

Dr. Bill Deagle—The Scariest Interview About . . . Weaponized Weather and Toxic Electronic Plagues

This is a hard hitting interview not available anywhere else.

Dr. Bill Deagle interviewed by Deborah Tavares—October 13, 2011

You will learn about the weaponized weather manipulation programs, biological weapons, micro-toxins, bio-toxins dispersed into the atmosphere and what 85% of the military weapon development programs are. In fact, you will learn much more than this.

Dr. Deagle has numerous scientific and medical credentials, a near photographic memory and an IQ measured over 200.

LISTEN to Dr. Deagle's Interview with Deborah at www.ToxicSky.org

The military weapon systems are turning on us!

You can listen to more of Dr. Deagle and his guests on his radio shows at www.NutriMedical.com (Recent radio shows include Smart Meters with experts worldwide)

Dr. Deagle: This is Dr. Bill Deagle, Md. I graduated from medical school in 1977. I did my research in marine bacteriology and genetics in 1973, finished my Ph.D. research project. My graduate director told me all I had to do was write the thesis because I finished a five year project in five months. I trained under Dr. Robert Brown who was a bioweaponer who worked at Bethesda and also at an institute in Colorado. I can tell you that there are a number of things having worked as a civilian doctor on contract with the U.S. Space Command--Star Wars, in the mid-nineties in Colorado and having a background in bacteriology and genetics exactly what's going on in terms of the material because I took care of pilots flying out of Buckley and Peterson Air Force bases in Colorado that fly the high altitude drones and the robotic drones as well as aircraft that are dumping biotoxins in the air.

Deborah: This is the geo-engineering program we're talking about.

Dr. Deagle: They started doing tests on bacterial dispersions back in the 1920s with biplanes. And they were using bacteria that were real simple ones like ones which would show up orange on an agar plate. We have specific bacteria, without getting into all the specifics, that when they grow they turn orange on the agar plates. You can see in your lab if the airflow is proper and if you're able to kill off the bacteria by flaming the catharst with alcohol. You can pour alcohol on them and then flame them. So then you can have a clean environment when you put these plates out to make sure that you weren't having any dispersions of bacteria in the lab that would screw up your test.

Now, there are basically four types of biotoxins, and most people are aware of a couple of them but not all four. The first biotoxin is bacterial, viral, mycobacterial, fungal, etc. But they're doing testing and they're sending these dispersions out there at low altitude. There are basically three levels of "chemtrails" which are basically chemical and biological and other nano-technological agents that are released into the atmosphere all the way from low atmosphere to high. If you're looking at low atmosphere those are primarily dispersions of biological weapons, chemicals. And they usually have Bacillus (inaudible). Bacillus Fluorescens which fluoresces under a wood lamp so they can actually pick out the material and the bacteria and actually see that was a deposit caused by their chemtrails creating these little spinning fluffy clouds that block the sun and change the albedo of the lower atmosphere so they can induce cloud formation and so on.

The Number One Military Project: They're also looking at dispersion of biological agents. In fact 85 percent of the research of the U.S. military in terms of biological weapons research, 85 percent for the last twenty-five years is not in growing viruses or bacteria, but creating what is called microtoxins under stressful conditions. Microtoxins are used in the battlefield but they also want to use them in Operation Sunshine. They come over with small robotic helicopters that can spray a population and knock them down. It doesn't kill you but it paralyzes you and then they can do whatever they want. They can disorient the population.

They can make you nauseated and vomiting and that stuff. And they can make you so disoriented you can't stand up. So these, that we call psychoactive agents, are biotoxins specifically extracted from fungi. That's the number one project the U.S. military has been working on, not biological agents that get out of control because they realize it will kill their own soldiers and they can also mutate so that even if they "think" they have a vaccine it won't protect them. And they don't have 100 percent verification if even all their biohazard suits don't have holes in them or other problems that happen when you're in the battlefield. So what they've done is they've concentrated on what's called immediate dispersion of biological microtoxins. That's the first layer in biological weapons, bio-research markers to measure the dispersion pattern.

