In his teachings Mahavira stressed the need to fight passions and bodily senses to purify the soul and gain omniscience, the highest Jain goal. Many of his followers also became renouncers and abandoned worldly pleasures, renunciation being the way to conquer all passions. The body of believers was divided into two groups, the renouncers, composed of both monks and nuns, and the lay practitioners, whose position was subordinate to the renouncers. All Jains observed the three moral excellences or jewels (*triratna*), right knowledge, right intuition, and right conduct, including the practice of ahimsa (noninjury to any life-form). Lay followers were not expected to embrace the harsher requirements of the monks and nuns but were encouraged to develop twenty-one meritorious quali-

ties, among them mercy, kindness, truthfulness, humility, modesty, and limiting possessions. Those who renounced, however, embraced five principles or greater vows (*vratas*): (1) noninjury (ahimsa), (2) kindness and speaking the truth, (3) honorable conduct, (4) chastity in word and action, and (5) renunciation of worldly interests.

Beliefs and Practices

Central to Jainism is the belief in reincarnation and karma (merit and demerit). The aim of the code of conduct is to avoid accruing new negative karma while destroying old negative karma. Jainism maintains that the self is polluted by karmic particles, bits of materials generated by a person's actions that attach to the soul and consequently bind the soul to material bodies through many births. When karmic particles are wiped from the self, enlightenment is attained and the soul no longer faces material rebirth. Mortification of the flesh protects against the acquisition of new negative karma and rids the body of old negative karma. Purification requires fasting, confession, penance, reverence for superiors, service to others, meditation, study, indifference to the needs of the body, and observation of vows.

The first principle, noninjury, or ahimsa, is viewed as especially necessary to free the soul of karma. The primary ethical virtue, ahimsa is the measure by which all actions are judged. A policy of ahimsa is assiduously followed, demanding great precautions to avoid harming or killing any life-form, including insects and microbes. In Jainism a person's negative karma is increased by interference with the spiritual progress of another. Thus many Jains cover their mouths, wearing a mask or cloth (*mul-patti*), to prevent breathing in or swallowing insects. Many Jains do not eat or drink after dark to avoid inadvertent ingestion of insects. Eating meat, of course, is a violation of ahimsa, along with eating any foods that engender colonies of microbes. Not only are such foods considered unhealthy for the consumer, but also the microbes themselves are damaged by consumption. Similarly, wandering renouncers remain in one place during the monsoons, because while walking on muddy roads they might crush worms, snails, or waterborne creatures. Other renouncers refuse to travel by rail because of the possibility that the train's wheels might kill organisms on the tracks.

Sects

Disputes among Mahavira's followers led to the formation of two sects. The division, which began around the second century BCE and was finalized in the first

century CE, formed the Digambaras ("sky clad"), or naked ascetics, and the Svetambaras ("white clad"), who wear a simple white garment. The Digambaras believe nakedness is proof of the conquest of sin, asserting that sin cannot exist in the absence of shame. The Svetambaras protest that wearing a simple garment implies no shame or sin. The two sects are divided on the subject of women's enlightenment. Svetambaras assert that women can become enlightened, while Digambaras declare that only males can achieve enlightenment. Consequently women do not become naked ascetics, although according to Mahavira's teachings women are allowed to renounce the world and form orders of nuns. All renouncers are required to pluck out their hair rather than shave or cut it, hence Jains are often called hair pluckers. After twelve years of strict asceticism, a Jain renouncer may commit suicide through self-starvation.

Influence and Role in Indian Society

Jainism has existed continuously in India for 2,500 years. Jain beliefs, particularly ahimsa, have had a significant influence on India's culture. Asoka (d. c. 238), a Buddhist emperor, stressed the practice of ahimsa in his reforms. In the twentieth century Mohandas (Mahatma) Gandhi (1869–1948) was influenced by the concept of ahimsa when he developed his policy of nonviolent resistance in India's struggle for independence. Historically ahimsa and vegetarianism have been important in Buddhism and Hinduism. Jains also have contributed to philosophy, logic, art, architecture, mathematics, astronomy, and literature.

Jains constitute the oldest religious minority still practicing in India. The 1981 Indian census counted some 3.2 million Jains, most of whom live in urban centers in the modern states of Maharashtra, Rajasthan, Gujarat, Madhya Pradesh, and Karnataka. Traditionally the Jains have avoided farming because cultivation of the soil may accidentally kill insects and violate the ahimsa restriction. Twenty-first-century Jains are mainly bankers, jewelers, merchants, moneylenders, and industrialists. As merchants and businesspeople they are known for their honesty. Even though the Jains are a wealthy community, they seek out and support humanitarian causes to relieve suffering. They are particularly renowned for operating centers dedicated to maintaining abused and sick animals and for endowing lavish temples.

JAIPUR (2001 est. pop. 2.3 million). The capital and largest city of Rajasthan state in northwestern India, Jaipur ("city of victory") is known as the pink city for its salmon-colored facades in the old-walled quarter. The fabled stronghold of a clan of rulers, it is today a vibrant, even tumultuous, city of wild contrasts. Jaipur was founded by the great warrior-astronomer Maharaja Jai Singh II (1693–1743). In 1728 with Mughal power receding, he decided to move from his hillside fort to a new site on the plains. Synthesizing Rajput and Mughal architectural styles, he laid out the city in rectangular blocks with surrounding walls and built a city palace and the world's largest stone observatory, all according to principles in the *Shilpa-Shastra*, a Hindu architectural treatise.

Among the city's architectural masterpieces are the Hawa Mahal ("hall of winds") palace, dedicated to the

Lord Krishna, the Jamtar Mantar observatory, and the Ram Nivas gardens with the Central Museum, zoo, and art gallery. The Rambagh Palace, former home of the Maharaja of Jaipur, is one of India's most prestigious and romantic hotels. In commerce, cottage industries such as textiles, brass, lacquer, leather work, and jewelry prevail.

JAKARTA (2000 pop. 8.4 million). The Indonesian metropolis of Jakarta is situated on the northwest coast of Java and covers a territory of approximately 660 square kilometers. The present Indonesian capital has a history of nearly 500 years. It sprang up around a bustling pepper-trading port called Sunda Kelapa. In 1522 the Portuguese arrived, but before long they were driven out and the city was renamed Jayakarta, meaning "victorious city." For almost 350 years it was the center of Dutch colonial rule, known

The Hawa Mahal (Hall of Winds) in Jaipur. (WILDCOUNTRY/CORBIS)

as Batavia. In 1942 the Japanese invaded Java, and Batavia's name was changed back to Jayakarta. After World War II the Dutch returned, but in 1949, when Indonesian independence was eventually achieved, Indonesians made Jakarta the capital of the new republic, abbreviating its old name.

At that time Jakarta had a population of 900,000. Today the population is over 8 million, having increased almost tenfold. The population of greater Jakarta, the city plus the surrounding districts, is about 17 million.

As Jakarta has attracted people from many other parts of Indonesia and from abroad, it is a cosmopolitan city with a culture of its own. Over the last fifteen years Jakarta has undergone great changes, but it is still a place of extremes, where wide avenues intersect with unpaved streets and modern buildings stand a few blocks from overcrowded shacks. The city is sometimes under water for days because the canals, built by the Dutch to prevent flooding in below-sea level sections, cannot hold the pouring monsoon rains.

Jakarta is the main economic center of Indonesia. Engineering is the dominant sector of Jakarta's heavy industry, including shipbuilding, transport equipment, electrical and electronics products. Manufacturing includes rubber, chemicals, paper, and timber products. Textile and food industries are well developed. Jakarta has the principal Indonesian seaport of international trade, exporting rubber, tin, coffee, palm oil, and petroleum. Jakarta's Sukarno-Hatta International Airport is the center of international air traffic in Indonesia. The Presidential Palace, the army headquarters, the National Museum, and other governmental buildings are located in Jakarta.

JAKARTA RIOTS OF MAY 1998 In Indonesia, the 1998 Asian economic crisis led to soaring inflation, plummeting currency, political violence, and the downfall of President Suharto (b. 1921). Unemployment rose to 20 million (11 percent).

The consequences were catastrophic. On 12 May, the turning point came. Security forces fatally shot six

students of Trisakti University in Jakarta to bring the students under control. Crowds looted and burned the shops and residences of Chinese Indonesians, and Chinese-Indonesian women were targeted for systematic rape. There were reports of Chinese fleeing to Australia and Singapore. The mob violence resulted in over twelve hundred deaths. The Chinese were targeted by mobs because they were seen as the cause of all the problems. They dominated the corporate sector and retail trade. Indonesia had had a long history of anti-Chinese violence. The "anti-Chinese pogrom" of 1965 massacred 250,000 Chinese.

On 19 May, thousands of demonstrating students occupied the Assembly Building in Jakarta. About eighty thousand troops occupied Merdeka Square to prevent a large-scale demonstration. Meanwhile, Suharto was losing the support of Muslim leaders and his cabinet colleagues. On 21 May, he resigned.

The nation was aggrieved by the May events. The riots in Jakarta were the worst violence in Indonesia since 1965, when seven hundred thousand were killed over six months. The events of 1998 shattered the confidence of the Chinese-Indonesian community and sullied the image of Indonesia as a tolerant nation. The rule of Suharto, widely viewed as corrupt and authoritarian, was over.

JAMA'AT-E-ISLAMI The Jama'at-e-Islami ("Islamic party") is one of the oldest Islamist movements. It is a leading political force in Pakistan but has a more marginal presence in Bangladesh, India, and Sri Lanka. It treats Islam as a complete way of life that can be used as a guiding principle for all life's situations—whether on a personal level or on a national, political level—and as the only alternative to both Western liberalism and Marxism. Jama'at-e-Islami's highly structured organization has been a model for Islamist movements elsewhere in the world.

History

Jama'at, as the party is often called, was created in 1941 by Abu'l-A'la Mawdudi (1903–1979), in the trou-

bled context of preindependence India. It opposed both British colonial rule and the predominantly Hindu Indian National Congress. Opposed as well to the secular definition of Muslim nationalism put forward by the founder of Pakistan, Muhammad Ali Jinnah (1876–1948), Mawdudi defended the necessity of a truly Islamic state where *shari'ah* (Islamic law), interpreted in a very conservative way, would be the unique source of constitutional, penal, and family law and regulate the economic system. Jama'at also opposed religious esotericism.

Since 1947 Jama'at has been located in Lahore, Pakistan. Its leadership comes from educational and business sectors and contests the monopoly the *ulama* (religious scholars) hold over Qur'anic interpretation. It has a very small but very vocal membership (75 members in 1941; probably 15,000 in 1998); the party overall is hierarchical and disciplined. A single call from the emir, or president (Mawdudi from 1947 to 1972, Mian Tufail Muhammad from 1972 to 1987, and Qazi Husain Ahmad from 1987 to the present), mobilizes the whole party. Jama'at supervises a wide network of affiliated institutions, including relief organizations, schools, trade unions, publishing houses, and think tanks.

Goals

The aim of Jama'at is to capture power. It has put forward candidates for nearly every election; it fought for civil liberties in the mid-1950s but also collaborated with Zia's military regime in 1978. Though electorally weak (never holding more than 4 percent of the seats in Pakistan's Assembly) due to its limited social base, it keeps a strong influence. The capacity of its student wing for street mobilization is feared by Pakistani government.

Jama'at Outside of Pakistan

In Bangladesh, Jama'at was banned in 1971 for having opposed Bangladesh's drive for independence from Pakistan, but it has gained influence since 1991. In India, the Jama'at-e-Islami Hind concentrates on spreading Mawdudi's version of Islam, but in the disputed territory of Kashmir it has an important military force, Hezb-ul Mujahideen. In Great Britain, Jama'at-inspired organizations (such as the Islamic Foundation) act as a lobbying force and were prominent in the protests against the novelist Salman Rushdie when he was accused of blaspheming Islam by Iran's Ayatollah Khomeini in 1989.

JAMI, 'ABDURRAHMAN (1414–1492), Persian poet, scholar, mystic. Mowlana Nur od-Din 'Abdurrahman ebn Ahmad Jami, a man of exceptional erudition, studied at the renowned Nizamiyya school in his native city of Herat in today's Afghanistan and later in Samarqand, where the sciences were patronized by the astronomer-prince Timurid Ulugh-Beg (ruled 1447–1449). In addition to poetry, Jami's writings included Qur'anic commentaries and prophetic traditions (hadith), Arabic grammar, music, riddles, poetics, and prosody.

A profound affinity for mysticism made Jami an early adept of the Naqshbandi Sufi order and defined his literary work. Jami was held in the highest esteem by his contemporaries: the Ottoman sultan Bayazid II (ruled 1481–1512) tried to entice him to Istanbul, and the famous Timurid minister, scholar, and benefactor Mir 'Ali Shir Nava'i (1441–1501) was a close friend who wrote his biography.

Jami's poetry was renowned for its graceful style and vivid imagery. His fame rests on three lyrical collections (divans) composed in his youth, middle age, and old age; and on the *Haft aurang* (Seven Thrones, a name of the Great Bear constellation)—a compendium of seven long narrative poems in the tradition of Nizami's and Amir Khusraw Dihlavi's *Hamsa* (Five Poems). Three of these poems—*Silsilat al-dhabab* (Chain of Gold), *Tubfat al-abrar* (Gift to the Noble Ones), and *Subhat al-abrar* (The Rosary of the Devout)—are didactic works of a theological and ethical nature, illustrated with parables and instructive anecdotes. *Salaman and Absal* (translated into English by Edward Fitzgerald in 1856), *Layla and Majnun*, and *Yusuf and Zulikha* are allegorical romances permeated with mystical sentiments. The philosophical Alexander-romance *Khivad-nama-i Sikandari* (Book of the Wisdom of Alexander) completes the cycle.

Jami's prose writings are primarily scholarly in nature, but two have earned wide popularity: the

biographical compendium of mystics *Nafabat al-uns* (Breath of Divine Intimacy) and the didactic collection of instructive anecdotes in rhymed prose *Beharistan* (*Abode of Spring*), which he modeled on Sa'di's (c. 1213–1292) *Gulistan* (Rose Garden). Jami's poetry and prose left a deep imprint on the literatures of Persia, Turkey, and Muslim India. He is considered the last great Persian author of the Classical period (tenth–fifteenth centuries).

JAMMU AND KASHMIR In August 1947, the British territories on the Indian mainland and the

princely states that were part of these territories were partitioned between India, which inherited the much larger portion, and the newly created state of Pakistan. The antagonisms that had made it impossible to hold the raj as a single entity survive to the present day in the enduring enmity between India and Pakistan. The problem, which originated in the controversial manner in which the fate of the princely state of Jammu and Kashmir was decided, stemmed from the actions of the wealthy ruler, the maharaja Hari Singh (1895–1961), of the Dogra Hindu dynasty.

In Jammu and Kashmir, where the maharaja ruled, the bulk of the population was Muslim and generally poor. The vast majority of the princely states were absorbed into either India or Pakistan. Some rulers of large states, as in the case of Hari Singh in Jammu and Kashmir, sought an independent status, but these requests were turned down by the British. On the basis of principles applied in the other princely states in 1947–1948, Kashmir should have been part of Pakistan. Generally, geographical compulsions, such as location, and the religious profile of the state would be the operative factors. Princely states with a Hindu majority would join India, while those with a Muslim majority would join Pakistan. Hari Singh's indecision provoked a rebellion in some parts of his territories, followed by an invasion by Pathan tribesmen supported by Pakistan. Hari Singh fled to India and

AN UNFULFILLED PLAN FOR PEACE

The following statement was set forth at the fifty-seventh meeting of the Indian National Congress party in 1951. In 2002 conflict continues in Kashmir between Hindus and Muslims and Pakistani and Indian supporters of each.

In regard of Kashmir, it has been the declared policy of the Government of India, with which the Congress is in entire agreement, that the people of Kashmir themselves should mould and decide their own future. The Congress welcomed an early plebiscite in Jammu and Kashmir under proper conditions which had been clearly stated by the Government of India. The Congress welcomes the constitution of a Constituent Assembly in the Kashmir State and hopes that through its labours the State will make even greater progress than it has done during the last two or three years.

Source: Jagdish Saran Sharma. (1965) *India's Struggle for Freedom: Select Documents and Sources*. Vol. II. Delhi: S. Chand & Co., 176.

sought assistance to quell the rebellion and resist the invasion. More significantly, he agreed to let his state become part of India, a controversial decision that India claimed was valid but that Pakistan rejected as spurious and unacceptable. The Hindu maharaja's decision appeared to have been made under duress. From this dubious decision stems more than fifty years of hostility and three wars between India and Pakistan over the fate of Jammu and Kashmir.

The First Indo-Pakistan War over Jammu and Kashmir

The first Indo-Pakistan war over Jammu and Kashmir took place in 1947 in the wake of the independence of the two countries. A U.N.-mediated cease-fire took effect from January 1949 through the Karachi Agreement of 27 January 1949, signed by military representatives of the two countries defining the cease-fire lines in Jammu and Kashmir. In time this line came to mark the effective limits of the sovereignty of India and Pakistan. When the territories of Jammu and Kashmir were divided between India and Pakistan along the cease-fire line, India received the Kashmir valley; Jammu and Kashmir is thus the only Muslim-majority state in the Indian Union. Since the U.N. had in 1949 prescribed a plebiscite to determine the future of Jammu and Kashmir, the division was expected to be temporary. But that plebiscite was never held.

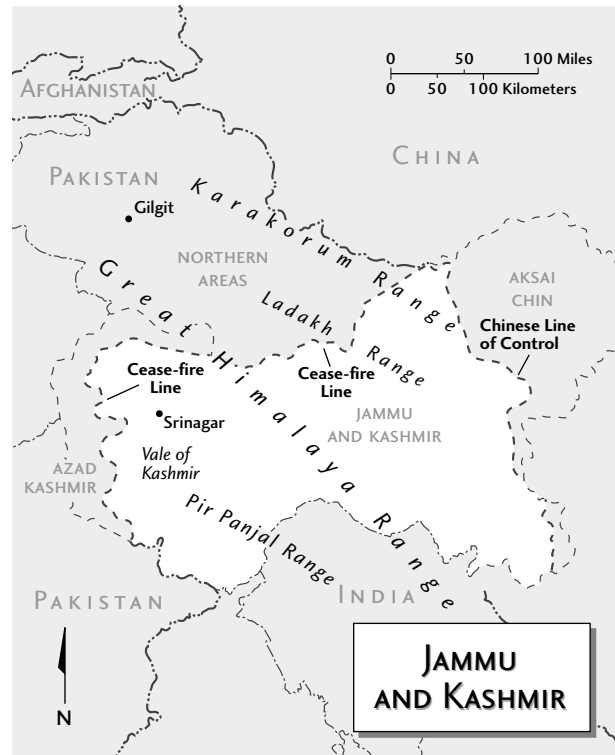

Effects of the Division of Jammu and Kashmir

The cease-fire line in Jammu and Kashmir has become an extension of the international border between India and Pakistan. This leaves both India and Pakistan dissatisfied: India, as heir to the former state of the rulers of Jammu and Kashmir, insists on its rights to regions in Pakistan-controlled Azad Kashmir, to the north of Jammu and Kashmir. These territories are Swat, Gilgit, and the Northern Territories. Pakistan for its part insists on the plebiscite that was promised in 1949.

The situation became even more complicated in the early 1960s. After India's defeat at the hands of China in 1962, Pakistan signed the Sino-Pakistan agreement of 2 March 1963, setting the boundary between Pakistan-occupied Azad Kashmir and China's Xinjiang Province. Large extents of territory in Ladakh, to the east of Jammu and Kashmir, are now held by China but are claimed by India by virtue of being the heir to the rulers of Jammu and Kashmir.

The Second and Third Indo-Pakistan Wars

Two years later came the second indecisive Indo-Pakistan war over Kashmir (1–23 September 1965),

which ended after a cease-fire agreement. The Tashkent Declaration of 1 January 1966, signed by the Indian and Pakistani delegates with the then Soviet prime minister Kosygin as unofficial mediator, brought the second Indo-Pakistani war to an end. The two countries reaffirmed their commitment to solving their disputes by peaceful means and agreed to revert to their positions prior to 5 August 1965. The declaration proved to be a mere temporary respite. In less than five years came the third Indo-Pakistan war in the Kashmir area, a war concurrent with the Indian intervention in East Pakistan and the successful separatist agitation that led to the creation of Bangladesh in 1971.

Talks between a triumphant Indian government and its defeated and humiliated Pakistani counterpart (28 June–2 July 1972) led to the Simla Agreement, through which both governments undertook to "respect" the line of control resulting from the cease-fire of December 1971.

Continuing Problems in Jammu and Kashmir

Following the Simla Agreement of 1972, the Jammu and Kashmir problem lost some of its salience as a territorial dispute between Pakistan and India for a decade or so. But by the mid-1980s, the policy of benign (or not so very benign) neglect that India had pursued over this issue since the early 1970s faced a

severe test in a changed situation. First, Kashmir's inhabitants experienced an upsurge of nationalism and a desire for independence from both India and Pakistan. Kashmiri dissidents were encouraged by the growing radicalization among the Punjabi Sikhs and the assassination of the Indian prime minister Indira Gandhi (1917–1984) in October 1984. Once the new radicalism took root in Kashmir, the struggle was joined by militant Islamists from outside, primarily from Afghanistan but also from other parts of the Islamic world, such as Libya and Iran, Sudan and Egypt, and Bangladesh. This process of internationalization kept Indo-Pakistan relations disturbed.

Second, the insurgents shifted their stance from a demand for Jammu and Kashmir's independence to a pro-Pakistan position. The Kashmiri Muslims, caught in a bitter conflict with Indian security forces, looked to Pakistan and beyond to Afghanistan, Iran, and the Middle East. The intervention of volunteers from these Islamic countries was encouraged and facilitated by Pakistan. Pakistan could not be expected to ignore events across the border on the basis of the Simla Agreement, an accord signed during a period of extreme weakness.

Equally important, the forces of democracy and nationalism that led to the collapse of the Soviet Union and the communist states of Central and Eastern Europe were at work in Kashmir itself. Although the Indian prime minister Rajiv Gandhi (1944–1991) adopted a more conciliatory policy in Jammu and Kashmir than had his mother, Indira Gandhi, the situation did not improve greatly. Indeed, the resort to terrorism by Kashmiri separatists led to the migration, forced or voluntary, of Hindus living in the Kashmir valley. The heavy-handed behavior of the Indian army in its response to the violence further antagonized the Kashmiris. Very soon, the Jammu and Kashmir issue returned to its pre-1972 form—an emotional factor in the domestic politics of both India and Pakistan, but especially in Pakistan. For both civilian and military leaders, Jammu and Kashmir was a useful rallying cry and a readily available issue with which to divert attention from failures in social and economic policies.

Whenever an opportunity to assert their rights presents itself, both India and Pakistan were quick to exploit it. Recently, improvements in mountain-climbing techniques have made it possible for both India and Pakistan to send troops into the remote, virtually uninhabited mountainous areas of Jammu and Kashmir, India, to the Siachen glacier, an undemarcated point on the line of control (in 1984 and thereafter), and Pakistan less successfully to the Kargil sector, across the line of control, in territory held by

India (in 1999). The result has been confrontations on the border in one of the most inaccessible regions of Jammu and Kashmir, where the soldiers are more vulnerable to the bitter cold than to the weapons used by the opposing army.

India treats the fact that Kashmir is an integral part of India as beyond debate. Any attempts by Pakistan to raise the issue at a diplomatic level are dismissed as interference with India's internal affairs. Pakistan still insists on the plebiscite as originally envisaged by the U.N. Security Council resolution of 1949. For Islamabad, Kashmir is an unresolved international dispute. Thus, the public posture of the governments of India and Pakistan on the Jammu and Kashmir issue remains unchanged. It also remains the most dangerous issue in South Asia, and one that has the potential of a nuclear conflict.

In December 2001, an attack on the Indian parliament attributed to Kashmiri separatists brought India and Pakistan to the brink of another conflict. Indian troops were massed in Kashmir on the border with Pakistan. It took several weeks before the tensions eased.

JAPAN—PROFILE (2001 est. pop. 127 million). Japan, known as the Land of the Rising Sun, lies off the east coasts of Russia, Korea, and China. Its closest neighbor is Korea, from which it is separated by the Straits of Tsushima, a distance of about 200 kilometers. Made up of a number of islands, Japan is particularly small, being one and a half times the size of the United Kingdom.

JAPAN

Country name: Japan
Area: 377,835 sq km
Population: 126,771,662 (July 2001 est.)
Population growth rate: 0.17% (2001 est.)
Birth rate: 10.04 births/1,000 population (2001 est.)
Death rate: 8.34 deaths/1,000 population (2001 est.)
Net migration rate: -0 migrant(s)/1,000 population (2001 est.)
Sex ratio: 0.96 male(s)/female (2001 est.)

Although Japan was still an agriculture-based society in the middle of the nineteenth century, it changed, in about only sixty years, to a modern industrial nation. Today it has the world's second-largest economy, surpassed only by the United States, and enjoys one of the highest per capita incomes in the world. Its reliance on trade for wealth has led to a focus on manufacturing, and Japanese products are well known throughout the world.

Geography

Japan is made up of four main islands—Hokkaido, Honshu, Shikoku, and Kyushu—along with some 7,000 smaller ones, so that altogether the island chain stretches about 3,000 kilometers from northeast to southwest. Because of its proximity to Siberia,

Hokkaido has cold winters and heavy snowfalls, while the Ryukyu islands in the south, which stretch almost to Taiwan, are subtropical.

Japan's topography is very rugged, though some areas are favorable to agriculture. The largest such area is the Kanto Plain, on which Tokyo is situated. There are two other agricultural areas—the Nobi Plain (Nagoya area) and the Kansai Plain (Osaka, Kyoto, Nara area)—but these are some ten times smaller than the Kanto Plain. About 13 percent of Japan's land surface is devoted to agriculture today.

Approximately half the country is covered by mountains, with the Hida Range running through central Japan. Many of its peaks rise more than 2,000 meters and are volcanic in origin. The best known of

these, with a summit of some 3,800 meters, is Mount Fuji (inactive since 1707), whose almost perfect cone shape is an enduring symbol of the country.

Japan is usually thought to be a highly urbanized nation, but this is only partly true. Cities cover less than 5 percent of Japan's land area. Its largest city is the capital, Tokyo, whose population numbers nearly 8 million, and the high concentration of population around Tokyo and other populous cities leads to considerable urban sprawl. In a fifty-kilometer radius of Tokyo there are more than 30 million people, around Osaka approximately 16 million, and around Nagoya 9 million. This high level of urbanization dates from the late nineteenth century but has become especially salient since 1950.

Peoples

People first came to Japan from Korea, China, and the Pacific islands perhaps 200,000 years ago, or 600,000 years ago according to some archaeologists. The last glaciers receded about 15,000 years ago, and until that time land bridges in the north, west, and south intermittently connected Japan to the mainland. Archaeological evidence clearly shows that early waves of migrants reached the islands some 30,000 years ago and formed the Paleolithic (Old Stone Age) Japanese population. According to modern DNA analysis, the first wave of migrants came from Southeast Asia, with subsequent groups traveling from the Asian mainland. Hence, the modern Japanese are a mixture of both ethnic and racial groups, Southeast Asian and East Asian; remnants of the earlier groups, the Ainu people, today live in pockets in northern Japan. Thus the frequently heard Japanese claim that they are ethnically and racially homogeneous is not supported by the evidence.

History and Culture

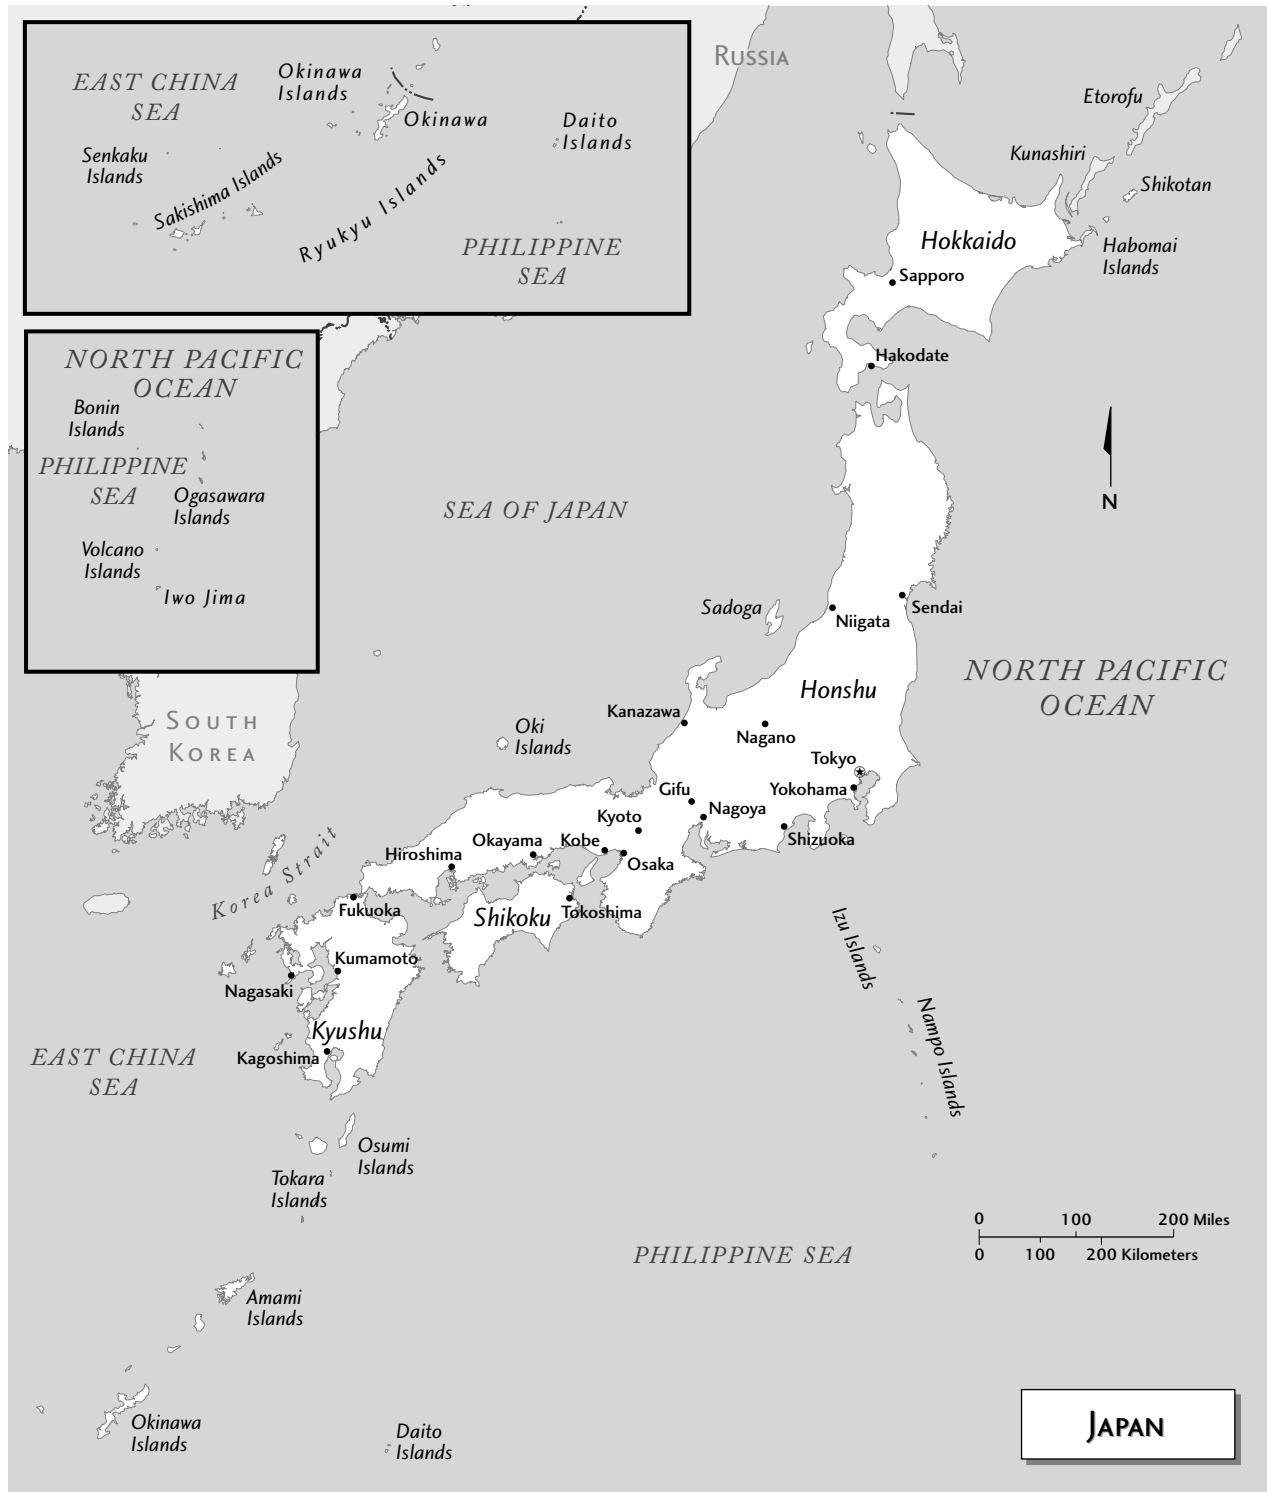

The first substantial Neolithic (New Stone Age) civilization of hunters and gatherers in Japan is the Jomon (roughly 10,000–300 BCE). Although the inhabitants remained primarily hunter-gatherers, the Jomon period saw the beginning of permanent settlements and early agriculture, particularly dry rice farming.

Around 300 BCE a new wave of migrants from the mainland arrived in Japan and eventually displaced (or absorbed) the Jomon, a process that took hundreds of years. The new group brought bronze and iron technology, and the period has been named Yayoi (after an excavation site in Tokyo). The technology and artifacts are typical of Northeast Asia and include mirrors, weapons, bells, and coins brought from the mainland. During the Yayoi period (c. 300 BCE–300 CE), the introduction of wet rice agriculture had a massive impact on Japanese society, in terms of increased food production, expanded areas of settlement, and establishment of a cooperative and hierarchical social order.

Shinto, the indigenous religion of Japan, existed from the earliest settlement of the islands. With its pantheon of gods (*kami*), Shinto is animistic and is concerned with day-to-day matters such as keeping various spirits content. Although there is no substantial ethical code, the religion is grounded in a close relationship with the natural environment and communal life. As the titular head (chief priest) of this religion, the emperor still today performs ceremonies symbolic of planting and harvesting, and it is partly his place in Shintoism that has accorded him sacred status throughout Japan's history.

By the seventh century Japanese society began to be transformed through contacts with Korea and China. Among the important cultural practices borrowed from the mainland were Buddhism, Confucianism, and the concept of a strong centralized government. Borrowed, too, was the Chinese writing system, though it was modified to suit the spoken Japanese language.

Kyoto became the capital of Japan in 794, marking the beginning of a golden age in Japanese history. While Europe was just coming out of the Dark Ages, culture blossomed in Japan. Feudalism developed slowly in Japan as the centralized state under the emperor gradually lost its authority and regional groups of families, or clans, began to assert their power. This system prevailed for most of Japan's subsequent history. By 1185 the country was under the control of these warrior families, who in turn submitted to a military dictator with the title of shogun. Over the next

four hundred years, as the power of the shoguns waned, Japan broke into small feudal principalities; each was ruled by a daimyo, or feudal lord, and governed and policed by samurai warriors.

With mounting conflict among the daimyo and the various clans, Japan disintegrated into civil war by the mid-fifteenth century. In the mid-sixteenth century several powerful Japanese daimyo attempted to reunify

Japan, and the Tokugawa family eventually completed the unification by the early seventeenth century. At this time the leaders of this family, worried by both the continuing power of other regional clans and the growing Western influence (including the spread of Christianity and modern weapons) in Asia, decided to close Japan to foreigners. For more than 200 years thereafter Japan remained almost completely isolated from the rest of the world.

During the seventeenth and eighteenth centuries Japan developed many of its unique practices in government, literature, architecture, and religion, and the country remained relatively peaceful and stable. This peace was reinforced through a rigid totalitarian system of government, with the Tokugawa shoguns, based in the capital city of Edo (present-day Tokyo), as supreme leaders. As Europe and America became more insistent on trade during the mid-1850s, Japan's vulnerability to the West, because of its outdated military technology, became obvious to those who were aware of the threat, and the country was a potential target for colonization. Meanwhile, from a domestic standpoint the system of government that had worked well for some two centuries had, by the nineteenth century, become outdated and riddled with inequities.

The catalyst for change was the arrival of Commodore Matthew C. Perry (1794–1858) of the U.S. Navy, who sailed into Edo bay in 1853 and demanded that Japan open its ports to trade. The recognition of the country's vulnerability after such a long period of isolation created a tremendous drive for change in Japan. By 1868 the shogun and daimyo had handed power back to the emperor, who remained a symbol of continuity while the country went through a period of breakneck modernization.

This period, known as the Meiji Restoration, saw Japan move from a feudalistic, agricultural country to a modern, industrial one with a reasonably democratic constitution. Within sixty years Japan had electricity, railways, steamships, elections, and modern weapons. Its teachers were the major industrialized countries of the time—the United States, Britain, France, Germany, and Holland.

Japan was not content to remain a student, however, and by the late nineteenth century it exercised its growing power in a war with China (1894–1895), which it won. This victory eventually brought Japan into conflict with Russia, which it defeated in the Russo-Japanese War of 1904–1905. Underlying these conflicts was one of the fundamental truths about Japan—its home islands had few resources, and the

country needed to import raw materials to maintain its industrial growth. Like the other major countries of the day, Japan sought to secure needed resources and markets through colonization and conquest.

Japan, however, was not accepted by the major Western countries as an equal, and its colonization of parts of China and Korea was strenuously resisted. By the 1930s Japan was on a collision course with the West. Faced with an embargo of raw materials, especially oil, from the United States and Britain, Japan gambled on war to secure these resources from East and Southeast Asia. The result was the surprise attack on Pearl Harbor in 1941 in an attempt to decimate American naval power while Japanese troops invaded Southeast Asia. Japan's leaders, however, underestimated the resolve of the United States and its allies. The result was the Pacific theater of World War II, ending with atomic bombs being dropped on the Japanese cities of Hiroshima and Nagasaki in August 1945 and Japan's subsequent unconditional surrender.

