combat information transport system.

**city pair** Pair of cities studied from viewpoint of mutual passenger/cargo traffic.

**city pair ranking** Lists of \*\* in order of current or projected traffic generation.

**CIU** 1 Computer, central, cockpit, coupler, communications, or control interface unit.

2 Central Interpretation Unit (RAF, 1941–).

3 Control-information unit (cartridge dispensing).

**CIV** 1 Crossbleed isolation, or centre interconnect, valve.

2 Coannular inverted-velocity (nozzle).

3 Civil.

**CIVA** Commission Internationale de Vol Aérobattique.

**Civil Aeronautics Administration** Since 1958 FAA (1).

**Civil Aeronautics Board, CAB** US Government (DoC) agency responsible for civil aviation, including CARs, licensing, routes and US mail rates.

**civil aircraft** Not in government [including military] service.

**Civil Air Patrol, CAP** US para-military organization using pilot and lightplane resources of general aviation for national ends.

**civil day** Day of constant 24 hours (sometimes counted as two periods of 12 hours); mean solar day.

**Civil Reserve Air Fleet** US airline transport aircraft and flight crews pre-designated as available at any time for reasons of national emergency.

**civil time** See *mean solar time*.

**civil twilight** Period at sunrise or sunset when Sun's centre is between 0° 50' and 6° below horizon.

**CIVL** Commission International de Vol Libre (FAI hang-gliding organization).

**CIVRES** Congrès International des Techniques du Vide et de la Recherche Spatiale.

**Civs, Civils** CAA [1], (UK, colloq.).

**CIVV** Commission International de Vol à Voile (gliding).

**CIWS** Close-in weapon system.

$C_j$  Blowing coefficient, or thrust coefficient of jet engine.

**CJAA** Classic Jet Aircraft Association (US).

**CJAP** Commonwealth Joint Air Training Plan (1939–45).

**CJCS** Chairman of the Joint Chiefs of Staff.

**CJO** Chief of Joint Operations (UK MoD).

**CJS** 1 Canopy jetison system.

2 Commerce, justice and science (US Senate).

**CJS** Combined joint statement of requirements.

**CJTF** Combined [or commanders] joint task force.

**CK** Cape Kennedy.

**CK, Ck** Check

**Ck** Theodorsen's function.

**CKD** Component knock-down, or completely knocked down, parts imported for assembly in importing country to avoid duty.

**CKEM** Compact kinetic-energy missile.

**CL** 1 Centreline of aircraft.

2 Checklist.

3 Chemical laser.

4 Catapult-launched.

5 Charge limit, ie limit payload (RAF).

6 Creeping landing.

7 Centre of lift.

8 Compass locator.

9 Centreline lights of runway, followed by number giving number of bars of approach lighting.

**CL** 1 Coefficient of lift.

2 Low cloud.

**CL** Centreline.

$C_l$  Rolling-moment coefficient (BSI).

$C_l$  Main-rotor section lift coefficient  $L/1/2 \rho V_c^2$

**cl** Centilitre.

$c_l$  Section lift coefficient.

$\bar{C}_l$  Mean lift coefficient of helicopter rotor.

**CLA** 1 Clear ice formation.

2 Centreline average (surface roughness).

3 Collective labor agreement (US).

4 Consortium of Lancashire Aerospace, Became NWAA.

5 Creeping line ahead.

**CLAC** Comisión Latino Americana de Civil Aviación (Int.).

**clack, clacking** Aural warning, esp. of Mach limit.

**clack valve** Fluid one-way valve having freely hinged flap seated on one side.

**Cladosporium** See *Hormoconis*.

**Clads** Common large-area display set.

**CLAES** Cryogenic limb array etalon spectrometer.

**CLAEX** Air-force flight test centre (Spain).

**clag** Widespread low cloud, mist and/or rain (colloq.).

**Claire** Clean-air engine.

**CL/AL** Catapult-launched, arrested landing.

$C_l \alpha$  Slope of lift curve.

**CLAMP** Closed-loop aeronautical management programme.

**clamp** Weather unfit for flight (colloq.) Hence airfield may be **clamped**.

**clamped** Of a structural member, fixed in space and also unable to rotate or pivot. Hence a beam can be \* at one end and free at the other.

**clamping** To hold either or both peaks of waveform or signal at desired reference potential (d.c. restoration). Increasingly used in processing sensor images; black-level \* references all black levels to darkest point of image.

**clamshell** 1 Cockpit canopy hinged at front or rear.

2 Nose or tail of cargo aircraft hinged into lower and upper or left and right halves.

3 Reverser opening in upper and lower halves meeting on jet centreline behind nozzle [US = bucket].

**clandestine aircraft** Aircraft designed to overfly without detection, having minimal noise, IR and radar signatures.

**clang box** Jet-engine switch-in deflector for V/STOL comprising an internal valve and side nozzle with deflecting cascade.

**Clansman** Army tactical radio communication system (UK).

**CLAP** Centre Laique d'Aviation Populaire (F).

**clapper** Part-span shroud.

**Clara** Carbon-dioxide-laser radar, for obstacle avoidance.

**Class, CLAS** Conformal load-bearing-antenna structure (AFRL).

**CLASB** Citizens' League Against the Supersonic Boom (US).

**clash detection** See dynamic \*, *static* \*.

**Class** Coherent laser airborne shear sensor.

**class action** Litigation in US courts in which plaintiffs represent a class, eg airline passengers, or passengers of a particular carrier.

**classic** Term merited by aircraft produced for many years, esp. to distinguish from later versions of same type.

**classical aeroplane** Aeroplane having clearly defined fuselage, nacelles and aerodynamic surfaces, not necessarily with all tail surfaces at rear. Opposite of integrated aeroplane.

**classical flutter** Occurring because of coupling – aerodynamic, inertial or elastic – between two degrees of freedom.

**classify** 1 To protect official information from unauthorised disclosure [UK and US have numerous classification grades].

2 In ASW to sort sonar returns according to types of source.

**claw** 1 Accelerator hook.

2 Operative part of arrester hook.

**Claws** Complementary low-altitude weapon system (USMC).

**CLB** 1 Crash locator beacon.

2 Climb, helicopter autopilot mode.

$C_{L\beta}$  Dihedral effect, the rolling moment due to sideslip; also called dihedral derivative.

$C_{l\beta}$  Rolling moment due to sideslip rate [US usage, small l].

**CLBR** Calibration.

**CLC** 1 Command launch computer.

2 Course-line computer.

**CLD** 1 Cloud (ICAO).

2 Crutching light-duty (stores carrier).

**cld** Cloud.

**CLDP** Convertible laser-designation pod.

**CLDS** 1 Cockpit laser-designation system.

2 Clouds.

**CLE** Central Landing Establishment, RAF Ringway 1941, pioneer paratroop/glider school.

**Clean** Component validator for environmentally friendly aero engine (Europe).

**clean** 1 Of aircraft design: streamlined, devoid of struts and other excrescences.

2 Of aircraft condition: landing gear, high-lift systems and other extendible items retracted, and not carrying drop tanks, external ordnance or other drag-producing bodies.

3 Nuclear weapon designed for reduced, or minimal, residual radioactivity compared with normal weapon of same yield.

**cleaning** In prolonged glide with piston-engined aircraft, to open up engine briefly to high power to clear over-rich mixture and gummy or carbon deposits.

**clean room** Sealed airlock-entrance facility for manufacture [eg, of inertial gyro] or examination of space samples, with rigid rules on humans admitted.

**clean up** To retract gear and flaps, and other high-lift devices, after takeoff.

**clear** 1 To authorise hardware as fit for use.

2 To authorise person to receive classified information.

3 To rectify stoppage in automatic weapon.

4 To unload weapon and demonstrate no ammunition remains.

5 To empty core store, register or other memory device.

6 In flight operations, authorised to take off, land or make other manoeuvre under ground control.

7 En route, to pass over waypoint.

8 To destroy all hostile aircraft in given airspace.

9 Of local sky, devoid of clouds ("the \*"), but may be above or between cloud layers.

10 To clean piston engine; see *cleaning*.

11 To fly out of a local area, eg a flying display.

12 Not secure [communications].

**clear air turbulence, CAT** Significant turbulence in sky where no clouds present, normally at high altitude in high windshear near jetstream.

**clearance** 1 Authorisation by ATC (1), for purpose of preventing collision between known aircraft, for aircraft to proceed under specified conditions within controlled airspace (see *abbreviated* \*, *SIDS*, *STARs*, \* *delivery*, \* *items*, \* *limits*).

2 Minimum gap between portions of hardware in relative motion (eg fan blade and case).

3 Transport of troops and material from beach, port or airfield using available communications.

4 Approval for publication of written text, image or film concerning sensitive subject, after excision of offending parts.

**clearance amendment** Change in clearance (1) made by controller to avoid foreseeable conflict.

**clearance control** Precise control of the microscopic gap between the tip, or outer radius, of a rotating structure and the surrounding fixed casing. Also called tip\*.

**clearance delivery** ATC service, with assigned frequency, for issuing pre-taxi, taxi and certain other pre-flight clearances.

**clearance function** Clearance delivery (UK).

**clearance limit** Fix or waypoint to which outbound flight may be cleared, there to receive clearance to destination.

**clearance void** Automatic cancellation if takeoff not made by specified time.

**clearance volume** Minimum volume remaining in piston engine cylinder at TDC.

**cleared flight level** FL to which flight is cleared, though possibly not yet reached.

**cleared through** Valid to clearance limit, including intermediate stops.

**clear ice** Glossy, clear or translucent accretion from slow freezing of large supercooled water droplets.

**clearing manoeuvre** Change of aircraft attitude, on ground or in flight, to give better view of other traffic.

**clearing procedure** Clearing manoeuvre, often combined with vocal callouts (esp. when pupil under instruction) before takeoff or any other flight operation (eg scrutiny of airspace beneath prior to spin).

**clearing turn** Turn in which pilot checks local airspace, especially below, before stall or spin.

**clear-vision panel** See *DV panel*.

**clearway** 1 Rectangular area at upwind end of runway or other takeoff path devoid of obstructions and prepared as suitable for initial climbout.

2 Specif., area beyond runway, extending not less than 250 ft/76 m wide on each side of centreline, no part of which (other than threshold lights away from centreline and not over 26 in/660 mm high) projects above \* plane.

**clearway plane** Plane extending from upwind end of runway at slope positive and not exceeding 1.25 per cent.

**cleat** 1 In airframes, a triangular brace at a junction.

2 In an aircraft equipped for towing [large military] gliders, the attachment [usually with two pivoted jaws] for the towrope.

**clevis joint** Fork and tongue joint (eg between solid motor cases) secured by large-diameter pin.

**CLF** Carbon-loaded foam, common single-layer RAM.

**CLFA** Centre de Laser Franco-Allemagne.

**CLG** 1 Ceiling (ICAO).

2 Calling.

**CL<sub>γ</sub>, Cl gamma** Circulation lift coefficient.

**CLGE** Cannon-launched guidance electronics.

**CLGP** Cannon-launched guided projectile.

**CLI** Common languages interactions.

**Climate Change Levy** Financial penalty imposed [in absence of precise numerical values] on users of energy from non-renewable sources (EC).

**climatic test** Static test in simulated adverse environments (rain, ice, temperature extremes, salt, sand, dust) to demonstrate compliance with requirements.

**climb** 1 Any gain in height by aircraft (verb or noun).

2 More commonly, deliberate and prolonged gain in height by appropriate trajectory and power setting (ie not zoom).

**climb corridor** Positive controlled military airspace of published dimensions extending from airfield.

**climb gradient** Vertical height gained expressed as percentage of horizontal distance travelled.

**climb indicator** See *VSI*.

**climbing cruise, climb cruise** Compromise between speed and range, typically at  $1.15 V_{md}$  planned from published tables for peak efficiency higher than attainable in constant-height cruise.

**climbing shaft** Access hatch and ladder leading from bottom to top of airship hull.

**climb out** 1 Loosely, flight from unstick to setting course (lightplane in VFR).

2 Specif., flight from screen height (35 ft/11 m) to 1,500 ft/460 m. Comprises six segments: 1, 35 ft to gear up ( $V_2$ ); 2, gear up to FRH ( $V_2$ ); 3, level (accelerate to FUSS); 4, FRH to 5-minute power point (FUSS); 5, level (accelerate to initial ERCS); 6, to 1,500 ft/460 m (ERCS) (see *NFP*).

**CLIN** Contract line-item number.

**clinker-built** Marine hull or float constructed from diagonal or longitudinal planks overlapping at edges.

**clinodromic** Holding constant lead angle.

**clinometer** 1 Instrument for measuring angle of elevation, used in some ceilometers.

2 Pre-1935, a lateral-level flight instrument.

3 Several authorities use \* as synonymous with *inclinometer*.

**clip, CLIP** 1 Cellular logic image processor.

2 Pack of air-launched missiles loaded as a unit.

**clipped wing** Aircraft having wing modified by removal of tips or outer portions (eg for racing).

**clipper** Clipping (1) circuit.

**clipping** 1 Limiting positive and/or negative parts of waveform to chosen level.

2 Mutilation of communications by cutting off or distorting beginnings and/or ends of words or syllables.

3 Limitation of frequency bandwidth.

4 Reduction of amplification below given frequency.

**CLIRCM, Clircm** Closed-loop IRCM.

**CLK** Clock, clock time.

**CLL** Centreline lighting provided.

**C<sub>M</sub>** Centreline (major axis) of missile.

**CLMA** Contact localization and mission analysis (ASW).

**$Cl_{max}$**  Maximum attainable lift coefficient.

**Clnc, CLNC** Clearance (UK), hence Clnc Del, for delivery.

**CLNP** Connectionless network protocol.

**CLNS** Connectionless network service.

**CLNTS** China Lake Naval Testing Station (CA, USN).

**CLO** 1 Counter-LO (low-observables).

2 Logistics and training command (KL, RNethAF).

**CLOAR** Common low-observable[s] autorouter (AFMSS).

**cllobber** To knock out a ground or air target (colloq.).

**clocking** Precisely aligning groups of rotating airfoils, especially of turbine stages.

**clock rate** Precise frequency at which pulses are generated to control computer arithmetic unit, digital chip or other device.

**CLOS** Command to line of sight; can be prefaced by A = automatic, M = manual or SA = semi-automatic.

**close air support, CAS** Air attack on targets close to friendly surface force, integrated with latter's fire and movement.

**close-controlled interception** One in which interceptor is under continuous ground control until target is within visual or AI radar range.

**closed-circuit tunnel** Wind tunnel which recirculates given mass of working fluid.

**closed-circuit TV** Camera/microphone linked to TV receiver/speaker by wires.

**closed competition** Procurement competition in which prices, performances and design details are not disclosed to rival bidders.

**closed cycle** See *closed thermodynamic cycle*.

**closed-jet tunnel** Tunnel, not necessarily closed-circuit, in which working section is enclosed by walls.

**closed-loop system** Dynamic system in which controlled variables are constantly measured, compared with inputs or desired values and error signals generated to reduce difference to zero. Future aircraft will probably have \* cabin-air systems, significantly reducing fuel burn.

**closed thermodynamic cycle** Cycle which can transfer energy but not matter across its boundary. Thus, the working fluid recirculates endlessly, a system achieved in APUs but not for aircraft propulsion.

**close flight plan** To report safe arrival to appropriate ATC authority and thus terminate flight plan. (Failure to close may trigger emergency.)

**close hangar doors!** Stop talking shop (RAF, colloq.).

**close out** 1 To seal spacecraft, esp. manned; task performed by ad hoc \*\* crew who are last to leave pad area.

2 To complete manufacturing programme.

**close parallel operation** Runways less than 200 m [656 ft] apart.

**closest approach** 1 Time, location or separating distance at which two planets are closest.

2 Same for fly-by spacecraft.

**close support** See *close air support, CAS*.

**closet** Above-floor bay or compartment for carry-on baggage or folded wheelchairs.

**closure** Relative closing velocity between two air or space vehicles.

**clot** Idiot (RAF colloq.).

**cloud** Large agglomeration of liquid droplets (water in case of Earth) or ice crystals suspended in atmosphere.

**cloud absorption** Absorption of EM radiation by planetary cloud depends on cloud structure, size and EM wavelength, long waves reflected from planet surface being strongly absorbed even by thin layers.

**cloud amount** Estimated as apparent coverage of celestial dome, as seen by observer; originally estimated in tenths, now expressed in oktas and written in symbolic form on met chart.

**cloud attenuation** Reduction in strength of microwave or IR radiation by cloud, usually due to scattering rather than absorption.

**cloud banner** See *banner cloud*.

**cloud break approach** Final approach beginning in cloud and ending in visual contact (though possibly with precipitation).

**cloud chamber** Sealed chamber filled with saturated gas which, when cooled by sudden expansion, gives visible track of fog droplets upon passage of ionising radiation or particle.

**cloud/collision warning** See *weather radar*.

**cloud cover** See *cloud amount*.

**cloud-cover satellite** Satellite equipped to measure by spectral response cloud cover on Earth or planet below.

**cloud deck** Cloud layer, esp. visibly dense, seen from above.

**cloud droplet** Water or ice particle with diameter  $\leq 0.2$  mm.

**cloud height** Altitude of base.

**cloud 9** To be on \* = feeling of elation and/or haziness.

**cloud point** Temperature at which cooling liquid becomes cloudy.

**cloud seeding** Scattering finely divided particles into cloud to serve as nuclei for precipitation (rainmaking).

**cloud types** Each type has its own entry. They are classified by numbers giving an indication of danger: cirrus 0, cirrocumulus 1, cirrostratus 2, altostratus 3, altostratus 4, nimbostratus 5, stratocumulus 6, stratus 7, cumulus 8, and cumulonimbus 9.

**clover leaf** 1 A search pattern in which the aircraft describes three or more radial leaf patterns, repeatedly overflying a central point.

2 Cross-section of a solid-propellant rocket motor grain in the form of a hollow drum with three inward-projecting radial ridges or walls.

**clovers** Common low-observables verification system (USAF).

**CLP** Club der Luftfahrtpublizisten (Austria).

**C<sub>p</sub>** The roll-damping derivative, introduced chiefly to correct for spanwise variation in  $\alpha$  in roll; positive except perhaps in a spin.

**CLR** 1 Clearance, or cleared to (given height).

2 Clear sky [ $\leq 10\%$  cloud].

3 Compact, long-range (Flir).

**CLRC** Central Laboratory of the Research Councils (UK).

**CLRS** Weather clear and smooth.

**CLS** 1 Contingency landing site.

2 Cargo loading system [M adds manual] (JARS).

3 Computer loading system.

4 Contractor [or co-operative] logistic system [or support].

5 Central logging system.

6 Capsule launch system.

**Cl<sub>s</sub>** Lift coefficient at stall.

**CLS** Cruising/loiter speed.

**CLSD, Clsd** Closed.

**CLSU** Culham Lightning Studies Unit.

**CLT** 1 Centreline tracking (ILS/ILM).

2 Customised lead time.

3 calculated landing time.

**CLTF** Closed-loop transfer function.

**Cl<sub>to</sub>** Takeoff lift coefficient.

**CLTP** Connectionless mode transport protocol.

**CLTS** Combined life time support.

**CLU** Container/launch unit.

**Cl<sub>v</sub>** Lift coefficient, unblown.

**club layout** Pairs of seats facing each other, often with table between.

**club propeller** Propeller having stubby coarse-pitch blades for bench-testing engine with suitable torque but reduced personnel danger and slipstream.

**clue** Piece of information, hence: clued up, well informed; clueless, ignorant (RAF colloq.).

**cluster** 1 A group of off-the-shelf computers linked together to create a high-performance (e.g. over 10 teraflops) computing system.

2 Two or more parachutes linked to support single load.

3 Several bombs or other stores dropped as group.

4 Several stars or other pyrotechnic devices fired simultaneously from single container.

5 Several engines forming group controlled by single throttle.

6 Several rocket motors fired simultaneously to propel single vehicle.

**cluster bomb unit** *cluster munition*.

**cluster joint** Structural joint of several members not all in same plane.

**cluster munition** Container which, after release from aircraft, opens to dispense numerous bomblets (rarely, ECM or other payloads).

**cluster weld** See *cluster joint*.

**clutter** Unwanted indications on display, esp. radar display, due to atmospheric interference, lightning, natural static, ground/sea returns or hostile ECM.

**CLV** Crew launch vehicle, partner of future CEV2 (NASA).

**C<sub>LW</sub>** Lift coefficient of the wing.

**CLX** Combat leadership exercise.

**CM** 1 Command module.

2 Configuration, or context, management (EDP, software).

3 Crew member, thus \*1, \*2, etc.

4 Cluster [or cratering] munition.

5 Cruise missile.

6 Comsec module.

7 Countermeasure[s].

8 Classified message.

9 Capability Manager (MoD UK).

10 Crew module.

**CM** Coefficient of pitching moment about half-chord. This and the next two terms are numerically pitching moment divided by  $qSb$  [dynamic pressure, wing area, wing span].

**C<sub>m</sub>** Coefficient of pitching moment about quarter-chord; also rendered  $C_{m/4}$  and  $C_{m0.25}$ .

**cm** 1 Centimetre[s].

2 Centre of mass of a body.

**CMA** 1 Central[ized] maintenance application.

2 Common-mode analysis.

3 *China Meteorological Administration*.

**C<sub>mac</sub>** Coefficient of pitching moment about aerodynamic centre; in US often  $C_{m\alpha}$ .

**CMAG** Cruise-missile advanced guidance.

**CMAL** Continuously-moving assembly line.

**CMATZ** Combined military air, aerodrome, traffic zones.

**CMB** 1 Continuous monofilament, braided.

2 Concorde Management Board.

3 Cosmic microwave background.

4 Central Medical Board (RAF).

5 Ceiling-mounted bin.

6 Climb, climbing.

**CMBRE** Common munitions built-in test reprogramming equipment.

**CMC** 1 Cruise-missile carrier (A adds aircraft).

2 Ceramic-matrix composite(s).

3 Central maintenance computer [F adds function, S system].

4 Cheyenne Mountain Complex (USAF).

- C<sub>meg</sub>** Coefficient of pitching moment about c.g.
- CMCS** Central maintenance computing system.
- CMD** 1 Command, ie total autopilot authority.  
2 Countermeasures dispenser, or duties.  
3 Cruise-missile defense.  
4 Colour [or common] multipurpose [or multifunction] display [S adds system, U unit].
- CMDA/H** Circling minimum descent altitude height.
- CMDO** Coevolutionary multidisciplinary optimisation.
- CMDR** 1 Coherent monopulse Doppler radar.  
2 Card maintenance data recorder.
- CMDS** Countermeasures dispensing system.
- Cmdt** Commandant.
- CME** 1 ECM (1) (F).  
2 Coronal mass ejection.  
3 Central Medical Establishment (RAF).
- CMEA** Council for Mutual Economic Assistance.
- CMF** 1 Conceptual military framework (NATO).  
2 Central maintenance function.  
3 Common message format.
- CMFS** Chassis-mounted fuel system.
- CMFT** Canadian Museum of Flight and Transportation, Surrey BC.
- CMG** Control-moment gyro.
- CMH** Center for Military History (US).
- CFI** 1 Computer-managed instruction (see *CAI* [2]).  
2 Cruise-missile interface.  
3 Catia Metaphase Interface.
- CMIK** Cruise-missile integration kit.
- CMIS** 1 Command management information system.  
2 Conical microwave image[r]/sounder.
- CMISE** Combat management integration support environment.
- CMIT** Components management integrated team.
- CMIV** Cabin management and interactive video.
- CML** Consumable materials list.
- C<sub>mle</sub>** Coefficient of pitching moment about the leading edge [usually of the wing].
- CMLP** Cruise-missile launch point.
- CMLS** Commercial microwave landing system [A adds avionics].
- CMM** 1 Computerised modular monitoring (of health of hardware).  
2 Condition-monitored maintenance.  
3 Co-ordinate measuring machine.  
4 Common-mode monitor (AFCS).  
5 Component maintenance manual.  
6 Capability maturity model; I adds integration (SEI4).  
7 Common modular missile.  
8 Command memory management.
- CMMI** See *CMM* (6).
- CMMCA** Cruise-missile mission control aircraft.
- CMMS** Congressionally mandated monthly study (US).
- CMN** Control-motion noise (MLS).
- CMO** Certificate Management Office (FAA).
- C<sub>mo</sub>** Coefficient of pitching moment (1/4-chord) at zero lift.
- CMOS** 1 Complementary metal-oxide silicon, or semiconductor.  
2 Cockpit maintenance operations simulation, or simulator.
- CMP** 1 Countermeasures precursor (aircraft penetrating hostile airspace ahead of attacking force).  
2 Counter-military potential (strategic balance).  
3 Central maintenance panel.  
4 Configuration management plan.
- CMPL, cmpl** Completion, completed.
- C<sub>m<sub>q</sub></sub>** The pitch-damping stability derivative.
- CMR** Central[ised] maintenance record.
- CMRA** Cruise-missile radar altimeter.
- CMRB** Composite main-rotor blade.
- CMRS** 1 Countermeasures receiver system.  
2 Crash/maintenance recorder system.
- CMS** 1 Continuous monofilament, spun.  
2 Commission de Météorologie Synoptique.  
3 Cockpit, cabin or circuit [electric/electronic, not ATC] management system.  
4 Constellation, or central, maintenance system.  
5 Common modular, or combat-mission, simulator.  
6 Computer module system.  
7 Cassette memory system.  
8 Component-management support.  
9 Content, or combat, management system.  
10 Combat mission simulator.  
11 Civil maritime surveillance.
- CMSAF** Chief master sergeant of the Air Force (USAF).
- CMT** 1 Cadmium mercury telluride (IR detector).  
2 Communications management terminal.  
3 Certificate management team (ATOS).
- C<sub>mt</sub>** Coefficient of moment of the tailplane [horizontal stabilizer].
- CMTC** Committee for Military-Technical Co-operation.
- C<sub>μ</sub>, C<sub>mu</sub>** Blowing coefficient of circulation-controlled aerofoil.
- CMU** 1 Communications, or central, management unit.  
2 Control and monitor unit (Hums).
- CMUP** Conventional-mission upgrade program.
- C<sub>mv</sub>** The tuck derivative.
- CMW** Compartmented mode workstation.
- C<sub>m<sub>w</sub></sub>** Coefficient of moment of the wing.
- CMWS** Common missile warning system.
- CM<sub>x</sub>, C<sub>My</sub>** Helicopter roll moment coefficients, M<sub>x</sub>, M<sub>y</sub> divided by ρAR [ΩR].
- C<sub>Mo</sub>, CM zero** Coefficient of pitching moment at zero lift.
- C<sub>m0.25</sub>, C<sub>m1/4</sub>** See C<sub>m</sub>.
- CN** 1 Crew's Notes [in large aircraft, can be a massive tome].  
2 Fleet carrier, nuclear [previously CVN] (USN).  
3 Consigne de Navigabilité [= AD(1)] (F).
- C/N** Cadet Navigator (RAF rank).
- C<sub>N</sub>** Coefficient of normal force, N<sup>1/2</sup>ρU<sup>2</sup>C.
- C<sub>n</sub>** Directional stability, yawing moment coefficient due to sideslip, = yawing moment ÷ q bs [dynamic pressure, span, wing area].
- c/n** Constructor's number.
- CNA** 1 Computer network attack.  
2 Center for Naval Analyses.  
3 Common-nozzle assembly.  
4 Cast nickel alloy.
- CNAD** Conference of National Armaments Directors (NATO).
- C<sub>na</sub>** Slope of normal force plotted against α curve.
- CNATRA, Cnatra** Chief of Naval Air Training (USN).

- CNATS** Controller of National Air Traffic Services (UK).
- CNC** 1 Computer numerical control (NC machining).  
2 Com/nav controls.
- CNCE** Communications nodal control element.
- CNCS** Central Navigation and Control School (RAF).
- CNCT** Combat Network Communications Technology [adds AEHF] (USAF).
- CND** 1 Computer network, defense.  
2 Campaign for nuclear disarmament (UK).
- CNDB** Customised navigation database.
- CND/RTOK** Could not duplicate, retest OK.
- CNEIA** Comité National d'Expansion pour l'Industrie Aéronautique (F).
- CNEL** Community noise equivalent level.
- CNES** Centre National d'Etudes Spatiales (F Paris 75039).
- CNF** Central notice-to-airmen facility.
- CNG** 1 Compressed natural gas.  
2 Chief of [State] National Guard.
- CNH** Carbon Nomex honeycomb.
- CNI** 1 Communications, navigation, identification.  
2 Chief navigational instructor.  
3 Continuous nitrogen inerting.
- CNIE** Comision Nacional de Investigaciones Espaciales (Arg.).
- CNIEW** CNI (1) electronic warfare.
- CNII** Central research institute (R).
- CNIMS** CNI (1) management system.
- CNIR** Communication, navigation, identification and reconnaissance.
- CNITI** Central scientific institute for radiotechnical measurement; often rendered TsNITI (R).
- CNIU** CNI (2) unit.
- CNK** Cause not known.
- CNL** Cancel, cancelled.
- CNMA** Communications network for manufacturing applications, search for ISO standards complementary to MAP6 and TOP (EEC).
- CNO** 1 Chief of Naval Operations (USN).  
2 Computer network operations; JTF adds Joint Task Force.
- C/NO, C/No** Carrier-to-noise density ratio.
- C/N/P** Com./nav./pulse.
- CNPI** Communication(s), navigation and position(ing) integration.
- CNR** 1 Community noise rating.  
2 Consiglio Nazionale Ricerche (I).
- C<sub>nr</sub>** Yaw-damping derivative, contributor to C<sub>n</sub>.
- CNRA** Certificat de Navigabilité Restreint (homebuilts, F).
- CNRE** Centre National de Recherches de l'Espace (F).
- CNRI** Combat net radio interface.
- CNRS** Centre National de la Recherche Scientifique (F).
- CNS** 1 Continuous.  
2 Communications network simulator.  
3 Communications, navigation, surveillance; ATM adds air-traffic management (ICAO).  
4 Common nacelle system, able to accept different types of engine.  
5 Chief of Naval Staff [First Sea Lord] (UK).
- CNSA** China National Space Administration.
- CNSAC** Comité National de Sûreté de l'Aviation Civile (F).
- CNST** Center for NanoSpace Technologies.
- CNT** 1 Certificat de Navigabilité de Type (F).  
2 Carbon nano tube.
- CNTR** Centre.
- CN<sub>2</sub>D** Coefficient of usable lift (variable aerofoil profile).
- CN<sup>2</sup>H** Conduit nuit 2nd generation helicopters.
- CNVTV** Convective.
- CNX** Cabin network accelerator (satcoms).
- CNX ratio** The percentage of passengers who are connecting with a second flight.
- CO** 1 Commanding officer.  
2 Crystal oscillator.  
3 Checkout.  
4 Aerodynamic mean chord.  
5 Corps observation (USA, 1919–24).  
6 Carbon monoxide.  
7 Controlling obstacle.  
8 Collaborative optimization.
- Co** 1 Company.  
2 County.
- c/o** Changeover [switch].
- COA** 1 Course of action.  
2 Corps observation, amphibian (USA 1919–24).  
3 Certificate of authorization (FAA).
- CoA** Circle of ambiguity
- coach** Formerly, US domestic high-density seating configuration.
- COAITA** Colegio Oficial y Asociación de Ingenieros Tecnicos Aeronáuticos [E-28004 Madrid] (Spain).
- coalescing filter** Works by coalescing finely divided liquid droplets (eg water in fuel) into removable masses.
- coaming** 1 Edge of open-cockpit aperture, often padded.  
2 In flight deck, along top of main instrument panel.
- Coanda effect** Tendency of fluid jet to adhere to solid wall even if this curves away from jet axis.
- Coanda flap** Flap relying on Coanda effect for attachment of flow to upper surface even at extreme angles.
- coannular inverted nozzle** Nozzle of variable-cycle jet engine with low-velocity core and high-velocity surrounding jet.
- coarse pitch** Making large angle between blade chord and plane of disc, thus giving high forward speed for given rotational speed.
- coarse-pitch stop** Mechanical stop to prevent inefficient over-coarse setting (removed when feathering).
- coast** 1 Radar memory technique tending to slave to original target trajectory and avoid lock-on to stronger target passing same LOS.  
2 Unpowered phase of trajectory, esp. in atmosphere (usually verb).
- coastal refraction** Change in direction of EM radiation in crossing coast; also called shoreline effect, land effect.
- coast-boost** Period of coasting followed by rocket burn.
- coasted track** Continued on basis of previous characteristics in absence of surveillance data (TCAS).
- coastline refraction** See *coastal refraction*.
- COAT** Corrected outside air temperature (OAT minus TAS/100).
- co-axial** Propeller or rotor having two or more sets of

blades on same axis rotating in opposite senses independently. Not same as contra-rotating.

**co-axial cable** Comprises central conductor wire and conducting sheath separated by dielectric insulator.

**COB** 1 Co-located operating base.

2 Certificated operational base.

3 Catenary obstruction beacon, mounted on pylons supporting power cables.

**cob** The thick inner boundary around the centre of a compressor rotor stage or disc.

**cobalt** Hard, silver-white metal, density 8.9, MPt 1,495°C, important in steels and in high-temperature engine alloys. Co-60 is dangerous radioisotope theoretically producible in large amount by nuclear weapons.

**cobblestone turbulence** 1 High frequency \* due to large mass of randomly disturbed air without significant gross air movement.

2 Buffet experienced by jet V/STOL descending into ground effect.

**COBE** Cosmic-origin background explorer.

**Cobol** Common business-oriented language.

**cobonding** Manufacture of composite aerofoil, esp. wing, in which entire surface is assembled and cured, but with one skin (usually upper) separated by debonding agent. This skin is then attached by removable bolts.

**Cobra** 1 Manoeuvre in which from level flight at moderate airspeed pilot applies maximum symmetric nose-up command, reaching AOA 90° up to possibly 130°, when control neutralised for flip-down recovery to level flight about 5 s later. Modest gain in height, large loss in airspeed [energy], for dynamic braking.

2 Co-optimized booster for reusable applications.

3 Coastal battlefield reconnaissance and analysis (USMC).

4 Collection of broadcasts from remote assets.

**COBS** Canadian orbiter boom sensor; S adds system.

**COBY** Current operating budget year.

**COC** 1 Common (or combat) operations centre, for tactical control of all arms in theatre.

2 Catalytic ozone converter.

3 Copper on ceramic.

4 Chamber of Commerce.

5 Cash operating cost.

**COCC** Contractor's operational control centre.

**cockade** National insignia worn by military aircraft, esp. one of concentric rings.

**cocked** Aircraft, especially combat type, preflighted through all checklists to point of starting engines.

**cocked hat** Triangle formed by three position lines that do not meet at a point.

**cockpit** Space occupied by pilot or other occupants, esp. if open at top. Preferably restricted to small aircraft in which occupants cannot move from their seats; most \* contain only one seat. Term could arguably be applied to all aerodyne pilot stations, but flight deck preferred for large aircraft.

**cockpit alert** State of immediate readiness with combat aircrew fully suited, in \* and ready to start engine.

**cockpit audio monitoring** Activated by flight crew, continuously transmits live audio via satellite from aircraft [jet airliner] experiencing emergency.

**cockpit bag** Container, usually flexible fabric, designed to hold flight guides, charts, headset etc.

**cockpit check** Numbered list of investigations of status

[and if necessary of operability] of every functioning item according to meticulously followed schedule, printed on paper in a light aircraft and stored electronically in more complex aircraft, carried out on entering cockpit [after completing externals] by pilot, assisted by any other members of flight crew if necessary.

**cockpit cowling** Aircraft skin around cockpit aperture.

**cockpit television sensor** Solid-state CCD camera recording what the pilot sees during each flight.

**cockpit voice recorder** Automatic recycling recorder storing all crew radio and intercom traffic, plus background noise, during previous several missions.

**Coco exercise** Combat mission exercise called off when aircraft are lined up on runway.

**Cocom** Combat Commander (JBFSa).

**Cocomo** Constructive cost model (software).

**Cocraly** Anti-oxidation coating for hot metal, from Co, Cr, Al, Yttrium.

**COD** 1 See *carrier on-board delivery*.

2 Component operating data.

3 Cash on delivery.

4 Chemical oxygen demand.

**CODA, Coda** Centre Opérationnel de la Défense Aérienne (Taverny, F).

**Codamps** Coupled ocean/atmosphere mesoscale prediction system.

**Codan** Carrier-operated device anti-noise.

**Codar** Correlation detection and recording, or ranging (ASW).

**Code** 1 Two capital [upper-case] letters assigned to airline [any public carrier]; sometimes shared, thus Cronus aircraft operate on \* of Aegean. These letters preface the three- or four-digit number identifying a particular time-tabled flight.

2 See \* *letters*.

3 Another meaning is the series of pulses from a transponder.

**Code Bambini** Literally 'child's talk', multi-lingual tactical radio language (Switz.).

**code block** Standardised format of data identifying each frame in visual, IR or SLAR film, with provision for high-speed computer recall.

**Codec** Coder/decoder.

**code letters** Pairs of letters [from 1944 often letter + number] identifying unit of aircraft in WW2. Each aircraft also assigned individual letter (RAF, USAAF).

**code light** Surface light giving signal, usually Morse; if at airfield could be called beacon.

**codem** Coded modulator/demodulator.

**coder** Part of DME transponder which codes identity into responses.

**code rate** Ratio of actual data bits to total information digits transmitted in radar or communications system having deliberate redundancy. Symbol R.

**Coderm** Committee for Defence Equipment R & M (UK).

**Codes** Common digital exploitation system.

**codes** Numbers assigned to multiple-pulse reply signals transmitted by ATRBS and SIF transponders.

**Codib** Controlled-diffusion blade (or blading).

**coding** Arrangement of problem-solving instructions in format and sequence to suit particular computer.

**CODSIA, Codsia** Council of Defense and Space Industry Associations [office, Arlington, VA 22201] (US).

**COE** 1 Certification of equivalency (USAF).

2 Co-operative emitter.

3 Common operating environment.

**COEA** Cost and operational effectiveness analysis.

**coefficients** Except for next four entries, see under appropriate characteristics.

**Coefficient A** In simple magnetic compass, deviations on cardinal and quadrantal points summed and divided by 8.

**Coefficient B** In simple magnetic compass, deviation E minus deviation W divided by 2.

**Coefficient C** In simple magnetic compass, deviation N minus deviation S divided by 2.

**coefficient conversion factor** Formerly, multiplier 0.00256 required to convert absolute to engineering coefficients.

**COEIA** Combined operational effectiveness and investment appraisal (UK 2001).

**COF** Centrifugal oil filter.

**C of A** Certificate of Airworthiness.

**COFAS** Centre d'Opérations des Forces Aériennes Stratégiques (Taverny, F).

**CoFAS** Commandement des FAS, same address.

**C of C** 1 Certificate of Compliance.

2 Change of control.

**COFDM** Code orthogonal frequency-division multiplexing (helicopters).

**C of E** Certificate of Experience

**C of F** Construction of facilities.

**coffin** 1 Missile (ICBM) launcher recessed into ground but not hardened.

2 Symbol which appears in place of a downed aircraft (ACMR).

**C of G** See *c.g.*

**C of M** Certificate of Maintenance.

**C of P** See *centre of pressure*.

**C of R** Certificate of Registration of aircraft.

**COG** Component Obsolescence Group [1937–, 160+ member organizations] (UK).

**C of T** Certificate of test.

**cogbelt** Flexible belt incorporating teeth to prevent slip.

**cognitive model** An imagination of a future hardware item, including a complex system, in the brain of a design engineer. Software engineers have imagined thousands of lines of software code before anything has been created physically.

**COGT** Centre-of-gravity towing.

**coherent** Radiation in which, over any plane perpendicular to direction of propagation, all waves are linked by unvarying phase relationships (common simplified picture is of waves 'marching in step' with all peaks in exact alignment).

**coherent echo** Radar return whose amplitude and phase vary only very slowly (from fixed or slowly moving object).

**coherent pulse radar, coherent radar** Incorporates circuitry for comparing phases of successive echo pulses (one species of MTI).

**coherent transponder** Transmitted pulses are in phase with those received.

**coherer** RF detector in which conductance of imperfect part of circuit (eg iron filings) is improved by received signal.

**Cohoe** Computer-originated holographic optical elements.

**COI** Co-ordinator of Information (US, WW2).

**CoI** Central Office of Information (UK).

**COIAE** Colegio Oficial de Ingenieros Aeronauticos de España [office, E-28041 Madrid] (Spain).

**Coil, COIL** 1 Chemical oxygen iodine laser.

2 Commercial overhaul information letter (FAA).

**coin, Co-In, CO-IN** Counter-insurgency; aircraft designed for guerilla war.

**Coincat** Community of Interests in Civil Air Transport (G).

**coincidence circuit** Gives output signal only when two or more inputs all receive signals simultaneously or within agreed time.

**COINS, Coins** Computer-operated instrument system.

**COIS** Coastal ocean imaging spectrometer.

**Cojas** Coherent jammer simulator.

**coke** Verb, to modify aircraft with Küchemann 'Coke bottle' fuselage.

**col** In atmosphere isobar field, saddle-shaped region separating two highs on opposite sides and two lows on remaining sides.

**colander** In some ramjet engines, perforated shell controlling secondary airflow into combustion chamber. Generally equivalent to gas-turbine flame tube.

**cold** 1 Without using afterburner.

2 Of a restricted area, not currently active.

**cold air mass** Colder than surrounding atmosphere.

**cold-air unit** Air-cycle machine, usually in an ECS, which greatly reduces temperature of working fluid by extracting mechanical energy in expansion through a turbine.

**Coldama** Co-ordination of loads data acquisition management.

**cold bucket** In aft fan with double-deck blades, outer blades handling cold air.

**cold cathode** Highly emissive coating and operating at ambient temperature.

**cold-cockpit alert** Combat aircraft has no ground power supplies and is 'cold' until pilot enters and initiates start sequence for engine, gyros and systems.

**cold cordite charge** Does not detonate but burns to give high-pressure flow of gas.

**cold drawing** Drawing workpiece at room temperature.

**cold flow test** Static test of liquid rocket propulsion system to verify propellant loading and feeding but without firing engine(s).

**cold front** Front of advancing cold air mass moving beneath and lifting warmer air, esp. intersection of this front with Earth's surface.

**cold gas** Reaction-control jet or rocket using as working fluid gas released from pressure or monopropellant decomposed without combustion.

**cold launch** 1 Launch of missile or other ballistic vehicle under external impulse, usually from tube (in atmosphere, in silo or on sea bed) with vehicle's propulsion fired later.

2 Takeoff of aircraft with INS not aligned.

**cold mission** Mission or test judged non-hazardous, thus not interfering with other activities.

**cold plate** In high-vacuum technology, refrigerated plate used to condense out last molecules of gas in chamber.

**cold plug** Spark plug having short insulated electrode

keeping relatively cool (because rate of carbon deposit from oil or fuel is very low).

**cold rating** Cold thrust; rated output of jet engine without afterburning. Can be MIL.

**cold rocket** Operating on pressurized gas or monopropellant, without combustion.

**cold rolling** Performed on steels to harden and increase strength, at expense of ductility.

**cold round** Test missile launched without active propulsion.

**Colds** Common opto-electronic laser detection system (detects laser beams and measures angle of arrival).

**cold shut** Porosity due to premature surface freezing in casting, or formation of gas bubble in weld.

**cold soak** 1 Test of complete aircraft by prolonged exposure to lowest terrestrial temperature available before flying a mission.

2 Test of cryogenic propulsion system by prolonged passage of propellant.

**cold stream** Fan airflow; hence \* reverser, one not affecting core.

**cold test** Determines lowest temperature at which oil or other liquid will flow freely.

**cold thrust** Maximum without afterburner.

**cold wave** Sudden major fall in surface ambient temperature in winter.

**cold working** Forming metal workpiece at room temperature; increases hardness and often strength but reduces ductility (increases brittleness).

**Coleman theory** Derived by NACA's R. P. Coleman and A. M. Feingold, basic explanation of ground resonance of helicopters with articulated rotors; hence such resonance called Coleman instability.

**coileopter** Aircraft having annular wing with fuselage at centre; usually tail-standing VTOL.

**collaborative programme** Undertaken by industrial companies in two or more countries as result of legal agreements between those companies or between their national governments.

**collar** Impact-absorbent ring around bottom of balloon gondola (usually lightweight foamed polystyrene).

**collateral damage** 1 Refers esp. to injury to friendly eyes from clumsy use of powerful lasers in warfare.

2 Damage caused to anything other than the intended target.

**collation** Selection in correct sequence and stacking in exact register of pre-cut piles to make part in composite material.

**collective pitch** Pilot control in rotary-wing aircraft directly affecting pitch of all blades of lifting rotor(s) simultaneously, irrespective of azimuth position. Main control for vertical velocity. Colloq. = 'collective'.

**collective stick** Collective-pitch lever (colloq.).

**collector** 1 Bell-mouth intake downstream of working section of open-jet tunnel.

2 Region of transistor between \* junction and \* connection carrying electrons or holes from base.

**collector cell** Small compartment at the inboard end of a main wing fuel tank, or elsewhere in the tank system where fuel might collect when fuel nearly consumed, which will continue to feed even under negative-g.

**collector ring** Circular manifold collecting exhaust from cylinders of radial piston engine.

**collimate** To adjust optical equipment to give parallel beam from point source or vice versa.

**collimating mark** A short line or cross at the mid-point of each edge of a reconnaissance photo.

**collimating tower** Carries visual and radio/radar target for establishing axes of aeriels (antennas) with minimal interference from other electrical fields. Alternatively collimation tower.

**collision-avoidance system** Provides cockpit indication of all conflicting traffic, without latter carrying any helpful equipment or co-operating in any way, and increases intensity of warning as function of range and rate of closure.

**collision beacon** Powerful rotating visual light, normally flashing Xenon tube, carried by IFR-equipped aircraft (normally one dorsal, one ventral).

**collision-course interception** Aimed at point in space which target will occupy at a selected future time; interceptor may approach this point from any direction.

**collision-warning radar** See *weather radar*.

**collision-warning system** See *collision-avoidance*.

**colloidal propellant** Having colloidal structure, with particles never larger than  $5 \times 10^{-3}$  mm and apparently homogeneous to unaided eye.

**co-located** Two ground nav aids, usually VOR and DME, at the same site.

**colours of the day** Particular combination, changed daily, of [usually two] Very [or similar] signal cartridges, fired to confirm aircraft as friendly to suspicious ground forces.

**colour stripping** Removal of all MES (6) colours except those indicating organic substances such as plastic explosives.

**Colpar** Confederacion Latino Americana de Paracaidismo (sport parachuting, office Argentina).

**COLT** CO<sub>2</sub> laser technology.

**COM** 1 Computer output on microfilm (direct recording).

2 Company operations manual.

3 Acronyms based on Command[er] or communications [over 50].

4 Cockpit operating manual.

**com** Communications (FAA = comm).

**Comac** Cockpit-management computer.

**ComAO, COMAO** 1 Composite air operation[s].

2 Combined air operations.

**comb** 1 Rake, usually linear, of pressure heads.

2 IFF aerial (antenna) with linear array of dipoles often sized to match spread of wavelengths.

**combat aircraft** Aircraft designed to use its own armament for destruction of enemy forces; thus includes ASW but not AEW or transport (definition controversial).

**combat air patrol, CAP** Maintained over designated area for purpose of destroying hostile aircraft before latter reach their targets.

**combat camera** Colour ciné camera aligned with fighter armament to film target.

**combat control team** Air force team tasked with establishing and operating nav aids, communications, landing aids and ATC facilities in objective area of airborne operation.

**combat fuel tank** *Combat tank*.

**combat gross weight** See *weight*.

**combat load** Aggregate of warlike stores carried

(includes guns/ammunition but excludes radars, lasers/receivers and drop tanks carried for propulsion).

**combat mission** Mission flown by balloon, airship, kite, aeroplane, helicopter or other aircraft such that it may expect to encounter enemy land, sea or air forces.

**combat persistence** Ability of fighter aircraft to engage numerous successive targets, by virtue of large number of AAMs carried.

**combat plug** Manual control of fighter engine permitting TET limit to rise to new higher level for period of emergency (typically 30 sec to 3 min).

**combat radius** *Radius of action.*

**combat spread** Variable loose formation affording best visual lookout.

**combat tank** External jettisonable fuel tank used on combat missions; possibly smaller than ferry tank.

**combat thrust loading** Thrust loading assumed for fighter in typical combat.

**combat trail** Combat aircraft, usually interceptors, in loose trail formation, maintaining position visually or by radar.

**combat wing loading** Wing loading assumed for fighter in typical combat.

**combat zone** 1 Geographic area, including airspace, required by combat forces for conduct of operations.

2 Territory forward of army rear boundary.

**combi, Combi** Transport aircraft with main deck furnished for both passenger and freight (from 'combination'). Proportion devoted to freight usually variable.

**combination** Tug and glider, before separation.

**combination aircraft** Combi.

**combination propulsion** See *mixed-power aircraft*.

**combination slide** Escape slide designed for subsequent use as life raft.

**Combined** Involving armed forces of two or more allied nations. Thus \* common user item, \* forces, \* staff etc.

**combined arms gateway environment** Complete mission planning from a single laptop.

**combined display** Presents information from two or more sources, usually radar superimposed on moving-map display.

**combined-effects munition** One having anti-armour, anti-personnel and incendiary effects.

**combined sight** Weapon-aiming device able to operate in more than one mode, eg optical and thermal imaging.

**combined stresses** Two or more simple stresses acting simultaneously on same body.

**combiner** Optical element in HUD for aligning, collimating or focusing at infinity all displayed elements on single screen.

**combining gearbox** Reduction gearbox driven by two or more engines or [e.g.] surface power units, and driving single or contra-rotating propeller or lifting rotor.

**Combre** See *CMBRE*.

**COMBS** Contractor-operated and managed base supply, ie manufacturer of major system manages and maintains government-owned GSE and spare parts and carries out heavy maintenance.

**combustion** Chemical combination with oxygen (burning).

**combustion chamber** 1 In piston engine, space above piston(s) at TDC, arguably extended over part of stroke depending on progress of flame front.

2 In gas turbine, entire volume in which combustion

takes place, including that outside flame tube(s) occupied by dilution air.

3 In liquid rocket or ramjet, entire volume in which combustion takes place, bounded by injector face, walls of chamber and plane of nozzle throat (not nozzle exit).

4 In solid or hybrid rocket, inapplicable.

**combustion efficiency** Ratio of energy released to potential chemical energy of fuel, both usually expressed as a rate.

**combustion ratio** Ratio of fuels or propellants actually achieved; in case of fuel/air usually termed mixture ratio.

**combustion ring** Combustion chamber of annular (eg Aerospike) liquid rocket engine.

**combustion space** See *combustion chamber (1)*.

**combustion starter** Gas-turbine engine-start energised by burning fuel, either fuel/air, monopropellant (eg Avpin) or solid cartridge. Some purists add "within a cylinder".

**combustion test vehicle** Free-flight vehicle (RPV or missile) whose purpose is test or demonstration of propulsion performance.

**combustor** 1 See *combustion chamber (2)*.

2 Combustion chamber (2) together with fuel manifolds, injectors, flameholders and igniters.

3 Rarely, afterburner burning region, with fuel spray bars, flameholders and ignition system.

**combustor loading** Expressed as a function of mass flow, and inversely of velocity, and total inlet pressure and temperature.

**Comdac** Command, display and control (USCG).

**Comecon** Council for Mutual Economic Assistance.

**Comed** Combined map and electronic display (pronounced co-med).

**Comeds** Conus meteorological data system (DoD).

**Comest** European colour-TV satellite management consortium.

**Comfile** Expandable network connecting ATC data, voice and radar to digital recorders.

**comfort chart** Plot of dry-bulb T° against humidity (sometimes modified to include effect of air motion).

**Comint** Communications intelligence.

**comlo** Compass locator.

**comm** Communication[s] (FAA).

**command** 1 Intentional control input by flight crew or remote pilot.

2 Electrical or radio signal used to start or stop action.

3 In EDP, portion of instruction word specifying operation to be performed.

4 Authority over precise flight trajectory exercised by ATC or military authority (hence \* altitude, \* height, \* heading, \* speed etc.).

**command airspeed** A target airspeed displayed as a *command parameter*.

**command augmentation system** Compares pilot demand with aircraft response, FCS receiving the difference; latest CAS have full authority and often high gain.

**command bars** Principal reference index on flight director instruments, giving attitude in pitch and roll.

**command destruct** System which, at range safety officer's discretion, can explode malfunctioning missile, RPV or other unmanned vehicle, or trigger BUS, thereby averting hazard to life or property.

**command dot** *Command marker* in form of bold dot or small disc.

**command ejection** Ordered [not necessarily triggered] by captain of aircraft.

**commander** Used only in military aviation, aircraft \* has authority over everyone on board even though he may not be a member of flight crew. Not synonymous with PIC or with civil term captain.

**command guidance** Steering by remote human operator.

**command lane** The principal channel in a primary flight-control system. It continuously outputs the incoming flight-control commands on the relevant A629 bus until, following a malfunction, it is over-ridden by the majority rule, or [in a more modern system] by the appropriate standby lane.

**command marker** Reference index (line, bug, arrow or other shape) indicating target value, set by pilot on tape (sometimes dial) instrument and then flown to centre reference line. (See *command reference symbol*.)

**command parameter** Variable subject to command (1), (2), (4) and thereafter displayed as target value on instrument or display.

**command reference symbol** HUD symbology in form of ring or other shape showing a point at which to aim ahead of aircraft, eg landing touchdown point or an aerial point for optimum AOA on overshoot (go-around).

**comma rudder** Rudder shaped like comma, with balance area ahead of hinge axis, used without a fixed fin.

**Commendation** Official praise for skilful flying, written in personal log book, usually of pilot.

**commercial** In military use, purchasable from civilian source (eg aircraft rivet).

**commercial aircraft** Aircraft flown for hire or reward.

**commercial electrics** Electrical systems serving passenger functions only (eg steward call circuits, PA system, cabin lighting).

**commercial load** Not defined, but usually means payload.

**commercial support** Assistance to operator of civil aircraft given or sold by original manufacturer or dealer.

**com./met./ops.** Communications, meteorology, operations.

**commitment** Announced decision to purchase an aircraft type, usually commercial transport.

**committal height** See *decision height*.

**commodity loading** All cargo of one kind grouped together, without regard to destination.

**commodity rate** Price charged to fly specified kind of cargo, typically per kilogramme over particular route.

**common aero vehicle** 1 Originally this was a standard design of RV [to house different payloads] for ICBMs.

2 Today, a common vehicle structure for deploying a variety of customised payloads, including weapons, into the atmosphere (MSP).

3 Capitalized, "an unpowered, manoeuvrable hyper-sonic glide vehicle carrying c1,000lb of munitions" launched from space to hit within 10ft (USAF).

**commonality** 1 Hardware quality of being similar to, and to some degree interchangeable with, hardware of different design.

2 Objective of using one basic design of aircraft, or other major system, to meet needs of more than one user service in more than one role (with economies in training, spares and other areas).

**common automatic recovery system** To retrieve UAVs

on surface ship: electronic guidance to system of nets and cables on LPD quarterdeck.

**common-cause analysis** Procedure maintained through planning, design and operation of a system to identify common-mode failures of all kinds.

**common configuration** Numerous plans, mainly USAF, to bring as many aircraft of one type as possible to uniform standard, usually by upgrades.

**Common Criteria** The chief standard for certifying secure software [very like DO-178B], used by the US and 20 other countries. See EAL2.

**common display system** Standardised glass cockpit.

**common-flow afterburner** Augmented turbofan in which fan and core flows mix upstream of afterburner.

**common infrastructure** Financed by two or more allies, eg by all members of NATO.

**common mark** Marking assigned by ICAO to aircraft of international agency (eg UN) on other than national basis. Hence \*\* registering authority.

**common module(s)** Use of identical "black box" subsystems as building blocks for different major equipments, eg \* IR components to build night-vision, recon., weapon guidance and other systems for different armed forces or civilian customers.

**common route** Portion of N American route west of coastal beacon.

**common sensor** The principal meaning is a sensor that intercepts both communications and Elint.

**common servicing** Performed by one military service for another without reimbursement.

**common-user airlift** In US, provided on same basis for all DoD agencies and, as authorised, other Federal Government agencies.

**communication deception** Interference with hostile communications (including ATC and nav aids) with intent to confuse or mislead.

**communication language** Complete language structure for linking otherwise completely separate (and possibly dissimilar) EDP (1) systems.

**communications intelligence** Gained by listening, by whatever means, to hostile communications.

**communications satellite** Vehicle, normally man-made, orbiting planetary body, usually Earth, for purpose of relaying intercontinental telecommunications (telephone, telex, radio, TV, online etc.) (see *active \*\**, *passive \*\**, *synchronous \*\**).

**communications security** Made up of physical security of transmitter and receiver, emission security of transmitter, transmission security en route and cryptosecurity of message.

**community** Clearly defined group, usually of aircrew, eg all who fly particular aircraft type or particular type of mission.

**community boundary** Drawn around inhabited or urban areas surrounding airport or airfield.

**community noise level** Flyover, sideline and approach NLs measured at designated points on or beyond community boundary (see *noise*).

**commutated Doppler** Form of MLS in which beam is frequency-coded and/or linearly commutated instead of scanned in azimuth and elevation.

**commutation** 1 Repeated reversal of current flow in winding of electrical machine, esp. to change output from a.c. to d.c.

2 Transfer of current between elements of polyphase rectifier to produce unidirectional output.

**commutator** Typically, radially separated series of conductors forming ring round rotating generator shaft, opposite pairs of which are touched by brushes in external circuit to give d.c. output by commutation (1).

**commuter aircraft** See *feederliner*.

**commuter airline** In theory, air carrier operating between outlying regions and major hub(s). In practice, applied to anything from air-taxi operator to – in undeveloped regions – national carrier (see *third-level*).

**com/nav** Communications and navigation aids; usually means complete avionics fit.

**Comlo** Compass locator (usually comlo).

**COMNA** Commodore Naval Aviation.

**Comos** Common Mode S (Eur ATC).

**comp** 1 Component of W/V along Tr (strictly, along flight-plan track between check points).

2 Compressor.

**compact airborne early warning** AEW platform without a rotodome.

**Compacta tyre** Landing wheel tyre of reduced diameter and greater than normal width (Dunlop).

**companion body** Hardware from launch system accompanying space vehicle or satellite on its final trajectory.

**comparative cover** Reconnaissance coverage of same scene at different times.

**comparative vacuum monitoring** Potentially very important method of detecting even the smallest cracking in structures by measuring any flow of air into a volume maintained as partial vacuum.

**compartment marking** Stencilled subdivisions of cargo aircraft interior to assist compliance with floor loading and c.g. position limits.

**Compas** Computer-oriented metering, planning and advising system.

**Compass** Compact multipurpose advanced stabilized system.

**compass acceleration error** See *acceleration errors*.

**compass base** Area on airfield, usually paved disc, on which aircraft can conveniently be swung.

**compass calibration pad** Compass base.

**compass compensation** See *compensating magnets*.

**compass course** See *heading*.

**compass deviation** Deviation (2).

**compass error** 1 Vector sum of variation E plus variation W.

2 Sum of deviation, variation and northerly turning error.

**compass heading** See *heading*.

**compass locator** Low-power beacon used with ILS, 2-letter ident.

**compass points** 32 named directions comprising cardinal points, quadrantal points and 24 intermediate points.

**compass rose** Disc divided into 360°, either on simple magnetic compass or on compass base.

**compass swing** See *swing*.

**compass testing platform** See *compass base*.

**compass variation** See *variation*.

**compatibility** Ability of materials (solids, liquids and gases) and dynamic operating systems to interface for prolonged periods without interference under prescribed environmental conditions.

**compatible** 1 Colour TV transmission capable of being received as monochrome by monochrome receiver.

2 Language and software capable of being used in given computer.

**compensated gyro** Incorporates correction for apparent wander.

**compensating magnets** Two pairs of bar magnets carried on arms rotatable about axis of magnetic compass to correct or minimise deviation.

**compensation manoeuvres** Aircraft manoeuvres required for accurate use of compensator (2), always involving four orthogonal headings, and sometimes circle or cloverleaf.

**compensator** 1 Instrument for measuring phase difference between components of elliptically polarised light (Babinet \* has pair of quartz wedges with optical axes perpendicular).

2 Device, manually or computer-controlled, carried in ASW aircraft to eliminate false readings caused by permanent (airframe and equipment hardware), induced and eddy-current interference signals.

**Compglas** Low-density composite of graphite fibres in ceramic matrix, offering strength at very high temperatures (United Technologies).

**compiler** ECP (1) program more powerful than assembler for translating and expanding input instructions into correctly assembled sub-routines.

**complementary shear** Induced in tension field (eg aircraft skin) at right angles to applied shear, in plane of field.

**completion business** Process of taking green airframes from manufacturer and equipping and furnishing to each customer's specification (principally in field of executive or commuter transports). Hence, a completion = one aircraft ready for customer.

**complex** See *launch complex*.

**compliance** Demonstrated fulfilment of requirements or certificating authority.

**compliance limit** Time (usually GMT) by which compliance must be demonstrated.

**compliant member** Capable of substantial elastic or otherwise recoverable deflection.

**compliant volume** Trapped body of fluid, usually oil, having predetermined stiffness resulting from fluid's bulk modulus. Often sealed by diaphragm or piston having small bleed, to even out pressures over a period (see *stiffness*).

**component** 1 One of assemblage of structural members.

2 One of assemblage of parts used to build hardware system.

3 Major subdivision of prime mover, esp. gas turbine (eg fan, compressor, combustor, turbine, afterburner, nozzle); hence \* efficiency.

4 Force, velocity or other vector quantity along reference axis, such that components along two mutually perpendicular axes sum vectorially to actual vector. Thus, crosswind \* on landing.

5 Major portion of aircraft that can be separated in flight, esp. if this leaves two complete aircraft able to proceed independently.

**component efficiency** Measure of performance of part of machine, normally on basis of energy output  $\times$  100 divided by energy input. Thus overall efficiency of gas turbine is product of \*\* of each part, considered on both mechanical and thermodynamic basis.

**component life** Authorised period of usage without attention, as stipulated by manufacturer or other authority. At expiry may be discarded or overhauled. Period may be extended from time to time.

**components tree** Notional "tree" formed by interlinking of aircraft systems, highlighted in CBT by ability to strip aircraft layer by layer.

**composite aircraft** 1 Comprising two aircraft joined together at take-off [see *component* (5)] but separated later in flight.

2 Aircraft made principally of composite material(s).

**composite air picture** Fed from many sources to give giant hi-resolution monitor with many overlays controlled by keyboards, mice and trackballs.

**composite beam** Composed of dissimilar materials bonded together.

**composite cloud** Combination of, or intermediate between, basic forms, eg cirro-cumulus.

**composite construction** See *composite material*.

**composite cooling** Evaporative cooling.

**composite double-base** Solid rocket filling of combined double-base and composite types (eg AP (2) + AIP in matrix of NC + NG).

**composite flight plan** One specifying VFR for one or more portions and IFR for remainder.

**composite flying** Long-range navigation along great circle but modified (eg to avoid high mountains) by inserting sectors using other methods.

**composite launch** Single launch vehicle carrying two or more distinct payloads.

**composite material** Structural material made up of two or more contrasting components, normally fine fibres or whiskers in a bonding matrix. Unlike an alloy, usually anisotropic.

**composite power** See *mixed power*.

**composite propellant** Solid rocket filling comprising separate fuel and oxidiser intimately mixed.

**composite route** One where composite separation is authorised.

**composite separation** Reduction [usually to half normal] of lateral and vertical minima on oceanic routes meeting criteria.

**compound aerofoil** Not defined, but has been applied to wing whose trailing edge comprises separately hinged upper and lower sub-aerofoils leaving controllable gaps.

**compound aircraft** Having wing(s) and lifting rotor(s).

**compound balance** Compound shelf.

**compound curvature** Sheet or surface curved in more than one plane, thus not formable by simple bending.

**compound die** Performs two or more sheet-forming operations on single stroke of press.

**compound engine** Expands working fluid two or more times in two or more places, eg in HP and LP cylinders or in piston engine followed by gas turbine or blow-down exhaust turbine.

**compound helicopter** Having propulsion (usually turbofan or turbojet) in addition to thrust component of lifting rotor.

**compound shelf** Control surface comprising two [rarely, three] spanwise sections hinged together one behind the other and moving in opposition. LE of main [front] section normally has fabric seal to fixed surface.

**compound stress** Not simple tension/compression,

torque, bending or shear but combination of two or more of these.

**compound taper** Outer wing is tapered more or less sharply than inboard.

**compound wing** Wing made up of major fixed portion and upper/lower rear foils, with or without blowing between them. Also called multi-foil section. T/c up to 30% has been achieved at high M<sub>d</sub>.

**compressed-air starter** Expands HP airflow through piston engine cylinders or ATM or turbine-blade impingement jet. In multi-engined aircraft cross-bleed can start second and subsequent engines.

**compressed-air tunnel** Closed-circuit tunnel filled with gas or air under pressure; can be smaller, and cheaper to run, than one at atmospheric pressure for given M and R.

**compressibility** In aerodynamics, phenomena manifest at speeds close to local sonic speed, when air can no longer be regarded as incompressible. Loosely, behaviour of airflow subject to pressure/density changes of 50 per cent or more of free-stream values.

**compressibility correction** From RAS to EAS (see *airspeed*).

**compressibility effects** Manifest as local speed, at peak suction, exceeds that of sound in surrounding flow; include abnormally rapid increase in drag, rearward shift of CP (2) on lifting wings, appearance of shockwaves, tendency to boundary-layer breakaway and, in improperly designed aircraft, control buzz and other more severe losses of stability and control.

**compressibility error** Manifest in all instrument readings derived from simple pitot/static system at high subsonic Mach numbers; typically, progressive under-reading until pressure and static orifices have penetrated bow shock.

**compressibility factor** See *Glauert*.

**compressibility stall** Rapid and dramatic loss of lift of traditional [e.g., thick-section] wing when Mach numbers exceeds about 0.8. Also called shock stall. Not relevant to wings designed for supersonic flight.

**compression** Control of signal gain, esp. to increase it for small signal voltages and reduce it for large.

**compression ignition** Combustion of fuel/air mixture triggered by high temperature due to compression in diesel cylinder or in highly supersonic ramjet with suitable internal profile.

**compression lift** Lift gained at supersonic speed by favourable flow field by forcing flow to accelerate beneath wing (accentuated by down-turned wingtips).

**compression pressure** Gauge pressure in piston engine cylinder at TDC (in absence of combustion).

**compression ratio** Ratio of entrapped volume above piston at BDC to volume at TDC.

**compression rib** Provided inside fabric-covered wing to withstand tension of drag bracing.

**compression ring(s)** Top ring(s) on piston, of plain rectangular section, serving to seal mixture into combustion space on compression stroke.

**compression wave** See *blast wave*.

**compressor** Machine for compressing working fluid (see *axial* \*, *centrifugal* \*, *skew* \*, *Roots* \*, *positive-displacement* \*). In general, term used for device handling large mass flow at moderate pressure (say, up to 40 ata, 400 kPa); small flow at high pressure = pump.

**compressor blade** 1 Loosely, rotor blade or stator vane in axial compressor.

2 Precisely, operative aerofoil from axial compressor rotor.

**compressor casing** Fixed casing closely surrounding compressor rotor.

**compressor characteristic** Plot of fundamental compressor performance,  $P_2/P_1$  (pressure ratio) as ordinate and  $W\sqrt{T}/\rho$  (corrected mass flow) as abscissa.

**compressor diffuser** Passage for working fluid immediately downstream of compressor wherein pressure is increased at expense of flow velocity.

**compressor efficiency** Useful work done in delivering fluid at higher pressure, in assumed adiabatic operation, expressed as percentage of power expended in driving rotor.

**compressor map** Fundamental graphical plot of compressor performance showing variation of pressure ratio (ordinate) against mass flow (abscissa) for each rpm band.

**compressor pressure ratio** Ratio of total-head pressure at delivery to that at inlet (if ratio is 24:1, conveniently written as 24, for example).

**compressor rotor** Main moving part in compressor of rotary form (ie, not reciprocating type).

**compressor stator** Stationary part of axial compressor carrying fixed vanes.

**compressor vane** Stationary blade attached to stator (case), one row of such vanes preceding each row of rotor blades.

**compromised** 1 Classified information known or suspected to have been disclosed to unauthorised persons.

2 Of serial number or civil registration, one inadvertently applied to two aircraft.

**Compton wavelength** Defined as  $h/m_e C = 2.42631 \times 10^{-12}$  m.

**Comptuex** Composite training unit exercise (USN).

**Compu-Scene** Add-on visual system for existing simulators (General Electric).

**computational fluid dynamics** Representation of a surface by a fine grid, enabling program to determine fluid flow over it in terms of velocity, pressure, force, moment, temperature and possibly other variables. Impossible before powerful computers.

**computed air release point** Air position at which first paratrooper or cargo item is released to land on objective.

**computed approach** MLS approach to a runway not aligned with an MLS radial.

**computer** 1 Machine capable of accepting, storing and processing information and providing results in usable form; function may be direct control of one or more operating systems.

2 Simple mechanical device for solving problems (eg Dalton \*).

**computer acceleration control** Use of airborne computer linked to AFCS to limit (close to zero) unwanted flight accelerations, esp. in vertical plane, on aeroplanes and helicopters.

**computer-assisted approach sequencing** Use of one, or several interlinked, computers in ATC system to solve problem of feeding arrivals automatically into optimised trajectories so that each arrives at destination runway at correct spacing and with minimal delay.

**computer board** Component part of a computer or similar device, each being a driver, RAM, EPROM, A/D converter, video interface or similar self-contained unit

which can be assembled with others on to a bus (eg, back-plane) to form a purpose-designed EDP system.

**computer-programmable** Capable of being controlled by digital computer without additional interfacing (typical item would be microwave signal generator for radar testing).

**computing gunsight** Automatically compensates for most predictable or measurable variables in weapon aiming.

**COMR** Civil[ian]-owned, military registered [initially helicopters] (UK).

**comsat** See *communications satellite*.

**Comsec** Office of Communications Security (US, NSA).

**comsnd** Commissioned (of facilities on airfield charts).

**COMSS** Coastal/oceans monitoring satellite system.

**CON, Con** 1 Consol beacon.

2 Continuous.

3 Console.

4 Control.

**Conac** Continental Air Command (1 December 1948, became part of ADC).

**Conaero** Consorzio Italiano Compagnie Lavoro Aereo (1).

**Conar** Continental Norad Region (US).

**Conc** Concrete surfaced runway (ICAO).

**concentrated force, load** See *point force, load*.

**concentration ring** 1 In balloon, ring, usually rigid, attached to envelope or (if applicable) surrounding net, and from which basket is suspended.

2 In airship, ring to which several mooring lines may be secured (sometimes also helping support car, if this is suspended below hull).

**concentric** Having common centre or central axis.

**concession** 1 Allowable departure from drawing or other design authority in manufacture of part (eg on material spec., surface finish or manufacturing tolerance).

2 Allowable non-compliance with certification or other requirement, esp. in emergency (eg take-off permitted with one engine or one altimeter inoperative).

**concrete cloche** *HAST* (colloq., UK).

**concurrence** Policy adopted for reasons of national emergency in which most, or all, parts of major system programme are implemented simultaneously, even though several large portions may need to be grossly modified or updated (eg Atlas ICBM hurriedly deployed above ground, then in surface shelters and finally in silos).

**concurrent engineering** 1 Consideration of market, design, manufacture [and tooling], test and life support, from outset.

2 Automatic storage in every design database for all parts of new vehicle of each new technique for reducing RC2 (2).

**concurrent forces** Acting through common point.

**Cond, Conds** Condition[s].

**condensation** Physical change from gaseous or vapour state to liquid.

**condensation level** Height at which rising parcel of air reaches saturation; cools at DALR and reached 100% RH at \*\* at intersection of DALR and DPL.

**condensation nuclei** Minute particles, solid or liquid, upon which nucleation begins in process of condensation; most effective \*\* are hygroscopic.

**condensation shock** Sudden condensation of super-saturated air in passage through normal or inclined shock,

rendering shock field visible, often showing elliptical lift distribution around transonic aircraft.

**condensation trail** Visible trail, usually white but sometimes darker than sky background, left by winged or propelled vehicle when flying above condensation level. May be due to reduced pressure (eg in tip vortices), but nearly all persistent \*\* due to condensation (and probable freezing) of water vapour formed by combustion of fuel.

**condenser** 1 Capacitor.

2 Device for changing flow of vapour to liquid by removing latent heat of evaporation. Essential feature of closed-cycle space power systems in which working fluid must be used repeatedly.

**condenser-discharge light** Gives very short flashes of great intensity caused by capacitor discharge through low-pressure gas tube (eg collision beacon).

**con-di nozzle** Jet-engine nozzle having cross section which converges to throat and then diverges; subsonic flow accelerates to throat, becomes supersonic and then accelerates in divergent portion.

**conditionally unstable** Unsaturated air above or through which temperature falls with height faster than SALR but less than DALR; thus if air becomes saturated it will be unstable.

**condition monitoring** Health inspection of operative hardware, eg engine, using intrascope, X-ray photography, oil sampling and BITE.

**Condo** Contractors on deployed operations.

**Condor** 1 Confidential direct occurrence reporting, system for non-attributably ensuring that nothing having a direct bearing on flight safety is kept hidden (RAF, CAB, etc).

2 Electronic 'sniffer' which by mass spectrometry identifies traces of vapour or particles emitted by explosives and drugs (from contraband detector, British Aerospace).

3 Covert night and day operations for rotorcraft.

**conductance** 1 Real part of admittance in electric circuit; symbol  $\Lambda$ .

2 In circuit having no reactance, ratio of current to potential difference, ie reciprocal of resistance. Symbol  $G$ , unit siemens,  $= 1/\Omega$ .

3 In vacuum system, throughput  $Q$  divided by difference in  $p$  between two specified cross-sections in pumping system.

4 Several meanings in electrolytes (little aerospace relevance).

5 See *thermal* \*.

**conduction** Transfer of heat from hotter to colder material or of electrons from higher to lower potential.

**conduction band** Band of electron energies corresponding to free electrons able to act as carriers of negative charges.

**conductivity** Measure of ability of material to transmit energy, eg heat or electricity. Thermal \*, symbol  $k$  or  $\lambda$ , measured in  $Jm/M^2s^{\circ}C$ . Electrical \*, symbol  $\delta$ , measured in  $mhos/m$  (per cube); reciprocal of resistivity.

**conductor** Material having very low electrical resistivity, esp. such material fashioned in form useful for electric circuits.

**cone** 1 Drag and stabilizing member trailed on end of HF aerial wire (trailing \*) or on end of air-refuelling hose.

2 Drag and stabilizing member incorporating pressure and/or static heads trailed beneath aircraft under test in supposed undisturbed air.

**cone angle** Semi-angle of right circular cone having same increase in surface area per unit length as diffuser; hence diffuser \*\*.

**CONNECT, Conect** Combat network communications technology.

**coned** Caught in beams of two or more searchlights.

**cone of confusion** Inverted cone of airspace with vertical axis centred on VOR or other point navaid.

**cone of escape** Volume in exosphere with vertex pointing directly to Earth centre through which atom or molecule could theoretically escape to space without collision. Opens out in angle to infinity at critical level of escape.

**cone of silence** Inverted cone of airspace with vertical axis centred on certain marker beacons, NDBs and other point nav aids within which signal strength reduces close to zero.

**cone passage** Flight through cone (of confusion or of silence) above point navaid.

**cone yawmeter** Cone flying point-first, with pitot holes spaced at  $90^{\circ}$  intervals, to obtain yaw indication at supersonic speeds (avoids averaging effect of wing-type yawmeter).

**confidence level** Used in statistical sense, eg as percentage probability that an actual MTBF will exceed estimated or published MTBF. Value of \*\* increases with number of samples. Sometimes called confidence limit.

**confidence manoeuvres** Set pattern of ground and air tasks easily mastered by new and inexperienced pupil pilot (eg, swinging propeller, letting aircraft recover from unnatural flight attitude hands-off); devised to ease problem of apprehension and tension. Sometimes called confidence actions.

**Confidential human [factors incident – reporting programme** Procedure whereby professional pilots and controllers may confidentially report incidents caused by human error for analysis by *IAM(2)*.

**configuration** 1 Gross spatial arrangement of major elements, eg in case of aircraft disposition of wings, bodies, engines and control surfaces.

2 Aerodynamic shape of aircraft where variable by pilot command, eg position of landing gear, leading/trailing-edge devices and external stores. Thus high-lift \*, clean \*.

3 Standard of build or equipment for task. Thus helicopter in dunking ASW \*, passenger transport converted to all-cargo \*.

4 Apparent positions of heavenly bodies, esp. in solar system, as seen from Earth at particular time.

5 A new (1990–) usage: the number of seats in a passenger airliner, thus '\*220'.

6 Used, incorrectly, to mean 'application', eg 'Chaparral is the Sidewinder missile in ground-to-air \*'. This would be correct if hardware was physically changed in \*.

**configuration bias** Channel or subsystem in stall protection or stick-pusher system allowing for changes in configuration (2).

**configuration deviation list** Comprehensive schedule of all variable parts of a/c, such as door panels and seals.

**configuration management** Combining the management and traceability of software and hardware in a single solution.

**conflict** In ATC (1), two aircraft proceeding towards

potentially dangerous future situation. Hence, \* alert, \* resolution, \* situation.

**conflicting traffic** With respect to one aircraft, other traffic at or near same FL heading towards future conflict.

**conformal airborne early warning** This usually means a large planar side-looking array radar on either or both sides of the fuselage.

**conformal-array aerial** Electronically scanned, fits exterior surface of vehicle.

**conformal-array radar** Having plurality of small or light ES aerials covered by radomes fitting vehicle shape (eg wing or rotor leading and trailing edges, etc).

**conformal gears** Having teeth whose mating profiles conform, both sets having instantaneous centres of curvature on same side of contact. Usually applied to W-N gears.

**conformal projection** Having all angles and distances correct at any point, but with scale changing with distance from point.

**conformal tank** Removable [not necessarily jettisonable] fuel tank shaped to fit precisely against skin of aircraft.

**confusion reflector** Designed to reflect strong echo to confuse radar, proximity fuze, etc. Form of passive ECM.

**conical camber** 1 Applied to wing leading edge so that, from root or intermediate station to tip, it is progressively drooped, centreline of profile following surface of cone with vertex at root (or at start of \*\* if this is some distance along semi-span).

2 The term is also loosely applied to down-curved wingtips.

**conical flow** Theory for supersonic flow over thin flat plate having corner (apex), with flow perpendicular to rear edge: constant pressure, velocity, density and temperature along any radius (to infinity) from apex.

**conical scanning** Common search mode for radar, esp. AI radar, in which beam is mechanically or electronically scanned in cone extending ahead of aerial, often using beam-switching to give az/el data.

**conical sleeve** Cone-shaped flexible sleeve extending inwards into gas cell of airship from aperture for line, providing near gas-tightness with freedom for line to move axially through envelope.

**conic apogee** Apogee of satellite if all mass of primary were at its centre.

**conic perigee** Perigee of satellite if all mass of primary were at its centre.

**conic sections** Perpendicular to axis = circle; parallel to axis = parabola (eccentricity 1); eccentricity less than 1 = ellipse; eccentricity greater than 1 = hyperbola. All are found in trajectories of bodies moving in space.

**Conie** Comision Nacional de Investigacion de Espacio (Spain).

**coning** 1 Tunnel test in which model is rotated whilst held at constant AOA and sideslip by rotary balance.

2 Capturing hostile aircraft in beams of several searchlights.

**coning angle** 1 Angle between longitudinal axis of blade of lifting rotor and tip-path plane (assuming no blade bending). Symbol  $\beta$ .

2 Incorrectly, sometimes given as average angle between blade and plane perpendicular to axis of rotation.

3 Upward angular displacement of blades of lifting rotor of helicopter or autogyro; caused by their lift.

**conjugate** Many specialised meanings in theory of

groups, complex numbers and geometry of curved surfaces.

**conjugate beam** Hypothetical beam whose bending moment assists determination of deflection of real beam.

**conjugate foci** In optics, interdependent distances object/lens and lens/image.

**conjunction** Alignment of two heavenly bodies sharing same celestial longitude or sidereal hour angle.

**connecting rod** Joins reciprocating piston to rotary crank in piston engine, reciprocating pump, etc.

**connector** Standard mating end-fitting for fluid lines, multi-core cables, co-ax. cables and similar transmission hardware, providing automatic coupling of all circuits. Term preferred for multipin electric \*; with fluid systems prefer "pipe coupling".

**Conops** Concept[s] of operations (USN, now all-US).

**conplan** Contingency plan.

**Conradson** Standard test apparatus and procedure for determining carbon residue left after combustion of hydrocarbon oils, especially lubricating oils.

**Con Rep** Connective replenishment [carrier] (USN).

**conrod** Piston-engine connecting rod (colloq.).

**consensus** Majority vote concept in logic systems, multi-channel redundant systems etc; thus, \* can command landing flare against presumed failed channel.

**Consequence assessment tool set** Central program used by Federal and local agencies in responding to domestic emergencies, now part of ECHO (DoD).

**Consol** Simple long-range navaid providing PLs (within range of two \* stations, a fix) over N Atlantic. LF/MF receiver is tuned to identified \* station and operator counts dots and dashes in repeated 'sweep' lasting about 30 seconds; PL is then obtained by reading off \* chart.

**Consolan** Consol-type system radiating daisy pattern at c300 kHz, formerly based at Nantucket (US).

**console** 1 Control station for major device or system, normally arranged for seated operator.

2 Control and instrument installation for pupil navigator, esp. when such \* repeated along fuselage (but not used for pilot station on flight deck).

3 Single bank of controls and/or instruments on flight deck, eg roof \*, left side \*.

4 Station for manual input/output interface with large system, eg air defence, ATC, EDP (1).

5 Tailored box for storage of maps, cameras and other items, eg 'The Cessna 210 has centre-aisle \* as an option'; misleading and ambiguous.

**consolidation** Period between first solo and issue of PPI or other ab initio licence; hence \* exercise, \* flight.

**consolute** Of two or more liquids, miscible in any ratio.

**constantan** Alloy of copper with 10-55 per cent nickel; resistivity essentially unchanged over wide range of temperature.

**constant-colour** Philosophy for cockpit warning systems, usually: no caption illuminated = no fault, all buttons normal; blue = normal-temperature operation; white = button abnormal, either from mis-select or to rectify/suppress fault; red or amber = fault.

**constant-descending approach** Self-explanatory, adopted to minimise noise over urban areas. Same as *continuous-descent*.

**constant duty cycle** Device or system whose rate of operation is unvarying despite variable demand; eg DME

ground transponder beacon has \*\*\* behaving as though continuously interrogated by 100 aircraft.

**constant-energy line** Plots taken in steep dive at terminal velocity, when increase in dive angle has no effect on V.

**constant-flow oxygen** Crew-breathing system in which gox is fed at steady rate, in contrast to demand-type supply.

**constant-g re-entry** RV uses aerodynamic lift in skip trajectory to impose constant total acceleration down to relatively low velocity.

**constant-heading square** Helicopter pilot training manoeuvre: large square described at low level with helicopter constantly facing into wind (so one leg forwards, one backwards and two sideways).

**constant-incidence cruise** Transport aircraft flight plan calculated on basis of constant angle of attack over major portion, angle being chosen for best L/D or other optimised point between time and fuel consumption.

**constant-level balloon** Designed to float at constant pressure level.

**constant of gravitation** See *gravitational constant*.

**constant-pressure chart** Plot of contours showing height above MSL of selected isobaric surfaces.

**constant-speed drive** CSD, infinitely-variable-ratio gear between two rotating systems, esp. variable speed aircraft engine and constant-frequency alternator; output maintained invariant despite variation in input speed and output torque.

**constant-speed propeller, c/s propeller** Propeller whose control system incorporates governor and feedback which automatically adjusts pitch to maintain selected rpm.

**constant speed unit** CSU, engine-driven governor controlling c/s propeller, maintaining rotational speed by varying pitch according to airspeed and engine power.

**constant torque on takeoff** Turboprop electronic unit which modifies DECU voltage according to pilot's torque command.

**constant-volume combustion** Super-rapid burning of stoichiometric mixture [i.e. detonation] in one or more aft-facing tubes. Also called pulse detonation, Humphrey cycle.

**constant wind** 1 W/V assumed for navigational purposes, until updated or refined.

2 Used in contradistinction to gust (2).

**constellation** 1 Traditional conspicuous group of fixed stars having supposed resemblance to Earth object.

2 Arbitrary portion of celestial sphere containing a \* (1) bounded by straight lines, whole sphere being thus divided for use as reference index.

**constituent day** Period of Earth rotation with respect to hypothetical fixed star.

**constrictor** 1 Obstruction in pipe or other fluid flow constraint pierced by small hole giving precisely known mass flow per unit pressure difference.

2 Annular or distributed constriction in nozzle of air-breathing jet engine, esp. ramjet or pulsejet.

**consumables** Materials aboard spacecraft which must undergo once-only irreversible change during mission, eg propellants, foods (in present state of art) and some other chemicals such as in SPS.

**consumables update** Regular housekeeping chore, reporting to Earth mission control exact quantities (usually masses) remaining.

**Consuta** Method of making boat, later marine-aircraft,

hulls from mahogany ply sewn with copper wire (S.E. Saunders, 1898-).

**cont** Continuous, continuously, continued or continue.

**contact** 1 Visual link between pilot (rarely, other aircrew) and ground or other external body. Thus, in \* = seen, \* flying = by reference to ground.

2 Unambiguous radar link (radar \*).

3 Single positive mechanical hook-up between FR tanker and receiver aircraft (dry \* if no fuel to be transferred).

4 Shouted by pilot of simple aircraft to person swinging propeller of piston engine, indicating ignition about to be switched on.

5 Unidentified target appearing on radar or other surveillance system (rarely, seen visually).

**contact altimeter** See *contacting altimeter*.

**contact approach** Visual approach to airfield requested by, and granted to, pilot making IFR flight.

**contact-burst preclusion** Nuclear-weapon fuzing system which, in the event of failure of desired air burst, prohibits unwanted surface burst.

**contact car** Front-line vehicle, usually AFV, housing local tactical air controller and army liaison officer, plus multiservice radio (1943-).

**contact flying** Aircraft attitude and navigation controlled by pilot looking at Earth's surface. (Certain authorities, questionably, include clouds as source of visual cues.)

**contact height** That at which runway is first glimpsed during landing approach.

**contacting altimeter** Makes or breaks electrical circuit (eg warning or radio transmission) at chosen reading(s).

**contact ion engine** Space thruster stripping electrons from caesium or other supply material infiltrated in substrate (eg tungsten). Bombardment ion engine more common.

**Contact Judy** AAM firing mode: target is within correct parameters.

**contact lights** White lights on either side of runway in use, parallel to centreline (obsolescent, see *runway edge lights*).

**contact lost** Situation in which contact (5) can no longer be seen, though target believed still present.

**contactor** Electric switch having remote (usually electromagnetic) control.

**contact patrol** Patrol beyond front line with intention of encountering hostile a/c (WW1).

**contact point** In CAS (3), geographical or time point at which leader established R/T contact with FAC or ground ATC.

**contact print** Photograph made from negative or diapositive in contact with sensitised material; optical, radar or IR.

**contact race** Competitors are required to land at several intermediate points where their logbooks are signed by a marshal.

**contact ratio** The number of points or lines at which intermeshing gear-teeth touch each other.

**contagious failure** One likely to transmit to an adjacent item.

**container** 1 Standard rigid box for baggage or cargo: maindeck \*, ISO 96 in × 96 in × 10, 20, 30 or 40 ft; SAE 10, 96 in × 96 in × 125 in; SAE 20, 96 in × 96 in × 238.5 in;

## container delivery

underfloor \*, IATA A1 (LD3) 92 in × 60.4 in × 64 in; A2 (LD1) 79 in × 60.4 in × 64 in.

2 Standard ASR package dropped to aircrew in dinghy.  
**container delivery** Standard military airdrop supply of from one to 16 bundles of 1,000 kg (2,200 lb) each.

**containment** Demonstrated ability to retain every part within machine, following mechanical breakup of portion or whole of moving machinery. Applies particularly to gas-turbine engines, certification of which usually prohibits ejection of fragments even through inlet or nozzle.

**containment casing** Specially designed ring structure surrounding a fan or other rotating part.

**contaminate** Aerospace meanings include transfer of terrestrial germs and other organisms to spacecraft sterilized for mission, transfer of unwanted atoms to single-crystal (eg semi-conductor) materials, and deposit and/or absorption and/or adsorption of any NBC material on friendly surfaces.

**contaminated fuel** Fuel containing any unwanted material, including water or ice.

**contaminated runway** Surface all or partly covered with water, snow, slush, blown sand or foreign objects capable of causing damage.

**Contap** Consol Technical Advisory Panel.

**Coticell** Proprietary low-density sandwich structure.

**contingency air terminal** Mobile air-transportable unit providing all necessary functions to handle air transport at combat airfield.

**contingency plan** Drawn up and implemented by military commander or civil manager in event of failure of original plan, for anticipated reasons.

**contingency power** Exceptional power available from engine[s] of multi-engined aircraft after failure of another; in Concorde \* was 5 per cent above normal reheat T-O rating. See next.

**contingency rating** Power levels required of helicopter and VTOL engines in emergency conditions, time-limited [usually to from 1.5 to 30 min] and normally requiring subsequent special inspection (see *maximum \*\**, *intermediate \*\**).

**contingency retention item** Surplus to requirements but authorised for retention to meet unpredicted contingency.

**contingent effects** Those of nuclear detonation other than primary effects.

**continuation trainer** Trainer aircraft for experienced pilots, esp. those in desk jobs.

**continued airworthiness** Maintaining [old] aircraft to ensure that they always comply with whatever requirements are in force and are in a condition for safe flight.

**continuity line** Portion of line system diagram in cockpit or other human interface superimposed on push-button or magnetic indicator.

**continuous airborne deterrent** Maintenance of bombers armed with live NW at high altitude round the clock, to ensure capability of MAD 3.

**continuous beam** Single structural member having more than two supports.

**continuous-descent approach** Especially important at night, philosophy of eliminating stacking and enabling every arrival to avoid power settings for level flight.

**continuous-element system** Fire-detection system comprising either electrical circuit or gas-filled tube; heating any part sends signal.

## contractor-furnished equipment, CFE

**continuous-flow system** See *constant-flow oxygen*.

**continuous half rolls** Display/competition manoeuvre in which numerous half rolls are made, marking being on accuracy of intermediate wings-level positions, which are held very briefly.

**continuous ignition** In a gas-turbine engine flying through hazardous conditions [tropical rain or severe hailstorm], continuous operation of the igniter[s].

**continuous-path machining** Shaping of workpiece by cutter traversing unbroken path, esp. this form of NC control and machine program.

**continuous strip** Film produced by \*\* photography, using \*\* camera, in which \*\* film passes at constant speed, related to speed of aircraft, past slit in optical focal plane.

**continuous wave, CW, c.w.** EM waves repeated without breaks indefinitely, usually with constant amplitude and length (frequency); ie, not pulsed.

**continuum** Spectral region in which absorption or emission is continuous, with no discrete lines.

**continuum flow** See *free-molecule flow*.

**Contour** Comet-nucleus tour (NASA).

**contour** 1 On topographic map or chart, line joining all points of equal surface elevation above datum (eg MSL).

2 On \* chart, line joining all points of equal elevation (height above or below datum, eg MSL, and above or below ground or sea surface) of selected pressure surfaces. Thus can plot \* of 1,000 mb surface at -120 ft, MSL and +120 ft.

3 On weather radar, area blanked out in centre of display of storm cell, or whenever return level exceeds given threshold.

**contour capability** 1 Of mapping radar, ability to display all ground above selected height above MSL or other datum.

2 Of weather radar, ability to make contour display.

**contour display** Radar display in which all echoes above given strength are cancelled. Normally used in viewing storm clouds. With CONTOUR operative cloud echo has black centre showing region of greatest precipitation (and assumed greatest gust severity). With colour radar each contour has distinctive hue.

**contour flying** Normally denotes holding constant small height AGL, ie not following contours (1) but terrain profile (see *NOE*).

**contour interval** Difference in height between adjacent contours (1, 2).

**contour template** Hard copy of profile of 2-D or 3-D shape, eg for tunnel throat, press tool, form block.

**contract definition phase** Important process in procurement linking end of feasibility study and other conceptual phases with full hardware development, CDP involves collaboration with one or more industrial contractors and can involve detailed computer study and hardware test to establish what is to be bought and on what terms.

**Contracting State** Sovereign country party to an international agreement.

**contraction** Duct of diminishing cross-section through which fluid is flowing; eg front part of venturi.

**contraction ratio** 1 In subsonic tunnel, ratio of maximum cross-section to that at working section.

2 In supersonic tunnel, ratio of cross-sectional area just ahead of contraction to that at throat (can be variable).

**contractor-furnished equipment, CFE** Hardware, software or, rarely, specialist knowledge or experience,

supplied by contractor to support programme; esp. items normally GFE, bought-out or supplied from other source.

**contractor-furnished weight, CF weight** Total mass of aircraft in precise state in which ownership is transferred to customer.

**contract oversight** Ongoing monitoring of contracts, with particular attention to finance and national security (DoD). Does not mean to fail to notice an irregularity.

**Contrafan** Registered name for studies of advanced direct-drive shrouded propeller engines in Mach 0.9 class (Rolls-Royce).

**contra-flow engine** Loosely, any engine involving fluid flow in opposite directions; specif., gas turbine having compressor and turbine back-to-back, with flows (1) axially towards each other and radially out together, (2) radially out from compressor and radially in through turbine, or (3) forward through compressor and back through ducts to turbine.

**contrail** *Condensation trail* (abbn. not admitted by NATO).

**contra-injection** Upstream injection of fuel droplets into airflow or of one liquid rocket propellant against another.

**contra-orbit defence** Supposed technique of defending area by launching missile along predicted trajectory or orbit of hostile weapon.

**contrapop** Contra-rotating propeller.

**contra-rotating** 1 Two or more propellers rotating at equal speed in opposite directions on common shaft axis, and sharing common drive.

2 Installation of similar tandem piston engine/propeller combinations back-to-back on opposite ends of common nacelle. (Not to be used for propellers rotating in opposite directions but not on common axis. See *counter-rotating, handed*.)

3 Of any rotating assembly, turning in opposite directions, possibly at different speeds.

**contrast** Difference in luminous intensity between different parts of picture (photograph, radar display, synthetic display or TV).

**control** 1 Exercise of civil or military authority, eg over air traffic.

2 In hardware system, device governing system operation.

3 In man/machine system, device through which human command is transmitted across interface.

4 In photogrammetry, points of known position and elevation.

5 In research experiment, unmodified test subject used as yardstick.

**control airport** See *tower airport*.

**control and reporting centre** Subordinate air-control element of tactical air control centre from which radar control and warning operations are conducted within its area of responsibility (USAF, NATO etc).

**control and reporting system** Organisation set up for (1) early warning, tracking and identification of all air and sea traffic, and (2) control of all active air defence.

**control anticipation parameter** In a sudden large nose-up command, ratio of initial to steady-state normal acceleration [in simple manual aircraft].

**control area** Controlled airspace extending upwards from specified height (ICAO prefers 'limits') above Earth (NATO adds 'without upper limit unless specified').

**control augmentation system** See *command augmentation*.

**control bar** Main pilot's input to hang glider.

**control cable** Physical connection between human control (3) and operating system, esp. between pilot's flying controls and control surfaces.

**control car** Housing pilot or coxswain of airship.

**control centre** See *launch* \*\*.

**control column** Aerodyne trajectory control (flight control input) normally exercising authority in pitch and roll. May be stick, wheel, miniature sidestick or spectacles (see *yoke*).

**control-configured vehicle** See *CCV*.

**contrôle auto généralisé** Voice + computer (F).

**control feel** See *feel*.

**control-force gradient** Increase in hinge moment with indicated airspeed.

**control jet** See *reaction control jet*.

**controllable-pitch propeller** Capable of having blade pitch manually altered in flight, either to set positions or over infinite range (but not c/s).

**controllable rocket** Having rate of combustion of liquid, solid or hybrid propellants capable of being varied at will during burn.

**controllable twist** Helicopter rotor blade capable of changing angle of incidence in predetermined manner from root to tip in course of flight.

**controlled aerodrome** One at which ATC service is supplied to aerodrome traffic (does not imply existence of control zone).

**controlled airspace** Airspace of defined dimensions within which ATC service is provided (ICAO adds 'to controlled flights'). Can be IFR only, IFR/VFR or visual exempted [no control provided].

**controlled attack** Bombing target with Master Bomber in attendance (RAF WW2).

**controlled-emissivity material** Substrate or surface coating designed to reduce IR signature.

**controlled environment** One in which such variables as temperature, pressure, atmospheric composition, ionising radiation and humidity are maintained at levels suitable for life or hardware.

**controlled flight** Provided with ATC service.

**controlled flight into terrain** Unexpectedly encountering terra firma (land or water, but usually hills or mountains), the No 1 killer in commercial aviation. The flight need not be controlled (see previous); definition means PIC has not lost control.

**controlled interception** One in which interceptors are under positive control (from ground, ship or AWACS).

**controlled leakage** Environment for life or hardware in which harmful products (eg carbon dioxide) are allowed to leak away and be replaced by fresh oxygen or other material.

**controlled mosaic** One in which distances and directions are accurate.

**controlled response** Chosen from range of options as being that giving best all-round result.

**controlled torque tightening** Use of special adjustable tool to tighten bolts/nuts etc according to material, diameter, plating and lubricant.

**control line** 1 Connection between operator and \*\* aircraft.

2 Connection between control car of airship and controlled item.

**control-line aircraft** Model aircraft whose trajectory is controlled by varying tensions or signals in two or more filaments linking it with ground operator.

**control lock** Physical lock preventing movement of control surface, either built into aircraft or brought to it and fastened in place.

**control-motion noise** Sufficient to cause small surface movement in coupled ILS, but not affecting trajectory.

**control panel** Self-contained group of controls, indicators, test connections and other devices serving whole or portion of aircraft system, either accessible in flight or only during ground maintenance.

**control pattern** In SSR/IFF, governs reply code for each mode selected.

**control plane** CP, in a helicopter, the plane commanded by cyclic pitch, also called the swashplate plane.

**control point** Fixed position, marked by geographic feature, electronic device, buoy, aircraft or other object, used as designated aid to navigation or traffic control (NATO, USAF).

**control reversal** In aircraft flight control system, dangerous state in which pilot demand causes response in opposite sense. Normally caused by either mechanical malfunction (eg crossed controls) or aeroelastic distortion of airframe.

**control rocket** Usually small and intermittently fired thruster for changing spacecraft attitude and refining velocity.

**controls** As 'the \*', primary flight control input devices, esp. in aerodyne; typically stick and rudder pedals.

**control sector** Defined block of airspace within which one controller, or group of controllers, has authority [normally feature of civil ATC].

**control stick** Control column (colloq.).

**control-stick steering** Control of aircraft trajectory by input to AFCS by means of primary flight controls. Not same as \* -wheel\*.

**control surface** Aerofoil or part thereof hinged near extremities of airframe so that, when deflected from streamwise neutral position, imparts force tending to change aircraft attitude and thus trajectory.

**control surface angle** Measured between reference datum on control surface and chord of fixed surface or aircraft longitudinal axis.

**control system** In missile, RPV or aircraft flying on AFCS, serves to maintain attitude stability and correct deflections (NATO, USAF). Also, not included in this definition, translates guidance demands into changes in trajectory.

**control tower** ATC organization, normally located on tower or near airfield, providing ATC service for airfield traffic and possibly within other airspace.

**control vane** Refractory surface, usually small, pivoted in jet of rocket or other propulsion system to control attitude, and hence trajectory, of vehicle when deflected from neutral setting.

**control warfare** Information warfare.

**control-wheel steering** Autopilot mode giving manual control of heading while holding velocity and/or attitude.

**control zone** Controlled airspace extending upwards from Earth's surface (NATO, USAF). SEATO has long and involved definition including 'and including one or

more airdromes' (*sic*). ICAO adds 'to a specified upper limit'.

**Conus** Continental US, ie US and its territorial waters between Mexico and Canada plus Alaska, but excluding overseas states.

**Conv** Convergent, convergence.

**convection** 1 In fluid dynamics, transfer of fluid property by virtue of gross fluid motion.

2 In atmosphere, transfer of properties by vertical motion, normally thermally induced.

**convection cooling** Method of cooling hot hardware, esp. gas turbine rotor blades, by removing heat from within bulk of material by flow of cooler air passing through system of holes or passages (see *film cooling*, *transpiration cooling*).

**convective cloud** Cumuliform, CuF, triggered by convection; normal vertical development fair-weather cumulus; extreme form is cumulonimbus. Bottom lies at condensation level; top can be in stratosphere.

**Convective Sigmet** Issued for convective weather posing potential danger.

**convenience bag** Sick bag [despite name, not for urine, though some are marketed for both purposes].

**conventional** Not nuclear, ie HE.

**conventional enhancement** Modifies B-52H for electrical and software interfaces for future weapons, using MIL-STD-1760.

**conventional stores** Free-fall HE devices.

**conventional take-off and landing, CTOL** Aeroplanes other than STOL, VTOL and other short-field forms.

**convergence** 1 Condition in which, at least reckoned on surface winds, there is net inflow of air into region.

2 Of mathematical series, one having a limit.

3 Of vector field, contraction.

4 Of terrestrial meridians, angular difference between adjacent pair at particular position.

**convergence factor** Ratio of convergence (4) and change of latitude (zero at Equator, max. at poles).

**convergent** Of oscillation – eg sinusoidal motion, phugoid or structural vibration – tending to die out to zero within finite (possibly small) number of cycles.

**convergent/divergent** See *con-di nozzle*.

**converging flight rule** Aircraft approaching from right has right of way.

**conversion angle** That between great-circle and rhumb-line bearings.

**Convertible** Fighter-type aircraft missing canopy / canopies, for whatever reason (US colloq.).

**convertible aircraft** 1 Transport aircraft designed for rapid conversion from passenger to all-cargo configuration or vice versa.

2 Aircraft which can change its configuration [eg. from rotor to fixed wing] in flight.

**convertible brake** Able to make quick change anywhere between carbon/compo/steel.

**convertible engine** One capable of giving either fan thrust or shaft power.

**convertible laser designation pod** Any 'convertible' pod usually offers a choice of LWIR or TV.

**converticard** One term for a roadable VTOL.

**convertiplane** Aerodyne capable of flight in at least two distinct modes, eg vertical flight supported by lifting rotor and forward translational flight supported by wing.

**convertor** Among many other meanings;

1 Rotary machine for changing alternating into direct current.

2 Self-regulating boiler for drawing on Lox storage and supplying flow of Gox.

**Conv1** Conventional.

**conv0** Convolution response algorithm.

**COO** 1 Chief operating officer of company or corporation.

2 Cost of ownership.

**cookie** HC bomb 4,000 lb or over (RAF colloq.).

**cook-off** Inadvertent firing of automatic weapon due to round being detonated by residual heat in breech.

**Coolanol** Inert liquid of high heat capacity used as a thermal transport medium.

**coolant** Liquid circulated through closed circuit to remove excess heat, eg from piston engine.

**cooldown** See *chilldown*.

**cooled cooling air** Use of a fuel/air heat exchanger to cool [hot] compressor-bleed air used to cool the turbine and nozzle, permitting higher TGT.

**cooling drag** That due to need to dump excess heat to atmosphere (with skill can be made negative).

**cooling effectiveness** Expressed as  $\frac{T_{\text{gas}} - T_{\text{metal}}}{T_{\text{gas}} - T_{\text{coolant}}}$ .

**cooling gills** Hinged flaps forming partial or complete ring around rear edge of cowling of air-cooled piston engine to control airflow.

**co-operative aircraft** In ATC, one carrying transponder for SSR.

**co-operative emitter** Any friendly emitter, esp. those provided for surveillance and tracking of hostile targets.

**Co-operative Fuel Research** Permanent committee of SAE including fuel and engine representatives with special brief to measure and improve anti-knock ratings.

**co-operative independent surveillance** Monitoring aircraft position, beyond radar range, by satellite tracking; co-operative because aircraft emits a signal, and independent because aircraft's nav aids are not used.

**Cooper-Harper** Refined scale of flying qualities, broad bands being: up to 3.5 satisfactory, 3.5–6.5 adequate, improvement warranted, over 6.5 inadequate, improvement required.

**Cooper scale** Scale for quantified Pilot Opinion Rating; see above.

**Co-ops** CO<sub>2</sub> observational platform system.

**co-ordinated-turn** One in which controls about three axes are used to avoid slip or skid.

**co-ordinates** Inter-related linear and/or angular measures by which the position of a point may be defined with reference to fixed axes, planes or directions.

**co-ordination** In a pilot, ability to control simultaneous unrelated motions, by left and right hands and feet.

**COP** 1 Changeover point from one nav aid to next (US = chop).

2 Common operating [or operational] picture; 21 adds 21st century [Jscope].

3 Cab over [snow] plough.

4 Character-oriented protocol.

5 Conference[s] of the parties [1995–] (UNFCCC).

**COPA** Canadian Owners and Pilots Association [office, Ottawa].

**copal** Natural resin from tropical trees used in some varnishes.

**COPE, Cope** Controlled overall pressure ratio engine.

**copied** Unauthorised R/T word meaning “received and understood”.

**co-pilot** Licensed pilot serving in any piloting capacity other than (1) PIC or (2) being on board solely to receive instruction.

**copper** Malleable metal of distinctive red-gold colour, Cu, density 9.0, MPt 1,084°C.

**Copper Flag** Air-defence equivalent of Red Flag, held at Tyndall AFB (USAF).

**COPR** Cruise overall pressure ratio.

**Cops, COPS** 1 Common operational performance specification.

2 Common operating procedures.

**copter** Helicopter (approach procedure).

**Copy** “I read you” (radio voice code).

**copy machining** Using machine tool having means for copying shape of template or master part.

**copy milling** See *copy machining*.

**COR, cor** 1 Correct, corrected, correction.

2 Certificate of Registration.

**Coral** British computer language very similar to Jovial.

**cord** US measure of volume, = 3.6246 m<sup>3</sup>.

**cord, corded** From pioneer era rigging of flight-control surfaces was adjusted by doping on length [guessed from experience] of cord. Even today trim can be improved by cord on one side of trailing edge, and overbalance by adding cord on both sides.

**cordite** Gun propellant prepared mainly from nitro-cellulose (gun-cotton) dissolved in nitroglycerine.

**Cords** 1 Coherent on-receive Doppler system

2 Centre for Orbital and Re-entry Debris Studies (US).

**Cordtex** Blasting or cutting cord comprising high explosive in flexible filament form.

**Cordwood** Electronic technology (1948–55) designed to achieve maximum packing density of discrete components in pre-semiconductor era.

**CORE, Core** Controlled requirements expression, discipline which defines software design (BAe).

**core** 1 Gas-generator portion of turbofan, term especially when \* small in relation to fan; less relevant to bypass or ‘leaky turbojet’ engines.

2 Central part of launch vehicle boosted by lateral or wrap-round rockets.

3 Low-density stabilizing filling inside honeycomb, foam-filled or other two-component structure.

4 High-density penetrative filling in armour-piercing projectile.

5 Magnetic circuit of transformer or inductor.

6 Central portion of nuclear reactor in which reaction occurs.

7 Solid shape(s) which make casting hollow.

8 Loosely, EDP (1) memory of magnetic type, from \* (5).

9 Interior of carburised or nitrided part unaffected by surface treatment.

**core booster** *Booster* 3.

**core deposits** Solids deposited on metal surfaces of core (1).

**core exhaust mixer** In engine of ejector-lift STOVL, core nozzle capable of inflight limited vectoring and, in jet-lift mode, of deflecting at least 90° while entraining fresh air from above.

**core-failure clutch** Upon major mechanical failure of

core (1), disconnects drive to tilting rotors (rarely, to helicopter transmission).

**corel** Combined omnidirectional runway/taxiway edge light[ing].

**coring** Uneven flow of oil through oil cooler due to reduced viscosity of oil in hot central core.

**coriolis acceleration** Acceleration of particle moving in co-ordinate system which is itself accelerating, eg by rotating. In Earth-referenced motion, \*\* is experienced in all motion parallel to local surface except for that on Equator.

**coriolis correction** Applied to all celestially derived fixes to allow for coriolis acceleration.

**coriolis effect** 1 Physiological response (eg vertigo, nausea) felt by persons moving inside rotating container (eg space station with rotation-induced gravity) in any direction other than parallel to axis.

2 According to AGARD: 'The acceleration, due to an aircraft flying in a non-linear path in space, which causes the displacement of the apparent horizon as defined by the bubble in a sextant'. This definition is inadequate.

**coriolis force** Apparent inertial force acting on body moving with radial velocity within a rotating reference system. Such a force is necessary if Newtonian mechanics are to be applicable. On Earth, \*\* acts perpendicular to direction of travel, towards right in N hemisphere and towards left in S hemisphere. Also called deflecting force, compound centrifugal force, geostrophic force.

**coriolis parameter** Twice component of Earth's angular velocity about local vertical, ie twice Earth rate multiplied by sin lat.

**coriolis rate sensor** Instrument based on beam vibrating in plane of aircraft-referenced vertical, sensing any disturbance about longitudinal axis.

**corkscrew** Evasive manoeuvre, esp. when subjected to stern attack by fighter; interpretation variable but \* axis basically horizontal.

**Corliss valve** Fluid-system throttle in form of a section of pipe rotating on diametral axis. [not to be confused with steam-engine \* gear].

**corn cob** Descriptive generic name for multi-row radial or multi-bank in-line piston engine (colloq.).

**corner point** Instantaneous change in slope of graph; eg kink in payload/range curve, esp. limiting range for max payload.

**corner reflector** Passive device for giving strong radar echo, based on three mutually perpendicular metal plates or screens which automatically send back radiation directly towards source.

**corner speed** Lowest airspeed at which a fighter can pull structure- or aerodynamic-limiting g.

**Corogard** Vinyl-modified polysulphide paint resistant to hydraulic fluid, usually silver from added aluminium powder.

**Corona** Radio countermeasure: issuing misleading voice commands to enemy fighters (RAF Bomber Command WW2).

**corona discharge** Electric discharge occurring when potential gradient around conductor is sufficient to ionise surrounding gas. Unlike point discharge, can be luminous and audible, but unlike spark discharge there are an infinity of transmission paths carrying continuous current. Also called brush discharge, St Elmo's fire (see *static wick*).

**co-rotating wheels** Landing-gear wheels on live axle and thus constrained to rotate together.

**Co-Route** Company route.

**CoRP** Common radar processor, partner to MoRE.

**corpuscular cosmic rays** Cosmic rays are primary particles (protons, alpha particles and heavier nuclei) which react with Earth atmosphere to yield particles and EM radiation. Term corpuscular is redundant.

**CORR** Corridor.

**corrected advisory** Resolution advisory that instructs pilot to change vertical speed [ROC]. [TCAS].

**corrected airspeed** No defined meaning [see *airspeed*, *SSEC*].

**corrected altitude** No defined meaning, other than "true height above SL" (see *altimeter errors*).

**corrected gyro** Normally taken to be one corrected (by latitude nut) for apparent wander due to Earth rotation.

**corrected** Many, such as SSEC.

**corrective advisory** Resolution advisory commanding changes in ROC, vertical speed.

**correlation** Confirmation that aircraft or other target seen visually or on radar display or plotting table is same as that on which information is being received from other source(s).

**correlation criterion** Statistical basis for defruiting or decoding raw IFF, typically on \*\* of 2/7, ie 2 valid synchronous replies detected within any 7 successive interrogations.

**correlation factor** In nuclear warfare, ratio of ground dose-rate reading taken at approximately same time as one at survey height over same point.

**correlation protection** Development by RAE with industry of method of avoiding false ILS indications caused by spurious signals reflected from large objects near runway; localizer and glide-path aeriels duplicated (respectively horizontally and vertically) and emit signals which, if not received almost simultaneously at aircraft, are suppressed.

**corridor** 1 Geographically determinate path through atmosphere, typically curved-axis cone with apex at surface, along which space vehicle must pass after launch.

2 Path through atmosphere, geographically determinate for given entry point, along which space vehicle must pass during re-entry; has precisely defined upper and lower limits, above which vehicle will skip back into space and below which it will suffer severe deceleration and risk injuring occupants or burnup through heating.

3 Assumed safe track in LO penetration of hostile territory.

4 Path through atmosphere, usually at low level, along which defences are assumed handicapped by prior seeding with chaff and decoys.

5 Region of any shape on graph within which solution to problem is possible.

6 In Europe pre-1960, nominated tracks along which aircraft were permitted to cross a frontier.

**corrosion** A normally used word, but see *exfoliation*.

**corrugated mixer** Turbofan core nozzle of deep multi-lobe form to promote rapid mixing with fan airflow.

**corrugated skin** Stabilized against local bending by uniform rolled corrugations which, when used as external skin of aircraft, are aligned fore and aft (incorrectly assumed parallel to local airflow).

**corrugated strip** Interposed between welded sections of

gas-turbine flame tube, admits film of cooling air; colloq. wiggly-strip.

**corruption** Degradation of EDP (1) memory, typically from severe EM interference or, with volatile memory, from switching off power.

**CORS** Continuously operating reference station (NGS).

**Corsaire** Co-ordination of research for the study of aircraft impact on the environment (EU).

**COS** 1 Corporation for open systems, software improvement concept.

2 Common operating system.

**CoS** Chief of Staff.

**Cosac** Computing system[s] for air cargo.

**Coscap, COSCAP** A grouping being formed (from 2005) by 90+ members to oversee safety and implement international standards and procedures. By 2005 ACSA, PASO, \*SA [south Asia], \*SEA [south-east Asia] and \*NA [north Asia] were functioning, and seven more groups had been established (ICAO).

**Cosim** Variometer (colloq., obs.).

**Coslane** Constant [lateral] separation lane.

**Coslettising** Anti-corrosion treatment involving a wet deposition of Zn.

**cosmetic RFP** Issued for sake of appearance, contract award being already decided.

**cosmic speeds** Those sufficiently high for interstellar exploration, similar to that of light; even allowing for relativistic time effects these are wholly unattainable at present.

**cosmodrome** Space launching site (USSR).

**cosmology** Science of the Universe.

**cosmonaut** Member of spacecraft crew (USSR, R).

**cosmonautics** See *astronautics*.

**Cospar** Committee on Space Research [office, F-75016 Paris] (Int.).

**Cospas** Anglicised form of space system for search for distressed vessels [e.g., downed aircraft], in conjunction with *Sarsat* (R).

**Cosro** Conical scan, receive only, i.e. only during reception.

**Cossi** Commercial Operations and support savings initiative.

**Cost** European Co-operation in the field of Scientific and Technical Research [established by EU November 1971] (Int.).

**cost** In procurement main elements may include R&D, T&E, flyaway, spares provisioning, ground equipment, base, crew and publications. Operating adds fuel and other consumables, depreciation and various indirect \*.

**costa** Rib, translated in aviation not as wing rib but as fuselage frame.

**costal** Pertaining to frames or ribs; hence intercostal.

**Costar** Correcting optics space telescope axial replacement (Hubble).

**cost/economical** Cruise conditions for minimum trip cost.

**cost-effectiveness** Measure of desirability of product, esp. a weapon system, in which single quantified figure for capability (including reliability, survivability and other factors) is divided by various costs (total ownership, acquisition etc).

**cost plus fixed fee** Reward invariant with actual costs but fee may be renegotiated.

**cost plus incentive fee** Reward covers actual costs plus a fee which depends on contractor performance and possibly costs.

**cost-sharing** No fee, contractor merely reimbursed agreed percentage of costs.

**COT** 1 Compressor outlet temperature.

2 At the coast.

3 Centre of twist.

**Cotal** Confederación de Organizaciones Turísticas de la America Latina (Int.).

**CoTAM** Commandement du Transport Aérienne Militaire (F).

**Cotim** Compact thermal-imaging module.

**COTP** Connection-oriented transport protocol.

**COTS, Cots** 1 Commercial off-the-shelf [item already available, esp. for military a/c].

2 Cabin offtake system.

3 Commercial orbital transportation system (NASA).

**cottage loaf** Fuselage with smaller-section upper deck and unfaired sides [almost figure 8].

**cotter pin** 1 Wedge-shaped pin used in joining parts, or transmitting rotation.

2 In US, often split pin.

**CO<sub>2</sub>** Carbon dioxide.

**Cougar** 1 Co-operative unmanned ground-attack robot (USA).

2 Counter-UAV GBAD additional module requirement.

**coulomb** SI unit for quantity of electricity or electric charge, = 1 As, symbol C.

**coulomb damping** That due to opposing force independent of distance or velocity; also called dry friction damping.

**coulomb excitation** Raising of energy level as a result of charged particle passing outside range of nuclear interactions.

**Coulomb's law** Force between two magnetic or electric charges is proportional to product of charges and

inversely to square of distance apart:  $F = \frac{Q_1 Q_2}{4\pi\epsilon r^2}$ .

**countdown** Oral telling-off of time, usually at first in minutes, then in seconds, remaining before launch of vehicle or other event.

**counter** 1 Portion of ship hull from stern overhanging water; thus applicable to undersurface of rear fuselage above and behind jet nozzles or other lower section.

2 Electronic circuit which counts bits, impulses, waves or other repeated signals.

**counter air** Defensive and offensive actions against enemy air power.

**counterfeit part** An unapproved part knowingly installed.

**counterforce** Attack directed against enemy ICBMs and SLBMs or other strategic forces.

**counter-illumination** Challenging LO technology in which appearance of an object is changed or [in theory] eliminated by nullifying incident illumination; also called active visual camouflage.

**counter-insurgent, Coin** Directed against supposed primitive guerrilla forces.

**countermeasures** All techniques intended to confuse or mislead hostile sensors such as radar, IR, visual, TV or noise.

**counter-pointer** Dial indication comprising rotating pointer(s) and counter readout in same instrument.

**counter readout** Numerical display generated by numerals on adjacent rotating drums, also called veeder.

**counter-reflector** Metal mesh or other radio reflector arranged in pattern under VOR or other ground station to nullify interference and give radiation as from perfect level-surface site.

**counter-rotating** Left and right devices rotate in opposite directions, on different axes.

**countersilo** Counterforce attack against ICBM silos.

**countersink** To form or cut conical depression in work-piece to receive rivet or bolt head flush with surface.

**countersurveillance** All active or passive measures to prevent hostile surveillance.

**countertrade** Trade in reverse direction generated to assist high-tech (eg defence) exports by an industrialised country; in no sense barter.

**countervalue** Attack directed against enemy homeland society and industry.

**country cover diagram** Small-scale map and index showing availability of air reconnaissance information of whole country for planning purposes.

**countup** Oral telling-off of time, usually in seconds, elapsed since liftoff.

**coupé** Aircraft, normally with open cockpit[s], fitted with \* top, generally synonymous with canopy forming integral part of fuselage.

**couple** Two parallel opposing forces not acting through same point, producing rotative force equal to either force multiplied by perpendicular distance separating axes. SI unit Nm (newton-metre), = 0.748604 lb-ft. Also called moment, turning moment, torque.

**coupled engines** Geared to same propeller(s) but not necessarily mechanically joined.

**coupled flutter** In which energy is transferred through distorting structure linking two fluttering masses to augment flutter of either or both.

**coupling** 1 Inertia[] \*, tendency for inertia forces in manoeuvres to overcome stabilizing aerodynamic forces, esp. in long, dense aircraft having large inertia in pitch and yaw; eg, rapid roll results in violent cyclic oscillation in pitch about principal inertial axis, increasingly marked with altitude owing to divergence of this axis from relative wind.

2 Connection (electrical, electronic or mechanical) between flight-control system and other onboard system such as ILS or TFR.

3 Unwanted connection or interference between two radiating elements in a planar-array antenna.

**coupon** 1 Small extra piece formed on casting or, rarely, forging or extrusion, to provide metallurgical test specimen.

2 See *flight\**.

**courier** See *delayed repeater comsat*.

**course** 1 UK term for *heading*.

2 Often used to mean airfield circuit c1908–18.

**course and distance calculator** Aluminium disc with pivoted arms for solving three- [even four-] vector navigation problems (1917–40).

**course and drift indicator** *Bearing-plate*.

**course and speed calculator** More advanced yet compact mechanical computer for solving vector problems (UK 1935–50).

**course corrections** Allowances for deviation and variation.

**course deviation indicator** Vertical needle of VOR display.

**course light** Visual beacon on airway, or light indicating course [track] of airway (both obs.).

**course line** Locus of points nearest to runway centreline in any horizontal plane along which DDM is zero.

**course sector** Horizontal sector in same plane as course line limited by loci of nearest points having DDM of 0.155.

**course selector** See *OBS*.

**courtesy vehicle** Battery electric car providing up to 6 seats for elderly or disabled passengers.

**courtyard** Space in centre of closed-circuit tunnel; hence \* wall, inner wall of tunnel.

**COV** 1 Common operational value (RAF).

2 Covered, cover, covering (ICAO).

**cove** Local concave curved region where two structures meet, eg wing/pylon or pylon/pod.

**cover** 1 Protection of friendly aircraft by fighters or EW platforms at higher level.

2 Ground area shown in imagery, mosaics etc.

3 To maintain continuous EM receiver watch.

4 To use fighters to shadow hostile contact from designated BVR distance.

**coverage diagram** Plot of air-defence radar performance against target of particular cross-section for different elevation angles, plotted on altitude (ordinate) and slant range.

**coverage index** See *covertrace*.

**Coverage Level** In aerial firefighting, quantity of retardant per unit area, in US usually USG per 100 sq ft.

**cover mod** Paperwork [documents] by which DA accepts SEM (3) or STF (UK).

**cover search** To select best cover (2) for air reconnaissance for particular requirement.

**covertrace** Map overlay listing all air reconnaissance sorties over that ground area, marking tracks and exposures.

**covert search** Patrol using advanced sensors from high level so that aircraft's presence is undetected from ground, esp. in offshore patrol for customs, immigration or fishery protection.

**Covos** Comité d'Etudes sur les Conséquences des Vols dans la Stratosphère (Int.).

**cowl** Covering over installed engine or other device, normally mainly of hinged or removable panels.

**cowl flaps** See *gills*.

**cowling** See *cowl*.

**CP** 1 Critical point.

2 Centre of pressure (often c.p.).

3 Controllable pitch (not constant speed).

4 Chlorinated paraffin.

5 Circularly polarised.

6 General call to several specified stations (ICAO).

7 Co-pilot.

8 Critical parameter.

9 Cathode protection.

10 Command post.

11 Centre-perforate (rocket grain).

12 Computer, or communications, processor.

13 Constant power.

14 Control plane.

- 15 Control panel.  
16 Conflict probe.
- C/P** Cadet Pilot (RAF).
- C<sub>p</sub>** Helicopter rotor power coefficient.
- C<sub>p</sub>** 1 Pressure coefficient.  
2 Specific heat at constant pressure.  
3 Propeller power coefficient.
- cP** 1 Centipoise.  
2 Continental polar air mass.
- cp** Candlepower.
- CP<sup>3</sup>** CPPP.
- CPA** 1 Critical-path analysis (see *critical path*).  
2 Continuous patrol aircraft.  
3 Closest point of approach.  
4 Cabin public address.  
5 Certified public accountant.  
6 Civilian Production Administration (succeeded WPB, US).
- C/PA** Cost/performance analysis.
- CPACS** Coded-pulse anti-clutter system.
- CPAM** 1 Committee of Purchasers of Aviation Materials (Int.).  
2 Cabin-pressure acquisition module.
- CPC** 1 Cabin-pressure control[ler]; S adds system.  
2 Cursor-position control.  
3 Controller/pilot communication[s].
- C<sub>pc</sub>** Helicopter climb power coefficient.
- CPCI** Computer program-configuration item.
- CPCP** Corrosion prevention and control programme.
- CPCS** Cabin-pressure control system.
- CPD** 1 Command planning and direction (GTACS).  
2 Continuing, or continuous, professional development.  
3 Cabin-pressure detector.
- CPDA** Continuing professional development in aerospace (BWECC).
- CPDL** Controller/pilot data link [C adds communications].
- CPE** 1 Central Photographic Establishment (RAF).  
2 Circular position error.
- CPF** 1 Complete power failure.  
2 Central processing facilities.
- CPFF** Cost plus fixed fee.
- CPG** 1 Co-pilot/gunner.  
2 Consumer Protection Group [CAA] (UK).
- CPGS** Cassette-preparation ground station.
- CPI** 1 Cost plus incentive (F adds 'fee').  
2 Chief pilot instructor.  
3 Crash position indicator.
- C<sub>pt</sub>** Helicopter power coefficient.
- CPIF** Cost plus incentive fee.
- CPIFT** Cockpit procedures and instrument flight trainer (Pacer Systems).
- CPILS** Correlation-protected ILS.
- CPIOM** Core processing, or common processor, input/output module.
- cPk** Continental polar, colder than surface.
- CPL** 1 Commercial pilot's licence.  
2 Current flight plan message (ICAO).
- CPL/A** Commercial pilot's licence, aeroplanes.
- CPL/H** Commercial pilot's licence, helicopter.
- CPL/IR** Commercial pilot's licence, instrument rating.
- CPL/SEL** Commercial pilot's licence, single-engine limitation.
- CPM** 1 Capacity passenger-miles.  
2 Critical-path method.  
3 Core [or control, or common, or central] processor [or processing] module.  
4 Certification program manager.  
5 Command-post modem; P adds processor.  
6 Cabin pressure-altitude monitoring and warning system.  
7 Channel-plate multiplexer.
- CPMIEC** China Precision Machinery Import and Export Corporation, Beijing.
- CPO** Close parallel operation.
- CPP** 1 Cost per passenger.  
2 Critical parts plan (ECPD).  
3 Crossfeed phasing parameter [ $\mu$  is preferred].
- C<sub>pp</sub>** Helicopter parasitic power coefficient.
- CPCC** Cost plus percentage of cost.
- CPR** 1 Coherent-pulse radar.  
2 Crack-propagation rate.  
3 Contract (or contractor, or cost) performance report.  
4 Covert penetration radar.
- CPRSR** Compressor.
- CPRTM** Cents per revenue ton-mile.
- CPS** 1 Central processing system (or site).  
2 Cabin-pressure sensor.  
3 Covert penetration system.  
4 Characters per second (also cps).  
5 Control power supply.  
6 Conventi[onally] profiled sortie.
- cps** Cycles per second (Hz is preferred).
- CPSA** Conseil Permanent de la Sécurité Aérienne [Paris F-75015] (F).
- CPT** 1 Cockpit procedure[s] trainer.  
2 Central passenger terminal complex.  
3 Civilian pilot training program (US, 1939–46).  
4 Clearance, pre-taxi.  
5 Combined processor/totaliser [fuel system].
- CPTA** Civilian Pilot Training Act (1939).
- CPTP** CPT Program (US 1939–42), became WTS.
- CPTR** Command-post terminal replacement.
- CPU** 1 Contractor payment unit.  
2 Central [or communications] processing unit.  
3 Control-panel unit; -F adds front, -S side.
- cPw** Continental polar, warmer than surface.
- CPX** Command-post exercise.
- C<sub>p0</sub>** Helicopter profile power coefficient.
- CQ** 1 Carrier (ship) qualification.  
2 General message to all stations.  
3 Target control (remotely piloted target), USAAF 1942–47.
- C<sub>Q</sub>** Helicopter rotor torque coefficient.
- CqS** Constant-q stagnation trajectory.
- CQWI** Combined Qualified Weapons Instructor (RAF).
- CR** 1 Compression ratio.  
2 Credit (aerial victory).  
3 Cost-reimbursable.  
4 ATC request (FAA).  
5 Change request.  
6 Fighter-reconnaissance (F).  
7 Contrast ratio.  
8 Root chord, also C<sub>r</sub>.  
9 Canard/rotor, also C/R.  
10 Countermeasures receiver.

11 Close-range.  
 12 Component repair.  
 13 Common requirements (ANSP).  
 14 See next.

**C/R** 1 Counter-, or contra-, rotating, or rotation, usually refers to handed engines driving single-rotation propellers in opposite directions.  
 2 Command/response.  
 3 See CR (9).

**CR** 1 Resultant-force coefficient.  
 2 Range constant, velocity  $\times$  wt/fuel flow.

**Cr** Chromium.

**Cr** Sometimes cr, wing chord at root.

**Cr<sub>2</sub>O<sub>3</sub>** One of the three chromium oxides.

**CRA** Centro Ricerche Aerospaziali, Rome.

**crab** 1 To fly with wings level but significant drift due to crosswind.  
 2 To fly with wings level but significant yaw due to asymmetric thrust.  
 3 To fly with wings level but significant yaw imparted by rudder to neutralise effect of crosswind.  
 4 Miniature trolley driven by Link trainer and certain other simulators which reproduces aircraft track on map on instructor's desk.

**crab angle** 1 Drift angle.  
 2 In landing, angle between runway axis and aircraft heading.  
 3 Angle between fore/aft camera axis and track.

**crab list** List of snags after flight test (US, WW2).

**crab-pot** Fabric non-return valve in circular duct in airship, controlled by bidirectional pull of cord attached to centre.

**crack** 1 Microscopic rupture in stressed metal part which under repeated loads progressively grows longer, without deformation of structure, until remaining material suddenly breaks.  
 2 To break down hydrocarbons by cracking. Originally done continuously in giant cat-crackers in refineries, this is becoming a procedure necessary in JP7-fuelled hyper-sonic ramjets.

**cracking** Application of heat and usually pressure, sometimes in presence of catalysts, to break down complex hydrocarbons, esp. petroleum, into desired products. Hence cracked spirit.

**crack-stopper** Structural design feature, such as assembly of part from several components with joints perpendicular to expected crack directions, to prevent crack progressing right across.

**CRAD, Crad** Critical R&D.

**CRADA, Crada** Co-operative R&D agreement.

**CRAF** 1 Civil Reserve Air Fleet (US, from 1951).  
 2 Comet rendezvous/asteroid flyby.  
 3 Committee on Radio Astronomy Frequencies.

**crafted** Made (US usage).

**Crag, CRAG** From Pacer -\*, compass, radar, GPS.

**C-RAM** Counter rockets, artillery and mortars.

**Cram** Conditional route-availability message.

**crane helicopter** Designed for local lifting and positioning of heavy or bulky items rather than normal transport; characterised by vestigial fuselage with payload attached externally or slung.

**Cranfield** Formerly College of Aeronautics, now Cranfield University [Bedfordshire, MK43 0AL] (UK).

**crank** Apart from familiar meanings, a single rotation of

crank handle [human inceptor], thus full flap may need 12 cranks.

**cranked wing** Has acute anhedral inboard, dihedral outboard, usually with abrupt change at about 30 per cent semi-span.

**cranking** 1 Turning engine (any type) by external power.  
 2 Making a max-rate turn away from the target immediately upon launching an AAM, hence: a crank.

**C-Rap** Condensed recognized air picture.

**crash** Unpremeditated termination of mission at any point after start of taxi caused by violent impact with another body, with or without pilot in control, usually causing severe damage to aircraft. Term never used in official language.

**crash arch** Strong structure above or behind pilot(s) head(s), esp. in open cockpit or small cabin aircraft, able to bear all likely loads in overturning and sliding inverted on ground.

**crash barrier** See *barrier*.

**crash deflector lever** See *crash switch*.

**crash gate** Gate in airfield periphery through which crash/fire/rescue teams can most quickly reach nearby crashed aircraft.

**crash landing** Emergency forced landing with severe features such as rugged terrain or incapacitated pilot, resulting in more than superficial damage to aircraft.

**crash locator beacon** Automatic radio beacon designed to be ejected from crashing aircraft, thereafter to float and survive all predictable impacts, crushing forces or fire while broadcasting coded signal.

**crash pan** Secondary structure under para-dropped load, esp. vehicle or artillery, which absorbs landing shock by plastic deformation.

**crashproof tank** Euphemistic, denotes fuel or other tank designed not to rupture, leak or catch fire in all except most severe crash.

**crash pylon** Structure having same purpose as crash arch.

**crash restraint barrier** Quickly fitted/removed barrier across the front of a cargo deck.

**crash switch** Electrical switch triggered by various crash symptoms to shut off fuel, isolate electric batteries, activate fire/explosion suppression, release CLB, etc.

**crashworthiness** Generally unquantifiable ability of aircraft to crash without severely injuring occupants or preventing their escape. A crashworthy fuel system is designed to remain fuel-tight in a crash.

**crate** Aerodyne, esp. aeroplane (colloq., derogatory, archaic).

**CRaTER** Cosmic-ray telescope for the effects of radiation (NASA).

**CRAW** Carrier replacement air wing (USN).

**CRB** 1 Chlorinated rubber-based; P adds paint [airfields].  
 2 Crash restraint barrier.

**CRC** 1 Control and Reporting Centre.  
 2 Carbon-fibre reinforced composite.  
 3 Communications Research Center (Canada).  
 4 Central [ised] radio control.  
 5 Cyclic redundancy check, or code.  
 6 Cassegrain Ritchey/Chretien.

**CRCACS** Cooperative Research Centre for Advanced Composite Structures [Fishermens Bend, Vic.] (Australia).

**CRCO** Central Route Charges Office (ICAO).

**CRD** 1 Controller, Research & Development (MAP, WW2).

2 Current routing domain.

**CRDA** Cooperative research and development agreement (FAA).

**cRDC** Common remote data concentrator[s].

**CRD/F** Cathode-ray direction-finding; ground D/F receiver in which aerial automatically rotates to null azimuth as soon as pilot transmits, bearing being instantly shown on circular display.

**CRE** 1 Command-readiness exercise.

2 Communications radar exciter.

3 Control and reporting element.

4 Central Reconnaissance Establishment (RAF, formerly).

**creamed** Shot down, destroyed (colloq.).

**creamer** A perfect landing.

**creamy** A pilot diverted from normal career [creamed off], either put into a career holding pattern or "promoted sideways" (RAF).

**Create** Homeland Security Center for Risk and Economic Analysis of Terrorism Events [University of S California] (US).

**credible** Of deterrent, demonstrably capable of being used and having desired effect; depends on its ability to penetrate and on government's resolution.

**credit** Unit of aerial victory scores made up of air-combat plus strafing (aircraft destroyed on ground), with fractions for targets shared (US).

**creep** 1 Slow plastic deformation under prolonged load, greatly accelerated by high temperatures.

2 Gradual rotation of tyre around wheel; hence \* marker, white index marks on wheel and tyre initially in alignment.

3 Slow taxi under idle power

4 See next.

**creepback** Tendency of bombs to fall progressively further back in front of target (RAF Bomber Command).

**creeping landing** Landing by jet-lift STOVL aircraft with just enough forward speed to avoid reingestion of hot gas or debris from unpaved surface.

**creeping line ahead search** This covers an area by flying repeated parallel tracks sufficiently close together that an object of interest is unlikely to be missed.

**creeping wave** EM [especially radar] wave attached to the surface of a solid body.

**creep life** Safe service life of turbine rotor blades, normally set at or near point at which elongation ceases to be proportional to time.

**creep strength** Stress that will produce specified elongation over given period (typically 0.1% over 1,000 h) at given temperature.

**CRES, Cres** Corrosion-resistant steel.

**crescent wing** Has progressive reduction in both t/c ratio and sweep angle from root to tip, usually in discrete stages.

**Crest** 1 Comprehensive radar effects simulator trainer.

2 Consolidated reporting and evaluating subsystem, tactical.

3 Crew escape technology.

**cresting** Ceremonial admission to exclusive group, such as Blue Angels (USN).

**crevice corrosion** Initiated by presence of crevice in

structure in which foreign material may collect; eliminated by modern structural coating and assembly methods.

**crew** Divided into flight \* to fly aircraft, mission \* to carry out other duties in flight, cabin \* to minister to passengers and, arguably, instructors; all assigned to these duties by appropriate authority.

**crew duty time** Measured from reporting for duty to completion of all post-flight duties.

**crewing** 1 Make-up of flight crew by trade or appointment.

2 Make-up of flight crew by individual rostered names.

**crew ratio** Number of complete air crews authorised per line aircraft (civil) or per aircraft in unit complement (military).

**crew resource management** Ever-refined improvement in in-flight [airline] crew behaviour, esp. in flight-deck and cabin communications, esp. in crisis.

**crew return vehicle** Lifting-body vehicle, with final descent by inflatable wing, to bring ISS crew of six back to Earth.

**crew room** Room reserved for (usually military) flight crews, some on standby and others relaxing after a mission, where publications are kept and notices promulgated.

**crew trainer** Aircraft designed to train whole flight crew, esp. of traditional military aircraft requiring several flight-crew trades: pilot/navigator/bombardier/signaller/engineer/gunner.

**CRFMU** Cabin radio-frequency management unit [ensures passenger phones do not cause RF interference].

**CRG** Contingency Response Group (USAF).

**crib** Shop-floor container for small tools, parts or material other than scrap.

**CRIMSS** Cross-track IR microwave sounder system.

**CRIP** Coat-rod inches per passenger.

**crisis management** Management of military (war or near-war) situations or of civil crises such as major accidents or natural disasters.

**CRIS** Cross-track IR sounder.

**Crisp, CRISP** 1 Contra-rotating integrated shrouded propfan.

2 Computer-reconstructed images from space photographs.

3 Compact reconfigurable interactive signal processor.

**Crista** Cryogenic infrared spectrometer telescope for the atmosphere.

**CRIT** Centre de Recherches Industrielles et Techniques (F).

**critical altitude** 1 The highest density altitude which a supercharged piston engine can maintain its maximum continuous rated power.

2 See *decision height*.

**critical angle** 1 Angle from local vertical at which radio signals of given frequency do not escape through ionosphere but just return to Earth.

2 Incorrectly used to mean stalling angle of attack.

**critical case** That combination of failures (of propulsion, flight controls or systems) giving worst performance (see *critical engine*).

**critical crack** One of \* length.

**Critical Design Review** Almost self-explanatory, the CDR immediately follows the stage of detailed design of hardware and software, and is the last opportunity to

introduce changes without incurring very large costs in item and money. Passing CDR permits the hardware build and software coding that will result in the prototype or other initial product.

**critical engine** Engine of a multi-engine aircraft, the failure of which is most disadvantageous, due to asymmetric effects, loss of system power or other adverse factors; failure of \*\* at  $V_1$  is basis of takeoff certification in most multi-engine aircraft.

**critical frequency** 1 That corresponding to natural resonance of blade, control surface or other structure.

2 Helicopter main-rotor blade-passing frequency at which whole machine resonates on landing gear.

3 Frequency at which critical angle becomes zero; highest at which vertical reflection is possible.

**critical-length crack** Crack of length at which application of limit load causes failure.

**critical line** Locus of critical points (when track is not known precisely).

**critical Mach number** 1  $M_{crit}$ ; Mach number at which most-accelerated flow around a body first becomes locally supersonic; for thin wing might be  $M$  0.9 while thick wing may have \* below 0.75.

2 Mach number at which compressibility effects significantly influence handling.

**critical mass** Mass of fissile material in which chain reaction becomes self-sustaining.

**critical part** An item whose failure would imperil continuation of safe flight.

**critical path** That traced through number of tasks proceeding both consecutively and concurrently (as during turn-round of aircraft) that determines minimum total elapsed time.

**critical-path technique** Minimisation of total elapsed time by concentrating on those elements that form critical path.

**critical point** That from which two fixed bases, such as departure airfield and destination, are equidistant in time.

**critical position** That over large city or mountain range at which propulsion failure would be most serious.

**critical pressure** In fluid flow through nozzle, that final pressure below which no further reduction results in increase in flow from fixed initial pressure; usually rather more than 50% of initial pressure (fixed ratio for any given medium and temperature).