The Second Military Project: The second level of the chemtrail project is what's called weather modification where they put up what's called doping agents that actually create micronuclei. Just like cosmic waves create micronuclei is coronal mass ejections from the sun, solar wind and also what's called gamma burst and background cosmic radiation that varies in the cosmos. So there's a lot of cosmic radiation and there's going to be more rainfall, okay. So they're talking about modifying the weather. And they have a super computer at Boulder at NOAA that takes the data when they do what's called drivers. They insert a driver and it can be thousands of miles away but it affects weather patterns in the jet streams so they can affect the climate and have a weather weapon against other countries. They can create droughts. They can create famine. They can create tremendous weather storms and they can steer weather by creating what's called a trans-dimensional vortex. It's a spiral shaped magnetic flux field that pulls storm cells in toward a spiraling magnetic flux field. They can actually pull them in and create a storm cell and move it like with a joy stick by super heating the ionosphere out in the upper atmosphere. And they have these weapon systems. They're not just ground based like HAARP. They're space based weapons that super heat the ionosphere.

The Third Military Project: The third level that people are not aware of is nanotechnology. They are putting out nanotechnological weapons into the

atmosphere. Those include genetically modified organisms that are nanotechnologically developed nano-organisms that are basically bio-robots.

The Fourth Military Project: The fourth level that people have never heard of before is that they're turning the entire atmosphere into what's called a plasma. And then they put these particular particles like a nanoparticle of barium, thorium and strontium. And every fiftieth atom of thorium by nature is radioactive. They're doing this because they're creating a plasma. And they do the upper atmosphere. They're doing what Edward Teller suggested should be done at 22,000 miles up, but they're doing it in the upper troposphere about 80,000 to 73,000 feet to deflect chromatic injections, to stop a CME (Chromatic Mass Ejection) from knocking out power grids and electronics on the ground.

They are the only chips that are EMP (Electro Magnetic Pulse) proof because tubes are somewhat resistant . . . but not totally. The Russians have known this for decades, so most of the aircraft including their long range bomber jets still use tubes because tubes are relatively EMP resistant, but not totally. The only totally resistant weapon has magnetic microchips are from the Atneil Corporation in Colorado Springs. .

I have all the technical details on it and I have a close to photographic memory and advanced technical training in pretty well every science you can think of. When I talked to the technicians and understood they were way behind production in order to replace all of our jet aircrafts to operating chips, our marine craft, for example, most of our navy, we bought chips on the open market. Most of those chips are made in China. We've also transferred technology to China of what's called scalar harmonically resonant electromagnetic weapons. And the Chinese have these weapons and they've also given them to the Iranians. So they can tune to the specific microchips say in our step down transformers and our battle carrier groups or our missile launch systems, and they can actually shut off the microchips thousands of miles away. So we're idiots thinking we're going to war with China or Iran because they can simply tune out and shut down the daisy chain of all of our microchips.

So what they're trying to do is they want to create a plasma because they can then pump frequency through it. Specifically every tissue in every living organism is called a harmonic capacitor which means there's a specific tunable frequency. Just like an earthquake will take down one building but not the next one because if there are not frequencies within that earthquake that are harmonic with a specific building, the building will not develop what's called giant waves and tear the structure apart. Well the same is true with a living organism. There's a harmonic frequency for every tissue in every organ. And if you create the specific harmonic frequency you can release it in biological molecules and it will destroy certain tissues and can activate certain gene complexes.

They're fully aware of this and they deployed these in Gulf War II. They were called poppers. I asked my contact why they called them poppers and it is because the Republican Guard would pop out of bunkers like they were popcorn, because they would release a fear molecule and hardened Republican Guard murderers were crawling up to the Americans without one shot being fired, begging them to turn it off because it induced such a state of fear. They used them in Fallujah and in Najav so that people who would walk through the middle of a combat zone, like a woman and child, the operational robots, of which there were over 1200 deployed in Gulf War II, would lock onto a target and hit them with a ping for a friend or foe dog tag, and if they didn't have a friend or foe dog tag on they could do an accurate head shot at 2-1/2 miles with either a high caliber weapon or directed energy weapon.