Politics and the Economy

Japan was in a shambles in late 1945. Much of its industrial base had been destroyed in the war, and it had lost the wealth of its empire. The country was occupied by the Allies under the leadership of General Douglas MacArthur (1880–1964), whose mission was to transform Japan into a peace-loving and stable ally of the West and to ensure that the country could not again become a military threat. One of the key decisions taken in this regard was to break up the large landholdings of the rich families and turn Japan into a nation of small farmers and entrepreneurs. Another was to provide Japan with a British-type constitution that included a unique provision (Article 9) whereby the Japanese renounced war and forswore the development of a military force.

The start of the Cold War and the outbreak of war in Korea in 1950 changed matters. Japan became part of America's front-line defense against the spread of world Communism. The country received economic aid to develop its manufacturing sector to supply motor vehicles, electronic goods, and clothing to the soldiers in Korea. Japan's economy began to boom in these areas.

Although there were labor problems in the 1950s and early 1960s, by the latter date Japan had become a peaceful, industrious nation focused on economic growth. The Liberal Democratic Party came into being in 1955 and, except for a brief period out of power in 1993–1994, has dominated ever since. Although the party is stable, there are multiple factions, each with

its own leader, so that prime ministers regularly change while the same party remains in power.

The 1960s was a time of supergrowth in Japan's economy. Even faced with the "oil shocks" of the 1970s, the economy continued to grow, diversifying away from heavy industry into consumer electronics, computers, and robotics. Its trade surplus with other industrialized countries, principally the United States, led in 1985 to pressure on Japan to strengthen its currency. The result was a tremendous flow of Japanese money worldwide, as Japanese went on buying sprees. Japan seemed an unstoppable global economic power.

The massive loans made available to Japanese companies and individuals for both domestic and offshore investments led to the development of a "bubble" economy by the late 1980s. This resulted from easy credit made available by Japanese banks in the mid- to late 1980s, coupled with dramatic strengthening of the yen after 1985. Much of this money made its way into real estate speculation and the stock market, rather than productive industries. Many loans were secured by land, which led to an inflation in real estate values until Japanese land became the most expensive in the world. The stock market, too, became highly overvalued. The result, in the early 1990s, was a crash in both areas and an economic slump that continued into the twenty-first century. Japan's growth rate continues to hover around the 1 percent mark, far behind that of most other industrialized countries.

Constitutional Reforms

Constitutional reform has a long history in Japan. The principal area of debate is the nature of the country's military. Article 9 of the 1947 constitution renounces the maintenance of military forces or their use in international disputes. Today, however, Japan has the second-largest defense budget in the world after the United States as well as a well-equipped military, but avoids constitutional debate by calling the military a self-defense force. The charade has caused many in Japan to call for a change in the military's name and role.

Both the Gulf War and the terrorist attacks in New York and Washington, D.C., on 11 September 2001 have put increased pressure on Japan to use its military in international conflicts. In addition, Japanese leaders have been attempting to secure a permanent seat on the United Nations Security Council, which would probably require a greater commitment of military forces. Nevertheless, there is a strong pacifist group in Japan, dating from 1945, which inhibits reform in this area.

Other measures for reform are concerned with the way Japan is governed. Key areas here include reducing the power of the bureaucracy and making it subservient to politicians; making elections policy-based rather than focused on personalities and pork barreling; having elections contested between at least two major political parties rather than being dominated by the Liberal Democratic Party; and deregulating and decentralizing the governing system and giving ordinary people a stronger political voice. The reform movement has generally had little success, despite some optimism in the early 1990s, and today there are few areas of significant reform.

Major Issues Today

Japan is presently faced with myriad difficulties. While its companies continue to manufacture world-class products, cracks are developing throughout its economy and society. Japan is still coping with the bursting of the bubble economy. Many companies and banks were left with massive debt, much of it hidden, and the government has been attempting to take over these loans and restore business confidence. A major problem in this regard is the close connections between politicians, bureaucrats, and major corporations and interest groups. While this was viewed as a successful system during the period of high growth, today it is seen as a major obstacle to the government's making the hard economic decisions necessary to put the economy on the road to recovery.

The social system that supported Japan's rapid economic development is also being called into question. While workers are relatively well paid, they are expected to show tremendous dedication to the workplace. Men in particular must focus their lives on their companies. Because of the highly urbanized conditions in Japan, where land continues to be expensive, working people can anticipate extremely long commuting times, substantial overtime work, and little time for their families. Such dedication (or exploitation) is increasingly being called into question, particularly when companies no longer offer workers the generous benefits and certainty of lifelong employment typical of the boom years.

Japan's economic problems are also leading to questions about the way in which its fundamental social institutions are organized. The educational system, with its emphasis on competition and rote learning, is now being viewed by many as dysfunctional. The powerful bureaucracy in Japan, the pinnacle of achievement for young Japanese, whose roots go back to the samurai and a highly regimented feudalistic society, today

often seems incapable of making effective decisions. Women, who until recently have been denied full participation in the economy, seem to be struggling to find new roles in modern Japan.

Perhaps the major issue confronting Japanese society today is its aging population. An extremely high birthrate in the late 1940s and early 1950s means that there will be massive retirements of Japanese in the first few decades of the twenty-first century, with concomitant problems of funding pensions, caring for elderly people, and possible substantial labor shortages. The aging of the population will have a massive impact on virtually every aspect of Japan's society and economy over the coming decades.

JAPAN—ECONOMIC SYSTEM Although endowed with few natural resources, Japan has achieved a world-class standard of living following its miraculous economic recovery from World War II. At current exchange rates, Japan's per-capita gross domestic product (GDP) in 1999 was \$34,500, only slightly below that of the United States, a resource-rich country with 25 times as much land and twice the population. In 1999, Japan had only 2.1 percent of the

world's population and 0.3 percent of the world's land, but its GDP was 13.4 percent of the world total.

The postwar economic miracle was characterized by phenomenal efficiency, but also by impressive economic equality. In 1960, 76 percent of respondents to a government survey considered themselves middle class, a figure that reached 90 percent by the early 1990s. As measured by salary gaps between various categories of employees (e.g., workers and managers; middle-school and college graduates), for example, Japan has had one of the lowest levels of income inequality in the world.

A high growth rate, relatively equal distribution of income, and low unemployment are hallmarks of the Japanese development experience. So too are a low crime rate and high rates of literacy and savings. Japan leads the world in life expectancy (77 years for men and 84 years for women, estimated for 2001). Other indicators of the quality of life, however, have been less favorable. Pollution was a serious problem in the 1960s. Long commutes to work, long working hours, and few vacation days meant Japanese workers had much less leisure time than their Western counterparts. Scarce land has resulted in high land prices, cramped living conditions, limited recreational space, and narrow roads. In 1996, residential land prices in Osaka were 18.5 times higher than in New York (commercial real estate was 2.8 times higher). For example, the cost of a detached house in Tokyo was 12.9 times annual income (9.5 times in Osaka) in 1994, but only 2.9 times annual income in New York. In 1995, the average size of a Japanese house was 93.3 square meters (the U.S. 1996 house size was 177.5 square meters). Most Japanese residential property is too small for a lawn or garden. Consumer prices in Japan have been consistently high compared to other developed countries. While Japan's resource constraints make such problems difficult to surmount, steady progress has occurred in most areas (due in no small part to the long economic stagnation). After falling steadily throughout the 1990s, residential land prices ended the decade at less than half their peak (1991) value. Japan's consumers also received a break in the form of lower prices and a greater selection of products and services.

Historical Transitions

In Japan's transition from a closed, feudalistic society during the Tokugawa period (1600/1603–1868) to its modern status as a global, industrial giant, two turning points stand out: the Meiji Restoration (1868) and the Allied Occupation (1945–1952). Only

EMPLOYMENT REALITIES IN JAPAN

The "lifetime-employment" guarantee enjoyed by many Japanese workers became far less practical in the harsher economic climate in Japan in the 1990s. The following excerpts from *White Paper on Labour, 1999*, a Japanese government report, outline some of the new realities facing employers and their young and middle-aged workers.

Such factors as changes in younger people's attitudes about job changes and the growing diversity in employment patterns will have a significant impact on employment practices. Also, the continued decline in the number of children will make it difficult to fully compensate for structural changes through traditional adjustments at the labour market's entrance and exit. Instead, job changes will play a greater role than they have in the past. In addition, the lowering of the expected growth rate and the globalization of operations are likely to have the effect of weakening long-term employment practices.

Nevertheless, support for long-term employment practices currently remains high among both companies and workers. Long-term employment practices will continue to be highly effective with respect to jobs in which teamwork is important, and in relation to vocational abilities that require a buildup over time. For Japanese companies and the Japanese economy and society as a whole, it will be important to focus in particular on stabilizing and maintaining employment, thereby improving employee morale and securing the flexibility needed for corporate growth. Hasty employment adjustments could cause companies to lose credibility and make it more difficult for them to obtain required workers. . . .

In Japan, middle-aged workers have enjoyed a low unemployment rate and stable employment. Now, however, they are facing the most severe conditions ever. In order to eliminate unease about employment among middle-aged workers, it is of course important to steadily pursue improvements to employability, as well as job creation and the establishment of a labour market that facilitates reemployment. In addition to these efforts, however, there is a need for initiatives that utilize the vocational abilities that middle-aged workers have built up over time. It is also important that middle-aged workers be utilized in a way that maintains their connections to their traditional workplace or job (e.g., company or corporate group).

Ministry of Health, Labor and Welfare—Japan. *White Paper on Labour, 1999*. Retrieved 17 September 2002, from: <http://www.mhlw.go.jp/english/wp/wp-1/2-3-3.html>

four decades after the Meiji Restoration, Japan achieved modern economic growth and gained international respect as a leading military power. The Meiji period (1868–1912) resulted in significant economic reforms. These included the opening of the country to foreign trade and technology, privatization of land ownership, replacement of the rice tax with a mone-

tary land tax, and the introduction of a modern money and banking system.

The Occupation brought radical reforms to many institutions. The three major economic reforms were the redistribution of agricultural land, the dissolution of the *zaibatsu* (large, family-owned industrial enter-

JAPAN'S LARGEST COMPANIES

According to *Asia Week* the largest nineteen companies (on the basis of sales revenue) in Asia are Japanese firms. The top ten are as follows.

Rank	Company	Sector	Sales (\$ millions)
1	Mitsubishi	General Trading	129,862.7
2	Toyota	Cars, Trucks	124,565.5
3	Mitsui & Co.	General Trading	121,974.7
4	Itochu	General Trading	112,603.3
5	Nippon Telegraph & Telephone	Telecommunications	105,113.6
6	Sumitomo	General Trading	93,533.1
7	Marubeni	General Trading	87,564.8
8	Hitachi	Electronics, Machinery	78,101.3
9	Matsushita Electric	Appliances, Electronics	71,277.4
10	Sony	Electronics, Media	67,874.4

prises), and the legalization of trade unions and collective bargaining. In the financial sphere, Joseph M. Dodge, an American banker and Occupation adviser, introduced a number of important policy changes known as the "Dodge line." These included the imposition of a balanced budget policy, an end to inflationary financing of public financial institutions, a return of foreign trade to private enterprise, lifting of price controls, termination of production subsidies, and the unification and pegging of the exchange rate (at ¥360 to the U.S. dollar). Professor Carl Shoup, another Occupation adviser, tried to implement a unified and nonpreferential tax system but was less successful.

Japan's recovery from wartime devastation and the recession induced by Dodge-line policies received a big boost from the "special procurements" demand of the Korean War (1950–1952), followed by a long period of high and sustained economic growth. From 1955 to 1965, GNP growth (in constant prices) averaged 9.5 percent. To put this in perspective, a growth rate of 8.6 percent would result in a doubling of real income in just nine years. Amazingly, super growth continued for almost a decade more. From 1965 to 1975, real GNP growth averaged 7.9 percent while the average per-capita GNP grew at an incredible 6.5 percent. This period includes the end of the Bretton Woods system of fixed exchange rates in 1971 (the "Nixon shock") and the first oil shock (1973–1974).

These were traumatic events for Japan's export-led and import-dependent economy. The quadrupling of oil prices provoked the first year of negative growth in the postwar period and resulted in a massive restructuring of industry, drastic energy conservation measures, and an increasing reliance on nuclear power.

Japan's economy continued to grow at a very respectable pace in the decade and a half following the first oil shock. Real GNP growth averaged 4 percent between 1975 and 1990. The floating of the yen began a long period of appreciation, from ¥272 to the U.S. dollar in 1972 to a plateau of ¥210 in 1978. A period of yen depreciation followed the second oil shock in 1979, and recovery from the oil shock brought with it large current-account surpluses. As a result, trade frictions escalated. The Plaza Accord of September 1985 sought to reverse the yen's rise and shrink Japan's burgeoning trade surplus. While modest progress was made on the trade front, yen appreciation exceeded expectations, and it rocketed to a postwar peak of ¥94 to the dollar in 1995. The yen's rise was supported by a declining real price of oil, a positive U.S.-Japan inflation gap, and ongoing trade and capital liberalization.

It was the Bank of Japan's attempt to stem the yen's ascent that created the liquidity for financing the now infamous "bubble economy." During the bubble period (1985–1990), prices of such assets as stocks, bonds, land, and collectables doubled or tripled. Bal-

ance sheets ballooned. In fiscal 1991, the seven largest banks in the world (based on assets) were Japanese. Nomura Securities became the largest security company in the world. Starting in May 1989, monetary tightening by the Bank of Japan led to the collapse of the bubble and a liquidity crunch that led to a severe and protracted banking and economic crisis. The "lost decade" of the 1990s undermined faith in the continuing viability of the postwar economic system.

Japanese Capitalism

Using the Anglo-American economic system as a point of reference, historians and social scientists have identified several distinctively Japanese institutions. With the collapse of the bubble economy, these institutions came under tremendous strain.

Three "golden treasures" characterize the traditional employment system: lifetime employment, seniority-based wages, and enterprise unionism. From the postwar period through the early 1990s, a lifetime employment guarantee was a standard feature of the implicit contract for employees of major corporations and government organizations. Smaller companies, although unable to offer the same employment security, often had a similar paternalistic attitude toward their employees. Wages in traditional organizations depended on initial entry conditions (education, gender, connections, industry, establishment size), position, and age. Typically, employees started out with salaries below market level, but received higher than market pay in later years. Some 95 percent of unions in Japan are enterprise unions (confined to the specific company for which union members work), and not organized on the basis of trade or industry as in other developed countries. Most unions belong to one of four major union federations and include both blue- and white-collar workers. In the 1990s, some economists began to see the golden treasures as golden chains, locking workers into a fixed and hierarchical system that seems increasingly ill suited for a fast-paced, flexible global economy.

Two other institutions of the traditional employment system deserve mention. One is the bonus system, whereby employees are given a lump sum payment two or three times a year. The size of the total annual bonus can be substantial, ranging from two to six times monthly base pay in normal years. A second institution is the annual "spring offensive" (*shunto*), a coordinated and ritualized bargaining campaign by individual enterprise unions.

These institutions apply only to permanent employees, however. Japanese firms also take on large

numbers of temporary employees, who receive lower pay and benefits, lack union protection, and may be laid off during business slowdowns. Women are another exception. In the traditional pattern, women work while young, but leave the work force in their twenties to marry and raise a family. A large proportion of the female work force are employed part-time, the result of the tax system, inflexible work conditions, a demanding educational system, seniority-based wages, and a host of discriminatory practices.

Industry Groupings

Historically, Japanese corporations have had strong group affiliations of various types and purposes. *Zaibatsu* were powerful family-owned holding companies that dominated the Japanese economy prior to 1945. Under Occupation reforms, the holding-company structure was forbidden and individuals were prohibited from owning more than 1 percent of the shares of a single company. New group formations, however, soon emerged following dissolution of the *zaibatsu*. Horizontal (or financial) *keiretsu* are groups of independent firms with a trading company and a main bank at their core and an informal "presidents' club" as a coordination mechanism. Three financial *keiretsu* groups (Mitsubishi, Fuyo, Sanwa, and Dai-Ichi Kangyo), postwar formations with substantial market shares but with a smaller number of affiliated firms and somewhat weaker ties. The vertical-production *keiretsu* is a manufacturer-supplier relationship in which a dominant manufacturing firm is supported by a network of subsidiaries, subcontractors, and affiliated companies. In the vertical-distribution *keiretsu*, a large manufacturing enterprise distributes its products through a network of affiliated retail stores. Still other variations on these basic group structures exist.

Keiretsu firms are held together by interlocking share ownership. Mutual shareholding prevents hostile takeovers and allows firms to honor their long-term commitments to workers. With few exceptions, board members of a Japanese corporation are senior executives of the company. There are, in fact, no corporations in Japan with a majority of outside directors. These features of the Japanese system leave individual stockholders with little influence on a company's management. The result is a form of capitalism different from that in the Anglo-Saxon world. In the Japanese firm, shareholders must take a back seat to other stakeholders. The Japanese corporation, it is often asserted, is run for the benefit of its permanent employees. In

the 1980s, this system was widely praised. Japanese capitalism was said to promote long-term planning, since, unlike their Western counterparts, Japanese managers do not have shareholders constantly breathing down their necks.

Banking and Finance

At the core of the *keiretsu* group is a main bank, which takes the lead in organizing funding for the affiliated firms. It is usually the largest holder of a firm's debt and holds up to 5 percent of its stock. This gives the bank a strong incentive to monitor the firm's activities and to provide useful information. It is in a good position to do this since it handles a disproportionate share of the firm's daily transactions. In times of financial distress, the main bank usually organizes the rescue operation. The main bank takes on many of the responsibilities that would be borne by large shareholders in the Anglo-American system.

The financial system of Japan's high-growth period (1955–1973) was characterized by highly segmented financial markets and indirect finance (i.e., borrowing through financial intermediaries). The private sector's slice of the financial pie was finely divided among a host of depository institutions, nondepository institutions, and securities-related financial institutions. Further categorization of private institutions depended on a host of characteristics (e.g., size and nature of its customers, types of products offered, maturity and structure of loans). Public financial institutions included postal savings, the trust fund bureau, two public banks, and eleven public finance corporations.

During the high-growth period, some 90 percent of investment funds were borrowed from financial institutions. Private banks dominated the system, accounting for 40 percent of total lending. Starting in the 1970s, financial liberalization began to whittle away at this "banker's kingdom." Barriers to intersector and international competition steadily eroded. Although capital markets have begun to play a more important role in industrial and public finance, depository institutions still hold a commanding position in the financial system. The main reason for this is the high proportion of private savings in deposit accounts, including the gargantuan postal savings system.

Industrial Structure

Perhaps the most dramatic change in the Japanese economy in the last century has been the shrinking of the agricultural sector. At the start of the Meiji period, Japan was an agriculture economy. The agricultural sector provided 45 percent of Japan's GDP and em-

ployed 73 percent of its labor force. By 1955, those statistics had shrunk to 21 and 39 percent, respectively. In 1998, Japan's entire primary sector (agriculture, forestry, and fisheries) accounted for only 1.7 percent of GDP and 5.3 percent of employment (with most agricultural employees being part-time farmers). Although small in size, the agricultural sector wielded considerable political power in the postwar period as a mainstay of the ruling Liberal Democratic Party's support base. Its loyalty has been rewarded with generous price supports and subsidies, and large construction outlays. These and other barriers to trade have been sources of continuing international friction. Government policy has aimed at improving labor productivity by increasing the size of the average farm.

The share of the secondary sector (mining, manufacturing, and construction) in production and employment rose steadily before stabilizing in the mid-1970s. In 1998, the secondary sector accounted for 33.0 percent of GDP and 31.5 percent of employment. Manufacturing's share of GDP was 23.5 percent. In the manufacturing sector, large firms accounted for 52.2 percent of the total value of factory shipments (1998). The overwhelming number of firms in the industry (99.4 percent in 1998), however, were classified as small or medium-sized. Furthermore, small and medium-sized companies employed 74 percent of the industry's workers.

By the early 2000s, Japan had clearly entered the postindustrial stage of development. Japan's tertiary sector constituted 61.1 percent of GDP and 63.2 percent of employment (1998), and information technology had become the primary focus of its industrial policy.

Japan has often been described as having a dual economy. On one side of the divide are the large and efficient export-oriented firms—world-class corporations producing products such as automobiles, machinery, electronic goods, and semiconductors. On the other side are inefficient, domestic-oriented firms, which tend to be in such highly protected industries as agriculture, construction, and finance. Opinion is now widely shared that these inefficient sectors have been a profound drag on the economy. How to invigorate them without destroying the social compact is a great challenge.

International Economic Relations

For a resource-poor country, Japan is surprisingly little dependent on foreign trade. In 1998, the export share of GDP was 10.2 percent; import dependency was 7.4 percent. Most European countries, in contrast,

have dependency ratios over 20 percent. Japan's exports are dominated by manufactured goods; its imports are mostly primary products. Japan runs trade surpluses with most industrial countries and trade deficits with most of its primary product suppliers. The United States is Japan's biggest trade partner. In 1998, the U.S. absorbed 31 percent of Japan's exports and accounted for 24 percent of Japan's imports.

Since 1981, Japan has run continuous and generally rising trade surpluses, resulting in considerable friction, particularly with the United States. But Japan has also been active in promoting international and intraregional economic cooperation and has been the number one provider of overseas development assistance in the world. In 1998, 43.3 percent of Japanese aid went to Asia (down from a high of 98.3 percent in 1970), and the Japanese government has advocated closer and more open trading ties among Asian countries, seeking a more stable currency environment and a wider use of the yen as a settlement currency.

Social Foundations and the Neoclassical Debate

Some scholars argue that Japan's economic institutions are constructed on a fundamentally different social structure than those of Anglo-American design. The Japanese social system, in this interpretation, has feudal-period roots. It is claimed, for example, that Japanese business, government, and social institutions are patterned after the *ie* (household) or *mura* (village) concepts of social organization. In such organizations, individuals are bound together in lifelong, hierarchical relationships and, consequently, are compelled to accept group norms of behavior. In the Japanese system, social harmony and the pursuit of collective goals take precedence over individual interests. The dynamics of such organizations may well be different from those patterned on the more individual-centered Anglo-American model.

With its institutional rigidities and group dynamics, the Japanese economic system poses a challenge to neoclassical economic theory's paradigm of individual choice and its assumption that only unregulated markets deliver economically efficient outcomes. Many believe that Japan's success is an example of bureaucrat-led development—an example that has been successfully imitated by other Asian economies. The claim is that industrial and other policies, most notably those of the Ministry of International Trade and Industry (MITI), helped to propel the economy onto a faster and better growth path than would have been possible in a less regulated system. Neoclassical economists find such assertions hard to accept with-

out convincing evidence that government action overcame recognized market imperfections (public goods, externalities, or Keynesian-style instabilities).

The importance of the bureaucracy in Japan's economic system cannot be lightly dismissed. The Japanese bureaucracy not only administers the nation's laws, but also drafts most of the legislation proposed in the Diet. The bureaucracy has consistently drawn top students from Japan's elite universities, and richly rewarded them. Scandals have cast light on the common business practice of showering key bureaucrats with gifts, speaker fees, and lavish entertainment. After retiring from government service, faithful bureaucrats can expect to "descend from heaven" (*amakudari*) into senior positions at private or public corporations. They may retire several times and receive generous, multiple pensions—practices one would not expect to find in a *laissez-faire* economy.

Nor is the power of the bureaucracy limited to enforcing formal laws and regulations. Japanese bureaucrats also rely on administrative guidance (*gyosei seido*), an informal request for "voluntary" compliance with government policies. The more leverage the ministries exert over targeted firms, the more effective the administrative guidance.

An example of this approach is the Bank of Japan's policy of providing periodic loan targets for commercial banks. The "window guidance" policy, which was discontinued in 1991, rested on the rewards and punishments the central bank had at its disposal. Cooperative banks could borrow money at attractive rates, and, until 1995, were guaranteed a profit on Bank of Japan borrowing, since the spread between the interbank loan rate and the central bank discount rate was always positive. Recalcitrant banks probably found the discount window closed, had trouble getting Bank of Japan approval for new branches or products, and experienced more frequent and troublesome bank inspections.

The Convoy System

The literature on Japan's political economy concentrates on industrial and trade policies, but an arguably more important set of policies deals with the regulation of finance and macroeconomic activity. In this domain, the Ministry of Finance has traditionally reigned supreme. It prepares the budgets for the national government and the Fiscal Investment and Loan Program (FILP); designs the tax system and monitors tax collections; oversees customs, tariffs, and international finance; establishes financial system policies; and licenses and supervises, with some exceptions, all of

the important financial institutions. An old exception is the postal savings system, which is regulated by the Ministry of Posts and Telecommunications.

As part of the "big bang" reforms following the banking crisis of the 1990s, the Ministry of Finance was forced to surrender some of its licensing and supervisory powers to a new Financial Agency under the prime minister's office. In addition, the new Bank of Japan Law, which took effect in April 1998, gave the central bank considerable independence in the design and conduct of monetary policy.

Bureaucrats refer to the Japanese system of financial regulation as the "convoy system." The image conveyed is a group of carefully selected ships, tightly linked under central command, moving at nearly identical speeds through dangerous waters. The Ministry of Finance, operating through the Bank of Japan, controlled the financial spigot. Four characteristics of the traditional financial system helped the ministry maintain convoy discipline. Capital controls protected domestic markets from external competition. Administered interest rates provided the incentive structure for domestic fund competition. Market segmentation allowed more precise channeling of the flow of funds. Finally, indirect finance gave the ministry direct control over the flow of funds and indirect control, through the *keiretsu* system, over the entire economy.

Is it a coincidence that the golden age of the convoy system (1955–1971) overlapped the period of high-speed growth? Maybe not. The convoy's low interest rate policy provided an inducement to "overinvestment." Other policies, such as tax incentives and consumer lending disincentives, may have stimulated the required "oversaving." This may have led to more capital deepening and per-capita income than would have been achieved by a more market-based system.

Whether or not the convoy system stimulated faster growth, the original convoy was ill suited for the choppy seas of the 1970s. Financial liberalization resulted in a soft form of convoy regulation. The big-bang reforms were designed to create a financial structure that was free, fair, and open. Could a convoy operate under such rules? The Ministry of Finance scarcely had time to contemplate the question when the ultimate shock occurred. In 1997 the collapse of several large commercial banks and the Asian currency crisis hit the convoy like a hurricane.

Macroeconomic stabilization was a key responsibility of convoy regulators. Demand management involved manipulation of several unique tools. Japan's underdeveloped bond market meant that open market

operations could not be the primary instrument for monetary control, as in Western countries. Until the early 1990s, the Bank of Japan used discount loans and window guidance as its primary policy instruments. The primary tool for fiscal policy has been the highly flexible FILP budget. The Ministry of Finance has had enormous discretion in varying the amount of budget outlays within and between fiscal years.

The Twenty-first Century

At the start of the new millennium, Japan found itself in a very difficult economic situation. The country had endured a decade of stagnation, going back to the collapse of asset values. Commercial banks and the government were burdened with enormous debts. Unemployment rates were at postwar highs, interest rates on savings near zero, and, with a rapidly aging population, pension funds under great stress. Whether the current economic system survives is a debatable point. What should be clear, however, is that the Japanese people will not give up. They are disciplined, hard working, frugal, and adaptable, and will surmount this crisis as they have others before it.

Some observers believe that the cumulative impact of the post-bubble changes in the Japanese economy may ultimately turn out to be as profound as that of the Meiji Restoration and the Occupation. They differ as to whether Japan's political-economic structure has been undergoing a "regime shift" or simply some costly modernization around a solid institutional core. But history suggests that the system that finally emerges will be a blend of both Western and Eastern values.

JAPAN—EDUCATION SYSTEM In the 1980s and 1990s, the Japanese education system received widespread international attention and praise for its accomplishments. Modern schooling was credited with contributing significantly to the country's modernization and economic development. Almost 90 percent of students graduated from high school, and the average level of student achievement was high by international standards.

While still impressive, Japan's education system is now undergoing significant changes. Underlying these changes is a shift in thinking about the purposes of education. Whereas the school system previously functioned to produce and differentiate human resources for the industrial and economic needs of postwar society, there is a growing consensus that the education system has many problems and shortcomings. The call for educational reform and the reports issued by advisory groups to the prime minister are not new to postwar Japan. There have been several series of reform debates and policy changes. The difference this time, however, is that reform debates are motivated by far-reaching social changes and a prolonged economic recession. Education for the twenty-first century must address issues such as globalization, aging and the low birth rate, technological innovations and the "information society," and the increasing diversification and internationalization of Japanese society.

Historical Background

Before a modern education system was introduced into Japan in the second half of the nineteenth century, an extensive infrastructure of schools and private academies already existed during the feudal Tokugawa

THE PRESSURE TO ACHIEVE IN JAPANESE

The following report from the Japanese newspaper *Yomiuri Shimbun* on 17 June 1951 indicates that pressure to achieve in school is not a recent development in Japan.

Every time I meet one of my parents [complains an elementary-school teacher writing in the newspaper], I hear the same complaint—"Teacher, I wish you would pile on the homework a bit more. My boy simply won't sit down and study unless he's got to." Of course one understands the sincerity of the parents' desire to do the best they can for their child. But if the child, after giving all of his brain-power to his school work, comes home only to have to start work over again, the result will be a deep dislike for study of any sort. As long as this continues, the familiar problem of the child who seriously damages his health over entrance examinations will always be with us.

period (1600/1603–1868). Children of aristocrats, the samurai warrior class, and urban merchants attended schools operated by and for their own respective classes. Regional government-operated fief schools prepared sons of samurai families for administrative work by training them in both military arts and Confucian studies. Commoners and farmers voluntarily attended so-called temple schools where they learned the three "Rs" and other basic skills under teachers who were not necessarily monks. Among these various schools, only the temple schools accepted females. By 1850, it was estimated that in Japan, as in leading European countries at this time, 25 percent of the population was literate.

In enacting the Education Law of 1872, the new Meiji government (1868–1912) began the task of creating a modern public-education system for all children, regardless of class. The aims of this new system were to help Japan catch up industrially with the West and to instill a sense of national, albeit emperor-centered, identity. After studying various Western school systems, the Meiji-era leaders adapted and combined aspects of several systems—the United States, France, Germany—for Japanese use and established a centralized Ministry of Education.

By 1890, the government had codified a nationalist educational philosophy in the Imperial Rescript on Education. This Rescript emphasized the Confucian values of hierarchical relationships and the pursuit of learning and morality. This philosophy persisted until Japan's defeat at the end of World War II, in 1945. During the time of the Rescript, a new Elementary School Law of 1900 established tuition-free compulsory education for four years, which was extended to six years in 1908.

Prior to and during World War II, the content of education became increasingly nationalistic and militaristic, and, therefore, reform of the education system was a priority for the U.S. Occupation authorities. The 1946 Report of the U.S. Education Mission to Japan, commissioned by the General Headquarters of the Occupation, recommended educational changes aimed at the production of citizens rather than subjects. Most of the Mission's recommendations were incorporated into the 1947 Fundamental Education Law (whose principles for education replaced those of the prewar Imperial Rescript) and into the 1947 School Education Law, which established a new school system. Respect for individual human rights, pacifism, and democracy replaced Confucian values as the guiding principles for education. The first article states: "Education shall aim at full development of personal-

ity, at rearing a people, sound in mind and body, who love truth and justice, esteem individual values, respect labor, have a deep sense of responsibility, and are imbued with an independent spirit as the builders of a peaceful state and society" (Ministry of Education, Science, Sports, and Culture 1999: 9). The new School Education Law subsequently formed a 6-3-3 school system (that is, six elementary, three lower secondary, and three upper secondary years), with coeducational nine-year compulsory schooling organized by the local boards of education under the supervision and control of the Ministry of Education.

The Formal School System

Since the peak in the population of school-age children in the mid-1980s, there has been a steady decrease in enrollment rates due to a declining birth rate. This demographic phenomenon is having a lasting effect at all levels of the school system. For example, as average class size shrinks from forty-five students to thirty-eight to thirty, classroom management and teaching methods change. Another example is the effect on educational competition, discussed below in the section on postsecondary schools.

Pre-Elementary Education Pre-elementary education is not compulsory, but a high percentage of Japanese children are enrolled. Sixty percent of all three-year-olds, 90 percent of four-year-olds, and 95 percent of five-year-olds attended either kindergarten (*yochien*) or nursery/day care centers (*hoikuen*) in 1996. Kindergartens operate under the supervision of the Ministry of Education and are usually open for about five hours a day. Day care centers are licensed by the Ministry of Welfare and are run for eight hours a day. Tuition at day care centers is adjusted to family income. Facilities, curriculum, teaching style, and activities at day care centers and kindergartens are similar. In both types of early education, the curriculum tends to be nonacademic, although pressure to become more academic is increasing among some groups. Recently, the declining population of children has forced many kindergartens to extend their hours and offer additional afternoon programs in an effort to compete with day care centers for enrollment.

Compulsory Education: Elementary and Junior High School Compulsory education in Japan begins at the age of six years, when students enter elementary school, and ends upon completion of the third year of junior high school. Less than 1 percent of primary school children and a little over 5 percent of junior high school students attend private schools. Most students, in other words, receive their nine years of

schooling in the mainstream public school system. Since the Ministry of Education determines curriculum standards, pace, and textbook content for all schools, both public and private, the degree of uniformity in educational experience is remarkable. In addition, students are not tracked by ability, and as long as they are attending classes, they are virtually assured of advancement to the next grade.

The school year begins with an opening ceremony in April and finishes with a closing ceremony in March. There is a forty-day summer vacation from mid-July to the end of August. Winter and spring vacations are fourteen days in December and March, respectively. Until recently, Japanese children attended sixty more days of school per year than American children. Half-day attendance on Saturdays is being slowly phased out by alternating six-day weeks and five-day weeks. By the year 2003, all public elementary and junior high schools will have completed the transition to a five-day school week.

The curriculum for elementary and junior high schools is also undergoing revision. By 2002, the required number of class hours for many subjects—Japanese language, social studies, mathematics, science, music, art, physical education, and special activities (assemblies, events, clubs)—was to be reduced. The thirty-five hours devoted to moral education will remain the same. Finally, integrated learning and information studies will be introduced.

With regard to cultural practices and implicit curriculum common to public schooling, coming-to-order procedures, small-group work structures, daily monitors who handle administrative tasks, and assignment of school clean-up duties are a few examples of classroom management and discipline strategies. These daily rituals are introduced to first graders and subsequently continued throughout a child's school career. Other examples are the custom of an annual visit to the home of every child by the homeroom teacher and, more generally, the cooperative relationship among home, school, and the community (including the police department). Activities such as after-school clubs or the sixth and ninth graders' three-day study trips by bus caravans to places of historical significance exemplify the emphasis on shared experiences that instill values of cooperation and awareness of group membership. What really distinguishes Japanese schooling from its Western counterparts is conventions such as these.

Upper Secondary Schools Ninety-six percent of graduates of compulsory education continue on to upper secondary schools that require tuition and textbook

fees. At this point, however, schools and curricula are no longer uniform. Through guided placement by junior high school advisers, students are directed to a school appropriate to their level, and they sit for that school's entrance examination. Since high schools tend to be ranked, the process of educational stratification begins at this stage. Entry into a particular high school is directly related to a person's future career path.

There are six types of high schools: elite academic, nonelite academic, vocational, evening, correspondence, and special education. Elite academic high schools, public and private, specialize in sending a high percentage of their graduates to the highest-ranking national and private universities. A majority of students attend nonelite academic high schools, and there is considerable diversity in terms of the percentage of graduates who proceed to universities, junior colleges, or special training schools.

There are several ways to obtain vocational or specialized training beginning at the high school level and, in some cases, continuing into postsecondary schooling. Vocational high schools, a part of the secondary school curriculum since 1893, are grouped by the Ministry of Education into the following categories: commercial, technology, domestic sciences, agriculture, medical, educational/social welfare, public health, arts and culture, and fisheries. Twenty-three percent of high school students attend specialized vocational high schools. In addition, about 31 percent of the nonelite academic high schools offer both vocational and general courses. In 1995, 4.3 percent of vocational graduates entered a four-year university, 6.6 percent joined a two-year college, and another 22.5 percent chose further education at a special training school. Approximately 60 percent obtained full-time employment.

Finally, evening and correspondence high schools, whose combined enrollment is about 4 percent of high school students, serve the needs of students who must work or, for reasons of health, cannot attend the day high schools.

Postsecondary Schooling Postsecondary institutions include 604 universities with 438 graduate programs, 588 junior colleges, 62 technical colleges, and numerous other special training and miscellaneous schools. Junior-college programs are usually two to three years in length. Technical colleges, which include courses of study corresponding to upper secondary school, have five-year programs. Depending on the course of study, special-training and miscellaneous schools' programs range in length from a few months to five years. University undergraduate-degree programs are

normally four years in length, two semesters per year. In addition, there are six-year programs in medicine, dentistry, and veterinary science. Postgraduate programs consist of two-year master's degree courses or five-year doctoral programs.

College admission rates have increased steadily throughout the postwar period, and in 1998, 55 percent of high school graduates matriculated to a university (41.6 percent) or junior college (13.4 percent). Seventy-five percent of these universities are private and educate about 73 percent of all university students. Among these, 34.9 percent of university students and 90.1 percent of junior-college students were female. Female students accounted for 24.8 percent of graduate program enrollment.

Universities are currently undergoing significant changes related to the economic recession and the declining birth rate. In the past, elite public and private universities maintained close connections to private companies, virtually ensuring the placement of their graduates. The name and reputation of the university mattered more than a student's actual skills and talents. Today, as many Japanese companies restructure and struggle to regain a competitive edge internationally, these firms have reconsidered their ties with universities. Increasingly, job candidates must demonstrate their abilities and assets to the prospective company.