**critical pressure coefficient**  $C_{pc}$ ; pressure coefficient at critical Mach number, approximately given by Prandtl-Glauert.

**critical pressure ratio** That at which particular axial compressor suddenly ceases to operate efficiently due to choking, stall or other flow breakdown.

**critical speed** 1 See  $V_1$ .

2 That rotational speed at which machinery (eg, engine) suffers dangerous resonance or whip of shafting.

**critical static pressure** That at critical Mach number; symbol  $P_c$ .

**critical temperature** That below which gas or vapour may be liquefied by pressure alone.

**critical velocity** Speed at which fluid flow becomes sonic, ie locally reaches Mach number of unity;

$$V_{cr} \text{ or } V_{crit} = a_0 \sqrt{\frac{(\gamma - 1) M_0^2 + 2}{\gamma - 1}}$$

**CRL** 1 Common rail launcher.

2 Cambridge [Massachusetts] Research Laboratory (USAF).

**CRLCN** Circulation.

**CRM** 1 Originally cockpit resource management, now crew resource management.

2 Collision-risk model.

3 Customer relationship, or resource, management.

**CRN** Common random number.

**CRNA** Centre Régional de la Navigation Aérienne (F).

**CRO** 1 Civilian Repair Organization.

2 Cathode-ray oscilloscope.

3 Community relations officer (RAF).

4 Combat recovery operation[s].

**Crocco** Luigi Crocco (1932) derived equation:

$$T = T_w - (T_w - T_f) \frac{u}{U_f} + \frac{u(U_f - u)}{2C_p}$$

where  $T$  is temperature within boundary layer,  $T_w$  temperature of adjacent solid surface,  $T_f$  free-stream temperature,  $u$  local velocity,  $U_f$  free-stream velocity, and  $C_p$  specific heat at constant pressure.

**crocodile** 1 Control surface, usually aileron, which can split apart into upper and lower halves as airbrake; see *deceleron*.

2 Covered gangway to protect passengers from slipstream, c 1920–40.

**cropped-fan engine** Turbofan whose fan has been reduced in diameter to match reduced thrust requirement and permit LP turbine and other parts to be simplified.

**cropped surface** Wing, tail or other surface whose tip is cut off diagonally at Mach angle appropriate to particular supersonic flight condition.

**cropped tip** *Cropped surface*.

**cross** To pass over a fix under ATC at a specified altitude, or a specified maximum or minimum altitude.

**cross-bar** System of approach lighting using straight rows of white lights perpendicular to runway centreline. Calvert and some other systems use several bars decreasing in width to threshold while US practice is single white bar followed by red undershoot zone.

**cross-beam rotor** Helicopter (usually tail) rotor comprising two two-blade assemblies superimposed; usually set at  $90^\circ$  but in AH-64 at  $55^\circ/125^\circ$ .

**cross-bleed** Pneumatic pipe system connecting all engines so that bleed from one can start, or drive accessories on, any other.

**Crossbow** Code for air attacks on flying-bomb launch sites, 1944.

**cross-bracing** Use of crossed diagonal wires, cables or struts/ties to achieve a rigid structure.

**cross certification** To certify an item on the basis of certification by another country.

**crosscheck** Brief message from one pilot to another, or another crew member, in same aircraft giving or confirming situation, eg "Inner marker" or "crosscheck, I have the yoke".

**cross-cockpit collimated display** Simulator display providing large visual scene on back-projected screen viewed in curved concave mirror, giving correct perspectives with no discontinuities.

**cross-country** Flight to predetermined destination, where landing may or may not be made, esp. one to gain practice in map-reading and navigation.

**cross-crew qualification** Training course for mixed-fleet flying.

**cross-deck** Operations by two or more aircraft carriers, not necessarily of same navy, in which aircraft operate from unfamiliar decks on exchange basis; hence \*ing.

**cross-drive** Facility enabling an engine to drive a secondary power item on the other side of the aircraft centreline, e.g. left engine to drive right hydraulic pump.

**crossed controls** Application of flight-control movements in opposite sense to those in normal turns or manoeuvres, eg right stick and left rudder; rarely required.

**cross-spring balance** Wind-tunnel balance whose pivots are made up of two or more leaf springs crossing diagonally and giving virtually frictionless flexure through defined axes.

**cross-fall** Transverse slope of runway surface, to ensure sufficiently quick run-off of water to avoid aquaplaning except in particular adverse crosswinds.

**cross-feed** 1 Feeding items (eg, engines) on one side of aircraft from supply (eg, fuel) on opposite side; abnormal condition under pilot control.

2 Often crossfeed, use of rudder to minimise sideslip in roll or in sustained very steep turn. See next.

**crossfeed phasing parameter** Not quantifiable-value  $\mu$  derived from ratios of transfer-function numerators of rudder: sideslip and aileron: sideslip, with profound effect on pilot rating.

**cross-flow** Having two fluids flowing past each other at 90° while separated by thin metal walls.

**cross-level** Lateral clinometer, instrument formerly used to indicate direction of local vertical as aircraft manoeuvres in rolling plane.

**cross-modulation** Unwanted modulation from one carrier being impressed on another in same receiver, usually resulting from inability to filter out certain sidebands.

**cross-needle** Instrument display based on two pivoted needles which pilot attempts to keep crossed at 90° in centre of display.

**cross-over exhaust** Gas from inboard cylinders of multi-piston engine aircraft is piped to discharge on outboard side to reduce noise in fuselage.

**cross-over model** That model of compensatory operation in a powered flight-control system at which the open-loop frequency response has a gain of unity, the same as the closed-loop bandwidth  $\Omega_c$ , i.e. at which open-loop amplitude response crosses 1.0 [zero db] line.

**cross-over struts** Inclined radial gas paths in one form of coannular inverted-flow engine to convey high-V core jet to outer periphery and low-V fan flow to centre.

**cross-over turn** Fighter battle formation in which left aircraft move across to right.

**cross-qualification** Among other meanings, qualification of pilots on a type of aircraft with characteristics and flight deck similar to that habitually flown, but (except on simulator) not actually flown; eg, A300B/A310, B737-300/B757.

**cross-radial navigation** Routeing not on a radial constituting a promulgated airway; ie, RNav using VOR and/or DME to fly direct from A to B (see *GNav*).

**cross-range** Approximately at 90° to axis of missile or space launch range. See next.

**cross-range limit** Maximum lateral distance to either side of re-entry trajectory which can be reached by a lifting body on a particular re-entry.

**cross-section** 1 Transverse section through object, eg fuselage or structural member.

2 Measure of radar reflectivity of object, usually expressed as area of perfect isotropic reflector perpendicular to incident radiation; depends on structural materials, incident angles, physical size of target, radar wavelength and possibly other factors.

3 In nuclear or atomic reactions, area (expressed in barn) giving measure of probability of process occurring.

**cross-servicing** Between-flights routine maintenance and replenishment of aircraft at base of different armed force or different nation; \* guide is manual facilitating operational turnaround at locations where relevant documents are not available.

**cross start** Using power from one engine [electrical, air bleed or whatever] to start another.

**cross-talk** Unwanted signals generated in one set of circuits in communications or EDP (1) system by traffic in another.

**cross-trail** Distance bomb or other free-fall object falls downwind measured perpendicular to track (or track at release point projected ahead).

**cross-trail angle** Angle in horizontal plane measured at release point between track and line to point of bomb impact.

**cross-tube** Transverse tube forming main spar of wing in most microlight and similar aircraft.

**cross-turn** Rapid 180° in which each half of formation turns towards remainder.

**crosswind** One blowing more or less at right angles to track, to runway direction, or to other flown direction.

**crosswind axis** Straight line through c.g. perpendicular to lift and drag axes.

**crosswind component** Velocity of wind component at 90° to runway, track or other direction; =  $WV \sin A$  where A is angle between WV and direction concerned.

**crosswind force** Component along crosswind axis of resultant force due to relative wind; normally zero except in sideslip.

**crosswind landing gear** One whose wheels can be castored or prealigned with runway while aircraft crabs on to ground with wings level.

**crosswind leg** In landing circuit, that made at 90° to landing direction from end of downwind leg to start of approach.

**crosswind testing** Testing of engine with high-velocity wind (simulated at known speed) blowing across inlet.

**crowbar** Unswept wing (c 1950 colloq.).

**crowd-line** Often one word, line defining front edge of airshow crowd, parallel to runway.

**crow** 1 Upper part of fuselage, above cabin ceiling, of passenger transport, especially large pressurized aircraft.

2 Loosely, upper part of any fuselage.

3 Top of canopy [envelope] of balloon.

**CRP** 1 Carbon-fibre reinforced plastics.

2 Control and reporting point (or post).

3 Counter-rotation propfan.

4 Compulsory reporting point.

5 Contractor's Repair Party.

**CRPA** Controlled reception-pattern antenna.

**CRPAE** Cercle des Relations Publiques de l'Aéronautique et de l'Espace (F).

**CRPM** Compressor rpm.

**CRPMD** Combined radar and projected-map display.

**CRR** Cutover readiness review.

**CRRA** Capabilities review and risk assessment.

**CRS** 1 Container release system.

2 Control and reporting squadron (or section).

3 Component repair squadron (US).

4 Computer reservation system.

5 Child restraint system.

6 Congressional Research Service (US).

7 Cosmic-ray subsystem.

8 Not recommended, course.

**crs** 1 Course.

2 Cruise.

**CRT** Cathode-ray tube.

**CRT display** CRT whose electron beam[s] create pictures and disgrams on the tube-face, a basic element in radars and, since c1960, flight instruments.

**CRTE** Combat rescue training exercise.

**CRTS** CRT scope; term not recommended.

**CRU** 1 Control routing unit [MIL-1553B].

2 Chemical-resistant urethane.

3 Computer receiver unit.

**CRUAV** Communications-relay UAV.

**crucible** Hot source designed for radiating IR, for decoy or training.

**cruciform** Having approximate form of a cross, in aerospace usually when viewed from front; thus \* wing missile has four wings arranged radially (often at 90°) at same axial position round body.

**cruise** 1 In any flight from one place to another, that portion of flight from top of climb to top of descent en route to destination, usually at altitudes, engine settings and other factors selected for economy and long life.

2 Verb, to perform (1).

3 Tour of operations by naval air unit aboard carrier.

**cruise configuration** Describes not only aerodynamic (normally fully clean) status but also systems status and possibly location and duties of flight crew, during cruise (1).

**cruise missile** Long-range pilotless delivery system whose flight is wing-supported within atmosphere.

**cruise motor** Propulsion, of any kind, used to sustain speed of missile from boost burnout onwards.

**cruising altitude** That assigned to or selected by captain for flight from top of climb to top of descent; varies with type of aircraft, sector distance, take-off weight, ATC rules and other traffic, winds and other factors.

**cruising boost** With piston engine, that available in weak mixture for continuous operation giving best time or lowest fuel burn.

**cruising ceiling** Formerly, greatest height at which 1.35  $V_{i-mp}$  could be maintained at max WM cruise power.

**cruising speed** That selected for cruise (1).

**cruising threshold** 1.35  $V_{i-mp}$ , considered (1935–50) practical lower limit to cruising speed.

**crutches** Lateral arms carrying pads which are screwed down on upper sides of bomb, missile or other store to prevent movement relative to rack, pylon or other carrier.

**CRV** 1 Centre-reading voltmeter.

2 Crew rescue vehicle.

3 Crew-return vehicle.

**CR/W** Canard rotor/wing.

**CRW** Circular rotating wing; spinning wing provides gyro-stabilization as well as [in fast forward flight] adequate lift.

**cryogen** See *refrigerant*.

**CryoGenesis** Cleaning by blast of air + solid CO<sub>2</sub> [dry ice].

**cryogenic** Operating at extremely low temperatures.

**cryogenic fuels** By far the most important is LNG (liquefied natural gas), consisting mainly of methane with traces of ethane and other gases; BPt is about -161°C. LH<sub>2</sub>, liquid hydrogen, has the drawbacks of very low density and exceedingly low BPt (near absolute zero, at -253°C).

**cryogenic materials** Limited range of highly specialized materials suitable for sustained structural or other use at below -180°C.

**cryogenic propellants** Gases used in liquid state as oxidants and/or fuels in rocket engines, esp. Lox, LH<sub>2</sub>, FI and various FI compounds or mixtures.

**cryoplane** Aeroplane designed to use cryogenic fuel.

**cryopump** High-vacuum pump operating by cooling chamber walls so that residual gas molecules are condensed on to them, leaving vapour pressure below that required.

**cryostat** Usually small lab rig for experiments at ultra-low temperatures, eg NMR, superconductivity etc.

**Cryotech** Range of deicer materials, used alone or in combination with sodium or potassium acetate.

**crystal laser** One whose lasing medium is a perfect-lattice crystal, eg ruby.

**crystal lattice** Three-dimensional orthogonal space lattice whose intersections locate the atoms of a perfect crystal (except on small scale, most crystals contain important imperfections).

**crystal oscillator** One with added subcircuit containing piezo-electric crystal (eg quartz) whose extremely rigid response gives high frequency stability.

**crystal transducer** Transducer containing piezo-electric crystal which translates mechanical strain into electrical voltage.

**CRZ** Cruise.

**CS** 1 Constant-speed (c/s is preferred).

2 Cassegrain system.

3 Chemical harassing agent OCBM.

4 Certification standard.

5 Or C/S, c/s, callsign.

6 Communications subsystem.

7 Control subsystem (ECM).

8 Colour stripping (baggage screening).

9 Cargo system.

10 Common service.

11 Suffix, close support.

**C/S** Callsign.

**Cs** 1 Cirro stratus.

2 Caesium.

**C<sub>s</sub>** 1 Specific fuel consumption (F).

2 Constant in torsion/bending of tube or box structure, resistance to rotation caused by warp load.

3 Chord at selected wing station (usually 70 per cent semi-span).

**c/s** 1 Constant-speed.

2 Course/airspeed.

3 Cycles per second (Hz is preferred).

4 Centre-section of wing.

5 Callsign.

6 Characters per second.

**CSA** 1 Canadian Space Agency.

2 Configuration status accounting (software).

- 3 Control-stick assembly.  
 4 Chief Scientific Advisor (UK MoD).  
 5 Customer Service Agent.
- CS-A** Certification Specifications for Airframes (EASA).
- CSAA** Chinese Society of Aeronautics and Astronautics [office, 100010 Beijing] (China).
- CSAF** Chief of Staff (USAF).
- CSAM** 1 Conseil Supérieur de l'Aviation Marchande (F).  
 2 Canadian Society of Aviation Medicine [office, Ottawa].
- CS&S** Customer solutions and support.
- CSAR** Combat search and rescue.
- CSAS** 1 Command [one source says "control"] stability augmentation system.  
 2 Common-service airlift system.
- CSASI** Canadian Society of Air Safety Investigators [Agincourt, PO].
- CSATC** Central School for Air Traffic Control (RAF).
- CSAV** Academy of Sciences (Czech).
- CSAW** Commander's situational-awareness workstation.
- CSB** 1 Closely spaced basing (ICBM).  
 2 Carrier and sidebands (ILS).
- CSBA** Center for Strategy [or Strategic] and Budget[ary] Assessment[s] (US Congress).
- CSBM** Confidence and security building measures (MBFR treaty).
- CSBPC** Control-stick boost and pitch compensator.
- CSBS** Course-setting bombsight.
- CSC** 1 Course and speed calculator.  
 2 Constant symbol contrast (HUD).  
 3 Centreline stowage cabinet.  
 4 Chief sector controller.  
 5 Cargo- or communication-, or compass-system controller.  
 6 Cataloging and Standardization Center (USAF Battle Creek, Mich.).  
 7 Carbon/silicon carbide.
- CSCE** 1 Conference on Security and Co-operation in Europe.  
 2 Communication systems control element.
- CSCG** Communications system control group.
- CSCI** Computer-software configuration item.
- CSCP** 1 Computer software change proposal (usually SCP).  
 2 Cabin-system control panel.
- CSCS** Contractor[s] satellite control site.
- C/SCSC** Cost/schedule control systems criteria.
- CSD** 1 Constant-speed drive.  
 2 Common strategic Doppler.  
 3 Critical-sector detector.  
 4 Circuit-switch data.
- CSDB** Commercial standard data-bus, or digital bus.
- CSDC** Computer signal data converter.
- CSDE** Central Servicing Development Establishment (RAF).
- CSDS** 1 Constant-speed drive starter.  
 2 Cargo smoke-detector system.
- CSDU** 1 Constant-speed drive unit.  
 2 Cabin satellite data unit.
- CSE** 1 Central Studies Establishment (Australia).  
 2 Central Signals Establishment (UK).
- CS-E** Certification specifications for Engines (EASA).
- CS/EL** Combat survivor/evader locator.
- CSELT** Centro Studi e Laboratori Telecomunicazioni (I).
- CSET** Certification, standardization and evaluation team.
- CSEU** Control-system electronics unit.
- CSF** Command/status frame.  
 2 Customer service facility.
- CSFIR** Crash-survivable flight-information recorder.
- CSG** 1 Centre Spatial Guyanais (F).  
 2 Constant-speed generator.  
 3 Counterterrorism Security Group (NSC).  
 4 Computer signal [or symbol] generator.  
 5 Cryptologic Systems Group (USAF).  
 6 Carrier Strike Group.
- CSH** Combat support helicopter, basically transport role.
- CSI** 1 Combined speed indicator, displaying airspeed and Mach.  
 2 Computer-synthesised image, or imagery, in hybrid simulator blended with CGI.  
 3 Commercial satellite imagery.  
 4 Carriage/store interface.  
 5 California Space Institute [UCSD] (US).
- CSi** Caesium [US cesium] iodide.
- CSiC** Carbon/silicon carbide composite.
- CSII** Centre for Study of Industrial Innovation (UK).
- CSINA** Conseil Supérieur de l'Infrastructure et de la Navigation Aérienne (F).
- CSIP** Customer satisfaction improvement programme.
- CSIRO** Commonwealth Scientific and Industrial Research Organization [HQ, Dickson ACT 2602] (Int.).
- CSIRS** Covert survivable in-weather reconnaissance/strike.
- CSIS** 1 Cabin sensor indicating system.  
 2 Canadian Security Intelligence Service.  
 3 Center for Strategic and International Studies (US).
- CSK** Countersunk.
- CSLC** Coherent side-lobe canceller, or cancellation.
- CSM** 1 Command/service module.  
 2 Customer support manager.  
 3 Crash-survivable memory [M adds module, U unit].  
 4 Cabin-systems management [U adds unit].  
 5 Computational solid mechanics.
- CSMA** Carrier-sense multiple access.
- CSMM** Crash-survivable memory module (CSMU, see above).
- CSN** Catalogue sequence numbers[s].
- CSO** 1 Command Signals Officer (RAF).  
 2 Communication systems operator.
- CSOC** Combined Space (or Satellite) Operations Center (pronounced C-sock).  
 2 Consolidated space operations contract.
- C/SOIT** Communications/surveillance operational implementation team.
- CSP** 1 Common signal-processor.  
 2 Capability-sustainment programme (UK), or plus.  
 3 Comprehensive surveillance plan[s] (ATOS).  
 4 Common services programme [airlines share maintenance].
- CSPA** Canadian Sport Parachuting Association [office, Navan, PO].

- CSR** 1 Covert strike radar.  
2 Corporate social responsibility.  
3 Comprehensive spending review.
- CSRDF** Crew-station research and development facility.
- CSRL** Common strategic rotary launcher.
- CSRP** Cabin-safety research program.
- CSRS** Counter-surveillance and reconnaissance system.
- CSS** 1 Control-stick steering.  
2 Cockpit system(s) simulator.  
3 Clean stall[ing] speed.  
4 Communications subsystem.  
5 Complementary satellite system.  
6 Computer support [or sighting] system.
- CSSD** Strategic Defense Command (USA).
- CSSI** Carriage/store/station interface.
- CSSO** Concurrent subspace optimization.
- C/SSR** Cost/schedule status report.
- CSSS** Combat service support system.
- CST** 1 Combined station and tower.  
2 Centre Spatial de Toulouse (F).  
3 Commercial space transportation.  
4 Central Standard Time (US).  
5 Coast, coastal.
- eSt** Centistoke[s].
- CSTA** Chambre Syndicale du Transport Aérien [F-75009 Paris] (F).
- CsTe** Caesium telluride, photocathode material.
- CSTF** Cross-scan terrain following.
- CSTI** Control-surface tie-in.
- CSTM** Centro Studi Trasporti Missilistici (I).
- CSTMS** Customs.
- CSU** 1 Constant-speed unit.  
2 Central suppression unit, prevents mutual interference in complex avionics.  
3 Command sensor unit.  
4 Cabin service unit.  
5 Configuration stopping [or strapping] unit.  
6 Communications switching unit.  
7 Crew-station unit.  
8 Control-status unit.  
9 Control selection unit.  
10 Categorization and status unit (ILS).  
11 Cross-strap unit.
- CSV** 1 Capacity (or catapult) safety-valve.  
2 Common standard vehicle.
- CSVr** Crash-survivable voice recorder.
- CSVTS** Scientific and technical society (Czech).
- CSW** 1 Conventional standoff weapon.  
2 Combat Support Wing.
- CSWIP** Certification scheme for weldment inspection personnel.
- CSWS** Corps-support weapon system.
- CT** 1 Carry trials.  
2 Counter-terrorist.  
3 Current transformer.  
4 Tip chord [also Cr].  
5 Clearance time.  
6 Contact.  
7 Computerized, or computed, tomography.  
8 Crew-member terminal.  
9 Control transmitter, or tower.  
10 Cockpit trainer; /IPS adds interacting, or interactive, pilot station, /IPS-E further adds enhanced.
- Cr** Thrust coefficient, eg of propeller, helicopter rotor, or forced flow through a slit in CC aerofoil.
- C<sub>t</sub>** Propeller torque coefficient.
- cT** Continental tropical airmass.
- C<sub>t</sub>, c<sub>t</sub>** Equivalent tip chord of winf [there are formulae for rounded tips].
- CTA** 1 Control area.  
2 Companion trainer aircraft.  
3 Centro Técnico Aeroespacial (Braz.).  
4 Controlled, or calculated, time of arrival.  
5 Cryogenic telescope assembly.  
6 Canadian Transportation Agency (issues licences).  
7 Central terminal area.
- CTAA** Commandement des Transmissions de l'Armée de l'Air (F).
- CTAF** 1 Comité des Transporteurs Aériens Français.  
2 Common-traffic advisory frequency areas.
- CTAGS** Co-operative transatlantic air-ground surveillance; S adds system.
- CTAI** 1 Cowl thermal anti-icing.  
2 China Taipei Aeroports Association (Taiwan).
- CTAM** Climb to and maintain.
- CTAPS** Contingency theater [or tactical] air [or aircraft, or automated] planning system (USAF).
- CTAR** Comité des Transporteurs Aériens Complémentaires (F).
- CTAS** 1 Center Tracon automation system.  
2 Co-operative Transatlantic AGS [aerospace ground surveillance] System (Int.).
- CTB** 1 Comprehensive Test Ban (T adds 'treaty'), 1996.  
2 Central terminal building.
- CTC** 1 Canadian Transport Commission (Ottawa).  
2 Command track counter.  
3 Cabin-temperature control[ler].  
4 Counter-Terrorism Committee (UN).  
5 Central telemetry control.
- Ctc, ctc** Contact.
- CTD** 1 Compound turbo diesel.  
2 Colour tactical display.  
3 Critical technologies demonstration, or [Australia] capability and technology demonstrator.
- CTDC** Civil Transport Development Corporation (J).
- CTE** Coefficient of thermal expansion.
- CTF** 1 Combined test force.  
2 Central Test Facility.  
3 Conventional turbofan.
- CTFE** Chlorotrifluoroethylene, advanced non-flam hydraulic fluid.
- CTHA** Contrawound toroidal helical antenna.
- CTI** 1 Costings technology integration [O adds office] (USAF).  
2 Computer/telephone, or telephony, integration.  
3 Continuous technology insertion.  
4 Commission Technique et Industrielle (F).  
5 Combined threat image.
- CTIPS** See CT (10).
- CTK, ctk** 1 Capacity tonne-kilometres.  
2 Command track.
- cTk** Continental tropical air, colder than surface.
- CTL** 1 Control.  
2 Tactical air command (Netherlands).  
3 Contour tape-laying.

4 Coal to liquid.  
**CTLA** Control area.  
**CTLZ** Control zone.  
**CTM** 1 Capacity ton-miles (unless otherwise stated, short tons, statute miles).  
 2 Centrifugal twisting moment.  
 3 Cost per ton-mile.  
**CTMO** Central[ized] air-traffic flow management organization.  
**CTN** 1 Caution.  
 2 Case, throat, nozzle.  
**CTO** 1 Chief technical officer.  
 2 Conventional takeoff.  
 3 Crypto operator.  
**CTOC** Common tactical operations centre (GBAD).  
**CTOL** Conventional takeoff and landing, ie ordinary aeroplane.  
**CTOT** 1 Calculated takeoff time.  
 2 Constant torque on takeoff.  
**CTP** 1 Chief test pilot.  
 2 Command track pointer.  
 3 Common technology programme (ASTOVL).  
 4 Critical technology project[s].  
**CTPA** Comité Technique de Programmes d'Armement (F).  
**CTPB** Carboxy-terminated polybutadiene rocket propellant.  
**CTR** 1 Controlled airspace, control zone [see CTZ].  
 2 Controllable-twist rotor.  
 3 Common Type Rating.  
 4 Co-operative Threat Reduction (US, R).  
 5 Click to refresh.  
 6 Continuous technology refreshment.  
 7 Common, or configuration, test requirements; D adds document.  
 8 Civil tilt-rotor.  
 9 Center, centre.  
 10 Conversion to role; T adds training.  
**CTRD** Configuration test requirements document.  
**CTRDAC** Civil tilt-rotor development advisory committee.  
**CTRL** Control.  
**CTS** 1 Central tactical system.  
 2 Cockpit television sensor.  
 3 Common termination system.  
 4 Clear to send.  
 5 Contractor transition support (USAF).  
 6 Communications technology satellite.  
**C<sup>T</sup>/s, or C<sub>T</sub>/σ** Helicopter blade-loading coefficient.  
**CTSS** Commercial training simulator, or simulation, services (USAF).  
**CTT** 1 Capital-transfer tax (UK).  
 2 Commander's tactical terminal; H/R adds hybrid-receive only.  
 3 Controlled-torque tightening.  
 4 Conversion to type; T adds training.  
 5 Combined Test Team (Int.).  
 6 Council for Travel and Tourism, [office London] (UK).  
**CTTO** Central Tactics & Trials Organization (RAF).  
**CTTTF, CT<sup>3</sup>F** Combating Terrorism Technology Task Force (DoD).  
**CTU** 1 Control terminal unit.

2 Cabin telecommunications, or telephone, unit (satcom).  
**CTV** 1 Curved trend vector.  
 2 Crew transfer vehicle.  
**CTVS** Cockpit TV sensor [or system].  
**CTWADN** Council of Third World Aerospace & Defence Newspapers [Karachi, Pakistan].  
**C2PC** Command and control personal computer.  
**CTZ** 1 Control zone [this is preferred].  
 2 Corps tactical zone.  
**CU** 1 Conversion unit.  
 2 Cage/uncage; gyro system control.  
 3 Common use[r]: BES adds baggage enterprise system [cubes], PS passenger self-service, SS self-service and TE [cute] terminal equipment.  
 4 Control unit (HMS).  
 5 Combiner unit (HUD).  
 6 Channel utilization.  
**Cu** Cumulus.  
**CUAV** Clandestine UAV.  
**cubage** Total volume of rectilinear cargo that can be accommodated; typically 0.7 of pressurized above-floor cargo volume.  
**Cuban eight** Manoeuvre in vertical plane normally comprising ¾ loop, half-roll, ¾ loop, half-roll.  
**cube out** To run out of payload volume (either pax, cargo or both) as less than MSP (5).  
**cubic foot** Non-SI measure of volume, 1\* = 28,316.7 cm<sup>3</sup>, = 0.0283167 m<sup>3</sup>; reciprocals, 3.53 x 10<sup>-5</sup>, 35.3148.  
**cubic inch** Non SI measure of volume, 1 cu in = 16.387 cm<sup>3</sup> = 0.0164 litre; reciprocals 0.06102, 60.9756.  
**c/uc** Cage/uncage.  
**CUDS** Common-user data services.  
**CUE** Computer update equipment.  
**cue** 1 Glimpse of Earth's surface through cloud or darkness giving helpful attitude and distance information.  
 2 To slave homing seeker of missile to target, using information from other source.  
**CuF** Cumuliform cloud.  
**cuff** 1 Secondary structure added around propeller blade root, usually for aerodynamic reasons.  
 2 Structure added ahead of wing LE extending chord 3–5%, with sharp inboard end.  
 3 Heated muff round drain valve or drain mast.  
**Cufos** J. Allen Hyneck Center for UFO Studies [Chicago, Illinois 60659] (US).  
**CuFra** Cumulus fractus.  
**CUG** Computer Utilization Group (OECD).  
**CUGF** Counter underground facilities [weapons against caves].  
**CUGR** Cargo utility GPS receiver.  
**CUI** Committee on Unlawful Interference.  
**cu in** Cubic inch, 16.387 cm<sup>3</sup>.  
**culture** Man-made terrestrial features.  
**cumulonimbus** Cb, extremely large cumuliform clouds whose tops reach stratosphere and spread in form of fibrous ice-crystal anvil. Extreme vertical velocities and turbulence make them dangerous.  
**cumulus** Cu, dense white clouds with almost horizontal base and large vertical development, domeshaped tops (cauliflower) showing growth in strong upcurrents.  
**cumulus mammatus** Cumuliform clouds having pendulous protuberances on underside.  
**CUP** 1 Capabilities upkeep program (USN).

2 Cockpit upgrade program[me].

**cup** Non-SI unit of volume, =  $2.3659 \times 10^{-4} \text{m}^3$ .

**Cupid** Common, or combat, upgrade plan integration, or integrated, details (USAF).

**cupola** 1 Turret-like structure projecting from aircraft with windows giving maximum field of view.

2 Manned viewing station on space station for observation of docking, truss construction and placement of antennas and other equipment.

**cupping** Re-rigging to increase angle of incidence.

**curie, Ci** Unit of radioactivity equal to  $3.7 \times 10^{10}$  disintegrations or transformations per second, replaced by becquerel.

**curie point** Critical temperature, different for each material, above which ferromagnetic materials lose permanent or spontaneous magnetisation.

**curing** Process by which most synthetic rubbers, plastics and solid-propellant binders are converted to compositions of higher molecular weight; may involve heating (condensation polymerization), chain reaction via free-radical or ionic mechanism (addition polymerisation), or use of catalysts. In solid rocket motors semi-liquid is often cured in case, solidifying and becoming case-bonded.

**curl** Vector resulting from action of operator del (differential operator in vector analysis) on vector; sometimes called rotation.

**curling die** Used with curling punch to bend sheet edges to tubular form.

**curlover** Possibly dangerous downdraft and turbulence downwind of trees or buildings.

**currency** Continuing validity of licence, esp. that for pilot.

**current** 1 Pilot is qualified on particular type and routinely flying it.

2 Civil aircraft is on active register and in routine operation.

3 Flight plan is that being followed.

**curvise writing** Rounded, flowing writing with strokes joined; hence formed in display by actual strokes rather than TV-type raster scanning.

**curtain** 1 Non-gastight partition in aerostat.

2 Electronic barrier formed by wall of chaff.

**curved approach** 1 Adopted by some aircraft, notably WW2 fighters, because of inadequate forward view straight ahead at low airspeeds.

2 Any of numerous possible quasi-elliptical paths followed when using MLS or other system offering such approach paths on either side of straight centreline.

**curved trend** Turn information imparted by three future track-lines on EHSI terminating 30 sec, 60 sec and 90 sec hence; these are straight with wings level but in banked turn show \*, in extreme case linking in 360° circle (does not allow for drift).

**curve of pursuit** Followed by any aircraft chasing another and continuously steering towards latter's present position; with non-maneuvring target curve soon becomes asymptotic with target straight-line course.

**curvic coupling** Joint between driving and driven shaft systems which transmits torque perfectly; allows for small errors in alignment or angle but does not secure one to other [in fact, making faces tend to push apart]. In simplest form comprises two sets of meshing radial teeth of smooth curving profile.

**curvilinear flight** Accelerated flight, ie not straight and level.

**Cus, CUS** Customs available.

**cushion** See *ground cushion*.

**cushion creep** Use of ground cushion for gradual helicopter takeoff.

**CUSRPG** Canada/US Regional Planning Group.

**Cuss, CUSS** Common-use self-service, for check-in desks which automatically identify and process passenger. CUSS is an electronic standard [v1.0], produced by SITA but specified by IATA. K adds kiosk.

**customer** Usually purchaser and operator are synonymous; where purchaser is government agency and operator an air force, or purchase is finance company or bank, \* normally applies chiefly to operator.

**customer base** Total list of customers (term usually refers to civil air carriers) committed to purchasing or leasing new type.

**customer bleeds** See *customer supplies*.

**customer mock-up** Exact reproduction of aircraft interior, or part thereof, furnished with materials, fabrics, colours, seats and other equipment as specified by customer.

**customer supplies** Bleed-air or shaft power, other than that required for propulsion, needed for aircraft services.

**customised lead time** No spares supplied until needed, \* typically 2h–2 years.

**customising** 1 Finishing GA aircraft to customer's spec., eg furnishing, avionics kit, external paint.

2 Finishing avionics or instruments for particular task with chosen language, labels, IC chips and self-test.

**cusum** Cumulative sum [suggest: tautology].

**cut** Sudden complete shutdown of power [noun and verb]; hence: the \*, command given by batsman on carrier.

**CVT** Code/unit test.

**cutaway** General term for detailed perspective drawing showing maximum detail of 3-D object.

**cutback** 1 Sudden partial closure of throttles at end of first climb segment for noise-abatement reasons.

2 Reduction in existing or planned procurement.

3 Reduction in manufacturing rate.

**cut-back nozzle** Normally, one (not of con-di type) shortened in length and terminating obliquely to give thrust slightly inclined to pipe axis.

**cutback speed** ASIR at top of first segment.

**Cute** Common-user terminal equipment (SITA).

**Cutlass** Combat UAV target locate and strike system.

**cutlet** Cutlet-shaped flattened outer arm of hub forging of rigid rotor.

**cutoff** 1 Termination of rocket propulsion before burnout because desired trajectory and velocity have been reached.

2 Flying shortest track to intercept an air target.

**cutoff ports** Circular apertures in forward face of solid motor which can swiftly be blown open to terminate combustion.

**cut-out** 1 Aperture in pressurized fuselage, for door, window, hatch or other purpose.

2 Absence of rear inner part of elevator, terminating in diagonal edge, to allow full rudder to be applied.

**cut-out switch** One isolating or inactivating circuit or subsystem.

**CV** 1 Fleet [aircraft] carrier.

2 Carrier vehicle (SDI).

- 3 Compiler vendor.  
 4 Cryptographic variable.  
 5 Controlled variable[s].
- C<sub>v</sub>** Specific heat at constant volume.  
**cv** Cheval vapeur, metric horsepower = 0.98632 hp = 0.7355 kW; reciprocals 1.01387, 1.35962.  
**CV(A), CVA** 1 Fleet carrier, attack.  
 2 Creditors voluntary agreement.  
**CVBG** Carrier battle group.  
**CVCC** Constant-volume combustion cycle; E adds engine.  
**CVD** Chemical vapour deposition.  
**CVDR** Cockpit voice data recorder.  
**CVE** 1 Escort carrier.  
 2 Combat value enhancement.  
**CVF, cv(f)** Future aircraft carrier.  
**CVFD** Cockpit voice and flight data [R adds recorder].  
**CV/DFDR** Cockpit voice and digital flight data recorder.  
**CVFP** Charted visual flight procedure.  
**CVFR** Controlled visual flight rules.  
**CVH** Helicopter carrier.  
**CVI** Counter-flow virtual impactor.  
**CVID** Clearly visible impact damage.  
**CVL** 1 Controlled-vortex lift.  
 2 Light aircraft carrier.  
**CVM** Comparative vacuum monitoring.  
**CV(N), CVN** Fleet carrier, nuclear-propelled [X adds next-generation]  
**CVOR** Commutated VOR.  
**CVR** 1 Cockpit voice recorder [CP adds control panel].  
 2 Crystal video receiver.  
**CVRS** Computerized voice reservation system.  
**CV(S), CVS** Carrier, escort/ASW.  
**CVUT** Czech aeronautical society [office, Prague 2] (Czech Rep.).  
**CVV** 1 Compressor variable vane.  
 2 Combined validation and verification.  
**CVW** Carrier air wing (USN).  
**CV-WST** Carrier-based weapon-system trainer.  
**CW** 1 Continuous wave.  
 2 Ambiguously, carrier wave.  
 3 Clockwise.  
 4 Chemical warfare.  
 5 Composite Wing (USAAF, USAF).  
 6 Complex weapons.
- C<sub>w</sub>** Helicopter weight coefficient.  
**CWA** 1 Center weather advisory (inflight, unscheduled).  
 2 Civil Works Administration (US, 1933).  
 3 Communications Workers of America.  
**CWAN** Coalition wide-area network.  
**CWAR** CW (1) acquisition radar.  
**CWB** Centre wing box.  
**CWC** 1 Crosswind component.  
 2 Chemical Weapons Convention, 15 January 1993.  
 3 Comparator warning computer.  
**CWCS** Common weapons control system.  
**CWD** Chemical warfare defence.  
**CWDS** Clean-wing detection system, senses thickness of contaminant, eg ice.  
**CWFS** Crashworthy fuel system.  
**CWG** 1 Charges Working Group (IATA).  
 2 Capability Working Group (MoD and NATO).
- CWH** Canadian Warplane Heritage Museum [Mount Hope, PO].  
**CWI** Continuous-wave illuminator [or interference].  
**CWID** Coalition Warrior interoperability demonstration (NATO).  
**CWIN** 1 Cockpit weather information system.  
 2 Cyber warfare integration network.  
**CWM** Comparator warning monitor.  
**CWN** Call when needed, short-term contract prevalent in firefighting.  
**CWP** 1 Central warning panel.  
 2 Contractor's working party.  
 3 Compact when packed (antennas).  
 4 Controller, or controlled, work[ing] position[s].  
 5 Central West Pacific (ICAO).  
**CWR** Continuous-wave [or colour weather] radar.  
**CWS** 1 Caution/warning system.  
 2 Central [or collision] warning system.  
 3 Control-wheel steering.  
 4 Container weapon system.  
**CWSG** Civil Wing Study Group.  
**CWSU** Central [or Center] Weather Service Unit (US).  
**cwt** Hundredweight, archaic unit of mass, = 112 lb = 50.8032 kg; US short \* = 100 lb = 45.3592 kg.  
**CWU-45P** Classic USAF leather flight jacket.  
**CWV** Crest working voltage.  
**CWW** Cruciform-wing weapon.  
**CWY** Clearway.  
**C<sub>x</sub>** 1 Longitudinal [axial] force coefficient (=  $C_d \cos A$  minus  $C_L \sin A$ , where A is angle of attack).  
 2 Controlled expansion, for fatigue enhancement of holes.  
**CXO** Chandra X-ray Observatory.  
**C-X** Center Experimental (USAF).  
**CXR** Helicopter configuration, co-axial rotor(s).  
**CXV** Crew transfer vehicle.  
**CXRS** Coherent X-ray scattering (baggage screening).  
**CY** Calendar year.  
**C<sub>y</sub>** 1 Side-force aerodynamic coefficient, = side force divided by  $qS$ , dynamic pressure  $\times$  wing area.  
 2 Helicopter Y-force coefficient.
- cyan** Bright blue colour, e.g. marking FLOT/FEBA on radar.  
**cyaniding** Surface hardening of steel by immersion in bath of cyanide (and other) salts producing nitrogen as chief agent.  
**Cy $\beta$**  Sideforce derivative due to sideslip; subscript  $\beta$ , due to sideslip rate.  
**cyber** Prefix, concerned with information, computers and the internet, hence \* attack, \* crime, \* defence, \* security, \* strategy, \* tools.  
**Cyc, CYC** Cyclonic.  
**cycle** One complete sequence of events making up portion of life of machine; thus for piston engine, four strokes of Otto \*, while for aircraft usually start-up, taxi, takeoff, climb, cruise, possibly combat, descent, landing, thrust-reverse, taxi, shutdown.  
**cycle-dependent costs** Directly proportional to usage, eg reverser.  
**cycle efficiency** Measure of performance of heat engine derived from PV or entropy diagram; usually synonymous with thermal efficiency.  
**cycle parameters** For gas turbine, primary \* are EPR and TET.

**cyclic pitch** In most helicopters main rotor blade pitch progressively increases from minimum (a very small angle when head-on to airstream (momentarily occupying position of wing) to maximum 180° later (when in position of wing trailing-edge-on to airstream); this makes blade fall on advancing side of rotor and rise on retreating side, effectively decreasing and increasing angle of attack to even-out lift on both sides. This is also called feathering, and results in blade flapping (see \* *control*).

**cyclic-pitch control** Primary helicopter flight control. Usually governed by stick, similar to aeroplane control column, which in central position causes basic cyclic variation as described above by tilting stationary and rotating stars on rotor hub. Pilot demand is passed through mixing unit and output tilts fixed star in desired direction to superimpose additional cyclic variation causing disc to tilt in desired direction to cause helicopter to rotate about pitch or roll axis.

**cyclic rate** Rate at which automatic gun fires, expressed in shots per minute, measured after maximum rate has been attained and not necessarily attainable except for brief periods.

**cyclic stick** Cyclic-pitch control stick.

**cyclic testing** Repeated application of supposed operating cycle, usually of exceptionally severe nature, under arduous environmental conditions to prove endurance or life of hardware.

**cycling** Cyclic testing.

**Cycloconverter** Elegant method of generating constant-frequency a.c., by commutating six phases of h.f. [over 1,600 Hz] to very precise 400 Hz three-phase.

**cyclogenesis** Development of a cyclone.

**cyclogiro** Aerodyne, never successfully achieved, lifted and propelled by pivoted blades rotating about substantially horizontal transverse axis as in paddle steamer.

**cyclone** Tropical revolving storm.

**Cyclonite** See *RDX*.

**cyclostrophic force** That experienced by wind following

curved isobars acting in addition to geostrophic force to give resultant wind along isobar according to Buys Ballot's law. At Equator geostrophic force vanishes, leaving pure cyclostrophic wind.

**cyclostrophic wind** As explained above, wind near Equator with strong circular motion, such as a tornado.

**Cyclotol** Specially formulated high explosive, used alone or with PBX-9500 series, to cause implosion trigger (NW).

**cyclotron** Family of magnetic resonance particle accelerators, many extremely large.

**cyclotron resonance** Motion of moving charged particle in magnetic field on which is superposed alternating electric field normal to magnetic field.

**cyc/sec** Cycles per second, SI unit is Hz.

**CYI** Canary Islands (AMR).

**cylinder** One unit of piston engine, or, specif., surrounding cylinder enclosing combustion space and guiding piston.

**cylinder block** Single unit enclosing row of liquid-cooled in-line piston engine cylinders.

**cylinder head** Usually removable top of piston engine cylinder containing plugs, inlet/exhaust connections and (except with sleeve valve) valves.

**cylinder liner** Hard abrasion-resistant lining inserted into cylinder of light alloy or other soft material.

$C_{yp}$  Side force due to roll rate.

$C_{yr}$  Sideforce due to yaw rate.

**Cytac** Loran-C.

**CY2KSS** Center for year-2000 strategic stability (US/R).

**CZ** Control-zone (US).

$C_z$  Normal force coefficient,  $C_L \cos A + C_d \sin A$ , where  $A$  is angle of attack; rarely called  $C_N$ , which is strictly negative.

**cZ** Fore/aft magnetic VSI component.

**CZCS** Coastal zone colour scanner.

**CZI** Compressor-zone inspection.

# D

- D** 1 Total aerodynamic drag.  
2 Danger area (ICAO).  
3 Duration of phenomenon in seconds, eg  $D_{60}$ .  
4 Drift.  
5 Diameter (rarely, d); for tyre [tire], at rim ledge.  
6 For airspace, see \*-class.  
7 Departure chart.  
8 Pavement bending strength for dual-wheel landing gear.  
9 Drone (UK).  
10 Drone director (US modified-mission prefix).  
11 Electric flux density.  
12 Fuze delay time.  
13 PPL Group for microlights (CAA).  
14 Sport-parachuting certificate: 200 free-falls, 20 landing  $\leq 15\text{m}$  of target.  
15 Detail [maintenance check], followed by number.  
16 Aircraft category: gliders and motor gliders (FAI).  
17 Other meanings include Doppler, downward, distance, day, dust, delete, designated, delay, displacement, differential coefficient, chemical diffusion coefficient and decision.
- d** 1 Distance, and spacing between structural members.  
2 Differential.  
3 Deci, prefix, multiply by  $10^{-1}$  (not recommended).  
4 Clear distance between contact areas of landing wheels (can include axial or transverse distance between wheels of bogie).  
5 Thickness of RAM surface-wave absorber.  
6 Usually as subscript, design.  
7 Diameter of fuselage, jet or propeller (alternative to D).  
8 Diode.  
9 Relative density.  
10 90 per cent semi-span, usually measured outboard from root.  
11 Maximum depth of wing at root [assumed to be greatest anywhere on semi-span].
- D\*** Also called co-ordination-perception parameter, time-response criterion for the lateral/directional control response, combining lateral acceleration and angle of sideslip.
- $\bar{D}$**  In 2-D flow, often used for section drag [per unit span, parallel to freestream].
- $\bar{D}_1, \bar{D}_2$**  Non-dimensional drag factors.
- D1** Deliverable one, the first report (Sesar).
- D<sup>3</sup>** Data download and display.
- D<sup>3</sup>S** Dynamic data-display subsystem.
- D8PSK** Differential-8 phase-shift keying.
- D<sub>100</sub>** Drag at 100 ft/s.
- D-check** Major overhaul carried out every 3–5 years.
- D-class** Airspace up to 2,500 ft (762 m) AGL above airfield with operating tower; 2-way dialogue radio required.
- D-code** In flight plan, have DME.
- D-factor** Actual, or true, altitude divided by pressure altitude.
- D-gun** Detonation gun, firing suspended particles of hard surface coating by detonation of oxy-acetylene.
- D-layer** Region of increasing electron and ion density in ionosphere, existing in daytime only and merging with bottom of E-layer.
- D-licence** For inspection of engines after overhaul.
- D-nose** Strong leading edge of aerofoil, often forming principal structural basis of wing or helicopter rotor blade.
- D-notice** Issued regularly to advise [esp. Press, broadcasters] of changes in classification status of defence or other sensitive subjects (UK MoD).
- D-nozzle** Propulsive nozzle of jet engine on centreline of fuselage or nacelle vectoring to give lift or thrust (from cross-section).
- D-ring** Steel handle with which parachutist pulls ripcord.
- D-spar** D-nose.
- D-tube** Leading edge of lightplane or micro comprising spar and load-bearing skin, generally simpler than D-nose.
- D-value** Departure from pressure altitude.
- DA** 1 Drift angle.  
2 Diplomatic authorization.  
3 Double attack.  
4 Long-range (bomber) aviation, predecessor of ADD (USSR).  
5 Delayed-action (bomb).  
6 Dual-alloy (turbine disc).  
7 Direct action (fuze).  
8 Deck alert.  
9 Decision [or density] altitude.  
10 Danger area.  
11 Development aircraft.  
12 Design authority.  
13 Duplex aluminium.  
14 Air defence (F).  
15 Defence advisory.  
16 Drought area.  
17 Direct access (telecoms).  
18 Descent advisor, or advisory.  
19 Display Authorization.
- da** Deca [US, deka], prefix, multiplied by 10, non-SI.
- $d_\alpha$**  1 Radar resolution in azimuth.  
2 See  $\delta_\alpha$ .
- D/A** Digital/analog.
- DAA** 1 Directorate of Air Armament (UK).  
2 Digital/analog adaptor.  
3 Directorate, Army Aviation [DAAvn is preferred] (UK).
- DAACM** Direct airfield-attack cluster munition.
- DAAIS** Danger area activity information service (CAA, UK).
- DAAS** Defense advanced automation system (ATC)
- DAAT** Digital angle-of-attack transmitter.
- DAAvn** Directorate of Army Aviation (UK).
- DAB** 1 Defense Acquisitions Board (US).  
2 Digital audio broadcast[ing].
- DABF** Digital adaptive beam-forming; N adds network
- DABM** Defence against ballistic missile(s).
- DABRK** Daybreak.

**DABS, Dabs** 1 Discrete-address, or addressable, beacon system; can address individual aircraft via transponder, pointing a narrow beam at it to transmit messages via data-link.

2 Dual aft-body strakes.

**Dabsef** Dabs Experimental Facility (Lincoln Laboratories, US).

**DAC** 1 Deployable ACCS component (USAF).

2 Design aperture card.

3 Dual annular combustor.

4 Dangerous air cargo.

5 Defensive-aids computer.

6 Duplex aluminate coating.

7 DSMC (2) analysis code.

8 Divide and conquer [parallel modelling].

9 See DAeC.

**dac** Digital-to-analog converter.

**DACC** Dangerous Air Cargo Committee (UK, RAF).

**DACOS, Dacos** Deputy Assistant Chief of Staff; CS adds Carrier Strike.

**Dacota** Dispositif d'association, de correlation et de traitement radar pour les approches (F).

**DACP** Direccion de Aeronautica Civil del Peru [office, Lima].

**Dacron** A commercial polyethylene glycol terephthalate fibre and woven fabric related to Terylene and Mylar.

**DACU** Data-acquisition control unit.

**DACS** 1 Directorate of Aerospace Combat Systems (Canada).

2 Danger area crossing service (CAA, UK).

3 See next.

**Dacs** Divert and attitude control system.

**DACT** 1 Dissimilar air-combat training, or tactics.

2 Data automated communications terminal.

**DACU** Data-acquisition control unit.

**DAD** 1 Deep air defence.

2 Dual-alloy disc.

3 Density - altitude display.

**Dadacs** Danger-area divert and attitude-control system.

**DADC** Digital air-data computer.

**DADNE, Dadne** Diaminodinitroethylene.

**dadopanel** Cabin wall just above floor [one word]

**DADR** Deployable [not fixed-base] air-defence radar.

**DADS** 1 Deployable air-data sensor.

2 Digital air-data system.

**DADTA** Durability and damage - tolerance analysis.

**DAeC** Deutscher Aero Club eV [D-63150 Heusenstamm] (G).

**Daedalians** National fraternity of military pilots (US).

**DAES** Directorate of Avionic Equipment and Systems (UK).

**DAFCS** Digital automatic, or advanced, flight-control system.

**DA/FD** Digital autopilot/flight director.

**Dafics** Digital automatic flight inlet control system.

**DAFIF** Digital aeronautical flight-information file.

**Dafusa** Data-fusion airports (Euret).

**DA fuze** Direct-action fuze; designed to explode on impact.

**DAG** 1 Deutsche Angestellten-Gewerkschaft Bundesgruppe Luft- und Raumfahrt.

2 Domestic Aviation Grade.

**Dagmar** Faired shape [a body, not a blister] in front of a bluff projection.

**DAGR** Defense advanced GPS receiver, probably to replace PLGR.

**DAI** 1 Direction des Affaires Internationales (F, MoD).

2 DCMS Audio interface.

3 Directed airborne intelligence (UK).

**DAIR** Direct altitude and identity readout (FAA/USAF).

**DAIRS** Distributed-architectures, or aperture, IR system, or sensing.

**DAIS** 1 Digital avionics information system.

2 Distributed airport information system.

**DAISS** Digital airborne intercom switching system.

**Daisy** Decision-aid for interpretation of air situation display (Alcatel from 1994).

**daisy chain** Several helpers link arms to swing large propeller.

**daisy cutter** US tactical store designed to kill maximum number of exposed infantry [1969-].

**DAIW** Danger area infringement warning.

**DALGT** Daylight.

**Dallenbach layer** Pioneer form of RAM(2) coating consisting of homogeneous lossy layer backed by metallic plate (eg, aircraft skin); if lossy layer has same impedance as free space there will be no surface reflection.

**Dalmatian effect** Increase in number of spots in map of V/STOL air bases compared with airfields.

**DALO** Divisional Air Liaison Officer (UK).

**DALR** Dry adiabatic lapse rate.

**D-alt** Density altitude.

**Dalton computer** Family of pocket-size mechanical calculators for navigation [esp triangle of velocities] problems.

**Dalton's Law** Empirical generalization that, for many so-called perfect gases, a mixture will have pressure equal to sum of partial pressures each would have as sole component within same volume and temperature, provided there is no chemical interaction.

**DAM** Dollars per aircraft-mile.

**Dama, DAMA.** Demand-assigned, or assignment, multiple access.

**damage assessment** Determination of effect of attacks on targets.

**damage cycle** Loss of life of engine or other hardware.

**damage limitation** Ability to limit effects of nuclear destruction by using offensive and defensive measures to reduce weight of enemy attacks.

**damage-tolerant** Structure so designed as to continue to bear normal in-flight loads after failure (through fatigue, external damage or other cause) of any member (see *fail-safe*).

**Damask** Direct-attack munition affordable seeker.

**DAME** Designated aviation medical examiner.

**damped natural frequency** Frequency of free vibration of damped linear system; decreases as damping increases.

**damped wave** Wave whose amplitude decreases with time or whose total energy decreases by transfer to other frequencies.

**damper** 1 Mass[es] attached to crankweb, either rigidly or free to oscillate, to eliminate dangerous vibration at critical frequencies of crankshaft.

2 Snubber or part-span shroud on fan blade.

3 See *flame* \*.

4 See *roll* \*.

5 See *shimmy* \*.

<sup>6</sup> See yaw\*.

**damping factor** Ratio of peak amplitudes of successive oscillations.

**damping moment** Proportional to rate of displacement; tends to restore aircraft to normal flight attitude after upset.

**DAMS** <sup>1</sup> Dynamic airspace management system(s).

<sup>2</sup> Drum auxiliary memory subunit.

**Damsl** Dictionary and message specification language.

**daN** Decanewton, unit of force = 2.248 lbf.

**Danac** Decca area-navigation airborne computer (1984 also appeared as digital air-navigation control).

**D&C** <sup>1</sup> Design and clearance.

<sup>2</sup> Diagnostic and conditioning.

<sup>3</sup> Delays and cancellations, numerically = dispatch reliability.

**D&D** <sup>1</sup> Distress and diversion (ATC).

<sup>2</sup> Diesel and dye (smoke-making).

**D&F** Determination and findings.

**D&O** Description and operation.

**D&P** Development and Production (MoD contracts).

**D&V** Demonstration and validation.

**danger area** Airspace of defined dimensions in which activities dangerous to flight may exist at specific times.

**dangle** Angle between local horizontal at glider and end of tow-rope (usually air tow).

**DAO** <sup>1</sup> Defence Attaché Office.

<sup>2</sup> Distributed analysis optimization.

<sup>3</sup> Defence Acquisition Organization [ACT2600] (Australia).

**DAP** <sup>1</sup> Distortion of aligned phases (LCD).

<sup>2</sup> Director(ate) of Aircraft (originally Aeroplane) Production (UK, WW2).

<sup>3</sup> Distributed-array processor.

<sup>4</sup> Directorate of Airspace Policy (CAA, UK)

<sup>5</sup> Digital service accept product.

<sup>6</sup> Data-access protocol [see next].

**DAPS** Data-access protocol system.

**DAPU** Data acquisition and processing unit.

**DAR** <sup>1</sup> Design and Airworthiness Requirements (UK)

<sup>2</sup> Drone, anti-radar.

<sup>3</sup> Direct-access recorder.

<sup>4</sup> Design assurance review.

<sup>5</sup> Defense Acquisition Regulation.

<sup>6</sup> Diffuser area ratio.

<sup>7</sup> Digital archive recorder.

<sup>8</sup> Defence Airfield Review [programme of further base closures post-2007] UK MoD).

**Dara, DARA** <sup>1</sup> Defence Aviation Repair Agency [St. Athan, CF62 4WA] (UK).

<sup>2</sup> National space agency (G).

**Darc, DARC** Direct-access radar channel.

**DARE** Defence Avionics Research Establishment [Bangalore] (India).

**Darin** Display attack and ranging inertial navigation.

**dark** Switched off.

**dark burst** Gamma-ray burst that fades very rapidly.

**dark cockpit** All lights out, ie correct configuration and all systems normal.

**darkfire** Missile system operable at night in clear visibility.

**dark-trace** Display phosphor creating image through reflection/absorption of light instead of light emission from phosphor (see *skiatron*).

**Darlington pair** High-gain amplifier stage using two transistors in which base of second is fed from emitter of first.

**DArmRD** Directorate of Armament Research and Development (UK).

**DARO, Daro** Defense Airborne Reconnaissance Office[r] (DoD).

**Darp** <sup>1</sup> Dynamic airborne rerouting procedures, or programs.

<sup>2</sup> Digital audio recording and playback.

**Darpa, DARPA** Defense Advanced Research Projects Agency [office, Arlington, VA22203-1714] (DoD, US).

**Darps** Dynamic aircraft route-planning study.

**DARS, Dars** <sup>1</sup> Digital attitude-reference system.

<sup>2</sup> Dynamic-assist retargeting system.

<sup>3</sup> Drogue air-refuelling system.

<sup>4</sup> Digital audio radio system, or service[s].

<sup>5</sup> Deployable ARS 12 (NATO).

**Dart, DART** <sup>1</sup> Defensive-avionics receive, or receiver, transmitter; jams hostile IR-seekers.

<sup>2</sup> Directional automatic realignment of trajectory (ejection seat).

<sup>3</sup> Dual-axis rate transducer.

<sup>4</sup> Deployable automatic relay terminal.

<sup>5</sup> Demonstration of autonomous rendezvous technique, or technology (NASA).

<sup>6</sup> Design [of] advanced rotor for tilt-rotor technology.

**dart** <sup>1</sup> Unpowered aerodynamic vehicle with stabilizing tailfins.

<sup>2</sup> Any freeflight vehicle with stabilizing tailfins but no trajectory control.

<sup>3</sup> Guided missile accelerated to speed by rocket[s] jettisoned at burnout, thereafter coasting to target.

**Darts** <sup>1</sup> Diversified aircrew readiness training support.

<sup>2</sup> Digital airborne radar threat simulator.

<sup>3</sup> Departure and arrival traffic-management system.

**DARU, Daru** Data acquisition and recording unit.

**Darwin** Design assessment of [engine] reliability with inspection (FAA).

**DAS** <sup>1</sup> Defensive-aids suite, or system, or subsystem.

<sup>2</sup> Defensive avionics system.

<sup>3</sup> Director, Air Staff (UK).

<sup>4</sup> Directorate of Aerodrome Standards (UK).

<sup>5</sup> Distributed-aperture system.

<sup>6</sup> Designated alteration station (FAA).

<sup>7</sup> Digital autopilot system.

<sup>8</sup> Data-acquisition system.

**DASA** <sup>1</sup> Defense Atomic Support Agency (US, MoD).

<sup>2</sup> Defence Analytical Services Agency (UK).

**Dasals** Distributed-aperture semi-active laser seeker.

**DASC** <sup>1</sup> Direct air support centre.

<sup>2</sup> Defence Aviation Safety Centre (MoD, UK).

**DASD** Deputy Assistant Secretary for Defense.

**DASE** Digital autostabilizer equipment.

**DA718** Advanced (1995) DS compressor-blade alloy.

**DASH** <sup>1</sup> Drone anti-submarine helicopter.

<sup>2</sup> Differential airspeed hold.

<sup>3</sup> Display and sight[ing] helmet.

**dash** Portion of attack mission through defended hostile territory at full afterburning power at low level, ignoring high fuel burn.

**DASP** Discrete analog signal processing.

**DASR** <sup>1</sup> Digital airspace, or airport, surveillance radar.

<sup>2</sup> Direct air-to-satellite relay.

**DASS** 1 Defensive-aids subsystem.

2 Dynamic-assembly scheduling system.

**DAST, Dast** Drone[s] for aerodynamic and structural testing (NASA).

**DAT** 1 Damage-to-aircraft trials.

2 Digital audio tape.

**DATA** Defense Air Transportation Association (US).

**Data, Data** A MIL-STD-1553B bus carries Data in one channel and **Data** in the other.

**databus** Highway for digital data, most common linking aircraft sensors and other air or ground systems being MIL-STD-1553B or Arinc 419 (one-way) or Arinc 619 10base T (two-way).

**Datac** Digital-access terminal-area control, or communication [see *Datacs*].

**DATACOM, Datacom** Data compilation, large handbook and CD which attempts to give designers complete knowledge of effect on lift and moment of changes in design (USAF).

**Datacs** Digital autonomous terminal access communications system, became Arinc 629 (Boeing).

**data fusion** Integration and management of possibly billions per second of bits of information from recon sensors, C<sup>3</sup> and battle management systems.

**datalink** 1 Any highway or channel along which messages are sent in digital form.

2 Communications channel or circuit used to transmit data from sensor to computer, readout device or storage.

**data-logger** Short-term store for digital or analog information, eg for one flight or one week, periodically read back to build up service history of system, engines or other devices.

**data plate** Permanently fixed to aircraft, engine or other product, giving basic data, serial numbers and dates.

**Datar, DATAR** 1 Detection and tactical alert of radar (helicopter RWR).

2 Délégation de l'Amenagement du Territoire et à l'Action Régionale [aeronautical subcontract organization; Paris F-75007] (F).

**data reconstruction** Assembling correct bar-codes from brief any-angle glimpses (mainly in checking baggage).

**data recorder** Device, usually electronic, for recording data [previously analog, now mainly digital] for subsequent playback and analysis (see *flight recorder, maintenance recorder*).

**Datas** Data-link and transponder analysis system.

**Data-3** Inmarsat system enabling aircraft to link direct to ground networks.

**Datco** Duty air-traffic-control officer.

**DATF** Deployable air task force.

**DATIS, D-Atis, Datis** 1 Digital air-traffic information service, or system.

2 Digital automated, or automatic, terminal information service.

**DATM** Dummy air-training missile.

**Datmas** Danish air-traffic management system (2007-).

**DATS** Data-acquisition and telemetry system.

**Datsa** Depot automatic test system for avionics.

**DATT, DAtt** Defense Attaché (US).

**DATTS** Data acquisition, telecommand and tracking station.

**datum** 1 Numerical, geometric or spatial reference or base for measurement of other quantities.

2 Vertical (rarely, horizontal or other) reference line

from which all structural parts are measured and identified. Most \* lines are exactly at, or close in front of or behind, nose; thus, frame 443 is a nominal 443 in or mm behind\*; wing \* is often aircraft centreline.

**datum target** A point or straight line used to establish a datum.

**DAU** 1 Directly Administered Unit[s] (RAF).

2 Digital amplifier unit.

3 Data-acquisition unit.

**DAUG** Danger-area users group (NATS).

**Da Vinci** Departure and arrival integrated management system for co-operative improvement of airport traffic flow (Euret).

**Davis barrier** Retractable crash barrier across carrier (1) deck.

**Davis tables** List altitude and azimuth of astro-navigation targets.

**Davis wing** High-aspect ratio wing designed by David R. Davis; intended to cruise at low angle of attack with low drag.

**DAVSS** Doppler/acoustic vortex sensing system.

**DAVVL** Birdstrike committee, with several sub units (G).

**DAW (A)** Dedicated all-weather (aircraft).

**day** Mean solar \* is defined at  $8.64 \times 10^7$ s; sidereal \* is approximately  $8.616 \times 10^4$ s.

**Day-Glo** Family of dyes and paints with property of converting to visible light wavelengths outside normal visible spectrum, thus giving unnaturally bright hues.

**day/night** Equipment giving cheap and convenient IFR training, using tinted pilot goggles and complementary tinted cockpit transparency (eg blue goggles and amber canopy or red + green); pilot sees clear but tinted cockpit while outside world appears black.

**DB** 1 Development batch.

2 Direct broadcast. [S adds satellite, service or system].

3 Database.

4 Databus.

5 Double base (rocket propellant).

6 Diffusion bonding.

7 Day bombardment category (USA 1919–24).

8 Denied boarding.

**dB** Decibel, see *noise*.

**DBA** 1 Dominant battlespace awareness.

2 long-range bombing aviation (USSR, R).

**dBa** Decibels absolute, or A-weighted, see *noise*.

**d.b.a.** Doing business as.

**DBC** 1 Denied boarding compensation for bumped passengers; for pax reaching their destination within 4 h of original booked time 50% of flight-coupon value in Europe, 200% in US. No compensation for aircraft under 60 seats.

2 DCMS bus coupler.

3 Data-bank, Comecon.

**DBE** 1 Data bank, Eurocontrol.

2 Down between engines [rotation of handed propellers in four-engined aircraft].

**DBF** 1 Doppler beat frequency.

2 Digital beam forming.

3 Destroyed by fire.

4 Doppler blade flash.

**DBGS** Data-base generation system.

**DBFM** Defensive basic flight manoeuvres.

**DBI** 1 DCMS bus interface.

- 2 Downlink block identifier.  
3 Data-bus input.
- dBi** Decibels referenced to isotropic antenna or above isotropic circular.
- dBm** Decibel meter, unit of power referenced to 1 mW = dB × 10<sup>-3</sup>.
- DBM/C** Data bus monitor/controller.
- DBMS** Database management system; also rendered as **DBMX**.
- dBm<sup>2</sup>** Measure of radar cross-section using m<sup>2</sup> as reference.
- DB/N** Data-base No.
- DBNS** Doppler bombing/navigation system.
- DBO** Data-bus output.
- DBPS** Digital [electron] beam-positioning system.
- DBR** 1 Dual-band radar.  
2 Damaged beyond repair.
- DBS** 1 Doppler beam-sharpening.  
2 Direct-broadcast satellite, or service.  
3 Database storage.
- DBSA** Directorate for Broadening Smart Acquisition (MoD, UK).
- dBsm** Decibel unit of radar beam cross-section referenced to 1 m<sup>2</sup>; dBm<sup>2</sup> more common.
- DBT** Diffusion-bonded titanium.
- DBTE** Data-bus test equipment.
- DBTF** Duct-burning turbofan.
- DBU** Database unit.
- DBUF** Defence buildup plan, or programme (J).
- DBV** Diagonally braked vehicle, for runway friction measures.
- DBVOR** Doppler VOR with weather broadcast. Hence **DBVortac**.
- DBW** Differential ballistic wind.
- dBw** Decibels referenced to 1 Watt.
- DBWS** Database work-station.
- DC** 1 Depth charge.  
2 Departure control.  
3 Direct cycle.  
4 Display controller.  
5 Directionally cast.  
6 Drag control.  
7 Dead centre.  
8 Detection centre (homing).  
9 Dry chemical.  
10 Direct cost.  
11 Digital compass.
- dc, d.c.** Direct current.
- DCA** 1 Defense Communications Agency (US).  
2 Directorate of Civil Aviation.  
3 Defense Contre Avions (F, 1935–40).  
4 Department of Civil Aviation (A, Braz.).  
5 Dual-capable aircraft.  
6 Document content architecture (IBM).  
7 Defensive counter-air.  
8 Design Chain Accelerator.  
9 Drift correction angle.  
10 Defense Certification Authority.  
11 Defence Codification Agency (UK).
- DCAA** Defense Contract Audit Agency (US).
- DCACMRM** Defense and control airspace configuration/manufacturing resource management.
- DCAOC** Deployable combined air & space operations centre (NATO).
- DCAPES** Deliberate & Crisis Action Planning & Execution Segments [part of GCSS] (USAF).
- D-carts** Decoy cartridges.
- DCAS** 1 Deputy Chief of the Air Staff (UK).  
2 Digital core avionics system.  
3 Defense Contract Administration Service (DoD).  
4 Digitally controlled audio system.
- DCAV** STOVL (F).
- DCC** 1 Drone Control Center.  
2 Direct computer control.  
3 Digital computer complex.  
4 Data collector correlator.
- DCCA** Direction Centrale du Commissariat de l'Air (F).
- DCCR** Display-channel complex rehost.
- DCD** 1 Data collector and diagnoster.  
2 Data-collection device (helicopter).  
3 Double-channel duplex.  
4 Damage control deck [carrier].
- DCDI** Digital course deviation indicator.
- DCDS** Deputy Chief of the Defence Staff (UK).
- DCDU** 1 Datalink control and display unit (Fans).  
2 Digital, or data, communications and display unit.
- DCE** 1 Data communications equipment.  
2 Data-circuit terminating equipment.
- DCEE** Distributed continuous experimentation environment.
- DCFS** Digitally controlled frequency service.
- DCG** Direct-current generator.
- DCGA** Deck closed, go-around.
- DCGF** Data-conversion gateway function.
- DCGS** 1 Distributed common ground system [UAV].  
2 Distributed common group, or ground, station.
- DCH** Destination change (input button).
- DCI** 1 DCMS crew-member interface; replaced by PCC (5).  
2 Defence-capabilities initiative (NATO), or interface.  
3 Director of Central Intelligence (DoD).
- DCIC** Defence Capability Investment Committee (Australia).
- DCIU** Digital control and interface unit.
- DCKG** Docking.
- DCL** Defence Contractors List (UK).
- DCM** 1 Defense Contract Management; A adds Agency, C Command or Committee (US).  
2 Data-conversion management; F adds function.  
3 Diagnostic and condition monitoring.
- DCMAA** Direction Centrale du Matériel de l'Armée de l'Air (F).
- DCMF** Data communication management function.
- DCMS** 1 Digital, or data, communications management system.  
2 Door control and monitoring system.
- dcmsnd** Decommissioned.
- DCMT** Defence College of Management and Technology [Shrivenham, Wilts.] (MoD, UK).
- DCMU** Digitally coloured map unit.
- DCN** 1 Drawing, or design, or document, change notice.  
2 The Defence Contractors' Network [office, Bristol BS99 5ME] (UK)  
3 Diplomatic clearance number.
- DCNO** Deputy Chief of Naval Operations.

- DCO** Duty carried out.
- DCOM** Distributed-component object model.
- DCoS** Deputy Chief of Staff.
- DCP** 1 Distributed communications processor.  
2 Display control panel.  
3 Data collection and processing, or pack.  
4 Defence Capability Plan (Australia).
- DCPG** Defense Communications Planning Group (DoD).
- DCPS** Data collection and processing system.
- DCPU** Display control power unit (IFF).
- DCR** 1 Digitally-coded radar.  
2 Direct-conversion receiver (radio).  
3 Digital-cartridge recording; S adds system.  
4 Previously DCRJ, dual-combustion ramjet.  
5 Decrease.  
6 Design certification review.
- DCRD** Dynamic-component repair and development [helicopter and V/STOL].
- DCRF** Director, or Directorate, for Construction and Research Facilities (UK, 1935–57).
- DCRJ** See DCR4.
- DCS** 1 Deputy Chief of Staff (DCoS) preferred).  
2 Defense Communications System (US).  
3 Decompression sickness.  
4 Double-channel simplex.  
5 Departure control system.  
6 Double-correlated sampling.  
7 Digital or duplex communications system, or suite.
- dcS** Data collection system.
- DCSA** Defence Communications [and] Services Agency (UK).
- DCSO** Deputy Commander for Space Operations (USAF).
- DCS/R&D** Deputy Chief of Staff for Research and Development.
- DCSU** Dual crew-station unit.
- DCSWI** Deputy Chief of Staff for Warfighting Integration (USAF).
- DCT** 1 Digital communications terminal.  
2 Direct.
- dctd** Directed.
- DCTE** Data circuit terminating equipment.
- DCTL** From DC to light, ie entire usable FM spectrum.
- DCTN** Defense Commercial Telecommunications Network, subset of DISN.
- Dctr** Director.
- DCTS** Data communications terminal system.
- DCTU** Digital calibration trim unit.
- DCU** 1 Digital [engine] control unit.  
2 Data concentration, or collection, unit.  
3 Gas-turbine deceleration control unit.
- DCV** 1 Demonstrated crosswind velocity.  
2 Directional control valve.  
3 Destination-coded vehicle (baggage handling).
- DCVR** Digital crystal video receiver.
- Dcw** Crosswind drag component.
- DD** 1 Direct drive (servo valve).  
2 Dewpoint depression.  
3 Distress and Diversion.  
4 Destroyer ship class (USN).  
5 Differential Doppler.  
6 Data delivery.  
7 Defense display [cockpit].
- dd** Any component of drag; thus dDN could be drag of a nacelle; -dD is a forward thrust, such as negative drag of a winglet.
- DDA** 1 Design-deviation authorization, or authority.  
2 Defence Diversification Agency (UK).  
3 Digital differential analyser.  
4 Distance data adapter.
- DDAFCS** Dual digital automatic flight-control system.
- DDAU** Digital-data acquisition unit.
- DDB** Dynamic database [fusion of input] (Darpa).
- DDBS** Distributed database system.
- DDC** 1 Digital display console.  
2 Distributed digital computer.  
3 Distress and Diversion call.  
4 Deducted damage computation.  
5 Design and development contract.
- DDCA** Dual-designated complex architecture.
- DDCU** Data display and control unit.
- DDD, D<sup>3</sup>** 1 Dynamic data display; S adds subsystem.  
2 Detail data display.  
3 Dual disk drive.
- DDF, DD/F** Digital direction-finding.
- DDG** Guided-missile [-armed] destroyer (USN).
- DDI** 1 Digital display indicator; C adds control.  
2 Data display indicator (Awacs).  
3 Direct-dial indicator.
- DDL** 1 Down datalink.  
2 Dummy deck landing; see *Adds*.  
3 Drag due to lift.
- DDM** 1 Difference in depth of modulation.  
2 Distributed data management.  
3 Display diagonal measure [corner to corner].
- DDMS** DoD Manager for Space Shuttle (support) operations.
- DDN** Defense data network.
- DDNP** Diazodinitrophenol.
- DDOR** Deputy Director of Operational Requirements.
- DDP** 1 Declaration of Design and Performance [C adds Certificate], formal statement by manufacturer accompanying each functioning item or modification, (required by CAA).  
2 Digital data, or Doppler, processor.
- DDPE** Digital data-processing equipment.
- DDPS** Digital display, or data, processing system.
- DDR** 1 Depressed-datum reheat.  
2 Draft document review.
- DDR&E** Director of Defense Research and Engineering (DoD).
- DDRMI** DME/VOR radio-magnetic indicator, usually duplicated and partnered by two ADF/RMIs.
- DDS** 1 Display and debriefing subsystem.  
2 Digital-data set.  
3 Data distribution system.  
4 Dynamic directional stability.  
5 Direct digital synthesizer.  
6 Digital debrief[ing] station.
- DDT** 1 Direct digital targeting.  
2 Detail data display.  
3 Runway strength for double dual tandem [landing gear].  
4 Downlink data transfer.
- DDTC** Data-link delivery of [expected] taxi clearance[s].

**DDT&E** Design, development, test and evaluation.

**DDU** 1 Diagnostic display unit.

2 Disk drive unit.

**DDV** 1 Direct-drive valve (hydraulics/brakes).

2 Disciplinary design variable.

**DDVR** Displayed-data video recorder.

**DE** 1 Directed energy.

2 Direct-entry (RAF).

3 Weather map.

4 Deflection error.

**D<sub>E</sub>** Effective drag.

**d<sub>c</sub>** 1 Diameter of single jet or nozzle with area equal to total of system of multiple nozzles.

2 Distance between elements of an array antenna.

**DEA** 1 Delegated engineering authority.

2 Data encryption algorithm.

3 Drug Enforcement Agency [OAO adds Office of Air Operations].

**DEAD** Destruction of enemy air defence[s].

**dead centre** 1 In piston engine, with conrod aligned with cylinder axis [in normal designs], piston at end of stroke.

2 Precisely on target [esp. sport parachuting].

**dead engine** One that cannot be operated after IFSD.

**deadeye** Circular block pulled by surrounding cable or rope to exert tension on other cables passing through transverse holes.

**deadface** To cut off all system power by circuit interrupters at interface between modules, stages or spacecraft, prior to separation.

**dead foot** Failed engine of twin- [rarely more] engined aircraft.

**deadhead** 1 To fly to maintenance base off-route.

2 Of aircrew, to ride as passenger(s) while on duty.

**dead men** Masses [not necessarily anthropomorphic] simulating passengers.

**dead reckoning** Plotting aircraft position by calculations of speed, course, time, effect of wind, and previous known position.

**dead-rise** Difference in height from keel to chine of float or flying-boat hull.

**dead-rise angle** That between line joining keel and chine and transverse horizontal through keel.

**dead side** 1 Side away from aircraft formation, eg left seat when in echelon to right.

2 Side of airfield or active runway away from that of circuit [pattern] in use. It is usually the side from which arrivals join circuit.

**dead spot** In a system, region centred about neutral position where small inputs produce no response.

**dead-stick landing** Landing of powered aircraft with all engines inoperative.

**dead vortex** Remnants of vortex after breakup and decay.

**dead zone** 1 Surface area within maximum range of weapon, radar or observer which cannot be covered by fire or observation because of obstacles, nature of ground, or trajectory characteristics or pointing limitations of weapon.

2 Zone within range of radio transmitter in which signal is not received.

3 Region above gun or missile into which weapon cannot fire because of mechanical or electronic limitations.

4 Area(s) next to surfaces of aircraft plate for integrally machined parts which cannot be ultrasonically inspected

and for which ultrasonic-inspection thickness allowances can be removed.

**de-aerator** Static or centrifugal screen for removing air from circulating lubricating oil. Also called rotating separator, centrifugal breather.

**deal** Bad error by ATC controller.

**dealer plate No** Issued temporarily to a/c for export, often to several in succession, to avoid need for proper US registration (FAA).

**Deatac** Directed-energy applications in tactical airborne [or air] combat.

**DEB** Digital European backbone (major NATO programme).

**deboost** Retrograde or braking manoeuvre which lowers either perigee or apogee of orbiting spacecraft.

**debrief** To interrogate aircrew or astronauts after mission to obtain maximum useful information.

**debris** 1 Remains from catastrophic accident.

2 In particular, fragments from exploded engine.

3 Loosely, BFO(3).

**debug** To isolate, correct or remove faults or malfunctions, especially from computer program.

**DEC** 1 Data-Exchange Committee.

2 Digital engine [or electronic] control [S adds system, U unit].

3 Decrease.

4 Declination.

5 Decommissioned.

6 Digital electronic clock.

7 Defence; or Directorate of, equipment capability (UK).

**deca** Prefix, multiplied by 10, symbol  $\infty a$  (non-SI).

**Decade** DFS(4) Eurocontrol ATM(7) development.

**decal** Insignia or other mark applied by transfer, usually to a model.

**decalage** Difference in angles of incidence of wings of biplane or multiplane; angle between chord of upper plane and that of lower plane in section parallel to plane of symmetry. Negative when angle of lower plane is greater.

**decalescence point** Temperature, characterised by sudden evolution of heat, at which definite crystalline transformation takes place when heating steel.

**Decalm** Director of Equipment Capability for Air and Littoral Manoeuvre (UK).

**decametric** Having wavelengths in the order of 10 m.

**decaneutron** 10 N of force or thrust, = 2.24809 lbf.

**decant** Drain dregs of fuel from lowest point of integral or other tank, hence \*hole, \*assembly.

**decarburising** Heating iron or carbon steel to temperature sufficiently high to burn out or oxidise carbon.

**decay** 1 Progressive, accelerating reduction in orbital parameters, esp. apogee and perigee, of body in orbit affected by an atmosphere.

2 Progressive reduction in intensity of many natural processes, eg radioactivity, phosphorescence.

**decay curve** Plot of radiation intensity against time.

**decay orbit** Usually, final orbit terminating in re-entry.

**decay product** Usually, radioactive nuclides.

**decay rate** Rate of disintegration with respect to time.

**decay time** 1 Time for electronic pulse to fall to 0.1 of peak.

2 Time for charge in storage tube to fall to given fraction of initial, usually  $1/e$  where  $e$  is  $e(5)$ .

3 Estimated lifetime of satellite in low orbit.

**Decca chain** Single system of master and three slave Decca Navigator stations giving guidance over one geographic region.

**Decca Flight Log** Pictorial presentation of Decca Navigator inputs on roller-map display.

**Decca lane** In original Navigator, any hyperbolic region between two adjacent position lines.

**Decca Navigator** Pioneer hyperbolic navaid using CW.

**Decca Omnitrac** Airborne digital computer which eliminates Flight Log chart distortion, sets pen accurately after chart change and enables system to be coupled to autopilot.

**DECD** Digital expandable color display.

**deceleration limit** That sustained value allowed for fully equipped astronauts or aircrew, normally – 10 g.

**deceleron** Aileron which splits into upper/lower halves to serve as speed brake (originally Northrop patent).

**decentralised control** In air defence, normal mode whereby higher echelon merely monitors unit actions, making direct target assignments only when necessary.

**deception** Measure designed to mislead enemy by manipulation, distortion or falsification of evidence, eg by DECM (1).

**deci** Prefix, one-tenth, symbol d (non-SI).

**DECIBE** Defence equipment capability indirect battle-field effect (UK).

**decibel** Fundamental unit of sound pressure (see *noise*).

**decimetre**  $10^{-1}$  m = 3.937 in (contrary to SI).

**decimetric** Having wavelengths in the order of  $10^{-1}$  m (not recommended).

**decimillimetric** Having wavelengths in the order of  $10^{-1}$  mm (not recommended).

**decision height** Specified height AGL at which missed approach must be initiated if the required visual reference to continue approach to land has not then been established; normally but not exclusively ILS, PAR or MLS approach.

**decision height abuse** For test purposes, landing from points deliberately offset laterally or longitudinally at DH.

**decision speed** Usually,  $V_1$ .

**deck** 1 Any ground or water surface (colloq.).

2 From 1966, FL just above such surface.

3 A wing [pre-1914] (US).

**deck alert** Ready for immediate takeoff from ship, normally by fighter.

**deck-edge elevator** Lift built into side of aircraft carrier for moving aircraft between decks.

**decking** Top surface of fuselage.

**deck letter** Identifying letter painted on flight deck of aircraft carrier (USN: *number*).

**deck park** Parking area for aircraft or other vehicles on aircraft carrier flight deck.

**deck plate[s]** Electroluminescent panel[s] recessed flush with deck of ship or oil rig or other platform marking helicopter landing area.

**deck run** Distance run along ship deck in free (non-cat.) takeoff.

**deck spot** Area allocated to, or occupied by, one aircraft on deck.

**declaration** Size of force committed by government to special purpose, esp. to support multinational alliance; hence declared force.

**declarative language** So-called 'fifth generation'

computer language used for AI(2) which requires merely that programmer describes problem and declares facts and parameters necessary for solution; \* then decides how this information will be used in solution process.

**declared** Numerical or factual data published or filed before flight.

**declared alternate** Airfield specified in flight plan to which flight may proceed, should landing at original airfield become inadvisable.

**declared destination** Airfield specified in flight plan at which flight is intended to terminate.

**declared distance** See ASDA, ED, LDA, TODA, TORA.

**declared thrust** Generally, those ratings published by manufacturers.

**declared weight** Generally, that filed in flight plan.

**declassification** 1 Removal of item from security classification.

2 At public exhibition or display, removal of sensitive items prior to opening.

**declination** 1 Angular distance to body on celestial sphere measured north or south through  $90^\circ$  from celestial equator along hour circle of body. Comparable to latitude on terrestrial sphere.

2 Magnetic variation.

**DECM** 1 Deceptive ECM.

2 Defensive ECM.

**decode** To translate into plain language aeronautical telecommunications and other signals from ground to air, esp. in Notam and Q-code.

**Decometer** Original dial-type phase-meter display, one per lane, in Decca Navigator before 1953.

**decompression chamber** Capsule or chamber in which human beings or hardware can undergo process of decompression.

**decompression sickness** See *aeroembolism*.

**decompression stress** Human stress arising from decompression syndrome.

**deconfliction** In air display, arranging each slot to avoid scheduled traffic from same or nearby airfield[s].

**decoration** Extra manoeuvres, such as flick rolls, inserted into aerobatic routine while aircraft is being repositioned.

**decoupler** Large-amplitude elastic connection separating two systems of masses which, if rigidly linked, would be prone to dangerous flutter; hence \* pylon for separating vibration of wing and heavy stores hung below it.

**decoy** Device or technique used to simulate attacking aircraft and their defensive systems. Usually operates at radar or IR wavelengths.

**DECR** Decrease.

**decrab** To yaw crabbing aircraft landing in crosswind to align wheels with track.

**decrement** Quantified decrease in value of variable.

**DECS** Defence Economic-Commerce Service (UK).

**DECT** Digital enhanced cordless telecommunications.

**Dectrac** Decca Navigator display for GA aircraft.

**DECU** Digital engine (or electronic) control unit.

**ded** Dedicated.

**DED** 1 Data entry display.

2 Directed-Energy Directorate (AFRL).

3 Directorate of Engineering Development (UK).

**dedicated** Available only for one declared application; thus a \* dock is tailored to one type of aircraft.

**dedicated runway** That permanently assigned as main instrument runway.

**DEE** 1 Di-ethyl ether.

2 Department of Education and Employment (UK).

**DEEC** Digital electronic engine control.

**DEEP** Dangerous-environment electrical protection system.

**deep** Far down the runway [said of a landing].

**deep cycling** Pre-delivery test of electronics (rarely, other hardware) by subjecting circuits to slightly excessive voltages.

**deepening** Decreasing pressure in centre of existing low.  
**deep overhaul** Major overhaul, not normally performable by user.

**deep space** Not in vicinity of Earth.

**deep stall** Condition associated with T-tail, rear-engined configuration characterised by rapid increase in angle of attack to point where effectiveness of horizontal tail is inadequate for longitudinal control, and stable longitudinal trim point is reached with AOA up to 90°. Apparent synonyms are locked-in stall, superstall.

**deep surge** Operating condition [transient and violently unstable] in which air and possibly products of combustion are expelled from the inlet.

**DEEU** Data-entry electronics unit.

**DEF** Defensive systems (USAF).

**DEFA** Direction des Etudes et Fabrications d'Armement (F).

**Defaids** Defensive aids.

**Defamm** Development of demonstration facilities for airport movements guidance control and management (Euret).

**Defcon, DEFCON** Defence contracting (UK, MoD.).

**DEFCS** Digital electronic flight-control system.

**Defdars** Digital expandable flight-data acquisition and recording system.

**defence suppression** Secondary objective of air attack on enemy territory, to reduce or eliminate anti-aircraft defences.

**defense VFR** Filed by aircraft cruising at 180 kt or above intending to penetrate an ADIZ in VFR (US).

**defensive combat spread** Loose pair 1–2 miles (1.6–3.2 km) apart and slightly separated fore/aft and vertically.

**defensive electronics** Airborne ECM and EW equipment used to protect aircraft against hostile defences.

**defensive spiral** Accelerating high-g continuous-roll dive to negate attack.

**defensive split** Controlled separation of target element into different planes to force enemy interceptors to commit to one of them.

**defensive turn** Basic defensive manoeuvre to prevent an attacker from achieving a launch or firing position.

**deferment** Agreed postponement of delivery.

**deficiency** Fault condition (known or suspected), equipment shortage or other imperfection which may or may not render aircraft unairworthy.

**definition** 1 Clarity and sharpness of image in display.

2 In contract proposal, complete description by contractor of product offered.

**definitize** To complete the definition of (US usage).

**defl** Deflection.

**deflation port** Aperture in top of balloon gas envelope through which contents are [Ed. opinion, foolishly] dissipated after landing.

**deflected slipstream** Horizontal slipstream from propulsion system deflected downwards by mechanical means to augment lift for STOL or V/STOL performance.

**deflecting yoke** Mutually perpendicular coils around neck of CRT which control position of electron beam, enabling it to scan screen.

**deflection** 1 Bending or displacement of neutral axis of structural member due to external load.

2 Change in radius of pneumatic tyre, expressed as percentage.

**deflection angle** 1 In supersonic flight, that between longitudinal axis and outer surface of bow [nose] of body.

2 That between longitudinal axis and surface [esp. trailing edge of airfoil] determining angle of top and bottom shocks.

**deflection crash switch** One triggered by impact significantly changing shape of structure.

**deflection error** Lateral artillery error, as distinct from range error, usually problem with land rather than air targets.

**deflectometer** Instrument for measuring deflection under load of airfield surface. There are several species.

**Defra** Dept. of the Environment, Food and Rural Affairs, with many air-transport responsibilities [UK].

**defruiting** Elimination of fruiting by rejecting all non-synchronous replies; PRFs varying by 2.5µs can be eliminated.

**Defstan, DefStan** Defence Standard (UK).

**DEFT** Directorate of Elementary Flying Training (UK, until 2003).

**DEFTS** Defence Elementary Flying Training School (replaced JEFTS 2003).

**defueller** Unit, usually vehicle-mounted, for draining fuel and condensate from aircraft.

**DEG** Dressed engine gearbox.

**DEG, Deg** Degree[s].

**degarbling** Elimination of garbling by trying to extract interleaved replies, differentiating between the exact leading and trailing edges of the pulses.

**degraded flight control** Usually means failure of surface power unit.

**degraded performance** Performance reduced by internal shortcomings, eg airframe tiredness, engine gas-path deposits, etc. Not normally used for external influences, eg hot-and-high conditions.

**degraded surface** Airfield covered with snow, ice or standing water.

**degreasing** Removal of grease, oil or related residue by solvent, either liquid such as naphtha or vapour such as trichlorethylene.

**degree** Non-SI unit of plane angle, = 1.745329 × 10<sup>-2</sup> rad.

**degree of freedom** 1 Mode of motion, angular or linear, with respect to co-ordinate system; free body has six possible \*\*\*, three linear and three angular.

2 Specif., of gyro, number of orthogonal axes about which spin axis is free to rotate.

3 In unconstrained dynamic system, number of independent variables required to specify state at given moment. If system has constraints, each reduces \*\*\* by one.

4 Of mechanical system, minimum number of independent generalised co-ordinates required to define positions of all parts at any instant. Generally, \*\*\* equals number of possible independent generalised displacements.

**DEI** Development engineering inspection.

**de-icing** Removal of ice accretion by thermal, mechanical or chemical means. Note: anti-icing prevents accretion.

**de-icing fluid** Glycol/alcohol mixtures are common for removing frost from parked aircraft. Fluids for use in flight include ethyl or isopropyl alcohol and ethylene or propylene glycols.

**DEIMS** Defense economic-impact modelling system (DoD).

**de-ionisation time** Time for gas-discharge tube to return to neutral condition after interruption of anode current.

**deka** Prefix,  $\times 10$  [non-SI].

**del** Delete.

**DEL** Delay, delay message; also DLA (ICAO code).

**de Laval nozzle** Con-di nozzle used in steam turbines, certain rockets, and some tunnels.

**delay** 1 Distance from point directly beneath aircraft to beginning of area visible to its radar.

2 Electronic delay at start of time base used to select particular segment of total.

3 Difference in phase between two EM waves of same frequency.

**delayed automatic gain control** Applied only to received signals above predetermined level, so permitting only weak signals to be fully amplified.

**delayed CCIP** CCIP for highly retarded bomb.

**delayed drop** Live parachute descent begun by prolonged free fall. Controlled by wearer, unlike *delayed* opening.

**delayed explosive tyre failure** Several aircraft have been destroyed by rupture in flight of an MLG tyre overheated by heavy or prolonged braking before takeoff.

**delayed flap approach** Otherwise conventional landing approach, usually by commercial jet, in which AFCS (TCC) or FMS is programmed to postpone final configuration until very late stage, typically near airport perimeter. Reduces noise and fuel burn.

**delayed opening** Opening of parachute canopy automatically delayed by barostat to allow rapid fall through stratosphere to safer altitude, usually 10,000–15,000 ft, 3050–4570 m.

**delayed repeater** Comsat which stores messages and retransmits later, usually at high rate in brief period of time.

**delay indefinite** ATC cannot yet estimate duration of delay; usually followed by Expect further clearance.

**delay line** Passive network, such as closed loop of mercury, capable of delaying signal without introducing distortion.

**delay parameter** Also called altitude \*, time that elapses between sharp nose-up command and start of climb or arrest of sink. Significant in large aircraft on landing, when sudden download at tail has opposite to desired effect [except canard aircraft].

**delay rate** Unusual measure of airline punctuality: number of delays (usually 5 min) per 100 scheduled departures.

**delivery error** Overall inaccuracy of weapon system resulting in dispersion of shots about aiming point.

**delphinopter** Class of micro air vehicles weighing c4-5g combining tail-flapping propulsion with a forward wing which twists for trajectory control. Most alternate between flapping and gliding.

**Delrin** UV-stabilized acetyl-resin adhesives.

**DELSC** Defence Electrical and Electronic Standardization Committee.

**delta ( $\delta$ )** 1 Surface deflection angle, thus  $e\delta$  = elevator deflection angle.

2 Difference; thus \* 1700–1745 is 45 min.

3 Delta wing, or delta-wing aircraft.

**Delta Gold** Top FAI rating for glider pilot, requiring flight of 300 km or closed circuit (landing back at start) of 200 km.

**delta h,  $\delta h$**  Quantified change in altitude or height above ground.

**delta hinge** Helicopter main-rotor flapping hinge, giving blade freedom to flap up/down vertically. Thus, \* is perpendicular to both blade axis and axis of rotation.

**Delta Silver** FAI qualification for glider pilot requiring distance flight 50+ km and [can be same flight] 5+ h duration.

**Delta-3** Helicopter tail rotor with two pairs of blades not crossing at 90°.

**delta-V,  $\delta V$ ,  $\Delta V$**  Quantified change in velocity, usually airspeed.

**$\Delta V_{\text{whirl}}$**  Change in whirl velocity, usually across a single stage of compression or expansion.

**delta wing** Wing of basically triangular plan-form with one apex at front and transverse trailing edge, usually with sharp leading-edge sweep giving low aspect ratio.

**deluge pond** Facility at site for testing or launching large vertically mounted rockets into which cooling water is flushed; also called skimmer basin.

**DEM** 1 Digital elevation model.

2 Data-exchange model.

3 Detector electronics module.

**demand breathing** See demand mask.

**demand mask** Mask through which oxygen or other therapeutic gas flows only on inspiration of wearer.

**demand mode** Acars mode initiated by either aircraft or ground processor.

**demand oxygen** See demand mask.

**demijohn** Fluid container of cylindrical form (F).

**Demiz** Distant early-warning military identification zone.

**demodulation** Detection of received signal by extracting modulating signal from carrier.

**Demon** Demodulation of noise.

**demonstrate** 1 To display new hardware according to detailed test schedule before certificating authority or sponsoring military customer.

2 More specifically, to show compliance with numerical performance values, reliability or maintainability.

**demonstration flight** Made for potential customer [on board], normally not forming part of an airshow programme.

**demonstration lifejackets** Demo jackets are kept in a special locker, and are not normally considered part of actual emergency equipment.

**demonstrator programme** 1 Showing of new civil aircraft in visits to potential customers.

2 Agreed schedule of tests of new hardware, including complete aircraft, before military customer in advance of

any decision on procurement and often to establish what is possible.

**demounting** One meaning is to remove tyre from wheel; the wheel may include a demountable flange.

**Demoval, Demval** Demonstration and validation.

**Dempi** [pronounced dimpy]. Designated mean point of impact.

**Denalt** Density altitude.

**DENEb, Deneb** Fog-dispersal operation.

**DEngRD** Directorate of Engine Research and Development (UK).

**denitrogenation** Removal of nitrogen dissolved in blood and body tissues, usually by breathing pure oxygen for extended period, to minimise aeroembolism. Also called preoxygenation.

**densified wood** Multiple laminates bonded under high pressure.

**densitometer** 1 Instrument for measurement of optical density, generally of photographic image.

2 Instrument for measuring fuel density, usually part of fuel measurement system.

**density** 1 Mass per unit volume; SI unit  $\text{kg/m}^3 = 0.062428 \text{ lb/ft}^3 = 0.01002 \text{ lb/Imp gal}$ ;  $1 \text{g/cm}^3 = 0.036127 \text{ lb/in}^3$ ;  $1 \text{lb/in}^3 = 27.6799 \text{ g/cm}^3 = 27,679.9 \text{ kg m}^{-3}$ ;  $1 \text{ lb/ft}^3 = 16.0185 \text{ kg/m}^3$  [reciprocal, 0.0624278]. Often needs qualifying for temperature and pressure (see *absolute\**, *relative\**).

2 Of aircraft, MTOW divided by total aircraft volume calculated from external envelope, or divided by both wing area and mean chord.

**density altitude** Pressure altitude corrected for non-ISA temperature.

**density error** Correction to EAS to give TAS (see *airspeed*).

**deorbit** Deliberately to depart from spacecraft orbit, usually to enter descent phase or change course.

**DEOS** Digital engine operating system.

**DEP** 1 Department of Employment and Productivity (UK).

2 ICAO code for depart, departure, departure message.

3 Departure airfield.

4 Design eye position (usually of pilot).

5 Direct-entry pilot.

6 Data-entry panel.

**departure** 1 Any aircraft taking off from airport (as distinct from other airfields) under departure control.

2 In air navigation, distance made good in E/W direction, usually expressed in nm.

3 General term for uncontrolled flight beyond the stall; see *divergence* (1) or *disturbance* (2).

**departure alternate** Alternate airfield specified in flight plan filed before takeoff.

**departure control** Function of approach control providing service for departing IFR aircraft and, on occasion, VFR aircraft in such matters as runway clearances, vectors away from congested areas and radar separations, all at nominated time.

**departure pattern** That flown in 3-D by departure (1).

**departure point** Navigational check point, such as VOR or visual fix, used as a marker for setting course.

**departure procedures** ATC procedures (usually SID) flown by departing aircraft during climb-out to minimum en route altitude.

**departure profile** Flight profile flown by departure (1) to

suit needs of vertical and horizontal separation, noise abatement, obstacle clearance, etc.

**departure runway** That from which departures (1) are cleared.

**departure stall** On attempted takeoff from small field, pilot avoids obstacle ahead by steep bank and sharp turn, then applying top rudder, stalling upper wing.

**departure strip** Flight progress strip recording callsign, ETD and route of departure.

**depos** Imposed by most states at flat rate per passenger.

**departure track** That followed by departure (1).

**departure traffic** Total number of departures, scheduled and non-scheduled, from one airport, usually expressed in movements per hour or per day.

**DEP CON** Departure control.

**Depcos** Departure co-ordination system (Airsys); see *Depos*.

**depigram** Plot of variation of dewpoint with pressure for given sounding on tephigram.

**deplane** Normally transitive verb, to ask all occupants to leave aircraft, especially because of fault or potential danger.

**depleted uranium** Dense metal [see uranium] removed in spent fuel rods from nuclear reactors, used in flight-control surface balances and gun ammunition.

**depletion layer** In semiconductor, region in which mobile carrier charge density is insufficient to neutralise net fixed charge density of donors (N-type) and acceptors (P-type). Also known as depletion barrier or zone.

**deployable simulator** Installed at front-line airbase or aboard carrier.

**deployment** 1 Strategic relocation of forces to desired area of operation.

2 Extension or widening of front of military unit.

3 Change from cruising approach, or contact disposition, to formation for battle.

4 Process from pulling ripcord to fully opened parachute.

5 Extension of solar panels from spacecraft.

6 Basic meaning of word: to use a military or naval aircraft operationally.

**deploy range** Range of combat aircraft on transfer from one theatre to another, if necessary with internal or external auxiliary fuel.

**DEPM** Data evaluation program manager[s] (ATOS).

**Depos** Departure co-ordination system (ATC).

**depot-level maintenance** Performed at a specialized overhaul facility, remote from user unit.

**depreservation run** Test run of machinery after storage, to validate performance.

**depressed-datum reheat** Engine control mode for jet STOVL giving reheat operation at low (dry) thrust levels, giving smooth auto control to max. thrust.

**depressed-sightline attack** Shallow dive.

**depressed trajectory** Flight profile of ballistic missile, esp. SLBM, fired over relatively short range with altitude kept low to reduce exposure to defending radars.

**depression** 1 Region of relatively low barometric pressure, also known as cyclonic area or low; secondary \* is small low accompanying primary.

2 Negative altitude, angular distance below horizon.

**DEPS** Directed Energy Professional Society (US).

**depth** Aerospace meanings include \* of depression, \* of

modulation and distance down runway; \* of wing profile is *thickness*.

**Dept[s]** Department[s].

**DER** 1 Designated engineering representative.

2 Departure end of runway.

**DERA** Defence Evaluation and Research Agency, in 2001 renamed *DRA* (UK).

**derated engine** One whose maximum power is governed at a lower than normal value. Hence derating.

**Derd, DERN** 1 Display of extracted radar data.

2 Incorrectly used to mean *DENGRD*.

**deregulation** Removal of rules regarding admission to air-transport industry of new carriers, routes and equipment.

**derisking** Self-explanatory procedure of basing a new design on known technology.

**derivative** Not precisely defined, but taken by certifying authority to mean that new aircraft or engine is so similar to the original version that no new certification programme is needed.

**derivatives, resistance** 1 Lateral \*\* give variation of forces and moments caused by small changes in lateral, rolling and yawing velocities.

2 Longitudinal \*\* give variation of forces and moments caused by small changes in longitudinal, normal and pitching velocities.

**derivatives, stability** Quantities expressing variation of forces and moments on aircraft due to any disturbance to steady motion.

**derotation** To put nose gear on runway after landing.

**DES** 1 Design environmental simulator (USAF).

2 Design engineering support.

3 Data encryption standard.

4 Descend, descent.

**DESC** 1 Defense Electronic Support Center (US).

2 Defense Energy Supply Center [concerned with fuels].

**DesCat** Data-exchange system for control and targeting.

**descending node** Longitude or time at which satellite crosses Equator from N to S.

**descent fuel** Fuel burned from TOD until either hold or approach.

**descent idle** Engine setting to optimise parameters in near-glide.

**descent indicator** See *VSI*.

**descent orbit insertion** Start of lunar or planetary landing procedure from orbit, with retrograde thrust into descent transfer orbit.

**descent propulsion** That providing trajectory control for soft lunar or planetary landing.

**descent stage** Lower part of two-way lunar or planetary lander which, when mission is completed, acts as launch pad for ascent stage.

**descent transfer orbit** Highly elliptical around Moon, can be circular around planet, in which soft lander is placed before descent to surface.

**Descr.** Description.

**deselect** 1 To switch off.

2 Eliminate contender from competition.

**desensitization** Reduction in TCAS threat volume.

**design** Entire process of translating hardware requirement or specification into final production drawings and NC tapes.

**designate** To point out a target by aiming a laser.

**designated flying course** Prior to carrier landing, 15 seconds before turning downwind.

**designated target** One at which friendly designator (2) is pointed.

**designation marking** Use of laser or other designator.

**designator** 1 Letter/number code identifying each flight by a scheduled carrier.

2 Number/letter code identifying each runway, thus 26L = 260° left runway of pair.

3 Laser or other device pointed at target to make latter emit signals on which missile can home.

**Design Chain Accelerator** One of the first commercially offered clusters (1) for simulating complex systems (Intel/MS/HP).

**design envelope** See *gust envelope*.

**design gross weight** Anticipated MTOW used in design calculations; design takeoff weight.

**design landing weight** Anticipated MLW used in design calculations.

**design leader** 1 Individual leading design team.

2 Nation in collaborative project said to have political dominance.

**design load** Specified load below which structural member or part is designed not to fail, usually expressed as probable maximum limit load, unfactored.

**design load factor** Maximum repeated vertical acceleration which an aircraft structure is designed to withstand without accretion of damage. Typical values for a jet transport are +2.5/-1g (with flaps extended reduced to +2), and for a fighter +12/-6.

**design maximum weight** Assumed weight used in stressing structure for flight loads.

**design office** That in which design takes place, and authority vested therein.

**design points** Specific combinations of variables upon which design process is based; together these cover every combination of air density, airspeed, Mach, dynamic pressure, structural loads (including free or accelerated take-off and normal or arrested landing) and system demands aircraft can encounter.

**design verification** First item built to new design to prove compliance with drawings and demonstrate correct functioning (see *DVA*).

**design weight** No standard meaning, but with most design/certification authorities is less than MTOW.

**design wing area** Area enclosed by wing outline (including flaps in retracted position and ailerons, but excluding fillets or fairings) on surface containing wing chords, extended through nacelles and fuselage to plane of symmetry.

**Desir** Direct English statement information retrieval (EDP).

**desmodromic** Mechanical drive giving perfect *SHM* to/fro action, esp. of cam drive to piston-engine valve.

**Deso, DESO** Defence Export Services Organization [former agency of the MoD, disbanded July 2007, replaced by UKTI].

**de-spin** To rotate part or whole of satellite or other spacecraft to neutralise spin previously imparted (see *next*).

**despun antenna** One mounted on satellite spun for reasons of stability which, because it must point continuously towards an Earth station, must rotate relative to satellite.

**dessyn** Synchro (trade name).

**dest** Destination airport.

**destage** To redesign an engine by removing one stage of blading from an axial compressor (usually the last stage).

**destretch** To produce new version of transport aircraft with fuselage of reduced length.

**destruct** To destroy vehicle after launch because of guidance or other failure making it dangerous.

**destructive test** One which destroys specimen.

**destruct line** Map boundaries which vehicle must not cross; any which does is immediately destroyed.

**destructor** 1 Device, explosive or incendiary, for intentionally destroying all or part of vehicle such as wayward missile or aircraft down in enemy territory.  
2 NW for undersea use.

**DESU** Digital electronic sequence unit (APU).

**deswirl** Deliberate reduction in swirl velocity, for whatever reason. Hence \*tubes, \*vanes.

**DET** 1 Direct energy transfer.  
2 Double-element thermocouple.  
3 Or Det, detachment.

**DETA** Di-ethylene triamine.

**detachable** Capable of being removed from aircraft with normal hand tools.

**detachable pack** Parachute held to the harness by quick-release clips.

**detached shockwave** One proceeding ahead of body causing it.

**detail** 1 To design small part such as attachment bracket.  
2 Drawing (can be inset on main design drawing) giving graphical representation of features.  
3 Small military detachment for particular task.  
4 To assign to special task or duty.

**detail part** One not normally broken down during service or storage.

**Detasheet** Plastic explosive based on RDX/PETN.

**detectable crack** Nominal length 100 mm, 4 in.

**detector** Sensitive receiver for observing and measuring IR.

**detent** A spring-loaded catch permitting linear movement in one direction only.

**deterrence** Prevention of aggression through fear of consequences.

**DETF** 1 Data-exchange test facility.  
2 Delayed explosive tyre [tire] failure.

**detolerancing** The principal meaning is to open out (relax) dimensional limits on airframe structure.

**detonating cord** Flexible explosive [usually shaped-charge] pipe for emergency severing of doors, canopies, etc. More recently spelt chord.

**detonation** 1 Violent and irregular combustion in piston engine cylinder resulting from excessive compression ratio or supercharging, or using inferior fuel; also known as knocking or pinking.  
2 Correct triggering of explosive.

**detonator** Explosive device usually sensitive to mechanical or electrical action and employed to set off larger charge of explosive.

**detotalizing counter** Indicates total remaining of substance being measured, such as rounds for a gun or kg of fuel.

**DETR** Department of the Environment, Transport and the Regions [in 2002 became DfT] (UK).

**Detresfa** Distress phase of a search/rescue operation.

**DEU** 1 Display electronic unit.  
2 Decoder/encoder unit (CIDS).

**deuce** Two fighter or attack aircraft, usually in loose echelon formation.

**deuteron** Nucleus of deuterium.

**deuterium** Isotope of hydrogen (heavy hydrogen) whose nucleus contains a neutron as well as a proton; used as projectile in nuclear processes. Forms heavy water (D<sub>2</sub>O) with oxygen.

**deuteride** Compound of deuterium. Lithium-6 deuteride is a standard fusion material in NW.

**DEV** Deviation.

**Devco** Development Committee (ISO).

**development** 1 Process of converting first flight article into mature product ready for delivery.  
2 Ongoing process of improving production aircraft to carry heavier load, fly farther, accomplish new tasks, etc.  
3 Determining by mathematical calculation, computer graphics or drafting methods, size, shape and other pertinent characteristics of non-flat parts.  
4 Opening of parachute canopy.  
5 Generally not precisely quantifiable, process in which aircraft becomes locked-in to stall, superstall or spin.

**development contract** Calls for development (1) of particular hardware item.

**development stage** Begins as soon as hardware to new design is available; main phase complete at service (production) release or certification, but continues throughout active life of aircraft.

**deviation** 1 Distance by which impact misses target.  
2 Angular difference between magnetic and compass headings caused by magnetic fields other than that of Earth.  
3 In statistics, difference between two numbers (also known as departure), difference of variable from its mean (esp. standard \*), or difference of observed value from theoretical.  
4 In meteorology, angle between wind and pressure gradient.  
5 In radio, apparent variation of frequency above and below unmodulated centre frequency.  
6 In flying, sudden excursion from normal flightpath.  
7 Any significant variation from plan.

**deviation card** Records compass courses corresponding to desired magnetic headings.

**devil** Dust devil.

**deviation light[s]** Warn pilot or ground controller of excessive departure from ILS beam.

**DEW** 1 Distant early warning.  
2 Directed-energy weapon.  
3 Dressed engine weight.

**dew** Atmospheric moisture condensed upon cold objects, esp. at night.

**dewar** Thermally insulated container, eg for cryogenics.

**DEWD** Dedicated electronic-warfare display.

**DEWIZ** Distant early-warning identification zone, extends from surface north of DEW line and around Alaska.

**DEW Line** Distant early-warning radar stations at about 70th parallel across North American continent (1955–58).

**dewpoint** Temperature at which, under ordinary conditions, condensation begins in cooling mass of air.

**Dews** Digital electronic-warfare simulator.

**DF, D/F** 1 Direction-finding (or finder).

2 Digital filter.

3 Directed-flow (reverser).

4 Methylphosphonic difluoride, component of GB Sarin.

5 Data fusion.

6 Deutsche Flugsicherung [ATC] (G), also DFS.

7 Dong Feng = east wind, family designations of strategic ballistic missiles (China).

8 Double-fuselage.

9 Diesel fuel.

10 Defensive [or direct].

11 Downlink format.

12 Direct to fix.

**D.F.** Helicopter rotor damping factor.

**D<sub>F</sub>** Zero-lift drag, usually of whole aircraft.

**DF-1, DF-2, DF-A** GA specifications for diesel fuel.

**DFA** 1 Deutsche Flug-Ambulanz Gemeinnützige GmbH (G).

2 Delayed-flap approach.

3 Direction-finding antenna.

4 Design for assembly.

**DFAC** Data-fusion analysis convergence.

**DFAD** Digital-feature analysis data.

**DFAR** Defense Federal Acquisition Regulations (US).

**DFAS** Defense Finance and Accounting Service (US).

**DFBW** Digital fly-by-wire.

**DFC** 1 Distinguished Flying Cross.

2 Direct force control, eg on F-16.

3 Digital fuel control [s adds system].

4 Duty-free confederation.

**DFCC** Digital flight-control computer.

**DFCL** Director(ate) of flight-crew licensing.

**DFCS** Digital flight – [or fuel] – control system.

**DFCT** Directorate of Foreign and Commonwealth Training (UK, multiservice).

**DFD** 1 Digital frequency discriminator.

2 Data flow diagram (real time).

3 Digital flight data.

**DFDA** Defence Force Discipline Act (UK).

**DFDAF** Digital flight-data acquisition function.

**DFDAMU** DFD(3) acquisition management unit.

**DFDAU** Digital [or distributed] flight-data acquisition unit.

**DFDR** Digital flight-data recorder; S adds system.

**DFDS** Digital fire-detection system.

**DFDU** DFD(3) unit.

**DFES** Dept. for Education and Skills (England).

**DFE** Display failure flag.

**DFG** 1 Digital flight guidance [C adds computer, S system, U unit].

2 Defence Fuels Group.

3 Deutsche Forschungsgemeinschaft [D-53175 Bonn] (G).

**DF/GA** Day fighter/ground attack.

**DFGC** Digital flight-guidance computer.

**DFI** Direction-finding interferometer.

**DFIC** Duty-free import certificate.

**DFIDU** Dual-function interactive display unit.

**DFIR** Deployable flight-incident recorder.

**DFIU** Digital flight-instrument unit.

**DFL** Dry-film lubricant.

**DFLCC** *DFCC*.

**DF loop** Direction-finding aerial consisting of one or more turns of wire on vertically pivoted frame, giving maximum response in plane of frame, and thus PL through ground station (see *Adcock, ADF*).

**DFLS** Day Fighter Leaders' School (RAF).

**DFM** 1 Distinguished Flying Medal.

2 Digital frequency measurement.

3 Distortion-factor meter.

4 Direct-force mode.

5 Design for manufacture.

**DFMS** Digital fuel-, or flight-, management system.

**D<sub>form</sub>** Form drag.

**DFQI** Digital fuel-quantity indicator.

**DFR** 1 Dynamic flap restraint.

2 Departure flow regulation, or regulator.

3 Digital flight recorder.

**DFRC** Dryden Flight Research Center [previously Facility] (NASA, at Edwards).

**D<sub>fric</sub>** Total frictional drag, at low speeds almost equal to D<sub>F</sub>.

**DFRR** Data-fusion risk reduction.

**DFS** 1 Directorate of Flight Safety (UK).

2 Digital frequency synthesis, or select.

3 Deutsche Forschungsanstalt für Segelflug [glider research institute] (G).

4 Deutsche Flugsicherung GmbH [air-traffic control; office D-63067 Offenbach] (G).

5 Dynamic fuel-slosh measure.

6 Detailed functional specification.

**DFSC** Defense fuel supply center (DoD).

**DFT** 1 Distance from threshold.

2 Discrete Fourier transform.

3 Demand flow technology.

4 Defence fixed telecommunications [S adds system] (UK).

**DFT** Department for Transport [May 2002-; office, London SW1P 4DR] (UK).

**DFTD** Data-fusion technology demonstrator system.

**DFTI** Distance-from-touchdown, or threshold, indicator.

**DFU** 1 Digital function unit.

2 Deployable flotation unit.

3 Exhortation, Don't f\*\*\* up!

**DFV** Deutsche Flugdienstberater Vereinigung (G).

**DFVLR** Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, now DLR (G).

**DFW** Dedicated field work (USN).

**DFWD** Discrete flight warning display.

**DFWF** Direct-fire weapons effects; S adds simulator or simulation.

**DG** 1 Directional gyro, = DI (2).

2 Dichromated gelatin.

**Dg** Maximum growth of tyre [tire] outside diameter.

**DGA** 1 Dispersed ground alert.

2 Délégation Générale pour l'Armement (F).

3 Director-General Aircraft, (N) adds Navy (UK).

4 Displacement gyro assembly.

**DGAA** Director-General for Aeronautical Armaments (I, for NATO).

**DGAC** 1 Direction Générale de l'Aviation Civile (F).

2 Directorate-General of Air Communications (Indonesia).

3 Direzione Generale dell'Aviazione Civile (I).

4 Direcção-General da Aviação Civil (Portugal).

- 5 Dirección General de Aviación Civil (Spain etc).
- DGES** Director-General Equipment Support; can have suffix (Air). (UK).
- DGI** Directional gyro instrument or indicator.
- DGIA** Dirección General de Infraestructura Aeronautica (Uruguay).
- DGIIA** Defence Geographic and Imagery Intelligence Agency (UK).
- DGLR** Deutsche Gesellschaft für Luft- und Raumfahrt [office, Bonn] (G).
- DGLRM** Deutsche Gesellschaft Für Luft- und Raumfahrtmedizin (G).
- DGM** 1 Distance-gone meter (Doppler).  
2 Digital-group multiplexer.
- DGMS** Director-General of Medical Services (RAF).
- DGNS** Differential global navigation system.
- DGNSS** Differential global nav-sat system; U adds unit.
- DGON** Deutsche Gesellschaft Für Ortung and Navigation (G).
- DGPDM** Data-gathering, processing and display manager.
- DGPS** Differential GPS.
- DGR** Dangerous-goods requirements (IATA).
- DGRR** Deutsche Gesellschaft Für Raketentechnik und Raumfahrt (G).
- DGSM** Director-General of Support Management (RAF).
- DGRST** Direction Générale à la Recherche Scientifique et Technique (F).
- DGS** 1 Disc-generated signal.  
2 Digital-generation subsystem (ECM).  
3 Docking guidance system.  
4 Deployable ground system [various suffixes] (USAF).
- DGSI** Drift and groundspeed indicator (Doppler).
- DGT** Digital GPS translator.
- DGTA** Dirección General de Transporte Aéreo (Peru, etc).
- DGTE** Director-General Test & Evaluation (UK).
- DGU** Display generator unit.
- DGVS** Doppler ground velocity system.
- DGW** Design gross weight.
- DGZ** Desired ground zero; point on Earth's surface nearest to centre of planned nuclear detonation (see *actual ground zero, ground zero*).
- DH** 1 *Decision height*.  
2 Dataflash Header.
- DHA** Display head assembly.
- DHB** Dynamic hot bench.
- DHDA** Digicon header diode array.
- DHFS** Defence Helicopter Flying School, (RAF Shawbury, UK).
- DHKKHH** Aeronautic Association (S. Korea).
- DHMI** Airports authority (Turkey).
- DHO** Damped harmonic oscillator.
- DHS** 1 Data-handling system.  
2 Department of Homeland Security [2002-] (US).
- DHSA** Defence Helicopter Support Authority (UK).
- DHUD** Diffraction, or diffractive-optics, HUD.
- DHV** 1 Deutscher Hubschrauber Verband, [helicopter association; office, D-56581 Melsbach] (G).  
2 Deutscher Hängegleiterverband, [hang gliding and sport parachuting; office, D-83703 Gmund] (G).
- DI** 1 Daily inspection.  
2 Direction indicator.  
3 Director of Intelligence.  
4 Duty instructor.  
5 Direct-injection.  
6 Data interrupt.  
7 Dynamic inversion [control of linear system].
- D<sub>i</sub>** Induced drag.
- DIA** 1 Documentation Internationale des Accidents (DocIntAcc).  
2 Defense Intelligence Agency (US).  
3 Document interchange architecture (IBM).  
4 Data-interaction architecture; DEM adds demonstrator.  
5 Digital interface adaptor card.
- diabatic process** Process in thermodynamic system with transfer of heat across boundaries.
- diabolo** Landing gear with two wheels side-by-side on centreline of aircraft [esp. MLG].
- DIAC** Data-Interpretation Analysis Center (US).
- diagnostic routeing equipment** Automatic or semi-automatic fault-isolating tester with ability progressively to narrow down location of fault.
- diagonal-flow compressor** One in which air flows diagonally to plane of rotation, centrifugal with axial component.
- Dial** Differential-absorption lidar.
- dial-a-STOL** Notional method of operating CTOLs from bomb-damaged runways in which weapon/fuel load is selected according to length of undamaged runway available.
- Dialmet** Automated Metar and TAF service.
- Dials** Digital integrated automatic landing system.
- dial your weight** Small computer on whose keyboard is manually inserted all fuel, crew, payload and other on-board items, displaying MTOW and c.g. position (colloq.).
- diamagnetic** Reacting negatively to magnetic field, developing magnetic moment opposed to it, with permeability less than 1; includes aluminium, non-ferrous alloys and corrosion and heat-resistant steels.
- diameter** 1 That of any circular arcs making up fuselage external cross-section.  
2 In optics, unit of linear measurement of magnifying power.  
3 Of parachute canopy, that while fully spread out on flat surface.
- diametral clearance** The total free movement in the radial direction between the inner and outer races of a ball or roller bearing.
- diametral pitch** Ratio of number of teeth on gearwheel divided by pitch diameter.
- Diamond C** Highest proficiency award for which sailplane pilots can qualify.
- diamond landing gear** Tandem centreline mainwheels, and outriggers.
- diamond roll** Precision machine tool for dressing grinding wheels.
- diamonds** See *shock diamonds*.
- diamond-wing aircraft** Has swept-back front wing merged at tips into forward-swept rear wing; also called *twin-wing*.
- Diane** 1 Digital integrated attack navigation equipment.

2 Détection identification analyse des nouveaux émetteurs [helo threat warning] (F).

**DIAP** Defense Information Assurance Program (DoD).

**diaphragm** Fabric partition within aerostat; may be gastight (ballonet \*) or non-gastight (stabilizer \*).

**diathermy** Generation of heat by HF power, usually at 0.5/1.5 MHz.

**Diatms** DISN interim asynchronous transfer services.

**DIB** 1 De-icer boot.

2 Digital, or DCGS1, integration backbone.

3 Dry-ice blasting.

**diaber** Weapon intended to penetrate concrete runway before exploding.

**DIC** 1 Defence Industries Council (UK member of EDIG).

2 Dynamic-inversion controller.

**Dicaps** Digital cassette recorder for passive sonar.

**Dicass** Directional command-activated sonobuoy system.

**dice** 1 Semiconductor chips or IC after scribing and separation.

2 To fly, esp. in exciting manner or on operations (collog. RAF, WW2). Hence, **dic-ing**: 'op' is on, not scrubbed.

**dichroic mirror** One coated with molecular-thickness layer of reflector, usually metal, so as to transmit some EM wavelengths (esp. visible colours) and reflect others.

**DICU** Display interface control unit.

**DID** 1 Data-item description [S adds sheet(s)].

2 Digital-image design.

3 Data-insertion device.

**diddler** CRT auxiliary electrostatic plates which can collapse elongated blips to sharp spots.

**DIE** Defense [defence] information environment.

**die** 1 Press tool, often in mating male/female halves, which cuts sheet or imparts three-dimensional shape to workpiece.

2 Shaped tools used in \*-casting.

3 Shaped tools used in \*-forging.

4 Shaped female mould used in explosive or magnetic forming.

5 Shaped male tool used in ultrasonic, ECM and related mechanical, chemical or electrochemical shaping.

6 Tool with shaped aperture used in extrusion.

**dielectric** Substance capable of supporting electric stress, sustaining electric field and undergoing electric polarization; includes all insulators and vacuum.

**dielectric constant** Ratio of capacitance of material to same condenser using air or vacuum, or of ratio of flux densities in the two media. Also called **permittivity**. Symbol  $\epsilon$ , but  $\Delta$ ,  $\chi$  and other symbols can be found.

**dielectric heating** Generated in dielectric subjected to HF field, resulting from molecular friction due to successive reversals of polarization; power dissipated is **dielectric loss**.

**dielectric strength** Measure of resistance of dielectric to electrical breakdown under intense electric field; SI unit is  $Vm^{-1}$ ; also known as breakdown potential.

**dielectric tape camera** TV recording camera (Vidicon) giving output on tape in form of varying electric field.

**DIELI** Direction des Industries Electroniques et de l'Informatique (F).

**DIEPS** Digital imagery exploitation and production system.

**diergolic** Non-hypergolic, thus requiring an igniter system.

**diesel** IC engine utilising heat of compression to ignite fuel oil injected in highly atomised state direct into cylinder, with piston nearly at TDC.

**dieseling** Any spontaneous ignition of combustible gaseous mixture due solely to temperature caused by compression.

**diesel ramjet** Ramjet operating at Mach number high enough for fuel to ignite by heat of air compression.

**DIF, dif** Diffuse weather.

**Difar** Directional acoustic frequency analysis and recording (ASW).

**difference in depth of modulation** Modulation of stronger [usually ILS] signal minus that of weaker, both expressed as percentages, divided by 100.

**differential ailerons** Ailerons interconnected so that upgoing aileron travels through larger angle than downgoing. This increases drag of wing with upgoing aileron and minimises extra drag of the other wing.

**differential ballistic wind** In bombing, hypothetical wind equal to difference in velocity between ballistic and actual winds at release altitude.

**differential controls** Control surfaces on opposite sides of body or fuselage which move in opposition to cause or arrest roll.

**differential fare** Difference in airline fare levels usually reflecting time-saving and passenger appeal of new aircraft.

**differential GPS** Operates by placing a receiver at a point precisely referenced to a point on a runway. It then makes satellite measurements, from which error signals are transmitted to the airborne receiver which then corrects the signals received from the satellite, esp. for precision approach.

**differential laser gyro** Two lasers of opposite polarization operate in same cavity; comparison of outputs gives twice angular-measure sensitivity of normal laser gyro.

**differential pitch** Original term for *cyclic pitch*.

**differential positioning** See *differential GPS*.

**differential pressure** Pressure difference between two systems or volumes (abb. dP). That of fuselage or cabin is maximum design figure for pressurization system, beyond which point spill valves open.

**differential spoilers** Wing spoilers used as primary or secondary roll control.

**differential tailplane** See *taileron*.

**differential tracker** Radar that can simultaneously measure angular separation of target and friendly missile, so that guidance system can reduce this value to zero.

**differentiating circuit** Circuit delivering output voltage in approximate proportion to rate of change of input voltage or current.

**diffraction** Phenomena which occur when EM wave train, such as beam of light, is interrupted by opaque object(s). Rays passing through narrow slit, or a grating made of slits, are bent slightly as they pass edges; thus waves can 'bend' around obstacle.

**diffraction grating** Several forms of grating with lines so close that they diffract EM wavelengths.

**diffraction-optics HUD** Uses a precise 3-D array of

microminiature grids, or light apertures, to create a volume hologram which makes possible a wide-angle HUD suitable for all-weather low-level navigation and weapon-aiming.

**diffuser** Expanding profiled duct or chamber, sometimes with internal guide vanes, that decreases subsonic velocity of fluid, such as air, and thus increases its pressure, downstream of compressor or supercharger, upstream of afterburner, and in some wind tunnels. In contrast, supersonic flow through a \* is reduced in pressure and increased in velocity, hence con/di nozzle.

**diffuser area ratio** 1 Ratio of outlet to inlet cross-section area of diffuser, esp. of ramjet.

2 Ratio of area of jet-lift mixed-flow nozzle divided by that of primary jet.

**diffuser, compressor** Ring of fixed vanes or expansion passages in compressor delivery of gas turbine to assist in converting velocity of air into pressure.

**diffuser efficiency** Ratio of total energy at exit to entry or achieved/theoretical pressure rise.

**diffuser tunnel** Wind tunnel containing section in which velocity is converted into pressure.

**diffuser vanes** Guide vanes inside diffuser that assist in converting velocity into pressure.

**diffusion** 1 In atmosphere or gaseous system, exchange of molecules across border between two or more concentrations so that adjacent layers tend towards uniformity of composition.

2 Of stress, variation along length of structure of transverse distribution of stress due to axial loads.

3 In materials, movement of atoms of one material into crystal lattice of adjoining material.

4 In ion engines, migration of neutral atoms through porous structure prior to ionisation at emitting surface.

5 Of light, scattering of rays, either when reflected from rough surface or during transmission through translucent medium.

6 In electronic circuitry, method of making p-n junction in which n- or p-type semiconductor is placed in gaseous atmosphere containing donor or acceptor impurity.

7 Of uranium, repeated gaseous-phase concentration of fissile U-235.

**diffusion bonding** Use of diffusion (3) to join solids with high surface finish in uncontaminated intimate contact.

**diffusion coefficient** Absolute value of ratio of molecular flux per unit area to concentration gradient of gas diffusing through gaseous or porous medium, evaluated perpendicular to gradient.

**Diflis** Digital flight-strip system.

**DIFM** Digital instantaneous frequency-measurement; R adds receiver.

**DIFOT** Duty involving flight operations and training.

**DIG** 1 Display/indicator group.

2 Directional gyro (usually DG).

3 Digital image generator (or generation).

**Digest** Digital international geographic[al] exchange standard (NATO).

**digibus** Any digital multiplex data highway.

**digicon** Diode array giving a light input to electrical signals which are then amplified and analysed.

**Digilin** Digital plus linear functions on one chip (trade name).

**Digitac** Digital tactical aircraft control (USAF).

**digital** Operating on discrete numbers, bits (0s and 1s) or other individual parcels of data.

**digital/analog converter** Device which converts analog inputs (eg. varying voltages) into digits. Also known as **digitiser**.

**digital display** Usually means numbers instead of needle/dial.

**digital phase coding** Basic radar technique for hi-PRF and LPI.

**Dignu** Deeply integrated guidance and navigation unit.

**DIGS** Digital generation simulator.

**DIH** Department of Information Handling (ESOC).

**dihedral** Acute angle between left (port) and right (starboard) mainplanes or tailplanes (measured along axis of centroids) and lateral axis. See *anhedral*, *cathedral*.

**dihedral effect** 1 Roll due to sideslip.

2 Extra dihedral due to flexure of wing [esp. of sailplane] under load.

3 Sideslip effect in variable-sweep aircraft that causes change in rolling moment; too much augments roll response while too little (adverse sideslip) opposes it.

**DIJ** 1 Defense information infrastructure [COE adds common operating environment, F adds future, FD future deployed, IC adds integration contract] (UK MoD, US DoD).

2 DCMS interphone interface.

**DIL** 1 Digital integrated logic.

2 Dual in-line.

**Dilag** Differential laser gyro.

**DILS** Doppler ILS.

**diluter control** In an oxygen breathing system, regulates the ratio of oxygen to air.

**dilution holes** Precisely arranged air holes in combustion-chamber liner or flame tube.

**dilution of precision** Degrading factor caused by the often very small angle at which a GPS customer sees a satellite; GDOP adds geometric \*.

**dilution zone** The downstream end of a gas-turbine combustion chamber, where combustion should be complete and air is added for cooling.

**DIM** Dispense interface microprocessor.

**dim** RAF slang, 1, stupid; 2 to disagree, as 'to take a \* view of'.

**DIMA** Darpa interference multiple access.

**Dimas** Distributed information management and administration system.

**Dime** 1 Dynamic IR missile evaluation.

2 Distributed integrated modular electronics.

**dimensional similarity** Of physical quantities, made up of same selection of fundamental M (mass), L (length) and T (time) raised to same indices.

**Dimes** Descent image-motion estimation subsystem (planetary landers).

**diminishing manufacturing source[s]** Redesign of obsolete parts [esp. avionics] to ensure continued procurement.

**DIMM** Dual-part integrated memory monitor.

**Dimpi** *Dempi*.

**dimpled tyre** Landing-wheel tyre whose contact surface is covered with small recesses, mainly to provide visual index of wear.

**dimpling** Countersinking thin sheet metal by tool which dimples (recesses) without cutting, so that rivethead is flush with surface.

**DIMSS** Dynamic interface modeling and simulation system.

**DIN** 1 Deutsches Institut für Normung eV [equivalent of BSI, NBS; office D-10787 Berlin] (G).

2 Digital inertial navigation.

**DINA** Direct noise amplification.

**DINAS, Dinas** Digital inertial nav/attack system.

**DINFIA** Direction Nacional de Fabricaciones e Investigaciones Aeronauticas (Arg.).

**dinghy** Small boat, usually of inflatable rubberised fabric, for use by crew and passengers after aircraft has ditched. Correct term is liferaft.

**dinghy drill** Procedure for unpacking, inflating and entering dinghy.

**dining-in night** Formal dinner, usually once per month, attended by all members of mess and invited guests (RAF).

**dinking** Use of thin blade-like shaped die(s) to cut soft sheet materials such as leather, cloth, rubber or felt, and to cut lightening holes in thin sheet-metal; inexpensive die is used, and cutting action is by steady pressure or hand hammer.

**DINS** Digital inertial navigation system.

**DIO** 1 Defence Industry Office [Sydney, NSW 2000] (Australia).

2 Distributed Information Operation (USN).

**diode** Two-electrode thermionic valve containing cathode and anode, or semiconductor device having unidirectional conductivity.

**diode lamp** Semiconductor diode which, when subject to applied voltage, emits visible light. Smaller than most switchable light sources. Also known as light-emitting diode (LED).

**DIOT & E** Dedicated initial operational test and evaluation, requires four primary aircraft plus backup, all close to production configuration.

**DIP** 1 Digital image processing.

2 Defense industrial plant (US); EC adds 'equipment center'.

3 Defense industrial participation.

4 Defence Industrial Policy (UK, October 2002).

5 Debtor in possession.

6 Dual inline package [ICs].

7 Data-interrupt program.

8 Diplexer.

**dip** 1 Angle between magnetic compass needle perfectly poised or on horizontal axis and local horizontal plane. Also known as magnetic inclination.

2 Vertical angle at eye of observer between astronomical horizon and apparent line of sight to visible horizon.

3 Angle between local horizontal and lines of force of terrestrial magnetic field (indicated by [1]).

4 Salutation by briefly rolling aircraft towards observer, to \* wing in salute.

**DIPA** Defence Industrial Program Authorization.

**diplexer** Device permitting antenna (aerial) system to be used simultaneously or separately by two transmitters.

**DIP/LNA** Diplexer and low-noise amplifier.

**diplomatic authorization** Authority for over-flight or landing obtained at government level.

**diplomatic clearance** The number and callsign allocated to a military aircraft to permit it to overfly foreign territory.

**diplomatic locker** Secure compartment used solely for documents and other items being carried on behalf of the government to which the aircraft is registered.

**dipole** 1 System composed of two separated and equal electric or magnetic charges of opposite sign.

2 Antenna (aerial) composed of two conductors in line, fed at mid-point. Total length equal to one half wavelength.

**DIPP** Defense/industry partnership program (Canada).

**dipper** See *fuel dipper*.

**dipping sonobuoy** One designed to be suspended but not released from helicopter and immersed in selected places in sea.

**DIPR** Directorate of Intellectual Property Rights (UK).

**DIPS** Dipole inches per second (chaff dispenser).

**dipstick** Graduated quasi-vertical gauge of fluid level in container, usually disconnected for reading.

**dipsydoodle** Official term for rollercoaster manoeuvre performed by SR-71 and some other supercruise aircraft following inflight refuelling, comprising dive to supersonic speed followed by accelerating climb back to operating height.

**DIQAP** Defence Industries Quality-Assurance Panel (UK).

**DIR** 1 Diagnostic imaging radar.

2 Distributed IR.

3 Direct, direction, director.

4 Digital instant recall.

5 Dwell illumination region.

**Dircen** Direction des Centres d'Experimentations Nucléaires (F).

**Dircm** Directional, or directed, IR countermeasures (said as a word, USAF).

**direct-action fuze** See *DA fuze*.

**direct approach** Unflared landing.

**direct broadcast** Satellite powerful enough to transmit TV direct to terrestrial recipient or subscriber.

**direct coupling** Association of two circuits by having an inductor, condenser or resistor common to both.

**direct-cranking starter** Hand crank or starter geared to crankshaft to start engine.

**direct current** Electric current constant in direction and magnitude.

**Directd** Digital imaging reconnaissance demonstrator.

**direct damage assessment** Examination of actual strike area by air or ground observation or air photography.

**directed-energy weapon** One whose effect is produced by a high-power beam, normally of EM radiation, having essentially instantaneous effect at a distance. Most important are lasers and HPM.

**directed-flow reverser** Reverser whose discharge in the reverse mode is confined within limited angular limits to avoid the airframe or FOD/reingestion problems.

**directed mode** DME mode allowing FMCS to select one to five DMEs for interrogation.

**directed slipstream** Means of achieving STOL in which slipstream created by propellers or fans is blown over entire wing. Also known as deflected slipstream.

**direct flight** 1 Portions of flight not flown on radials or courses of established airways.

2 Point-to-point space flight, without rendezvous, docking or other manoeuvre.

**direct force control** Control of aeroplane trajectory by application of force normal to flightpath without prior

need to rotate to different attitude; eg lateral force by combined rudder and chin fin, vertical by tailerons/flaps/spoilers or vectored thrust.

**direct frontal** Air-combat tactic for double attack in which one interceptor closes head-on on each side of enemy force.

**direct injection** Precise metered doses of fuel sprayed directly into cylinder combustion space, not into eye of supercharger.

**direction** See *azimuth, bearing, course, heading, track*.

**directional aerial, antenna** Aerial which radiates or receives more efficiently in one direction than in others.

**directional beacon** Transmitter emitting coded signals automatically to enable aircraft to determine their bearing from the beacon with a communications receiver.

**directional gyro** Free-gyro instrument for indicating azimuth direction. Usually free from turning errors but prone to precess/wander.

**directional instability** Tendency to depart from straight flight by a combination of sideslipping and yawing.

**directional marker** Ground marker indicating true north and direction and names of nearest towns.

**directional network waveform** A high-speed net linking mobile stations throughout a theater of operations.

**directional solidification** Casting metal alloys in such a way that all transverse grain boundaries are eliminated, leaving long columnar crystals aligned with direction of principal stress.

**directional stability** Tendency of an aircraft to return at once to its original direction of flight from a yawing or sideslipping condition; also known as weathercock stability.

**direction-finder** Automatic or manually operated airborne receiver designed to indicate bearing of continuous-wave ground radio beacon (see *ADF*).

**direction indicator** See *directional gyro*.

**directivity** Antenna radiant energy per unit solid angle in a given direction [usually main axis] divided by that averaged over all directions.

**direct lift control** Use of aerodynamic surfaces, esp. symmetric spoilers, to provide instantaneous control of rate of descent without need to rotate aircraft in pitch.

**direct operating cost** Costs of operating transport aircraft, usually expressed in pence or cents per seat-mile, per US ton-mile or per mile, and including crew costs, fuel and oil, insurance, maintenance and depreciation. Excluding indirect expenses, such as station costs or advertising; usually taken as 100 per cent of direct costs.

**director** 1 Aircraft equipped to control RPV or missile.

2 In air traffic control, a radar controller.

3 Fire-control tower in warships.

**director horizon** One name for a panel instrument combining an artificial horizon with radio inputs, especially ILS and VOR.

**direct shadow photo** Simplest and oldest shadow photography: bright point source of light (in former days, spark) throws shadow of body and shockwaves on to photographic plate.

**direct side-force control** DFC (2) flight-control system in which aircraft (heavier than air) can be translated sideways without yaw or change of heading by application of direct lateral force.

**direct transit** Special rules under which aircraft may pause [eg, to refuel] in a Contracting state.

**direct-view storage tube** CRT storage tube needing no visor in bright sunshine.

**direct-vision optics** See next.

**direct-vision panel** Flight-deck window or part of window that can be opened.

**direct voice input** Control of function [eg, panel display, weapon selection, radio channel] by spoken command.

**dirigible** Capable of being guided or steered; thus an airship but not a balloon.

**Dir/Intc** Direct intercept.

**DIRP** 1 Defense industrial reserve plant (US).

2 Defense Industrial Research Program (Canada).

**DIRS** 1 Damage information reporting system.

2 Distributed IR system.

**dirty** 1 Aircraft configuration in which aerodynamic cleanliness is spoilt by extension of drag-producing parts, eg landing gear, flaps, spoilers, airbrakes.

2 NW whose detonation releases large quantity of toxic radiological material or emissions.

**dirty bird** Stealth aircraft coated [especially freshly] with ferrite paint.

**dirty duty** On intercept-ready status (USAF aircrew).

**DIS** 1 Distributed-intelligence system (MMI).

2 Defense Investigative Service (US DoD).

3 Defence Intelligence Service (UK MoD).

4 Distributed interactive simulation.

5 Data-intensive system[s].

6 Drawing-introduction schedule.

7 Defence Industrial Strategy [December 2005-] (UK).

**DISA** Defense Information Systems Agency (US).

**disabled aircraft** Damaged, or otherwise unairworthy, aircraft which could interfere with an airfield's operation.

**DISC** Defence Intelligence and Security Centre (Chicksands, UK).

**Disc** 1 Disconnect.

2 Direct [defense injection, reception and emergency action message command and control terminal] improvement and sustainment contract (NMCC).

**disc** 1 Ring on which one stage of compressor blades is carried. There is no defined boundary between this and a ring.

