

COFEE Version Change Log

- Version 1.1** NW3C Updates to original COFEE (includes removal of FCIV and PIPE, as well as modification of FORMAT/WIPE and the creation of NW3C profiles).
A SHA1 hashing utility created and implemented to replace FCIV.
A Quick FAT32 Format utility created to replace Format/Wipe issues also uses Cipher to wipe unallocated area of thumb drive.
- Version 1.1.1** Modified the Wipe portion. Wipe now Formats, then Wipes with SDELETE (with the `-c` argument), and then Formats again.
Modified source code to remove Cipher and replace with SDelete option to overwrite unallocated area of thumb drive with one pass of zero's.
- Version 1.1.2** Fixed bug which would not allow drives with drive labels to be formatted or wiped.