By the year 2005, there is to be a place at a university for every student who wishes to attend. This means that, except for the most prestigious schools, it is the universities that are competing to recruit students rather than the students who are competing for admittance. This trend has stimulated many universities to redesign their programs to appeal to contemporary students. Faculty members, too, are under pressure to improve the educational environment through a better understanding of their students and the ways that students learn. The Central Council for Education, moreover, recently proposed a reform of the examination system that would give students choices about applying to public universities, based on the content of their future plans rather than on test scores. In addition, concerns about the financial survival of universities are inspiring many new opportunities for adult education, in the form of degree and nondegree programs.

Educational Problems and Current Educational Reforms In addition to the changes occurring at the level of postsecondary schools, cultural values about the means and goals of education are shifting away from those of the previous fifty years. Schools are said

to be too rigid, curricula too uniform, organizations too centralized, and children too stressed.

Criticisms such as these are buoyed by an intensification of problem behaviors and an increase in violent juvenile crime at younger ages. At the beginning of the 1980s, a fluctuation in school violence was followed by the identification of two new educational problems: bullying (*ijime*) and school-refusal syndrome (*tokokyobi*, a psychiatric category). While all three problems remain significant sources of research and public discussion, the more recent phenomena of collapse of order in classrooms (*gakkyu bokai*) and school nonattendance (a broad category that includes truancy) are also concerns. While statistics for school violence, bullying, and truancy have gradually risen over the last twenty years, the percentages are still low in comparison with schools in the United States.

To address these problems and other changes happening in education, such as the introduction of computers in schools, there is a growing consensus that local communities should control their own educational needs and decisions. It is also thought that more choices should be given to students, including early-graduation options. Current discussions emphasize helping all children to find and utilize their strengths in combination with teaching them how to serve the needs of their own communities and societies. Schools in the near future will have fewer children per classroom, and children will be partners in and responsible for their own learning.

Special Education Compulsory special education for blind and deaf children began in 1948. In the late 1960s, various educators and parents set up special groups to study the problems and education of children with various disabilities. The range of schools was broadened to include other disabilities with the legal enactment in 1979 of compulsory education for developmentally disabled children. There are currently 71 schools for the blind, 107 schools for the deaf, and 810 schools for students with other significant disabilities, ranging in level from preschool to upper secondary education. In addition, 43 percent of public primary schools include special-education homeroom classes for children with intellectual or physical handicaps, speech problems, or emotional disturbances.

The Teaching Profession

In the prewar period, teacher certification for primary education was controlled by normal schools that were established by the government and that had been given the mandate of training imperial servants. The postwar Fundamental Education Law, in contrast, in-

cluded the notion that teachers were servants of the whole community. To ensure diversity among those in the teaching profession, various postsecondary schools were entitled to have a teacher-education course, making their graduates eligible to apply for certification. Consequently, although still authorized by the Ministry of Education, certificates for kindergarten, elementary, and junior high schools are obtainable at teacher-training universities and teaching-certificate courses in universities and junior colleges. Teachers for upper-secondary schools must receive training at universities or graduate schools or both. In addition to graduation from a two- or four-year institute and completion of professional training courses, a four-week and two-week minimum of student teaching for elementary and secondary levels, respectively, is required.

Upon graduation, a student automatically receives a teacher's certificate from the board of education in his or her university's prefecture. Although the certificate is valid throughout Japan, the holder must also pass an examination given by the board of education in the prefecture of his or her choice. Successful applicants are hired if there is a vacancy, and since the selection examination expires after one year, unemployed applicants must reapply and repeat the examination the following year.

According to the data supplied by the Ministry of Education in 1997, 80.7 percent of primary, 88.3 percent of junior high, and 89.3 percent of high school teachers have a four-year undergraduate degree. In addition, 1 percent of elementary, 2.5 percent of junior high, and 7.8 percent of senior high school teachers have completed a master's degree. Full-time female teachers made up 61.2 percent of elementary, 40 percent of junior high, and 23 percent of high school teachers in 1997.

International Education

Internationalization and international education became serious issues in the 1980s, when economic success provoked demands for Japan to take a more active role in international affairs. One outcome was the creation in 1987 of a \$400 million annual budget for the Japan Exchange and Teaching (JET) program. The JET program recruits college graduates from primarily Western countries and places them in Japanese public secondary schools and local government offices in a top-down bureaucratic effort to create mass internationalization.

There are currently a number of other programs that address international educational issues. The need

for teaching the Japanese language to foreign children living in Japan and attending public schools increased by 50 percent between 1995 and 1998. Among these 17,000 children, 43.1 percent speak Portuguese as their native tongue, followed by 30.8 percent for Chinese and 10.1 percent for Spanish. The Portuguese- and Spanish-speaking children are mostly children of Japanese ancestry from Brazil and other South American countries. This influx of foreign children into the school system inspired NHK, Japan's public television station, to create a drama about the adjustment experiences of a Japanese-Brazilian girl and her classmates, and at least one public school is using this program in its moral-education classes to promote understanding of foreigners.

Aside from foreign children, Japanese children who have lived abroad with their families for a year or more experience varying degrees of difficulty when they return home. These children, known as *kikokushijo*, numbered 12,884 in 1998; 61 percent of *kikokushijo* were elementary school students. Most prefectures now have special programs to ease the reentry of these students into the Japanese cultural and educational environment.

Another aspect of international education is the variety of exchange and study-tour programs available to high school students. For example, in 1996 a total of 688 public and private high schools, with 130,669 students participating, took school trips abroad. The most popular destinations were Korea, China, the United States, and Australia. That same year, a total of 972 schools accepted a total of 1,280 foreign students for three months or more.

Adult Education and Training

Systematic educational activities outside schools, also known as social education, have been practiced and promoted in Japan since the prewar period. The idea of lifelong learning became a major campaign of the Central Council for Education in the early 1980s. While social education had been defined by and organized under the Ministry of Education at national and local levels, universities and private educational establishments also began to expand their adult-education programs independently. Adult-education programs are offered in a variety of settings, including public halls and community centers, women's education centers, museums, libraries, and for-profit institutions of adult education. There are also institutions specializing in adult education, such as the Lifelong Learning Centers operated by local boards of education and the National Training Institute of Social Education. In

addition, there are high school, university, and college extension courses, correspondence courses, and adult enrollment in higher education. Finally, the 1983 establishment of The University of the Air, which uses televised and radio-broadcast classes along with printed materials, offers anyone the opportunity to enroll in an institution of higher education.

The Japanese place a high value on education. They have referred to themselves as the society of educational credentialism. While educational achievement will remain a source of prestige in Japan, societal expectations for education are changing. Education should enhance personal fulfillment in a society that has more leisure time and an aging population. Schools should cultivate individual talents and creativity in each and every student, while also instilling in them a sense of responsibility to the larger society. It remains to be seen how Japanese educators will actually put these ideals into practice. It is clear, however, that all forms of education in Japan are undergoing diversification and localization, as well as increasing accountability and personal choice.

JAPAN—HISTORY. See **Heian Period; Heisei Period; Jomon Period; Kamakura Period; Muromachi Period; Nara Period; Showa Period; Taisho Period; Tokugawa Period; World War II.**

JAPAN—HUMAN RIGHTS At least until the 1990s, Japan was reluctant to promote human rights in either its domestic or foreign policies, arguably because the very concept of human rights—rights possessed simply by virtue of being human, or standards of human dignity beneath which people may not permit themselves to fall—derives from a Western liberal tradition that is alien to Japan, and indeed to Asia as a whole. But many of the features of modern industrial life—the factory system, post offices, the business suit—were imported from the West, and this did not prevent their rapid assimilation into everyday Asian life. At precisely the time that Western dress and manufacturing techniques were being introduced into Japan in the 1870s and thereafter, there were many across Japan who appreciated and promoted liberal rights ideas and, inspired by them, were critical of government policy. That they did not have more influence has more to do with a deliberate government policy to prevent the free circulation of dissident ideas than an inability to understand them.

Establishment of an Independent Legal Profession

During the U.S. occupation of Japan following the end of World War II, the United States aimed to create democratic structures and eliminate the laws and practices that inhibited dissent. The postwar constitution was central to that task. Articles 10 through 40 define a set of human rights more extensive than any such document in the world did at that time. A network of locally appointed but centrally organized volunteers, the Civil Liberties Commissioners, was set up to promote the understanding of these human rights and to mediate in cases of rights infringement. Lawyers, who had previously been under the control of the Ministry of Justice, were converted into a self-governing profession within the Japan Federation of Bar Associations. Their primary duty, according to the Attorney Act of 1949, is "to protect fundamental human rights and to ensure social justice." Although the Civil Liberties

Commissioners have been unable to develop a critical role, the legal profession has been pivotal in the development of human-rights practice in Japan. Not only do lawyers publish extensively on human-rights issues, but they also are to be found actively involved in the whole range of rights-promoting activities.

Japan and the United Nations' Human-Rights Instruments

Despite a promising start with the production of the Universal Declaration of Human Rights in 1948, the United Nations did not approve the twin international covenants on civil and political rights and economic, social, and cultural rights until 1966. Even then they did not become effective until ratified by thirty-five nation-states, which took another ten years. Japan was not among these initial ratifiers; neither was the United States. U.S. policy toward the international promotion of human rights was made clear in the early 1950s when John Foster Dulles, secretary of state from 1952 to 1959, declared the United States to be in favor of the promotion of human rights but through "persuasion, education, and example rather than formal understandings." Throughout the postwar period, Japan's foreign policy was devised within the framework set by the United States. Reflecting this, Japan ratified the two covenants in 1979 when there was evidence of wide international acceptability and President Jimmy Carter was promoting human-rights diplomacy.

Japan has been slow to ratify many of the most important international treaties by comparison with its Asian neighbor, South Korea, and a similarly advanced industrial country, Sweden. The official explanation for this stresses that Japan takes the treaty obligations seriously and makes sure that domestic law is fully consistent with the treaty text before ratification. Nongovernmental groups such as the legal profession contest this. They argue that Japan has repeatedly sought to avoid drawing attention to its poor human-rights record. A careful examination of domestic law does not, for example, explain the long delay in ratifying the Convention on the Elimination of all forms of Racial Discrimination (CERD), and Japan still has not ratified the first optional protocol of the International Covenant on Civil and Political Rights (ICCPR), which would permit appeals by individuals to the Human Rights Committee where domestic institutions failed to provide effective redress in cases of rights infringement by the state.

Recent Developments

It is possible to detect a change in policy in the 1990s. Not only did the government ratify the Con-

vention on the Rights of the Child (CRC), CERD, and the Convention Against Torture (CAT), but it also created a committee to produce a policy on human-rights education as part of the U.N. Decade for Human-Rights Education (1995–2004) and a committee to suggest reforms to enable more effective redress in cases of human-rights violations, both located in the prime minister's office. There have also been significant changes in Japan's policy toward *burakumin* (Japanese who face prejudice and discrimination because of supposed connections with the outcaste groups of the premodern era), Korean residents, women, and Ainu (the non-Japanese indigenous people of Hokkaido). Three factors drive this policy change. Since the early 1990s, Japan has sought a permanent seat on the U.N. Security Council, and the ministry of foreign affairs has been seeking to win domestic and international support for this. Second, during the 1990s the government submitted several reports to the United Nations that exposed it to international criticism and created an opportunity for domestic nongovernmental organizations (NGOs) to express their views on Japan's human-rights practices. The 1993 official report to the United Nations under the ICCPR stimulated twenty-three "counter reports" commenting on some or all of the official statement. Third, in the 1990s the indigenous NGOs sought to develop links with the international movement. Korean groups communicated with fellow Koreans in Seoul and California, Ainu groups came in touch with other "first peoples," and the Buraku Liberation League supported groups that aimed to create transnational human-rights awareness.

Could Japan take a lead in the promotion of human rights within Asia, the only region of the world with no regional framework? It has been constitutionally committed to rights for more than fifty years, and it has ratified the most important U.N. conventions and has an active human-rights NGO community. But the rest of Asia still remembers Japanese imperialism, and the periodic intemperate statements by right-wing politicians do nothing to assuage the fears of other Asian nations. Moreover, while there is increasing tolerance of groups such as the Ainu, Koreans, and immigrant workers, there is still no positive celebration of ethnic plurality. The Japanese government and society remain reluctant supporters of human rights.

JAPAN—MONEY Money, in the classical definition, is any object that serves as a convenient means of payment or settlement. The financial assets that have been judged convenient by Japan's monetary authorities have varied over time with tastes, technology, institutions, and purpose; they have included bolts of cloth and bushels of rice. In the immediate postwar period, the most common definition of money was "cash currency in circulation" (bank notes and coins in circulation less vault cash in financial institutions). By 1955, the official definition was expanded to include "deposit money" (demand deposit minus checks and notes held at surveyed institutions). M1, or "narrow money," consists of cash currency plus deposit money. M1, which continues to be monitored by the Bank of Japan, is closely correlated with currency income and expenditure.

In 1967, recognition of the high degree of substitutability between demand and other deposits led to official recognition of "quasi money" (total deposits, less demand deposits, at surveyed institutions). Quasi money includes time deposits, deferred savings, installment savings, nonresident yen deposits, and foreign-currency deposits. M2, or "broad money," consists of M1 plus quasi money. The introduction of certificates deposit (CD) in 1979 provided another type of "near money." Since then, the most commonly used definition of money has been M2+CD.

In recent years, globalization and information technology have improved the liquidity of financial products. M3+CD has drawn increasing attention. M3 consists of M2 plus postal deposits (deposits made to savings account run by the Japanese post office), trust accounts, and deposits at various cooperative-type financial institutions. Since 1989, a variety of high liquid financial assets have been included in "broadly defined liquidity," the broadest category of official money.

Japanese money has several distinctive features. Consistent with a historical preference for cash payments, ordinary households do not use checkable deposits (deposits upon which a check can be written). Due to an efficient electronic payment system, payments by check constituted a mere 5 percent of non-cash payments in 1997. Postal savings deposits in household portfolios, are an important part of broad-

based money. In 1998, they made up 23 percent of M3+CD.

JAPAN—POLITICAL SYSTEM Modern Japan's political system can be formally divided into three periods centering around the emperor's Charter Oath of 1868, the Meiji Constitution of 1889, and the 1947 constitution. Each of these periods was, in turn, affected by less formal political movements, the meanings of which are still being hotly debated.

The Charter Oath of 1868

In April 1868, the young Meiji emperor participated in a solemn Shinto ceremony in which he issued what is now known as the Charter Oath. This promised that deliberative councils would be established, public discussion encouraged, "evil practices of the past" ended, and knowledge sought "all over the world" so that "the foundations of imperial rule shall be strengthened." The document was intended both to reassure conservatives and to signal—particularly to the Western world—that the new leaders of the Meiji Restoration were prepared to modernize Japan. General enough to be reinterpreted as time went on, it was later cited by the Showa emperor (Hirohito, the Meiji emperor's grandson) in 1946 as a set of ideals Japan might use to recover from the war.

To help accomplish these aims, the Meiji government in its first five years ended the system of hereditary estates (or social classes), abolished feudal domains (*han*), started a modern educational system, and organized a new army based on conscription rather than hereditary warrior privilege. On the negative side, a small (approximately 1,000 families) peerage was established, a strict press law was passed in 1869, legislation regulating public meetings was enacted in 1880, and the 1887 Peace Preservation Law gave the home ministry the power to censor "dangerous thoughts." Politically, the so-called Constitution (*Seitaisbo*) of 1868 set up a Grand Council of State (*dajokan*), a term that eventually stood for a government system allegedly modeled on that of the Nara and Heian periods (710–1185). A grand minister of state

PREAMBLE TO THE CONSTITUTION OF JAPAN

Adopted on 3 Nov 1946

We, the Japanese people, acting through our elected representatives in the National Diet, determined that we should secure for ourselves and our posterity the fruits of peaceful cooperation with all nations and the blessings of liberty all over this land, and resolved that never again shall we be visited with the horrors of war through the action of government, do proclaim that sovereign power resides with the people and do firmly establish this Constitution. Government is a sacred trust of the people, the authority for which is derived from the people, the powers of which are exercised by the representatives of the people, and the benefits of which are enjoyed by the people. This is a universal principle of mankind upon which this Constitution is founded. We reject and revoke all constitutions, laws, ordinances, and rescripts in conflict herewith.

We, the Japanese people, desire peace for all time and are deeply conscious of the high ideals controlling human relationship, and we have determined to preserve our security and existence, trusting in the justice and faith of the peace-loving peoples of the world. We desire to occupy an honored place in an international society striving for the preservation of peace, and the banishment of tyranny and slavery, oppression, and intolerance for all time from the earth. We recognize that all peoples of the world have the right to live in peace, free from fear and want.

We believe that no nation is responsible to itself alone, but that laws of political morality are universal; and that obedience to such laws is incumbent upon all nations who would sustain their own sovereignty and justify their sovereign relationship with other nations.

We, the Japanese people, pledge our national honor to accomplish these high ideals and purposes with all our resources.

(*dajo daijin*) presided over the minister of the right (*udaijin*) and the minister of the left (*sadaijin*), and various vice ministers and councilors (*sangi*) headed the various administrative departments.

The *genro*, a group of leaders of the Meiji Restoration, was set up in 1875; a seven-member cabinet was established in 1885; and a Privy Council was formed in 1888. A civil service was also started, as were law codes heavily influenced by European advisers. Lo-

cally, the government attempted to extend its authority by appointing local officials and establishing assemblies whose membership was limited to the wealthy and whose authority to bring up sticky issues was limited. While considerable progress was made toward the establishment of a more civil society, most political decisions were still made by members of the former samurai class (particularly from the Satsuma and Choshu families) who had masterminded the Meiji Restoration itself.

Protestors outside the National Diet in Tokyo in August 2000 rallying against legislation concerning the official acceptance of signs of imperial rule. (AFP/CORBIS)

All this hardly went unchallenged. In 1877 the samurai followers of Saigo Takamori (1827–1877) rose up in a revolt that was only crushed after hard fighting; ironically, Saigo's doomed stance against the Meiji government made him into one of the great heroic figures of modern Japan. Peasants also protested, many violently, against the hardships caused by a new tax system that no longer gave breaks in years of poor harvests. Most significant for our purposes, the largely rural Jiyuto (Liberal Party) of Itagaki Taisuke (1837–1919) and the largely urban Kaishinto (Progressive Party) of Okuma Shigenobu (1838–1922) were both formed to demand more constitutional government. Pressure of this sort was one of the chief reasons that the Meiji government decided to promise as early as 1881 that there would soon be a new constitution. Framed particularly by Ito Hirobumi (1841–1909), who drew heavily from German sources, the promulgation of the Meiji Constitution on 11 February 1889 marked the end of this first era of the modern Japanese state.

The Meiji Constitution of 1889

The new constitution clearly stated that Japan was to be "governed by a line of emperors unbroken for ages eternal." If his decrees were countersigned by a minister of state, the emperor had the official power to pick the prime minister, conduct foreign policy, command the military, dissolve the lower house of the

Diet (the legislature), veto legislation, issue proclamations in place of laws, and consider constitutional amendments. The emperor continued to be advised by the *genro*; the last of these, Saionji Kimmochi, was active until his death in 1940. A Privy Council of various lifetime appointments and political figures became less important as time went on, but it also was an appointive body that had the right to advise the emperor on matters of state. A prestigious and powerful bureaucracy, chosen by civil-service examinations but largely composed of officials from former samurai families, proposed legislation, carried out policy decisions, and often provided prewar political leaders. The constitution authorized legal codes and an independent judicial system, but, as Article 29 put it, the Japanese were to enjoy freedoms of speech and association "within the limits of the law." Finally, military leaders also played an important part in creating Japan's prewar governments. During the 1900–1913 and 1936–1947 periods, only active-duty generals or admirals could legally head the Ministry of Military Affairs and hence be part of the cabinet.

The Meiji Constitution also established a legislature known as the Diet. This consisted of an appointed House of Peers and an elected House of Representatives. Both houses had to approve any proposed piece of legislation, but if a new budget was not approved, the government could use the previous year's budget. While voting in the first election of 1890 was limited

to a very small number of property owners, universal suffrage for all males over twenty-five years of age was enacted by 1925. Political parties continued to be active, and in the so-called Taisho Political Crisis of 1913 these parties were even able to prevent the rather authoritarian Prime Minister Katsura Taro from using imperial edicts to build his cabinet. By 1926 Hara Takashi (Hara Kei), a commoner, had been appointed prime minister; by the 1920s, most prime ministers were appointed from one of the two major political parties.

Helped no doubt by a growing economy, foreign-policy successes, a weak Taisho emperor (the son of the Meiji emperor), and the growing popularity of liberal political ideals, commentators spoke hopefully about the changes in the formal political system apparently brought on by "Taisho Democracy." By the late 1930s, however, parliamentary democracy was in deep trouble. Politically, the Peace Preservation Law of 1887 was followed by a second, even stricter law that was passed in 1925 both to accompany the universal manhood suffrage bill and to counter what was considered to be the growing Communist threat. Economically, large numbers of Japanese (particularly tenant farmers) were doing so badly that they were naturally deeply resentful of the wealthy urban elite. Racially humiliating anti-immigration legislation passed by the United States in 1924, the collapse of the world economy that took place after the stock market crash of 1929, the high tariffs passed in the United States and elsewhere in the next few years, and the mounting opposition to Japan's military expansion all seemed to threaten Japan's existence. The police now began to arrest anyone deemed guilty of "dangerous thoughts."

Nationalist hotheads also assassinated unpopular leaders and, in February 1936, led an army rebellion that briefly occupied the center of Tokyo. With the Showa emperor too worried about the future of the throne to intervene and the various political parties apparently corrupt and fractious, many Japanese concluded that their only hope lay in allying with Germany and Italy. Even without formal changes in the political system, in other words, militarism became more popular. War followed.

The New Constitution

After Japan's defeat, major political changes took place. Between 1945 and 1952, Japan was technically ruled by SCAP, a term that stood both for "Supreme Commander of the Allied Powers" (who for most of the period was General Douglas MacArthur) and his government. Working mostly through the formal Japanese government and bureaucracy, SCAP initiated

a series of major political reforms that included the breakup of the military; a purge of top military, economic, and political leaders; a land-reform law that reduced the number of tenant farmers to perhaps 10 percent of the total farming population, legislation permitting unions to organize, an attempted breakup of some of the *zaibatsu*, or large industrial combines, and educational reforms designed to encourage liberal thinking. While not as severe as the reforms made in Germany, these various policies did try to create a more socially equal and politically aware civil society.

A new constitution lay at the center of these changes. Technically an amendment to the Meiji Constitution, this new one sprang from a draft written by SCAP officials unhappy with the more conservative proposals put forth by the Japanese government. It was promulgated in 1946 and went into effect in 1947. In this new document, the emperor was now "the symbol of the state and the sovereignty of the people . . . with whom resides sovereign power." All bodies such as the *genro* and the Privy Council were abolished, as was the peerage. At the insistence of the Japanese, the Diet—now the chief legislative body—kept the House of Councilors, half of whose members were elected every three years for a six-year term, and the House of Representatives, the members of which were to serve for no more than four years. Executive power lay in a prime minister who had to be a civilian and a member of the Diet. Like the Diet members, the prime minister and his cabinet could serve for up to four years unless (as in Great Britain) the Diet passed a no-confidence motion. An independent judiciary with the right of constitutional review and a far stronger set of human rights rounded out this new political system.

Four aspects of the new constitution were particularly striking. First, Article 14 of the new constitution explicitly outlawed discrimination not only on the basis of race, creed, social status, or family origin—this last aimed at discrimination against a racially Japanese outcaste group known as the Burakumin—but also on the basis of sex. Probably passed, ironically, in a rather sexist hope that women would be more likely to want peace than men, this amendment not only allowed women to vote for the first time, but also inspired other constitutional and legal provisions allowing them to own property, sue, hold public office, marry of their own free will, and divorce. Legislation of this sort naturally did not immediately change Japanese notions that separate, ascribed roles for women and men could be considered "equal." But there was at least substantial legal basis for women to argue that they should not be confined to the home or "office

lady" jobs. By the beginning of the twenty-first century, women were seeking (and winning) legal redress for abuses such as employment discrimination and sexual harassment.

A second important innovation was Article 9. Claiming that they were "aspiring to an international peace based on justice and order," the article went on to say that "the Japanese people forever renounce war as the sovereign right of the nation" and that "land, sea and air forces, as well as other war potential, will never be maintained." Although the origins of this article remain obscure, Article 9 made it a good deal easier for SCAP to permit the Showa emperor to stay on the throne. The article also made a profound impression on the many millions of Japanese who were reacting against the general destruction of the war and the particular horror of two atom bombs. These Japanese reacted angrily when SCAP and the Japanese government decided that the Cold War (that is, the absence of the "international peace" cited earlier) made it constitutionally possible for Japan to have a highly sophisticated "Self-Defense Force." While this Self-Defense Force is gradually becoming less contentious, the government is careful to keep the military budget at a very low percentage of the gross national product and remains hesitant about sending troops overseas to United Nations peacekeeping forces.

A third key provision was one that let the Diet set up the electoral system. The House of Councilors has traditionally had some of its seats directly elected and some filled by proportional representation. Given also that this body has more limited powers than those of the House of Representatives, this system has not caused as many problems in the House of Councilors as it has in the House of Representatives. Here a failure to adjust electoral districts to population shifts have often meant that rural votes have had as much as four times as much impact as urban ones; this surely is one reason why the conservative Liberal Democratic Party was able to monopolize political power for much of the period. Another problem has been that the so-called multimember district (in which each voter has one vote but varied numbers of candidates can get elected) has allegedly contributed to the factionalism, "money politics," and corruption scandals often found in the Japanese political system. A 1994 reform tried to solve these problems by reducing the seats in the House of Representatives to five hundred, three hundred of which were elected in single-member districts and two hundred filled proportionally from eleven different districts. Voters now got two ballots so that they could vote both for a person and by party for the proportional seats. While it remains to

be seen if these changes will radically alter Japanese politics over the long run, initially this system brought few changes to the political system.

Finally, Article 10 of the constitution left the requirements for citizenship largely up to the legislature. Given Japan's strong ethnic consciousness, this led to disputes over such things as immigration quotas, the ways in which the long-resident Korean minority in Japan has been treated, and the difficulties even foreigners who marry Japanese have had in becoming full citizens.

Assessment of the System

Japan's political system has thus been controversial. Was the rise of militarism, for example, rooted in the less-than-perfect reforms of the Meiji period, or were hostile Western policies largely to blame? Was the Showa emperor constitutionally unable to prevent militarism from taking over, or—particularly if he can be given credit for intervening to make surrender possible in August 1945—should he also be blamed for the destruction of the country? There have been equally serious debates about postwar issues such as whether the 1947 constitution was imposed by SCAP; whether Japan was, as Chalmers Johnson puts it, a "capitalist development state" in which bureaucracy too tightly controlled the economy and foreign trade; and the whole question of whether Japan's notoriously slow judicial system (trials are before judges and can take years to settle) unfairly discourages ordinary citizens from filing civil suits. These questions have, in turn, been related to a politically charged debate over whether Japan's development can serve as a successful model for a modernizing country. While the answer to these questions depends in part on one's point of view, it is at least fair to say that even if open to criticism by ideal standards, Japan's postwar political system was surely a substantial improvement upon the past.

JAPAN COMMUNIST PARTY The Japan Communist Party (JCP) was founded 15 July 1922, with the encouragement and financial support of the Soviet Union. Throughout most of its history, the JCP has had a close ideological connection with, and taken its lead from, Moscow. Because the party has not identified with the goals and symbols of Japanese nationalism, it has been marginalized as a political force.

Historically, the JCP has been divided between advocates of peaceful coexistence and those favoring violent revolution. The latter ideology has gone out of fashion and now has few advocates. The party has vigorously opposed Japan's rearmament and its security alliance with the United States.

The JCP contests more seats in the general elections than it could possibly hope to win because it sees its mission as one of educating the public and raising political awareness. Communism has been popular among students and intellectuals, especially with respect to the peace movement.

The Japanese Communists were embarrassed first by the excesses of the Cultural Revolution (1966–1976) in China, then by the demise of the Soviet Union. Today, the JCP does not favor the model of the Communist state. Instead it limits its activities to speaking out on peace issues and against social inequities.

JAPAN SOCIALIST PARTY Despite union support and ideological flexibility, the Japan Socialist Party (JSP) has never emerged as an effective political force. Founded on 28 January 1906, it was the first political party to be reestablished following World War II, but found itself ideologically divided. A leftist faction opposed the peace treaty ending the war on the grounds that it imposed on Japan an oppressive regime; also, it opposed the security alliance with the United States and Japanese rearmament. The rightist faction also opposed Japanese rearmament but favored the treaty and saw some virtue in the alliance with the U.S.

The Socialists did well in the election of 1947, but failed to win a majority. They formed a coalition government, but because Japan was experiencing serious

economic conditions at the time, they were unable to rule effectively.

In the decades that followed, the JSP was Japan's largest opposition party, but was never in a position to capture control of the government. Among other reasons, it did not run enough candidates in parliamentary elections. Even if all JSP candidates had won, they would not have constituted a majority in parliament. In 1994 the Socialists formed a coalition government with the Liberal Democratic Party. But this government lasted only one year.

The JSP draws its support from organized labor, especially the Japan Teachers Union. However, the party's political leverage is limited by the fact that unions in Japan are organized at the individual company level rather than across an entire industry. Thus fragmented, unions are difficult to mobilize effectively during electoral campaigns. Public sector unions like the Teachers Union are more aggressive than industrial unions but they are not significantly more influential.

Members of the JSP have embraced ideologies ranging from advocacy of revolutionary socialism on the model of communist China to promotion of liberal democracy and human rights. Those embracing the latter philosophy split off to form the Democratic Socialist Party in 1960. The 1966–1976 Cultural Revolution in China was an embarrassment to the JSP, and the party tried to distance itself from both the Chinese and Soviet models of government.

In the mid-1980s, the JSP attempted to broaden its popular appeal by moving closer to the middle of the ideological spectrum. It largely abandoned its socialist agenda and in 1991 changed its name in English to the Social Democratic Party. But its efforts to redefine itself as a centrist party were ineffective. The party did poorly in the 1996 and 2000 elections, and for all practical purposes ceased to be an electoral force.

JAPAN-AFRICA RELATIONS For most Japanese, the image of the African continent has been that of a remote and distant land. The majority of Japanese do not know that their economy has de-

pended heavily on African natural resources. In fact, Japan's position as an economic superpower would not have been achieved without natural resources from the African countries. Before 1945, the Japanese had little interest in relations with Africa because Japan was concentrating on the West.

After 1945, however, Japan began to attend to the African continent. In order to recover from the disasters of war and to develop the national economy, the Japanese needed to develop a friendship with the Africans. Japan's African diplomacy is, however, problematic rather than easy. During the global antiapartheid movement, Japan, in contrast to other developed countries, accepted the racial policy instituted by the South African regime. As a result, many people in African countries have viewed Japanese diplomacy as supporting racism, a view that has been difficult to overcome.

Pre-World War II

Japan-Africa relations prior to World War II were characterized by a lack of interest, if not disdain. Since the Meiji restoration in 1868, Japan had concentrated on its own modernization and industrial development by seeking to learn from the West. In 1897, Tomizu Hirono (1861-1935), a professor at the University of Tokyo, advocated that Japan colonize African countries, because taking advantage of the natural resources available in Africa would create a golden era for Japan in the twentieth century. In his book *Afrika no zento* (The Future of Africa), he claimed that the African countries were as important to Japan as China was to the Asian region. No one in Japan, however, supported his view. The first official relations between Japan and Africa were initiated when Japan opened the Official African Residence in Cape Town, South Africa, in 1918. Before 1945, Japan also dispatched delegations to Ethiopia, Mozambique, and Madagascar.

Post-1945

Japan's postwar African policy was determined by the search for economic resources. In the 1950s, most African countries were still under European colonial domination. While Japan sought to learn from the West, it pursued friendship with African nations. Japanese dual diplomacy with white and black Africa since the 1950s emphasized foreign relations with sub-Saharan Africa. (See Table 1.) In September 1951, Japan signed a peace treaty in San Francisco with the allied nations of the Western bloc, including Ethiopia, Liberia, Egypt, and South Africa.

It was not until African decolonization reached its peak in the 1960s that the opportunity for Japan to

formalize its ties with Africa fully emerged. Japan's policy of dual diplomacy was very visible in the 1960s. In 1961, the white minority regime in South Africa agreed to reconfirm the Japanese as having "honorary white" status, meaning that the Japanese could do business with South Africa and live in white residential areas. At that point, Tokyo officially announced its intention to resume diplomatic relations with Pretoria, which had been disrupted by World War II.

In the wake of Japan's recognition of South Africa in 1962, over sixty black African demonstrators were killed by white South African police in the Sharpeville massacre. There is no question that the white regime's decision to crack down on the demonstrators was bolstered by the vote of confidence represented by Japan's diplomatic decision to support South Africa at a time when South Africa was largely isolated from the industrialized world. The Japanese government, for its part, wanted to avoid criticism from black African countries rich in natural resources and so decided not to upgrade its consular office in Pretoria to the status of an embassy. For this reason, Japan reestablished a consular office rather than an embassy in Pretoria in 1961.

Despite the fact that the United Nations had moved to impose economic sanctions against South Africa in 1960, Japan continued to trade with South Africa, eager to gain access to South African uranium, man-

ganese, vanadium, and platinum. In the face of international objections, Japan opened a trade promotion office in Johannesburg. On 6 November 1962, the U.N. General Assembly passed a resolution to enforce economic sanctions against South Africa by a vote of sixty-seven in favor, sixteen opposed, and twenty-three abstentions. Japan was the only country in Asia to vote against the measure in 1962.

A significant date for Japan-Africa relations was 28 April 1964, when Japan was admitted as a full member to the Organization for Economic Cooperation and Development (OECD). In renewed efforts, Japan sought natural resources in Africa as a way to remain competitive in the postindustrial market. Membership in the OECD gave Japan greater access to international financial institutions such as the World Bank and the International Monetary Fund. On 31 August 1970, Keidanren, the most powerful business organization in Japan, formed the Committee on Cooperation with Africa. The priority for both government and business in Japan was to secure natural resources in black African countries. (See Table 2.)

After the end of apartheid, Japan has continued to have good relations with South Africa and has made little effort to improve relations with other African nations. Data indicate that Japan continues to discriminate against black African countries. According to the Ministry of Foreign Affairs, Japanese direct investment in South Africa in fiscal 1997 alone was around 16 billion yen, while Japanese loans to South Africa in 1996 alone totaled nearly 8 billion yen. On the other hand,

Japanese direct investment in Kenya was only 5.7 million yen (total through 1998), and in Nigeria 48 million yen (cumulative total fiscal 1951–1998).

Japan's problematic diplomacy in Africa continues in the early 2000s. The Japanese government has tried to provide more official development assistance (ODA) to African countries to soften the criticism that it focuses only on Asian nations. During 7–15 January 2001, Prime Minister Yoshiro Mori made a symbolic visit to South Africa, Kenya, and Nigeria to promise to increase Japanese ODA.

JAPAN-FRANCE RELATIONS Although the earliest contacts between Japan and France occurred in the late sixteenth century, prompted by the activities of Catholic missionaries, a formal bilateral relationship was not established until the signing of the treaty of friendship and trade in 1858. In the following year, the first French consul general arrived in Japan, while the first Japanese diplomatic mission reached France in 1862. In the last years of the Tokugawa regime, France sided with the shogunate and helped to lay the groundwork for Japan's modernization, notably in military matters. The Meiji Restoration of 1868, combined with the French defeat by Prussia in 1871, diminished the centrality of France as a model for Japan; nevertheless, French influence continued to be felt, for instance in legal reforms. The Tripartite Intervention that followed Japan's victory over China in 1895 soured Japanese popular sentiments toward France, but these events also indicated that Japan was becoming an imperial power on a par with France. Japan's next victory over Russia in 1905 led to the Franco-Japanese Agreement, and Japan joined the Triple Entente against Germany in World War I. From the 1920s, Indochina increasingly

became a bone of contention between the two countries as Japan sought to build up its naval forces lured by the rich natural resources of the region. Japanese troops finally entered and occupied Indochina in 1940, although the Vichyite French authority there was formally left intact until early 1945.

The San Francisco Peace Treaty revived the relations between Japan and France in 1952. In 1953, a bilateral Cultural Agreement followed. Shigeru Yoshida (1878–1967) became the first postwar Japanese prime minister to pay an official visit to France in 1954. In 1971, the Japanese emperor visited France, although the first official imperial visit did not take place until 1994. On the French side, Georges Pompidou was the first prime minister to visit Japan, in 1964, and Valéry Giscard d'Estaing was the first president to do so, in 1979. Although it was never seriously threatened, the bilateral relationship went through occasional difficulties, for example when France conducted nuclear tests in the Pacific in the 1970s, and again briefly in 1995. Lacking in focus, the postwar political relationship between the two countries verged on an indifferent friendship. The economic relations between the two countries continued to be marked by small bilateral trade volumes, and mutual cultural interest was the strongest underpinning of the postwar ties. French president Jacques Chirac furthered cultural exchanges in the early 2000s.

JAPAN-GERMANY RELATIONS

Relations between Japan and Germany go back to the early Edo period (1600/1603–1868), when Germans in Dutch service came to Japan to work for the Dutch East India Company. The first well-documented German visitors were the physicians Engelbert Kaempfer (1651–1716) and Philipp Franz von Siebold (1796–1866) in the 1690s and the 1820s, respectively. Siebold was allowed to travel throughout Japan, in spite of the restrictive seclusion policy the Tokugawa shogunate had implemented since the 1630s. Siebold became the author of *Nippon, Archiv zur Beschreibung von Japan* (*Nippon, Archive for the Description of Japan*), one of the most valuable sources of information on Japan well into the twentieth century.

Shortly after the end of Japan's seclusion in 1855, the first German traders arrived in Japan. In 1860 Count Friedrich Albrecht zu Eulenburg came to Japan as envoy from Prussia, the most powerful of the numerous regional states in Germany. After four months of negotiations, a treaty of amity and commerce was signed in January 1861 between Prussia and Japan—one of the infamous "unequal treaties" Japan was forced into by most of Europe's powers as well as the United States.