2 Hub carrying blades of fan or turbine.

3 Circular area swept by propeller or lifting rotor.

**disc area** Of propeller or helicopter rotor, area of circle described by tips of blades.

**Disch** Discharge.

**dischargeable weight** 1 All masses which may be jettisoned overboard in emergency.

2 Of airship, total weight that can be consumed or jettisoned and still leave ship in safe condition with specified reserves of fuel, oil, ballast and provisions.

**discharge coefficient** The ratio of actual to theoretical mass flows, symbol  $C_d$ .

**discharge correction factor** Of rocket nozzle, ratio of mass flow to that of ideal nozzle which expands identical working fluid from the same initial conditions to same exit pressure.

**discharge valve** Manually operated and opened sparingly to release hot air from balloon envelope. Generally = dump valve (3).

**discing** Operation of propeller in ground fine pitch to cause aerodynamic drag.

**disc loading** Helicopter weight, or rotor thrust, divided by main-rotor disc area, T/A.

**Disco** Directional composite whose resin-impregnated fibres can slip past each other, giving highly deformable product which retains directional strength properties.

**Discon** Defence integrated secure communications network (Australia).

**disconnect** Inadvertent or deliberate severance of flow during boom-type air refuelling.

**disconnect bolt** Manually removed link in nose landing gear to permit sharper turns when under tow on ground.

**discontinuity** 1 Sudden break in the continuity of mathematical variable.

2 In meteorology, zone within which there is rapid change, as between two air masses.

**discontinuous fibre** Chopped roving as distinct from yarn or tow.

**discount carrier** Despite next entry, one that [often in partnership with another] legally offers permanent low-cost travel, principally for tourists.

**discounting** Illegal selling of airline tickets, for affinity group and other promotional fares, at below agreed tariffs.

**discourager** A form of gas sealing insert closely related to honeycombs and labyrinths.

**Discr** Discrepancy.

**discrete code** Any of the 4096 xpdr codes available to ATCRBS except those ending with a zero.

**discretion** Flight time outside normal crew duty limits but legally permitted with concurrence of captain or PIC.

**discrimination** 1 Of radar, minimum angular separation at which two targets can be seen separately.

2 Precision with which satellite antenna can focus in particular direction.

**discriminator** Stage of FM receiver which converts frequency deviations of input voltage into amplitude variations.

**discus** Of variable-geometry wing, part-circular portion of upper surface of fixed glove on which swinging portion can slide.

**disembark** To step down from COD aircraft.

**dish** Reflector for centimetric radar waves whose surface forms part of paraboloid or sphere.

**dishing** 1 Pressing regular depressions in thin sheet to increase stability and resistance to bends.

2 In formation aerobatics, unwanted distortion of planar formation into dish shape [e.g. in formation roll].

**disk** Disc, except for compact\*.

**dismounted flight training** Hands-off training on ground using hand-held model aircraft, particularly for air-combat tactics.

**DISN** Defense Information System Network (DoD).

**Disney bomb** Armour-piercing free-fall bomb weighing 4,500 lb (2041 kg) finally accelerated to 2,400 ft/s (1089 ms<sup>-1</sup>) by rocket (UK WW2).

**DISSO, Disoss** Distributed office support systems (SNA).

**DISP** Displaced.

**dispatchable** Cleared to fly despite deficiencies [e.g. engines in N<sub>1</sub> instead of EPR mode].

**dispatch** 1 To supervise exit of parachutists, or to unload stores with parachutes attached, from aircraft in flight.

2 Process of supervising readiness of civil transport for next flight, with departure on schedule.

**dispatch deficiency** Malfunction, failure, breakage,

missing equipment item or other irregularity which does not prohibit on-time departure.

**dispatch delay** Any notifiable delay, measured variously from either 5 or 15 min, in departure of scheduled flight.

**dispatch deviation** Any reportable irregularity other than deficiency which does not prohibit on-time departure.

**dispatcher** One who is responsible for despatching an airline flight See *air*\*.

**dispatch reliability** 1 Essentially self-explanatory, the quantified record of an aircraft in repeatedly fulfilling its design mission. It can be plotted graphically with probability of dispatch as the ordinate [the axis typically extending from 0.95 to 1] and the number of days without maintenance action as the abscissa. Thus, for each failure the aircraft shall be able to operate for a specified number of days with the stipulated likelihood of a second failure not occurring.

2 Percentage of all scheduled flights by particular aircraft or all aircraft of that type, often over specified period or for particular operator, that departed on time (measured as within 5 or 15 min).

**dispensation** Agreement to waive a rule without affecting safety.

**dispenser** 1 Container from which objects [e.g., ECM chaff cartridges, flares and active emitters] can be ejected in predetermined sequence.

2 Externally carried container for bomblets or other small multiple munitions.

**dispensing** 1 Release of ECM payloads in controlled manner.

2 Supply of fuel to aircraft via hydrant.

**dispensing sequence** Graphical or tabular plan for ECM to meet expected threats.

**dispersal** 1 Geographical spreading out of aircraft, material, establishments or other activities to reduce vulnerability to enemy action.

2 Dispersal area.

3 Parking area, usually paved, accessible from perimeter track, on which one aircraft could be parked. Some WW2 airfields had over 100.

**dispersal airfield** Potential operating platform for strategic aircraft, especially bomber with NW, which could within hours become an operating base following political crisis or actual attack [1957–90].

**dispersal area** Area usually on remote parts of airfield to which aircraft and support equipment can be dispersed in wartime.

**dispersant oil** Lubricating oil with additives which slow or even prevent formation of sludge and other solid deposits.

**dispersion** 1 Average distance from aim point of bombs dropped under identical conditions or by projectiles fired from same weapon or group of weapons with same firing data.

2 In AAA, scattering of shots about target.

3 In chemical operations, dissemination of agents in liquid or aerosol form from bombs and spray tanks.

4 In rocketry and AAM testing, deviation from prescribed flight path; circular dispersion.

5 Measure of scatter of data points around mean value or around regression curve, usually expressed as standard-deviation estimate or standard error.

6 Process in which EM radiation is separated into its components.

7 Measure of resolving power of spectroscope or spectrograph, usually expressed in A/mm.

8 Tendency over long period of commercial traffic to move from primary to secondary airports.

9 Scatter of actual touchdown points on runway over a period.

**dispersion error** Distance from aim point to mean point of impacts.

**dispersion hardening** Scattering of fine particles of different phase within metallic material, resulting in overall strengthening.

**dispersion pattern** Distribution of series of rounds fired from one weapon or group of weapons on fixed aim under conditions as nearly identical as possible.

**dispersion warhead** Discharging bomblets, FAE or other multiple or dispersed payloads.

**displaced threshold** Threshold not at downwind end of full-strength runway pavement. It is usually beyond it, and is available for takeoff or for end of landing roll, but not for touchdown.

**displacement** 1 In air interception, separation between target and interceptor tracks to provide interceptor acquisition space.

2 Distance from standard point (usually origin) measured in given direction.

3 Of IC engine, total volume swept by pistons during crankshaft rotation from BDC to TDC. Also known as swept volume.

4 Of airship or balloon, mass of air displaced by gas, expressed as weight or volume.

5 Lateral, vertical or angular \* of any point of zero DDM from localizer or glidepath.

**displacement thickness** Dimension characteristic of all boundary layers and equal to thickness of completely stagnant fluid having same overall effect. Equal to distance through which each streamline is displaced from position it would have assumed had fluid been inviscid.

$$\delta^* = \int_0^{\infty} \left(1 - \frac{u}{V}\right) dy \approx \sqrt{\frac{3\nu l}{V}}$$

where  $u$  is local boundary layer velocity,  $V$  free-stream velocity,  $y$  distance from solid surface,  $\nu$  kinematic viscosity and  $l$  characteristic length; actual boundary-layer thickness is nearly three times  $\delta^*$ .

**display** Graphic presentation of data for human study.

**Display Authorisation** Document required from national aviation authority before pilot can take part in airshow.

**display datum** Also called display centre, the mid-point of the crowd-line.

**disposable lift** Gross lift less fixed weight of an aerostat.

**disposable load** Maximum ramp weight minus OEW.

**DISR** 1 Descent imager [and] spectral radiometer.

2 Department of Industry, Science and Resources (Australia).

**disreef system** Timing system for automatically releasing reef of parachute.

**disrupter-type spoiler** Maximises local turbulence.

**disruptive threat** Pentagonese for a totally unpredicted threat that 'comes out of left field' to tilt the balance of power (DoD).

**dissimilar air-combat training** Mock air combat with friendly fighters of different type(s) acting part of enemy

aircraft, chosen for performance similar to that of enemy types and usually painted to resemble them.

**dissimilar redundancy** Use of different teams of engineers and programmers to design and code the software in different channels or control lanes in an attempt to avoid sudden multiple failure.

**dissipation trail** Rift in clouds caused by passage of [jet] aircraft. Abb. **distrail**.

**Dist** Distance or district (ICAO).

**distance** Standard airline unit is nm (contrary to SI); up to 1,200 nm airline \* calculated as  $D$  (great-circle distance) +  $(7 + 0.015D)$ ; above 1,200 nm measure is  $D + 0.02D$ .

**distance bar** Rigid bar linking tow vehicle with aircraft.

**distance marker** 1 Numbers painted on runway side to indicate thousands of feet to upwind end.

2 Reference marker on radar display; usually one of series of concentric circles. Also known as range marker.

**distance-measuring equipment** Airborne secondary radar sending out paired pulses (interrogation) received at ground transponder; time for round trip is translated into distance. DME offers 252 frequencies from 962 to 1,213 MHz at 1 MHz spacing, providing 126 channels each comprising two frequencies 63MHz apart.

**Distant Marshal** At gliding championship, official charged with arranging tugs and gliders in correct start sequence.

**distillate** 1 Any petroleum product.

2 Fuel oil, eg for diesels.

**distortion** 1 Undesired change in shape.

2 Undesired change in waveform.

3 In radio or sound reproduction, failure exactly to transmit or reproduce received waveform.

4 Variation of flow velocity or temperature across transverse plane through gas turbine.

**distraction** ECM mode in which hostile missile locks-on to decoy before it can see real target.

**Distress & Diversion** ATC cells [or in UK RAF units] which maintain 24-h monitor on v.h.f./u.h.f. emergency frequencies to offer assistance.

**distress frequency** Internationally 121.5 kHz.

**distress signal** Signal transmitted by vehicle in imminent danger.

**distributed-aperture system** EO sensors providing a protective sphere around aircraft for missile warning, navigation support and night operations.

**distributed data-processing** Distribution of EDP (1) capability among a number of positions in a geographically large system.

**distributed jet system** Any arrangement in which a power source is arranged to augment lift along the length of an aerofoil, examples being the jet flap, augmentor wing, EBF, IBF, CCW and USB.

**distributed load** One which has no single point of application but is distributed over a line or area, such as air load on a surface.

**distributed mass-balance** One distributed along span of control surface.

**distributed mission training** Creating realistic battle-space for aircrew by using networked simulators.

**distributor** 1 Rotary switch feeding HT in sequence to spark plugs.

2 Circumferential gallery connecting engine fuel manifold[s] to burner nozzles, probably incorporating a \*

valve, to compensated for gravity head and ensure all burners receive same supply.

3 See *spreader 2*.

**disturbance** 1 Upset to normal flight involving uncommanded change in AOA ( $\alpha$ ), normally quantified as change in  $C_L = \Delta\alpha$ .

2 Situation involving unpremeditated loss of control, eg pitch-up or stall/spin.

3 Local departure from normal wind conditions; often used to mean cyclone or depression.

**disturbance motion** Uncommanded movement of cockpit caused by turbulence, vibration or other input beyond pilot's capacity to counter.

**disturbed-state concept** Advanced yet simplified modelling of the mechanics of materials and interfaces.

**disturbing moment** Moment which tends to rotate aircraft about an axis.

**Ditacs** Digital tactical system.

**DITC** Department of Industry, Trade and Commerce (Canada).

**Ditco** Defense Information Contracting Organization; E adds Europe (Int.).

**ditching** Emergency alighting of aircraft, especially landplane, on water; thus verb to ditch.

**ditching characteristic** Way in which aircraft behaves on being ditched, dynamically and structurally.

**ditching device** Causes RPV to land or crash land when control has been lost.

**ditching drill** Emergency procedures for aircraft crew and passengers, performed before and after ditching.

**Ditco** Defense Information Technology Contracting Organisation.

**dither** Signal applied to keep servo motor or valve constantly quivering and unable to stick in null position.

**DITS** Data information transfer system [or set], centralised control of military aircraft communications.

**dits** Digital information transport standard.

**ditty bag** Container for AC(2)'s personal items and mission documents carried aboard combat aircraft.

**DITU** De-icer timer unit.

**DIU** Data interface unit.

**diurnal** Adjective generally meaning daily, or in 24h cycles.

**DIV** Divert, diverting, division.

**DIVC** Digital imagery and video compression.

**DIVADS** Division air-defense system (USA).

**dive** Steep descent with or without power.

**dive bomber** Aircraft designed to release bombs at end of steep dive towards objective.

**dive brake** Extensible and retractable surface designed to enable aircraft to dive steeply at moderate airspeed.

**dive-recovery flap** Simple plate flap hinged at leading edge on underside of wing at about 30% chord and opened to assist recovery from dive by changing pitching moment, removing local compressibility effects and increasing drag. Common c1942–50.

**divergence** 1 Disturbance which increases without oscillation.

2 Expansion or spreading out of vector field; considered to include convergence, or negative divergence.

3 Aeroelastic instability which results when rate of change of aerodynamic forces or couples exceeds rate of change of elastic restoring forces or couples.

**divergence, lateral** Divergence in roll, yaw or sideslip;

tends to a spin or spiral descent with increasing rate of turn.

**divergence, longitudinal** Non-periodic divergence in plane of symmetry; leads to nose dive or stall.

**divergence Mach No** Value higher than  $M_{crit}$  beyond which there is rapid drag rise.

**divergence speed** Lowest EAS at which aeroelastic divergence occurs.

**divergent oscillation** One whose amplitude increases at accelerating rate.

**diversion** 1 Change in prescribed route or destination made because of weather or other operational reasons.

2 Traffic diverted or claimed to be diverted from one airline by another, or to non-scheduled, charter or supplemental operators on same route. Frequently called material\*.

**diversity receiver** See *spaced diversity*.

**divided landing gear** Traditional fixed main gear but with no axle or horizontal member linking wheels.

**divided shielding** Nuclear radiation shield in two or more separated layers.

**divider** 1 Logic circuit which performs arithmetical division.

2 Bulkhead or non-structural panel separating flight deck from passenger cabin.

**dividing streamline** That which eventually separates a flow into two parts, such as that which impacts the dividing line along the leading edge of a wing.

**division, air** 1 Air combat organization normally consisting of two or more wings of similar type units (US).

2 Tactical unit of naval aircraft squadron, consisting of two or more sections.

**DIWS** Digital-imagery workstation.

**Dixie cup** Simple continuous-supply drop-down oxygen mask for passengers.

**DJ** Detector-jammer.

**DJE** Deception-jamming equipment.

**DJRP** Digital joint reconnaissance pod.

**DJTF** Deployable Joint Task Force (NRF).

**DK** Docked.

**DKATMS** Danish air-traffic management system.

**DL** 1 Delay line.

2 Deck landing.

3 *Downlink, or datalink*.

**DLA** 1 Delay message.

2 Defense Logistics Agency (US).

3 Dedicated lease agreement.

4 Helicopter rotor disc loading.

**DLAD** Delayed.

**DLAIND** Delay indefinite (DLI more usual).

**DLAND** Development of Landing Areas for National Defense (US, 583 airfields 1941–44)

**DLAP** Datalink application processor.

**DLARS** Data-link automated response system (USAF).

**DLB** Datalink buffer.

**DLC** 1 Direct-lift control.

2 Downlink communication (sonobuoy).

3 Datalink control; DU adds display unit, I identifier.

4 Diamond-like carbon.

5 Domestic labor cost [usually per ASM2] (US).

**DLCO** Deck-landing control officer.

**DLCRJ** Detect, locate, classify, record and jam.

**DLE** Datalink entry.

- DLF** Design load factor.
- DLFA** Deutsche Luftundraumfahrt Forschungsanstalt (G).
- DLGF** Data-load gateway function.
- DLGS** Datalink ground station, for reconnaissance pods (RAF).
- DLI** 1 Deck-launched intercept.  
2 Delay indefinite.  
3 Datalink interface, or interpreter.
- DLIR** Downward-looking IR.
- DLJ** Downlink jammer, or jamming.
- DLK** Datalink (AEEC).
- DLL** 1 Design limit load.  
2 Datalink library.
- DLLR** Deutsche Liga für Luft- und Raumfahrt (G Munich).
- DLM** 1 Declarative language machine.  
2 Depot-level maintenance (US, NATO).
- DLME** 1 Direct lift and manoeuvre enhancement.  
2 Datalink and message engineering.
- DLMS** Digital land-mass simulation, common though superseded by MIL-STD protocols.
- DLMSU** Data-loader mass storage unit.
- DLMU** Datalink management unit.
- DLNA** Diplexer/low-noise amplifier.
- DLO** Defence Logistics Organization (UK); ES(A) adds Equipment Support (Air).
- DLOC** Datalink operations centre (RAF).
- DLODS** Duct leak and overheat detection system.
- DLP** 1 Deck-landing practice.  
2 Datalink processor.  
3 Directional lethal package.  
4 Digital light projector.  
5 Defence learning portal.
- DLPP** Datalink pre-processor.
- DLPU** Datalink processor unit.
- DLQ** Deck-landing qualification.
- DLR** Deutsches Zentrum für Luft- und Raumfahrt [D-51147 Köln] (G).
- DLS** 1 DME landing system.  
2 Datalink splitter.  
3 Data-load[er] system.  
4 Defect-location system.
- DLSM** Depot-level software maintenance.
- DLST** Datalink surface terminal[s].
- DLT** Digital linear tape.
- DLTS** 1 Datalink and tracking system.  
2 Datalink test set.
- DLU** 1 Data-logger unit.  
2 Download unit.  
3 Dual laser unit.
- DLV** Deutsche Luftsport Verband (1919–45).
- DLW** Design landing weight.
- DLY, dly** Daily.
- DLZ** Dynamic launch zone.
- DM** 1 Data management.  
2 Disconnected mode.  
3 Docking module.  
4 Double Master (Loran station).
- dm** Decimetre.
- DMA** 1 Defense Mapping Agency, now part of NIMA (US).  
2 Délégation Ministérielle pour l'Armement (F).  
3 Direct memory access, or addressing.  
4 Defence Manufacturers' Association of Great Britain [500+ members; office, Grayshott. GU26 6LG] (UK).  
5 Dimethylamine.  
6 Descent-mode annunciator.  
7 Directorate of Military Aeronautics (UK 1914–17).
- DMAAC** Defense Mapping Agency Aerospace Center (US).
- DMAB** Defended modular-array basing.
- DMATC** Defence Mapping Agency Topographic Centre.
- DMAW** Deployable Multinational Air Wing (NATO).
- DMB** Digital multi-broadcasting.
- DMC** 1 Direct manufacturing, or maintenance, cost[s].  
2 Dynamic metal compaction, by EM pulses.  
3 Disaster-monitoring constellation.  
4 Display[s] and mission computer.  
5 Display management computer.  
6 Digital-map computer.
- DMD** 1 Deployment manning document[s] (USAF).  
2 Digital message, or *micromirror*, device.  
3 Digital map display; G adds generator.
- DMDR** Digital mission-data receiver.
- DME** 1 Distance-measuring equipment; suffixes /N, /P, /T and /W signify normal, precision, Tacan or time, and wide-spectrum.  
2 Designated maintenance examiner.
- DMEA** 1 Defect-mode and effect[s] analysis.  
2 Defense Micro-Electronics Activity (DoD).
- Dmean** Dynamic management of the European airspace network (Eurocontrol).
- DMED** Digital-message entry device.
- DME distance** Slant range.
- DME fix** Geographical position determined by reference to navaid which provides distance and azimuth information.
- DMEP** Data-management and entry panel.
- DME-P** DME, precision.
- DMES** Deployable mobility execution system.
- DME separation** Spacing of aircraft on airway in terms of distance determined by DME.
- DMET** DME with respect to time.
- DMF** 1 Digital matched filter.  
2 Département Militaire Fédéral (Switz.).  
3 Database, menu, function (software).  
4 Date of manufacture.
- DMFS** Distributed-mission fighter station.
- DMFV** Deutscher Modellflieger Verband eV (G).
- DMG** 1 Deutsche Meteorologische Gesellschaft eV (G).  
2 Digital map generator.
- DMI** 1 Department of Manufacturing Industry (Australia).  
2 Meteorological Institute [and service] (Denmark).
- DMICS** Design methods for integrated control systems.
- DMIF** Dynamic multi-user information fusion.
- DMIR** Designated manufacturer [or manufacturing] inspection representative.
- DML** Decision and modeling/modelling language.
- DMLS** Doppler microwave landing system.
- DMM** 1 Dama modem module.  
2 Data memory, or management, module.  
3 Digital multimeter.
- DMMF** Developmental manufacturing and modification facility.

**DMMH/FH** Direct maintenance man-hours per flight hour.

**DMN** Data multiplexing network.

**DMO** 1 Dependent meteorological office.

2 Development Manufacturing Organization (modifies aircraft as system development vehicles).

3 Defense Materiel Organization (US).

4 Defence Material [now increasingly spelt materiel] Organization (Australia).

5 Defence Management Office (central procurement body, Australia).

6 Distributed mission operations [C adds Center, at Kirtland AFB] (USAF).

**DMOR** Digest of mandatory occurrence reports.

**DMOS** 1 Double-diffused MOS.

2 Diffusive mixing of organic solutions (spaceflight).

**DMP** 1 Display management panel.

2 Direct-manning personnel.

**DMPI** Desired mean point of impact.

**DMPP** Display and multi-purpose processor.

**DMR** 1 Delayed multipath replica.

2 Dual-mode radar.

3 Digital modular radio.

4 Development material release.

**DMS** 1 Defensive management system, or subsystem.

2 Defense Mapping School.

3 Data, or database; management system. [DMSS, subsystem].

4 Data multiplexer subunit.

5 Domestic military sales.

6 Display mode selector.

7 Diminishing manufacturing sources [or service, or support], obsolete spare parts.

8 Diminishing materiel shortage[s].

9 Debris monitoring sensor, or system.

10 Dual-mode seeker.

11 Digital-map system.

12 Defense Message Service (US).

13 Docket management system.

**DMSH** Diminishing.

**DMSK** Differential-minimum shift keying.

**DMSMS** Diminishing manufacturing resources and material shortages.

**DMSO** Defense Modeling and Simulation Office.

**DMSP** Defense Meteorological Satellite Program (DoD).

**DMSS** 1 Deployable mission support system [can go overseas on detachment].

2 See *DMS*[3].

**DMT** Distributed mission trainer [or training].

**DMTI** Digital moving-target indicator, or indication.

**DMU** 1 Distance-measurement unit.

2 Data-management unit.

3 Digital master unit.

4 Digital mock-up.

**DMV** See *DMFV*.

**DMWH** Direct-maintenance working hour[s].

**DMZ** Demilitarized zone.

**DNA** 1 Defense Nuclear Agency (US).

2 Do not approach area.

3 Direction de la Navigation Aérienne (SGAC,F).

4 Does not apply.

**DNAC** Direction Nationale de l'Aviation Civile (Mali).

**DNAPS** Day/night adverse piloting system.

**DNATS** Day/night airborne thermal sensor.

**DNAW** Director[ate] of Naval Air Warfare (UK).

**D/NAW** Day/night adverse weather.

**DNC** Direct (or digital, or direction[al], or distributed) numerical control (NC machining).

**DNCO** Duty not carried out.

**DND** Department of National Defense (Canada).

**DNG** Danger[ous].

**DNI** Director of National Intelligence.

**DNIA** Duty not involving alert.

**DNIF** Duty not involving flying.

**DNL** Day/night sound level.

**DNMI** Meteorological Institute [and service] (Norway).

**DNS** 1 Direct numerical simulation.

2 Dense.

3 Doppler navigation system.

4 Direct Navier-Stokes.

**DNSARC** Department of the Navy System Acquisition Review Council (US).

**DNSLP** Downslope.

**DNTAC** Dirección Nacional de Transporte Aéreo Civil (Arg.).

**DNV** Audit [certification] bureau (Neth.).

**DNVT** Digital non-secure voice terminal.

**DNW** 1 Deutsch-Niederländischer Windkanal [wind tunnel] (G/Neth.).

2 Directional network waveform.

**DO** 1 Drawing office.

2 Drop-out (mask).

3 Director of Operations.

**Do** 1 Wing profile drag.

2 Maximum outside diameter of tyre [tire].

**DOA** 1 Delegation option authorization; FAA document authorizing company to do its own aircraft type-certification.

2 Defence Operational Analysis Establishment (UK).

3 Direction of arrival (ECM).

4 Dominant obstacle allowance.

5 Department of Aviation (several countries, e.g. Thailand).

6 Design organization approval [-JA adds joint airworthiness].

**DOB** 1 Dispersed [or deployment] operating base.

2 Deployed Operating Base [2006-] (RAF).

**DOC** 1 Direct operating cost[s].

2 Delayed-opening chaff.

3 Designed operational capability.

4 Designated operational coverage.

**DoC** Department of Commerce (US 1926-38).

**Doc** Document [ation].

**DOCC** Deep-operations co-ordination cell.

**DOCCT/S** Dama orderwire channel controller trainer/simulator.

**dock** 1 Structure surrounding whole or portion of aircraft undergoing maintenance, to provide easy access for ground crew to reach all parts.

2 Large volume in factory, usually extending well below floor level, for installation of giant tools (jigs) and master tools.

**docking** 1 Mechanical linking of two spacecraft or payloads.

2 Forward movement of airliner to nose-in stand at terminal.

3 Process of manoeuvring airship into its shed after landing.

**documentation** 1 In EDP (1), formal standardized recording of detailed objectives, policies and procedures.

2 Any hard-copy media, such as aircraft servicing manual, illustrated parts catalogue, repair manual, servicing diagram manual, cross-servicing guide, aircrew or flight manual (usually three volumes), flight reference cards, equipment manuals, servicing cards, and possibly checklists. In aircraft restoration \* is required to authenticate every part.

**DoD** Department of Defense (US, from 1947).

**Dodac** DoD ammunition code.

**Dodaf** DoD architecture framework.

**DODIIS** DoD intelligence information system.

**DoE** 1 Department of the Environment, now DETR (UK).

2 Department of Energy (US).

3 Design of experiment[s].

**DoETR** See *DETR*.

**DOF** 1 Designated overhaul facility.

2 Date of flight (ICAO).

**DoF, DOF** Degree[s] of freedom.

**DofA** Department of Aviation (Australia).

**dog** 1 Bad individual example of particular aircraft type.

2 Aircraft type all examples of which exhibit bad flying qualities (both meanings colloq.).

**dogbone** Bone-shaped tie, eg linking rigid-rotor blade to hub, or reacting engine thrust on testbed.

**dogfight** Air-to-air combat at close visual range.

**doghouse** 1 Fairing for instrumentation, esp. on rocket (colloq.).

2 Balloon landing which results in basket being overturned.

**dogleg** 1 Track over several waypoints away from direct route.

2 Directional turn in space launch trajectory to improve orbit inclination.

**dogship** Repeatedly modified developmental prototype a/c [no reflection on handling qualities].

**dogtooth** Discontinuity at inboard end of leading-edge chordwise extension, generating strong vortex.

**DOHC** Double overhead camshaft.

**Dohud** Diffractive-, or diffraction-, optics head-up display.

**DOI** Descent (or docking) orbit insertion.

**Dol** Department of Industry (UK, now DTI).

**DOL** Dispersed operating location.

**DOLE** Detection of laser emitters.

**doll's eye** Cockpit magnetic indicator which when triggered clicks to a white warning aspect. Increasingly used to mean *blinker*.

**dolly** 1 Airborne data-link equipment.

2 Metal back-up block used in hand riveting or hammering out dents in sheet.

3 Pneumatic-tyred truck tailored to elevate and grasp engine, skid-equipped helicopter, radar or other item, and transport it on ground.

4 Vehicle or trolley equipped with ballmats, rollers [can be powered] or other interfaces for ULDs. Other names: pallet transporter or trailer, container trailer or carrier or even cargo trailer.

5 Each truck in airport baggage train.

**dolly roll** Dolly with payload carried on two roller-

supported rings for rotation to any desired angle to facilitate inspection and maintenance.

**Dolram, DOLRM** Detection of laser, radar and millimetre (millimetric) waves.

**DOM** 1 Domestic, within US.

2 Director of maintenance.

**dome** 1 Flight simulator [esp. for combat a/c] with replica cockpit at centre of hemisphere on which images projected.

2 Convex pressure bulkhead.

3 Astro\*.

**dome compartment** Space allocated within convex pressure bulkhead for cargo or other removables.

**dome rivet** Rivet with deep head, curved top and almost parallel sides.

**domestic** Involving one's own country only.

**domestic brief** Before combat or training mission, portion of briefing which allocates aircraft (and explains where they are parked) and call-signs.

**domestic reserves** Fuel reserves for scheduled domestic flight.

**domestic service** Airline service within one country.

**domicile** Country in which air carrier is registered.

**Domsat** Domestic (usually communications) satellite.

**donk** Aircraft engine[s] or power (colloq. noun or transitive verb).

**DO-160** 'Environmental conditions and test procedures for airborne equipment' (RTCA).

**DO-178** 'Software considerations in airborne systems and equipment certification' (RTCA).

**DO-178B** Design and certification procedure for software [civil aviation]. Level A is most comprehensive, Level E cheapest. See DO-254. (RTCA).

**door bundle** Para-dropped load immediately preceding stick of parachutists.

**door-hinge rotor** Articulated blades on flapping hinges visually similar to door hinge.

**Doors** Dynamic-object oriented requirements system.

**DOP** 1 Dioctyl phthalate [air-filter measures].

2 Defence and overseas policy (UK).

3 Detailed operation[al] procedure.

4 *Dilution of precision*.

5 Digital on-board processor.

**DoPAA** Description of proposed actions and alternatives.

**dope** 1 Liquid applied to fabric to tauten it by shrinking, strengthen it and render it airtight by acting as filler. Usually compounded from nitrocellulose or cellulose acetate base, and soluble in thinners.

2 Ingredient added to fuel in small quantities to prevent premature detonation (colloq.).

**doping** 1 Treatment of fabric with dope.

2 Addition of impurities to semiconductor to achieve desired electronic characteristics.

3 To prime piston engine with spray of neat fuel prior to starting from cold. Hence\* pump, usually operated manually.

**doploc** Doppler phase lock; active tracking system which determines satellite orbit by measuring Doppler shift in radio signals transmitted by satellite.

**Doppler** *Doppler effect*.

**Doppler beam sharpening** As aircraft radar aerial points anywhere other than dead-ahead, computer breaks each reading into small pieces and reassembles them as high-

resolution map using Doppler correction to eliminate background clutter.

**Doppler blade flash** Transient bright spots on radar display caused by returns from rotating helicopter rotor.

**Doppler correction** Numerical correction to observed frequency or wavelength to eliminate effect of relative velocity of source and observer (eg removal of sea wave velocity from Doppler groundspeed).

**Doppler effect** Increase or decrease in frequency of wave motion, such as EM radiation or sound, sensed by observer or receiver having relative speed with respect to source. Thus, police-car siren seems to drop in pitch as it passes stationary observer at high speed. Approximate figures for X (I/J)-band: 34.3 Hz per kt, 30 per mph, 19 per km/h, 20 per ft/s. Also known as Doppler shift.

**Doppler error** In Doppler radar, error in measurement of target radial velocities due to atmospheric refraction.

**Doppler groundspeed** Groundspeed output from Doppler.

**Doppler hover** VTOL, esp. helicopter, hover controlled over desired geographical spot by Doppler coupler to AFCS.

**Doppler navigation** Dead reckoning by airborne navaid which gives continuous indication of position by integrating along-track and across-track velocities derived from measurement of Doppler effect of radar signals sent out (usually in four diagonal directions) and reflected from ground.

**Doppler radar** Radar which measures Doppler shift to distinguish between fixed and moving targets, or serve as airborne navaid by out-putting groundspeed and track.

**Doppler ranging (Doran)** CW trajectory-measuring system which uses Doppler effect to measure velocities between transmitter, vehicle transponder and several receiving stations; obviates necessity of continuous recording by making simultaneous measurements with four different frequencies.

**Doppler shift** 1 See *Doppler effect*.

2 Magnitude of Doppler effect measured in Hz or (astronomical) in terms of visible-light spectrum.

**Doppler spectrum** Output of Doppler radar with finite beam width.

**Doppler velocity and position (Dovap)** CW trajectory-measuring using Doppler effect; ground transmitter interrogates a frequency-doubling transponder and output is received at three or more sites for comparison with interrogation frequency, intersection of ellipsoids formed by transmitter and each receiver providing spatial position.

**Doppler VOR** Point-source navaid suffering all the faults of VOR but using wide-angle ground aerial which reduces errors due to local terrain. It uses an AM reference signal.

**DOR** 1 Directorate of Research (previously of Operational Research), under Chief Scientist (CAA, UK).

2 Dynamic observation report (ATOS).

**DORA** Directorate of Research and Analysis (UK).

**Dora** New technology for aerospace digital computers (R).

**Doran** *Doppler ranging*.

**Dorca** Directive on occurrence-reporting in civil aviation (CAA, UK).

**dorsal** 1 Pertaining to the back, interpreted as upper surface of vehicle body.

2 Structural member running longitudinally along centreline at top of flying boat hull.

**dorsal fin** Shallow vertical surface on upper centreline sloping upwards to blend with main fin.

**dorsal spine** Ridge running along top of fuselage from cockpit to fin for aerodynamic or system-access purposes.

**dorsal turret** Powered gun turret on top of fuselage, normally able to cover upper hemisphere.

**DOS** 1 Disk operating system.

2 Denial of service (cyber attack).

**DoS** 1 Department of Supply (Australia).

2 Department of Space (India).

**DOSAAF** Voluntary society for support of Army, Air Force and Navy (USSR).

**DOSAV** Voluntary society for assisting Air Force (USSR, 1948–51).

**DOSC** Direct oil-spray cooled.

**dose rate** Incident rate of ionising radiation, measured in röntgens or mrem per hour.

**dose rate contour line** Line joining all points at which dose rates at given times are equal.

**dosimeter** 1 Instrument for measuring ultra-violet in solar and sky radiation.

2 Device worn by persons which indicates dose to which they have been exposed (each Apollo astronaut wore four passive \* and carried a fifth personal-radiation \* in sleeve pocket).

**DoT** 1 Department of Transportation (US, 1967), Canada and UK.

2 Designating optical tracker.

3 Day of training.

4 Details of task [unofficially “Dream of today”] (RAF).

**dot** Electronic dot displayed on CRT for cursive writing, providing steering guidance or other information.

**DOTe** Director, operational test and evaluation.

**DoTI** Department of Trade and Industry (UK, DTI is preferred).

**Dotram** Domain-tip random-access memory.

**DOTS** Dynamic ocean[c] track system [flexible routing responsive to PDWC].

**DO-254** Design and certification procedure for avionics hardware. See DO-160, 178 and 178B (RTCA).

**double attack** Co-ordinated air/air operation by two partners making repeated synchronized yoyos (lo and hi-speed) and BRA(2)s as an effective ACM system.

**double-base propellant** Solid rocket propellant using two unstable compounds, such as nitrocellulose and nitroglycerine, which do not require a separate oxidiser.

**double blank** Parachute with two gores removed.

**double-bubble** Fuselage cross-section consisting of two intersecting arcs [almost complete circles] with floor forming common chord.

**double-channel simplex** Two RF channels, one being disabled while the other is used to transmit.

**double curvature** Curvature in more than one plane; also known as compound curvature.

**double delta** Delta wing with sharply swept leading edge inboard changing at about mid-semi-span to less sharply swept outer section.

**double designation** Nomination by a national government of two of that country’s airlines as national flag-carriers operating scheduled service on same international route.

**double drift** Method of determining wind velocity by observing drift on three true headings flown in specific pattern.

**double-end feed** Cooling air fed under pressure to both inner and outer radii of a turbine nozzle guide vane, to emerge through [possibly hundreds of] surface holes.

**double engine** Power unit containing two engines driving co-axial propellers; usually one half can be shut down for cruising flight.

**double-entry compressor** Centrifugal or radial-flow compressor that takes in fluid on both sides of impeller.

**double farval** Aerobatic routine by section of four in diamond with 1 (box) and 4 (lead) inverted with respect to 2 and 3; thus at times it would be 2 and 3 that were inverted, 1 and 4 then being upright.

**double-flow engine** Usually, bypass turbojet or turbofan.

**double-fluxe** Bypass or turbofan engine (F).

**double-headed** Warship having SAM systems both fore and aft of central superstructure.

**double-hinged rudder** Rudder with additional hinge near mid-chord for maximum effectiveness at low speeds with large camber and total angle.

**double horn** Dangerous ice accretion on LE forming two LEs, with channel between them.

**double lift** Winchman and rescuee together.

**double manned** Two crews per aircraft.

**double modulation** Carrier wave of one frequency is first modulated by signal wave and then made to modulate second carrier wave of another frequency.

**double notch** Flight-control system giving reduced surface movement for given input.

**double propulsion** Use of two independent sources of thrust, one for lift and the other for propulsion, in an aerodyne. Historical examples include Rotodyne and Mirage III-V.

**double-protection honeycomb** Honeycomb structure protected by chemical surface conversion process and then varnish dip.

**doubler** Additional layer of sheet or strip to reinforce structural joint.

**double-root blade** Rotating blade or vane with root fitting at each end to enable it to be fitted into disc either way.

**double-row aircraft** Cargo airlifter able to carry unit loads (military vehicles, pallets, etc) side-by-side.

**double-row engine** See *twin-row*.

**double sideband** AM signal with carrier removed [still needs some bandwidth].

**double slot** Passive-suction system in upper surface of wing of high-subsonic aircraft in which air is continuously extracted immediately downstream of shockwave (to stabilize and weaken it) and discharged immediately upstream of it. Improves  $C_L$  and buffet boundary.

**double-slotted flap** Flap with vane and thus two slots, one between wing and vane, and the second between vane and flap.

**double-T** Tail comprising a vertical surface above each of two booms joined at top by a horizontal.

**doublet** 1 In fluid mechanics, source and sink of equal strength whose distance apart is zero.

2 Violent uncommanded stop-to-stop rudder movement.

3 Any precisely timed commanded pulse of  $\pm n^\circ$ , usually on the elevator.

**doublet antenna** Antenna (aerial) composed of two similar elements in line but separated and fed in centre, and having total length equal to half wavelength; half a dipole.

**double taper** Taper of aerofoil which incorporates change in angle at part-span.

**Double Tumble** Aerobatic manoeuvre comprising  $720^\circ$  rotation in pitch about the transverse axis, AOA alternately positive and negative.

**double-wedge aerofoil** Section suitable for straight supersonic wings and blades of supersonic axial compressors, characterised by sharp wedge-like taper and sharp leading and trailing edges.

**double wing** See Junkers.

**doughnut** 1 Common shape for plasma contained in toroidal bottle.

2 Low-pressure tyre on small wheel for soft airfields.

3 Figurative representation of a thermal, in which central upflow can rise no further and turns over into surrounding downflow.

**Douglas protractor** Transparent square covered with precise rectilinear grid and degrees around the edge.

**Douglas scale** Table of numerical values of sea state [nine, from calm to confused] as one axis and swell [again nine] as the other.

**DOV** 1 Data over voice.

2 Discrete operational vehicle (low-profile, does not appear to be military or para-military), usually non-flying.

**Dovap** Doppler velocity and position.

**Dover control** Patented linkage permitting all engines of multi-engine aircraft to vary power in unison or with any desired differences [obs.].

**DOW** Dry operating weight.

**Dowgard** Aviation ethylene glycol (Dow Chemicals).

**down** Faulty and unusable.

**downburst** Local but potentially dangerous high-velocity downward movement of air mass, eg when arrested by sea-breeze front; chief cause of windshear.

**down-conversion** To lower EM frequency-band.

**downcutting** Milling so that teeth enter upper surface of workpiece.

**downdraft** Bulk downward movement of air such as commonly found on lee side of mountain or caused by descending body of cool air.

**downdraft carburettor** One in which air is taken in at top and travels downwards; reduced fire hazard, and less risk of foreign-object ingestion.

**downed aircraft** Aircraft that has made forced landing or ditching, esp. because of battle damage.

**Downey cycle** A standard product life cycle, used by the British MoD.

**down-45 line** Straight sustained dive at inclination of  $45^\circ$ .

**downgrade** To reduce security classification of a document or item of classified material.

**downlink** Radio transmission from air- or spacecraft to Earth.

**downlink data** Transmissions to Earth from spacecraft giving such information as astronaut respiration or cabin temperature; computers alert flight controllers to any deviation (7).

**download** 1 Any load acting downwards, eg on wing at negative angle of attack.

2 To remove unexpended ordnance or camera magazines from aircraft after operational sortie or aborted mission.

**downlock** Locks landing gear in extended position.

**down-look radar** Radar capable of detecting targets close to ground when seen from above.

**downrange** Away from launch site in direction of target or impact area.

**downselect** To select [Pentagonese].

**downsize** 1 Of manufacturer, to reduce payroll.

2 Of air-carrier, to switch to smaller aircraft.

**downspring** Long-travel coil spring imparting near-constant force on lightplane elevator control which at low airspeeds makes pilot pull stick back, effect fading as airspeed rises.

**downstage** From upper stages of multi-stage vehicle downwards (signals, vibration, fluid flow, pressure, etc).

**downstairs** At a lower altitude (UK colloq.).

**downstroke** In a piston engine, movement of the piston from top dead centre to bottom dead centre.

**downtilt** Downward tilt of thrust axis, normally of single-engine tractor propeller aircraft, to maintain adequate longitudinal stability, esp. in high-power climb.

**downtime** Period during which hardware is inoperative following technical failure or for maintenance.

**downward identification light** White light on underside of aircraft for identification, with manual keying for Morse transmission.

**downwash** 1 Angle through which fluid stream is deflected down by aerofoil or other lifting body, measured in plane parallel to plane of symmetry close behind trailing edge; directly proportional to lift coefficient.

2 Angle through which fluid stream is deflected by a propeller, or a rotor of rotary-wing aircraft, measured parallel to disc.

3 Some authorities consider it not as an angular measure but as a rate of change of momentum, equal but opposite to lift. It is increasingly being taken to mean the induced velocity in the airflow through a propeller, hence the need for the term \* angle, symbol  $\epsilon$ .

4 Not least, often taken to mean linear velocity of flow through helicopter main rotor in hovering flight.

**downwind** Direction away from source of wind;  $G/S = TAS + W/V$ .

**downwind leg** Leg of circuit flown downwind,  $180^\circ$  from landing direction.

**downwing side** Inner side of aeroplane in banked turn.

**DP** 1 Direction des Poudres (F).

2 Data (or display) processor.

3 Differential protection.

4 Dual-purpose (in case of artillery, against air and surface targets).

5 Dew point.

6 Departure, or departure procedure.

7 Deep.

8 Deep penetration.

**D<sub>p</sub>** Parasite drag.

**dP** Differential pressure.

**DPA** 1 Defence Procurement Agency [of the MoD, managing 1,000+ projects, Bristol BS34 8JH] (UK).

2 Data Protection Act.

3 Diphenylamine.

4 Digital pressure altimeter.

5 Digital pre-assembly.

6 Defense Production Act (USAF).

**DPAC** Direction des Programmes Aéronautiques Civiles (F).

**DPAO** Defence Public-Affairs Organization [Canberra, ACT2600] (Australia).

**DPB** 1 Dual-purpose bomblet, for soft- or hard-skinned targets.

2 Defence Procurement Board (India).

**DPBAC** Defence Press and Broadcasting Advisory Committee (UK).

**DPBV** Disabled-passenger boarding vehicle.

**DPC** 1 Defence Planning Committee (NATO).

2 Defence Production Committee (J).

3 Departure control.

4 Digital phase coding.

**DDPCM** Differential, or digital, pulse-code modulation.

**DPD** Data-processing device.

**DPDS** Distributed, or digital, processing and display system (maritime sensors).

**DPDT** Double-pole, double-throw.

**DPDU** Data protocol data, or display, unit.

**DPE** 1 Designated pilot examiner.

2 Department of Public Enterprise [runs Irish civil aviation].

3 Duration of present emergency, the notional period of service for members of the armed services conscripted or volunteered in WW2 (UK).

**DPEE** Directorate of Proof and Experimental Establishments (UK, MoD formerly).

**DPELS** Dual-pack Evolved Sea Sparrow launch system.

**DPEM** Direct-purchased equipment maintenance.

**DPEO** Dispersant piston-engine oil.

**DPEWS, D-pews** Design-to-price electronic-warfare suite.

**DPF** Data-processing facility.

**DPFG** Data-processing functional group.

**DP.47** See *Silcodyne*.

**DPG** 1 Data-processor, or processing, group.

2 Defense Planning Guidance, policy directive underlying the budget process (DoD).

**DPH** Dew-point hygrometer.

**DPI** Direct petrol-injection.

**dpi** Dots per inch.

**DPICM** Dual-purpose improved conventional munition.

**DPKO** Department of PeaceKeeping Operations (UN).

**DPL** 1 Disabled-passenger lift.

2 Dewpoint line.

3 Denied Parties List [with whom no US industrial supplier is permitted to trade] (US).

4 Diode-pumped laser.

**DPLA** RPV or UAV (R).

**DPLL** Digital phase-lock loop.

**DPM** 1 Digital pulse-modulation.

2 Digital processing module.

3 Digital plotter map.

4 Development program manual.

**DPMA** Data Processing Management Association (US).

**DPMAA** Direction du Personnel Militaire de l'Armée de l'Air (F).

**DPMC** Digital-plotter map computer.  
**DP/MC** Display processor and mission computer.  
**DPMO** Department of Defense POW/missing personnel office (US).  
**DPNG** Deepening.  
**DPOC** Deep and persistent offensive capability (UK).  
**DPOI** Desired point of impact, or interest.  
**DPP** 1 Deferred-payment plan.  
 2 Development and production phase.  
**DPPDB** Digital point-positioning database (NIMA DoD).  
**DPR** 1 Dual-port RAM(1).  
 2 Aeronautical Association (N. Korea).  
**DPRAM** See preceding.  
**DPRE** Designated parachute rigger/examiner.  
**DPRK** Central aeronautical association [N Korea].  
**DPS** 1 Differential phase-shift.  
 2 Dynamic pressure sensor (brake pedals).  
 3 Descent propulsion system (LM or planetary lander).  
 4 Deorbit propulsion stage.  
 5 Data-processing system, or set.  
**DPSK** Digital, or differential, or differentially coherent, phase-shift keying.  
**DPT** 1 Durability proof test.  
 2 Depth.  
**DPTAC** Disabled Persons Transport Advisory Committee (DTLR).  
**DPTCA** Director, project technical cost-analysis.  
**DPU** 1 Display processor unit.  
 2 Digital, or data, processing unit.  
**DQ** Design qualification, demo of required reliability.  
**DQA** Directorate of Quality Assurance; TS adds Technical Support.  
**DQAB** Defence Quality Assurance Board; E adds Executive (UK).  
**DQ&R** Durability, quality and reliability.  
**DQAR** Digital quick-access recorder.  
**DQI** Digital-quality inertial.  
**DQTS** Data-quality tool set.  
**DR** 1 *Dead reckoning*.  
 2 Dispense rate (mass/time) of chaff or aerosol (ECM).  
 3 Dispatch reliability.  
 4 Deck run.  
 5 Direct.  
 6 Data record[ing], or receptacle.  
 7 Design Review [followed by number].  
**Dr** Drift.  
**D<sub>r</sub>** Receiver antenna directivity.  
**d<sub>r</sub>** 1 Increment of radius, e.g. helicopter rotor blade.  
 2 Radar resolution in range.  
 3 Maximum depth of a rib.  
**DRA** 1 Defence Research Agency (part of QinetiQ/ DSTL, previously DERA).  
 2 Direct radar access.  
 3 Dual-rail adapter.  
 4 Dual-row airdrop.  
 5 Direct radiating array.  
**dracone** Large inflatable fluid (eg fuel, water) container, towable through sea and usable on soft land (strictly, Dracone).  
**Drads, DRADS** Degradation of radar defence systems (active jamming by MIRVs).  
**DRaFT** Digital radio-frequency tag (USAF).  
**drag** Retarding force acting upon body in relative

motion through fluid, parallel to direction of motion. Sum of all retarding forces acting on body, such as induced \*, profile \*. Basic equation is  $D = C_D \frac{1}{2} \rho V^2 S$  where  $C_D$  is drag coefficient,  $\rho$  fluid density,  $V$  relative speed (e.g., TAS) and  $S$  total area, or total wing area.

**drag area** Area of hypothetical surface having absolute drag coefficient of 1.0.

**drag axis** Straight line through centre of gravity parallel to direction of relative fluid flow.

**drag bracing** Internal bracing commonly used in fabric-covered wings to resist drag forces; may consist of adjustable wires, rod or tubes between front and rear spars or between compression ribs.

**drag chute** Parachute streamed from aircraft to reduce landing run, or steepen diving angle. Also called brake or braking parachute, deceleration parachute drogue parachute or parabrake.

**drag-chute limit** Maximum EAS at which drag chute may be deployed.

**drag coefficient** 1 Non-dimensional coefficient equal to total drag divided by  $\frac{1}{2} \rho V^2 S$  where  $\rho$  is fluid density,  $V$  relative speed and  $S$  a representative area of the body, all units being compatible.

2 Coefficient representing drag on given body expressed in pounds on one square foot of area travelling at speed of one mile per hour (arch.).

**drag creep** The [undefinable] point at which drag starts to rise prematurely before  $M_{DD}$  is reached. The usual cause is formation of small shocks round a blunt leading edge, cured by root extension.

**drag curve** Plot of lift coefficient against drag coefficient, also known as drag polar.

**drag-divergence Mach number** Loosely, that at which shock formation becomes significant from viewpoints of drag, buffet and control. A common precise definition is  $M$  at which  $dD/dM = 0.05$ ; NASA Langley chooses 0.1, while another definition is simply  $M$  1.2. Also called drag-rise  $M$ ,  $M_{DD}$  and  $M_{div}$ .

**drag hinge** Approximately vertical hinge at root of helicopter main-rotor blade, allowing limited freedom to pivot to rear in plane of rotation.

**drag index** Usually means profile drag at 100 ft/s divided by total wetted area.

**drag link** Structural tie bracing a body, such as landing gear, against drag forces.

**drag manoeuvre** Air-combat manoeuvre in which one of a pair draws hostile aircraft into a firing position for his partner; can be used as verb.

**drag member** Structural component whose purpose is to react drag forces.

**Dragn** Dead-reckoning augmented GPS navigator.

**Dragon** Deployable ram-air glider with on-board navigation (UAV).

**drag parachute** 1 See *drag chute*.

2 See *drogue* (3).

**drag polar** Plot of  $C_D$  against  $C_L^2$ .

**drag rib** See *Compression rib*.

**drag rise** Sudden increase in wing drag on formation of shockwaves.

**drag rope** Thrown overboard from balloon to act as brake or variable ballast when landing; also called trail rope or guide rope.

**drag rudder** Wing-tip surface capable of imparting drag

[e.g. by splitting into upper/lower halves] on tailless aircraft.

**drag strut** Strut reacting drag forces, esp. one incorporated in a wing.

**drag-weight ratio** Ratio of total drag at burnout to total weight of missile or rocket.

**drag wires** 1 Wires inside or outside wing(s) to react drag.

2 Wires led forward from car or other nacelle of airship to hull or envelope to react drag.

**drain mast** Pipe, usually telescopic through which liquid [fuel, water from cabin environmental system, grey water] can be extracted. No relevance to toilet servicing.

**drains tank** May be provided to collect fuel that escapes from any part of the [gas-turbine] engine, often continuously emptied by suction into the combustion chamber. Fuel is drained here after shutdown, and an ejector pump may transfer it back on engine start.

**DRAM, Dram** Dynamic random-access memory.

**draping code** Virtual processing tool [simulation] for composite structure in which dry preform[s] are wrapped around smooth tool.

**Drapo** Dessin et réalisation d'avions par ordinateur (F).

**drawing introduction schedule** Checks details for compliance with authorities.

**DRB** Defense Resources Board (US).

**DRC** 1 Defense Review Committee (NATO).

2 Data-recording cartridge.

**DRD** 1 Dry-runway distance.

2 Digital radar display.

**DRDB** Dual-redundant data bus.

**DRDC** Defense Research and Development Canada (Valcartier, Quebec).

**DRDF** VHF/UHF radio D/F (UK).

**DRDL** Defence R & D Laboratory (Hyderabad) or Laboratories (India).

**DRDO** Defense R & D Organization (US, India).

**DRDPS** Digital radar data-processing system.

**DREA** Defence Research Establishment Atlantic (Canada).

**DRED** Ducted-rocket engine development.

**Dreem** Drone radar electronic enhancement mechanism.

**Drem lighting** Visual landing approach aid with red, amber and green lights in accurately inclined tubes pointing up glidepath (from RAF Drem, Scotland, 1937).

**DREO/P/S** Defense Research Establishments: Ottawa/Pacific/Suffield (Canada).

**DRER** Designated Radio Engineering Representative (FAA).

**Dress** Distributed and redundant electrical nose-gear steering system.

**dressed** Equipped with all externally attached accessories, piping and control systems, esp. of an aircraft engine or accessory gearbox.

**DRET** Direction des Recherches, Etudes et Techniques (F).

**DREV** Defense Research Establishment, Valcartier [Québec G3R 1X5] (Canada).

**DRF** 1 Dual-role fighter.

2 Deutsche Rettungsflugwacht eV, air rescue service (G).

3 Data-recording facility.

**DRFM** Digital RF memory; S adds system[s], TG techniques generator.

**DRFT** Drift

**DRG** During.

**DRIC** Defence Research Information Centre (UK, Glasgow).

**DRI/DRO** Dolly roll-in to dolly roll-out; engine-change elapsed time.

**Drier, DRIER** Dial-up rate IP [internet protocol] over existing radios (USAF).

**drift** 1 Lateral component of vehicle motion due to crosswind or to gyroscopic action of spinning projectile.

2 Slow unidirectional error movement of instrument pointer or other marker.

3 Slow unidirectional change in frequency of radio transmitter.

4 Angular deviation of spin axis of gyro away from fixed reference in space.

5 In semiconductors, movement of carriers in electric field.

6 Drag (until 1915).

7 Outward flow of boundary layer over swept wing, drawn towards tips by peak suction.

**drift angle** Angle between heading (course) and track made good.

**drift climb** Gentle climb after takeoff through noise-sensitive area at power just sufficient for ROC to be positive.

**drift correction** Angular correction to track made good to obtain correct track (for navigation, bombing, survey etc).

**drift-down** Gradual en route descent from top of flight profile (now rare).

**drift error** Change in output of instrument over period of time, caused by random wander.

**drift indicator** See *drift meter*.

**drift meter** Instrument indicating drift angle; in simple optical form a hair line is rotated until objects on ground travel parallel with it.

**drift sight** See *drift meter*.

**drill** 1 Correct procedure to be followed meticulously, eg in particular phase of flight such as takeoff.

2 Training flight by a formation, including formation changes.

**drill card** Checklist for correct procedures to be followed in particular phase of flight.

**drill round** Dummy missile or gun ammunition used for training.

**D-ring** 1 Ring in shape of capital D to which suspension ropes from balloon or other lighter-than-air craft are attached.

2 Handle for pulling parachute ripcord.

**drink [the]** Open sea or ocean (RAF colloq., equivalent to *oggin*).

**drip flap** Strip of fabric secured by one edge to envelope or outer cover of balloon or other lighter-than-air craft to deflect rain from surface below it and prevent it from dripping into basket or car; also helps to keep suspension ropes dry and non-conducting. Sometimes called drip band or drip strip.

**drip loop** Inserted in wiring loom to allow for future extra length, and to direct condensation to drip in harmless place.

**dripshield** Any tray for collecting fluid under machinery.

**drip strip** See *drip flap*.

**DRIR** Direct-readout infra-red.

**DRIRU** Dry-rotor inertial reference unit.

**DRISS** Digital read-in sub-system.

**Drive** Documentation review into video entry.

**driveline** Long essentially two-dimensional transmission of rotation, power or position, e.g. rotary flap-drive torque shaft along rear part of wing from a central actuator.

**driver, airframe** Pilot, especially in tanker/transport community (RAF colloq.).

**drive surface** In NC machining or GPP, real or imaginary surface that defines direction of cutter travel.

**driving band** Band of soft metal around projectile fired from rifled gun which deforms into barrel rifling to impart spin.

**Drivmatic riveter** Patented power-driven riveter which closes aircraft rivets at high speed; can drill, countersink, insert rivet, close and mill head in sequence.

**DRIW** Data redundancy in information warfare (USAF).

**drizzle** In international weather code, precipitation from stratus or fog consisting of small water droplets.

**DRK Flugdienst** Red Cross flying service (G).

**DRL** Data-reduction laboratory.

**DRLMS** Digital radar land-mass simulation (for TFR, GM, Nav-weaps, EW).

**DRM** 1 Ducted rocket motor (USAF).

2 Digital recording module.

**DRME** Direction des Recherches et Moyens d'Essais (F).

**DRN** Document release notice.

**DRO** 1 Daily routine orders.

2 Drone Recovery Officer.

**drogue** 1 Conical funnel at end of in-flight refuelling hose used to draw hose out and stabilize it, and guide probe of receiver.

2 Fabric cone used as windsock, or towed behind aircraft as target for firing practice, or as sea anchor by seaplanes.

3 Conical parachute attached to aircraft, weapon or other body to slow it in flight, to extract larger parachute or cargo from aircraft hold, or for stabilizing the towing mass such as a re-entry body or ejection seat.

4 Part of connector on a spacecraft (eg Apollo lunar module) into which a docking probe fits.

**drogue parachute** Drogue (3), tautological.

**drogue recovery** Recovery system for spacecraft in which one or more small drogues are deployed to reduce aerodynamic heating and stabilize vehicle so that large recovery parachutes can be safely deployed.

**drone** 1 Pre-programmed pilotless aircraft, usually employed as airborne target; either pilotless version of obsolete combat aircraft or smaller aircraft designed as a target. Totally different species from RPVs.

2 Loosely and unfortunately used as synonym for RPV or UAV.

**droneway** Runway dedicated to UAV operations.

**droop** 1 Downward curvature of leading edge of aerofoil to provide increased camber.

2 See *droop leading edge*.

3 Limited downward movement under gravity of door or access panel on underside, sufficient to have measurable effect on total aircraft drag.

**droop balk** Mechanical interlock prohibiting (a) selection of all engines at takeoff power with droops (2) up, or (b) selection of droops up in flight at above a specified angle of attack.

**drooping ailerons** Ailerons arranged to droop about 15° when flaps are lowered to increase lift while preserving lateral control.

**droop leading edge** Wing leading edge hinged and rotated down to negative angle relative to wing for high-lift low-speed flight (esp. takeoff and landing); colloquially called droops.

**droop nose** Nose designed to hinge down for low-speed flight and landing of slender delta aircraft and to provide crew forward vision at high angles of attack. Also called droop snoot.

**droops** Droop leading-edge sections.

**droop snoot** 1 Droop nose (colloq.).

2 Aircraft (esp. modification of familiar type) having extended down-sloping nose.

**droop stop** Buffer incorporated in helicopter rotor hub to limit downward sag of blades at rest.

**drop** 1 Dropping of airborne troops, equipment or supplies on specified \* zone.

2 Correction used by airborne artillery observer or spotter to indicate desired decrease in range along spotting line.

**drop altitude** 1 Altitude above MSL at which air drop is executed (DoD, NATO, CENTO).

2 Altitude of aircraft above ground at time of drop (see *drop height*).

**drop forging** Forcing of metal or other materials in hot and plastic state to flow under pressure of blow(s) from drop hammer into mould or die to form parts of accurate shape.

**drop height** Vertical distance between drop zone and aircraft (in SEATO, drop altitude).

**drop interval** Time interval between drops (1).

**drop line** Rope by which ground crew can walk balloon or other aerostat to new location.

**dropmaster** 1 Person qualified to prepare, perform acceptance inspection, load, lash and eject items of cargo for air drop. Also called air despatcher.

2 Air crew member who, during drop, will relay required information between pilot and jumpmaster (USAF).

**drop message** Written message dropped from aircraft to ground or surface unit (probably arch.).

**drop model** Aerodynamically and dynamically correct model of fixed-wing a/c, originally balsa, dropped in still air or vertical tunnel.

**drop-out** 1 Discrete variation in signal level during reproduction of recorded data which results in data-reduction error.

2 Of systems, automatic off-line disconnection following fault condition.

3 Disconnection of non-faulty autopilot in severe turbulence.

4 Oxygen mask which drops out automatically for passengers and crew following sudden loss of cabin pressure.

**drooping angle** In level bombing, the angle between the line of sight to the target at the moment of release and the local vertical.

**droops** Drop tanks [more than one, carried by one a/c].

**dropponde** Radiosonde dropped by parachute from high-flying aircraft to transmit atmospheric and weather measures at all heights as it descends. Used over water or other areas devoid of ground stations.

**drop tank** Auxiliary fuel tank carried externally and designed to be jettisoned in flight when empty.

**drop test** 1 Test of landing gear by dropping it from a height under various loads, with wheels at landing rpm.

2 Of models of future aircraft, free drop from balloon, helicopter or in spinning tunnel to check spinning or other characteristics.

3 Structural test of (usually unconventional) airframe by dropping on to hard surface.

4 Test of aerodynamics of spaceplane by drop from aircraft, eg NASA NB-52.

**drop-test rig** Rig designed to drop-test (1) any structure.

**drop zone** Specified area upon which airborne troops, equipment and supplies are dropped by parachute (abb. DZ).

**DRP** Design review panel.

**DRPC** Descending ring-plane crossover (planet Saturn).

**DR plot** Chart on which successive fixes, winds, positions and courses of an aircraft calculated by dead reckoning are shown.

**DR position** Position of aircraft calculated by dead reckoning; symbol, dot in small square.

**DRPS** Data receiving and processing station (Satcoms).

**DRR** Data refresh rate.

**DRS** 1 Detection and ranging set (radar, US).

2 Dead-reckoning subsystem.

3 Data-relay satellite.

4 Data-registration system (air cargo).

5 Design requirement specification.

**DRS/CS** Digital range safety/command system.

**DRSN** Drifting snow.

**DRSS** Doppler radar scoring system.

**DRTS** Detecting, ranging and tracking system (IR + laser).

**DRU** 1 Data-retrieval unit.

2 Direct-reporting unit.

3 DGNSS reference unit.

**drum** 1 Cylinder or series of discs upon which rotating blades of axial compressor are mounted; rotor minus its blades.

2 Portion of fuselage of broadly circular section, bounded by frames. Usually synonymous with plug or barrel section.

**drum-and-disc construction** Axial compressor rotor in which some stages of blading are held in single-piece multi-stage drum and remainder in discrete discs.

**drum test** Pressure test of fuselage section [or similar structure], normally in water tank.

**DRV** Deutscher Reisebüro-Verband eV, travel-agents association (G).

**DRVS** Doppler radar (or radial) velocity system.

**DRVSM** Domestic RVSM, less than international (US).

**DRX** Data reconstruction.

**dry** 1 Without afterburner/augmentor in use.

2 Without charge for fuel (aircraft hire).

**dry adiabatic lapse rate** Rate of decrease of atmospheric temperature with height, approximately 1°C per 100 m (1.8°F per 328 ft). This is close to rate at which ascending

body of unsaturated air (clean air) cools due to adiabatic expansion.

**dry bay** Structural compartment which, for a specific reason, is not used as an integral tank [it is normally surrounded by integral tankage].

**dry-bulb thermometer** Ordinary thermometer to determine air temperatures, as distinct from wet-bulb type; has glass capillary of uniform bore and bulb partially filled with a fluid (usually mercury) and sealed with vacuum above.

**dry contact** ARR hook-up between tanker and receiver without transfer of fuel.

**Dryden** See *DFRC*.

**dry cranking** Rotating main shaft[s] of gas turbine by external power, fuel system inoperative.

**dry emplacement** Rocket or missile launch emplacement without provision for water cooling during launch.

**dry film** Traditional film for optical camera, not digital smart card or video [originally to distinguish from wet film].

**dry filter** One on which filtration is effected by a dry matrix, without oil.

**dry fog** Haze due to dust or smoke.

**dry fuel** See *solid propellant*.

**dry gyro** Rotor has mechanical bearings and is not floated in fluid.

**dry hub** Rotor hub with elastomeric bearings needing no lubrication.

**dry hydrogen bomb** One without heavy water or other deuterium compounds.

**dry ice** Solid CO<sub>2</sub>, MPt -78.5C.

**dry lease** Transport-aircraft lease by one airline to (usually) another, without flight or cabin crew or supporting services. Sometimes called barehull charter.

**dry plug** *Dry contact*.

**dry power** See *dry rating*.

**dry rating** Of engine fitted with afterburner or augmentor, maximum thrust without these being ignited; usually same as MIL, maximum cold thrust.

**dry run** Pre-firing operation and actuation of engine (esp. liquid-propellant rocket motor) control circuits and mechanical systems without causing propellants to flow or combustion to take place. This enables instrumentation and control circuits to be checked.

**dry side** Especially in a long banana-shaped accessory gearbox, the position mounting starter, alternator, generator and other non-fluid items.

**dry squeeze** Simulated operation of a system or device (from \*\* of gun trigger to operate combat camera only).

**dry stores** Food and non-alcoholic beverages.

**dry sump** Engine lubrication system in which oil does not remain in crankcase but is pumped out as fast as it collects and passed to outside tank or reservoir.

**dry thrust** *Dry rating*.

**dry weight** 1 Weight of engine exclusive of fuel, oil and liquid coolant, and including only those accessories essential to its running. [There are many more complex definitions].

2 Weight of liquid rocket vehicle without fuel, sometimes including payload.

**Drzewiecki theory** Treatment of propeller blade as infinite number of chordwise elements; idealised, assumes each blade has no losses and meets undisturbed air.

**DRZL** Drizzle.

- DS** 1 Data sheet.  
 2 Directionally solidified alloy.  
 3 Documented sample.  
 4 Dynamic simulator.  
 5 Dust storm (ICAO).  
 6 Drone, anti-submarine (USN 1958–62).  
 7 Decision support.  
 8 Discarding sabot.  
 9 Double Slave[Loran station].
- Ds** Maximum shoulder diameter (aircraft tyre/tire).
- DS1** Digitization Stage 1 (UK MoD).
- DSA** 1 Distributed system architecture.  
 2 Defense Supply Agency (US).  
 3 Disposal[s] Sales Agency (US DoD and UK MoD).
- DSAC** Defence Scientific Advisory Council (UK).
- DSACT** Deputy Supreme Allied Commander Transformation (NATO).
- DSAD** Digital service access device.
- DSAG** Direction du Service Aérien Gouvernemental [Québec G2E 5W1] (Canada).
- DSARC** Defense Systems Acquisition Review Council [or cycle] (US).
- DSASO** Deputy senior air staff officer (RAF).
- DSB** Defense Science Board (US).
- DSB, d.s.b.** Double sideband.
- DSC** 1 Defect-survival capability.  
 2 Distinguished Service Cross (UK).  
 3 Digital selective calling.  
 4 Digital scan convertor.  
 5 Disturbed-state concept.  
 6 Defence Study Centre [B-1020 Brussels] (Int.).
- DSCA** Defense Security [and] Co-operation Agency (US, approves weapons for export).
- DSCE** Display select control equipment.
- DSCS** Defense Satellite Communications System (US).
- DSD** 1 Defence Support Division (NATO).  
 2 Data signal display [U adds unit].
- DSDC** Digital signal data convertor.
- DSEAD** Distributed suppression of enemy air defence.
- DSEDM** Departure-sequenced engineering development model (FAA).
- DSDU** Data signal display unit.
- DSEO** Defense Systems Evaluation Office (US).
- DSES** Defense Systems Evaluation Squadron (simulates hostile bombers attempting to penetrate Norad/ADC).
- DSF** 1 Domestic supply flight (RAF).  
 2 Display systems function.
- DSFC** Direct side-force control.
- DSG** Design service goal [flight hours].
- Dsg** Maximum shoulder diameter growth of tyre (tire).
- DSIF** Deep Space Instrumentation Facility, stations at Cape Kennedy, in California (2) at Goldstone, in S Africa (2) and Woomera (NASA/JPL).
- DSIR** Department of Scientific and Industrial Research (NZ, UK).
- DSIS** Digital software integration station (fighter radar).
- DSL** 1 Digital simulation language.  
 2 Depressed sightline.  
 3 Deutsche Schätzstelle für Luftfahrzeuge eV (G).  
 4 Digital subscriber line.
- DSLCL** Dynamic-scattering liquid crystal.
- DSM** 1 Dynamo situation modelling.  
 2 Departure-slot monitor.  
 3 Digital scene-matching.  
 4 Director of Support Management (RAF).
- DSMAC** Digital scene-matching area-correlation, or correlator.
- DSMC** 1 Direct seat-mile cost.  
 2 Direct simulation Monte Carlo.
- DSM/YOF** Distinguished Staff Member/Ye Olde Fokker (US).
- DSNA** Département de Satellite Navigation Aérienne, member of ESSP (F).
- DSMS** Digital stores-management system.
- DSN** 1 Deep-Space Network, comprising DSIF and SFOF.  
 2 Defense switched network.
- DSNS** Division of Space Nuclear Systems (AEC).
- DSNT** Distant, = 30+ miles.
- DSO** 1 Defence Sales Organization (UK).  
 2 Defense-, or defensive-, systems operator, or officer (US).  
 3 Distinguished Service Order (UK).  
 4 Device software optimization.  
 5 Design search and optimization.
- DSP** 1 Defense support program; O adds office (DoD).  
 2 Digital signal processor, or processing.  
 3 Departure spacing, or sequencing, program.  
 4 Display select panel.  
 5 Day surveillance payload.  
 6 Domain specific part.  
 7 Defence system[s] partnership[s] (UK).
- DSPDRV** Display driver.
- Dsplcd** Displaced.
- DSPS** Defense support program satellite[s].
- DSR** 1 Director of Scientific Research.  
 2 Display-system replacement (FAA).  
 3 Directed-stick radiator (acoustics).  
 4 Dynamic super resolution.  
 5 Dansk Selskab for Raumfartsforskning [astronomical society; office, DK-2860 Søborg] (Denmark).
- DSRTK** Actual track between two waypoints.
- DSS** 1 Department of Space Science (Estec).  
 2 Dipping sonar system.  
 3 Dynamic-signage system.  
 4 Decision support system.  
 5 Data-storage set.  
 6 Digital sequence/sequencer switch.
- DSSP** Deep-Submergence System Program.
- DSSS** Direct-sequence spread-spectrum.
- DS<sup>3</sup>L, DSSSL** Document-style semantics and specification language.
- DST** 1 Daylight-saving time.  
 2 Dry specific thrust.  
 3 Defense and space talks, or treaty (drafted 1988).  
 4 Direction de la Surveillance du Territoire (F border security).
- DS-T** Discarding sabot, tracer.
- DSTI, DSTL** Defence Science and Technology Laboratory [created 2001 when US refused to share classified information; Porton Down, Wilts. SP4 0JQ] (UK).
- DSTN** Double super-twist nematic.
- DSTO** Defence Science & Technology Organization [main office, Canberra ACT2600] (Australia).
- DSTS** Data storage and transfer set.
- DSTU** Digital-signal transfer unit.

- DS200** A directionally solidified HPT material.
- DSU** 1 Direct Support Unit (USAF).  
2 Dynamic-sensor unit; gas-bearing yaw gyro and normal and lateral accelerometers.  
3 Digital switching unit.  
4 Data-storage unit; R adds receptacle.  
5 Defense-systems upgrade; P adds Program (USAF).  
6 Domain service unit.  
7 Data, or digital, signalling unit.
- DSVT** Digital secure, or subscriber, voice terminal.
- DSWA** Defense Special Weapons Agency.
- DT** 1 Displaced threshold.  
2 Dual-tandem landing gear.  
3 Development test.  
4 Day TV (TADS).  
5 Damage-tolerant, or tolerance.
- D<sub>T</sub>** 1 Pressure drag.  
2 Trim drag.  
3 Radar transmitter antenna directivity
- D/T, D-T** Deuterium/tritium (NW fusion material).
- DTA** 1 Direction des Transports Aériens, now Service des Transports Aériens (F).  
2 Dynamic, or drop, test article.  
3 Design and Technology Association (UK).  
4 Directorate of Technical Airworthiness (Canada).  
5 Deep-target attack.
- DTAD** Demonstrated technology availability date.
- DTAM** Descend to and maintain.
- DT&E** Development, test and evaluation.
- DTASS** Digital terrain-aided survival system.
- DTAT** Direction Technique des Armements Terrestres (F).
- DTIC** 1 Design to cost.  
2 Distortion-tolerant control.  
3 Data-transfer cartridge.  
4 Defence Technology Centre[s] (UK MoD think-tank).
- DTCA** Direction Technique de Constructions Aéronautiques (F).
- DTCN** Direction Technique de Constructions Navales (F).
- DTCS** Drone tracking and control system.
- DTD** 1 Directorate of Technical Development (UK).  
2 Data-transfer device.  
3 Damage-tolerant design.  
4 Doppler turbulence detection.  
5 Data terminal display.  
6 Document type definition.
- DTDMA** Distributed (or distributive) time-division multiple access.
- DTE** 1 Data terminal, or transfer, equipment.  
2 Digital target extractor.  
3 Development, test [and] evaluation.
- DTEB** Defence Test and Evaluation Base (EDA).
- DTEC** Direct thermal to electric conversion.
- DTED** Digital, or doppler, terrain elevation data.
- DTE/MM** Data-transfer equipment, mass memory.
- DTE<sub>n</sub>** Direction Technique des Engins (F).
- DTEO** Defence Test and Evaluation Organization (Boscombe Down, UK).
- DTF** 1 Data transfer facility (software).  
2 Digital tape format.  
3 Direct tether forward (Sigint).
- DTG** 1 Distance to go.  
2 Dynamically tuned gyro.  
3 Date/time group.
- DTH** Direct to home.
- D-Thr, D THR** Displaced threshold.
- DTI** 1 Department of Trade and Industry [Aerospace-Defence, 471 Yellow Zone, London SW1W 9SS] (UK).  
2 Digital timebase interval.  
3 Distance to incident.  
4 Dial test indicator.  
5 Data-transfer interface; M adds module, U unit.  
6 Digital targeting information.
- DTIC** Defense Technology Information Center (US).
- DTIG** Deployed theater information grid.
- DTK** Desired track.
- DTL** Diode/transistor logic.
- DTLCC** Design to life-cycle cost.
- DTLR** Department for Transport, Local Government and the Regions (UK, includes civil aviation and aviation safety, became DETR).
- DTM** 1 Data-transfer module.  
2 Digital terrain-management; -D adds and display.  
3 Digital terrain modelling.  
4 Demonstration test milestone.
- DTM pt** Decision-to-miss point.
- DTMC** Direct ton[ne]-mile cost.
- DTMF** Dual-tone multi-frequency.
- DTMMM, DTM<sup>2</sup>** Data-transfer module/mass-memory.
- DTN** Data-transfer network.
- DTO** 1 Desired test objective.  
2 Defense-technology objective.
- TOA** Difference in, or differential, or delta, time of arrival.
- DT/OT** Development test[ing]/operational test[ing].
- DTP** Design to price.
- DTPC** Defense Technical Procedures Committee.
- DTR** 1 Damage-tolerant rating.  
2 Defense Training Review (UK).
- DTRA** Defense Threat-Reduction Agency (DoD, Dulles).
- DTRD** Two-shaft turbojet; F adds with afterburner (USSR, R).
- DTRI** Direction des Télécommunications du Réseau International (F).
- DTRM** Dual-thrust rocket motor.
- DTRS** Department of Transport and Regional Services (Australia).
- DTRT** Deteriorate, deteriorating.
- DTS** 1 Data-transfer system, or set.  
2 Dynamic test station.  
3 Desk-top simulator.  
4 Digital terrain system.  
5 Data terminal set.  
6 Diplomatic telecommunications system.  
7 Development and Trials Squadron (AAC, UK).  
8 Defence technology strategy [2006-] UK).
- DTSA** Defense Technology Security Administration (DoD).
- DTSB** Direct tether split-based (Sigint).
- DTSC** Digital Transmissions Standards Committee (UK).
- DTSI** Defense-Trade security initiative (US).
- DTSP** 1 Democratization transition systems program.  
2 Division TUAV Sigint Program (USA).

**DTU** 1 Display terminal unit.

2 Data terminal, transfer or transmission unit.

**DTUC** 1 Design to unit cost.

2 Data-transfer-unit cartridge.

**DTUPC** Design to unit production cost.

**DTV** 1 Day, daylight or daytime TV.

2 Development[al] test vehicle.

3 Damage-tolerance verification.

**DTVOR** Doppler-terminal VOR.

**DTW, d.t.w.** Dual tandem wheels; usually means bogie, DT is more common.

**DTWA** Dual trailing-wire antenna[s].

**DU** 1 Depleted uranium.

2 Display unit.

3 Dust (ICAO).

**Duad, DUAD** Dual air defence, battery consisting of only two fire units able to operate completely independently.

**dual** 1 Duplication of cockpit controls permitting either pilot or co-pilot, instructor or pupil, to fly manually.

2 Pilot instruction in dual aircraft.

3 Airtime logged under \* instruction.

**dual-alloy disc** Turbine rotor comprising powder-metallurgy disc diffusion-bonded to outer cast blade ring.

**dual-annular combustor** Gas-turbine combustion chamber comprising two coaxial elements at different radii, each with its own ring of fuel nozzles; one is used only for takeoff or other occasions demanding high power.

**dual architecture** FCS(1) in which each surface is driven by its own local hydraulic systems and EHAs.

**dual-axis rate transducer** Gyro based on electrically spun sphere of mercury, in which floats cruciform crystal sensor with 98% buoyancy; future rate sensor capable of operating at up to  $\pm 60$  g.

**dual-capable** 1 Equally good at fighter and attack missions.

2 Can carry both conventional and nuclear bombs.

**dual-combustion** Air-breathing engine, usually ramjet, which normally operates on two different fuels at different times. DCR feeds hot jet to main combustor burning JP-10.

**dual compressor** Compressor split into low-pressure and high-pressure parts, each driven by separate turbine; also known as two-shaft or two-spool compressor.

**dual-control aircraft** Provided with two sets of [usually interconnected] flight-control inceptors, usually for instructor and pupil.

**dual designation** Right of two or more airlines of same nation to compete with each other on international route(s).

**dual ignition** Piston engine ignition system employing two wholly duplicate means of igniting mixture.

**dual-lane slide** Escape slide able to convey two separated streams of passengers simultaneously.

**dual magneto** Single magneto with dual HT outputs to duplicate harness and plugs.

**dual-mode DME** Can process /N or /P signals.

**dual-mode EPU** Emergency power unit plus bleed from main engine.

**dual-mode radar** Usually means MTI + SAR.

**dual-mode seeker** Able to operate at either IR or RF frequencies.

**dual persistence** CRT coated with phosphors giving bright display and dim previous indications.

**dual-plane separation** Space vehicle staging in which interstage(s) falls away separately.

**dual propellant** Ambiguous, can mean liquid bipropellant, double-base solid, or different propellants in two stages.

**dual-purpose** Designed or intended to achieve two purposes, eg gun or missile (esp. on surface warship) intended to destroy surface or aerial targets.

**dual-rail adapter** Interface enabling two AAMs to be carried on one pylon.

**dual-rotation** Two-spool engine in which LP and HP shafts rotate in opposite directions.

**dual-row airdrop** Use of slight (usually 4°) aircraft tilt to despatch pallets side-by-side.

**dual-thrust motor** Solid rocket motor giving two levels of thrust by use of two propellant grains. In single-chamber unit boost grain may be bonded to sustainer grain, with thrust regulated by mechanically changing nozzle throat area or by using different compositions or configurations of grain. In dual-chamber unit, chambers may be in tandem or disposed concentrically.

**dual-use technology** Military but can have civil applications [increasingly, perhaps, the other way round].

**DUAT** Direct-user access terminal [S adds service].

**dubler** Second prototype [doubler] (R).

**DUC** 1 Dense upper cloud.

2 Distinguished unit citation (US).

**Ducat** Duct acoustics and radiation.

**DUCK, Duck** DCMS universal configuration key.

**duck soup** Easy, no problem (US flying colloq.).

**duct** 1 Passage or tube that confines and conducts fluid.

2 Channel or passage in airframe through which electric cables are run.

3 Portion of atmosphere (see \* *propagation*).

**ducted cooling** System in which cooling air is constrained to flow in duct(s) to or from power plant.

**ducted-fan engine** Aircraft propulsor incorporating fan or propeller enclosed in duct; more especially jet engine in which enclosed fan is used to ingest ambient air to augment propulsive jet, thus providing greater mass flow. Most forms are better known today as turbofans.

**ducted propulsor** Multi-bladed fan (usually with 5 to 12 variable-pitch blades) running in propulsive duct integrated with engine and airframe to give efficient and quiet low-speed propulsion. Source of power, piston engine or gas turbine.

**ducted radiator** One installed in duct, esp. to give propulsive thrust.

**ducted rocket** See *ram-rocket*.

**duct heater** Burning additional fuel in the bypass flow [turbofan].

**ductility** Property of material which enables it to undergo plastic elongation under stress.

**duct propagation** Stratum of troposphere bounded above and below by layers having different refractive indices which confines and propagates abnormally high proportion of VHF and UHF radiation, giving freak long-distance communications. Can be on surface or at height up to 16,000 ft (5 km); thickness seldom greater than 330 ft (100 m).

**DUEO** Deputy Unit Executive Officer (UK Police helos).

**Dufaylite** Airframe sandwich material with core of light plastics honeycomb.

**duff gen** Unreliable or incorrect information (RAF, WW2, colloq.).

**dull switch** Cockpit push-switch with dull appearance because never used.

**DUM** Dominant unstable mode, degree of freedom of aeroelastic or aeracoustic instability.

**Dumas** Dual-mode active IR and imaging IR seeker.

**dumb** Of munition, unguided or "iron"; not smart or brilliant.

**dumb-bell** 1 Manoeuvre in vertical plane resembling \*, usually by helicopter, in making repeated low-level passes over same point.

2 Sign [usually white] in signals area denoting 'use paved areas only'. When ends have black bars = no restriction on taxiing but use runway for landing or TO.

**dumb bogie** Unimpressive opponent in air combat.

**dummy deck** Facsimile of aircraft carrier deck marked out on land.

**dummy round** Projectile, usually air-to-air or air-to-ground missile, fitted with dummy warhead for test or practice firing.

**dummy run** 1 Simulated firing practice, esp. air-to-ground gunnery or dive-bombing approach without release of a bomb. Also called dry run.

2 Trial approach to land, to release or pick up a load, as practice before actually performing operation.

**dump** 1 Emergency deactivation of whole system.

2 Of computer operation, to destroy, accidentally or intentionally, stored information, or to transfer all or part of contents of one section into another.

3 To jettison part of aircraft's load for safety or operational reasons, eg \* fuel.

4 Of spacecraft, overboard release of waste water, astronaut waste products, etc.

5 Temporary storage area for bombs, ammunition, equipment or supplies.

6 To open \* vavle of balloon.

**dump and burn** Awesome airshow entertainment in which a fighter makes a flypast in full afterburner and jettisoned fuel ignites in the hot jet[s].

**dumper** Lift dumper.

**dump door** Quick-acting hatch under hopper or tank for emergency release of chemicals, or under water tank for firefighting.

**dump valve** 1 Automatic valve which rapidly drains fuel manifold when fuel pressure falls below predetermined value.

2 Large-capacity valve fitted to any fluid system to empty it quickly for emergency or operational reasons.

3 Pilot-controlled valve which releases hot air or gas from balloon in controlled manner.

**dunk** To lower [e.g. sonobuoy] into water on tether or communication cable.

**dunker training** How to escape from helicopter underwater.

**duo** Co-ordinated aerobatics by two aircraft.

**duo-tone** 1 Colour of camouflage scheme with two main hues.

2 Two notes emitted by variometer.

**Dupe** Duplicate (Message).

**duplex burner** Basically simple gas-turbine injector which

covers wide flow range by having two fuel chambers and two nozzles. See *duplex burner*.

**duplex** 1 Circuit or channel which permits telegraphic communication in both directions simultaneously.

2 The opposite: a radio system requiring separate T/R channels.

**duplex burner** 1 Gas-turbine fuel injector with alternative fuel entries and single exit orifice.

2 Small primary nozzle, used continuously, plus larger [often annular, surrounding primary] used only at T-O or other high-power regime.

**duplexer** Device which permits single antenna to be used for both transmitting and receiving, with minimal losses. (See *diplexer*).

**Düppel** Chaff (G, WW2).

**DUR** Duration, during [C adds climb, D descent, also expressed as **DURGC**, **DURGD**].

**Durabond** Metallic-composite adhesives for joining aluminium or stainless steel.

**duralumin** Wrought alloy containing 3–4.5 per cent copper, 0.4–1.0 per cent magnesium, up to 0.7 per cent manganese and the rest aluminium. Originally trade name.

**Duramold** Low-density structural material of thermo-setting plastic-bonded wood (Clark, Fairchild, 1936).

**duration** 1 Maximum time aircraft can remain in air.

2 Time in seconds of operation of rocket engine.

**duration model** Traditional rubber-powered model aeroplane designed for flight endurance.

**Durestos** Composite structural material comprising asbestos fibres bonded with adhesive, usually formed by moulding under pressure (Aero Research/Ciba).

**dustbin** 1 Gun turret lowered through aircraft floor to provide ventral defence (colloq., arch.).

2 Similar retractable container for sensor, esp. radar.

**dust devil** Small local whirlwind, dangerous to light aircraft.

**dusting** Controlled spreading of powder insecticide, fertiliser or other chemical by agricultural aircraft.

**Dustoff** Dedicated, unhesitating service to our fighting forces (US).

**DUT** Delft University of Technology.

**Dutch door** Upper portion hinges up, lower portion hinges down.

**Dutch roll** Lateral oscillation with both rolling and yawing components; fault of early swept-wing aircraft. Especially dangerous at high altitude, when damping is insignificant. Can be stable [self-decaying], neutral, or dangerously divergent [unstable].

**DUTE** Digital universal test equipment (computer-guided probes check circuit boards).

**duty crew** Crew detailed to fly specific mission.

**duty cycle** Ratio of pulse duration time to pulse repetition time.

**duty factor** 1 In EDP (1), ratio of active time to total time.

2 In carrier composed of pulses that recur at regular intervals, product of pulse duration and PRF.

3 Several meanings in electronic jamming, usually fractions of unit time set is emitting or receiving.

**duty ratio** In radar, ratio of average to peak pulse power.

**duty runway** Runway designated for use by aircraft landing or taking off.

**DUV** Data under voice.

- DV** 1 Distinguished visitor (US).  
2 Direct-vision (window).  
3 Digital voltmeter.  
4 Demonstrator/validation [also Demval].
- DVA** 1 Design verification article.  
2 Doppler velocimeter/altimeter; often DV/A.  
3 Diverse vector area [prescribed route not required].  
4 Dynamic vibration absorber.
- DVB** Digital video broadcast, or broadband.
- DVC** 1 Direct voice control.  
2 Digital voice communication[s].  
3 Digital video conversion.
- DVD** 1 Direct-vendor delivery.  
2 Direct-view display.  
3 Digital versatile disk.
- DVE** 1 Design verification engine.  
2 Degraded visibility environment.
- DVF** Demonstration and validation facility.
- DVFR** Defense Visual Flight Rules; procedures for use in an ADIZ (US).
- DVG** Display video generator.
- DV/VHF** Doppler/VHF.
- DVI** Direct voice input.
- DVI/O** Direct voice input/output.
- DVIT** Digital video image [or imaging] transmission [S adds system].
- DVK** Deutsche Versuchsanstalt für Kraftfahrzeug und Fahrzeugmotoren (G).
- DVL** 1 Deutsche Versuchsanstalt für Luft- und Raumfahrt.  
2 Data/voice logger.
- DVLP** Develop.
- DVLS** Digital voice-logging system.
- DVM** Digital voltmeter.
- DVMC** Digital video map computer.
- DVMS** Direct-voice management system.
- DVO** 1 Direct-view, or vision, optics (or optical or option).  
2 Direct voice output, synthesized speech confirming correct acceptance of DVI, and sometimes giving spoken warnings.
- DVOF** Digital vertical obstruction file, for terrain-referenced nav.
- DVOR** *Doppler VOR*, hence DVortac. Confusingly, this is now also being translated as “direct VOR”.
- DVR** 1 Direct-view radar [D adds display, I indicator].  
2 Design verification review.
- DVRS** 1 Display, or digital, video recording system.  
2 Digital voice recorder, or recording system.
- DVS** 1 Doppler velocity sensor.  
2 Deutscher Verband für Schweisstechnik (G).
- DVST** Direct-vision, or view, storage tube.
- DVT** 1 Deep-vein thrombosis.  
2 Delta voice terminal.
- DW** 1 Double wedge (aerofoil).  
2 Drop weight.  
3 Dual wheels.
- D/W** 1 Depth-to-width ratio in electron-beam hole drilling.  
2 Drag-to-weight ratio.
- DWan** Direct wide-area network.
- dwarf sonobuoy** Smallest size, same 124 mm diameter as A-size but length only 305 mm (12 in).
- DWC** Distributed weapons co-ordination (CC&D).
- DWD** Deutscher Wetterdienst [meteorological service; D-63004 Offenbach/M] (G).
- DWDF** Delta-wing dual-fuselage.
- DWDM** Dense wavelength division multiplexing, or multiplexed].
- DWE** Doppler wind experiment.
- dwell** 1 Brief rest period at end(s) of sinusoidal or other oscillatory motion, eg spot scanning CRT tube, bottom of drop-forging stroke, TDC and BDC in piston engine.  
2 Period when scanning [eg, radar] beam remains looking at a particular target, to enhance resolution.
- dwell illumination region** Operator-selectable region of sky on which a surveillance radar can concentrate, ignoring remaining coverage.
- dwell mark** Caused by skin-mill, routing or similar tool remaining too long over one spot.
- dwell time** Among other meanings, the time spent in US between overseas tours (US armed forces).
- DWG** Digital word generator.
- DWI** Installation for generating giant magnetic pulses to explode mines (from cover name Directional Wireless Installation).
- DWN** Downdraughts.
- DWP** Digital wave processing.
- DWPNT** Dewpoint.
- DWR** Drag/weight ratio.
- DWS** Dispenser weapon system.
- DWT** Deutsche Gesellschaft für Wehrtechnik eV (G).
- DWV** Seaplane association (G).
- DX** 1 See *duplex*.  
2 Distance.
- dyadics** Sets of generalised vectors of aircraft motion [with not the usual three but nine components].
- Dycoms** Dynamic coherent measuring system.
- DYN** Dynamic pressure (EDP code).
- dyn** see *dyne*.
- Dynafoam** Polyurethane elastomer becoming almost standard as seat filling.
- dynamic** Frequently refreshed [computer memory].
- dynamic amplifier** Audio amplifier whose gain is proportional to average intensity of audio signal.
- dynamic aquaplaning** Landplane tyres running at high speed over shallow standing water and riding up out of contact with runway.
- dynamic balance** Rotating body in which all rotating masses are balanced within themselves so that no vibration is produced.
- dynamic clash detection** Vital part of design process in which 3-D computer imaging is used to confirm that all parts of an assembly can be removed and replaced as in future maintenance.
- dynamic component** See *dynamics*.
- dynamic damper** Device intended to damp out vibration by setting up forces opposing every motion.
- dynamic directional stability**  $C_{n\beta_{dyn}}$ , refinement of divergence treatment of *a/c*, esp. supersonic fighters, by Moul/Paulson 1958.
- dynamic factor** Ratio of load carried by structural part in accelerated flight to corresponding basic load (see *load factor*).
- dynamic flight simulator** Normally, flight simulator whose cabin is mounted on a centrifuge.
- dynamic head** See *dynamic pressure*; also called kinetic head.

**dynamic heating** Heating of the surface of an aircraft by virtue of its motion through the air. Heat is generated because the air at the surface is brought to rest relative to the aircraft, either by direct impact in the stagnation region or by the action of viscosity elsewhere. For practical purposes, synonymous with *aerodynamic heating* and kinetic heating.

**dynamic hot bench** Test facility enabling items such as avionics or auxiliary power systems to be connected as if they were in the aircraft.

**dynamic lift** Aerodynamic lift due to the movement of the air relative to a lighter-than-air aircraft.

**dynamic load** A load imposed by dynamic action, as distinct from a static load. Specifically, with respect to aircraft, rockets or spacecraft, a load due to acceleration as imposed by manoeuvring, landing, gusts, firing guns, etc.

**dynamic meteorology** The branch of meteorology that treats of the motions of the atmosphere and their relations to other meteorological phenomena.

**dynamic model** A model of an aircraft (or other object) in which linear dimensions, mass and inertia are so represented as to make the motion of the model correspond to that of the full-scale aircraft.

**dynamic particle filter** One which separates particulate solids from moving fluid by making them move relative to fluid; most common are centrifugal filter and momentum separation.

**dynamic pressure** 1 Pressure of a fluid resulting from its motion when brought to rest on a surface, given by  $q = \frac{1}{2}\rho V^2$ ; where  $\rho$  is density and  $V$  free-stream velocity; in incompressible flow, difference between total pressure and static pressure.

2 Pressure exerted on stagnation point(s) on a body by virtue of its motion through a fluid.

**dynamic RAM** Constructed of periodically refreshed capacitor elements.

**dynamics** Main rotating parts of helicopter airframe.

**dynamic sampling** Concentration by flight recorder on one particular aspect of aircraft behaviour, esp. a malfunctioning channel.

**dynamic scale** Scale of flow about a model relative to a flow about full-scale body; if two flows have same Reynolds number, both are at same \*\*.

**dynamic sidelobe level** That exceeded for 3 per cent of time on each main-beam scan.

**dynamic similarity** 1 Relationship between model and full-scale body when, by virtue of similarity between dimensions, mass distributions, or elastic characteristics, aeroelastic motions are similar.

2 Similarity between fluid flows about a model and full-scale body when both have same Reynolds number.

**dynamic-situation modelling** Program which seeks to create a framework for producing a real-time representation of the battlespace.

**dynamic soaring** Soaring by making use of kinetic energy of air movements.

**dynamic stability** Characteristic of a body that causes it, when disturbed from steady motion, to damp oscillations set up and gradually return to original state; used esp. of helicopters.

**dynamic stall** Transient or fluctuating separation of flow over an aerofoil, especially a helicopter rotor blade, subjected to rapidly varying angle of attack which periodically takes it beyond the normal stall angle.

**dynamic storage** In EDP (1), storage in which information is continuously changing position, as in delay line or magnetic drum.

**dynamic system** See *dynamics*.

**dynamic thrust** Work done by fan or propeller in imparting forward motion, equal to mass of air handled per second multiplied by  $(V_s - V)$ , where  $V_s$  is slipstream velocity and  $V$  aircraft speed.

**dynamic viscosity** Shear stress in a medium divided by shear velocity gradient, in each case between notional adjacent layers. Symbol  $\mu$ , =  $\nu\rho$  (kinematic viscosity multiplied by density), units  $ML^{-1}T^{-1}$ . The SI unit  $Nsm^{-2}$  or  $Pa\cdot s$ , has no name, but see *poise*, = SI unit  $\times 10$ .

**dynamometer** Device designed to measure shaft power; torque or transmission \* measures torque or torsional deflection of shaft; electric and hydraulic \* measure power by electrical or fluid resistance; fan brake \* uses air friction, and prony brake \* applies torque by mechanical friction.

**dynamotor** A d.c. generator and electric motor having common set of field poles and two or more armature windings; one armature is wound for low-voltage d.c. and serves as motor; other serves as generator for high-voltage d.c.

**Dynarohr** Sound-suppressing multicell lining of engine fan cases and ducts (Rohr).

**dyne** Abb. dyn, unit of force sufficient to accelerate 1 g at  $1\text{ cm s}^{-2}$ ; =  $10^{-5}\text{ N}$  or  $\frac{1}{981}\text{ g}$  or  $2.248 \times 10^{-6}\text{ lb}$ .

**dynode** Electrode of electron multiplier which emits secondary electrons when bombarded by electrons.

**dysbarism** Decompression sickness, usually caused by release of nitrogen bubbles into blood at very low pressure.

**DZ** 1 Drop (or dropping) zone.

2 light drizzle.

**DZAA** Drop-zone assembly aid.

**Dzus fastener** Countersunk screw with slotted shank anchored in removable or hinged panel, which hooks with half-turn into wire anchor on airframe.

**Dzus rail** Mounting rail for LRUs.

# E

- E** 1 Energy (but work often W).
- 2 Electric field strength.
- 3 Electromotive force; unit, volt.
- 4 Prefix exa =  $10^{18}$ .
- 5 Young's modulus of elasticity.
- 6 US DoD role prefix, Special Electronic (from 1962).
- 7 UK role prefix, ECM training.
- 8 Illumination.
- 9 Endurance (usually safe endurance).
- 10 Estimated.
- 11 Sleet.
- 12 General controlled airspace (ICAO from 1990, US from September 1993).
- 13 East, or eastern.
- 14 Excellence (US defense contractors, WW2).
- 15 Emergency.
- 16 End (of reported weather).
- 17 Execution [NW mission] (RAF).
- 18 Effective (machine performance).
- 19 Aircraft category: rotorcraft (FAI).
- 20 Expected value of a function.
- e** 1 Strain rate.
- 2 Induced drag.
- 3 Base of natural logarithms,  $c.2.71828$ .
- 4 Emitter.
- 5 Electron charge, [strictly, preceded by minus sign] =  $1.6021 \times 10^{-19}$ C.
- 6 Eigen vector; suffix pm phugoid mode, sp short-period.
- 7 Elevator or slab tailplane.
- 8 Offset from hub of helicopter flapping hinge.
- 9 Subscript, exit.
- 10 Eccentricity of rotating item or shaft bearing, orbit or ellipse.
- e, E** Expansion ratio of rotating item r shaft bearing, rocket nozzle.
- (E)** 121.5 and 243.0 available, but may not be monitored.
- $\vec{E}$**  Electrostatic field,  $Vm^{-1}$ .
- $E_1$**  See *E-layer*.
- $E^2$ COTS** See *EECOTS*.
- $E^2$ I** Endoatmospheric/exoatmospheric interceptor.
- $E^2$  PROM** Electronically-erasable programmable read-only memory.
- E3** Rules governing import of used aircraft into the UK, and relevant design approvals (CAA).
- $E^3$**  1 Energy-efficient engine (NASA).
- 2 End-to-end encryption (networks).
- 3 Electromagnetic environmental effects.
- E-6B** Analog dead-reckoning navigation computer (US, 1941).
- E36 LRD** Potassium acetate liquid runway dispenser.
- e-bomb** Renders electronic threat dumb, blind and incapable of retaliation.
- E-cats** See ECATS.
- e-check** Electronic passenger-recognition system, usually biometric facial scan or iris scan
- E-display** Radar display with az/el target on rectangular x/y axes.
- E-freight** Electronic replacement of paperwork (IATA).
- E-glass** Ultra-high-strength, used as reinforcement in advanced structures (not in commercial GRP).
- E-hitch** Standard connector between tug and baggage trolley, with vertical pin.
- E-hour** Precise time for launch of mission with NW [E from execution] (RAF, previously).
- E-layer** Ionised layer of ionosphere typically 100–120 km, most pronounced in daytime; also called Heaviside or Kennelly-Heaviside or  $E_1$  layer; some evidence of higher layer called  $E_2$ .
- E-Pirep[s]** Electronic pilot report[s].
- E-plane** Plane of antenna containing electric field; principal \* is direction of maximum radiation.
- E-scan** Electronic scanning.
- e-tag** Electronic data tag.
- e-ticket** Book online, check-in with passport and hand luggage (IATA).
- EA** 1 Enemy aircraft.
- 2 Electronic Attack, US aircraft category from 1962.
- 3 Engine-attributable.
- 4 Epoxy asphalt.
- 5 Engineering authority.
- 6 Environmentally acceptable.
- 7 l'Espace Affaires business class (F).
- 8 Evolutionary algorithm[s].
- 9 The Institution of Engineers, Australia.
- 10 Engine anti-ice, followed by number.
- EAA** 1 Experimental Aircraft Association (US, from 1953, office Oshkosh, Wisconsin).
- 2 East Anglian Aircraft Preservation Society (UK).
- 3 Export Administration Act (US).
- 4 European Aluminium Association [office, Brussels B-1150] (Int.).
- 5 Eastern Aerospace Alliance [trade association, Stevenage SG1 2PX].
- EAAI** European Association of Aerospace Industries.
- EA&SD** Evolutionary acquisition and spiral development (EW).
- EAAP** European Association for Aviation Psychology (office in Zurich).
- EAAPS** European Association of Airline Pilots' Schools.
- EAAS** Empire Air Armament School (RAF Manby, November 1944 to June 1949).
- EAC** 1 Expected approach clearance time.
- 2 Experimental-apparatus container.
- 3 Equipment Approvals Committee (UK MoD).
- 4 European Airlift Centre (Int.).
- 5 Enlisted aircrew (USN).
- 6 European Astronaut Center [Oberpfaffenhofen, near Cologne].
- EACC** European Airlift Control Cell (Eindhoven).
- EACS** Electronic automatic chart system.
- EACSO** East Africa Common Services Organization.
- EAD** European AIS database (Eurocontrol).
- EADB** Elevator-angle deviation bar.
- EADE** Extended air defense (US).
- EADI** Electronic attitude director, or display, indicator.

**EADRCC** Euro-Atlantic Disaster Response Co-ordination Centre.

**EADS** 1 Extended air-defense simulation.

2 Enterprise architecture and decision support (NSA1).

**EAE** European Airlines Electronics Meetings[s].

**EAF** 1 Earned award fee.

2 Expeditionary Aerospace Force [= 10 AEFs] (USAF).

**EAFAS** European Academy for Aviation Safety, non-profit organization providing permanent training (Int.).

**EAG** European Air Group, air forces which share facilities (Belgium, France, Germany, Italy, Netherlands, Spain, UK).

**EAGA** European Advisory Group on Aerospace (EU).

**EAGL** European Association for Grey Literature.

**Eagle** 1 Extended, or early, airborne global launch evaluation, or evaluator (Awacs).

2 Evolutionary aerospace global laser engagement (AFRL).

**Eagle Squadrons** Three RAF units whose pilots were American volunteers (1940–42).

**EAGS** Expeditionary arresting-gear system.

**EAI** 1 Engine anti-ice.

2 Enterprise application integration.

**EAIC** Enterprise Architecture Integration Council (USAF).

**EAISD** European AIS(1) database.

**EAL** 1 Elevated approach light.

2 Evaluation assurance level.

**EALS** 1 Ejector augmented lift system.

2 Electromagnetic aircraft launch system.

**EAM** 1 Emergency action message (NCA).

2 Extravehicular activity mobility.

**EAMDS** European Airlines Medical Directors Society.

**EAME** Europe/Africa/Middle East theatre (December 1941 to November 1945).

**EAMTRA** East Anglian military temporary reserved airspace.

**E&E** Escape and evasion.

**E&M** Engineering and maintenance.

**E&MD** Engineering and manufacturing development.

**E&S** Executive and support (ATC services).

**E&ST** Employment and Suitability Test Program (USAF).

**EANPG** European Air Navigation Planning Group.

**EANS** Empire Air Navigation School (UK).

**EAP** 1 Experimental aircraft programme.

2 Engine-alert processor.

3 Emergency audio panel.

4 Educator Astronaut program.

**EAPAS** Enhanced airworthiness program for airplane systems, concerned particularly with electric wiring (FAA).

**EAPS** Engine air particle separator.

**EAR** 1 Electronically agile radar.

2 Espace Aérien Réglementé (= danger, restricted or prohibited areas) (F).

3 Export after repair.

**EARB** European Airlines Research Bureau.

**EARC** 1 Extraordinary Administration Radio Conference (UIT).

2 Elimination of ambiguity in R/T callsigns.

**EARDA** European Armaments R&D Agency (EU objective, yet to be created).

**early operational capability** First inventory aircraft,

usually to lower standard than successors, to gain service experience.

**early turn** Turn made ahead of fix in airway to ensure that aircraft does not, because of speed, course change required, wind, etc, fly outside airway boundaries.

**early warning** Given by radar surveillance to LOS limit.

**earnings** Profit (US).

**EAROM, Earom** Electrical alterable read-only memory.

**EARS** 1 Electromagnetic aircraft recovery system.

2 Environment analysis and reporting system.

**EARSel** European Association of Remote Sensing Laboratories [office, F-75340 Paris] (Int.).

**earth** Grounded side of electrical circuit or device.

**Earth funnel** Funnel-like shape of lines of force above magnetic poles.

**Earth inductor compass** Compass whose indication depends on current generated in coil revolving in Earth's magnetic field.

**earthing** Connecting to earth; also adjective, as in \* tyre (electrically conductive), \* wire.

**earthing point** In a long shaft system transmitting rotary power, a firm location where a trunnion, gearbox or shaft joint can be located to prevent whirl.

**Earth/Moon system** Regarded as two-planet system whose centre of rotation is on line joining the centres.

**Earth pendulum** See *Schuler pendulum*.

**Earth-rate correction** Command rate applied to gyro to compensate for apparent precession caused by Earth's rotation.

**earth return** Electrically bonded part of aircraft structure used in electrical circuit.

**earthshine** Illumination of dark part of Moon produced by sunlight reflected from Earth's surface and atmosphere. Also called earthlight.

**Earth station** Comsat, esp. Inmarsat, ground station, fixed or mobile.

**earth station** Point where a conductor can be connected to earth.

**earth system** All metallic parts of aircraft interconnected to form low-resistance network for safe distribution of electric currents and charges.

**EARTS** 1 Enhanced aircraft radar test station.

2 En-route automated radar tracking system.

**EAS** 1 Equivalent airspeed (see *airspeed*).

2 Espace Aérien Supérieur (upper airspace), (UIR).

3 Emergency avionics system.

4 Essential air service[s] (US).

**EASA** 1 European Aviation Safety Agency, replacing JAAs (Int. except in non-EU states, 28 September 2003, office moved October 2004 to Cologne D-50452 G).

2 European Aviation Suppliers Association (Int., office Horsham, UK).

**Easie** Enhanced ATM and Mode-S implementation in Europe, see *EATMS(2)*.

**EASS** 1 European Aviation Safety Seminar.

2 Evaluation and source-selection.

**Eastern Test Range** Test range extending from Cape Canaveral across Atlantic into Indian Ocean and Antarctic.

**EASU** Engine analyser and synchrophase unit.

**Easy** Enhanced ADS(5) system.

**EAT** 1 Estimated (or expected) approach time.

2 Electronic angle tracking.

3 Engage and trim indicator.  
**EATC** European Air Transport Command, proposed 2007 (Int.).  
**Eatchip** European ATC harmonization and integration programme, from 1991, three phases, still active 2009 (ECAC/Eurocontrol).  
**EATMP** European air-traffic management programme.  
**eating irons** Knife, fork, spoon, issued to airmen (UK, colloq.).  
**EATMS** 1 European Air-Traffic Management System (Int.).  
 2 Enhanced air-traffic management and Mode-S Implementation in Europe (Int.).  
**EAU** 1 European accounting unit; see *International Accounting Unit*.  
 2 Engine analyser unit.  
**EAW** Expeditionary Air Wing (RAF).  
**EB** 1 Essential bus.  
 2 Electron beam.  
 3 End-bend.  
 4 Executive Board (JAA).  
 5 US DoD role prefix for standoff jamming platform.  
**E<sub>b</sub>** Energy to be dissipated by wheel brakes.  
**EBA** 1 Engine bleed air.  
 2 Electric brake actuator.  
**EBAA** European Business Aviation Association [office, Tervuren, B-3080 Belgium] (Int.).  
**EBAC** Electric braking actuator controller.  
**Ebace, EBACE** European Business Aviation Conference, or Convention, and Exhibition (Int.).  
**EBA/H** EBA plus hydrazine.  
**EBAPS, Ebaps** Electronically bombarded active-pixel sensor.  
**EBDM** Extended Buhr design method.  
**EBF** Externally blown flap.  
**EBHA** Electrical back-up hydraulic actuator.  
**EBIC** Electron-bombardment-induced conductivity.  
**EBI** Eyeballs in.  
**Ebidtar, EBIDTAR** Earnings before interest, depreciation, taxes and aircraft rent.  
**EBIT** Earnings before interest and taxes; sometimes rendered [incorrectly] as earnings before income tax; DA adds depreciation and amortization; R adds [aircraft] rent.  
**EBL** Electron-beam lithography.  
**EBM** 1 Electron-beam machining (or micro-analysis).  
 2 Electronic battle management.  
**EBO** *Effects-based operations*.  
**ebonite** Hard, brittle substance composed of sulphur and hard black rubber; possessing high inductive and insulating properties.  
**EBP** Electron-beam perforated.  
**EBPVD** Electron-beam physical vapour deposition.  
**EBR** 1 Electron-beam recording.  
 2 Enhanced bit rate.  
**EBRD** European Bank for Reconstruction and Development.  
**EBRM** Electronic bearing and range marker.  
**EBS** 1 Electronic beam squint tracking.  
 2 Export baseline standard.  
**EBSC** European Bird Strike Committee.  
**Ebsicon** Standard NATO word for all SIT image tubes.  
**EBSV** Engine-bleed shutoff valve.

**EBT** Effects-based targeting.  
**EBU** 1 European Broadcasting Union.  
 2 Engine build-up or build unit.  
**ebullism** Formation of bubble, esp. in liquid rocket propellant or in biological or body fluids, caused by reduced ambient pressure.  
**e-business** Electronic business, usually means Internet.  
**EBW** 1 Electron-beam welding.  
 2 Enhanced bandwidth.  
**EC** 1 Eddy current.  
 2 Environmental control (system).  
 3 Escadre de Chasse (fighter wing) (F).  
 4 Elliptic-cubic (wing profiles).  
 5 Electronic combat.  
 6 Engine-caused.  
 7 European Community, or Commission.  
 8 Event criterion.  
 9 Electronic checklist.  
 10 Electronic commerce.  
 11 Earth coverage (Satcoms).  
**E<sub>c</sub>** Compressive (bearing) strain.  
**ec, e<sub>c</sub>** Perpendicular distance from wing aerodynamic axis to flexural axis.  
**ECA** 1 Electronic control amplifier.  
 2 European Cockpit Association [umbrella organization for pilot unions, [office, Brussels] (Int.).  
 3 Emergency Controlling Authority (CAA).  
**ECAA** European Common Aviation Area, comprising the 25 EU nations plus Albania, Bosnia/Herzegovina, Bulgaria, Croatia, Iceland, Macedonia, Montenegro, Norway, Romania, Serbia and the UN Interim Administration in Kosovo [2006–] (Int.).  
 4 Export Control Act [2002–] (UK).  
**ECAC** 1 Pronounced E-kak, European Civil Aviation Conference [since 1956, now 41 countries]; [office, Neuilly-sur-Seine] RL adds reference level (ATC) (Int.).  
 2 European Civil Aviation Council [36 countries].  
 3 Electromagnetic-compatibility analysis centre.  
**ECAM** 1 Electronic centralized aircraft monitor (presents all information on two CRTs in FFCC).  
 2 Electronic crew-alerting and monitoring.  
 3 Also said to mean electronic checkout and maintenance.  
 4 Electronic caution alert module.  
**ECAP** 1 Electronic-combat adaptive processing.  
 2 European capability action plan.  
**ECAR** European Civil Aviation Regulation[s], [harmonized with FARs, replacing JARs 2004–] (Int.).  
**Ecarda** European coherent approach to R&D in ATM(7). (Int.).  
**E-Cars** Enhanced airline communications and reporting system.  
**ECAS** Extended close air support.  
**Ecass, ECASS** The European Committee for Aircrew Scheduling and Safety (Int.).  
**Ecats, ECATS** Embedded combat-aircraft training system.  
**ECB** 1 Electronic control box.  
 2 Economical cruise boost.  
 3 Electronic Components Board (UK).  
**ECBA** Electronic-combat battle management.  
**ECC** See *ECCM*.  
**ECCA** Engine-condition classification analysis.  
**ECCD** Electric cockpit-control device.

**eccentricity** 1 Deviation from common centre or central point of application of load.

2 Of any conic, ratio of length of radius vector through point on conic to distance of point from directrix.

3 Of ellipse, ratio of distance between centre and focus to semimajor axis. Also called numerical \*.

4 Also of ellipse, distance between centre and focus. Also called linear \*.

5 Distance measured chordwise between a wing's aerodynamic centre and its elastic [torsional] axis.

**ECCM** Electronic counter-countermeasures.

**Ecosorb** Important family of commercially available SFAs (RAM).

**ECCP** European Climate Change Programme (Int.).

**ECD** 1 Excusable contract delay (no penalty).

2 Equipment Capability Directorate[s] (MoD).

3 Engineering cognisance drawing.

**ECDES** Electronic combat digital evaluation system (USAF).

**ECDIS** Electronic charts and data-information system[s].

**ECDS** Enhanced container delivery system.

**ECDU** Enhanced control and display unit.

**ECE** Economic Commission for Europe (UN).

**ECEF** Earth-centred, Earth-fixed.

**ECF** Enhanced connective facility (SNA).

**ECFS** Empire Central Flying School.

**ECG** Electrochemically assisted grinding.

**ECGD** Export Credits Guarantee Department (UK).

**ECH** Electrochemically assisted honing.

**echelon** 1 Aircraft formation in which each member is above, behind, and to left or right of predecessor; such formation is said to be in \* to port or starboard.

2 Subdivision of headquarters, forward or rear.

3 Level of command.

4 Servicing unit detailed to provide ground support and maintenance facilities.

**Echo, ECHO** Enhanced C<sup>4</sup>ISR for homeland security operations, an attempted synthesis of GCCS, Adocs (2) and CATS(4) (US, 2003).

**echo** 1 Pulse of reflected RF energy, esp. that reaching the receiver.

2 Appearance on radar display of such energy returned from target; also called blip.

**ECHS** Electrochemical hydrogen separator [fuel cell].

**ECI** 1 Electronic commerce infrastructure.

2 Earth-centred inertial.

**ECIF** Electronic Components Industry Federation, [office, London] (UK).

**ECIM** Electronics computer-integrated manufacturing, ie, CIM of electronics.

**ECIPS, Ecips** Electronic-combat or countermeasures, integrated pylon system.

**ECIT** Enhanced communications interface transceiver.

**ECJ** European Court of Justice.

**ECL** 1 Emitter coupled logic.

2 Electro-generated chemiluminescence.

3 Engine, or equipment, condition lever (CAA).

4 Electronic checklist.

**ecliptic** Apparent path of Sun among stars because of Earth's annual revolution; intersection of plane of Earth's orbit with celestial sphere, inclined at about 23° 27' to celestial equator.

**ECLSS** Environmental control and life-support system [or subsystems].

**ECM** 1 Electronic countermeasures.

2 Electrochemical machining.

3 Engine-, or equipment-, condition monitoring.

4 Electronic control module.

**ECMJ** Escadrille de chasse multiplace de jour (multi-seat day fighter squadron) (F).

**ECMO** ECM officer (aircrew).

**ECMS** 1 Electronic component management system.

2 Engine condition monitoring system.

**ECMT** 1 European Conference of Ministers of Transport = CEMT [Paris F-75775] (Int.).

2 Emerging counter-Manpads technologies.

**ECN** Escadrille de chasse de nuit [night fighter squadron] (F).

**ECNI** Enhanced CNI.

**ECNP** Export control and non-proliferation (UK).

**ECO** 1 Electron-coupled oscillator.

2 Engineering change order.

3 Engine cut-off.

**EOCA** Engine certificate of Airworthiness.

**ECOC** Enhanced Combat Operations Center.

**Ecofin** Council of Ministers for Economics and Financial Affairs (EU).

**Ecogas** European Council of GA Support (Int.).

**ECOM** 1 Earth centre of mass.

2 Electronic Command (USA).

**Econ** Economy.

**economical cruise mixture** Piston engine mixture with which AMPG is maximum.

**economiser** Reservoir in continuous-flow oxygen system in which oxygen exhaled by user is collected for recirculation.

**economiser valve** Assists in regulating fuel flow through piston engine carburettor, opened by increased airflow.

**economy** Originally a passenger fare cheaper than first class, with less luxurious standards of cabin service, meals, seat pitch etc. IATA airlines introduced \* class over North Atlantic in April 1958.

**economy-class syndrome** Normally means DVT (1).

**ECOP** Electronic copilot [colloq.].

**ECP** 1 Engineering change proposal, for introducing modification.

2 Etablissement Cinématographique et Photographique des Armées (F).

3 Effective candlepower (non-SI).

4 Eicas control panel.

5 Engine critical part[s].

**ECPNL** Equivalent Continuous Perceived Noise Level (see *noise*).

**ECPP** Effective critical parts plan.

**ECPS** Environmentally compatible propulsion system.

**ECR** 1 Electronic combat and reconnaissance.

2 Embedded computer resources.

**ECS** 1 Environmental control system.

2 Electronic Combat Squadron.

3 Engagement control station.

4 European company statute.

5 Engine-consumed spares.

6 Engineering compiler system.

7 Event-criterion sub-field.

8 Electronic chart system.

9 Engine control system, F adds failure.

10 Enhanced communications system[s].  
 11 Economical cruising speed.

**ECSL, ECSM, ECSR** Respectively ECS(1) plus left card, miscellaneous, right card.

**ECSR** East Coast Spacelift Range (USAF).

**ECST** Electronic-combat systems-tester (USAF).

**ECSVR** Engine-caused shop-visit rate.

**ECT** Enterprise caching technology.

**ECTM** Engine-condition trend-monitoring.

**ECU** 1 European Currency Unit (pronounced Ekyu, commonly called Euro).  
 2 Engine-change unit (complete bolt-on piston engine powerplant with cowl).  
 3 Environmental, or engine, or electronic, or Eicas, control unit.  
 4 Exercise Control Unit (a military formation).  
 5 External-compensation unit.

**EC<sup>UK</sup>** Engineering Council (UK).

**ECVS** Emergency communications voice system, or switch.

**ECW** 1 Electronic Combat Wing.  
 2 Enhanced compressed wavelet.

**ECWL** Effective combat wing loading.

**ED** 1 Emergency distance (or distress signal).  
 2 Engineering development (part of progress schedule).  
 3 End of descent (Lockheed uses 'EoD').  
 4 Explosive device.  
 5 Environmental damage.  
 6 Eicas display.  
 7 Followed by a two-digit number, design assurance levels for avionics systems, equivalent to DO-178B and DO-254. (Eurocae).

**ED** End of descent.

**EDA** 1 Effective disc area (helicopter).  
 2 Electronic design automation.  
 3 Excess defense article, available for sale (US DoD).  
 4 European Defence Agency [20 June 2004–, office, Brussels] (Int.).

**EdA** Ejercito del Aire [Air Force, Spain].

**EDAC** See EDC(4).

**EDAU** Engine, or extended, data-acquisition unit.

**EDB** Extruded double-base.

**EDC** 1 European Defence Community.  
 2 Early display configuration.  
 3 Eros data centre.  
 4 Error detection and correction [often EDAC].

**Edcars** Engineering data computer-assisted retrieval system.

**Edcas** Equipment designers' cost analysis system.

**EDCT** Expected departure clearance time, issued to a flight as part of traffic-management program (FAA).

**EDD** Electronic data display (ATC flight data, tabular callsigns, heights, tracks and position information).

**EDDS** 1 Explosive-device detection system.  
 2 electronic document distribution service.

**eddy** 1 Local random fluid circulation drawing energy from flow on much larger scale and brought about by pressure irregularities, eg from passage of unstreamlined body.  
 2 In meteorology, developed vortex constituting local irregularity in wind producing gusts and lulls.

**eddy current** Generated in conductor by varying magnetic field; to reduce \*\* cores are built up of insulated laminations, iron dust or magnetic ferrite.

**eddy damping** Automatic damping by eddy currents generated by moving conductor.

**eddy Mach wave radiation** One of three major sources of jet-engine noise, associated with supersonically convecting disturbances.

**EDEM** European defence equipment market.

**EDG** 1 Electrical-discharge grinding.  
 2 Engine-driven generator.

**edge alignment** Distance, parallel to chord of propeller section, from centreline of blade to leading edge at any station.

**edge diffraction** Near-radial reflections caused by impedance mismatch around a radar antenna perimeter.

**edge effect** Distortion of eddy-current pattern when testing for cracks near edge of material.

**edge enhancement** Increasing the contrast at the periphery of an image, to render it easier to distinguish [important in recon. and baggage screening].

**edge flare** Rim of abnormal brightness around edge of video picture.

**edge keys** Buttons around electronic display.

**edge management** Strict discipline of maintaining optimum LE of wing, tail [and pylons, if present] for aerodynamics and radar signature.

**edge elevator** Deck-edge elevator (carrier).

**EDI** 1 Electronic-data interchange, or interface, between single computers or groups; F adds function.  
 2 Electronic design information; L adds library.  
 3 Electron-drift instrument.  
 4 Engine-data interface; F adds function, U unit.

**edifact** Electronic-data interchange for administration, commerce and transport.

**EDIG** European Defence Industries Group [in April 2004 merged into ASD5, office same address at B-1200 Brussels] (Int.).

**E-Dircm** Escort directional IR countermeasures (USAF).

**EDIU** Engine-data interface unit.

**EDL** 1 Engage/disengage logic.  
 2 Electrical-discharge laser.  
 3 Entry, descent and landing.

**EdL** Erprobungsstelle der Luftwaffe (G).

**Edlar** European data-link for aerial reconnaissance (Int.).

**EDM** 1 Electrical-discharge machining.  
 2 Engineering development model.  
 3 Evasive defence manoeuvres.  
 4 Engine-data multiplexer.

**EDMS** Electronic data-management system[s].

**Edna** Enhanced diagnostic aid.

**EDO** Extended-duration orbiter.

**EDP** 1 Electronic data-processor, or processing.  
 2 Engine-driven pump.  
 3 Experimental data-processor (Eurocontrol).  
 4 Engineering-development pallet.  
 5 Engine development plan.

**EDR** Engineering design requirements.

**EDS** 1 Explosive[s], or electronic, detection system.  
 2 European Distribution System; A adds aircraft (USAF).

**EDSF** Electronic-data standard exchange.

**EDSS** Explosives-detection security system.

**EDT** 1 Eastern Daylight Time (US).  
 2 Expanded data-transfer; M adds module, S system.

- 3 Electronic drop tube.  
 4 Electrodynamic tether.  
 5 Engineering development test.
- EDU** 1 Enhanced, or engine, diagnostics unit.  
 2 Electronic display unit.
- eductor** Duct-fed ejector[s] for powered VTOL lift.
- Edwards** California [Mojave desert] AFB, site of AFFTC and NASA DFRC, previously called Muroc.
- EE** 1 Emergency equipment, or egress.  
 2 Electronic[s] equipment [bay or compartment].
- E/E** Electrical/electronic.
- E<sub>E</sub>** Elastic modulus in overall buckling of a panel.
- EEA** 1 Electronic Engineering Association (London, UK).  
 2 European Environment Agency (Int.).
- EEC** 1 European Economic Community.  
 2 Engine electronic, or electronic engine, control; U adds unit.  
 3 Extendable exit cone.
- EECM** Engine engineering and condition monitoring.
- EECots** Extended-environment commercial off the shelf.
- EECS** 1 Electrical/electronics cooling system.  
 2 Expeditionary Electronic Combat Squadron (USAF).
- EED** 1 Electromagnetic expulsive deicing.  
 2 Electro, or electrical explosive device.
- EEDS** Electro-expulsive deicing system.
- EEE** Energy-efficient engine, also E3 or E<sup>3</sup>.
- EEF** Engineering Employers Federation [UK, 800+ members, office London].
- EEFAE** Efficient and environmentally friendly aero engine; P adds program [completed end-2005].
- EEGS** Emergency electric-generating system.
- EEI** 1 EFIS/EICAS interface.  
 2 Essential elements of information (reconnaissance).  
 3 Electrical-engineering instruction.  
 4 Electronic engine instrument[s].
- EEL.3** Pioneer ester-based lubricant for gas-turbine engines (Esso).
- EELV** Evolved expendable launch vehicle.
- EEMAC, Eemac** Electrical & Electronic Manufacturers Association of Canada.
- EEMP** Enhanced electromagnetic pulse.
- EEMS** Electrostatic engine-monitoring system.
- EEOC** En-route Expeditionary Operations Center (USAF).
- EEOS** European Earth-observing satellite.
- EEP** Experimental electronics package.
- EEPGS** Enhanced EPGS, typically ½-ATR boxes and ½-volume.
- EEProm, EEPROM, E<sup>2</sup>Prom** Electronically-erasable programmable read-only memory.
- EER** Extended echo-ranging.
- EERM** Établissement d'Etudes et de Recherches Météorologiques (F).
- EEPSG** European Equipment Producers Support Group (Int.).
- EES** 1 Electronically-enhanced sensing, or sensor.  
 2 Electrical Engineering Squadron (RAF).
- EET** 1 Estimated elapsed time.  
 2 Estimated entry time.  
 3 Escadron d'Expérimentation et de Transport (F).
- EETC** Enhanced equipment trust certificate (leasing).
- E-Etops** Initial E can mean early or EIS.
- EEU** Elms [electrical load-management system] electronic unit.
- EEVIP** Early extended-range twin operations validation and integration.
- EEW** Equipped empty weight.
- EEZ** Exclusive [coastal] economic zone; IG adds industry group.
- EF** Evaluator Flight (RAF).
- E/F** Engine failure.
- EFA** End-fire array (radar).
- EFAB** Extended forward avionics bay.
- Efams** External fuel, armament and management system.
- EFAS, Efas** 1 En-route flight advisory service.  
 2 Electronic-flash approach-light system.
- Efato, EFATO** Engine failure at [or soon after] takeoff.
- EFB** Electronic flight bag.
- EFC** 1 Expected further clearance [time].  
 2 Elevator feel computer.  
 3 Engine-failure compensation mode.
- EFCC** Enhanced fire-control computer; C adds configuration.
- EFCS** Electrical [FBW], or electronic, flight-control system.
- efctv** Effective.
- EFCU** Electronic fuel-, or flight-, control unit.
- EFD** Electronic flight display.
- Efdars, EFDARS** Expandable flight-data acquisition and recording system (FAA).
- EFDC** Early-failure detection centre.
- EFDPMA** Educational Foundation of DPMA (US).
- EFDR** Expanded flight-data recorder.
- EFDS** Electronic flight-data system.
- EFE** 1 Emitter feature extractor, an Elint tool.  
 2 Environmentally Friendly Engine (UK 2004-).
- EFEO** European Flight Engineers Organization (Int., merged into IFEO).
- EFF** 1 Explosively formed fragment.  
 2 Effective.  
 3 Enhanced forward funding.  
 4 Experimental Forecast Facility (AWC3).  
 5 Engine fuel flow; HS adds heat sink.
- EFFE** European Federation of Flight Engineers, later EFEO.
- effective angle of attack** Angle at which aerofoil produces a given lift coefficient in two-dimensional flow, also called AOA for infinite aspect ratio.
- effective angle of incidence** See *effective angle of attack*.
- effective aspect ratio** That of aerofoil of elliptical planform that, for same lift coefficient, has same induced-drag coefficient as aerofoil, or combination of aerofoils, in question.
- effective atmosphere** That part of planetary atmosphere which measurably influences particular process of motion. For an Earth satellite limit is 120 miles, 193 km (see *mechanical border, sensible atmosphere*).
- effective cover[age]** Region within which a navaid provides accurate and reliable guidance.
- effective current** Difference between impressed current and counter-current.
- effective exhaust velocity** Velocity of rocket jet after effects of friction, heat transfer, non-axially directed flow, etc.

**effective helix angle** Angle of helix described by point on propeller blade in flight through still air measured relative to Earth.

**effective horsepower** Power delivered to propeller.

**effective pitch** Distance aircraft advances along flight-path for one revolution of propeller.

**effective pitch ratio** Basic propeller characteristic  $V/nd$ , where  $V$  is airspeed,  $n$  propeller rpm and  $d$  diameter, units being compatible.

**effective profile drag** Difference between total wing drag and induced drag of wing with same aspect ratio but elliptically loaded.

**effective propeller thrust** Net propulsive force; propeller thrust minus increase in drag due to slipstream.

**effective range** Maximum distance at which weapon may be expected to strike target.

**effective sortie** One which crosses the enemy frontier [see *sortie*].

**effective span** Span minus correction for tip losses; usually defined as horizontal distance between tip chords.

**effective terrestrial radiation** Amount by which IR radiation from Earth exceeds counter-radiation from atmosphere. Also called effective radiation or nocturnal radiation.

**effective velocity ratio** Based on dynamic pressures  $\sqrt{\frac{q}{q_j}}$  where  $q_j$  is jet impingement stagnation pressure

(jet-lift ground effect).

**effective wavelength** That corresponding to effective propagation velocity.

**effector** 1 In any system, an output device.

2 Any device used to manoeuvre a vehicle in flight, now becoming popular in US as alternative to inceptor.

**effects-based operations** Selection of a series of targets in a particular order, to achieve a specific final result.

**efficiency** Ratio of output to input, usually expressed in percentage form. See overall, propulsive, thermal\*.

**efficiency of catch** Proportion of total water droplets in path of aircraft which actually strike it.

**efflux** Total composition of gas or other fluid flowing out from a device, except that in an engine with a propulsive jet \* excludes flows from auxiliary devices such as turbogenerators, heat exchangers and breathers.

**effusion** Flow of gas through holes sufficiently large for velocity to be approximately proportional to square root of pressure difference.

**EFH** 1 Earth far horizon.

2 Engine flight hours.

3 Equivalent flight hours.

**EFI** Electronic flight instruments, or instrumentation; S adds system; 8×8 colour CRTs.

**EFIC** Electronic flight-instrument controller.

**EFIDS** European flight-information display system.

**EFIP** Electronic flight-instrument processor; CP adds control panel.

**EFIS** See *EFI*; CP adds control panel.

**EFIT** Engineer, furnish, instal and test.

**EFL** 1 Emitter function logic.

2 External-finance limits.

**EFM** 1 Enhanced fighter manoeuvrability, e.g. with TVC and RCFAM.

2 Engine fleet management.

**EFMCS** Enhanced flight-management computer system.

**EFMS** Experimental flight-management system (Phare).

**EOFGS** Enhanced fibre-optic-gyro missile.

**EFP** 1 Explosively formed penetrator, or projectile.

2 Engine fuel pump; MS adds and metering system.

**EFPS** Electronic flight-progress strip; D adds data.

**EFRS** Engine-failure recognition speed.

**EFS** External fuel system (battlefield helicopter).

**EFT** 1 Elementary flying, or flight, training; E adds exercise, P programme, S school.

2 Electronic funds transfer; S adds system.

**EFU** Emergency functions unit [air refuelling].

**EFVS** Enhanced flight vision system[s]. Allows aircraft below MDA and DH when not on Cat. II or III straight-in approach (FAA).

**EFW** Electric field and wave.

**EFX** Expeditionary forces experiment (USAF).

**EGA** 1 Exhaust-gas analyser.

2 Excess ground attenuation.

**EGAC** Enhanced general avionics computer.

**EGAD** Export Group for Aerospace and Defence (UK).

**Egads** Electronic ground automatic destruct sequencer button.

**EGAS** European guaranteed access to space (five-year 2003–07 plan requiring €1 billion).

**EGASF** European General Aviation Safety Foundation.

**EGATS** European Guild of Air Traffic Services.

**EGB** End-grain balsa.

**EGBU** Enhanced glide-bomb unit.

**EGCU** Electrical-generator control unit.

**EGDN** Ethylene-glycol dinitrate (a powerful explosive).

**eggbeater** Helicopter with intermeshing rotors.

**EGI** Embedded GPS/INS.

**EGIHO** Expedited ground-initiated handoff.

**EGIU** Electric[al] generator interface unit.

**Eglin** Florida, largest AFB, home of many facilities including former APGC (USAF).

**EGME** Ethylene-glycol monomethyl ether.

**EGNOS, Egnos** European geostationary new, or navigation, overlay service, or system. European equivalent of WAAS. (EC, ESA, Eurocontrol).

**EGP** Exterior-gateway protocol.

**EGPWS, EGPS** Ground-proximity warning system prefix E originally embedded, now enhanced; now called TAWS.

**EGR** 1 Engine ground run[ning].

2 Embedded GPS receiver.

**egress** 1 Procedure for getting out of spacecraft in orbit or after planetary or lunar landing, whether for working in space or any other reason. Begins with putting on spacesuits, and includes depressurizing and opening hatch.

2 Departure of combat aircraft from target area.

**egress handle** Handle which fires ejection seat.

**EGS** 1 Elementary gliding school.

2 Exfoliation galvanic stress.

**EGSE** Electrical ground support [or station] equipment.

**EGT** Exhaust-gas temperature, measured immediately downstream of turbine[s] or exhaust valve.

**EGTP** External ground test program.  
**EGW** Ethylene glycol and water.  
**EH** Edge enhancement.  
**E<sub>h</sub>** Total energy at given speed and height.  
**EHA** 1 European Helicopter Association [15 countries; office NL-1071 Amstcrsdam] (Int.).  
 2 Electro-hydrostatic, or -hydraulic, actuator, or actuation.  
**EHAC** En-route high-altitude chart.  
**Ehanods** Extended high-accuracy network orbital-determination system (USAF).  
**EHAS** Electro-hydrostatic actuation system.  
**EHBS** Enhanced high-band subsystem.  
**EHD** Electro-hydrodynamic.  
**EHDD** Electronic head-down display.  
**e.h.f., EHF** Extra-, or extremely, high frequency, see Appendix 2.  
**EHL** Environmental health laboratory (USAF).  
**EHM** Engine health monitoring (or monitor).  
**EHOC** European Helicopter Operators' Committee (Int.).  
**ehp, e.h.p.** Equivalent horsepower. Usually total equivalent shaft horsepower.  
**EHR** Engine history recorder.  
**EHS** 1 Enhanced surveillance.  
 2 Electrochemical hydrogen separation.  
**EHSI** Electronic horizontal-situation indicator.  
**EHT** Electrothermal hydrazine thruster.  
**eht** Extra high tension (volts).  
**EHUM** Engine health and usage monitor.  
**EHV** Electro-hydraulic valve.  
**EHVF** European Homebuilt and Vintage Federation [2005] (Int.).  
**EI** 1 Earth (atmosphere) interface.  
 2 Entry interface.  
 3 Emissions index.  
 4 Electronic intelligence, prefix to SEAD.  
**EIA** 1 Electronic Industries Alliance [originally Association; office Arlington, VA22201] (US).  
 2 Environmental impact assessment.  
 3 Element imaging array.  
 4 Enhanced imagery analysis [W adds workstation].  
**EIAC** Electronic Industries Association of Canada.  
**EIANS** Eurocontrol Institute of Air Navigation Services.  
**EIB** European Investment Bank.  
**EICAS, Eicas** Engine indication, or instrument, (and crew-alert[ing]-system; C adds control).  
**EICMS** Engine in-flight condition-monitoring system.  
**EID** 1 Electro-impulse deicing.  
 2 Emitter identification.  
**EIDS** Engine-instrument, or instrumentation, display system.  
**Eiffel-type tunnel** Open-jet, non-return-flow wind tunnel in which whole working section is open.  
**eigen values** Discrete values of undetermined parameter involved in coefficient of differential equation, such that solution, with associated boundary conditions, exists only for these values; also called characteristic values or principal values.  
**eight** Flight manoeuvre in which aircraft flying horizontally follows track like large figure eight (see *Cuban\**, *lazy\**).

**eight-ball** Artificial horizon or attitude indicator (colloq., US).  
**18-m class** One of four Ostiv/FAI classes for competitive gliding, including span not greater than 18m.  
**eight-point roll** Roll executed in eight stages, with aircraft held momentarily after each roll increment of 45°.  
**eight pylon** Manoeuvre used in air racing in which aircraft is flown around pylons so that wingtip appears to pivot on pylon.  
**802-M, -11B** Leading wireless cabin system [in 2002] for use by individual passengers.  
**EIMG** Engine Industry Management Group [12 companies] (Europe).  
**EIMS** European innovation monitoring system.  
**EIOTEC** Engineering, integration, operational test and evaluation contract.  
**EIP** 1 Enhanced industry participation.  
 2 Environmental-impact parameter.  
 3 École d'Initiation Pilotage (F).  
**EIPI** Extended initial protocol identifier.  
**EIPS** Engine ice protection system.  
**EIQ** Engine Integration Qualification (USA).  
**EIRA** Ente Italiano Rilievi Aerofotogrammetrici.  
**EIRP** 1 Effective [or equivalent] isotropically radiated power.  
 2 Earth incident radiated power.  
**EIS** 1 Entry into service.  
 2 Environmental impact statement.  
 3 Ejection initiation subsystem.  
 4 Electronic instrument(ation) system.  
 5 Engine indication, or information, or instrument, system.  
 6 Engine in service (Pratt & Whitney).  
**EISA** Extended industry-standard architecture.  
**EISF** Engine initial spares factor.  
**EISS** Enhanced information sensor system, or suite.  
**EISW** Equivalent isolated single-wheel load (LCN).  
**EIT** Exoatmospheric interceptor technology.  
**EITB** Engineering-Industry Training Board.  
**EIU** Interface unit prefixed by equipment, engine, electronic[s], Efis, Eicas or emergency.  
**EJAA** European Joint Aviation Authorities [pre-2003 predecessor of EASA] (Int.).  
**ejectable** Able to be ejected from aircraft, esp. capsule, crew seat, sonobuoy, dropsonde or flight recorder.  
**ejection** Escape from aircraft by ejection seat.  
**ejection angle** Angle at which ejection seat leaves, measured relative to aircraft.  
**ejection capsule** 1 Detachable compartment serving as cockpit or cabin, which may be ejected as unit and parachuted to ground.  
 2 Box containing recording instruments or data ejected and recovered by parachute or other device.  
**ejection chute** Parachute(s) used to decelerate ejection seat or capsule; often ballute or drogue.  
**ejection seat** Seat capable of being ejected in emergency to carry occupant clear of aircraft.  
**ejector** Device comprising nozzle, mixing tube and diffuser, utilising kinetic energy of fluid stream to pump another fluid from low-pressure region.  
**ejector augmented lift** *Ejector lift*.  
**ejector exhaust** Piston engine pipe(s) disposed or shaped to produce forward thrust, not necessarily incorporating an ejector.

**ejector lift** Method of powered lift in which high-energy flow of hot gas (rarely, HP bleed air) from jet engine is expelled downwards through arrays of nozzles in large profiled vertical duct to entrain much greater flow of free air.

**ejector nozzle** Propulsive nozzle for engine of supersonic aircraft whose jet can entrain a large surrounding airflow.

**ejector ramjet** See *ram-rocket*.

**ejector seat** See *ejection seat*.

**EJS** Enhanced JTIDS.

**EK** Equatorial air mass.

**EKG** Electrocardiograph.

**Ekman layer** Transition between surface boundary layer and free atmosphere.

**EKP** Electronic knee-pad.

**EKV** Exatmospheric kill vehicle.

**ekW** Equivalent shaft power of turboprop, measured in kW. See *equivalent power*.

**EL** 1 Electroluminescent.

2 Ejector (augmented) lift.

3 Emitter locator (or location).

4 Elevation [or el].

5 Electronic logbook; also see *ELB*.

6 Expeditionary logistic [EAW] (RAF).

**E<sub>L</sub>** Reduced elastic modulus in local buckling.

**Elac, ELAC** 1 En-route low-altitude chart.

2 Elevator and aileron computer.

**Elass, E-LASS** Enhanced low-altitude surveillance system.

**elastance** Inability to hold electrostatic charge.

**elastic axis** Spanwise line along cantilever wing along which load will produce bending but not torsion.

**elastic centre** 1 Point within wing section at which application of concentrated load will cause wing to deflect without rotation.