So we're in the 21st century where mind warfare, operational robots, directed energy weapons and turning the plasma of the air literally into frequencies. If you want to kill an entire crop you can . . . because the air has become a plasma you can pump frequencies that can be toxic to a wheat crop, you can pump in frequencies from the sky that can cause changes in behavior or cause bliss to make people unreasonably exuberant, despite the fact that they are in a dangerous situation, and you can make people basically psychologically and physically paralyzed so they can't function.

And if people think oh, no, this is just sci-fi. They can't do it. I could spend hours giving them the technical details of exactly how they can do it. I don't want to because some whack job out there will probably try to do it and turn it into a biological weapon. The government already has plenty and I don't want them to discover what I found thirty years ago.

My background is nuclear physics. I was supposed to go to MIT for nuclear physics. I switched to honor biochemistry. I have a particular talent in math, physics and hard sciences and I believe in numbers. I also have a close to photographic memory and I have the capacity to do things that most people think is a little unusual. If you want to do battle with me in the court, I am fearless but not careless. I'm going to tear you apart and like a wood chipper I can turn you into a mush. My attitude toward the people that try to pretend that this technology is not possible when they have technology that they deployed in Escondido, in Carlsbad, three years ago when they had the pre-elections in 2008 where they could go up to 300 decibels. But if they turn it up to a maximum they could liquefy your liver, cause you to have grand mal seizures or have a cardiac arrest. I don't think they should be deploying these as sound systems.

I don't think they should be deploying active denial systems that can cause terahertz waves to activate the pain receptors in your skin which is the complex I discovered and have patents on the initial pain gate in the skin. I'm the actual discoverer of the pain gate. So I am totally pissed. And anybody who is ignorant enough to think that I'm blowing smoke they need to turn off the radio, turn off the YouTube, walk away and have a quiet suicide and don't bother me anymore. And I do tell people if you're stupid enough to threaten me in any way I will sue you. And if you try to harm me or my family, if you try to come to my home or threaten me, I'm going to make your day. And it's going to be a bad one.

So we're in a bio-struggle for humanity now. This is not a rehearsal. The weapon systems are now turning on us, including the smart grid which is an Agenda 21 program. And I talked to Dr. Olle Johansson from four o'clock to five fifteen Pacific time, October 11th, exactly ten years and one month after 9/11 which was a nuclear demolition. And they repeatedly threatened to arrest me for making

the request for testing that would measure elements like Iron 58, non-radioactive heavy element of iron caused by neutron insertion from a nuclear blast. Other isotopes are slow decaying radio isotope signatures indicating the use of super thermite which they did use, and nuclear weapons as U.S. Army Corps engineer micro nukes are set in a chain of (inaudible) down the central part of the building to turn a third of the mass of the building to an atomic vapor, which by the way super thermite wouldn't do.

So if you can understand just how far down the rabbit hole we are, this is the end game. And the end game is to kill us. This is not to just kind of control us. It's to control us first and then to kill us. Once they have a new financial order they want to have a carbon tax and they want to be able to have the smart grid in place so they can shut off your power and put toxic frequencies through the broadband power network that can destroy your health, destroy your biology, control your mind and eventually terminate you and your family after they've sterilized you. People think this is just a delusion. They're idiots and they're going to die soon and take themselves out of the gene pool. That's the facts!

Deborah: What is the remedy here? What can people do to stop this?

Dr. Deagle: Revolution.

Deborah: What?

Dr. Deagle: Revolution, revolution. The people that are going to occupy Wall Street, including my second oldest son, Steven, who is down there now in a tent in San Diego downtown, is they're not asking for the governor or the chief magistrate or the city mayor or anybody to come up and talk to them. They just want to talk to each other and tell everybody they're sick and tired of this and they're mad as hell like Network (the movie) and they're not going to take it anymore. They're basically at the point now where we're as Jules Celente says moments away from a hot bloody revolution, moments away. We're fed up. And when we see what they're doing to the Greeks and what they want to do with the European sovereign debt and how the world economy is teetering on disaster . . . the Greeks I read this morning in the Wall Street Journal they're still trying to

squeeze them more. And there's no way they're going to come up with enough money to keep the debt solvent . . . the same with Portugal, Spain and Italy. So Europe is toast. America is toast. And it's all by design so they can create a new global economy with one hundred billion dollars a year just to force us into the smart grid and all the other grids they want.