During the Meiji period (1868–1912), many Germans came to work in Japan as advisers to the new government and contributed to the modernization of Japan, especially in the fields of medicine (Leopold Mueller, 1824–1894; Julius Scriba, 1848–1905; Erwin von Baelz, 1849–1913), law (K. F. Hermann Roesler, 1834–1894; Albert Mosse, 1846–1925), and military affairs (K. W. Jacob Meckel, 1842–1906). The Constitution of the Empire of Japan, promulgated in 1889, was greatly influenced by the German legal scholars Rudolf von Gneist and Lorenz von Stein, whom the Meiji oligarch Ito Hirobumi (1841–1909) visited in Berlin and Vienna in 1882.

Japanese-German relations cooled down at the end of the nineteenth century due to Germany's imperialist aspirations in East Asia. The frictions culminated

in 1895, when the Wilhelminian empire, together with Russia and France, prevented Japan from acquiring possessions on the Asian mainland (Triple Intervention). In World War I, Japan entered the conflict as an ally of Great Britain, France, and czarist Russia to seize the German colonial territories in Asia and the Pacific.

After World War I, cultural exchange between Japan and Germany was strengthened, but it was not until the rise of Nazism in Germany and militarism in Japan in the 1930s that political ties became closer again. Japan and Germany signed the Anti-Comintern Pact in 1936 and the Tripartite Pact, which also included Italy, in 1940. However, during the following years this seemingly close alliance never brought any real cooperation.

After their defeat in World War II, both Japan and Germany were occupied. Although Japan regained its sovereignty with the San Francisco Peace Treaty in 1952, Germany was split into two states. The Federal Republic of Germany (West Germany) restored diplomatic ties with Japan in 1955, and the German Democratic Republic restored ties as late as 1973. Postwar relations between Japan and both Germanys, as well as with unified Germany after 1990, have focused on economic questions. Germany, dedicated to free trade, continues to be Japan's largest European trading partner.

JAPAN-KOREA RELATIONS Proximity and memory are the main factors that have shaped the relations between the Japanese archipelago and the Korean peninsula. Since the dawn of history, unceasing human and material exchanges have taken place be-

tween these two neighboring areas. Many elements of Japanese culture, like rice growing, seem to have originated in Korea, and Korean immigrants played an important role in the formation of the early Japanese state. On the other hand, the Japanese were involved in internal Korean rivalries, particularly in the fourth and fifth centuries. Under the unified Korean states of Shilla (668–935) and Koryo (935?–1392), bilateral trade developed, but formal Japanese-Korean relations were established only at the beginning of the fifteenth century, with the coming to power of the shogun Ashikaga Yoshimitsu (1358–1408) in Japan, and of the Yi (Choson) dynasty (1392–1910) in Korea.

Early Relations

Those newly established formal relations put an end to the destruction Japanese pirates had wreaked on Korea during the second half of the fourteenth century. Furthermore, in 1443 the pirates lost one of their main strongholds when Korea concluded an agreement granting the So family, the lords of the island of Tsushima (part of Japan), in the Korean straits, a monopoly on the bilateral trade. This arrangement worked for 150 years, until the last decades of the sixteenth century. Then, between 1592 and 1598, the unifier of Japan, Toyotomi Hideyoshi (1537–1598), twice attempted to conquer Korea. The Koreans succeeded, with Chinese help, in stopping Hideyoshi, but the country was left devastated and exhausted.

Relations between the two countries were renewed in 1607. The So family regained its commercial privileges as main partner and only intermediary. A delegation from Tsushima, the Japan House (Japanese *wakan*; Korean *waegwan*), was opened in Pusan, and Korean embassies started coming to Japan. Between 1607 and 1811, twelve embassies consisting of several hundred people came to Japan, most of them crossing the archipelago from Tsushima to the shogunal capital of Edo. Korea was one of the few countries with which Japan had formal relations during the Edo period (1600/1603–1868). These exchanges make the period remembered as a rare time of friendship between the two lands.

1876–1910: From Opening to Annexation

During the Meiji period (1868–1912), Japan became a modern state and an imperialist power. Korea was one of the victims of this success. In the aftermath of the Meiji restoration (1868), the new Japanese government tried to redefine its relations with Korea, but Korea refused to change the old order. In 1876, Japan finally succeeded in opening her neighbor and in

THE MODERNIZATION OF FISHING

The Japanese occupation of Korea affected many aspects of life, including the economy. The account below describes how the Japanese transformed fishing in the village of Sokp'o from a local activity to a major source of income for the villagers.

Until the arrival of the Japanese in 1910 (their direct influence was not really felt in the village until four or five years later) Sokp'o had no sailboats, and fishing with hook and line and with nets was carried out near the coast at a relatively primitive technological level. All equipment was manufactured locally including hooks, although iron of course was obtained elsewhere.

Large stone fish traps built where sandy beaches adjoin rock outcroppings take advantage of the great tidal range. They have been there as long as anyone can remember and have been handed down in a few families as an important source of food. In recent years the runs of mullet, shad, and corvenia along the coast that used to fill the traps periodically have dropped off sharply and some are no longer maintained. A good deal of work is required to put the stones back in place after a storm, and management and maintenance of the traps is now mainly done by the poor and the old who have no other work.

Occasionally the traps still fill up with fish, and an excited crowd quickly gathers as the desperate fish begin to mill around more and more frantically. Many of the spectators help gather the fish as the tide goes out. Any fish that jumps over the stone wall or finds a gap in the rocks belongs to whoever catches it. The owner usually distributes a good portion to relatives and others to whom he may owe favors. If the catch is unusually large, he will use part of it to pay off obligations on the spot, keep a considerable portion for himself, and turn the rest over to the village.

The inhabitants of Sokp'o bartered some of their fish during the late Yi dynasty period for food and a few manufactured goods that were brought to the coast by people from inland towns and villages. Under Japanese direction a revolution took place in fishing. A different kind of boat with sails was introduced and the villagers learned much more efficient "long line" techniques for catching ray, eel, corvenia, and croaker. They also learned various kinds of netting techniques from the Japanese, who supplied the fishermen with the necessary gear. The Japanese, in addition to building roads and a rail network, established coastal passenger and freight shipping service on a regular basis. Large city fish markets and canneries were built to handle the increased fish production. Sokp'o was too isolated to profit much from the expanded national market for fish, but trading with the immediate hinterland increased substantially.

JAPAN TAKES CONTROL OF KOREA

In 1905 Japan made Korea a protectorate leading to its full annexation in 1910. The following declaration by the Japanese government of 22 November 1905 sets forth Japan's rationale for colonizing Korea.

The relations of propinquity have made it necessary for Japan to take and exercise, for reasons closely connected with her own safety and repose, a paramount interest and influence in the political and military affairs of Korea. The measures hitherto taken have been purely advisory, but the experience of recent years has demonstrated the insufficiency of measures of guidance alone. The unwise and improvident action of Korea, more especially in the domain of her international concerns, has in the past been the most fruitful source of complications. To permit the present unsatisfactory condition of things to continue unrestrained and unregulated would be to invite fresh difficulties, and Japan believes that she owes it to herself and to her desire for the general pacification of the extreme East to take the steps necessary and to put an end once and for all to this dangerous situation. Accordingly, with that object in view and in order at the same time to safeguard their own position and to promote the well-being of the Government and people of Korea, the Imperial Government have resolved to assume a more intimate and direct influence and responsibility than heretofore in the external relations of the Peninsula. The Government of His Majesty the Emperor of Korea are in accord with the Imperial Government as to the absolute necessity of the measure, and the two Governments, in order to provide for the peaceful and amicable establishment of the new order of things, have concluded the accompanying compact. In bringing this agreement to the notice of the Powers having treaties with Korea, the Imperial Government declare that in assuming charge of the foreign relations of Korea and undertaking the duty of watching over the execution of the existing treaties of that country, they will see that those treaties are maintained and respected, and they also engage not to prejudice in any way the legitimate commercial and industrial interests of those Powers in Korea.

imposing an unequal treaty, modeled on the treaties Japan itself had had to sign with the Western powers. The treaty of Kanghwa provided for the opening of three Korean ports to Japanese trade and residence and granted Japan commercial, financial, and judicial privileges. This was to be the beginning of a deepening Japanese involvement in the peninsula, which ultimately led to the annexation of Korea to Japan in 1910.

The annexation was not so much the result of a long-term policy as the outcome of the growing strategic importance of Korea for Japan. The peninsula was increasingly perceived as a vital element of Japan's security, as the archipelago's first line of defense against China and Russia. Accordingly, in the 1880s Japan tried to transform Korea into an independent and friendly state. For that purpose, Japan formed ties with Korean reformists, who saw in Japan's success a model

Japanese Prime Minister Keizo Obuchi and South Korea Prime Minister Kim Jong Il during a meeting on Cheju Island, South Korea, in October 1999. They are discussing the expansion of ties between the two nations. (REUTERS NEWMEDIA INC./CORBIS)

for their own country, and local reforms were encouraged and supported. But these were not enough to keep the Chinese away. In 1882, the Japanese delegation in Seoul was attacked by members of the military dissatisfied with the reforms (Imo mutiny). In 1884, the local reformists attempted to seize power by force, but failed (Kapsin political coup). These two incidents provided a pretext for Chinese military interventions, until in 1885 Japan and China agreed upon a mutual troop withdrawal (Tianjin convention).

This arrangement held for a decade, until the Sino-Japanese War (1894–1895). A Chinese military incursion to crush a peasant uprising (Tonghak rebellion) in the south of the Korean peninsula gave the Japanese an excuse to open hostilities. Along with the fighting, pro-Japanese reformist governments were set up, which adopted radical reforms (Kabo reforms). The Japanese victory may have eliminated Chinese influence from Korea, but it did not succeed in putting the peninsula inside the Japanese sphere of influence. Russia became Japan's new rival on the peninsula.

The decade before the Russo-Japanese war (1904–1905) was marked by dramatic events, such as the assassination of the Korean queen Min (1895) by a band led by the Japanese ambassador, and by compromises such as the Nishi-Rosen agreement (1898). These understandings allowed Japan to deepen its economic penetration of the peninsula. But the Russian advance in Manchuria also increased Japanese fears and reinforced Korea's strategic value. This percep-

tion was one of the main reasons for the war Japan launched against Russia in 1904.

After the victory over Russia, Japan was free to impose her will on Korea. The Korean-Japanese Convention of 1905 gave Japan full control over Korea's foreign affairs, making the peninsula a Japanese protectorate. Korean armed resistance was unable to stop the Japanese takeover. In October 1909, the Japanese resident-general, Ito Hirobumi (1841–1909), was assassinated in Harbin in northeast China by a Korean nationalist, An Chung-gun (1879–1910). On 22 August 1910, Japan forced a treaty of annexation on Korea. The Yi dynasty came to an end, and the country lost its independence.

1910–1945: The Colonial Period

The first decade of Japanese rule was a period of organization and consolidation. The government-general was essentially a military government that mercilessly repressed all signs of opposition. The land census and reorganization of land ownership caused great dissatisfaction among the peasants. Anger burst out on 1 March 1919 (Samil independence movement). Encouraged by the democratic spirit of the aftermath of World War I, large crowds demonstrated all over the country. The protests lasted for a few months and were answered by force. But once the movement was suppressed, Japan chose to soften its policy.

The 1920s were characterized by a relaxation of Japanese control. Limited political rights were granted

to the population, and freedom of speech was expanded. These were also years of accelerated economic development. Rice production rose; roads, bridges, and railways were built; modern industries were created. Although the results were impressive, all this was done for Japanese colonial needs. For example, the quantity of Korean rice shipped to Japan grew regularly, leaving less and less rice for the local population.

After the outbreak of the second Sino-Japanese war in 1937, Korea and its population were mobilized for the Japanese war effort. Some 1.5 million Koreans were transported to Japan and forced to work there. At the same time, a policy of assimilation was enforced in Korea. Use of the Korean language was forbidden; all Koreans were forced to adopt Japanese names and to worship the Japanese emperor and gods. This was the outcome of the ideology that sustained the annexation of the peninsula and claimed that Korea was not a colony, but an inalienable part of the Japanese territory and nation. This was the reason that Koreans were also conscripted into the Japanese army. But Koreans were never granted equal-citizen rights and were subject to contempt and discrimination. Thousands of Koreans were massacred after the 1923 earthquake in Kanto, Japan, and tens of thousands of Korean women served as forced prostitutes of the imperial army.

1945–2002: Japan and the Two Koreas

On 15 August 1945, Japan surrendered, Korea regained its independence, and the country was soon divided into two separate states. The heritage of the colonial period weighed heavily on the relations between Japan and the two Koreas. The 700,000 Koreans living today in Japan are perhaps the most concrete manifestation of this heritage. On the diplomatic level, a treaty of normalization was concluded between Japan and the Republic of Korea (South Korea, ROK) in 1965. The two countries established diplomatic relations; Japan recognized the ROK government as the only lawful government on the peninsula and awarded South Korea important economic assistance, but no compensations or apologies for the colonial rule. The territorial controversy around the small island of Takeshima (Korean Tokto) in the Sea of Japan (Korean East Sea) was also left unresolved.

Although the 1965 treaty left open sensitive issues, it supplied the two countries with an agreed-on framework. Since then, economic, political, and human exchanges have deepened, and Japan-ROK relations have steadily improved. These links are reinforced by common strategic interests. Both countries are allies

of the United States and harbor large American military bases, and both are diplomatically estranged from the Democratic People's Republic of Korea (North Korea, DPRK). Japan has no diplomatic relations with the DPRK, although normalization talks have been taking place intermittently since 1991.

The past still haunts relations between Japan and the Korean peninsula. North Korea wants Japan to apologize and provide compensation for the colonial period. South Korea would like to hear more explicit apologies than the "regrets" already expressed. In 2002, Japan and the ROK were to co-host the World Cup soccer tournament. Because of the sensitive nature of the relations between the two countries, the Soccer International Federation (FIFA) could not decide which one should hold the games; submitting to the historical record of colonialism, FIFA appointed both.

JAPAN-LATIN AMERICA RELATIONS

Latin America is geographically far from Japan, and the antipodes of Japan is found off the coast of southern Brazil. Despite the distance, Japan has maintained relations with Latin American countries in terms of labor migration and economic relations since the late nineteenth century.

Japan and Latin America have strong relations based on the history of Japanese migration. Among world regions, Latin America has the largest population of overseas Japanese and descendants of Japanese. Brazil is estimated to have 1.6 million Japanese and Japanese-Brazilians, while Peru (82,000), Argentina (30,000), Mexico (20,000), Bolivia (14,000), and Paraguay (7,000) also have Japanese communities (all estimates in 2000).

Japanese Migration to Latin America

The Japanese began to migrate to Latin America in the late nineteenth century at the end of national isolation and the lift of the ban on foreign travel. The first mass migration began in the 1890s, when 132 Japanese resettled from Hawaii's sugar plantations to Guatemala. In 1897, a group of thirty-five Japanese built the Enomoto Colony in Chiapas, southern Mexico, to grow coffee; however, the enterprise eventually failed. Some ten thousand Japanese were hired as plantation and mining laborers in Mexico during the first decade of the twentieth century. Diplomatically, Japan and Mexico entered into the Treaty of Amity, Commerce, and Navigation in 1888, which was the first equal treaty Japan was able to conclude with a non-Asian country. In 1899, 799 Japanese arrived at the port of Callao, Peru, as contract laborers in coastal plantations, marking the beginning of the era of migration to that country. Alberto Fujimori, who was the president of Peru from 1990 to 2000, is a son of Japanese immigrants.

Japanese migration to Brazil began in 1908 when a ship named *Kasatomaru* carried 791 Japanese to the port of Santos. They were hired as coffee plantation workers in the backcountry of Sao Paulo. After the initial contract expired, they either moved further inland to settle in Japanese enclaves or moved to Sao Paulo to engage in urban occupations as well as in farming on the urban fringe. The Brazilian government initially supported Japanese immigration to make up for a serious shortage of farm laborers, while the Japanese government assisted emigration to ease its domestic overpopulation. Japanese immigration continued until the early 1930s when it was prohibited by the Brazilian government. Under the new constitution of 1934, a quota system was introduced in accepting immigrants. This quota system appeared to resemble the Immigration Act of 1924 in the United States. Japanese immigration was prohibited partly because of an increasing number of Japanese immigrants while Brazil was suffering a labor surplus under a slow economy, and also because the Brazilian government began to encourage nationalism and disregard ethnic diversity.

Japanese migration to Latin America accelerated after Japan and the United States concluded the Gentlemen's Agreement (seven letters and memoranda between the U.S. Ambassador to Japan and the Japanese Foreign Minister in 1907 and 1908, under which Japan stopped issuing passports to those intending to go to the United States), and the United States enforced the 1924 Immigration Act cutting Japanese immigration. In the 1930s, however, the interest of the Japanese government shifted to Manchuria in north-eastern China, where Japanese were sent as colonists. Total Japanese migration to Latin America prior to World War II totaled 244,000. Brazil received three quarters of the total Japanese immigrants to Latin America.

Although Japanese migration to Latin America stopped during World War II, mass migration resumed in the early 1950s. Many moved away to escape Japan's postwar devastation, and the Japanese government assisted emigration. Over 90 percent of the postwar emigrants chose Latin America. While Japanese migrants in the prewar period hoped to become rich and return home in glory, those who migrated to Latin America after the war intended to settle down. High economic growth in Japan in the 1960s increased Japan's demand for labor, and the emigration boom ended.

Japanese Cultural Influence in Latin America

Japanese migrants brought Japanese culture to Latin America, most clearly in Brazil. Japanese immigrants introduced intensive farming systems and Asian crops; they also introduced the concept of agricultural cooperatives. The Agricultural Cooperative of Cotia, established by Japanese farmers in 1927, developed into one of the largest agricultural cooperatives in Brazil. Systematic missionary work by Buddhist sects and Japanese new religions also began in the postwar period, especially in the 1960s. Missionary activity not only increased the numbers of Japanese adherents but also attracted non-Japanese believers; in the early 2000s there are over thirty Japanese religious sects in Brazil.

The flow of labor migration was reversed in the 1980s, especially during the so-called bubble economy of the late 1980s, in which booming labor demands and high wages in Japan attracted foreign workers. A stagnant economy and hyperinflation in Brazil and other Latin American countries contributed to the influx of Latin Americans of Japanese descent into Japan. Immigration law permitted people of Japanese descent to stay and work legally. The money remitted from

Japan, the amount of which is unknown, appears to have helped Latin American families and the economy.

In 1998, there were approximately 1.5 million officially registered foreigners in Japan, with Brazilians accounting for 14.7 percent and Peruvians 2.7 percent. A majority of those from Latin American countries entered Japan to engage in labor; they were the descendants of Japanese immigrants. The Latin American population in Japan continues to increase both in large cities and in less populated areas where there is a demand for factory workers. Latin American culture has made inroads in Japan.

Japan's Trade Relations with Latin America

Japan and Latin America are trade partners, but the shares of Latin America in Japan's overall trade are low in comparison with Asia, North America, and Europe. Japan's exports to Latin America accounted for 4.7 percent of its total export value in 1999, while Japan's imports from Latin America accounted for 3.1 percent of its total import value. Panama, Mexico, Brazil, Chile, and Argentina are Japan's five leading trade partners from Latin America.

Japan was Brazil's third-largest export partner and was the destination for 6.7 percent of Brazil's exports. Japan was also the country of origin of 6.1 percent of Brazil's imports in 1995 and ranked fourth among Brazil's import trade partners. Japan exported machinery, automobiles, and auto parts and imported iron ore, aluminum, coffee beans, steel, paper pulp, and soybeans.

Japan was Mexico's third-largest export partner; exports to Japan accounted for 1.2 percent of Mexico's total exports. Imports from Japan accounted for 5 percent of Mexico's total imports, making Japan Mexico's second-largest import partner in 1995. Japan exported machinery, auto parts, and steel and imported machinery, oil, meat, and salt.

Japan was Peru's second-largest export partner and was the destination for 9.2 percent of Peru's exports; imports from Japan accounted for 7 percent of Peru's total imports, making Japan Peru's third-largest import partner in 1995. Japan imported copper ore and fish from Chile and exported automobiles and machinery to Chile. It is clear that Japan depends on the mineral and agricultural products of Latin America.

Japanese official development assistance (ODA) to Latin American countries amounted to \$814 million in 1999, or 7.8 percent of the total. Latin American resources continue to attract Japanese investment, and

direct investment, loans, and technical assistance from Japan have facilitated development projects.

A substantial amount of Japanese direct investment and government aid were directed to Brazil in the late twentieth century. Aluminum refineries were built at the mouth of the Amazon River. Eucalyptus plantations and paper pulp production were undertaken in Minas Gerais and Espirito Santo. The Serra dos Carajas Iron Mine project in eastern Amazonia has been partly financed by Japan. Japan has also helped with the reclamation of the inland savanna called *cerrado*. The Brazilian government launched a comprehensive development plan in the 1970s, which Japanese ODA helped finance. In addition to financial assistance, Japan has provided technical assistance, and a good portion of the products of the grain and coffee produced in newly developed large-scale farming regions that Japanese ODA has helped establish has been exported to Japan.

Those Japanese immigrants who departed from the port of Kobe for Brazil in 1908 spent nearly two months at sea. It is now possible to fly from Japan to Sao Paulo via Los Angeles in twenty-four hours. The distance between Japan and Latin America has been substantially reduced and there are many opportunities for cultural exchange. People in Japan enjoy Argentina's tango and Brazil's samba. There are Latin American soccer players and managers on Japanese teams. Japan-Latin America relations continue to improve in terms of the movement of people, goods, capital, information, and ideas in the early 2000s.

JAPAN–PACIFIC ISLANDS RELATIONS

The archipelago of Japan is made of more than three thousand Pacific islands. Most of them are tiny uninhabited spots of land, but they provide a sort of buffer zone between the four main Japanese islands and the non-Japanese Pacific islands. Historically, Hokkaido in the north and the Ryukyu Islands (included in Okinawa Prefecture, named for the largest of the

Ryukyus) in the south did not come under the control of the central government until the beginning of the twentieth century. This was the last step before the expansionist thrust of the early twentieth century toward the Asian mainland and the outer Pacific islands.

The great design of expanding Japanese territory and space step by step, rock by rock was inspired by the work of Japanese geographers at the beginning of the century. "South Seas fever" enflamed the national imagination and contributed to the myth that Japan could find in the South Seas islands the natural resources it lacked.

In 1917 a secret agreement between Japan and the United Kingdom, confirmed by the Treaty of Versailles (1919), provided the basis for the sharing of the German Far East possessions after World War I. In this way, Japan acquired sovereignty over the Mariana (except Guam), Marshall, and Carolina islands.

The Pacific War

During the 1920s, Japan built naval bases on the Micronesian islands for its expanding fleet, which was progressively being freed from the constraints imposed by the Washington Naval Conference of 1922. (That conference had limited the number of military vessels Japan could have.)

On 7 December 1941, Japan attacked the U.S. forces in Pearl Harbor in Hawaii. Hong Kong, Guam, Wake Island, and the Gilbert Islands were seized within a month. The Japanese built a major base in Rabaul (New Britain, Papua New Guinea), from which they launched attacks on New Guinea and the Solomon Islands. The year 1942 was decisive, with the main sea battles in the Coral Sea (4–11 May), Midway (3–7 June), and Guadalcanal (August 1942–February 1943) being won by the U.S. forces. The Pacific islands were conquered by the U.S. forces, which leapfrogged toward Japan's main islands from Bougainville (November 1943) to Iwo Jima (February 1945). After the war, Japan surrendered sovereignty over Micronesia to the United States.

Developments after World War II

After the war, Japan's energies were devoted to reconstruction and economic recovery. Japan was not part of any formal agreement between its former territories and the victorious Allied powers. The South Pacific became a U.S. lake under the ANZUS Treaty of 1952, which linked Australia, New Zealand, and the United States. Australia, New Zealand, the United Kingdom, France, and the United States set up the

South Pacific Commission in 1947 for economic cooperation among their dependent territories. The Pacific islands gradually attained independence between 1962 and 1980. Australia and New Zealand became the leading regional powers and promoted the creation of the South Pacific Forum (SPF) in 1971 as a gathering of the independent island states of the region. The SPF promoted the creation of the South Pacific nuclear-free zone in 1986 (Treaty of Rarotonga). In 2001 the forum's membership included the following: Australia, the Cook Islands, the Federated States of Micronesia, Fiji, Kiribati, Nauru, New Zealand, Niue, Palau, Papua New Guinea, the Republic of the Marshall Islands, Samoa, the Solomon Islands, Tonga, Tuvalu, and Vanuatu.

During the Cold War, the main manifestations of Japan's relations with Pacific islands were commercial exchanges, Japanese fishing in these islands' economic exclusive zones (EEZ), and Japanese tourists.

The Dawn of the Twenty-first Century

The end of the East-West confrontation in 1991, with the collapse of the Soviet Union, and the end of the French nuclear tests in Polynesia in 1995 dramatically changed the international role of the Pacific islands. They ceased to be pawns in a global competition and were left facing their own shortcomings and difficulties as poor, remote, and resourceless islands.

The former colonial powers have been all too happy to let Japan distribute a substantial amount of development aid to the island states. Since the 1990s, Japan has been contributing between \$150 and \$200 million annually in official development assistance (ODA) to the Pacific islands. It pursues an active bilateral diplomacy through grants (54.8 percent of ODA) and technical cooperation (33 percent) with most of them. It is also the third-largest contributor to Pacific Islands Forum activities (after Australia and New Zealand). At the end of the 1990s, Japan was the biggest bilateral aid donor to Samoa, the Solomon Islands, Tonga, and Vanuatu and the second biggest to Fiji, the Federal States of Micronesia, Kiribati, Nauru, Palau, Papua New Guinea, the Republic of the Marshall Islands, and Tuvalu. Japan is also the largest export market for the SPF countries, taking more than 30 percent of their exports (in minerals, forestry, fish).

In 1997 Japan initiated regular meetings between the leaders of Japan and the South Pacific states. The second meeting was held in April 2000. Three issues were discussed at this conference: sustainable development for the Pacific islands, promoting cooperation on regional and global problems, and strengthening

Japan's partnership with the South Pacific states. At the top of the cooperation agenda on global problems are climate change and global warming, which are matters of life and death for the island states, because rising sea levels are leading to land erosion and to the disappearance of some of the islands. The Pacific island states also expect Japan to pay attention to their own preoccupations when multilateral trade rules are being discussed in other forums.

Japan's aid policy is part of its global U.N. diplomacy: in 2000 Japan gave \$3 million to the United Nations Development Programme (UNDP) to be spent on projects for the South Pacific, including projects aimed at advancing technologies and fighting infectious diseases. Paradoxically, Japan is also using aid to the South Pacific states as a means of gaining supporting votes in the United Nations on such controversial issues as whaling, Tonga and Fiji being considered as potential pro-whaling countries, or for its bid to become a permanent member of the U.N. Security Council.

The geographic location of the Pacific islands also explains why Japan is paying such attention to them. First, access to the region's rich resource of tuna has been an enduring reason for Japan's aid program. Japan is constantly trying to strike a balance between its own interests and those of the Pacific island states in this regard. Second, the island states are scattered on the sea links being used by Japanese ships coming from Europe carrying nuclear waste. These trips usually cause great discontent among the nuclear-sensitive populations of the Pacific, and Japan is keen to assuage these fears. Third, Japan is also interested in taking advantage of the location of the Pacific islands near the equator. Japan's NASDA (National Space Development Agency) built a monitoring facility on Kiritimati Island in Kiribati in 1977. In 2000 NASDA was granted authorization to renovate the runway and to build ports, road, and other facilities by March 2002 and to use the runway until 2020 as part of its space program to develop a reusable spacecraft. Last, Japanese tourists account for a huge majority of the visitors to the Micronesian islands and to the French overseas territories of New Caledonia and French Polynesia.

JAPAN-PHILIPPINES RELATIONS Japan-Philippines relations are dominated mainly by issues that relate to trade and aid, and secondarily by security issues. For the Philippines, however, economic relations with Japan have implied collaboration with the enemy, especially in the immediate aftermath of World War II, and more recently in relation to problems about the large number of Filipino workers in Japan and about the environmental damage caused by Japan's dumping of hazardous waste in the Philippines.

Relations before 1941

During the early 1900s, Japan's active expansionist policy in the Asia-Pacific region was hindered by the presence of American forces on Philippine soil and by the strong position of American business in the Philippines. Nevertheless, until 1941 the two countries developed active trade, as Japan sold its textile and industrial products in the Philippines market, while the Philippines provided abaca (Manila hemp), cotton, and other products to the Japanese. This trade was boosted by the sizable Japanese community in the Philippines, which grew in significance during the 1920s and 1930s. By the end of the 1930s, almost thirty thousand Japanese residents were living and working in the Philippines, mostly in Davao in the southern Philippines.

Relations during World War II

By 1941 Japan had begun to express its ambitions in Southeast Asia and started to occupy the region bit by bit, including the Philippines, to establish the "Greater East Asia Co-Prosperity Sphere" and to assert its dominance over the area. Japan attacked the Philippines on 8 December 1941 and quickly advanced toward major strategic points. General Douglas MacArthur (1880-1964) evacuated his headquarters, Manila was declared an open city, and the Philippine president Manuel Luis Quezon y Molina (1878-1944) left for the United States to form a government in exile. In May 1942, Filipino and American forces led by General Jonathan Mayhew Wainwright (1883-1953), after a long and hard-fought defense of Bataan and Corregidor on Manila Bay, were forced to surrender. In an attempt to legitimize their occupation, the Japanese established an executive commission that included a number of influential Philippine politicians. In 1943 an independent Philippine Republic was declared, and Jose Laurel (1891-1959), a former senator and associate justice of the Commonwealth Supreme Court, became its president.

The Japanese occupation of the Philippines was one of the most depressing periods in the history of

JAPAN, EAST ASIA, AND SOUTHEAST ASIA VERSUS THE WEST

On 5 November 1943 Japan and its "allies" in Asia (the Philippines, China, Thailand, Burma, Manchukuo) issued this declaration calling for Asian unity in the face of United States and British imperialism. Harsh Japan rule of these conquered nations during World War II forestalled any chance of such cooperation after the war.

It is the basic principle for the establishment of world peace that the nations of the world have each its proper place and enjoy prosperity in common through mutual aid and assistance. The U.S.A. and the British Empire have in seeking their own prosperity oppressed other nations and peoples. Especially in East Asia they indulged in insatiable aggression and exploitation and sought to satisfy their inordinate ambition of enslaving the entire region, and finally they came to menace seriously the stability of East Asia. Herein lies the cause of the present war.

The countries of East Asia, with a view to contributing to the cause of world peace, undertake to cooperate towards prosecuting the war of Greater East Asia to a successful conclusion, liberating their region from the yoke of British-American domination and assuring their self-existence and self-defence and in constructing a Greater East Asia in accordance with the following principles:—

- I. The countries of Greater East Asia, through mutual cooperation will ensure the stability of their region and construct an order of common prosperity and well-being based upon justice.
- II. The countries of Greater East Asia will ensure the fraternity of nations in their region, by respecting one another's sovereignty and independence and practising mutual assistance and amity.
- III. The countries of Greater East Asia, by respecting one another's traditions and developing the creative faculties of each race, will enhance the culture and civilization of Greater East Asia.
- IV. The countries of Greater East Asia will endeavor to accelerate their economic development through close cooperation upon a basis of reciprocity and to promote thereby the general reciprocity of their region.
- V. The countries of Greater East Asia will cultivate friendly relations with all the countries of the world and work for the abolition of racial discrimination, the promotion of cultural intercourse, and the opening of resources throughout the world and contribute thereby to the progress of mankind.

relations between the two countries, largely because of the atrocities Japanese troops committed against the local population, resistance groups, and prisoners of war; in addition, many Philippine women were forced to become so-called comfort women (prostitutes) for the Japanese forces. The Japanese occupation met strong opposition from major groups of Philippine society, and despite Japanese attempts to win the support of the local population and to suppress the resistance movement, Philippine guerrillas, often Communist led, never stopped their attacks against the Japanese.

Relations Immediately after World War II

After General MacArthur's U.S. troops, together with Philippine guerrillas, recaptured the Philippines and defeated the Japanese in 1945, the civil government in exile, now led by President Sergio Osmeña (1878–1961), returned to Philippine soil. With American help, Osmeña's government gradually established control over the country.

In the aftermath of the war, the issue of collaboration with the enemy became a sensitive topic in the Philippines, and almost a decade elapsed before Japan and the Philippines could restore political and economic relations. In July 1956, ratification of two important documents, the Treaty of Peace with Japan and the Reparations Agreement between Japan and the Republic of the Philippines, opened a new chapter in the history of relations between these two countries.

Relations to the Present

Significant growth in bilateral trade played a central role in the development of Japanese-Philippine relations in the postwar period, as rapid economic recovery in Japan in the 1950s and 1960s was based on the policy of export-oriented industrialization. The trade between the two countries quickly grew, and by the 1970s Japan had become one of the largest foreign investors in the Philippines. By the 1990s, Japan had also become one of the largest aid-donor countries to the Philippines. According to the Japanese Ministry of Foreign Affairs, cumulative Japanese loans to the Philippines reached \$57.5 billion in 1999, and cumulative grants reached \$17.9 billion in the same year.

By the end of the 1990s, Japan had become the Philippines' largest trading partner, with imports from Japan—mainly of manufactured electronics, machinery, and other products—totaling \$6.13 billion in 1999 or 22.3 percent of all imports. At the same time, Japan had become the second-largest market, after the United States, for Philippine goods, with exports to Japan—mainly manufactured electronics, textiles, gar-

ments, and raw and processed agricultural products—totaling \$4.66 billion or 14.6 percent of all exports.

Likewise, the number of Filipinos living and working in Japan has steadily increased. In 1998, the Philippine embassy in Tokyo reported that of the 245,518 Filipinos in Japan, 129,053 were Filipino entrants and residents, 36,777 were entertainers, 39,268 were spouses or children of Japanese nationals, and 40,420 were overstaying Filipinos. The Philippines has benefited from the significant number of workers in Japan who send remittances back to the Philippines; from 1990 to 1999, these amounted to \$1.1 million. This amount applied only to bank-to-bank remittances and did not include remittances sent to the Philippines through other channels.

One important area of cooperation between the two countries has to do with the development of free trade in the Asia-Pacific region. The initiatives in this area include collaboration within the Asia Pacific Economic Cooperation framework and initiatives in the Japan-Association of South East Asian Nations (ASEAN) Comprehensive Partnership for regional prosperity and in the ASEAN + 3 (Japan, the People's Republic of China, and the Republic of Korea).

Several negative issues, however, have received public attention and have undermined the relations between the two countries. One is the trafficking of women to Japan. A significant number of Philippine migrants have been women looking for various opportunities in Japan; however, many women have been lured to Japan with promises of high salaries or prospective marriages, but were then treated harshly or forced into prostitution. Because the Philippine public has never forgotten the Japanese treatment of the comfort women, trafficking of women receives much public attention and mass-media coverage.

The other problem relates to environmental pollution in the Philippines, as a number of Japanese companies have illegally shipped hazardous waste there.

Since 2001, security issues have also become an important subject in Japan-Philippines relations, as the Philippines faces increasing violence and militancy from rebel and secessionist movements with links to several international terrorist organizations, and as Japan's role in international security and peacekeeping is becoming more prominent. After the terrorist attacks on the United States on 11 September 2001, Japan and the Philippines agreed to cooperate in actions against terrorism, and Japan agreed to provide financial assistance to Philippine security and defense forces.

JAPAN-RUSSIA RELATIONS Japan and Russia, neighbors who rank as two of the great powers of Northeast Asia, have for more than a century vied with each other for influence in Korea and China. For the past half-century, Tokyo and Moscow have also faced each other on the global stage, at times seeking leverage from their bilateral relations but more often opposing each other as part of Cold War alliances. Even today they have not "normalized" relations. Mired in a dispute over four islands known in Russia as the Southern Kuriles and in Japan as the Northern Territories, they managed to reestablish diplomatic relations in 1956 but not to sign a peace treaty or to agree on boundaries. Although they have been negotiating about both territory and large-scale economic cooperation, nationalistic attitudes in both countries have long prevented a deal.

Japanese-Russian Contacts before the 1850s

Japan and Russia first came into contact in the seventeenth century. After Russia's historic march through Siberia to the Pacific Ocean was diverted northward by China through the Treaty of Nerchinsk in 1689, Russian military colonizers sought provisions in Japan as a means to secure their presence in the East. Earlier in the century, however, Japan had decided to seclude itself from most foreign contacts, especially from the maritime West European powers jockeying for influence. Through the first half of the

nineteenth century, Russia sought ways to pry open Japan, while Japanese through their window in Nagasaki (the one Japanese port open to certain foreign countries) heard rumors about the danger of a growing Russian presence in the North. Despite occasional contacts through shipwrecked Japanese fishermen and aggressive Russian naval vessels, a breakthrough came only after the U.S. navy opened Japan in 1853.

Nineteenth- and Early-Twentieth-Century Relations

In the 1860s, both countries began far-reaching reforms after experiencing crushing military humiliations and awakening to national weakness. In the 1890s, they continued along parallel tracks, becoming leaders in rapid modernization. Both strengthened centralization and added nationalist assertiveness to their foreign-policy agendas. With Russia's construction of the Trans-Siberian railroad and Japan's defeat of China in the 1894-1895 Sino-Japanese War, the two countries confronted each other directly. The Russo-Japanese War of 1904-1905 fueled the two most powerful currents in Northeast Asia during the first half of the twentieth century: the rise of revolution in Russia after the country's defeat in World War I and the advance of colonialism in victorious Japan.

After the 1917 Bolshevik Revolution and the 1919 Japanese expeditionary force to the Russian Far East, a brief interlude of the friendly relations that had existed before World War I was impossible to revive. Eager to learn from European civilization, many Japanese were nevertheless drawn to Russia through its literary classics, while the two states found a common purpose in adjacent spheres of influence in Korea and northeast China. In Japan, a newly emerging intellectual stratum gravitated toward socialism, to the growing dismay of the Japanese government.

During Russia's civil war, Japan joined other countries in sending garrisons into Russia, which were later withdrawn once the Communists were firmly in charge. Indeed, until the Soviet Union blocked militarist Japan in two battles in 1938 and 1939, it appeared likely that Japan would turn northward from its invasion of China rather than shift toward Southeast Asia in its search for oil and a secure Asian hinterland from which to contend for global dominance.