2 Point within wing section about which rotation will occur when wing is subjected to twist.

**elastic collision** Collision between two particles in which no change occurs in their internal energy or in sum of their kinetic energies.

**elastic instability** Condition in which compression member will fail in bending before failing compressive strength of material is reached.

**elasticity** Property of material which enables a body deformed by stress to regain original dimensions when stress is removed.

**elasticiser** Elastic substance or fuel used in solid rocket propellant to prevent cracking of grain and bind it to case.

**elastic limit** Maximum stress withstood by material without causing permanent set or deformation. Hooke's Law asserts that within \*\* ratio of stress to strain is constant.

**elastic model** Linear dimensions, mass distribution and stiffness are so represented that aero-elastic behaviour of model can be correlated with that of full-scale aircraft.

**elastic modulus** Ratio of stress to strain [up to elastic limit].

**elastic stability** Able to bear compressive yield stress of materials without buckling.

**elastic stop nut** Nut in which self-locking is ensured by ring of fibre in which threads are formed as nut is screwed down.

**elasticity** See *specific elastance*.

**elastomeric bearing** Bearing in which angular (and some

linear) relative motion is permitted by distortion of flexible blocks bonded to the two parts. Needs no maintenance.

**elastomers** Rubber-like compounds used as pliable components in tyres, seals, gaskets etc.

**elasto-optical effect** Variation in length and refractive index of fibre optics when subjected to tensile stress.

**elastoplasticity** Theory of finite deformations.

**el-az** Elevation/azimuth.

**ELB** 1 Emergency locator beacon [A adds aircraft].

2 Extended [or extension of the] littoral battlespace.

3 Electronic logbook; FCG adds fault-correction guide, ISE in-service evaluation.

**ELBA** Emergency locator beacon, aircraft.

**elbow** 1 Angled section of piping used where change of direction is necessary.

2 Hollow fixture used for joining two lengths of electric conduit at an angle.

**ELC** Engine-life computer.

**ELCH** Elasticity laminate checker.

**ELCU** 1 Electrical control unit (CAA).

2 Electronic load-control unit.

**ELD** 1 Electroluminescent display.

2 Earth leakage detector.

**ELDO, Eldo** European Launcher Development Organization (1960, now defunct).

**elec** Usually electrical, not electronic.

**ElectRelease** Patented epoxy adhesive, rapidly disbonded by application of low voltage.

**electrical-discharge machining** Shaping hard metals by making the workpiece the anode in an electric circuit and eroding it by a shaped cathode tool, all submerged in ionised electrolyte.

**electrical engine** Rocket in which propellant is accelerated by electrical device; also called electric rocket (see *electric propulsion*).

**electrical interference** Undesirable and unintended effects on equipment due to electrical phenomena associated with other apparatus, cables, materials or meteorological conditions.

**electrical load management** Supervises links between generators/alternators on main engines and APU, batteries and ground power supplies and on-board loads.

**electric altimeter** Indicates height by variation of electrical capacitance. Also called electrostatic or capacity altimeter.

**electric bonding** Interconnection of metallic parts for safe distribution of electrical charges.

**electric braking** Use of powerful [rare-earth] electromagnets to squeeze the landing-gear brake rings.

**electric energy** Product of current and time, 1MJ = 0.277 kWh, 1J = 1Ws.

**electric field strength** Electric potential per unit distance across field, symbol E, units volts per metre.

**electric flux density** Also called dielectric flux density, D = 4π × displacement current, units coulombs/metre<sup>2</sup>.

**electric gyro** One whose rotor is driven electrically.

**electric propeller** One whose pitch-change mechanism is actuated by an electric motor and gearbox.

**electric propulsion** General term describing all types of propulsion in which propellant consists of charged electrical particles accelerated by electric or magnetic fields or both; eg electrostatic, electromagnetic or electrothermal.

**electric RAT** Ram-air turbine driving electric alternator or d.c. generator.

**electrics** Generalised term for all electric power generation, control and services.

**electric starter** Electric motor used to crank engine for starting.

**electric steel** Steel made in electric furnace (induction or arc-type) which possesses uniform quality and higher strength than open-hearth steel of same carbon content.

**electric tachometer** See *tachogenerator*.

**electric trim** Trim tab[s] moved by electric motor [and usually irreversible screwjack].

**electric welding** Welding by electric arc or passing large current through material.

**electric wind** Emission of negative charge from sharp corner or point of conductor carrying high potential current. Also known as electric breeze.

**electrochemical machining** Range of processes in which large direct current is passed through workpiece via shaped electrode in conductive electrolyte.

**electrochemical treatment** Process involving application of electrical energy to produce chemical change in surface of material to be treated, such as anodization of aluminium alloys.

**electrochromatic** Optically dimmable [transparency] by applied voltage.

**electrode** 1 Terminal at which electricity passes from one medium into another; positive is called anode and negative cathode.

2 Semiconductor element that performs one or more of the functions of emitting or collecting electrons or ions, or of controlling their movements by electric field.

3 In electron tube, conducting element that performs one or more of the functions of emitting, collecting or controlling, by electro-magnetic field, movement of electrons or ions.

**electrodynamics** Science dealing with forces and energy transformation of electric currents, and associated magnetic fields.

**electrodynamic tether** EDT, long (<100-km, 62-mile) flexible filament[s] linking in tension two bodies in orbit round Earth or other primary, providing modest artificial gravity as well as ability to change orbit and efficiently generate electrical power. See *tether system*.

**electro-expulsive de-icing** Use of intermittent giant pulses of d.c. to detach ice from airframe.

**electroforming** Building up a metal part of complex but thin form as an electroplated layer on a substrate, eg nickel on expanded polystyrene.

**electro-hydraulic** Synonymous with electro-hydrostatic; both are abbreviated EHA.

**electro-hydrostatic** Using hydraulic power to provide output force in localised system with all command and power provided by multi-redundant electric channels, which are much lighter than hydraulic piping.

**electroimpulse deicing** Mechanical method involving repeated [small] surface deformations caused by electric shocks.

**electrojet** Current sheet or stream moving in ionised layer in upper atmosphere; \* move around Equator following sub-solar point and around polar regions, where they give rise to auroral phenomena.

**electrokinetics** Science dealing with electricity in

motion, as distinguished from electrostatics. Electrokinetic potential symbol is  $\zeta$ .

**electroluminescence** Emission of light caused by electric fields; gas light is emitted when kinetic energy of electrons or ions accelerated in field is transferred to atoms or molecules of gas.

**electrolysis** Chemical decomposition or change in chemical state produced by electric current.

**electrolyte** Liquid or paste conductor in electrolytic cell or battery; when acid, base or salt is dissolved in water dissolved material ionises, so that solution has electric potential and, when current is passed, will have different potential from metal immersed in it; solution used for anodizing aluminium and alloys, sulphuric or chromic acids being most common.

**electrolytic corrosion** Corrosion resulting from electrochemical action of dissimilar metals in presence of electrolyte.

**electromagnet** Magnet whose flux is produced by current in coil which encircles ferromagnetic core; temporarily magnetised while current flows.

**electromagnetic** Pertaining to magnetic field created by current; combined magnetic and electric fields accompanying movements of electrons through conductor. Abb. EM.

**electromagnetic compatibility** All aircraft systems can work simultaneously with no mutual interference.

**electromagnetic expulsive deicing** Sends intermittent giant pulses of EM energy which impart skin shocks which, though small amplitude, throw ice off.

**electromagnetic focusing** Control and concentration of electrons in narrow beam by magnetic fields.

**electromagnetic frequency bands** For administrative purposes various EM bands allotted letters (see Appendix 2).

**electromagnetic induction** Establishment of current in conductor cutting flux of electromagnet; principle of rotary electrical machines and transformers.

**electromagnetic intrusion** Intentional insertion of EM energy into transmission paths with object of causing confusion.

**electromagnetic radiation** Radiation made up of oscillating electric and magnetic fields and propagated in a vacuum at 299,792,456 m [983,571,007 ft]/s; includes gamma radiation, X-rays, ultra-violet, visible light, infra-red radiation, radio and radar waves.

**electromagnetic riveting** Closing rivets by violent EM pulse.

**electromagnetic rocket** See *electrical engine, plasma rocket*.

**electromagnetic spectrum** EM radiation extending from gamma rays down through broadcast band and long radio waves.

**electromagnetic units** Several related systems of units [e.g. featuring abampere, abcoulomb, maxwell] now superseded by SI.

**electromagnetic waves** Waves associated with EM field, with electric and magnetic fields perpendicular to each other. Also known as electric waves, radio waves, light, X-rays, and by other names.

**electromechanical** 1 Using electricity as sole source of power and of command/control functions. Such systems are expected to displace hydraulics and other secondary power services, partly because of rare-earth magnets.

2 Control of engine fuel system by electrical signals.

**electrometallurgy** Use of electricity for smelting, refining, welding, annealing and other processes, and for electrolytic separation of metals and deposition from solutions.

**electromotive force** External electrical pressure (measured at source) which tends to produce flow of electrons in conducting medium; volt is \*\* required to maintain current of one ampere through resistance of one ohm.

**electron** Subatomic particle that possesses smallest negative charge, and which is so-called "fundamental particle" assumed to be building block of the Universe; mass at rest  $m_e = 9.1093897 \times 10^{-28}$  g, negative charge  $1.60217733 \times 10^{-19}$  coulombs; charge/mass ratio  $e/m_e = 1.7588 \times 10^{11}$  C kg<sup>-1</sup>.

**electron beam** Stream of electrons focused by magnetic or electrostatic field and used for neutralisation of positively charged ion beam and to melt or weld materials with high melting points. Also called cathode ray.

**electron-beam lithography** 'Writing' parts of an integrated circuit (microchip) by means of beam of electrons.

**electron-beam welding** Use of powerful focused beam of electrons to make precision weld on workpiece in vacuum.

**electron charge** Unit, symbol e,  $-1.602 \times 10^{-19}$  C.

**electron gun** Electrode structure which produces and may control one or more electron beams to produce TV picture or weld material.

**electronic ADI** Attitude director indicator incorporating a CRT display forming part of an EFIS.

**electronic charge** Electron charge.

**electronic cloth** Rapidly growing range of micro-electronics based on low-cost flexible substrates.

**electronic combat** See *electronic warfare*.

**electronic counter-countermeasures** Subdivision of EW; actions to ensure effective use of electromagnetic radiation despite enemy use of countermeasures.

**electronic countermeasures** Subdivision of EW; actions to reduce or exploit effectiveness of enemy electromagnetic radiation.

**electronic data-processing** System using electronic computer(s) and other devices in gathering, transmission, processing and presentation of information.

**electronic deception** Deliberate radiation, reradiation, alteration, absorption or reflection of electromagnetic radiation, to mislead enemy in interpretation of data or present false indications; manipulative \*\* is alteration or simulation of friendly electromagnetic radiations to accomplish deception; imitative \*\* is introduction into enemy channels of radiation which imitates his own emissions.

**electronic defence evaluation** Mutual evaluation of radar(s) and aircraft by means of aircraft trying to penetrate radar through ECM.

**electronic drop tube** A multistation flight-strip manager.

**electronic flight bag** Software and data-services solution to digitize logbooks, charts and other flight documents to achieve paperless cockpit. Class 1, usually COTS, including laptops; Class 2, the same, but connected to aircraft systems when in use, so requires approval; Class 3, installed equipment [AC-120-76A] (FAA).

**electronic flight-control unit** Computer controlling surfaces used as spoilers and airbrakes, with or without roll-control function.

**electronic flight instrument[ation] system** Replaces traditional flight instruments by full-colour CRT displays (typically three  $200 \times 200$  mm,  $8 \times 8$  in, for each pilot) each reprogrammable to operate in different modes and giving high redundancy.

**electronic interference** Disturbance that causes undesirable response in electronic equipment.

**electronic intelligence** Detection, recording, analysis and cataloguing (where possible, linking with particular emitters) of all unfriendly EM emissions.

**electronic jamming** Deliberate radiation, reradiation or reflection of electromagnetic signals with object of impairing use of electronic devices by enemy.

**electronic line of sight** Path traversed by electromagnetic waves not subject to reflection or refraction by atmosphere.

**electronic protective measures** Generally synonymous with electronic countermeasures.

**electronics** Branch of physics concerned with emission, transmission, behaviour and effects of electrons.

**electronic scanning** Scanning by cathode-ray tube, or sequenced emission from larger planar antenna array, instead of by mechanical means.

**electronic technical log** Manages civil airline fleet data including trip reports and maintenance requirements.

**electronic warfare** (also **electronic combat**) Use of electromagnetic emissions as a weapon or a source of intelligence.

**electron multiplier** Electron tube which delivers more electrons at output than it receives at input, because of secondary emission.

**electron tube** Gas-filled tube having anode, cathode and sometimes other electrodes for controlling flow of electrons.

**electron-volt** See *eV*.

**electro-optical guidance** EO guidance makes use of visible (optical) contrast patterns of target or surrounding area to effect seeker lock-on and terminal homing. Three such systems are contrast edge tracker (Mk 84 EOGB and Walleye); contrast centroid tracker (Maverick); and optical area correlator, which scans contrast patterns in large area surrounding target.

**electro-optic converter** Device which converts electricity into laser pulses for fibre-optic sensors.

**electro-optics** Electronics involving visible or near-visible light, eg TV.

**electroplating** Coating metal with deposit removed from electrode and carried by electrolyte in which object to be coated is immersed.

**Electropult** Patented assisted-takeoff device, in effect a d.c. motor "unrolled" (US c1940).

**electrostatic capacity** Measure of ability to hold electric charge, unit Farad, symbol F.

**electrostatic deflection** Bending of electron beam during passage through electric field between two parallel flat electrodes; beam is deflected towards positive electrode.

**electrostatic focusing** Use of electric field to focus stream of electrons to small beam.

**electrostatic precipitation** Use of high voltages (large potential gradients) to remove particulate matter from gas flow, smoke or other volumes.

**electrostatic rocket** See *ion rocket*, *ion engine*.

**electrostatics** Study of electricity (charges) at rest.

**electrostatic storage** Storage of information as electrostatic charges.

**electrostatic unit, ESU** Unit of electric charge, amount of charge which repels similar charge in vacuum with force of one dyne; a statcoulomb.

**Elektron** Magnesium alloys with 3–12% aluminium, 0.2–0.4% manganese and often 0.3–3.5% zinc.

**element** 1 In electron tube, constituent part that contributes to electrical operation.

2 In circuit, electrical device such as inductor, resistor, capacitor, generator, line, electrode or electron tube.

3 In semiconductor device, integral part that contributes to its operation.

4 Parameters defining orbit of body attracted by central, inverse-square force: longitude of ascending node, inclination of orbit plane, argument of perigee, eccentricity, semimajor axis, mean anomaly and epoch.

5 Flight of two or three aircraft (US) or basic fighting unit of two aircraft (UK).

6 Component parts of aircraft sufficiently distinctive and specific in type, shape or purpose as to be of major importance in design.

**elementary charge** Electron charge.

**elementary trainer** Ab initio, also known as primary trainer.

**element leader** Lead aircraft or pilot of element or flight.

**elephant ear** 1 Thick plate on rocket or missile used to reinforce hatch or aperture.

2 Air intake consisting of twin inlets, one on each side of fuselage.

3 Quasi-circular balancing area ahead of hinge axis of flight-control surface [rare after 1920].

**Elev, elev** Elevation.

**elevation** 1 Side or front view as drawn in orthographic projection.

2 Vertical distance of point or level, measured from mean sea level.

3 See *airfield\**.

4 Angle in vertical plane between local horizontal and line of sight to object.

**elevation rudder** Elevator (arch.).

**elevator** 1 Movable control surface for governing aircraft in pitch.

2 Effectiveness of pitch control, as in expression “to run out of \*”.

3 In air intercept, code meaning ‘take altitude indicated (in thousands of feet), calling off each 5,000 ft increment’ (DoD).

**elevator angle** Angle between chord of elevator and that of either the tailplane or aircraft longitudinal axis.

**elevator tab** Trim (or other) tab attached to elevator.

11-9 Date of 2001 terrorist attacks on US.

**elevons** Wing control surfaces combining functions of ailerons and elevators, esp. on delta-wing or ‘tailless’ aircraft.

**elox** Electronics (colloq.).

**e.l.f., ELF** 1 Extremely low frequency, see Appendix 2.

2 Electronic location-finder.

3 Aerospots federation (Estonia).

4 Early long flights [flight-test programme].

**Elfaa** European Low-Fares Airlines Association [January 2004–, 12 members] (Int.).

**Elfin** ATR racking and module for housing instrument, electronic unit or other equipment.

**ELG** 1 Emergency landing ground.

2 Electric Landing Gear (UK 2004–).

**ELGB** Emergency Loan Guarantee Board.

**Elint** Electronic intelligence.

**Elinvar** Trade name for an *invar* of steel character.

**Elios** Elint identification and operating system.

**Elips** Electronic integrated protection shield.

**Elite** Trade name for new [2005] range of lubricating oils, initially 20W-50.

**ELJ** External-load jettison.

**elliptical orbit** Orbit of space object about primary body having form of ellipse. Nearest/furthest points pericentre/apocentre.

**elliptical wing** Aerodynamic theory shows that for highest efficiency (lowest induced drag) the planform should be an ellipse with the quarter-chord line straight.

**elliptic loading** Ideal form of spanwise loading of wing, lift vectors forming semi-ellipse seen in front elevation.

**ELM** 1 Extended-length message.

2 Electrical load management [S adds system, U unit].

**elongation** 1 Increase in length of hardware under tension.

2 Angle at Earth between lines to Sun and another celestial body of the solar system.

**ELP** Electroluminescent panel.

**ELQA** Extended link quality analysis (TADIL).

**ELR** 1 Environmental lapse rate.

2 Extra-long-range.

3 Eyesafe laser ranger, or rangefinder.

**ELS** 1 Emitter location system.

2 Emergency landing strip.

3 (Electron) energy-loss spectroscopy.

4 Electronic library system.

5 Elementary surveillance.

**Elsa** Electronic lobe-switching antenna.

**Elssec** Electronic security.

**ELSS** Environmental life-support system.

**ELSSE** Electronic sky screen equipment; indicates departure of rocket from predetermined trajectory.

**ELT** 1 Emergency locator transponder, or transmitter.

2 Enforcement of laws and treaties.

3 Electronic light table, for EO reconnaissance.

4 Emergency landing technique.

**ELV** Expendable launch vehicle.

**Elvis** Enhanced linked virtual information systems.

**ELVT, ELVT** Ejector lift, vectored thrust.

**EM** 1 Electromagnetic.

2 Energy manoeuvrability.

3 Electron microscope.

4 Element manager.

**Em** Emission.

**e.m.** Electromagnet.

**e/m** Electron charge/mass ratio.

**EMA** 1 Electromechanical actuator, or actuation.

2 Electron microprobe analysis.

3 External mounting assembly (helicopter).

4 Electronic missile acquisition.

**EMAA** Etat-Major de l’Armée de l’Air (Chief of Staff, F).

**EMAD** Engine-mounted accessory drive.

**EMADS** Euromux management and data sheets.

**EMAGR, E-MAGR** Enhanced miniaturized airborne GPS receiver.

**Emals, EMALS** Electromagnetic aircraft launch system (catapult).

**Emars** Electromagnetic aircraft recovery system (carrier).

**EMARSSH, E-marsh** Europe Middle East route [structure] south of the Himalayas.

**EMAS** 1 Electromechanical actuation system.

2 Environmentally modified airfield surface.

3 Engineered-material[s] arresting system (ESCO).

**EMAT** Electromagnetic acoustic transducer.

**$E_{max}$**  Peak voltage.

**EMB** Extended MAD boom.

**embedded** 1 Computer or other processor forming integral part of device or subsystem and thus unable to communicate directly with bus or highway or to be used for any other purpose.

2 Mixed clouds, usually Cu embedded in other types.

**embedded optical databus** Plastic fibre-optic conductors printed on airframe structure, replacing looms of cables.

**embedded training** Simulated threat data are fed to the avionics of a real airborne aircraft; can include audio and ground control.

**embodiment loan** Loan of government property to private industry, research organization or individual, usually to enable recipient to fulfil government contract.

**Embratel** Empresa Brasileira de Telecomunicacoes SA.

**EMC** 1 Electromagnetic compatibility, or capability.

2 Entertainment multiplexer controller.

**Emcat** Electromagnetic catapult.

**EMCD** Electromagnetic chip detector.

**EMCDB** Elastomer-modified cast double-base propellant.

**Emcon** Emissions, or emission-monitor, control.

**EMCS** Energy monitoring and control system.

**EMD** 1 Emergency distance.

2 Eidgenossische Militärdepartement (Switz.).

3 Energy-management display.

4 Engine or engineering, model derivative.

5 Engineering and manufacturing development, or engineering, manufacturing and development.

**EMDa** Emergency distance available.

**EMDM** Enhanced multiplex-demultiplex unit.

**EMDP** Engine model derivative program (US).

**EMDr** Emergency distance required.

**EMDU** Enhanced main display unit (AEW aircraft).

**EME** Electromagnetic effects.

**EMEA** Europe, Middle East, Africa [or, Qinetiq, Australasia].

**EMEC** Enhanced master events controller.

**EMED** Electromagnetic-expulsion, or explosive, de-icing [sometimes Emedj].

**emer, Emerg** Emergency.

**Emerald** Emerging Research and Technology Department activities of relevance to ATM(7) concept definition (Euret).

**emergency air** Compressed air for energizing hydraulic or pneumatic circuit in event of failure of normal power supply.

**emergency cartridge** Provides combustion products to energize hydraulic or pneumatic circuit in event of failure of normal power supply.

**emergency ceiling** Highest altitude for multi-engined

aircraft at which best rate of climb is 50 ft per minute with throttle of one engine closed; also known as usable ceiling.

**emergency combat capability** Condition exclusive of primary alert status whereby elements essential to combat-launch an ICBM are present and can effect launch under conditions of strategic warning (USAF).

**emergency controlling authority** Temporary air-traffic rules in vicinity of an incident if required to preserve life or property (CAA).

**emergency descent** Premature descent from operating altitude because of in-flight emergency.

**emergency distance** Distance sufficient for all takeoff or landing emergencies, such as critical-engine failure at  $V_1$ , met by runway plus stopway and possibly clearway.

**emergency exit** Door or window designed to be opened after emergency landing or aborted takeoff for passenger and crew evacuation.

**emergency flotation gear** Inflatables fitted to aircraft in emergency to provide water buoyancy.

**emergency landing** Landing made as result of inflight emergency.

**emergency locator/transmitter** Radio beacon triggered by impact or water immersion giving position of crashed aircraft; fixed \*\*\*, portable \*\*\*, and survival \*\*\* (armoured and can float). Suggest synonymous with Adelt.

**emergency parachute** Second stand-by parachute.

**emergency power unit** On-board source of electrical and/or hydraulic power sufficient to continue controlled gliding flight following loss of main engines; commonly self-contained package using hydrazine monofuel (hence *MEPU*).

**emergency rating** 1 Special rating of remaining helicopter engine[s] following failure of one; time-limited, typically to 30s; also called super-contingency.

2 Piston engine rating for emergency sprint periods, with aid of high boost, water/methanol injection, etc.

**emergency scramble** Aircraft carrier CAP launch of all available fighter aircraft; if smaller number required, numerals and/or type may be added (DoD).

**emergent properties** Features of a new design which were not, and could not reasonably be, predicted at the original project stage, for whatever reason.

**emery** Hard abrasives based on corundum  $Al_2O_3$ .

**EMF** Embarked military force.

**emf, e.m.f.** Electromotive force.

**EMG** Electromagnetic gun.

**EMGFA** Armed forces general staff (Portugal).

**EMH** Electromagnetic health.

**EMI** 1 Electromagnetic induction, or inductor, or interference, or impulse[s].

2 Environmental message interchange.

**EMIH** EMI (1, 2) hardening, or hazard.

**EMI/HIRF** EMI (1) high intensity radio frequency.

**EMIO** Egyptian Military Industrialization Organization.

**EMIRS** Electromagnetic interference reduction system.

**emission** 1 Process by which body emits EM radiation as consequence of temperature only.

2 Sending out of charged particles from surface for electrical propulsion.

3 Loosely, any release from solid surface of electrical signal.

**emissions control** Combat environment in which all detectable emissions are, as far as possible, prohibited.

Thus, shipboard aircraft must use autonomous landing aids. In the days of nuclear deterrence it was central to attack by manned bombers.

**emissivity** Ratio of radiation emitted by body (if necessary in specified band of EM wavelengths) to that of perfect black body under same conditions; only luminescent can exceed 1, value for black body.

**emittance wash repair** In-flight repair of spacecraft TPS tile[s], vulcanizing Si/SiC powder.

**emitter** Device releasing radiation, usually in usable optical, IR or RF wavelengths.

**EML** 1 Emergency medical link.

2 Electromagnetic launcher.

**EMLU** European mid-life update.

**Emma, EMMA** Engineering mock-up and manufacturing assembly.

**eMMP** Electronic maintenance-management planning.

**EMMU** Engine monitor multiplexer unit.

**EMP** 1 Electromagnetic pulse (nuclear).

2 Electric motor pump.

3 Engine monitor[ing] panel.

4 Engine motor pump [on ground, flight controls].

5 Extended maintenance plan.

**Empar, EMPAR** European multifunction phased-array radar.

**EMPASS** Electromagnetic performance of air and ship system (USN).

**empennage** Complete tail unit.

**empirical** Based on observation and experiment rather than on theory; used esp. of mathematical formulae.

**employment** Tactical usage of aircraft in desired area of operation; in airlift, movement of forces into a combat zone, usually in assault phase (USAF).

**empty tunnel** No model in test section.

**empty weight** Measured weight of individual aircraft less non-mandatory removable equipment and disposable load. OEW is preferred.

**EMR** 1 Electromagnetic radiation.

2 Electromagnetic resonance.

3 Electromagnetic riveting.

4 Extraordinary magnetoresistance.

**EMRP** Effective monopole radiated power.

**EMRS** Electromagnetic remote sensing.

**EMRU** Electromechanical (or electromagnetic) release unit.

**EMS** 1 Emergency medical service (usually helicopter).

2 Entry monitor system.

3 Equipment Maintenance Squadron (USAF).

4 Engine management, or monitoring, system; see

EMSC.

5 Environmental management system (AEW radar).

6 Electromagnetic-pulse shielding (hardening).

**EMSC** Engine-monitoring system computer.

**EMSG** European maintenance system guide.

**EMSP** Enhanced modular signal processor.

**EMT** 1 Equivalent megatons.

2 Error-management training.

3 Electronic maintenance trainer.

4 Enhanced moving target; I adds indicator.

5 Expert missile tracker.

6 Emergency maneuver training.

**EMTA** Engineering & Marine Training Authority (UK, office Watford).

**Emtas** Eco-management and audit scheme.

**EMTE** Electromagnetic test environment.

**EMU** 1 Extravehicular mobility unit; suit for exploring lunar surface.

2 Engine maintenance, or monitoring, unit.

3 Electronic mockup.

4 Environment monitoring unit.

**emu, e.m.u.** Electromagnetic unit[s].

**EMUT** Enhanced manpack UHF terminal.

**EMUX, Emux** Electrical multiplexing.

**EMWR** Eddy Mach-wave radiation.

**ENA** 1 Escuela Nacional de Aeronáutica (Arg.).

2 Extended network addressing.

3 Exhaust nozzle area.

4 Exercise notification area.

**ENAC** 1 École Nationale de l'Aviation Civile (F).

2 Ente Nazionale per l'Aviazione Civile [civil aviation] (Italy).

**ENAV** ATC authority (Italy).

**ENB** Enhanced neutron bomb.

**ENC** Electronic noise-cancelling.

**encasement** Formal laying up and dedication of a disestablished unit's flags and ensigns (US).

**encastré** Structural beam whose ends are not pinned but fixed.

**enclosed cockpit** Provided with an overhead structure, either integral with the fuselage or a separate hinged or sliding canopy.

**encoder** Analog-to-digital converter, eg converting linear or angular displacement, temperature or other variable to digital signals.

**encoding altimeter** Presents usual display but in addition incorporates digitized output to transponder for transmission of pressure height to ATC.

**encounter** Time-continuous action between airborne friendly and hostile aircraft.

**end-bend blading** Gas-turbine compressor blading whose ends (root and tip) are progressively given 3-D curvature to compensate for relatively sluggish flow over the inner and outer walls of the duct.

**end-burning grain** Solid-propellant charge which burns only on transverse surface at one end, usually facing nozzle.

**end effects** Aerodynamic effects due to fact wing span is finite.

**end-fire** Linear aerial array whose direction of maximum radiation is along axis.

**end game, endgame** In failed interception by AAM, time when missile runs out of V and energy.

**end instrument** Converts data into electrical output for telemetry. Also called end organ or pickup.

**end item** End-product ready for use.

**endo-atmospheric** Within an atmosphere.

**endothermic** Absorbing heat.

**Endox Q-576** Alkaline soak added to water to form ultrasonic-cleaning fluid (Enthone).

**endplate[s]** 1 Small auxiliary fins at or near tips of tailplane.

2 \* effect, aerodynamic effect of T-tail on fin, or of tanks, pods, missiles or fairings on wingtips.

**end play** Unwanted axial movement of shaft.

**end speed** Speed of aircraft relative to carrier at release from catapult.

**end thrust** Thrust along axis of shaft.

**endurance** Maximum time aircraft can continue flying under given conditions without refuelling.

**endurance limit** Highest structural stress that permits indefinite repetition or reversal of loading; always less than yield stress (see *fatigue limit*).

**endurance on station** Maximum time maritime aircraft can patrol in designated areas.

**ENEC** Extendable nozzle exit cone.

**Enema** Etablissement National pour l'Exploitation Météorologique et Aéronautique (Algeria).

**energy** Capacity to do work. SI unit = joule, or [more usefully] MJ = 0.3725 hp-h, 0.277 kWh; 1 kWh = 3.6000 MJ; 1hp-h = 2.68452 MJ; 1 hp-h = 2.68452 MJ; 1 therm = 105.506 MJ; 1 BTU = 1.05506 kJ. At any time \* of a flying vehicle is given by  $E_h = W(h + V^2/2g)$  where h is height above MSL and W is instantaneous mass.

**energy absorption test** See *drop test*.

**energy conversion efficiency** Ratio of kinetic energy of jet leaving nozzle to that of hypothetical ideal jet leaving ideal nozzle using same fluid under same conditions.

**energy density** Sound energy per unit volume (usual unit is non-SI: ergs/cc).

**energy footprint** Total area of damage caused by aircraft crashing, especially at airshow.

**energy height** A measure of kinetic and potential energy of an air vehicle;  $h_c = h + V^2/2g$  where h is altitude above MSL and V is TAS expressed as a velocity.

**energy level** Any specific value of energy which a particle may adopt; during transitions from one level to another, quanta or radiant energy are emitted or absorbed, frequencies depending on difference between levels.

**energy management** Monitoring to minimise fuel expenditure for trajectory control, navigation, environmental control, etc.

**energy manoeuvrability** Flight manoeuvres in which full use is made of kinetic energy of aircraft, normally in trading speed for altitude.

**energy state** Total kinetic plus potential energy possessed by aircraft, particularly a fighter; normally expressed as altitude from SL reached (without propulsion) if all such energy were converted to potential (height) energy.

**energy weapons** See *directed-energy*.

**ENG** Electronic news-gathering.

**Eng** Engine.

**Engage** Armed position of some arrester hooks, extended or hinged down prior to landing

**engage** 1 In air interception, order to attack designated contact (DoD usage).

2 To contact arrester wire or barrier.

**engage and trim indicator** Panel instrument showing proper engagement of ailerons/elevators/rudder to autopilot system.

**engagement** Encounter which involves hostile action by at least one participant.

**engagement control** Exercised over functions of air-defence unit related to detection, identification, engagement and destruction of hostile targets.

**engaging speed** Speed of aircraft relative to arrester wire at engagement.

**engin** Missile (F).

**engine altimeter** Indicates altitude corresponding to manifold pressure of supercharged engine.

**engine-attributable** Caused by fault in an engine.

**engine car** Airship car wholly or mainly devoted to propulsive machinery.

**engine change unit** Aircraft piston engine removable as single unit with all accessories, cooling and oil systems.

**engine cowling** Hinged or removable covering around aircraft engine shaped to keep drag to minimum and optimise flow of cooling air.

**engine critical part[s]** Part[s] whose failure is likely to cause a Hazardous Engine Effect.

**engineered material** Cellular concrete for overrun areas.

**engineering** 1 Department responsible for detail design and development.

2 Hardware design and development.

**engineering mock-up** Full-scale replica of new aircraft or major part thereof, made [usually in metal] with high precision, partly in hard tooling, to check three-dimensional geometry of structure, systems, and equipment.

**engineering time** Number of man-hours required to complete engineering task.

**engineering units** Pre-SI (suggested obsolete) system of units for expressing lift and drag of wing or component part in lb/sq ft at 1 mph at specified angle of attack.

**engine-failure recognition speed** Usually written  $V_{fir}$ .

**engine flight cycle** The flight profile upon which the Approved Life is based.

**engine icing** A problem with all engines, but especially with piston engine with a choke-tube carburettor, where temperature is sharply reduced.

**engine indication and crew alerting** Eicas monitors several [typically 12] measures of engine and system performance, and can indicate impending failure.

**engine mounting** Structure by which engine is attached to airframe.

**engine-out** Condition in which one engine of multi-engined aircraft gives no propulsive thrust.

**engine-plus-fuel weight** A criterion of propulsive efficiency, heavy engines generally burning less fuel.

**engine pod** See *pod*.

**engine positioner** Dolly or trailer designed to carry engine, especially large turbofan, on cradle provided with hydraulic, or electrohydraulic, lateral, vertical, fore/aft, roll and pitch movement.

**engine pressure ratio** Pressure ratio across complete compression system [possibly fan, booster and LP, IP and HP compressors]. In 1950 an axial spool of 15 stages achieved \* of about 6; today this number of stages can exceed 50.

**engine rating** Power permitted by regulations for specified use; maximum takeoff, combat, maximum continuous, weak mixture etc.

**engine-section stator** The ring of inlet guide vanes immediately downstream of a fan at the inlet to the core.

**engine speed** Revolutions per minute of main or other specified rotor assembly.

**engine swapping** Replacing engines due for overhaul with stored engines that have serviceable life remaining.

**English bias** Missile aiming error at launch, and temporary guidance commands to overcome it.

**EngO** Pronounced N-jo, Engineer Officer (RAF).

**ENH** Earth near horizon.

**enhanced GPWS** Uses aircraft flight data to calculate envelope along projected flight path and compare this with internal terrain data base. Potential conflict gives

≤60 s aural/visual warning [in addition to normal GPWS output] and also displays terrain map showing clearance ahead.

**enhanced vision system** 1 Uses dual-band IR camera to project conformal image of scene ahead on to HUD, allowing approach to continue from 200 to 100 ft (30 m) decision height.

2 Another provides HUD-system to input Flir and/or MWR(1).

**ENJJPT** Euro-NATO Joint Jet Pilot Training.

**ENK, ENNK** Endo-atmospheric non-nuclear kill.

**ENNA** Enterprise Nationale de la Navigation Aérienne (Algeria).

**ENOC** Engineering network operation center.

**enplanement** Boarding by one passenger (US).

**Enq** Enquire.

**ENR** En-route, also ENRT.

**ENRI** Electronic Navigation Research Institute (Sendai, Japan).

**enrichment** 1 Adjustment by piston engine mixture control to produce richer mixture.

2 Artificial increase in percentage of isotope; thus, enriched uranium contains more than natural 0.75% of fissile U235.

**en route** 1 Between point of departure and destination.

2 Portion of flight on airways or desired track, excluding initial departure and approach phases.

**en-route automated radar tracking system** A step beyond ARTS IIIA with improved digital-display radars and fail-safe features (FAA).

**en route base** Air base between origin and destination of air force mission which has capability of supporting aircraft operating route.

**en route clearance** Valid to destination, either to joining stack or coming under approach control.

**en route climb** Climb to designated FL or cruising altitude on desired track.

**en route height** See *cruise altitude*.

**en route support team** Selected personnel, skills, equipment and supplies necessary to service and perform limited specialised maintenance on tactical aircraft at en route base (USAF).

**en route time** Time en route (1), normally measured from initial cruise altitude to TOD.

**en route traffic control service** Provided generally by ATC centres, to aircraft on IFR flight plan operating between departure and destination terminal areas.

**ENRT** En route.

**ENS** Euler/Navier-Stokes.

**ENSA** École Nationale Supérieure de l'Aéronautique (F).

**ENSAE** New designation of ENSA, with addition of "et de l'Espace". Now more commonly called Supaéro.

**ENSCE, or Enscce** Enemy situation correlation element (US, intelligence).

**Ensieta** École Nationale Supérieure des Ingénieurs des Etudes et Techniques d'Armement [F-29806 Brest] (F).

**ENSIP, Ensip** Engine structural integrity program (USAF).

**ENSMA** Ecole Nationale Supérieure de Mécanique et d'Aéronautique (F).

**ENSO** El Niño southern oscillation.

**Ensolite** Very wide range of closed-cell foams made

chiefly from VN (vinyl/nitrile PVC NBR rubber) or Neoprene; many applications (Uniroyal).

**Intel** Empresa Nacional de Telecomunicaciones (Argentina, Chile, etc).

**Enterprise caching technology** Combines VDA, APC(10) and selective caching in order to prevent superfluous data from being sent over electronic communications.

**ENTG** Euro/NATO Training Group.

**enthalpy** Total energy (heat content) of system or substance undergoing change from one stage to another under constant pressure, expressed as  $H = E + PV$ , where E is internal energy, P pressure and V volume; another expression is  $Q = V + pV$ . See specific \*.

**entity** Radar-detected aircraft seen on screen.

**entomopter** Flying machine based on insect aerodynamics.

**ENTR** Entire.

**entrainment** Sucking-in of induced fluid flow by high-velocity jet through duct.

**entrance cone** Portion of Eiffel-type tunnel upstream of working section.

**entrant** Start-up airline, new to the market [opposite of incumbent].

**entropy** 1 In physics and thermodynamics, measure of unavailability of energy; symbol  $\phi$ , or S, a measure of energy per unit temperature J/K. Specific \*, symbol s, is \* per unit mass  $\text{kJ/kgK} = 0.238846 \text{ Btu/lb}^\circ\text{R}$ ; the reciprocal is 4.186798. Thus, in irreversible process, such as occurs in any real engine, \* always increases. Any system or process having constant \* is said to be isentropic.

2 In communications theory, measure of information disorder.

**entry** 1 Penetration of planetary atmosphere by spacecraft or other body travelling from outer space.

2 Fore part of body or aerofoil, esp. wing.

**entry corridor** Limits of route through atmosphere which returning spacecraft must follow. With too steep a trajectory spacecraft would burn up; with too shallow, spacecraft would bounce off atmosphere and be unable to return.

**entry fix** Precise reporting point at entry to FIR or control area, see next.

**entry gate** Point(s) of entry for incoming airways traffic to TMA.

**entry interface** Point during re-entry at which returning spacecraft encounters sensible atmosphere. Traditionally (non-SI) = 400,000 ft.

**entry level** Not precisely defined, but most common meaning is to describe small business jet, first to be bought by customer, who may later change to more costly replacement.

**entry point** 1 Ground position at which aircraft entering control zone crosses boundary.

2 Where supersonic track crosses coast inbound.

**ENU** East/north/up co-ordinate system.

**envelope** 1 Of variable, curve which bounds values but does not consider possible simultaneous occurrences or correlations between different values.

2 Curve drawn through peaks of family of curves or through all limiting valves.

3 Glass or metal casing of electronic tube.

4 Hot air or gas container of non-rigid aerostat.

5 Outer cover of airship.

6 Volume of airspace bounded by limits of effective use of weapon.

**envelope diameter** 1 Diameter of circle encompassing engine or other irregular object.

2 Diameter of airship envelope.

**envelope jiggling** Precision assembly of stressed-skin structure in reverse order, starting with skin in female jig and then adding internals (Fairley).

**ENVG** Enhanced night-vision goggle[s] combining thermal imager with image intensifier.

**environmental chamber** Chamber in which humidity, temperature, pressure, solar radiation, noise and other variables may be controlled to simulate different environments.

**environmental control system, ECS** Produces environment in which human beings and equipment can work satisfactorily.

**environmental lapse rate** Measured rate of decrease of temperature with height; determined by vertical distribution of temperature at given time and place, and distinguished from process lapse rate of individual parcel of air.

**environmental mock-up** Mock-up cabin intended to assist design of ECS.

**environmental stress screening** Test procedure similar to burn-through for promoting reliability with growth.

**environmental system** Environmental control system.

**EO** 1 Electro-optical, or optics; used thus in subsequent definitions.

2 Engineering [or Executive] order.

3 Earth observation.

**EOA** 1 Early Operational Assessment.

2 Engine-out allowance.

**E/O** Engine out.

**EOAR** European Office of Aerospace Research (USAF).

**EOB** Electronic order of battle.

**EOBT** Estimated off-block[s] time.

**EOC** 1 Electro-optic converter.

2 Enhanced, or early, operational capability.

**EOCCM, EO<sup>C2</sup>M** EO counter-countermeasures.

**EOCM** EO countermeasures.

**EOD** 1 Explosive-ordnance disposal, or demolition; S adds system, T reining.

2 Electro-optical device [S adds system, T training].

3 End of day.

4 Enhanced operating database.

5 Embedded optical databus.

6 Erasable optical disc.

**EoD** Effects of defects.

**EODAS, EOdas** Electro-optical distributed-aperture system.

**EODAP, Eodap** Earth and ocean dynamic applications program.

**EODC** Earth-Observation Data Centre (UK).

**EOE** Elasto-optical effect.

**EOEM** Electronic original equipment manufacturer.

**EOFC** EO fire control.

**EOFT** Enhanced operational flight trainer.

**EOGB** Electro-optical[ly] guided bomb.

**EO guidance** Electro-optical guidance.

**EOI** Expression of interest, requested by potential customer from supplier; if answered, could lead to ITT (2).

**EOIS** EO imaging system.

**EOIVS** EO IR viewing system.

**EOL** 1 Engine-off landing.

2 Edge of light, use of reflected light at grazing angle to highlight surface imperfections.

3 End of life; D adds disposal.

**Eolia** European pre-operational data-link applications (ATC/Euret).

**EOL power** End-of-life power.

**EOM** 1 Earth observation mission.

2 End of message.

**Eonnex** Aircraft fabrics; name registered by Eonair Inc.

**EOP** 1 Engine oil pressure.

2 Engine operating point.

3 Enhanced operational capability.

4 End of production; R adds review.

**EOQ** Economic order quantity.

**EOQC** European Organization for Quality Control (Int.).

**EOR** Extend/off/retract.

**EoR** Effects of repairs.

**EOS** 1 Electrophoresis operations in space.

2 EO sensor/system/subsystem/surveillance. Thus EOSDS is surveillance and detection system, EOSS is sensor system.

3 Earth observation satellite, or observing system; DIS adds data and information system.

**Eorsat** Elint ocean-reconnaissance satellite.

**EOSP** EO signal processor.

**EOT** 1 EO target/tracking/threat; S adds system,

**EOTADS** target acquisition and detection system and **EOTWD** threat-warning development.

2 End of test.

3 End of text.

4 Early orbit test[ing].

**EOTS** EO targeting system.

**EOVL** Engine-out vertical landing.

**EOVS** EO viewing system.

**EOW** EO warfare.

**EP** 1 External [or electric] power.

2 Environmental protection, [or plot], or processor [see *EPX*].

3 Engineering project, or plan.

4 Extended performance (target).

5 Electronic protection.

6 l'Espace Première = 1<sup>st</sup> class (F).

7 Enhancement phase.

8 Equipment Programme [MoD] (UK).

9 Evolutions programme.

**EPA** 1 Environmental Protection Agency (US).

2 Epoxy polyamide.

3 Extended planning annex.

4 Economic price adjustment (US contracting).

5 Experimental (or European) prototype aircraft.

**EPAD** Electrically powered actuation design.

**EPAF** European participating [rarely, partner] air force[s].

**EPAM, Epam** Electronic pilot activity and alertness monitor.

**EPAS** Expert process advisory set.

**epaulettes** In aviation, shoulder-mounted bages of rank or seniority, in civil aviation the most senior having four bars denoting captain of aircraft.

**EPC** 1 External power contactor, or connector.

- 2 Equipment Policy Committee (UK MoD).  
 3 Elementary Pilot Certificate.  
 4 Electronic power conditioner.
- EPCA** Energy Policy and Conservation Act (US).  
**EPCO** EANPG Co-ordination meeting[s] (ICAO).  
**EPD** 1 Exhaust-plume dilution.  
 2 Electronic product definition.  
 3 Electric-power distribution; A adds assembly, S system.  
**EPDS** See above.
- Epera** Extractor-parachute emergency-release assembly.  
**EPFA** The European Property Flying Association [registered Monmouth, Wales, promotes aircraft in the construction industry].  
**EPG** European participating governments (or groups).  
**EPGS** Electric[al] power generation, or generating, system.
- ephemeris** Periodical publication tabulating future positions of satellites or daily positions of celestial bodies and other astronomical data (plural = ephemerides).  
**ephemeris time** Uniform time defined by laws of dynamics, determined in principle by observed orbital motions of Earth and other planets (see *universal time*).  
**EPI** 1 Engine performance indicator.  
 2 Engineering process improvement.  
 3 Electronic-protection initiatives (AFRL).  
 4 Elevator position indicator.
- EPIA** European Photovoltaic Industry Association (Int.).  
**EPIC, Epic** 1 Epitaxial passivated integrated circuit.  
 2 Engineering and product information control (management team).  
 3 Emergency procedures information centre (BAA).  
 4 Electronic Privacy Information Center (DC-based watchdog).  
 5 Electronic and photonic integrated circuit (Darpa).
- epicos** Global e-business platform for aerospace and defence industries (Int.).  
**EPiRB, Epirb** Emergency position-indicating radio beacon, operating on 121.5 and 406 MHz in link with Sarsat.  
**EPL** Engine power lever, ie throttle.  
**EPLD** Electrically programmable logic device.  
**EPLRS** Enhanced position-location reporting system.  
**EPM** Electronic protection, or protective, measures.  
**EPMaRV** Earth-penetrating manoeuvring re-entry vehicle; does not penetrate planet, only its atmosphere (USAF).  
**EPMS** 1 Engine performance monitoring system.  
 2 Electrical power management system.
- EPN** European participating nations.  
**EPNdB** Equivalent Perceived Noise Decibel; unit of EPNL (see *noise*).  
**Epner** Ecole du Personnel Navigant Centre d'Essais et de Réception (F).  
**EPNL** Equivalent perceived noise level; measure of effect of noise on average human beings which takes into account sound pressure level (intensity), frequency, tonal value and duration.  
**EPNR** Electrically powered noise reduction.  
**EPO** Earth parking orbit.  
**epoch** Time when a satellite is established in orbit.  
**epoxy resin** Complex organic adhesive and electrical insulating material; addition of hardeners, plasticisers and fillers tailors its properties.
- EPP** 1 Emergency power package.  
 2 Enhanced parallel port.
- EPPIIC, Epic** Enhanced precise positioning integrated capability (satellite).  
**Eppler** Family of wing sections for competition sailplanes; tailored to small R, high IAS for penetration.  
**EPR** 1 Engine pressure ratio.  
 2 External power receptacle.  
 3 Ethylene/propylene/rubber.
- EPRL** Engine pressure ratio limit.  
**Eprom** Erasable, or electrically, programmable read-only message, or memory.  
**EPRT** Engine pressure-ratio transmitter.  
**EPS** 1 Emergency, or [confusing] electrical, power system, or supply or source.  
 2 Enhanced propulsion, or polar, system.  
 3 Earning[s] per share.
- EPSA** Emirates Parachute Sport Association [office, Dubai] (UAE).  
**EPSPG** Equipment product supply group.  
**Epsilam** Copper-coated flexible substrate of ceramic-filled Teflon.  
**EPSRC** Engineering and Physical Sciences Research Council [1994-; office, Swindon SN2 1ET] (UK).  
**EPSU** European Public Service Union (Int.).  
**EPT** Egress procedures trainer, initially for the F-22 but with wide future possibilities.  
**EPTA** European Pultrusion Trade Association.  
**EPU** 1 Emergency power unit.  
 2 Electronic processing unit.
- EPUU** EPLRS user unit [MLS can be suffix].  
**EPV** 1 Estimated programme value.  
 2 École du Personnel Volant (F).  
**EPW** Earth-penetrating warhead.  
**EPX** Environmental processor, military extension.  
**EQAR** Extended-storage [or expanded] quick-access recorder.  
**EQD** Electrical Quality-assurance Directorate (UK MoD).  
**EQPT** Equipment.
- equal deflections** Principle used in analysis of statically indeterminate structure: two members rigidly attached must deflect an equal amount at point(s) of attachment under load.  
**equaliser** 1 Filter network which compensates over-specified frequency band for distortion introduced by variation of attenuation with frequency.  
 2 Connection between generators in parallel to equalise current and voltage.  
**equalising pulses** Signals sent before and after vertical synchronizing pulses to obtain correct start of lines in iconoscope, vidicon and display tubes.  
**equal taper** The same on LE and TE.  
**equation of time** Before 1965, difference between mean time and apparent time, usually labelled + or - to obtain apparent time. After 1965, correction applied to 12 hours + local mean time (LMT) to obtain local hour angle (LHA) of Sun.  
**equations of motion** Give information regarding motion of a body or point as a function of time when initial position and velocity are known.

**equator** Primary great circle of sphere or spheroid, such as Earth, perpendicular to polar axis.

**equatorial bulge** Excess of Earth's equatorial diameter over polar diameter.

**equatorial satellite** One whose orbit plane coincides, or almost coincides, with Earth's equatorial plane.

**equi-axed** Descriptive of traditional crystalline cast metal items.

**equiax blade** Turbine rotor blade cast in traditional way with random arrangement of crystal axes [often capital E].

**equilibrium flow** Fluid flow in which energy is constant along streamlines, and composition at any point is not time-dependent.

**equilibrium glide** Hypersonic gliding flight in which sum of vertical components of aerodynamic lift and centrifugal force is equal to weight at that height.

**equilibrium height** At which, under given conditions, equilibrium is established between lift and weight of free aerostat without power.

**equilibrium vapour** Vapour pressure of system in which two or more phases coexist in equilibrium; in meteorology reference is to water unless otherwise specified.

**equinox** 1 Instant that Sun occupies one equinoctial point.

2 One of two points of intersection of elliptic and celestial equator, occupied by Sun when declination is 0°; also called equinoctial point.

**equi-period transfer orbit** Orbit differing from first but having same period, eg that of lunar module following separation from command module.

**equipment** Type or class of aircraft used or to be used on particular air-transport route(s).

**equipment configuration report** Real-time all CMC, P/N S/N and DB/N.

**equipment interchange** Agreement allowing aircraft to fly long routes over sectors of two or more carriers, crew being changed so that each carrier flies its own sectors.

**equipment operationally ready** Weapon system is capable of safe use and all subsystems necessary for primary mission are ready (USAF).

**equipped empty weight** Measured weight of individual aircraft including removable and other equipment but less disposable load.

**equi-signal zone** Zone within which aircraft receives equal signals from left and right intersecting lobes, giving continuous on-track signal.

**equivalence ratio** Ratio of stoichiometric to experimental air-fuel ratios.

**equivalent airspeed** See *airspeed*.

**equivalent brake horsepower** See *equivalent horsepower*.

**equivalent circuit** Theoretical circuit diagram electrically equivalent to practical circuit or device.

**equivalent drag area** See *equivalent flat-plate area*.

**equivalent flat-plate area** Area of square flat plate, normal to free-stream relative airflow, which experiences same drag as the body or bodies under consideration; usually written  $f = D^{1/2} \rho V^2 \alpha$ .

**equivalent flight hours** 1 The equivalent actual flight time simulated in an accelerated fatigue test.

2 A yardstick [C-130 EFH] established by the European Airlift Centre to enable members to trade flight time without the need to exchange funds (Int., 2004-).

**equivalent full-throttle power** The theoretical brake horsepower which a supercharged piston engine would

develop at sea level if it were run at full throttle and maximum r.p.m.

**equivalent horsepower** In turboprop, sum of horsepower, usually measured as brake hp, available at propeller shaft plus equivalent power derived from jet thrust by applying numerical factor to measure of thrust (abb. ehp). See *equivalent power*.

**equivalent isotropically radiated power** Product of power to antenna multiplied by antenna gain in a particular direction relative to that from isotropic antenna.

**equivalent kilowatt[s]** SI measure of power of turboprop, abb. ekW, see *equivalent power*.

**equivalent monoplane** Monoplane wing having same lift and drag properties as combination of two or more wings under consideration.

**equivalent monoplane aspect ratio** Wings and tip vortices of biplane mutually interfere; Prandtl showed increase in induced drag of each wing is:  $\Delta Di = \frac{\sigma L_1 L_2}{\frac{1}{2} \rho V^2 \pi b_1 b_2}$  where

$\sigma$  is Prandtl interference factor, L wing lifts, b spans, and  $\frac{1}{2} \rho V^2$  dynamic head. Total added induced drag is twice that of single wing, so  $**** = \frac{b_1^2}{S} \left[ \frac{\mu^2 (1+r)^2}{\mu + 2\sigma\mu r + r^2} \right]$  where

$b_1$  is longer span, S total area,  $\mu$  ratio  $\frac{\text{shorter span}}{\text{longer span}}$ , and

r ratio  $\frac{\text{shorter-span lift}}{\text{longer-span lift}}$

**equivalent pendulum** Freely gimbaled platform usually incorporating gyros and accelerometers, which has same period of oscillation as simple pendulum of particular length.

**equivalent perceived noise level**  $LP_{Neq} = L_E - 10 \log T/t_0$  where  $L_E$  is aircraft exposure level, T is total period of noise and  $t_0$  is (usually) 1s (see *noise*).

**equivalent potential temperature** Temperature given sample of air would have if brought adiabatically to top of atmosphere (ie to zero pressure) so that all water vapour is condensed and precipitated, remaining dry air then being compressed adiabatically to 1,000 millibars. \*\*\* is therefore determined by absolute temperature, pressure and humidity.

**equivalent power** See *equivalent horsepower*; in SI units power is measured in W or multiples thereof; to a first-order approximation  $ekW = kW + 68F_n$  where  $F_n$  is residual jet thrust in kN. In Imperial units jet thrust (lb force) is typically multiplied by 0.3846 [reciprocal 2.6] before being added to shaft power.

**equivalent shaft horsepower** See *equivalent horsepower*.

**equivalent single-wheel load** Mass which, supported by single wheel of size just large enough not to sink significantly into surface, causes same peak bending moment in airfield pavement as particular truck, bogie or other multi-wheel gear of actual aircraft.

**equivalent still-air distance** The distance over the ground the aircraft would have covered in the absence of wind.

**equivalent temperature** Temperature particle of air would have if brought adiabatically to top of atmosphere (ie to zero pressure) so that all water vapour is condensed and precipitated, remaining dry air then being compressed adiabatically to original pressure.

**equivalent wing** In stress analysis, same span as actual wing, but with chord at each section reduced in propor-

tion to ratio of average beam load at that section to average beam load at section taken as standard.

**ER** 1 Extended-range.

2 Enhanced radiation.

3 Echo reply.

4 Essential requirements.

5 Expanded Response [SLAM].

**E/R** Extend/retract.

**Er** *Erbium*.

**ERA** 1 European Regional Airlines Association [offices at Geneva and Fair Oaks Airport GU24 8HX, UK] (Int.).

2 Elastic recoil analysis, for hydrogen content.

3 En-route [radar] array.

4 Explosive reactive armour.

5 Employment relations act (UK 1999).

6 European Research Area (Int.).

7 European Robotic Arm [ISS].

8 Electrical Research Association (UK).

**ER-AAM** Extended-range air-to-air missile.

**ERAAS** Extended-range autonomous attack system (UAV).

**eradiation** See *Earth radiation*.

**ERAM** 1 Extended-range anti-tank mine (or anti-armour munition).

2 En-route automation modernization (FAA).

**ERAQ** European Regional Airline Organization (Int.).

**ERAP** 1 Earth-resources aircraft program (US).

2 Enhanced range applications program (USAF).

**ERAPDS** Enhanced recognised air picture dissemination system.

**ERAPS, Eraps** Expendable reliable-acoustic-path sonobuoy.

**erase** In EDP (1) to expunge stored information, usually without affecting storage medium.

**ERASL** Enhanced recognition and sensing lidar.

**Erasmus** En route air-traffic management ultimate system (Honeywell, EU).

**Erast** Environmental research aircraft and sensor technology (NASA).

**E-Rast** Expendable Rast.

**Erat** En-route absorption of (expected) terminal delay.

**ERATS, Erats** En route advanced, or automated, tracking system.

**ERAU** Embry-Riddle Aeronautical University [Daytona Beach, FL32114-3900; Prescott, AZ 86301-3720] (US).

**ERB** 1 Executive, and also Engineering, Review Board.

2 Executive responsibility budget.

3. Earth radiation budget.

**erbium** Bright silver metal, Er, density 9.1, MPt 1,529°C, important in optics [especially optical fibres] and in eye-safe Er-glass lasers on 2.9  $\mu$ .

**erbium silicide** One of the favoured materials currently used for fabricating nanowires.

**ERBM** Electronic range/bearing marker.

**ERBS** Earth radiation budget system, later satellite.

**ERC** 1 Electronics Research Center, NASA, Cambridge, Massachusetts.

2 Extended runway centreline.

3 Engine-related causes.

4 En route chart.

**ERCA** Etablissements Régional du Commissariat de l'Air (F).

**ERCC** 1 En-route control centre.

2 Engine Requirements Co-ordinating Committee (CAA).

**ERCS** 1 Emergency rocket communications system.

2 Enhanced radar cross-section (UAV decoy).

**ERCE** Escadrille de Réception et de Convoyage Equipe [crew ferry flight unit] (F).

**ERD** End-routing domain.

**ERDA** 1 Energy Research and Development Administration (US).

2 European Regional Development Agency.

3 En Route Descent Adviser (NASA).

**ERDE** Explosives Research and Development Establishment (formerly at Waltham Abbey, UK).

**ERDI** ERD infrastructure.

**ER/DL** Extended-range, data link.

**ERE** External roll extrusion.

**EREA** European research establishments in aeronautics, or for aerospace, launched 2001 with seven members.

**erect** 1 Not inverted, vertical acceleration +1g.

2 To restore a horizon or standby horizon to give correct indication after upset.

**erection** 1 Assembly and rigging of aircraft from component parts or from dismantled state; eg after crated shipment.

2 Of gyro, acceleration from rest to operating speed with axis in desired alignment. (Thus re-\*, to restore proper axis alignment after being toppled.)

**erector transporter** Vehicle used to convey ballistic rocket, elevate it for firing and act as launcher; also known as transporter erector.

**E-region** Region of ionosphere in which E-layers and Sporadic E-layer tend to form.

**EREL** Elevated runway-edge light.

**ERFA** Conference on Economics of Route Air Navigation Facilities and Airports.

**ERFCS** Extended-range fuel containment system [= tank].

**ErG** Erbium-glass.

**erg** Unit of energy in CGS (not SI) system; work done by force of one dyne acting through distance of 1 cm =  $10^{-7}$ J.

**ERGM** Extended-range guided munition (USA, USN). **ergometer exerciser** Device for exercising astronauts on long missions and measuring muscular work.

**ERGP** Extended-range guided projectile.

**ERHA** En-route high-altitude; C adds chart.

**Erint** Extended range-interceptor.

**ERIS, Eris** Exoatmospheric re-entry vehicle interceptor system.

**ERJ** External-combustion ramjet; one in which airflow and combustion are outside vehicle with profiled exterior surface.

**erk** RAF slang (WW2) for airman ground crew possessing minimal skills and lowest rank (AC2 or ACH).

**ERL** 1 Environmental Research Laboratories (NOAA).

2 Electronics Research Laboratory (Australia).

**ERLA** En-route low-altitude; C adds chart.

**ERMA, Erma** Extended-red multi-alkali (Gen II image intensifiers).

**ER/MP** Extended-range, multipurpose.

**ERM/R** Economic Regulation and Multilateral Relations (European Commission).

**E<sub>rms</sub>** Root mean square voltage.

**ERO** Engine repair and overhaul.

- EROC** En-route obstacle clearance study group.
- Erom** Erasable ROM.
- Erops, EROPS** Extended-range operations, same as Etops.
- EROS, Eros** 1 Earth Resources Observation Systems (US Geological Survey).  
2 Earth-resources orbiting satellite.  
3 Earth remote observing system.
- erosion gauge** Instrument for measuring erosion by dust and micrometeorites on materials exposed to space environment.
- ERP** 1 Effective radiated power.  
2 Eye reference point.  
3 Excitation [or exciter] receiver processor.  
4 Enterprise resource planning, or process.
- ER-PDU** Echo reply protocol data unit.
- ER-PGB** Extended-range precision guided bomb.
- ERPM** Engine rpm [normally of helicopter].
- Erprobungsstelle** Proving (test) centre (G).
- ERQ-PDU** Echo request protocol data unit.
- ERR** Early risk-reduction
- ERRB** Enhanced radiation, reduced blast.
- error** 1 In mathematics, difference between true value and calculated or observed value.  
2 In EDP (1), incorrect step, process or result, whether due to machine malfunction or human intervention.  
3 In air/ground bombing or photography, various definitions mainly concerned with linear miss-distance.
- error band** Error value, usually expressed in per cent of full-scale, which defines maximum allowable error permitted for specified combination of transducer parameters.
- error signal** Voltage proportional to difference between actual and desired condition. Thus, in radar, \*\* obtained from selsyns and AGC circuits and used to control servo to correct error.
- ERS** 1 Earth-resources satellite.  
2 Error-recovery service message (networks).  
3 En-route supplement.  
4 Emergency radio switching [system].  
5 Electronic resource system.  
6 Earth remote surveillance.
- ERs** Essential requirements (EASA).
- ersatz** Substitute material (G).
- ERSDS** En-route software development and support (FAA).
- ERSU** Environmental remote-sensing unit.
- ERT** 1 Elevator rigging tool.  
2 Extended-range tank.  
3 Earth-receive time [signal from planet].
- ERTS** Earth-resources technology satellite.
- ERU** 1 Ejector release unit for external stores.  
2 Emergency reaction unit (USAFSS).  
3 Engine relay unit.
- ERV** Expendable rocket vehicle.
- Ervis** Exoatmospheric re-entry vehicle interception (or interceptor) system (SDI).
- ERW** Enhanced-radiation (neutron) weapon.
- ER-WCMD** Extended-range wind-corrected munitions dispenser.
- ERWE** Enhanced radar-warning equipment.
- ES** 1 Escape slide.  
2 Expert systems (artificial intelligence).  
3 Electronically scanned.  
4 Electrostatic.  
5 Electronic support.  
6 End system.  
7 Extended squitter.  
8 Evolution strategy [algorithm].
- E<sub>s</sub>** 1 Specific energy,  $h + v^2/2g$ .  
2 Secant modulus.
- ES1, ES2** Radar antenna with electronic scanning about 1 or 2 axes, respectively.
- ESA** 1 European Space Agency [17 members; office, F-75738 Paris Cedex 15] (Int.).  
2 Enhanced signal average.  
3 Electronic signature authentication.  
4 Engineering source approval.  
5 Electronically scanned, or steered, array.  
6 Enhanced [or electronic] situation[al] awareness [S adds system].  
7 Embedded/special application, also E/SA.
- ESAD** 1 Equivalent still-air distance.  
2 Electronic safe/arm device.
- ESAA** Electronic-scanning array antenna.
- ESAF** Electronic safety arming and fuzing.
- ES&DF** Electronic support and direction finding.
- ESAR** Enhanced synthetic-aperture radar.
- ESARR** Eurocontrol safety regulatory requirements.
- ESAS** 1 Electronically steerable antenna system.  
2 See *ESA* (6).  
3 Exploration systems architecture study (NASA).
- ESASC** EEA/SBAC Avionics Systems Committee.
- ESB** Elevating sliding bridge, simpler than apron-drive type of airbridge.
- ESC** 1 European Space Conference.  
2 Executive steering committee.  
3 Engine supervisory control.  
4 Energy storage [and] control.
- Escadre** Wing (military unit, F).
- Escadrille** Flight (military unit, F).
- Escadron** Squadron (F).
- escalation** 1 Increase in scope, violence or weapons of conflict.  
2 Increase in cost due to incorrect cost estimation, inflation, advances in technology, changes in specification or other factors.
- E-scan** Electronically scanned array.
- escape** To achieve velocity and flightpath outward from primary body sufficient neither to fall back nor orbit.
- escape capsule** See *ejection capsule*.
- escape chute** Near-vertical chute forming part of structure, entered by opening pressure door in floor of crew compartment. Not to be confused with escape slide.
- escape hatch** Hatch in aircraft, usually jettisonable, intended for use in abandoning aircraft; ventral for use in flight, dorsal after belly landing or ditching.
- escape manoeuvre** 1 Several predetermined manoeuvres to evade hostile triple-A.  
2 Maximum-rate manoeuvres to avoid CFIT.  
3 Trajectory of spacecraft departing from Earth or evading planet [not normal usage].
- escape orbit** Any of several paths body escaping from central force field must follow in order to escape.
- escape rocket** Small rocket used to accelerate and separate payload near pad following launch-vehicle malfunction.
- escape slide** Rapid-inflation pneumatic channel

extended (usually from doors) from transport aircraft to enable passengers and crew to evacuate quickly in emergency. (Possible confusion with escape chute.)

**escape spoiler** Aerodynamic baffle extended upstream of crew escape door or chute.

**escape tower** Connects escape rocket(s) to vehicle; separated if ascent is normal.

**escape velocity** Speed body must attain to escape from gravitational field. Earth 25,022 mph, 11.186 km s<sup>-1</sup>, 36,700 ft/s, Moon 7,800 ft/s, Mars 16,700 ft/s and Jupiter 197,000 ft/s.

**ESCC** European space components co-ordination (Estec).

**Esces** Experimental Satellite-Communication Earth Station (India).

**ESCS** 1 Emergency satcom system.

2 Electrical-system controller subsystem.

**ESD** 1 Electronic Systems Division (USAF Systems Command).

2 European Security [or Strategy] and Defence [A adds Agency, I adds identity, P policy]; proposed EU task force.

3 Electrostatic discharge.

4 See *ESSD*.

**Esdac** European Space Data Centre (now DIH).

**ESDP** European Security and Defence Policy.

**ESE** Earth-science enterprise (NASA).

**ESF** 1 European Science Foundation (Int., office Strasbourg 67080).

2 Expanded support, or supporting, foam.

3 Explosion suppressant foam.

**ESFC** Emergency surgery flying centre (helicopter).

**ESG** 1 Electrostatically suspended gyro.

2 Extended-service goal.

3 Electronic Security Group (USAF).

**ESGM** ESG monitor.

**ESH** End system hello.

**ESHE** École de Spécialisation sur Hélicoptères Embarques (F).

**eshp** Equivalent shaft horsepower, ehp.

**ESI** 1 Engineering staff instruction.

2 Engine and system indication [D adds display, S system].

3 Earth-surface imager.

**ESIC** Environmental Science Information Center (NOAA).

**ESID** 1 Electrical-storm identification device.

2 Engine and system indication display.

**ESIID** Embedded-system ionosphere interperability demonstration.

**ESIL** Eye-safe IR laser.

**ESIP** Engine structural integrity program (US).

**ESIS** 1 Electronic standby instrument system.

2 See *ESI(2)*.

**ESJ** Equivalent single jet.

**ESKE** Enhanced station-keeping equipment.

**ESL** 1 Earth-Sciences Laboratories (NOAA).

2 Eye-safe laser [R adds ranger].

**ESlab** European Space Laboratory; now DSS of Estec.

**ESLE** Electronic survivor-location equipment.

**ESLR** Electronically scanned laser radar.

**ESM** 1 Electronic support measures (UK).

2 Electronic surveillance measures, or measurement (US).

3 Electronic surveillance, or signal, monitoring.

4 Enhanced space multiprocessor.

**ESMB** Electrically-steered multi-beam.

**ESMC** Eastern Space and Missile Center (USAF Patrick AFB).

**ESMD** Exploration Systems Mission Directorate (NASA).

**ESMO, Esmo** ESM operator.

**ESMR** Electronically scanned microwave radiometer.

**ESO** 1 Engineering standards order (FAA).

2 Evolutionary structural optimization.

**Esoc, ESOC** European Space Operations Centre, Darmstadt (Int.).

**ESP** 1 External starting power.

2 Extended-service programme.

3 Elastically suspended pendulum.

4 Electrical standard practice[s].

5 En-route spacing program.

6 Expandable signal [or system] processor.

7 Expendable system programmes.

8 Engine surge protection.

9 European Safety Programme for ATM7 [2006-].

10 External stowage platform [Shuttle].

**ESPA** Electronically scanned phased-array.

**ESPI** European Space Policy Institute.

**Esprit** 1 European strategic programme for research into information technology.

2 Eye-slaved projected raster inset (Singer Link-Miles).

**ESQAR** Extended-storage quick-access recorder.

**ESR** 1 Electro-slag refined (or remelt).

2 European staff requirement (NATO).

3 Energy storage.

4 Emergency Sun reacquisition.

**ESrange** Former European (now Swedish) space launch range, Kiruna.

**ESRO** European Space Research Organization, now part of ESA.

**ESRC** Engineering and Sciences Research Council (UK).

**ESRDA** European Safety, Reliability and Data Association.

**ESRL** Electronic and Surveillance Research Laboratory [Salisbury, SA5108] (Australia).

**ESRP** European supersonic research programme [also called **PERS** (F)].

**ESRRD** E-scope radar repeater display.

**ESS** 1 Environmental stress screening.

2 Experiment support system (spacecraft).

3 ESM subsystem.

4 Electronic switching system.

5 Exercise support system.

6 Electronic Security Squadron (USAF).

7 Engineering Support System (RAF), or services.

8 Engine section stator.

9 Engine support structure.

10 Essential.

**ESSA** Environmental Science Services Administration (now NOAA).

**ESSAP** European Strategic Safety Action Plan, programme to raise air safety standards in 41 European countries, (2004).

**ESSD** Electrostatic sensitive device[s].

**essential bus** Electrical bus (bus-bar) on which are grouped nothing but essential electrical loads.

**essential items** Shaft-driven accessories whose failure would bring about termination of the flight, examples being fuel and oil pumps. Drive-shafts to these items do not incorporate deliberate weak lines.

**ESSI** Enhanced special structural inspection.

**ESSL** Emergency speed select lever.

**ESSP** 1 European Satellite Services Provider [F, DSNA; G, DFS; I, ENAV; Portugal, NAV; Spain, AENA; Switzerland, Skyguide; UK, NATS]. (Int. 2005-).  
2 Efficient small-scale propulsion.

**ESSS, ES<sup>3</sup>** 1 External stores support system.

2 Electronic sensors and systems sector.

**Esswacs** Electronic solid-state wide-angle camera system.

**EST** 1 Eastern Standard Time (US).

2 En-route support team (USAF).

3 See *E&ST*.

4 Elevation, slope, temperature.

5 Estimate[d].

**ESTA** Electronically scanned tacan antenna.

**establish** To achieve a steady state. In particular see next.

**established** Aircraft confirmed as being stable at a prescribed flight condition, notably at a given FL or on a particular glidepath.

**ESTAe** École Spéciale de Travaux Aéronautiques (F).

**ESTC** European Space Tribology Centre.

**Estec** European Space Research and Technology Centre.

**Esteem** Elaboration of a strategy for the transition from Eatchip Phase III to EATMS (Euret).

**Ester** EO sensor technology and evaluation research.

**ester** Compound which reacts with water, acid or alkali to give an alcohol plus acid; important in many aerospace lubricants and other materials.

**ESTL** European Space Tribology Laboratory (ESRO).

**ESTOL, Estol** Extremely STOL.

**ESU** 1 Electronic storage unit.

2 Emergency supply unit.

**e.s.u.** Electrostatic unit  $2.998 \times 10^{-6}$  wb/m<sup>2</sup>.

**ESV** Enhanced synthetic vision [S adds system, but Kollsman has registered ESVis].

**ESVN** Executive secure-voice network (US civil govt.).

**ESWL** Equivalent single-wheel load[ing] (of multi-wheel landing gear).

**ET** 1 Emergency technology.

2 Extraterrestrial.

3 External tank.

**E<sub>T</sub>** Elastic tangent [longitudinal] modulus; in US often  $E_t$ .

**e<sub>t</sub>** 1 Tensile strain.

2 Thermal efficiency.

3 Environmental sensor unit.

**ETA** 1 Estimated time of arrival.

2 Estimated time of acquisition.

3 Ejector thrust augmentation.

4 Effective turn angle.

**ETAC** 1 Enlisted tactical air controller[s].

2 Engin tactique anti-chars (F).

**ETACCS** European theatre air command and control study.

**ETADS** Enhanced transportation automated data system.

**etalon** Small interferometer which reflects/refracts laser

light to form interference pattern giving unique signature, rejecting all other sources.

**ET&E** European test and evaluation (USAF).

**ETAP** European technology acquisition plan, or programme.

**eta patch** Fan-shaped patch of fabric and webbing secured to aerostat envelope to provide attachment for a cable eyelet.

**e-Taws** Early, or embedded, terrain-awareness warning system.

**ETB** 1 Engineering [and] Technology Board (UK Engineering Council).

2 End of block (ASCII).

3 Engineering test band.

**ETBE** Ethyl-tertiary butyl ether.

**ETBS** Etablissement Technique de Bourges (F).

**ETC** 1 Environmental Test Centre (Foulness, UK).

2 Electro-thermal chemical.

3 Erroneous track change (FDR).

4 European Travel Commission [office, B-1000] (Int.).

5 Equipment trust certificate, for financing new equipment.

**ETCAS, E-TCas** Enhanced traffic-alert and collision-avoidance system.

**ETCS** Expeditionary tactical communications system (MCWL).

**ETD** 1 Estimated time of departure.

2 Explosive[s] trace detection, or detector.

3 Expendable towed decay.

**ETE** 1 Estimated time en route.

2 Environmental test and evaluation.

**ETEB** Engineering Test and Evaluation Board (US).

**ETEC** Expendable turbine engine concept.

**ETES** Exotic threat-emitter system.

**eTES** Enhanced total entertainment system.

**ETF** 1 Electronic time fuze.

2 Enhanced tactical fighter.

3 Engine test facility.

4 Engineering task force.

**ETG** 1 European Tripartite Group.

2 Electronic target generator.

**Ethernet** Ether-net, yet uses coaxial cable or twisted pair of wires to link IEEE-802 radar images or data at <10 Mbps.

**ethyl alcohol** Alcohol prepared from organic compound such as grain, starch or sugar; withstands high compression ratios but compared with conventional fuel costs more, has lower heat value and vapour pressure, and affinity for water, basically C<sub>2</sub>H<sub>5</sub>OH.

**ethylene glycol** Principal additive in cooling systems of liquid-cooled engines, composed of saturated solution of ethylene oxide and water (C<sub>2</sub>H<sub>4</sub>O<sub>2</sub>), BPT 197C.

**ethylene oxide** Petroleum-derived gas used in FAE devices.

**ETI** 1 Elapsed-time indicator.

2 Engine-technology improvement (US).

3 Extraterritorial income.

**ETICS, Etics** Embedded tactical internet control system.

**ETIESS** Enhanced technical-intelligence exploitation of SBIRS sensor data.

**Etips** Electrothermal ice-protection system.

**ETL** 1 Elevated threshold light.

2 Electronic technical log.

**ETM** 1 Elapsed-time measure[ment].  
 2 Environmental technical manual.  
 3 Electronic training manual [i.e., paperless].  
**ETMP** Enhanced terrain-masked penetration.  
**ETMS** Enhanced traffic-management system (FAA).  
**ETNAS** Electro-level theodolite naval alignment system.  
**ETO** 1 Estimated time over, or overhead.  
 2 European theatre of operations (WW2).  
**ETOA** European Tour Operators' Association [2005-] (Int.).  
**ETops** Extended-range twin (engine) operations. Said to translate as: engines turning or passengers swimming.  
**ETOS** Effective time on station.  
**ETOT** Estimated takeoff time.  
**ETOW** Engine time on wing.  
**ETP** 1 Equal time point.  
 2 Estimated time of penetration.  
**ETPS** Empire Test Pilots' School (originally Farnborough, now Boscombe Down, UK).  
**ETPU** Engine transient-pressure unit.  
**ETR** Eastern Test Range (US).  
**Etrac** Enhanced tactical radar correlator.  
**ETRAS** Electrical thrust-reverser actuation system [see next].  
**E-Tras** Electromechanical thrust-reverser actuation system.  
**ETRC** Expected taxi ramp clearance.  
**ETS** 1 Experimental test site.  
 2 External tank system.  
 3 Electronic systems test [S adds site].  
 4 Engineering test station.  
 5 Emitter targeting system.  
 6 Emissions Trading Scheme [January 2005-] (European nations).  
 7 Embedded training simulator.  
**ETSC** European Transport Safety Council (Int.).  
**ETSI** European Telecommunications Standards Institute.  
**ETSS** Enterprise targeting and strike system.  
**ETU** 1 External transmitter unit (IRCM).  
 2 Engineering Test Unit.  
**ETV** 1 Elevating [cargo] transfer vehicle.  
 2 [missile] Eject test vehicle.  
**ETVS** Enhanced terminal voice switch.  
**ETW** European transonic windtunnel [D-51127 Köln] (Int.).  
**E<sup>2</sup> PROM** See *EPPROM*.  
**ETX** End of transmission.  
**EU** 1 European Union.  
 2 Ejector unit (stores carrier).  
 3 Electronic[s] unit [many applications].  
**Eu** Europium.  
**EUA** European Union emissions allowance.  
**EUACA** European Union Airport Co-ordinators Association (Int.).  
**EUAFS** enhanced upper-air forecast system.  
**Eucare** European confidential aviation reporting network (Int.).  
**Euclid** European co-operation for the long term in defence (Int.).  
**EUEA** European Union emissions allowance.  
**EulG** K iron garnet.  
**Euler formula** Maximum load  $W$  of strut or long column,

$$W = \frac{kEI}{l^2}, \text{ where } E \text{ is modulus of elasticity, } I \text{ moment of}$$

inertia of strut section,  $k$  constant, and  $l^2$  square of length between supports.

**Eulerian angles** Systems of three angles which uniquely define with reference to one co-ordinate system (Earth axes) orientation of a second (body axes); orientation of second system is obtainable from first by rotation through each angle of turn, sequence being important. A singularity at 90° became significant with the latest [Russian] fighters.

**Eulerian co-ordinators** System in which properties of fluid are assigned to points in space at each time, without attempting to identify individual parcels from one time to next.

**EUM, Eumed** European-Mediterranean Air Navigation Region (ICAO).

**Eumetsat** European meteorological satellite organization [office, D-64295 Darmstadt] (Int.).

**EUMS** Engine-usage monitoring system; EULMS adds 'life'.

**EUPS** External uninterruptible power supply.

**EUR** European (ICAO).

**Eur** Eureka.

**Eurac** 1 European aircraft-cost formula (includes landing, navigation and interest charges).

2 European Air Chiefs conference.

**Euraca** European Air Carrier Assembly [charter air carriers, office, Zaventem B-1930] (Int.).

**Euram** European research on advanced materials (EC7).

**EURANP** European air-navigation plan (ICAO).

**EURATN** European ATN(1).

**Eureca** European retrievable carrier.

**Eureka** Ground beacon responding to Rebecca radar homing and distance-measuring system.

**Eureka piece** Fragment of wreckage showing cause of catastrophe.

**Euresco** European research conference[s].

**Euret** European Research Programme in Transport.

**EURFCB** European frequency-coordinating body (ICAO).

**Euricas** European Research Institute for Civil Aviation Safety.

**EUROAVIA** The European Association of Aerospace Students (Int.).

**EuroCAE** European Organisation [spelt thus] for Civil Aviation Electronics [office, Paris F-75783] (Int.).

**Eurocard** Standard single-sided PCB, 160 × 100 mm.

**Eurocontrol** The European Organization for the Safety of Air Navigation, comprising 37 states [office, B-1130 Brussels] (Int.).

**Eurocores** ESF collaborative research programmes.

**Eurogrid, Euro Grid** Digital map with terrain overlain by pilot-selected graphics (initially for military helicopters).

**Eurogroup** Informal group of European defence ministers (NATO).

**Eurohores** European Heads of Research Councils (1992-, Int.).

**Euronep** European mission equipment package (helo night vision etc, F/G).

**Europa** European undertakings for research organization, programmes and activities, an umbrella MoU (Int.).

**European Air Chiefs** Free-ranging conference held twice per year since 1993 to promote air-power co-operation.

**Europilote** European organization of airline pilots' associations.

**europium** Symbol Eu, soft silvery metal, a lanthanide; density 5.243, MPt 822°C, many uses in phosphors, screen coatings, semiconducting alloys and lasers.

**Europol** Intra-European air-transport policy (ECAC).

**Eurospace** Popular name for AESI (merged 27 April 2004 into ASD5).

**EUR-TFG** European Traffic-Forecast Group (Eurocontrol).

**eutectic point** Lowest temperature at which mixture can be maintained in liquid phase; lowest melting or freezing point of alloy.

**Eutelsat** European Telecommunications Satellite Organization (Int.).

**EUV** Extreme ultra-violet, just beyond FUV (ie shorter wavelength); E adds Explorer.

**EUVSA** European Unmanned Vehicle Systems Association (Int.).

**EV** 1 Enhanced vision.

2 EAS (F).

3 Earned value.

**Ev** Every.

**eV** Electron-volt, gain in energy acquired by electron gaining one volt in potential,  $1.60219 \times 10^{-19}$ J.

**EVA** 1 Extravehicular activity; carried on outside spacecraft or on lunar surface.

2 Equipement vocal pour l'aéronef, (cockpit human voice control) (F).

3 Equipe de Voltige Aérien (F, = team).

4 Economic value added.

**evaluation** 1 Appraisal of information in terms of credibility, reliability, pertinency and accuracy; for US and NATO letters A-F indicate reliability and numbers 1-6 accuracy; thus B-2 indicates probably true from usually reliable source, while E-means improbable from unreliable source.

2 Process of assessing proposal, design or hardware, usually on comparative basis in course of commercial or military procurement.

**Evaluation Assurance Level** Any of seven rankings of multiple independent levels of security of the Common Criteria; DO-178B is ranked by different authorities at EAL4+ or EAL5, while no commercial operating system has achieved a level above 4.

**evaporative cooling** Cooling system which uses latent heat of evaporation by allowing coolant to boil, then condensing and recycling it.

**evaporative ice** Ice formed in engine induction system on surface cooled by evaporation; can form from water or vapour at air temperatures up to 25°C.

**EVAS** Emergency vision assurance system = smoke goggles.

**Evasion** Ensemble de Visualisation et d'Affichage au Service de l'Instructeur à Organisation Numérique.

**evasive action** Flight manoeuvre performed by aircraft to evade defending forces, esp. AAA fire.

**EVC** Embedded visual computer, or computing.

**EVCS** Extravehicular communications system.

**EVD** 1 Elementary vortex distribution.

2 Explosive-vapour detector.

**EVED** Eidg. Verkehrs und Energiewirtschafts Departement (Switz.).

**event** At an airport, either a takeoff or a landing.

**event marker** Time-dependent indicator in HUD.

**Everel propeller** One of the few single-bladed propellers to have achieved any commercial success, the blade being counterbalanced by a lead cylinder (US c1930-40).

**Everling number** 
$$N_o = \frac{n}{C_D} = \frac{V_C^3}{96,000\sqrt{\sigma}} \cdot \frac{W_o/P}{W_o/S}$$

where n is propulsion efficiency,  $C_D$  total drag coefficient,  $V_C$  max level KEAS,  $\sigma$  relative density,  $W_o/P$  power loading and  $W_o/S$  wing loading.

**Evett's Field** Airfield serving WRE (Australia).

**EVF** Enter visual fix.

**EVG** Electrostatically supported vacuum gyro.

**EVR** Enhanced-vision IR.

**EVM** 1 Engine-vibration monitor.

2 Error-vector magnitude.

3 Earth-viewing module.

**EVO** Hellenic arms industry.

**EVP** Executive vice-president.

**EVR** Electronic video recording.

**EVS** 1 Electro-optical viewing system.

2 Enhanced vision sensor, or system.

3 Electronic voice-switching [S adds system].

**EVT** 1 Extravehicular transfer.

2 Educational and vocational training (for return to civilian life).

**EW** 1 Electronic[s] warfare.

2 Early warning.

3 Equatorial [warmer] air.

4 Elliptical waveguide.

5 Examining Wing.

6 Expeditionary warfare.

**EWA** European Wind-tunnel Association (Int.).

**EWAAS** End-state wide-area augmentation system.

**EWAC** 1 Electronic-Warfare Aircraft Commander (USN).

2 Electronic-warfare analysis centre.

**EW/Aco** Electronic warfare and/or acoustic (RAF aircrew trade).

**EWACS, Ewacs** 1 Electronic wide-angle camera system.

2 Early warning and control system.

**EWADS** Expeditionary warfare air-defense systems.

**EWASIF** Electronic warfare avionics integrated support facility.

**EWAM** Extended-window addressable memory.

**EW&C** Early warning and control.

**EWAP** Electronic-warfare AGE [access on ground equipment] panel.

**EWAS** Electronic-warfare analysis system.

**EWAT** Electronic-warfare advanced technology.

**EWAU** Electronic-warfare avionics unit (RAF).

**EWBM** Electronic-warfare battle management.

**EWCC** 1 Electronic-Warfare Combat Co-ordinator.

2 Electronic-warfare co-ordination cell (NATO).

**EWCS** Electronic-warfare coordination system, or command station.

**EWCU** Electronic-warfare computer unit.

**EWEDS** Electronic-warfare evaluation display system.

**EWEP** Electronic-warfare evaluation program (USAF).

**EWES** Electronic-warfare evaluation system.

**EWG** Executive working group.

**EW/GCI** Early warning and ground-controlled intercept.

**EWIRDB** Electronic-warfare integrated reprogramming database (USALF).

**EW line** The early-warning line 240 n.m. in advance of the frontier of the supposed hostile state [USSR] at which an NW attacking force would have descended to low level (RAF, 1957-90).

**EWM** Electronic-warfare management [S adds system, U unit].

**EWMC** Electronic-Warfare Mission Commander.

**EWMS** Electronic warfare management system.

**EWO** 1 Electronic-Warfare Officer.

2 Emergency war order.

**EWOP** Electronic-Warfare Operator (USN).

**EWOSE** Electronic Warfare Operational Support Establishment (UK).

**EWPA** European Women Pilots' Association.

**EWPI** Electronic-warfare prime indicator.

**EWR** 1 Early-warning radar.

2 Emission wash repair.

**EWS** External weapon station.

**EWSM** Electronic-warfare (or early-warning) support measures (or surveillance measures).

**EWSP** Electronic-warfare self-protection.

**EWTA** Electronic-warfare sensor technology modeling simulator and analysis research (USAF).

**EWTS** Electronic-warfare training system.

**Ex** Expect[ed].

**Ex, ex** Except.

**e<sub>x</sub>** Longitudinal distance between lift-jet centrelines.

**E-x** Time until encounter with heavenly body.

**exa** Prefix, multiply by 10<sup>18</sup> [million million million], symbol E.

**Exactor** Mechanical remote-control system giving precise position.

**exact orbit** That Earth satellite must follow if exact sought-after data are to be obtained.

**exact-point symbology** That showing a point rather than a locus; eg, in HUD, point where one projectile would have hit, rather than tracer line.

**Excap** Expanded capability (= better).

**exceedence** Single event, recordable on all HUM systems, in which engine or other device suffers an excursion in operating regime beyond allowable limits.

**excess power** 1 Difference between horsepower available and horsepower required; determines rate of climb. When horsepower available and required are equal, rate of climb falls to zero and absolute ceiling has been reached (see *SEP*).

2 A totally different meaning is extra power required for level turn at same airspeed.

**exchange rates** Conversion factors used in calculating influence of variables in aircraft performance, most being guesses or assumptions; thus there are \*\* linking engine s.f.c., engine weight, parts cost, engine price and similar factors; \*\* will vary with stage length, operating conditions, costing formulae etc.

**exciter** 1 Source of small current, such as battery or d.c. rotary generator, which supplies current for field windings of large electrical machine.

2 Oscillator which supplies carrier voltage to drive

subsequent frequency-multiplying and amplifying circuits of transmitter.

3 Source of light used to stimulate photo-emissive cell.

**exciton** Bound state of electron and hole in nanoscale material.

**exclusion zone** Airspace prohibited to aircraft, e.g. over National Monuments (US).

**EXCM** Expendable [or external] countermeasures.

**EXcom** Extended communications search [SAR].

**EXCP** Except[ed].

**excursion** Undesired short-term variation of variable, such as instrument reading or flight path, away from correct value.

**excursion fare** Promotional fare offered by airlines to stimulate traffic; usually applicable only to round trips, with limits on season, days available and/or trip duration.

**excursion level** 1 In glidepath, maximum vertical or angular variation of centreline voltage/signal.

2 In glidepath, lowest safe angle of centreline voltage/signal.

**EXD** Expand display [in cockpit].

**eductor** Outlet from diffuser of centrifugal compressor.

**Exec** Executive.

**execute missed approach** A mandatory ATC instruction.

**exercise** There are no specific aerospace meanings.

**exercise option** To convert option(s) into firm order(s).

**exfoliation corrosion** Surface sheds thin flakes or layers.

**exhaust branch** Short pipe from cylinder to exhaust manifold.

**exhaust collector ring** Circular duct into which exhaust from radial engine is discharged.

**exhaust cone** Assembly of outer pipe and inner cone which leads gas from turbine to jetpipe.

**exhaust-driven supercharger** Turbocharger.

**exhaust duct** 1 Tunnel through which gas is expelled from underground missile launcher.

2 Fan duct of aft-fan engine.

**exhaust flame-damper** Expanding and shrouded pipes designed to prevent exhaust gas or stacks being seen at night.

**exhaust gas analyser** Electrical instrument for indicating proportion of carbon monoxide and so indicating efficiency of combustion and correctness of fuel/air mixture.

**exhaust manifold** Duct into which gas is led from number of cylinders. In a radial engine called collector ring.

**exhaust plug** Streamlined body in exhaust nozzle for adjusting backpressure and giving propulsive thrust.

**exhaust reheater** See *afterburner*.

**exhaust stack** Exhaust pipe.

**exhaust stator blades** Whole or partial ring of blades behind turbine to remove residual whirl from gas.

**exhaust stroke** Fourth stroke in four-stroke cylinder, in which piston moves up to expel burnt gases.

**exhaust stub** Short pipe linking cylinder direct with atmosphere.

**exhaust tailpipe** Final pipe leading exhaust away from a collector ring or manifold.

**exhaust turbocharger** See *turbocharger*.

**exhaust velocity** Mean velocity of jet from rocket measured in plane of nozzle exit,  $v_e$ .

**Eximbank** Export-Import Bank (US).

**exit** Departure from battlefield [helo or fixed-wing].

Thus \* **criteria**, required capabilities in flight performance and avionics to achieve this.

**exit cone** Portion of wind tunnel into which air flows from working section.

**exit fix** Reporting point at which aircraft leaves control area or FIR.

**exit ramp** Safe path through mountainous region following pressurization failure.

**exo-atmospheric** Beyond the atmosphere.

**exogenous inputs** Disturbing inputs to dynamic [especially flight control] systems which, though neither actual controls nor reference signals, are crucial; Stevens/Lewis have noted that, without such an input, a glideslope coupler would command a horizontal trajectory.

**exosphere** Outermost layer of atmosphere where collisions between molecular particles are so rare that only gravity will return escaping molecules; lower boundary is critical level of escape (region of escape) at 500–1,000 km.

**exotic fuel** Any unusual fuel for air-breathing engine intended to produce greater thrust.

**exotic material** Structural material seldom used in conventional applications; esp. one with melting point above 1,800°C.

**expandable structure** One packaged in space vehicle and erected to full size and shape outside atmosphere.

**expanded foam** Low-density material, usually rigid but of low mechanical strength, produced by chemical reaction in liquid state; often formed inside hollow metal airframe part.

**expanding balloon** Kite balloon encircled by rubber cords or other devices to control shape when not full of gas; also known as dilatable balloon.

**expanding brake** One whose segments are forced radially against drum by flexible sac.

**expanding square search** Standard method for searching for item on Earth's surface, made up of increasingly long straight legs with 90° corners.

**expanding reamer** One with slotted flutes expanded by tapered pin.

**expansion-deflection nozzle** Rocket nozzle in which jet enters top of bell-type nozzle moving radially outwards through an annular throat.

**expansion joint** Pipe joint so constructed as to allow limited axial movement between sections held together.

**expansion ratio** Ratio of cross-sectional area of rocket nozzle exit to area of nozzle throat.

**expansion stroke** See *power stroke*.

**expansion wave** Simple wave or progressive disturbance in compressible fluid, such that pressure and density decrease on crossing wave in direction of its motion; also known as rarefaction wave.

**expansive corner** On supersonic body, convex corner [makes flow expand and accelerate].

**expected approach clearance, EAC** Time at which arriving aircraft should be cleared to begin approach for landing; also known as expected approach time (EAT).

**expected further clearance, EFC** Time at which it is expected additional clearance will be issued to aircraft.

**expedite** ATC request: hurry up.

**expandable construction** Rocket propellant tanks divided into sections jettisoned in sequence.

**expendables** Missiles, RPVs, drones, and stores and materials consumed in action or in flight, esp. in space.

**experimental aircraft** Aircraft whose objectives are fundamental research, or development of hardware having general application to many types of aircraft.

**experimental mean pitch** Distance through which propeller advances along its axis during one revolution when slip is zero, i.e., when giving no thrust.

**exploding bridgewire** Metal wire which melts at high temperature, produced by large electrical impulse.

**explosion turbine** Turbine rotated by gas from intermittent combustion process taking place in constant-volume chamber.

**explosive bolt** One incorporating explosive charge so that, when detonated, whatever it secures in position is released.

**explosive cladding** Use of explosive welding to clad one material with another.

**explosive decompression** Rapid reduction of pressure caused by catastrophic leak in pressure cabin (eg loss of window).

**explosive forming** High-energy-rate forming of sheet metal by using controlled explosive energy to blow work-piece against die.

**explosive rivet** Blind rivet with partially hollow shank charged with black gunpowder which, when detonated, causes shank to bulge.

**explosive welding** Effecting near-perfect bond between dissimilar metals by using explosion to drive them together under such pressure that joint melts and sweeps away previous surface impurities.

**exposed wing area** Net area minus projected area of nacelles and similar bodies, often written  $S_{exp}$ .

**exposure level**  $L_{E_i} = k \log \sum 10L_{EPN_i} + 10$ ; can be amplified using  $L_{EPN_i}/k$  where  $L_{EPN_i}$  is  $i$ 'th event and  $k$  is usually 10, with additions of  $10T_0/t_0$  where  $t_0$  usually 1s and  $T_0$  may be 10s (see *noise*)

**express** Property transported under air express tariffs filed with CAB; conducted on basis of agreement between Railways Express Agency and airlines.

**Ext** Extension of runway.

**ext** External.

**EXTD, ExtD** Extended.

**extendable nozzle** Rocket exit cone retracted or extended to alter area ratio; also called extendable exit cone.

**extended air defence** Defence against aircraft, UAVs and TBMs.

**extended centreline** Centreline of runway extended in either direction indefinitely.

**extended overwater operation** As defined by US FAR (Pt 1), an operation over water at horizontal distance more than 50 nm from nearest shore.

**extended-range Dovap, Extradop** Baseline extension of Dovap to provide coherent reference to ground transmitter and all Dovap receivers located beyond line of sight.

**extended-range operations** Modern engines are so reliable that twin-engined aircraft [large jets] can be certificated for Etops routes taking them 60, 90, 180, or 240 minutes away from nearest suitable airport at engine-out cruise speed. In 2006 the FAA was considering an extension to 5½ hours.

**extended-root blade** 1 Gas-turbine rotor blade in which aerofoil is carried on long platform in disc of reduced diameter.

2 Propeller blade with root extended in chord.

**extension contract** Industrial contract formed as extension of previous contract in either scope or timing.

**extension flap** See *area-increasing flap*.

**extensometer** Instrument for measuring small amounts of deformation.

**external aileron** Aileron mounted clear of wing surfaces but deflected conventionally.

**external augmentor** Generalised description for arrangements which use high-energy primary flow to entrain ambient airflow remote from source of power, as in ejector lift.

**external check** See *externals 1*.

**external energiser** Portable motor used to supply motive power to engine inertia starters.

**external gearbox** That attached outside the casing of a gas-turbine engine, providing drives for accessories, usually from HP shaft, and connector for hand-turning. More often called the accessory gearbox.

**external input** System input from source outside system.

**external lighting** Some aircraft have none. Usually \* serves two functions: to render the aircraft visible from other aircraft at the same level from the greatest possible distance [see *navigation \**] and to illuminate the ground ahead when taxiing or under tow. Other species include ice-warning, airline-logo and air-refuelling guidance.

**externally blown flap** Flap in wake of main engine[s] when deflected, thus having greatly enhanced effect esp. in increasing lift.

**externals 1** External inspection of aircraft carried out by pilot [if necessary with other crew members] before boarding.

2 Complete gas-turbine engine apart from the core, i.e. fuel and lubrication systems, accessories, starting system, etc.

**external storage** EDP (1) storage media separate from machine but capable of retaining information in form acceptable to it.

**external supercharger** Impeller (manifold-pressure booster) located upstream of carburettor.

**extinction 1** Attenuation of light through absorption and scattering.

2 Cessation of combustion (see *flameout*).

**extinction coefficient** In meteorology, space rate of diminution of transmitted light; attenuation coefficient applied to visible radiation.

**extraction 1** To recover friendly troops from hostile location.

2 To take shaft power from engine for performance-measuring purposes.

**extraction parachute** Extracts cargo from aircraft and deploys main parachutes.

**extraction zone** Specified ground area upon which

supplies are delivered by extraction technique from low-flying aircraft.

**extractor 1** Part of firearm which engages rim or base of cartridge to pull it from chamber.

2 Computer-controlled device for automatic initiation and maintenance of all desirable radar contacts in ATC or air-defence system.

**extraordinary magnetoresistance** Fantastic increase in resistance of superplastics in extremely powerful magnetic fields.

**extra section** Extra flight by airline to take overflow of fully booked flight.

**extravehicular activity** See *EVA*.

**extremely high frequency** 30–300 GHz.

**EXTRM** Extreme.

**extrusion** Hot or cold forming of metals, rubbers and plastics by forcing through die of appropriate cross-sectional shape.

**Extv** Extensive,

**ExW** Explosive welding.

**$E_{x0}$ ,  $E_{x\text{zero}}$**  Elastic modulus of composite panel in direction of fibres.

**$e_y$**  Lateral distance between jet centrelines.

**EYE** European Young Engineers (Int.).

**eye** In centrifugal compressor, that portion through which fluid enters.

**eyeball 1** Passenger-controlled spherical valve outlet for fresh air, usually overhead.

2 To search visually, or keep eyes on a target (colloq.).

**eyeball design** Design by eye, without calculation.

**eyeballs down** Jargon for severe positive acceleration.

**eyeball/shooter** Manoeuvre in which lead fighter flies across to identify target visually, while wingman (shooter) remains able to fire BVR.

**eyeballs in** Acceleration from behind when subject is seated upright, or below when prone [best].

**eyeballs out** Deceleration when subject is seated upright [worst].

**eyeballs up** Negative-g, downward acceleration.

**eyebrow panel** Panel of instruments or controls in flight deck roof, above and behind windscreen.

**eyebrow window** In roof of flight deck, also called VIT window.

**eyelids** Jet-engine reverser or afterburner nozzle halves similar to eyelid in appearance and action.

**eye patch** Worn over one eye by all members of crew of aircraft about to drop live NW or launch missile with NW warhead.

**eye reference point** Actual or notional position in three dimensions of an eye, or mean of both eyes, of pilot looking ahead, especially during landing.

**eye relief** Distance from eyeball to NVG eyepiece or image of HMD.

**Eytie** Italian [noun and adjective, collaq.] (WW2).

# F

- F** 1 Fahrenheit (contrary to SI).  
2 Fighter aircraft category (USN since 1922, USAF since June 1948), UK prefix since 1942.  
3 Flap angle.  
4 Force, especially net propulsive force, thrust.  
5 Farad.  
6 Sonobuoy size, 0.3 m (1 ft) long.  
7 Photographic category (USAS, USAAC, USAAF, 1924–47).  
8 First class (seating).  
9 Fuel mass.  
10 Fuel, with suffix 12 to 44, thus F18 =100LL and F22 = 115 Grade (NATO).  
11 Flashing [sequenced] light.  
12 Fog.  
13 Area forecast.  
14 Magnetomotive force [also M].  
15 Luminous flux [usually  $\Phi$ ].  
16 General term for a factor.  
17 General term for a flight-control forcing function, suffix  $\xi$  for lateral,  $\eta$  for longitudinal.  
18 New top airport taxiway category, able to handle A380.  
19 Aircraft category: model, aeromodelling (FAI).  
20 Prandtl's tip-loss function [helicopter rotor blade].
- F** Faraday constant.
- f** 1 Frequency.  
2 Frictional force.  
3 Acceleration, esp. linear.  
4 Equivalent parasitic area of aircraft or flat-plate equivalent of helicopter fuselage.  
5 Symbol meaning a function of [rarely, F].  
6 Subscript, usually fuel, flap or fountain.  
7 Normal stress.  
8 Prefix femto, =  $\times 10^{-15}$ .
- F<sup>2</sup>T<sup>2</sup>EA** Find, fix, track, target, engage and assess (AFRL).
- F<sup>3</sup>** 1 Form/fit/function, called F-cubed.  
2 Full flight-envelope flight, control law and display system.  
3 Free-form fabrication.
- F4** Airfield subgrade, standard asphalt.
- F-class** Restricted or advisory airspace (ICAO).
- F-code** In flight plan, aircraft has 4096-code transponder and approved R-nav.
- F-display** Target centred in rectangle, blip gives az/el aiming errors.
- F-factor** Dimensionless number interpreting vertical/horizontal strengths of windshear in terms of quantified reduction in climb performance.
- F-layer** One layer of ionosphere, at 150–300 km divided into F<sub>1</sub> and F<sub>2</sub> layers, F<sub>2</sub> being always present and having higher electron density.
- f-pole** Firing point of AAM which maximises aircraft/target separation at missile impact.
- f-pole line** Avionics limit which keeps fighter nose pointing within limits of radar gimbal boundary.
- FA** 1 Frequency agility, or frequency-agile.  
2 Frontal (tactical) aviation (USSR, R)  
3 Flight attendant, or assistant.  
4 Free-air (tunnel).  
5 Final approach.  
6 Fix to an altitude.  
7 Flying accident (RAF).
- FA** Fix/attack (display).
- F<sub>A</sub>** 1 Flaperon [rarely, flap] angle.  
2 Any resultant aerodynamic force.
- FAA** 1 Federal Aviation Administration (US, since 1967 part of Department of Commerce, said to mean 'federal acronym association').  
2 Federal Aviation Agency (US, 1958–67, independent body, previously CAA).  
3 Fleet Air Arm (formed 1924 as part of RAF, from 1939 part of Royal Navy, until 1953 officially called Naval Aviation.  
4 Fuerza Aerea Argentina.  
5 Foreign Airlines Association (UK, office Bourne End, Bucks; also [unrelated] in Japan, office Tokyo).  
6 Functional analysis and allocation.  
7 Flasher and audio (alarm).
- FAAA** Flight Attendants Association of Australia (office, Sydney).
- FAAD** Forward-area air defense; C<sub>2</sub>I can be added, S adds system.
- FAAM** 1 Family of AAMs.  
2 Fleet Air Arm Museum [Yeovilton, BA22 8HT] (UK).  
3 Facility for Airborne Atmospheric Measurements (Met. Office and NERC, UK).
- FAAN** Fight Against Aircraft Nuisance (UK).
- FAAOA** Fleet Air Arm Officers' Association [1957–; London SW1Y 4JU] (UK).
- FAAR** Forward-area alerting radar, against low-flying aircraft.
- FAAS** Focal-area aerial surveillance.
- FAATC** 1 FAA Technical Center, Atlantic City, NJ, until 1981 called Nafec.
- FAAWC** Force Anti-Air-Warfare Commander.
- FAB** 1 General-purpose HE bomb (USSR, R).  
2 Flight-authorization book.  
3 Força Aerea Brasileira.  
4 Functional Airspace Block.
- Fab** Family of beyond LOS.
- fabric** Cloth or linen material of two main types: biased, multi-ply with one or more plies cut so that threads are transverse or diagonal; and parallel, with warp threads of all plies parallel.
- fabricated** Usually means welded.
- fabrication** 1 Generally, manufacture of hardware.  
2 Specific, assembly by welding.
- fabric strip** A particular meaning is the piece of fabric repeatedly doped over the leading edge of many 1940-era fighters to protect guns from contamination by rain, snow and ice.
- Fab-T, FAB-T** Family of advanced beyond-LOS terminals (USAF).
- FAC** 1 Name of several air forces, usually Spanish- or Portuguese-speaking [see 8 below].

- 2 Forward Air Control[er], now called JTAC.
- 3 Flight-augmentation computer.
- 4 Federal Airports Corporation (Australia).
- 5 Federal Aviation Commission (US, 1934-36).
- 6 Farnborough Aerospace Consortium [550+ companies, office GU14 0LX] (UK).
- 7 Fast attack craft (marine).
- 8 Federación Aerea de Chile [general aviation, office Santiago] (Chile).

**Fac** Facility, facilities.

**FAC (A), FAC-A** = FAC (2) airborne, the airborne controller in a tactical situation

**FACCE** See FAC<sup>2</sup>E.

**FACE** Future airline core environment [IT system] (Int.).

**face** 1 Any exposed quasi-flat surface, such as main area of turbine disk.

2 Any surface for mating with another.

3 Open end of duct to be joined to another, including front of gas-turbine-engine inlet.

4 Either surface of propeller or helicopter-rotor.

**face alignment** Distance perpendicular to chord from propeller or rotor blade chord centreline to flat face of blade at any station.

**faceblind firing** Method of firing ejection seat in which occupant pulls roller blind at top of seat down over his face, thus shielding latter from airstream on leaving aircraft.

**faceplate** 1 Disc mounted on nose of lathe spindle for rotating work between centres or for gripping asymmetric item of short length.

2 Accessory mounting pad.

3 Transparent front of pressurized helmet.

**FaCET** Falcon combined-cycle engine technology (Darpa).

**Facet** Fault-assisted circuits for electronic training.

**facet** Panel forming part of external visuals of simulator. The F-22 FMT has nine.

**faceted aircraft** One whose external surface is made up of flat 2-D panels. Such an aircraft is theoretically invisible to hostile radars except for brief instants when one face is precisely normal to the incident signal. Such aircraft have severe flight-control limitations, and increased computer power now enables LO aircraft to have better aerodynamics.

**Facets** Future anti-air concepts experimental technology (also terminal) seeker.

**facilitation** Portmanteau word meaning making air travel easier for passengers.

**facility** 1 Physical plant, buildings and equipment (previously US usage).

2 Any part of adjunct of a physical plant or installation which is an operating entity.

3 An activity or installation which provides specific operating assistance to military or civil air operations.

**facility availability** Actual/specified operating times, usually as percentage.

**facility performance category** See *categories (3)*.

**Facio, FACO** Final assembly and check-out.

**FACP** Forward air control post.

**FACRI** Flight Automatic Control Research Institute (China).

**FACS** Fully automatic compensation system.

**facsimile** Telecommunications process in which picture

of image is scanned and signals used locally or remotely, sent by telephone or TV, to reproduce \* or likeness of subject image.

**Fact, FACT** French air force ATM co-ordination tool.

**Factor** Follow-up action on accident reports.

**Factor** Development of functional concepts from EATMS operational requirements (Euret).

**factored field lengths** Any distance relative to CTOL operations (TOR, EMD, TOD etc) multiplied by factor to take account of engine failure at V<sub>1</sub>, slippery surface or any other hazard.

**factoring** Process of selecting and applying appropriate factors (of safety) in such areas as design and stress calculations, performance estimates etc.

**factor of safety** 1 Factor by which limit load is multiplied to produce load used in design of aircraft or part; intended to provide margin of strength against loads greater than limit load, and against uncertainties in materials, construction, load estimation and stress analysis.

2 Ratio of ultimate strength to actual working stress or maximum permissible stress in use of material component.

**factory loaded** Propellant charge or explosive filling added in plant before delivery.

**factory remanufactured** Product, usually an engine, indistinguishable from new.

**Facts** 1 FLIR-augmented Cobra Tow sight.

2 Fighter-aircraft-control training system.

**FAC<sup>2</sup>E** Fighter air command and control enhancement.

**FAD** 1 Fleet air defense (US).

2 Fast-action device.

3 Fighter aerodynamics development.

4 Feature analysis data.

5 Flexible-aircraft dynamics.

6 Funding authorization document.

7 Fuel advisory departure.

8 Forsvars & Aerospaceindustrien i Danmark.

**FADA** Federación Argentina de Aeroclubes.

**FADD** Fatigue and damage data.

**fade** Decrease in received signal strength without change of receiver controls.

**Fadec** Full-authority, or fully authoritative, digital engine (or electronic) control.

**faded** Radio word meaning 'air-intercept contact has disappeared from reporting station's scope, and further information is estimated' (DoD).

**fade-out** Fading in which received signal strength is reduced below noise level of receiver. Also known as radio fade-out, Dellinger effect, Mogel-Dellinger effect (see *blackout*).

**fading** Variation of radio field strength caused by change in transmission medium.

**FADOLC** Full-authority direct organic lift control.

**FADR** Fixed [-site] air-defence radar.

**FADS, Fads** Flush, or flexible air-data system.

**FAE** 1 Fuel/air explosive; large class of ordnance devices.

2 Federación de Aeronáutica Española (Spain).

**Faeshed** FAE store, helicopter delivery.

**FAEI** Federation of Aerospace Enterprises in Ireland.

**FAF** 1 Final-approach fix.

2 Full and free [flight controls].

3 Confusingly, French Air Force.

**FAFC** Full-authority fuel controller.

**FAFL** Forces Aériennes Françaises Libres (1940–45).

**FAFT** Fore/aft fuselage tankage (LH<sub>2</sub>).

**FAGC** Fast automatic gain control.

**FAGr** Fernaufklärungsgruppe, long-range reconnaissance wing (G).

**Fagsa, FAGSA** Federation of Airline General Sales Agents (UK, office, Birmingham).

**Fahrenheit** Temperature scale, contrary to SI, in which ice point is 32° and boiling point of water 212°; thus to convert to °C subtract 32 and multiply by  $5/9$ ; to convert to °K add 459.67 and multiply by  $5/9$ .

**FAI** 1 Fédération Aéronautique Internationale, the supreme body ratifying aeronautical records, (office Lausanne, Switzerland, established 14 October 1905).  
2 Fatal-accident inquiry.  
3 First-article inspection.  
4 Final approach initiation [rendezvous].

**fail** 1 To cease normal operation.  
2 Deliberately to close throttle of an engine in order to provide asymmetric practice.

**fail-active** Quality of a dynamic functional system of remaining correctly operational after any single failure.

**failed item** For whatever reason, one that has ceased to function. A failed engine may be in perfect running order [see fail 2].

**fail frozen** Should a failure occur, the system instantly locks into its current operating condition.

**fail-hard** 1 Describes part or component, notable primary structure or other unduplicated load path, fracture of which would be catastrophic.  
2 Describes system component whose failure renders system immediately misleading, incorrect or dangerous.

**failing load** That which, when applied, will just cause structural member to fail.

**fail link** Deliberate weak link to prevent overload damage to costly structure.

**fail-operational** Any single system failure has no (or limited) effect on operation, though warning is given.

**fail-passive** Failure inactivates system, thus preventing dangerous spurious signal or hardover output.

**fail-safe** Normally structural design, rather than system, technique in which no crack can cause catastrophic failure of whole structure but is allowed to occur and be detected.

**fail-soft** System failure does not inhibit operation but authority or limits of travel are reduced.

**failure** Separation of a part into two or more pieces such that the part is no longer complete (FAA).

**FAIP** First-assignment instructor pilot.

**fairing** Secondary structure whose function is to reduce drag; eg streamlined cover, or junction between two parts.

**fairing wire** Wire provided as point of attachment for outer cover to maintain contour of airship envelope.

**fairlead** Streamlined tube through which trailing aerial or other cable exits aircraft.

**fair over** To reduce drag of excrescence by fitting fairing over or around it.

**faker** Strike aircraft engaged in air-defence exercise (DoD).

**FAL** 1 Facilitation of air transport (ICAO, section of AIP).  
2 Fuselage, or final, assembly line.  
3 Fédération Aéronautique Luxembourgeoise.

**Falac** Forward-area liaison and control.

**Falcon** 1 Frequency-agile low coverage netted.

2 Force application and launch from the Continental US (USAF/Darpa).

**fallaway section** Part of rocket vehicle that separates; one that falls back to Earth.

**fallback** 1 Immediate return of malfunctioning ballistic vehicle after vertical launch.

2 Material carried into air by nuclear explosion that ultimately drops back to Earth.

**fallback area** Area to which personnel retire once missile (large, surface-launched) is ready for firing.

**fallback programme** Second project undertaken as insurance against failure of first.

**falling leaf** Aerobatic manoeuvre in which aircraft is stalled and then forced into spin; as soon as spin develops, controls are reversed; process is repeated, resulting in oscillations from side to side with little apparent change in heading.

**fall off on a wing** See *stall turn*.

**fallout** 1 Rain of radioactive particulate matter from nuclear explosion. Local \* settles on surface within 24 hr; tropospheric \* is deposited in narrow bands around Earth at about latitude of injection; stratospheric \* falls slowly over much of Earth's surface.

2 See *spin-off*.

**fallout contours** Lines joining points of equal radiation intensity.

**fallout mission** Alternative or secondary combat mission, primary being impossible of accomplishment.

**fallout pattern** Distribution as portrayed by fallout contours.

**fallout prediction** Estimate before and immediately after nuclear detonation of location and intensity of militarily significant fallout.

**fallout safe height** Altitude of detonation above which no militarily significant fallout will be produced.

**fallout wind plot** Wind vector diagram from surface to highest altitude affecting fallout pattern.

**false alarm** Appearance on a radar display of what appears to be a valid target but is caused by something else.

**false cirrus** Cirrus-like clouds in advance of and at summit of thunder cloud, lacking feathery texture. Also known as thunderstorm cirrus.

**false-colour film** 1 Has at least one emulsion layer sensitive to radiation outside visible spectrum (eg infra-red), in which representation of colours is deliberately altered.

2 Modified film whose dye layers produce assigned colours rather than natural ones.

**false cone of silence** Radio-range phenomenon similar to cone of silence above transmitting station and likely to occur over mountains, ore deposits or other factor that causes dead spot in reception; lacks four characteristics of true counterpart; build-up, deadspot, surge and fade.

**false glidepath** Loci of points in vertical plane containing runway centreline at which DDM is zero, other than those forming ILS glidepath.

**false heat** Emitted by flares and other IR decoys.

**false lift** Additional aerostat lift caused by positive superheat, temperature difference between gas and surrounding air.

**false nosing** Built up of nose-rib formers and D-skin, attached to front spar to form leading edge.

**false ogive** Rounded fairing added to nose of vehicle to improve streamlining. Also known as ballistic cap.

**false ribs** Auxiliary nose ribs between main ribs forward of front spar to support fabric covering and improve contour.

**false spar** Secondary spar not attached to fuselage, used as mounting for movable surfaces.

**false start** Gas-turbine starting cycle which fails to achieve stable light-up; ability to survive is certification requirement.

**FALW** Family of air-launched weapons.

**FAM** 1 Fighter attack manoeuvring.

2 Federal Air Marshal [P adds program].

3 Final-approach mode.

**Fame** Full-sky astrometric mapping explorer.

**Famet** Fuerzas Aeromoviles del Ejercito de Tierra [army aviation] (Spain).

**FAMG** Field artillery missile group (USA).

**familiarisation** Training to acquaint technical personnel with specific system.

**Famis** Full-aircraft management and inertial system.

**famished** Air-intercept code: 'Have you any instructions for me?' (DoD).

**Famos** Floating-gate avalanche-injection MOS.

**FAMS** 1 Family of air missile systems.

2 Federal Air Marshal Service (US 2002-).

**FAN** 1 Forward air navigator.

2 False-alarm normalization [normally holds CFAR to 10<sup>-6</sup>].

**fan** 1 Vaned rotary device for producing airflow.

2 Multi-bladed rotor, usually with single stage, serving as first stage of blading in turbofan [last stage in aft-\* engine] and handling much greater airflow than core.

3 Propeller, when function is moving air rather than providing thrust.

4 Assembly of three or more reconnaissance or mapping cameras at such angles to each other as to provide wide lateral coverage with overlapping images.

**fan blade off** Most severe turbofan certification requirement, ability to contain and survive severance of one entire fan rotor blade at redline speed without danger to aircraft.

**F&E** Facilities and equipment.

**F&F** Fire and forget.

**F&R** Function and reliability.

**F&U** Fire and update.

**fan duct** Annular duct [in B-52H twin C-ducts] through which air compressed by fan of turbofan engine is delivered. Can be short, ending in annular propulsive nozzle surrounding core casing, or extend to rear where there may be a mixer. Almost always incorporates a reverser.

**fan engine** 1 See *turbofan*.

2 Three-cylinder engine with one cylinder vertical and others at about 45° to it.

**fan exit case** Casing surrounding fan (2) carrying reverser and often accessory gearbox.

**fan-failure clutch** When necessary, disconnects engine fan from transmission of tilt-rotor.

**Fang** Federation of Anti-Noise Groups (charity, UK, 1973-, office East Molesey).

**fanjet, fan jet** Turbofan, or aircraft powered thereby (colloq.).

**fan lift** Jet V/STOL system using large axial fans inside

wings and fuselage covered by shutters above and below which are opened only in hovering mode.

**fan mapping** Aerial survey using fan of cameras.

**fan marker** Radio position-fix beacon radiating in vertical, fan-shaped [ellipse or dumbell] pattern, keyed for identification (see *radio beacon*, *Z-marker*, *FM-marker*).

**fanned-beam antenna** Unidirectional antenna so designed that transverse cross-sections of major lobe are approximately elliptical.

**fanning beam** Radiant-energy beam (eg radar) which sweeps back and forth over a limited arc (see *scan*).

**Fanpac** Fan-noise prediction and control.

**fan ramjet** See *augmented turbofan*.

**FANS, Fans** Future air navigation system[s]; several variants with suffix letter or number (ICAO).

**fan straightener** Radial vanes in front of and/or behind fan in wind tunnel to introduce or remove flow rotation usually counteracting that of fan.

**fan stream burning** Thrust boosting by burning fuel in airflow downstream of fan; in some vectored engines same as PCB, in ejector lift and RALS after travel along large pipe.

**FanWing** Patented VTOL lift/propulsion system based on powered 'paddlewheels' rotating on transverse axes.

**FAO** Fabrication assistée par ordinateur (F).

**FAOR** Fighter area of responsibility.

**FAP** 1 Fleet average performance.

2 Force Aérienne de Projection (F).

3 Fuel-adjusted profit.

4 Frangible armour-piercing; DS adds discarding-sabot.

5 Forward, or flight, attendant panel.

6 Final approach, or final-approach point.

7 Federation of Australian Pilots.

8 Fluorinated aluminium powder.

9 Federación Argentina de Paracaidismo [sport parachuting] (Argentina).

**FAPA** 1 Future Aviation Professionals of America.

2 First Air Pilots Association.

**FAQ** Frequently-asked question[s].

**FAR** 1 Federal Aviation Regulation[s]; eg FAR-23 [also called Part 23] defines flight performance of private and taxi a/c ≤12,500 lb [5670 kg] MTOW, FAR-25 covers a/c above this limit, Pt 36 is concerned with noise and FAR-103 with single-seat ultralights, for example.

2 False-alarm rate.

3 Fighter/attack/recon. (pilot grading, USAF).

4 Field assessment (or functional area) review (US).

5 Force d'Action Rapide (F).

6 Forward-area rearm [or rearm/refuel, P adds point].

7 Federal Acquisition Regulations.

8 Federatia Aeronautica Romana [office, R-70139 Bucharest] (Romania).

9 Fatal-accident rate.

**FARA** Formula Air Racing Association [office, London W1X] (UK).

**farad** SI unit of electrical capacity, Symbol F; capacity of condenser (capacitor), which has potential difference of 1V when charged with 1C. More commonly used: microfarad and picofarad.

**faraday** Symbol F; non-SI unit of electric charge carried by 1 mole of singly-charged carbon-12 ions = 9.6487×10<sup>4</sup>C.

**Faraday waves** Specific family of waves set up by fluid sloshing in confined space.

**Faradex** Functional architecture reference for ATM (7) systems and data exchange (Euret).

**Faraway** Fusion of radar and ADS (5) data through two-way data-link (Euret).

**fare dilution** Dilution of airline revenue yield by excursion, affinity, group, seasonal or off-peak and other types of promotional fares, and by discounted or free travel to employees, or passengers on particular sectors.

**fare structure** Complete range of airline fares, either approved by licensing authority such as CAB for domestic use or agreed at IATA traffic conferences for international use.

**far-field boom** Supersonic N-wave boom after long travel has changed form, esp. by reducing rate of change of pressure at front and rear.

**far-field noise** Noise, especially from jet engine, at considerable distance (typically 100+ metres) where higher frequencies are attenuated.

**far IR, far infra-red** Wavelengths longer than 6  $\mu$ .

**farm** Compact group of large number of aerials (antennas), especially protruding from aircraft.

**farm-gate operations** Operational assistance and specialised tactical training provided to friendly foreign air force by United States armed forces; includes, under specified conditions, flying of operational missions by combined US and foreign aircrew as part of training when such missions are beyond recipient's capability.

**farm strip** Private airfield, usually with no facilities except hangar.

**Farnborough** Location of QinetiQ/Royal Aerospace Establishment (RAE), originally Royal Aircraft Factory (UK).

**Farnborough indicator** Pioneer indicator for continuously recording pressure cycles in cylinder of piston engine.

**Farnham roll** Large powered machine for two-dimensional bending of sheet metal.

**FARRP** Forward-area rearming and refuelling point (or FARP, forward arming and refuelling point).

**farval** Aerobatic manoeuvre in which two aircraft perform routine with one inverted above the other (thus a half-roll results in the pair changing places). See *double \**, (USN 1929, relaunched by Blue Angels 1962).

**FAS** 1 Frequency-agile subsystem.

2 Flight-attendant station.

3 Forward acquisition sensor.

4 Federatsiya Aviatsionogo Sporta (USSR).

5 Flare-augmentation system.

6 Fuel-advisory system.

7 Fore-and-aft scanner; S adds system.

8 Forces Aériennes Stratégiques (F, note plural, unlike FAT).

9 Future antenna suite.

10 Federal air surgeon (US).

11 Final-approach segment.

**FASA** 1 Friendly aircraft simulating aggressors.

2 Fédération Algérienne des Sports Aériens.

**Fasat** Future anti-satellite (weapon).

**FASGW** Future air/surface guided weapon (UK).

**FASH** Future amphibious support helicopter.

**FASI** 1 Federation of air sports [Jakarta airport] (Indonesia).

2 Fused all-sources intelligence.

**Fasid, FASID** Facilities and services implementation document.

**FASM** 1 Forward air-support munition.

2 Farnborough Air Sciences Museum (2003–).

**Fasoc, FASOC** Future air & space operations concept, or capability (MoD, UK).

**Fasotragru** Officially written in capitals, Fleet Aviation Specialized Operational Training Group; DET adds Detachment (USN).

**FASS** 1 Fore and-aft scanner system.

2 Fixed aircrew seat standardization.

**FASST** Federation of Americans Supporting Science and Technology [office, Washington, DC].

**FAST, Fast** 1 Fan and supersonic turbine.

2 Fuel and sensor, tactical (clip-on pack).

3 Future aviation safety team (EC, JAA).

4 Flying-ambulance surgical trauma.

5 Fuselage automated, or automatic, splicing tool.

6 Fast-acting stabilizing [reefed drogue].

7 Final-approach spacing tool.

8 Fleet-aircrew simulation training.

9 Forecasting and assessment of science and technology.

10 Fly-away satellite terminal.

11 Forward-area support team.

12 Flight-advisory service test [of civil/military ground radar].

13 Fully automatic scoring target.

14 Flexible acquisition [and] sustainment tool (USAF).

15 Fuze air-to-surface technology (USAF).

16 Future air systems tanker.

**FASTA** Farnborough Air Sciences Trust Association [Mytchett GU16 6DH] (UK).

**Fasta** Flugzeugabwehrstartanlage (air-defence launcher, G).

**Fast-action device** Thyristor switch which brings battery on line upon failure of generator or TRU.

**Fastar** Forward-area surveillance and target-acquisition radar.

**FASTC** Foreign Aerospace Science & Technology Directorate Center (USAF).

**Fast CAP, Fastcap** Combat air patrol by fast jet.

**Fastec, FASTec** Foundation for Advancing Science & Technology Education (US).

**fast erection** Provision for super-rapid [usually electrical] acceleration of gyro[s].

**Fast FAC** Forward air controller in fast jet.

**Fasti** First air traffic control support tools implementation (Eurocontrol).

**Fastjam** Flow analysis for selective, or selected, target jamming (Darpa).

**fast jet** Generic title for ATC purposes of any aircraft with typical jet speed.

**fast mover** Jet combat aircraft, especially in FAC role.

**fast prototyping** Techniques for getting first flight article airborne at earliest possible date, ignoring deficiencies and making maximum use of simulation.

**fast-reaction weapons demonstration** Ongoing research into optimum methods of dispensing multiple miniature smart submunitions (USAF).

**Fastt** Flight-strip automation system for towers and Tracons.

**FASU** Federation of Aeronautical Sports of Ukraine.

**FAT** 1 Flechette anti-tank.

2 Factory acceptance test.

3 Final-approach track.

**fat** 1 Overweight.

2 Material that can be removed to meet less-severe requirement, as in civil derivative of military engine.

**Fatac** Force Aérienne Tactique (F).

**fatal accident** One in which at least one occupant is killed; casualties on ground do not qualify.

**Fatca** Federal ATC authority (Yugoslavia).

**Fate** 1 Fuzing, arming, test and evaluation.

2 Factory acceptance test equipment.

**FATG** Fixed air-to-ground, ie against non-moving target.

**fathom** Nautical unit of sea depth, 6 ft, 1.8288 m.

**fatigue** 1 Weakening or deterioration of metal or other material under load, esp. repeated cyclic load; causes cracks and ultimately failure.

2 Progressive decline in human ability to carry out appointed task apparent through lack of enthusiasm, inaccuracy, lassitude or other symptoms. In any form of briefing, limits usually quantified in terms of hours or sorties.

**fatigue index** Arbitrary scale of airframe structure life terminating at 100, but capable of being extended to higher values by modification.

**fatigue life** Minimum time, expressed in thousands of hours or specified number of load cycles, that structure is designed to operate without fatigue failure.

**fatigue strength** Maximum stress that can be sustained for specified number of cycles without failure. Also known as fatigue limit.

**fatigue test** Test in which specimen is subjected to known reversals of stress, such as alternate tension and compression, or cycle of known loads repeatedly applied and released.

**Fatmi** Finnish air-traffic management integration.

**FATO, Fato** Final approach and takeoff [determines size of heliport].

**Fature** Federation of Air Transport User Representatives in Europe [office, London WC2B 6TE] (Int.).

**FAU** Forward antenna unit.

**fault-tree analysis** Use of a family-tree structure in order to establish the probability of failure of any level or component; the analysis is based on the established MTBF of each element, some parts being in parallel [four engines or hydraulic pumps]. This is a fundamental procedure in the PSSA and SSA.

**FAUSST** Franco-Anglo-US SST Committee (1964-66).

**FAV** First-article verification.

**fav** Fuel available.

**favourable unbalanced field** A T-O with excess power available, so that surplus acc/stop distance can give screen height greater than 35 ft.

**FAW** Fighter, all-weather (role prefix, UK).

**FAWS** Future airborne weapon system.

**faying surface** Overlapping of adjoining skin surfaces with edges exposed to airstream or to water.

**FB** 1 Fighter-bomber (role prefix, UK). Also major subdivision of undergraduate pilots, as alternative to TTT (USAF).

2 Fingerprint biometrics.

3 Flare block [of cartridges].

**F<sub>B</sub>** 1 Aerodynamic loading due to buffeting pressure field.

2 Structural buckling factor [highly variable, depending on construction].

**F<sub>b</sub>** 1 Burn time at average thrust (rocket).

2 Body-fixed reference frame.

**FB** 1 Fighter-bomber clear-weather day/night.

2 Fan/booster/compressor [module].

3 Fly by cable = mechanically signalled manual FCS.

**FBE** Fleet battle experiment (USN).

**FBG** Fighter/Bomber Group (USAAF).

**FBH** Front-bearing housing.

**FBI** Frequency and bias injection.

**FBL** 1 Fly-by-light.

2 FIATA combined transport bill of lading.

**FBM** 1 Fleet ballistic missile (S adds 'submarine' or 'system').

**FBO** 1 Fixed-base operator.

2 Flights between overhauls.

3 Federal budget outlays.

4 Fan-blade off; hence, an \* event, \* test.

**FBPAR** Fixed-base precision approach radar.

**FBR** Fuji bearingless [main] rotor].

**FBS** 1 Fly-by-speech.

2 Fixed-base simulator.

3 Forward-based system.

4 Flash/bang/smoke.

**FBSM** Feature-based solid modelling.

**FBT** Fixed-base tower.

**FBVL** Fédération Belge de Vol Libre.

**FBW** 1 Fly-by-wire.

2 Fly-by waypoint.

**FBWG** Franco-British Working Group [Concorde].

**FC** 1 First class.

2 Fuel cell.

3 Funnel cloud, tornado or waterspout.

4 Foot-candle[s].

5 Flight crew.

6 Flight cycle.

7 Fibre channel [bus].

**F<sub>c</sub>** Fracto-cumulus.

**f<sub>c</sub>** Carrier frequency.

**F/C** Forecast.

**FCA** 1 Future cycle accumulation (engine).

2 Functional configuration audit (software).

3 Flight-control, or -critical, avionics.

4 Fully controllable array.

5 Frequency control and analysis.

6 Frequency clearance agreement.

7 Flying Chiropractors Association [office, Johnstown, PA] (US).

**FCAC** Future combat air capability (RAF).

**FC-AE** Fibre channel avionics environment.

**FCAS** 1 Flight-control actuation system [Bell].

2 Future combat air system.

**FCB** Frequency co-ordinating body.

**FCBA** 1 Fédération des Clubs Belges d'Aviation.

2 Future carrier-based, or -borne, aircraft (UK, replaced by FJCA).

**FCC** 1 Federal Communications Commission (US, from 1934).

2 Flight-control computer.

3 Flight-connection centre (DAIS.2).

4 Flat conductor cable.

5 Flying Control Committee.  
**FCCC, FC3** Framework Convention on Climate Change.  
**FC cost** Flight-crew cost.  
**FC (CSA)** Fleet Command [Carrier Strike and Aviation] (UK).  
**FCD** Full concept definition.  
**FCDA** 1 Federal Civil-Defense Administration (US).  
 2 Federación Colombiana de Deportes [sport] Aereos [Santa Fe de Bogotá] (Colombia).  
**FCDC** 1 Flight-control digital computer.  
 2 Flight-control data concentrator.  
 3 Flight-critical direct current.  
 4 Flexible confidant detonating cord.  
**FCDM** Flow-control decision message.  
**FCDS** Flight-control display system.  
**FCE** 1 Flight-control electronics.  
 2 Flight-crew environment.  
 3 Full cockpit emulator.  
**FCEM** Flow-control execution message.  
**FC-ECY, FC/ECY** First-class and economy.  
**FCES** Flight-control electronics system.  
**FCF** 1 Functional check, or checkout, flight.  
 2 Forward centre fuselage.  
**FCG** Fatigue-crack growth.  
**FCGMS** Fuel and c.g. management system.  
**FCI** 1 Fuel-consumed indicator.  
 2 Flight-command indicator.  
**FCL** Flight-crew licensing (CAA).  
**FCLP** Field carrier-landing practice.  
**FCLT** Freeze calculated landing time (FAA).  
**FCM** Fuel control and monitoring; C adds computer, S system.  
**FCNP** Fire-control navigation panel.  
**FCNS** Fiber-channel network switch (USN).  
**FCNU** Flight-control navigation unit (UAV).  
**FCO** 1 Formal change order (contract).  
 2 Fire-control operator.  
 3 Foreign and Commonwealth Office [London SW1A 2AH] (UK).  
**FCOC** Fuel-cooled oil cooler.  
**FCOM** Flight crew operating, or operations, manual.  
**FCP** 1 Fuel cell powerplant.  
 2 Flight-control panel, or processor.  
 3 Future capability plan, or programme.  
 4 Fuel control panel.  
 5 Fatigue countermeasures program [NASA Ames] (US).  
**FCPC** Flight-control primary computer.  
**FCR** Fire-control radar.  
**FCRC** Federal Contract Research Center (US).  
**FCRS** Flight-crew record system.  
**FCS** 1 Flight control system.  
 2 Fire control system, for management of weapons.  
 3 Failure combat system.  
 4 Future combat system[s] (USA).  
 5 Frame check sequence.  
**FCSC** Flight-control secondary computer.  
**FCSS** Fire-control sight system.  
**FCST** Federal Council for Science & Technology (US).  
**Fcst, FCST** Forecast.  
**FCT** 1 First configuration test.  
 2 Foreign comparative test[ing] (USAF).  
 3 Flight-crew training [RM adds reference manual].

4 Friction coefficient.  
**FCTP** Flight-control technology program (VTOL, at WPAFB).  
**FCTR** Fan/core thrust ratio.  
**FCTS** Flight-controller training simulator.  
**FCU** Feathering, fighter, flight or fuel control unit.  
 **$F_{cy}$**  Yield strength in compression.  
**FD** 1 Flight director.  
 2 Frequency duplex.  
 3 Frequency domain.  
 4 Flight, or final, data.  
 5 Flight deck [D adds documentation].  
 6 Full development.  
 7 Flight dynamics.  
 8 Finite difference.  
 **$F_d$**  Takeoff-distance correction factor for slush, =  $TOD \div TOD$  for dry runway.  
 **$f_d$**  Doppler frequency.  
**FDA** Flight-data acquisition; F adds function, S system and U unit.  
**FDAC** Flight demonstration of ASTA (2) concepts.  
**FDAD** Full digital Arts (1) display.  
**FDAF** See *FDA*.  
**FDAI** 1 Flight-director attitude indicator.  
 2 Føringen for Dansk Aerospace Industri [office, DK-1787 Copenhagen] (Denmark).  
**FDAMB** Field ambulance.  
**FD&E** Forces development and evaluation (USAF).  
**FDAS** See *FDA*.  
**FDAU** See *FDA*.  
**FDB** Flight[plan] data bank.  
**FDC** 1 Frequency-to-digital converter.  
 2 Flight-director computer, or coupler.  
 3 Flight-data concentrator, or centre.  
 4 Fire direction centre; OPC adds operations planning cell.  
 5 Fuel-data concentrator.  
**FDCC** Forward-deployed communication[s] center (USAF).  
**FDD** 1 Flight-data display.  
 2 Flying Display Director  
**FDDI** Fibre-optics distributed, or fibre distribution, data interface.  
**FDDP** Full-digital design process.  
**FDDS** Flight-deck display system.  
**FDE** 1 Fire detection and extinguishing., or fire-detector element.  
 2 Fault detection and exclusion.  
 3 Force development evaluation.  
**FDECU** Field-deployable environmental-control unit.  
**FDEP** Flight-data entry and print-out (or FDE panel).  
**DFD** 1 Føringen Danske Flyvere (Danish pilots' association) [office Copenhagen]  
 2 Fachverband Deutsche Flugdatenbearbeiter.  
**FDFF** Føringen af Danske Fabrikanter af Fly-material (Danish industry assoc.).  
**FDFM** Flight-data and flow management (ICAO group).  
**FDH** Flight-deck handset.  
**FDI** 1 Flight director indicator.  
 2 Flight-data interface [MU adds management units, U unit].  
 3 Fault detection and isolation.  
**FDIO** Flight-data input/output.

**FDL** 1 Full-drawn line (symbology right across display).

- 2 Flight Dynamics Laboratory.
- 3 Fast deployment logistic (ship).
- 4 Fighter data link.

**FDM** 1 Frequency-division multiple, or multiplex.  
2 Fused deposition modelling.

**FDMA** Frequency-division multiple access.

**FDMS** Flight deflection measurement system.

**FDMT** Flight-data monitoring tool.

**FDMU** Flight-data management unit.

**FDO** Flight-deck officer.

**FDOA** Frequency difference of arrival.

**FDP** 1 Flight [-plan] data processing, or processor; R adds replacement, S adds system, or service.

- 2 Flight-duty period.
- 3 Floating-deck pulser.
- 4 Funded delivery period.

**FDR** 1 Flight-data recorder [A adds analysis, S system].

- 2 Flat-deck runway.
- 3 Flight-deck reporting.
- 4 Fiduciary deposit receipt[s].

**FDS** 1 Flight director, or data, or display, system.

- 2 Fence disturbance sensor.
- 3 Flight-deck [of aircraft] simulator.
- 4 Field-deployable simulator.

**FDSC** Future defence supply chain.

**FDSO** Full dispersed-site operations.

**FDSS** Flight display subsystem.

**FDSU** Flight-data storage unit.

**FDT** Flight-deck, or -data, terminal[s].

**FDTE** Force development test and experimentation.

**FDU** 1 Flight-data unit.

- 2 Flux, or fire, detector unit.

**FDVLO** First-day vertical liftoff.

**FDX** Fast-switched Ethernet.

**FE** 1 Flight engineer [or examiner].

- 2 Ferroelectric.
- 3 Fan exit.

**Fe** Iron.

**F<sub>e</sub>** Static thrust per engine at sea level.

**f<sub>E</sub>** Factor of stress increase at corner of a cut-out in stressed skin.

**FEA** 1 Federal Energy Administration (US).

- 2 Finite-element analysis.

**FE(A)** Flight Examiner (Aeroplanes).

**FEAF** Far East Air Force[s] (WW2 and Korea).

**FEAR** Failure-effect[s] analysis report.

**feasibility study** Determines whether plan is within capacity of, or makes best use of, resources available.

**feathering** 1 Turning propeller blades to feathering angle, following engine failure or apparent malfunction, to minimise drag and prevent further damage.

- 2 Of helicopter, cyclic pitch.

- 3 SpaceShipOne, pivoting tails up 65° to give shuttle-cock re-entry stability.

**feathering angle** See *feathering pitch*.

**feathering button** Used to feather propeller; protected by hinged cover.

**feathering hinge** Helicopter rotor-blade pivot which allows blade angle to be varied.

**feathering pitch** Angular setting giving zero windmilling torque for stopped propeller (opposite ends of each blade cancelling out torque), thus minimum drag.