I took care of employees at the Virtual World Project at Colorado Springs Schriever Air Force Base, 300 levels of security of NORAD. I was their doctor. I took care of some employees in the Virtual World Project for six years. And as I say, I have an advanced technical and scientific background in virtually every specialty from multiplexing satellite signals to machine language, software programming to nanotechnology, chemistry, biochemistry, genetics, biology, medicine, pretty well every area in science that you can imagine. I understand and I'm either self-taught in everything from geomagnetism to geology and have an extensive background in every one of these areas to be able to converse with all the specialists, retaining everything that they say and feed them more information to cross correlate between these various diverse specialties that don't talk to each other. I have had a measured IQ of over 200. And I have a bad ass attitude and a personality disorder which does not have reverse gear.

Deborah: We're glad you're on our team, I'll tell you that much right now. And we're on a major . . .

Dr. Deagle: I'm on the dark side like Darth Vader. But I can tell you these people will wish they had the devil after them not Dr. Deagle because I'm not going to back down. When they think they're going to put a smart meter on my house as I told them off, these technicians yesterday and this attorney, Raul Allemandes Smith, I made it very plain, and so did my wife, Michelle, who is another warrior, that we are going to sue their ass if they cut off the power . . . immediately. In fact, I'm going to call right now Mitch Blacher from 10 News who I've been feeding this information for two months on the story. He's gotten every email including the latest one this morning sent to Raul Smith who is senior legal counsel for Sempra Energy San Diego Gas and Electric and they're in deep trouble.

Rather than bullying me they've just pissed me off major. There will be no bullying.

What's going to happen is we've made it very plain. You want to put an "analog" meter that is certified by SDG&E, no problem. You want to put a smart meter, it's not going to be funny. You will not have access to it. You've got to cut the power. You're going to get sued. I'll have an injunction on you and I'll have a lawsuit slapped on you, not in state court but federal court. I've been preparing a lawsuit for the last two and a half months. So we're just about ready to file. I talked to Dr. Olle Johansson. I'm the first individual especially professional in any country in the world willing to file against the federal government, the utilities commission and the utility in federal court.

Deborah: And this will be discussed today on your radio program with Dr. Johansson?

Dr. Deagle: I discussed it yesterday with Ron MacDonald on hour number one. In hour number three we discussed cancer because of the smart meter radiation. These smart meter devices are a very strong inductive of cancer, heart disease, dementia, infertility, mood disorders, violent behavior . . . you name it. These smart meter's scalar radiation electro-toxins induce changes in biology and create free radical damage. And I'm presenting the keynote lecture in Las Vegas in December 2011. I'm speaking on mitochondria and free radicals and specific gene complexes that regulate aging and cancer. I'm presenting the primary lecture on that in Las Vegas to all the doctors in the world.

And next spring (2012) I'm presenting the primary lecture to the Academy of Environmental Medicine on Fukushima and world radiation caused by the Fukushima radiation disaster including (inaudible) the nuclear reactor which I'm an expert on as well because I took care of employees working at the Savannah River Nuclear Plant, the nuclear plant in Central Illinois as a director of the medical (inaudible) clinic and the emergency department, trauma center and burn center. And also was the next down from the commander working at Rocky Flats, the most toxic nuclear waste site in the western world. So I was their doctor. So they're not talking to a minor person here. I'm a fellow who is highly

qualified and experienced and really pissed off about the idea that they're going to dismiss it (smart meter issue) and they said we don't care about the health of your daughter or yourself. We don't care about cutting off your power. We're going to not only cut off your power, we're threatening to sue you and put in jail, Dr. Deagle, for a year. And I'm not happy. I'm not happy.