Post-World War II Relations

In 1945 as World War II came to an end, the Soviet Union scuttled the neutrality pact it had signed with Japan in 1941 and joined the United States in the last week of the war in the Pacific. Although at Yalta

JAPAN CONSOLIDATES ITS CONTROL OVER MANCHURIA

As part of its colonial expansion in the early twentieth century, Japan used agreements, treaties, and conventions as well as military rule to control territory it gained militarily and to limit the power of rival nations. The following convention concerns Manchuria, which Japan had taken from Russia.

The Imperial Government of Russia and the Imperial Government of Japan, sincerely attached to the principles established by the Convention concluded between them July 17/30, 1907, and desiring to develop the results of that convention with a view to the consolidation of peace in the Far East, have agreed to complete the said arrangements by the following agreements:

Article I. For the purpose of facilitation of the communications and developing the commerce of the nations, the two High Contracting Parties engage mutually to lend each other their friendly cooperation with a view to the improvement of their respective lines of railroad in Manchuria, and to the perfecting of the connecting service of the said railways, and to refrain from all competition unfavorable to the attainment of this result.

Article II. Each of the High Contracting Parties engages to maintain and to respect the status quo in Manchuria as it results from all the treaties, conventions or other arrangements hitherto concluded, either between Russia and Japan or between these two Powers and China. Copies of the aforesaid arrangements have been exchanged between Russia and Japan.

Article III. In case any event of such a nature as to the menace to the above-mentioned status quo should be brought about, the two High Contracting Parties will in each instance enter into communication with each other, for the purpose of agreeing upon the measures that they may judge it necessary to take for the maintenance of the said status quo.

the United States had approved the transfer of the Kurile Islands to the Soviets, along with Sakhalin Island, Moscow's occupation of the southernmost of the Kuriles, near Hokkaido, created a rallying cry for Japanese nationalists once they had regrouped under U.S. encouragement to hold the line against Communist expansionism. Japan argued that these islands were not part of the Kuriles and had never previously been under Moscow's control. Prolonged Soviet im-

prisonment and forced labor for hundreds of thousands of Japanese prisoners-of-war also started post-war relations on a negative note. Although widespread admiration for Russian literature and sympathy for socialism and the Russian-encouraged peace and neutrality movements offered opportunities for Moscow's foreign relations into the 1960s, Kremlin overoptimism about the prospects for revolution in Japan proved counterproductive.

This cartoon from 1904 or 1905 depicts Japanese troops crushing Koreans as they move toward Russia. (RYKOFF COLLECTION/CORBIS)

When in 1960 Moscow unilaterally abrogated the 1956 joint declaration that committed Moscow to return the two smallest islands nearest to Japan in the event of a peace treaty, the Liberal Democratic Party in Japan found a symbol for vigilance in international relations and for rebuilding Japan's self-defense forces. As the Japanese Left turned away from Moscow to Beijing, public opinion became intensely critical of the Soviet Union. The image of unfriendly bilateral relations and a negative national character lingered a decade after the demise of the Soviet Union in 1991.

Until Gorbachev's *glasnost*, Soviet media were filled with distorted stories about Japan—such as Japan's refusal to report the true nature of the "economic miracle," the growing influence of leftist political parties and labor unions that would soon turn Japan on a revolutionary course, and its lack of sovereignty vis-à-vis the United States. Yet from the 1970s, different images of Japan filtered through the propaganda. Its technological prowess became a reproof to the Soviet Union's failures in the new economy. Japan's success in combining rapid modernization with traditional culture appealed to intellectuals who bemoaned the loss of Russian cultural roots. In the late 1980s, those who objected to the militarization of Soviet foreign policy and the economy cited Japan's successful diplomacy and adaptation to global competition as proof that an alternative policy existed. Positive images of Japan played a role from

1988 to 1991 in fueling "new thinking" in diplomacy and domestic reform.

Despite generally cool relations in the 1960s–1980s, Moscow and Tokyo explored economic cooperation in ways that left enduring dreams. In the 1960s, Japanese companies began to invest in natural resources in eastern Siberia and the Russian Far East, assisting in the infrastructure to move coal, lumber, and other products to coastal vessels. In the mid-1970s, feasibility studies began for developing Sakhalin's offshore oil and gas deposits. After a decade of increasingly troubled relations as the Cold War intensified, Japanese local governments and business interests renewed their hopes for these projects at the end of the 1980s, embracing the concept of the Sea of Japan economic rim. Through a shift to a market economy and decentralization in Russia, many in Japan envisioned the start of regionalism in Northeast Asia, with powerful economic and even strategic consequences for their country's leadership aspirations. While Russian skeptics voiced vague hopes of joining the Asia-Pacific region through Japanese investment and trade, Japanese idealists saw the Russian Far East as one path for "reentering Asia," a popular slogan as Japan looked beyond its ties to the West after the Cold War.

Negotiations from 1986 to 2001 foundered on the territorial question, although the agenda was widening to incorporate common interests. In 1992 in secret and

in 2001 through a public declaration, Moscow made it clear that it was prepared to return the two islands closest to Hokkaido with 7 percent of the land area of the four disputed islands. It favored a deal whereby Tokyo renounced its claim to the other islands. Already in 1989 Tokyo had agreed to discuss simultaneously economic ties as well as the territorial issue; in 1998 it suggested that it would settle for "residual sovereignty," or recognition that the land belonged to Japan even if its return took a long time; and in 2000 it appeared willing to postpone negotiations over the remaining two islands while signing a peace treaty and securing the return of the closest islands. Yet leaders on both sides were not prepared to relinquish any claims. In the Tokyo declaration of 1993, the Krasnoiarsk declaration of 1997, and the Irkutsk declaration of 2001, an upbeat tone was achieved, but neither side was ready for a compromise acceptable to the other. The symbol of territorial differences overshadowed other causes of abnormal relations.

Recent Relations

In the 1990s, economic ties suffered for reasons independent of territory. The Japanese generously provided humanitarian assistance in Russia's difficult transition from 1990 to 1993 but felt that Russia was not very grateful for the aid. In 1999 in the hope of a diplomatic payoff, Tokyo positioned itself to appear more supportive than the Western countries, who had been discouraged by Russia's default in 1998; Japanese investors, however, felt cheated in joint ventures with the Russians, and trade was declining. The sale of Japanese used cars in the Russian Far East had quickly become criminalized, as had the export of crabs and other marine products to Japan. Huge profits were made on the Russian side without providing much public revenue to counter the declining standards of living and the crisis conditions in the Russian Far East. Although a fishing agreement in 1998 was aimed at ending the practice of Russian patrol vessels firing on Japanese boats allegedly poaching, and a visa-free agreement allowed the original inhabitants of the disputed islands and their heirs to cross from Hokkaido, these steps did not reduce the distrust along the border.

Interfering with bilateral relations were the difficulties that leading officials had in recognizing the significance of the other country. The Soviet foreign minister, Andrei Gromyko, had long failed to recognize Japan's importance. Mikhail Gorbachev had moved more boldly in relations with other great powers; his trip to Japan was delayed until April 1991, when his standing at home did not permit compro-

mise. Boris Yeltsin had rudely canceled a trip to Japan in September 1992, and by the time he visited in October 1993 nationalism had reawakened at home. The Russian military objected to a transfer of islands, fearing the loss of the Sea of Okhotsk as a haven for its missile-launching submarines. Japanese prime ministers came and went, with few secure enough to challenge the right wing of Japan's Liberal Democratic Party, which began to consider a compromise on the islands only after it became alarmed by the rise of China and the threat of instability from North Korea. When Ryutaro Hashimoto joined Boris Yeltsin at a "no-necktie summit" in November 1997, both sides appeared to be acting boldly, but at home they actually conveyed the message that the other side was about to abandon its position.

Only when, after 11 September 2001, Vladimir Putin shifted his position to support the United States in the war against terrorism did it become possible for the Japanese leader Junichiro Koizumi to see Russia as a partner. Before then, neither side took the other seriously as a balance among the great powers.

Future Possibilities

Japanese relations with Russia have been filled with dissatisfaction. The goal of "normalization" of relations remains illusive even as the benefits of good relations between the two countries become ever clearer: (1) expansion of trade would take advantage of enormous economic complementarities, such as Russian natural resources and Japanese manufactured goods and technical know-how; (2) joint development of the Northeast Asian region would use Japanese capital to exploit vast Russian resources; (3) stabilization of security on their mutual border and throughout the region would allow each country to diminish its military burden and to lessen its concerns over the Korean peninsula; (4) leverage in great-power relations would permit each country to balance relations with the United States and China; and (5) a rapprochement would support each country's model of development and national identity, as each seeks a return to what it regards as "normal" diplomacy by solving its problems with the other.

Lately Japanese-Russian relations have operated against the backdrop of the rise of China and U.S. unipolarity. Both Russia and Japan are looking for leverage in relations with those two countries, while hoping to develop closer relations with each other. After a century of seeing each other as threatening present or future military adversaries, they have begun military exchanges with the notion that this will

be increasingly useful in the face of Chinese power. The United States has generally encouraged Japan to bolster Russia's democratization and market reforms, but as Washington has grown to doubt Moscow's commitment to those ideals, Tokyo's continued efforts at reconciliation raise some uncertainty. China stands to benefit from better Russo-Japanese relations through a quieter atmosphere in the North, so that it can concentrate on Taiwan, but it is distrustful. In 2000, the summit between North and South Korea made multilateral cooperation more essential, yet Japan's wariness about South Korea's making concessions without stopping the missile threat from North Korea differed from Russia's effort to rebuild ties with North Korea to gain leverage. Hopes for regionalism centered on development of Russian energy resources and resolution of the Korean impasse (both to be accomplished jointly with the United States and China) and on Russia's creating a sound economic and legal framework.

While at times over the past half-century leaders in the Kremlin have harbored hopes of splitting Japan from the United States, they would do well to expect only modest leverage through a more independent Japanese foreign policy in a context of economic globalization. Such leverage would give a boost to Russian aspirations for influence while not interfering with the need to combine the resources of multinational corporations for Russian development. It is up to Russia to foster an environment conducive to Japanese trust and investment.

Over more than three centuries of contact, Japanese and Russians can look back to few periods of sustained cooperation. In the second half of the nineteenth century, both nations turned to the West rather than to each other for models of change and for promising partners. In the first postwar decades, Moscow insisted that its socialist model was applicable to Japan as well as other countries. During the late 1980s and early 1990s, some in Japan proposed that Russia pay less attention to Western free-market ideals and borrow from Japan's state guidance and modified market economy. If comparisons may suggest that a shared preference for collective orientation over individualism could draw these nations together, most observers point instead to the contrasts in thinking: quality-oriented Japanese ways opposed to Russian reliance on quantity over quality; coercive top-down Russian exercise of power versus consensus building in Japanese organizations; and quiet Japanese confidence in continuities with the past unlike the frustrated Russian search for an elusive national identity. Even if the two nations need each other for stability and regional development, they are not likely to turn to each other as models.

Intense negotiations have begun to look beyond the territorial issue toward multilateral relations. Japan and Russia stand at opposite ends of Northeast Asia. Having squeezed China and Korea for many decades, they now face the challenge of economic integration through regionalism and globalization. The geographical reality is that Russia's Far East population is shrinking and now stands at barely 7 million, which Moscow cannot afford to support. Its dispersed natural resources from the northern reaches of eastern Siberia to the Sea of Okhotsk require Japanese investment for development. If Moscow and Tokyo could agree on a program for cooperation, the twenty-first century would proceed with the two sides bringing Northeast Asia together, in contrast to the past century when they split it apart.

JAPAN-TAIWAN RELATIONS Relations between Japan and Taiwan have ranged from hostility in 1874, to colonial occupation in the late nineteenth and early twentieth centuries, to the current relationship of active commercial trade and diplomacy. Since 1972, official relations have been strained by the international acceptance of the People's Republic of China (PRC) as the legitimate government of China, but economic relations have continued and expanded in the face of this difficulty.

Early Contacts

The first significant contact between Japan and Taiwan came when Japan sent a force to Taiwan in 1871 to punish the Taiwanese for the murder of a group of shipwrecked sailors from the Ryukyu Islands. China's foreign ministry accepted responsibility for the actions of the Taiwanese natives and paid an indemnity. In doing so, China asserted its sovereignty over Taiwan and effectively accepted Japan's control over the Ryukyus.

Some twenty years later, following the Sino-Japanese War of 1895, China was forced to cede Taiwan and neighboring islands to Japan, and Taiwan was formally colonized as part of Japan's Greater East Asia Co-prosperity Sphere in 1923. The indigenous Taiwanese population were thus brought into the Japanese empire as subjects (not citizens) and were indoctrinated much as the Korean population was, being forced to adopt Japanese names and wear Japanese clothing. This formal colonization ended with the Japanese defeat in 1945 at the end of World War II, but rather than becoming free Taiwanese the people came under the control of the Nationalist Chinese.

Because the Nationalist Chinese leader Chiang Kai-shek had participated in the Allied Cairo Conference with Franklin D. Roosevelt and Sir Winston Churchill, it fell to his forces to accept the surrender of Japanese forces on Taiwan. Thus the postwar relationship of Japan and Taiwan was between the former imperial power and the Chinese opposition, the former of which had been defeated by the United States, and the latter of which was losing its civil war against the Communists on the Asian mainland. Japan and Taiwan would be guided in the coming decades by the geopolitics between East and West and by the conflicts between Communism and capitalism, as much as by the actions and desires of their home governments.

Role of Communist China

The role of the Chinese Communists shaped Japan-Taiwan relations for the next quarter-century. To counter what it perceived as a monolithic Communist threat, the United States sought to limit the opportunities upon which Moscow or Beijing could capitalize. The U.S. decision to support Chiang over China's Communist leader Mao Zedong was a political one; during World War II the Roosevelt administration had seen fit to ally itself with another Communist (Joseph Stalin), but in the case of China, the U.S. Congress favored Chiang. In any case, following the

retreat of Chiang's forces to Taiwan in 1949, the United States pursued a policy of using its assets in the region to support the Nationalist government. One of those assets was Japan, which was still under U.S. administration at that time. Coincident with this was the need to keep Japan free from Communist influence; the fear of Communism was the dominant factor in Washington's East Asian policy.

The Truman administration (1945-1953) saw the establishment of close trade relationships between Taiwan and Japan as a means to preserve a stable, non-Communist Japan as well as to support the Japan that the United States was trying to develop. For Japan, Taiwan would be a better source of food and raw materials than other Southeast Asian nations such as Myanmar (Burma) or Malaysia. However, despite its desire to trade with Taiwan, Japan also favored ties with Communist China, which had more to offer despite the competing forms of government.

The key to Japan's willingness to trade with a Communist government lies in the Japanese business philosophy known as *seikeibunri*, a contraction for the Japanese words *seiji* (politics), *keizai* (economy), and *bunri* (separation). *Seikeibunri* provided a means of private Japanese business to continue economic ties with Taiwan when Japan and the United States wanted to do otherwise and was the basis for the continuation of these economic ties once diplomatic recognition of Taipei was abandoned. This stance, which came to be known as the Japan formula, explains a great deal of Japan's regional economic success.

The defeat of the Nationalist Chinese in 1949 seemed to the United States to be the harbinger of further Communist successes. Although the U.S. policy of "containing" Communism had called for steady pressure on the Soviet Union in the expectation that Communism would fail from its own flaws, President Harry Truman in mid-May 1950 approved an Asia policy that called for a "rollback" of Communism in China. The need for such a policy was punctuated five weeks later when the Korean War began, even as the Allied powers of World War II were negotiating a peace treaty with Japan.

Despite the Communist invasion of South Korea with its implications for other non-Communist nations in East Asia, not all of America's allies perceived the same degree of threat. In particular, Great Britain was at odds with U.S. policy regarding the two Chinas. London did not see the need for ties with the Nationalists and sought to have Taiwan ceded to the People's Republic of China; the British presence on Hong Kong may have been a motivating factor for this.

The U.S. desire for ties between Japan and Taiwan was fulfilled; by 1951 Japan and Taiwan accounted for about one-third of each other's trade. On the political side, the Japanese prime minister Yoshida Shigeru accepted the U.S. demand that Japan would not make peace with the PRC; for Yoshida, it was more valuable to end the U.S. occupation of Japan than to contest the bases of future Japanese foreign policy. Japan's acceptance of Taiwan over the PRC would contribute to the "two China" view preferred by the United States.

The Japanese position was supposedly laid out in a letter from Prime Minister Yoshida to the U.S. secretary of state John Foster Dulles. The "Yoshida Letter" (actually written by Dulles) accepted Nationalist rule in Taiwan and was the basis for a bilateral treaty between Tokyo and Taipei that took the place of Chiang's participation in the multilateral peace treaty with Japan. In retrospect, it shows the degree to which regional politics were at the convenience of Washington. This began to change once Japan signed the multilateral peace treaty and regained some degree of independence.

With the peace treaty signed, in 1952 Japan began unofficial trade agreements with the People's Republic of China. By 1956 Japanese trade with China exceeded that with Taiwan.

U.S.-China Policy

The U.S. commitment to Taiwan was formalized in 1954 with the Mutual Defense Treaty. This treaty called for either party to support the other in the event of an attack by hostile forces, but it did allow either side to terminate the treaty after one year's notice. Coming after the Korean War, this treaty remained in effect through the conflict in Vietnam, during which military aid to Taiwan (and other nations in the region) more than doubled.

The Vietnam War led to a change in U.S. policy that was confusing to some and outrageous to others. Despite an ongoing armed conflict with a Communist nation (North Vietnam) supported by other Communist nations (the Soviet Union and the People's Republic of China), it became evident that U.S. policies seemed to be softening toward China. At the beginning of July 1971, the U.S. secretary of state Henry Kissinger met with Taiwan's ambassador, James Shen, to hear Taiwan's objection to the possibility of "dual representation" in the United Nations. The next day Kissinger left on a secret mission to Beijing to discuss a major change in U.S.-PRC relations. Dual representation was a political hot potato on many fronts; it

would also face objection from South Korea and West Germany, due to their Cold War divided status.

A different view was held in Japan. In January 1971 Prime Minister Sato Eisaku announced to the Japanese parliament his desire for closer ties to Beijing. When it became known that the United States was involved in normalization of relations with the PRC, the Japanese response was enthusiastic. However, Japan's minister of foreign affairs did not believe that dual representation would be possible and so advised the U.S. embassy in Tokyo. The United States still sought a means for retaining the status quo with the Nationalist government while moving toward normalizing relations with Beijing, but support for Taiwan was eroding in the United Nations.

Only ten months later, the United Nations accepted the proposal to expel Taiwan; a vote on the U.S. plan for dual representation was not taken. A month later, in February 1972, the U.S. president Richard Nixon and the PRC premier Zhou Enlai issued the Shanghai Communiqué, which in addition to denouncing hegemony in the region declared that Taiwan was an integral part of China. This seemed to be at odds with Nixon's foreign policy report of the same month, which restated the United States's "friendship, our diplomatic ties, and our defense commitment" to Taiwan.

Japan Formula

Japan formally offered diplomatic recognition to the PRC in September 1972. Japan had officially supported Taiwan as long as it was evident that the United States could prevent the PRC government from representing China in the United Nations. When it became evident that the PRC government had enough support to take over China's U.N. seat, Japan no longer supported Taiwan over the PRC. This did not mean that Japan sought to abandon Taiwan as a trading partner; it was just a formal recognition that Japan saw the People's Republic as having the advantage in any competition between the two Chinas.

That month the Japanese prime minister Tanaka Kakuei and Zhou Enlai agreed on essentially the same issues that Nixon and Zhou had. They announced work toward a peace treaty (since the People's Republic had not been a party to the multilateral treaty of 1951), and, most significant, China accepted the Japan formula, allowing continued Japanese trade with Taiwan. This Japan formula called for Japan and Taiwan to shift their relations from governmental to non-governmental organizations. Rather than relying on the familiar governmental entities like the Japanese

Ministry of International Trade and Industry (MITI), trade between Tokyo and Taipei would be handled by such agencies as the Association of East Asian Relations in Taipei, the China External Trade Development Council, and the Japanese Interchange Association. Tokyo had too much at stake to give up its investment in Taiwan for better relations with the People's Republic. By 1972 Japan had \$500 million invested in Taiwan, and trade was running at \$800 million a year. The Japan formula provided a win-win-win situation for Japan and the two Chinas: Japan protected its investment, Taiwan got continued trade, and the People's Republic would receive Japanese credit, steel, and technology.

The importance of this Japan formula cannot be overstated, because in addition to allowing Japan to maintain economic relations with both Chinas it made the same thing possible for the United States. When the PRC paramount leader Deng Xiaoping traveled to Japan in October 1978 to sign the Sino-Japanese Peace Treaty, he hinted that the People's Republic would not object to a similar arrangement with the United States. This led to the eventual agreement that China would not object to continued U.S. economic, trade, and cultural relations with Taiwan, while the United States would recognize the PRC. This, of course, required that the United States withdraw from its Mutual Defense Treaty with Taiwan.

The U.S. decision to end the Mutual Defense Treaty with Taiwan led Congress to pass the Taiwan Relations Act in 1979. The ending of the U.S.-Taiwan relationship, foreseen for years, led to a new freedom in economic relations. The new order allowed the government in Taiwan to pursue the normal goals of diplomacy with other countries without official recognition or obligation. While lacking the diplomatic status of earlier years (and the forum of the United Nations), Taipei still had "informal offices" internationally through which it could participate in the international arena. Granted, it had to accept less-than-perfect agreements in many cases; nevertheless, it could still participate in the Olympics as "Chinese Taipei" alongside the People's Republic, and it earned membership in the Asian-Pacific Economic Cooperation forum (alongside the PRC) and the Asian Development Bank.

Enhanced Japan-Taiwan Trade

The Japan formula did not hurt Taiwan's economic relations with Japan; trade continued, although much to Japan's favor. By 1980 Taiwan's trade deficit was \$3.2 billion, with a cumulative \$14.2 billion between

1972 and 1980. This imbalance led to Taiwan's embargoing Japanese goods, which resulted in a Japanese trade mission to resolve the imbalance. Japan reduced its exports to Taiwan briefly, which allowed a later increase in overall exports. This increased trade level continued until 1992.

In the early years of the Taiwan Relations Act, Taiwan and other "trading states" that had developed export-oriented economies along the Japanese model (such as South Korea, Taiwan, Singapore, and Malaysia) pulled away from other developing countries and established themselves in the global market. Between 1985 and 1989, Japan's trade with Taiwan increased threefold, and trends indicated that Japan would replace the United States as Taiwan's major trading partner.

By 1992 Japan's trade with Taiwan reached \$30.7 billion (with Japan running a \$12.9 billion trade surplus). Even as the economic relations between the two nations expanded, relations between Taipei and Beijing developed as well. In 1991 Taiwan and the People's Republic engaged in \$7 billion in trade. Trade between the two Chinas grew during this decade in excess of 10 percent annually, and it stood at over \$22 billion in 1998. The lack of diplomatic ties and restraints has enabled Taiwan and its trading partners to avoid the normal barriers of international trade and has simplified technology transfer between Taiwan and its trading partners.

In 1992 the government in Taiwan changed the name of its trade offices from the Association of East Asian Relations to the Taipei Economic and Cultural Representative Office; four of these quasi-consulates are located in the Japanese cities of Tokyo, Yokohama, Osaka, and Fukuoka. In 1994 MITI posted a minister to Taipei to further legitimize relations. As Taiwan's economy became one of the most prosperous in East Asia, investment became more expensive. This resulted in reduced Japanese imports from and exports to Taiwan, and subsequently Japan expanded investment in the less expensive developing nations in the region, such as Malaysia and Thailand.

As the government of Taiwan has begun to push for broader acceptance as a legitimate government, it has joined many international organizations of which Japan is also a member, including the Pacific Basin Economic Council and the Asia-Pacific Economic Cooperation forum. Japan and Taiwan continue to attempt to resolve the trade deficit issue through annual bilateral talks and to establish direct air travel facilities for tourist travel between the two nations. By the

late 1990s, more than 1.5 million passengers and tourists made the trip annually.

Japan's economic involvement with Taiwan has contributed to the success of each and to the detriment of neither. Without the freedom to separate politics from economics, Japan would have been forced to choose sides in the competition between Taipei and Beijing, but *seikeibunri* removed that obstacle. Japan sought the greatest advantage for itself, whether that was to avoid ties with the People's Republic to accommodate the United States as Japan prepared for autonomy in 1951, to establish informal ties with the mainland while holding formal ties with Taiwan, or to reverse the arrangement and continue trade through nongovernmental agencies in Taipei.

JAPAN–UNITED KINGDOM RELATIONS

The history of relations between Japan and Great Britain can be divided into four stages: the beginning of full relations in the mid-nineteenth century, the alliance, interwar, and post–World War II.

Although the first contact between the two nations was in the early seventeenth century, full relations began in the last part of the Tokugawa period (1600/1603–1868). During the Meiji period (1868–1912), Britain played a major role in the modernization of Japan by helping in the establishment of the Japanese navy and the planning and construction of railroads and factories. Meiji leaders regarded Britain, the pioneer of the industrial revolution, as a model for modern economic and social institutions.

Meiji leaders sought treaty reform as another goal for Japan in its relations with the West. Revision of the Unequal Treaties sought to abolish foreigners' judicial and economic privileges. The Anglo-Japanese Commercial Treaty of 1894 prescribed termination of extraterritoriality, provided that Japan reformed its legal institutions along Western lines. Even though Japan did not get complete tariff autonomy until 1911,

British treaties facilitated negotiations with other Western countries.

Japan and Great Britain were allies during the early twentieth century. The Anglo-Japanese Alliance (1902–1923), directed against Russian expansion in the Far East, assisted Japan in the Russo-Japanese War (1904–1905). It was renewed two times, which obligated Japan's participation in World War I as a British ally. After the war, the significance of the Alliance for Britain decreased, and the United States viewed Japan as a strong competitor in East Asia. At the Washington Conference (1921–1922), the United States forced Japan to end the Alliance, which was replaced by the Four Power Pact.

As Japan became an increasingly powerful nation, relations with Great Britain suffered, mainly because of political and economic disputes in Asia, especially trade disputes with China. After the Manchurian Incident of 1931, trade conflict became more intense, and at the conclusion of the Tripartite Pact of September 1940, Japan's ties with Germany and Italy strained relations further still. On 8 December 1941, Japan declared war against Great Britain and the United States, and attacked Britain's colonies in Southeast Asia.

Relations between Japan and Great Britain began to improve after World War II. Britain ratified the Multilateral Peace Treaty in 1952. In the 1960s, new trade treaties were concluded between the two countries. Exchange of royal visits in the 1970s symbolized more open communication between the two nations. Good relations continue in the early 2000s, with exchanges in every sphere.

JAPAN-UNITED STATES RELATIONS

The relationship between Japan and the United States, which dates from the mid-nineteenth century, is complex and multifaceted. Two of its most important aspects are security and economic relations.

Relations until World War II

When Commodore Matthew Perry forced Japan to enter into trade and diplomatic relations with the West in 1853–1854, the event was a turning point in the transformation of the Japanese political system from the shogunate to the Meiji imperial system. The United States, however, paid little attention to the Asia-Pacific area until the end of World War I.

After 1918, Japan emerged as one of the five major world powers. The United States established the Washington Treaty System to restrict Japanese territorial expansion and the arms race in the Asia-Pacific area in the 1920s. This system was sustainable as long as Chinese nationalism did not become radical enough to challenge the status quo and Japan maintained its economic prosperity through cooperation with the United States. Though the U.S. immigration law of 1924 virtually prohibited Japanese immigration and damaged U.S.-Japanese relations, the spirit of cooperation and the benefit derived from the Washington Treaty System prevailed in the early 1920s.

But the Great Depression of 1929 demolished the Treaty System and precipitated Japanese military expansion into Manchuria and the Chinese mainland. In 1931 the Japanese army occupied Mukden, Manchuria (present-day Shenyang), and eventually extended its rule over all of Manchuria. The United States had no vital interest in Manchuria, and the Hoover Administration adopted a policy of nonrecognition. In the absence of strong U.S. opposition, Japan continued its expansion and established the puppet state of Manchukuo (in Chinese, Manchuguo) in 1934. In July 1937 the Japanese army advanced to the Marco Polo Bridge, beginning the full-scale Sino-Japanese war.

The United States did not intend to fight against Japan over China issues, but neither could Washington bear the prospect of the entire Asia-Pacific area under Japanese rule. In September 1940 Japan stationed its army in northern French Indochina, and in July 1941 moved into southern Indochina. The Japanese expansion in Asia, along with the expansion of Germany in Europe, would have led to a closed world, a world consisting of a series of exclusive economic blocs. In response to these developments, Washington forbade oil exports to Japan in August 1941. This prohibition significantly contributed to Japan's final

THE UNITED STATES DECLARES WAR ON JAPAN AND ENTERS WORLD WAR II

"Whereas the Imperial Government of Japan has committed unprovoked acts of war against the Government and the people of the United States of America: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled, That the state of war between the United States and the Imperial Government of Japan which has thus been thrust upon the United States is hereby formally declared; and the President is hereby authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial Government of Japan; and, to bring the conflict to a successful termination, all of the resources of the country are hereby pledged by the Congress of the United States.

decision to go to war against the United States and attack Pearl Harbor that December.

The Occupation Era, 1945–1952 After Japan's defeat at the end of World War II, the United States played a dominant role in carrying out the Allied Occupation policies in Japan. It first employed punitive economic policies, but later tried to establish a self-sufficient economy in Japan. In February 1949, Joseph Dodge, an American financial adviser, implemented an austerity program to balance Japan's budget. This politically unpopular austerity program was called the Dodge Line.

The Dodge Line constituted a critical turning point in the Occupation, transforming the state-managed economy into a market-oriented, export-first economy. The fate of the Dodge Line depended on the revival of Japanese foreign trade, but with a world wide depression in 1949, Japan faced a severe economic downturn. Southeast Asian countries were Japan's natural market because of their great demand for

OPENING JAPAN TO TRADE WITH THE UNITED STATES

This extract from Treaty No. 19, Treaty of Commerce and Navigation of 1860, sets the conditions for trade between Japan and the United States.

The President of the United States of America, and His Majesty the Ty-coon of Japan, desiring to establish on firm and lasting foundations, the relations of peace and friendship now happily existing between the two Countries, and to secure the best interest of their respective Citizens and Subjects by encouraging, facilitating, and regulating their industry and trade, have resolved to conclude a Treaty of amity and commerce, for this purpose, and have therefore named, as their plenipotentiaries, that is to say:

The President of the United States, His Excellency Townsend Harris, Consul General of the United States of America, for the Empire of Japan, and His Majesty the Ty-coon of Japan, Their Excellencies Ino-ooye Prince of Sinano and Iwasay Prince of Hego, who, after having communicated to each other their respective Full Powers, and found them to be in good and due form, have agreed upon and concluded the following Articles:

Article First. There shall henceforth be perpetual peace and friendship between the United States of America, and His Majesty the Ty-coon of Japan, and His Successors.

The President of the United States may appoint a Diplomatic Agent to reside at the City of Yedo, and Consuls or Consular Agents to reside at any or all of the Ports of Japan which are opened for American Commerce by the Treaty. The Diplomatic Agent and Consul General of the United States shall have the right to travel freely, in any part of the Empire of Japan from the time they enter on the discharge of their official duties.

The Government of Japan may appoint a Diplomatic Agent to reside at Washington and Consuls or Consular Agents, for any or all of the ports of the United States. The Diplomatic Agent and Consul General of Japan, may travel freely in any part of the United States from the time they arrive in the country.

Article Second. The President of the United States, at the request of the Japanese Government, will act as a friendly Mediator, in such matters of difference as may arise between the Government of Japan and any European Power.

The ships of war of the United States shall render friendly aid and assistance, to such Japanese vessels, as they may meet on the high seas, so far as can be done without a breach of neutrality, and all American Consuls, residing at Ports, visited by Japanese vessels shall also give them such friendly aid as may be permitted by the Laws of their respective Countries, in which they reside.

Article Third. In addition to the Ports of Simoda and Hakodate, the following Ports and Towns shall be opened on the dates respectively appended to them, that is to say:

Kanagawa, on the (4th day of July 1859) . . .

Nagasaki, on the (4th day of July 1859) . . .

Nee-e-gata [Niigata] on the (1st of January 1860) . . .

Hiogo [Hyogo] on the (1st of January 1863) . . .

CONTINUED ON NEXT PAGE

CONTINUED FROM PREVIOUS PAGE

If Nee-e-gata is found to be unsuitable as a Harbour, another Port, on the West coast of Nipon, shall be selected by the two Governments in lieu thereof.

Six months after the opening of Kanagawa, the port of Simoda shall be closed as a place of residence and trade, for American Citizens.

In all the foregoing Ports and Towns, American Citizens may permanently reside, they shall have the right to lease ground, and purchase buildings thereon, and may erect dwellings and warehouses. But no fortification or place of military strength, shall be erected under the pretence of building dwellings or warehouses, and to see that this Article is observed, the Japanese authorities shall have the right to inspect from time to time any buildings, which are being erected, altered or repaired.

The place which the Americans shall occupy for their buildings, and the Harbour Regulations, shall be arranged by the American Consul, and the Authorities of each place, and if they cannot agree, the matter shall be referred to, and settled by the American Diplomatic Agent and the Japanese Government.

industrial goods and Japan's geographical proximity. Establishing a regional economic linkage, however, required political stability in Asia. By 1949, the United States had focused its attention on bringing political stability to Southeast Asia as a prerequisite for Japanese economic recovery.

The United States also emphasized demilitarization in the early stage of the Occupation. Because this left Japan defenseless, Washington realized that to ensure Japan's security it would have to maintain military bases and armed forces there, and in 1951 signed the U.S.-Japanese Security Treaty.

The United States successfully compelled Japan to accept American bases and to agree, reluctantly, to rearmament. But making military commitments is a double-edged sword, as it made the United States responsible for Japan's security. Moreover, for the Japanese retaining American bases was a sensitive issue, because they impinged on Japan's sovereignty. Consequently, the United States had to prevent the base issue from becoming the agenda of any heated debate in the Japanese Diet. Washington could not push Japan too hard concerning Japan's rearmament program since it might lead to the sensitive base issue. In short, Japan's reluctant acceptance of American bases guaranteed Japan's security while mitigating American pressure on Japan to rearm.

The Korean War, which broke out in June 1950, stimulated the Japanese economy. The Chinese Communists' intervention in the war and their military suc-

cesses increased China's prestige in Asia. With China's increasing status, the United States believed that it would be difficult to retain Japan's pro-American orientation unless it took steps to preserve its own prestige. In response to these pressures, Washington articulated its commitment to maintaining Japan's security, sanctioning the use of force if necessary. Because Japan was an unreliable former enemy, Washington could not simply count on its good will, but had to stimulate Japan's own self-interest to encourage its alignment with the West.

Japan's primary task became to determine its minimum defense contribution without jeopardizing its ties with the United States. Japan was excellent at exploiting America's Achilles' heel: it manipulated U.S. security anxieties in Japan to induce more involvement in Japan's economic recovery and security. Japan also tried to induce aid from the United States in exchange for Japan's rearmament. As a weak ally in an unstable area surrounded by two giant Communist countries, Japan found its own perceived weakness to be the best asset with which to deal with the United States.

Postoccupation Economic Relations

During the 1950s, both the American and Japanese governments tried to reduce Japan's trade deficit and integrate the Japanese economy into the Western bloc. Japan, however, could not enjoy full benefits of the General Agreement on Tariffs and Trade (GATT) because of restrictions imposed by other member states.

Moreover, the United States severely curtailed Japanese trade with China.

Four factors helped the Japanese economic development in the early postoccupation period. First, the United States tolerated Japan's restrictions on imports and foreign investments. Few American businesses regarded the Japanese market as important. Second, Washington facilitated Japanese access to the American market. Third, American military spending in Japan and other parts of Asia helped revitalize the Japanese economy. Fourth, Japan was able to concentrate on economic growth because it was not hampered by excessive defense spending. During the 1950s, the United States and Japan had trade frictions only in specific sectors, including textiles, sundries, and silverware. The American textile industry was especially hard hit by heavy importation of cheap Japanese products. In January 1956, Japan began to adopt self-imposed export restraint.

As American economic supremacy gradually declined in the late 1960s, Washington could no longer keep its domestic market open to Japanese goods. The U.S.-Japanese textile negotiations between 1969 and 1971, which were designed to restrain imports of Japanese textiles, were symbolic incidents of this era. Americans were alarmed to realize Japan had recovered from World War II so quickly and, by the early 1970s, had become competitive with U.S. industries. During the 1970s, however, the United States was primarily concerned with competition from Western Europe.

Japanese economic growth gradually slowed beginning in the mid-1980s, and the United States started to focus serious attention on Japan as an economic competitor. Washington emphasized not only reducing Japanese imports to the United States but also expanding U.S. exports to Japan. In addition, Washington focused on unfair Japanese trade practices, considering it imperative to change the Japanese domestic system. By the late 1980s, Japan had an enormous trade surplus and the United States a towering deficit. Between September 1989 and June 1990, the two countries devised the Structural Impediments Initiative as a way to mitigate trade problems. Unlike earlier trade agreements, this one dealt with structural issues instead of focusing on particular items.

Postoccupation Security Relations

The Security Treaty of 1951 had two major problems. First, it gave the United States the right to station its armies in Japan, but it did not oblige the U.S. to defend Japan or to consult with it over military operations. Second, the treaty allowed the American army to repress domestic rioting, a potential violation of Japan's sovereignty. In 1960, a new U.S.-Japan Security Treaty was concluded that abrogated the United States's right to intervene in domestic rioting and specified that the United States assumed official responsibility for Japan's defense. In turn, Japan was obligated to protect U.S. installations in Japan if they were attacked.

Japan did not become directly involved in the Vietnam War, but as a dependable ally of the United States it made significant contributions and reaped enormous economic benefits. Okinawa became a base for B-52s and a training base for U.S. Marines. America used its bases in mainland Japan for logistics, supplies, training, and rest and recreation. The U.S. withdrawal from Vietnam encouraged the United States to promote closer military cooperation with Japan. In November 1978, the United States and Japan began to review var-

ious aspects of military cooperation, such as the emergency defense legislation and logistic support.