**feathering pump** After stoppage or failure of engine, provides hydraulic pressure to feather propeller.

**feathers** Wing movables: slats, Krügers, droops, flaps, ailerons, spoilers (colloq.).

**FEATMS** [sometimes **Feats**] Future European air-traffic management system.

**FE@R** Force elements at readiness [2005–, MoD RAF] (UK).

**feature console** In passenger cabin, clock, TAS readout, phone, fax etc.

**feature-line overlap** Series of overlapping air photographs which follow ground feature such as river or road.

**FEBA** Forward edge of battle area (replaced by FLOT).

**FEC** Forward error correction.

**fecal canister** Sealable container for human solid wastes in spaceflight.

**FECU** Flap electronic control unit.

**FED** 1 Field-effect display.

- 2 Field emission display.

**fed** Of radio, supplied with RF oscillations.

**Federal Air Marshal** Armed guard carried [as ordinary passenger] on US commercial flights to deter terrorism (FAA).

**Federal Flight-Deck Officer** Captain or copilot trained to carry a gun (TSA).

**federated** Traditional arrangement of avionics in which each suite provides its own processor and a separate unit [usually called mission computer] distributes workload and output.

**Fedix** Federal information exchange, online.

**FEDN** Fondation pour les Etudes de Défense Nationale (F).

**FEDP** Fuel-element differential pressure.

**Feds** The FAA (1) [colloq.].

**feed** 1 To provide signal.

- 2 Point at which signal enters circuit or device.

- 3 Signal entering circuit or device; input.

4 Means of supplying ammunition to gun, or chaff through dispenser.

**feedback** 1 Return of portion of output to input; positive \* adds to input, negative \* subtracts from it.

2 Information on progress, results, field performance, returned to originating source.

3 Transmission of aerodynamic forces on control surfaces or rotor blades to cockpit controls; also forces so transmitted.

**feedback control loop** Closed transmission path containing active transducer, forward path, feedback path, and one or more mixing points arranged to maintain prescribed relationship between input and output signals.

**feedback control system** One or more feedback control loops to combine functions of controlled signals with functions of commands to tend to maintain prescribed relationships between them.

**feedback path** 1 Transmission path from loop output signal to loop feedback signal.

- 2 The path from output to demand.

**feeder** 1 Transmission line which connects aerial to transmitter or receiver.

2 Air route or service that feeds traffic to major domestic or international routes (see *commuter*, *third-level*).

**feederliner** Transport aircraft used to operate feeder, commuter or third-level services.

**feeder route** Links en-route to initial approach fix.

**feed pipe** Pipe supplying any liquid.

**feed tank** Small tank drawing fuel from main tankage and transferring it under pressure to an engine.

**feel** Subjective pilot assessment of aircraft response to flight-control commands, stability, attitudes and other factors influencing his opinion.

**feeler aileron** Small manual aileron whose primary purpose is to impart feel.

**feel system** Mechanism in which control feel is augmented, improved or simulated artificially rather than provided only by aerodynamic forces on control surfaces (see *artificial feel*).

**feet dry** Code: "I am, or contact designated is, over land" (DoD).

**feet per second** Ft/s, = 0.3048 ms<sup>-1</sup>, 1.09728 km/h.

**feet wet** Code: "I am, or contact designated is, over water" (DoD).

**FEFA** Future European Fighter Aircraft (project).

**FEFI** Flight engineers fault isolation (technique and handbook).

**FEGV** Fan-exit guide vane.

**FE(H)** Flight Examiner [Helicopter].

**FEI** 1 Federation of the Electronics Industry [office London WC1B 5EE] (UK) 300+ members.

2 Field engineering instructions (NATS).

**FEIA** Flight Engineers' International Association (US, merged into IFEO).

**FEL, Fel 1** 1 Free-electron laser.

2 Fibre-elastomer or elastomeric.

**FELC** Field-effect liquid crystal.

**FELD** Forward electrical load center (EP-3).

**FELT, Felt** Free-electron laser technology; IE adds integration experiment (SDI).

**felt** Non-woven materials used when properties of uni-directional fibre-reinforced plastics are not required; built up from fibres or whiskers of carbon, glass, formerly asbestos, etc.

**felt strip** See *moleskin*.

**FEM** 1 Force effectiveness measure.

2 Finite-element model/mesh/method.

**FEMA** Federal Emergency Management Agency (US).

**femto** Prefix: multiplied by 10<sup>-15</sup>, one thousandth of a millionth of a millionth; see *fermi*.

**fence** 1 Line of readout or tracking stations for communication with satellite.

2 Line or network of radar stations, on land or round periphery of surface fleet, for detecting enemy aircraft or missiles.

3 Wall-like plate mounted on upper surface of wing, often continuing around leading edge, substantially parallel to airstream and used to prevent spanwise flow, esp. over swept wing at transonic speeds.

**Fenda** Federación Nacional de los Deportes Aéreos (Spain).

**FENE** Fixed exit nozzle engine.

**Fenestron** Helicopter tail rotor with numerous blades rotating in short duct inset into fin.

**FEO** Federal Energy Office (US).

**FEP** Front-end processor.

**fermi** Unit of length, = 10<sup>-15</sup>m.

**Ferpic** Ferroelectric photoconductive image ceramic.

**FEPS** Flight-envelope protection system.

**ferret** Aircraft, ship or other platform equipped for detection, location, recording and analysis of hostile EM radiation (Elint mission).

**Ferris scheme** Carefully designed paint scheme using two shades of colours to make it difficult to ascertain aircraft attitude (secondarily, aircraft type and direction of travel).

**ferrite** Magnetic ceramics composed of salts of iron and another divalent metal; because of low eddy-current losses, cores constructed of sintered powders of these materials are widely used for rod aeriels and cores of inductors for RF and video.

**ferrite paint** See *iron paint*.

**ferritic** Of ferrite.

**ferrous** Derived from iron.

**Ferroxcube** Proprietary non-metallic insulating magnetic materials which have extremely high resistivity and low eddy-current losses but do not become permanently magnetised.

**ferrule** Small metal fitting or wire wrapping used to prevent loosening of wire terminal.

**ferry flight** Flight whose purpose is to reposition aircraft at a different place.

**ferry pilot** One responsible for delivering aircraft from one place to another; eg from manufacturer to customer.

**ferry range** Distance unladen aircraft can be ferried; specified with or without ferry tanks.

**ferry tank** Extra fuel tank for ferry flight over range greater than normal limit.

**fertile material** Not itself fissile by thermal neutrons, can be converted into fissile material by irradiation; two are U-238 and Th-232, partially converted into Pu-239 and U-233.

**FES** Flexible elastomer skin.

**FESC** Forward electrical/electronic service centre.

**Fescolizing** Patented electroplating of Cd, Cr or Ni.

**FESG** Forecasting and Economic-Support Group.

**FEST** Foreign emergency support team (USAF).

**FET** 1 Field-effect transistor.

2 First engine to test (date).

3 Fighter engine[s] team.

**FETAP** Fédération Européenne des Transports Aériens Privés.

**FETT** First engine to test, date of first run of first complete engine of new type; confusingly sometimes said to mean first engine Type-Test, which might be years later.

**FEW** 1 Fighter Escort Wing.

2 Few clouds, usual = 1 to 2 oktas.

**The Few** Collectively, the fighter pilots defending the UK between 10 July and 31 October 1940.

**few** Up to 7 hostile aircraft (DoD).

**FEWP** Federation of European Women Pilots.

**FEWSG** Fleet EW Support Group.

**FF** Final fix.

**FF, f.f.** Fuel flow.

**F/F** First flight.

**f<sub>f</sub>** Frequency to which digital filter is tuned.

**FFA** 1 Flying Farmers Association [office, Shobdon airfield, HR6 9LT] (UK).

2 Foam-filled aluminium.

3 Flygtekniska Förökanstalten; aeronautical research institute, merged 2001 into FOI (Sweden).

4 Fédération Française d'Aérostation [ballooning; office, F-75116 Paris] (F).

**FFAM** Fédération Française d'Aéro-Modélisme.

**FFAR** 1 Folding-fin aircraft rocket (2.75-in calibre).

2 Rarely, free-flight, or forward-firing, aircraft rocket.

3 Feel forces/stick angle relationship.

**FFAS** French-language rendition of ADSL.

**FFATC** Free-flight [phase] air-traffic control.

**FFBW** Fully fly-by-wire.

**FFC** 1 Fan-failure clutch.

2 For further clearance.

**FFCC** Forward-facing crew cockpit.

**FFCS** 1 Formation-flight control system.

2 Fly-by-wire [primary] flight-control system.

3 Free-fall control system (air-dropped ICBM).

**FFD** 1 FMS (1) flight data.

2 Free-form deformation.

**FFDO** Federal Flight-Deck Officer.

**FFF** 1 Film-forming foam (extinguishants).

2 Free-form fabrication.

**FF/FU** Fuel flow/fuel used (panel instrument).

**FFG** Code: guided-missile frigate (USN).

**FFH** For further headings.

**FFI** 1 Freedom from infection.

2 Forsvarets Forskningsinstitutt [defence research, Kjeller N-2007] (Norway).

**FFIS** Formation-flight instrumentation system.

**FFK** Full-function keyboard.

**FFL** Forces Française Libre, so-called "free French" [WW2].

**FFM** 1 True-mass fuel flowmeter.

2 Far-field monitor.

**FEMA** Federal Emergency Management Agency (US).

**FFMRRR, F<sup>2</sup>MR<sup>3</sup>** Folded fibreglass-mat rapid runway repair system.

**FFN** Far-field noise.

**FFNAC** Fédération Française des Navigants de l'Aviation Civile.

**FFO** 1 Furnace fuel oil.

2 Fixed-frequency oscillator.

3 Full fuzing option.

**FFP** 1 Firm fixed price.

2 FOV/focus/polarity.

3 Flight fine pitch.

4 Fédération Française de Parachutisme [office, F-75012 Paris] (F).

5 Frequent-flyer programme.

6 Free Flight Phase, followed by -1 or -2 (FAA).

7 Free-fall parachuting.

**FFPB** Free-fall practice bomb.

**FFPLUM, FF-Plum** Fédération Française de Planeur Ultra-léger Motorisé [office, F-94700] (F).

**FFPS** FFP(7) site.

**FFPVL** Fédération Française de Parachutisme Vol Libre (hang gliding).

**FFR** 1 Fuel-flow regulator.

2 Full flight regime, ie operative throughout each flight.

3 Full flight release (engine certification).

**FFRAT** Full-flight-regime autothrottle.

**FFRDC** Federally Funded R&D Centers (US).

**FFS** 1 Full flight simulator.

2 Fee for service.

3 Formation Flight System (Honeywell), or formation-flying system [a TCAS].

4 First Flight Society [Kitty Hawk, NC 27949] (US).

**FFSP** Full-function signal processor.

**FFSS** Fire Fighting and Safety School (RAF).

**FFT** 1 Fast Fourier transform.

2 Full-scale fatigue test [S adds specimen].

**FFTTEA** See *F<sup>2</sup>T<sup>2</sup>EA*.

**FFT<sub>x</sub>** Fuel-flowmeter transmitter.

**FFVC** Forward-facing video camera.

**FFVV** Fédération Française de Vol à Voile [gliding; F-75006 Paris] (F).

**FG** 1 Fighter Group (USAAF, USAF).

2 Fog, defined as visibility  $\leq \frac{3}{8}$  mile.

3 Fuel-carrying glider (USAAF, 1944-47).

4 Formation-flying system [a TCAS].

**F<sub>g</sub>** Gross thrust.

**FGA** Fighter, ground attack (role prefix, UK).

**FGAS** Flight guidance and autopilot system.

**FGB** Functional payload [or cargo] block (R).

**FGC** Flight-guidance computer.

**FGCP** Flight-guidance control panel.

**FGCS** Flight guidance and control system[s].

**FGIH** Federal government in-house.

**FGM** Flux-gate magnetometer.

**FGMDSS** Future global maritime distress and safety system, integrated with aviation satellites.

**FGPA** Field-gate programmable array.

**FGR** Fighter, ground attack, reconnaissance (role prefix, UK).

**FGS** Fine-guidance sensor.

**F<sub>gs</sub>** Gross thrust corrected to standard weight.

**FGV** Field-gradient voltage.

**Fg Wg** Flying Wing (RAF).

**FH** 1 Flight hour(s).

2 Frequency-hopping.

**FHA** 1 Fleet hour agreement (engine support).

2 Functional hazard assessment, or analysis.

**FHC** Fluorinated hydrocarbon.

**f.h.p.** Friction horsepower [lost].

**FHS** Flight-hardware simulator.

**FHSS** Frequency-hopped spread spectrum.

**FHU** Force helicopter unit (helicopter portion of detached autonomous force).

**FHV** Fuel-heating value.

**FHW** Fault-history word.

**FI** 1 Flying Instructor.

2 Fault isolation.

3 Fluid injection (TVC).

4 Fatigue index.

5 Flyaround initiation.

**F<sub>I</sub>** Flight idle engine power.

**F<sub>i</sub>** Any inertial reference frame.

**FI<sub>A</sub>** 1 Fédération Internationale d'Astronautique. [F-75015 Paris] (F).

2 Future imagery, or imaging, architecture (NIMA).

**FI(A), FI/A** Flight instructor, aeroplane [CAA] (UK).

**FIAS** Formation Internationale Aéronautique et Spatiale.

**Fiasts** Fully integrated aircrew synthetic-training service (RAF).

**FIAT** 1 First installed article test.

2 Field Information Agency, Technical (US Group Control Council 1945-6).

**FIATA** Fédération Internationale des Associations de Transitaires ou Assimilés [International Federation of

Freight Forwarders' Associations; office, CH-8050 Zurich] (Int.).

**FIB** Forwarding information base.

**FIBDATD** "Fix it but don't alter the drawings".

**Fiberloy** Family of composite materials based on boron fibres bonded in various resinous or plastics adhesives (Dow Chemical).

**FibeX** Computer-placed carbon-fibre epoxy (Spectrum).

**fibre** Word used loosely of FBL and other systems employing optical fibres for all data transmission [US **fiber**].

**Fibredux** Family of CFRP and hybrid prepreg resins (Ciba-Geigy).

**Fibrefrac H** High-temperature ceramic-fibre insulating material, available as bulk fibre, blanket, felt or paper.

**Fibreglass** Glass-fibre, either raw fibre (many forms) or bonded into matrix and moulded or otherwise formed [capital F in UK, in US **fiberglass**].

**Fibrelam** Plastic honeycomb sandwich panel mechanically resistant to spike heels and not affected by galley or other spillage (Ciba/Geigy).

**fibre optics** Branch of optics concerned with propagation of light along thin fibres each comprising core and sheath of different glasses or other transparent material; light entering one end is transmitted by successive internal reflections. In practice extremely fine fibres a few microns in diameter are made up into bundles of 100,000 or more.

**fibre-optics gyro** Instrument (not a gyro at all) for measuring rotations by means of coherent light passed simultaneously both ways around a loop (typically 300–500 m long) of monomode optical fibre, rotation being measured instantly and precisely by phase shift at output.

**fibrescope** Fibre-optic borescope.

**Fibs, FIBS** Flight information billing system.

**Fibua** Fighting in built-up areas.

**FIG** 1 Flight information center, or centre.

2 Finance committee (ICAO).

3 Film integrated circuit.

4 Flying [or flight] instructor course.

5 Frequency/identification/course.

6 Flight inspection computer, compares aircraft position with that derived from nav aids.

**Ficon** Federal Interagency Committee on Aviation Noise (US).

**Fick's law** Basic law of gaseous diffusion: mass flux  $j$  = diffusion coefficient  $D$  times differential  $dC_1/dy$  where  $C_1$  is concentration of gas 1 and  $y$  is distance from surface.

**Ficon** Fighter conveyor, fighter carried to target by large bomber, to offer protection (USAF).

**Fidag** Federazione Italiana Dipendenti Aviazione Generale.

**fidelity** 1 Accuracy with which electronic or other system reproduces at output essential characteristics of input signal.

2 Handling \* is degree to which flight simulator replicates handling of real aircraft.

**FIDO** 1 Flight dynamics officer.

2 Fog Investigation and Dispersal Operation, UK method of dispersing fog in WW2 by burning fuel along runway edges.

3 Field integrated design and operations (Mars vehicle).

**Fids, FIDS** 1 Fault identification and detection system.

2 Flight information display set [ATC radar] or system [for passenger information].

3 Fire detection and suppression system.

**fiducial marks** Index marks on camera which form images on negative to determine position of optical centre or principal point of imagery; collimating marks.

**FIE** Flight instrument examiner.

**field** 1 Airfield, as in \* length.

2 Region of space within which each point has definite value; examples are gravitational, magnetic, electric, pressure, temperature, etc. If quantity specified at each point is vector, field is said to be vector \*.

3 Customer service, thus \* service, \* rep, \* report.

4 Operation at advanced base with austere facilities (military), thus \* maintenance.

**field alignment error** In ground DF station, error introduced by incorrect orientation of aerial elements.

**field coils** Two fixed coils of DF goniometer at right angles to each other and connected to two halves of aerial system.

**field extension** Organizational element performing operating functions that must be retained under direct control of parent staff office (USAF).

**field-handling frame** Portable frame attached to airship on ground to afford grasp to large handling crew.

**field inventory** Portfolio of used aircraft, parked and immediately available.

**field length** Distance required for takeoff and landing, accelerate/stop, RTO and other operations as specified in flight manual (see *balanced* \*).

**field maintenance** That authorised and performed in field (4) in direct support of operational squadrons and other units; normally limited to replacement of unserviceable items.

**field modification** One made in field (4), usually by FMK.

**field of regard** Total angular coverage of sensor; with fixed installation same as FOV (2, next), but if gimballed depends on FOV plus slewing and elevation limits.

**field of view** 1 Angle between two rays passing through perspective centre (rear nodal point) of camera lens to two opposite sides of format. Not to be confused with angle of view.

2 Total solid angle available when looking through sight, HUD or other optical system. In the case of a TV, FOV is defined as: wide, 4°; narrow, 0.9°; underscan, 0.45°.

**field operation** From forward airfield, esp. with unpaved runways.

**field performance** That associated with takeoff and landing, esp. in context of certification.

**field site** Completely unprepared stretch of terrain used in Harrier training.

**field strength** 1 Flux density, intensity or gradient; also called field intensity, although this term does not follow strict radiometric definition of intensity (flux per unit solid angle).

2 Electric field strength, units  $Vm^{-1}$ .

3 Signal strength; magnitude of electric or magnetic component in direction of polarization.

4 See *magnetic* \*.

**field takeoff** From airfield, not ship or catapult [naval a/c].

**field traffic** Surface vehicles on airfield.

**field training detachment** Established to provide maintenance-orientated technical training, at operational location, on new systems and their aerospace ground equipment (USAF).

**FIES** Factor of initial engine spares.

**FIF** Fluorescent inspection fluid.

**f<sub>IF</sub>** Intermediate frequency (superhet. receiver).

**FIFO** 1 Fail-isolated/fail-operative.

2 First in, first out.

**FIFOR, Fifor** Flight forecast (Int.).

**15-m class** Most restrictive of the Ostiv/FAI classes for competitive gliding, including span not greater than 15m (49 ft 2 in).

**15-3-3-3** Alloy 76 Ti, 15 Va, 3 each Al, Cr, Sn.

**fifth-freedom traffic** Picked up by airline of country A from country B and flown to country C (see *freedoms*).

**fifth wheel** Vehicle [e.g., baggage trolley] steering by pivoted full-width axle.

**FIG** 1 Fighter interceptor group.

2 Flight-idle gate.

**fighter** Aircraft designed primarily to intercept and destroy other aircraft.

**fighter affiliation** Training exercise carried out by bombers, other heavy aircraft, ground or naval forces, in co-operation with fighters.

**fighter-bomber** Fighter able to carry air-to-surface weapons for ground attack and interdiction.

**fighter controller** Officer on staff of tactical air controller charged with co-ordination and evaluation of air warning reports and operational control of aircraft allocated to him. Also known as fighter director (see also *air controller, tactical air controller, tactical air director*).

**fighter cover** Patrol of fighter aircraft over specified area or force for purpose of repelling hostile aircraft.

**fighter-direction aircraft** Equipped and manned for directing fighter operations.

**fighter escort** Force of fighters detailed to protect other aircraft from attack by enemy aircraft.

**fighter sweep** Offensive mission by fighter aircraft to seek out and destroy enemy aircraft or targets of opportunity in allotted area.

**Fighting Area** A nominated area including south-east England (1925–36). Became part of RAF Fighter Command.

**fighting harness** Seat harness [fighter and similar a/c 1920s].

**fighting kite** Used in sport [originally China] in which objective is to cut rival's control cords.

**fighting top** Cockpit box for gunner(s) on upper wing of large early bombers, accessed by ladder from fuselage.

**fighting wing** Combat formation which allows wingman to provide optimum coverage and maintain manoeuvrability during max-performance manoeuvres.

**FIGS, Figs** Formation integrated gateway subsystem. Integrates radars, com, and airport systems gateways with VME-bus and LAN connections.

**figure 8 fuselage** See *double-bubble*.

**Figure-9 loop** Self-explanatory, aircraft progressively reducing [vertical-plane] turn radius to describe a 9.

**Figure of 8** Self-explanatory manoeuvre in the horizontal plane, in many countries required for A-licence.

**figure of merit** 1 Single numerical value describing quality of real system as percentage or decimal fraction of ideal or theoretical ideal.

2 In particular, helicopter ideal hover power divided by actual.

**FIH** Flight information handbook.

**FIJPAÉ** Fédération Internationale des Journalistes Professionnels de l'Aéronautique.

**FIKI** Flight into known icing.

**FIL** Fountain-induced lift.

**FILA, Fila** Fighting intruder[s] at low altitude.

**Filac** Federazione Italiana Lavoratori Aviazione Civile.

**filament winding** Manufacture of pressure vessel (eg rocket-motor case) by winding continuous high-strength filament on mandrel, bonded by adhesive.

**File** Feature identification and location element (OSTA).

**filed flightplan** That filed by pilot or his designated representative, without any subsequent changes.

**FILG** Filling.

**fill, filling** Threads in fabric which run perpendicular to selva; weft.

**fillers** 1 Paste or liquid used for filling pores of wood prior to applying paint or varnish.

2 Pulse pairs generated by random noise in unsaturated DME beacon to maintain 2,700/s.

**fillet** 1 Aerodynamic fairing giving radius at junction of two surfaces, especially wing trailing edge and fuselage or hull.

2 Fill which traditional weld makes at intersection of two parts.

3 Increased area of pavement at junctions of taxiways and runways to facilitate high-speed turn-offs and other manoeuvres.

**filling** Increase in pressure in centre of low (meteorological); opposite of deepening.

**filling sleeve** See *inflation sleeve*.

**film chip** One incorporating thin or thick-film technology.

**film cooling** Cooling of body by maintaining thin fluid (liquid, vapour or gas) layer over surface.

**filmed** IIT coated with ion-barrier film to prevent feedback damaging delicate photocathode.

**film-return satellite** Reconnaissance satellite which [possibly in a constellation of sensors] includes a camera using physical film, returned to Earth.

**Filour** Flying innovative low-observable unmanned research.

**FILS, Fils** Fault-isolation and location system, integrates Bite with other systems.

**FILT** Federazione Italiana Lavoratori Trasporti [trade union; office, I-00161 Rome] (Italy).

**filter** 1 See *centrifuge \**, *momentum separation \**, *dynamic particle \**.

2 Capacitance and/or inductance and resistance designed to pass given band of RF only. High-pass, low-pass, band-pass and band-stop \* pass frequencies respectively above, below, between and outside desired frequencies. Frequencies at which attenuation falls by more than 3 dB are termed cut-off frequencies.

3 To study air warning information and eliminate any not of interest.

**filter centre** Location in aircraft control and warning system at which information from observation posts is filtered (3) for further dissemination to air-defence control and direction centres (DoD).

**filter crystal** Quartz crystal resonator used to control filter characteristics.

**filter element** Cleansing medium in filter (1) with dry matrix or liquid (often oil) film.

**filtering** 1 Analysis of signal into harmonic components.

2 Separation of wanted component of time series from unwanted residue (noise).

3 Suppression or attenuation of unwanted frequencies.

4 Cleansing of fluid flow of solid particles.

5 Process of interpreting reported information on vehicle movements to determine probable true tracks and, where applicable, heights or depths.

**Fluor** Flying innovative low-observable unmanned research.

**FIM** 1 Fault-isolation monitoring [or manual].

2 Field-ion microscope.

3 Full indicator movement.

**FIN** Functional identification [or item] number.

**fin** 1 Vertical or inclined fixed aerofoil, usually at rear or on wingtip to increase directional stability.

2 Projecting flat plate to increase surface available to reject unwanted heat.

3 Those parts of stabilizers of kite balloon providing stability in pitch.

4 Shallow sharp-edged ridge around fixed or [more often] rotating part of gas turbine core, which in successive stages almost eliminates air or gas loss. The outer radius may be sealed by oil or abradable material.

**FinAF** Finnish air force.

**“final”** Inbound to active runway, called verbally by pilot when 4 nm from visible threshold.

**final approach** 1 IFR, flightpath inbound, beginning at \*\* fix and extending to active runway or to point where missed-approach procedure is executed.

2 VFR, flightpath in direction of landing along extended runway centreline from base leg to runway; hence “on finals”.

**final-approach altitude** Height at start of final approach.

**final-approach fix** That from or over which published final IFR approach is executed.

**final-approach gate** Position on extended runway centreline above which landing aircraft is required to pass at time assigned by approach control.

**final-approach point** Start of final-approach segment of non-precision approach.

**final-approach segment** Final approach (1).

**final assembly** Assembly of major structural and subunits which form completed aircraft; erection.

**final-assembly drawing** Undimensioned drawing calling out all major installations on aircraft; complete index to particular model or sub-type (see *callout notes*).

**Final clearance** Unambiguous authorization to V-bomber crew to make attack with NW, also called PRM (RAF).

**final controller** Radar controller employed in transmission of PAR (previously GCA) talk-down instructions, and in passing monitoring information to pilots not using PAR.

**final mass** Mass of rocket after burnout or cutoff.

**final monitor aid** Program for management of parallel runways (FAA).

**final procedure turn** Links base leg to approach.

**finals** Final approach (colloq.).

**final trim** Exact adjustment of ballistic missile or space launcher to desired cutoff velocity.

**fin carrier** Frame laced to channel patches on aerostat to distribute loads from fin.

**Finder** Acronym, flight-inserted detection expendable for reconnaissance.

**fine adjustment** Cockpit lever operating needle valve controlling fuel flow to engine, normally operated in conjunction with the air lever [c1908–25].

**fine data channel** Channel of trajectory-measuring system delivering accurate but ambiguous data; coarse channel resolves ambiguity.

**fineness ratio** Ratio of length of streamlined body to maximum diameter, or some equivalent transverse dimension.

**fine pitch** Governed propeller-blade angle most suitable for take-off and low-speed flight, between ground fine and range of coarser cruising settings.

**fine-pitch stop** Sets limit of blade rotation into fine pitch.

**fin flash** Rectilinear marking on fin, usually comprising stripes in national colours.

**finger** See *fingers*.

**finger-bar controller** Pilot flight-control input in which fingers rotate cylinder forward or backward for pitch control and rock sideways for roll.

**finger four** See *finger tip*.

**finger lift** Finger-operated latch on front or rear of throttle lever to prevent inadvertent selection of afterburner or reverser.

**finger patch** Aerostat envelope patch having radial ‘fingers’ to distribute load into fabric.

**fingers** Long corridors projecting at about 90° from airport terminal to provide sufficient length for large number of gates.

**finger-tight** Assembled so that item can readily be part-dismantled or stripped; usual state of prototype engine stored after cancellation.

**finger tip** Formation in which four aircraft occupy positions suggested by fingertips of hand held horizontally, palm down.

**finger twizzle** Twirl by finger signifying ‘start engines’.

**fin girder** Main vertical fin member in rigid airship.

**finish** 1 External coating or covering of aircraft or part.

2 General appraisal by eye or touch of external surface quality of aircraft or part, esp. of all-metal construction.

**finite-amplitude wave** Shockwave generated at front or rear of supersonic body of finite dimensions.

**finite-displacement stick** Pilot’s control column which transmits movements (even if small) and not electrical signals generated by force transducers.

**finite-element analysis** Representation of the infinite complexity of stress in a structure by breaking it down into small triangular cells, which can be treated mathematically.

**finite wing** Wing having tips, thus all real wings other than annular.

**finlet** Dorsal fin.

**Finnegan** Exercises involving detachment of NW-armed bomber[s] to dispersal base (RAF 1959–70).

**Finrae** Ferranti inertial-navigation rapid-alignment equipment.

**FINS, Fins** Fixed-imagery navigation sensor (Lantirn).

**FIO** Fully integrated optimization.

**FIP** 1 Flight instruction program (AFROTC).

2 False-image projection, test of operator alertness.  
 3 Full intermediate power.  
 4 Failure-injection panel.  
 5 Flight Information Publication (UK).

**FIPS** Flight-information processing system.

**FIR, Fir** 1 Flight Information Region.  
 2 Finite impulsive response.  
 3 Flight-incident recorder.  
 4 Full indicator reading.

**Firams, FIRAMS** Flight-incident recorder and monitor system.

**FIRC** Flight-instructor refresher clinic.

**Fire** Flammes infra-rouge embarquées, IR payloads (F).

**fire** 1 To ignite rocket engine; start of main-chamber burn.  
 2 To launch rocket.

**fire access door** Hinged flap, usually spring-loaded, through which fire extinguisher can be aimed when a/c parked.

**fire-and-forget missile** One with IR seeker or other self-homing capability.

**fire axe** Carried to enable crew to escape after crash or belly landing while on fire, normal exits unavailable.

**fireball** 1 Luminous sphere formed a few millionths of a second after detonation of nuclear weapon.  
 2 Meteor with luminosity which equals or exceeds that of brightest planets.

**fireblocker** Furnishing fabric meeting specific requirements as barrier to fire.

**fire channel** Single data highway for C<sup>3</sup>I, esp. of SAM system (eg Hawk has 2, Patriot has 10).

**fire classification** Class A, wood, paper etc; B, petrol (gasoline), oil, other fuels, except, C, butane, propane, hydrogen etc.

**fire-control radar** One providing target-information inputs to a weapon fire-control system.

**fire-control system** System including radar(s) mounted on land, sea or air platform to provide exact data on target position and velocity before engagement with guns, missiles or other weapons.

**fire deluge system** Remotely controlled pipes, hoses and spray outlets, situated throughout launch-pad area of large missile or space launching site, which operate if there is a fire or explosion in the area.

**fired out** Fighter which has launched all its AAMs.

**fire floor** Essentially horizontal floor or other sheet designed to be fireproof [at least for significant time].

**firegate** In effect, the tap that, usually under computer control, governs dispensation rate of retardant in fire-fighting tanker.

**firepoint** Locations in main floor of [especially pressurized] aircraft provided with visual access and light in order to inspect underfloor area and establish cause of fire warning.

**fire point** Temperature at which material will give off vapour that will burn continuously after ignition (see *flashpoint*).

**fireproof** Rules include 'at least as well as steel'.

**fire pulse** Signal for remote control of fire (1); for fire (2) usually called launch pulse.

**fire resistant** Rules include 'at least as well as aluminium alloy'.

**Fires** 1 Firefighters' integrated response equipment system (USAF).  
 2 Fixed IR and enhance[d] survivability.

**Firetex** Fire-blocking material, a viscose carbonised fabric reinforced with aramid fibres.

**fire tunnel** Test facility for engine bay or other device for investigating temperatures, airflows, insulation, fuel leaks and fire suppression, etc.

**fire unit** Basic subdivision of large SAM system (ie not infantry-operated), usually with four to 12 launchers at one location.

**fire up** To start engine, especially first test of new type previously subjected only to motoring tests without combustion.

**firewall** 1 Fire-resistant bulkhead designed to isolate engine from rest of aircraft.  
 2 Internet or Aeronet security barrier.

**Firewire** Stainless-steel capillary tube containing insulator with electric wire running down the centre. If heated above a critical temperature a current flows, triggering warnings and release of extinguishant (Graviner).

**firing chamber** Test cell for static firing of small horizontally mounted rocket or missile.

**firing console** Human interface with rocket engine or vehicle launch.

**firing envelope** For any given airspeed and aerial target, the 3-D box of sky within which a fighter can launch a guided missile and achieve interception.

**firing order** Sequence in which piston engine cylinders fire, invariably 1-3-4-2 or 1-5-3-6-2-4.

**firing pass** Flight of combat aircraft towards air or ground target in which weapons are fired.

**firing pit** Encloses rocket test stand on all sides except nozzle.

**firing test** Static operation of rocket.

**firing time** 1 Time between application of d.c. voltage to vacuum tube or solid-state device and start of current flow.  
 2 Time between RF power and RF output in radar.  
 3 Burn time.

**Firms** Alternative to Firams.

**FIRMU** Flight-incident recorder memory unit.

**firmware** This usually means the fixed structure supporting a moving element, such as the mountings for a gimballed radar antenna.

**First** Flexible independent radar skills trainer.

**first-angle projection** Side and plan show nearest faces of front elevation (US).

**first-article verification** Self-explanatory, confirmation that the first production item [part of a system or functioning device] fully meets the specification.

**first buy** Lockheed term for firm order.

**first day** First day of theoretical war, with part-loaded aircraft making vertical liftoffs. Later, defences are worn down, and aircraft make STOs with full weapons load.

**first hop** Briefly airborne during high-speed taxi test prior to first flight.

**first law of thermodynamics** Statement of conservation of energy for thermodynamic systems (not necessarily in equilibrium); fundamental form requires that heat absorbed serves either to raise internal energy or do external work.

**first-limit indicator** Cockpit instrument giving an

unmissable unquantified readout of vital engine parameters.

**first-line life** 1 Operational life of hardware in first-line service.

2 Time between delivery of missile or RPV and its destruction or withdrawal. For planning purposes usually five years.

**first-line service** Active operation in original design role with combat or training unit, or revenue service with air carrier.

**first motion** First visible motion of vehicle at start of mission.

**first officer** Civil airline rank = second pilot or copilot.

**first pilot** See *PIC*.

**first-run attack** Made immediately on a surface target not seen previously.

**first stage** Lowest of two- or multi-stage launch vehicle, first to be fired.

**first-tier customer** Purchaser [or lessee] of new aircraft.

**first-tier supplier** One supplying direct to prime contractor.

**firtree root** Usual gas-turbine rotor-blade root of tapered form with broached serrated edges providing multiple load-bearing faces.

**FIS** 1 Flight Information Service[s] [A adds automated, B adds broadcast, E adds en-route, O adds Officer].

2 Federal Inspection Services.

3 Flight instructors' school.

4 Fighter Interceptor Squadron.

5 Flight-instrument system.

6 Flight inspection system

**FISA** 1 Fédération Internationale des Sociétés Aérophilatéliques [office, moves around Europe] (Int.).

2 Foreign Intelligence Surveillance Act (US).

**FIS-A** Flight information service, automated.

**FIS-B** Flight information service, broadcast.

**fiscal year** Financial year; for US, 1 October to 30 September; for Britain, 1 April to 31 March; for France and Germany, calendar year.

**FIS-E** Flight information service, en-route.

**fishbone antenna** Coplanar elements in colinear pairs, coupled to balanced transmission line.

**fish-head** Naval aircrew (RAF, WW2).

**Fishpond** Active bomber radar giving bearing/distance of hostile aircraft (RAF 1943).

**fishtailing** 1 Using coarse rudder to swing tail from one side to another in repeated S-turns, an alternative manoeuvre to sideslipping to steepen approach.

2 Many aircraft [the author remembers the Oxford] proceeded in a mild zig-zag, which could not be arrested.

**fishtail nozzle** Ends in triangular portion with narrow slit nozzle.

**FISO** Flight Information Service Officer.

**fissile** Fissionable by slow neutrons.

**fission** Splitting of heavy nucleus into two approximately equal parts (nuclei of lighter elements), accompanied by release of large amount of energy and generally one or more neutrons.

**fissionable** See *fissile*.

**fission yield** Amount of energy released by fission in thermonuclear explosion as distinct from that released by fusion. The fission yield ratio, frequently expressed in per cent, is ratio of yield derived from fission to total.

**Fist** 1 Fire support team.

2 Flight-instrument and subsystem tasks.

3 Future integrated supply, or support, supply team.

**Fista** Flying IR signature technology aircraft.

**FIT** Floating-input transistor.

**fit** 1 Desired clearance, if any, between mating surfaces; eg push \*, shrink \*, force \*.

2 Total complement of avionic equipment in aircraft.

**FITAP** Fédération Internationale des Transports Aériens Privés.

**fit check** Test to ensure compatibility of mating parts, such as missile on launcher.

**FITE** Fusion interfaces for tactical environment.

**FITO** Forward indium-tin oxide.

**FITS** 1 Flir internal targeting system.

2 Fully integrated tactical system.

**fitter** Skilled metalworking tradesman.

**fitting** Assembly of parts mating with specified fit (1).

**FITVC** Fluid-injection thrust-vector control.

**five by five** Radio reception loud and clear. First figure denotes volume and second intelligibility, so "five by three" means loud but not very clear.

**Five-Power Defence Agreement** UK/Australia/Malaysia/NZ/Singapore.

**FIW** Fan in wing [V/STOL].

**fix** 1 Aircraft position established by any independent means unrelated to a previous position.

2 In particular, aircraft position established by intersection of two position lines. See *absolute* \*, *outer* \*, *running* \*.

3 Solution, possibly temporary, to technical problem (colloq.).

**fixed aerial** Aerial [antenna] in form of wire fastened to aircraft at both ends.

**fixed-area nozzle** One whose cross-section cannot be adjusted.

**fixed-base operator** Business operation at American airport usually including flying school, charter flights, sales agency for particular light aircraft and accessories, fuel/oil, maintenance and overhaul facilities and, sometimes, third-level or commuter airline.

**fixed-base simulator** One in which cab does not move.

**fixed-displacement pump** Fluid pump handling uniform volume on each repetitive cycle.

**fixed distance marker** Located 300 m (1,000 ft) from threshold to provide marker for jet aircraft on other than precision instrument runway.

**fixed-geometry** 1 Aircraft that does not have variable-sweep wings.

2 Engine that does not have variable inlet or nozzle.

**fixed gun** Gun fixed in aircraft to fire in one direction, usually forwards.

**fixed-gun mode** One for close-range snaphooting in which sightline is boresighted to gun line.

**fixed landing gear** One not designated to retract.

**fixed light** Constant luminous intensity when observed from fixed point.

**fixed-loop aerial** Not rotating relative to aircraft.

**fixed munition** 1 One used against a fixed target.

2 Gun ammunition in which projectiles are held in propellant cases.

**fixed-pitch propeller** One that has no provision for changing pitch of blades, and hence efficient at only one flight speed.

**fixed point** 1 Positional notation in computer oper-

ations in which corresponding places in different quantities are occupied by coefficients of same power of base (see *floating point*).

2 Notation in which base point is assumed to remain fixed with respect to one end of numeric expressions.

**fixed-price contract** One which either provides for firm price, or under appropriate circumstances may provide for adjustable price; several types, designed to facilitate proper pricing under varying circumstances (DoD).

**fixed-price incentive contract** Has provision for adjustment by formula based on relationship which final negotiated total cost bears to negotiated target cost as adjusted by approved changes (DoD).

**fixed satellite** See *geostationary*.

**fixed slat** Forward portion of aerofoil ahead of fixed slot built into structure.

**fixed station** Telecommunication station in aeronautical fixed service.

**fixed tank** External tank that is non-jettisonable.

**fixed target** One that does not move relative to local Earth's surface.

**fixed weight** Total mass of aerostat in flying order without fuel, oil, dischargeable weight or payload.

**fix end** End of holding pattern flown over fix (1) at which aircraft enters pattern.

**fixer network** Radio or radar direction-finding stations which, operating in conjunction, plot positions of aircraft; fixer system (obs.).

**fixture** Small jig for detail subassembly.

**fixturing** The process of loading a workpiece into a fixture, determining its precise position and orientation, and adjusting the machinery program to accommodate future variations.

**fizzer** To be on the \* = to be on a disciplinary charge (RAF, WW2).

**FJ** 1 Fuel jettison.

2 Fast jet; DIC adds directed IR countermeasures, MAWS missile-approach warning system, OEU Operational Evaluation Unit, PT pilot training, TS test squadron.

**F<sub>j</sub>** Jet-engine thrust.

**FJA** Forward jamming antenna.

**FJCA** Future joint carrier [or combat] aircraft (UK).

**F(j $\omega$ )** Fourier transform of a function of time.

**FJS** Fast-Jet Squadron (A&AEE).

**FJTF** Fast-Jet Training Fleet (RAF).

**FJTS** Fast Jet Test Squadron (ATEC).

**FLWOU** Fast Jet Weapons Operation [not operational] Evaluation Unit (RAF Coningsby).

**FKR** Cosmonautics federation (R).

**FL** 1 Flight level, usually expressed in hundreds of feet; thus FL96 = 9,600 ft.

2 Foot-lambert[s] (see *luminance*).

3 Fan lift.

4 Flight line.

5 Flashing light.

6 Foot-launched

**FL** Forced landing (RAF).

**FLA** 1 Future large aircraft [aeroplane].

2 Foot-launched aircraft.

**flade** Fan blade.

**Flag, FLAG** 1 Floor level above ground.

2 Flemish Aerospace Group (Belg.).

3 Four-mode laser gyro, see *Flagship*.

**flag** Small brightly coloured plate, often Day-Glo red or orange, or diagonally striped yellow/black, which flicks into view in panel instrument, spacesuit instrument or any other subsystem or device, to give visual warning of fault or impending difficulty such as loss of electric power or low fuel or signal level.

**flag carrier** 1 Airline designated as part of bilateral agreement to fly international route(s).

2 National state airline.

**Flage, FLAGE** Flexible lightweight agile guided experiment (anti-missile).

**flagman** 1 Person carrying chequered flag (formerly) employed at US airports, and still seen in Russia and other CIS, to direct arrivals to signalman or airport marshaller for parking.

2 Person carrying bright flag on tall mast to guide aviation pilot towards end of each run.

**flag operator** *Flag carrier*.

**flagship** 1 Normal meaning can apply to airline service or individual aircraft, or [American, 1930–59] whole fleet.

2 Four-mode laser gyro software/hardware implemented partitioning, comprising Adiru, ADM, CDU, GNSSU and MSU.

**flag stop** Special unscheduled stop by scheduled airlift mission aircraft to load or unload traffic (USAF).

**flag tracking** Method of tracking helicopter rotor by holding fabric flag against blade tips coated with wet paint.

**flak** AAA fire.

**flak curtain** Self-explanatory protection of occupant[s] or vital equipment, usually multi-ply nylon fabric.

**flakship** Small German warship tasked with defending other vessels against air attack (WW2).

**flak-suppression fire** Air-to-ground fire used to suppress AA defences immediately before and during air attack on surface targets (DoD). This definition should be amended to allow use of ASMs, cluster bombs etc.

**FLAM** Future land-attack missile.

**flame attenuation** Attenuation of radio signal by ionisation in rocket exhaust.

**flame bucket** See *flame deflector*.

**flame chute** Concrete and metal duct carrying flame and gas from bottom of silo or test pit to surface.

**flame damper** 1 Pre-radar shroud or extension to piston engine exhaust pipe to prevent visual detection at night.

2 See *flame trap*.

**flame deflector** Deflects hot gas of vertical-launch rocket engine from ground or from launching structure.

**flame float** Pyrotechnic marker that burns on water surface. Principal purpose is to facilitate measurement of drift at night.

**flame front** Boundary of burning zone progressing through combustible mixture. For kerosene, the flow velocity must not exceed c10m (33ft)s<sup>-1</sup>.

**flame hardening** Hardening metal surface by flame.

**flameholder** Body mounted in high-velocity combustible flow to create local region of turbulence and low velocity in which flame is stabilized.

**flameout** Cessation of combustion in gas turbine or other air-breather from cause other than fuel shutoff.

**flamer** Aircraft on fire in air, especially in air combat.

**flame-resistant** Not able to propagate flame after ignition source is removed.

**flame stabilizer** Flameholder.

**flamestat** Sensor detecting abnormal high temperature in a [e.g. air conditioning] duct.

**flame trap** Filter in piston engine induction system to prevent passage of flame upstream after blow-back or backfire.

**flame tube** 1 Perforated tube designed for mixing of fuel and air, in which fuel is burnt in gas turbine; usually inserted as inner liner in combustion chamber for diluting and cooling flame (UK).

2 Interconnector between combustors or between afterburner gutters (US).

**Flan** Flying/floating local-area network.

**flanging machine** Metal-forming machine with high-speed plunger which bends up successive small portions of flange on moving workpiece.

**flank** 1 Lower side of fuselage or other aerodynamic body.

2 Sides of lower (inner radius) end of compressor or turbine blade.

**FLAP** Frankfurt, London, Amsterdam, Paris.

**flap** 1 Movable surface forming part of leading or trailing edge of aerofoil, esp. of wing, able to hinge downwards, swing down and forwards, translate aft on tracks or in some other way alter wing camber, cross-section and area in order to exert powerful effect on low-speed lift and drag. See following types: *double-slotted, dive-recovery, Fowler, Gouge, Junkers, Krüger, leading edge, manoeuvre, plain, slotted, split, triple-slotted, Youngman and Zapp*.

2 Side walls of thrust-augmenting ejector in powered-lift system, in fighters part of a retractable structure.

3 Hinged segment forming part of primary or secondary nozzle of afterburner.

4 Urgent activity (UK colloq.).

**flap angle** Angle between chord of flap and that of wing.

**flap blowing** Discharge of HP compressor bleed air over lowered flaps to prevent airflow breakaway. Normally air issues at about sonic speed through slit facing across flap upper surface, flow attaching to flap through Coanda effect. Also called Attinello flap (see *BLC, super-circulation*).

**flaperon** Surface combining roll-control function of aileron with increased lift and drag function of flap; can be differentially operated.

**flap fan** Experimental concept in which flaps carry small fans driven by engine bleed air (perhaps eight fans on each flap) to maintain attachment and provide powered lift.

**flaplet** 1 Loosely, any small flap.

2 Narrow-chord flap with circular-arc LE and flat top/bottom forming TE of Coanda CCW.

**flappery** Flaps, especially if prominent on Stal aircraft (colloq).

**flapping** Angular oscillation of helicopter rotor blade about flapping hinge.

**flapping angle** Angle between tip-path plane and plane normal to axis.

**flapping hinge** Sensibly horizontal pivot on helicopter main-rotor hub which allows blade tip to rise and fall.

**flapping plane** Plane normal to plane of each flapping hinge axis.

**flap-retraction-height** Variable but always over 1,000 ft (305 m) with aircraft at or above FUSF.

**Flaps** 1 Force-level automated planning experiment (AAFCE).

2 Flat-aperture parabolic surface (antenna or mirror).

**flap setting** Predetermined angle of flap (1) for takeoff, landing or other flight condition.

**flaps-extended speed** The highest speed permissible with flaps in a prescribed extended position.

**flaps-up safety speed** Minimum TAS at which aircraft maintains positive ROC with flaps retracted.

**flap-type control** The common type of flight control surface.

**FLAR** Federatsii Lyubitelei Aviatsii Rossii, Federation of aviation amateurs (R).

**Flair** Fixed low-altitude intermediate-range, surveillance radar.

**flare** 1 Noun and verb, final nose-up pitch of landing aeroplane to reduce rate of descent close to zero at touchdown. It starts at the point of departure from the glideslope.

2 Distance sides of planing bottom of marine float or hull flare out from centreline.

3 Pyrotechnic aerial device for signalling or illumination; parachute \* illuminates large area when released at altitude; wingtip \* illuminates ground when landing.

4 Inverse taper (ie opening out) at tail of cylindrical body, as at base of rocket vehicle.

5 Eruptions from Sun's chromosphere, which may appear within minutes and fade within an hour; eject high-energy protons, cause radio fadeouts and magnetic disturbances on Earth.

6 Fixed source of ground or water illumination, of several types, usually burning kerosene or related fuel (generally obs.).

**flare-augmentation system** Electronic feedback on fixed-wing STOL to achieve minimum landing field length.

**flare demand** Coded Autoland signal commanding flare (1).

**flare dud** Nuclear weapon which detonates with anticipated yield but at altitude appreciably greater than intended; a dud in its effects on target (DoD).

**flare out** See *flare* (1).

**flare path** 1 Line of flares (6) or lights down one side or both sides of runway to provide illumination (generally obs.).

2 In the modern world this means the trajectory described in a landing *flare* 1.

**flare-path dinghy** Attends flare path laid over water for marine aircraft.

**Flash** 1 Folding lightweight acoustic sonar [or system] for helicopter.

2 Flying laser self-defence system against seeker-head missiles.

**flash** 1 Basically rectangular pattern of vertical bars in national colours painted on military aircraft, usually covering portion of fin.

2 White semicircular or circular badge worn in head-gear of aircrew cadet.

**flashback** Sudden upstream travel of flame in flow of combustible mixture in enclosed system.

**flash/bang/smoke** Signifies training target disabled.

**flash burn** Caused by radiation from nuclear explosion.

**flasher unit** Regular make/break switch in circuit of light which flashes rather than rotates.

**flashing light** Intermittent aeronautical surface light in which light periods are clearly shorter than dark, with repeated cycle. Usually has published frequency.

**flashing off** Drying of surface of film or finish until safe to gentle touch.

**flash lobe** Sudden peak in radar signal caused by radome [also one word].

**flashover** 1 Phenomenon in which material exposed to intense radiation suddenly ignites over its entire surface.

2 Sudden discharge between conductors with very large potential difference.

**flashpoint** Temperature at which vapour of substance, such as fuel, will flash or ignite momentarily. Lower than fire point.

**flash suppressor** Attachment to muzzle of gun which reduces or eliminates visible light emitted.

**flash welding** Electric welding by partial resistance welding under low pressure, heating by electric arc, and application of large compressive pressure forcing surplus weld out of joint.

**FLAT** Flight-plan aid tracking.

**flat** With horizontally opposed cylinders.

**flatbed** Transport aircraft (so far only conceptual) for conveying ISO containers on flatbed fuselage.

**flat diameter** Diameter of circle enclosing canopy of flat parachute when spread out on plane surface.

**flat-Earth navigation** If the vehicle speed and distance travelled are small it is possible to ignore Coriolis and centripetal effects.

**flat four** Four-cylinder, horizontally opposed piston engine.

**flat-H** Piston engine with two superimposed rows of opposed cylinders.

**flatthattng** Flying at lowest possible safe height (US colloq.).

**flat-head rivet** Thin-headed rivet used internally or where round or countersunk heads are for any reason not advisable.

**flat pad** Ship-mounted ballistic-missile launcher isolated from ship motion (colloq.).

**flat-panel instrument** With LCD display.

**flat parachute** Parachute whose canopy consists of triangular gores forming regular polygon when laid out flat.

**flat pitch** Ground fine pitch.

**flat-rated** 1 Engine throttled or otherwise restricted in output at low altitudes and thus able to give constant predictable power at all FLs up to given limit, shown as kink point on plot of power: altitude.

2 Engine restricted in output in cold ambient conditions and thus able to give constant predictable power in all air temperatures up to given published limit; eg \* to 28.9°C.

3 Usually \* combines (1) and (2). Hence, flat rating.

**flat riser** VTOL aircraft able to take off with fuselage substantially horizontal (term not normally applied to helicopters and other rotorcraft).

**Flats** Flight-line automatic test set (Varo).

**flat sequence** Display aerobatic routine imposed by low cloudbase.

**flat six** Six-cylinder, horizontally opposed piston engine.

**flat spin** Spin at large mean angle of attack but with longitudinal axis of the aircraft nearly horizontal; recovery difficult and prolonged because, with aircraft fully stalled, ailerons, elevators and rudder are ineffective; nose-up position and rotation carries slipstream away

from tail. Anti-spin parachute can assist positive recovery.

**flat template** Representation on two-dimensional material of dimensions, areas and other characteristics of curved part; also known as layout template.

**flattened-X** Delta-3.

**flattening out** 1 "In alighting, the transition between the approach glide and the horizontal motion before making contact with the earth" (BSI).

2 Many authorities add recovery from a dive to level flight.

**flat-top** Aircraft carrier (colloq.).

**flat zone** Zone within indicated course sector or ILS glidepath sector in which slope of sector characteristic curve is zero.

**FLAVIR** Flapless air vehicle integrated industry research (UK).

**FLB** Association of airline operators (Austria).

**FLC** 1 Fuel and limitation(s) computer.

2 Flight-level change.

**FLCH** 1 Flechette(s), for piercing armour.

2 Change in flight level.

**FLD** Fault location device (wiring).

**fld** Field.

**FLE** Future logistics enterprise.

**FLEEP** Flying lunar-exursion experimental platform. One-man rocket-powered platform intended to enable astronaut to make quick hops on lunar surface.

**fleet** All aircraft of one type used by same operator. Hence \* age, \* youth, average flight time of fleet.

**fleet ballistic missile submarine** Submarine designed to launch ballistic missiles.

**fleet carrier** CV, large surface vessel equipped to launch, recover and maintain powerful fixed-wing aircraft in any theatre.

**fleet leader** Aircraft in [usually airline] fleet having greatest flight time.

**fleet noise level** Average noise level throughout fleet.

**fleet performance monitoring** Confidential use of quick-access recorders to inspect actual way pilots fly [airline] aircraft, and in particular whether airspeeds, rates of descent, etc, are within limits.

**Flem** Fly-by landing excursion mode.

**Flettner** Aileron tab.

**Flettner control** See *servo tab*.

**Flettner rotor** Cylinder spinning on axis normal to airstream, generating transverse thrust/lift. In theory could provide both lift and thrust, but no successful \* aircraft has been flown.

**FLEX** Flexible takeoff.

**Flexadyne** Proprietary (Rocketdyne) formulation of solid propellant.

**Flexar** Flexible adaptive radar.

**flexbeam** Torsionally compliant spar, typically of CFRP laminates, attaching helicopter rotor blade to hub and flexing to accommodate varying blade pitch and coning angles.

**flexibility** Ability of hardware, including aircraft, to operate efficiently over wide range of conditions; eg long or short sectors, high or low level.

**flexibility factor** Used in helicopter rotor stress calculations to make up for structure's flexibility.

**flexible air-data system** Versatile microprocessor-based

DADC outputting MIL-1553B, Arinc 429, analog and IFF transponder.

**flexible blade** 1 Helicopter rotor blade with trailing-edge or balance tabs.

2 Helicopter rotor blade in which pivots are replaced by flexible structure.

**flexible elastomer skin** Reduces RCS by hiding joints and discontinuities.

**flexible flight deck** Post-WW2 concept of aircraft carrier whose aircraft would need no landing gear.

**flexible gun** Clearly a nonsensical idea: what is meant is pivoted, ball-mounted or in any other way manually aimed independently of the aircraft.

**flexible takeoff, FTO** Takeoff technique in which for TOW below MTOW, less than maximum engine thrust is selected. For given WAT condition, this thrust is computed by intersection of TOW and aircraft performance to comply with regulations, giving a theoretical "ambient temperature" Tf. Thrust selected is that which would be available at full power at Tf. FTO saves engine costs, reduces noise and extends engine life.

**flexible tank** Bag-type tank.

**flexible [flex] targeting** Mission is launched by local commander with choice of targets and weapons to attack suddenly seen target.

**flexible wall** Used in wind tunnels, engine air inlets and other ducts subject to large range of flow and Mach number; may be perforated to extract boundary layer.

**Flex-tracks** The first step towards complete user-preferred routing, available [2006] on a trial basis over routes from Australia to Asia, and the US Pacific coast.

**flexural axis** Locus of flexural centres, points at which applied load produces pure bending without twist (note, on swept wing pure bending results in apparent twist, ie loss of incidence).

**flexural wash-out** Apparent reduction in angle of incidence from root to tip as swept wing deflects upward under load.

**flexure** Bending under load.

**flex-wing** Foldable or collapsible single-surface wing for micro or hang glider.

**FLG** 1 Flashing light.

2 Falling (also Flg).

**FLI** 1 Fighter lead-in.

2 First-limit indicator.

**flicker** Subjective sensation resulting from periodic fluctuation in intensity of light at rates less than about 25/30 times a second, preventing complete continuity of images.

**flicker control** See *bang-bang control*.

**flicker marking** Various black-white schemes to render rotating propeller blades more visible on ground.

**flicker rate** Refresh rate for CRT information below which flicker becomes noticeable; dependent on eye's persistence of vision and persistence of CRT phosphor.

**flicker vertigo** Caused by light occulting (flickering) at frequencies from four to 20 per second (eg with single-propeller aircraft headed towards Sun at low rpm), producing nausea, dizziness or unconsciousness.

**flick roll** 1 Essentially a horizontal spin, made by slowing to spin-entry speed with engine throttled back and then applying hard back stick and full rudder. Result should be a controlled very rapid 360° roll.

2 "A rapidly executed roll" (B.S., 1940).

**FLID** Flight identification.

**Flidras** Flight-data relay and analysis system.

**flight** 1 Movement of object through atmosphere or space sustained by aerodynamic, aerostatic or reaction forces, or by orbital speed.

2 An instance of such movement.

3 Specified group of aircraft engaged in common mission.

4 Basic tactical unit of three or four aircraft.

5 Flight sergeant (colloq., abb.).

6 Radio call sign, Flight Directory (NASA).

7 Particular scheduled air-carrier service, with three or four-figure identifying numbers, either routinely or on particular day.

8 Fighting formation comprising two elements each of two aircraft (US, 1981 onwards).

**flight advisory** Message giving advice or information broadcast to airborne aircraft or interested ground stations.

**flight assist** Provision of maximum assistance to aircraft lost or in distress by flight-service stations, towers and centres (US).

**flight attitude** 1 Defined by inclination of three vehicle axes to relative wind.

2 Defined relative to Earth, ie local vertical.

**flight augmentation computer** Main AFCS component providing yaw damping, pitch trim and flight-envelope monitoring and protection.

**flight bag** 1 For personal equipment of flight crew member.

2 Hang-glider body bag.

**flightboard** Rigid sheet, at least A4 size with reinforced corners, on which can be displayed flight information, quick-erase writing panel and many other items.

**flight cap** Legally imposed arbitrary limit on number of flights (arrivals or departures) at airport, either throughout year or between particular [night] hours.

**flight case** Superseding pilot case to describe large [soft or rigid] briefcase.

**flight characteristic** Feature of handling, feel or performance exhibited by aircraft type or individual example.

**flight check** Callsign prefix for navaid or other calibration/inspection (FAA).

**flight compartment** See *flight deck (1)*.

**flight computer** Computer (2).

**flight control** Specifically, control of trajectory.

**flight-control data concentrator** Transmits info, such as control-surface position, to FDIU and displays, indicates failure status to FWCs and displays, and memorizes failures for central maintenance computer.

**flight-control primary computer** In charge of generating control laws and controlling surfaces.

**flight controls** Those governing trajectory of aircraft in flight.

**flight-control secondary computer** Controls flight-control power system, spoilers and rudder trim and limits; if FCPC fails, also takes over Elac and yaw damper.

**flight control system** See *control system*.

**flight control unit** Primary flight-deck interface with AFCS providing autopilot modes, SPD/MACH, HDG SEL, ALT SEL and similar functions; some include autothrust.

**flight coupon** Actual ticket or ticket book issued by air carrier to passenger.

**flight crew** Personnel assigned to operate aircraft.

**flight cycle** Sequence of operations and conditions, different for airframe, propulsion and each system or equipment item, which together make up one flight.

**flight data recorder** See *flight recorder*.

**flight deck** 1 Compartment in large aircraft occupied by flight crew.

2 Upper deck of aircraft carrier.

**flight department** Part of large company responsible for providing air travel [executive aircraft or airline] whenever needed.

**flight dispatcher** See *dispatcher*.

**flight director** 1 Flight instrument generally similar to attitude director giving information on pitch, roll and related parameters.

2 Panel controller for autopilot.

3 Most senior member of large wide-body cabin crew.

**flight-director attitude indicator** Manned-spacecraft display indicating attitude, attitude error and rate of pitch, yaw and roll.

**flight duty period** See *crew duty time*.

**flight dynamics** General subject of motion of aerodyne and laws which govern it.

**flight effects** Changes in relationships as an aircraft accelerates from rest to cruising speed, notably velocity shear at jet boundary.

**flight engineer** Aircrew member responsible for powerplant, systems and fuel management, and also sometimes for supervising turnaround servicing. Today rare except R and military.

**flight envelope** 1 See *gust envelope*.

2 Curves of speed plotted against altitude or other variable defining performance limits and conditions within which equipment must work. Commonly assessed at three levels: operational \*, for normal flying; service \*, defined by service ceiling, normal limiting IAS etc.; and permissible \*, including limiting manoeuvres.

**flight envelope monitoring** AFCS function providing computation of  $V_{MIN}$ ,  $V_{MAX}$  and angle-of-attack limits.

**flight-envelope protection** System in FBW [Airbus] aircraft which cannot normally be over-ridden by [eg hijacker] pilot which automatically commands climb or turn to avoid hitting an obstacle.

**flight fine pitch** Finest propeller blade angle available in flight. Weight on wheels may remove \* stop, enabling drag to be increased.

**flight flutter kit** Installation, together with instrumentation, of 'bonkers' or other devices to induce flutter in flight-test aircraft.

**flight-following** Maintaining contact with specified aircraft to determine en route progress.

**flight idle** Lowest engine speed available in flight, set by \*\* stop, mechanical limit released to ground-idle position at touchdown.

**flight indicator** Instrument combining lateral inclinometer, fore-and-aft inclinometer and turn indicator (obs.).

**flight indicator board** Display in airport terminal showing arrivals and departures of airline flights.

**flight information centre** Unit established to provide flight information service and alerting service.

**flight information region, FIR** Airspace of defined dimensions within which flight information and alerting services are provided by air traffic control centre.

**flight information service** Service giving advice and information useful for safe and efficient conduct of flights. In good weather provides listening watch only.

**flight inspection** 1 By specially equipped aircraft, of accuracy of nav aids.

2 Periodic examination of flight crew and ATC controllers.

**flight instruments** Those used by pilot(s) to fly aircraft, esp. those providing basic information on flight attitude, speed and trajectory.

**flight integrity** Close relationship between two friendly combat aircraft manoeuvring for mutual support.

**flight jacket** Half-length zipped jacket of nylon with polyester filling, usually dark blue or olive/sage green. A traditional type is goatskin or fleece-lined sheepskin.

**flight level, FL** Level of surface of constant atmospheric pressure related to datum of 1013.25 mb (29.92 in mercury), expressed in hundreds of feet; thus FL 255 indicates 25,500 ft (see *QFE*, *QNH*).

**flight-line** 1 Ramp area of airfield, where aircraft are parked and serviced.

2 In reconnaissance mission, prescribed ground path across targets.

**flight Mach number** Free-stream Mach number measured in flight.

**flight management system** Automatic computer-controlled system with autothrottle, possible Mach-hold, and complete control of navigation, including SIDs and STARs. Offers "menus" for minimum cost, minimum fuel burn or other objectives. Relieves workload, increases precision. Hence FMST, \* trainer, synthesizes all these functions.

**flight manual** Book prepared by aircraft manufacturer and carried on board, setting out recommended operating techniques, speeds, power settings, etc, necessary for flying particular type of aircraft. Known to airlines as operations manual.

**flight mechanic** Pre-1935 title of flight engineer.

**flight mechanics** One of the two components of flight dynamics, whose role is to establish the right balance between stability, manoeuvrability and control power.

**flight number** See *flight (7)*.

**flight office** On a GA airfield, centre for booking pleasure flights and carrying out domestic business, but not concerned with ATC or visiting pilots.

**flight panel** Accepted definition: panel grouping all instruments necessary for continued flight without external references. Preferable: panel grouping available flight instruments.

**flightpath** Trajectory of centre of gravity of vehicle referred to Earth or other fixed reference. In following five definitions H signifies \* in horizontal plane and V in vertical plane.

**flightpath angle** Acute angle between flightpath (V) and local horizontal, shown on FPA display by resolving G/S and V/S.

**flightpath computer** See *course-line computer* (H).

**flight-path controller** Digital system for Coast Guard (UK) helicopters comprising Doppler, 'radalt', attitude gyro and accelerometers to control low-altitude hover in absence of visual reference. Modes include autotransition, up/down, ability to overfly target.

**flightpath deviation** Angular or linear difference between track and course of an aircraft (H).

**flightpath recorder** Instrument for recording angle of flightpath (V) to horizontal.

**flightpath sight** In HUD, direct aiming point showing distant point through which aircraft will pass (V, H).

**flightpath vector** Prediction of future flightpath which replaces traditional flight director in advanced EFIS, especially to protect against windshear.

**flight plan** 1 Specified information relating to whole or portion of intended flight (2); filed orally or in writing with air traffic control facility.

2 Common working document, both in spacecraft and at all ground stations during manned or unmanned space flight. Separate \*\* issued for lunar or planetary surface operations.

**flight-plan correlation** Means of identifying aircraft by association with known flight plans.

**flight platform** See *helipad*.

**flight profile** Plot of complete flight (2) in vertical plane, usually altitude plotted against track distance.

**flight process board** In ATC centre, displays all current FP strips.

**flight-progress strip** ATC aide-memoire: paper strip typically 25 mm × 200 mm, coloured for traffic direction, giving one flight's c/s, FL, ETA as amended; slid into FP board until passed to colleague at handover.

**flight-proximity demonstration** Flight in which a receiver aircraft formates behind a tanker even though neither may be equipped [yet] to supply or receive fuel.

**flight rating test** One in which member of flight crew demonstrates ability to comply with requirements of particular licence or rating.

**flight-readiness firing** Short-duration test of in-service space launcher, or other rocket vehicle, on launcher.

**flight recorder** Device for automatically recording information on aircraft operation. Main type is flight data recorder (FDR), also colloquially called crash recorder or 'black box', although invariably bright orange. Records 50 or more parameters, including following mandatory channels: altitude, airspeed, vertical acceleration, heading, elapsed time at 1s intervals (UK also requires pitch, and usually control-surface positions, high-lift surface positions, engine speeds and flight-crew speech are also included). Such recorders are designed to survive crash accelerations, impacts, crushing and fire, and often carry underwater transponders or beacons. Normally recording medium, eg multi-track steel tape, is recycled every 25 h. Cockpit voice recorder (CVR) stores all speech on flight deck or cockpit, including intercom and radio. Maintenance recorders, eg AIDS, are linked by serial data highways to hundreds of transducers and other inputs recording many kinds of information (temperatures, vibrations, pressures and electronic parameters) to yield advance information of impending fault conditions or failures and improve system operation and economy. Highways lead to various logic and acquisition units, some for quick-look and others long-term; separate highway to protected FDR often provided.

**flight reference card** Carried in cockpit to provide quick detailed list of vital actions in event of all system failures or emergencies commonly encountered, with recommendations, suggestions and prohibitions.

**flight regime** State of being airborne, governing many systems and modes unavailable on ground.

**flight release certificate** Issued for aircraft with Permit to Fly (UK CAA).

**flights** Always plural, the offices [usually on the air side of hangars] and nearby aircraft parking areas of operational units on a permanent RAF station (becoming archaic usage).

**flight-safety information management system** Proposed unclassified database of accidents, incidents and malfunctions reported by participating air forces to improve safety of military aircraft.

**flight schedule monitor** Shared by FAA and user community, is the decision-making tool that forms basis of current flight information and air-traffic demand at each airport.

**flight service station** Facility providing flight assistance service (FAA).

**flight shed** Traditional British term for hangar in which prototypes are completed and readied for flight and subsequently are kept. Not normally associated with series production.

**flight simulator** Electronic device that can simulate entire flight characteristics of particular type of aircraft, with faithful reproduction of flight deck; used to test and check out flight crews, esp. in coping with emergencies, and (military) in completing combat missions according to role; or as design and engineering tool during aircraft development.

**flight sister** Female nursing officer trained for aeromedical duties.

**flight space** Space above and beyond Earth available for atmospheric or space flight.

**Flight Standards District Office** Handles all matters within assigned geographic area (FAA).

**flight station** 1 Flight crew position away from flight deck.

2 Base for marine aircraft (WW1).

**flight status** Indication of whether a given aircraft requires special handling by air traffic services.

**flightstick** The inceptor of an entertainment or educational simulator; not normally in an aircraft.

**flight strip** 1 Auxiliary airfield on private property, farmland or adjacent to highway.

2 See *flight progress strip*.

**flight structural mode excitation** Allows pilot to command deterministic signals, such as swept-frequency sine waves, from FCC to excite all aircraft's flexural modes.

**flight suit** One-piece overall garment with various pockets, zips and velcros.

**flight supplement** Added to price of airline ticket to cover such factors as additional fuel burn and airport time-slot charges.

**flight surgeon** Physician (invariably not surgeon) trained in aeromedical practice whose primary duty is medical examination and care of aircrew on ground.

**flight test** 1 Test of vehicle by actual flight to achieve specific objectives.

2 Test of component mounted on or in carrier vehicle to subject it to conditions of flight.

3 Flight rating test.

**flight test vehicle** Special aircraft, missile or other vehicle for conduct of flight tests to explore either its own capabilities or those of equipment or component parts.

**flight time** 1 Elapsed time from moment aircraft first

moves under its own power until moment it comes to rest at end of flight. For flying boats and seaplanes, buoy-to-buoy time (see *block time*).

2 For gliders and sailplanes, time from start of takeoff until end of landing.

3 For vehicles released in flight from parent carrier, measured from moment of release.

4 Aggregate of \*\* of all flights made by same basic structure or other hardware item.

**flight-training device** Invariably, this is synonymous with flight simulator.

**flight vector** Direction of travel; except in still air, not the same as azimuth of longitudinal axis. Essentially = track.

**flight visibility** Average forward horizontal distance from cockpit (assumed at typical light-aircraft FL) at which prominent unlighted object may be seen and identified by day and prominent lighted object may be identified by night.

**flightway** The airspace immediately beyond the end of a runway or other takeoff path; this concept has fallen into disuse.

**flight weight** Similar to production item; not a battleship test construction.

**flightworthy** Ready for flight; for aircraft, airworthy.

**Flight Zero** Brief unplanned flight, caused by sudden event during fast taxi or other testing prior to Flight 1.

**flimsy orders** Printed on onion-skin paper, can be eaten.

**flinger ring** Uses centrifugal force to inject W/M [in some Turbomeca engines, fuel] from entry to engine compressor.

**FLIP, Flip** 1 Flight information publication.

2 Floated lightweight inertial platform.

**flip-flop** 1 Bistable multivibrator; device having two stable states and two input signals each corresponding with one state; remains in either state until caused to flip or flop to other.

2 Bistable device with input which allows it to act as single-stage binary counter.

**flipper** 1 Elevator (US colloq.).

2 Before turning on final, flaps, pitch, power [some add roll].

**FLIR, Flir** Forward-looking IR.

**FLIS** Federal Logistics Information Systems (US).

**Flit** Fighter lead-in training (USAF, Holloman).

**FLL** 1 Flight line (two words) level (UK/NATO).

2 Fördergesellschaft für Luftschiffbau und Luftschiffahrt eV (G).

**FLM** 1 Flightline maintenance, or mechanic (US).

2 Foot-launched microlight.

3 Focused-lethality munition.

**FLMTS** Flight line maintenance test set (Kollsman).

**FLO** 1 Flow control [of traffic]; -E adds East, -W West (ICAO).

2 Defence logistics organization (Norway); /Luft adds Air.

**Flo** Floodlights available on landing.

**fl<sub>o</sub>** Local-oscillator frequency.

**float** 1 Horizontal distance travelled between flare and landing or alighting (see *ground effect*).

2 Watertight body with planing bottom forming alighting gear of \* seaplane. Also wingtip \*.

3 Ability of control surfaces to trail freely in airstream except when commanded by input; reckoned negative when surface deflected away from relative wind and posi-

tive when (because of overbalance ahead of hinge axis) surface moves against it.

4 Buoyant capsule in carburettor [carbureter].

**floatation** See *flotation*.

**float displacement** Mass of water displaced by totally submerged seaplane float.

**floate gyro** Floating gyro.

**floate position** That assumed by flight-control surface [esp. manual] in absence of pilot input.

**float gear** Floats (2) applied as modification to landplane.

**floating ailerons** Designed to float (3).

**floating gudgeon pin** Free to rotate in both piston and connecting rod.

**floating gyro** Mass supported by hydrostatic force of surrounding liquid.

**floating lines** In photogrammetry, lines connecting same two points of detail on each print of stereo pair; used to determine whether or not points are intervisible, and drawn directly on prints or superimposed by transparent strips.

**floating mark** Mark or dot seen as occupying position in three-dimensional space formed by stereoscopic pair, used as reference in stereoscopy.

**floating point** EDP (1) positional notation in which corresponding places in different quantities are not necessarily occupied by coefficients of same power; eg 186,000 can be represented as  $1.86 \times 10^5$ . By shifting \*\* so number of significant digits does not exceed machine capacity, widely varying quantities can be handled.

**floating reticle** One whose image can be moved within FOV.

**float light** See *flare* (3).

**floatplane** See *float seaplane*.

**float seaplane** Aeroplane supported on water by separate floats (2), usually 2 or 3.

**float-type carburettor** Head of fuel supplied to jet is controlled by float (4) and needle valve.

**float valve** Fluid valve regulated by float acting on level in container.

**float volume** Ratio of seaplane gross weight to mass of unit volume (traditionally 1 ft<sup>3</sup>) of water.

**FLOLS** Fresnel-lens optical landing system.

**float** To overflow float chamber of carburettor, hence flooded.

**flooder control** Simple inceptor, usually a pull-wire, with which piston-engine float chamber can be flooded manually to provide rich mixture for starting.

**flood flow** 1 Unrestricted supply of hot high-pressure air to cockpit either for demist/deicing, or in emergency, or by auto switch triggered by excessive cabin altitude.

2 Has similar (various) meanings in oxygen systems.

**floodlight** Light providing general illumination over particular area.

**flood valve** Controls flow of fire extinguishant.

**floor** Notionally, the hangar \*; thus, place of work, esp. for A&P.

**floor-loaded** Aircraft is in factory for refurbishment or rework.

**floor loading** 1 Actual number of aircraft being modified.

2 Maximum [or actual] number of passengers.

**floor locks** Rows of attachments which interface with seating or VLDs.

**floor vents** Pass used cabin air to pressurized or non-pressurized lower fuselage.

**flops** Floating-point operations per second, hence M-\*, Giga-\*

**FLOT, Flot** Forward line of own troops (formerly called Feba, forward edge of battle area).

**flotation** Quality of a wheel landing gear of operating from soft ground.

**flotation bags, collars** Inflatables used to provide buoyancy and stability for sea-recovered spacecraft.

**flotation gear** 1 Inflatable bags carried inside RPV, target or missile test vehicle to provide buoyancy after ditching.

2 Emergency inflatable bags surrounding landing gear of shipboard helicopter [or, historically, carried on, or in, carrier-based landplane].

**Flo Trak** Patented arrangement of large-area plates fitting around landing-wheel tyre for enhanced flotation, esp. to permit combat aircraft to use soft surface.

**flow augments** Usually means ejector, but also applied to inducer at entry to centrifugal pump.

**flowback** Runback of water from wing leading edge in icing conditions.

**flow chart** Graphical symbolic representation of sequence of operations.

**flow control** Measures designed to maintain even flow of traffic into airspace or along route. Chief feature is acceptance of each aircraft into pre-booked slot at entry to controlled airspace, at agreed gate time, to provide orderly ATC service which does not become overloaded.

**flow control system** One form of main control for gas-turbine engine: fuel-pump delivery pressure is function of rpm, output being controlled to maintain set dP across throttle valve for any set air-inlet condition; ancillaries take care of transients and limitations. See *proportional* \*.

**flow disrupter** Small hinged or retractable plate intended to promote intentional stall.

**flowdown** The multi-stage process by which a set of requirements are progressively subdivided into the smallest indivisible hardware items. Essentially synonymous with Work breakdown structure.

**flow fence** Kevlar fabric shield surrounding top and sides of ejection-seat occupant.

**flowmeter** Instrument which measures fluid (gas or liquid) flow; numerous types based on venturi pressure drop, speed of free-spinning turbine, pitot pressure and many other principles; measure can be velocity at point, near-average velocity or, with density input, mass flow. See *integrating* \*.

**flow rake** See *rake*.

**flow regime** Particular type of fluid flow (see *continuum* \*, *free-molecule* \*, *laminar* \*, *slip* \*, *turbulent* \*).

**fl oz** Fluid ounce.

**FLPFM** Foot-launched powered flying machine, eg, wheelless micro or engine parachute.

**FLPP** Future Launcher[s] Preparatory [or Preparation] Programme (2002, ESA+R).

**FLRCM** Future long-range cruise missile (UK).

**FLR** Forward-looking radar.

**FLRE** Flare.

**FLS** 1 Foreign Liaison Staff (MoD).

2 Fuel-level sender.

**FLT, Flt** Flight (unit).

**FLTA** Forward-looking terrain-avoidance.

**FLTCAL** Flight calibration.

**FLTCK** Flight check.

**FLT CON, Flt Ctrl** Flight control.

**FLTP** Future launcher technology programme (ESA, 1999, never implemented).

**Flt Pln** Flight plan.

**FLTR** Flightline tape-reader.

**FLTS** Flight Test Squadron (USAF).

**FltSatCom** Fleet satellite communication system; also clumsily written all capitals (USN).

**FLTWO** Flight watch outlet.

**FLUC** Fluctuating.

**flueries** See *fluidics*.

**fluid** Liquid or gas.

**fluid dynamics** Study of fluid motion.

**fluid element** Second or supporting element in *fluid four*.

**fluid four** Tactical formation in which second element is loosely spread in both vertical and horizontal planes to enhance manoeuvrability, look-out and mutual support.

**fluid gallon** See *gallon*.

**fluidic nozzle** Jet-engine nozzle in which fluidic control is used to vary vectoring, profile and area.

**fluidics** Branch of technology akin to electronics but using instead of electrons air or other fluid flowing at low pressure through pipes, valves and gates for control of external systems; one advantage is relaxed upper temperature limit.

**fluidity** Reciprocal of viscosity.

**fluidized bed** Container of finely divided solid particles supported in liquid-like state by upcurrent of air or other gas.

**fluid mechanics** Study of static or moving fluids and reactions on bodies (includes aerodynamics, aerostatics, hydrodynamics, hydrostatics).

**fluid ounce** Non-SI unit of volume, UK \* =  $1/160$  Imp. gal. = 28.4131 cc; US \* =  $1/160$  US gal. = 23.6588 cc.

**fluid resistance** See *drag*.

**fluid seal** Normally refers to a labyrinth shaft seal in which the peripheries of the sealing rings on the inner shaft are slightly immersed in oil in a rotating outer casing. See *hydraulic seal*.

**fluorescein** Proprietary chemical supplied as solid block attached by lanyard to aircrew dinghy. When dropped into sea stains surface fluorescent greenish yellow.

**fluorescence** Emission of photons, esp. visible light, during absorption of radiation of different wavelength from other source; photoluminescence (see *luminescence*, *phosphorescence*, *scintillation*).

**fluorescent testing** Examination of item coated in fluorescent ink by UV light, to reveal crack as a bright line.

**fluorine** Reactive yellow-green gas, used as liquid (BPt  $-188^{\circ}\text{C}$ ) oxidant in rockets (Isp 410 with  $\text{LH}_2$ ) or in many cryogenic compounds such as oxygen difluoride ( $\text{OF}_2$ ); \*  $^{-18}$  is radionuclide of half-life 110 min.

**fluorocarbons** Generally resemble hydrocarbons, but F instead of H makes them more stable; many uses.

**fluoroscope** Instrument with fluorescent screen supplied by processed signals from X-ray tube, used for immediate indirect viewing inside metal or composite structures.

**fluoroscopy** X-ray TV.

**flush air-data system** One whose sensors do not protrude beyond the skin of the aircraft.

**flush antenna** One conforming with external shape of vehicle.

**flush deck** Whole ship upper deck at same level.

**flush intake** Not protruding, orifice in skin of vehicle.

**flush on warning** Take off immediately radar evidence suggests hostile missile attack so that, when airfield is hit, aircraft are just out of dangerous radius of thermonuclear warhead.

**flush rivet** Head is flush with surface into which it is countersunk.

**flush weld** Plug or butt weld which leaves no weld material on surfaces.

**flushed** Skin stiffened by evenly spaced parallel semi-circular channels. External \* cannot be aligned with complex slipstream.

**flutter** 1 High-frequency oscillation of structure under interaction of aerodynamic and aeroelastic forces; basic mechanism is that aerodynamic load causes deflection of structure in bending and/or twist, which itself increases imposed aerodynamic load, structure overshooting neutral position on each cycle to cause load in opposite direction. Distinguished by number of degrees of freedom (bending and torsion of wing, aileron and other components are considered separately), symmetry across aircraft centreline, and other variables. When heating involved subject becomes aerothermoelasticity (see *classical* \*, *hard* \*, *soft* \*).

2 Radio beat distortion when receiving two signals of almost same frequency.

**flutter model** Flexible model with mass distribution, flexure and other features designed so that flutter qualities simulate those of full-scale aircraft.

**flutter speed** Lowest EAS at which flutter occurs.

**fluvial** Adjective meaning that seaplane [widest meaning] is intended to operate from calm water only. Opposite = maritime.

**flux** 1 Generally, quantity proportional to surface integral of normal (90°) field (eg, magnetic) intensity over given cross-section.

2 Volume, mass or number of fluid elements or particles passing in given time through unit area of cross-section; eg luminous \*, measured in lumens (abb. lm).

3 Magnetic \* can be thought of as number of lines of force passing through particular coil or other closed figure; symbol  $\Phi$ , unit weber Wb.)

4 Materials used in welding, brazing and soldering to clean mating surfaces, and/or form slag, which helps separate out oxides and impurities by flotation and exclude oxygen.

**flux density** 1 Unit of magnetic \*\* is  $\text{Wb/m}^2$ , or tesla (T).

2 Neutron \*\*, and particle physics generally, is particles per unit cross-section per second multiplied by velocity,  $\Delta\theta/\Delta t = nv$ .

**fluxgate** Sensitive detector giving electrical signal proportional to intensity of external magnetic field acting along its axis, used as sensing element of most remote-indicating compasses; also called fluxvalve.

**fluxgate compass** Uses fluxgate to indicate, subject to corrections, direction of magnetic meridian.

**fluxvalve** See *fluxgate*.

**FLW** 1 Forward-looking [i.e. predictive] windshear radar.

2 Follow[s].

**fly a desk** Retirement from professional flying (e.g., senior officer).

**fly-away cost** Published retail price of GA aircraft, with specified avionics fit, ignoring spares, training or support.

**fly-away disconnects** Launch-vehicle umbilicals on rigid arms which swing clear under power.

**flyback** Controlled descent through atmosphere of returning aerospace-plane.

**fly-back period** That during which CRT spot returns from end of one line to start of next when in raster-scan mode.

**fly-back time** Time, usually ns or  $\mu\text{s}$ , for each fly-back period.

**fly-back vehicle** Space vehicle intended to be reusable.

**flybar** Flying by auditory reference.

**fly before buy** Philosophy of flight evaluation of new aircraft type, esp. by military (government) customer for combat aircraft.

**fly-by** 1 Interplanetary mission in which TV and instrumented spacecraft passes close to target planet but does not impact or orbit it.

2 Slow flight past tower to verify aircraft configuration or possible damage.

**fly-by-cable** Mechanical links join cockpit to PFCUs.

**fly-by-light** Flight-control system with signalling by optical fibres.

**fly-by-speech** Flight-control system with input signalled by voice of pilot (various research programmes).

**fly-by-wire** Flight-control system with electric signalling.

**flyco** 1 Abbreviation for Wing Commander, Flying, at an RAF station.

2 Position aboard aircraft carrier from which all aircraft launches and recoveries are controlled.

**Flygtekniska Föreningen** Society of Aeronautics (Sweden).

**Flygtekniska Försökstansten** Aeronautical Research Institute (Sweden).

**fly-in** Informal gathering of private and club aircraft at particular airfield, usually with a relaxed programme of events and competitions.

**flying blind** Piloting without external cues.

**flying boat** Seaplane whose main body is a hull with planing bottom; US = boat seaplane.

**flying cable** Connects captive or kite balloon to winch.

**flying club** Civilian group formed to assist its members to fly light aircraft as owner, hirer, pupil or passenger. It need not itself own an aircraft, or an airfield. First UK was Midlands Aero Club, 3 September 1909.

**flying controls** See *control system*.

**flying diameter** Overall diameter of circular parachute canopy in normal operational descent.

**Flying Farmers** Association of over 400 airstrip owners [not necessarily farmers] (UK).

**flying grading** See *grading*.

**flying machine** Powered aerodyne; common pre-1914, today humorous or derogatory.

**flying order book** Set of rules governing the flying of aircraft owned by a club (UK usage), or by club members.

**flying pay** Extra emoluments payable to military aircrew when actively engaged in flying operations.

**flying position** Attitude of aircraft when lateral and longitudinal axes are level or in flight attitude; esp. when

aircraft on ground is supported in this attitude. Note: flight attitude varies with airspeed.

**flying qualities** Loosely, stability and control as perceived by the pilot; documented in MIL-1797, previously MIL-F-8785C (US).

**flying rigging** Distributes loads into balloon from flying cable.

**flying roundup** Event, usually annual, at which passengers, usually handicapped children, are given flights, often in vintage transports (US).

**flying saucer** Popular, descriptive, name of the most common species of UFO.

**flying shears** Rotary system for cutting long web of sheet metal or other material moving at high speed.

**flying speed** 1 Loosely, minimum airspeed at which aeroplane can maintain level flight (preferably, positive climb) in specified configuration.

2 Another definition: speed reached on takeoff at which pilot has full control [but only for climbing straight ahead]. In modern terms  $V_2$ .

**flying spot** Rapidly moving spot of light, usually generated by CRT, used to scan surface containing visual information.

**flying stovepipe** Ramjet (colloq.).

**flying-tab control** See *servo tab*, *Flettner*.

**flying tail** Use of whole horizontal tail as primary control surface.

**flying testbed** Aircraft or other vehicle used to carry new engine or other device for purpose of flight testing.

**flying the ball** 1 Loosely, flying IFR, from traditional turn/slip indicator.

2 Correctly flown VFR carrier approach using mirror sight.

**flying the needle** Navigating along airways by VOR.

**flying time** See *flight time*.

**flying weight** See *flight weight* (engine).

**flying wing** Aeroplane consisting almost solely of wing, reflecting idealised concept of pure aerodynamic body providing lift but virtually devoid of drag-producing excrescences.

**flying wires** Diagonal cables/wires placed under tension in 1g flight and used to join lower anchor (low on fuselage or within biplane cellule) to higher anchor further outboard on wing; also known as lift wires.

**flying-off** 1 Competitive in-flight demonstration of performance and other qualities between two or more rival aircraft built to same requirement to determine which will be chosen for procurement.

2 Without hyphen, to take off from a ship, esp. by free takeoff.

**flying-over noise** Noise made by aircraft over particular point, usually near airport on inbound/outbound track, chosen for noise measurements. *Approach/takeoff noise*.

**flover reference location** A point chosen for measurement of flover noise.

**fly space** Simulated volume of sky, especially above a terrain board.

**FM** 1 Frequency modulation or modulated; instantaneous frequency of EM carrier wave is varied by amount proportional to instantaneous frequency of modulating (intelligence-carrying) signal, amplitude and modulated power remaining constant.

2 Frequency measurement.

3 Fan marker.

4 Flight manual.

5 Facilities management.

6 Figure of merit.

7 Fissile material.

8 From.

9 Fighter, multiplace (USAAC 1936–41).

**f<sub>M</sub>** Mode frequency [FCS airspeed].

**f<sub>m</sub>** Modulating frequency.

**FMA** 1 Flight-mode annunciator or annunciation.

2 Fleet Management, or Manager, agreement.

3 Final monitor aid.

4 Federacion Mexicana de Aeronáutica.

**FM/AM** 1 Amplitude modulation of carrier by frequency-modulated subcarrier(s).

2 Alternate FM and AM operation.

**F<sub>max</sub>** 1 Maximum thrust.

2 Peak thrust of rocket engine.

**FMC** 1 Flight management computer [F adds function, DL data-link, S system, U unit].

2 Fully mission-capable (USAF).

3 Forward motion compensator, or compensation.

4 Fatigue-monitoring computer.

**FMCS** FMC (1) or (4) system.

**FMCT** Fissile-Material[s] Cutoff Treaty (repeatedly postponed).

**FMCW** Frequency-modulated continuous [rarely, carrier] wave.

**FMD** Flight management display.

**FMDA** Federation Mexicana de los Deportes Aeos (Mexico DF).

**FME** Failure modes and effects [A adds analysis, CA criticality analysis, S summary, TA task analysis], all self-explanatory tools for risk assessment.

**FMEA** See previous.

**FMEP** Friction mean effective pressure, torque measured on calibrated brake.

**FMF** 1 Foreign military financing.

2 Flight-management function.

**FMG** Flight management guidance (C adds computer, EC envelope computer, S system).

**FMGC** Flight management and guidance control (system).

**FMGEC** See *FMG*.

**FMI** Functional management inspection.

**FMICW** FM (1) intermittent [or interrupted] continuous wave.

**FMK** 1 Flyvematerielkommandoen (Denmark).

2 Field modification kit.

**FML** Frequency memory-loop.

**FM marker** Fan marker, transmits fan-shaped pattern of coded identity signals upwards, usually across one leg of radio range station.

**FMMWRA** Forward-looking MMW radar altimeter.

**FM-9** Fuel modifier No 9, which with a carrier fluid forms Avgard.

**FMOG** Flight Maneuver Operations Center (NASA).

**FMOF** First manned orbital flight.

**FPOP** Frequency modulation on pulse.

**FMP** 1 Full [or flight] mode panel.

2 Flow management position.

3 Foreign military program.

4 Fleet management program[me].

**FMPG** Flow Management Planning Group (ICAO).

**FMQG** Fuel measurement and quantity-gauging; C adds computer, S System.

**FMS** 1 Flight-management system; T adds trainer.

2 Field maintenance squadron (USAF).

3 Frequency-multiplexed subcarrier.

4 Foreign military sales (DoD).

5 Federation of materials societies.

6 Fuel-management system.

7 Flexible manufacturing systems.

8 Full-mission simulator.

**FMSC** Frequency Management Sub-Committee (NATO).

**FMSP** Flight-mode selector panel.

**FMST** Flight-management system trainer.

**FMT** Full-mission trainer.

**FMTAG** Foreign Military Training Affairs Group (US).

**FMTI** Future missile-technology initiative (USA).

**F/MTI** Fixed/moving target indicator.

**FMTS** Fleet [of aircraft] management and tracking system (Aero-C).

**FMU** 1 Flight-management unit.

2 Fuel-metering, or management, unit.

3 Flow [of air traffic] management unit.

**FMV** Försvarets Materielverk (Defence Materiel Administration, Sweden).

**F<sub>N</sub>** Nozzle drag correction.

**F<sub>n</sub>** 1 Net thrust.

2 Receiver noise.

**FNA** 1 Fédération Nationale Aéronautique (parent body of flying clubs, F).

2 Final approach.

**FNBA** Fédération Nationale Belge d'Aviation.

**FNBDT** Future narrow-band digital terminal.

**FNC** Favoured-nation clause.

**FNCP** Flight navigation control panel.

**FNL** 1 Flight Navigator's Licence (UK).

2 Fleet noise level.

**FNLN** Fine line, on radar indicating significant turbulence.

**FNMOCC** Fleet Numerical Meteorology and Oceanography Center.

**fnp** Fusion point.

**FNPT** Flight [and] navigation procedure[s] trainer.

**FNS** 1 Strategic nuclear forces (F).

2 Fortified Navier-Stokes algorithm.

**FNT** Front [+GNS = frontogenesis = front forming; LYS = frontolysis = decaying].

**FNY** French Navy [Anglicised usage].

**FO** 1 Foreign object.

2 Fibre optics (resulting in numerous other FO acronyms).

3 Fail operational, or operative (see *FOS*, *FOOS*).

4 First Officer.

5 Flag Officer.

6 Fractional ownership.

7 Forward observer.

**F/O** 1 Flying Officer (RAF).

2 First Officer (civil).

3 Fuel/oil.

**f<sub>0</sub>** Frequency, prior to Doppler shift.

**FOA** 1 Field Operating Agency, unit of USAF distinct from major command.

2 Follow-on attack (no precise definition).

3 Försvarets Forskningsanstalt, Swedish defence research establishment (merged 2001 into FOI).

4 Future offensive aircraft (C adds capability, S system).

**FOAC** 1 Flag Officer, Aircraft Carriers.

2 Future offensive air capability.

**FOAEW** Future organic airborne early-warning.

**foam carpet** Layer of foam put down on runway or other space by fire tenders to cushion impact of aircraft making wheels-up landing.

**foamed plastics** Foaming agent provides minute voids to create low-density material used for insulation (thermal, mechanical shock etc), or to increase structural rigidity; often foamed in place within structure.

**foam monitor** Turret-mounted foam gun on crash-fire vehicle.

**foaming space** Free vapour volume above fuel in tank.

**foam strip** Foam carpet.

**FOARC** Fractional Ownership Aviation Rulemaking Committee.

**FOAS** Future Offensive Air System [more recently, Support] (UK).

**FOB** 1 Forward operating base.

2 Fuel on board (suggest undesirable usage, confusion with established non-aero acronym free on board).

**FOBS** Fractional-orbit bombardment system.

**FOC** 1 Foreign-object check.

2 Full (or final) operational, or operating, capability.

3 Flares/off/chaff.

4 Faint-object camera.

5 Fibre-optic control, or cable, or computer.

6 Final operational clearance.

7 Fuel/oil cooler.

8 Flight-operational commonality, making possible mixed-fleet flying.

9 Formal offer to customer.

**FOCA** Federal Office of Civil Aviation (Swiss).

**focal length** Distance from optical centre of lens or surface of mirror to principal focus.

**focal plane** That parallel to plane of lens or mirror and passing through focus.

**focal point** 1 See *focus*.

2 Air Staff agency or individual designated as central source of information or guidance on specific programme or project requiring co-ordinated action by two or more Air Staff agencies (USAF).

**Focas**, **FOCAS** 1 Fibre-optic communications for aerospace systems (USAF).

2 Flag Officer Carriers and Amphibious Ships (RN).

3 Focused ordnance controller with aimpoint selection (USAF).

**FOCR** Final operational clearance recommendation.

**FOCSL**, **Focsi** Fibre-optic control-system integration.

**focus** 1 Point at which parallel rays of light meet after being refracted by lens or reflected by mirror.

2 Point having specific significance relative to geometrical figure such as ellipse, hyperbola or parabola.

**FODMS** Fibre-optic[s] data multiplex system.

**FOD** 1 Foreign-object damage [or debris].

2 Fibre-optic[s] data [B adds bus, C control, H highway, L link, MS multiplex systems and S system].

3 Flight Operations Department (UK CAA).

4 First operational delivery.

**Fodcom** Flight Operations Department communication, issued as necessary (CAA).

**FODCS** Fibre-optic[s] digital control system.

**FODMS** Fibre-optic[s] data multiplex system.

**FOD plod** Duty of removing from taxiways and runways anything that might cause FOD.

**F/ODS, Fods** Fire/overheat detection system.

**FODT** Fibre-optic[s] data transmission.

**FOES** Fibre-optic engine sensor.

**FOFA** Follow-on forces attack.

**FO/FO** Flame-on/flame-out.

**FOF3** Flag Officer 3rd Flotilla, responsible for all naval aviation (UK, RN).

**FOG** 1 Fibre-optic[s] guidance.

2 Fibre-optic[s] gyro.

3 Flight-operations group (RAeS).

**fog** 1 Form of cloud in surface layers of atmosphere caused by suspended particles of condensed moisture or smoke, reducing visibility to less than 1 km. Advection \* results from arrival of warm humid air over cold surface; radiation \* from cooling of water vapour created by evaporation during day by cold ground on clear night; sea \* by condensation of moisture in warm air over cold sea (essentially advection).

2 See cabin \*.

**Foglite** Finding obscured ground targets using laser imaging of the target environment (USAF + industry).

**FOG-M, Fog-M** Fibre-optic[s], guided missile (USA).

**fog of war** Notional idea invented to explain 'own goals' in recent conflicts (US).

**FOHE** Fuel/oil heat exchanger.

**Föhn, foehn** Dry wind with strong downward component, warm for season, characteristic of mountainous regions.

**FOI** 1 Follow-on interceptor (USAF).

2 Totalförsvarets Forskningsinstitut [defence/aerospace research, Sweden].

3 Flight Operations Inspectorate (CAA).

**FOIA** Freedom of Information Act (US).

**foil** 1 Lifting surface of hydrofoil landing gear.

2 Spanwise trailing-edge members, one upper and one lower, forming integral part of compound wing.

**FoIP** Fax over Internet Protocol.

**FOL** 1 Forward operating location.

2 First-order logic.

**fold** Joint in wing of carrier aircraft enabling it to be folded. Incorporates one or more horizontal, skewed or vertical hinges.

**folded combustor** Gas-turbine annular combustion chamber in which, to reduce engine overall length, the flow makes two 180° turns, leaving at a reduced chamber diameter to match high-speed turbine.

**folded dipole** Two parallel, closely spaced dipole antennas connected at ends, with one fed at centre.

**folded fell seam** Fabric seam which has both edges folded and located in same place between fabric layers.

**folding fin** 1 Aircraft or missile fin hinged axially at base to lie flat prior to launch.

2 Rocket or missile fin hinged transversely to emerge from housing slot, as in FFAR.

**folding wing** One hinged outboard of root to enable overall dimensions to be reduced when aircraft must enter hangar, esp. on carrier.

**foliage penetration** Fopen, challenging objective of wide

range of EM-radiating systems, especially with MTI; other acronyms Lobstar, TUT.

**follow-on** Anything considered to be second or subsequent generation in development, esp. within same manufacturing team.

**follow-on contract** One whose terms repeat those for earlier stage of same programme.

**follow-on development tests** Tests during acquisition phase after completion of formal Cat II tests; consist of updating changes or additions not available previously (USAF).

**follow-on production** Serial production immediately subsequent to completion of development or previous production batch.

**Folta** Forward operating location training area.

**FOM** 1 Figure of merit.

2 Federation object model [simulation].

**FOMA** Flag Officer Maritime Aviation (UK).

**FOMC** Fibre-optic micro-cable.

**FONA** Flag Officer, Naval Aviation (UK).

**Fonda** Future optical network distribution for aerospace (AgWestland).

**fone** Telephone (FAA).

**Foo fighters** UFOs (US, 1946–60).

**FOO** Forward observation officer (FAC2).

3 Area covered by airline route network [generally relevant to hub/spoke and similar regional carriers].

**FOOS** Fail-operational, fail-operational, fail-safe.

**foot** Non-SI unit of length, = 0.3048 m by definition.

**foot-candle** Non-SI unit of luminance = 1 lm/sq ft = 10.76 lux.

**foot-lambert** See *lambert*.

**foot-launched** Micro or powered parachute strapped to pilot's back.

**foot motor** Foot-operated hydraulic motor used to energise wheel brakes.

**foot-pound** Unit of work or energy, = 1.35582 J.

**foot-poundal** Unit of work or energy, = 0.042140 J.

**foot-pound-second system** Non-SI system of units still used in US; also called Imperial.

**footprint** 1 Area around airport enclosed by selected contour for LPN, EPNL, NNI or other noise measure.

2 Possible recovery area for spacecraft plotted from re-entry point.

3 Area covered by airline route network [generally relevant to hub/spoke and similar regional carriers].

**foot-thumper** Stall-warning device that triggers oscillating plunger in rudder pedal when stall imminent.

**foot-to-head acceleration** Ambiguous, means accelerating force acting on body from head to feet, negative g.

**footwell** Recess in outer skin of [usually combat] aircraft, often covered by spring-loaded flap, to enable crew to board without ladder.

**FOP** 1 Forward operating paid.

2 Fired outside parameters.

**Fopen** Foliage penetration, or penetrating (SAR, TUT).

**FOQA** Fleet [airline] or flight-operations, or operational, quality assurance (FAA).

**FOQNH** Forecast regional QNH.

**FOR** 1 Fail-operative redundant.

2 Field of regard.

**Foracs** Fleet operational readiness and calibration system.

**Forcap** Force CAP, combat air patrol maintained overhead a task force (USN).

**Force, FORCE** Flight Operations Research Centre of Excellence.

**force** SI unit is Newton (N), which gives mass of 1 kg acceleration of  $1 \text{ ms}^{-2} = 0.101968 \text{ kgf}, 0.22482 \text{ lbf}, 7.230658 \text{ pdl}, 3.597 \text{ ozf}, 10^5 \text{ dynes}$ ; reciprocals include  $1 \text{ lbf} = 4.44822 \text{ N}, 1 \text{ kgf} = 9.80665 \text{ N}$ .

**force balance transducer** Output from sensing member is amplified and fed back to element which causes force-summing member to return to rest position.

**force coefficients** Aerodynamic forces, eg lift and drag, divided by dynamic pressure  $\frac{1}{2}\rho V^2 S$ .

**force combat air patrol** Patrol of fighters maintained to protect task force against enemy aircraft.

**forced convection** Process by which heat is transported by mechanical movement of air (cooling systems, meteorology).

**force diagram** Vector presentation of force(s) acting on object, length and direction of each vector representing magnitude and direction of one force. If diagram forms closed polygon, forces are in equilibrium. If diagram fails to close, gap indicates unbalanced force. Hence, force polygon.

**forced landing** Made when aircraft can no longer be kept airborne, for whatever reason.

**forced oscillation** One in which response is imposed by excitation; if excitation is periodic and continuing, oscillation is steady-state.

**forced vibration** See preceding entry.

**force fit** Mating parts in which male dimension exceeds female (see *fit*).

**force gradient** Relationship between pilot input force and aircraft response, e.g., degrees roll per second per pound of lateral force on stick.

**force majeure** Literally, no choice; reason for crossing a frontier at other than a designated point of entry (now archaic).

**force rendezvous** Navigational checkpoint at which formation of aircraft or ships joins main force.

**force-sensing controller** Pilot's primary flight-control input (stick/pedals) which senses applied force without noticeable movement.

**force structure** Currently effective operational inventory (US).

**force vector** Line in force diagram representing force magnitude, direction and point of application.

**Fords** Fleet [airline] operational reliability data system.

**fore-and-aft level** Gravity-controlled indicator of pitch attitude (arch.) Usually a glass tube in form of triangle part-filled with coloured liquid.

**forebody** 1 The front portion of a body in atmospheric flight; in \* strake can mean front half of fuselage.

2 Planing bottom of float or hull upstream of step.

**forebody strake** Low-aspect-ratio extensions of wing at root along sides of fuselage; like LERX and glove [which taper more sharply] they generate powerful vortices at high AOA to improve handling in extreme positive-acceleration manoeuvres.

**forecast** Statement of expected meteorological conditions at given place during specified period; air-navigation \* includes wind velocity at selected heights, cloud, visibility, precipitation, ice formation, and barometric pressures at airfields and sea level.

**foreflap** Leading member of double or triple-slotted flap.

**foreign air carrier** One registered in foreign country, except in case of multinational carriers (eg SAS or Air Afrique) in collaborating countries.

**foreign military sales** Portion of United States military assistance authorised by Foreign Assistance Act (1961 as amended); differs from Military Assistance Program Grant Aid in that it is purchased by recipient country.

**foreplane** Horizontal aerofoil mounted on nose or forward fuselage to improve take-off and low-speed handling, esp. of delta aircraft where wing lift is lost because of upward movement of elevons. \* can be fixed or retractable, fixed-incidence or rotating, and have slats, flaps or elevators.

**forerudder** Rudder at front of aircraft.

**Forester** F open [foliage-penetrating] reconnaissance, surveillance, tracking and engagement radar (USA).

**forging** Shaping metal softened by heating by slow, rapid or repeated blows, with or without a shaped female die or male/female dies.

**forked rod** Piston engine connecting rod having forked bearing on crankshaft, fitting over big end of matching blade-type rod.

**forklift capacity** Of cargo item, provided with an integral pallet, tineways or forklift entries.

**FORM** First-order reliability method.

**formability** Unquantified measure of ease with which material can be shaped through plastic deformation.

**Formac** Fibre-optic medium-access controller.

**format** 1 Size and shape of map, chart or photo negative or print.

2 One of several selectable types of presentation for instrument (eg ADI or HSI) or display, such as moving map, radar map, alphanumeric, attitude indication, flight planning or en route.

3 Fortran matrix abstraction technique.

**formation** Ordered arrangement of two or more vehicles proceeding together, especially in a geometric pattern.

**formation flight** More than one aircraft which, by prior arrangement between pilots, navigate and report as single aircraft; FAA formation limits are no more than one mile laterally or longitudinally and within 100 ft vertically from leader.

**formation-flight control system** Developed at UCLA to perfect autonomous formation flight.

**formation light(s)** Fitted to aircraft to enable other aircraft to formate on it at night.

**formatted** Electronically processed to be compatible with particular format (2).

**form block** Block or die usually made of wood, zinc, steel or aluminium, over or into which sheet metal is formed.

**form die** One which performs bending and sometimes light drawing operations upon flat blank.

**form drag** Pressure drag minus induced drag.

**former** Light secondary structure added to maintain or improve external shape; eg around basic box fuselage to give curved cross-section, or extra false wing ribs ahead of front spar to maintain profile where curvature is sharp.

**form factor** Physical overall dimensions of a body, especially one carried externally, taken into account not so much aerodynamically as to avoid hardware conflicts.

**form, fit and function**  $F^3$ , essentially self-explanatory, the

three baseline factors determining whether a new hardware item can immediately replace its predecessor in a functioning system.

**forming** Forcing flat material to assume desired contours and curves, esp. compound curvatures, by such means as drop hammer, flanging machine, hydraulic press, stretch press, hand forming etc.

**forming roll** Bends sheet metal into cylinders of various diameters and other single-curvature shapes.

**Form 700** In many English-speaking air forces, document signed by captain on taking over aircraft to signify that he is satisfied that every pre-flight maintenance inspection has been completed.

**formula costs** Direct operating costs for transport aircraft as calculated to ATA formula, which assumes indirect costs as 100 per cent of direct and standardized values for passenger, freight and mail revenues.

**Formula 1** Air-racing rules, laid down by FARA, for uniform class of racers (includes engine not over 200 cubic inches, wing not less than 66 square feet, empty weight not less than 500 lb, fixed landing gear and carefully defined cockpit/windshield geometry).

**Formula V** Lightweight FARA class with VW-derived engines.

**FORS** 1 Foreign airlines representatives (Sweden).  
2 Fibre-optic rate sensor.

**Forte** Fast on-orbit recording of transient events.

**Fortran** Formula translator; computer language.

**Forty-five line** Trajectory at 45° to horizontal, flown in either direction, thus up-\* line and down-\* line (advanced aerobatics).

**forward aeromedical evacuation** Provides airlift for patients between battlefield and initial and subsequent points of treatment within combat zone.

**forward air controller** Member of tactical air control party who, from forward ground or airborne position, controls aircraft engaged in close air support of ground troops (DoD).

**forward air control post** Mobile tactical air control radar used to extend coverage and control in forward combat area.

**forward compatibility** The degree to which a device or system will meet future legislation or be compatible with future development.

**forward lock** Prevents selection of reverser except after landing; disabled by oleo deflection or, if possible, bogie-beam tilt.

**forward oblique** Oblique photograph of terrain directly ahead.

**forward operating base** Airfield used indefinitely to support tactical operations without establishing full support facilities.

**forward operating location** Forward operating base.

**forward path** In a functioning system, the path from demand to output.

**forward scatter** Scattering of radiant energy into hemisphere of space bounded by plane normal to incident radiation and lying on side toward which radiation was advancing; opposite of backward scatter.

**forward slip** See *sideslip*.

**forward speed** Component of speed in horizontal plane.

**forward stagnation point** Point on leading edge of body in airstream which marks demarcation for airflow on either side; boundary-layer air is stationary.

**forward supply point** En route or turnaround station at which selected aircraft spares are prepositioned for support of assigned mission(s).

**forward sweep** Opposite of sweepback, wing tips being further forward than roots.

**forward tilt** Of helicopter rotor, forward angular deviation of locus of centroid of blade sections from plane of rotation.

**forward tilt wing** See *slew-wing aeroplane*.

**FOS** 1 Fail-operational, fail-safe.

2 Faint-object spectrograph.

3 Fibre-optics sensor (or sensing, or system).

4 Family of systems.

5 Fleet operations standards.

6 Forward observer system.

**FOSA** Fondation des Oeuvres Sociales de l'Air (F).

**FOSC** Fibre-optic satellite communications.

**FOSI** 1 Formatting output specifications instance.

2 Family of systems integration, or integrator (AFRL).

**FOSON** Follow-on stand-off weapon.

**FOSS, Foss** Fibre-optic sensor, or sensing, systems.

**FOST** Flag Officer, Sea Training.

**foster parent** Company contracted to provide service support, possibly extending to major modification and update, for an imported type of military aircraft.

**FOT** 1 Frequency of optimum transmission.

2 Fibre-optic twister for making inverted image upright.

3 Flight-operations Telex.

4 Follow-on operational test (USAF).

5 Future-oriented technologies.

**FOT&E** Follow-on test and evaluation (continues after entry to service, USAF).

**FOT&FOE** Inserts final operational.

**FOTD** Fibre-optic towed decoy.

**FOTM** Flight operations training manager.

**fouling** Unwanted deposition on points of piston engine spark plug.

**fount** Range of characters for electronic display.

**fountain** Vertical rising column of hot air, usually plus entrained debris, formed by jets of VTO jet aircraft hovering at low level; on impact with fuselage can exert undesired suckdown effect; alternatively, can be made to increase lift.

**fountain sheet** Vertically rising wall between adjacent jets in hovering VTO.

**four-bank eight** Flight training manoeuvre similar to figure of eight except that outer portions of loops are not circular but consist of two 45° turns linked by short, straight flightpath.

**four-course beacon** See *radio range*.

**4-D** 3-D plus time, usually latitude, longitude, altitude and time.

**4-D R-nav** Terminal guidance sufficiently accurate to put arrival's wheels on runway within guaranteed window of  $\pm 10$  s.

**four greens** Gear locked down and landing flap setting.

**Fourier expansion** Expansion of waveform or other oscillation in terms of fundamental and harmonics.

**Fourier integral** Representation of  $f(x)$  for all values of  $x$  in terms of infinite integrals.

**Fourier series** Representation of function  $f(x)$  in interval  $(-L, L)$  by series consisting of sines and cosines with

common period 2L; when  $f(x)$  is even, only cosine terms appear, when odd, only sine terms appear.

**4midable** Requirement/benefit definition study leading to 4-D meteorological databases (Euret).

**four-minute turn** See *standard turn*.

**four-poster** Jet engine for VTOL with two front fan nozzles and two rear core-jet nozzles, which in VTOL mode provides lift from four jets in rectangular pattern; or an aircraft equipped with such an engine.

**four-way cross** Airshow manoeuvre in which two pairs of aircraft roll wings vertical to pass in a close head-on.

**four-wing configuration** See *cruciform wing*.

**FOV** Field of view; EA adds eye angle relative to head.

**FOVE** Fleet operations versatile environment [cockpit interface].

**FOW** 1 Family of weapons.

2 Fibre-optic wire.

3 Fly-over waypoint.

**Fowler flap** Special form of split flap that moves at first rearwards and then downwards along tracks, thus producing initial large increase in lift and at full deflection giving high lift and drag for landing.

**Fowss** Fibre-optic wing-shape sensing.

**fox away** Verbal code: "AAM has been fired or released" (DoD).

**Fox Code** Air-combat numeral code, usually: 1, SARH missile selected; 2, IR missile selected; 3, guns; 4, fired outside parameters to distract enemy. There is an alternative, used to report method used to dispose of adversary: 1, radar, AAM; 2, IR AAM; 3, gun(s); 4, made opponent fly into ground.

**FP** 1 Flight progress.

2 Fluoro-polyamide.

3 Flight path.

4 Full potential (aerodynamic flow).

5 Fixed-price.

6 Weather forecast (US states).

7 Fuel, petroleum.

8 Framework Programme [followed by a number] (EU).

**f<sub>p</sub>** Freezing point.

**FPA** 1 Fire Protection Association (UK).

2 Flight-path angle.

3 Flying Physicians' Association [office, Lake Bluff, IL, US].

4 Flight-path accelerometer.

5 Focal-plane array.

6 Forward pitch amplifier (SAAHS).

7 Flat-plate antenna.

**FPAC** Flight-path acceleration.

**FP area** Food-preparation area.

**FPAS** 1 Focal-plane array seeker.

2 Flight-profile advisory system.

**FPASS** Force-protection airborne surveillance system.

**FPB** 1 Fuel preburner.

2 Functional payload block.

**FPC** 1 Flight-path control, or controller, or command.

2 Flight-profile comparator.

**FPCC** Flight propulsion control coupling.

**FPCD** Flat-panel colour display.

**FPCS** Flight-path control system, or (F-15 S/MTD) set.

**FPC2** Force protection command and control.

**FPD** 1 Flight-planning document.

2 Flat-panel display.

3 Fee per departure.

4 Freezing-point depressant.

5 Flight-proximity demonstration.

6 Force Protection Directorate [2005-] (RAF).

**FPDA** Five-Power[s] Defence Agreement, or Arrangements [which see].

**FPDS** Feasibility pre-definition study.

**FPDZ** Free-fall parachute drop zone; A adds activity (CAA, UK).

**FPEEPM** Fédération des Pilotes Européennes (federation of European women pilots).

**FPEEPM** Floor proximity emergency-escape-path marking.

**FPEPA** Fixed-price with economic price adjustment [i.e., not fixed].

**FPF** Fixed-price firm.

**FPG** Force per g.

**FPGA** Field-programmable gate array.

**FPI** 1 Fluoropolyimide.

2 Fixed-price incentive.

3 Fluorescent penetrant inspection.

**FPIF** Fixed-price incentive firm.

**FPIS** 1 Fixed-price incentive contract with successive targets.

2 Forward propagation by ionospheric scatter.

**FPIWA** First-pass in-weather attack.

**FPL** 1 Flight-plan message, ie filed flight plan.

2 Full performance level (FAA 1 air-traffic controllers).

3 Fluctuating pressure (rarely, power) level(s).

4 See *f-pole line*.

5 Full programme launch.

**FPLN** Flight plan.

**FPLR** Full programme launch review.

**FPM** 1 Flightpath miles.

2 Feet per minute (ft/min preferred).

3 Fleet performance monitoring [or monitor].

4 Flight-performance module (AFMSS).

5 Fibre/fiber placement mandrel.

6 Flight-plan message.

**FPMU** Fuel-pump monitoring unit.

**FPN** Fixed-pattern noise.

**FPNM** Feet [altitude] per nautical mile.

**FPO** Force Protection Organization [2005-] (RAF).

**FPOV** Fuel preburner oxidiser valve.

**FPP** 1 Fixed-pitch propeller.

2 Ferry Pilots' Pool.

**FPPS** Flight-plan processing system.

**FPR** 1 Fan pressure ratio.

2 Fixed price, redeterminable.

3 Federal Procurement Regulation (US).

4 Flight-plan route.

5 Flat-plate radiometer.

6 Final proposal revision[s].

**FPRA** FPR (2) of A-type.

**FPRM** 1 Flight phase related mode.

2 Fuel-pipe repair manual.

**FPS, fps** 1 Foot-pound-second system.

2 Feet per second.

3 Fine-pitch stop.

4 Fuel production and storage [O adds offshore].

5 Flight-progress strip.

6 Fast packet switch.

**FPSA** Focal-plane staring array.

**FP70** Low-expansion firefighting foam, hydrolized protein plus perfluorocarbon surfactant (Angus).

**FPSR** Flight-progress-strip printer.

**FPSR** Foot-pound-second Rankine, traditional British system of engineering units.

**FP strip** *Flight progress.*

**FPIS** Forward propagation by tropospheric scatter.

**FPU** Fin processor unit.

**FPV** Flight-path vector.

**FQGS** Fuel-quantity gauging system.

**FQHE** Fractional quantum Hall effect.

**FQI** Fuel-quantity indicator, or indication.

**FQIS** FQI switch or system.

**FQMS** Fuel-quantity management system.

**FQP** Flow quality probe.

**FQPSK** Feher-patented phase-shift keying.

**FQPU** Fuel-quantity processor, or processing, unit.

**FQR** Formal Qualification Review.

**FQT** 1 Formal qualification testing.

2 Frequent.

**FQTI** Fuel-quantity totaliser indicator.

**FR** Fineness ratio.

**F/R** 1 Function reliability.

2 Final run.

**FR** 1 Flight refuelling.

2 Flight recorder.

3 Fighter reconnaissance.

4 Forward relay (ATC).

5 Fuel remaining.

6 Frame.

7 Falling rapidly.

8 From.

9 Federal Register (US).

**F<sub>r</sub>** 1 Aerodynamic loading (force) due to Rth mode.

2 Frictional force.

**fr** Fuel required.

**f<sub>r</sub>** 1 Radar p.r.f. [sometimes F<sub>r</sub>].

2 Resonant frequency.

**FRA** 1 First-run attack.

2 Fuel-risk aversion.

3 Flap-retraction altitude.

4 See *fracto*.

**fractional** Fractionally owned [adjective and noun].

**fractional distillation** Heating crude petroleum to moderate temperature at atmospheric pressure and condensing different fractions separately.

**fractional orbit bombardment system** ICBM initially launched into low Earth orbit, enabling warhead[s] to arrive on target from any direction.

**fractional ownership** Aircraft, usually bizjet, is registered to prearranged [usually small] group, each having equal allocation of annual flight time. Today there are many variations.

**fractionation** Use of large numbers of small (nuclear) warheads, esp. in counterforce attack; hence to fractionate.

**fracto-** Prefix, clouds broken up into irregular, ragged fragments.

**FRAD** Frame relay access device.

**FRADU, Fradu** Fleet Requirements and Air Direction Unit (UK).

**FRAG** Fatigue Research Advisory Group.

**fragmentary order** Abbreviated form of operation order which eliminates need for restating information contained

in basic operation order (DoD). Usually a daily supplement to SOOs governing conduct of specific mission.

**fragmentation bomb** Charge contained in heavy case designed to hurl optimum fragments on bursting.

**frag order** Fragmentary order.

**FRAIS** Functional requirements for airport ground-movement control and management interconnection system.

**FRAM, Fram** 1 Fleet rehabilitation and modernization.

2 Ferroelectric RAM (1).

**F<sub>ram</sub>** Ram drag.

**frame** 1 In photography, single exposure within continuous sequence.

2 Transverse structural member of fuselage, hull, nacelle or pod, following its periphery.

3 Of engine, structural transverse diaphragm carrying main shaft bearing.

4 Picture area scanned in radar, TV, video or CRT (US = field).

**frameless canopy** Single blown transparency in metal peripheral frame.

**frame of reference** See *reference axes*.

**frame relay** New standard for handling small packets of high-speed burst data over WANs.

**frame time** Symbol  $t_f$ , time required to scan one frame in radar search.

**framing pulses** Transmitted in TV/video, SSR, IFF, ATRCBS and similar systems to synchronize transmitted and received timebases.

**franchise** Legal right of a carrier to fly for hire or reward on a given route, without obligation to do so.

**frangible** Designed to, or likely to, shatter on impact.

**Frap** Fragmenting-payload, gun [initially 28-mm Mauser] projectile comprising 180 slender (1-g) tungsten-alloy needles.

**FRAS** 1 Free-rocket anti-submarine.

2 Fuel-resources analysis system.

**FRAT** 1 Flight-readiness acceptance test.

2 Fuzzy reasoning adaptive thresholding.

**fratricide** Shooting down friendly, esp. in air/air engagement.

**fraudulent echo** Radar echo produced by DECM.

**Fraunhofer region** The region sufficiently far from a radiating antenna for the antenna to be considered as a point source.

**frax** Fractional ownership (colloq.).

**FRC** 1 Flight reference card.

2 Fibre-reinforced [or fibrous refractory] composite (or concrete).

3 Future rotorcraft capability.

4 Federal Radio Commission (US).

5 Full route clearance.

6 Flight-rules computer [air-launched missiles].

**FRCI** 1 Flexible reusable carbon insulation.

2 Fibrous refractory composite insulation.

**FRCS** Field-replaceable connector system.

**freak** Verbal code meaning frequency in MHz (DoD).

**FRED, Fred** 1 Flexible routine[s] for engine development.

2 Fuzzy resasoning edge detection.

**Freda** Mnemonic, prior to joining circuit: fuel tank selection/radio frequency/engine temperatures and pres-

suress/directional gyro and compass in agreement/altimeter setting.

**freddie** Air-intercept controlling unit (DoD).

**free-air anomaly** Difference between observed and theoretical gravity computed for latitude and corrected for elevation above or below geoid.

**free-air overpressure** Unreflected pressure in excess of ambient created by blast wave from explosion.

**free airport** One at which people and goods may be trans-shipped without customs charges or examination.

**free-air tunnel** Aerodynamic or other test with specimen moved through atmosphere, eg on aircraft or rail flatcar or rocket sled.

**free atmosphere** That portion of Earth's atmosphere, above planetary boundary layer, in which effect of Earth's surface friction on air motion is negligible, and in which air is usually treated (dynamically) as ideal fluid. Base usually taken as geostrophic wind level.

**free balloon** One floating untethered.

**free-balloon concentration ring** Ring to which are attached ropes suspending basket and to which net is secured; also known as load ring.

**free-balloon net** Distributes basket load over upper surface of envelope.

**freeboard** In a marine aircraft, the vertical distance from the loaded waterline to the lowest opening through which water could enter.

**free-body principle** Stress-analysis procedure that involves isolating structure, considering it to be held in equilibrium by loads acting upon it.

**free-call** Change frequency [non-mandatory ATC advisory].

**free canopy** Cockpit canopy that is non-jettisonable.

**freedoms** Basic rights for the air carriers [airlines] of all nations, negotiated between governments:

1 To fly across another's territory, without landing.

2 To make technical [non-traffic] stop, landing at another's territory to refuel or for any other non-traffic reason.

3 Right to set down, to bring passengers or goods to another country.

4 Right to pick up, to bring passengers or goods from another country.

5 Right to fly to a foreign state, pick up traffic and convey it to third state. In US often called Beyond rights.

6 Right to pick up traffic from a foreign state, convey it to a third and return to one's own.

7 Right to carry traffic between two foreign states without calling at one's home territory.

**free drop** Dropping packaged equipment or supplies without parachute.

**free electron** Not bound to an atom.

**free fall** 1 Fall of body without guidance, thrust or braking device.

2 Free motion along Keplerian trajectory, in which force of gravity is counterbalanced by force of inertia.

3 Parachute jump in which parachute is manually activated at discretion of parachutist, or automatically at pre-set altitude.

4 Acceleration  $g$  under standard conditions, =  $9.80665 \text{ ms}^{-2}$ .

**free-fall altimeter** Worn by parachutist in free-fall jump to deploy parachute at pre-set altitude.

**free-fall(ing) bomb** Bomb without guidance.

**free-fall landing gear** Designed to be lowered by force of gravity, and possibly wind load.

**free-fall model** Unpowered model for spinning or other tests intended to fall freely after release.

**free fan** Name promoted by Boeing for UDF and propfan propulsion to avoid image of 'propeller'.

**free-field testing** In the open air.

**Free Flight** Programme 'to provide controllers and NAS users with tangible functional enhancements' (FAA). Broadly, it puts decisions regarding commercial traffic over the US in the hands of pilots, monitored from the ground.

**free flight** 1 Without guidance except, possibly, simple stabilizing autopilot.

2 In air-carrier operations, captain can select his own FL and flight path, ATC intervening only to prevent conflict.

**free-flight model** One normally ground-launched and self-propelled, usually instrumented for aerodynamic or flutter measures.

**free-flight tunnel** One in which model can be observed in free flight, ie unmounted or fired from gun.

**free-form fabrication** Flexible manufacturing method for rapid development of prototype parts.

**free gun** Capable of being aimed independently of the aircraft.

**free gyro** Two degrees of freedom, spin axis may be oriented in any specified attitude and not provided with erection system.

**free jet** Fluid jet after emission from nozzle.

**free-jet test** In an open hypersonic airflow, rather than having air pumped into inlet.

**freelance** Verbal code: "Self-control of air-intercept aircraft is being employed" (DoD).

**free-molecule flow** 1 Flow regime in which mean free path is at least ten times typical dimension of flying body, as at height above 180 km.

2 Flow about body in which collisions between molecules of fluid are negligible compared with collisions between these and body.

**free parachute** Deployed manually by parachutist, not by static line.

**free-piston engine** Any of several types in which hot gas is generated between pistons oscillating freely in linear or toroidal cylinders.

**FREER** Free-route experimental encounter resolution.

**free radical** Atom or group of atoms broken away from stable compound by application of external energy; often highly reactive.

**free-return trajectory** One in which crippled spacecraft would fall back to Earth.

**free rocket** Unguided rocket.

**free scan** DME operating mode providing distance to all DMEs within LOS.

**free space** Ideal homogeneous medium possessing dielectric constant of unity and in which there is nothing to reflect, refract or absorb energy.

**free-spinning tunnel** Vertical wind tunnel used to test spinning characteristics using free models.

**free-standing propellant** Not case-bonded.

**free stream** Fluid outside region affected by aircraft or other body.

**free-stream capture area** Cross-sectional area of column of air ingested by jet engine, esp. ramjet.

**free streamline** One passing well away from moving body. Streamline separating fluid in motion from fluid at rest.

**free-stream Mach number** Mach number of body measured in free stream, unaccelerated by body's presence.

**free-stream velocity** Usually means difference between body's velocity and undisturbed air, symbol  $V_\infty$ .

**freestyle** Aerobic routine selected by pilot, not preset. Similarly \* skydiving, not following a preset sequence.

**free takeoff** From aircraft carrier, not using catapult.

**free turbine** One that drives output shaft to propeller or helicopter rotors, and is not connected to compressor.

**free-vortex compressor** Axial compressor designed to impart tangential velocities inversely proportional to radius from axis.

**free-vortex flow** Persisting in fluid remote from source or solid surface, eg tornado.

**freewheel** Sprag clutch or other device which permits helicopter rotor system to continue to rotate even if input shaft from main gearbox is arrested.

**freewing** Wing freely able to rotate about spanwise axis, thus having incidence determined by relative wind while AOA remains constant [the reverse of conventional aeroplane].

**freeze** 1 To arrest dynamic operations, eg in simulator training.

2 Radar mode which, once commanded, permits one more scan; emissions then cease and display remains active but frozen until \* button is pushed a second time.

3 See *freezing*.

**freeze-out** Method of controlling humidity by condensing water vapour, and possibly carbon dioxide, over cold surface.

**freezing** 1 Stage in design when all major features are irrevocably settled, thus enabling detail design to start.

2 Manually arresting input to display, leaving static (prior) situation for study.

3 Sudden locking of flight-control system, preventing movement.

4 Sudden onset of panic causing pilot [usually pupil] to 'lock solid' on flight controls, possibly with abnormal strength.

**free zone** Customs-free area.

**freight** Cargo, including mail and unaccompanied baggage but excluding express.

**freight consolidating** Process of receiving shipments of less than carload/truckload size and assembling them into carload/truckload lots for onward movement to ultimate consignee or break-bulk point.

**freight container** See *container*.

**freight doors** Designed to take freight, vehicles or containers.

**French landing** With plenty of power on.

**Frensor** Freezing-point sensor.

**Freon** Trade name for family of halogenated hydrocarbons containing one or more fluorine atoms, including CFCs, widely used as refrigerant medium (eg in vapour-cycle air conditioning), as fire extinguishant and as aerosol propellant.

**freq, FREQ** Frequency.

**frequency** 1 Reciprocal of primitive period of time-periodic function, symbol  $f$ , units (SI) Hz, (fps units) cycles per second.

2 Number of services operated by airline per day or per week over particular route.

**frequency agility** The ability to generate an output whose frequency is variable. This is a basic ECCM technique. In the case of radars the magnetron or other waveform generator can be tuned to give a different frequency on each scan. There are many other FA methods for communications and other emissions. The objective is invariably to prevent hostile jamming.

**frequency band** Continuous range of frequencies extending between two limiting values; EM bands are listed in Appendix 2.

**frequency bias** Constant frequency added to signal to prevent its frequency falling to zero.

**frequency channel** 1 Band of frequencies which must be handled by carrier system to transmit specific quantity of information.

2 Band of frequencies within which station must maintain modulated carrier frequency to prevent interference with stations on adjacent channels.

3 Any telecommunications circuit over which telephone, telegraph or other signals may be sent.

**frequency departure** Variation of carrier frequency or centre frequency from assigned value.

**frequency deviation** 1 Maximum difference between IF (1) of FM wave and frequency of carrier.

2 In CW or AM transmission, variation of carrier frequency from assigned value.

**frequency distortion** Produced by unequal amplification of signals or reproduction of sounds of different frequency; usual criterion for high-fidelity reproduction is level amplification over 20-15,000 Hz.

**frequency division multiplex** Telecommunications allowing two or more signals to travel on one network simultaneously by modulating separate subcarriers, suitably spaced in frequency to prevent interference.

**frequency drift** Slow change in frequency of oscillator or transmitter with time.

**frequency equation** Relates phase speed to wavelength and to physical parameters of system in linear oscillation; also known as dispersion equation.

**frequency hopping** Unpredictable continual and rapid changes of frequency of radar or other military electronics to defeat hostile ECM.

**frequency modulated radar** One in which range is measured by interference beat frequencies between transmitted and received FM waves.

**frequency modulation, FM** Instantaneous frequency of modulated wave differs from carrier by amount proportional to instantaneous value of modulating wave. Combination of phase and frequency modulation commonly referred to as FM.

**frequency monitor** Stabilized receiver giving audible or visual indication of any departure of transmitter from assigned frequency.

**frequency pairing** Association of each VOR frequency with a specific DME channel to reduce workload and errors.

**frequency parameter** Ratio of airspeed to product of frequency of oscillation and representative length of oscillating system.

**frequency response** 1 Portion of EM spectrum sensed within specified limits of error.

2 Response as function of excitation frequency.

**frequency scanning** Pattern of radar-antenna movement formed by successive beams having different azimuth and frequency.

**frequency-selective** Response only to narrow frequency band.

**frequency-selective surface** Large family of frequency filters made up of band-pass or band-stop designs, eg loaded slots of various geometries, or doubly periodic arrays of metal elements or apertures in a conductive frame creating a plane-wave transmission with properties which are frequency-dependent. Fighter radomes are becoming treated with \*, on the outside [fragile] because internal \* could be destroyed by lightning strike.

**frequency shift-keying** System of telegraph signalling in which keyed signal imposes small frequency shift on carrier; frequency changes of received signal are converted to amplitude changes.

**frequency swing** Peak difference between maximum and minimum frequencies of FM signal.

**frequency tolerance** Extent to which carrier (or centre of emission bandwidth) is permitted to depart from authorized frequency because of instability.

**frequency-wild** Electric power system whose frequency is not stabilized but varies with rotational speed of generators.

**frequent flyer** Fare-paying passenger rewarded for being good customer. [Varies with carrier].

**FRES** Future rapid-effects system.

**Frescan** Frequency scanning.

**Fresnel lens** Form of echelon lens for generating parallel beam [familarly used in lighthouses].

**Fresnel mirror** Two planar mirrors joined at one edge, angle between them being almost 180°, for generating interference fringes.

**Fresnel zone** Any spatial surface between transmitter and receiver, or radar and target, over which increase in distance over straightline path is equal to integer multiple of half wavelength. Loosely, the antenna near field.

**Frespid** Frequency response identification (software).

**FRET, Fret** First round effect[s] on target.

**fretting** Rubbing together of solid surfaces, esp. slight movement but high contact pressure.

**FRF** 1 Frequency-response function.

2 Flight-readiness firing.

**FRFC** Full-range flow control.

**FRFI** Fuel-related fare increase.

**FRGN** Foreign.

**FRH** Flap-retraction height.

**friction** Force generated between solids, liquids or gases opposing relative motion.

**friction coefficient** Friction (static, on point of relative motion, or dynamic) divided by perpendicular load pressing surfaces together.

**friction horsepower** Indicated horsepower minus brake horsepower.

**friction layer** Planetary boundary layer.

**friction lock** Device in which friction is used to prevent unwanted movement; eg of throttle levers. Usually adjustable up to a positive lock.

**friction range** For a given longitudinal trim setting, the range of airspeeds that can be flown stick-free due to FCS friction.

**friction wake** That downstream of streamlined non-lifting body.

**friction welding** Welding by rotating two parts together under load until surfaces are on point of melting and then forcing together to squeeze out joint material, simultaneously arresting rotation.

**Friendly** Functional requirement identification development methodology (Euret).

**friendly** Not hostile, contact positively identified as such (DoD).

**FRIG** Floated rate-integrated (or integrating) gyro.

**Frise aileron** Aileron having inset hinges and bevelled along upper leading edge; when lowered forms continuation of wing upper surface but when raised nose protrudes below wing, increasing drag and equalising aileron drag in banked turn.

**FRL** 1 Fuselage reference line.

2 Flyover reference location.

**FRM** 1 Failure-related mode.

2 Fault-report[ing] manual.

3 Flammability-reduction means [tank explosion].

**FRMALS** Fédération Royale Marocaine de l'Aviation Légère et Sportive [Rabat Chellah] (Morocco).

**FRMG** Forming (weather report).

**FRMN** Formation (weather report).

**FRMR** Frame reject[ion].

**FRMS** Fatigue risk management system.

**FRN** Federal Radionavigation Plan, to phase out non-satellite nav aids from 2010 (US DoT).

**FRNG** Firing.

**FRO** Failure requiring overhaul.

**FROB** Failure Review Oversight Board.

**FROD** Functionally related observable differences.

**FROG** Free rocket over ground.

**frog** Free-fall sport-parachuting position with body horizontal face-down, arms stretched parallel horizontal and lower legs vertical.

**front** 1 Boundary at Earth's surface between two contrasting air masses; usually associated with belt of cloud and precipitation, and more or less sharp change in wind (see *cold* \*, *occluded* \*, *stationary* \*, *warm* \*).

2 Occupant of front cockpit of tandem-seat aircraft, especially if aircraft commander (colloq., usually US/NATO).

**frontal area** Projected cross-section area of body viewed from front.

**frontal attack** Air intercept which terminates with heading crossing angle greater than 135° (DoD).

**frontal weather** To be expected in front; clouds, rain, temperature variation and other phenomena.

**front casing** Where this term is used in connection with a turbofan engine, it means that position of the fan case actually surrounding the fan, designed to survive FBO.

**front course sector** That situated on same side of localizer as runway.

**front crew** This usually means pilots.

**front end** Various meanings, including (1) system location (actual geometry immaterial) where EDP program is developed, and editing, compiling and peripheral access take place. (2) Start of major design process, long before appearance of hardware.

**front enders** Flight crew members, esp. in military transport (colloq.).

**front ignition** Solid rocket motor with igniter at end of filling or grain furthest from nozzle.

**frontogenesis** Process which produces discontinuity in

atmosphere or increases intensity of existing front, generally caused by horizontal convergence of air currents possessing widely different properties.

**frontolysis** Process which tends to weaken or destroy a front.

**front stagnation point** See *forward stagnation point*.

**Fropa** Frontal passage.

**Frost** Fast read-out optical storage technology.

**frost** Small drops of dew which freeze upon contact with object colder than 0°C such as aircraft passing from cold air into warmer humid air. Glazed \* (rain ice) is layer of smooth ice formed by rain falling on object at below 0°C. Hoar \* is white semi-crystalline coating.

**frost point** Temperature of air at which frost forms on solid surface at same temperature.

**Froude efficiency** Basic element of propulsive efficiency:

$$\frac{2U}{V+U}$$

where U is TAS and V is velocity of propulsive jet

or propeller slipstream relative to the aircraft.

**Froude number** Non-dimensional ratio of inertial force to force of gravity for fluid flow; reciprocal of Reech number;  $Nfr = v^2/fg$ , where v is characteristic velocity and 1 characteristic length (may be given as square root of this ratio).

**frozen** No further design changes permitted.

**frozen smoke** Acoustic/thermal insulation [colloq. airogel said to be lowest-density semi-rigid material, able to support  $10^3 \times$  own mass].

**frozen stick** Terrifying situation in which pilot cannot overcome stick force needed to recover from steep dive.

**FRP** 1 Fibre-reinforced plastic[s] or plywood.

2 Flight-refuelling probe.

3 Fuselage replacement programme.

4 Federal radio navigational plan.

5 Fares and Rates Panel.

6 Full-rate production.

7 Fleet response plan.

**FRPA** Fixed reception pattern antenna.

**FRPC** Federal Research and Production Centre, [English rendition] (R).

**FRQ** Frequent, frequency.

**FRR** 1 Flight-readiness review.

2 Final readiness review.

**FRS** 1 Fan rotation speed ( $N_1$ ).

2 Fighter, reconnaissance, strike (role prefix, UK).

3 Fleet Replacement Squadron (USN, USMC).

4 Flying Refresher School (RAF).

5 Field Repair Squadron (RAF).

6 Flammability reduction system.

7 Flight reconstruction system (FOQA).

**FRSI** Flexible reusable silica, or surface, insulation.

**FRST** Frost.

**FRTO** Flight radio-telephony operator.

**FRTOL** 1 Flight radio temporary operating license.

2 Flight R/T operator licence (UK).

**FRTV** Forward repair and test vehicle.

**FRU** 1 Forward Repair Unit (RAF).

2 Fleet Requirements Unit (RN).

**fruiting** SSR responses of aircraft to interrogation by other stations or responses of different aircraft to interrogation by other stations, in either case not synchronized with desired response by aircraft interrogated by own station; hence defruiting usually simple.