Deborah: What would you say to people right now that are noticing the consequences of the overhead aerial spraying and there are people now that are becoming frightened?

Dr. Deagle: The air is being converted to a plasma so they can pump scalar frequencies to effect biology.

Deborah: What can people do to stop this?

Dr. Deagle: The primary thing is we have a radiation protection protocol that is for smart meters and toxic radiation. And I have nutraceuticals specifically to stop the growth of pathogens and the effects of scalar radiation on your cells. The most important protection, and this is Dr. Carlo, is re-mineralization. And then free radical protection, we have things like micro D2 and then the cell detox (inaudible), the most powerful (inaudible??) in the world. And if you look at the protocol and if you take the supplements to re-mineralize yourself because the primary perm type of scalar radiation is demineralization. When you expose yourself to scalar radiation, your cells, the ion channels, leak your mineral levels and your cells get demineralized. You have a free radical load and your body can't protect itself so you get DNA breakage damage and the primary protectant is mineralization of the cells.

So if they look at the protocol it makes it very plain and it's what I call protection. The problem is the ultimate protection is to stop the exposure. They're turning the world literally into a microwave. Bees can't find their way back to the hive and birds are losing their way to navigate. And the reason is every living thing has magnetites. Magnetite is a molecule present in all living things because the flux fields of the (inaudible) earth's geomagnetic pulse brushes the electrons to the outer (inaudible) orbitals and allows them to cause chemical interactions. If you

put an animal or a human being or an insect in a metal box where there is no brush ceiling (inaudible) of object in the (inaudible) box and the animals die. They go into slow motion first and then they die.

So what it means is they're actually putting a toxic scalar field that's destroying the (inaudible) genetics that control our genes and they know that. They're actually turning you into a plasma so they can control living things on the earth. They can also trigger off earthquakes by (inaudible) what's called a (inaudible) electric slip threshold by pumping the scale of frequencies of harmonic and tectonic plates. And once it reaches enough energy the crystal structure of the fault lines start to absorb the energy and create a harmonic frequency that results in the (inaudible) resistance between the rock faces to drop towards zero, and then the rock faces release energy until the (inaudible) resistance rises again. And you get a massive earthquake. So they can use this type of technology to effect biological systems, (inaudible) the jet stream, by super heating the upper atmosphere and triggering off field magnetic effects, earthquakes and volcanoes.

Deborah: As they did in Japan?

Dr. Deagle: Yeah, and they can basically turn the earth into a weapon of mass destruction which is what they're trying to do. Pretty amazing, isn't it?

Deborah: Well, on a happier note?

Dr. Deagle: Well reality is always happy if you face reality and have a plan to survive and thrive. I knew these bastards were bad enough to try to threaten to cut off my power even though it wasn't rational. So I have a 20 kilowatt generator, and in three weeks or less I'm going to contact some people. I'm going to have my solar panels on as quickly as I can. But you have to be fearless but not careless. You have to realize you're dealing with a psychopathic intent on murder enemy and they have no restraint. And if people think that what I'm saying is not true, they're going to find the blunt end of it violently on top of their neck like a wild animal. And they're not going to be prepared and they're not going to have the emotional or physical energy to be able to fight the battle because they haven't prepared in any way, shape or form for the level of intensity of the attack

that's going to be on them personally, their family, their finances, their health, their home, everything they think of because they dismiss people like me and think we're doing what are called bizarre late night or middle of the day entertainment and alternative radio when we are actually the news and everything else is the snooze to put you to sleep . . .

Deborah: That's exactly right.

Dr. Deagle: I've got to run because I've got to contact San Diego 10 News. And I've got to make some other contacts here. But if that information helps, people better wake up. And if they disagree with Dr. Deagle, I would say you're entitled to your opinion but not the facts and I have the facts so wake up and smell the coffee.

Deborah: Thank you so much, Dr. Deagle. I look forward to talking to you next time on the radio.

Dr. Deagle: Okay, take care. Send this audio far and wide.

Deborah: I will. Thank you.