The 1990s and Afterward

The Cold War structure and America's preeminence in the world brought stability to post-World War II U.S.-Japanese relations. The Cold War made Japan depend on the United States strategically, and America's supreme power brought both military protection and economic well-being to Japan. However, the U.S. loss of dominance in the mid-1970s and the end of the Cold War in the early 1990s undermined the basis of stability in the countries' relations.

The 1990s were an unstable decade for U.S.-Japanese relations, a time during which these countries searched for a new principle to determine the orientation of their relationship.

During the 1990s, the U.S. economy revived, primarily due to the information technology (IT) revolution and the rapid development of IT-related industries, while Japan remained in deep political and economic turmoil. In July 1993, the Japanese Liberal Democratic Party, the long-term ruling party, lost its majority in the Diet, ending its thirty-eight-year rule over Japanese politics. A series of weak coalition governments followed, none bringing political stability, which contributed to Japan's economic recession. Economic crises in Southeast Asian countries in 1997 further undermined Japanese economic conditions. Currently, the world pays close attention to Japan's management of macroeconomic policy because of the negative effect of Japan's prolonged economic stagnation on the performance of the world economy, especially that of Asia.

The Japan-U.S. Framework for New Economic Partnership began in 1993 in order to redress trade imbalances. The negotiations stressed macroeconomic concerns, area-specific issues, structural problems, and a result-oriented approach. Washington demanded that Japan set the numerical target for its increase of imports, arguing that since the Japanese market was closed, the United States could not expand its exports to Japan. Japan strongly opposed this request on the grounds that it could lead to managed trade, and insisted that U.S. firms conduct more effective market research and produce goods suitable for Japanese consumers.

The gross national products (GNPs) of the United States and Japan combined constitute more than 40 percent of the world's total GNP, and their economic assistance makes up approximately 50 percent of the total amount of aid. Since U.S.-Japanese economic re-

lations will continue to have a decisive impact on the health of the global economy, the U.S.-Japan Twenty-first Century Committee was established in July 1996 as a bilateral private-sector forum for dialogue and the consideration of policy proposals. Moreover, the two nations have worked together on such global threats as the deterioration of the earth's environment, communicable diseases, natural calamities, and terrorism.

The Persian Gulf War of 1991 reaffirmed the importance of the U.S. bases in Japan. The war forced the United States to restructure its strategic policy toward Asia as a whole. In February 1995 the United States published the Nye Initiative, a report on U.S. security strategy toward East Asia and the Pacific area compiled by defense expert Joseph Nye. It claimed there were 100,000 Americans associated with the military in Asia, of whom 60,000 were in Japan. The Nye Initiative defined U.S.-Japanese relations as the most important bilateral relationship in Asia, and Japanese security as the linchpin of U.S. security policy there.

Suspicious in 1994 that North Korea was developing nuclear weapons prompted Japan to reconsider its security policies. In September 1995, the abduction and rape of a twelve-year-old Japanese girl in Okinawa by American Marines sparked renewed criticism of the U.S.-Japanese Security Treaty. The threat of military conflicts among China, Taiwan, and the United States in 1995 and 1996 demonstrated military instability in Asia.

In April 1996, President Clinton held a summit with Prime Minister Hashimoto Ryutaro, with security as the principal agenda. They issued new guidelines for closer U.S.-Japan military cooperation. In May 1999 the Japanese Diet passed legislation supporting the guidelines. Japan formally approved conducting military-related action outside of Japan, including rear-area logistic support but not active combat operations, to enhance its own security interests.

Japan's neighbors, especially China, are closely watching the expanding role of the U.S.-Japanese alliance in the Asia-Pacific area and worry that Japan might again become a great military power. In the post-Cold War era, Washington redefined the security treaty with Japan to maintain a military presence in Japan partly because the continuous presence of the U.S. army would curb Japan's military behavior.

The Near-Term Outlook

In 2001, Prime Minister Junichiro Koizumi visited Washington to meet with President George W. Bush,

taking with him the sad statistics of the nation's economy. Japan faces the highest level of deflation since the Great Depression of the 1930s, and government debt has risen to 130 percent of the gross national product. Banks are the most important problem for Koizumi. Nonperforming loans total hundreds of billions of dollars. Koizumi openly expressed his pro-U.S. position in public, looking for outside support to implement his potentially unpopular reform agenda. President Bush, for his part, demonstrated support for Koizumi's economic reform policy. The terrorist attacks on the World Trade Center and the Pentagon in 2001 further promoted military cooperation between Japan and the United States. Japanese-U.S. relations continue to be one of the most important bilateral relationships in the twenty-first century, especially in the Asia-Pacific area. The peace and stability of the Asia-Pacific area depend on Japanese-U.S. cooperation and their efforts to contain destabilizing factors in this area.

JAPANESE EXPANSION Between 1895 and 1945, Japan built a colonial empire in East Asia and the South Pacific, exerted growing political and economic influence over areas of Asia beyond the borders of its formal colonial holdings, and eventually launched a war that extended the area of Japanese control to its greatest limits but ultimately resulted in the complete destruction of the empire.

While Japan's transition from a largely isolated country in 1853 into one of the world's major powers began with fears of being colonized, by 1905 a newly created Japanese state had successfully assumed a place alongside the Western imperialist powers. Japanese expansionism found its ultimate expression in a war to supplant Western colonial influence with a greatly enlarged Japanese colonial empire, defined as a "New Order in Asia."

Colonial Empire

Following the establishment of the Meiji government in 1868, Japan's new leaders set out to establish formally Japan's boundaries under Western international law. The 1870s and 1880s thus witnessed the integration within Japanese borders of Hokkaido and the Kurile Islands in the north, the Ogasawara Islands off the Pacific coast, and the Ryukyu Islands in the south. Also driving the government's foreign policy was a desire to revise the unequal commercial and diplomatic treaties the old Tokugawa government (1600/1603–1868) had signed under duress during the 1850s. Establishing political and economic institutions patterned on Western practice was viewed as a necessary step toward convincing signatory nations to revise relations on a basis of equality; it was also seen as indispensable to building a Japan capable of guaranteeing its own independence.

Japan's leaders also became convinced that their nation's security would be threatened if any third power gained control of the Korean peninsula. Shortly after receiving British acquiescence to renegotiate the unequal treaties, rivalry with the Chinese Qing dynasty (1644–1912) over control of Korea erupted into the Sino-Japanese War of 1894–1895. A Japanese victory drove the Chinese out of Korea and brought Japan formal possession of Taiwan and participatory status in the unequal-treaty system that governed great-power relations with China.

The Russian presence just north of Korea in Manchuria, however, continued to concern Japanese leaders, and in 1902 Japan entered into an alliance with Great Britain directed at countering Russian influence in Northeast Asia. Japan's victory in the Russo-Japanese War of 1904–1905 brought control over what became known as the Guandong Leased Territory on China's Liaodong Peninsula and formal possession of southern Sakhalin. Japan's success also affirmed its status as a regional power and paved the way for the formal annexation of Korea in 1910. When Japan joined World War I as Britain's ally, it took control of Germany's colonial possessions in China and Micronesia. In 1915, the government also took an initiative known as the Twenty-One Demands to gain predominant political and economic influence over China, but this effort to exert influence beyond the formal boundaries of the new empire only provoked Chinese enmity and Western suspicions.

The Search for a New Order

After World War I, international conferences in Paris and Washington set out to revise the diplomatic practices of great-power relations and arms competition, which were viewed as central causes of the war. Open multilateral negotiations, free trade, self-determination, and arms limitation were to be the building blocks of a new order that would prevent a repeat of the Great War. Some Japanese viewed these reforms as an Anglo-American stratagem to perpetuate a status quo favoring their interests, but for the better part of the 1920s Japan was able to expand its interests on the Asian continent within the rules instituted in Paris and Washington.

Although the postwar settlement required that Japan relinquish control over former German concessions in China, the agreement also recognized the legitimacy of Japan's other colonial holdings and its control over the Guandong Leased Territory. Growing economic expansion on the continent during the 1920s further raised Japan's material stake in China's

future. Some Japanese believed that the increasingly active Chinese nationalist movement and the prospects of a unified China threatened Japan's continental position. Others, particularly in the armed forces, feared that an invigorated Soviet Union would carry Communism into Northeast Asia. Finally, during the 1930s, the widely accepted belief in Japan's rightful role as the dominant power in East Asia increasingly intertwined with Pan-Asianist ideals postulating a national mission to liberate Asia from the yoke of Western imperialism.

Japan's response to these exigencies focused first on protecting its economic and security interests in Manchuria. By the beginning of the 1930s, many Japanese became convinced that Japan's interests could be better served through direct action than by continued adherence to the precepts of cooperative diplomacy. On 18 September 1931, against a backdrop of economic depression and domestic political uncertainty, Japanese army officers conspired to solve the "Manchurian question" by staging a swift military seizure of Manchuria and presenting their government and the world with their military occupation as a fait accompli. Extremely popular with the Japanese public, the Manchurian Incident strengthened the position of those favoring an independent foreign policy and reform of Japan's domestic political order. Following the army's lead, Japan's government in 1932 established the puppet state of Manchukuo and, in the face of international criticism, withdrew from the League of Nations in February 1933.

Wartime Expansion

Whereas Japan's expansion as a colonial power and pursuit of its interests in East Asia had occurred largely according to the prevailing practices of prewar imperialism and the postwar great-power style of cooperation elucidated in the Paris and Washington treaties, during the 1930s Japan became increasingly committed to establishing hegemony in East Asia. By the end of the decade, a confluence of domestic and international factors placed Japan increasingly at odds with those Western powers concurrently opposing German expansionism in Europe.

A skirmish between Chinese and Japanese troops north of Beijing on 7 July 1937 mushroomed into a general war that thereafter shaped Japanese policy making and eventually led to war with the Anglo-American powers. In 1938, Japanese leaders redefined the war in China as a noble crusade to construct a "New Order for East Asia," thereby placing Japan in direct conflict with the interests of the British and

Americans in China. In 1940, Japan joined in the Axis Pact with Nazi Germany and Fascist Italy and expanded its self-appointed mission to include incorporation of South and Southeast Asia into a Greater East Asian Coprosperity Sphere. Hostility with the Anglo-American powers grew as a result, and on 7 December 1941 Japan began the war in the Pacific with an air attack on Pearl Harbor and an assault on Western colonial holdings in East and Southeast Asia. Despite stunning initial successes, including the occupation of vast areas of the South Pacific, Japan's offensive soon stalled. The Allies' overwhelming counteroffensive culminated in 1945 with Japan's unconditional surrender and the complete collapse of both formal empire and regional hegemony.

Explaining Japanese Expansion

Explanations of Japanese expansion tend to emphasize either the international context or Japan's domestic situation. Scholars who favor the former approach stress the reactive but rational nature of Japan's search for national security during a period of rampant colonization and great-power competition. While not necessarily disputing the importance of Western imperialism, other scholars view Japanese militarism and state economic imperatives as having driven the nation's imperialist expansion. While these two interpretative themes have analogs in broadly general theories of imperialism, Japan's experience as the only Asian country to colonize other Asians is unique. Given the fact that the wars launched by Japan on the continent and in the Pacific hastened the destruction of both Japanese and Western colonialism, Japan's imperial expansion clearly possesses specific and considerable significance for the history of the twentieth century.

JAPANESE FIRMS ABROAD The increasing international presence of Japanese firms beginning in the 1980s has generated a great deal of interest. At the end of the 1980s, Japanese companies made more investments abroad (in factories, banks, Hollywood picture studios, property, and hotels) than companies from any other country. While the 1990s saw a lessening of this overseas expansion, Japanese firms have become important players in the economies of North America, Europe, and mainland Asia. Indeed, their distinctive overseas behavior is due to the broader forces operating in the cultural, economic, and political environment at home.

One important factor that explains the differences between Japanese overseas operations and those of other countries is that, compared with the United States and Europe, for example, Japan is a latecomer to overseas investment. As a result of its defeat in World War II, Japan forfeited most of its foreign investments in 1946. After 1946, Japanese international economic strategy was based primarily on trade—on the development of exports and industrial self-sufficiency in raw materials for the domestic economy. Consequently, the giant Japanese trading companies (*sogo shosha*) were at the vanguard of overseas activities. Trading firms, such as Mitsui and Mitsubishi, acted as marketing agents for Japanese industry (textiles and steel products) in countries in Asia, North America, and Western Europe. At the same time, these firms were also responsible for acquiring strategic suppliers of materials such as coking coal and iron ore for the major steel firms. To conduct such global trade each *sogo shosha* maintained a large worldwide network of overseas offices connected to its headquarters by a sophisticated telex and telecommunications network.

The Early Post–World War II Years

Until the late 1960s, the Japanese government's policy toward overseas operations by Japanese manufacturers was very restrictive in order to save scarce foreign exchange reserves. In addition, the relatively low domestic wage levels provided little stimulus for Japanese firms to look overseas for cheaper labor locations. As a result, Japanese manufacturing firms had a very low presence overseas throughout the 1960s. In the 1970s, however, trading houses became more in-

volved in securing strategic energy resources following the oil shocks of that decade. Moreover, as Japanese exports and wages rose, Japanese manufacturers also began to move overseas. This was either to avoid trade barriers to the rush of Japanese exports in Southeast Asia and the United States, or to take advantage of cheaper wages in neighboring South Korea and Taiwan. As Japanese trade and offshore manufacturing grew, so did the overseas activities of banking, warehousing firms, and other service companies (construction and transportation companies).

The Bubble Economy and Its Aftermath

In the 1980s, a number of developments in the Japanese economy combined to produce a dramatic takeoff in Japanese overseas production. The most important of these developments included the relaxation of Japanese government restrictions on overseas investments, the rapid increase in the value of the yen after 1985, the growing shortage (and increasing cost) of domestic labor, and a shortage of indigenous natural resources. The late 1980s also saw a spectacular rise of the Japanese stock market as well as the domestic property market, leading to sudden bloated values in corporate assets. This phenomenon was known as the bubble economy; it coincided with several years of strong balance-of-trade surpluses and very high rates of domestic savings. The net result was that Japan became the world's largest creditor and exporter of financial capital. Consequently, Japan's major banks, life insurance firms, and securities companies (stockbroking firms) also started rapidly expanding their overseas operations. Their intention was to expand their capacity to loan financial resources in the major financial markets of the world (New York and London) and invest in foreign bonds and property.

In the early 1990s, conditions dramatically altered as Japan's bubble economy burst, leading to stagnant growth at home. Since 1995, the number of overseas affiliate companies established by Japanese firms has declined. Manufacturing firms, however, have continued to search out lower-cost production locations and areas of market growth, such as Southeast Asia and China, in order to maintain their international competitiveness.

Japanese Firms in North America

During the 1990s Japanese firms were established in all parts of the world and most had a globalization strategy that connected their organizations in the three major regions. In North America as well as in the world, the United States has been consistently the

number-one country in terms of number of Japanese firms with a presence there. The growing presence of Japanese automobile firms in the United States has attracted widespread attention. The Honda Motor Company was the first Japanese automobile firm to begin producing automobiles in the United States (1982); it was followed by five other manufacturers. By the 1990s, these transplanted car assembly factories produced about 20 percent of the automobiles made in the United States. Japanese auto firms also operated in Canada (Toyota, Honda, and Suzuki), but Japan's major presence there has been in the timber and wood pulp sectors. Mexico has seen a number of electronics firms operate close to the U.S. border in special industrial zones (*maquiladoras*) aimed at exporting cheaper products and components into the lucrative U.S. market.

Japanese Firms in Europe

In Western Europe, Japanese firms have been attracted by the size of the European Union market as a whole, especially as this region moves toward fuller unity. Most investment has occurred in the United Kingdom where Japanese firms are concentrated in automobiles (Nissan and Toyota) and electronics (Sony's color television factory in South Wales), as well as chemical products. These plants not only ensure access to the United Kingdom market but also to the continental European market. General machinery firms have chosen to go to Germany, while France is host to electronics, chemical products, and food processing companies. In Spain, Japanese firms are involved in automobile assembly and parts manufacturing, while in Italy it is clothing and textile products, as well as general machinery. Since the dissolution of the Soviet Union in 1991, some Japanese firms have expanded into Eastern Europe, for instance in automobile assembly.

Japanese Firms in Southeast Asia

Starting in the late 1960s, Southeast Asian countries were targeted by electronics and machinery firms, and the relocation of complete production lines (video cameras, audio-visual products, and air conditioners) took place in large-scale factories aimed at worldwide as well as local markets. Around the mid-1980s, Southeast Asian countries began to be more relaxed about the operation of foreign companies in their countries; Malaysia and Thailand allowed Japanese automobile companies such as Toyota, Nissan, and Mitsubishi Motors to increase their production capacity. In the 1990s, China emerged as the most favorable investment location for Japanese firms. Although not large in value,

Japanese investment has also increased in Vietnam. Mention should also be made of the special role taken by Singapore and Hong Kong as centers for Japanese trade, banking, retailing, and service operations aimed at Southeast Asia and China, respectively.

Friction with Host Nations

In all these regions there have been two major areas of controversy arising from the way Japanese firms have conducted their business. The first concerns labor practices and the impact of so-called Japanese-style management, as well as distinctive Japanese production techniques, including lean production, just-in-time delivery of parts, and flexible manufacturing assembly lines. Most accounts have shown that these practices have not been transferred abroad without some local adaptation that reflects the sociocultural background of the host country. A second area relates to localization and the relationship between assembly plants and their components suppliers. Japanese firms at home have been accustomed to very particular kinds of business ties with their domestic suppliers and have often found it difficult to quickly increase local procurement of parts or components when overseas. The strategy of importing from existing suppliers has been under severe pressure from governments in host countries. One response has been to persuade their traditional suppliers to move overseas. This offshore transfer is raising concerns about a hollowing out of the domestic manufacturing industry. Nevertheless, most companies have maintained research and development facilities in Japan, together with the very highest technology-intensive production.

Future Directions

Despite an increasing convergence with Western corporations, Japanese firms as a group still differ in a number of significant ways from other multinationals in terms of their management style, strong links with the government, and sense of national mission. In the immediate future Asia is the preferred region for capital investment among Japanese companies. China looks particularly promising in the medium-term future, and Japanese firms expect positive changes in the business environment now that China has entered the World Trade Organization.

JAPANESE FOREIGN INVESTMENT

A major feature of the world economy since the 1960s has been the rapid expansion of foreign direct investment (FDI). Strong world economic performance, substantial realignment of the exchange rates of major currencies, and technological developments in transportation and communication services have all contributed to unprecedented growth in FDI, particularly since the mid-1980s. The United States, Japan, Germany, the United Kingdom, and other developed nations have been the main investing countries. Among these nations, the increase of Japanese FDI has been particularly high since the mid-1980s, though it has declined since the economic recession of the 1990s. With the notable exception of Japan, most of the leading investing countries are also major recipients of FDI.

The Development of Japan's FDI

The growth of Japan's role as a foreign investor has been extraordinary. With little involvement in the 1950s, Japan emerged with about 17 percent of the world's stock of foreign direct investment in the late 1980s. Total investment flows first began to gather momentum after 1965, rising from \$227 million in 1966 to a peak of \$3.49 billion by 1973. The investment boom slackened due to the oil crisis of 1973, but resumed again in 1978. After receding slightly in 1982, it rose steadily until 1985; between 1986 and 1989, it surged ahead at a rapid pace. By 1989, Japan was the single largest source of FDI, with outflows amounting to \$67 billion. This was in comparison with \$40 bil-

lion from the United States and \$35 billion from the United Kingdom.

Factors that contributed to the high investment rates in the 1980s included Japan's increasing trade surplus; the 1980 deregulation of exchange controls that paved the way for banks, financial securities companies, and institutional investors such as life insurance firms to invest abroad; and the 46 percent appreciation of the yen between 1985 and 1987. Japan's foreign investment growth has been negative in the 1990s as a result of the bursting of the bubble economy at the end of 1989 and the resulting pessimistic economic forecast.

Most of the Japanese FDI is concentrated in Southeast Asia, China, Western Europe, and the United States. In the 1960s, in order to secure a stable supply of raw materials for manufacturing, Japan invested in petroleum drilling in Indonesia, iron-ore mining in Malaysia, and copper mining in the Philippines. Beginning in 1970, Japanese FDI began to concentrate in the newly industrialized economies (NIEs) of Taiwan, South Korea, Hong Kong, and China, in manufacturing activities such as textiles and consumer electronics. Both internal factors in Japan and external factors in the Asian countries played a role in promoting Japanese FDI. An increase in the price of Japanese products, particularly labor-intensive products, resulting from rising wages and appreciation of the yen led Japanese producers to shift their production to the countries where production could be carried out at a lower cost. The abundance of quality low-wage labor, FDI promotion policies such as export processing zones, and preferential taxes attracted Japanese FDI to Asia.

FDI in Asia

In 1989, the share of Asia in overall Japanese FDI was 12.2 percent. Of that investment in Asia, the Asian NIEs, Southeast Asia, and China accounted for 98.6 percent of Japanese FDI in 1989. The largest recipients in Southeast Asia were Thailand, Malaysia, Indonesia, and Singapore in reported value of FDI. In 1989, Japan was the largest foreign investor in all the member countries of the Association of Southeast Asian Nations (ASEAN). Between 1990 and 1995 Malaysia, Indonesia, and Thailand continued to attract the most FDI in Southeast Asia, ranking third, fifth, and seventh respectively in the world based on cumulative FDI. Rising wages due to the shortage of labor and rising land prices in Japan provided additional incentive for overseas production. The distinguishing feature of Japanese firms in Asia in the early 2000s

is that joint ventures between indigenous and Japanese partners are more common than in North America and Europe.

FDI in the United States

The United States accounted for 48.2 percent of Japan's overall FDI in 1989, but in the 1990s, as a result of the fall in Japan's stock and land prices, FDIs were drastically reduced. The bulk of the Japanese investment in the United States is concentrated in manufacturing, particularly in electrical machinery and transport equipment. The Japanese automobile industry has made major investments in the United States and Canada; there are several major Japanese transplant assembly facilities, as well as some 270 automotive parts suppliers. Honda was the first automotive company to produce in the United States, arriving in 1982. By 1989, Nissan, Toyota, Mazda, and Mitsubishi had factories located in rural sites in the Midwest and South. The increasing threat of U.S. import barriers precipitated a massive onrush of Japanese manufacturing FDI in the period 1978 to 1984. Along with the desire to have a production presence in the United States to ensure market access, a number of Japanese firms, particularly in areas such as chemicals, optical goods, and electronics, acquired U.S. corporations to obtain a direct channel to coveted technology. The United States offers many attractions to foreign investors, including a large and growing market, few bureaucratic restrictions and regulations that impede corporate activity, an excellent social infrastructure, low energy costs, and an educated labor force. Most state and local governments have welcomed Japanese investment and have solicited Japanese firms.

FDI in Europe

By the end of the 1980s, Europe accounted for 21 percent of the Japanese FDI. Japanese firms have invested in Europe because of trade restrictive measures. The United Kingdom was the favored FDI destination, followed by the Netherlands, Luxembourg, Germany, and France. Switzerland and Spain also received Japanese FDI. Relatively lower wages, favorable public investment incentives, and an absence of strong local rivals in automobiles and electronics explain the attraction of Britain. France offered a central location and a large internal market. Germany offered a good industrial relations record, high labor skills, and centrality. Spain, which has a large reservoir of cheap labor, had a relatively large Japanese production presence because of its high import barrier. In Britain, the Japanese have selected peripheral regions such as Wales, Scotland, and northeast England

for locating firms. Machinery, electronics, and transport equipment dominate the FDI.

Historically, much of Japan's foreign investment has been induced by the need to avert potential market losses resulting from protectionist policies or by attempts to secure overseas raw materials. By setting up overseas plants, Japanese firms are able to retain much of their market share. Investments in low-wage countries in Asia and Latin America have helped Japan to retain the general export competitiveness of its products.

JAPAN INTERNATIONAL COOPERATION AGENCY (JICA) The Japan International Cooperation Agency (Kokusai Kyoryoku Jigyodan) is one of two Japanese governmental organizations responsible for official development assistance (ODA). The other organization was formerly the Overseas Economic Development Fund (OEDF), which merged with the Japan Export-Import Bank in October 1999 to form the new Japan Bank for International Cooperation.

JICA's roles have been to administer grant aid, to provide technical aid, and to oversee the Japan Overseas Cooperation Volunteers (JOCV, or Seinen Kaigai Kyoryokudan), the Japanese equivalent of the U.S. Peace Corps. While Japanese ODA has traditionally been loan-based in order to ensure efficient use of funds by the recipient country, by fiscal year 1995, grant aid and technical assistance were nearly equal to lending. Japan gives grant aid to the world's poorest countries, as well as for general humanitarian projects. Thus, both JICA and the JOCV are influential in least developed countries (LDCs).

JICA's technical assistance takes a variety of forms. In many cases, consultants advise governments or pub-

lic organizations in developing countries on engineering or other projects. JICA technical assistance also funds the feasibility studies that precede projects funded by either grant or loan aid.

Japan's ODA budget and policy priorities are set outside of JICA by the Ministry of Foreign Affairs, the Ministry of Finance, the Ministry of International Trade and Industry, and the Economic Planning Agency. The varying interests of these ministries have sometimes made for a disjointed approach that emphasizes foreign policy and commercial concerns to varying degrees.

In the late 1980s, the United States pressured Japan to untie its aid for fear that U.S. firms would be excluded from lucrative Japanese aid contracts in developing countries. The result was that most of JICA's grants were officially "untied," as were all Japanese ODA loans. In other words, non-Japanese as well as Japanese firms can bid to be contractors on most Japanese aid projects. In some cases, projects are LDC-untied, which means that LDC-based firms can compete with Japanese firms for contracts, but that developed country firms cannot. Most contracts are still won by Japanese firms, however, and there remains some dispute as to whether Japanese ODA is actually untied in practice.

JAPANESE LANGUAGE The Japanese language ranks sixth in number of speakers worldwide after Chinese, English, Russian, Hindi, and Spanish. Most Japanese speakers are located within Japan, although there are also immigrant communities in the Americas and other parts of the world where a small number of Japanese speakers can be found. As Japan is said to be a linguistically homogeneous nation, most of its approximately 127 million residents do speak Japanese. It is important to remember, however, that Japan is also home to linguistic minorities such as the Ainu, Okinawans, and permanent foreign residents.

Scholars debate the origins of the Japanese language, and arguments have been made for links to Altaic languages (such as Mongolian), Korean, Dravidian

languages (such as Tamil), Malayo-Polynesian languages, and Tibeto-Burmese. It seems probable that the Japanese language originated as a mix of languages from Central and Southeast Asia and had fully developed into a distinct language by the time of the Yayoi culture (300 BCE–300 CE).

While the Japanese use the Chinese system of writing, the Japanese language is not related to the Chinese language. The writing system was borrowed from Chinese during the fifth or sixth century, long after the development of spoken Japanese. The earliest known writings in Japanese date back to the eighth century.

Pronunciation

Japanese has five vowels (*a, i, u, e, o*), which are similar in pronunciation to the vowels of Spanish and Italian. Each vowel can also be elongated, doubling the duration of its pronunciation.

The sound system of Japanese is straightforward; there are few exceptions to established pronunciation rules, and each character in a word is pronounced. Unlike some languages, sounds are constant, and even long words can be sounded out easily. Sound units are composed of a consonant plus a vowel or a vowel alone. Only the consonant *n* can occur completely unattached to a vowel.

Japanese is a pitch-based language, unlike English, which is based on stress. Each syllable in a Japanese word is stressed equally, but the pitch of syllables rises and falls. Consequently, pronunciation of Japanese words is steady and even compared with English.

The Written Language

The literacy rate in Japan is officially reported at 99 percent of the population, which shows the emphasis placed on the written language. Japanese utilizes four distinct systems of writing: kanji, hiragana, katakana, and *romaji* (romanization). These writing systems are used together, and occasionally all four are found in a single sentence. More commonly, two or three of the systems will be used in one sentence; it is extremely uncommon to find a sentence incorporating only one writing system.

Kanji is the Japanese name for the simplified pictographs borrowed from Chinese, which represent whole words and are not phonetic. Although elements of a kanji may at times offer clues to its pronunciation, there are no foolproof ways of knowing a particular kanji's pronunciation without memorizing its reading. Altogether there are approximately 50,000 kanji, but

the Japanese government has limited to 1,945 the number necessary for daily use. Educated Japanese adults can usually recognize at least two to three thousand characters.

Kana, a term that covers both hiragana and katakana, originated from the simplification of kanji in the ninth and tenth centuries, and reflect phonological characteristics of Japanese. In other words, while kanji represent whole words, kana simply represent sounds that are combined to form words. There are forty-eight sound units that can be expressed in both hiragana and katakana. These units represent vowels, consonant-vowel combinations, and the single consonant *n*. Hiragana are a cursive style and are used mainly for verb and adjective endings and other grammatical markers. Katakana are much more angular. They are regularly used for onomatopoeias and loanwords from other languages, in a manner somewhat similar to italics in English.

The fourth writing system is the roman alphabet (*romaji*), which is used primarily for company names and in advertising. For example, the company name Sony is always written in *romaji*. There are two systems of romanization, Hepburn and Kunrei, both of which are used in Japan and overseas.

Japanese can be written either vertically or horizontally. Traditionally, Japanese was written vertically from right to left; the first page of a Japanese book would be considered the last page of a Western book. This format continues in newspapers and some books, but many magazines and books are printed horizontally from left to right.

Grammar

Japanese is a language with a flexible subject-object-verb word order. The only word order restriction is that the verb must come at the end of a sentence; otherwise, words can be randomly ordered because of the presence of conjugational suffixes and case particles that mark the function of words in a sentence.

Nouns in Japanese do not change for gender, case, or number. Verbs and adjectives in Japanese must be conjugated; verb conjugation is straightforward and there are few irregularities. There are no articles in Japanese.

An important aspect of the Japanese language is a complex system of honorific verbs. Because Japanese society is based on strict hierarchies, those hierarchies are expressed in the language. Humble verb forms are used when speakers refer to themselves, and exalted forms are used when addressing a person of higher

rank or status. Positions can be based on social status, rank, gender, age, or any combination thereof. In addition, male and female speech is differentiated, with female speech usually taking more polite forms and male speech often coming across as more direct.

The Future of Japanese

In addition to standard Japanese, based on the Tokyo dialect, there are a number of regional and local dialects of Japanese. Because mass media and compulsory education have familiarized people around the country with the standard dialect, most Japanese now speak both standard Japanese and their local dialect. The Kansai dialect, spoken in Kyoto and Osaka, is one of the most well-known dialects and is a source of pride for people from that region.

Another factor causing language change in Japan is the incorporation of a large number of loanwords. There are loanwords from a variety of languages, and since the end of World War II, the number of English loanwords has increased rapidly. Loanwords such as *apaato* (apartment), *hambaagaa* (hamburger), and *basukettobooru* (basketball) are written in katakana. The increasing number of new loanwords being used in Japanese has caused confusion among older Japanese, who worry that Japanese is losing its traditional identity.

JAPANESE SPIRIT. See **Yamato Damashii**.

JATIYA PARTY The Jatiya Party (JP, but Jatiya Dal in its original form) was founded in 1983 as a vehicle for the Bangladesh leader Hussain Muhammad Ershad (b. 1930). It attracted some members of the Bangladesh Nationalist Party (BNP), who were willing to work with Ershad to maintain their political influence, as well as a few from the Awami League

for the same reason. It is a centrist party, as is the BNP, and the economic and social programs of the two parties have little difference. The difference has been the BNP's dislike of the means Ershad used to gain power.

Ershad called a parliamentary election in 1986 in which the JP won a slight majority over the Awami League, thereby dispelling claims that the election was fixed. However, the Awami League withdrew from the parliament in 1988, forcing another election in which the JP won an overwhelming majority because no other significant party contested. Since the fall of Ershad in December 1990, the party has continued to contest, finishing third in the 1991 and June 1996 elections. Following the latter, Ershad led the party into a coalition with the Awami League, but the JP has now split. The faction led by Ershad has aligned with the BNP in the opposition; the other faction remains allied with the Awami League in the government.

Craig Baxter

JATRA *Jatra* ("journey") is a theatrical form of folk opera that relies heavily on dance and music, and is prevalent in the Bengal region of eastern India and present-day Bangladesh. This theater, which is devoted to the worship of Krishna, follows the tradition of classical ancient Indian theater, in which dialogue, dance, music, and gesture are all intermixed with the mythic content. But, whereas ancient drama had a larger secular content, *jatra* was narrowed down to the philosophy of personal and individual bhakti (devotion) to Krishna or Rama as god incarnate. Watching a *jatra* play is a way symbolically to perform a spiritual journey or a pilgrimage. The term also denotes the journeying (*jatri*) or wandering players.

The wave of bhakti was generated in Bengal and Orissa in the fifteenth century by, among others, the poet Chaitanya Mahaprabhu as a mass movement. In the earliest phase, the *jatra* plays were adaptations into local vernacular of such Sanskrit-tradition plays as *Vidagdha Madhavam*, written in northern India by authors including Roop Goswami. Goswami's play, adapted as *Radhakrishna Lila Kadamba*, continues to be a significant part of the *jatra* repertoire. Devotional verses of Bengali poets such as Lochan Das (1523–1589), Jagannath Vallabh, and Jadogunananda Das (around 1607) were adapted into *jatra*. Famous performance texts such as *Kaliya Daman*, *Nimai Sanyas*, and *Chaitanya Chandrodaya Kaumudi* (1712) were com-

posed. Many *jatra* plays were about the lives of the great saints of the bhakti movement.

In the nineteenth century, *jatra* had more music than dance or gestures. The dance portions are mainly on the dalliance of Krishna with the *gopis* (village women tending cows), a standard motif. But the main emotional intensity in this theater was generated by the musical excellence of the verses used as dialogue. *Jatra*, like most medieval theater from other parts of India, made musical dialogue the most prominent feature of the performance.

The musical ensemble for *jatra* consists of the drum (*dbol*), flute, and the harmonium—an Indian version of accordion—which was introduced during the nineteenth century. The singers were dressed in long white robes and the players in a conventional dress. The manager of the performers, the *adbikari*, generally is also the trainer and chief senior artist. In the twentieth century, however, the impact of the urban theater (an Indian version of Western naturalistic art) can be seen on *jatra*. There also was an attempt to use the *jatra* form to produce modern scripts with socialist and contemporary ideologies.

Like most traditional theatrical forms, *jatra* is becoming an endangered species in the twenty-first century, as audience tastes have changed and the social demand of the times is more for lighter entertainment than for deep devotion of the religious kind.

JAVA (2000 pop. 120 million). The island of Java is the political and economic center of Indonesia. In conjunction with the island of Madura, usually included in its statistics, Java has a territory of 132,608 square kilometers. Java is divided into three provinces: West, Central, and East Java, and also includes two special territories: Jakarta and Yogyakarta. A volcanic mountain chain runs the length of the island. Java has over sixty volcanoes, of which more than a dozen are still active. The most important mineral resources are oil, iron ore, and salt. The climate is hot and wet, with a dry and a wet season. Natural forests have been reduced to about 3 percent of the land area. Valuable wood species are teak, coconuts, and spice trees. Endangered animal species include the gibbon, the one-horned rhinoceros, and the leopard. The main ecological problem is soil erosion.

With a density of approximately 905 people per square kilometer, Java is among the world’s most densely populated areas. The ethnic composition of the population presents three main groups, each speaking their own language: Javanese, Sundanese, and

FITTING IN—IN JAVA

Tjotjog is a key element of slametan, a system of Javanese rituals practiced by rural villagers. In the excerpt below, anthropologist Clifford Geertz explains the concept.

At the base of this often quite involved system lies one of the most fundamental Javanese metaphysical concepts: *tjotjog*. To *tjotjog* means to fit, as a key does in a lock, as an efficacious medicine does a disease, as a solution does an arithmetic problem, as a man does the woman he married (if he doesn't, they get divorced). If your opinion agrees with mine, we *tjotjog*; if the meaning of my name fits my character (and if it brings me good luck), it is said to be *tjotjog*. Tasty food, comfortable surroundings, gratifying outcomes are all *tjotjog*. In the broadest and most abstract sense two separate items *tjotjog* when their coincidence forms an aesthetic pattern. It implies a contrapuntal view of the universe in which what is important is what natural relationship the separate elements—space, time, and human motivation—have to one another, how they must be arranged in order to strike a chord and avoid a dissonance.

As in harmony, the ultimately correct relations are fixed, determinate, and knowable, and so religion, like harmony, is ultimately a science, no matter how much of an art its actual practice may be. The petungan system provides a way of stating these relationships and thus of tuning one's own actions to them, of avoiding the kind of disharmony with the general order of nature which can only bring misfortune.

Madurese. Most of the people are Muslim but some small pockets of Hinduism still survive in East Java.

Java is one of the oldest foci of human habitation, with specimens of *Homo erectus* dating from 800,000 years ago having been discovered there. The first major principality arose around the beginning of the eighth century. Hinduism, Buddhism, and Islam consecutively penetrated into Java between the first century CE and the sixteenth century. The Majapahit dynasty flourished there from the end of the thirteenth century to the sixteenth century; at its height its influence reached to Siam and Annam. By the end of the eighteenth century the entire island was under Dutch control. Today, Indonesia's three biggest cities are on Java: Jakarta (the nation's capital), Surabaya, and Bandung.

Java is one of the most fertile tropical places on earth. About 70 percent of the workforce engages in agriculture. Crops grown for domestic use include rice, maize, and cassava. A quarter of Java's land area is used for *sawah* agriculture (growing rice in flooded paddy fields). Cash commodities include rubber, coffee, tea, tobacco, and peanuts.

JAVA SEA The Java Sea is 162,662 square nautical miles and is bounded by Sumatra to the west, Borneo to the north, and Java to the south. Comprising the southern extension of the Sunda Shelf of continental Southeast Asia, it is 20–60 m deep and is sheltered from waves over 1.5 m. Influenced by monsoons, its surface currents reverse seasonally, and its tides range from under 1.5 m to 3 m. Mangroves dominate the Borneo shores while limited coral reefs lie off Java's north coast.