**fruit salad** Impressive rows of medal ribbons (UK, colloq.).

**FRUSA** Flexible rolled-up solar array.

**FrW** Friction welding.

**FRWD** Fast-reaction weapons demonstration.

**FRZ** 1 Freeze (information or display).

2 Flight Restricted Zone [e.g. within 15 n.m. of Washington Reagan] (FAA).

**FS** 1 Fuselage station.

2 Frame station.

3 Fail-safe.

4 Fighter Squadron.

5 Front spar [often F.S.].

6 Flight simulator.

7 Feasibility study.

8 Full-supercharge gear.

9 Factor[s] of safety.

10 French standard [approach lighting].

**Fs** Fractostratus.

**f<sub>s</sub>** 1 Signal frequency.

2 Shear stress [up to near u.t.s.].

**ft/s** Not acceptable for ft/s.

**FSA** 1 Final squint angle.

2 Force-structure aircraft (US).

3 Fuel-savings advisory; S adds system and see *FSA/CAS*.

4 Frequency-spectrum availability.

5 Future strike aircraft (USAF).

6 Flight-spoiler assembly.

**FSAA** Flight simulator for advanced aircraft (NASA).

**FSA/CAS** FSA (3) cockpit avionics system.

**FSAF** Future surface-to-air family (title often in French) (Int.).

**FSAGA** First sortie after ground alert.

**FSAS** 1 Fuel-savings advisory system.

2 Flight-service automation system.

**FSAT** 1 Full-scale aerial target.

2 Federal service of air transport (R).

**FSB** 1 Fan-stream burning.

2 Fasten seat-belts.

3 Flight Standardization Board (US).

4 Federal security service (R).

**FSC** 1 Force-sensing control[ler].

2 Fuel-saving[s] computer.

3 Forward shaped-charge warhead.

4 Flight Safety Committee (UK).

5 Flight-safety critical.

**FSCC** Flap/slat control computer[s].

**FSCL** Fire-support co-ordinating line.

**FSCM** Federal supplier [or supply] code of manufacturer, or for manufacturers (US).

**FSFCP** Flap/slat control processor.

**FSCRS** Flight-safety confidential reporting system [not same as Chirp].

**FSCTE** Fire Service Central Training Establishment (UK).

**FSD** 1 Full-scale deflection.

2 Full-scale development.

3 Federal Security Director (TSA).

4 Full-spectrum dominance.

5 Flying scholarships for the disabled.

6 Specification prefix for aero gas turbine fuels and lubricants (Sweden).

**FSDG** Fan-shaft-driven generator.

- FSDO** Flight Standards District Office (FAA).
- FSDPS** Flight service data-processing system (FAA).
- FSE** 1 Fleet-supportability evaluation.  
2 Field-service engineer, or evaluation.
- FSED** Full-scale engineering development.
- FSEMC** Flight Simulator Engineering and Maintenance Conference [Annapolis, MD21401] (US).
- FSEO** Fire Support Element Officer (MAOCC).
- FSEU** Flap/slat electronics unit.
- FSF** 1 Flight Safety Foundation [*'provides leadership to over 600 member organisations in 75 countries'; main office, Alexandria, VA22314-1756*] (US, Int.).  
2 Svenska Flygsporförbundet (Sweden).  
3 Full-scale fatigue; S adds specimen, T test.  
4 Forward Supply Flight (RAF).
- FSG** 1 Fluid-sphere gyro.  
2 Fans stakeholder group.  
3 Flight Simulation Group (RAeS, C adds Committee).
- FSI** Field service instruction.
- FSII** Fuel-system icing inhibitor.
- F-Sims, FSIMS** Flight-safety information-management system.
- FSK** Frequency-shift keying.
- FSL** 1 Full-stop landing, aircraft brought to halt.  
2 Forecast Systems Laboratory (NOAA).  
3 Fast serial link.
- FSM** Flight schedule monitor.
- FSME** Flight structural-mode excitation.
- FSN** 1 Factory serial number.  
2 Federal stock number.  
3 Field-service notice.  
4 French-speaking nations.
- FSO** 1 Free-space optical (USAF).  
2 Front-sector optronics.
- FSOL** Flight-safety occurrence list.
- FSOV** Fuel shut-off valve.
- FSP** 1 Flight [progress] strip printer.  
2 Flexible sustainment program.  
3 Fragment-simulator projectile (test of armour).  
4 Function signalling panel.  
5 Flir-stabilized payload.  
6 Flight-screening program (USAF).
- FSPF** Military production authority (Iraq).
- F<sub>spil</sub>** Inlet spillage drag correction.
- FSPM** Flight-strip printing module.
- FSP/UPT** Flight-screening program and undergraduate pilot training (USAF).
- FSQP** Feasible sequential quadratic programming.
- FSR** 1 Frequency set-on receive; S adds system.  
2 Field-service representative.  
3 Flight safety reporting.  
4 Further special refit.
- FSRI** Florida Space Research Institute (Federal funding, US).
- FSRS** 1 Frequency-selective receiver system.  
2 Flight-safety recording system.
- FSS** 1 Flight Service[s] Station (FAA).  
2 Flight Standards Service (FAA).  
3 Flying Selection, or Support, Squadron (RAF).  
4 Frequency-selective surface[s].  
5 Fixed satellite service[s], or fixed-service satellite.  
6 Micro class, single-seat.  
7 Fire-suppression system.  
8 Flow-separation suppression; E adds element.  
9 Flight-support system.  
10 Flight Superintendent, Simulators.
- FSPP** Forward-scattering spectrometer probe.
- FSSR** Federal Safety Standard Regulations.
- FST** 1 Flight-simulation test.  
2 Fuel-spike test.  
3 Full-scale tunnel.  
4 Fuel-system trainer (F-22).
- FSTA** Future strategic tanker aircraft.
- FSTP** Full-spectrum threat protection.
- FSU** 1 Flir sensor unit.  
2 File server unit.
- F<sub>su</sub>** Ultimate shear strength.
- FSVL** Fédération Suisse du Vol Libre (Switzerland).
- FSVT** Federal service of air transport; equivalent to FAA (R).
- FSW** 1 Forward-swept wing.  
2 Friction-stir welding.
- FT** 1 Fault-tolerant.  
2 Fast-track.  
3 Fourier transform.  
4 Functional test.  
5 Terminal forecast.  
6 False target; G adds generator, I imagery, LO lock-on, R rejection.  
7 Feet [confusing].
- F-T** Flight-time (diagram).
- ft** Foot, feet.
- f(t)** Function of time.
- FTA** 1 Fatigue-test article.  
2 Fast tactical attack.  
3 Fire-track area.  
4 Fault-tree analysis.
- FTAAS** Fast-time acoustic-analysis system.
- FT-ADIR** Fault-tolerant air-data inertial reference; S adds system, U unit.
- FTAE** First-time-around echo.
- FTAJ** Frequency/time ambiguity jamming.
- FTB** Flying, or flight, testbed.
- FTC, ftc** 1 Fast time constant.  
2 Federal [and also Fair] Trade Commission (US).
- ftc** Foot-candle [contrary to SI].
- FTCA** Future Tactical Combat Aircraft.
- FTCCP** Flight-training candidates checks program (US Dept. of Justice).
- FTD** 1 Field Training Detachment (USAF).  
2 Foreign Technology Division (USAF).  
3 Flight-training device[s].  
4 Flight-test development [usually preceded by pre-], or display.
- FTDC** Fault-tolerant distributed computing.
- FTDW** Flying Training Development Wing (RAF).
- FTE** 1 Flight-test engineer.  
2 Flight technical error.  
3 Full-time equivalent (personnel).
- FTEP** Full-time error protection.
- FTESS** Fixed trailing-edge secondary structure.
- FTF** Flygtekniska Föreningen (Sweden).
- FTG** 1 False-target generator.  
2 Fitting.
- FTH** 1 Full-throttle horsepower.  
2 Further.
- FTI** 1 Fixed time interval.  
2 Fixed target imagery, or indicator, or indication.

3 Fast tactical imagery.  
 4 Flight test instrumentation.  
 5 Fictional threat image.  
 6 Flight-training instructor.  
 7 Association of aeronautical engineers (G).  
 8 Flight-time integration.  
 9 Federal Telecommunications Infrastructure (FAA).

**FTIR** Fourier transform of IR [S adds spectroscopy].  
**FTIT** Fan-turbine inlet temperature.  
**FTK** Freight tonne-kilometre(s).  
**FTL** Foot-lambert (non-SI unit of luminance or brightness).  
**ftL, FTL** Flight-time limitation.  
**FTLB** Flight-Time Limitation Board (UK).  
**FTLO** 1 Fast-tuned local oscillator.  
 2 False-target lock-on.  
**FTM** 1 Frequency/time modulation.  
 2 Flight-test mission objective(s).  
 3 Fleet technical management.  
**ft/min** Feet [climb or descent] per minute.  
**FTNW** Future tactical nuclear weapon.  
**FTO** 1 Flexible take-off.  
 2 Flying training organization.  
 3 Federation of Tour Operators (UK).  
**FTP** 1 Functional test, procedure.  
**FTPP** Fault-tolerant power panel.  
 2 File transfer protocol.  
**FTR** 1 Failed to return.  
 2 Flat-tyre radius.  
 3 False-target rejection.  
 4 Future transport rotorcraft.  
**Ftr** Fighter.  
**FTRG** Fleet Tactical Readiness Group (USN).  
**FTS** 1 Flying Training School.  
 2 Fatigue-test specimen.  
 3 Federal Telecommunications System.  
 4 Flexibe turret, or track, system.  
 5 Flight termination system (UAV).  
**ft/s** Feet per second, which see for conversions.  
**FTSA** 1 Fault-tolerant system architecture.  
 2 Fédération Tunisienne des Sports Aériens [office, Tunis 1001] (Tunisia).  
**FTSC** Fault-tolerant spacecraft (or spaceborne) computer.  
**FTTU** Fliegender Technologie-träger unbemannt = unmanned technology testbed (ETAP).  
**FTU** 1 Forward transmitter unit.  
 2 Ferry Training Unit (RAF).  
 3 Formal Training Unit (USAF).  
**F<sub>tu</sub>, F<sub>TU</sub>** Ultimate tensile strength; F often italic.  
**FTV** Flight test vehicle.  
**FTW** Follow-through warhead.  
**FTX** Field training exercise.  
**F<sub>ty</sub>** Yield strength in tension.  
**FTZ** Foreign trade zone, secure duty-free area at airport legally outside territory administered by local customs authority.  
**FU** 1 Fuel uplifted.  
 2 Fire unit.  
 3 Forecast upper wind.  
**FU, Fu** Smoke (ICAO).  
**fu** Fuel used.  
**FUA** Flexible use of airspace (UK, 2004-).  
**FUCE** Far-ultraviolet camera experiment.

**fudge factor** Multiplying factor to allow for unknowns (colloq.).

**FUE** Full unit equipped.

**fuel** Substance used to produce heat by chemical or nuclear reaction; usual chemical reaction is combustion with oxygen from atmosphere or from rocket oxidant (see *kerosene, petrol, propellant*).

**fuel accumulator** Container for storing fuel expelled during starting cycle to augment flow momentarily at predetermined fuel pressure.

**fuel additive** Any material or substance added to a fuel to give it some desired quality; eg tetraethyl lead added as an anti-detonation ('knocking') agent.

**fuel advisory departure** Procedure to save fuel by holding aircraft prior to engine start, rather than at destination stack.

**fuel-air explosive** Selected liquid fuels which on warhead impact are scattered in fine cloud of large volume alongside target; this is then detonated (combining with atmospheric oxygen) less than 1 s after impact with blast effects generally greater than that of same mass of conventional explosives.

**fuel-air mixture analyser** Measures piston engine air-to-fuel ratio. Chemical \*\*\* measures absorption of CO<sub>2</sub> by substance such as sodium or potassium hydroxide; physical (electro-chemical \*\*\*) measures difference in electrical resistance between two sampling cells, one open to air and other to exhaust.

**fuel blending facility** One having authority to mix hydrocarbon fractions to produce piston or turbine fuels to specification, with correct additives.

**fuel burn** *Fuel consumption*.

**fuel bypass** Maintains fuel pressure in carburettor float chamber of supercharged piston engine at fixed level above carburettor air pressure.

**fuel capacity** Unless otherwise stated means actual volume of tank(s), not of system, and has no relevance to usable capacity.

**fuel cell** Device which converts chemical energy directly into electricity; differs from storage battery in that reactants are supplied at rate determined by electrical load.

**fuel chop** Sudden cutoff of supply, for whatever reason.  
**fuel consumption** Measured on volume and mass basis; 1 mpg = 0.354 km/1 (UK), 0.425 km/1 (US); 1 gal/mile = 2.825 1/km (UK), 2.353 1/km (US); including payload, 1 tonne-km l<sup>-1</sup> = 2.868 UK ton-miles/UK gal; reciprocal is 0.348.

**fuel control and monitoring computer** Measures and indicates fuel volume and mass, controls refuelling to selected levels whilst monitoring pumps and valves, monitors and controls tank temperatures, and controls tank utilization sequence to minimize wing bending moment and control c.g.

**fuel control unit** Governs engine fuel supply in accordance with pilot demand, ambient conditions and engine limitations.

**fuel-cooled** Cooled by fuel, either en route to engine or recirculated back to tank (see *regenerative cooling*).

**fuel cost** Cost of fuel as proportion of total DOC, typically [all gas-turbine aircraft] 20 to 25 per cent.

**fuel cut-off** Device for cutting off the supply of metered fuel to cylinders or a combustion chamber.

**fuel dipper** Automatic adjustment of fuel flow to turbine

engine, usually triggered to reduce flow at specific time, eg when firing guns or when any kind of upset disturbs inlet airflow to cause rapid rise in TGT.

**fuel dumping** Release of fuel in flight to bring weight down to MLW in emergency.

**fuel flowmeter** See *flowmeter*.

**fuel-flow regulator** Central element of gas-turbine engine CASC, driven by engine and incorporating two governors, pressure-drop and speed control, and two variable-orifice sliding valves, the VMO and the PDC (6).

**fuel grade** Quality of piston engine petrol (gasoline), esp. as defined by anti-knock rating; previously called octane number. Usual grades are 80 (dyed red), 100 (green), 100L (green or blue, lower TEL content) and 115 (purple).

**fuel injection** Inevitable in diesel or compression-ignition engines; term normally refers to Otto-cycle piston engine with mechanical injection of measured quantities of fuel either into carburation induction system or directly to cylinders. Unlike carburettor, \*\* unaffected by aerobatic or evasive manoeuvres and not prone to icing or fire hazards.

**fuel jettison** Rapid discharge of fuel from aircraft in emergency.

**fuel-jettison time** That required to reduce weight from MTO to MLW.

**fuel lag** Deliberate short delay in injection of one propellant into rocket thrust chamber to establish particular ignition sequence.

**fuel-lubricated** Use of aircraft fuel as sole lubricant of a [usually rotating] item; usually the item is designed to continue to run in the absence of fuel.

**fuel manifold** Peripheral main pipe with branch pipes distributing fuel to all burners of gas turbine.

**fuel metering unit** In modern gas-turbine aircraft, the [usually electronic] device which responds to signals from the EEC to modulate fuel flow according to engine demand. Part of a Fadec, if this is fitted.

**fuel nozzle** In a gas turbine engine these atomise or vaporise the fuel to ensure very rapid burning in a short linear distance; see *Simplex*, *Duplex*, *Lubbock*, *airspray*, *vaporizing*.

**fuel-pressure switch** Ensures full current is not applied to electric starter until fuel pressure has reached predetermined level.

**fuel pump** In a traditional piston-engined aircraft, usually a single gear-type pump driven by the engine, often supplemented by a priming pump operated manually. In a modern jet aircraft, usually an electrically driven LP pump (often called a tank booster pump), commonly inducer+centrifugal, delivering to an HP on the engine (commonly gear type driven off the engine HP shaft). Other \* include the *ejector pump*.

**fuel-quantity indication** Simple aircraft still often use a float-type gauge, but most fuel systems have one or more capacitance or ultrasonic probes in each tank, their output being shaped and summed electronically to convert level to mass.

**fuel savings advisory** Provides command to pilots using flight-path optimization algorithms and Flight Manual data for L/D and thrust. An additional mode can be preset for T-O/ldg parameters.

**fuel shift** Gross long-term movement of fuel [eg, caused by prolonged steep climb], can be very dangerous.

**fuel shut-off** See *cut-off*.

**fuel sink** Total heat capacity of fuel as receptacle for surplus onboard energy; unit should be J.

**fuel sloshing** Gross short-term movements of fuel or oxidant in part-empty tank.

**fuel spike test** Tests engine surge margin.

**fuel starvation** Fuel in tank[s] is for some reason prevented from reaching engine[s].

**fuel state** The precise quantity of fuel in the tank[s] of an aircraft; quality of the fuel is irrelevant.

**fuel tank** See *bag tank*, *integral tank*, *rigid tank*, *drop tank*.

**fuel tester** Hand-held transparent tube, incorporating slot-head and Phillips-head drivers, for checking contamination.

**fuel trimmer** An adjustment on gas-turbine fuel control to achieve a precise value of N<sub>2</sub> (NPC), adjusted to ISA sea-level for a particular engine, repeated after major overhaul and recorded on data plate.

**fuel vent** Small pipe used to equalize pressure inside and outside tank.

**FUF** Favourable unbalanced field.

**fufo, FUFO** Full-fuzing options (NW).

**FuG** Radio equipment (G).

**fuh** Fuel mass at given height (usually rocket).

**Führer weather** Sunshine, blue sky (WW2 Luftwaffe).

**Fu L, FuL** Führungsstab der Luftwaffe (G).

**full annealing** Heating above critical temperature, or crystalline-transformation point, followed by slow cooling through range of transformation; results in relief of residual stress, greater ductility, increased toughness but lower strength.

**full-authority control** Control system, today usually electronic but could be fluidic, which provides complete management function [of engine(s), system(s), or complete aircraft], with pilot serving as passive observer. Early example is Fadec, from which FAFC differs in lacking transient control intelligence, eg to control compressor airflow.

**full flight regime** Designed to operate throughout each flight, eg FFR autothrottle.

**full-flight simulator** Provides total reproduction of flight deck, qualified to FAA Level D.

**full-flow oil system** Gas-turbine [usually advanced turbofan] lubrication system without a pressure-relief valve, filters and coolers being protected against extreme pressures by bypasses.

**full fuzing options** For NW, air drop, air burst, ground burst, contact burst, time-delay after parachute-retarded, laydown retarded or free-fall.

**full house** No parking stand left at terminal.

**full indicator movement** Micrometer readings may be taken at any point on a part being measured.

**full lateral** Describes FMC or FMS (1) exercising total authority via AFCS from just after takeoff until final approach.

**full mission trainer** Simulator capable of duplicating complete mission [initially for F-22] with any mal-function; can network with others.

**full performance level** Category of most highly qualified air traffic controllers (FAA 1).

**full-pressure suit** Completely enclosing wearer's body and able to sustain internal gas pressure convenient to human functions (see *partial pressure suit*, *water suit*, *spacesuit*).

**full rudder, aileron or elevator** Hard-over demand signal by pilot or flight-control system moving surface to limit of travel.

**full-scale aerial target** Expendable target for air-combat training with size similar to manned fighter. Invariably means a retired fighter converted as an RPV.

**full-scale development** Period when system or equipment and items for its support are tested and evaluated; intended output is pre-production system which closely approximates final product, documentation for production phase, and test results which demonstrate product will meet requirements (USAF).

**full-scale tunnel** Wind tunnel for testing complete aircraft.

**full-span stall** 1 In the case of a wing, self-explanatory, a stall extending from tip to root, or root to tip.

2 In an axial compressor, a stall affecting the full radial dimension (span) of each rotor and stator blade.

**full-wave rectifier** Two elements in split circuit rectify both positive and negative halves of waveform, currents combining unidirectionally at output.

**fully active** See *active*.

**fully developed flow** Flow of viscous fluid over solid surface on which boundary layer has reached full thickness and velocity distribution remains constant downstream.

**fully expanded nozzle** Normally, nozzle of jet engine, esp. rocket, whose supersonic divergent portion expands jet to ambient pressure at exit plane.

**fully factored** Multiplied by ultimate factor of safety.

**fully FBW** No mechanical backup, because aircraft could not be flown manually.

**fully feathering** See *feathering*.

**fully grown dimension** Dimension of part after process that results in enlargement, esp. high-temperature creep under tensile load.

**fully ionised plasma** All neutral particles have lost at least one electron. With hydrogen no further ionisation is possible; other atoms can be further excited.

**Fulva** Federazione Unitaria Lavoratori Trasporte Aereo (I).

**Fulton system** Folding recovery system on nose of aircraft for retrieving space capsules and other parachuted loads in mid-air; used in modified form for repeated pick-up of persons or other loads from ground.

**fumble factor** Factor of safety.

**Functional Airspace Block** Newly created national parcels of European airspace intended to replace inefficient national airspaces (Single European Sky).

**Functional Hazard Analysis** Standardised procedure for examining all kinds of failure and considering their actual or potential ultimate effects, categorised as: catastrophic [target  $<1 \times 10^{-9}$  per flight hour], hazardous [ $<1 \times 10^{-7}$ ], major [ $<10^{-5}$ ] or minor [ $<1 \times 10^{-3}$ ].

**functionally shaped controls** Manual controls shaped to confirm their function, eg terminating in miniature wheel or flap.

**fundamental frequency** 1 Of periodic quantity, lowest component frequency of sinusoidal quantity which has same period.

2 Of oscillating system, lowest natural frequency; normal associated mode of vibration is fundamental mode.

3 Reciprocal of period of wave.

4 Lowest resonant antenna frequency without added inductance or capacity.

**fundamental units** Mass, length and time, from which all other units are derived. Main systems in use are SI, foot-pound-second, centimetre-gramme-second and metre-kilogramme-second.

**funding** Process of finding and securing political approval for sums of money needed for military programmes (US).

**fungus** Generalised term for life-forms growing at fuel/air interface in tank.

**funicular polygon** See *force diagram*.

**funk** General term for com. radio (G).

**funnel** 1 Safe approach area centred on ILS glidepath and normally considered to extend  $0.5^\circ$  above and below and  $2^\circ$  left and right; aircraft inside \* should be able to land.

2 Pre-1950 term for final approach area to runway, esp. any lighting or other guidance system for channelling aircraft to runway.

**fu<sub>0</sub>** Fuel mass at liftoff.

**FUR** Future utility rotorcraft.

**furaline** French rocket fuel; aniline with traces of anti-corrosive additive.

**furlong** Non-SI unit of length, = 201.168 m.

**furlough** 1 Leave of absence (holiday with pay) from armed forces (US).

2 Laying off (holiday without pay) from airline during traffic downturn or from similar cash-strapped employer (US).

**furnishing** Non-structural cabin interior trim, seats, galley, toilet, baggage racks and associated features in commercial aircraft.

**furnishing mock-up** Whole or part of cabin prepared for particular customer's evaluation and refinement.

**FUS** 1 Far-UV spectrometer.

2 Flexible use of airspace.

**FUSE** Far-UV Spectroscopic Explorer.

**fuse** Linkage in operating system or structure so designed that, if the system or structure becomes overloaded, it fails at this place. Without a suffix, a weak link in an electrical circuit, usually a conductor with a low MPt. Not to be confused with *fuze*.

**fuse bolt, fuse pin** Mechanically weak link at a point of high stress in a structural system, such as attachment for engine or landing gear.

**fusee** Pyrotechnic squib installed in solid-propellant case to ignite charge over whole length.

**fuselage** Main body of an aerodyne, absent in all-wing designs; when tail is attached to booms, called nacelle; with planing bottom called hull.

**fuselage dihedral effect** Effect of the fuselage on roll stability in sideslip, generally positive with a high wing.

**fuselage number** Identity of aircraft (R, USSR).

**fuselage reference line** Straight line used as reference from which basic dimensions are laid out and major components located; usually along plane of symmetry and at convenient height.

**fuselage shielding** Disturbance to normal ram airflow into side-mounted intake to fuselage engine in yawed flight.

**fuse pin** Strong non-redundant pin attaching engine, or engine pylon, to airframe.

**fusible plug** Several types, most important being fitted in

main landing wheels; if temperature rises to dangerous value (at which tyre could burst) after excessive braking, \*\* blows and releases pressure in controlled manner.

**fusion** 1 So-called thermonuclear process whereby nuclei of light elements combine to form nucleus of heavier element, releasing very large amounts of energy; can be controlled and sustained.

2 Collection and integration of outputs from all of a range of sensors and warning systems, hence *IDF*.

3 Generally, data processing.

**fusion bomb** One using energy of thermonuclear fusion.

**fusion power density** Power generated per unit volume in controlled thermonuclear plasma; using deuterium at  $10^{16}$  particles/ml and 60 kV, \*\*\* is about 1 kW, as kinetic energy of reaction products.

**fusion reactor** Reactor in which thermonuclear fusion takes place.

**fusion welding** Fusing edges of two base metals by using a welding flame to melt edges of metals, and a welding rod, which is similar in composition, to fuse or weld two metals together.

**FUSS** Flaps-up safety speed.

**future air-navigation systems** Wide range of incoming nav aids including satnavs, Glonass, GNSS, FMS, FNC, new R-navs and Mode-S.

**future cycle accumulation** Number of LCF or operating (mission) cycles operator plans to accumulate on given hardware.

**FUV** Far ultra-violet.

**fuze** Device or mechanism designed to start detonation of high explosive under proper conditions of heat, impact, sound, elapsed time, proximity, external command, passage of electric current or other means, and usually without danger of detonation before weapon is armed.

**fuzzy logic** Programming based on instructions not precisely specified numerically but on best estimates between 0 (false) and 1 (true).

**FV** 1 Flight visibility.

2 Prefix to three-figure designators of alloys [mainly stainless steels] developed by Firth-Vickers (UK).

3 Finite volume [mesh code].

**FVA** Federación Venezolana de Aeroclubes (Venezuela).

**F<sub>VAC</sub>** Vacuum thrust.

**FVB** Fleet Viability Board (USAF).

**FVC** Forebody vortex control [T adds technology].

**FVD** Fluorescent vacuum display.

**FVLPR** Hang-gliding federation (Puerto Rico).

**FW** 1 Fiscal week.

2 Fixed wheel (sailplane).

3 Failure warning.

4 Filament-wound, see *filament winding*.

5 Fighter Wing (USAAF, USAF).

6 Frequency-wild.

**f.w.** Full wave.

**FWA** Flight watch area.

**FW&A** Fraud, waste and abuse.

**FWC** 1 Filament-wound cylinder, or case.

2 Flight, or fault, warning computer.

3 Flight watch centre.

**FWCS** Flight-watch control station.

**FWD** Falling-weight deflectometer.

**fwd** Forward.

**FWE** 1 Foreign weapons evaluation (US).

2 Fighter Wing Equivalent.

**FWETE** Foreign weapons equipment technology evaluation (US DoD).

**FWF** Firewall forward, the engine compartment of single-engine tractor aeroplane.

**FWHM** Full wave, half modulation.

**FWOC** 1 Forward wing operations centre (RAF).

2 Fleet Weather & Oceanographics Centre (UK).

**FWS** 1 Fighter Weapons School (USAF).

2 Flight warning system.

3 Fire warning system.

4 Filter wedge spectrometer.

**FWW** Fighter Weapons Wing.

**FWWS** Food, water and waste subsystems.

**FX** Fuel type unspecified.

**F<sub>x</sub>** Helicopter aerodynamic force parallel to plane of rotor disc [disk].

**f(x)** Function of x (math).

**FXML** Federated extensible markup language.

**FY** Fiscal year; US government runs 1 Oct. to 30 Sept.

**F/Y** First-class and economy or tourist.

**FYDP** 1 Five-year defence plan.

2 Future years defense program(US).

**FYDS** Flight director/yaw-damper system.

**F/Y ratio** Fission/yield ratio.

**F<sub>z</sub>** Helicopter aerodynamic force normal to plane of rotor disk [disk].

**FZ, FZG** Freezing; **FZDZ** freezing drizzle, **FZFG** fog, **FZRN** rain.

**fZ** Transverse VSI (magnetic) component.

**FZP** Fresnel zone plate.

# G

- G** 1 Giga, multiplied by  $10^9$ .  
 2 Geostrophic force.  
 3 Geared (US piston engines).  
 4 Universal *gravitational constant* =  $6.6705 \times 10^{-11}$  Nm<sup>2</sup>kg<sup>-2</sup>.  
 5 Stress imposed on body due to applied force causing acceleration.  
 6 Gun (US DoD).  
 7 Shear modulus, rigidity.  
 8 Aircraft category, single-engine transport (USN 1939–42).  
 9 Aircraft category, glider (USA 1919–26 and USAF 1948–55).  
 10 Aircraft category, gyroplane [autogiro] (USAAC 1935–39).  
 11 Role prefix, air-refuelling tanker (USN 1958–62).  
 12 Role prefix, parasite carrier (USAF 1949–55).  
 13 Status prefix, permanently grounded (US from 1924).  
 14 Guard (suffix to serial on secret aircraft, UK, or to radio frequency).  
 15 Uncontrolled (airspace).  
 16 Green.  
 17 Gust[s].  
 18 Ground control.  
 19 Gain (radio).  
 20 Group.  
 21 Geschwader (G).  
 22 Sonobuoy size 419-mm long.  
 23 Conductance (also  $\mathcal{U}$ ); unit, siemens.  
 24 Graphite.  
 25 Gauss.  
 26 Generator.  
 27 Record category: parachuting (FAI).
- g** 1 Acceleration due to Earth gravity, international standard value being  $9.80665 \text{ m/s}^2$ , assumed at standard sea level in atmosphere; often *g*, italic.  
 2 Gram[me]s.  
 3 Grid.  
 4 Suffix, gauge pressure.  
 5 Suffix, height AGL.
- G<sup>3</sup>** Gadolinium-gallium garnet.
- °G** Grid [degrees].
- g-break** Sudden change of aircraft trajectory away from previous straight line in lateral or upward direction, eg following fast low-level run over airfield before landing.
- G-display** Rectangular, target is at centre (when radar aerial is aimed at it) and grows lateral ‘wings’ as range is closed; aiming errors result in appropriate displacements of blip from centre.
- g-force** Inertial force, that needed to accelerate mass, usually expressed in multiples of gravitational acceleration.
- G-layer** Layer of free electrons in ionosphere occasionally observed above F<sub>2</sub> layer.
- g-loc** Pilot blackout and LOC induced by severe and sustained vertical acceleration.
- g-meter** Indicates acceleration, usually in vertical plane.
- G-seat, g-seat** Seat simulating Z-axis acceleration, occupant normally wearing g-suit.
- G-Star** A spatial temporal anti-jam receiver for GPS-guided weapons.
- g-suit** Worn by pilot or astronaut; exerts pressure on abdomen and lower parts of body to prevent or retard collection of blood below chest under positive acceleration. Not necessarily pressure suit.
- g-tolerance** Tolerance of subject, human or device, to acceleration of specified level and duration. In case of human, usually vertical [head/toe direction].
- GA** 1 General aviation.  
 2 Gas analysis.  
 3 Gimbal angle.  
 4 Group accounting.  
 5 See *general-arrangement drawing*.  
 6 Go-around.  
 7 Military code for lethal nerve gas developed (G, 1937) as Tabun.  
 8 Ground attack aircraft category (USA 1919–24).  
 9 Goggle aut ejector.  
 10 Grazhdanska Aviatsiya, civil aviation (R).  
 11 Grid amplifier, or array.  
 12 Genetic algorithm[s].
- G/A** 1 Ground to air.  
 2 Glycol/alcohol.
- G<sub>a</sub>** In flight-control channel, the equivalent transfer function for differential ailerons.
- GAA** 1 General Aviation Association, [office, Bankstown, NSW] (Australia).  
 2 General Aviation Alliance [October 2004-] (UK).  
 3 Grid-array amplifier.
- GAAAA, GA<sup>4</sup>** Global Airline Alliance Adherence Agreement (Int.).
- GAAC** 1 General Aviation Awareness Council [at RAeS, London W1J 7BQ] (UK).  
 2 General Aviation Airports Coalition (US).
- GAACC** General Aviation Airworthiness Consultative Committee (UK).
- GAAP** Generally accepted accounting principles.
- GaAs** Gallium arsenide.
- GAATS** Gander automated air-traffic system.
- GAC** 1 Gust-alleviation control.  
 2 Go-around computer.
- GACA** General Authority of Civil Aviation (Saudi Arabia).
- GACC** 1 Ground-attack control capability.  
 2 General Aviation Consultative Committee (CAA, UK, from 1997).
- GACS** Generic ATN com. service.
- GACW** Gust above constant wind.
- gadget** Code, radar equipment; type of equipment indicated by letter, followed by colour to indicate state of jamming: green \*, clear; amber \*, sector partially jammed; red \*, sector completely jammed; blue \*, completely jammed (DoD).
- GADO** General Aviation District Office (FAA).
- gadolinium** Lanthanide metal, Gd, isotopes are alpha-emitters.

**GADS** Generic aircraft display system.

**GAF** German air force [UK usage].

**Gafact** German air force ATM co-ordination tool.

**Gafor** General-aviation forecast for VFR, met. briefing service in many European countries.

**G/A/G** Ground to air to ground.

**gage** Gauge (US).

**gaggle** Group of aircraft (say, five to 20) flying together but with no semblance of formation.

**GAIN, Gain** Global aviation [or analysis and] information network (US, collects safety information).

**gain** 1 General term for increase in signal power in transmission, usually expressed in dB.

2 Increase or amplification; antenna \* (\* factor) is ratio of power transmitted along beam axis to that of isotropic radiator transmitting same total power; receiver \* (video \*) is amplification by receiver. Calculation for radars is usually equal to area of sphere of unit radius divided by area subtended on that sphere by solid angle equal to the 3-dB beam.

**Gains, GAINS** GPS air-data [or aided] laser inertial navigation system.

**GAIS** General ATC information system [mainly Wx].

**GAIT** 1 General aviation infrastructure tariff (Australia).

2 Ground-based augmentation and integrity.

**gaiter** Fireproof flexible cover over a pipe or tube, e.g. to prevent ingress of abrasive dust.

**Gal, gal** Non-SI unit of small acceleration, gal (Galileo) =  $10^{-3} \text{ms}^{-2} = 1,000 \text{mgal}$ .

**gal** Gallon, type not specified.

**GALAT, Galat** Groupement Aviation Légère de l'Armée de Terre (F).

**GALCIT** Guggenheim Aeronautical Laboratory, Caltech.

**galena** Lead sulphide, PbS, used in IR cells.

**Galerkin** One of the most rigorous methods of solving structural dynamics problems.

**gallery** 1 Gas-turbine fuel manifold.

2 Fluid conduit formed within three-dimensional volume of material, eg drilled through body of pump.

**galley** Aircraft kitchen with provision for heating prepacked meals.

**galling** Pitting or marring of finished surface, esp. bearing surface, because of fretting.

**gallium** White metal, Ga, density 5.9, MPt 29.78°C, \*-68 radionuclide of half-life 68 min.

**gallon** Non SI unit of liquid volume. Imperial \* = 4.546087 litres = 277.42 cu in = 1.20095 US \*; US\* = 3.785412 litres = 231 cu in by definition = 0.83267 Imperial \*.

**galvanic corrosion** Electrolytic action caused by contact of dissimilar metals or formation of oxygen cell in contact with metal.

**galvanising** Coating of metal, esp. steel sheet, by dipping in bath of molten zinc; protects from galvanic corrosion.

**galvanometer** Instrument which measures electric current passed through pivoted coil in magnetic field. With shunted external resistance, used as ammeter; with series resistance, voltmeter.

**GAM** 1 GPS-aided munition[s].

2 Ground-attack missile.

3 Ground-to-air missile, = SAM.

4 German army [UK usage].

**GAMA** General Aviation Manufacturers' Association Inc. [1970-; office, Washington, DC20005] (US).

**GAMAA** Gate management and airport analysis (software).

**Gambica** Association for the instrumentation, control and automation industry [London SE1 7SW] (UK).

**Gambit** General anti-material [US materiel] bomblet with improved terminal effects.

**GAME** Generalised automated maintenance environment (USN).

**Game** GPS approach-minima estimator.

**Games** GPS anomalies monitoring equipment suite.

**GAMM** Generalised air (or airlift) mobility model, baseline study using real military cargo spectrum (USAF, USA).

**gamma** 1  $\gamma$  ratio of specific heats of gas.

2 Logarithmic function; ratio of contrast of transmitted scene to that of received display.

3 Flight path angle.

4 SI unit of very small changes in magnetic flux density; \* (not abbr.) = 1nT.

**gamma<sub>r</sub>,  $\gamma_r$**  Ratio of viscous damping to critical damping.

**gamma plot** Flight path angle plotted against airspeed.

**gamma rays** High-energy, short-wavelength EM radiation; very penetrating, similar to X-rays but nuclear in origin and usually more energetic. Symbol  $\gamma$ .

**GAMS** General airline management simulation.

**Gamta, GAMTA** General Aviation Manufacturers and Traders Association [merged 2004 into BBGA, staying in same Aylesbury office] (UK).

**GAN** Global area network.

**GaN** Gallium nitride.

**G&C** Guidance and control.

**gang drill** Series of drill presses in close proximity on one bed, or drills operated simultaneously through interconnected chucks.

**gang start** All [multiple] engines start simultaneously.

**gantry** Large crane for erection and servicing of launch vehicles; \* straddles vehicle and runs on tracks crossing launcher and work area.

**GANTT** General Agreement on National Trade and Tariffs.

**GAO** 1 General Accounting Office (US).

2 Government Accountability Office (US).

3 Groupe Aérien d'Observation (F).

**GAP/Gap** 1 General-aviation propulsion (NASA/industry).

2 GPS airborne pseudolite.

3 Ground-accident prevention (FSF).

4 Gas analysis package.

**gap** Distance between chords of any two adjacent superimposed wings of same aircraft, measured perpendicular to chord of upper wing at any point on its leading edge.

**GAPA** 1 Ground-to-air pilotless aircraft.

2 General Aviation Pilots' Association (US).

**Gapan** Guild of Air Pilots and Air Navigators [1 October 1929, livery company of City of London since 1936; office, London WC1R 5DJ] (UK).

**gap coding** Precise gaps in radio transmissions, or intervals of silence, used to represent letters, words or phrases.

**GAPCU** Ground and auxiliary power control unit, combines GPCU/APU-GCU.

**GAPE, Gape** General-aviation pilot education (FAA).

**gap-filler** Radar used to supplement long-range surveillance radar in area where coverage is inadequate.

**gaping** Discontinuity of skin profile caused by distortion or deflection of landing-gear doors, access doors and other separate panels intended to lie flush.

**gapless ice guard** 1 Fitted within intake mouth; used in conjunction with automatic alternative inlet.

**GAPP** 1 Geometric/arithmetic parallel processor, or processing.

2 Ground-accident prevention programme.

**gapped ice guard** Mounted forward of air intake to provide a gap which does not ice up.

**gapping** Gap [increased clearance, intended or otherwise] between TE of compressor rotor blades and LE of next stator.

**GAPS** Generic acoustic processing system (DSTL).

**gap-squaring shears** Tool used for squaring and cutting sheet metal; similar to squaring shears but able to slit long sheet.

**GAPU** Ground auxiliary power unit.

**GAR** 1 Ground abort rate.

2 Geopotential altitude range.

**GARA** General Aviation Revitalisation Act, passed by US Congress 1994 to limit manufacturers' product liability, especially for aircraft over 18 years old.

**garbage** 1 Miscellaneous hardware in orbit or deep space; usually material ejected or broken away from launch vehicle or satellite.

2 EDP (1) software or program which has been degraded or in any other way rendered imperfect or unreliable, or output therefrom.

**garbling** Indecipherable responses from two aircraft both at exactly same slant range of about 4 km (corresponding to 20.3  $\mu$ s pulse interval) to SSR interrogation; caused by fact both sets of reply pulse trains are synchronised and superimposed (see *degarbling*).

**garboard strake** That section of plating on a seaplane hull which extends fore and aft and is adjacent to the keel.

**GARC** Groupe Aérien Régionale de Chasse (F).

**GARD** General address reading device.

**gardening** Aerial minelaying (RAF code name, WW2).

**Gardian** General area-defense integrated anti-missile laser.

**GAR/I** Ground acquisition receiver/interrogator.

**GARP** Global Atmospheric Research Programme.

**GARS** Gyrocompassing attitude reference system.

**Garteur** Group for Aeronautical Research and Technology in Europe.

**GAS** Global-positioning adaptive-antenna system.

**gas bag** Flexible gas container of rigid airship; also known as gas cell.

**gas-bag alarm** Indicates when predetermined gas-bag pressure has been reached.

**gas-bag net** Mesh of cordage or wire to retain bag in position.

**gas-bag wiring** Mesh of circumferential and longitudinal wiring enclosing each bag to take pressure and transmit lift.

**gas bearing** Bearing for rotating assembly, usually high-speed, in which all forces are reacted by dynamic forces generated in contained volume of dry filtered gas, often He or N.

**gas bleedoff** Bleeding-off of hot combustion gas from rocket engine for pressurizing or driving turbomachinery.

**GASC** Ground Air Support Command (USAAF).

**gas cap** Gas immediately in front of hypersonic body in atmosphere; compressed and heated, and if speed is sufficiently high becomes incandescent.

**Gasco** 1 General-Aviation Safety Council [formed 1965 as GAS Committee, office, Rochester Airport, ME5 9SD] (UK).

2 Ground Air Support Command (GASC was preferred).

**gascolator** Filter fitted at lowest point of fuel system [archaic US usage].

**gas constant** Constant factor R in equation of state for perfect gas; kJ/kg K = 185.863 ft-lbf/lb °R; 8,314.34 J/kmol/K for particular gas; specific  $r = R/m$  where m is molecular weight (see *Boltzmann*).

**gas dynamics** Study of gases under high velocity, temperature, ionisation and other extreme conditions prohibiting compliance with aerodynamic laws.

**gaseous electronics** Study of conduction of electricity through gases, involving Townsend, glow and arc discharges, and collision phenomena on atomic scale.

**gaseous fuels** Those stored in aircraft in gaseous form, GH<sub>2</sub> being possible example (see *Blaugas*).

**gaseous rocket** Bipropellant or monopropellant rocket utilising gaseous fuel and/or oxidiser.

**GASF** General Aviation Strategy Forum [being formed 2006] (Europe).

**gas film** Boundary layer on inner surface of combustion chamber.

**gas generator** 1 Device for producing gases, hot or cold, under pressure. In some tip-drive helicopters \* comprised gas-turbine core engines.

2 Gas-turbine core engine, eg turbopan minus LP turbine and fan or turboprop minus LP turbine, gearbox and propeller.

3 Major component supplying working fluid for turbopump of liquid rocket engine.

**gash** Surplus, or pilfered (RAF, WW2).

**gas hood** Cowl or ports in outer cover of airship through which gas can escape from inside hull.

**gasifier** Machine for producing flow of hot gas, normally by combustion of fuel compressed by mechanism extracting energy from flow; free-piston and other systems but not gas turbine.

**Gasil** General-aviation safety information leaflet [published quarterly by CAA] (UK).

**gas laser** One in which lasing medium is gaseous, eg HeNe, CO<sub>2</sub>, Ar.

**gas laws** Thermodynamic laws applying to perfect gases: Boyle-Mariotte, Charles, Dalton, equation of state. Also called perfect or ideal \*\*.

**gas main** Fabric hose running length of airship and having branches to gas bags for inflation.

**gas misalignment** See *jet misalignment*.

**gas motor** Mechanical drive system energised by high-pressure gas from combustion of solid fuel, usually single-shot.

**gas oil** Residual hydrocarbon fuel left after distillation of gasolines and kerosenes from particular petroleum fraction. Can yield diesel oil and, by cracking, gasolines.

**gasoline** Blends of hydrocarbon liquids, almost all petroleum products boiling at 32°/220°C, used as piston engine fuel. See *octane number*, *petrol*.

**gas-operated** Automatic weapon in which initial rear-

ward motion of moving parts, unlocking breech, is caused by piston moved by gas bled from barrel.

**GASP** General Aviation Strategic Plan, being developed for 2004-08 (TSA).

**gasper system** Low-pressure fresh-air supply piped to individual controllable outputs above each passenger or serving each crew-member.

**gas pressurization** Feeding liquid propellant for rocket engine by piping high-pressure gas to dispel it from tank, with or without use of flexible liner; eliminates need for turbopump.

**gas producer** See *gas generator (1)* or *(3)*.

**Gasrig** Universal rendition of GASRWG.

**gas ring** Spring ring for maintaining gastight seal between piston and cylinder.

**gas rudder** See *gas vane*.

**GASRWG** General Aviation Safety Review Working Group [CAA, industry and RAeS, 2002-] (UK).

**GASS** 1 Garde Aérienne Suisse de Sauvetage (Switz.), same initials in Italian but SRFW in German.

2 General air and surface situation (NATO).

**gassing** Replenishing gas balloon with fresh gas to increase purity or make up for losses.

**gassing factor** Quantity of gas required by aerostat over period of one year, ordinarily expressed as percentage of gas volume.

**gas starter** Early (1920 onwards) method of starting multi-engined aircraft using airborne compressor set supplying compressed air or over-rich mixture to cylinders of each engine in correct sequence.

**gas temperature** TET is usually measured between first stators and rotor, TGT at a point between stages and EGT can be same as JPT.

**Gaston** Génération d'APT (auto-programmed tool) standard pour trajectoires d'outils normalisées (F).

**gas triode** See *thyatron*.

**gas trunk** Duct between gas-bag valve and gas hood.

**gas tube** Electronic tube (valve) containing gas under very low pressure.

**gas turbine** Engine incorporating turbine rotated by expanding hot gas. In usual form consists essentially of rotary air compressor, combustion chamber(s), and turbine driving compressor.

**gas-turbine numerology** Stations within an engine are designated by numbers used as inferior suffixes which vary with engine configuration; in a simple turbojet the numbers are: 1, entrance to inlet duct; 2, entrance to compressor; 3, compressor delivery; 4, turbine entry; 5, turbine exit; 6, entry to nozzle; 7, in plane of nozzle. A two-spool engine with afterburner has numbers 1 to 10. A different set of suffixes identifies the shafts in a multishaft engine, 1 being LP, 2 HP or IP, and 3 HP or free-turbine in a three-shaft engine.

**gas valves** Both rigid and non-rigid airships require valves to enable excess pressure in the gas bags or ballonets to be relieved. Lifting gas is released [automatically or manually] at the top, and air from valves on the underside.

**gas vane** Aerodynamic TVC in jet of rocket (see *jet vane*).

**gas volume** Volume of aerostat gas at SL.

**gas welding** Fusion welding with hot gas flame; eg oxy-acetylene on steels and oxy-hydrogen on aluminium.

**GAT** 1 General air traffic.

2 General aviation terminal.

3 Greenwich apparent time.

**Gatco, GATCO** Guild of Air Traffic Control Officers [1954-, office GU1 2ND] (UK).

**GATE, Gate** German Airport Technology and Equipment ev (association, 34 members).

**gate** 1 Point of passenger emplanement at airport.

2 Point at which commercial flight starts, or enters new sector of controlled airspace.

3 Removable lock to limit maximum travel of control lever (eg throttle) under normal conditions.

4 Position(s) on extended runway centreline above which inbound aircraft are required to pass at time assigned by approach control.

5 In air intercept: 'Fly at maximum possible speed for limited period' (DoD).

6 Control electrode of any device, esp. input connection to FET.

7 To control passage of signal in electronic circuits.

8 Circuit having output and input so designed that output is energised only when required input conditions are met, eg AND-\*, OR-\*, NOT-\*

9 Circuit designed to receive signals in small fraction of principal time interval in radar or control system.

10 Range of fuel/air ratios through which combustion can be started.

11 Of trajectory, eg speed-record run, specified transverse apertures in space through which aircraft must pass to comply with regulations.

12 Of space mission, transverse aperture(s) defined in width and height at particular time or distance from liftoff or related to other body in space, through which vehicle must pass if mission is to accomplish objectives.

**gated** 1 EM pulse permitted to function only under control of another pulse, usually synchronized.

2 Limited by gate (3).

**gate guardian** Aircraft publicly displayed at entrance to major establishment, esp. air force base.

**gate hold** Departure held at gate, common if delay exceeds 5 min.

**gate position** Particular gate (1) numerically assigned to flight (7).

**gate reader** Rapid checker of ticket and boarding pass located at gate (1).

**gate time** 1 Agreed time at which flight enters new sector of controlled airspace.

2 Time at which aircraft passes particular point on track.

**gate-to-gate** ATC is usually considered to be effective between gates (2).

**gate valve** Valve controlling fluid flow by flat plate having linear motion across flow channel.

**gateway** Customs airport, through which pax/cargo can enter country.

**gathered parasheet** Parasheet whose periphery is constrained by hem cord.

**gathering** Process of bringing guided missile into narrow pencil beam for subsequent guidance.

**gating** 1 Process of selecting portions of EM wave which exist during one or more selected time intervals or which have magnitudes between selected limits.

2 Use of Q-switching or other control to permit laser to emit only during exact specified time intervals, esp. when used in rangefinding mode.

3 Imposing mechanical stop on piston engine throttle below selected pressure altitude.

**Gatip** Global air-traffic interoperability project (FAA / Eurocontrol).

**gatling** Originally (1861) Gatling, automatic rapid-fire gun having a rotating assembly of several parallel barrels brought in succession in front of a single breech.

**GATM** Global air-traffic management.

**Gator** 1 GPS ability to overcome resistance.

2 Ground/air task-oriented radar.

**Gatorizing** Isothermal forging process for high-nickel turbine rotor blades and other super-alloys.

**GATR** Ground/air transmit/receive.

**GATS** GPS-aided targeting system; /GAM adds GPS-aided munition[s].

**GATSS** Global air-transportation systems and services (R, CIS).

**GATT** 1 Gate-assisted turnoff thyristor.

2 General agreement on tariffs and trade.

**GAU** Gun, aircraft unit.

**GAUC** GA Users Committee (LGK, LHR).

**gauge** (US gage) 1 Any pressure-measuring instrument.

2 Hand comparator for GO/NO GO check on an exact dimension or screwthread.

3 Standard measures of sheet and wire thickness.

**gauged fuel** Sum of fuel-gauge readings; fuel state, including unusable.

**gauge pressure** Indicator reading showing amount by which system pressure exceeds atmospheric.

**gauss** Non-SI unit of magnetic induction (flux density), =  $10^{-4}$ T.

**GAvA** Guild of Aviation Artists [office, Farmborough GU14 6TF] (UK).

**GAVC** Ground/air visual code (FAA).

**GAVRS** Gyrocompassing attitude and velocity reference system.

**GAWG** General Aviation Working Group (Natmac).

**GAZ** State aviation factory [almost 1,000] (USSR).

**GB** 1 Gain/bandwidth.

2 Groupe de Bombardement (F).

3 Aircraft category, glide bomb (USAAF 1942–47).

4 Lethal nerve gas first produced as Sarin (G 1938) and later by US.

**Gb** Gigabyte[s].

**G<sub>B</sub>** In flight-control augmentation, a bending-mode filter.

**g.b.** Grid bias.

**GBA** Groupe de Bombardement d'Assaut (F).

**GBAD** Ground-based air defence; BC adds bridging capability, WS adds weapon system[s].

**GBAS** Ground-based augmentation system, for precision approach.

**GBCS** Ground-based common sensors.

**GBD** Greener by design (UK).

**GBDM** Ground-based data management; S adds system.

**GBI** Ground-based interceptor[s].

**GBIB** Ground-based integrity broadcast.

**Gbits/s** Gigabits ( $10^9$ ) per second, not to be confused with Gb.

**GBL** 1 Ground-based laboratory.

2 Ground-based laser.

3 Government bill of lading.

**GBMD** Global ballistic-missile defence.

**G/BMI** Graphite/bismaleimide composite.

**GBM levels** Gough, Beard and McEvoy pioneered investigation of upper limits of force a pilot could be expected to exert on particular flight-control inputs (NACA).

**GBP** Great Britain pound[s] Sterling.

**GBR** Ground-based radar; P adds prototype (US NMD).

**GBRAS** Ground-based regional augmentation system.

**GBS** 1 Global broadcast service.

2 Ground-based software; T adds tool.

3 Ground-based sensor[s].

**GBTA** Guild of Business Travel Agents [1967–, office, London] (UK).

**GBTS** Ground-based training system.

**Gbyte** *Gb*.

**GBU** Glide-bomb unit.

**GC** 1 Groupe de Chasse (fighter wing, F).

2 Great circle.

3 Goggles-compatible (NVG).

4 Gyrocompass.

5 Ground control.

**GCA** 1 Ground-controlled approach.

2 General controlled airspace, from 1990 called Class E (FAA).

**GCAA** General Civil Aviation Authority (UAE).

**GCAM** Ground collision-avoidance module.

**GCAS, G-cas** Ground collision-avoidance system.

**GCB** 1 Generator circuit-breaker, or control breaker.

2 Gun-control box (helicopter).

3 See next.

**GC brg** Great-circle bearing.

**GCC** 1 Graduated combat capability.

2 Goggles- (ie, NVG) compatible cockpit.

3 Gulf Cooperation Council (Inmarsat).

4 Global climate change; I adds initiative[s].

5 Ground-cluster controller (Acars).

**GCCS** Global command and control system (DoD).

**GCF** Ground-conditioning fan.

**GCHQ** Government Communications HQ (Cheltenham, UK).

**GCI** Ground-controlled interception.

**GC/IMS** Gas chromatography/ion mobility spectrometry.

**gem<sup>-3</sup>** SI unit of *density*.

**GCMS** Gas-chromatograph mass spectrometer.

**GCOS** Global climate observing system.

**GCP** General conditions of purchase.

**GCR** 1 Generator-control relay.

2 Ground-clutter reduction.

**CGS** 1 Ground-control station[s].

2 Ground-clutter suppression.

**Gc/s** Gigacycles = GHz.

**GCSC** Great-circle steering cue.

**GCSS** Global combat-support system (USAF).

**GCT** 1 Government competitive test.

2 Greenwich Civil Time.

**GCU** 1 Generator control [and protection] unit.

2 Ground control unit [UAV].

3 Guidance control unit.

**GCV** Ground check vehicle [navaids].

**GD** 1 Lethal nerve gas first produced (G, 1940) as Sarin (also GB).

2 General Duties branch, which includes aircrew (RAF).

3 Geometric dimensioning, & T adds and tolerancing.

**GDB** Ground data-bus.

**GDC** Gyro display coupler.

**GDE** 1 Gas-discharge element, light source.

2 Graphics differential engine.

3 Ground demonstrator engine.

**GDI** Get-down-itis, dangerous desperation to land for whatever reason.

**GDL** 1 Gas-dynamics laboratory, pioneer rocket research centre (USSR).

2 Gas dynamic laser.

3 Ground data-link; P adds processor.

**GDM** Generalized development model.

**GDOP** Geometric[al] *dilution of precision*, also expressed as geometrical degradation of performance.

**GDP** 1 See GDOP.

2 Graphics drawing processor.

3 Ground delay program.

**GDPA** Ground distributed processing station.

**GDS** 1 Ground debriefing station.

2 Global decision support, controls worldwide airlift; S adds system (USAF).

3 Global, or general, distribution system (Sita).

4 *Goldstone*.

**GDT** Ground data terminal.

**GE** 1 Groupe d'entraînement (F).

2 Gigabit ethernet.

**G/E** Graphite/epoxy.

**Ge** Germanium.

**G<sub>e</sub>** Gain, especially of radar jammer system.

**GEANS** Gimballed electrostatic aircraft navigation system; GEAINS adds inertial.

**gear** Landing gear (colloq.).

**gear change** In powered flight-control system, traditionally effected [automatically, with manual standby] by moving fulcrum or radius of an operating rod according to IAS or Mach.

**geared engine** Piston engine with reduction gear to turn propeller more slowly than crankshaft, to enable power to be increased whilst not overspeeding propeller.

**geared fan** Fan (2) driven through reduction gear.

**geared propeller** See *geared engine*.

**geared supercharger** Piston engine supercharger driven through friction clutch and step-up (speed-increasing) gears.

**geared tab** Balance tab mechanically linked to control surface so that its angular movement is determined by that of main surface.

**gear-type pump** Two intermeshing gears in close-fitting casing which pump fluid round outside of each gear in spaces between successive teeth and outer casing.

**GEASA** Group of experts on aviation safety and assistance.

**Gebecoma** Groupement Belge des Constructeurs de Matériel Aérospatiale [office, Brussels B-1130] (Belgium).

**GEC** Graphite epoxy composite.

**GeCu** Germanium/copper (IR detector).

**GEE** Ground exploitation, or evaluation, equipment.

**Gee** Pioneer precision navaid, using interrelated VHF pulses transmitted from ground stations; position of aircraft determined by observing intervals between pulses from pairs of stations and plotting on hyperbolic map.

**Gee-H** Secondary-radar navaid which enabled aircraft to determine position with precision by simultaneously measuring distances from two beacons.

**GEEIA** Ground Electronics Engineering Installation Agency (USAF).

**GEF** General Engineering Flight (RAF).

**Gefra** Group of experts on the future regulatory arrangements [for international air transport].

**gegenschein** Faint light area of sky opposite Sun and celestial sphere; believed to be reflection of sunlight from particles beyond Earth's orbit.

**GEH** Graphite-epoxy honeycomb.

**GEI** Groupement d'Économique Interêt (see *GIE*, which is more common).

**Geiger counter** Geiger-Müller gas-filled tube containing electrodes; ionising radiation releases short pulse of current from negative to positive electrode, frequency of pulses indicating intensity of radiation.

**GEJ** Group of Experts on Jurisprudence (ICAO).

**GEL** Graphite-epoxy laminate.

**GELIS, Gelis** Ground-emitter location and identification system.

**GEM** 1 Ground-effect machine (ACV).

2 Generic electronics module.

3 Graphite epoxy (solid rocket) motor.

4 Ground-environment material.

5 Generalized emulation of microcircuits.

6 Guided, or guidance, enhanced missile.

7 Graphic [piston-] engine monitor, typically pictures CHT and EGT.

8 GPS-embedded module.

**GEMS, Gems** 1 Grouped engine monitoring systems.

2 Global environment management system (noise).

3 Global expeditionary medical system (USAF).

4 Generic Earth-station management system.

**GEN** 1 Generator.

2 General [not the rank].

3 General information (AIP).

**Gen, gen** 1 Information, latest knowledge (colloq. RAF WW2).

2 Generation, a complete phase of development.

**Gen2, Gen3** New 'generations' of helicopter visionics.

**genav** General aviation.

**GENE, Gene** GPS – enhanced navigation equipment.

**general air traffic** All traffic excluding OAT (3), special military (eg lo-level training) and local pleasure flights not notified for ATC purposes.

**general-arrangement drawing** Usually three-view (front, side, plan) outline, in some cases with addition of dimensions, ground line, and broken lines giving additional information.

**general aviation** All civil aviation except air transport for hire or reward; largest sectors are private (including company transport), agricultural and aerial work. Term introduced in US by CAA in 1951.

**General Belgrano** Head office of the CAA [colloq.] (UK).

**general cargo** Loose items, excluding large unit loads, not containerized or palletized. Head office of the CAA [colloq.] (UK).

**general inference** General meteorological situation and future forecast.

**General Flying Test** Taken at different levels by candidates for PPL, BCPL and CPL.

**general-purpose aircraft** Military aircraft intended to fill multiplicity of roles; nearest modern equivalent is armed utility.

**generate** To get a combat aircraft airborne and thus \* a sortie.

**generation** Family of all examples of particular hardware species designed at same time to meet similar requirements; after first \* hard to define, and word generally used to impress audience of prior experience of particular manufacturer in field concerned.

**generator** 1 Machine for generating direct current. Invariably used incorrectly to mean alternator.

2 Device for producing clearly visible smoke, e.g. for aerobatics or for wind-tunnel.

**generator line contactor** Main circuit-breaker between generator (ie, alternator) and AC bus.

**generic** A particular meaning: using same region of EM spectrum for land, sea and air stations.

**genop** General overall validation for ATM (7) (Euret).

**gentle turn** Primary flight manoeuvre in which bank angle does not exceed 25°.

**Gen-X** Generic expendable[s].

**GEO** Geostationary Earth orbit.

**GEOAP** Ground equivalent onboard attitude processor.

**geocentric** Related to centre of Earth.

**geodesic line** Shortest line between two points on mathematically derived surface; \*\* on Earth called geodetic line.

**geodesic radome** Spherical enclosure for large surface or ship radar whose structural members are geodetics and whose panels are perpendicular to transmissions.

**geodesy** Science which deals mathematically with size and shape of Earth and its gravitational field, esp. with surveys of such precision that these measures must be taken into consideration.

**geodetic construction** Methods of making curved space frames in which members follow geodesics along surface, each experiencing either tension or compression; resulting basketlike framework does not need stress-bearing covering.

**geodetic height** Height above the surface of the Earth (represented as an oblate spheroid) measured along a normal to the surface, symbol *h*.

**geodetic latitude** The angle between the geodetic equatorial plane and the normal to the surface, positive in N hemisphere, negative in S, symbol  $\phi$ .

**geodetic position** Location of a point on the surface of the geosphere, defined by geodetic latitude, longitude and height.

**GEODSS** Ground-based electro-optical deep-space surveillance system.

**geographical envelope protection** Database which prevents the aircraft in which it is installed from entering a defined keep-out zone, eg overriding pilot's attempt to steer into a building.

**geographical mile** One minute of arc at Equator, defined as 6,087.08 ft.

**geographical position** Where line from centre of Earth to a heavenly body cuts Earth's surface (astronav).

**geographic information system** Inputs land use in Gems (2), and other studies of airport noise.

**geographic poles** North or south points of intersection of

Earth's surface with axis of rotation, where all meridians meet.

**geoid** Earth as defined by that geopotential surface which most nearly coincides with MSL.

**geolocation** Finding where fixed targets are on the land surface, if possible near-instantaneously.

**geomagnetic cavity** Volume moving through solar wind occupied by Earth and surrounding magnetic field (magnetosphere).

**geomagnetic co-ordinates** System of spherical co-ordinates based on best fit of centred dipole to actual terrestrial magnetic field.

**geomagnetic dipole** Hypothetical magnetic dipole (bar magnet) located within Earth in such position as to give rise to actual terrestrial field.

**geomagnetic equator** Terrestrial great circle everywhere 90° from geomagnetic poles (should not be confused with magnetic equator).

**geomagnetic poles** North and south antipodal points marking intersection of Earth's surface with extended axis of geomagnetic dipole; north \*\* is 78½°N, 69°W, and south \*\* is 78½°S, 111°E. Should not be confused with magnetic pole.

**geomagnetism** 1 Magnetic phenomena exhibited by Earth and surrounding interplanetary space.

2 Study of magnetic field of Earth.

**geometric dilution of precision** See *dilution of precision*.

**geometric pitch** Distance propeller-blade element would advance in one revolution when moving along helix to which line defining blade angle of that element is tangential; \*\* of fixed-pitch propeller at standard radius is pitch of that propeller, and is marked on it.

**geometric transition absorber** Family of RAM (2) structures, most common being pyramidal type. Others include cones and sine waves.

**geometric twist** Variation along span of aerofoil of angle between chord and a fixed datum (see *aerodynamic twist*).

**geometry-limited** Restriction placed on aircraft attitude or configuration by geometric considerations; eg scraping tail on take-off or (variable-geometry aircraft) underwing stores fouling tailplane at max sweep.

**geophones** 1 Sensitive acoustic sensors for detecting sound transmitted through Earth's crust.

2 Seismic sensors buried along edge of runway to measure point of touchdown, severity of impact and bounces on landing (see *ALMS*).

**geopotential altitude**  $Z = \frac{R_e H}{R_e + H}$  where  $R_e$  = Earth radius and *H* is geometric altitude [*Z* can be ignored at low altitude].

**geopotential height** Height above Earth in units proportional to potential energy of unit mass (geopotential) relative to sea level. For most meteorological purposes same as geometric height, but geopotential metre = 0.98 metre; \*\* used under WMO convention for all aerological reports.

**Georef** World Geographic Reference System.

**George** Automatic pilot (colloq., arch.).

**GEOS** Geodynamic experimental ocean satellite[s] (NASA).

**GeoSAR** Geographic synthetic-aperture radar (NIMA).

**geosphere** Solid and liquid portions of Earth's litho-

phere plus hydrosphere. Above \* lies atmosphere, and at interface is found almost all biosphere zone of life.

**GEOSS** Global Earth Observation System of Systems [2005-] (U.N., int.).

**geostationary altitude** That at which body is in geostationary orbit. Accepted value is c35,880 km, 22,300 miles.

**geostationary orbit** Orbit in which satellite remains over same point on surface of Earth. Thus, period = 24 h; V is 3.07 kms<sup>-1</sup>, 1.91 miles/s.

**geostationary satellite** Satellite in geostationary orbit; also called synchronous satellite.

**geostrophic wind** Wind the direction of which is determined by deflective force due to Earth's rotation.

**geostrophic wind speed** Calculated from pressure gradient, air density, rotational velocity of Earth and latitude, but neglecting curvature of wind's path.

**geosynchronous** Revolving at same angular speed as Earth, generally synonymous with geostationary.

**GEP** 1 Glassfibre/epoxy/PVC foam sandwich.

2 Geographical envelope protection.

**GEPA, Gepa** Groupement d'Études de Phénomènes Aériens (N adds 'Non-identifies') (F).

**Gepna, GEPNA** Groupe Européen de Planification de la Navigation Aérienne (Int.).

**Gepta, GEPTA** Group of experts on air-transport policy (Int.).

**GERB** Geostat Earth radiation budget.

**germanium** Silver-white, hard, brittle element possessing properties of both metals and non-metals; used in transistors, LEDs and IR windows (8-14 microns), but being superseded. Symbol Ge.

**gerotor** Generator-rotor.

**gerotor pump** Gear pump in which spur gear having n teeth rotates inside internal ring gear having n + 1 teeth.

**GES** 1 Ground Earth station.

2 Ground exploitation station [S adds subsystem].

3 Global exploration strategy [2007-] (Int.).

**Geschwader** Luftwaffe formation equivalent to RAF group or US wing; also naval squadron (G).

**GET** 1 Ground elapsed time.

2 Ground entry terminal [Elint].

**get** To remove gas from vacuum system by sorption.

**GETA** Graphite-epoxy/titanium/aluminium.

**get-away speed** Airspeed at which seaplane or flying boat becomes entirely airborne.

**GETI** Ground elapsed time of ignition.

**Gets** GPS-enhanced theater support (US).

**getter** Material or device for removing gas by sorption.

**GEU** Guidance electronics unit.

**GEV** Ground-effect vehicle (usually = ACV).

**GEW** Ground-effect wing.

**GEWP** Generic electronic-warfare platform [pilotless aircraft for testing missile countermeasures].

**GF** 1 Gold film.

2 Ground fog.

3 Geospatial Force (US).

**G<sub>F</sub>** In flight control, noise filtering.

**gf** Gram[me] force, = 9.80665 × 10<sup>-3</sup> N.

**GFA** Gliding Federation of Australia [Essendon, Vic.].

**GFAC** 1 Ground forward air controller, ie not airborne.

2 Government furnished active countermeasures.

**GFAE** Government-furnished avionics (or aeronautical or aerospace) equipment (US).

**GFDEP, GFDep** Depth [thickness] of fog, estimated in feet.

**GFE** Government-furnished equipment; supplied by DoD to industrial contractor for incorporation in aircraft or other large product.

**GFET, G-fet** G-force environmental training.

**GFH** Groupement Française de l'Hélicoptère [office, F-75016 Paris] (F).

**GFI** 1 Government-furnished information (US).

2 Ground fault interrupter.

3 General format identifier.

**GFK, GfK** Glass-reinforced plastics (G).

**GFL** 1 Gesellschaft zur Förderung der Luftschiffahrt (G).

2 Gravity feed line.

**G-Flops** Billions of Flops.

**GFM** Government-furnished materiel (US).

**GFMC** Global Fire Monitoring Centre, an agency of ISDR [Freiburg, Germany] (Int.).

**GFP** Ground fine pitch.

**GFPT** Geospatial Force planning tool (US).

**GFPR** Glass-fibre reinforced plastic[s].

**GFS** 1 Gesellschaft zur Förderung der Segelflugforschung (G).

2 Global fire-support system (Litton).

**GFSK** Gaussian frequency-shift keying.

**GFT** 1 General flight (or flying) test.

2 Generalized fast transform.

**GFW** Gesellschaft für Weltraumforschung (German national space society).

**GF-X** Global Freight Exchange (London office).

**GG** 1 Gravity gradient.

2 Gas generator.

3 Gyro-angling gain.

4 Graphics generator.

5 Ground-to-ground [usually between controllers].

**GGG** Gadolinium gallium garnet.

**GGP** GPS guidance pack [age].

**GGR** Ground-to-ground router.

**GGS** 1 Gyro gunsight.

2 Gravity-gradient satellite.

3 GPS ground station.

**GGTFM** Ground/ground traffic-flow management.

**G/GV** Glove and glove vane.

**GH** General [or ground] handling.

**GH<sub>2</sub>** Gaseous hydrogen.

**GHA** Greenwich hour-angle, difference in longitude between heavenly body and 0° meridian. D adds difference, read off Godsave tables.

**GhAF** Ghanaian Air Force.

**ghost** Extra images or blips on radar, TV or other display caused by signal reflection from hills, buildings or other objects; usually to right of primary image at distance proportional to reflected and direct path lengths.

**GHQ** General headquarters.

**GHW** Ground-handling wheels.

**GHz** Gigahertz, billions of cycles per second.

**GI** 1 Gum inhibitor.

2 Government issue (US).

3 Group identifier.

**GIA** 1 Glideslope intercept altitude.

2 Ground instructional airframe.

**GIB** 1 Guy in back, ie navigator or other back-seater in tandem two-seat military aircraft.

2 GNSS integrity broadcast.  
**GIBEA, Gibea** Guilde Belge des Electroniciens de l'Aviation (Belg.).  
**Gibli** Hot dry wind in N Africa, similar to Sirocco.  
**Gibson criteria** A series of assessments, such as attitude gain or frequency response plotted against phase angle, in an attempt to avoid PIOs.  
**GIC** GNSS, or GPS, or GPS/WAAS, integrity channel.  
**GICB** Ground-initiated comm-B, radio plus DME.  
**GID** Government Inspection Division (CAA).  
**GIDEP, Gidep** Government/industry data exchange program (DoD, US).  
**GIDS, Gids** Gate information display system.  
**GIE** Groupement d'Interêt Economique.  
**GIEL** Groupement des Industries Electroniques [office, Paris] (F).  
**GIES** Ground imagery exploitation station.  
**GIF** 1 Guy in front (see GIB).  
 2 Graphic[s] interchange file, or format.  
**Gifas, GIFAS** Groupement des Industries Français Aéronautiques et Spatiales [aerospace industries trade association 200+ members; office F-75782 Paris] (F).  
**Gift** Geosynchronous imaging Fourier transform spectrometer.  
**GIG** 1 GPS integration guidelines.  
 2 Global information grid (DoD).  
**giga** Prefix, symbol G, =  $\times 10^9$ .  
**GIG-BE** GIG(2) bandwidth expansion, links centres with 10 Gbits/s fibre optics.  
**GIGO, Gigo** Garbage in, garbage out [EDP truism].  
**GIHO** Ground-initiated handoff.  
**GII** Global information infrastructure.  
**GIITS** General imagery intelligence training system.  
**GILA** Generalised integrated learning architecture (Darpa).  
**Gilham Code** Gray code.  
**gill** Non-SI unit of liquid measure. UK \* =  $1.42065 \times 10^{-4} \text{ m}^3$ ; US \* =  $1.18294 \times 10^{-4} \text{ m}^3$ .  
**gills** Hinged flaps at rear of engine cowling or other compartment to control cooling airflow.  
**Gimads** Generic integrated maintenance diagnostics (USAF).  
**gimbal** 1 Mounting with at least two, and usually three, mutually perpendicular and intersecting axes of rotation.  
 2 Gyro support which provides spin axis with degree of freedom.  
 3 To pivot propulsion engine for TVC.  
 4 To mount on \*.  
**gimbal freedom** Maximum angular displacement about gyro output axis, expressed in degrees or in equivalent angular input.  
**gimballing chamber** Rocket-engine thrust chamber mounted on gimbal (3) so that it can swivel about one axis (or two perpendicular axes).  
**gimbal lock** Condition of two-degrees-of-freedom gyro wherein alignment of wheel spin axis with axis of freedom removes degree of freedom, rendering gyro useless.  
**Gins** 1 GPS/INS.  
 2 Gravimetric INS.  
**GIP** 1 Ground instructor pilot.  
 2 Generic interface processor.  
 3 Government/industry partnership.  
**GIPS** Geospatial information production system (NIMA).

**GIRA** Groupe d'Instruction des Reserves de l'Air(F).  
**GIRD, Gird** Group for study of reaction (ie, rocket) engines (USSR, 1932–34).  
**girt bar** Rapid-action link which in emergency transfers upper attachment of an escape slide from a door to the door sill.  
**GIRTS** Generic IR training system (ASD).  
**GIS** 1 Geographic[al] information system[s] (civil, US).  
 2 Graphic[al] information system.  
**Gismo** Globally integrated satellite mobile operating system.  
**GISS** Goddard Institute for Space Studies (NASA, New York City).  
**GIT** General interface terminal.  
**GITC** Guns in the cockpit.  
**GIUK** Greenland/Iceland UK, supposed air-defence gap.  
**GIVS** Groupe Interministeriel des Vols Sensibles, charged with security of commercial flights (F).  
**GK** Loop gain, plan  $\times$  compensator [many suffixes].  
**GKAP** State committee on aviation industry (USSR, R).  
**GKAT** State committee on aviation technology (USSR, R).  
**GKO** State defence committee (USSR, R).  
**GKS** Graphic[al] kernel system (WMO).  
**GL** 1 Ground level.  
 2 Group length.  
**GLA** Gust load alleviator.  
**GLAADS** Gun low-altitude air-defence system (USA).  
**GLAM** Groupe de Liaisons Aériennes Ministérielles (F).  
**gland** Short tube fitted to airship's envelope or gas bag through which rope may slide without leakage.  
**Glare** Glass-fibre prepreg tape reinforced aluminium alloy [usually multi-ply].  
**glare shield** Overhanging lip above instrument panel to protect pilot's night vision from bright reflections on windshield.  
**G-Lars** Guided launch and recovery system; /PLS adds precision landing system.  
**GLAS** Gust-load-alleviation system.  
**glass aircraft** One with high proportion of GRP in airframe, including skin.  
**glass cockpit** One featuring electronics displays in place of traditional instrument (colloq.).  
**glass-fibre** Produced by melting glass and spinning on revolving drum, fibres being typically 0.025 mm diameter. Fibreglass is registered name. Produced in many forms for structural or optical properties.  
**glass floor** Zero accidents or reportable incidents.  
**Glasshouse** Detention centre, military prison (UK, colloq.).  
**glass wool** Produced by forcing molten glass through orifices of approximately  $1 \mu$  diameter.  
**Glast** Gamma-ray large-area space telescope.  
**Glauret factor** Increase in lift coefficient due to fluid being compressible, =  $(1 - M^2)^{-1/2}$ .  
**Glavkosmos** Chief Administration of Space Launch Services (R).  
**Glavkoavia** Chief Administration of Aviation (USSR).  
**glazed frost** Rain ice, layer of smooth ice formed by fine rain falling on sub-zero surface.  
**glaze finish** Vitreous enamel coating on metal.

**glaze ice** Transparent or translucent coating with glassy surface formed by contact with rain; part freezes on impact, most flowing back and freezing over surface.

**GLC** Generator line contactor.

**GLCM** Ground-launched cruise missile.

**GLCS** Global launch control system (DoD).

**GLD** Glider (ICAO).

**glid** See *GLLD*.

**glide** 1 Controlled descent by aerodyne, esp. aeroplane, under little or no engine thrust in which forward motion is maintained by gravity and vertical descent is controlled by lift forces. Rate of descent is given by  $v_a = -(D/L)V$  where *D* is drag, *L* lift and *V* TAS.

2 Flightpath of \*.

3 To descend in \*.

**glide bomb** Missile without propulsion but with aerofoils to provide lift and guidance; released from aircraft.

**glide landing** No-flare landing.

**glide mode** Flight-control system mode in which aircraft is automatically held to centre of glideslope.

**glidepath** 1 Flightpath of aircraft in glide, esp. when making ILS landing.

2 Glideslope.

**glidepath angle** That between local horizontal and straight line representing mean of glideslope.

**glidepath beacon** ILS outer, middle or inner marker.

**glidepath bend** Aberration in electronic glidepath.

**glidepath indicator** ILS panel instrument.

**glidepath localizer** Contradiction in terms (see *localizer*).

**glidepath sector** Sector in vertical plane containing glideslope and extended runway centreline, limited by loci of points at which DDM is 0.175.

**glider** Fixed-wing aerodyne designed to glide, ordinarily having no internal propulsion (see *sailplane*).

**glide ratio** Ratio of horizontal distance travelled to height lost;  $TAS \div V_s$  (in same units). A common symbol is  $R_G$ .

**glider flight time** Includes time on tow.

**glider train** Two or more gliders towed in tandem behind one tug.

**glider tug** Aircraft used to tow gliders.

**glideslope** Radio beam in ILS providing vertical guidance (see *ILS*).

**gliding angle** 1 Angle between local horizontal and glidepath. Traditionally  $\gamma = \tan^{-1} D/L$  where *D* is drag and *L* lift.

2 Shallowest possible \* of sailplane.

**gliding range** Maximum distance that can be reached from given height in normal glide; also known as gliding distance.

**gliding turn** Spiral flight manoeuvre consisting of sustained turn during glide; also known as spiral glide.

**glim lamp** Source of illumination dim and local enough for use during blackout, esp. airfield lighting.

**GLint** 1 Geostationary Earth orbit light-imaging national testbed (US).

2 Gated-laser illumination for night TV.

**glint** Pulse-to-pulse change in amplitude of reflected radar signals, caused by reflection from object whose radar cross-section is rapidly changing.

**GLIT, Glit** Chief State flight-test centre, Akhtyubinsk (R).

**glitch** Small voltage surge affecting sensitive device; later general colloq. for technical problem.

**GLLD** Ground laser locator-designator.

**GLM** Gear limiting speed [usually means 'extended', rather than 'cycling'].

**GLN** GPS landing and navigation; S adds system, U unit.

**GLO** Ground liaison officer.

**Global Area Network** Pioneer worldwide satcom service providing 64 kbit/s (Inmarsat 1991-).

**Global Command and Control System** Overall electronic system tracking, and to some degree controlling, combat operations worldwide (DoD).

**Global distribution system** That which apportions revenue from an air-carrier passenger ticket (Sita).

**globalization** Distribution through many carefully selected countries of the companies needed to make and support a product.

**Global positioning and com** Gives GPS/TDMA for numerous linked users, esp. for station-keeping.

**Global Positioning System** Worldwide system in which users derive their location by interrogating four satellites from total net of 24. Originally US military, which reserves to itself the greatest [centimetric] accuracy.

**Globmet** Global meteorological service.

**GLOC** See *g-loc*.

**Glonass** Global navigation-satellite system (USSR, R, India).

**glory** Aircraft in humid atmosphere viewed from above or below at centre of rings in spectral [rainbow] colours.

**glove** 1 Fixed leading portion of wing root, esp. of variable-sweep wing.

2 Additional aerofoil profile added around normal wing, usually over limited span, for flight-test purposes.

**GLOW** Gross lift-off weight (not spoken as word).

**glow-discharge anemometer** Sensitive method of measuring gas velocity, esp. at low speeds or in turbulence, using cathode discharge between two pointed electrodes about 0.1 mm apart.

**glow plug** Electric heating element, used in semi-diesel engines, which aids starting or, in one type of turboprop, provides inflight relight after flame-extinction.

**GLS** 1 GPS- or GNSS-based landing system.

2 Gunlaying system.

3 Glider launching site.

**GLTD** Ground-based laser target-designation.

**GLU** GPS landing unit.

**GLY** Galley.

**GLUAV** Gun-launched unmanned aerial vehicle.

**glycerin** Glycerol, compound of C/H/O, soluble in water/alcohol, constituent of antifreezes.

**glycol** See ethylene glycol.

**glyptal** Synthetic resin made from glycerin and phthalic acid or phthalic anhydride.

**GM** 1 Ground map mode (airborne radar).

2 Guaranteed minimum.

3 Gain [FCS feedback] margin.

4 Guided missile, usually with prefix.

5 Guidance material.

**G/M** Gun/missiles selector switch on control column.

**gm, g<sub>m</sub>** Location of c.g. as fraction of chord behind leading edge.

**GMADS** Ground-based maintenance aid and diagnostic system.

**GmbH** Gesellschaft mit beschränk Haftung, incorporated company (G).

- GMC** Ground movement control, or controller.
- GMCS** Ground-maneuvring camera system.
- GMD** Ground-based midcourse defense; S adds segment or system; in 2002 this replaced NIM as planned national defence against ballistic missiles (US).
- GMDSS** Global maritime distress and safety system[s].
- GMES** Global monitoring for [or of] environment and security [EC + ESA] (2008-).
- GMFSC** Ground mobile forces satellite communications.
- GMI** Goddard management instruction.
- GML** Gross moving load.
- GMLA** Guided missiles and launch assemblies.
- GMLRS** Guided multi-launch rocket system.
- GMLS** Guided-missile launch system.
- GMLTS** Guided-missile launcher test set.
- GM-1** Nitrous oxide, piston-engine boost system (G, WW2).
- GMP** Ground-movement planning.
- GMR** 1 Ground-mapping radar.  
2 Giant magnetoresistance.
- GMRP** Guided-missile round pack.
- GMS** 1 Geostationary meteorological satellite.  
2 Groupement des Missiles Stratégiques (F).  
3 Ground-based midcourse system.  
4 Ground monitoring station.
- GMSP** Global multi-mission support platform.
- GMT** Greenwich mean time, or *Zulu*, now replaced by *UTC*.
- GMTI** Ground moving-target indicator (or indication).
- GMTT** Ground moving target tracking.
- GMU** GPS-based measuring, or monitoring, unit.
- GMVLS** Guided-missile vertical launch system.
- GN** See GN<sub>2</sub>.
- Gn** Green.
- g<sub>n</sub>** Standard value for gravitational acceleration.
- GNA** Global network architecture.
- GN&C** Guidance, navigation and control.
- G-nav** Navigation direct from A to B not on promulgated airway but crossing radials yet still using VOR/DME; name from graphic navigation, using computer-produced charts or hand-held equipment to give pilot a picture derived from VOR/DME inputs. Basic method of cross-radial navigation.
- GNC** 1 Graphic numerical control.  
2 General navigation computer.  
3 Global navigation chart.
- GNCS** Guidance navigation control system.
- GND, gnd** Ground [CK adds check, CON control, FG fog].
- GNE** 1 Gross navigational error.  
2 Global distribution system new entrants (Int.).
- GNLS** GPS navigation and landing system.
- GNLU** GPS navigation and landing unit.
- GNN** Government News Net (UK).
- gnomonic projection** Created by projecting from centre of Earth surface features on plane tangent to surface; distortion severe except near origin (point where plane touches Earth) but great circles are straight lines.
- GNR** Global navigation receiver.
- GNS** 1 Global navigation system.  
2 Global navigation satellite [P adds panel, S system, SA supervisory authority, SP system panel, SU sensor unit]; general term for all such spacecraft.  
3 Glassfibre/Nomex sandwich.
- GNT** Gross nozzle thrust.
- GN<sub>2</sub>** Gaseous nitrogen.
- GNV** German navy [UK usage].
- GO** 1 Geared, opposed (US piston-engine designation).  
2 General Order (military).  
3 Groupe d'Observation (F).
- GO<sub>2</sub>** Gaseous oxygen.
- go-ahead** Point in government programme at which prime contractor receives written authorization to proceed with full-scale development. Not an official term.
- go-around** *Overshoot*; see *going around*.
- go-around mode** Terminates aircraft approach and commands climb; also known as auto overshoot.
- GOC** Generator over-current.
- GOCE** Gravity-field and steady-state ocean explorer.
- Goco, GOCO** Government owned, contractor-operated (US).
- GODAE** Global ocean data assimilation experiment.
- Goddard Space Flight Center** Greenbelt, Maryland, centre for NASA tracking and communications network.
- Godsave** See **GHA**.
- Goes, GOES** 1 Geostationary, or geosynchronous-orbit, or global, operational environmental satellite, suffixes East or West.  
2 Gyro-stabilized opto-electronic system.
- go for broke** To fire all weapons in one pass of target.
- go gauge** Dimensional gauge which must fit close, but without being forced, on or in the part for which it is intended.
- go-home mode** Emergency RPV flight-control mode used following loss of navigation or command link.
- going around:** 1 Overshoot straight ahead (UK civil).  
2 Make another circuit (RAF).
- Gold** General on-line diagnostic.
- gold** Au, malleable metal with density 19.3, MPT 1,064°C, aerospace use mainly thermal-reflective coatings.
- goldbeaters' fabric** Layer of cloth fabric cemented to one or more layers of goldbeaters' skin, making it gastight.
- Gold C** Gliding certificate second only to Diamond C, requiring flight of ≥300 km and other achievements.
- golden arm** Supposed attribute of pilot whose ability and experience master all simulations and are acknowledged by peers.
- golden handcuffs** Large cash sum to induce military pilot to extend period of service (UK, colloq.).
- gold film** Extremely thin vapour-deposited electrically conductive film used for thermal anti-icing of transparencies.
- Goldfish Club** Club open to aircrew whose lives have been saved by dinghy made by UK company RFD Ltd. (1940-).
- goldie** Verbal code: "Aircraft automatic flight-control system and ground-control bombing system are engaged and awaiting electronic ground commands" (DoD).
- goldie lock** Verbal code: "Ground controller has electronic control of aircraft" (DoD).
- gold plating** Introduction of what (generally ignorant or partisan) politicians claim to be costly and unnecessary features in weapon systems (US).
- Goldstein** In 1929 put forward two theories to simplify propeller calculations: the trailed vortex sheet is a helix of constant pitch; and the resultant velocity is the vector sum

of the induced velocity and the velocities of rotation and forward motion.

**Goldstone** DSIF stations NE of Barstow, CA.

**golf ball** Turbulence control structure.

**goMats** Gulf of Mexico advanced traffic surveillance.

**gondola** Car of airship.

**gong** Medal or decoration (RAF colloq.).

**gonio** VHF/DF (F).

**goniometer** 1 Instrument for measuring angles between reflecting surfaces of crystal or prism.

2 Electrical transformer used with fixed and rotating aerials for determining bearing of radio station.

3 Motor-driven instrument used with four stationary aerials to deliver rotating signal field for VOR.

**go/no-go** Step-by-step basis on which manned space-flights are flown, with flight crew and mission control jointly making positive decision whether to continue into each new phase of mission.

**go/no-go check list** Written guide for flight crews to determine go/no-go situation on any given subsystem deficiency (USAF).

**go/no-go gauge** Dimensional gauge for checking whether part is within upper and lower tolerance limits.

**Go-NoGo Line** Geographical line beyond which aircraft carrying live NW could penetrate only after receipt of Positive Release Message [in case of RAF 1953–80 this was 8°E longitude].

**go/no-go test equipment** Provides only one of two alternative answers to any question, eg whether given signal is in or out of tolerance.

**good engine** One that continues to operate after other[s] failed.

**Goodman diagrams** Various graphical plots used to determine parts life under repeated cyclic loads, most common having per cent alternating stress/endurance strength as ordinate and per cent mean stress/rupture strength as abscissa.

**good parachute** Fully and correctly deployed.

**Goodrich de-icer** Original patented pulsating rubber de-icer for leading edges, intermittently inflated with air to break up ice.

**Goodrich rivnut** See *Rivnut*.

**goofers** Audience on island of carrier.

**goolie chit** Written promise of reward if downed aircrew member is returned intact [UK Imperial, esp. North West Frontier, 1920–50].

**goon** Guard at PoW Stalag Luft (RAF WW2).

**gooseneck flare** Type of runway flare mounted on slender stem designed to bend easily if struck by aircraft.

**GOPS, Gops** Giga [10<sup>9</sup>] operations per second.

**GOR** 1 General Operational Requirement.

2 Guy on the right, in side-by-side military aircraft, normally navigator or electronic-warfare officer.

3 Ground occurrence report.

**Gorac** Ground collision-avoidance system operational requirements and certification (Euret).

**gore** 1 Shaped sector of parachute canopy normally bounded by two adjacent rigging lines.

2 Shaped section of airship envelope or gas bag, or balloon envelope.

3 Radial panel in airframe, esp. pressure bulkhead, hence \* panel, \* diaphragm.

**GOS** 1 General operator station.

2 Grade of Service.

3 Gate-operating system.

4 Global observing system.

**Gosat** Greenhouse-gases observing satellite.

**GOSC** General Officer Steering Committee.

**Gosip** Government open-systems interconnection profile.

**GosNII** State scientific research institute (USSR, R); -A or Aeronavigatsiya adds ATC/navigation/landing aids; -AS adds avionics; -GA adds all aspects of civil aviation; PAS adds ground test of aircraft systems.

**Gospar** State commission for space research (R).

**Gosport tube** Flexible speaking tube used in tandem open-cockpit trainers connecting instructor's mouthpiece with pupil's helmet or vice versa.

**Gost** State research institute for fuels and lubricants (USSR, R).

**Gothic-arch bearing** Becoming the preferred type of ball bearing in gas-turbine mainshafts, this runs the balls between races each formed from two radii struck from slightly different centres.

**Gothic delta** Wing whose basic triangular shape is modified to resemble Gothic window; also known as ogival delta.

**GOTS** Government off the shelf.

**Göttingen-type tunnel** Wind tunnel with return-flow circuit but open working section.

**GO<sub>2</sub>** Gaseous oxygen.

**Gouge flap** Flap whose upper surface forms part of cylindrical surface; thus as flap rotates immediate movement is rearwards to increase area.

**GOX, gox** Gaseous oxygen.

**GoXML** Universal meta-language converting almost any data format into XML and back.

**GP** 1 General purpose (bomb, or former RAF squadron role prefix).

2 Glove pylon.

3 *Geographical position*.

4 *Glidepath*.

**Gp** Group.

**GPa** Gigapascal.

**GPADIRS** Global positioning air-data inertial reference system [U adds unit or replaces system, **GPIRS** omits AD].

**GPADS** Guided-parafoil aerial [or air or airborne] delivery system.

**GPALS** Global protection against limited strikes.

**GP&C** Global positioning and communications.

**GPB** Ground-power breaker.

**GPBC** Gold-plated beryllium copper.

**GPC** Government Procurement Code (US).

**GPCDU** General-purpose control and display unit.

**GPCU** Ground-power control unit.

**GPDC** General-purpose digital computer.

**GPEP** Global-positioning experiments program.

**GPES** Ground-proximity extraction system.

**GpFL** Group flashing light.

**gph, GPH** Gallons per hour.

**GPI** 1 Ground-positioning indicator.

2 Ground point of interception.

3 *Glide-path indicator*.

4 Global positioning inertial; N adds navigation, RS reference system, RU reference unit, SS sensor system.

5 Gas-penetrant imaging, or inspection.

**GPIAA** Accident-investigation authority (Portugal).

**GPIB** General-purpose instrument bus, or interface board.

**GPIIA** Groupement Professionel des Industriels Importateurs de l'Aéronef (F).

**GPIN** Global positioning [laser]-inertial navigation.

**GPIO** General-purpose input/output.

**GPIRS** See *GPADIRS*.

**GPM** 1 Glass polycarbonate mix.

2 Global precipitation measurement.

3 General-purpose processing module.

**gpm** Gallons per minute (also gal/min).

**GPMG** General-purpose machine gun.

**GPMS** GPS performance-monitoring sys.

**GPP** 1 Graphic part-programming; technique for communicating with computer by words and diagrams, conveying pictures of shape required and operations necessary to produce it.

2 Generative process planning, basis for implementing FMS (7).

3 General-purpose processor.

**GPPE** General-purpose processing element.

**GPPPA, GP<sup>3</sup>A** Groupement Pour la Préservation du Patrimoine Aérien (F).

**GPR** Glider Pilot Regiment [1942–57] (UK).

**GPRA** Glider Pilot Regimental Association [1945–; Benfleet SS7 5JQ] (UK).

**GPRS** General packet radio services; see packet (3).

**GPS** Global positioning system, or satellite (Navstar); ANT adds antenna, L1/L2/L5 see these entries.

**GPSCS** General-purpose satellite communications system.

**GPS-HMU** GPS height measuring unit.

**GPSI** GPS interferometer.

**GPSS** General-purpose simulation software.

**GPSSU** GPS sensor unit.

**GPT** Glidepath tracking.

**GPTe** General-purpose test equipment.

**GPTN** General-purpose telephone network.

**GPU** 1 Ground power unit.

2 Gun pod unit.

**GPVI** Graphic[s]-processor video interface.

**GPW** Ground-proximity warning [C adds computer, S system, SU sensor unit].

**GR, G/R** 1 Green run.

2 Ground attack, reconnaissance (role prefix, UK current).

3 General reconnaissance, ie Coastal Command (role prefix, UK, WW2).

4 Ground relay, or router.

5 Groupe de Reconnaissance (F).

6 Hail.

**Gr** 1 Net climb gradient.

2 Graphite.

3 *Grashof number*.

**G<sub>R</sub>, G<sub>r</sub>** Rudder actuator.

**GRA** Geared rotary actuator.

**grab** Tendency of wheel brakes to increase power suddenly without pilot input.

**grabbit** Long boathook carried on large marine aircraft.

**grab line** See *handling line*.

**Grace** Gravity recovery and climate experiment (US/G).

**GRAD, Grad** Gradient.

**grad** Non-SI unit of plane angle, = 0.9° = 1.5708 × 10<sup>-2</sup> rad.

**grade** 1 Of fuel, see *fuel grade*.

2 Unit of plane angle, defined as 0.9°.

**Grade-A** Standard aircraft cotton fabric, long staple with 80 threads per inch across both warp and weft (US = fill).

**graded fibre** Standard form of reinforcing-fibre raw material supplied according to diameter, length or other variable.

**gradient** 1 Of net flightpath, has normal meaning, h/D%; note runway \* = slope.

2 Space rate of decrease of function; if in three dimensions, vector normal to surfaces of constant value directed towards decreasing values. Ascendent is negative of \*.

3 Loosely, magnitude of either \* or ascendent.

4 Rate of change of quantity, or slope of curve when plotted graphically.

**gradient distance** Linear distance from encounter with gust to point of peak intensity.

**gradient of climb** See *climb gradient*.

**gradient wind** Along isobars with velocity exactly balancing pressure gradient; equilibrium between force directed towards region of low pressure and centrifugal forces.

**gradient wind speed** Calculated as for geostrophic but taking into account curvature of trajectory.

**grading curve** In determining propeller performance by Drzewiecki theory, forces on infinitely small blade element are determined; curve of these forces (as the ordinate) against blade radius is \*\*, from spinner or root and reaching maximum between 70%–90% tip radius.

**Gradu** Gradual[ly].

**Graetz number, Gz** Heat-transfer measure = C<sub>p</sub> (specific heat at constant pressure) times mass flow divided by thermal conductivity and a length characteristic of body concerned.

**Grafil** Registered name (Courtaulds) for carbon-fibre raw materials.

**grain** 1 Entire case or extruded charge for solid rocket motor.

2 Particle of granular solid propellant, usually in gun ammunition.

3 Particle of metallic silver remaining in photographic emulsion after developing and fixing; these form dark area of image.

4 Non-SI unit of weight = 0.0648 g =  $\frac{1}{7,000}$  lb.

**grain orientation** Direction of solidification of metal.

**GRAM, Gram** GPS receiver application module.

**gramme** Fundamental SI unit of mass [gram in US], abb, g.

**gramme-molecule** Mass in grammes of substance numerically equal to its molecular weight.

**gramophone grooving** Close-pitch grooves in female part to form abradable seal round high-speed rotating member.

**Grandfather rights** Permanent certificates for their existing route networks awarded US domestic airlines by CAB on its formation in July 1940. Hence Grandfather routes. Today loosely extended to all nations on basis 'If you've had this right in the past, you'll probably succeed in a fresh application'.

**Grand Slam** RAF 22,000 lb [9,979 kg] deep penetration bomb of 1944.

**grand slam** Verbal code: "All hostile aircraft sighted have been shot down" (DoD).

**Grand Tour** Planned unmanned exploration of series of outer planets with same spacecraft using planets' gravitational fields to turn spacecraft from one to another; possible only once in each 180 years.

**granularity** General measure of structure of very large EDP system based on number of processors used.

**granular snow** Precipitation from stratus clouds (frozen drizzle) of small opaque grains 1 mm or less in diameter.

**GRAP** Ground recognised air picture; -IOC adds initial operating capability.

**grape** Purple-suited refuelling crewman on carrier (USN).

**graphic part programming** Translation of three-dimensional co-ordinates of workpiece into computer program for NC machining, invariably using computer graphic displays as human interfaces.

**graphics** Visual displays of any kind, esp. electronics displays forming part of EDP (1), EW or similar system (eg on CAD), and designed written matter and symbology inside and on skin of aircraft.

**graphics differential engine** Uses *DTED* and algebraic/polynomial calculation to produce perspective digital landmass for *DMR*.

**graphics drawing processor** An ASIC using subpixel addressing and anti-aliasing algorithms – eg, giving smooth dynamics, avoiding stair-stepping – to generate complex display formats at higher than 30 Hz.

**graphic solution** Using geometric construction to solve problem; eg calculating point of no-return.

**graphic[s] user interface** A simulation of an actual, or proposed, interface between a human and an operating system. It typically includes a functioning display and software simulating fault response.

**graphite** Soft naturally occurring allotropic form of carbon, also produced artificially and recently in form of strong fibres with perfect hexagonal crystalline structure. Large family commonly called carbon fibres includes many which in fact are graphite.

**graphite bomb** Filled with filaments which short-out hostile electronics.

**Grapioc** Ground recognised air picture initial operating capability (UK Army/RAF).

**GRAS** Ground-based regional augmentation system, for en-route navigation and precision approach.

**Grashof number, Gr** Heat-transfer parameter =  $1^3g(T_2-T_0)/\nu^2T_0$  where 1 is a length,  $g$  is gravitational acceleration,  $T_1$  and  $T_0$  are temperatures, and  $\nu$  is kinematic viscosity.

**grass** Random spikes projecting from timebase of CRT, radar or other electronic display caused by noise or deliberate jamming.

**grasshopper** Safety-pin type of clip used to fasten cowl and other panels to perforated stud or similar anchor.

**graticule** Any array of lines used as a reference for aiming, measurement or determining spatial relationships, esp. one of straight lines crossing at right angles on chart, map, CRT or other display, HUD or other human interface.

**grating lobes** Undesirable radar-emissions caused by overlarge spacing between array elements which could reveal fighter's position.

**grating spectrum** Produced by diffraction grating.

**GRAU** State rocket and artillery directorate (USSR, R).

**graunch** To damage aircraft or vehicle (UK, colloq.).

**graveyard dive** One entered too close to the ground.

**graveyard spiral** Without blind-flying instruments most simple aircraft, on entering cloud, can enter increasingly steep spiral, pilot under 1g and wings apparently level.

**Graviner** Maker of fire extinguishers, became term for an extinguisher (RAF WW2).

**gravipause** Point between two bodies where their gravity fields are equal and opposite.

**gravireceptors** All sensors in human body for attitude, gravity and acceleration.

**gravitation** Assumed universal property of all masses of attracting all other masses with force  $GmM/r^2$  where  $G$  is universal \* constant,  $M$  and  $m$  are two masses and  $r$  is mutual distance apart.

**gravitational constant, G** Also called Newtonian constant, =  $6.6732 \times 10^{-11} \text{ Nm}^2\text{kg}^{-2}$ ; other published values include 6.664, 6.669, 6.670 and 6.6705, in each case  $\times 10^{11}$ .

**graviton** Hypothetical elementary unit of gravitation.

**gravity** Attraction experienced in vicinity of a mass, especially Earth. Standard value for terrestrial acceleration  $g = 9.80665 \text{ ms}^{-2} = 32.1740 \text{ ft/s}$ .

**gravity drop** Departure of inert projectile from initial trajectory.

**gravity drop angle** Angle in vertical plane between gun line at moment of firing and straight line to a future projectile position.

**gravity feed** Relying on fact liquids tend to flow downhill, unassisted by pump.

**gravity seat** Simulator seat giving sensation of 'pulling-g', see next.

**gravity suit** Aircrew suit, closely related to g-suit, with elements inflated/deflated by external system to give sensation of flight manoeuvres.

**gravity tank** Container relying on gravity for feed, hence may be inoperable when inverted.

**gray** 1 Grey (US spelling).

2 Derived SI unit of absorbed dose of ionising radiation, equal to 1J/kg.

**gray Code** Binary code used to transmit altitude data interleaved between transponder framing pulses, changing one digit at a time in Mode C.

**gray scale** Grey scale.

**grazing** Almost tangent to a curved surface, eg Sun-limb sensor or target-ranging system in low-level attack.

**grazing angle** That between aircraft axis or sensor LOS and local Earth's surface.

**GRB** Gamma-ray burst; CN adds co-ordinates network.

**GRBL** Green-raster brightness level.

**GRBM** Gamma-ray burst monitor.

**GRC** 1 Glenn Research Center (NASA, Cleveland, Ohio).

2 Glass-reinforced concrete.

**GRCA** Ground radar coverage area (MR-Tip).

**GRCS** Guardrail common sensor.

**GRDC** Gulf Range drone control; US adds update system.

**GRDS** 1 Ground-roll director system, based on PVD.

2 Generic radar display system.

**GRE** 1 Ground readout equipment.

2 Ground runup enclosure.

**grease** 1 Lubricants based on hydrocarbon soaps emulsified in petroleum oils.

2 To make a greaser.

**greaser** Landing so smooth touchdown is imperceptible.  
**great circle** 1 Circle (usually small portion) on surface of sphere whose plane passes through sphere's centre.

2 Intersection of Earth's surface and plane passing through Earth's centre.

**great-circle chart** One on which all GCs are straight lines.

**great-circle course** See next.

**great-circle route** Shorter of two great circles linking all pairs of points on Earth's surface, giving minimum distance to fly; GC course is a misnomer because except along Equator or meridians course (hdg) is constantly changing.

**great-circle track** See *great-circle route*.

**Greating nozzle** Pioneer noise-reducing jet nozzle having several (typically six to eight) radial petal-like segments to increase length of periphery.

**green** 1 Signal to proceed given by Aldis or similar lamp aimed at aircraft.

2 Friendly.

3 Coloured light[s] on instrument panel, esp. 3 \* = landing gear down and locked.

**green aircraft** Flyable but still lacking interior furnishing and customer avionics, and still in \* protective surface coat, awaiting painting.

**green airway** One running essentially E-W.

**Green channel** Airport route for arriving 'nothing to declare' passengers without dutiable possessions.

**green density** That of compacted powder prior to sintering.

**green endorsement** Written in logbook of aircrew member in green ink, showing exceptional ability, esp. for landing crippled or dangerous aircraft.

**greenfield site** Site considered for new airport or other facility where no structures exist at present.

**Green Flag** Tac-air war exercises strongly emphasising EW (USAF).

**green flag** In signals area = right-hand circuit.

**greenhouse** Long glazed canopy over tandem cockpits (colloq.).

**greenhouse effect** Filtering and reflective effect of Earth's atmosphere on solar and other radiation akin to that of glass panes; part of incoming spectrum penetrates to Earth, where it heats surface and causes reradiation of longer wavelengths, some of which are absorbed by atmospheric water vapour and again reradiated.

**Greenie[s]** Technical air groundcrew (RN).

**greenlight** To authorise start of expenditure on a programme (US).

**green, red, blue** A common landing check, meaning gear [undercarriage], mixture, propeller[s].

**green run** First run of new or overhauled engine or other item.

**green suit[er]** Soldier (USA).

**green tube** Unfurnished passenger aircraft.

**Greenwich** Earth's prime (0°) meridian, hence \* apparent time (GAT), \* hour angle (GHA), \* mean time (GMT) and \* sidereal time (GST).

**green zone** Traditionally, intersection between green and crossing airway at which it is traffic on crossing route that has responsibility for ensuring height separation.

**Gregale** Strong wind from NE in central Mediterranean [pronounced gregally].

**Gremlin** Family of mischievous imps responsible for faults (RAF, WW2).

**Gretel** Gamma-ray Eureka telescope.

**grey body** Unknown hypothetical body absorbing constant fraction of all wavelengths of incident EM radiation.

**grey code** Gray Code.

**grey literature** Technical documents produced by universities, laboratories and professional and government bodies, not normally available to public.

**greyout** Blurred vision under high positive acceleration less than that producing blackout.

**grey scale, grey shades** Standard series of achromatic tones linking black to white, typically 64 on modern display.

**grey water** Waste from handbasin; this can be fed to drain mast, unlike waste water.

**grey wedge** Standard filter whose opacity increases in known fashion across width, usually L to R; used in determining pulse distribution and other variables on CRT and other displays.

**grf, g.r.f.** Group repetition frequency.

**GRG** Ground-roll guidance.

**GRI** Group repetition interval.

**Grib** Gridded-binary data [chart of forecast weather].

**grid** 1 Perforated electrode between cathode and anode of thermionic valve controlling flow of electrons into fine beam.

2 Metal cylinder at negative potential in CRT designed to concentrate electrons.

3 System of two sets of parallel lines crossing at 90° to form pattern of squares each identified by number and/or letters in margins; superimposed on maps, charts, photographs and multi-sensor outputs so that any point can be located by letter/number code. Usually also permits accurate measures of distance and direction. Often called military \*, though most are civil.

**grid bearing** Direction of one point from another measured clockwise from grid (3) north.

**grid bias** Constant potential in series with input circuit between grid (1) and cathode to hold operation to one part of characteristic curve.

**grid convergence** Angle between true north and grid (3) north.

**grid co-ordinates** Rectilinear measures about two axes in flat plane of grid (3) facilitating conversion of lat/long and other Earth measures on to flat sheet by routine plane surveying.

**grid heading** Aircraft heading measured relative to grid (3) north.

**grid leak** Resistor allowing grid (1) charge to drain to cathode.

**Grid Lock** Automatic precise geo-registration of imagery from airborne sensors to create target co-ordinates within minutes, later within seconds (USAF).

**grid magnetic angle** Angle between magnetic north and grid (3) north, measured E/W from latter; also known as gravitation (= grid variation).

**grid modulation** AM achieved by applying modulating signal to grid (1).

**grid north** Zero datum of grid (3), close to true north.

**grid ring** Round top of traditional magnetic compass, rotated by hand when setting course.

**grid ticks** Small marks on neatline or along grid (3) lines showing alternative grid system(s).

**grid variation** See *grid magnetic angle*.

**griff** Reliable news or information.

**Griffith crack** Supposedly ideal crack in structure, where minor axis = 0.

**Griffith wing** Subsonic wing of very deep section with powerful suction slit on upper surface at about 70% chord to induce airflow to follow discontinuity between upper surface ahead of slit and thin trailing edge. Never successfully used.

**Grip** Global reach improvement program.

**grip range** Range of thickness of material joinable by particular blind rivet or other fastener.

**GRIS** Global reconnaissance information system.

**GRM** Ground-roll monitor.

**GRMS** Ground reference and monitor station (DGPS).

**GRND** Ground.

**GRO** Gamma-ray observatory.

**grommet** 1 Rigid or reinforcing eyelet closed on to flexible surface.

2 Flexible ring set into rigid surface, often by peripheral groove matched with sheet thickness, providing bearing surface for pipe, cable or other line (1, 2) or control cable.

**grooved runway** One whose surface is traversed by one of four standards of shallow grooves tailored to climate, crossfall and other factors, along which water can escape even in heavy rain and strong wind to make critical aquaplaning depth extremely unusual.

**groover** Machine with large wheel, usually diamond-dressed saw, for cutting runway grooves.

**GROS, Gros** Civil Experimental Aeroplane Construction Organization (USSR).

**gross altitude scale** Presentation of total altimeter operating range on one fixed scale (ASCC).

**gross area** Area of projected surface of aerofoil, edges being assumed continuous through nacelles, fuselages, pods or other protuberances. Where tapered wing meets fuselage, edges projected in to meet at centreline, except in case where angle is extreme (eg, with glove, Lerx, strake), where end of root is taken across at 90°.

**gross ceiling** Altitude at which gross climb gradient (see *gross performance*) is zero.

**gross dry weight** Traditional measures of powerplant weight which included propeller hub (metal hub on which wooden propeller was mounted), all starters, primers, exhaust systems, fluid filters, air inlets and accessories, but excluding cooling system, fluid tanks and supply systems and instruments.

**gross flightpath** Gross profile in climb-out segment.

**gross flight performance** See *gross performance*.

**gross height** Height of any point on gross flightpath.

**gross lift** Buoyancy in ISA (1) of aerostat under standard conditions of inflation and with allowance for humidity.

**gross liftoff weight** Actual mass of spacecraft at moment of liftoff.

**gross moving load** Total moving mass of simulator, including upper baseplate and actuators.

**gross performance** That actually measured on one aircraft of type, adjusted by small factor to reflect guaranteed rating and fleet minimum performance.

**gross profile** Side elevation of aircraft trajectory, esp. following takeoff, corresponding to gross performance.

**gross thrust** That developed by propulsion system in ideal conditions, not allowing for inlet momentum drag, inlet shock losses, duct losses, tailpipe losses, cooling drag, propeller slipstream drag, torque effects or any other effects.

**gross upset** Major uncommanded departure in AOA/V/altitude/attitude.

**gross weight** Traditional measure usually defined as maximum flying weight permitted; today MTOW.

**gross wing area** *Gross area*.

**ground** 1 US = earth.

2 To declare object or person unfit for flight.

3 Personnel on apron connected to aircraft by inter-phone cord.

**ground-adjustable propeller** One whose pitch can be changed only by ground crew.

**ground air vehicle** One designed for ground mobility but which can fly for short periods (ASCC).

**ground alert** Status of aircraft fuelled and armed and crews able to take off within specified period, usually 15 minutes.

**ground angle** 1 That between local horizontal and major axis of parked fuselage.

2 Maximum usable nose-up angle on landing, limited by tail scrape.

**ground board** Flat surface representing the ground in wind tunnel.

**ground clearance** 1 Vertical distance between airfield or deck and tips of helicopter main rotor blades in no-lift position.

2 Vertical distance between airfield or deck and specified part of aircraft or external stores.

**ground clutter** Unwanted returns on radar display caused by direct reflection from ground.

**ground collision avoidance system** To prevent airborne aircraft from flying into the ground, not for preventing taxiing accidents.

**ground contact** Glimpse of Earth sufficient to assist navigation.

**ground control** Control tower position or other authority assigned to control all vehicles, including taxiing aircraft, on airfield movement area.

**ground-controlled approach, GCA** Ground radar installation able to watch approaching aircraft and direct them to safe landing by radio (so-called talkdown) in bad visibility; and landing thus directed.

**ground-controlled interception, GCI** Interception (1) controlled by ground radar and radio (usually voice-plain-language) advice.

**ground crew** 1 Personnel assigned to cleaning, replenishment, servicing or maintenance of aircraft at turnaround, between missions or in other routine situation.

2 Personnel assigned to manoeuvre aerostat on ground (see *landing crew*).

**ground cushion** 1 Region of increased pressure beneath landing aeroplane caused by forward motion, proximity of ground and trapping of air ahead of flaps and under fuselage (can affect flow over tail and, for this and other reasons, cause pronounced pitching moment).

2 Region of increased lift under helicopter or jet V/STOL in low-altitude hovering mode caused by reflec-

tion of downwash, jets, entrained air and possibly entrained solids or liquids from ground.

**ground delay program** Implemented to control traffic to airport where acceptance rate is reduced [expected to last a significant time, e.g. because of severe weather or an accident] by prohibiting flights to that airport to depart until a delayed EDCT.

**ground Earth station** Aeronautical ground station.

**grounded** Legally prohibited from flying.

**ground effect** 1 Increased wing lift when flying in close proximity to ground, especially with low-wing aircraft.

2 Increased lift caused by interaction of powered lift system and ground, as with ground cushion (2), used in ACV (GEM).

3 All effects, invariably unwanted, caused by interference of ground on radars, radio nav aids and other EM systems.

**ground elapsed time, GET** Time measured from liftoff of major space mission, beginning with countup and continuing to provide one index of elapsed time unvarying with Earth time zone.

**ground engineer** Skilled member of armed force or employee of MRO with power to certify work.

**ground environment** 1 Environment experienced by ground equipment (no definition except to meet particular specifications which are variable).

2 Electronic environment created by ground stations, esp. for air-defence purposes.

**ground equipment** 1 All non-flying portions of aerial weapon system.

2 All hardware retained on ground needed to support flight operations. Appears to be no clear definition; most authorities agree every item intimately associated with flight operations but exclude those concerned with training, design/development, marketing or other peripheral areas, and never include consumables.

**ground fine pitch** Special ultra-fine pitch available after landing to increase drag on non-reversing installation; use of \*\*\* known as discing (pronounced dinking).

**ground-fine-pitch stop** Mechanical lock on hub released by compression of landing gear or other signal.

**ground fire** Gunfire from ground directed against aircraft (most authorities exclude all but small-arms fire).

**ground/flight switch** Isolates batteries on ground.

**ground fog** Shallow fog caused by radiation chilling of surface at night.

**ground half-coupling** That part attached to GSE affording direct connection with mating half in aircraft.

**ground handling equipment** Ground equipment for lifting or moving large items, such as wings, missiles, spacecraft etc.

**ground hold** Hold (1) for ATC purposes taken on ground before starting engines.

**ground horizon** 1 Theoretical distance of horizon from sea level (see *horizon*).

2 Actual horizon seen from particular location.

**ground idle** Governed running speed for engine with throttle fully closed; lower rpm than flight idle.

**ground-imagery exploitation station** Each GIES comprises an IIW, an MD/RWW and an RRW (RAF reconnaissance).

**ground lag** See *lag*.

**ground liaison** Officer specially trained in offensive air support (DoD) and/or air reconnaissance (NATO,

CENTO, IADB); organized as member of team under ground commander for liaison with air and/or navy.

**ground line** A notional airfield surface used in design [in theory, the same as the actual surface at any time].

**ground loiter** Helicopter saving fuel by resting on ground between particular military tasks, in friendly or hostile territory.

**ground loop** Involuntary uncontrolled turn while moving on ground, esp. during takeoff or landing, common on tailwheel aeroplanes with large ground angle, caused by directional instability; if at high speed, landing gear would normally collapse before turn had reached 180°.

**ground marks** ICAN and other bodies decree what information should be written [usually in letters/numbers 6.09m (20ft) high] on the ground or on buildings to aid pilots.

**ground movement control** Military unit assigned to control of transport by land, esp. of air forces.

**ground moving target indication** Separation of ground moving targets from clutter background by using their different Doppler shift, especially when looking ahead at small angles from track.

**ground nadir** Point on ground vertically beneath perspective centre of camera lens when exposure was made; coincides with principal point in vertical photo.

**ground observer** Trained person forming part of organization providing (DoD) visual and aural information on aircraft movements over defended area, (UK) information on fallout after nuclear attack.

**ground occurrence report** Monitors failures [ground or inflight] traced to lapses by engineers.

**ground-performance aircraft** One able to move itself on ground without using flight propulsion system (ASCC).

**ground plane** Earthed system of conductors forming horizontal layer (mesh, sheet, radial rods etc) surrounding ground navaid.

**ground plot** A calculated ground position.

**ground position** Point on Earth vertically below aircraft.

**ground-position indicator** Device fed with data from compass, ASI etc and giving continuous readout of DR position (obs.).

**ground power unit** Source of power, usually electric and possibly pneumatic/hydraulic/shaft, supplied to parked aircraft.

**ground-proximity extraction system** Standard technique for low-level airdrop of palletized cargo using shock-absorbing ground coupling which engages with hook suspended from pallet.

**ground-proximity warning system** Uses forward-looking radar and sensitive altimeter[s] to give aural and/or visual warning, and in most systems, if ignored, to command violent pull-up to [typically] 30° climb. See *EGPWS*.

**ground radar aerial delivery** Method of air-dropping cargo, usually in A-22 (US) containers, from high altitude to avoid hostile fire, mountains or other hazards, with full parachute deployment delayed to increase accuracy.

**ground readiness** Status of aircraft serviceable and crews standing by so that arming, briefing etc can be completed within any specified period (longer than 15 min of ground alert).

**ground resonance** Dangerous natural vibration of helicopter on ground caused by stiffness and frequency of landing-gear legs amplifying primary frequency of main

rotor; potentially catastrophic unless designed out, and even with certificated helicopter can occur as a result of severe landing shock.

**ground return** See *ground clutter*.

**ground roll** Distance travelled from point of touchdown to runway turnoff, stopping or other point marking end of landing.

**ground run** Distance from brake-release to unstick, not same at TOR (see *takeoff*).

**ground safety lock** Retraction lock.

**groundschool** This is increasingly being spelt as one word. It usually refers to classroom instruction for GA pilots, especially on executive aircraft.

**ground sheet** Radial-wall flow of hot gas along ground beneath VTO [esp. jet-lift] hovering in ground effect.

**ground signals** Bold visual symbols displayed in signal area.

**groundspeed, G/S** Aircraft speed relative to local Earth.

**groundspeed mode** Flight-system mode holding constant G/S.

**ground spoiler** Spoiler available only after landing, usually as lift dumper.

**ground start** Supply of propellants to large rocket vehicle from ground during ignition and hold-down so that at liftoff main-stage tanks are still full.

**ground stop** Holds flight [usually scheduled, but in any case already cleared] at departure. Reasons might be closure of destination or to allow for implementation of longer-term solution to a destination problem, such as a *GDP*.

**ground strafing** Attack by aircraft on tactical surface target, esp. by gunfire.

**ground support** 1 Air power deployed for immediate assistance of friendly army, ie close air support; hence designation \* aircraft.

2 Hardware needed to facilitate operation of aircraft, eg ladders, chocks, refuelling, replenishing and rearming equipment, loaders, tie-downs, blanks (4) and ground conditioning and power supplies; and use thereof.

**ground support equipment, GSE** Ground equipment required for operation of aircraft [especially military], RPV or missile.

**ground swing envelope** Plot of ground where obstructions would foul nose or tail of longest aircraft in most extreme positions on curves of taxiways or apron.

**ground test** Test on ground of equipment or system normally used in air.

**ground test coupling** Connections enabling airborne system to be tested on ground for fluid pressure and functioning, supply voltage or any other variable.

**ground trace** Ground track of satellite.

**ground track** Path on Earth's surface vertically below aircraft or satellite.

**ground upset** Accident caused to light aircraft or other vehicle by jet blast or large propeller slipstream.

**ground visibility** Prevailing visibility along Earth's surface as reported by accredited observer or measured by RVR.

**groundwash** Outward flow of wake turbulence from engines or wingtips of large aircraft on ground.

**ground wave** Radio or other EM waves taking direct path from ground transmitter to ground receiver (in practice mix of ground, ground-reflected and surface waves); subject to refraction in ducts in troposphere.

**ground wire** 1 US term for earthing wire.

2 Winched cable emerging from top of mooring mast and connected to airship mooring cable; US = mast line.

**ground zero, GZ** Point on Earth nearest to centre of nuclear detonation (which may be below, at or above GZ).

**group** 1 Military air formation consisting of two or more squadrons (DoD), or two or more wings (RAF).

2 Several sub-carrier oscillators in telemetry system.

3 Major portion of aircraft (eg. wing\*) assigned to \* (4).

4 Team of engineers assigned to design, stress, develop and possibly cost major portion of aircraft, often remaining intact to work on same part on successive programmes; common in US, where \* titles are wing, fuselage, tail/controls, weight, electrical, hydraulic, armament and often others.

**group flashing light, GpFL** Ground light with regular emission of two or more flashes or Morse letter(s).

**group technology** General term for philosophy that links CAD with CAM to give CIM, based on recognising similarities between discrete parts.

**group velocity** Symbol *U*, that of entire disturbance of waves, equal to phase speed *c* minus wavelength 1 times *dc/dl*.

**growl** Missile tone heard in pilot headset indicating IR head locked on to target.

**growler** 1 Test equipment for short circuits in electrical machines (colloq.).

2 ECM aircraft, or a member of its crew.

**growth** Development to increase performance, hence \* engine; this may or may not be physically larger.

**GRP** 1 Glass-reinforced plastics.

2 Geographic reference point.

**GRR** Glycol recovery and recycling.

**GRS** 1 Government rubber synthetic, Buna-S type.

2 Global reconnaissance strike (US).

3 Gamma-ray spectrometer.

**GRSF** Ground Radio Servicing Flight (RAF).

**GRT** Gross registered tonnage, measure of capacity of ship, = 100 ft<sup>3</sup> = 2.832 m<sup>3</sup>.

**GRU** Main intelligence directorate of General Staff (USSR).

**grunt manoeuvre** One involving high *g* (colloq.).

**Gruppe** Group (G), equivalent to RAF wing.

**GRV** Glycol recovery vehicle.

**GRVD** Grooved runway.

**GRVL** Gravel runway or surface.

**Gr wt** Gross weight.

**Gryphon** FBMS/shore communications system.

**GS** 1 Ground speed.

2 Glideslope.

3 Ground plus station (costs).

4 Ground supply (usually electrical).

5 General schedule.

6 Galley service vehicle.

7 Ground stop.

8 Gliding School.

**G/S** 1 Ground speed.

2 Glideslope.

**Gs** Small hail or snow pellets.

**GSA** Gunsight, surface-to-air.

**GSARS** Ground-surveillance airborne radar system.

**GSC** 1 Ground switching centre.

2 Ground-station controller.

- GSD** 1 Graphics system design.  
2 Grey- [gray-] scale definition.  
3 Ground sample distance.
- GSDI** Ground speed and drift indicator.
- GSE** 1 Ground support equipment.  
2 Ground swing envelope.  
3 Global sensitivity equation[s].
- GSF** Gross square feet [undesirable].
- GSFC** Goddard Space Flight Center, Greenbelt, MD (NASA).
- GSFG** Group of Soviet Forces in Germany (NATO name).
- GSGA** State service of civil aviation (R).
- GSGG** Gadolinium scandium gallium garnet.
- GSI** 1 Grand-scale integration (microelec.).  
2 Government source inspection.  
3 Glideslope indicator.  
4 Grid security infrastructure.
- GSIF** Ground-station information frame.
- GSLV** Geostationary [or geosynchronous] satellite launch vehicle (India).
- GSM** 1 Ground-station module, or mobile.  
2 Global-station module.  
3 GPS sensor module.  
4 Global-systems mobile, or global system for mobile communications.
- GSMC** Global system for mobile communications.
- GSMS** Ground-station management system.
- GSN** Guidance unit (R).
- GSO** Geostationary orbit.
- GSOC** German Space Operations Centre, Oberpfaffenhofen.
- GSP** 1 Ground service plug (= socket).  
2 Glareshield panel.
- GSQA** Government source quality assurance (US).
- GSR** 1 Ground surveillance radar.  
2 General Staff requirement (UK, Army).
- GSS** Ground (or group) support system.
- GSSS** Gyrostabilized sight system.
- GST** 1 Greenwich sidereal time.  
2 General Staff Target.  
3 General skills test (proposed for NPPL).
- GSTF** Global Strike Task Force (USAF).
- GSTP** General support technology programme (ESA).
- GSTRS** Ground safety tracking and reporting system.
- GSTS** Ground-based surveillance and tracking system (SDI).
- GSU** 1 Group Support Unit.  
2 Group Standardisation Unit (RAF).
- GSV** Gray-scale voltage[s].
- G-switch** Activated by severe acceleration or impact.
- GT** 1 Group technology.  
2 Rate, eg kg/h, of fuel consumption (USSR).  
3 Gas temperature.  
4 Greater than.  
5 Gain/thermal noise ratio, also G/T.  
6 Aircraft category, glider torpedo (USAAF 1942–47).
- G<sub>t</sub>** Gain of radar aerial (dB).
- GTA** General terms agreement.
- GTACS** 1 Ground-target attack control system.  
2 Ground-theater air control system (JFACC).
- GTAW** Gas tungsten-arc welding.
- GTC** 1 In IFF, group time cycle.  
2 Gyro time constant.  
3 Ground terminal computer of data-link.
- GTDS** Ground tracking data station.
- GTE** Grupo de Transporte Especial [government air carrier] (Brazil).
- GTf** 1 Ground test facility.  
2 Geared turbofan.
- GTL** Gas to liquid [fuel].
- GTM** Ground targeting mode.
- GTN** Global Transportation Network [web-based control system, to be upgraded to \* 21] (US DoD).
- GTO** Geosynchronous (or geostationary) transfer orbit.
- GTOW** 1 Ground take-off weight.  
2 Confusingly, gross take-off weight.
- GTPE** Gun time per engagement.
- GTR** 1 Gulf Test Range.  
2 General technical requirements.  
3 Greater.
- GTRE** Gas Turbine Research Establishment (India).
- GTRI** Georgia Tech. Research Institute.
- GTS** 1 Gas-turbine starter.  
2 Glider Training School.
- GTSIO** Geared, turbocharged, direct injection, opposed.
- GTSS** Ground-target sensor surveillance.
- GTT** Ground test time.
- GTV** 1 Ground-test vehicle (helicopter).  
2 Guidance test vehicle (missile).  
3 Glide test vehicle.  
4 Ground test valve (hydraulic system).
- g.u.** Gravity unit, standard unit for geophysical and MAD calculations, =  $10^{-6} \text{ ms}^{-2}$ .
- GUAP, Guap** Chief Administration of Aviation Industry (USSR).
- guaranteed rating** Minimum power or thrust which manufacturer guarantees every engine of type will reach.
- Guard** Category of aircraft of secret type, or containing secret equipment, requiring armed guard when parked (UK, WW2).
- guard** Emergency VHF channel usually monitored as a secondary frequency by all air and ground stations in geographical area.
- guarded switch** One protected against inadvertent operation by hinged cover or shroud.
- guard frequency** Guard.
- guardroom** Police post at entrance to RAF airfield or other military establishment (UK).
- guardship** 1 Armed escort helicopter.  
2 Planeguard helicopter.
- gudgeon pin** Links piston to connecting rod (US, wrist pin).
- GUDN** Guarnylurea-dinitramide.
- GUGVF** Chief Administration of Civil Air Fleet, of which Aeroflot is operating branch (USSR, R).
- GUH** Get-U-Home.
- GUI, G/UI** Graphics, or graphic[al], user interface.
- guidance** Control of vehicle trajectory, esp. that of unmanned, or of manned but according to external inputs (see *active homing, beam-rider, command \*, electro-optical \*, inertial \*, IR \*, laser \*, midcourse \*, passive homing, radar command \*, semi-active homing, wire \**).
- guidance radar** One dedicated to providing pencil beam for beam-rider or radar command guidance or illumination beam for semi-active homing.

**guidance system** Complete system providing guidance signals to flight-control system which steers vehicle.

**guide ailerons** Small wing-tip ailerons providing normal feel on aircraft with plug-type spoiler ailerons.

**guided bomb** Free-fall missile with guidance, esp. modified bomb.

**guided missile** Vehicle able to deliver warhead to target; normally not including those travelling over land surface or entirely through water (torpedo) but including all with some form of aerial trajectory.

**guided weapon** Guided missile (UK).

**guide rope** See *drag rope*.

**guide-surface canopy** Any of several families of parachute deployed from pack but able to be steered through air with translational motion.

**guide vane** 1 See *stator blade*.

2 Radial aerofoil struts at gas-turbine inlet designed to add or reduce swirl to airflow.

**Guidonia** Large aeronautical research centre formerly (pre-1944) run by Italian defence ministry.

**Guinea Pig Club** Members of Allied air forces in WW2 who had been critically burnt or injured and operated on semi-experimentally.

**GULF, Gulf** Graphical user interface load-control facility.

**gull wing** One having pronounced dihedral from root to c15–20% semi-span, then little dihedral or even anhedral to tip.

**gull-wing canopy** In left/right halves, opened along centreline.

**gull-wing door** One having pronounced curvature, concave on outer face, hinged parallel to aircraft longitudinal axis.

**gully** Deep axial channel, eg. between two separated engines in fuselage of twin-jet aircraft.

**gulp** Irreversible consumption of lubricating oil.

**gum** General term for viscous residues formed in gasolines (petrols) and to lesser extent other hydrocarbon fuels, mainly by slow oxidation.

**gum inhibitor** Now called anti-oxidant additive.

**Gumo, GUMO** Main and central directorates, each with a number (R, MoD).

**Gump** Gas, undercarriage, mixture, propeller(s) (US arch.).

**gun** 1 Good general term for airborne rifled weapons of all calibres, including recoilless installations; no clear definition at what low muzzle velocity \* becomes projector.

2 Piston engine throttle; hence to cut \* = to close throttle, and to \* engine = to apply full power (colloq., suggest arch.).

**gunbore line** Projected axis of bore.

**gun cross** HUD symbol indicating gun is armed, ready to fire.

**gun gas** Emitted from muzzle, mix of initially incandescent gases from propellant deficient in unburned oxygen which if ingested by engine suddenly alters operating conditions.

**gun jump** Angle between gunbore line at firing and projectile trajectory as it leaves muzzle.

**Gunk** Registered commercial solvent for oils and greases.

**gunlaying radar** Early AI radar with mode for assisting attack with fixed guns on target seen only on display.

**Gunn oscillator** Major family of GaAs diodes generating microwave outputs on application of small bias voltage.

**gun pack** Quickly replaceable unit comprising one or more fixed guns (sometimes with barrels remaining installed in aircraft), feed systems and ammunition tanks, either in streamlined pod or contained within aircraft.

**gun perfection coefficient**  $\frac{T-m}{60-M}$  where  $m$  is mass of projectile,  $M$  mass of gun and  $T$  shots per minute.

**gunship** 1 Specially designed helicopter with slim two-seat fuselage, extensive protection and wide range of armament for roles in land warfare.

2 Large transport aircraft equipped with night sensors and guns for use against poorly defended ground targets.

**gunsight line** LOS to aiming point through gunsight fixed optics.

**gun time per engagement** Usually firing duration in seconds, aggregate of separate bursts, against one aerial target.

**gun-type weapon** Nuclear weapon triggered by firing together at maximum velocity two or more subcritical fissile masses.

**gunwales** Pronounced gunnels, the upper edge of the sides of a marine-aircraft hull or float [with a rounded top, hardly applicable].

**Guppy** Aircraft with grossly swollen or bulged fuselage, eg. for conveyance of space-launcher stages and wide-body components (colloq.).

**Gusem** Generic unified systems engineering metamodel.

**gusset** Small flat member used to reinforce joints and angles.

**gust** 1 Sudden increase in velocity of horizontal wind (see *gustiness factor*).

2 Suddenly encountered region of rising or falling air, causing moving aerodyne to experience sudden increase or decrease in angle of attack, = gust velocity  $u \div$  airspeed  $v$ . Vertical gust can theoretically be sharp-edged (instantaneous change from zero to maximum  $u$ ) but normal design/airworthiness based on 1-cosine (gradual) gust curve to which gust-alleviation factor applied.

**gust alleviation** Dynamic system for reducing effect of vertical gust on aeroplane (rarely, other aircraft) (see *active ailerons*, *Softride*).

**gust-alleviation factor** As aeroplane encounters gust it pitches (depending on wing/tail or foreplane geometry) and wing does not generate full extra lift until it has travelled several chord lengths into gust, both of which reduce sudden structure load below instantaneous encounter, BCAR assumes \*\*\* 0.61, ie assumptions are based on 61% of true sharp-edged gust.

**gust curve** Assumed plot of gust (invariably 2) velocity relative to surrounding air mass against horizontal distance from undisturbed air to position of peak  $u$ .

**gust envelope** Basic aircraft design plot, vertical axis being structural load factor (1) and horizontal axis airspeed; normal boundaries are positive-stall curve, peak positive gust (normal non-SI = 50 ft/s) to  $V_C$ , line to meet gust of half this strength  $\pm$  25 ft/s at  $V_D$ , then vertical  $V_D$  to negative half-strength gust, line to  $-$  50 ft/s gust at  $V_C$ , and straight line at this negative gust value to meet positive stall at point less than 1 g. Recently new boundaries have been established at  $V_B$  at  $\pm$  66ft/s. Increasingly now called flight envelope.

**gustiness factor** Measure of gust (1), = difference

between maximum gust and lull expressed as percentage of mean wind.

**gust loading** Increased structural loads caused by gust (1, 2).

**gust locks** Particular *control locks* preventing movement of flight controls of parked aircraft.

**gust response** Aircraft encountering gust (1, 2) experiences vertical acceleration made more severe by high speed, low wing loading (esp. large span, discounting flexure effect of wing) and some other factors. Normal measure of \*\* is number of 0.5 g vertical accelerations experienced by pilot's seat per minute under specified conditions at high (Mach 0.9) speed at low level.

**Guti** Rare clag in Zimbabwe.

**gutter** Afterburner flameholder having cross-section generally in form of V, open side to rear, to create strong turbulence sufficient to keep flame attached; see vapour \*.

**Guttman** Original scaling technique used to assess community noise response assuming that any positive answer implies positive answer to all questions of lower order; final Guttman scale is normally: no action; sign petition; attend meeting; contact officials; visit officials; help organize action group.

**GUVVF** Chief Administration of Air Fleet (USSR).

**GV** Grivation.

**GVC** Girls Venture Corps; -AC or (AC) adds Air Cadets [1939-, incorporates WJAC; office Sheffield S9 1UD] (UK).

**GVE** Graphics vector engine.

**GVF** Civil Air Fleet (USSR, R).

**GVI** General visual inspection.

**G/VLLD** Ground/vehicle laser locator designator.

**GVLS** Ground vortex length scale.

**GVPF** Geared variable-pitch fan.

**GVR** Gross vehicle weight [airport vehicle].

**GVRC** GPS volume receiver card.

**GVS** 1 Ground velocity subsystem.

2 Global voice service.

**GVSC** Generic VHSIC spaceborne computer (USAF).

**GVT** Ground vibration test(s).

**GVW** Gross vehicle weight.

**GW** 1 Guided weapon.

2 Groundwave.

3 Gateway.

**G<sub>w</sub>** In a flight-control system [for example] a washout filter.

**GWAI** George Washington Aviation Institute [Ashburn, VA] (US).

**GWAC** Government-wide acquisition contract [2007-] (US).

**GWIB** Guy way in back [GIB1 more common].

**GWIS** Generic weapon interface system.

**GWEN, Gwen** Groundwave emergency network.

**GWJ** Garnet water jet for high-rate cutting of hard metals.

**GWM** Guam missile/space station.

**G-WOE** Global war on error.

**GWOT, G-WOT** Global war on terrorism.

**GWs** 1 Guided weapon system (RN).

2 Graphical weather service.

**GWT** Gross weight.

**GWVSS** Ground wind vortex sensing system.

**G<sub>x</sub>** Gain of transponder RF amplifier.

**G<sub>xyz</sub>** Shear modulus of a composite panel with fibres crossing at 45°.

**gyro** Gyroscope.

**gyro angling gain**  $CG = H/c$ ,  $H$  sense (7).

**gyrocompass** Compass based upon space-rigidity of gyroscope; no true long-term instrument exists but see *directional gyro* and *Gyrosyn*, and sensing element of fluxgate compass is gyro-stabilized.

**gyrocopter** *Autogyro* (US).

**gyrodyne** Aerodyne having engine power transmitted to lifting rotor(s) and propeller(s) used for thrust; convertiplane has wing in addition.

**gyrograph** Graphical plot of gyro drift against time.

**gyro gunsight** Sight for fixed guns using one or more gyros (and RAE-developed Hooke's joint with two degrees of freedom) to provide automatic lead computation by measuring rates of sightline spin while remaining insensitive to rotation about sight axis itself caused by roll of host aircraft).

**gyrohorizon** See *artificial horizon*.

**gyro log** Form used to calculate and record gyro drift and drift rate (ASCC).

**gyromagnetic compass** Directional gyro whose azimuth datum is maintained aligned with magnetic meridian by precession torquing from magnetic detector.

**gyropilot** See *autopilot*.

**gyroplane** Becoming a common US term for an *autogyro*.

**gyroscopic manoeuvre** Flight manoeuvre by aerodyne in which the aircraft tumbles, rotating about all three axes but capable of controlled recovery.

**gyrostabilized** Held in fixed attitude relative to space, subject to precession and wander.

**gyrostat** Hughes-developed technique for satellites of great length spinning about minor axis.

**Gyrosyn** Registered name for gyrosynchronized compass comprising DI (2) slaved to magnetic meridian by fluxgate.

**gyro time constant**  $GTC = J/c$ .

**gyro vertical** Local vertical indicated by vertical gyro.

**GZ** Ground zero.

# H

- H** 1 Henry.  
2 Total pressure.  
3 Enthalpy.  
4 High (synoptic chart).  
5 High-altitude-class Vortac/Tacan or Route Chart.  
6 NDB 50-1,999 W.  
7 Angular momentum.  
8 Helicopter mission category, USAF since 1948, USN since 1962, or helicopter qualification [PPL].  
9 US military aircraft modified mission prefix, search/rescue and aerial recovery (DoD).  
10 Magnetizing force; horizontal component of Earth's field, See  $\vec{H}$  below.  
11 Stored in silo but raised to surface for launch (DoD, ICBM).  
12 Hard temper (light-alloy suffix).  
13 G/S home from CP.  
14 Airway or map prefix, helicopter route.  
15 Ambulance [hospital] category (USN 1929-31, 1942-44).  
16 Transfer function.  
17 Health (facility or RAF).  
18 Piston engine with two crankshafts and parallel opposed cylinders.  
19 Hard surface [airfield].  
20 Haze.  
21 Homing [beacon].  
22 Hold, followed by direction.  
23 Heavy.  
24 Hazard.  
25 Heliport.  
26 Geometric altitude, or height of aircraft c.g. when on ground.  
27 Hydrogen [see  $H_2$ ].  
28 Maximum section height (tyre).  
29 Propeller pitch [P more common].  
30 Aircraft category. VTOL aircraft [but see category M] (FAI).  
31 Hankel function.  
32 High-intensity [airfield lighting].
- h** 1 Hour[s].  
2 Prefix hecto =  $10^2$ .  
3 Hexode, heptode (ambiguous).  
4 Hangarage available.  
5 High (synoptic chart).  
6 Heater (electronics).  
7 Height above MSL, or height difference in flight trajectory.  
8 Specific enthalpy.  
9 Planck constant, =  $6.62559 \times 10^{-34}$  Js.  
10 Height of blade CP above flapping axis.  
11 Operator, 120° (electrical).  
12 CC blowing jet slit height (also hj).  
13 Distance measured across chord from leading edge divided by MAC.  
14 Subscript, hover.
- H+**, **H-** Hours plus or minus minutes, eg related to  $H$ -hour.  
 $\vec{H}$  Magnetic field,  $Am^{-1}$ .
- h<sup>1</sup>,  $\dot{h}$**  Vertical velocity. Suffixes for glide-slope (GS), flare trajectory (FL) and reference trajectory (REF).  
**H<sub>2</sub>** Gaseous hydrogen.  
**H24, H<sub>24</sub>** Continuous-service airfield or facility.  
**H<sub>2</sub>S** Original PPI mapping radar (UK, WW2).  
**H<sub>2</sub>X** Development of H<sub>2</sub>S at shorter wavelength in US (see *mickey*, *BTO*).  
**H-83282** Highly stable non-inflammable synthetic hydraulic fluid (USN).  
**H-bomb** *Hydrogen bomb*.  
**H-display** B-display with elevation angle indicated; target appears as bright line with slope proportional to sin elevation.  
**h-dot** See  $h^1, \dot{h}$   
**H-engine** Piston engine with left and right rows of vertical opposed cylinders, two crankshafts geared to central output.  
**H-force** Helicopter main-rotor drag.  
**H-hour** Start of war, esp. time first landing aircraft reaches LZ, or similar clearly defined action.  
**H-film** Kapton hi-temperature polyimide.  
**H-plane** Plane of antenna's magnetic field, normal to E-plane.  
**H-Pres** Pressure altitude.  
**H-tail** One having twin fins on tips of tailplane.  
**HA** 1 Height of apogee.  
2 Hour angle.  
3 High altitude.  
4 Housing allowance.  
**ha** Hectare[s], =  $10^4 m^2$ .  
**HAA** 1 Helicopter Association of America [office Washington DC].  
2 Height above airport.  
3 Historic Aircraft Association [1978–; office Leamington CV32 6NQ] (UK).  
4 Heavy anti-aircraft [gun, or fire].  
5 High-altitude airship.  
6 Helicopter Association of Australia.  
**HAAP** Helicopter approach aiming point.  
**haar** Wet sea fog (UK, North Sea).  
**HAARP** Hf active auroral research program (ONR).  
**HAARS** High-altitude airdrop resupply system.  
**HAATR** Highly accurate autonomous target recognition [C adds capability].  
**HAB** Heliport acquisition beacon.  
**HABM** Hypervelocity air-breathing missile.  
**haboob** Line squall causing severe dust storm.  
**HABV** Hypersonic air-breathing vehicle.  
**HAC** 1 House Appropriations Committee (US Congress).  
2 Hover/approach coupler.  
3 High-acceleration cockpit.  
4 Hélicoptère anti-char (F).  
5 Helicopter aircraft controller.  
6 Helicopter active control.  
7 Heading alignment cone.  
8 Helicopter Association of Canada.  
**Hacienda** Office of Aerospace Research (USAF, colloq.).