The Java Sea is Indonesia's second largest and most important marine region. On its southern shore is the heavily populated island of Java with Indonesia's largest ports at Tanjungpriok and Surabaya. Petroleum is produced in the western Java Sea, near the southeast coast of Sumatra. Fishing is economically important, and seafood processing facilities are located at Tanjungpriok, Cirebon, Pekalongan, Semarang, Surabaya, and Banyuwangi on the north coast of Java and at Banjarmasin in South Kalimantan. It is among Indonesia's most polluted seas, and erosion is a major problem on its southern shores.

JAVA WAR The Java War lasted from 1825 to 1830, overlapping the Padri War (1821–1837) on neighboring Sumatra. The war cost 200,000 Javanese lives when Java's population was only around 3 million. As in the Padri movement, Islam helped unify opposition to Dutch rule in Java.

The Dutch policy of interfering in royal palace (*kraton*) affairs directly caused this uprising. Colonial authorities passed over Prince Diponegoro of Yogyakarta (1775–1835), eldest son of the previous sultan, recognizing instead the sultan's younger brother as his successor. Diponegoro sought to regain his rightful position, as revealed to him by the sea goddess Nyai Rara Kidul in a dream, and, more

tangibly, as promised to him by Sir Thomas Raffles (1781–1826), lieutenant-governor of Java during the British interregnum. This Javanese mystical notion was combined with the prince's *pesantren* (Islamic school) education when he promoted Islam as the religion of Java by challenging the colonial unbelievers.

There was another provocation as well. The Dutch tried to restrict *kraton* wealth and power by declaring that it could not lease its land and that rentals must be repaid. A Dutch-built road from Malang to Yogyakarta was partly constructed over a sacred burial ground (the road also expedited Dutch troop movements). Diponegoro led resistance to the Dutch, assisted by the *priyayi* (aristocracy) of Yogyakarta, through a campaign of guerrilla warfare. Diponegoro was hailed as the *ratu adil* (just king) by many for whom the prince represented their anticolonial hopes. The Dutch countermeasure was to establish a series of linked forts from which effective raids were made. In 1829, Diponegoro's two most trusted advisers, Kiyayi Maja and Sentot, surrendered—a blow to the rebellion. In 1830, Diponegoro agreed to negotiations to end the conflict but refused to renounce his claim to the Yogyakarta throne. The Dutch tricked Diponegoro by falsely promising him safe conduct for the negotiations, but actually arrested him and exiled him to Makasar. While many hoped for Diponegoro's return, the Java War was the last of the *priyayi*-led rebellions; the *priyayi* were increasingly coopted by Dutch colonial authorities as agents of governance and were seen by the people as collaborators. The Dutch, in their campaign to destroy the power of the various *kratons* of Java and of traditional authorities elsewhere in the Indies, weakened the Yogyakarta sultanate by stripping away vast land holdings. However, Yogyakarta's royal family retained titular leadership of its traditional territory, and the current sultan of Yogyakarta, Hamenkubuwono X, remains the formal head of the province of Yogyakarta under a unique arrangement.

JAVANESE Javanese is the language of the largest ethnic group of Indonesia with around 75 million speakers. It is mainly spoken in Central and East Java, as well as in northern coastal areas. Outside Java, many Javanese speakers are found in transmigration areas in Sumatra, Kalimantan, and Sulawesi. In Suriname (formerly Dutch Guiana, in South America) there is a Javanese immigrant community of some 60,000 descendants of indentured workers.

Javanese belongs to the Austronesian (Malayo-Polynesian) family. There is considerable dialectal variation, but the language of Central Java, more specifically the principalities of Surakarta and Yogyakarta, is commonly regarded as standard. A feature that Javanese shares with related languages such as Sundanese, Madurese, and Balinese is the possession of different speech levels or sets of vocabulary, the *ngoko-krama* phenomenon. The basic, informal level is *ngoko*, while *krama*—synonymous with politeness—is used when speaking to a social superior or a stranger. Three types of script are used for writing modern Javanese: Javanese, Perso-Arabic, and Roman script. Javanese script has evolved over more than 1,200 years and derives from an Indian script. Since World War II, however, Javanese script has rapidly given way to Roman script, which is currently the only script mastered by the majority of Javanese. Perso-Arabic script, with or without vowel diacritics, is associated with Islamic texts.

The charter of Sukabumi, dated 25 March 804 CE, marks the beginning of the Old Javanese language. The terms Old Javanese, Middle Javanese, and Modern Javanese do not reflect a neat historical succession. Old Javanese is used for all Javanese texts lacking Arabic loans or Muslim influence, whereas Middle Javanese denotes the language of Balinese *kidung* literature. In Bali, Old

Javanese dancers in traditional costume in Bandung, West Java. (LINDSAY HEBBERD/CORBIS)

Javanese remains a living tradition to the present day. The earliest documents in Modern Javanese are two manuscripts of Islamic teachings current on the north coast of Java in the sixteenth century. In the early twentieth century Indonesian nationalists decided that Malay was more suitable than Javanese for a national language, and declared it so under the name of *Bahasa Indonesia* (Indonesian language) in 1928. A process of mutual interpenetration of the two languages is still in progress.

JAYAVARMAN II (c. 770–834), founder of the unified Khmer state. Jayavarman II, a mysterious figure who left no inscriptions of his own, is credited with the foundation of a unified Khmer state in what is now Cambodia. Jayavarman II was often mentioned in the inscriptions of his successors, who regarded him as the founder of what became the powerful Angkorean kingdom. Scholars have established that when he was about twenty years old, Jayavarman came from Java and declared his independence from the Javanese kingdom. His early career combined military conquests and the formation of strategic alliances in which local powers transferred some of their influence to the newcomer.

The Sdok Kak Thom inscription, incised in the eleventh century, gives the details of what would later become Jayavarman's most enduring legacy. According to the inscription, in the year 802 CE, Jayavarman initiated a ritual whereby he became a "universal monarch." The ritual celebrated the cult of the *devaraja*, or "god king," which was associated with the Hindu divinity Siva. As Siva was a creator, keeper, and destroyer of worlds, the king assumed the role of an intermediary between the cosmic world and the world of human existence. Notions of a "universal monarch" and a "god king" endured to transcend the political culture of modern Cambodia.

JAYAVARMAN VII (1181–1220), king of Angkor. Jayavarman VII is recognized as the last great king of Angkor, the mighty kingdom that preceded modern Cambodia. A first cousin of Suryavarman II (d. 1150), who built the famed Angkor Wat, he assumed the throne at a time when the kingdom was in decline, having been invaded and overtaken in an attack by the Chams. It took four years of fighting for Jayavarman's army to drive the Chams out of Angkor. Unlike his Angkorean predecessors, who worshiped Hindu gods, Jayavarman VII was a Mahayana Buddhist. Jayavarman VII was the most prolific builder of Cambodia's Angkorean kings. He built roads that extended from the heart of his kingdom, and he built temples, hospitals, reservoirs, and rest houses. He built the walled city of Angkor Thom, with the Bayon at its center. He was also responsible for building Ta Prohm, Preah Khan, Ta Som, the Terrace of the Elephants, and Srah Srang. Much of the life, and death, of Jayavarman VII remains shrouded in mystery. It is possible that he is the leper king of Khmer oral tradition. Whatever the case, it is clear that regional power and influence of the Angkor kingdom declined after his reign.

JESUITS IN INDIA The Society of Jesus, founded in 1540 by Saint Ignatius of Loyola (1491–1556), is a Roman Catholic religious order known worldwide for its evangelical, charitable, and educational work as well as for its concern for social issues. Members (Jesuits) are bound by vows of poverty, chastity, and apostolic labors.

Saint Francis Xavier (1506–1552) was the first Jesuit to work in India; he represented the society in Goa

on the west coast of India from 1540, where he worked among the *paravas*, a fisher caste, and made many converts. After his death his body was enshrined in the cathedral in Goa, where he is venerated by people of all faiths.

Jesuits published India's first printed book in 1556. Thomas Stephens (1549–1619), an English Jesuit stationed in Goa, wrote a Konkani grammar, a manual of Christian instruction in Konkani and Marathi, and *Kristapurana* (Christian Purana, 1615), a Marathi poem in the style of the Puranas. Roberto de Nobili (1577–1656), another linguist, wrote a Tamil catechism.

The Society of Jesus enjoyed many successes in India, but these were often tempered by momentary trials and setbacks. In 1744 Pope Benedict XIV (1675–1758) issued a papal bull suppressing the rites used by Indian converts. In 1759 the prime minister of Portugal, Marquês de Pombal (1699–1782), expelled all Jesuits from Portugal and Portuguese territories (including Goa), and in 1773 Pope Clement XIV (1705–1774) abolished the Jesuit order (it was reconstituted in 1814 by Pope Pius VII). Jesuit missionaries struggled with social issues, often involving caste. At first their evangelization targeted the lower-caste Hindus, who were known as "rice Christians" because their mass conversions were seen as tainted by desire for material comforts (such as food), but subsequent efforts, which focused on social change through education, attracted high-caste converts. By 1858 they had founded colleges in Goa, Mumbai (Bombay), Calcutta, and Cranganore. At the beginning of the twenty-first century, Jesuit missions in India are engaged in educational and social programs, having established over twenty colleges, more than one hundred high schools, and several technical, labor relations, and management institutes in India.

JEYARETNAM, JOSHUA BENJAMIN (b. 1926), Singapore politician. Joshua Benjamin (J. B.) Jeyaretnam was born in Sri Lanka and was educated at University College London. He was called to the bar at Gray's Inn, London, and worked in the legal service in Singapore from 1952 to 1963, later engaging in legal practice there. He entered the political scene in Singapore when he revived the Workers' Party founded by David Marshall. In the 1972 election, Jeyaretnam advocated abolishing the Internal Security Act, which allows the government to detain anyone deemed to be a threat to internal security. In 1981, he became the first opposition member in the Singapore parliament since the withdrawal of Barisan Sosialis (Socialist Front) members in 1965. Lee Kuan Yew, then prime minister of Singapore, charged Jeyaretnam and his party with libel in a number of successful lawsuits. Consequently, both were burdened with a substantial debt. Jeyaretnam was returned to parliament by the constituents of Anson in the 1984 general election. In 1986 he was found guilty of making a false declaration concerning party accounts and fined S\$2,500. This led to his expulsion from parliament; he was disqualified from membership in parliament until November 1991. He was also found guilty of abuse of privilege and contempt in January 1987 and fined S\$13,000. Consequently, he was unable to participate in the August 1991 election.

Jeyaretnam contested in the 1997 general election and lost. He became one of the nominated members of parliament (NMP) because he polled one of the highest numbers of votes among the losing candidates. The prime minister and nine other ministers immediately sued him for statements he made at an election rally. The High Court's judgment on the suits by the prime minister, who was awarded S\$100,000 in damages, was delivered in September 1997. In addition, Jeyaretnam had debts totaling S\$547,508 in damages that he owed eight creditors who had sued him after they were defamed in an article in the Workers' Party publication. He lost his NMP nonconstituency seat in the parliament after a failed appeal of his bankruptcy in July 2001.

JHARKHAND (2001 pop. 26.9 million). Jharkhand is a new Indian state formed in 2000 from the

southern half of the former state of Bihar. The name Jharkhand (or Jhaarkhand, Jhaakhand) has however existed since ancient times and has encompassed parts of West Bengal, Chhattisgarh, and Orissa, as well as Bihar. This area has also been called Khokhra, Nagdesh, Dasranya, and Ranchi, after the town of the same name, which is the capital of the new state. Jharkhand is administratively divided into eighteen districts. The state's area is 79,714 square kilometers. The region is mainly a hilly, forest-clad plateau lying between the basins of the Ganges, Sone, and Mahanadi Rivers. Much of the plateau is around 700 meters in elevation, though in the west it reaches 1,200 meters. The *sal* tree forests yield timber and medicinal plants, and the state is important for its coal and iron ore mines. Rice, maize, potato, pulse, and oil-seed are the main crops cultivated.

The British had little contact with this rather remote region at first, but with the decline of Maratha power early in the nineteenth century the East India Company acquired suzerainty, and in 1858 its authority was transferred to the Crown. During the British period Jharkhand was known as the Chota Nagpur (or Chutia Nagpur) division of the Bengal presidency.

This heavily forested area was populated primarily by warlike tribes who often fought against the British. The main tribal groups include Kol, Santal, Oraon, Munda, and Bhumij. Some tribes of the Jharkhand region first organized themselves collectively in 1915 for economic purposes, in a movement known since 1938 as Adivasi Mahasabha, under the leadership of Jaipal Singh. From 1947 to 2000 Jharkhand was part of the state of Bihar. The Adivasi Mahasabha, renamed the Jharkhand Party, won many seats in the Bihar Assembly in the first general election of 1952, but requests for the separation of Jharkhand from Bihar had been received as early as 1953. However, in the years that followed, the Jharkhand Party slowly lost its Assembly seats, eventually ceasing to exist as a distinct party.

Yet the quest for separate statehood was revived in 1973 with the formation of the Jhaarkhand Mukti Morcha Party (JMM), which by 1985 held thirteen seats in the Bihar Legislative Assembly. Since then JMM and other organizations have continued to gain popular support, culminating in the creation of the new state of Jharkhand in 2000.

JHELUM RIVER The Jhelum (also Jhilmam or Bihat) River is the most westerly of the five rivers that traverse Punjab and flow into the Indus River in Pakistan. Ancient Greeks called the river Hydaspes. It arises in the Himalayas some 80 kilometers south of Srinagar, flows northwest through Srinagar and the Vale of Kashmir, and then west and south until it joins with the Chenab. The length is 725 kilometers. The river is famed for its nine old bridges. In Pakistani Punjab the Jhelum is the basis of an extensive irrigation and canal system. In 1901 the Jhelum canal colony was established, with the intention of irrigating 457,000 hectares, and it quickly brought prosperity to the settler-farmers.

JIANG JIESHI. See **Chiang Kai-shek**.

JIANG ZEMIN (b. 1926), President of China. Born into an intellectual family in Yangzhou, Jiangsu Province, Jiang Zemin joined the Chinese Communist Party (CCP) in 1946 and occupied various economics-related Communist government positions, going to Moscow for a year's study in 1955. He continued working during the Cultural Revolution (1966–1976). As a supporter of reform, however, he did even better after 1978, becoming mayor of Shanghai in 1985 and, in 1987, Shanghai's CCP first secretary. During the nationwide demonstrations of 1989, he was able to defuse those of Shanghai peacefully. He was chosen by Deng Xiaoping (1904–1997) as CCP general secretary in June 1989 and became chairman of the Central Military Commission in November 1989. In March 1993 he became China's president, thus holding the three most senior positions in the Chinese party, military, and state.

After 1989, Jiang consolidated his power better than most observers anticipated he would. He followed reform policies, doing his best to strengthen the CCP's power and trying hard to stamp out widespread corruption within it. He played an active diplomatic role by traveling abroad many times and worked hard for China's accession to the World Trade Organization. He also aroused ire for such abuses as active suppression of the quasi-religious movement Falun Gong from mid-1999.

JIANGSU (2000 est. pop. 74.4 million). Accounting for only 1.1 percent of China's territory, Jiangsu is the fifth most populous and the fifth most densely populated province, with a population of some 74.4 million in 2000. Located on the eastern seaboard of China, it is the most low-lying province in that nation. It borders Shandong in the north, Anhui in the west, Zhejiang in the south, and Shanghai in the southeast. Jiangsu straddles the lower course of the Changjiang (Yangzi River) and has relatively mild temperatures and abundant precipitation. Both in terms of regional cultures and environments, Jiangsu is often considered a transitional zone between north and south China. Nanjing is Jiangsu's capital and largest city.

Rapid economic growth and persistent uneven development distinguish Jiangsu from other provinces. Since the Tang dynasty (618–907 CE), it has been one of the most prosperous provinces in China. Its early economic development was due in large part to an efficient water-transportation system consisting of numerous rivers and the Grand Canal as well as to sophisticated technologies in agriculture, industry, and trade. The post-Mao Zedong (1893–1976) economic reforms in China have further accelerated the growth of Jiangsu, whose gross domestic product (GDP) grew at an average rate of 15.1 percent from 1990 to 1999, compared with a national rate of 10.0 percent during the same period. In 1999 the GDP in Jiangsu was second only to Guangdong Province.

Jiangsu's recent economic growth is in no small part due to foreign investment and efforts in rural industrialization. "Open" cities and zones, such as Suzhou, Wuxi, and Kunshan, were designated to attract foreign investment. Equally important, rural industrial enterprises—often referred to as township-village enterprises (TVEs)—that benefited from the leadership or management by local government officials have fueled the economic growth of Jiangsu. The prominence of TVEs in Sunan (southern Jiangsu), which borders Shanghai and Zhejiang and is part of the agriculturally and industrially prosperous Changjiang (Yangzi River) Delta, has popularized a "Sunan model" of development emulated in other parts of China.

But perhaps the best-known story about Jiangsu is the persistent disparity between a prosperous and resource-rich Sunan and an impoverished Subei (northern Jiangsu). The gap between them is as large as that between the richest province and the poorest province in China and has widened further since the economic reforms. Though a transitional Suzhong (middle Jiangsu) seems to have emerged recently, Jiangsu remains a classic example of the simultaneous processes of economic growth and increasing spatial inequality during China's socialist transition.

JIANGXI (2002 est. pop. 44.7 million). The southeastern China province of Jiangxi (Chiang-hsi,

LUSHAN—WORLD HERITAGE SITE

Mount Lushan in Jiangxi was designated a World Heritage Site in 1996 for its splendid landscape and important monuments to the Buddhist, Confucian, and Taoist faiths.

Kiangsi) covers an area of 166,600 square kilometers and borders on Hunan in the west, Hubei and Anhui in the north, Zhejiang and Fujian in the east, and Guangdong in the south. Hilly and mountainous areas account for three-fourths of the area, which is traversed by rivers that flow into Lake Poyang, China's largest freshwater lake, situated in a 20,000-square-kilometer lowland area in the north of the province. While the mountains in the province rise from 1,000 to 2,000 meters, the low area in the north rarely exceeds 50 meters above sea level. The climate is subtropical, with plenty of rain, averaging 1,500 millimeters annually. This makes the province perfect for agriculture. A total of 99 percent of the population are Han Chinese. The capital, Nanchang (1.5 million, 1995), is situated in the northern lowlands.

Jiangxi remained sparsely populated until the Tang dynasty (618–907 CE), when it was connected to the capital by the Grand Canal. During the Song dynasty (960–1279), Jiangxi became a center of political and cultural eminence and the resort of famous scholars, such as Zhu Xi (1130–1200). With the fall of the Song, the intellectual milieu declined, and in the following centuries the mountainous border regions became strongholds for antigovernment rebels. During the Qing dynasty (1644–1912), Jiangxi experienced peace and unprecedented wealth. This, however, was terminated with the Taiping Rebellion (1851–1864). In the early 1930s, Jiangxi became the battleground between the Communists and Nationalists, and from 1938 to 1945 the province was occupied by Japan.

Since 1949 economic development has grown steadily. Rice is by far the most important crop; most areas have two crops a year and some have three. Other major agricultural products are rapeseed, peanuts, and cotton, and, with a tea planting history going back to the eighth century, Jiangxi is one of the most important tea producers in China. Jiangxi also has a large production of pork, and timber and bamboo are exported to the rest of China. Industry is concentrated in the larger cities, and products include diesel en-

gines, trucks, tractors, and aircraft. In the northeast the famous imperial kilns of the Ming dynasty (1368–1644), which produce Jingdezhen porcelain, are still operating.

JIKEY *Jikey* is a form of Malaysian popular-music theater performed by Malay and Thai communities in the west coast border states of Kedah and Perlis. Its origins are unclear, but the genre may have developed from a form of Islamic chanting known as *dikir* or *zikir* and bears some resemblance to the Thai theatrical genre, *likay*. According to local folklore, *jikey* was introduced to the region by an Indian Muslim trader. This theory is supported by the presence of a turbaned Indian (Bengali) character, who appears at the beginning of each performance and dances, sings, and describes the plot to the audience.

Jikey is performed at night on a simple raised stage with minimal props and costume, by troupes ranging from twelve to sixteen performers, including musicians. The eclectic plots, which range from local legends and Thai folk tales to Middle Eastern tales derived from *bangsawan* theater, generally deal with the adventures of wandering royalty and frequently include ogres and clownish lower-class characters. Musical accompaniment is simple and might involve a small ensemble of *serunai* (double-reed oboe), a bossed gong, three *rebana* (frame drums), and a pair of *cerek* (wooden clappers). Other instruments may be used as available.

Like other theatrical genres of the region, *jikey* performances begin with consecration rituals (*buka panggung*), introductory musical numbers (*lagu-lagu permulaan*), and invocatory songs placating the local spirits (*bantu*). The main play introduced by the Ben-

gali character is always episodic. Each scene includes song, dance, and dialogue between the principal characters. The final scene, which begins with the performers lined up on stage to ask forgiveness of the audience for any infelicities in their performance, concludes with formal closing rituals (*tutup panggung*).

JILIN (1998 est. pop. 26 million). In many ways, Jilin Province represents a very good example of "new" China in transition. Jilin is located in northeast China and has a short border with Russia and a long border with North Korea. It is the central province of the old Manchuria, whence came the Manchu people who conquered the Chinese empire in the mid-seventeenth century and who nominally ruled China until 1911. The province's capital, Changchun (meaning eternal spring), was the capital of the Japanese puppet state of Manchuguo between 1933 and 1945.

There is something of a frontier atmosphere in this province of 187,000 square kilometers. Its population is 90 percent Han Chinese, even though before 1907 Han Chinese were not permitted to live in this outpost of empire. Thus, the vast majority of the current Chinese in Jilin are descended from settlers who moved there during the twentieth century. Much of the remaining population is Man (the original Manchurians). There is also a large Korean minority population. The people of Jilin lack the reserve of those in southern China. They are known for their openness, their hospitality, and their ability to drink copious amounts of *bai jiu* (white liquor), the spirit of choice in most of China. The climate is similar to that of the northern part of North America; that is, the winters are long and severe, with temperatures dipping to -25° and -30°C . Jilin has four quite distinct seasons.

Jilin is an agricultural province. It supplies one-sixth of China's grain needs. Corn and wheat are the mainstays, while the ever-present rice is also a staple. Jilin also has ample forest resources, and wood products are a significant export. The province is a major oil producer. Since the Japanese occupation, Jilin has always been a highly industrialized province, being a center of automobile and chemical production. And while there is still a very large state-owned sector, in recent years the provincial government has welcomed foreign private investment, specifically in the automobile industry.

JIN PING MEI *Jin ping mei* (Plum in a Golden Vase, The Golden Lotus) has been the most controversial Chinese novel ever since it was first published in the late Ming dynasty (1368–1644). Chronicling the rise and fall of a merchant, Ximen Qing, his wife, his five concubines, and assorted maids and prostitutes, the novel explores the corrosive effect of the "four vices" (drunkenness, lust, greed, and anger) on the social and moral fabric of society in vivid, intimate, and compelling detail. The intent and purpose of the novel's careful portrait of the pleasures, failings, and excesses of the denizens of a flourishing urban culture has elicited vastly different interpretations from changing generations of readers. The novel has been variously understood as a veiled attack on the abuses of historical elite and imperial figures, as a literary exposé of the corruption and decay of an entire age, as an exhortation toward the cultivation of Confucian sentiments such as filial piety, as a Buddhist-Taoist injunction toward renunciation of worldly desires, as a celebration of human instinct, as an alternately accurate or disparagingly misogynist representation of women, or as a literary masterpiece with few, if any, precedents in world literature.

Despite the sophistication of its narrative techniques and the punitive outcomes for excess, the novel's explicit representation of all manner of sexual practices elicited concern among paternalistic elite readers from its first appearance. At the end of the sixteenth century, a famous literary coterie, fearful that ordinary readers would be inclined to imitate rather than avoid the behavior represented in the novel, restricted circulation of the novel in manuscript form to their own circle. Upon subsequent publication under the pseudonym Lanling Xiaoxiao Sheng ("The Scoffing Gentleman of Lanling"), the novel was repeatedly proscribed in China and condemned as pornographic and, after being translated, in Europe as well. It nevertheless remained in print, albeit often in excised form.

In the wake of commercialization and the concomitant resurgence of interest in issues of gender and sexuality in the Chinese-speaking world in the 1980s, scholarly study of the novel intensified, as did interest among writers and filmmakers. Hong Kong filmmaker

Claire Law's *The Reincarnation of Golden Lotus* and Chinese dramatist Wei Minglun's *Pan Jinlian* reassessed the most reviled character of the novel, the murderously manipulative Pan Jinlian, in light of feminist sexual politics.

JINNAH, MOHAMMED ALI (1876–1948), Indian Muslim leader and Pakistan's first governor-general. Mohammed Ali Jinnah, a Muslim Indian politician, played the leading role in the formation of the nation of Pakistan. Born in Karachi, Jinnah initially pursued a business career in London but soon switched to studying law at Lincoln's Inn and eventually became a barrister in Mumbai (then Bombay). His

A huge portrait of Mohammad Ali Jinnah being hung for Pakistan Day on 23 March 1993. (REUTERS NEWMEDIA INC./CORBIS)

career in politics began when he helped Parsi Dadabhai Naoroji win a seat in the Indian legislature. He joined the Indian National Congress in 1906 and in 1913 became a member of the Muslim League, working to increase cooperation between Hindus and Muslims. Jinnah contributed significantly to drafting the Congress-League Lucknow Pact of 1916.

After World War I, the political climate in India changed when Mohandas K. Gandhi (1869–1948) joined the Congress. Jinnah viewed Gandhi's ideas about noncooperation with the British as dangerous, but, unable to prevent the Congress from heeding Gandhi's message, Jinnah left the Congress in 1919. Nevertheless, he continued his political involvement and was elected to the viceroy's legislative council in Calcutta and New Delhi as an independent Muslim member from Bombay. While in London attending the first Round Table Conference on Indian constitutional reforms, Jinnah, along with Sir Shah Nawaz Bhutto, attained separate provincial status for Sind, which became the only province of British India with a majority Muslim population in 1935.

Jinnah returned to India to become the permanent president of the Muslim League. Empowered by its victories, the Congress blocked League members from positions in provincial cabinets in 1937. The situation led Jinnah to garner the support of Indian Muslims to achieve the status of Quaid-i-Azam (Great Leader). Three years later at the League's session in Lahore, Jinnah proposed a resolution creating a separate Muslim state, since he believed that Muslims could no longer achieve equality while remaining an ethnic minority.

From then on, Jinnah's efforts were focused on making the Lahore Resolution a reality. On 14 August 1947, Pakistan was founded following extensive and intensive negotiations with Britain, and Jinnah became its first governor-general. The next year, however, he succumbed to lung cancer and was unable to realize further his vision for Pakistan.

JIT, KRISHEN (b. 1939). Malaysian theater director. The preeminent director in modern Malaysian

theater, Krishen Jit has made seminal contributions to both Malay and English-language theater in a career that spans more than three decades. Educated in the University of Malaya and a Fulbright scholar at the University of California, Berkeley, Jit began his theater career with the Malaysian Theatre Arts Group in the 1960s and was the first Malaysian actor to take a lead role in Shakespeare's *Julius Caesar*, in what was then a British- and expatriate-dominated theater scene. Deeply affected by nationalist concerns following the country's 13 May 1969 race riots between Malays and ethnic Chinese, Jit broke with English-language theater. He directed exclusively for modern Malay theater until 1982. He cowrote an important nationalist manifesto for Malaysian theater for the National Cultural Congress in 1970, and was the leading theater critic until the mid-1990s.

In the 1970s, Jit eschewed naturalistic conventions and acting, and delved into experimental modes, physical theater, and contemporary reworkings of indigenous performance traditions. The performance of *Tok Perak*, a multimedia theater event, was a milestone in Malay theater in this period. Jit cofounded the Five Arts theater company, one of Malaysia's oldest professional theater and arts groups, and moved back into English-language theater. He has been involved with a more eclectic array of directorial styles within Kuala Lumpur's cosmopolitan and less nationalistic theater scene. His productions have been performed in theater festivals in Singapore, Tokyo, Cairo, and Berlin. He has also made pioneering contributions in theater education as the founding theater department chairman of the National Arts Academy as well as cofounder of the Flying Circus theater workshop in Singapore.

JIUZHAIYOU The mountains, rivers, and waterfalls of Jiuzhaigou, a scenic nature reserve, make it one of the most beautiful areas in the world and a major sightseeing attraction in southwestern China. It is located in the northern part of Sichuan Province, about 400 kilometers north of Chengdu, the capital of Sichuan Province.

The word "Jiuzhaigou" has an interesting meaning. In Chinese, "jiu," "zhai," and "gou" mean "nine,"

"tribe," and "gutter," respectively. Because nine Tibetan tribes live there, people began to call the area Jiuzhaigou. Because Jiuzhaigou is located in the Min Shan Mountains, it lies 2,000 meters above sea level. More than one hundred rivers, waterfalls, and lakes, covering 650 square kilometers, are found in Jiuzhaigou. About 42 percent of Jiuzhaigou is forest land. In addition, a number of endangered animals, including the panda, live in Jiuzhaigou.

Because of its natural beauty, Jiuzhaigou has been called "the fairy-tale world" of China and has often been a film location for Chinese media. About 60,000 hectares of Jiuzhaigou were designated as a natural protective area in 1978 and were registered as a UNESCO Natural World Heritage Site in 1992. Because the number of people visiting Jiuzhaigou from all over the world has increased, in July 2001 the Chinese government began limiting visitors to twelve thousand a day.

JODHPUR (2001 est. pop. 846,400). Founded in 1459 by Rao Jodha, ruler of the Rathor clan of Rajputs, Jodhpur the city was the capital of the state of Marwar ("region of death") at the edge of the Thar Desert in northwestern India until 1949, when it became part of Rajasthan state. Jodhpur the state was founded about 1212; after 1561 it came under the Mughals, then the Marathas (a Hindu warrior caste) at the end of the eighteenth century, and in 1818 the British. Parts of the city are surrounded by an eighteenth-century wall. The massive hilltop fortress of Mehrangarh contains a palace and museum with a notable gem collection; it also offers a splendid view of Umaid Bhawan Palace, built of golden sandstone.

A road and rail junction, Jodhpur is an agricultural trade center and is famous for glass bangles, cutlery, dyed cloth, ivory goods, lacquers, leather goods, marble stonework, and carpet weaving. Called the blue city for the color wash of its old townhouses, it is the site of a university, the state high court, an air force college, and the University of Jodhpur medical college. Part of the 1994 film *Rudyard Kipling's Jungle Book* was shot here, and the riding britches called "jodhpurs" took their name from this city.

JOHOR (2000 est. pop. of state 2.6 million; 2000 est. pop. of capital city 1 million). Johor (formerly known as Johore), a state in Malaysia, lies in the southern part of the Malay Peninsula, bordered by Indonesia on the southwest, Singapore on the south, and the Malaysian state of Melaka (formerly Malacca) on the west. Its coastline includes the Strait of Malacca and the South China Sea, and the narrow Johore Strait separates it from Singapore. With a land area of 18,986 square kilometers, Johor is the fifth-largest state of the Federation of Malaysia. Johor's capital city, Johor Baharu, is located in the southeast of the state.

The sultanate of Johore was founded by the sultan Mahmud Shah (d. 1528), once the sultan of Malacca, and his son Ala'ud'din (d. c. 1564), after the Malaccan sultanate fell to the Portuguese in 1511. The area remained largely undeveloped until the nineteenth century, due to the jungle and swamp that isolated it from the rest of the Malay Peninsula. In 1819, the British leased the territory of present-day Singapore from the sultan of Johore and thereby recognized the sultanate's independence. A later sultan, Abu Bakar (1843?–1895), succeeded in keeping Johore free of British rule.

In the early twentieth century, Johore received an important boost when large rubber, coconut-palm (for producing copra), and oil-palm plantations were established and tin and bauxite were discovered in the state. In 1914, it became a British protectorate, and in 1948 it joined the Federation of Malaya. Since 1970, Johor has been one of the fastest-growing states in Malaysia; it relies on agriculture, manufacturing, tourism, and mining, and it benefits from its proximity to Singapore.

JOMON PERIOD The Jomon is the period in Japanese prehistory between the Paleolithic and the Yayoi. Recent radiocarbon dates place the beginning of the Jomon period as early as 14,500 BCE; the period ends in the fourth century BCE except in Hokkaido, where the Epi-Jomon continued until the middle of the first millennium CE. "Jomon" in Japanese means "cord marked," and although not all Jomon pottery has this type of decoration, the beginning of the Jomon period is usually defined as coinciding with the appearance of ceramics in the islands of Japan. The economy of the Jomon period was primarily hunting, gathering, and fishing, and thus the presence of pottery but the absence of agriculture makes it difficult to fit the Jomon into the evolutionary schemes commonly used in Europe and North America. Similar foraging cultures with pottery are, however, known from mainland Northeast Asia, where they are sometimes termed Forest Neolithic.

Jomon Subphases and Variations

The Jomon is usually divided into six subphases termed Incipient, Initial, Early, Middle, Late, and Final (with a seventh, the Epi-Jomon, being found only in Hokkaido). Considering the very long duration of the Jomon period and the ecological diversity of the Japanese archipelago, it is not surprising that there is

**JAPAN—HISTORICAL PERIODS**

great cultural variation within the Jomon tradition. Rather than a single Jomon culture, it is more appropriate to speak of multiple Jomon cultures. These cultures were found as far north as Hokkaido but do not seem to have spread into Sakhalin until the Epi-Jomon phase. The Early Shellmound culture of the central Ryukyus probably originated in the Jomon tradition of Kyushu, but it is the most divergent of all Jomon cultures. The Sakishima islands of the southern Ryukyus were occupied by quite different cultures that appear to have their roots somewhere in Southeast Asia. The highest population densities in the Jomon period were found in central and eastern Honshu; western Japan was, in contrast, more sparsely populated. This difference is usually explained by the lower productivity of the broadleaf evergreen forests of western Japan.

Calibrated radiocarbon dates place the earliest pottery in Japan at about 14,500 BCE. Those dates make Jomon pottery the oldest in the world, but similar final Pleistocene dates have been reported from China and the Russian Far East, and it is not yet clear if Jomon ceramics developed in isolation or as part of a wider East Asian ceramic technology. Jomon pottery is not only very old but was produced in large quantities, especially in the latter half of the period. A deep cooking pot is the most common form; other vessels, such as shallow bowls and spouted "teapots," are much rarer.

Life in the Jomon Period

The diet of the Jomon peoples included a broad range of plant, animal, and marine foods. Remains of salmon bones from the Maeda Kochi site in Tokyo show that this fish was exploited from as early as the Incipient phase (14,500–8000 BCE). Shell middens are known from the Initial phase (8000–5000), and more than three thousand Jomon shell middens have been identified. These middens have produced a variety of shellfish as well as the remains of sea mammals and inshore and offshore fish. Deer and wild boar were the main terrestrial animal species exploited.

Hunting was conducted using bows and arrows as well as pit traps. The domesticated dog is present from the Initial phase and was probably also used in hunting. Nuts, roots, and berries are thought to have been the main plant foods exploited by the Jomon peoples. There is also increasing evidence that a number of plants were cultivated. These plants include hemp, *Perilla* (Japanese *shiso* and *egoma*), burdock, bottle gourd, barnyard millet (*Echinochloa utilis*), azuki and mung beans (*Vigna angularis* and *V. radiatus*), and the lacquer tree (*Rhus vernicifera*). Rice, barley, broom-corn, and foxtail millet also appear to have been cultivated by the end of the Jomon period.

The semisubterranean pit house seems to have been the basic dwelling of the Jomon period, but ethnographic parallels suggest these buildings would have only been used in the winter months. A raised-floor structure is also commonly found at Jomon sites; these are usually interpreted as storehouses. Most Jomon sites are small clusters of a few pit buildings but many very large sites are also known, especially from the Early and Middle phases. Sannai Maruyama in Aomori Prefecture, the largest Jomon site discovered so far, has produced over six hundred pit buildings, but it is not clear how many of these were occupied simultaneously.

A great variety of ritual artifacts are known from the Jomon period. These artifacts include clay figurines and masks, phallic stone rods, and highly ornate lacquer and ceramic vessels. Stone and wooden circles are also known. The two stone circles at Oyu in Akita Prefecture have diameters of 45 and 40 meters. Jomon burials are mostly simple inhumations with few grave goods. The skeletons excavated from these burials are of a so-called "Paleo-Mongoloid" type that was broadly distributed across East Asia. The strong resemblance between Jomon and Ainu skeletal morphology suggests that the latter are descended from an earlier Jomon population in northern Japan. In cultural terms, however, Ainu society as known ethnohistorically appears to have been very different from its Jomon predecessor.

The Jomon period saw long-distance exchange in obsidian, jade, amber, asphalt, pottery, and probably also in shellfish meat. Most of these exchange networks were within the Japanese archipelago, but Jomon Japan was by no means isolated from the Asian mainland. The Siberian blade-arrowhead culture reached Hokkaido in the early part of the Jomon. Other influences arrived from the Korean Peninsula and across the Japan Sea; there was probably small-scale but steady gene-flow from the continent through the Jomon period. The discovery of over a hundred dugout canoes from Jomon sites suggests that these vessels were the main method of water transportation. That the Jomon people were not confined to rivers and coasts, however, is shown by several finds, including Early Jomon remains from Hachijo Island, some 200 kilometers from Honshu.

The Jomon is perhaps the most materially affluent hunter-gatherer culture known through archaeology. It is presently unclear, however, whether that material affluence was matched by the type of complex social organization known ethnographically from the northwest coast of North America and elsewhere.

JONES, WILLIAM (1746–1794), British orientalist. William Jones was born in London but later settled in Calcutta, India. The son of a prominent mathematician, he was educated at Harrow College and Oxford. As a young man he became highly fluent in French and Persian, and he translated a biography of the Persian emperor Nadir Shah into French. His grammar of Persian (1771) was long the standard work in the field. He is said to have known thirteen languages thoroughly and twenty-eight others fairly well.