**hack** 1 Aircraft informally used as general transport and utility vehicle by military unit (often captured from enemy or retired from combat duty).

2 To be able to accomplish (military/RAF, transitive, colloq.).

3 To penetrate private network, especially a secure LAN.

**HACP** High-altitude communications platform [unmanned airships].

**HACS** Helicopter armoured crashworthy seat.

**HACT** Helicopter active-control technology.

**HAD** 1 Hybride analog/digital.

2 Hélicoptère d'Appui-Destruction (F).

3 Hardware architecture document.

**Hadas** Helmet airborne display and sight.

**Hadec** Highly-adaptive digital engine control.

**HADF** High-accuracy direction finder.

**HADS** 1 High-accuracy digital sensor.

2 Helicopter air-data system.

**HAE** High-altitude endurance.

**HAF** Hellenic air force [UK usage].

**HAFFS** Heliborne aerial firefighting system.

**Hafnium** Hf, corrosion-resistant silver metal, density 13.3, MPt 2,230°C, \* carbide and \* nitride MPts are well beyond 3,000°C.

**HAGB** Helicopter Association of Great Britain.

**Hagen-Poiseuille** Law for velocity or pressure drop per unit length for pure streamline (laminar) flow in constant-

section pipe. Equal to  $u = \frac{P}{4\mu} (a^2 - r^2)$

where  $u$  is local velocity,  $P$  pressure drop per unit length,  $\mu$  coefficient of viscosity,  $a$  radius of tube, and  $r$  radius at point concerned. Equation denotes parabolic velocity distribution.

**HAGR** High-gain advanced GPS receiver.

**HAH** Hot and high.

**HAHO, Haho** High-altitude high-opening.

**HAHS** Hibernian Aviation Historical Society [office Dublin].

**HAHST** High-altitude high-speed target.

**HAHV, HaHv** Haute altitude, haute vitesse.

**HAI** Helicopter Association International [office, Alexandria, VA22314-2818] (US, Int.).

**HAIL** Highlands and Islands Airports plc (UK).

**hail** Precipitation in form of hard or soft ice pellets, varying size; maximum for certification test is usually 1 in (25.4 mm) sphere.

**HAILSS** Helicopter aircrew integrated lift-support system.

**HAINS, Hains** High-accuracy INS.

**Hair** High-altitude IR.

**hair absorber** Family of RAM (2) coatings consisting of dense mats of hair with conductive coatings, eg carbon-black in neoprene.

**hairline crack** One in which the two sides are in close contact, hence inconspicuous to eye.

**HAISS** High-altitude IR sensor system.

**HAL** 1 Height above landing [on helicopter pad].

2 Host accessory logic.

**Hale, HALE** High-altitude, long-endurance.

**half-brightness life** Used in several senses, eg time from cutoff of stimulating radiation of phosphor to luminescence falling to half peak, time of cutoff of current to LED

to same reduction in brightness, and various characteristics of storage tubes and displays.

**half chat** Vaguely, any partial power setting [colloq.].

**half-Cuban** Aerobatic manoeuvre consisting of up-45 line, half-roll followed by remainder of loop [many variations and additions].

**half glidepath** ILS glidepath within points at which DDM is 0.0875.

**half-life** Time required for decomposition of half original mass or number of atoms of radio-active material.

**half-million** Aeronautical chart series on scale 1:500,000 (ICAO).

**half-period zone** See *Fresnel zone*.

**half-power points, rings** Points, whose locus is normally closed ring, where radiated power from antenna is half lobe maximum.

**half-power width** Total angle at antenna between two opposite half-power points measured in plane containing lobe peak.

**half-residence time** Time for quantity of delayed fallout (weapon debris) deposited in particular part of atmosphere to decrease to half original value.

**half-reverse Cuban** Aerobatic manoeuvre: two left rolls up up-45 line, two flick rolls to right, increase trajectory to vertical to zero airspeed, tailslide followed by other manoeuvres on down-45.

**half-roll** Rotation of aircraft sensibly about longitudinal axis through 180°, usually from upright to inverted attitude or vice versa; can be half of barrel roll or of slow roll.

**half-thickness** Thickness of absorbing medium which transmits half intensity of radiation incident upon it.

**halftone screen** Fine opaque grating usually scribed on glass to break up photographic image into halftone dot pattern, for printing or digitising purposes.

**halftone tube** CRT containing conventional gun for writing separated from screen by fine-mesh electrode and storage plate.

**half-view** Drawing showing half a symmetrical object.

**half-wave rectification** Use of single-phase rectifier which passes only half of each alternate wave from input.

**Hall effect** When current-carrying material is subjected to magnetic field (or when conductor is moved through magnetic field) potential difference is set up perpendicular to both current (or motion) and field; small in metals but important in semiconductor systems and in study of electricity in ionosphere. Since 1990 the operating principle of some space thrusters.

**Halo** 1 High-altitude, low-opening (paradrop system).

2 High-altitude large optics.

3 High altitude [or agility], low observable.

4 Hypersonic air-launched option.

5 High altitude, long operation.

**halo** 1 Any of several species of part-circular phenomena caused by ice crystals in upper atmosphere, chief of which is 22° radius around Sun or Moon.

2 Coloured ring or disc seen on cloud in direction away from Sun, ie with aircraft shadow at centre; also called pilot's \*.

3 Reflection of cockpit instrument seen in canopy at night.

**halo effect** Ability of SST service to generate or attract additional first-class subsonic traffic to same carrier on same route(s).

**Halon** Family of halogen-based fluids, mainly BCF,

stored as liquid under pressure and used as fire extinguishants and for inerting space above fuel in tanks.

**Halsol** High-altitude solar [-powered aircraft].

**HALT, Halt** Highly, or hardware, accelerated life test[s].

**halteres** Twin vibrating prongs used in certain time-keeping systems.

**hammer** Sudden violent excursions in pressure caused by reflected shockwaves in closed fluid (esp. hydraulic) system.

**hammerhead** 1 Large circular paved area at end of runway to facilitate turning.

2 See next.

**hammer stall** Extreme stall turn in which aircraft rotates within c 5° of vertical plane; depending on aircraft, power retained until point of stall at apex. Also called hammer-head stall.

**Hamots** High-altitude multiple-object tracking system.

**HAMS** Hot-air management system.

**han** Hydroxyl ammonium nitrate.

**handbook problem** One requiring in-flight consultation of flight manual for numerical answer.

**hand bumping** Use of hand tools and backing dollies to shape sheet metal.

**hand controller** Human interface to automatic or semi-automatic system, eg to HUD, multi-mode radar or large display; usually incorporates stick, rolling ball or triggers.

**hand-crafted** Still used to mean IC (4) is custom-designed for particular application, even though design is entirely via computer graphics.

**hand cranking** Direct mechanical connection between crank and piston engine or small gas turbine (in latter case via step-up gears) for starting.

**handed** Items on left of aircraft are mirror-image of those on right; see next.

**handed propellers** Left and right \*\* rotate in opposite directions.

**hand flying** Piloting autopilot-equipped aircraft in fully manual mode.

**hand forging** Forging by hand tools.

**hand forming** Shaping ductile sheet with hand tools and accurate form blocks tailored to flanging, beading etc.

**hand geometry** Basis of one branch of biometrics concerned with linear and rotary measures, but not forces.

**hand-held microphone** Self-powered (battery) microphone for use in light aircraft following total electrical failure, usually connected to external antenna at 121.5 MHz.

**hand inertia starter** Hand crank spins flywheel which, when at full speed, is suddenly clutched to start piston engine.

**handlebar moustache** Wide with upturned ends (RAF fashion, WW2).

**handler** Apron loader of cargo.

**Handley Page slat, slot** See *slat*.

**handline** Firefighting hosepipe stowed on CFR vehicle, unreeled and deployed manually.

**handling** 1 Subjective impressions of response to controls of particular aircraft; hence \* *squadron*.

2 Manoeuvring of aerostat by ground crew or landing party.

3 Providing full service for operator at airport where that operator has no staff. Customer is usually an air-carrier.

4 Response of [usually gas-turbine] engine to varying power demand; see next.

**handling bleed** Air bleed, usually from compressor, to avoid surge caused by varying power demand.

**handling line** 1 Primary line used by ground crew for handling aerostat.

2 Single or twin cables attached above c.g. of seaplane for use when hoisting by crane into or out of water.

**handling pilot** Pilot actually flying the aircraft.

**handling squadron** Assigned assessment of new aircraft, and compilation of Pilot's Notes.

**handoff** Transfer of control or surveillance from one ground radar controller to another.

**handover** Handoff (military).

**hand priming** Manually squirting a spray of fuel into the engine inlet manifold [if fitted, by a cockpit inceptor].

**hands-off** 1 Condition in which non-autopilot aircraft, usually aeroplane, flies by itself in perfect trim with pilot(s) not touching controls.

2 Flight on autopilot.

3 Ground party release balloon basket, permitting ascent.

**hands-on** 1 With human(s) interfacing with system, which can be EDP (1) or aircraft in flight; appropriate only to complex autopilot aircraft in which \* is rare in cruising flight. Hence, \* training = practice in hand flying, or interfacing manually with military sensors and weapon systems.

2 Ground party hold down balloon basket.

**hand starter** Arrangement for starting engine by hand other than by swinging propeller.

**hand-starter magneto** Separate hand-controlled auxiliary magneto carried to aircraft and used to supply powerful spark when starting piston engine.

**hand-turning gear** Connection for a hand-crank, eg on same shaft as centrifugal breather to give maximum mechanical advantage. In piston engine can be same as manual or hand starter.

**hangar** Shelter for housing aircraft on ground.

**hangurette** 1 Hangar tailored to single aircraft, esp. hard shelter [*HAS* 1 now almost universal].

2 Weatherproof cover over missile launcher or similar installation.

3 Pre-fabricated hangar flown to FOL and rapidly erected.

**hangar flying** Social chat about flying by those involved in it, esp. pilots.

**hangar queen** Particular aircraft notoriously prone to unserviceability requiring major maintenance.

**hangar rat** Young enthusiast [self-explanatory].

**hangfire** Fault condition in which rocket missile fails to fire; vehicle or missile thus affected.

**hang glider** Large class of simple ultra-light aerodynes, broadly divided into those with flexible wings (most of Rogallo type) and those having wings with preformed aerofoil section (called rigids); majority have no controls and manoeuvre by translation of pilot mass to shift c.g. Can be monoplane or biplane, and may have rear tail, canard or auxiliary engine. Demarcation line with glider or ultra-light aeroplane becoming blurred.

**hang up** 1 Externally or internally carried store which fails to release when thus commanded.

2 Gas-turbine engine which starts but fails to spool-up; also called hung start.

**h<sub>ant</sub>** Height of ILS or MLS antenna above ground plane.

**HANZ** Helicopter Association of New Zealand.

**HAP** Hélicoptère d'appui et de protection (F).

**Hapdar** Hardpoint demonstration array radar.

**HAPI, Hapi** Helicopter approach-path indicator.

**Happ** High-altitude powered platform, lightweight, solar-powered, unmanned aircraft able to hold station for months to years.

**Haps** 1 Helmet-angle position sensor.

2 Helicopter acoustic processing system.

**HAR** 1 Helicopter, air rescue (role prefix, UK).

2 Helicopter alternative route.

**harass** 1 Air attack on any target in area of land battle not connected with CAS or interdiction, with objective of reducing enemy's combat effectiveness.

2 To interfere with progress of another aircraft by making repeated close passes against it.

**Harc jet** Hall-effect arc jet, using magnetic field on hydrogen plasma jet (see *Hall*).

**Harco** Hyperbolic area-coverage.

**HARD** Helicopter and aeroplane radar detection.

**hard copy** Immediately readable output, eg printed pages, as distinct from tape, microfilm or software.

**hard data** Remains in memory when power switched off.

**hard deck** The ground, especially in air combat at low altitude.

**hardened** 1 Protected against blast, ground shock, overpressure, EMP, radiation and possibly other effects of nuclear explosion, and (DoD only) likely to be protected against chemical, biological or radiological attack (see *hardness*).

2 More recently, protected against terrorist attack, eg cockpit or LD3 container.

3 Of avionics, protected against EMP and any other powerful external EM effects which in particular would normally degrade or destroy most memory cores.

4 Of metal, physically \* by precipitation, quenching or cold working.

**hard flutter** Normally well damped but extremely violent over one narrow range of conditions.

**hard intervals** Precisely scheduled service/overhaul periods, as distinct from on-condition.

**hard intervals** Precisely scheduled service/overhaul periods, as distinct from on-condition.

**hard-iron magnetism** That induced into all magnetic parts of aircraft during manufacture, esp. by hammering or riveting, orientation and polarity depending on assembly heading and terrestrial latitude.

**hard lander** Spacecraft designed to free-fall to surface of heavenly body.

**hard landing** 1 Conventional aircraft landing with excessive rate of descent, esp. that results in damage or overstressing.

2 Arrival of hard lander on lunar/planetary surface.

**hardness** 1 Various measures of physical \* such as Moh's scale for non-engineering (eg geological) materials, and Rockwell, Vickers, Brinell and many other standard tests for precise quantified readings.

2 Any of five measures of nuclear hardening; eg resistance to overpressure, which varies from c 2 lb/sq in (c 14 kPa) for aircraft parked in open to over 11,000 lb/sq in (c 75 MPa) for hardest concrete silo.

**hardover runaway** Sudden unwanted operation of

system, esp. flight-control channel, to extreme limit of travel.

**hardover signal** Fault condition resulting in full demand for unidirectional system operation unrestrained by normal feedback.

**hardpoint** Anchorage built into aircraft structure for heavy external load, usually via intermediate pylon, MER or launcher.

**hard radiation** High penetrating power from very short-wavelength; usual definition is ability to pass through 100 mm of lead.

**hard recovery** Landing under difficulties, eg barrier crash into net in bad weather with tower out of action (probably colloq.).

**hardstanding** Paved parking area (US, often hardstand).

**hard target** 1 One that is hardened (1).

2 In air-to-air or surface-to-air firing practice, a rigid drone, as distinct from a sleeve or banner.

**hard-target functional defeat** Use of air/ground weapons to disable deeply buried installations without necessarily killing humans.

**hard temper** Modification of light-alloy properties, eg by cold working, denoted by scale such as 3/4H (= 75% fully hard); increased tensile strength is usually accompanied by reduced ductility, which in airframes tends to be equated with shorter fatigue life.

**hard time** Period, usually an inspection interval, precisely written into service/overhaul documentation and mandatory. Today increasingly replaced by flexible routines such as OCM.

**hardtop** Paved with permanent all-weather surface.

**hard turn** Planned turn in air combat at rate governed by angle-off and range.

**hard vacuum** High vacuum, pressure below  $10^{-9}$  Nm<sup>-2</sup> ( $10^{-7}$  torr).

**hardwall hose** Does not collapse under atmospheric pressure when used for suction; not necessarily armoured.

**hardware** 1 Originally introduced to distinguish mechanical parts of EDP (1) systems from software, today useful to imply manufactured items of any kind that exist, as distinct from software, system concepts, paper designs and proposals, simulations, capabilities and functions.

2 In narrow sense, small fasteners and similar small parts.

**hardware in the loop** Flight-motion simulation system incorporating portions of actual aircraft dynamics.

**hard wing** 1 One with simplified leading edge compared with particular previous wings, eg no slat.

2 Any wing with fixed-geometry leading edge.

3 In combat mission, wing man locked-in to follow leader in (almost) all circumstances.

**Harm, HARM** High-speed anti-radiation missile.

**Harmattan** Dry, dust-filled NE wind (W Africa).

**harmonic** Component of sinusoidal or complex waveform or tone whose frequency is integer multiple of fundamental frequency.

**harmonic analyser** Device, typically variable-frequency filter, which can resolve waveform into harmonic constituents.

**harmonization** 1 Boresighting of all guns fixed to fire in same basic direction (eg ahead) so that all are correctly aligned with respect to aircraft axes, usually so that all gun axes converge at specified distance from aircraft.

2 Adjustment of flight-control system so that effect of

controls about each axis matches that about others at all airspeeds; in particular so that handling about each axis in terms of rate of pitch, roll or yaw, and load (real or synthetic) experienced by pilot appear to be in harmony.

**harness** 1 Assembly of straps with which member of flight crew can be secured to seat.

2 Assembly of straps with which parachutist can be attached to parachute, which may or may not be permanently attached to \*.

3 System of straps and other restraining members with which cargo pallet or container is secured to cargo floor in cases where there is no inbuilt anchorage. Not restraint net.

4 Weatherproof, screened assembly of HT leads connecting ignition source to piston engine plugs or gas-turbine igniters.

**harness secure** The mandatory procedure of assembling and pinning the harness in an empty pilot seat when a dual aircraft is being flown solo [to prevent it fouling the control column].

**HARP, Harp** 1 Helicopter Airworthiness Review Panel.

2 Helicopter advanced rotor program.

3 High-altitude research program.

**Harper rivet** Extremely shallow convex head.

**harpoon system** Any helicopter hold-down system based on firing barbed anchor into grid or other fixed base on ship platform.

**Harris program** Numerical factors used in designing aircraft to the area rule for minimum wave drag (NASA).

**Harry Clampers** Clamp (colloq.).

**HARS, Hars** 1 Heading/attitude reference system.

2 High-altitude route system.

**harsh environment recorder** Tape recorder with up to 28 tracks meeting most severe specification for temperature, vibration/shock and sustained acceleration.

**hartley** Standard unit of information content generally taken as equal to  $\log_2 10 = 3.219$  bits or 1 decimal digit.

**Hartmann generator** Common electrically powered source of intense noise, usually with variable spectrum.

**Hartridge smoke unit, HSU** One of most popular measures of smoke blackness; smoke is fed through chamber of known length and light meter measures light received from calibrated source at other end. Accurate for combustion engineers but for subjective assessment against sky jet diameter must be taken into account. PSU is similar (see *smoke*).

**HARVe** Pronounced harvey, high-altitude reconnaissance vehicle (JHU/APL).

**HAS** 1 Hardened aircraft shelter.

2 Hover-augmentation system (reduced pilot workload by using sensitive accelerometers in hover).

3 Hood, aircrew survival.

4 Helicopter anti-submarine (UK).

5 Heading and attitude (reference) system (or heading/attitude sensors).

6 Hazard awareness system.

7 Helicopter air and surface [targets].

**HASA** Helicopter Association of Southern Africa.

**HASC** House Armed Services Committee (US).

**Hasell check** Height, airframe, security, engine(s), location, lookout; prior to spin or other harsh manoeuvre.

**HASG** Helicopter Airworthiness Study Group (CAA).

**HASI** Huygens atmospheric-structure instrument.

**Hasp** High-altitude sampling program.

**Hass, HASS** Highly accelerated stress screening.

**HAST** High-altitude supersonic target.

**Haste** Helicopter ambulance service to emergencies (US).

**Hastelloy** Family of US Ni-Cr-Mo-Fe alloys combining strength at high temperatures with resistance to oxidation or corrosion.

**HAT** 1 Height above touchdown (or threshold) (FAA).

2 Harbour acceptance trial(s) (Missile).

3 Hierarchical axis, or axes, technique.

4 High-power amplifier transmitter.

**Hat** On a navex, or en route, noting heading / altitude / time at each turning point (GA1).

**hat** 1 Section commonly used for stiffeners and other structural members, formerly called top-hat and resembling latter's outline.

2 Coolie \*, flat cone multiway thumb switch on top of stick, usually controlling trim and radar elevation angle.

**hatchback** Transport whose rear cabin area is Combi.

**HATM** Hypervelocity anti-tank missile.

**HATOD** Hill airtasking order defragger.

**Hatol** Horizontal-attitude takeoff and landing.

**HATR** 1 High-temperature attenuated total reflectance.

2 Hazardous air traffic report(ing).

**HATS** 1 Helicopter automatic targeting system.

2 Heavy Aircraft Test Squadron (UK, WW2).

**hatted** Appointed as a military commander (US colloq.).

**Have** Permanent first word in code names of AFSC projects (USAF).

**have numbers** Radio code: "I have received and understood wind and runway information for my inbound flight".

**HAW** 1 Hypersonic aerodynamic weapon.

2 Hawaii space tracking station.

**HAWC** Homing and warning computer.

**Hawfcar** Helicopter adverse-weather fire-control acquisition radar.

**Hawk** Homing all the way killer.

**hawking the deck** To fly closely past carrier on right (starboard) side to check deck state before landing on.

**Hawtads** Helicopter all-weather target-acquisition and destruction system.

**Haybox** Helicopter jetpipe incorporating IRCM (colloq.).

**hazard alert** Broadcast to all affected operators of existing or impending failure in hardware of nature likely to imperil safety of flight, usually as result of fault discovered on inspection; fault can be structural or in system operation, but invariably affects part of aircraft.

**hazard beacon** Warns of permanent danger to air navigation.

**hazard levels** Aircraft manuals identify three: Note, a mere reminder of possible hazard; Caution, advice of possible damage to human or hardware; Warning, ignoring which could be lethal (FAA).

**hazardous** A particular aerospace meaning is: likely to threaten the continuation of safe flight.

**Hazcam** Hazard [on planetary surface] camera.

**haze** Mist caused by water borne by particulate matter in unsaturated air.

**hazmat** Hazardous material[s].

**HB** 1 Brinell hardness.

- 2 Aircraft category, heavy bombardment (USAAC 1925-27).
- 3 Height of burst.
- h<sub>b</sub>** Height of bump on runway.
- HBA** Hybrid buoyant aircraft.
- HBAW** Handbook bulletin for airworthiness (FAA).
- HBB** Hollow-bladed blisk.
- HBC** 1 Hot-bonding controller.  
2 Heave by cable.
- HBD** Hollow-bladed disk.
- HBK** Handbook.
- HBN** Hazard beacon.
- HBP** High-band prototype.
- HBPR** High bypass ratio.
- HBR** 1 Human-behaviour representation.  
2 High bit-rate.
- HBS** 1 Hot ball and socket.  
2 High-band subsystem [DU adds demonstration unit].  
3 Hold-baggage screening.
- HBT** Heterojunction bipolar transistor.
- HC** 1 Hexachloroethane, ECM aerosol also usually containing ZnO and Al powder.  
2 Hand controller.  
3 Helicopter, cargo (UK) and USA (1959-62, became CH).  
4 Critical height [ch preferred].  
5 High-capacity [bombs, WW2].  
6 Hydrocarbon[s].  
7 Crane helicopter (USN 1952-55).
- Hc** Height change.
- hc, h<sub>c</sub>** Distance from leading edge at MAC (1) to c.g.
- HCA** 1 High-cycle aircraft, specimen which has completed more flights than any other of same type.  
2 Hot compressed air (airfield snow clearance).  
3 Historic cost accounting.  
4 Helicopter Club of America.  
5 Hypersonic-cruise aircraft.
- HCC** High-thermal conductivity composite.
- HCCS** Human-centred control system[s].
- HCDC** House of Commons Defence Committee (UK).
- HCDR** High channel density receiver.
- HCF** 1 High-cycle fatigue.  
2 Hollow carbon fibre.
- HCGB** Helicopter Club of Great Britain [office, Aynho, Banbury OX17 3AT] (UK).
- HCHE** High-capacity HE (ammunition).
- HCI** 1 Human/computer interface.  
2 Helicopter Club of Ireland.
- h<sub>cm</sub>** US usage for chordwise location of centre of mass.
- HCMM** Heat-capacity mapping mission (spacecraft).
- HCN** Hydrogen cyanide.
- HCMOS** High-density CMOS.
- HCP** 1 Head-up control panel.  
2 Hélicoptère de combat polyvalent [= multirole] (F).
- HCS** Host computer system.
- HCT** Helicopter control trainer.
- HCTS** Helicopter collective training system (British Army).
- HCU** 1 Heavy Conversion Unit (RAF, WW2).  
2 Hydraulic control unit.
- HCV** Hypervelocity, or hypersonic, cruise vehicle.
- HCW** Heavily cold-worked [seamless tube].
- HD** 1 Height difference, usually in attack mission between IP and target.  
2 Distilled mustard gas code (USA).  
3 Hydrogen decrepitated powder, for sintered and polymer-bonded magnets.  
4 High-drag [bomb].  
5 Hourly difference.  
6 Home Defence [i.e., of UK, WW2, esp. civilian].  
7 High-definition [TV].  
8 Decision height (F).
- HDA** High-density acid (usually nitric).
- HDAC** House [of Representatives] Defense Appropriations Committee (US).
- HDAS** Hypersonic deep attack system.
- HDB** High-density bombing, rebuild of bomber designed for nuclear warfare to carry heavier loads of conventional bombs.
- HDBK** Handbook.
- HDBT** Hard [and] deeply buried target [DC adds defeat capability].
- HDD** Head-down display, ie a display inside cockpit, usually CRT raster plus symbology and TV overlay.
- HDRR** Head-down display radar, or recorder.
- HDEP** Haze depth.
- HDF** 1 Hot-drape forming.  
2 High-frequency direction-finding (facility).
- HDFPA** High-density focal-plane array.
- Hdg** Heading.
- Hdg C** Compass heading.
- Hdg Sel** Heading select.
- HDI** Homeland defense interceptor.
- HDIP** Hazardous-duty incentive pay (US).
- HDK** Hard disk.
- HDL** Hybrid datalink.
- HDLC** High-level datalink control; - B adds balanced..
- HDLMS** Hybrid datalink management system.
- HDMR** High-density multitrack recording.
- HDOC** Hourly direct operating cost.
- HDOP** Horizontal dilution of precision.
- HDP** Hardware development plan.
- HDPE** High-density polyethylene.
- HDR** 1 High data rate.  
2 High-density rule [busy airports].
- HDS** 1 Helicopter delivery service.  
2 Hard-disk subsystem.  
3 Horizontal driveshaft.
- HDT** High damage tolerance.
- HDTA** High-density traffic airport (FAR 93).
- HDTS** Helmet-display tracking system.
- HDTV** High-definition TV.
- HDU** 1 Hose-drum unit for in-flight refuelling.  
2 Horizontal display unit.
- HDV** Hydrant dispenser vehicle.
- HE** 1 High explosive [43 suffix acronyms].  
2 High-energy [ignition].  
3 Handling equipment.
- He** Helium.
- He, H<sub>e</sub>** Altitude error.
- h<sub>e</sub>** Energy height,  $h + v^2/2g$ .
- HEA** Head equipment assembly [HUD].
- HEACE** Health effects in aircraft cabin environment [2001-] (EU).
- head** 1 Complete hub of helicopter rotor (main or tail) including flight-control linkage and all auxiliaries (nitrogen pressure signal, anti-icing connection, lights etc).

2 Cutter and positioning system in most machine tools, esp. those in which workpiece is stationary.

3 Loosely, downwind end of runway.

**head-down** Looking into cockpit as distinct from outside aircraft.

**head-down display** See *HDD*.

**header tank** Inserted at highest point of coolant circuit of liquid-cooled piston engine, receiving hot coolant from engine and passing it to radiator[s].

**heading** Angle between horizontal reference datum and longitudinal axis of aircraft expressed as three-figure group 000°-360°; in UK also called course. Datum can be compass north, magnetic north or true north. Not to be confused with track [one dictionary actually calls \* 'the direction of an aircraft path', precisely what it is not].

**heading alignment cone** Imaginary cone of 18,000-ft upper diameter serving to guide Orbiter or STA(6) to runway.

**heading hold** Flight-control mode which maintains selected heading.

**heading-orientated map** One held in hand so that heading is towards top of sheet.

**heading select** Flight-control mode in which aircraft automatically turns to and holds any inserted \*.

**head-level display** Immediately below HUD.

**head moment** Total turning moment transmitted through head(1) in helicopter manoeuvre.

**head-on** Flying directly towards other aircraft on reciprocal track.

**head resistance** Drag.

**heads down** Control of RPV or UAV without having it in view.

**headset** Receive/transmit interface with radio communications or other system (eg aural warning or missile launch tone), either worn separately or built into helmet. Normally includes earpieces or earshells, noise-cancelling microphone on boom and binaural cable.

**heads up** 1 Airborne intercept code: "Hostile force, whole or in part, got through defences" or "I am not in position to engage" (DoD).

2 Occasionally used to mean head-up [only one human head can use a HUD at any one time].

**head-up display** See *HUD*.

**health** Generally everyday meaning but applied to hardware; thus \* monitoring, can be equated with inspection, AIDS output etc.

**HEAO** High-energy astronomical observatory.

**heap cloud** Cloud with pronounced vertical development, e.g., cumulus family.

**Heart** Health evaluation and risk tabulation.

**heart-cut distillate** Particular family of kerosene fuels, in particular JP-6.

**HEAT** 1 High-enthalpy ablation test.

2 High-explosive anti-tank, shaped-charge warhead.

3 Helicopter electric-actuation technology.

4 High-energy advanced trainer.

**Heat** Armament panel switch selection for IR AAMs.

**heat** Measure of atomic/molecular kinetic energy, but not to be confused with temperature. Symbol  $Q$ , unit joule,  $J = 0.238846 \text{ cal}_T$ .

**heat barrier** Supposed barrier to increasing flight Mach number due to kinetic heating.

**heat capacity** 1 Of a solid [usually metal] object, its mass multiplied by the specific heat of the material. See next.

2 Quality of high-power lasers which permits sustained firing followed by brief cooling period.

**heat-engine** Prime mover in which energy is extracted from thermodynamic system in which gas passes through cycle from which closed PV or T-entropy diagram can be plotted. Perfect \*\* has reversible (Carnot) cycle; all practical \*\* have lower-efficiency irreversible cycle. Nearly all aviation \*\* are constant-pressure gas turbines or Otto-cycle piston engine.

**heater** Afterburner (colloq.).

**heat-exchanger** Radiator in which two fluids are brought into close contact (eg, cold air and hot oil) so that one can reject heat to other.

**heat flow rate** Synonymous with *power*. SI unit is watt,  $W = 3.41214 \text{ Btu/h} = 0.85985 \text{ kcal/h}$ ;  $\text{Btu/h} = 0.293071 \text{ W}$ .

**heat load** Rate of heat transfer, = *heat flow rate*.

**heat of ablation** Measure of value of ablating material, rate of heat input divided by rate of mass loss.

**heat pipe** Contains fluid which is alternately evaporated and condensed, transferring heat [in spacecraft, to space].

**heat pulse** Total heat to be absorbed, dissipated, radiated or otherwise transferred from original kinetic energy of body on re-entry.

**heat-seeker** Sensitive IR detector and homing guidance system.

**heat shield** Usually non-structural layer protecting primary structure from high-temperature environment which would degrade strength, such as around aeroplane afterburners, at base of large rocket vehicle and, esp., over upstream face of body on re-entry (later is invariably ablative).

**heat sink** 1 Any location to which heat may be removed from thermodynamic system.

2 Specifically, mass of metal, fuel, oil or other material which can accept unwanted heat.

**heat treatment** Heating metals above specific temperatures followed by slow or rapid cooling to improve mechanical properties (see *carburising*, *case hardening*, *nitriding*, *precipitation* \*\*, *solution* \*\*).

**heave** 1 Vertical movement without rotation (simulator).

2 Motion of taxiing aircraft [esp. marine] in vertical plane, fuselage [hull] remaining level.

**heavier than air** Having density much greater than that of air, thus aerostatic buoyancy ignored in calculating lift, which is assumed generated wholly by aerodynamic or propulsive forces; aerodyne.

**Heaviside layer** D, E, F, and F<sub>1</sub>, layers in upper atmosphere (ionosphere) where UV solar radiation ionises gas molecules, allowing conduction of electricity.

**heavy** 1 Flight control; difficult to move.

2 Maintenance, major and prolonged.

3 Warning to ATC of wake turbulence, aircraft MTO  $\geq 300,000 \text{ lb}$  (136,080 kg).

4 US [becoming universal] civil radio traffic, any large transport, esp. large jet.

5 AA gun, >40-mm calibre (WW2); also, of course, can mean intense fire from many guns of all calibres.

6 Propeller aircraft,  $\geq 5,700 \text{ kg}$  [12,566 lb] MTOW.

7 Air in balloon envelope close to density of local atmosphere.

8 Large firefighting tanker, as distinct from Seat.

**heavy alloy** One tailored to have exceptionally high

density; most consist chiefly of tungsten, but osmium, iridium and depleted uranium are important.

**heavy bomber** Aircraft designed to deliver heavy load of conventional ordnance to targets in enemy heartlands (arch.).

**heavy dropping** Delivery by system of parachutes of exceptionally bulky or heavy load, suitably packaged and cushioned.

**Heavy Fuel** In US usage, all DFs (diesel fuels) plus JP-5 and JP-8.

**heavy landing** See *hard landing* (1).

**heavy maintenance** Maintenance taking 30 days or longer.

**heavy metal** Classic warbird, esp. large and powerful (colloq.).

**Heavyside** E-layer.

**Heavy Wagon** Designated routes for lo military flights within Conus; 300 series for various nav/electronic systems evaluation and 400 Series for nav. training and weather evaluation at 500 ft (152 m) down to MOCA, normally not over 500 kt (USAF, USN).

**HECS** High-performance engine control system.

**hectare** Non-SI unit of large areas = 10<sup>4</sup>m<sup>2</sup>.

**hecto** Prefix, multiplied by 10<sup>2</sup>, symbol h.

**hectopascal** Pressure of 100 Nm<sup>-2</sup> = 1 mb, symbol hPa.

**hedge-hopping** Lo(2) flight by light GA aircraft (colloq.).

**hedging** Increasing one's stock of a commodity [especially fuel] in the belief price will rise.

**Hedi, HEDI** High-endoatmospheric defense interceptor (SDI).

**HEDP** Ammunition, high-explosive, dual-purpose.

**HEDR** High-energy dynamic radiography.

**Heel** Helicopter emergency-egress lighting; s adds system.

**heeling** Roll due to turn while taxiing.

**HEETE, Heete** Highly efficient embedded turbofan [or turbine engine].

**HEF** High-expansion foam (anti-fire) usable at 1.5% concentration.

**HEH** Hershey, Eberhardt, Hottel, basic analysis and charts for idealised piston engine cylinder performance.

**HEI** 1 Ammunition, high-explosive incendiary.

2 Hot-end inspection.

**height** 1 In performance, Ht defined as true vertical clearance between lowest part of aircraft (assumed aeroplane) in unbanked attitude and relevant datum.

2 General common definition: h, vertical distance of level, point or object considered as point, measured from specified datum (normally associated with QFE).

3 Vertical distance from reference ground level to specified upper extremity (close to but not necessarily highest point, which may be small whip aerial, static wick or other flexible part) of aircraft at specified weight (usually MTOW) and tyre inflation pressure when parked on flat horizontal surface.

**height above airport, HAA** Height of MDA above published airfield elevation.

**height above touchdown, HAT** Height of DH or MDA above highest obstruction in touchdown zone.

**height computer** Calculator for converting barometrically indicated to true altitude by correcting for atmospheric density.

**heightfinder radar, HFR** One whose primary output is

precise height of distant target; has nodding aerial giving multi-lobe beam.

**height lock** Function of autopilot or flight system in holding (after in some cases capturing) selected height h.

**height ring** Visible on most displays of weather/mapping/AW/cloud-collision warning and other forward-looking radars as bright ring beyond zero-range ring formed by direct reflection from Earth's surface.

**height/velocity curve** Fundamental plot of IAS against altitude included in helicopter flight manual; indicates region(s) from which safe autorotative descent is possible, normally assuming zero wind, sea level, MTOW.

**Heim joint** Universal coupling in torque tube.

**Heine mat** Flexible mat towed by support vessel on to which marine aircraft taxis before being hoisted on board.

**HEIPT** Helicopter engines integrated product team.

**HEI-SAP** High-explosive incendiary, semi-armour-piercing.

**HEIT** Ammunition, HE incendiary, tracer.

**HEJOA** Heathrow Executive Jet Operators' Association,

**HEL** High-energy laser [A adds applications, also see HELCM, Helex, HELJTO, Hels, HELSTF and Heltads].

**Helarm** Helicopter, armed (sortie).

**HELCM** HEL countermeasures.

**HELD** Helicopter [or high-energy] laser designator.

**Helex** HEL experiment[al].

**Heli** Helicopter.

**Heliarc** Inert (helium) gas welding technique patented by Northrop 1940.

**helical compressor** Diagonal-flow compressor.

**helical gear** Spur gear with teeth arranged diagonally; contact begins at one end of tooth and proceeds diagonally across width, two teeth, normally transmit load at any time. Double \* (herringbone) gear eliminates axial load.

**helical tip speed** Actual airspeed at tip of propeller, taking account of vehicle's airspeed.

**Heli-Coil** Patented hard-steel thread inserted in soft metal or to repair stripped female thread.

**helicopter** Rotorcraft deriving both lift and control from one or more power-driven rotors rotating about substantially vertical axes. Rotors are driven as long as engines operate above certain minimum input speed, and airflow through rotor(s) is downwards except in autorotative engine-failure mode.

**helicopter approach-path indicator** Hapi, ground optical aid giving steady white for correct [0.25-0.75°] glidepath, with green and flashing green above and red and flashing red below. Signal width 24°.

**helicopter lane** Safety air corridor reserved for helicopters (DoD, NATO).

**helideck** Operating platform for helicopters, e.g. on oil rig.

**helidrop** Discharge of passengers/cargo/weapons while hovering.

**heliocentric** Centred on the Sun.

**heliopause** Frontier beyond which Sun has little or no influence.

**Helios** Helicopter instrument and operational procedures simulator.

**heliosphere** Region of solar influence.

**heliosynchronous** Satellite orbit inclined at 90° to give

complete Earth coverage, each pass having the same illumination angle.

**helipad** Prepared area designated as take-off/landing area for helicopters; need have no facilities other than painted markings.

**heliport** Facility for operating, basing, housing and maintaining helicopters; if civil, includes passenger facilities and usually mail/cargo channels.

**heliport acquisition beacon** Marks landing pad[s] by white flashing Morse H.

**helistat** Aerostat with added helicopter rotor(s).

**helistop** Helipad served by civil helicopter.

**helitanker** Large firefighting helicopter.

**helitow** Towing by helicopter, normally applies to minesweeping.

**helium** Inert gaseous element, He, density 0.0001785 (0.1785  $\text{g l}^{-1}$ ), 0.01114  $\text{lb/ft}^3$ , BPt 3.2°, 4.2° K (two isotopes), helium 3 (three atomic nuclei) being important as lunar-source material for fusion power.

**helix angle** 1 Of gear, measured between line tangent to tooth helix at PCD and shaft axis.

2 Of propeller, see *effective\**.

3 Of wingtip in steady roll,  $P_b$  [roll rate  $\times$  span]  $\div$  2V [TAS].

**HELJTO** High-energy laser joint technology office.

**Hellads** High-energy liquid laser area-defense system [airborne].

**Hellas** Helicopter laser [radar].

**helmet** Individual fairing over piston-engine cylinder, hence helmeted cowl.

**helmet sight** Any of several systems which attempt to interface between human aircrew looking at surface (or other) target and aiming of armament system; usually wearer's head is in some way accurately aligned with rigid flight helmet whose orientation is then automatically monitored to give output signals fed to weapon-aiming system.

**Helmholtz resonator** Hollow volume connecting with outside via small orifice, single-frequency output.

**Helmore light** Powerful air-to-air searchlight [RAF, not adopted, 1940].

**Helms** Helicopter malfunction system.

**helo** Helicopter (colloq.).

**HELP, Help** Hybrid electronic lightweight packaging.

**Helps** Helicopter protection and support.

**Helraps** Heliborne long-range active [acoustic-path] sonar.

**Helras** Helicopter long-range sonar.

**HELs, Hels** High-energy-laser system [TF adds test facility] (USA).

**HELSTF** High-energy-laser system test facility, at WSMR (USA).

**Heltads** High-energy-laser tactical air-defense system (USA).

**Heltas** Helicopter towed-array support.

**Helweps** High-energy laser weapon system (TRW/USN).

**HEMA** Heavy maintenance.

**Hem-bird** Helicopter electromagnetic probe, suspended magnetometer for measuring thickness and other parameters of surface layers.

**HEMC** High-explosive medium-capacity.

**Hemes** Helicopter Hospital Emergency Medical Evacuation Service (USAF, USA).

**hemispherical engine** Piston engine whose combustion spaces at TDC are hemispherical.

**hemispherical radar** Mounted at nose and tail of aerial platform to provide complete 360° (2  $\times$  180°) azimuth coverage.

**hemispherical resonator gyro** Senses changes in vibration patterns in thin-wall glass shell when subject to acceleration.

**hemispheric rule** For IFR, and VFR between FL30-290, altitude assignments are determined by magnetic bearing.

**Hemloc** Helicopter emitter/locator countermeasures.

**Hemp** Name of khaki-ochre colour [BS.4800-10B-21] of large patrol and tanker aircraft (RAF).

**Hems** Helicopter emergency medical service.

**HEMT** High electron mobility transition.

**HEND** High-energy-neutron detector.

**He-Ne** Helium/neon laser.

**henry, H** SI unit of inductance, that of closed circuit in which 1 V is generated when current varies at steady 1 A/s; in other units  $H = \text{kg.m}^2\text{s}^{-2}\text{A}^{-2}$ ; plural henrys.

**HEOB** Hostile electronic order of battle.

**HEO** Highly elliptical [Earth] orbit; P adds payload.

**HEP** High-explosive plastic.

**HEPA** High-efficiency particulate air, or arrester.

**HEPL** High-energy-pulse laser.

**heptane** Basic member of straight-chain (alkane) hydrocarbons (see *paraffin series*) with seven carbon atoms and thus 16 of hydrogen; zero-octane reference fuel.

**HER** 1 Harsh [or high] environment recorder.

2 Helicopter experimental radar.

**Herald** Helicopter equipment for radar and laser detection.

**Herbst manoeuvre** Post-stall [70° AOA] 180° turn using vectored thrust (X-31).

**Hercules** Large range of fibre-reinforced materials [US company name].

**Herid** High-energy railgun integration demo, (USAF).

**Hermes** Helicopter energy/rotor management system; automatically computes limiting payload.

**Hermit** Harsh-environment robust micromechanical technology.

**HERO, Hero** Historical evaluation and research organization.

**herringbone gear** Double-helical (see *helical*).

**HERT** Headquarters emergency relocation team.

**Hertz, Hz** SI unit of frequency, = cycles per second; hence kHz, MHz, GHz etc.; in the US, increasingly hertz.

**Hertz pressure** Contact pressure between mating gear teeth.

**Hesh** High-explosive squash-head.

**hesitation roll** Aerobatic rolling manoeuvre, normally based on slow roll, in form of succession of quick aileron applications between which rate of roll is suddenly arrested; positions of arrest called points, and common \*\* are 4-point, 8-point or 16-point, 16 being difficult and rare.

**HESSI, Hessi** High-energy solar spectroscopic imager.

**HeSTOR** Helicopter simulator for technology operations and research.

**HET** 1 Helicopter environmental technique, to increase safety and reduce disturbance by avoiding dwellings, and certainly urban areas.

2 Hall-effect thruster.

**HETE** High-energy transient Explorer.

**Hete** High-energy transient experiment.

**Heterodyne** Mixing of two alternating currents (eg radio signals) to generate third equal to sum or difference of their frequencies; verb or adjective.

**heterojunction II logic** Microcircuits with inverted gates in which transistor is embedded (integrated injection) in epitaxial GaAs layer.

**heterosphere** Earth atmosphere above c100km (62 miles).

**HEU** 1 Highly enriched uranium; MF adds Materials Facility.

2 HUD electronics unit.

**heuristic** Leading towards solution by trial and error (see *algorithm*).

**HEUS** High(er)-energy upper stage.

**HEW** 1 Heliborne, or helicopter, early warning.

2 Health, Education and Welfare (US).

**HEWS** Helicopter electronic-warfare suite, or system.

**H<sub>ex</sub>** Heat exchanger.

**Hexal** Hexogen/aluminium bomb filling.

**Hexapod** Usual mounting for cabin of flight simulator: two superimposed triangles (both horizontal when at rest) displaced spatially by 60° with corners joined by six actuating jacks to give 6-DoF motion.

**Hexcel** Range of proprietary honeycombs, and honeycomb sandwiches, most with 24ST skins bonded by epoxy resin to glassfibre core [US company].

**Hexogen** RDX.

**Hexotonal** Mix of RDX, TNT and powdered aluminium.

**HF** 1 Human factors; see HFE, HFM, HFR(2), HFRT, HFSG.

2 Hydrogen fluoride; C adds cleaning.

3 High-altitude fighter (UK role prefix, WW2).

4 Hybrid fan.

5 Heavy fuel, includes all DFs plus other blends.

6 High-frequency, see *Appendix 2*.

7 Height to a fix.

**H<sub>F</sub>, H<sub>f</sub>** Wheel height at flare initiation.

**Hf** *Hafnium*.

**h.f., HF** High-frequency, see *Appendix 2*.

**h<sub>F</sub>** Height above longitudinal axis of resultant force on deflected rudder.

**h<sub>f</sub>** Per-cent-chord location of wing flexural axis.

**HFAC** Helicopter flight-advisory computer.

**HFAJ** High-frequency anti-jam[mer].

**HfB<sub>2</sub>** Hafnium boride.

**HFCS** Helicopter flight-, or fire-, control system.

**HFD** 1 Head-up flight display, S adds system.

2 High-frequency data; CR adds communications radio, L link, R radio, RS radio system, U unit.

**HFDF** 1 High-frequency direction-finding.

2 Hydrogen fluoride/deuterium fluoride.

**HFDL** HF datalink.

**HFDM** HF data modem.

**HFDP** High-frequency differential protection.

**HFDR** HF data radio.

**HFDS** Head-up flight display system.

**HFE** 1 Human-factors engineering.

2 Heavy-fuel engine.

**HFG** High-flotation [landing] gear.

**HF-GWR** H.f. ground-wave [OTH] radar.

**HFI** Helicopter Foundation International.

**HFIP** H.f. improvement programme (NATO).

**HFISA** Helicopter flight into Service Area.

**HFK** Hochgeschwindigkeits Flugkörper, high-speed vehicle (G).

**HFM** Human factors in maintenance.

**HFL** Hydrogen fluoride laser.

**HFNPDU** HF network protocol data unit.

**HFOL** Hydrogen fluoride overtone laser.

**HFOR** Human-factors open reporting.

**HFP** 1 High-fragmentation projectile.

2 High flash point.

**HFPD** High-frequency pulse detonation.

**HFR** 1 Height-finder, or -finding, radar.

2 Human-factors reporting.

**HFRT** Human Factors Research and Technology Division (NASA).

**HFS** High-frequency system[s].

**HFSG** Human-factors steering, or study, group.

**HFSNL** HF sub-network layer.

**HFSWR** High-frequency surface-wave radar.

**HFVT** Hybrid-fan vectored thrust.

**HG** Head-up guidance; D adds display, S system from LOC/GS capture to touchdown.

**Hg** 1 Mercury.

2 Barometric, or boost, pressure in inches of (1).

**HGA** High-gain antenna; S adds system.

**HGAA** High-gain active antenna.

**HGC** Head-up guidance computer.

**HgCdTe** Mercury cadmium telluride, IR detector for 8-14 $\mu$ .

**H-GDS** Helicopter gunfire detection system.

**HGI** Hot gas ingestion (ejector lift).

**HGL** Hot gas leak.

**HGM** Hot-gas manifold.

**HGOPA** High-gain open planar array.

**HGPADS, HGPads** High-glide precision air-delivery system (USA).

**HGR** 1 Hot-gas recirculation [or reingestion].

2 Hypervelocity guided rocket.

**Hgr** Hangar.

**HGRI** Hot-gas reingestion.

**HGS** 1 Holographic guidance system.

2 Head-up guidance system.

3 Heading guidance system.

**H<sub>gs</sub>** Height of glide-slope referenced to depressed surface.

**HGSI** Hot-gas secondary injection TVC.

**Hgt** Height.

**HGU** Horizon gyro unit.

**HGW** Higher gross weight.

**HH** NDB class, over 2 kW.

**HHC** Higher harmonic control.

**HHLD** Heading hold.

**HHMD** Hand-held metal detector.

**HHS** Helicopter [shipboard] handling system.

**HHSI** Horizontal hover situation indicator.

**HHT** Hand-held terminal [readout unit].

**HHTI** Hand-held thermal imager.

**HHTR** Hand-held tactical radar.

**HHV** Higher heating value.

**HHUD** Holographic HUD.

**HXX** Hydrogen heat exchanger.

**HI** 1 High-intensity light.

2 Heading indicator [direction indicator].

3 High, high-altitude, high-intensity, high band.

**hi** Flight at tropopause or above, adopted by gas-turbine combat aircraft flying for range outside hostile environments.

**HIA** Held in abeyance.

**HIADC** High-integration air-data computer.

**HIAL** 1 High-intensity approach lighting; S adds system.

2 Highlands & Islands Airports Ltd [Inverness IV2 7JB] (UK).

**HIAPER, Hiaper** High-performance instrumented [or instruments] airborne platform for environmental research (NCAR).

**HIB** Helicopter identification by [AT adds acoustic techniques *Hibat*, IRD adds IR detection *Hibird*, RAD adds radar detection *Hibrad*].

**hibernate** To remain on station in space or in orbit with as many subsystems as possible switched off until reactivated by Earth command.

**Hibird** Helicopter identification by IR detection.

**Hibrad** Helicopter identification by radar detection.

**HIC** Head impact criteria.

**Hi-camp** Highly calibrated aircraft measurements program (Darpa).

**Hicar** Acrylonitrile to DTD.5509.

**Hi-CAT** CAT above 55,000 ft (16.8 km).

**HICT** Hand-held imaging communications terminal.

**HICU** HIPSS interface control unit.

**Hidar** High instantaneous dynamic acoustic range.

**Hidas** Helicopter integrated defensive-aids system, or suite.

**hide** Locally constructed aircraft shelter of posts, net and camouflage.

**Hidec** Highly integrated digital engine [or electronic] control.

**HIDL** High-integrity data-link (UAV).

**HIDSS** Helmet integrated display sighting [or and sight] system.

**Hiduminium** Family of duralumin-type alloys, including RR (Rolls-Royce) formulations, often also containing nickel and iron; developed for piston engine pistons and similar applications, also used in supersonic airframes (in Concorde also known by French designations such as AU2GN).

**Hidyne** See *Hydyne*.

**HIE** Helicopter-installed equipment.

**Hi-Ex** High-expansion [typically volume factor of 1,000] firefighting foam.

**HIF** Horizontal integration facility (space launchers).

**Hifast** High-frequency active suppression technology.

**HIFR** Helicopter in-flight refuelling from ship, also rendered hover in-flight refuelling.

**HIG, Hig** Hermetic integrating gyroscope.

**HIGE** Hover[ing] in ground effect.

**Higger** High-integrity GPS guidance enhanced receiver (blind STOVL).

**high** Region of high atmospheric pressure, anticyclone.

**high altitude** 1 Above 10 km (32,800 ft) (NATO).

2 Between 25,000 and 50,000 ft (7.6–15.2 km) (DoD).

**High-altitude airship** To remain geostationary at 70,000 ft (21.34 km) for six months (US).

**high-altitude bombing** Level bombing with release at over 15,000 ft (4.57 km) (DoD).

**high-altitude burst** Nuclear weapon explosion at over 100,000 ft (30.5 km).

**high blower** See *high supercharger*.

**high boost** Piston engine operated at high inlet-manifold pressure, esp. one well above SL atmospheric pressure for takeoff.

**high boss** Variable stator vane outer bearing.

**high BPR** Bypass ratio exceeding 5.

**high-capacity bomb** Large thin-case bomb for demolition of major soft target.

**high cloud** Extremely loose classification, typical band being 6–8 km (20,000–60,000 ft) in tropics, 5–13 km (16,000–43,000 ft) in temperate, 3–8 km (10,000–26,000 ft) polar. Always mainly ice crystals, Ci, Ce, Cs.

**high compressor** HP compressor (US).

**high-cycle fatigue** That due to high-frequency vibrations, flexure or rotation of machinery, typically at rate many times per second.

**high-density focal-plane array** EO sensor with thousands of 2-D IR elements integral in substrate with CCD readout and processing circuitry.

**high-density rule** Applied at four busy US airports to limit arrival rates [from 1 Non. 04] (FAA).

**high-density seating** Normally, that giving greatest practical number of passengers, more even than all-economy, tourist or other classifications.

**high-density tunnel** One having closed circuit filled with air or other gas under pressure, power required for given Mach/Reynolds combination being inversely proportional to density.

**high-energy laser** No lasting definition; varies with family, whether continuous, pulse or gated, and with rapid progress, which by 1980 had made GW output not uncommon.

**higher harmonic control** Reduction of helicopter stress, noise and vibration by using dynamic absorption methods.

**high-flash fuel** See *Avcat*.

**higher heating value** Gross calorific value of fuel.

**high-flotation gear** Landing gear having geometry and other characteristics suitable for operation from soft soils, sand and similar surfaces.

**high-flotation tyre** One of low inflation pressure and very large contact area; not necessarily used on high-flotation gear.

**high frequency** See *Appendix 2*.

**high-frequency pulse detonation** Proposed propulsion systems based on pulse detonation at frequencies not less than 2 kHz, pioneered by Moscow State University.

**high-gain aerial** Usually means strongly directional, designed to transmit or receive along single axis.

**high gate** Different meaning in different programmes (lunar landing, air speed record runs, etc) but always a specified rectangle in exact relation to surface of Earth or other body through which vehicle must pass, often at precise time, for mission to be successful (see *gate* [10, 11]).

**high gear** High supercharger gear.

**high-incidence stall** Unaccelerated symmetric stall at highest angle of attack, normally with high-lift configuration.

**high-inclination mission** Usually means satellite inclination from about 63° to 99° to Equator.

**high-lift** System, device, configuration or mode giving lift greater than in clean or cruise configuration. Normal \* devices include leading-edge flaps, droops, slats,

Krügers, trailing-edge flaps, flap blowing and variable-sweep; other forms include BLC, EBF, USB, Jet Flap, vectored thrust and tilt-wing.

**highly blown engine** Piston engine in which supercharger is used to achieve high inlet manifold pressure at low altitudes. Terminology can be ambiguous; high and low-blown can mean high and low rated altitudes (critical heights).

**highly supersonic** Mach 4 to Mach 6.

**high-Mach buffet** Experienced when critical Mach number is exceeded on aircraft not designed for transonic flight; can affect control surfaces and primary structure, and cause trim changes which automatically either remove or intensify condition.

**high-Mach flight** Flight at high subsonic Mach number.

**high-Mach trimmer** See *Mach trimmer*.

**high oblique** Oblique reconnaissance or other aerial photograph in which portion of apparent horizon is visible.

**high-octane** *Fuel grade*. Not defined, but typically over 100.

**high pitch** Coarse-pitch.

**high-pressure area** Region of atmosphere where pressure significantly exceeds that of surroundings, esp. one bounded by enclosed isobar rings; anticyclone.

**high-pressure compressor** Applicable only to an engine with two or more compressors on separate shafts. High-pressure turbine likewise.

**high-pressure fuel pump** The HP pump is normally that mounted on the engine.

**high-pressure shut-off valve** See *pressure-raising shut-off valve*.

**high-ratio engine** Engine having high BPR.

**high route** Area-navigation route extending from 18,000 ft AMSL to FL450 (FAR. 1.).

**high rudder** See *top rudder*.

**High-Shear rivet** Patented close-tolerance steel threadless bolt held by swaged ring closed around groove.

**high-speed alloys** Brasses, steels, light alloys and other metals which can either be machined easily at high linear speed, or which retain strength at high temperature and can edge cutting tools (two almost opposite meanings for same term).

**high-speed exit** *High-speed turnoff*.

**high-speed stall** Accelerated stall in which stalling angle of attack is reached at relatively high airspeed; height well below aircraft ceiling is implied.

**high-speed tunnel** Traditionally, one in which effects of compressibility can be observed.

**high-speed turnoff** Taxiway forming transition curve from landing runway enabling aircraft to leave runway at earliest possible moment.

**high-speed warning** ADC-triggered subsystem giving aural and visual indication (usually duplicated) of inadvertent speed excursion beyond threshold usually set at just above MMO; can be overridden to demonstrate M<sub>DF</sub>/V<sub>DF</sub> but aircraft thus equipped is not airworthy without it.

**high-subsonic** In the range of Mach numbers where sonic speed is locally exceeded at peak suction, and compressibility effects, if any, are manifest; in older aircraft can be Mach 0.8, today higher values can be reached with no significant change in handling or trim (beyond 0.9 there may be major trim changes auto-

matically countered by Mach trimmer). Hence \* aircraft, general category of jet aircraft other than those designed for supersonic performance.

**high supercharger gear** In older high-power piston engine with mechanically driven supercharger it was common to have two drive ratios, high gear being automatically clutched in by aneroid at preselected height, thus giving power/altitude curve with two major discontinuities; high gear unavailable at lower levels.

**high-tailed aircraft** Aeroplane with horizontal tail on top of fin; T-tail.

**high-test peroxide, HTP** Not aqueous solution but almost pure hydrogen peroxide, used in MEPUs, rocket engines and other applications as monofuel rapidly decomposed by silver-plated nickel into superheated steam and free oxygen in which kerosene or other fuel is also often burned.

**high-time item** That particular engine, aircraft or other hardware item that has flown more hours or completed more operating cycles than any other of same design.

**high tow** Towing a glider, especially over a long distance, at an altitude higher than the tug.

**high turbine** HP turbine (US).

**high vacuum** Pressure less than  $10^{-9}$  Nm<sup>-2</sup>( $10^{-7}$  torr).

**high-velocity drop** Airdrop in which conventional parachute system is not used, and speed of descent lies between 30 ft/s (low-velocity) and free-fall; requires retarding means plus stabilization to ensure impact on cushioned face.

**highway** Generalised term for channel for data in EDP (1) or other dynamic system.

**high wing** One attached at top of fuselage; see parasol, shoulder.

**HILL** Heterojunction integrated injection logic.

**HIK** Heading index knob.

**hikodan** Wing (= UK group) (J).

**hilite plane** That across the face of an externally mounted jet engine nacelle; hl forms suffix to R [radius] or D [diameter].

**The Hill** The seat of government, esp. The Capitol (US).

**HIL** Horizontal integrity limit.

**Hill's mirror** Instrument for measuring wind-speed by observing smoke or other particulate matter.

**Hilo 2** Hi/lo No 2, one of two worldwide programs for microcircuit design.

**HILS** Hardware-in-the-loop simulator.

**HIM** High-inclination mission.

**Himad** High to medium (altitude) air defence [s adds system].

**Himat, HiMAT** Highly manoeuvrable aircraft technology (research programme).

**Himes, HIMES** Highly manoeuvrable experimental space [vehicle] (J).

**hinged wing** General term for wing not always rigidly fixed but able to fold, vary sweep or incidence, slew or rotate in any other way relative to fuselage.

**hinge moment** Force required to rotate aerodynamic surface or resist incident air load on it, C<sub>H</sub> = total aerodynamic load on surface (varies as square of airspeed) multiplied by distance from hinge axis to cp.

**HIO** Highly-inclined orbit.

**HIOC** Hourly indirect operating cost.

**Hip** Hot isostatic pressing.

**Hipar** 1 High-power acquisition radar.

- 2 High-performance precision approach radar.
- Hipas** High-performance active sonar.
- Hipcor** High-power coherent radar.
- HiPEP, Hipep** High-power electric propulsion.
- HIPO, Hipo** Hierarchical input process output.
- HIPPAG, Hippag** High-pressure pure-air generator.
- Hips** Highly interactive problem solver.
- HIPSS** Helicopter integrated power and switching system.
- HIR** 1 Harmful interference to radio [ICAO study].  
2 Higher.
- Hiran** High-precision shoran.
- HIRES** 1 High resolution, pronounced hi-rez.  
2 High-resolution Earth station.
- HIRF** High-intensity radiated field, or radio frequency.
- HiRise** High-resolution imaging science instrument [Mars orbiter].
- HIRL** High-intensity runway light/lights/lighting.
- HIRM** High-incidence research model.
- HIRNS, Hirns** Helicopter IR navigation system.
- HIRS** 1 Helicopter IR system.  
2 High IR sounder.
- HIRSS** Hover IR suppressor, or suppression, system.
- Hirt** High-Reynolds-number tunnel.
- Hirta, HIRTA** High-intensity radio transmission area.
- Hirth coupling** A method of precisely locating the mating faces of two rotating assemblies, such as a turbine disc and a hollow driveshaft, by high-precision radial grooves which maintain perfect centering at all rotational speeds.
- HIS** Hyperspectral imaging system.
- Hisar** Hughes integrated surveillance and reconnaissance.
- Hisat, HISAT** High-speed air-to-air target.
- HISL** High-intensity strobe light.
- Hisos** Helicopter integrated sonar system.
- hi-spec** Commonly means luxuriously appointed.
- Hi-Spot** High-altitude surveillance platform for over-the-horizon targeting (airship, Lockheed).
- Hiss** ASW helo. (USN colloq.).
- HISTED, Histed** High-speed turbine-engine development, or demonstration.
- historical** Based on past values.
- HISU** Hybrid inertial sensor unit.
- HIT, Hit** 1 Homing-intercept technology.  
2 Hybrid/inertial technology.
- hit band** Plot of initial velocity against initial path angle for vehicle to make successful impact (hard/soft) on lunar or planetary surface; usually very narrow and curved.
- hit dispersion** See *dispersion*.
- HITL** Human in the loop.
- Hitmore** Helicopter installed TV monitor recorder.
- Hitron** Helicopter Interdiction Tactical Squadron (USCG).
- HITS, Hits** Hostile identification/targeting system.
- HITT** Holland Institute of Traffic Technology (Neth.).
- hit the silk** Abandon aircraft by parachute in emergency (colloq.).
- Hittile** Direct-hitting guided missile, ie one designed to explode inside target.
- Hiwas** Hazardous in-flight weather advisory service.
- HJ, H<sub>j</sub>** 1 Sunrise to sunset (ICAO).  
2 Helicopter, utility (USN, 1944-49).
- hj** CC blowing jet slit height.
- HJV** Hot-jet velocity.
- HKAOA** Hong Kong Aircrew Officers' Association.
- Hkwr** Hookwire (available).
- HL** 1 High-level airway, eg in North American VOR system, other than Jet Routes.  
2 Heavy lifter (airship class).  
3 Height loss.
- hl** Hilite plane [suffix].
- HLA** 1 High-level architecture.  
2 Helicopter Listing Association (US).
- HLBA** High-level bus analyser.
- HLCS** High-lift control system.
- HLD** Head-level display
- HLDG** Holding.
- HLDC** High-level data-link control.
- HLE** Higher-layer entity.
- HLF** 1 Hybrid laminar flow [N adds nacelle].  
2 Heritage Lottery Fund (UK).
- HLH** Heavy-lift helicopter.
- HLL** High-level language.
- HLLV** Heavy-lift launch vehicle.
- HLMD** Hull loss per million departures.
- HLO** Helideck Landing Officer (oil rigs).
- HLP** Hybrid linear potentiometer.
- HLS** Helicopter landing site.
- HLSI** Hybrid LSI.
- HLSTO** Hailstones.
- HLTC** High-level target concepts (Acare).
- HLTF** High-level task force (MBFR treaty).
- HLU** Hybrid linear unit.
- HLUAV** Hand-launched UAV.
- HLV** 1 Heavy-lift vehicle (space launch).  
2 In 2006 also said to mean Hybrid launch vehicle (USAF).
- HLWE** Helicopter laser warning equipment.
- HLYR** Haze layer aloft.
- HM** Heavy maintenance.
- H<sub>m</sub>** Controls-fixed manoeuvre margin.
- h<sub>m</sub>** Per-cent-chord location of H<sub>m</sub>.
- HMA** 1 Helicopter maritime attack.  
2 His/Her Majesty's Aircraft (UK civil airliner individual name prefix).  
3 Hang-gliders Manufacturers Association [El Segundo, CA] (US).
- HMAFV** Her Majesty's Air Force Vessel (UK).
- HMAS** Her Majesty's Australian Ship.
- HMC** Health-monitoring computer.
- HMC&E** Her Majesty's Customs and Excise.
- HMCS** 1 Helmet-mounted cueing system.  
2 Her Majesty's Canadian Ship.
- HMCU** Hydraulic monitoring computer unit.
- HMD** 1 Helmet-mounted display [D adds device, S and sight, SS and sight system].  
2 Helicopter mine dispenser.  
3 Hand-held metal detector.
- HMDG** Hydraulic-motor-driven generator.
- HMDS** 1 Hexamethyldisylazane.  
2 See HMD 1.
- HMEP** Helmet-mounted equipment platform.
- HMF** Health maintenance facility, monitors health of space-station human crew.
- HMFU** Hydromechanical fuel unit.
- HMG** 1 Her/His Majesty's Government.  
2 Hydromechanical governor.

- 3 Heavy machine gun.  
4 Hydraulically motored generator.
- HMGP** Heavy machine-gun pod.
- HMH** 1 Helmet-mounted HUD.  
2 Heavy helicopter squadron (USMC).
- HMI** Human/machine interface.
- HML** Hard mobile launcher.
- HMLA** Helicopter squadron, light attack (USMC).
- HMM** Helicopter squadron, medium (USMC).
- HMOB** Hardened main operating base.
- HMOS** High-density MOS.
- HMOSP** Helicopter multimission optronic stabilized payload.
- HMP** HMG (3) pod; -RL adds rocket launcher.
- HMR** 1 Homer.  
2 Health-monitor[ing] recorder.  
3 Helicopter main route.
- hmr** Homer.
- HMRS** Hotline mobile repair shop.
- HMS** 1 Health-monitoring system.  
2 High-modulus sheet (CFRP).  
3 Helmet-mounted sight; /D adds display, S system.  
4 His/Her Majesty's Ship, name bestowed on ships and airfields of the Royal Navy. The latter were named after seabirds; thus, RNAS Henstridge was HMS *Dipper*.  
5 Heat-management system.
- HMSO** Her/His Majesty's Stationary Office.
- HMSS** Helmet-mounted symbology system.
- HMST** Helmet-mounted sensory technologies [PO adds program office].
- HMT** Helicopter Training Squadron (USMC).
- HMTAS** Helmet-mounted target-acquisition sight.
- HMTDS** Helmet-mounted target designation system.
- HMTIS** Helmet-mounted targeting and indication system (R).
- HMU** 1 Hydromechanical unit.  
2 Helmet-mounted unit.  
3 Height-monitoring [or measuring] unit, for RVSM.
- h<sub>μ</sub>, h<sub>mu</sub>** Jet thickness or height.
- HMV** Heavy-maintenance visit.
- HMX** 1 Cyclotetramethylenetetranitramine; shock-sensitive explosive, most powerful in general use [see HNIW].  
2 Helicopter squadron, development (USMC).
- HN, H<sub>N</sub>** Sunset to sunrise (ICAO).
- H<sub>n</sub>** C.g. margin.
- HN3** Nitrogen mustard gas (code USA).
- HNIW** Hexanitrohexazaisowurtzitane, most powerful conventional explosive.
- HNM** Helicopter noise model.
- HNMO** Host-nation management office.
- HNP** Hypersonics National Plan.
- h<sub>np</sub>** US usage for chordwise location of neutral point.
- HNS** 1 Host-nation support.  
2 Hybrid navigation system.
- HNSC** House [of Representatives] National Security Committee (US).
- HNVS** Helicopter night-vision system.
- HO** 1 Service available to meet operational requirements (ICAO).  
2 Hardover.  
3 Helicopter, observation (USA, USN, 1948–62).  
4 Handoff.
- HoA** 1 Heads of agreement.  
2 Head[s] of Agency.
- hoar frost** White semi-crystalline coating deposited in clear air on surface colder than frost point (see *frost*).
- HOB** Height of burst.
- Hobbs meter** Logs engine operating time.
- Hobo, HOBO** Homing bomb [S adds system].
- HOBS** High off-boresight (missile aiming).
- Hocac** Hands on cyclic and collective.
- Hocas** Hands on collective and stick.
- HOCSR** Host and oceanic computer system replacement (FAA).
- HOD** Head-out display, HUD type equipment mounted on helmet and always in wearer's LOS.
- HODF** Human-operator describing function.
- HOE** 1 Homing overlay experiment, to kill RVs above atmosphere.  
2 Holographic optical element.
- Hoerner tip** Sailplane wingtip of curved downturned shape; popular 1950–60.
- Hofin** Hostile fire indicator; detects shockwaves caused by projectiles.
- HOG** Hermann Oberth Gesellschaft eV (G).
- HOGE** Hovering out of ground effect.
- hogging** 1 Machining from solid, esp. of large part out of heavy forging.  
2 Deformation of airship such that both ends droop.  
3 Stressing condition of fuselage caused by sag of overhanging nose or tail in flight or on ground.  
4 Stressing condition of seaplane float or boat hull when weight wholly supported by large wave at mid-length.
- Hohmann** Describes minimum-energy transfer orbit between two bodies, using their gravitational attraction.
- Hohner** Sailplane wingtip (see *Hoerner tip*).
- HOJ** Homing on jamming; fundamental ECM technique.
- HOL** 1 High[er]-order language [see HOLWG].  
2 Holiday.
- hold** 1 To stop countdown until fault has been cleared.  
2 Period of \* (1).  
3 To retain data in EDP (1) store after it has been copied into another.  
4 To fly standard pattern as requested until given further clearance (see *holding fix*).  
5 To wait on airfield at any time after arrival and before departure under tower instructions.  
6 Underfloor cargo compartment, identified as container \* or bulk \*.  
7 Above-floor compartment in all-cargo aircraft.  
8 Manual adjustment for vertical/horizontal synchronization of raster display.
- holdback link** Strong link between carrier aircraft and deck, severed in accelerated takeoff; hence, any such link in launch of missile or RPV.
- hold-down test** One carried out while vehicle, rocket motor or other device is mounted on test stand.
- holding** Hold [4,5]; hence \* course, \* reciprocal, \* side, non-\* side, \* fix end, \* outer (or outbound) end, etc.
- holding area** Region of holding fix.
- holding bay** Airfield area where aircraft in motion (taxiing or towed) can be held (5) to facilitate ground movement or accommodate queue for takeoff.
- holding fix** Navaid on which holding area is based, such as VOR radial intersection, Vortac, ILS outer marker etc.

**holding off** In landing an aeroplane, the final moments of flight when the pilot keeps increasing pull on control column to postpone landing/aligning in order to do so either at lower speed or (tailwheel aircraft) in three-point attitude.

**holding pattern** Racetrack pattern of precisely known location, two parallel legs joined by turns at 3°/s or at 30° bank.

**holding point** 1 See *holding area*.

2 Designated point for holding on airfield, especially before entering active runway.

**holding room** Airport lounge.

**holding side** That side of holding course on which pattern is flown.

**hold short** Land and stop before reaching any runway intersection.

**hole** 1 Vacant space left by electron missing from crystal lattice, hence any positive charge (fixed or mobile, in latter case flow of \* cloud through p-type semiconductor).

2 Air pocket (colloq.).

**hollow charge** See *shaped charge*.

**hollow spinner** Propeller spinner in form of annular ring through which passes airflow for engine, cooling or other purpose.

**hollow-stem valve** Piston engine exhaust valve stem in form of tube filled with sodium or other material of high specific heat for conducting heat from head.

**holography** Photographic record produced by interference between two sets of coherent waves. Many unique properties, one of which is 3-D nature of image.

**Hols** Holidays.

**HOLWG** High-order language working group [1975] (DoD).

**HOM** 1 High-orbit mission.

2 Harmony order management (software).

**home** 1 To use matched-wavelength seeker and error-sensing flight-control system in order to fly automatically towards source of radiation.

2 To steer aircraft manually towards particular point navaid or other emitter.

**homebuilt** Difficult to define, but generally accepted as powered aircraft designed for construction by amateur. Majority are designed professionally, with plans approved by EAA or other authority and then duplicated and sold to homebuilders. In some cases successful \* is put into commercial manufacture for sale, removing it from category. Excluded; modifications of existing types, replicas, restorations or copies of commercial designs.

**Homeland Security** Effective October 2002, US Department exceeded in size only by Defense, with c170,000 personnel integrated from Coast Guard, federal Emergency, Customs, Immigration & Naturalization, Border Patrol and Secret Service.

**home-in** See *home* (2).

**home plate** Base airfield to which aircraft are to recover after mission.

**homer** VHF/DF station.

**homing** 1 Procedures for bringing two radio or other EM stations, at least one airborne, together.

2 Guidance which causes a vehicle [e.g. aircraft or missile] automatically to fly towards a particular source of radiation.

**homing beacon** One on which pilot can home (2).

**homing guidance** System enabling unmanned vehicle to

home (1), typically based on use of IR, IIR, EO/TV, ARH, SARH, or SALH.

**homing receiver** Radio receiver indicating aurally/visually when heading (rather than track) is not towards transmitter.

**homodyne** Reception of DSB in which local oscillator generates output synchronized with original carrier.

**homogenous** Having uniform radar reflectivity at all points on surface (function of material substrate, coating[s] and orientation).

**homosphere** Earth atmosphere below a height of about 100 km (62 miles), composition being almost constant.

**homotron** Soft failure.

**HOMP** Helicopter operations monitoring program.

**HOMS** Homing optical missile system.

**Honcho** Big chief, hence fighter ace or high-ranking military or company officer (US, colloq.).

**honeycomb** 1 Low-density structural technique and materials based on hexagon-cell honeycomb sandwiched between two sheets too thin for stability alone; can be all-metal, or any of the three components can be of various other materials, joined by various adhesives. Can be supplied as standard sheet, or parts can be made individually with any form. Nid d'abeilles, NdA (F).

2 Grid of thin intersecting aerofoils or flat plates across tunnel or other duct intended to remove turbulence from fluid flow.

**honking** Being airsick, hence *honk bag* (cabin-staff term).

**HOO** Helicopter offshore operations.

**hood** see *canopy*.

**hoodoo** Hose-drum unit (RAF, colloq.).

**hook** 1 Procedure used by air controller to direct EDP (1) of semi-automatic command and control system to take specified action on particular blip, signal or portion of display.

2 Aerobatic manoeuvre resembling a lateral Cobra.

3 Arrestor hook.

**Hooke's law** Up to elastic limit, strain set up in elastic body is proportional to applied stress.

**hookman** Member of carrier deck party charged with unhooking aircraft after recovery.

**hooks** Interfaces available for future avionics, weapons or other items not yet invented (colloquial).

**Hoops, HOOPS** Helicopter offshore operations.

**Hoover highway** Command flight-path display (colloq.).

**HOP** Hours of persistence.

**hop** 1 Very short flight; eg by aeroplane on fast taxi test or by aerodyne only marginally capable of flight.

2 Full circuit in advance of official first flight.

3 Jump from one EM frequency to another by ECCM subsystem.

**Hope** H<sub>2</sub> orbiting plane experiment [not same as next] (Japanese NAL).

**Hope - X** High-orbiting plane experiment.

**hopper** 1 Small receptacle in oil tank for hot or diluted oil to assist cold-weather start.

2 Container in ag-aircraft for dust (powdered chemical).

**Hops** Helmet optical position sensor.

**Horiz** 1 *Horizontal*.

2 *Horizon*.

**Horizon** Hélicoptère d'Observation Radar et d'Investigation sur Zone (F).

**horizon** 1 Actual boundary where sky and planetary body appear to meet: visible \*.

2 Apparent boundary as modified by atmospheric refraction, terrain, fog or other influence: apparent \*.

3 Great circle on celestial sphere at all points 90° from zenith and nadir: celestial \*.

4 Line resembling apparent \* but above or below: false \*.

5 Locus of points at which direct rays from terrestrial radio transmitter become tangent to Earth: radio \*.

6 Artificial horizon (instrument).

**horizon and pitch scale** HUD symbology comprising a horizon line, parallel lines above and below ( $\pm 2^\circ$  or  $5^\circ$ ) for pitch information, and heading marks at  $5^\circ$  intervals.

**horizon bar** Fixed horizontal reference in most types of horizon (6), HSI and attitude-displays.

**horizon sensor** Radiometer or other sensitive passive receiver used to align one axis of spacecraft or satellite with apparent horizon of Earth or other body; also called \*-seeker.

**horizontal** Used in Hatol to mean short or vertical takeoff with fuselage substantially level; used in Hotol to mean takeoff along runway (CTOL) instead of straight up in vertical attitude.

**horizontal error** Error in range, deflection or miss-radius which weapon system exceeds on half of all occasions when firing on target on horizontal plane. When trajectory at arrival is near-vertical \*\* is CEP; where trajectory slanting, giving elliptical dispersion, \*\* is probable error.

**horizontally opposed engine** Piston engine with left and right rows of horizontal cylinders and central crankshaft.

**horizontal parallax** Geocentric parallax of body on observer's horizon, = angle subtended at body by Earth radius at equator.

**horizontal plane** Usually that through longitudinal [OX] axis and perpendicular to vertical.

**horizontal project** One in which hierarchy in design/project team is minimised and each member works full-time on single project.

**horizontal scanning** Scanning in azimuth only at near-0° elevation; rare (see *scanning*).

**horizontal situation indicator, HSI** Standard pilot panel instrument for all except small GA aircraft; includes Hdg (T, M), angular deviation from VOR, INS or other track, Tacan/DME or INS display, and alphanumeric readout of G/S and possibly other data.

**horizontal stabilizer** Tailplane.

**horizontal tailplane** Tailplane.

**horizontal technology integration** Using common hardware, such as sensors, scanners/windows, stabilization and software shared between two or more systems, such as FLIR,IRST, LST, etc.

**Hormoconis resinae** By far the most common jet-fuel fungus.

**horn** 1 Operating arm of simple manual flight-control surface to which cable is attached.

2 Microwave aerial coupling waveguide to free air to give directional pattern; three basic forms are pyramid, sectoral and biconical, first two having rectilinear funnel appearance.

3 Acoustic emitter tube whose varying cross-section and final area control acoustic impedance and directivity.

4 Small area of control surface ahead of hinge axis, usually at tip, sometimes shielded at low deflection angles

by fixed surface upstream and usually housing mass-balance; when surface deflected provides aerodynamic force assisting deflection.

**horn aerial** See *horn* (2).

**horn balance** See *horn* (4).

**horn check** Verify correct functioning of landing-gear warning horn.

**Hornet** Hazardous-ordnance engagement toolkit, to defeat terrorist SAM (US).

**horsal** Horizontal ventral fin (originally on XF10F).

**horsepower** Non-SI unit of power; traditional hp defined as 550 ft-lb/s = 0.745700 kW; metric \* [called ch or PS] defined as 75 kg-m/s = 0.7355 kW. There is also electric \* defined exactly as 0.746 kW. Brake \* is measured at output shaft by applying known retarding torque; indicated \* calculated from area of indicator diagram and rpm; frictional \* is indicated minus brake \*; equivalent \* is turboprop bhp plus addition factored from residual jet thrust. Aircraft engines also have various \* ratings, as do some nations' pilot certificates.

**horsepower loading** See *power loading*.

**horseshoe** Revetment having this shape in plan.

**horseshoe vortex** 1 Combination of finite wing plus trailing vortex from each tip, forming circulation of approximate square-cornered U-shape in plan. The flow above and below the wing can be divided into any number of local \*.

2 Semi-toroidal flow of ground sheet ahead of VTO hovering in headwind.

**Horus** Hypersonic orbital return upper stage.

**HOS** 1 Human operator simulator.

2 Helitop observation system.

**hose** 1 Flexible conduit for fluid (liquid or gaseous).

2 Verb, to fire long burst of gunfire at or ahead of hostile or challenged aircraft.

**HOSG** Helicopter Operations Study Group (UK).

**host aircraft** That acting as carrier to test installation, or parent to UAV/drone.

**host computer** One to which remote terminals or I/O devices are connected.

**hostile** Target known or assumed to be enemy, esp. one seen on remote display.

**hostile track** One which, based upon established criteria, is determined to be enemy airborne, ballistic or orbiting threat.

**host nation** One whose territory houses infrastructure forming part of an international system or aircraft of a friendly air force.

**HOT** Higher-order term.

**Hot** High-subsonic, optically tracked, teleguided.

**hot** 1 Fast-landing (colloq.).

2 With afterburner in operation.

3 With combustion in operation (pressure-jet tip drive or HTP/hydrocarbon rocket).

4 Strongly contaminated by fallout.

5 Hazardous to vicinity (see \* *mission*).

6 Including propellant ignition (see \* *test*).

7 Ready for firing (launch or static test).

8 High-temperature parts of gas turbine (see \* *end*).

9 Thermally anti-iced, thus \* prop.

10 In ground refuelling, with engine(s) running.

11 Currently in use [restricted area].

12 Production line with significant number of items still to be manufactured.

**Hotac** Hotel accommodation to provide sleep for civil flight crews.

**hot-air balloon** Balloon rendered buoyant by heating the air contained in the envelope, thereby reducing its density.

**hot and high** Airfield or helicopter platform where high altitude above MSL is combined with high ambient temperatures. These both reduce engine power and the lift from a wing or rotor.

**Hotas** Hands on throttle and stick, design of cockpit of air-combat fighter so that pilot has every control switch, button or trigger needed in any combat on these two handholds [A adds aid]. See *Hocac*.

**hot bird** Fully functioning satellite.

**hot box** Stolen item of avionics, for intelligence or commercial profit.

**hot bucket** Turbine rotor blade (colloq., US).

**hot chaff** Pyrophoric material for IRCM dispensed in covert [not emitting at visible wavelengths] manner.

**hot day** Standard ISA condition for engine rating, aircraft performance certification and other temperature-dependent lawmaking.

**hot dimpling** Dimpling of holes pre-heated to avoid cracking.

**hotel mode** Aircraft on ground with full air-conditioning refrigeration.

**hot end** Portion of gas-turbine subjected to high temperatures from combustion, normally all parts to rear of compressor (which itself can be hot enough to require special refractory alloys in final stages but is never included in this definition); called hot section in US.

**hot fire** *Hot test*.

**hot-gas recirculation** Any mechanism by which hot gas from a propulsion or lift jet can return to engine inlet.

**hot gas system** One energized by gas bled from combustion of solid fuel, or from operating solid rocket motor.

**hot gas valve** One used to control hot gas pressure for TVC purposes.

**hot gun** Aircraft scrambled with loaded gun[s].

**hot isostatic pressing** Temperature/pressure cycle for compacting sintered ceramic or encapsulated powders close to precise net shape.

**hot leg** Presentation, or flypast, on which target simulates IR of hostile jet aircraft.

**hot mike** Microphone continuously on transmit.

**hot mission** Particular test (flight or otherwise) which involves hazards precluding other activity in same area.

**Hotol** Horizontal takeoff and landing (spacecraft launch).

**hot pit** Air refuelling in which fuel is transferred (UK colloq.).

**hot rock** Inexperienced pilot eager to show off (colloq.).

**hot rocket** One in which fuel is burned.

**hot round** Rocket vehicle equipped with operative propulsion, in test programme where many are not.

**HOTS** Hands on throttle and stick; Hotas is more usual.

**hot section** Total of all parts of gas-turbine engine subjected to high temperatures from combustion of fuel, in modular engine exactly defined and normally including associated external dressing which in fact remains relatively cool.

**hot shot** Method of igniting afterburner fuel [which

would not otherwise ignite reliably, especially at high altitude] by spraying extra dose of fuel into engine combustion chamber to create hot flame which passes through turbine to afterburner; \* lasts too short a time to damage turbine.

**hot soak** Standardized tests in which an item is baked at a selected high temperature for a specified period.

**hot spot** 1 Place much hotter than environment, showing on 3–5 micron IR.

2 Local area on radar target giving intense return.

**hot standby** Satellite (Comsat, navsat) available for instant use should operating satellite malfunction.

**hot start** 1 Attempted start of gas turbine abandoned because of overtemperature indication.

2 Start, or attempted starts, of piston engine soon after previous run, often thwarted by vapour lock.

**hot streak** Method of igniting afterburner by injecting fuel from special (normally inoperative) nozzle in main combustor, causing long flame to pass through turbine into afterburner primary zone. Can be synonymous with hot shot.

**hot-stream nozzle** That from core engine in turbofan without mixer.

**hot test** Static test of rocket engine in which actual firing takes place.

**hotwell** Tank or portion of larger tank in which hot liquid collects.

**hot winchback** Aircraft pulled into HAS with engines running.

**hot-wire ammeter** One measuring current by I<sup>2</sup>R heating of fine wire; hence \* galvanometer, \* voltmeter.

**hot-wire anemometer** Measures airspeed or wind speed down to 10 mm/s by heating platinum wire to about 1,000°C and either measuring current I for constant T or resistance at constant I.

**hot-wire ignition** Use of suddenly heated (but not exploded) resistance wire to set off rocket engine or gun ammunition.

**hot-wire probe** Hot-wire anemometer.

**hot-wire transducer** Detects and measures sound waves by change in resistance of heated wire.

**hour** Mean solar = 3,600 s; sidereal \* = 3,590.1704 s.

**hour angle** Bearing of object on celestial sphere; angle at pole between hour circles of observer and object, abb HA (see *local \*\**, *Greenwich \*\**, *sidereal \*\**).

**hour circle** Great circle of celestial sphere formed by projecting Earth meridian.

**House** House of Representatives (US).

**house aircraft** One used for research or development and property of user, normally a manufacturer.

**HOV** Autopilot mode maintaining zero lateral/longitudinal groundspeed.

**hover** 1 To fly (usually at low altitude) stationary relative to Earth, airspeed being that of local wind.

2 Exceptionally, to fly with zero airspeed, carried along at speed of wind in horizontal plane (while holding height constant).

3 Uncommon use, to be on station in geostationary orbit.

4 To operate or travel in air-cushion vehicle; obvious contradiction in terms.

**Hovercraft** The original [registered] name of pioneer air-cushion vehicles, still popularly used without initial capital.

**hovering ceiling** Greatest altitude at which helicopter under specified conditions can hover (2), normally defined as IGE (in ground effect) or OGE (out of ground effect).

**hovering point** Location where V/STOL aircraft picks up or sets down load without landing.

**hovering rig** Free-flying rig comprising open spaceframe in which are mounted jet lift engines and supporting systems planned for future aircraft to facilitate development of control systems in low hovering flight. These qualify as aircraft.

**hover pit** Test facility for jet VTO or STOVL aircraft.

**HOW** Handover word.

**HOWD** Helicopter obstacle warning device.

**howdah** Open gunner's cockpit above upper wing of large aircraft pre-1930.

**Howe truss** One having upper and lower chords joined by verticals plus diagonals inclined outwards from bottom to top on each side of mid-point.

**howgozit** Basic graphical plot of particular flight for planning purposes, always on basis of distance and with vertical scale flight level; includes weights, W/V and ambient T, and is amended as flight progresses (often arch).

**howler alert** Warns interphone handset is not properly seated.

**Howls** Hostile-weapons location system; versatile phased-array radar.

**HOWS** Helicopter obstacle warning system.

**HP** 1 High pressure; suffix number (eg HP<sub>8</sub>) denotes stage from which bleed air is taken.

2 Horsepower (undesirable).

3 Host processor.

4 Holding position, or point, or pattern.

**hp** 1 Horsepower.

2 High-pass filter.

**h<sub>p</sub>** Pressure altitude.

**h.p.** High-pressure.

**HPA** 1 Human-powered aircraft; G adds London-based Group.

2 High-power amplifier or amplification.

**hPa** Hectopascal, previously called *mb*.

**HPAL** Human performance and limitations.

**H-PAPI** Helicopter PAPI.

**HPBB** High-power broadband.

**HPBW** Half-power beamwidth.

**HPC** 1 High-pressure compressor.

2 Calibrated pressure altitude.

**HPCS** High-productivity computing system (Darpa).

**HPD** 1 High-power discrimination, or discriminating.

2 High-PRF pulse-Doppler.

**HPDA** Heavy propeller-driven aircraft.

**HPEL** Hold[ing]-position edge light[s].

**HP-EMP** High-power electric-motor pump.

**HPF** High-pass filter.

**HPFL** High-power fiber/fibre laser (JTO, DoD).

**HPFOTD** High-power fiber-optic towed decoy.

**HPI** 1 High probability of intercept.

2 High-power illuminating, or illuminator (radar).

**HP/IP** The structure, containing two roller bearings, supporting adjacent ends of the IP and HP compressors. Hence, HP/LP in a two-shaft engine.

**HPIR** HPI(1) receiver.

**HPL** High-power laser (B adds blinding).

**HPM** High-power microwave[s].

**HPMG** Hydraulic permanent-magnet generator.

**HPOC** High power offload to Cass (USN).

**HPOT** High-pressure oxidiser turbopump.

**HPOX** High-pressure oxygen.

**HPPAG** High-pressure pure-air generator [missile cooling].

**HPR** 1 High-performance rescue (vehicle).

2 High-power relay.

**HPres, HPRES** Pressure altitude.

**HPRF** 1 High pulse-repetition frequency.

2 High-power radio frequency.

**HPRL** Human Performance Research Laboratory (NASA, Ames).

**HPRP** High-power reporting point (radar).

**HPS** 1 Helmet pointing system.

2 Horizon and pitch scale.

3 Hardened personnel shelter.

4 High-pressure sodium.

**HPSC** House Permanent Select Committee; I adds on Intelligence (US).

**HPSM** High-power switching mode.

**HPSOV** High-pressure shut-off valve.

**HPSS** High-pressure single-spool.

**HPSSL** High-power solid-state laser.

**HPT** 1 High-pressure turbine.

2 High-precision thermostat.

3 High-power transmission.

**HPTC** High-performance technical computing.

**HPTE** High-performance turbine engine[s], or engined.

**HPTIC** High-performance thermal-imaging committee (DERA/industry).

**HPTS** High-power transmit[ter], or transmitting, set.

**HPW** High-pressure water (snow removal).

**HPX** HP-spool shaft-horsepower extraction.

**HPZ** Helicopter protected zone.

**hpz** Hectopièze[s], non-SI unit of pressure = 10<sup>5</sup> Pa.

**HQ** Headquarters; -C<sup>2</sup> adds Command and Control, MSS mission-support system.

**HQR** Handling-qualities rating.

**Hr** Hour[s].

**HR** 1 Helicopter route.

2 Helicopter, transport (USN category 1944-62).

3 Radar altitude.

4 Hear, here or hours.

**HRA** Highlands [of Scotland] restricted area.

**H<sub>RAD</sub>** Radar altitude measured in landing phase, = wheel height.

**HRB** Horizon reference bar.

**HRC** 1 Historical-records container.

2 Helmet-release connector.

**HRD** Home-routing domain.

**HRDF** High-resolution direction-finding, or finder.

**HRE** Hypersonic ramjet engine.

**HRF** High-Response Force, since 2005 also often called High-Readiness Force (NATO).

**HRG** 1 High-resolution geometric.

2 Hemispherical resonator gyro.

**H<sub>p</sub>** Density altitude.

**HRI** High-resolution instrument.

**HRGM** High-resolution ground map.

**HRIR** High-resolution IR radiometer.

**HRL** Human Resources Laboratory (USAF).

**HRN** High-resolution navigation mode.

**HROD** High rate of descent.

- HRP** Headset-receptacle panel.
- HRR** 1 High-resolution radar.  
2 High-range resolution; GMTI adds ground MTI.
- HRS** 1 Horizon-reference system.  
2 High-resolution stereoscopic.  
3 Hemispheric radar system.
- hrs, Hrs** Hours.
- HR SAR** High-resolution SAR(2).
- HRSCMR** High-resolution surface-composition mapping radiometer.
- HR SI** High-temperature reusable surface, or silica, insulation; Si-fibre tiles protected by fretted borosilicate glass with pigment for desired absorption/emission ratio.
- HRST** Hyperspectral remote-sensing technology.
- HRT** High-resolution textured [simulator].
- HRTS** High-resolution telescope and spectrograph.
- HRZ** Helicopter restricted zone.
- HRZN** Horizon.
- HS** 1 Scheduled hours only.  
2 Anti-submarine helicopter designation prefix (USN 1951–62).  
3 Helicopter Squadron.  
4 Hold short (command).  
5 High speed [1553B bus].
- Hs** Maximum shoulder height of tyre [tire].
- h<sub>s</sub>** Total height of a stringer
- HSA** 1 Horizontal-stabilizer actuator.  
2 Homeland Security Agency (US, 2002).
- HSAB** 1 Heavy-store[s] adapter beam.  
2 NDB with automatic weather broadcasts.
- HSAC** Helicopter Safety Advisory Committee/Conference [office, Houston, TX77205] (US).
- HSACE** HSA control electronics.
- HSAD** High-speed anti-radiation demonstration.
- HSARD** High-speed anti-radiation demonstration.
- HSAS** Homeland security advisory system.
- HSCS** High-specific creep-strength; M adds material[s].
- HSC T** High-speed commercial transport; usually = M2.2-M5.
- HSCU** Horizontal-stabilizer control unit.
- HSD** 1 Hard surface, dry (runway).  
2 Horizontal-situation display.  
3 Homeland Security and Defense (US 2001), also rendered as Homeland Security Department (2005).
- HSDB** High-speed data bus.
- HSDC** High-speed data channel; E adds extension.
- HSE** Health and Safety Executive (UK).
- HSEC** High-stability engine control.
- HSF** Half sampling frequency.
- HSFD** High-speed flight demonstration.
- HSFRS** High-Speed Flight Research Station (NACA Muroc, became NASA Dryden).
- HSF-RSAD** High-speed [film] frame, relay service access device.
- HSI** 1 Horizontal-situation indicator.  
2 Hot-section inspection.  
3 Hours since inspection.  
4 Hyperspectral imagery, or imaging.
- HSIN** 1 Homeland Security Information Network [2006–] (US).  
2 High-speed impulsive noise.
- HSIC** High-speed integrated circuit.
- HSIT** Hardware/software integration test.
- HSKT** Hunter standoff-killer team.
- HSL** Heading select.
- HSLA** High-strength low alloy steel.
- HSL LADS** High-speed low-level air-delivery system.
- HSLV** High-speed low-voltage (LSI).
- HSM** 1 Hard-structure munition, conventional munition intended to have maximum effect on hardened targets.  
2 High-speed machining.  
3 Hardware security module.
- HSMF** High-strength modified fluoropolymer.
- HSMU** Hydraulic system[s] monitoring unit.
- HSN** Hot-stream nozzle.
- HSO** Homeland Security Office (counter-terrorism, UK).
- HSOS** Helicopter stabilized optical sight.
- HSP** 1 High-speed [1,300 m/s] penetrator, or penetration; T adds technology.  
2 Head-shrinkable polyolefin.  
3 Hard spark[ing] plug.
- HSR** 1 High-speed research.  
2 High-stability reference.  
3 High sink-rate.
- HSRP** Hot-standby routing protocol.
- HSS** 1 Helicopter support ship.  
2 Helicopter stabilized sight.  
3 Homeland security sensor, or suite.  
4 Hypersonic sound.
- HSSL** Helicopter self-screening launcher.
- HSSM** High-speed [Mach 8] strike missile.
- HSSS** Helicopter secure-speech system.
- HST** 1 Hypersonic transport.  
2 Heat-shrinkable thermoplastics.  
3 High-speed tunnel, or turnoff.
- HSTA** Horizontal-stabilizer trim actuator.
- HSTF** High-strength toughened fluoropolymer.
- HSU** 1 Hartridge smoke unit.  
2 High-speed unit (satcom).
- HSV** Highly supersonic vehicle.
- HSVD** Horizontal-situation video display.
- HSW** High-speed weapon[s].
- HSWT** High-speed wind tunnel.
- HT** 1 High turbine (US for HP turbine).  
2 Hard time, thus \* life.  
3 Helicopter, training (USN category 1948–62, role prefix, UK).  
4 History tape.  
5 Horizontal tail.  
6 High tension [h.t. preferred].
- H/T** Hub-tip ratio.
- ht** Height.
- h.t.** High tension (electrical).
- HTA** 1 High-time aircraft of type.  
2 Horizontal target attack.  
3 Heavier than air.  
4 Hand-entered terrain altitude.  
5 Helicopter type allowance.
- HTAD** Hard-Target Attack Division (USAF).
- HTADS** Helmet target-acquisition and designation system.
- HTC** 1 Hard-target capability.  
2 See HTCU.  
3 Human to computer.  
4 Highest two-way channel.
- HTCU** 1 Hover trim control unit.

2 Heavy Transport Conversion Unit (RAF).

**HTD** Hard-target defeat.

**H<sub>TD</sub>** Wheel height at touchdown referenced to depressed surface.

**HTDU** High-temperature demonstration unit.

**HTFD** Hard-target functional defeat.

**HTI** Horizontal technology integration.

**HTIC** House Transportation and Infrastructure Committee (US).

**HTIFT** Hard-target influence-fuze technology.

**HTK** Hit to kill.

**HTKP** Hard-target kill probability.

**HTL** High-threshold logic.

**HTLC** High-temperature load calibration.

**HTMPFG** One of earliest of at least 35 English-language safety acronyms = hood/harness, throttle/trim, mixture, pitch, fuel/friction-nut/flaps, gills/gyros/possibly goggles.

**HTNS** Helicopter tactical navigation system.

**HTOVL** Horizontal (conventional) takeoff, vertical landing.

**HTP** 1 High-test peroxide.

2 High-tensile polyimide.

3 Horizontal tailplane.

**HTPB** Hydroxyl-terminated polybutadiene, rocket propellant.

**HTR** Heat-transfer reduction.

**HTS** 1 High-tensile sheet (CFRP).

2 Harm targeting system.

3 Hydraulic test stand.

4 High-temperature superconductor.

5 High-temperature sensor.

**HTSC** High-temperature superconductor.

**HTSF** Hard-target smart fuze.

**HTT** Head, or helmet, tracker transmitter.

**HTTB** High-technology testbed (Lockheed).

**HTU** Hand-held terminal unit.

**HTUFT** Helicopter[s] taken up from trade, ie commandeered [also Hetuft].

**HTZ** Helicopter traffic zone.

**HU** 1 Helicopter, utility (USN, USA, 1950-62).

2 Helmet unit, part of HMD(1).

**hub** 1 Strictly, those structural members required to hold together blades of propeller or rotor; in practice meaning has come to include all central portions, including pitch and other mechanisms, de-icing and instrumentation, but not spinner or other fairing.

2 Missile body section containing attachments for cruciform wings.

3 Chief airport of major city.

4 Head office or largest plant of company.

**hub and spoke** Route pattern of carrier totally centred on one city.

**hubbed, hubbing** Parked at hub (3).

**hubbed loop** An arbitrated loop in which the nodes are arranged radially around a hub.

**hub drive** Driven by shaft input rather than tip jet reaction.

**hub plane** HP, in a helicopter the plane perpendicular to the main-rotor shaft.

**hub/tip ratio, H/T** Ratio of radius at root of gas turbine fan, compressor or turbine blade, to radius at tip (usually inside tip shroud if fitted).

**Hucks starter** Device, often locally made, for starting

piston engines. On a car or truck chassis a drive is taken from the engine to a long shaft whose height and inclination can be varied. This terminates in lateral pins [dog clutch] which engage with a bayonet clutch on the end of the propeller shaft (suggest obs.).

**HUCP** Highest useful compression pressure.

**HUCR** Highest useful compression ratio.

**Hud, HUD** Head-up display; C adds camera, or computer, see next.

**Hudwac** HUD weapon-aiming computer.

**Hudwass** HUD weapon-aiming subsystem.

**Hufford** Family of large machine tools which grip ductile sheet at each end in jaws on hydraulic rams mounted on pivoting platforms and stretch it over male die itself thrust forward on rams.

**HUGS** Head-up guidance system.

**HULD** Hardened unit-load device.

**hull** 1 Fuselage of flying boat.

2 Main body of rigid airship.

3 For insurance purposes, complete aircraft as defined in policy, ignoring any load or persons on board.

**hull insurance** That covering capital value (assigned at operative time, neither original first cost nor replacement cost) of aircraft.

**hull lines** Set of plan views of LWLs of marine aircraft or float.

**hull loss** Aircraft written off.

**Hultec** Hull to emitter correlation, EW/ESM software programs.

**HUM, Hum** Health and usage monitor, or monitoring; C adds computer, S adds system or and sensing, U unit.

**human intelligence** Gained by getting people 'in the know' to disclose information, by whatever means.

**human-operator describing function** The transfer-function model for the use of error information to track an unpredictable target.

**humidity** Wetness of gas, esp. amount of water vapour present in air; absolute \* is mass of vapour in unit volume g/m<sup>3</sup>, specific \* is mass of vapour in unit mass of dry air g/kg, relative is percentage degree of saturation = 100 times actual vapour pressure divided by SVP.

**humidity mixing ratio** Specific humidity.

**Humint** Human intelligence, ie countermeasures against human decision-taking.

**hump** Region where, in takeoff of marine aircraft, T/W -R/W is least; T is total thrust, W weight and R total resistance. Point at which aerodynamic lift exceeds hydrodynamic lift.

**Humphrey cycle** See *constant-volume combustion*.

**hump speed** That of marine aircraft (seaplane, flying boat) or ACV at which total resistance of water is greatest; in case of aircraft this speed [in US called V<sub>H</sub>] is typically about half V<sub>US</sub>.

**Hums** Health and usage (and performance) monitoring, or management, system.

**Hun** 1 German aircraft or pilot (UK usage WW1, occasional WW2).

2 Pupil pilot (colloq, RFC).

**hundred per cent aircraft** One that exactly measures up to published performance.

**hundredweight** Non-SI unit of mass, abb. cwt = 112lb, 50.8023kg; in US [called short \*, sh.cwt.] = 100 lb, 45.3592 kg.

**hung** Hung start.

**hung round** Rocket or other missile which fails to release from aircraft.

**hung stall** After compressor stall, engine fails to recover immediately.

**hung start** Starting of main turbine engine which, for any reason, automatically or under manual control is arrested after ignition but before self-sustaining speed is reached.

**Hunter** Head-up navigation and targeting equipment for retrofit.

**hunter/killer** 1 Aircraft or other platform able to seek out and kill submarines unaided.

2 Pair of ASW aircraft, one with sensors, the other with weapons.

3 Co-ordinated task force comprising aircraft and surface forces combining in ASW mission.

**hunting** Continual steady oscillation about neutral point; governed speed, governed position, desired flight attitude or other target regime; manifest in cyclic phugoids in aircraft pitch or yaw (rare in roll), shuttling of hydraulic spool valve, ceaseless rising and falling of speed of rotating machine or visible oscillation of instrument needle.

**hunting tooth** Gear ratios which ensure that each tooth engages between a different pair of teeth on each revolution, to even out wear.

**Huntsville** Alabama location of MSFC, USSRC.

**HURCN** Hurricane.

**hurricane** One name [notably in West Indies] for tropical revolving storm, usually defined as one with winds whose mean speed exceeds 64 kt, 119 km/h.

**HURT, Hurt** Heterogenous urban reconnaissance [surveillance and target acquisition] team (Darpa).

**hush house** Noise-suppressing testbed for jet engines (colloq.).

**hushkit** Supplied by manufacturer to operator to quieten engine, invariably turbojet or turbofan already in service; often includes inlet acoustic liners, liners for tailpipe and new nozzle with longer periphery and faster mixing.

**Hutton sight** Gunsight with red/green illuminated dots for use at night, 1917 (UK).

**HV, h.v.** 1 High voltage.

2 High vacuum.

3 High volume.

**H/V** Height/velocity (plotted curve).

**HVA** 1 Horizontal viewing arc.

2 High-value asset[s].

**HVAC** Heating, ventilating and air-conditioning.

**HVAP** High-velocity armour-piercing.

**HVD** 1 Helmet visor display.

2 Helicopter video downlink.

**HVDF** Hf/vhf D/F.

**HVG** Hypervelocity gun.

**HVI** Helmet/vehicle interface.

**HVLP** High volume, low pressure [painting].

**HVM** Hypervelocity missile.

**HVML** High-volume minelayer.

**HVO** Hydrogenerated vegetable oil[s].

**HVOF** High-velocity oxygen/fuel plasma spray.

**HVOR** High-altitude VOR.

**HVPS** 1 High-voltage power supply [U adds unit].

2 High-volume precipitation sensor.

**HVT** High-value target; A adds acquisition.

**HVU** High-value unit [surface target].

**HVY** Heavy.

**HVZL** Hauptverwaltung der Zivilen Luftfahrt (DDR, East Germany).

**HW** Hardware.

**h.w.** Half-wave.

**HWA** Hot-wire anemometer, or anemometry.

**HWCI** Hardware configuration item.

**HWD** Heavy-weight deflector.

**HWIL** Hardware in the loop.

**HWMMT** High water mark mean tides.

**HWT** Hypersonic weapons technology.

**HWVR** However.

**HX, H<sub>x</sub>** 1 Airfield has variable working hours.

2 Heat exchanger.

3 Hold[ing] to a fix.

**Hyblum** Long-established Al-Mg-Si alloys.

**H<sub>2</sub>BOLT** Hypersonic boundary-layer transition.

**hybrid bearing** Combining bearing with rolling elements (ball, roller, needle) encased in free-rotating journal supported by fluid film. Typically Sinide elements in steel race.

**hybrid buoyant aircraft** Those built so far, or planned, are vectored-thrust airships.

**hybrid chip** Combining digital and analog functions.

**hybrid composite** Matrix reinforced by fibres of two different types.

**hybrid computer** One using digital techniques for large and precise arithmetic and logic beyond scope of analog machines, and analog wherever possible for highest computational speed; invariably a good compromise for large simulations and other specialized tasks [Ed.'s opinion].

**hybrid display** One in which alphanumeric and symbology are cursively written on top of a raster background.

**hybrid electronics** Combination in single integrated circuit of epitaxial monolithic or thin-film with one or more discrete devices.

**hybrid fan** Refined form of tandem-fan lift/cruise engine which in lift mode blows entire fan airflow through twin vectored forward nozzles and separately induced core flow through aft vectored nozzle.

**hybrid FCS** Flight-control system with digital outer loop and analog inner loop.

**hybrid helicopter** Aerodyne with VTOL capability conferred by helicopter rotor[s] but which cruises (flies in translation mode) as an aeroplane.

**hybrid IC, hybrid package** Hybrid electronics.

**hybrid laminar flow** Combination of aerodynamic design and suction.

**hybrid navigation system** This usually means GPS, INS and IFF.

**hybrid operation** See *hybrid display*.

**hybrid propulsion** 1 Aircraft propelled by two or more dissimilar species of prime mover; eg turboprop plus jet, or turbojet plus rocket.

2 Single propulsion engine capable of operating in two distinct modes; eg turborocket or ram rocket.

**hybrid RAM** RAM(2), especially forming integral part of airframe, combining two or more techniques to give broader bandwidth in thinner layer, eg magnetic/CA, graded dielectric/CA, etc.

**hybrid RAT** Ram-air turbine driving both electric generator and hydraulic pump.

**hybrid rocket** One using both liquid and solid propellants simultaneously; usual arrangement is solid fuel and liquid oxidant.

**hybrid solar array** Part folding, part flexible.

**hybrid trajectory** Any space trajectory intermediate between that for minimum energy or minimum time and alternatives offering greater payloads, longer launch windows or other advantages.

**hybrid wave** EM wave in waveguide having both magnetic and electric components in plane of propagation.

**Hycatrol** One of several trade names (FPT Industries) for rubber/metal bonded structures.

**Hycorder** Hyperspectral covered-lantern optical recognition device recorder.

**hyd** Hydraulic[s].

**Hydim** Hydraulic interface module.

**hydrant dispenser** Installation under apron or finger/gate area stand for refuelling aircraft without need for tanker vehicles.

**hydrant pit** Below-ground compartment, normally covered, housing connections and controls for fuel, hydraulic, lube oil or other liquid supply.

**hydraulic catapult** *Catapult.*

**hydraulic fluid** See *hydraulics.*

**hydraulicicing** Abnormal resistance to movement of machine, esp. piston engine, caused by hydraulic lock in lower cylinders part-full of essentially incompressible oil; can cause serious damage.

**hydraulic lock** Use, frequently inadvertent, of essentially incompressible liquid to prevent movement of mechanical part.

**hydraulic motor** Source of mechanical power, usually rotary, driven hydraulically.

**hydraulic power unit** Source of power to energize hydraulic system, eg when main engines inoperative.

**hydraulic RAT** Ram-air turbine driving hydraulic pump.

**hydraulics** Science of liquids either in motion (hydrodynamics) or as media for transmitting forces (hydrostatics). In aerospace generally science of nearly incompressible liquids enclosed in closed-circuit pipe systems at high pressure and used both to apply forces, with little fluid motion, and supply power, with large fluid motion. Media originally mineral oils, today also engine fuel, phosphate esters, chlorinated silicones, silicate esters and (supersonic and missiles) alkyl silicate esters. There are several so-called synthetic ester-based fluids, but most aircraft still use mineral oils, notably DTD.585 [UK], MIL-H-5606 [US], H.515 [NATO], AMG-10 [Russia] and AIR.320 [France].

**hydraulic seal** Total seal between two annular spaces in engine formed by ring-fins or flanges projecting into ring of oil created by centrifugal force.

**hydraulic starting** Used in small [eg, missile and UAV] jet engines: external supply feeds pressure to hydraulic motor; once engine is started, motor functions as hydraulic pump.

**hydraulic system** Complete aircraft installation comprising closed circuits of piping, engine-driven pumps, accumulators, valves, heat exchangers, filters and, usually, emergency input such as RAT or MEPU;

normally divided into at least two systems with maximum degree of independence. Each system is assigned task of driving selected items by linear actuators, motors or other output devices.

**hydrazine** Family of chemicals, mostly colourless liquids, often corrosive; basic member is  $^*$ ,  $(\text{NH}_2)_2$ ; common rocket fuel is unsymmetrical dimethyl  $^*$ ,  $\text{NH}_2\text{N}(\text{CH}_3)_2$ ; another is monomethyl  $^*$ ,  $\text{NH}_2\text{HH.CH}_3$ .

**hydrobooster** Hydraulic power unit used in boosted (not fully powered) flight-control system (colloq.).

**hydrocarbon** Compound of hydrogen and oxygen only; some millions are known, including all derivatives of petroleum, which in product form often have other elements added for specific purposes. Many aviation fuels are alkanes (paraffins), which are open chains with carbon atoms having single-valence bonds; first six members, with one to six carbon atoms respectively, are methane, ethane, propane, butane, pentane and hexane. These are prefixed n (normal), distinguished from prefix iso of more reactive branched alkanes. Alkenes have one carbon with double bond, based on ethylene  $(\text{CH}_2)_2$ . Aromatic  $^*$  series are based on hexagon ring of benzene  $\text{C}_6\text{H}_6$  with three double bonds.

**hydrodynamics** Science of fluid motion, esp. of water.

**hydroflap** Water rudder on flying boat.

**hydrofoil** Lifting surface operating in water. As well as being vehicles in their own right, surface-piercing and ladder  $^*$  have been used on marine aircraft.

**hydroforming** Shaping parts by fluid pressure, esp. of thin-foil items.

**hydrogen** Symbol H, least-dense element, comprising 88 per cent of atoms in Universe,  $\text{LH}_2$  (liquid  $^*$ ) has density  $77.0 \text{ g l}^{-1}$ ,  $4.806 \text{ lb ft}^{-3}$  at 13.8K (the triple point) and  $70.8 \text{ g l}^{-1}$  at BPt of 20.28K,  $-253^\circ\text{C}$ , where it becomes  $\text{GH}_2$  (gaseous  $^*$ ) with density  $0.0008988$  ( $0.08988 \text{ g l}^{-1}$ ) or  $0.005611 \text{ lb ft}^{-3}$ ; isotopes are bivalent deuterium, trivalent tritium. In air at STP  $10^3 \text{ cu ft}$  [ $28.317 \text{ m}^3$ ] of  $^*$  will lift  $32.090 \text{ kg}$  ( $70.746 \text{ lb}$ ).

**hydrogenation** Causing to combine with hydrogen, esp. at high pressure and in presence of catalyst such as nickel or platinum, in conversion of crude petroleum distillates into tailored fuels and other products.  $^*$  of coal also important to future aviation.

**hydrogen bomb** So-called H-bomb, or thermonuclear weapon TN or TNW; comprises NW surrounded by lithium deuteride (LiD, the lithium being isotope Li-6) and a little tritium T. Triggering the NW emits neutrons which instantly convert the Li-6 into  $\text{H}+\text{He-3}+\text{T}$ . The He-3 and T then combine with remaining D to form more He and more neutrons, which also convert the U-238 bomb case into Pu-239, causing an additional (fission) reaction.

**hydrogen bus** Airport airside buses are among the first vehicles to be powered by hydrogen, usually  $\text{GH}_2$  stored on vehicle roof.

**hydrogen economy** Hypothetical future in which Earth's limited reserves of petroleum are replaced by gaseous and liquid hydrogen. No new technology is needed, but see next.

**hydrogen fusion** Essentially limitless power could be unlocked if mankind could emulate the Sun and build a facility which continuously converted hydrogen into helium. Conversion would yield  $630,000,000,000\text{J}$  of energy per gram.

**hydroglider** Glider with marine alighting gear.

**hydrograph** Hydrometer hard-copy output.

**hydrokinetics** Science of liquids in motion.

**hydrolapse** Rate of decrease of atmospheric water vapour with altitude.

**hydromagnetics** See *MHD*.

**hydromechanical logic** Performed with mechanical elements wherein information exists as hydraulic flows/pressures.

**hydromechanical metering unit** *Fuel metering unit*.

**hydrometer** Instrument for determining density of liquids.

**hydrometeor** 1 Any atmospheric water in solid or liquid form; all precipitation, fog, dew, frost etc.  
2 Phenomena dependent upon (1).

**hydrophobic** Rain-repellant.

**hydrophilic** Affinity for water, so acts as desiccant (various spellings).

**hydroplane** Light boat which skims water surface on planing bottom when at high speed; erroneously misused for seaplane and/or hydrofoil.

**hydroport** Inland airport for marine aircraft.

**hydropress** Diverse family of hydraulic presses widely used in aerospace with large-area platen on which are mounted large or multiple tools around which sheet is shaped by rubber pad or mating tools.

**hydroskis** Planing surface, usually in left/right pair and retractable, used for takeoff and landing of certain marine aircraft; have little buoyancy, so ski aircraft rests on water like flying boat when at rest.

**hydrosphere** Water resting on or within crust of Earth or other body, excluding that in atmosphere.

**hydrostatic bearing** Spinning shaft, sphere or other mass is supported (usually radially and axially) by filtered gas or liquid dynamic reaction, eliminating contact between fixed and moving solid surfaces.

**hydrostatic drive** Transmits power, usually between rotating shafts, by pumping hydraulic fluid round closed circuit; both pump and motor usually have stroke or output infinitely variable down to zero, giving perfectly flexible dynamic link from zero to maximum output power.

**hydrostatic equation** Applies when secondary effects (Earth curvature, friction, coriolis etc) ignored, leaving  $dp/dz = -\rho g$  where  $p$  is pressure,  $z$  geometric height and  $\rho$  density.

**hydrostatic extrusion** Advanced technique for extrusion of steels and other materials, usually at room temperature by forcing through die under extreme hydraulic pressure.

**hydrostatic fuze** Triggered by depth-dependent water pressure.

**hydrostatic test** Test of container (fuselage, solid rocket case) under high pressure using water or other liquid to minimize stored energy.

**hydrovane** One meaning is a patented form of hydrofoil intended to facilitate emergency water alighting of land-plane.

**Hydrus** FBMS ship/shore communications system.

**Hydulignum** Trade name (Hordern-Richmond) for densified wood.

**Hydne** Storable rocket fuel in various formulations based upon 60% UDMH and 40% diethylenetriamine.

**hyetograph** 1 Recording rain gauge.  
2 Annual rainfall chart.

**Hyfil** Trade name for family of CFRP raw materials marketed in standard forms or used for inhouse production (Rolls-Royce).

**Hyflex** Hypersonic flight experiment.

**HyFly** Programme of Mach-6 research (Darpa/ONR).

**HYE** High-yield explosive.

**hygrograph** 1 Output from a recording hygrometer.  
2 Instrument for recording humidity, traditionally with pen positioned by bundle of stretched human hair.

**hygrometer** Determines atmospheric humidity (strictly, wet and dry bulb \* is psychrometer).

**hygroscopic** Eager to absorb moisture.

**Hy-Jet/I,II,III,IV** Ester-based non-inflammable hydraulic fluids (Chevron).

**Hy-Lite** Hyperspectral long-wave imager for the tactical environment.

**Hylyte** British titanium alloys (+ Sn, Zr, Al); creep-resistant.

**H<sub>1</sub>MIC** Hybrid micro integrated circuit.

**hyperabrupt** Device, eg diode, tailored to most rapid possible action.

**hyperacoustic zone** Region above 100 km (62 miles) where mean free path approximates to wavelengths of sound; limit of sound propagation.

**hyperbaric** 1 Having atmospheric pressure or oxygen concentration greater than normal sea-level.  
2 Internal body pressures greater than ambient.

**hyperbola** Conic section obtained by plane cutting both nappes (normal right circular cone and its mirror-image inverted above); locus of points whose distances from two foci have constant difference, standard equation  $x^2/a^2 - y^2/b^2 = 1$ . Because of constant difference in distance from two foci, possible to base families of navoids on keyed radio emissions from two fixed stations.

**hyperbolic navoids** Based upon synchronized emissions from fixed ground stations, often called master and slave(s), which are received by aircraft at time differences which yield lines of constant time (ie range) difference in form of hyperbolic position lines. First were Gee, Loran and Decca, later developed to give instantaneous readout of position or moving-map display.

**hyperbolic error** That due to assumption that waves received at all antennas of an interferometer baseline are travelling in parallel directions.

**hyperbolic frequencies** Measured in several tens of GHz.

**hyperbolic re-entry** At hyperbolic speed.

**hyperbolic speed** Sufficient to escape from Solar System; on Earth trajectory away from Sun about 40,597 km/h, 25,226 mph.

**hypergolic** Of rocket propellants, those which ignite spontaneously when mixed.

**hypermetropia** Long-sightedness.

**hypermixing nozzle** In ejector-lift system, row of nozzles which alternately deflect jets in opposite directions to create large vortices promoting rapid mixing.

**hyperoxia** Excess oxygen in the blood.

**hypersat** Loose term for advanced small satellite[s].

**hypersonic** Having Mach number exceeding 5 [another authority, M8 to M12].

**Hypersonic National Plan** Co-ordinates DoD, NASA, industry and academia (US).

**hypersound** Frequency greater than  $10^9$  Hz.

**hyperspectral** Operating in several electromagnetic

bands, dividing each colour into a separate channel to give a unique signature of absorption and emission.

**hypertension** High blood pressure.

**hyperventilation** Overbreathing; specif. reduced CO<sub>2</sub> causing \* syndrome, dizziness, fainting, convulsions.

**hypobaric** Having atmospheric pressure much less than normal at sea level.

**hypocapnia** CO<sub>2</sub> deficiency in blood.

**hypoid** Bevel or helical gears transmitting power with some tooth-sliding action between shafts neither parallel nor intersecting.

**hypoventilation** Underbreathing.

**hypoxaemia** Condition resulting from hypoxia.

**hypoxia** O<sub>2</sub> deficiency in blood, from whatever cause.

**hypometric tints** Colour gradations chosen for contrast by natural or artificial illumination (eg. for contour bands on topographic map).

**HYR** Higher.

**Hyrat** Hydraulic (pump driven by) ram-air turbine.

**HySET** Hydrocarbon-fuel scramjet engine technology.

**H<sub>γ</sub>SID** Hypersonic systems integrated demonstrator.

**hysteresis** / Generally, condition exhibited by system whose state results from previous history, specif. one whose instantaneous values lag behind prediction.

2 In ferromagnetic and some other materials, lagging of magnetic flux density T behind magnetic field strength A/m causing it (see \* *loop*).

3 Effects caused by internal friction in elastic material undergoing varying (esp. rapidly oscillating) stress.

4 Lag in instrument indication; eg that of barometric altimeter in dive or climb.

**hysteresis loop** Plot of magnetising field strength against magnetic flux density for ferromagnetic material; traditionally called B/H curve because flux density was called induction, symbol B, measured in gauss, and field strength (formerly in oersteds) was identified by symbol H; today's units are (field strength) A/m and (flux density) T.

**HYT** High year of tenure (waiver programme).

**Hytech** Hypersonic technology.

**Hythe** Ciné camera mounted on Scarff ring or similar base for gunnery instruction; full name \* camera gun.

**Hytral** Noise-absorbent panels of sandwich construction.

**Hyways** Hybrids with advanced yield for surveillance.

**HZ** Haze (ICAO).

**Hz** Hertz, SI unit of frequency, = cycles per second.

**HZ Anlage** System of using a piston-engine solely to drive supercharger feeding propulsion engines [G, WW2].

**H<sub>0</sub>, H<sub>zero</sub>** Distance from leading edge of AMC(1) to aerodynamic centre.

**HZZ** Hrvatski Zrakoplovni Savez, [aeronautical sport federation, Zagreb 10-000] (Croatia).

# I

- I** 1 Electric current,; see ampere.  
2 Moment of inertia. suffixes include XX roll, YY pitch, ZZ yaw, R rotor [of engine or helicopter etc],  $\omega$  angular momentum, and numbers for structural webs, etc.  
3 Second moment of area  
4 Luminous intensity.  
5 Total heat content.  
6 Total impulse, usually non-dimensional.  
7 Intensity of turbulence.  
8 Immigration.  
9 Initial approach.  
10 Instrument.  
11 In-line.  
12 Interrupted.  
13 Prefix, direct-injection engine (US).  
14 Aircraft category: human-powered aircraft (FAI).
- i** 1 Intensity of rainfall.  
2 Square root of minus 1'.  
3 Instantaneous current.  
4 Helicopter blade control-point index.
- I-band** EM radiation, 37.5–30 mm, 8–10 GHz.
- I-beam** One of I section.
- I-display** When radar aerial pointed at target latter appears as circle at radius proportional to range; when aerial points away from target latter appears as segment showing magnitude/ direction of error.
- I-local** Index of local warnings [weather].
- I-section** Structural beam with vertical web and flat upper and lower booms.
- I<sup>2</sup>** Image-intensifying.
- I<sup>2</sup>F** Intelligent influence fuze.
- I<sup>2</sup>R** The heat generated by an electric current.
- I<sup>2</sup>S** 1 Infra-red imaging system.  
2 Integrated information system, cabin wireless LAN for passengers based on 802.11 and ARINC-763.
- I<sup>2</sup>t** Current squared times time, characteristic of trip switch.
- IA** 1 Initial approach (FAA).  
2 Inspection authorization (FAA).  
3 Input axis.  
4 Imagery analysis.  
5 Initial attack (firefighting).
- ia** Anode current.
- IAA** 1 International Academy of Astronautics. Paris.  
2 International Aerospace Abstracts (AIAA).  
3 Irish Aviation Authority [office, Dublin 2] (Ireland).  
4 See *IAA (E)* and *IAA (O)*.
- IAAA** International Airforwarder and Agents Association. [office, Alexandria, VA].
- IAAC** 1 International Agricultural Aviation Centre (HQ in UK).  
2 International Association of Aircargo Consolidators.  
3 Information Assurance Advisory Council (UK).
- IAAE** Institution of Automotive & Aeronautical Engineers (Australia).
- IAA(E)** Inspector of Air Accidents (Engineering) [DETR, UK].
- IAAF** International Agricultural Aviation Foundation [office, Walla Walk, WA99362] (Australia).
- IAAFA** Inter-American Air Forces Academy (US).
- IAAH** International Association of Aviation Historians.
- IAAI** 1 International Airports Authority of India.  
2 Indonesian Aeronautical and Astronautical Institute.
- IAAIA** International Association of Airline Internal Auditors.
- IAA(O)** Inspector of Air Accidents (Operations) [DETR, UK]
- IAARC** International Administrative Aeronautical Radio Conference.
- IAASM** International Academy of Aviation & Space Medicine Montreal.
- IAASS** International Association for the Advancement of Space Safety.
- IAATC** International Association of Air Training Centers.
- IAB** Investment Approvals [until 2003 Appraisals] Board [senior procurement body; MoD] (UK).
- IABA** International Association of Aircraft Brokers and Agents.
- IABCS** Integrated aircraft brake control system.
- IABG** Industrieanlagen Betriebs GmbH (G).
- IAC** 1 Intelligence Analysis Center (US).  
2 International Aerobatics Club [office Oshkosh, WI 54093-3086] (Int.).  
3 Instrument-approach chart.  
4 Integrated avionics computer.  
5 See *TIACA*.  
6 Instituto de Aviação Civil [20021-010 Rio de Janeiro] (Brazil).  
7 Irish Aviation Council [Greystones, Co. Wicklow] (Ireland).  
8 Irish Aviation Club Ltd [Dublin 14] (Ireland).
- IACA** International Air Carrier Association [head office, B-1930 Zaventem; UK office E Grinstead RH19 4QA] (Int.).
- IACAC** International Association of Civil Aviation Chaplains (office JFK airport, NY).
- IAC/AV** Interstate Aviation Committee/Aviation Register (R, CIS).
- IACC** Inter-agency Air Cartographic Committee (US).
- IACD** Intelligent adviser [not advisor] capability demonstrator.
- IACES** International Air Cushion Engineering Society.
- IACG** Inter-agency consultative group (US, USSR, Europe, Japan, space science).
- IACP** Independent Association of Continental Pilots.
- IACS** Integrated avionics [also air-traffic] control system.
- IACSP** International Aeronautical Communications Service Provider.
- IACS** Integrated avionics [also air-traffic] control system.
- IACZ** Inter Airline Club Zurich (Int.).
- IAD** 1 Fighter Division (R).  
2 Integrated antenna detector.
- IADB** Inter-American Defense Board [Washington, DC].

**IADF** Isopropyl alcohol de-icing fluid.  
**IADS** Integrated air-defence system.  
**IAE** 1 Instituto de Aeronautica e Espaco, previously Instituto de Atividades Espaciais (Brazil).  
 2 Institute for Advancement in Engineering (US).  
 3 Institute for Aviation and Environment [Cambridge CB2 1EW] (UK).  
**IAEA** 1 Indian Air Engineers' Association.  
 2 International Atomic Energy Agency.  
**IAEM** Instituto dos Altos Estudos Militares (Port.).  
**IAF** 1 International Astronautical Federation [office, F-75015 Paris] (Int.).  
 2 Initial approach fix.  
 3 Italian air force [UK usage].  
 4 Indonesian air force [UK usage].  
 5 Iranian air force [UK usage].  
 6 Independent Air Force, strategic arm of RAF, formed 5 June 1918.  
 7 See **FAI**.  
**IAFA** International Airfreight Forwarders' Association (J).  
**IA5** International Alphabet No. 5.  
**IAFU** Improved assault fire unit (USA).  
**IAGA** Israeli Association of General Aviation [46910 Kfar Shmaryahu].  
**IAGC** Instantaneous automatic gain control.  
**IAGS** 1 Inter-American Geodetic Survey.  
 2 Integrated Arinc ground station.  
**IAHA** International Air Handling Association.  
**IAHFR** Improved airborne high-frequency radio; /NOE adds nap-of-the-Earth.  
**IAIM** Integrated aeronautical information management.  
**IAIN** International Association of Institutes of Navigation.  
**IAIP** Integrated aeronautical information package (CAA).  
**IAIS** Industrial Aerodynamics Information Service.  
**IAL** International Airtraffic League.  
**IALA** International Association of Lighthouse Authorities.  
**IALCE** International Airlift Control Element (NATO).  
**IALPA** Irish ALPA [office Dublin airport PA1] (Ireland).  
**IAM** 1 International Association of Machinists (US). See *IAMAW*.  
 2 Institute of Aviation Medicine (UK).  
 3 Inertially-aided munition, free-fall device (Northrop).  
 4 Instrument approach minima.  
 5 Institute for Advanced Materials (Petten, Neth.).  
 6 Initial approach mode.  
 7 Integrated asset management [CS&S].  
**IAMAW** International Association of Machinists and Aerospace Workers (US, Washington, DC, and, Canada, Ottawa).  
**IAMS** 1 Integrated armament management system.  
 2 Integrated airline management system (IATA).  
**Iamsar** International Aeronautical and Maritime SAR Manual (ICAO).  
**IANA** Internet Assigned Number Authority.  
**IANC** 1 International Airlines Navigators Council.  
 2 International Air Navigation Convention (from 1919).

**I&C, I&CO** Installation and checkout.  
**I&E** Installations and Environment (US DoD).  
**I&M** Improvement and modernization.  
**I&T** Integration and tape.  
**I&W** Indications and warnings.  
**IANS** Institute of Air Navigation Services (Luxembourg).  
**IAO** 1 In and out of cloud.  
 2 Information Awareness Office (Darpa).  
**IAOA** Indicated angle of attack.  
**IAOPA** International Council of AOPAs [1962–, office Frederick, MD 21701] (Int.).  
**IAP** 1 Imagery architecture plan.  
 2 Fighter aviation regiment (USSR, R).  
 3 Instrument approach procedure (see \* *chart*).  
 4 International airport.  
 5 Integrated actuation pack[age], usually an electrically driven pump.  
 6 Institution of Analysts and Programmers [office, London] (UK).  
**IAPA** 1 International Airline Passenger Association (Croydon, UK).  
 2 International Airline Passengers Association [office, Dallas TX] (Int.).  
 3 International Aviation Photographers' Associations.  
 4 Instrument-approach procedures automation.  
**IAPC** 1 International Airport Planning Consortium (UK).  
 2 Instrument approach procedure chart.  
**IAPS** 1 Ion auxiliary propulsion system.  
 2 Integrated avionics processing system.  
**IA-PVO** Fighter aviation, air defence of the homeland (USSR, R).  
**IAQG** International Aerospace Quality Group (Int.).  
**IAR** 1 Idle area reset.  
 2 Institute for Aerospace Research [part of NRC, Ottawa, K1A 0R6] (Canada).  
 3 Inspection, or intersection, of air routes.  
**IARO** International Air Rail Organisation (office Heathrow, UK).  
**IARP** Inverse-address resolution protocol.  
**IAS** 1 Institut Aéronautique et Spatial (F).  
 2 Indicated airspeed (see *airspeed*).  
 3 Integrated acoustic structure.  
 4 Interplanetary automated shuttle.  
 5 Impact attenuation system.  
 6 Ideal aerofoil/airfoil shape.  
 7 Integrated airport systems.  
 8 Institute of the Aeronautical Sciences, changed to Aerospace, and in 1962 to AIAA.  
 9 Institut Aéronautique et Spatial [office, Toulouse] (F).  
 10 Institute of Aviation Safety [unrelated to ASI3, Closter, NJ] (US).  
**IASA** 1 International Air Shipping Association.  
 2 International aviation safety assessment (FAA).  
**IASB** Institut d'Aéronomie Spatiale de Belgique.  
**IASC** 1 *CASI* (I).  
 2 International Assessment and Strategy Center [DC] (USA).  
**IASM** Institute of Aerospace Safety and Management (U of S California 1953, became ISSM).  
**IASS** 1 International air-safety seminars.  
 2 Integrated airport security system.

- IAT** 1 International atomic time.  
2 International Association of Touristic managers.  
3 Initial approach track.
- IATA** International Air Transport Association [1945–, 280 members and growing, many national offices; head office, Montreal H4Z 1M1 (Int.).]
- IATB** International Aviation Theft Bureau [office, Frederick, MD, US] (Int.).
- Iatco** Icelandic Air Traffic Controllers' Association [office, Reykjavik] (Iceland).
- IATF** International Airline Training Fund [office, Geneva, 15] (Int.).
- IATP** 1 International Airline Technical pool.  
2 Inter-American Training Plan 1941–46.
- IATS** Intermediate automatic test system.
- IATSC** International Aeronautical Telecommunications Switching Centre.
- IAU** 1 International Accounting Unit.  
2 International Astronomical Union [office, Paris].  
3 Interface adaptor unit.  
4 Integrated avionics unit.
- IAVW** International Airways Volcano Watch.
- IAW, i.a.w.** In accordance with.
- IAWA** International Aviation Women's Association.
- IAWF** International Association of Wildland Fire.
- IAWG** Industrial Avionics Working Group (UK).
- IB** 1 Inbound.  
2 Incendiary bomb.  
3 Ion beam, thus \* erosion, \* engine.  
4 Interconnecting box.
- I<sub>b</sub>** 1 Burning-time impulse.  
2 Helicopter blade moment of inertia about the flapping hinge.
- IBA** 1 Inbound boom avoidance.  
2 Fighter/bomber aviation (R).  
3 International Bureau of Aviation (Europe).
- IBAA** International Business Aircraft Association (Europe).
- IBAC** International Business Aviation Council [office, Montreal] (Int.).
- IBC** 1 Individual blade control.  
2 Intelligent bandwidth compression.  
3 Integrated broadband communications.
- IBCOS** In-built checkout system.
- IBCT** Interim Brigade Combat Team (USA).
- IBE** 1 Indirect battlefield effect.  
2 Internet booking engine.
- Iberlant** Iberia–Atlantic area (NATO).
- IBF** Internally blown flap.
- IBIS, Ibis** 1 ICAO birdstrike information system.  
2 Israeli boost-intercept system.
- IBIT** Integrated, or initiated, built-in test.
- IBKV** Integrated helicopter avionics system (R).
- IBLS** Integrity beacon landing system.
- IBN** Image-based navigation.
- IBn** Identity (or identification) beacon.
- IBOR** Innovation and business opportunity review.
- IBP** Iron-ball paint.
- IBR** 1 Integrally bladed rotor (gas turbine).  
2 Intra-base radio.  
3 Integrated baseline review.  
4 Involuntary boarding refusal.
- IBRD** 1 Inflated ballute retarding device.  
2 International Bank for Reconstruction and Development.
- Ibris** Interactive baggage reconciliation information system.
- IBS** 1 Integrated bridge system.  
2 Integrated broadcast service, for correlating theatre intelligence for all US forces.
- IBSC** International Bird Strike Committee (Int.).
- IBU** Independent back-up unit.
- ICAOAN** ICAO Annex[e], many titles.
- IC** 1 Internal combustion.  
2 Interceptor controller.  
3 Indirect cycle (sometimes i.c.).  
4 Integrated circuit.  
5 Intelligence community.  
6 Ice crystals.  
7 Inter-Cabinet.  
8 Incident commander (aerial firefighting).
- I/C, I & C** 1 Installation and checkout.  
2 Interface and control.
- i.c.** 1 Integrated circuit.  
2 Internal combustion (IC more common).
- ic** 1 In charge (UK usage).  
2 Intercom.
- ICA** 1 International Committee of Aerospace Activities. [usually ICAA]  
2 Initial cruise altitude.  
3 International Cartographic Association.  
4 International Council of Airshows [office, Toronto].
- ICAA** 1 International Civil Airports Association [Paris, Orly].  
2 International Committee of Aerospace Activities.
- ICAAS** Integrated controls and avionics for air superiority (USAF).
- ICADS, IcadS** Individual combat-aircrew display system (laptop training device).
- ICAEA** International Civil Aviation English [language] Association.
- ICAF** 1 International Committee on Aeronautical Fatigue [office, D-64289 Darmstadt].  
2 Industrial College of the Armed Forces (US).
- ICAI** Intelligent computer-assisted instruction.
- ICAM** Integrated computer-aided manufacturing.
- ICAN** International Commission on Air Navigation (rue George Bizet, Paris, from 1921).
- ICAO** International Civil Aviation Organization [1947–, 186 member states; office, Montreal H3C 5H7] (Int.).
- ICAOAN** ICAO Annex[e], many titles.
- ICAOPA** See *IAOPA*.
- Icaotam** ICAO Technical Assistance Mission.
- ICAP, I-Cap** Improved capability.
- Icarus** Complex laptop combining flight/black-box data with real-time graphics (Qinetiq).
- ICAS** 1 International Council of the Aeronautical Sciences [office, Bonn].  
2 International Council of Air Shows [office, Milwaukee, WI, US].
- ICAT** International Center for Air Transportation (MIT).
- Icats** Integration command and telemetry system.
- ICAU** International Civil Aviation University, office Melbourne.
- ICAW** Integrated caution, advisory and warning.

**ICB** International competitive bidding.

**ICBM** Intercontinental ballistic missile.

**ICC** 1 International Control Commission.

2 International Chamber of Commerce.

3 International Code of Conduct (use of space).

4 Integrated command and control.

5 Initial CAOC capability.

6 Information coordination circular.

7 Interstate Commerce Commission (US 1887–1996).

8 Integrated cargo carrier.

9 IAPS(2) card cage.

10 Interface and configuration cartridge.

**ICCABMP** International code of conduct against ballistic-missile proliferation.

**ICCAIA** International Coordinating Council of Aerospace Industries Associations [office, Washington, DC].

**ICCD** Intensified charge-coupled device.

**ICCOPI** Integrated classified combat operations process initiative (CAOC).

**ICCP** Integrated communications control panel (in aircraft).

**ICCS** 1 Integrated command and control subsystem.

2 Integrated communications control system (on ground, unrelated to ICCP).

**ICD** 1 Installation, or interface, control drawing.

2 Interface control document, or device.

3 Interim, or initial, capability document.

**ICDDS** Institute of Civil Defence and Disaster Studies (UK).

**ICDO** International Civil Defence Organization [office, CH-1213 Geneva] (Int.).

**ICDOC** Interchangeability condition direct operating cost.

**ICDRiA** International Center for Decision and Risk Analysis [University of Texas, Dallas] (Int.).

**ICDS** Integrated control and display system.

**ICDU** Intelligent control and display unit.

**ICE** 1 Interference cancellation equipment.

2 Internal-combustion engine.

3 In-circuit emulator, simulates portions of external hardware during debugging of control software.

4 Improved combat efficiency [or effectiveness].

5 Independent cost estimate.

6 Institution of Civil Engineers (UK, 1818–).

7 Innovative control effector[s].

8 Integrated collaborative environment.

9 Immigration and Customs Enforcement (DHS2).

10 Internal convection enhancement turbine cooling, (GE).

**ice** Naturally occurring forms include crystals, fog, needles and pellets, self-explanatory.

**icebox rivet** One (eg 2024 alloy) which must be kept below 0°C until use.

**ice frost** Forms on cryogenic tank; if on rocket, easily shaken off at launch.

**ice guard** For piston engine, usually a mesh screen; see *gapless* \*, *gapped* \*.

**IceHawk** Proprietary [Goodrich] ice detection based on polarized IR.

**ice impact panel** Specially designed structure immediately surrounding the blades of a fan or compressor.

**ice ingestion** Class of tests to determine ability of engine to swallow various cubes of ice, ice-water slush and some-

times hailstones at specified flow rates. See *ice rod*, *ice slab*.

**ice light** A light arranged to illuminate a region prone to icing, such as wing leading edges.

**ICEM** Intergovernmental Committee for European Migrations.

**IC engine** Internal combustion, usually means reciprocating: Otto, Diesel, Stirling, Rankine etc.

**icephobic** “Lethal to ice”, a preventative coating.

**ice plate** Strong plate on fuselage skin in plane of propellers.

**ice point** NTP equilibrium temperature for ice/water mixture.

**ice rod** Standard ingestion-test size: 1.25 in diameter × 12 in.

**Icerun** Ice on runway.

**ICESat** Ice, cloud and [land] elevation satellite.

**ice slab** Standard ingestion-test size 12 in × 12 in × 0.5 in (305 × 305 × 12.7 mm). Is permitted to break before entering engine.

**ice zapper** System for removing accreted ice by giant electrical pulses (colloq.).

**ICF** 1 Initial contact frequency (ATC).

2 Inertial confinement fusion.

**ICFAC** Inter-Caribbean Federation of Aero Clubs [office, Curaçao].

**ICFP** Inverse-Cassegrain flat plate.

**ICG** Icing.

**ICGIC** Icing in cloud[s].

**ICGIP** Icing in precipitation.

**ICH** Interline Club Holland (Int.).

**ICHE** Intercooler heat-exchanger.

**ICHTHUS** Integrated and coherent technology for aircraft health and usage support systems (Smiths).

**ICI** 1 International Commission for Illumination.

2 Initial capability inspection.

**ICIAAP** Inter-agency Committee on International Aviation Policy (established 1963).

**icing** Accretion of ice or related material on aircraft. Occurs on ground in freezing fog and in flight through supercooled water droplets.

**icing indicator** Any of four families of device quantifying presence of icing and rate of accretion.

**icing limits** Usually upper and lower temperature limits, corresponding to one (sometimes two) flight levels.

**icing meter** Instrument giving rate of accretion, buildup thickness and cloud liquid-water content.

**icing tanker** Aircraft equipped to cause severe icing on another following close behind.

**ICLECS** Integrated closed-loop ECS.

**ICM** 1 Intercontinental missile.

2 Improved conventional munition.

3 Inter-console marker.

4 Integrated collection management.

5 Interim control module.

6 Interline communications manual.

**ICMD** Improved countermeasure[s] dispenser.

**ICMP** Internet control message protocol.

**ICMS** 1 Integrated conventional-stores management system.

2 Integrated countermeasures system, or suite.

3 Integrated combat-management system (USN).

**I-CMS** Index of central maintenance system fault messages.

**ICNI** Integrated com, nav, IFF.

**ICNIA** Integrated communications, navigation and identification avionics (USAF), or architecture [UK reneclering].

**ICNIS** Integrated CNI set.

**ICNS** Integrated com/nav system.

**ICO** 1 Ignition cutoff.

2 Idle cutoff.

3 Intermediate circular orbit, 10,000–15,000 km.

4 Instinctive cut-out.

**ICOC** International Code of Conduct (ICBMs; ABMP adds against BM proliferation).

**Icon** Integration contract.

**iconic model** A preliminary physical representation of a system, not necessarily full-scale, and not necessarily with functioning parts.

**Icons** Integrated control and operations network system.

**ICP** 1 Integrated core processor [or processing; TD adds technology demonstration].

2 Integrated control panel.

3 Initial conflict probe.

**ICPA** Indian Commercial Pilots' Association.

**ICR** 1 In-commission rate.

2 Integrated cassette recorder, for voice/video to LAN/WAN.

**ICRC** International Committee of the Red Cross.

**ICS** 1 Improved composite structure.

2 Inverse conical scan(ning) (ECM).

3 Improved (or integrated) communications system.

4 Intercom switch, or system, or set.

5 Internal countermeasures system, or set.

6 Interim contractor support.

7 Inter-cockpit communication system.

8 Intelligent control system.

**ICSA** International Centre for Security Analysis.

**ICSAR, Icsar** Inter-agency committee on search and rescue.

**ICSC** International Communications Satellite Corporation.

**ICSM** 1 Integrated conventional-stores management; GPS can be a suffix.

2 Integrated communication signalling and monitoring.

**ICSMA** Integrated Communications System Management Agency.

**ICSMS** See *ICMS*.

**ICSS** Integrated communications switching system.

**ICST** Imperial College of Science and Technology [London SW7 2BY] (UK).

**ICSU** International Council of Scientific Unions.

**ICT** 1 Ice-contaminated tailplane [S adds stall].

2 In-country test[ing].

**ICU** 1 Interface computer, or converter, or control unit.

2 Interstation control unit.

3 Instrument comparator unit.

**ICW** 1 Independent carrier wave, or see *i.c.w.*

2 Interpersonal communications workshop.

3 Intermittent [or interrupted] continuous wave.

**i.c.w.** Interrupted continuous wave.

**ICWAR, Icwar** Improved continuous-wave acquisition radar.

**ICWI** Interrupted continuous-wave illumination.

**ICY** 1 Interchangeable Y-axis.

2 International Co-operation Year (1965).

**ICZ** Interchangeable Z-axis.

**ID** 1 Internal or inner diameter.

2 Inadvertent disconnect (flight refuel).

3 Identification, identity, identifier.

4 Inverse dark (video characters).

**IDA** 1 Istituto di Diritto Aeronautico (I).

2 Intermediate dialect of Atlas.

3 Integrated digital avionics.

4 Intelligence/decision/action.

5 Initial design activity.

6 Integrated digital audio; CS adds control system.

7 Institute for Defense Analyses [Alexandria VA 22311-1772] (US).

**Idaflieg** Interessengemeinschaft Deutscher Akademischer Fliegergruppen eV (G).

**IDAP** Integrated defensive-avionics program.

**IDAS** 1 Integrated defensive aids system (RWR plus jammer).

2 Integrated design automation system.

**IDC** 1 Imperial Defence College (UK).

2 Interactive design centre.

3 Inner dead centre [= upper in inverted engine].

4 Indicator display control.

5 Image-dissector camera.

**IDCAOC** Interim deployable CAOC.

**IDCSP** Initial Defense Com Sat Program (DoD).

**IDD** Interim, or instrumented, deployment device.

**IDE** Integrated development environment.

**IDEA** 1 Instituto de Experimentaciones Astronauticas (Argentina).

2 Integrated digital electric airplane.

**ideal fluid** Perfect, inviscid fluid; forces are perpendicular to small-parcel boundaries, no kinetic energy can be degraded to heat, boundary layer absent.

**ideal profile** Flight profile and path for lowest fuel burn.

**ideal rocket** Theoretical rocket with perfect operation, eg no heat transfer, no turbulence, no friction etc.

**Ideas** International data exchange for aviation safety (ICAO).

**IDECM** Integrated defensive electronic countermeasures.

**IDefy, IDEFY** Indefinitely.

**ident** 1 Special feature in ATCRBS and I/P in SIF to distinguish one displayed select code from other codes (FAA).

2 ATC request; transponder sends extra pulse plus \* code.

**identity** Proof that a replacement PMA part duplicates the original in design, material, fit and function (FAA certification).

**identification** 1 Proclamation of identity, eg by SSR or squawk.

2 Visual recognition of aircraft type.

**identification cable colour** Each cable or pipeline in modern aircraft is colour coded to indicate function.

**identification feature** Characteristics built into each selected code in SSR, ATCRBS and military radars for ident purposes.

**identification friend or foe** Automatic interrogation and response, by coded transmission from transponder, to proclaim friendly status or identify flight on SSR.

**identification light** 1 Pilot-controlled white lights visible from above or below for broadcasting identity by keying.

2 Light on ground adjacent to beacon serving as identifier.

**identification manoeuvre** In primitive radar GCA, manoeuvre commanded by controller to establish positive identity of customer on radar.

**identifier code** Three-letter code unique to each airport.

**IDex** Imagery dissemination and exploitation [system].

**IDF** 1 Intelligent data fusion, most efficient way of using large amounts of data from many sources.

2 Indigenous Defence Fighter.

3 IR decoy flare.

4 Instantaneous direction-finding.

**Idflieg** Inspektion der Fliegertruppen (G).

**IDG** Integrated-drive generator.

**IDGA** Institute for Defense and Government[al] Advancement (US).

**IDH** Intelligent, or intelligence, data handling; S adds system.

**IDI** Initial domain identifier.

**ID/IQ** Indefinite delivery, indefinite quantity.

**IDIS** 1 Interactive distributive information and support [on-line manuals].

2 Intelligent display and information system.

**IDL** Intraflight datalink.

**idle area reset** Open divergent afterburner nozzle with throttle closed [reduces temperatures].

**idle cutoff** Position of piston engine mixture control that cuts off fuel supply, thus stopping engine.

**idle descent** To bleed off height with engine[s] at flight idle.

**idler** Gearwheel or shaft whose sole function is to transmit drive between two others.

**idles** Repeated cycling of engine from idling to specified higher power.

**IDLH** Immediately dangerous to life or health.

**idling** Running at governed low speed consistent with reliable smooth operation, in most engines well above minimum sustaining rpm: usually two regimes, ground \* being lower  $N_1$  than flight \* and obtained only when oleos compressed.

**IDLS** International Data Link Society (2003–).

**IDM** 1 Improved data modem.

2 Inductive debris monitor.

**IDO** Initial defensive operations.

**IDP** 1 Individual development programme.

2 Integrated data-processing.

3 Imagery display processor.

4 Initial domain port.

**IDPA** International Deaf Pilots' Association.

**IDPM** Institute of Data Processing Management (UK).

**IDPS** Interface data-processing segment (NPOESS).

**IDPU** Incurison and display processing unit.

**IDR** Initial design review.

**IDRF** Impact-Dynamics Research Facility (crash tests, NASA Langley).

**IDRP** Inter-domain routing protocol.

**IDS** 1 Interdiction/strike.

2 Integrated display set [or system].

3 Improved data set (USAF).

4 Integrated dynamic system (helo).

5 Infra-red detection set.

6 Integrated diagnostic system.

7 Ice-detection system.

8 IATA distribution services.

9 Intrusion detection system.

10 Information display system.

11 Integrated deepwater system (USCG).

**IDSCP** Initial Defense Satellite Communications Program (US).

**IDST** Integrated decision support tool.

**IDTC** Inter-deployment training cycle (USN).

**IDU** Interactive, or integrated, display unit.

**IE** 1 Institution of Electronics (UK).

2 Instrument error.

3 Initial equipment (RAF).

4 Incremental ejection.

**IEA** International Ergonomics Association.

**IEAA** International EAA, UK based.

**IEB** Institut für Extraterrestrische Biologie (G).

**IEC** 1 International Electrotechnical Commission. [office, Geneva]

2 IAPS (2) environmental control module.

3 Inertial electrostatic confinement.

**IECC** International Express Carriers Conference.

**IECMS** In-flight engine-condition monitoring system.

**IED** 1 Improvised explosive device; D adds disposal.

2 Insertion/extraction device.

**IEDD** *IED* (1) disposal.

**IEE** The Institution of Electrical Engineers [1871–; now the IET] (UK).

**IEEE** The Institute of Electrical and Electronic Engineers [office, New York, NY08855] (US).

**IEER** Improved extended echo ranging.

**IEF** Interpretive execution facility (software).

**IEM** Interpretive/explanatory material (JARs).

**IEMats** Improved emergency message auto transmission system.

**IEN** Internal engineering notice.

**IEP** 1 Interim Earth penetrator.

2 Integrated electric propulsion [carrier].

**IEPG** Independent European Programme Group (NATO).

**IEPR** Integrated engine pressure ratio.

**IERE** Institution of Electronic and Radio Engineers (UK).

**IERW** Initial entry rotary-wing [ITS adds integrated training system].

**IES** 1 Image enhancement system.

2 Imagery exploitation system.

3 Interface editor system (ATC).

**IES** 1 Illuminating Engineering Society; AC adds Aviation Committee (US).

2 Institute of Environmental Services [office, Mt Prospect, IL] (US).

**IESI** Integrated electronic standby instrument.

**IESSG** Institute of Engineering, Surveying and Space Geodesy.

**IET** 1 Initial entry training.

2 Interline electronic ticket.

3 Institution of Engineering and Technology [London WC2R 0BL] (UK).

**IETDS** Interactive electronic training delivery system (Neth.).

**IETF** Internet engineering task force.

**IETM** Interactive electronic technical manual[s].

**IEU** Interface electronics unit.

**IEVS** IR enhanced vision system.

**IEW** 1 Integrated electronic warfare; S adds system, UAV adds unmanned air vehicle.

2 Intelligence/electronic warfare; CS adds common sensor, S adds system, UAV adds unmanned air vehicle.

**IEWS** 1 Information and electronic-warfare system.

2 See IEW.

**IF** 1 Intermediate frequency (often i.f.).

2 Instrument flight, or flying.

3 Intensive flying (UK, RN).

4 Independent Force (RAF, 1918).

5 Ice fog.

6 Intermediate, or initial, fix.

**I/F** Interface.

**I/F module** Inlet and fan module.

**IFA** International Federation of Airworthiness; 120 members in 47 countries engaged in manufacturing, operating, insuring, etc.; Secretariat, East Grinstead RH19 1BP] (Int.).

**IFAA** International Flight Attendants' Association.

**IFAC** International Forum for Air Cargo [office, Warrendale, PA] (Int.).

**I-Fact** Indirect-fire forward air control trainer.

**iFACTs** Interim future area control tools support (NATS).

**Ifalda** International Federation of AirLine Dispatchers Associations [office, Agincourt, ON, Canada] (Int.).

**Ifalpa** International Federation of Airline Pilots' Associations [95 members; admin. office, Chertsey KT16 9AP, UK; Tech.Standards, Stevensville, MD21666, US] (Int.).

**IFANS, Ifans** International Federation for the application of standards.

**Ifapa, IFAPA** International Foundation of Airline Passengers' Associations.

**IFAS** See *FISAI*.

**IFast** Integrated flexibility (or facility) for avionics system test (USAF).

**Ifatca, IFATCA** International Federation of Air Traffic Controllers' Associations [office, Montreal].

**IFATE** International Federation of Airworthiness Technology and Engineering.

**Ifatsea, IFATSEA** International Federation of Air-Traffic Safety Electronics Associations; office, London.

**IFB** Invitation for bid.

**IFBP** In-flight best procedure[s].

**IFBS** Individual flexible barrier system.

**IFC** Incentive-fee contract(ing).

**IFCA** International Flight Catering Association (office UK).

**IFCNC** Integrated flight-control and navigation computer.

**IFCS** 1 Integrated, or intelligent, flight-control system.

2 Integrated fire-control system.

**IFDAPS** Integrated flight-data processing system.

**IFDFS** In-flight duty-free shop.

**IFDL** Inter-/intra-in-flight data link.

**IFE** 1 In-flight emergency.

2 In-flight entertainment [N adds network, S system].

**IFEO** International Flight Engineers' Organization [office, Chertsey, KT16 9AP, UK] (Int.).

**IFESS** Integrated flight entertainment and services system.

**IFF** 1 Identification friend or foe.

2 International Flying Farmers Inc. [office, Wichita, KS67277-9124] (Int.).

3 Institute of Freight Forwarders, (Int. office Richmond, Surrey, (UK).

**IFFAA** International Federation of Forwarding Agent Associations (now IFFFA).

**IFFCC** Integrated flight and fire-control computer.

**IFFCP** IFF (1) control panel.

**IF/FCS** Integrated fire/flight control system.

**IFFFA** International Federation of Freight Forwarders' Associations; office, Zurich.

**IFGR** Information for global research (USAF).

**IFHA** International Federation of Helicopter Associations (office, US).

**IFI** International Friction Index.

**FIAT** See *FITAP*.

**Ifics** In-flight interceptor communications [or control] system.

**I-file** Intelligence (surveillance computer).

**IFIM** International Flight Information Manual (US).

**IFIS** 1 Independent flight inspection system (for ILS, Vortac, etc).

2 Independent frequency-isolation system.

3 Integrated flight-information system[s].

**IFM** 1 Instantaneous frequency measurement.

2 In-flight monitor.

3 International Formula Midget [= Formula 1].

**IFMA** In-flight mission abort.

**IFME** In-flight medical emergency.

**IFMIS** Integrated force management info system.

**IFMP** Integrated financial management plan (NASA).

**IFMR** IFM (1) receiver.

**IFM/SHR** IFM (1) superheterodyne receiver.

**IFMU** Integrated flight-management unit (UAV).

**IFMW** Information for mobile warfare (USAF).

**IFN** Institut Français de Navigation [office, F-75007 Paris] (F).

**IFO** 1 International field office.

2 Improved first-order [approximation].

**IFOBL** In-flight-operable bomb lock.

**IFOG** Interferometric fibre-optic gyro.

**IFOP** Intensive flight-operations program.

**IFOR** Implementation Force (NATO).

**IFOSTP** International follow-on structural test programme.

**IFoV, IFOV** Instantaneous field of view.

**IFP** 1 Initial flightpath.

2 In-flight performance [computer program].

3 In-flight phone.

4 Integrated flight planner.

**IFPA** 1 International Fighter Pilots' Academy (Slovak Republic).

2 IFPS (1) area.

3 Indirect fire precision attack.

**IFPC** Integrated flight and propulsion control (STOL); S adds system.

**IFPG** 1 Intelligent flight-path guidance.

2 International Frequency Planning Group.

**IFPL** 1 In-flight power loss.

2 ICAO flight plan.

**IFPM** In-flight performance monitor.

**IFPS** 1 Integrated, or initial, flight-plan processing system.

2 Intra-formation positioning system.

**IFPTE** International Federation of Professional and Technical Engineers (Int.).

**IFPZ** IFPS (1) zone.

**IFR** 1 Instrument-flight rules.

2 In-flight repair.

3 In-flight refuelling.

4 Initial flight release (of engine).

5 Internationaler Förderkreis für Raumfahrt (G).

**IFRA** In-flight refuelling area, designated airspace.

**IFRB** International Frequency Registration Board.

**Ifrep, IFREP** In-flight report [reconnaissance].

**IFRS** International financial reporting standards.

**IFRU** Interference rejection unit.

**IFS** 1 Institut für Segelflugforschung (G).

2 Inspectorate, or Inspector, of Flight Safety (USAF, RAF).

3 Instrument flight simulator.

4 Inner fixed structure of reverser.

5 Initial Flight Screening (USAF).

**IFSA** In-Flight Food Service Association [office, Houston, TX] (US).

**IF SAR, Ifsar** Interferometric SAR (2) for digital terrain [E adds elevations].

**IFSD** In-flight shutdown [rate].

**IFSR** In-flight shutdown rate [uncommon usage].

**IFSS** 1 International flight service station.

2 Instrumentation and flight safety system.

**IFT** 1 Intelligent flight trainer.

2 Integrated flight test, or training.

3 Intercept flight test (NMD).

**i.f.t.** Intermediate-frequency transformer.

**IFTE** Integrated family of test equipment.

**IFTO** International Federation of Tour Operators [office, Lewes, BN7 1YE] (Int.).

**IFTS** Internal, or integrated, Flir [and] targeting system.

**IFTU** Intensive Flying Trials Unit (UK).

**IFU** Interface unit.

**IFURTA, Ifurta** Institut de Formation Universitaire et de Recherche du Transport Aérien [Aix-en-Provence F-13628] (F).

**IFW** In-flight weight.

**IG** 1 Imperial gallon (sometimes I.g.).

2 Inspector-General.

3 Image generation, or generator.

**Ig** Grid current; hence Ig2 screen-grid current.

**I<sub>g</sub>** Mass moment of inertia.

**IGA** 1 Inner gimbal angle.

2 Informazione geotopographiche aeronautiche (I).

3 Irish Gliding Association.

4 Indium gallium arsenide.

5 Intermediate-gain antenna.

**IGAA** Inspection Générale de l'Armée de l'Air (F).

**IGAC, Igacem** Inspection Générale de l'Aviation Civile et de la Météorologique [Paris F-75006] (F).

**Igan** Indium/gallium/arsenic/nitride.

**IGB** Integral, or intermediate, or inlet, gearbox.

**IGBAD** Integrated ground-based air defence.

**IGC** 1 International Gliding Commission.

2 Intergovernmental Conference (US/EU).

**IGDS** Integrated graduate development scheme.

**IGE** 1 In ground effect.

2 Instrument[ation] graphics environment.

**IGEB** Inter-agency GPS Executive Board.

**IGES** 1 International graphics exchange [file] standard.

2 Interim ground Earth station.

**IGFET** Insulated-gate field-effect transistor.

**IGI** Instrument Ground-Instructor.

**IGIA** Interagency Group on International Aviation [from 1960].

**igloo** 1 Air cargo container in form of rigid box sized for above-floor loading.

2 Small pressurized experiment container designed for use with Spacelab orbital laboratory.

**IGN** Ignition.

**igniter** Pyrotechnic (rocket) or high-energy discharge device for starting combustion of solid or liquid fuel.

**igniter plug** Electric device producing intense flashover for starting combustion of gas-turbine engine. Most common types are surface discharge, shunted surface discharge, and air-gap.

**ignition delay time** Several definitions for elapsed period between ignition signal and stable or other desired combustion in piston engine, solid rocket etc. For solid motors, the elapsed time from ignition firing voltage to chamber pressure reaching 10% of maximum value, symbol  $t_d$ .

**ignition harness** Complete screened assembly of h.t. cables serving spark plugs of piston engine.

**ignition interference** Disturbance to radio communication caused by faulty ignition screening.

**ignition loop** Plot of gas-turbine combustion stability on axes air/fuel ratio and air mass flow.

**ignition screening** Surrounding layer of conductive braid to prevent signal emission from h.t. harness.

**ignition servo unit** Automatically controls ignition timing.

**IGO** 1 Prefix, US piston engine, direct injection, geared, opposed.

2 Inter-governmental organization[s].

**IGOR** Intercept ground optical recorder; long-focal-length tele-camera.

**IGOS** Integrated Global Observing Strategy, or System (Int.).

**IGPM** Imperial gallons per minute.

**IGS** 1 Internal gun system.

2 Instrument guidance system.

**IGSO** IGO plus supercharged.

**IGT** Industrial gas turbine.

**IGTI** International Gas Turbine Institute [ASME, office, Atlanta, GA 30328] (Int.).

**Ig2** Screen-grid current.

**IGV** Inlet guide vane[s].

**IGW** Increased gross weight.

**IGY** International Geophysical Year [1957–58].

**IH** Inhibition height (GPWS).

**I<sub>h</sub>** 1 Mean horizontal candlepower.

2 Heater current.

**IH** Aviation Historical Association (Finland).

**IHADSS** Integrated helmet and display sight[ing] system.

**I-Hards** Improved high-altitude radiation-detection system.

**IHAS** 1 Integrated helicopter attack, or avionics, system.

2 Integrated hazard-awareness, or avoidance, system.

**IHC** 1 Integrated hand control.

2 Industry Harmonization Conference [rule making].

- IHDSS** Integrated helmet display and sight[ing] system.
- IHDTV** Intensified high-definition TV.
- IHE** Insensitive, or improved, high explosive.
- IHEC** Integrated helicopter emissions control.
- IHEWS** Integrated helicopter EW suite.
- IHFA** International Helicopter Firefighters Association (office in US).
- IHIRSS** Improved hover IR suppression system.
- IHM** International Helicopter Museum [Weston-super-Mare, BS22 8PP] (UK/Int.).
- IHMD** Integrated helmet-mounted display.
- IHO** International Hydrographic Organization.
- IHOC** International Helicopter Operations Committee.
- i.h.p.** Indicated horsepower.
- IHPA** Irish Hang-gliding and Paragliding Association.
- IHPRPT** Integrated high-payoff rocket-propulsion technology.
- IHPRET** Integrated high-performance turbine-engine technology, principally focused on propulsion of supersonic-cruise aircraft: takes off with maximum BPR, meeting civil noise legislation with simple nozzle, accelerates with  $BPR \leq 1$ , cruises with BPR near 3, lands at high BPR (GE/USAF/Darpa).
- IHST** International Helicopter Safety Team.
- IHTTET** Improved high-temperature turbine-engine technology (DoD).
- IHTU** Inter-Service Hovercraft Trials Unit (UK, from 1962).
- IHU** Integrated helmet unit.
- IHUMS, I-Hums** Integrated health and usage monitoring system
- IHV** Improved high-velocity [ammunition].
- II** Image intensifier.
- IIAE** Instituto de Investigaciones Aeronauticas y Espaciales (Argentina).
- IIASA** International Institute for Applied Systems Analysis.
- IIC** Image isocon camera.
- IID** Integrated instrument display [S adds system].
- IIDS** 1 Istituto Italiano di Diritto Spaziale.  
2 Integrated instrument display system.
- IIE** Institution of Incorporated Engineers (UK).
- IIF** Inserted in flight (data, target, destination etc).
- IIMS** Initial implementation of Mode-S [ES adds enhanced surveillance].
- IIN** 1 Istituto Italiano di Navigazione.  
2 Information infrastructure network (RAF).
- IIP** Instrument, or instrumentation, incubator program (NASA).
- IIR** 1 Imaging infra-red.  
2 Infra-red imaging radar (US).  
3 Infinite impulse response (signal processing).  
4 Incident [usually involving aircraft damage] investigation report.
- IIR** Institute for International Research (US).
- IIRA** Integrated inertial reference assembly.
- IIRS** 1 Instrument inertial reference set.  
2 Imagery interpretability rating scale.
- IIS** 1 Infra-red imaging system.  
2 Integrated instrument system.
- IISA** Integrated inertial sensor assembly.
- IISL** International Institute of Space Law [office, F75015 Paris] (Int.).
- IISS** International Institute for Strategic Studies [London WC2R 3DX] (UK).
- IIT** Image-intensifier tube.
- IITR** Inter/intra team radio.
- IITS** Infra-theatre imagery transmission system.
- IITV** Image-intensified TV.
- IIW** Image interpretation workstation, portion of GIES tasked with target location and selection.
- IIWD, I<sup>2</sup>WD** Intelligence and Information Warfare Directorate (USA).
- IJMS** Interim JTIDS message standard, or structure, or system.
- IJPS** Initial Joint Polar System [1998–] (US/Europe).
- IK** Club of Aeronautical Engineers (Finland).
- IKAT** Interactive keyboard and terminal.
- IKBS** Intelligent knowledge-based systems.
- IKI** Space research institute (Soviet academy of sciences).
- IKPT** Initial key personnel training.
- IKSANO** English rendition of Information co-ordination council on air-navigation charges debts (R).
- IKW** Intercept and kill weapon.
- IL** 1 Infantry liaison (aircraft category, USA, 1919–25).  
2 Instytut Lotnictwa [aviation institute, PL-02-256 Warsaw] (Poland).  
3 Internationale Luftverkehrsliga eV [Munich, G].
- ILA** 1 International Law Association [office London WC1B 5DR] (Int.).  
2 Internationales Luftfahrt-Archiv (G).  
3 Image light amplifier.  
4 Instrument landing aid.
- ILAA** Integrated landing and approach aid.
- ILAAS** Integrated low-altitude attack subsystem.
- ILAC** Intake-lip acoustic liner.
- ILAD** Inner-layer air defence.
- ILAF** Identical location of accelerometer and force.
- ILAS** Improved limb atmospheric spectrometer.
- ILC** 1 Integrated laminating centre (or center).  
2 Increased-life core (engine).
- ILCA** International Legal Committee for Aviation (from 1909, office Paris).
- IL-check** C-check plus more detailed inspection, repair and update of systems and furnishing.
- ILD** Injection laser diode.
- ILEAV** Inherently low-emission airport vehicle.
- ILF** In-line filter.
- ILFPS** Integrated lift-fan propulsion system.
- ILGH** Interessengemeinschaft Luftfahrtgeräte-Handel (G).
- ILL** Internationale Luftverkehrsliga.
- ILLF** Initial long-lead funding.
- illuminance** Intensity of illumination, luminous flux per unit area, symbol E, unit lux,  $lx = lm/m^2$ .
- illumination** 1 *Illuminance*.  
2 Lighting of target by radar or other signals, esp. to make it an emitter for SARH missile.
- illuminator** The aircraft in an attacking force charged with aiming a laser precisely at the target.
- ILM** 1 Independent landing monitor.  
2 Intermediate-level maintenance.
- ILO** International Labour [Labor] Organization.
- ILP** Inventory logistics program[me].
- ILS** 1 Instrument landing system.  
2 Integrated logistic (or logistics) support.

3 Integrated [or intelligent] library system.  
 4 Initial launch services.  
 5 Integrated, or intelligent, [missile] launch system.  
 6 Inventory Locator Service (US).

**ILS integrity** Trust which can be placed in correctness of information supplied by ILS (1) facility (ICAO).

**ILSMT** Integrated logistic support management team.

**ILS Point A** On extended runway centreline 4 nm from threshold.

**ILS Point B** On extended runway centreline 1,050 m (3,500 ft) from threshold.

**ILS Point C** Intersection of straight line representing nominal (mean) glideslope and horizontal plane 30 m above threshold.

**ILS Point D** 6 m above centreline, 600 m upwind (ie towards localizer) of threshold.

**ILS reference datum** Point at specified height vertically above intersection of centreline and threshold through which passes straight line representing nominal (mean) glideslope.

**ILS reliability** 1 Facility: probability its signals are within specified tolerances.  
 2 Signals: probability signal in space of specified characteristics is available to aircraft.

**ILS-S** Integrated logistics system-supply (USAF).

**ILS(V)** ILS with emergency voice facility.

**ILT** Institute of Logistics and Transport [office London] (UK).

**ILVSI** Instantaneous-lag [or lead] VSI.

**ILWS** International living with a star (NASA).

**IM** 1 Inner marker.  
 2 Intermediate maintenance.  
 3 Inventory management.  
 4 Intra-mural.  
 5 Insensitive munition[s].  
 6 Instant messaging [satellite].

**IMA** 1 Institut Médical de l'Aviation (Switzerland).  
 2 Intermediate maintenance activity.  
 3 Individual mobilization augmentee.  
 4 Integrated modular avionics, or architecture.  
 5 Integrated multifunction apertures.  
 6 International Museum of Airlines [Rockville, MD 20849] (US, Int.).

**IMAA** Irish Microlight Aircraft Association.

**IMAAWS** Infantry man-portable anti-armour/assault weapon system.

**IMAC** Integrated microwave amplifier converter.

**Imacs** Integrated manufacturing control systems.

**IMAD** Integrated multisensor airborne display (Elint).

**Image** Instrument for the measurement of air-traffic flow using ground environment.

**image convertor** Converts image from invisible to visible wavelengths.

**image degradation** That due to error in sensor operation, processing procedure or other fault by user.

**image intensifier** Any of large family of electron tubes which multiply electron flow due to signal while ignoring noise; hence IIT, \*\* tube.

**image-motion compensation** Synchronization of target image with recording sensor in vehicle, esp. low-level reconnaissance aircraft.

**imagery** Representation of objects reproduced by optical or electronic means.

**imagery collateral** Reference materials supporting imagery interpretation function (ASCC).

**imagery correlation** Mutual relationship between different signatures on imagery of same object from different sensors.

**imagery data-recording** Auto record of sensor speed, height, tilt, geographical position, time and possibly other parameters on to sensor matrix block at moment of imagery acquisition (ASCC).

**imagery exploitation** Entire process from acquiring imagery to final dissemination of information.

**imagery interpretation** Process of location, recognition, identification and description of objects visible on imagery (DoD, NATO).

**imagery intelligence** Conveyed by photographs, diagrams, electronic images and other media.

**imagery interpretation key** Diagrams, examples, charts, tables etc, which aid interpreters in rapid identification of objects.

**imagery pack** Assembly of all records from different sensors covering common target area (ASCC).

**imagery sortie** One flight by one aircraft for acquiring imagery (DoD, NATO, Cento).

**IMAS** Integrated mission-avionics system.

**I<sub>max</sub>** Peak value of current.

**IMBP** State institute of biomedical problems (R).

**IMC** 1 Instrument meteorological conditions (UK, see *IWR*).  
 2 Image movement compensator (reconnaissance).  
 3 Intermetallic-matrix composite.  
 4 Indirect maintenance cost.  
 5 See *InstMC*.

**IMCC** 1 Integrated mesoscopic cooler circuit.  
 2 International Military Control Commission.

**IMCPU** Improved master-controlling processor unit.

**IMD** 1 Indian Meteorological Department.  
 2 Integrated mechanical diagnostics.

**IMDS** Integrated maintenance data system[s] (USAF).

**IMDT** Immediate.

**IME** 1 Indirect manufacturing expense.  
 2 Integrated modelling environment.

**IMEA** Integrated munitions effects assessment, tool for selecting aim points.

**IMechE** Institution of Mechanical Engineers [1847–; office, London SW1H 9JJ] (UK).

**IMEP** International materiel evaluation program (US).

**i.m.e.p.** Indicated mean effective pressure.

**IMET** International Military Education and Training (NATO).

**Imets** Integrated meteorological system.

**IMEWS** Integrated missile early-warning system, or satellite.

**IMF** 1 International Monetary Fund (UN agency).  
 2 International Metalworkers Federation (trade union, office Geneva).

**IMFCA** Institut de Mécanique des Fluides et Constructions Aérospatiales (Romania).

**IMFF** Inlet mass flow function.

**IMFIS, Imfis** Interoperability of military forces and information systems (Canada).

**IMG** 1 Immigration.  
 2 Implementation management group.

**IMI** 1 Intermediate maintenance instruction.  
 2 Improved manned interceptor.

3 Initial maintenance interval, or inspection.  
 4 Interactive multimedia instruction.  
 5 Imbedded [=embedded] message identifier.

**Imint** Imagery intelligence.

**IMIS** Integrated maintenance information system.

**IMK** Increased maneuverability kit (US).

**IML** 1 International micro-gravity laboratory (Spacelab).  
 2 Inner mould line.

**IMLS** Interim MLS.

**IMM** 1 Intelligent menu-management.  
 2 Interacting multiple model.  
 3 Ignition-mitigation means [fuel-tank explosion].  
 4 Integrated marketing management.

**IMMC** Integrated mission-management computer.

**Immed** Immediate.

**immediate air support** That meeting specific request during battle and which cannot be planned in advance.

**immediate award** Decoration awarded without the usual assessment process.

**Immelmann** Air-combat manoeuvre. Two definitions current: (a) first half of loop followed by half-roll, resulting in 180° change of heading and gain in height; (b) steep climbing turn to bring guns to bear on target again following dive attack from front or rear.

**immersed pump** Booster pump.

**IMN** 1 Indicated Mach number.  
 2 Induced matrix norm.

**IMO** 1 International Maritime Organization.  
 2 International Meteorological Organization (1872–).

**I<sub>mo</sub>** Motor specific impulse (solid propellant).

**IMOK** I am OK.

**IMP** 1 Interactive microprogrammable.  
 2 Indication of microwave propagation (anaprop) to exploit gaps in hostile radars and assess friendly radars in defence.  
 3 Incremental modernization program [simulators].  
 4 Inter-modulation product.  
 5 Interplanetary monitoring platform.  
 6 Integrated missile panel.

**Impact** Integrated multistatic passive/active concept testbed (sonobuoys).

**impact area** Area having designated boundaries within which all ordnance is to hit ground.

**impact microphone** Sensitive to small vibrations, as of micrometeoroid impact.

**impact point** 1 Point on drop zone where first parachutist or air-dropped cargo should land (NATO, IADB).  
 2 Point at which projectile, bomb or re-entry vehicle impacts or is expected to impact (DoD).  
 3 Reference point of accident from which all surveys are plotted, easily identifiable and either central or having highest density of contamination (USAF); this need not be actual point of impact.

**impact pressure** See *stagnation pressure*.

**impact tests** Charpy, Izod and similar tests to measure resistance of material to suddenly imposed stress.

**Impatt** Impact-ionisation avalanche transit time (solid-state oscillator).

**IMPD** Interactive multipurpose display.

**IMPDS** Improved missile point-defence system.

**impedance** Resistance to a.c. (1), symbol  $Z = \sqrt{R^2 + X^2}$  where R is ohmic resistance and X is reactance.

**impeller** Single-stage radial-flow compressor rotor.

**Imperial** System of units previously standardized in UK, such as foot (ft) and pound (lb).

**Imperial gallon** See *gallon*.

**impervious canopy** One through which ejection is prohibited.

**impingement** Impact of high-velocity air or gas on structure (eg in reverse-thrust mode).

**impingement cooling** Cooling of material by high-velocity air jets directed on to surface (usually internal surface of hollow blade or vane).

**impingement injector** Liquid fuel and oxidant jets impact on each other to cause swift breakup and mixing.

**implosion** Detonation of spherical array of inward-facing shaped charges (eg to crush fissile core of nuclear weapon).

**IMPR** Improving.

**impress** To commandeer a civil aircraft into government service in time of emergency.

**improved climb T-O** Take-off at increased weight allowed by raising  $V_2$  where second segment is limiting factor and runway distance is available.

**improved conventional munition** Usually means fitted with electronic time fuze or RF proximity fuze.

**IMPS** International Microelectronics and Packaging Society (Int.).

**IMPT** Important.

**impulse** Rocket burn-time multiplied by burn-time average thrust; total energy imparted to vehicle.

**impulse magneto** One whose drive incorporates stops and spring-loaded coupling (bypassed by centrifugal clutch in normal running) to give series of sudden rotations and thus hot sparks during starting.

**impulse/reaction** Common form of gas turbine, combining impulse and reaction techniques.

**impulse starter** Incorporated in impulse magneto.

**impulse turbine** One whose working fluid enters at lowest pressure and maximum velocity, expands through diverging passages, and leaves at similar pressure and low velocity.

**IMR** 1 Imaging microwave radiometer.

2 Initial manufacturing release.

**IMRO** Industrial Marketing Research Organization (UK).

**Imron** Range of du Pont polyurethane enamels.

**IMRS** Integrated maintenance recording system.

**IMS** 1 Information management system.

2 Integrated management system.

3 Intermediate maintenance squadron.

4 International Military Services (MoD, UK) or Staff (NATO).

5 Integrated multiplex[ing] system, ties nav, weapons, air data and FBW.

6 Inertial measurement system.

7 Integrated mission system.

8 Inventory management system.

9 Ion mobility spectroscopy, or spectrometer (explosives/narcotics detection).

10 Intelligent munition system.

**I'm safe** One of 35 English-language safety-related mnemonics: illness, medication, stress, alcohol [+ drugs], fatigue, emotional problems.

**IM-6** Structural graphite/epoxy composite material (Hercules).

**IMSS** Integrated multisensor system.

**IMT** 1 International mobile telecommunications.

2 Immediate[ly].

**IMTA** Intensive military training area.

**IMTS** Integrated maintenance training system.

**IMU** Inertial measurement unit.

**IN** 1 Inertial navigator (or navigation).

2 Instrument navigator (arch.).

**in** 1 Inch, inches.

2 When applied to airbrakes, usually means retracted, not in use.

**INA** 1 International Navigation Association Inc. [office, Arlington, VA 22202-0324] (Int.).

2 Initial approach.

**INACP** Integrated navigation-aids control panel.

**inactivate** Of military unit, withdraw all personnel and transfer to inactive list.

**InAF** Indian Air Force [UK usage].

**INAS** Integrated, or inertial, navigation/attack system.

**InAs** Indium arsenide.

**InAsSb** Indium antimony arsenide.

**INB** Iron-neodymium-boron magnetic alloy.

**INBD, inbd** 1 Inbound.

2 Inboard.

**inboard aileron** Aileron situated on inner wing between, or in place of, flaps.

**inboard profile** Side-elevation drawing showing internal systems and equipment, sometimes as true section along centreline.

**inboard quadrant** Inner selectable position of power (throttle) lever on left side of cockpit giving operative afterburner.

**inbound** Approaching destination, thus \* traffic, \* controller etc.

**inbound bearing** Normally QDM, not QDR or VOR radial.

**INC** 1 Insertable nuclear component.

2 Interchangeability code.

3 In cloud.

4 Increase, increasing.

5 Information network computing.

**Inc** Incorporated (US company).

**Inca** 1 Intelligent correlation agent (data fusion).

2 Integrated nuclear communications assessment.

3 Initiative en combustion avancée, future engines (F).

**Incans** Interference cancellation system.

**Incas** Integrated navigation and collision-avoidance system.

**INCD** Integrated navigation cockpit display.

**incendiary bomb** Bomb designed to ignite enemy infrastructures.

**inceptor** Cockpit control forming interface between pilot and major change in trajectory, eg stick/yoke, throttle, pedal, cyclic, collective or nozzle angle lever.

**Incerfa, INCERFA** Code: phase of uncertainty (ICAO).

**inch** 1 To command powered actuator in rapid succession of small cycles to achieve target condition.

2 Non-SI unit of length, = 25.4 mm exactly.

**inches** Traditional US measure of piston engine manifold pressure, = \* Hg (mercury), see next.

**In Hg** Non-SI unit of pressure, = (at 0°C)  $3.38639 \times 10^{-3} \text{ Nm}^{-2}$ .

**incidence** 1 Angle between chord of wing at centreline and OX axis.

2 Generally, the angular setting of any aerofoil or other plate-like surface to a reference axis.

3 Widely and incorrectly used to mean angle of attack.  
**incidence instability** Divergent aerofoil load caused by wing flexure simultaneously resulting in increased incidence.

**incidence wires** Diagonal bracing wires in plane of biplane interplane struts.

**incident report** Normal report of incident; this falls short of an accident, takes place on ground or in air during flying operations, and usually stems from human error.

**incl** Inconclusive, include[d].

**inclination** Angle between isobar and wind or airflow at given point.

**inclined shock** Shockwave generated by body in airflow at Mach number significantly greater than 1, with angle such as to turn flow parallel to surface of body; in air-breathing inlet generated by centreflow or sharp-edged plate and focused on lip.

**clinometer** Instrument for measuring inclination; many forms, one being spirit level on pivoted arm [end of arm shows degrees on protractor while slight curvature of sliding spirit level gives minutes]. Some authorities call this a *clinometer*, which see.

**included angle** That between longitudinal axis of body and free-stream vector.

**incoherent backscatter[ing]** Random backscatter of a signal by individual electrons in the ionosphere.

**Incomap** Family of mechanically alloyed Al alloys, esp. Al-Mg-Li-C-O.

**Inconel** High-nickel chromium-iron refractory alloys (Int. Nickel and Mond).

**Incoss** Integrated control system [Hartman ASW].

**Incose** International Council on Systems Engineering (Int.).

**Incospa** Indian National Committee for Space Research.

**Incr** Increase.

**incremental airbrakes** Capable of being controlled to intermediate positions.

**incremental ejection** Dispensing chaff in discrete bundles.

**incremental sensitivity** Change in received signal per unit displacement of ILS receiver from mean glidescope.

**INCRSG** Increasing.

**incumbent** Airline long established in the market [cf, entrant].

**incursion** 1 Conflict, especially between two aircraft, on runway or elsewhere on airfield [FAA adds 'with active control tower'].

2 Any entry by aircraft into forbidden area, either on ground or in flight.

**Ind** Indicator (for wind or landing direction).

**INDAE** Instituto Nacional de Derecho Aeronautica y Espacial (Argentina).

**indefinite callsign** C/s assigned to individual units/facilities etc and to large groupings.

**INDEFLY** Indefinitely.

**independence** One meaning is Busemann's principle that aerodynamic forces on a wing of high aspect ratio are independent of any V component in the spanwise direction.

**independent** 1 Military unit with complete authority over tasking [e.g. UK \* Air Force 1918].

- 2 R&D or programme not relying on external funding.  
3 Airline run by private company.

**independent overspeed protection** Gas-turbine engine subsystem independent of the EEC or other control which automatically shuts the engine down upon sensing rotor overspeed.

**indexed wing/fins** Aerodynamic surfaces are at same angular setting to [usually missile] body, measured in transverse plane, eg all at 45° to horizontal or two vertical and two horizontal.

**index error** That caused by misalignment of measurement mechanism of instrument (ASCC).

**Indian** Hostile aircraft, esp. fighter.

**indicated airspeed** See *airspeed*.

**indicated altitude** That shown by altimeter set to latest known QNH.

**indicated course** Locus of points in any horizontal plane at which ILS Loc needle is centred.

**indicated course sector** Sector in any horizontal plane between loci of points at which ILS Loc needle is at FSD left or right.

**indicated glidepath** Locus of points in vertical plane through runway centreline at which G/S needle is centred.

**indicated hold** Autopilot mode maintaining present IAS.

**indicated horsepower** Theoretical power developed by a reciprocating engine, ignoring losses due to friction, windage and other causes, numerically proportional to PLAN where P is the brake mean effective pressure, L is the piston stroke, A total piston area and N the rotational speed, all units being compatible. See *horsepower*.

**indicated Mach number** That shown on Machmeter.

**indicator** Identifying 4-letter code for every airfield [in England and Wales beginning EG].

**indicator diagram** Plot of piston engine cylinder pressure against piston position, often drawn by instrument attached to cylinder.

**indirect air support** Given friendly land/sea forces by action other than in tactical battle area, eg by interdiction and air superiority.

**indirect cycle** Nuclear propulsion with primary circuit, heat exchanger and secondary circuit.

**indirect damage assessment** Revised target assessment based on new data such as actual weapon yield and ground zero.

**indirect wave** One arriving by indirect path caused by reflection/refraction.

**indium** In, soft silver-white metal, density 7.28, MPt 156.4°C.

**individual controls** Control surfaces not attached to fixed surface but cantilevered from body (guided weapons).

**induced downwash angle** Loosely called induced angle, the downwash angle at any radius of a propeller blade due to lift, one symbol, being  $\epsilon_i$ .

**induced drag** Drag due to component of wing resultant force along line of flight; drag due to lift. For a conventional wing in subsonic flight  $C_{Di} = C_L^2 / \pi A e$  where  $e$  is an efficiency factor very close to unity.

**induced flow** Fluid flow drawn in and accelerated by a high-velocity jet.

**induced force** Usual aircraft design consideration is that caused by air entering engine inlet.

**induced velocity** That due to wing vortex system and downwash, normally considered proportional to lift.

**inducer** 1 Booster vanes at entry to centrifugal impeller, esp. rocket-engine turbopump.

2 Bleed ejector to induce cooling airflow.

**inductance** Property of electric circuit to resist change in current as result of opposing magnetic linkage; see *self\**, *mutual\**.

**induction** 1 In a piston engine, sucking in air or mixture on downstroke.

2 In the overhaul process [of anything], accepting the item, plus documentation, into the overhaul facility.

**induction compass** Based on induction coil pivoted to rotate in Earth's field.

**induction heating** Heating electrically conductive material by h.f. field.

**induction manifold** Pipe system conveying mixture to piston engine cylinders.

**induction period** Specified delay between adding catalyst or hardener and applying or spraying material (coating, adhesive or thermo-setting structure).

**induction phase** In pulsejet, portion of cycle when air is admitted.

**induction stroke** In piston engine, portion of cycle when air or mixture is admitted.

**induction system** In piston engine, entire flow path from combustion-air inlet to cylinder.

**induction tunnel** Wind tunnel driven by jet engine(s) or compressed air via ejector system.

**inductive coupling** 1 Mechanical shaft drive relying on magnetic linkage.

2 Magnetic coupling between primary and secondary coils, eg of transformer.

**inductive reactance** Impedance due to inductance.

**inelastic collision** Theoretical impact with no deformation or energy loss.

**inert gas** Gas incapable of chemical reaction.

**inertial anti-icer** Free-spinning vanes or other device for imparting rotation to engine airflow, ice or snow being flung out away from engine inlet.

**inertial coupling** See *coupling (1)*.

**inertial flight** No propulsion, controls locked central or free.

**inertial frame** A reference frame subject to Newton's Laws.

**inertial guidance** Guidance by INS.

**inertial gyro** Gyro of characteristics and quality to meet INS requirements.

**inertial navigation system, INS** Assembly of super-accurate gyros to stabilize a gimballed platform on which is mounted a group of super-accurate accelerometers – typically one for each of the three rectilinear axes – to measure all accelerations imparted, which with one automatic time integration gives a continuous readout of velocity, and with a second time integration gives a readout of present position related to that at the start.

**inertial orbit** Trajectory when coasting.

**inertial platform** Rigid frame stabilized by gyro(s) to carry accelerometer(s).

**inertial restraint** Of a structural beam, free at one end but with an attached mass which damps movements.

**inertia starter** Rotary-drive starter whose energy is stored in flywheel.

**inertia welding** Welding by rapid rotation and pressure between mating surfaces.

**inerting** Filling the space above the fuel in a tank with

inert gas, usually nitrogen [USSR in WW2 used cooled engine exhaust, which contains oxygen].

**inert round** Missile or ammunition partly or entirely dummy, and lacking propulsion.

**INES** IUE newly extracted spectra.

**INET** Inertial navigation equipment tester.

**INEWS, Inews** Integrated electronic-warfare system [or suite].

**INF** 1 Intermediate-range nuclear force(s).

2 Infantry.

**infant mortality** Failure at start of life-cycle.

**Infco** Standing Committee for Science and Technology Information (ISO).

**inferior planet** Planet with orbit inside that of Earth.

**infiltration** Manufacturing stage with FRM (fibre-reinforced metal) components in which molten metal is used to fill gaps between compressed metal-coated fibres.

**infinite aspect ratio** Many aerofoil calculations ignore effects at the ends (tips) and accordingly are true only for a wing of infinite aspect ratio (ie, it goes on forever or touches both walls of tunnel).

**infinity** Symbol  $\infty$ , used as subscript to denote free-stream values.

**Infis** Inertial-navigation flight inspection system.

**inflatable aircraft** One whose airframe is of flexible fabric, stabilized by internal gas pressure. Term usually applied to aerodynes.

**inflatable de-icer** One whose action is the repeated inflation and deflation of a flexible surface, thus breaking off accreted ice.

**inflation manifold** Links several sources of gas to gas-filled aerostat.

**inflation sleeve** Large thin-wall tube to which inflation manifold is connected.

**inflator** Trolley-mounted powered fan to begin inflation of hot-air balloon.

**inflection** Point at which curve reverses direction.

**in-flight advisory** Sigmet/airmet broadcast to enroute pilots notifying conditions not anticipated at preflight briefing.

**in-flight weight** Maximum authorized weight after in-flight refuelling, can exceed MTOW.

**inflow** 1 The component of velocity through a helicopter main rotor normal to the tip-path plane.

2 There are two more [rare and confusing] meanings: increase in relative speed as air is sucked into a propeller; and inwards radial velocity as air is sucked into a propeller.

**inflow ratio** Ratio of rotorcraft TAS and peripheral velocity  $r\omega$  at tips of blades.

**influence line** Graphical plot of shear, bending moment and other variables as point load moves along structure.

**Info** Information frame.

**informatics** Word gaining some ground in English from transliteration "informatique" (F) = EDP (1).

**information dominance** Being quicker than the enemy in assessing combat situation and launching weapons.

**information operations** Central method of waging war, including EW, psyops, comint and defence against cyber attack.

**information pulses** Those repeated parts of the transmission in SSR or IFF that convey information (eg identity, flight level).

**information technology management** The ground-based portion of an ADMS.

**Infosec** Information security.

**Infowar** Information warfare.

**Infraero** Airports authority (Brazil).

**infra-red, IR** Portion of EM spectrum with wavelength longer than deep red light, thus not visible, but sensed as heat. Near \* wavelengths 0.75–1.5 $\mu$ , intermediate \* 1.5–20 $\mu$ , far \* 20–1,000 $\mu$ .

**infrasound** Sound, especially at very high power, at very low frequency [ $< 20$  Hz] and very large amplitude.

**infrastructure** Fixed installations needed for activity (eg airfield, hangars, control tower, communications, fuel pipelines).

**infrastructure authority** Those responsible for airfields, communications, radar and other ground installations.

**infringement** Violation of air traffic control or other rules regarding operation of aircraft.

**ingestion** Swallowing of foreign matter by engine (usually gas-turbine engine), including birds, ice, snow/slush/water, sand, rocket gas, catapult steam and metal parts; hence \* test, \* certification.

**ingress** To re-enter spacecraft after EVA, including expeditions on lunar or planetary surface.

**ingress route** Attack aircraft track from base to initial point.

**in ground effect** With a [notional] impervious flat horizontal surface immediately underneath a hovering aerodyne.

**inherent stability** In-flight stability achieved by basic shape of aircraft.

**in Hg** Inches of mercury, non-SI unit of pressure = 3,386.39 Nm<sup>-2</sup>.

**inhibiting** 1 To spray interior of machine or other item with anti-corrosion material before storage.

2 To coat inner surfaces of rocket solid-propellant grain to prohibit burning over treated areas.

3 The worst case in flight performance situations, eg instrument flight, failed engine and other adversities.

**inhibitor** 1 Additive to fuel or other liquid, eg Methyl Cellosolve (often +0.4% glycerine) to protect against ice and against formation of gumming residues, corrosion or fuel oxidation.

2 Refractory inert coating to control burning of solid grain.

3 Anti-corrosion oil for long-term storage.

**INI** Instituto Nacional de Industria (Spain).

**INIT, Init** Initialization or initial.

**initial altitude** Altitude(s) prescribed for IA (1) segment (FAA).

**initial approach** 1 Segment of standard instrument arrival or STAR between IA (1) fix and intermediate fix or point where aircraft established on intermediate approach course (FAA).

2 Portion of flight immediately before arrival over destination airfield or over reporting point from which final approach is commenced (Seato, IADB).

**initial-approach area** See *initial area*.

**initial area** Ground area of defined width between last preceding fix or DR position and either intersection of ILS, facility to be used in instrument approach or other point marking end of IA (1).

**initial attack** Tanker effort to contain a fire until ground firefighters can reach it (USFS).

**initial contact frequency** That used for ATC communication as aircraft enters new sector of controlled airspace.

**initial defensive operations** The initial deployment of an ABM system (MDA/White House).

**initial heading** That at start of rating period while using astro-gyro control (ASCC).

**initial mass** 1 That of rocket or rocket vehicle at launch.

2 That of fissile or other nuclear material before reaction.

**initial operational capability** Time at which particular hardware (eg weapon system) can first be employed effectively by trained and supported troops (USAF). Particular parts of the system may still be lacking.

**initial point** 1 Well defined fixed surface feature usable visually and/or electronically as starting point for attack on surface target (most existing definitions state 'starting point for bomb run').

2 Similar surface point where aircraft make final correction of course to pass over drop zone or other surface target.

3 Air-control point near landing zone from which helicopters are directed to landing sites.

4 First point at which moving target is located on plotting board or display system.

**initial radiation** That emitted from fireball within 60 s of nuclear burst, mainly neutrons and gamma rays.

**initial surface** That at start of solid-rocket burn; its area.

**initial surface/throat area** Fundamental non-dimensional characteristic of solid motor.

**initial throat area** Cross-section area of unused solid-motor throat.

**initial-value problem** One which, from given state, determines state of dynamic system at any future time.

**initiation** 1 Starting sequences leading to nuclear explosion.

2 Birth of new inbound track on air-defence system.

**initiation phase** In autoland, 10 nm from threshold, 2,500 ft (usually 205 kt, 15° flap).

**initiator** 1 Person assigned to initiate tracks in air-defence system.

2 Starts automated sequence in modern crew ejection.

**INL/A** International Narcotics and Law Enforcement Affairs, office of Aviation (Int.).

**INJ** Injection.

**injection** Insertion of satellite into orbit, or spacecraft on to desired trajectory.

**injection carburettor** One delivering metred flow to nozzle in induction system, usually without venturi and with insensitivity to flight attitude.

**injection flow** Primary flow in ejector pump or induced augmeter.

**injection point** That at which satellite enters orbit.

**injection pressure** Pressure in system between turbo-pump and injector.

**injection pump** 1 Ejector.

2 Injection carburettor.

3 More usually, multi-plunger pump in direct-injection engine.

**injection velocity** That at injection point.

**injector** Point at which one or both propellants in liquid rocket enters chamber (usually many are used, distributed around chamber).

**ink** Verb, to sign a formal contract (US, colloq.).

**INL/A** International Narcotics and Law Enforcement Affairs, office of Aviation (Int.).

**inlet** Usually air intake at upstream end of air-breathing system.

**inlet blocker** Fixed or movable screen inside inlet duct[s] to engine[s] of combat aircraft to prevent hostile radar seeing front of engine.

**inlet distortion** 1 Departure from ideal airflow through inlet, esp. in yawed or turbulent conditions.

2 Plot of flow velocities across plane normal to axis of air-breathing engine, eg at entry to fan, entry to combustor or entry to turbine.

**inlet duct** Air passage linking inlet (intake) to engine.

**inlet guide vane** Fixed or variable-incidence stators preceding compressor rotor or turbine.

**inlet mass flow function** Corrected value for airflow through a gas-turbine engine,  $W\sqrt{T}/P$ .

**inlet particle separator** Dynamic (usually centrifugal) device that removes solid particles from airflow entering engine.

**inlet unstart** Sudden gross disruption of airflow through supersonic engine inlet causing near-total loss of thrust; hard-to-cure hazard at Mach 3 and above (see *unstart*).

**inline engine** 1 Piston engine with all cylinders in single linear row; loosely (probably incorrectly) applied to engines with two or more rows such as the vee or opposed configurations.

2 Turbojet and ramjet mounted in tandem, sharing same airflow (usually with variable-geometry ducting).

**INM** Integrated noise model; rv adds research version.

**Inmarsat** International Maritime Satellite Organization [office, London EC1Y].

**INMG** Instituto Nacional de Meteo e Geofisica (Portugal).

**InN** Indium nitride.

**inner** Applied to aeroplane, = closer to centreline.

**inner horizontal surface** Specified portion of local horizontal plane located above airfield and immediate surroundings.

**inner loop** Control loop via pilot, not autopilot.

**inner marker** ILS marker rarely installed near threshold, 3,000 Hz dots and white panel light.

**inner mould line** Low-cost technique for composite-structure tooling.

**inner planets** Four nearest Sun: Mercury, Venus, Earth, Mars.

**inner space** Within Solar System.

**inner wing** 1 Loosely, inboard part.

2 That on the inside of a turn, usually with reduced airspeed.

**innovative controls** Many forms, e.g. replacing rudder and ailerons by rotating wingtips or slot/spoilers.

**INO** Indian Ocean region (ICAO).

**IN100** HPT material, high-Ni alloy, 1975.

**INOP, Inop** Inoperative.

**inoperative** Deliberately taken out of use (thus not a failed engine or other device).

**I-NOSC** Integrated network operations and security center (USAF).

**INP** If not possible.

**InP** Indium phosphide, semiconductor.

**INPE** Instituto de Pesquisas Espaciais [space research, São José dos Campos] (Brazil).

**inph** Interphone.

**in-phase** Occurring at the same point in each of a series of phugoids or other SHM or repeated cycles, but caused by external stimulus.

**in-plane bleeder** Sustained max-rate turn without change of height.

**inplant** Done within factory instead of subcontracted, or relative to the factory (thus \* facilities, \* modification).

**INPR** In progress.

**input** 1 Point at which signal, data, energy or material enters system.

2 Signal, data, energy or material entering system.

**input axis** Axis normal to gyro spin axis about which rotation of base causes maximum output.

**INREQ** Request for information.

**INRIA** Institution Nationale de Recherches d'Informatique et Automation (F).

**INS** 1 Inertial navigation system.

2 Ion neutralization spectroscopy.

3 Immigration and Naturalization Services; PASS adds passenger accelerated service system (US).

4 Information network system.

**ins** Confusingly, inches.

**Insacs** Interstate airway communication station (US).

**In-Sap, IN-SAP** Intelligence special-access program.

**InSb** Indium antimonide, IR detector 3–5 $\mu$ .

**INSC** Instrument comprehension.

**insensitive munition** One impossible to detonate except by its own triggering system.

**insert** 1 Small D-section body fixed inside propelling nozzle to trim area.

2 To place spacecraft in desired trajectory.

3 To convey friendly force (usually small and covert) to point on ground deep in enemy territory, usually by helicopter; hence insertion.

**inserted blades** Not forming an integral [monolithic] part of the disc.

**inset balance** Mass located within movable surface.

**inset hinge** On conventional control surface one whose axis is to rear of leading edge.

**inset light** One flush with airport pavement.

**INSI** Inertial navigation system interface.

**inside wing** That pointing towards centre of a turn.

**insolation** Solar radiation received, usually at Earth or by spacecraft.

**INSP** Inspection.

**inspectability** Unquantifiable measure of extent to which fault, esp. structural, may escape notice of inspectors because of inaccessibility or any other reason.

**inspect and repair as necessary** Not to pre-ordained schedule.

**inspection** Search of hardware for evidence of existing or impending fault condition.

**inspection record** Meticulous written account of every technical event, including e.g. record of each stall or other possibly significant manoeuvre.

**inspin yaw** Yawing moment holding or accelerating aircraft into spin.

**INST, inst** Instrument.

**instability** 1 Structural condition in which strut, web or other member buckles under compressive load.

2 Aerodynamic condition in which slightest disturbance triggers gross disruption or flight of body.

3 Meteorological, normal meaning.

**installation envelope** Overall three-view dimensioned outline drawings.

**instantaneous readout** System with zero lag between sensor and display.

**instantaneous VSI** One giving instantaneous readout, with accelerometer air pumps to counteract lag. Also called instant-lead.

**Inst. E** The Institute of Electronics (UK).

**INSTL** Installed, installation.

**InstMC** Institute of Measurement and Control (UK, 1944–).

**INSTR** Instruction.

**instruction to proceed** Informal document accepted as guaranteeing payment in advance of contract.

**instructor** In pilot training, pilot qualified and appointed to teach pupils.

**instrument approach** Made under non-visual guidance, normally from aids on the ground.

**instrument approach area** Volume of sky in which non-visual landing aid operates.

**instrument approach runway** One providing non-visual directional guidance for straight-in approach.

**instrument error** Difference between indicated and true value.

**instrument flight** Using instruments in place of external cues.

**instrument flight rules, IFR** Rules applied in cloud or whenever external cues are below VFR minima which prohibit non-IFR pilots/aircraft.

**instrument landing** Ambiguous but usually IMC landing without ground aids (thus, non-ILS).

**instrument landing system, ILS** Standard ground aid to landing comprising two radio guidance beams (localizer for direction in horizontal plane and glideslope for vertical plane with usual inclination 3°) and two markers for linear guidance. See headings beginning *glidepath*, and *categories*.

**instrument meteorological conditions** Conditions less than minima for VFR.

**instrument monitor** Various meanings from traditional flight-test panel camera(s) to automatic systems for notifying faults, ensuring majority vote or isolating failed instrument (rare).

**instrument rating** Endorsement to pilot's licence allowing flight in IMC.

**instrument runway** Instrument-approach or precision-approach runway.

**insulators** Poor conductors of electricity, heat, noise or other forms of energy.

**Int** 1 Intersection (FAA).

2 Intercom.

**Inta** Instituto Nacional de Tecnica Aeroespacial Esteban Terradas (Spain).

**intake** 1 Air inlet to propulsion or internal system.

2 Narrow-chord leading member of upper flap in CWW augmentor wing, upstream of shroud and separated by a slot.

**intake duct** See *inlet duct*.

**intake heater** Heat exchanger inserted to prevent icing in piston-engine inlet system.

**intake stroke** See *induction stroke*.

**intcp** Intercept[or] or intercept.

**integral construction** Made from single slab of metal by

machining and/or etching, or by forging and machining, to finished shape.

**integral stator** Fabricating a section [typically containing six to eight vanes] of the turbine HP stator ring as a monolithic extension of a flame tube.

**integral tank** Tank formed by coating aircraft structure with sealant.

**integrated acoustic structure** Noise-absorbent structures forming load-bearing part of main structure.

**integrated aeroplane** One in which single shape (eg Gothic delta with no separate fuselage) serves all functions, with no demarcation between parts.

**integrated cargo carrier** Unpressurized payload carrier fitting cargo bay of Shuttle.

**integrated circuit** Microelectronic device fabricated by successive etching, doping etc of single-crystal (usually silicon) substrate.

**integrated communications control** Switches audio paths, controls and displays 40 channels of NVM, formats synthesized alerts and provides for antenna selection and Bite.

**integrated decision support tool** Used in CDM to bring critical National Airspace System status and traffic management data together, graphics offering what-if capability.

**integrated drive generator** Electric generator (alternator) made as one unit with CSD to give constant-frequency output.

**integrated dynamic system** Combination of helicopter rotor hub, main transmission, swash plates, control system and hydraulic servos into single unit (MBB).

**integrated electronic standby instrument** Solid-state replacement for pneumatic airspeed, altitude and horizon.

**integrated flight system** Computer-linked FCS and panel displays which to a large degree relieve pilot of need to exercise judgement [arguable definition].

**integrated flight test** Current [1990–2020] meaning is to demonstrate identification and tracking of ICBM targets in space.

**integrated flight training** One meaning is ab initio use of flight instruments.

**integrated instrumentation display** Combines engine, transmission, accessory systems, rotor track/balance and vibration monitoring plus caution/warning.

**Integrated Modular Avionics** In the early years of the new Century IMA is the latest stage reached in avionics packaging. LRUs are replaced by uniform narrow modules in an integrated pack, sharing common power supplies. First used in the Lockheed Martin F-22, IMA saves space and power [and thus heat generation], and makes possible greater redundancy [e.g., in computer power].

**integrated power unit** APU plus IDG.

**integrated sensor suite** Usually means EO/IR.

**integrated servoactuator** Flight-control power unit with integral failure-correction and only electric [or other] valve inputs, devoid of mechanical input from pilot.

**integrated spar inspection system** Pressurizing the interior of a helicopter main-rotor blade so that leakage reveals the presence of a crack.

**integrated surveillance system** TCAS, TAWS and weather radar with PWTB.

**integrating accelerometer** Accelerometer whose output

signal is first or second-order integration with respect to time (viz velocity or position).

**integrating circuit** Electronic circuit whose function is to integrate (mathematically) one variable with respect to another (usually time).

**integrating flowmeter** Shows not only rate of flow of fuel, or other consumable, but also quantity [mass] consumed, or remaining.

**integration** Assembly of stages, boosters and payloads of spacecraft (post-\* normally means after mating of payloads).

**integrator** 1 Device, usually digital, for giving numerical approximation to integration (mathematical).

2 Mechanical latch for devices such as an escape slide or brake chute enabling ground engineers to open up for routine maintenance.

**integrity** Validity of structure or system, functioning in design role after suffering damage; usually, but not always, a mechanical quality associated with avoiding mechanical breakup. Loosely, resistance to failure.

**integrity beacon landing system** Combines DGPS with ground-based pseudolites to give accuracy  $\pm 10$  cm (ESTOL).

**intelligent missile** Vague popular concept normally taken to mean self-homing.

**Intelsat** International Telecommunications Satellite Organization.

**intensive flying** Purpose is to log flight hours on new equipment at maximum rate under operational conditions.

**intensive student area** Regions of US airspace where IFR flight is restricted.

**Inter** Intermittent, also *INTMT*.

**interaction parameter** Basic measure of relative dominance of fluid motion or magnetic field in MHD and plasma physics.

**interactive computer** One capable of progressive dialogue with human operator, via displays and lightpen or other method.

**intercalation** Insertion of chemical compounds in plasma layers between planes of base material such as graphite to enhance electrical conductivity.

**intercase** *Intermediate case*.

**interception** 1 Flight manoeuvre to effect closure upon another aircraft or spacecraft.

2 To capture and hold desired flight condition (eg, VOR radial or ILS).

**interceptor** 1 Aircraft or spacecraft designed to intercept, and if necessary destroy, others.

2 Small hinged strip to block local airflow, esp. between slat and wing or immediately to rear of slat, operated on one wing only by applying aileron.

**intercept point** Computed location in space towards which vehicle (eg interceptor aircraft or spacecraft) is vectored.

**interchanger** Variable gearbox in one axis of powered flight-control system.

**intercom** Communication system within aircraft using crew headsets or loudspeakers but without any radio emission.

**interconnectors** Tubes conveying flame from each gas-turbine combustor primary zone to neighbour [in US called flame tube, which has different meaning in UK].

**intercontinental ballistic missile** Land-based, range over 5,500 nm (6,325 miles) (USAF).

**intercooler** Radiator for rejecting excess heat in enclosed fluid system., e.g. downstream of piston-engine supercharger

**intercostal** Short longitudinal structural member (stringer) joining adjacent frames or ribs, usually to support access door or equipment.

**inter-cylinder baffle** See *baffle*.

**intercrystalline corrosion** Originating and propagating between crystals of alloy.

**interdiction** See *air interdiction, battlefield air interdiction*.

**interface** Boundary between mating portions of system; can be mechanical (eg inlet duct and engine) or electronic (eg central computer and navigation display).

**interference** 1 Mutual interaction between solid bodies in fluid flow, eg upper and lower biplane wings (see *Prandtl* \*).

2 Disruption of radio communications by unwanted emission on same wavelength, as from unscreened ignition.

**interference drag** Drag caused by aerodynamic interference.

**interference factor** Arbitrary drag multiplier, from 1 to 1.5, correcting for location of external bodies in proximity to aircraft [usually to the wing].

**interference fit** Fit between parts where male dimension exceeds female (several exact definitions).

**interference foul** Physical conflict between fixed and moving parts, esp. between control column/wheel/yoke and an obstruction.

**interference strut** Obstructs cockpit if flight controls locked.

**interferogram** Display or photograph of interferometer patterns for precise measurement or aerodynamic research.

**interferometer** Optical measuring system using divided light beam later rejoined to give phase interference seen as light/dark fringes.

**interferometer array** Aerial (antenna) able to emit or receive simultaneously at large number of accurately related locations.

**interior ballistics** Branch of ballistics concerned with bodies under propulsion.

**interlacing** 1 Scanning technique for raster display in which all odd-number lines are scanned and then all even.

2 IFF technique in which pulse trains of different modes are transmitted sequentially (to achieve enough transponder returns per scan it is rare to interlace more than three modes).

**interline** Between different air carriers, hence interlining.

**intermediate approach** That part of approach from arrival at first navigational facility or pre-determined fix to beginning of final approach.

**intermediate case** 1 Gas-turbine casing; several meanings, eg between two compressor spools or over compressor spool downstream of fan.

2 In a three-shaft engine, the case linking the IP and HP components.

**Intermediate contingency** 1 Turboshaft power rating below emergency (max. contingency) level, usually allowed for 30 [sometimes 60] min.

2 Of afterburning turbofan or turbojet, usually means maximum cold thrust.

**intermediate frequency** That to which signal is shifted between its reception and transmission.

**intermediate gearbox** See *step-aside gearbox*.

**intermediate maintenance** At least six meanings, the most common being maintenance performed on a military user airbase in a specialized workshop.

**intermediate-pressure** Compressor/turbine spool between LP and HP in three-shaft engine, abb. IP.

**intermediate range** Traditional figure for ballistic missiles is 1,500 nm, about 1,727 miles, 2,780 km (originally USAF).

**intermediate rating** Intermediate contingency.

**intermediate shop** Flightline fault-isolating system, esp. for avionics, synthesising all forms of EM signal for HUD, radar, etc.

**intermetallics** Compounds or alloys in which atoms of two or more metals are arranged in complex structures in fixed ratios. Some are semiconductors, but immediate work is concentrated on aluminides of refractory metals.

**intermittent duct** Resonant air-breathing engine; also known as intermittent jet, but more common term is pulsejet.

**intermodal** Capable of use by more than one form of transport, ideally by air, rail and truck.

**internal air system** All airflows and pressure differences having no direct effect on engine thrust or power.

**internal balance** By control-surface area ahead of hinge [called the shelf] fitting in vented chamber in fixed structure. See *compound shelf*.

**internal burning** Solid propellant rocket grain whose exposed surface is along centreline [e.g., star centred].

**internal combustion** Originally described prime mover whose fuel was burned in the cylinder, unlike steam engine; in gas turbine and nuclear era meaning is blurred.

**internal combustion turbine** Accepted term for gas turbine [UK Government establishments, 1926–46].

**internal efficiency** Rocket thermal efficiency.

**internal engineering notice** Issued by manufacturer, esp. to customers.

**internal fuel** Contained in aircraft or spacecraft, as distinct from fuel in removable or jettisonable tanks.

**internal gearbox** In a two-shaft engine the starter must drive the HP spool, and this normally calls for a bevel gear inside the core. There are usually bevel gears from adjacent ends of the LP and HP shafts from which drive is taken to external gearbox[es].

**internal lip contraction** In an externally mounted turbofan, the ratio  $t_{hl}/t_{th}$ , hilt plane to throat.

**internally blown flap** 1 Usually, large conventional flap through which main propulsion jet(s) or bleed air can be ducted.

2 Rarely, jet flap.

**internal power** Generated in the aircraft (electrical, hydraulic, etc).

**internals** 1 Items inside cockpit.

2 Frames, longerons and stringers, or spars and ribs.

**internal service** Air route wholly within one country.

**internal starter/generator** Built into centre of engine as part of it.

**internal supercharger** Downstream of carburettor.

**international** As applied to flight, service or route, one passing through airspace of more than one country

(though departure and destination may be in same country).

**International Accounting Unit** Used by NATO and in other multinational infrastructure programmes, originally equal to £ sterling prior to 1967 devaluation.

**international airport** Designated as airport of entry and departure for international traffic, and provided with necessary extra facilities (typically 12).

**international altitude** That shown by ISA-calibrated pressure altimeter set to 1013.25 mb.

**international boost** Piston engine boost control set to ISA.

**International knot** See *knot*.

**International power** The b.h.p. a piston engine is rated to develop at full throttle at International rpm at specified altitude.

**International rpm** Highest crankshaft speed permitted in climbing flight for period exceeding 5 min.

**International Standard Atmosphere, ISA** That agreed by ICAO and still used as common standard; defines pressure (1013.25 mb at MSL, about 29.92 in Hg), temperature (15°C at MSL) and relative density up to tropopause (see *atmosphere*). Hence, Standard Day.

**InterNIC** Internet network information centre.

**inter-ocular** Between eyes.

**interphone** Intercom serving crew stations, service areas and ground-crew jacks (2).

**interplane** Adjective 'between [biplane] wings', hence \* drag, \* interference.

**interplane strut** Joins superimposed [biplane] wings.

**interplanetary** Between planets [assumed, within plane of their orbits].

**interpolation** Process of calculating or approximating values of function between known values.

**interpretation** Extraction of maximum intelligence from reconnaissance imagery.

**interpulse period** PRI.

**interrogate** To transmit IFF, SSR or ATC signal coded to trigger transponders.

**interrogation mode** Any mode in which signals include code to trigger transponder; eg Modes A, B and D for ATC transponders.

**interrogator** Radio transceiver scanning in synchronism with primary radar or SSR requesting replies from all cooperative airborne transponders to reply; replies sent to video displays.

**interrupted Bite** Ground test facility initiated manually via on-board control panel to enhance detection/location capability of C-Bite.

**interrupter gear** Device for enabling rapid-fire gun[s] to fire safely past blades of propeller. In contrast *synchronization* gear matches the two frequencies. In practice the blade passing frequency was much greater than the rate of fire of even two guns, so \* soon became obsolete.

**interscan** Brief time between scans on a timebase.

**Intersect** Strictly, intesect, intelligent sensors for control technologies.

**intersection** 1 Point where centrelines of runways coincide, hence \* departure starts T-O at \*.

2 Point on Earth, and vertical line through this point, where centrelines of airways cross.

**interservices** Linking turbopfan core to aircraft, thus \* strut, \* couplings, \* interface.

**Intersputnik** Soviet Bloc comsat system.

**interstage** Space launcher airframe section between stages designed as major assembly housing guidance for other systems but without propulsion.

**inter-tropical front, ITF** The assumed giant front where tradewinds meet N and S of Equator, also called ITCZ; not a normal front.

**inter-turbine burner** Compact combustion system between HP and LP turbines in reheat-cycle engine.

**intervalometer** Mechanical or electronic system controlling spacing of events (eg reconnaissance photographs).

**in the blind** Without external cues, ie no visual reference outside aircraft.

**in the groove** In the desired flight condition, esp. correctly aligned on the approach.

**in the slot** Correctly lined up for landing.

**INTL, intl** International.

**INTMT** Intermittent.

**Into** Intelligence officer.

**into engine** With asymmetric power, towards the operating engine [the other being at flight idle]; thus, when flying on L engine, the application of L aileron or rudder.

**into the mission** Measured from T-O or liftoff at end of countdown, thus 30 s \*\*\*.

**INTPS** Integrated navigation and tactical plotting system.

**INTR** Interior.

**intra-flight data-link** Secure communications between pilots and their sensors.

**intraformation positioning system** Allows aircraft to fly close formation in blind conditions.

**in-trail procedure** To be followed by large jet following another, especially when using ADS-B.

**intramarket** Market for civil air transport in particular geographical region, which can be a single large country.

**introscope** See *borescope*.

**intravehicular** Between two spacecraft.

**intrepid birdman** Jokey reference to any pilot.

**INTRG** Interrogated, interrogator.

**introscope** Another name for a *borescope*.

**INTRP** Interrupted, interruption.

**intruder** 1 Aircraft engaged on interdiction, esp. against hostile aircraft and airfields (not necessarily by night).

2 An altitude-reporting aircraft considered to be a potential threat and processed by TCAS threat-detection logic.

**intst** Intensity.

**INTXN, intxn** Intersection.

**INU** 1 Inertial navigation unit.

2 Inertial nav/attack unit.

**Inv** Inverter.

**Invar** Alloys formulated for near-zero coefficient of thermal expansion; \*36 [36 per cent Ni] widely used for large CFRP moulds.

**inventory** Complete list of hardware, esp. of items assigned to military units.

**inventory carrying cost** Total cost of [airline] inventory, factored for depreciation, divided by [usually] fleet time per annum or per aircraft.

**inventory service** Assigned to operational unit, including training units, but excluding those in evaluation, development, research and other non-operational status.

**inverse monopulse** Missile or other guidance radar in which target Doppler shift is detected early in RF amplifier chain instead of at late stage.

**inverse-square law** States point-source radiation and most other emissions fall off in intensity as square of distance from emitter.

**inverse synthetic-aperture radar** Use of SAR/DBS technique but using a fixed (or moving) radar to integrate successive echoes from a moving target.

**inversion** Local region of atmosphere where lapse rates are negative, ie temperature increases with height.

**inversion point** Height at which inversion ceases and normal lapse rate begins.

**inverted bipolar** Inverted gate.

**inverted engine** Piston engine with crankshaft above cylinders.

**inverted-flight valve** Commonest form is fitted in delivery from fuel tank to maintain feed under negative-g.

**inverted gate** Bipolar with emitter downwards.

**inverted gull wing** Seen in front elevation, slopes down from body with pronounced anhedral and then (suddenly or gradually) slopes up with dihedral to tip.

**inverted loop** See next two entries. BS: "A complete revolution in flight in a vertical plane about lateral axis with upper surface on outside of curved flight path." Some insist \* must be started with aircraft inverted, thus from bottom of manoeuvre.

**inverted normal loop** Normal loop begun from inverted position.

**inverted outside loop** See *bunt*.

**inverted spin** Spin in inverted position. Strangely, BS definition is: "A spin with negative mean angle of incidence" [AOA is meant].

**inverted vee-engine** Two inclined banks of cylinders below crankshaft.

**inverter** Electrical machine or static rectifier that inverts polarity of each alternate AC sine wave to give DC output.

**investment casting** Casting complex shapes in ceramic moulds formed as coatings on wax patterns which are then melted and run out, hence term lost-wax casting.

**investment prediction** Assessment of required inventory of spares and GSE.

**INVH** Integrated night-vision helmet.

**inviscid** Without viscosity.

**invocon** Innovative concepts in systems engineering.

**INVOF** In the vicinity of.

**involuntary boarding refusal** Passenger denied access to aircraft, for whatever reason.

**involuntary retirement** Of aircraft, caused solely by legislation, esp. environmental non-compliance.

**INVR** Institute of Noise and Vibration Research (UK).

**INVRN** Inversion [weather].

**inwales** Longitudinal members at junction of flying-boat topsides and deck. Often = gunwales.

**inward relief valve** One-way valve in fluid system triggered by abnormally low local pressure in container.

**in-weather** Flying in conditions that are wet and/or icy, but not poor visibility (USAF).

**In-WX** In weather.

**IO** 1 Identification officer (air-defence systems).

2 Direct-injection, opposed cylinders (US piston engines).

3 Image orthicon.

4 Information officer (US).

5 Information operations (US).

6 Integrated optics.

**I/O** Input/output; C adds computer.

**Io** Mean spherical candle power.

**IOA** 1 Initial operational assessment.

2 International Omega Association (office, Arlington, VA).

**IoA** Institute of Acoustics.

**IOAT** Indicated outside air temperature.

**IOB** International Operations Bulletin.

**IOBP** Imagery on-board processor.

**I-obs** Index of crew and maintenance observations.

**IOC** 1 International Oceanographic Commission (UN).

2 Initial operational [or operating] capability [or clearance].

3 Indirect operating cost.

4 International order of characters.

**I/OC** Input/output concentrator, or controller.

**I/OCE** Input/output control element.

**IOCU** International Organization of Consumers' Unions.

**IOD** 1 Inflight-opening doors (Stovl engine).

2 Internal- [as distinct from foreign] object damage.

**iodine** Shiny black solid element, symbol I, density 4.9, sublimes to purple vapour, see silver iodide.

**IOE** 1 Initial operating experience.

2 In-orbit experience.

**IOFP** Intensive operational flying programme.

**IOI** Item of interest/importance.

**IOIC** Integrated operations intelligence center, or communications (USN).

**IOIS** Integrated operational intelligence system.

**IOL** Society of Austrian aeronautics companies [office, Vienna].

**IOM** Input/output module.

**I-omega, I $\omega$**  Angular momentum.

**ION** The Institute of Navigation [office, Alexandria, VA22314] (US).

**ion** Electrically charged atom or group of atoms; can be in solid or solution or free; charge can be positive (missing electron) or negative (usually through extra electron).

**IONDS** Integrated operational nuclear detection system.

**ionic propulsion** See *ion rocket*.

**ionization** Conversion of atoms to ions.

**ionization potential** Work measured in eV necessary to remove or add electron in ionization.

**ionization screen** Barrier to charged particles which would otherwise damage human tissue.

**ionogram** Plot of radio frequency against pulse round-trip time, ie electron density level for reflection (approx. equal to altitude of reflective layers).

**ionopause** Ill-defined base of ionosphere; also known as D-region.

**ionosphere** Entire ionized region of Earth's atmosphere (Kennelly-Heaviside, Appleton, E and F layers). Not Van Allen Belts.

**ion rocket** Propulsor, usually small thruster, generating high-velocity jet of ions in electrostatic field.

**IOP** 1 Institute of Petroleum.

2 Information operations planning [S adds system].

3 Independent overspeed protection.

**I/OP** Input/output processor.

**IOR** 1 Indian Oceanic Region.

2 Immediate operational requirement.

**IOS** 1 Instructor operating [or operated] station [or system].

- 2 Internal operating system.
- 3 Innovation and opportunity selection.
- 4 Integrated operational support [contract] (UK).

**IOSA** 1 Integrated optical spectrum analyser.

- 2 Integrated overhead Sigint architecture.
- 3 IATA, or international, operating, or operational, safety audit (IATA).

**IOT** 1 In-orbit test.

- 2 Initial officer training (RAF)

**IOTE, IOT&E** Initial operational test and evaluation.

**IOV** In-orbit validation (ESA).

**IOVC** In overcast.

**IP** 1 Initial point.

- 2 Intermediate-pressure.
- 3 Instructor (rarely, instrument) pilot.
- 4 Identification pulse (SSR).
- 5 Identification position (IFF).
- 6 Intellectual property (company law), R adds right[s].
- 7 Initial provisioning of spares.
- 8 Industrial participation.
- 9 Internet protocol.
- 10 Instrumented prototype [A adds aircraft].
- 11 Ice pellets.
- 12 Intercept point (radio dBm).
- 13 Initial production.
- 14 Instrument [flight] procedure[s].

**I/P** Identification position (US).

**IPA** 1 Independent Pilots' Association [office, Haywards Heath] (UK).

- 2 Instrumented production aircraft.

**IPACG** International Pacific ATC Co-ordinating Group.

**IPAD** 1 Integrated programs for aerospace [vehicle] design.

- 2 Improved processing and display [S adds system].

**IPARS, Ipars** International programmed airlines reservation system.

**IPAS** Integrated pressure air system.

**IPAT** 1 Inertial pointing-aided tracking.

- 2 Integrated propulsion analysis tool.

**IPATS** International Police Aviation Training School.

**IPB** 1 Illustrated parts breakdown.

2 Intelligence preparation of the battlespace, one of the pillars of PBA.

**IPBS** In-flight propeller balancing system.

**IPC** 1 Intermittent positive control (ATC backup, IPS used in US).

- 2 IP compressor.
- 3 Illustrated parts catalogue.
- 4 Integrated processing cabinet.
- 5 Instrument proficiency check.

**IPC-ASA** IPC (1) automatic separation assurance; advises conflicts to DABS/Adsel aircraft.

**IPCC** International Panel on Climate Change.

**IPCS** 1 Institution of Professional Civil Servants (UK).

- 2 Intelligent power-control system.
- 3 Ice-protection control system.

**IPD** 1 Instituto de Pesquisas e Desenvolvimento (Brazil).

- 2 Improved point defence [MS adds missile system].
- 3 Initial production delivery.

4 Integrated product design [by prime plus suppliers], or delivery.

5 Imagery processing and dissemination; S adds system.

6 Information processing division.

7 Initial professional development.

**IPE** 1 Institution of Production Engineers (UK).

2 Increased- (or improved-) performance engine.

3 Interconnect, passive and electro-mechanical.

**IPEC** 1 Inflight passenger entertainment and communications; C adds conference, S systems.

2 Integrated planning and execution center.

**IPES** Individual passenger entertainment system.

**IPex** Immediate-purchase excursion; low-price fare without advance booking and without guarantee of seat.

**IPF** Integrated, or integration and processing facility.

**I/PF** Identification position feature.

**IPFA** Inspection des Programmes et Fabrications de l'Armement (F).

**IPFD** Integrated primary flight display.

**IPG** Indian Pilots' Guide.

**IPI** 1 Intercept pattern for identification.

2 Inertial position insertion.

3 Initial protocol identifier.

**IPID** 1 IR perimeter intrusion detection.

2 Indefinite quantity, indefinite delivery.

**IPK** International Prototype Kilogramme, a platinum body kept at Sèvres.

**IPL** 1 Illustrated parts list.

2 Image Product Library (NIMA).

**IPM** 1 Interplanetary medium.

2 Immediate past Master (GAPAN).

**IPMS** 1 International Plastic (singular) Modelers (US spelling) Society.

2 Integrated platform management system.

3 Institution of Professionals, Managers and Specialists (UK).

**IPN** Iso-propyl nitrate.

**IPNVG** Integrated panoramic NVGs.

**IPO** 1 Initial public offering.

2 Integrated product ownership.

**IPP** 1 Institut für Plasma-Physik (G).

2 Information-processing panel.

3 Industrial preparedness planning (US).

4 Impact-point prediction.

**IPPS** Integrated power plant system.

**IPR** 1 Intellectual property rights, has particular relevance to software.

2 Inches per revolution.

3 Internet protocol router.

**IPRA** 1 Independent precision radar approach.

2 Industrial participation risk assessment.

**I/P, I/Press** Intermediate pressure.

**IPS** 1 Information presentation or processing system.

2 Instrument-pointing system.

3 Inlet particle separator.

4 Intelligence and planning squadron (RAF).

5 Intermediate pitch stop (helicopter).

6 Interactive pilot station.

7 Intermittent positive control (ATC).

8 Integrated power system.

**i.p.s.** Instructions per second.

**IPSA** Infirmières-Pilotes Parachutistes Secouristes de l'Air (F).

**IPSE** Integrated product (or project) support environment (software).

**IPT** 1 Integrated project team; L adds leader (UK).

2 Integrated product team (US).

3 Intermediate-pressure turbine.

4 Integrated physiological trainer [a simulator].

5 Intelligent power terminal.

**IPU** 1 Interface processor unit.

2 Integrated power unit [usually electric].

3 Image processing unit.

**IPV** 1 Improve.

2 Icy runway, also IR.

**IPW** 1 Institut für Physikalische Weltraumforschung (G).

2 Ice-pellet shower.

**IP/XML** Internet protocol, extensible markup language.

**IQA** The Institute of Quality Assurance (UK).

**IqAF** Iraqi air force [UK usage].

**IQSY** International Quiet Sun Years [1964–65].

**IQT** Initial qualification training, or testing.

**IQTG** International Qualification Test Guide (ICAO).

**IR** 1 Infra-red.

2 Instrument rating [or route, or rules].

3 Inspection report.

4 Incident report.

5 Initial reserve (RAF).

6 Ice on runway.

7 Ice reconnaissance.

8 Implementing rules.

**Ir** Rotor-system inertia.

**IRA** 1 Inertial reference assembly.

2 Infra-red astronomy.

3 Initiated by requesting authority.

4 Intercooled recuperated aero-engine (Clean).

**IRAC** 1 Interdepartmental Radio Advisory Committee (US).

2 IR array camera.

**IRAD** 1 Investigate, research and define.

2 Independent research and development.

3 IR acquisition and designation [S adds system].

**IRAN** Inspect and repair as necessary.

**IR&D** Internal research and development, ie company funded.

**IRAS** 1 Interdiction/reconnaissance attack system.

2 IR astronomy satellite.

**iraser** IR laser (not recommended).

**Irasi, IRASI** IR atmospheric sounding interferometer.

**IR augments** Flare or otherwise intense IR source carried by vehicle to facilitate IR tracking.

**IRAWS** IR attack weapon system.

**IRB** 1 Industrial revenue bonds.

2 Integrated Requirements Board.

**IRBM** Intermediate-range ballistic missile.

**IRC** Industrial Reorganisation Corporation (UK).

**IRCA** Integrated real time in the cockpit/Real-time out of the cockpit for combat aircraft (AFRL).

**IRCAM** IR camera acquisition module.

**IRCC** International Radio Consultative Committee.

**IRCCD** IR-sensitive charge-coupled device.

**IRCCM** IR counter-countermeasures.

**IRCM** IR countermeasures (sometimes rendered IRC). Measures adopted to minimise IR emissions or render them misleading (eg by ejecting flares which it is hoped

hostile IR-homing weapons will prefer instead of one's own aircraft).

**IRCS** Intrusion-resistant communications system.

**IRD** 1 Interoperability requirements document.

2 Independent (or internal) research and development (company-funded).

3 Inlet ram drag.

4 Integrated receiver/decoder.

**IR decoy** Intense heat source intended to distract IR-homing missiles.

**IR detector** Device containing cell sensitive to IR which raises electrons (cryogenically cooled to reduce noise) to higher energy level.

**IRDF** IR direction-finding.

**IRDS** IR detecting set, or detection set, or suite, or system.

**IRDT** Inflatable re-entry and descent technology.

**IRDU** IR detection unit.

**IRE** 1 Institution of Radio Engineers (UK).

2 IFF reply evaluator.

3 Instrument rating examiner.

4 Internal roll extrusion.

**IR/EO** IR electro-optical.

**Ireps** Integrated refractive effects prediction system (anaprop).

**IREW** IR electronic warfare.

**IRF** 1 Immediate Reaction Force (NATO).

2 Institute of space physics (Sweden).

**IRFFE** Intelligent RF front end.

**IRFI** International Runway Friction Index.

**IRFIS** Inertial-referenced flight inspection system.

**IRFITS** IR fault-isolation test system.

**IRFNA** Inhibited red fuming nitric acid.

**IRFPA** IR focal-plane array.

**IR guidance** Use of IR seeker cell and combined optics and flight control to make vehicle home on suitable heat source.

**IRI** Inadvertent runway incursion.

**IRIA** Institut de Recherche Informatique et d'Automatique (F).

**iridium** Ir, hard, inert silvery metal, density 22.562, MP 2,410°C.

**IRIG** Inter-range instrumentation group.

**Iris** 1 IR [or integrated radar] imaging system.

2 Inferential retrieval index system.

3 IR interferometer spectrometer.

**iris scanner** Looks into human eye to give unequivocal confirmation [or not] of identity.

**IRJ** IR jammer.

**IRLS** 1 IR linescan, or line scanner.

2 Interrogation, recording and location system.

**IRM** 1 Information resources management.

2 Intelligent robotics manufacturing.

3 Ion-release module.

4 Implementing Rules on Maintenance, new legislation for General Aviation [2006–] (IAOPA).

**IRMA** International Registry of Mobile Assets [2001–].

**IRMP** Inertial reference mode panel.

**IRMS** Integrated radio management system.

**I<sub>rms</sub>** Effective [root mean square] current.

**IRMW** IR missile warning [S adds system or subsystem].

**I-RNAV** Boeing term for RNP-RNAV, meaning integrated-RNAV.

**IROC** International Requirements Oversight Council (US).

**iron** 1 Metallic element, Fe, density about 7.86, MPT 1,539°C.

2 All magnetic parts of compass, aircraft etc, of whatever material.

3 Colloquially, aircraft (especially warbird).

**iron ball** General term for a common magnetic RAM, powders of ferrites or carbonyl iron embedded in flexible matrix or sprayed on, see *iron paint*.

**iron bird** Ground rig to test major aircraft system[s].

**iron bomb** Simple free-fall bomb (colloq.).

**iron compass** Railway used as navaid (US colloq.).

**ironless** Constructed of non-magnetic materials.

**iron mike** Autopilot (colloq., obs.).

**iron paint** RAM (2) sprayed-on coating comprising ferrite magnetic balls of microscopic size contained in epoxy binder. Multiple layers give desired thickness.

**iron reserve** Fuel for taxiing at destination.

**irons** See *eating irons*.

**Irotis, IR-OTIS** IR optronic tracking and identification system.

**IRP** 1 Intermediate rated power.

2 Interphone receptacle panel.

3 Integrated refuelling panel.

4 Intruder role player.

**IRPG** IR plume generator.

**IRR** 1 Integral rocket/ramjet.

2 Infra-red radiation, or radiometer.

3 Installation readiness review.

**IRRC** Integrated real-time info into the cockpit/real-time info out of the cockpit for combat aircraft.

**irreversible control** Position of output governed only by input (thus, \* flight control is unaffected by air load on surface).

**irreversible screwjack** Thread chosen so that linear position governed solely by rotation, not by operating load.

**IRROLA** Inflatable radar-reflective optical location aid.

**irrotational flow** Individual elements or parcels do not rotate about own axes.

**IRRS** IR reconnaissance system.

**IRS** 1 Inertial reference system, or set.

2 Improved radar simulator.

3 Indian remote satellite.

4 IR signature, or spectrograph.

5 Internal Revenue Service (US).

6 Interface requirements specification.

**IR seeker** See *IR detector*.

**IR signature** Complete plot of IR emissions from given source or vehicle, usually in form of intensity plotted against wavelength.

**IRSM** IR surveillance measures.

**IR telescope camera system** Hand-held, on long wand, for inspection [or search for explosives or drugs] in dark places.

**IRSP** Instrumentation radar support programme.

**IRST** IR search and track; S adds system.

**IRT** 1 Instrument-rating test.

2 Incident, or immediate, response team.

**IRTH** IR terminal homing.

**IRTS** 1 Initial radar training simulator.

2 IR threat simulator.

3 IR track and scan.

**IRTT** IR tow target.

**IRU** Inertial reference unit.

**IR/UV** Infra-red [and] ultra-violet.

**IRV** 1 Infra-red vision.

2 Inward[s] relief valve.

**IRVAT** Infra-red video automatic tracking.

**Irvin** Trade name of Irving Air Chute (parachutes).

**Irving flap** Split flap pivoted to links near mid-chord and lowered by actuator thrust on the leading edge.

**Irvin suit** Two-piece flying suit of fur-lined leather, from c1928 (UK).

**IRVR** Instrumented runway visual range.

**IRWR** IR warning receiver.

**IS** 1 Institut für Segelforschung (G).

2 Implementation staff.

**ISA** 1 *International standard atmosphere*.

2 International Stewardess, Hostess and Airliner Association, now ISAA (2).

3 Instrument Society of America [office, Pittsburgh, PA] (US)..

4 Instruction set architecture.

5 Inter-service agencies.

6 Industry standard architecture.

7 Integrated servoactuator.

**ISA+21** International Society of Women Airline Pilots [ISA, international social affiliation].

**ISAA** 1 Israel Society of Aeronautics & Astronautics [61028 Tel Aviv] (Israel).

2 International Steward/ess & Airliner Association.

**ISA/AMPE** Inter-service agencies/automated message processing exchange.

**ISABE** International Society for Air-Breathing Engines.

**ISAC** Institute of Space and Aeronautical Science (J).

**ISADS** 1 Integrated strapdown air-data system.

2 Integrated sensor[s] and display system.

**ISAE** International Society of Airbreathing Engineers.

**ISAF** International Security Assistance Force [NATO-led].

**IsAF** Israeli air force [UK usage].

**ISAG** International Simulation Advisory Group.

**ISAHRS** Improved standard AHRS.

**ISAL** Inverse synthetic-aperture lidar (or ladar).

**isallobar** Line joining all places where, over given period (typically 3 h), barometric pressure at surface changes by same amount.

**ISAMP** International Society of Aviation Maintenance Professionals (1996).

**ISAN** Integrity of satellite navigation (G, research programme).

**IS&S** Integrated systems and solutions, merger of command and control intelligence and data fusion (DoD).

**ISAR** 1 Inverse synthetic-aperture radar.

2 Integrated, or intelligence, surveillance and reconnaissance; C adds cell.

**ISAS** 1 Institute of Space and Aeronautical Science (India).

2 Institute of Space and Aeronautical Science (J).

**ISASI** International Society of Air Safety Investigators [office, Sterling VA 20164-4421] (Int.).

**ISA-SL** ISA (1) at sea level.

**ISAT** 1 Integrated site acceptance test.

- 2 Innovative space-based radar antenna technology.
- Isatis** Integrated system for ATIS (1 or 2) (F).
- ISAW** International Society of Aviation Writers.
- ISB** Inspection Service Bulletin.
- ISB, isb** Independent sideband.
- ISBA** Inertial-sensor-based avionics.
- IS-BAO** International standard[s] for business aviation, or aircraft, operations (IBAC).
- ISC** 1 Integrated semiconductor circuit.  
2 Instrumentation system[s] coupler.  
3 Intercom set control.  
4 Integrated systems controller.  
5 Industry Steering Committee (Int.).
- ISCA** International Steering Committee for Consumer Affairs.
- ISCC, ISC<sup>2</sup>** Integrated space command and control.
- ISCS** Integrated sensor control system.
- ISD** 1 In-service, or initial service, date.  
2 Interim situation display (FAA).  
3 Integrated systems development.  
4 Integrated self-defence.
- ISDN** Integrated services digital [or data] network.
- ISDOS** Information system design and optimization system.
- ISDR** International Strategy for Disaster Reduction.
- ISDS** 1 Image switching and distribution system.  
2 IRCM, or improved, self-defence system.
- ISDU** Inertial system display unit.
- IS/DX** Integrated services, digital exchanges.
- ISE** 1 Interconnected stabilizer/elevator.  
2 Intelligent synthesis environment.  
3 In-service evaluation.
- ISEE** International Sun/Earth Explorer.
- ISEI** Improved-specific emitter identification.
- Iseman rivet** Hollow blind rivet set by driving drift pin from manufactured-head end.
- isenergetic** Without change in total energy per unit mass of fluid (in bulk or along a streamline).
- isentropic** Without change in entropy (usually along streamline, with respect to time).
- ISF** 1 Industrial space facility, two modules, one remaining in space and the other shuttling raw materials and completed products.  
2 Integrated support facility.
- ISFI** Internally staged fuel injector.
- ISG** 1 Inflatable survival gear (esp. liferafts, escape slides).  
2 Internal, or integrated, starter/generator.
- ISH** Intermediate system hello.
- ISHM** Internal Security and Hazardous Materials office (FAA).
- ISI** 1 Institute for Scientific Information (international corporation, Philadelphia).  
2 International sale indicator (IATA).
- ISIP** Information systems improvement program.
- ISIS** 1 Integrated spar inspection system.  
2 Integrated strike and interception system.  
3 Integrated standby instrument system.  
4 International satellites for ionospheric studies.
- ISISP** Initial single integrated space picture, to provide COP to CAOC (USAF).
- ISIT** Intensified silicon intensified target [*sic*].
- ISJTA** Intensive student jet training area (US armed forces).
- ISL** Inactive-status list.
- island** 1 Enclosed area on 2-D graph or plot.  
2 Superstructure above aircraft-carrier deck.
- ISLN** Isolation.
- ISLS** Interrogation, or interrogator, side-lobe suppression.
- ISM** 1 Institut Suisse de Météorologie (Switzerland).  
2 Internationale Segelflugzeugmesse (G).  
3 Inflatable space module.
- ISMLS** Interim-standard MLS.
- ISN** Inter-simulator network.
- ISNS** International satellite-navigation system (FAA).
- ISO** 1 International Organization for Standardization. [Numerous aerospace documents, eg ISO 9000, International standards for quality; ISO. 9002, 19-part qualification of companies engaged in aerospace logistics, maintenance and training; office, CH-1211 Geneva] (Int.).  
2 Also **iso**, isolation, isolated.
- iso** Prefix, equal.
- isobar** 1 Line on map or chart joining points of equal atmospheric pressure, usually reduced to MSL by ISA law.  
2 Line on tunnel model or free-flight vehicle joining points of equal aerodynamic (surface stagnation) pressure.
- isobaric range** Band of flight altitudes over which cabin pressure can be held constant.
- isobar sweep** Angle between transverse axis and local direction of isobar (2).
- isocentre** Intersection of interior bisector of camera tilt angle with film plane.
- isochoric** Without change in volume.
- isochrone** Line joining points of equal time difference in reception of radio signals.
- isocline, isoclinic line** Line joining points of equal magnetic dip.
- isoclinic wing** One maintaining constant angle of incidence while flexing under load.
- isocountour** On weather radar = contour.
- isodoppler contour** Joins all points of equal Doppler velocity.
- isodynamic line** Line joining points of equal horizontal magnetic field intensity.
- iso-echo** Radar display mode in which cloud turbulence centres appear dark or coloured, width of surround indicating rain/turbulence gradient; also called contour mode.
- isogonal, isogonic line** Line joining points of equal magnetic declination (variation).
- isogram** See *isopleth* (also specif. line joining places where meteorology event has same frequency of occurrence).
- isogrid** Pattern of reinforcing webs stiffening thin sheet (machined, chem-milled etc), usually based on equilateral or isosceles triangles.
- isgriv** Line joining points of equal angular difference between grid and magnetic north (grid magnetic angle).
- isohyet** Line joining places of equal rainfall.
- Isolane** PU/AP + al (F).
- isolated drag** Drag of a body considered in isolation; thus \* of a jet-engine pod may be significantly less than its drag when hung on the aircraft.
- ISOL[D]** Isolated.
- isolux** Line joining points of equal light intensity.

**isomers** Compounds having same chemical formula but different structure.

**isometric** Drawing projection in which verticals are vertical, other two axes are equally inclined, and distances along all three axes are correct.

**isometric switch** Governs lock-on to aerial radar target.

**iso-octane** Hydrocarbon of paraffin series used as reference index for anti-knock ratings, normally C<sub>8</sub>H<sub>18</sub>.

**iso-opinion charts** Graphic attempts to portray general consensus of pilot evaluations, eg plotting undamped natural frequency against short-period damping.

**ISO-PA** ISO(1) protocol architecture.

**isopleth** Line joining points of a constant value of a variable with respect to space or time.

**isopod** Patented multi-mode packaging system.

**iso-propyl nitrate** Monopropellant for rockets and fuel for starters.

**isopycnic** Of unchanging density, or of equal densities, with respect to space or time.

**ISOR** Initial statement of requirements.

**ISOS** Inertially stabilized optronic sensor.

**isoshear** Joins places of equal wind shear.

**isostatic** Under equal pressure from all sides.

**isotach** Line joining points of equal wind speed, irrespective of direction.

**isotherm** Line joining points of equal temperature.

**isothermal** At constant temperature.

**isothermal atmosphere** Hypothetical atmosphere in hydrostatic equilibrium with constant temperature, also called exponential.

**isothermal change** Change of volume-pressure humidity and possibly other variables of perfect gas or gas mixture at constant temperature.

**isothermal forging** Manufacturing a metal part close to finish dimensions by squeezing it as powder in a die, or between dies, under high pressure, both the die and the part being under the same high temperature. See *sintering*.

**isothermal layer** See *stratosphere*.

**isotope** Radioactive form of (normally non-radioactive) element.

**isotope inspection** X-ray using isotope as energy source.

**isotope power** Using isotope radiation as source of heat energy in closed fluid cycle.

**Isotran** Isolator transition, isolates Gunn diode from load mismatches and couples to waveguide and coaxial conductor.

**isotropic** Having same properties in all directions.

**ISP** 1 Interim support plan (FAA).

2 Internet, or Inmarsat, service provider.

3 Integrated switching panel.

**Isp** Specific impulse.

**ISPA** International Society of Parametric Analysts.

**ISPA, Ispa** International Society of Parametric Analysis (Int.).

**Ispan** Integrated strategic planning and analysis network (Stratcom).

**ISQC** Intersound quality-control facility [checks video-cassettes].

**ISR** 1 Initial, or intermediate, Service Release.

2 Intelligence, surveillance, reconnaissance.

3 Integrated signature reduction.

4 Image storage and retrieval.

5 Interrupt[ed] service routine.

**Israc, ISRAC** Intelligence, surveillance and reconnaissance cell (NATO).

**ISRBM** Intelligence, surveillance and reconnaissance battle manager (USAF).

**ISRC** 1 International Search and Rescue Convention.

2 Intelligence, surveillance and reconnaissance cell.

3 Intelligence, surveillance, reconnaissance and communications (USAF).

**ISRO** Indian Space Research Organization (office, Bangalore).

**ISRU** In situ resource utilization [space exploration].

**ISS** 1 Inertial, or integrated, sensor system, or suite.

2 Integrated sensor structure (Darpa).

3 Instrument subsystem.

4 Indonesian Space Society.

5 International Space Station [MCETF adds management and cost evaluation task force] (US + R).

6 Information support system (ATC).

7 Integrated Satellite System.

8 Imaging science subsystem [planetary].

9 Integrated surveillance, or sensor, system.

**ISSC** Integrated system support contract.

**ISSI** International Space Science Institute (Berne).

**ISSM** Institute of Safety and Systems Management, (U of S California, Pasadena).

**ISSN** Intermediate system subnetwork.

**ISSR** Independent secondary surveillance radar.

**ISST** ICBM silo superhardening technology.

**IST** Institute for Simulation and Training (University of Central Florida).

**Istar** 1 Integrated system test of an air-breathing rocket (NASA).

2 Intelligence, surveillance, target acquisition and reconnaissance.

**ISTAT** International Society of Transport Aircraft Traders/Trading [office, Arlington, VA].

**ISTD** Integrated space-technology demonstration (USAF).

**ISTN** Interfacility Satellite Telecommunications Network.

**ISTP** Integrated Space Transportation Plan (NASA).

**ISTR** Integrated systems test rig.

**Istres** Location of chief French Government flight-test establishment, the Centre des Essais en Vol (CEV), whose other locations are at Brétigny and Cazaux.

**ISTS** Integrated space transport system.

**ISU** 1 Intelligent, or inertial, or integrated, sensor unit.

2 Ignition servo unit.

3 Initial signal unit.

4 Intercommunication set [control] unit.

5 International Space University [F-67400 Illkirch] (F).

6 Information switching unit.

**ISURSS** Interim small unit remote sensing system[s].

**ISV** 1 Intensified silicon target vidicon.

2 In-seat video [TV screen].

**ISVR** Institute of Sound and Vibration Research (Southampton, UK).

**ISWL** Isolated single-wheel load.

**IT** 1 Inclusive tour.

2 Information technology.

3 Interactive touchscreen.

4 Integral terminal, an HMI.

5 Independently targetable.

**I<sub>T</sub>** Total impulse.

- ITA** 1 Institut du Transport Aérien [office, F-75008 Paris] (Int.).  
 2 Instituto Tecnológico de Aeronautica (Brazil).  
 3 International trade in arms/armaments.
- I<sub>TA</sub>** Motor specific impulse.
- ITAA** 1 Inspection Technique de l'Armée de l'Air (F).  
 2 Information Technology Association of America.
- ITAC** 1 Integrated tactical-aircraft control.  
 2 Intelligence and Threat Analysis Center (USA).
- ITACS** Integrated tactical air control system (USAF).
- ITALD** Improved theater [or tactical] air-launched decoy.
- ITAM** Institute for Theoretical and Applied Magnetics (R).
- IT&E** Integrated test and evaluation.
- ITAP** Interim track analysis program (US).
- ITAR** 1 International traffic[king] in Arms Regulations.  
 2 Integrated terrain access and retrieval system.
- Itars** Integrated terrain access and retrieval system.
- ITAS** 1 Improved tracking adjunct system.  
 2 Integrated tactical avionics system.  
 3 Integrated tower/approach system.  
 4 Improved target-acquisition system.
- ITAV** Ispettorato Telecomunicazioni e Assistenza al Volo (I).
- ITB** 1 Integrated testbed.  
 2 Inter-turbine burner.
- I<sub>TB</sub>** Burn time impulse.
- ITC** 1 Inclusive-tour charter.  
 2 Investment tax credit.
- ITCI** Interhost through check-in.
- ITCM** Integrated tactical countermeasures (USA, USAF).
- ITCS** 1 Integrated track and control system for RPV.  
 2 Integrated target control system.  
 3 IR telescope camera system.
- ITCZ** Inter-tropical convergence zone (see *inter-tropical front*).
- ITD** 1 Interactive-touchscreen display.  
 2 Integrated technology demonstrator.
- ITE** 1 Integral throat entrance.  
 2 Involute throat and exit [rocket nozzle].  
 3 Integrated test environment.  
 4 Impact to egress [time spent on planetary surface].
- ITEA** 1 Integrated Test, Evaluation and Acceptance.  
 2 International Test & Evaluation Association [office, Fairfax, VA22033] (Int.).
- ITEC** 1 Involute throat and exit cone (rocket).  
 2 Interoperability through European co-operation (Int.).
- ITEM** Integrated test and maintenance system.
- Items** Integrated turbine-engine monitoring system.
- ITER** Improved triple ejector rack.
- ITF** 1 Inter-tropical front.  
 2 Intelligence task force (US).  
 3 International Transport Workers Federation [125 countries, office London SE1 1DS] (Int.).  
 4 Integrated test facility.
- ITGS** Integrated track guidance system.
- ITM** 1 Information technology management, ground-based ADMS/EDMS.  
 2 Institute of Travel Managers in Industry & Commerce [office, Stamford, Lincs.] (UK).  
 3 Impact trajectory maneuver.  
 4 Inventory technical management.  
 5 Institute of Transport Management (UK).
- ITMS** Ion-trap mobility spectrometry.
- ITO** 1 Independent test organization (software V&V).  
 2 Indium-tin oxide.  
 3 Instrument takeoff.
- ITOC** Integrated tasking and operations centre.
- ITOD** International technical order digitization.
- ITOS** Improved Tiros operational system.
- ITP** 1 Instruction [or intention] to proceed (UK).  
 2 Initial technical proposal (US).  
 3 Invitation to propose.  
 4 Intent[ion] to purchase.  
 5 In-trail procedure.
- ITPR** IR temperature-profile radiometer.
- ITPS** International Test Pilots' School (UK).
- ITR** Integrated-technology rotor (USA).
- ITRR** Imaging-time resolved receiver.
- ITS** 1 Initial Training Squadron (rarely, school) (RAF).  
 2 Integrated test, trajectory or tower, system.  
 3 Integrated targeting system [2009-] (RAF).
- ITSE** Integrated test and support environment.
- ITSO** Integrated training suite operations.
- ITSS** Integrated tactical surveillance system (USN).
- ITT** 1 Inter-stage turbine temperature.  
 2 Invitation to tender.  
 3 Innovation and technology transfer.  
 4 Institute of Travel and Tourism (UK).
- ITTCC** International Telegraph & Telephone Consultative Committee.
- ITTS** 1 Instrumentation targets and threat simulations.  
 2 Integrated tower and terminal system.
- IT21** Info technology for 21st Century.
- ITU** International Telecommunications Union (formed as I Telegraph U in 1865).
- IT-UAV** IT (1) for UAVs.
- ITV** 1 Instrument test vehicle.  
 2 Inert test vehicle.  
 3 Inclination to vertical (parachute).  
 4 Idling throttle valve.  
 5 Independently targeted vehicle.
- ITW** Initial Training Wing (RAF).
- ITWL** Instytut Techniczny Wojsk Lotniczych [air force institute of technology] (Poland).
- ITWS** Integrated terminal weather system (US, under development).
- ITX** Inclusive-tour excursion.
- IU** Input, or interface, or instrument[s], unit.
- IUAI** International Union of Aviation Insurers [office London EC3R 8DT] (Int.).
- IUCP** Interface unit control panel.
- IUE** International UV Explorer.
- IUKAdge** Improved UK Air Defence Ground Environment.
- IUMS** Integrated utilities management system.
- IUOTO** International Union of Tourist Organizations.
- IUPS** Internal uninterruptible power supply.
- IUS** Inertial upper stage.
- IUT** Instructor under training (US).
- IV** 1 Isolation valve.  
 2 Interactive voice [M adds module, R response].  
 3 Inverted-vee piston engine.  
 4 Intelligent vehicle.

**I/V** Instrument/visual controlled airspace.

**IVA** 1 Input video amplifier.

2 Istituto del Valore Aeronautico (I).

3 Ingeniorsvetenskapsakademien [Stockholm], (Sweden).

**Invadize** Patented process of ion-vapour deposition of aluminium on steel.

**IV&V** Independent verification and validation (software).

**IVD** 1 Interactive video disk.

2 Integrated voice and data; M adds modem, N network.

**IVDU** Intelligent visual display unit.

**IVH** Integrated vehicle health [M adds management, MS monitoring, or management, system].

**IVI** Interchangeable virtual instrumentation (sets software standards).

**IVKDF** Institut von Kármán de Dynamique des Fluides (Int., also called VKIFD).

**IVMMS** Integrated vehicle mission-management system.

**IVMS** Integrated vehicle management system.

**IVR** Instrumented visual range.

**IVRI** Intelligent vehicle research initiative (NASA).

**IVRS** Interim voice-response system.

**IVS** 1 Intelligent vehicle system.

2 Interactive video system.

**IVSC** Integrated vehicle support, or subsystem, control[s], or controller.

**IVSI** Instantaneous VSI.

**IVSN** Initial voice-switched network (NATO).

**IVV** Instantaneous vertical velocity.

**IW** 1 Individual weapon.

2 Imminent warning (UK, WW2).

3 Information warfare [also InfoWar], D adds defense [UK = defence], O offensive, or officer.

4 Integrated Wing, ATVP adds advanced-technology verification programme (UK 2004-).

**I<sub>w</sub>** Moment of inertia of rotating wheel or disc.

**IWAAS** Initial wide-area augmentation system.

**IWAC** Integrated weapon-aiming computer.

**IWASM** International Women's Air and Space Museum (Cleveland, OH).

**IWBP** Independent wide-band repeater.

**IWC** Integrated weapon complex.

**IW/EW** Information warfare and electronic warfare.

**IWFN** Inhibited white fuming nitric; A adds acid.

**IWG** Internet Working Group.

**IWG-BAO** Industry Working Group on Business Aircraft Operations (DoT).

**IWI** Interceptor weapons instructor.

**IWIDS** Integrated weather information display system.

**IWIU** Integrated weapons interface unit.

**IWM** 1 Imperial War Museum (London, UK).

2 Institution of Works Managers (UK).

**I-W/M** Index of warnings and malfunctions.

**IWR** Instrument weather rating, proposed by JAA to replace UK's IMC.

**IWS** Integrated weapons system.

**I<sub>x</sub>** Moment of inertia about the X-axis.

**I<sub>y</sub>** Moment of inertia about the Y-axis.

**IYQS** International Years of the Quiet Sun.

**I<sub>z</sub>** Moment of inertia about the Z-axis.

**I<sub>ζ</sub>** Helicopter blade moment of inertia about the lagging hinge.

**Izlid** IR zoom laser illuminator/designator.

**Izod** Standard test for impact strength of notched specimen subjected to transverse blow[s] of known energy.

**IZS** Satellite (R).

# J

- J** 1 Turbojet (US military engine designation).  
 2 Jet route in Class-A airspace (civil airways).  
 3 Joule[s].  
 4 General EM signal power.  
 5 RPV direction aircraft (DoD aircraft designation prefix).  
 6 Special test, temporary (DoD aircraft designation prefix).  
 7 Polar moment of inertia; also inertia matrix.  
 8 Aircraft category, transport (1926–31), utility (1931–55) (USN).  
 9 Life jackets.  
 10 Current density.  
 11 Propeller advance/diameter ratio.  
 12 Torsion constant units = length<sup>4</sup>.  
 13 Cost function [for italic *J*].  
 14 Bessel function of first kind.
- j** 1 Mass flux (gaseous diffusion).  
 2 Square root of minus 1.  
 3 Usually as subscript, fully expanded jet.  
 4 Operator, 90° (electrical).
- J2** Diesel fuel (G, WW2).
- J3E** Single-sideband suppressed-carrier mode, ie HF SSB.
- J9** Joint Experimental Directorate (USA).
- J-band** EM radiation 30–15 mm, 10–20 GHz.
- J-curves** Atmospheric post-stall manoeuvres by thrust-vectoring aircraft [X-31].
- J-dinghy** Circular, for crew of 6 (RAF, WW2).
- J-display** Time base is ring near edge of display, echo blip position varies with range; main use radar altimeters.
- J-nose** Fixed leading-edge structure.
- J-turn** Cobra followed immediately by rapid [30°–40°/s] yaw to reverse direction of flight.
- JA** Judge-advocate.
- JAA** 1 Japan Aeronautic Association.  
 2 Joint Aviation Authorities [2000–, office at 2130 KA Hoofddorp, Netherlands] (EAAC, Int.).
- JAAA** Japan Ag-Aviation Association.
- JAATT** Joint air attack team tactics (outcome of Jaws [1]); hence JAAT.
- Jabo** Fighter-bomber (G).
- JaboG** Fighter-bomber wing (NATO, Luftwaffe).
- JAC** 1 Joint airworthiness code (AICMA).  
 2 Junta de Aeronautica Civil (Chile).  
 3 Joint Air Component [HQ adds headquarters] (UK).
- JACIS** 1 Japan Association of Air Cargo Information Systems.  
 2 Joint applications command information system (multiservice, UK).
- jack** 1 Powered linear actuator.  
 2 Jack box.
- jack box** Socket for plugging in communications headset. Except in light aircraft, probably enables any crew member or ground crew to access intercom.
- jack pad** Strong plate, usually square, distributing support of lifting jack into surrounding airframe.
- jackscREW** Screwthread converting rotary power to linear (jack) output, usually irreversible (see *ball* \*).
- jack stall** Aerodynamic load on the surface overcomes force applied by powered flight-control unit.
- jackstay** Hinged strut for bracing cowl or other large panel when in open position.
- JACMAS** Joint Approach Control Meteorological Advisory Service.
- Jacobs-Relf** Original equations for calculation of  $M_{crit}$  and related  $C_p$ .
- Jacola** Joint Airports Committee Of Local Authorities (UK).
- JACTS** Joint Air Combat Training Squadron (USAF/USN).
- JAE** Judge Advocate-General Executive Office (USAF, Pentagon).
- JAEA** Japan Aerospace Exploration Agency.
- JAF** Royal Jordanian air force [UK usage].
- JAFE** Joint advanced fighter engine (US).
- Jafna** Joint Air Force/NASA (US).
- Jafü** Jagdführer, fighter leader (G, WW2).
- JAG** Judge-Advocate-General.
- Jagd** Hunt (G), hence Jagdflieger [fighter pilot], Jagdflugzeug [fighter], Jagdgeschwader [fighter group (US = wing)], Jagdgruppe [fighter wing (US = group)].
- Jago, JAGO** Joint air/ground operations [G adds Group, S School, at Nellis] (USAF).
- Jaguar** Joint air/ground operations unified adaptive replanning [or preplanning] (USAF).
- JAIC** Japanese Aircraft Industry Council.
- JAIST** Japan[ese] Advanced Institute of Science & Technology.
- JALS** JAA-ATPL integrated learning system.
- jam** Obliterate hostile EM transmission (esp. radar) by powerful emission on same wavelength(s).
- Jamac** Joint aeronautical materials activity (USAF).
- James** Air-damped pendulum driving deceleration (g) pointer carried in braked truck to give friction measure on runway (see *JBD, JBI*).
- jammer** High-power emitter to jam specific wavelengths.
- jammer support receiver** Automatically scans through programmed range of frequencies of interest.
- jamming** 1 Noise \* obliterates by sheer power.  
 2 Deception \* attempts to mislead enemy by causing false indications on his equipment.
- jam nut** Thin lock-nut.
- JAMSCE** Joint Advanced Materials and Structures Center of Excellence (FAA).
- Janap, JANAP** Joint Army, Navy, Air Force Publication (US).
- Janet flights** Contractor flights bringing staff to classified Nellis/Tonopah sites.
- Janis, janis** Joint Army/Navy intelligence studies (US).
- jankers** Punishment, confined to camp (RAF, colloq.).
- JAN-TX** Joint Army-Navy technical documentation (US).
- Janus system** Doppler radar technique in which frequency shift is measured as difference between beams to front and rear.
- JAOC** Joint Aerospace Operations Center (USAF).

**JAOPA** Jamaica Aviators, Operators and Pilots' Association.

**japanning** Coating with enamel.

**JAPCC** Joint Airpower Competence Centre [D-47546 Germany] (NATO).

**JAPHAR, Japhar** Joint airbreathing propulsion for hypersonic applications research.

**JAPNMS** Jtids air-platform network management system (RAF).

**JAR** Joint Aviation Requirement[s] [eg Pt 23 light aircraft, 25 based on FAR-25 + national variants, 66 training for maintenance engineers, 145 approval for maintenance organizations; – AWO adds all-weather operations, E Europe, FCL flight-crew licensing, OPS aircraft operation, VLA very light aircraft] (EC).

**jaric, JARIC** Joint Air Reconnaissance [&] Intelligence Centre [now part of DGIIA, at RAF Brampton] (UK).

**JART** Joint assessment and ranking team.

**JAS** 1 Joint Airmiss Section, now Airprox (UK, civil/military).

2 Fighter, attack, reconnaissance (Sweden).

**JASA** Joint airborne, or avionics, Sigint architecture.

**JASC** Joint Airmiss Steering Committee [ECAC].

**JASDF** Japanese Air Self-Defence Force = air force.

**JASIF** Joint airborne signal intelligence family.

**JASM** Joint air-to-surface missile.

**Jasmad** Joint AirSpace Management and Deconfliction (USAF).

**Jasman, JASMAN** Joint aircraft survivability to Manpads.

**JASO** Joint Air-Support Organization (UK).

**Jaspo** Joint Aircraft-Survivability Program Office (US).

**JASS** 1 Joint Anti-Submarine School (UK).

2 Joint airborne Sigint system.

**JASSM** Joint air-to-surface standoff missile (US).

**JAST** Joint advanced strike technology.

**JASU** Jet aircraft start[ing] unit (US).

**JAT** Joint affordability team (DoD).

**JATCC** Joint air-traffic control centre (UK).

**JATCCCS** Joint advanced tactical command control/com system (US tri-service).

**JATCRU** Joint Air Traffic Control Radar Unit (UK).

**JATE** Joint Air Transport Establishment (UK).

**JATEU** Joint Air Transport Evaluation Unit (RAF Brize Norton).

**Jato** Jet (ie, rocket) assisted takeoff.

**Jats, JATS** 1 Jamming analysis and transmission selection (ECM).

2 Joint Air Traffic Services.

**Jaumann absorber** Multilayer RAM (2) absorber consisting of sandwich of Salisbury screens graded from high resistivity at front to low resistivity at back.

**JAWG** Joint Airprox [previously Airmiss] Working Group (ICAO and UK NATS).

**Jaws** 1 Joint attack weapon systems (fixed and rotary-weapon against armour hostile to USA).

2 Jamming and warning system (ECM).

3 Joint airport weather studies.

**JAXA** Japan[ese] Aerospace Exploration Agency (from October 2003, incorporates ISAS, Nasda).

**Jazz Rock** Joint Survival System/Regional Operational Control Center (Adcom).

**JB** 1 Jet-propelled bomb category (USAAF, WW2).

2 Jet barrier.

**J-bar** Jet runway barrier (FAA).

**JBC** Joint C4ISR Battle Center (US).

**JBCSA** The Joint British Committees for Stress Analysis.

**JBD** 1 James brake decelerometer.

2 Jet blast deflector.

**JBF** Joint Blue Force; SA adds situational awareness.

**JBG** JagtBombergeschwader [also Jabog] (G).

**JBI** James brake index.

**JBMC2** Joint battle management, command and control (US).

**JBPDS** Joint biological point detection system.

**JCA** Joint Combat Aircraft [=F-35 JSF] (RAF).

**JCAB** Japanese Civil Aviation Bureau.

**JCAP** Joint Committee on Aviation Pathology.

**JCAS** Joint close air support.

**JCASR** Joint Committee on Avionics Systems Research.

**J-catch** Joint countering attack helicopters (US programme against hostile battlefield helicopters).

**JCC** Jorn Control, or Co-ordination, Centre.

**JCCDC** Joint CCD(4) Center.

**JCDP** Joint conceptual definition phase.

**JCEWS** Joint combat electronic-warfare system.

**JCIDS** Joint capabilities integration and development system.

**JCIT** Joint combat information terminal (USA).

**JCM** Joint Common Missile; P adds Program (US, could involve UK).

**JCMPO** Joint Cruise Missiles Project Office (USAF/USN).

**JCMT** Joint collection management tools.

**JCO** Joint co-ordination order.

**JCOA** Joint Center for Operational Analysis (US).

**JCP** Joint Certification Procedures [WG adds Working Group] (JAA).

**JCR** (Not JRC) Joint Research Centre of EC7 based in Ispra and co-ordinating some 50 laboratories on remote sensing and related problems.

**JCS** 1 Joint Chiefs of Staff (US).

2 Jet-capable ship.

**JCU** Joint common user.

**JDA** 1 Japan Defence Agency.

2 Joint Deployment Agency.

**JDAM** Joint direct-attack munition (US).

**JDCC** Joint Doctrine and Concept Centre (UK).

**JDCU** Jamming detection control unit.

**JDI** Just do it.

**JDP** 1 Joint defensive planner (USAF).

2 Joint definition phase.

**JDRADM** Joint dual-role air-dominance missile.

**JEA** Joint endeavour agreement.

**JEC** Joint Economic Committee (US Congress).

**JECCS** Joint enhanced core communications system (USMC).

**JEDEC** Joint experimental (sometimes engineering) development of electronic components.

**Jedmix** Joint engineering data-management information and control system.

**Jeep** Escort carrier or CVE (WW2).

**JEF** Joint Expeditionary Force[s]; E adds experiment, X exercise, but [2002] also means experiment (USAF + others).

**JEFS** Joint Elementary Flying School (UK).

**JEFTS** Joint Elementary Flying Training School (RAF Barkston Heath, since 2003 called DEFTS).

**JEM** 1 Jet-effects model.

2 JTRS enhanced MBITR.

**jempers** JEMPRS (colloq.).

**JEMPRS** Joint en-route mission planning rehearsal system [typically 10 laptops, Ethernet network and palletized EMS terminal] (US DoD).

**Jemtos** Jet-engine maintenance task-oriented system.

**JENA** Jet-engine neural analyser.

**Jengo** Junior engineering officer (RAF).

**Jenisys** Joint-effects network-integrated system solution.

**JEPES** Joint engineer planning and execution system.

**Jeppesen** Widely used commercially-sold database of airway and airport charts and electronic information, named for Ebroy Jeppesen, whose 1926–40 notes formed basis.

**jerk** Rate of change of acceleration,  $V$  (esp. in ECM target or input motion).

**jerk offload** Extraction of large unit load from airlifter by sudden pull through ramp door (by parachute, ground extraction system etc).

**Jesus nut** Holds main rotor to rotor shaft on helicopter or, especially, light autogyro.

**JET** 1 Joint estimate team.

2 Joint experimental toolkit.

**jet** 1 High-velocity gas flow discharged from nozzle (eg from \* 2 or from open-\* wind tunnel).

2 Turbojet engine (loosely, turbofan).

3 Aircraft powered by 2 (loosely, also by rocket).

4 Calibrated orifice(s) in carburettor.

5 To travel by 3.

**Jet A** Turbine kerosene similar to JP-5; freezes about  $-40^{\circ}\text{C}$ ; available US only.

**Jet A-1** Turbine kerosene; freezes below  $-50^{\circ}\text{C}$ , flash above  $37.8^{\circ}\text{C}$ ; standard commercial fuel.

**jet advisory area** Specific regions along jet routes extending 14 nm each side of route segment from FL240–410 (radar) or FL270–310 + FL370–410 (non-radar).

**jet advisory service** That offered to certain civil jets in jet advisory areas; IFR separation or (in radar areas) other facilities (FAA).

**jet age** Loosely, era in which jet (3) aircraft became dominant.

**JFTL** Joint Future Theater Lift [USA-USAF].

**jetavator** See *jetevator*.

**Jet B** Wide-range distillate fuel similar to JP-4; freezes below  $-60^{\circ}\text{C}$ , vapour pressure 2–3 lb/sq in.

**jet blast** Disturbance caused by ground running jet engine, hence need for blast fence.

**JETDS** Joint electronics type designation system (NATO).

**jet-edge shear** Rate of change of velocity per unit radial distance at outer boundary of jet (1), including on large scale the velocity profile at edge of atmospheric jetstream.

**jet engine** Any propulsion system whose reaction is generated by a jet (1), thus a turbofan, turbojet or ramjet. Generally used to mean air-breathing, esp. turbofan/turbojet, and thus arguably not a rocket, and certainly not applied to space thrusters of ES, ion, plasma and similar types.

**jetevator** Small power-actuated flap, spoiler or ring on skirt or nozzle exit or rocket for TVC.

**jet flap** Flap through which passes high-energy gas or air flow, discharged along trailing edge.

**jet-fuel starter** Main-engine starter burning main-engine fuel.

**Jethete** Proprietary refractory sheet metal (high-nickel).

**Jeti** 1 Jet-engine test instrumentation.

2 Joint European Technology Initiative (Int.).

**jet-impingement stagnation pressure** That which would be achieved if a high-velocity jet were to be brought precisely to rest on a fixed surface.

**jet lag** Mild temporary symptoms produced in human beings by fast travel through large meridian difference, ie through five or more time zones.

**jet lift** Using jet-engine thrust to support V/STOL aircraft.

**jet noise** To a first approximation, the noise caused by interaction at the edge of a propulsive jet (from a jet engine or propeller) is proportional to the eighth power of the relative velocity. See *noise*.

**jetpipe** Pipe carrying hot gas from engine core [in a turbojet, turboshaft or turboprop, from whole engine] to propulsive nozzle.

**jet propulsion** Aircraft propulsion by jet engine(s).

**jet route** High-altitude route system for aircraft with high-altitude nav aids, normally extending from 18,000 ft AMSL to FL450 (FAA).

**JETS** Joint effects targeting system.

**jet sheet** High-velocity fluid flow of essentially two-dimensional nature.

**jet shoes** Astronaut shoes for weightless walking.

**jetstream** Quasi-horizontal wind exceeding 80 kt (148 km/hr) in warm air at sharp boundary with cold, high troposphere or stratosphere, mid latitudes, predominantly westerly.

**jet tab** See *jetevator*.

**jetfission** Discard fuel, canopy, external stores or other mass to reduce weight or remove a hazard; hence \* pipe(s), \* pump(s), \* handle or switch.

**Jetts, JETTS** Joint effects tactical targeting system, a software-driven  $C^2$  tool for managing defensive systems and sensor platforms (UK).

**jet vane** See *jetevator*.

**jet velocity** In turbojet or turbofan core, proportional to square root of absolute temperature. In rocket, proportional to square root of absolute temperature divided by mean molecular weight of jet.

**jetway** See *bridge*.

**JEWC** Joint Electronic Warfare Center (US).

**Jezebel** Passive acoustic ASW search system (see *Julie*) (US).

**JFAC** Joint Force[s] Air Component; C adds Commander (US).

**J-Fact-SU, JFACTSU** Joint FAC Training and Standardization [in 2007 changed to Support] Unit (RAF Leeming, UK).

**JFASCC** JFACC plus space (US).

**JFC** 1 Jet fuel control.

2 Joint Force, or Field, Commander.

**JFCC** Joint Functional Component Command[s] (Stratcom).

**JFCOM** Joint Forces Command (US).

**JFDP** Joint force development process, broad initiative at inter-service co-operation (US).

**JFET** Junction field-effect transistor.

**JFHQ** Joint Forces HQ.

**JFI** Joint fires initiative.

**JFIT** Joint fires integration and interoperability team (US).

**JFL** Joint Futures Laboratory (JFC2).

**JFN** 1 Joint fires network [forest-fire mission planning].  
2 Joint Forces Network.

**J-FOCSS, J-fox** Joint-force command support system.

**JFS** Jet-fuel starter.

**JFTO** Joint flight-test organization.

**JFTC** Joint Force Training Center (NATO).

**JFTL** Joint Future Theater Lift [USA–USAF].

**JG** 1 Jagdgeschwader, fighter unit equivalent to UK group or US wing (G).  
2 Junior Grade (USN).

**JGr** Jagdgruppe, equivalent to UK wing or US group (G).

**JGSDF** Japanese Ground Self-Defence Force (= army).

**JHC** Joint Helicopter Command [multi-service, 1999–] (UK).

**JHCU** Jamming-head control unit; P adds processor.

**JHL** Joint Heavy Lift, proposed multiservice logistics aircraft (US).

**Jhmcs, JHMCS** Joint helmet-mounted cueing system.

**J-HPSSL** Joint high-power solid-state laser (US multi-Service).

**JHQ** Joint Headquarters.

**JHSU** Joint Helicopter Support Unit (UK).

**JHU** Johns Hopkins University; APL adds Applied Physics Laboratory.

**JI** Joint implementation.

**J<sub>2</sub>** Non-dimensional damped natural frequency [often  $J_1$ ].

**JIAAC** Junta for civil air accidents (Argentina).

**JIADS** Joint integrated air-defense system.

**JIAWG** Joint Integrated [also rendered as Industrial] Avionics Working Group (US).

**JIC** 1 Jet-induced circulation.  
2 Joint industrial company, prime contractor interface in typical collaborative programme with members assigned by all participating nations.  
3 Just in case.  
4 Joint intelligence centre.

**JICF** Jet in cross-flow.

**Jico, JICO** Joint interoperability, or interface, control officer.

**JIEDDO** Joint IED Defeat Organization (DoD).

**JIES** Joint interoperability evaluation system.

**Jifdats** Joint-services in-flight data transmission system (US).

**jig** Hard tooling; any rigid frame in which a part (eg of airframe) is assembled.

**JIGI** Joint-Stars imagery geolocation improvement.

**jigsaw** Multi-lobed rotor forming moving element of wheel brake.

**JILL** Jet-induced lift loss.

**Jimpacs** Joint improved multi-mission payload aerial surveillance, combat-survivable.

**jink** To take sharp avoiding action, eg against AAA fire.

**Jintaccs** Joint interoperability of tactical command and control systems.

**JIO** Joint Intelligence Organisation (Australia).

**JIOC** 1 Joint Information Operations Center (USSC).  
2 Joint Intelligence Operations Center (USA).

**JIP** Joint Interface Program, between different systems or services (US).

**JIRD** Joint initial, or interim, requirements document.

**J/IST** Joint, or JSF, integrated subsystems technology.

**JIT production** Just in time.

**JITS** Joint Integrated Technical Support (MoD/RAF).

**jitter** 1 Transmission of DME pulses with random spacing, to avoid locking-on to another aircraft interrogating same beacon.  
2 ECCM technique in which p.r.f. is made to vary unpredictably.

**jitterbug** Hand-held rotary buffer/polisher.

**jitters** JTRS.

**Jiva, JIVA** Joint intelligence virtual architecture.

**JJPTP** Joint jet-pilot training programme.

**J-Lars, JLARS** Joint-liaison advanced radio system (US civil government).

**JLD** Jet-lag diet.

**J-lens, JLENS** Joint land-attack missile/cruise missile defense elevated netted sensor system.

**JM** JTIDS module[s].

**JMCC** Johnson Missile Control Center (NASA JSC).

**JMCIS** Joint Maritime Command information system (US).

**JMD** Joint manufacturing demonstration.

**JMEM** Joint munitions effectiveness manual (US armed forces).

**JMG** Joint Meteorological Group.

**JMIC** Joint Military Intelligence College (Washington DC).

**JMOD** JSAF(1) Block Modernization Program.

**JMPS, Jumps** 1 Joint mission planning system.  
2 Joint Combat Aircraft mission planning system (UK).

**JMR** Jason microwave radiometer.

**JMRC** Joint mobile relay centre.

**JMSDF** Japanese Maritime Self-Defence Force, = navy.

**JMSNS** Justification of major-system new start.

**JMSPO** Joint Meteorological System Program Office (DoD).

**JMTSS** Joint multichannel trunking and switching system.

**JNC** Jet navigation chart.

**JNI** Java native interface.

**JNLWD** Joint Non-Lethal Weapons Directorate (DoD).

**JNR** Jamming-to-noise ratio.

**JNT** Joint.

**JNWPU** Joint Numerical Weather Prediction Unit (US 1954–).

**JOAC** Junior Officers Air Course (RN).

**Joanna** Joint airborne night navigation and attack.

**JOAP** Joint oil analysis program (USAF).

**job card** Actual piece of card traditionally used to record in handwriting details of maintenance task, part number and other information required in order to provide authority to draw item[s] from stores. Now becoming obsolete.

**Jo-bolt** Patented internally threaded three-part rivet.

**JOC** 1 Joint operations centre.

- 2 Jet orientation course.
- jock, jockey** Combat aircraft pilot (colloq.).
- JOCS, Jocs** Joint operations, or operational, command [and control] system.
- joggle** Small vertical offset along edge of sheet or strip to allow it to overlap adjacent component.
- joggling** Local squeezing of sheet-metal parts to improve abutment of mating surfaces.
- Johanssen block** Super-accurate metal block for reference of various dimensions and surface finishes.
- Johnson noise** RF thermal noise.
- joined wing[s]** *Diamond wing.*
- Joint Aerospace Operations Center** Carried in MC2A-X to control global task force (USAF).
- Joint Aviation Authorities** Regulations adopted by Austria, Belgium, Cyprus, Czech Rep., Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Monaco, Netherlands, Norway, Poland, Portugal, Slovenia, Spain, Sweden, Switzerland and UK.
- jointery** Willing co-operation between armed forces (UK colloq.).
- jointship** Vague buzzword meaning air/land/sea [space?] is all one conflict.
- Joint-Stars** Joint surveillance and target-attack radar system (USAF).
- joint-use restricted area** Restricted area in which, when not in use by using agency (eg USAF), FR or VFR clearance can be given for FAA traffic.
- Joint Weather Impact System** Automatic database supporting MAAP.
- joint-wing** *Diamond wing.*
- Joker** Fuel planning level selected to warn of imminent approach of Bingo.
- JONA** Joint Office of Noise Abatement (DoT/NASA).
- JOP** 1 Junior officer pilot (RAF).  
2 Joint operations picture.
- JOPES** Joint operation[s] planning and execution system.
- JOpsC** Joint Operations Command [being prepared by Joint Forces Command 2003 for major combat and stability operations] (US).
- JORD** Joint Operational Requirements Document.
- JORN, Jorn** Jindalee OTH radar network (Australia).
- Josephson junction** Formed by weakly linking superconductors at below 4°K, offering immense possibilities 0–1,000 GHz.
- JOSS** Joint overseas switchboard (DoD).
- Jostle** Powerful RAF active jammer, 1942–45.
- JOTS** Joint operational tactical system.
- JOTT** Junior officer tactics team (USN).
- joule** SI unit of energy [potential, heat or kinetic],  $J = Nm = Ws = 10^7 \text{erg}$ ; MJ = 0.37251 hp-h.
- Joule constant** Mechanical equivalent of heat, = 4.1858 J/15°C calorie, used in definition of 15° calorie.
- Joule/Kelvin effect** Expansion of gas from high pressure through throttling orifice or porous plug; also called Joule/Thomson effect, see next.
- Joule/Thomson coefficient** Rate of change  $\left(\frac{dT}{dP}\right) H$  where T = temp, P = fluid pressure and H = enthalpy in reversible flow through porous plug.
- Joule/Thomson cooling** Achieved by passing compressed gas through porous plug or small aperture.
- Jovial** A real-time language for embedded computers [replaced by Ada].
- joy** Success, satisfaction; thus “no \*” = it failed to work (RAF).
- joystick** Control column (suggest archaic).
- JP** 1 Jamming pulse.  
2 Jet propulsion/propelled/propellant.