Jones came to India as a barrister, becoming a judge in the Supreme Court of Bengal in 1783. In 1784, following similar developments in Europe, he founded the Royal Asiatic Society of Bengal, the oldest scholarly society on the subcontinent. He collected rare Oriental manuscripts and befriended Indian scholars. He was one of the first to demonstrate the genetic connection between Latin, Greek, and Sanskrit, a language of which he was a devoted student. He was also the first to show the origin of the Brahmi script in some early Semitic alphabets and developed the first scientific Roman orthography for Indian languages. Several of his volumes of Asiatic researches were translated into French and German. He also completed nine large volumes of a digest of Hindu and Islamic law before his early death in Calcutta. Jones was knighted for his services to scholarship and the judicature.

JUCHE *Juche* (or *chuch'e*), the national Communist ideology of North Korea, is used to justify the personality cult of Kim Il Sung (1912–1994) and his son Kim Jong Il (b. 1942). It is the official state ideology of North Korea, as prescribed in the charter of the North Korean Workers' Party (NKWP). *Juche* (literally "subject") means thinking and acting to master the world. It is an anthropocentric ideology, based on the notion of the superiority of willpower and ideology over environmental conditions. While it is based on Marxism-Leninism, it is somewhat contradictory to Marxist analysis of the social conditioning of humankind. *Juche* and its twin notion of *chajusong* (self-determination) do not mean individualism, but a collective movement under the firm guidance of the NKWP and the leader (*suryong*).

History

Kim Il Sung first used the term *juche* in his speech "Eradicating Dogmatism and Formalism by Consolidating Juche," in December 1955. However, he later claimed to have originally developed *juche* in the 1930s, during his alleged struggle against the

A statue of North Korean leader Kim Il Sung in Pyongyang, North Korea, in 1975. Showing loyalty to Kim was one of the elements of the collectivist *juche* ideology. (MIROSLAV ZAJIC/CORBIS)

Japanese occupation. As *juche* developed, it became an ideological and economic system underlying practically all of Kim Il Sung's and Kim Jong Il's thought. Much of this philosophy can be traced back to Stalinist and Maoist ideology, but during the ideological struggle between the Soviet Union and China in the 1960s *juche* became North Korea's "own style of socialism" (*urisik saboejuui*).

When Kim Il Sung and the NKWP took power in 1946, they introduced a system of Soviet-style Communism with the help of Russian advisers. This system included agrarian reform; nationalization of industry, banks, transportation, and communications; and modernization of North Korean society (for example, introduction of a law on equality of the sexes). After the Korean War (1950–1953), the collectivization of farming, commerce, and services completed the transition to a Soviet-style economy.

However, three problems led to the subsequent development of *juche* ideology. First, after the death of

Josef Stalin (1879–1953), the personality cult in Communist countries was increasingly criticized, and a new basis for government was needed. Second, Kim Il Sung wanted to purge various opposing factions in the NKWP. Third, the rising differences between China and the Soviet Union, the two main supporters of North Korea, had to be addressed. In this situation, Kim Il Sung proposed *juche* as an ideological system in 1955. In 1956, he extended *juche* to the economic sphere, where it meant the development of a self-reliant economy. In 1962, *juche* was interpreted as the guiding thought for military defense, and in 1966 as the principle of political independence.

These extensions reflect the policy of equidistance between the Soviet Union and China. In 1970, in the fifth NKWP meeting, *juche* was introduced as the party's guiding principle, together with Marxism-Leninism, and in 1972 it was described as the leading guideline in the new Communist constitution. Throughout the 1970s and 1980s, *juche* experienced numerous variations; in the 1990s, it took the form of a careful ideological and economic opening process, in response to the economic problems experienced by North Korea in the wake of the collapse of the Soviet Union.

Ideology

The ideology of *juche* is based on three axioms: economic autarky (self-sufficiency), military defense, and political independence. While reflecting the political position of North Korea between the Soviet Union and China, it also harkens back to nineteenth-century xenophobia and isolationism, the humiliation of Japanese occupation, and the threat posed by South Korea since the division. Contrary to an individualistic interpretation of the subject and the idea of self-reliance, *juche* stresses the monolithic development of the collective and the principle of the supreme leader (*suryongron*).

The ideas of suffering and revolutionary spirit that evolved from the guerrilla war against Japan in Manchuria in the 1930s are prevailing in *juche*. Often, military metaphors are used—for example, in the three forms of economic-plan fulfillment through "speedy attack," "shock attack," and "exterminatory attack."

Mass movements along the lines of Mao's Great Leap Forward and Cultural Revolution are important means of ideological mobilization. For Kim Jong Il, the movement of the three revolutions—the economic, technical, and cultural changes necessary for the development of North Korea—became crucial in the power transition after his father's death in 1994. Kim Jong Il also developed the Red Flag Doctrine,

based on a song allegedly sung by Kim Il Sung during the fight against the Japanese, to rally the masses to the defense of the supreme leader. After his death, Kim Il Sung was practically deified; the succession scheme is comparable to dynastic succession in pre-modern Korea.

Juche ideology is implanted in children from their early school days, but adults also have to participate in weekly sessions to learn *juche*. While *juche* is a national Communist ideology, from the beginning it was also promoted as the best Communist system the world over. Worldwide, *juche* is promoted by the Chotongpyung Liaison Committee, headquartered in Paris. Proselytizing among the Korean community in Japan is especially strong.

Economics

As an economic system, *juche* is closely related to Soviet-style central planning. Economic decisions are formulated by a State Planning Commission under the political leadership of the NKWP's Central Committee; the market role is extremely limited. Plans are formulated in a reiterative process between plants and cooperatives, local planning commissions, ministries, and the State Planning Commission, implemented by the dual administrative and party structure, and controlled by the North Korean Central Bank. Spending is highly centralized, with 85 percent of the budget on the central level and 15 percent on the local level. Until the collapse of the Soviet Union, production focused on heavy industry and military and prestige goods (for example, the ubiquitous monuments for Kim Il Sung). Savings were raised mainly by socialist accumulation (forced domestic savings). Borrowing from Western countries and access to their technology in the early 1970s came to an abrupt halt with North Korea's default on its foreign debt in 1975.

Similar to Mao's strategy in China, mass movements should lead to leaps in economic development. In 1958, Kim Il Sung propagated the Flying Horse Movement (*chollima wundong*), for the systematic mobilization of labor for the development of heavy industry. In 1960, he announced the *ch'ongsan-ri* method for ideologically motivated increases in productivity, named after "on-the-spot" guidance in a collective farm in South P'yongan province. In 1961, the *taean* work system, a form of economic management by the masses under the collective guidance of the party committee, was introduced.

Results and Recent Developments

As an economic system, *juche* was disastrous. Forced industrialization, maintainable only through massive

Soviet and Chinese aid, had by the late 1960s already resulted in declining growth rates. (Reliable statistical data have not been available since 1965.) After the collapse of the Soviet Union, famine and malnourishment became chronic despite international aid. Central planning declined due to the absence of resources, and illegal private markets flourished. After 1991, North Korea began a slow ideological change. While *juche* is still proclaimed as a superior ideology, an opening process for international and South Korean capital began. China's method of introducing economic reforms without relinquishing political power is being carefully studied. Today, North Korea resembles more and more a military dictatorship, and the role of *juche* as an effective ideological tool to mobilize the masses has practically disappeared.

JUDAISM—CHINA Chinese of the Jewish faith existed in China from the period of the first millennium. Jews of Kaifeng and Jewish sojourners in Shanghai and Harbin were practically invisible to the people of China. The former assimilated themselves into the Han population; the sojourners were isolated from most Chinese and departed after World War II. The memories of these communities are sharp among their descendants and among many scholars, however.

These scholars tend to agree that cloth traders and dyers using the Judeo-Persian written language migrated to Kaifeng at the end of the tenth century. They had arrived earlier in China overland along the Silk Road from Central and South Asia and by sea, possibly with Muslim traders. They converged on Kaifeng, the capital of the Song dynasty (960–1279), because it

was the most important commercial and intellectual center in the country.

Although they built their first synagogue in 1163 and possessed sacred texts, including several Torah scrolls, their isolation from world Jewry, their efforts to conform to Chinese culture and religious practice, and the openness of the Chinese educational and bureaucratic systems to persons of talent led to their absorption. Information about their lives and practices comes from their descendants, but mainly from the writings of seventeenth-century Christian missionaries and Arab, Chinese, and Jewish travelers and inscriptions on stone steles. The Kaifeng Jews probably never accounted for more than two thousand people at any one time.

Beginning in the 1840s, an even smaller community of Arabic-speaking Baghdad Jews arrived in Shanghai and Hong Kong from India in the wake of the British control of Hong Kong and the grant of extraterritorial rights in the five major cities, including Shanghai. Never more than about 700 in number, these Jews enjoyed great influence through trade and real estate holdings. The Sassoon and Kadoorie families and their employees led the Jewish community by offering jobs to coreligionists and supporting the synagogue and educational institutions. With the exception of Silas Aaron Hardoon, an active participant in Chinese culture and politics, the Baghdadis considered themselves temporary visitors, and they departed after World War II.

The last and largest group of Jews, twenty thousand refugees, arrived in Shanghai, where no visas were required, between 1938 and 1942; they included Russians escaping from Japanese-occupied Harbin and Germans, Austrians, and others escaping Nazi terror. After World War II, most of these sojourners departed for Israel and the United States. Today, Jews still live in Hong Kong, and because of trade and diplomatic missions enough Jews reside in Shanghai, Beijing, and Hong Kong for the observance of major Jewish holidays.

JUDAISM—SOUTH ASIA Judaism, a monotheistic religion with a belief in a transcendent creator of the world, is essentially different from the predominantly polytheistic, iconocentric religions of South Asia. Nevertheless, Judaism and Hinduism share points of similarity. Both possess an orthodox system of codification, embodied in the rabbinical traditions of Judaism and in the Brahmanical traditions of Hinduism. Judaism is also rooted in nonorthodox traditions, as exemplified by Hasidic and cabalistic practices, while Buddhism and Hinduism have developed tantric and devotional traditions.

Judaism was never a significant religious force in South Asia, although throughout the centuries Jews had limited contact with members of local religions. Ancient South Asian Jewish communities have been found only in India, although it is possible that Jews lived in Sri Lanka at some stage. From the nineteenth century on Jewish communities have functioned in Burma (now Myanmar), Singapore, Malaya, Hong Kong and other parts of China, Thailand, and elsewhere. Established by Jews of Iraqi origin, these communities were frequented in the second half of the twentieth century by Jews who found a temporary haven there after the Holocaust as well as by occasional Jewish and Israeli businesspeople, some of whom were transient and some of whom eventually stayed.

Historical Ties between Israel and South Asia

Linguistic evidence confirms the possibility of early commercial connections between Israel and South Asia in that the ships of King Solomon (c. tenth century BCE) transported cargo such as *kofim* (apes), *tukim* (peacocks), and *almag* (sandalwood or *valgum*), of Indian origin. Travelers' tales in the Talmud mention trade with India (*Hoddu*) and include specific Indian commodities, such as Indian ginger and iron, but they make no reference to Indian Jews. In the Book of Esther, the kingdom of King Ahasuerus (c. mid-fourth century BCE) stretched from *Hoddu*, generally accepted to be India, to *Kush*, generally accepted to be Nubia or Ethiopia.

From the ninth century CE Jewish merchants known as Radanites traded from the Middle East to South Asia and back. Documents discovered in the Cairo Genizah describe the trade in spices, pharmaceuticals, textiles, metals, gold, silver, and silks from the eleventh to the thirteenth centuries between

Arabic-speaking Jews and Hindu partners. However, the evidence does not indicate that Judaism was disseminated.

In the seventeenth century Jewish merchant centers were established in Madras, Calcutta, and other places. In addition an independent Jewish traveler, Hazrat Saeed Sarmad (d. 1659), carried on trade between Armenia, Persia, and India and practiced Judaism until he renounced a materialistic life to become an Indian saint. Sarmad was executed as a heretic by the Mughal emperor of India, Aurangzeb (1762–1839).

During the nineteenth century Jewish emissaries traveled to Asia from Palestine and other Jewish centers to make contact with the Jews in far-flung places, often in the belief that the scattered Jews were members of the legendary ten lost tribes. Several emissaries stayed in India for extensive periods and were influential in bringing the practices of Asian Jewish communities in line with those of other Jews. In the twentieth century some of the visitors to Asia were Zionist emissaries, who wanted to encourage Jews all over the world to emigrate to Israel.

Jewish Communities in India

Three Indian Jewish groups, the Cochin Jews, the Bene Israel, and the Baghdadis, practice Judaism as a religion. All three groups adhere to the monotheistic nature of Judaism and observe the major festivals and commandments. The Judaism practiced in India developed several special Indian traits, however, such as eating Indian delicacies on particular festivals or the observance of specific wedding or burial customs, which reflect the influence of local customs. At times religious practices and beliefs were influenced by local Hindu, Muslim, or Christian behaviors.

The Bene Israel According to the Bene Israel tradition, the ancestors of their community were members of the lost tribes of Israel who set sail from the Kingdom of Israel to escape persecution by enemy conquerors, possibly in the year 175 BCE. Their ship capsized off the coast of Konkan near Goa in India. The survivors lost all their possessions, including their holy books. Welcomed by the local Hindus, the Jews took up the occupation of pressing vegetable oil. They were called *Shanwar telis* ("Saturday oil people") because they refrained from work on Saturday in accordance with the dictates of the Jewish religion. They remembered the Jewish prayer "Hear! O Israel" declaring monotheism; they observed some of the Jewish holidays and fasts though not all; and they

circumcised their sons as commanded by the Jewish religion. Unique customs adapted from South Asian practices characterized their Judaism, including the prewedding *mehendi* (henna body-painting) ceremony, the rites of the prophet Elijah (c. ninth century BCE), and the festival of Shila San (Festival of Stale Things) on the day after Yom Kippur (Day of Atonement), when the souls of the ancestors departed and alms were given to the poor.

From the eighteenth century on, the Bene Israel began a lengthy process of bringing their practices in line with other Jewish communities in the world. This process was aided by their contact with the British in India, a few of whom were Jewish, the resulting move to Mumbai and other cities, and access to the English language and higher education. The ultimate outcome of their identification with world Jewry was the gradual emigration of most members of the Bene Israel community to Israel during the last half of the twentieth century. During the 1960s their Judaism was questioned on halakic (Jewish legal) grounds, but the Bene Israel subsequently have been accepted as full Jews in every respect by the Israeli rabbinate. Some five thousand Bene Israel observe the Jewish religion in India, largely in the Maharashtra region, and nearly fifty thousand more live in Israel.

The Cochin Jews The Jewish settlement on the Malabar Coast is ancient. One theory holds that they arrived with King Solomon's merchants; another account, repeated in South Indian legends, claims they arrived in the first century CE, when Saint Thomas (d. 53 CE) supposedly brought Christianity to India. Records noting that the ruler Bhaskara Ravi Varman (962–1020 CE) granted seventy-two privileges to the leader of the Jews, Joseph Rabban (c. late ninth century CE), document the Jewish settlement in Kerala. In 1344 the Jews moved from Cranganore to Cochin. After Vasco da Gama (c. 1460–1524) led an expedition to India in 1497–1498, some European and other Jews settled in Cochin to become part of the Paradesi ("foreigner" in Malayalam) Jewish community. The Paradesi synagogue was established in 1568. The subgroups of Jews in Cochin did not pray in each other's synagogues, and they did not intermarry. In 1954, the Cochin Jews emigrated as a community to the new state of Israel.

The Baghdadi Jews From the eighteenth century on Jews from Baghdad and other cities in Iraq shifted their enterprises to India and other South Asian centers. Shalom Cohen (1762–1834), one of the first Jewish merchants to escape the deteriorating conditions in Iraq, settled in Calcutta in 1798. Other Iraqi Jews

followed and established thriving businesses and magnificent Jewish community structures in the East. Among them was David Sassoon (1792–1864), who arrived in Mumbai in 1832. There he established two synagogues, Knesset Eliahu and Magen David. In Calcutta several Baghdadi synagogues operated with regular schedules. The Baghdadis kept up family and trade ties with other members of their community throughout South Asia. They identified with their British rulers, so when the British raj disintegrated in Asia, most Baghdadis emigrated to England, Australia, North America, or Israel. Fewer than three hundred Jews of Iraqi descent remain in South Asia.

Jewish Manifestations

The Shinlung is the most prominent group of South Asians who, claiming descent from the lost tribes of Israel, have adopted forms of Judaism since the 1960s. Composed of Kuki and other tribes, the Shinlung group is found primarily in Mizoram and Manipur States in northeastern India, with an offshoot in Tiddim in Burma. This group, which calls itself "the Children of Menasseh," has established prayer halls and observes many Jewish practices. Over five hundred of its members have emigrated to Israel and converted to Judaism there. Groups claiming to descend from the ten lost tribes also have emerged in Andhra Pradesh and other regions of India.

Despite the relatively large numbers of Israeli and Jewish travelers visiting different locations in South Asia, no new Jewish communities have been established in South Asia. However, the Lubavitcher Hasidic movement holds an annual communal seder for Israeli and Jewish backpackers in Kathmandu, Nepal.

JUDAISM—WEST ASIA Until the mid-twentieth century, there were Jewish communities in all the countries of the Muslim Middle East. Jews belonged to all social classes, from very poor (the vast majority) to very rich, from sophisticated professionals to illiterates and beggars, and, along another spectrum, from deeply pious and learned to secular agnostic and leftist. Although Islam encouraged converts, it did not require, let alone force, conversion. Those who wished to retain their own religion could do so, as long as they paid the *jizya*, a capitation fee for non-Muslims, which was levied on various Christian and Jewish communities.

Jews in West Asia before the Nineteenth Century

The situation of the Jews under medieval Islam compared favorably to that of the Jews in medieval Europe. Jews in the Islamic world were not outsiders; they had lived in the area long before the Muslim conquests and for the most part spoke the languages of those around them, initially Greek or Aramaic, and later Arabic, Persian, or (though to a lesser extent) Ottoman Turkish, both among themselves and with their non-Jewish neighbors. Hebrew was used only in the liturgy, and spoken or modern Hebrew is of recent origin, created by Zionist immigrants to Palestine at the end of the nineteenth century.

Although the picture has sometimes been painted in overly rosy terms, the Jews of the Middle East were rarely—certainly not until the nineteenth and twentieth centuries—subject to the persecutions and expulsions experienced by their contemporaries living in various countries of Europe. In no sense did Middle Eastern Jews live in constant fear of irrational or vicious sectarian rage. Thus when the Jews and the Muslims were expelled from Spain in 1492, both communities sought refuge and found new homes in Morocco and the Ottoman empire, adding to the Jewish population of the cities of North Africa, Egypt, and further east. It is also the case that the Jewish (and Christian) populations of the Middle East, although forming distinctive communities of their own, generally shared the norms of the majority Muslim population in such spheres as moral values, notions of right conduct, food, and domestic arrangements, including the seclusion of women, at least until the 1870s.

The communities also regularly interacted with one another. In Aleppo around 1900, for example, some 7

percent of the population of the old city was Jewish. Jews formed a majority in four of the city's traditional gated city quarters (the ones closest to the synagogue), but other Jews lived next door to Christians and Muslims in a further five city quarters. Jews sued Muslims for debt in the Islamic courts and won their cases if they could prove them; as further illustration of their faith in the Islamic legal system, they regularly brought cases against each other in the same courts. In Bab Tuma, a largely Christian suburb of Damascus, Christian, Jewish, and Muslim butchers' shops still stand next to one another; because the dietary laws are more or less identical and most Middle Eastern Christians do not eat pork, members of the various religions buy meat indiscriminately from one another's shops.

Jews in West Asia from the Nineteenth Century Onward

In the nineteenth and twentieth centuries, the situation of the minority communities underwent some significant changes, partly because one result of the Ottoman reforms (called the *Tanzimat*) was an emphasis on the equality of all Ottoman subjects, and partly because of the greater intensity of European economic penetration throughout the region. A number of prominent Baghdad Jewish families, for example, became part of a great trading diaspora stretching from Manchester and London through Mesopotamia and the Persian Gulf, to India, Hong Kong, and Shanghai. The major trading families included the Sassoons, Kadouries, and Gabbays, who originated in Baghdad. When their business links with India, Hong Kong, Shanghai, London, and Manchester originated, in the late nineteenth century, the family members held British passports, deriving from their residence in England, India, Hong Kong, and other British countries. Wealthier Middle Eastern Christians also sent family members abroad, both for education and as representatives of their trading houses, with the result that when it came to appointing representatives for European firms or finding individuals to assist the European consulates in their relations with the local authorities and to act as vice-consuls and honorary consuls in the Middle East, the European powers often chose local Christians or Jews. France and Britain had *consuls de carrière* (full-time members of a country's foreign service) in Aleppo, but Austria-Hungary, for instance, was represented by several generations of the Picciotto family, Jews originally from Livorno who had settled in Aleppo in the late eighteenth century. Ironically, a leading businessman, Leopold Manasci, was appointed honorary consul of Germany in Aleppo in the mid-1930s, until an inquiry into his antecedents

Family members of one of the thirteen Jews on trial for spying for Israel before the revolutionary court in Shiraz, Iran, wait outside the court. (REUTERS NEWMEDIA INC./CORBIS)

revealed that he was not suitable to serve as the Reich's representative in northern Syria.

In addition to this ready employment of members of the local minority communities (who were often also multilingual), a number of local Christians and Jews (although rather fewer than is often alleged) were either under the formal protection of a particular power or themselves possessed one or more European nationalities. Benefiting from a series of regulations on extraterritoriality known as the *Capitulations* (dating from the sixteenth century, originally guaranteeing non-Ottoman traders exemption from some local taxes, especially the *jizya*, and the right to be judged by their own consuls), such individuals had an edge over other local traders and businessmen, since they were not subject to the same tax regime. In the course of the nineteenth century, these arrangements occasionally aroused jealousies on the part of those who were not so well placed, and there were violent outbursts against the minority communities in Aleppo in 1850 and Damascus in 1860, often specifically targeting richer Christians and Jews.

Naturally the Jewish communities in the towns of the Middle East did not live in a vacuum. They were affected both by the various intellectual and philosophical debates among world Jewry in the nineteenth and twentieth centuries and by other political trends and tendencies that had more to do with their status as citizens of a particular nation than with their religious affiliation. Jews were pioneers in modern Arabic journalism, as writers of fiction (especially in Iraq and Egypt) and also as artists, musicians, and singers throughout the Arab world until the middle of the twentieth century. Many were also highly visible in the nationalist and independence movements and were prominent in the Communist movement in various Arab countries.

A vital catalyst in the provision of modern secular education (at little or no cost) was the Alliance Israélite Universelle, founded by French Jews in Paris in 1860, which by 1900 came to control a network of about one hundred schools from Morocco to Iran, with some 26,000 pupils and a teachers' training college in Paris. French was the principal language of instruction in the Alliance schools in French North Africa, Italian in Libya, and Arabic in Iraq and Syria. In addition, Hebrew newspapers of the *Haskala*, the Jewish enlightenment (a movement that began in the mid-nineteenth century and produced Reform Judaism), were becoming available in the Arab world and in Iran. Naturally, all this had a certain secularizing effect on the Middle Eastern communities. The *responsa* (traditional question-and-answer religious writings) literature of the early twentieth century reflects some of these concerns, although Oriental rabbis rarely took up the rejectionist positions, which did not admit the validity of reformed or "uncanonical" Jewish practices (in matters like conversion and services in vernacular languages) of many of their Orthodox European contemporaries.

Of all the currents competing for the attention of world Jewry in the first half of the twentieth century, Zionism seems to have held relatively little appeal for the Jews of the eastern Arab world, Iran, and Turkey, except for a rather large exodus of Yemenis to Palestine between 1881 and 1914. Along with their Christian contemporaries, Middle Eastern Jews migrated to Alexandria, Beirut, and Cairo and to Europe, the United States, and South America. By 1914, however, there were probably only ten to twenty thousand Jews of Middle Eastern origin in the area that became Palestine; Zionism, by and large, attracted the Jews of Central and Eastern Europe. Zionist associations in Egypt, Iraq, and Syria drew only small numbers. During the Palestine General Strike in 1936, the Iraqi broadsheet *Habazbuz* produced a cartoon showing the rabbi, the priest, and the mullah shaking hands and saying, "We are all Iraqis. Let us work hard together for the good of the country." In addition, the Alliance, still a major influence in the 1920s and 1930s, was suspicious of Zionism, since the Alliance's goals were to produce well-educated Jewish citizens imbued with French culture, rather than activists for the Zionist cause.

Migrations to Israel

By the late 1960s the creation of Israel in 1948 and the Israeli wars of 1956 and 1967 had led to the departure of almost all the million or so Jews who had lived in the Arab world, Iran, and Turkey at mid-century. Most were obliged to go to Israel, but some,

especially those from Algeria, Morocco, and Tunisia, went to France. Few of those who went to Israel would have done so of their own accord, and anecdotal and other evidence suggests that many were disappointed at the conditions they found there, particularly the disdain they endured at the hands of the European Jewish community. They generally had little choice, since they were stripped of their original nationality and their property in ways that, particularly in the cases of Iraq and Yemen, suggested an unusual degree of connivance between the Zionist authorities and the former host countries.

In the late 1940s there were about 1.1 million Jews in the Arab world, Iran, and Turkey. There are now about forty thousand: about six thousand in Morocco, twelve thousand in Iran, and nineteen thousand in Turkey, with a few hundred elderly people in Egypt, Iraq, Lebanon, and Syria. To an important extent, the communities have reconstituted themselves and continued their traditions in Israel, but, if only in terms of cultural diversity, pluralism, and tolerance, the loss to the regions where they lived for many thousands of years is irreparable.

JUDO Judo is a nonaggressive Japanese martial art that developed in the late nineteenth century, split into rival approaches in the last half of the twentieth century and eventually became a global competitive sport. Judo was developed by Kano Jigoro (1860–1938) while a student at Tokyo University. He began to combine techniques from jujutsu with Western science and Asian philosophy. His goal was to produce a martial

art that would serve as a vehicle for personal growth and the advancement of Japanese society. Judo uses techniques that turn an opponent's force against him and involve throwing, groundwork, and striking techniques.

Known as the "Father of Japanese Sports," Kano was an effective promoter of judo and sports in general. Before his death, he had set the stage for the emergence of judo as an international sport and as an Olympic event, with judo first appearing on the Olympic program in 1964. However, the popularity of judo as a sport also led many practitioners to abandon Kano's original vision and transform judo into a modern sport where the focus is on competition, scoring, and standardized methods and rules. The result has been a deep division among judo practitioners between the traditionalists who favor Kano's approach and methods and the modernists who favor training geared to competition rather than personal growth.

JUJUTSU Jujutsu is a generic label for lightly armed and unarmed martial arts that emerged in Japan during the Edo period (1600/1603–1868). It is estimated that some seven hundred schools of jujutsu developed, with many based on earlier Japanese and samurai fighting techniques. Perhaps the greatest similarity shared by the schools was nevertheless a departure from the fighting techniques of the samurai—the emphasis placed on the use of motion and minimal force. Also important was the incorporation of ancient Japanese and Buddhist philosophy and the goals of mental and spiritual growth into the training and techniques of the different schools. To a significant extent, the emergence of jujutsu represented a decline and redefinition of the role of the samurai in Japanese society, with the government now controlling warfare and the merchant class increasing its influence.

In the twentieth century, the jujutsu schools declined in number and influence as the practice was suppressed by the Meiji government (1868–1912) and then resurrected as a source of nationalistic pride during World War II, which cost it favor after the war.

Today, jujutsu remains a minor martial art, with many different schools. A basic conflict between schools that favor competition and those that favor personal growth remains, with no central organization to unify the art or promote it outside Japan.

JUMNA RIVER The Jumna (or Yamuna) River rises in the Indian Himalayas in the north of Uttar Pradesh state, at the southwestern base of the Jamnotri Peaks, near the Jamnotri hot springs, at an elevation of 3,307 meters. It flows south to break through the Siwalik Hills by a gorge and out onto the Gangetic Plain at Faizabad, continuing on past Delhi, and then in a southeasterly direction past Agra to join with the Ganges River at the fort and city of Allahabad. This latter is a most sacred confluence, called *prayag*, or place of pilgrimage. Countless thousands come here to bathe and become sanctified each year.

The river's length is 1,384 kilometers, and it is the most important feeder of the Ganges. Its catchment area is estimated at 305,600 square kilometers. In its upper reaches, timber is floated down the stream, and in the lower reaches grain, cotton, and building materials are transported by barge. Near Faizabad it gives off the Eastern (constructed between 1823 and 1830) and the Western (constructed in 1350 and 1628) Jumna Canals. As a result of this loss of water, during the hot season the river itself is reduced to a mere stream above Agra. Here and elsewhere several railway bridges cross the Jumna.

JUNK The basic traditional Chinese ship style is the junk, a flexible design used in river and oceangoing vessels of various sizes. The design's predecessor seems to have been bamboo rafts, with flat ends and many internal compartments separated by bulkheads, a design that was easily adapted into a variety of easily maneuvered vessels; by the ninth century the junk was plying international waters in South and Southeast Asia. The use of multiple internal bulkheads created a series of watertight compartments that gave the junk further stability and seaworthiness. Older junks had no keels, relying on thick wales (planks) that ran

A river junk on the Chang (Yangtze) River in the Three Gorges area. (WOLFGANG KAEHLER/CORBIS)

along the sides of the vessel to provide rigidity. River junks usually had only one mast, though space was provided for oars in the forward section, with cabins and other types of superstructures always placed aft of the mast. These vessels could reach up to forty-six meters in length, though most were between eleven and thirty meters long, and were used for all kinds of transportation. In certain areas where rapids or narrow channels caused difficulties in navigation, articulated or twisted ships were built, though the basic junk design was retained.

Articulated ships could also be adapted for military use; incendiary devices placed in the forward portions of the vessel, which was brought up to an enemy position, were uncoupled and left to explode. Oceangoing junks had a design very similar to that of river junks but could reach fifty-two meters or more in length. The design of both types of junk provides for the greatest width of the ship to be at the rear, in a conscious imitation of aquatic birds. Many ships were built without the use of metal, the artisans preferring to use wooden pins. The flat-bottomed design also allowed comparatively large ships to dock in shallow waters or navigate up relatively small rivers or canals. Propulsion for Chinese vessels could be by sails or oars, or a combination of both. Evidence of the first true rudder, connected to the ship by a post and balanced on an axis, can be found on tomb models of Chinese ships from the first century CE. Junks are still commonly used today.

JURCHEN JIN DYNASTY The Jurchen were a sedentary, Tungus-speaking people living in Manchuria and southeastern Siberia. In the eleventh

century there were two groups of Jurchen. One was a little-assimilated group of "raw" tribesmen living more or less the traditional life. The other was the "cooked" Jurchen, who had interacted closely with the Kitan, the dominant political group at that time in north China and rulers of the Liao dynasty (906–1125), and with the many Chinese ruled by the Kitan.

The founder of the Jurchen state, the chieftain Aguda (1068–1123) of the Wanyan clan, was primarily a ruler of the "raw" Jurchen, but he had learned how to use cavalry effectively in warfare from the Kitan. (Horsemanship and war on horseback were then not part of Jurchen native tradition but soon became an important part of Jurchen culture and the real basis of their military power.) Aguda had also learned how to form a state in the Central Asian manner, by grafting heterogeneous elements, including Kitan tribesmen dissatisfied with their own government, around a Jurchen core.

After a series of raids conducted all along Liao's western frontiers, Aguda went over to a general attack and began taking the Liao subordinate capitals one by one, sometimes with the help of the native Chinese dynasty occupying the rest of China, the Northern Song (960–1126). Aguda died before completing his conquest of Liao, but his successor Wuqimai, or Taizong (1075–1135), not only completed his task, but even began a massive invasion of Song, his former ally. It had attempted to make gains in the north as Liao had collapsed at the expense of Jin.

The decades of war that followed nearly destroyed the Song, which had to be reorganized as a new dynasty, the Southern Song (1127–1279) under a collateral branch of the old imperial line, based in the city of Hangzhou in central China. Not just the old Liao domains, which had been confined to the northeast, but the entire north came under Jin control. China was divided between two equally powerful regimes, with a third regime, that of the Xi Xia state, occupying the northwest.

Even as the wars with Song continued, internecine struggle divided the Jin elite. In order to organize its new conquests, the Jin courts of Wuqimai and his successors had adopted Chinese forms of government. Many traditional elements of Jin society failed to understand why this was necessary; they felt that their vested interests were in danger and that they faced absorption by Chinese culture. This conflict was still unresolved at the time of the Mongol invasions, which was one of the reasons why the Mongols were able to conquer Jin with relative ease, in part with some of

the very same tribal allies that the Jurchen had used in their own rise.

The Jurchen emperor at the time of the dynasty's first Mongol crisis was Zhangzong (1168–1208), a Sinicizer. He had begun a new war with the Southern Song in 1207 in which Jurchen cavalry had proven far less effective than in the past, indicating a weakening of a native Jurchen tribal base that was having more and more difficulty maintaining its traditional life and the cavalry forces sanctioned by Aguda as part of this traditional life. The reign of Zhangzong also witnessed growing Jin problems with its other tribal groups, principally with the Kitan of the Sino-Mongolian frontier zone. In 1207, most of the peoples involved revolted, handing what is now Inner Mongolia over to the Mongols, who used it as a base for raiding and expansion.

The response of the Jin, who had once actively intervened in the steppe and had manipulated events there in its own interests, was to build fortifications. These proved no barrier whatever to the Mongols, who began a general assault on the Jin in 1211. During the next 23 years they conquered Jin territory

piecemeal. They took the principal Jin capital of Zhongdu in 1215 and consolidated their rule in much of the north with a great deal of local help, including from Chinese warlords, the Kitan, and even Jurchen allies. The Jurchen court could only retreat to its domains along the Yellow (Huang) River, where it was able to hold out for another nineteen years thanks to Mongol preoccupation elsewhere, principally with a campaign in the west (1218–1223) and with the conquest of Xi Xia, and then an interregnum.

The end came when the Mongol khan Ogodei (1185–1241) gathered his resources and refocused Mongol attention on China. The Jin capital was then at Kaifeng. The Mongols assaulted it from several directions. The capital, swollen by refugees, was forced to extremities, and the Jin court fled south to Caizhou, where it attempted to organize further resistance. Kaifeng fell in 1233 and Caizhou in February 1234. The last Jin emperor killed himself.

Although their dynasty was at an end, the Jurchen, unlike the Tanguts of Xi Xia, who were virtually exterminated resisting the Mongols, survived and prospered. The Jurchen had their own native scripts, based loosely on Chinese, and these survived into the sixteenth century. Later the same cultural groups that had given rise to the Jurchen produced the Manchu, who had their own "raw" and "cooked" components and who also tried to combine tribal vigor with a Chinese style of government. They had even less success than the Jurchen in maintaining their ethnic identity during their reign of China, and the once large Tungus population of Manchuria is all but extinct today.

JUSTICE PARTY. See **Adalet Partisi.**

JUTE Jute is a fiber that is extracted from the stems of plants in the genus *Corchorus* of the *Tiliaceae* order, which includes two jute species, white jute (*C. capsularis*) and upland jute (*C. olitorus*). Jute has been cultivated in India and Bangladesh since 800 BCE, but it

A boat piled high with jute on the Hooghly River in Calcutta, India, in 1979. (SHELDAN COLLINS/CORBIS)

was not grown as a major cash crop until 1838, when Dundee, Scotland, mills developed a jute-spinning machine. Jute plants are slender-stemmed annuals that are approximately 2.5 to 3.5 meters tall. The fiber is used to manufacture cordage and coarse fabrics that are used to make heavy-duty bags and carpet backing. Jute grows in alluvial soils and can survive in heavy flooding. It will only grow in areas with high temperatures, sand or loam soils, and annual rainfall over 1,000 millimeters. Large-scale jute cultivation is virtually confined to northern and eastern Bengal, mostly in the floodplains of the Ganges and Brahmaputra Rivers. More than 97 percent of the world's jute is produced in Asia, including 65 percent in India and 28 percent in Bangladesh. The world's largest jute mill is in Bangladesh. The jute industry has been threatened for more than four decades because synthetic fibers are cheaper to produce than jute.

K2, MOUNT Mount K2 was so named in 1856 by its surveyor T. G. Montgomerie of the Survey of India, to designate it as one of the thirty-five peaks in the Karakorum range of the western Himalayas. One of its unofficial names is Mount Godwin Austen, after the British topographer who was only the second European to visit this remote and rugged area. Its other names include Qogir Feng in Chinese and Dap-song in Tibetan, and there are also several local names for the peak.

K2 is the second-highest mountain in the world, surpassed only by Mount Everest, which is also in the Himalayas. K2 rises to 8,611 meters, the highest peak in the Karakorum range. It lies athwart the borders between China and the state of Jammu and Kashmir, in an area heavily contested by India and Pakistan but now controlled by Pakistan. K2 is some 800 kilometers due north of Delhi. Although eight expeditions attempted to climb K2 between 1892 and 1954, the mountain was not ascended until 1954, when members of an Italian expedition managed to reach the peak.

KABADDI *Kabaddi* is an Asian team sport of indeterminate origin, played extensively in the Indian subcontinent and Japan with some variation. Although it is believed to be more than four thousand years old, it has yet to establish itself as an international sport, being confined as it has been mostly to Asia.

The sport is played between two teams of twelve players each. Seven players begin the game for each team, and five players act as reserves. The *kabaddi* court measures 12.50 meters by 10 meters, divided by a line into two halves. Each team has to initiate moves of offense and defense alternately. The team who wins the toss sends into the opponents' area a "raider" who, while chanting "*kabaddi-kabaddi*" tries to touch any or all of the seven opponents. Those opponents who are touched by the raider are out of the game. The opponents try to capture the raider until the raider is out of breath and can no longer chant "*kabaddi-kabaddi*." Points are awarded on the basis of opponents touched or raiders captured. The team scoring the most points within the scheduled time (a total of forty minutes of playing time with a five-minute break) wins. Because of its low cost and rugged skills, *kabaddi* is a popular sport among the rural masses in Asia.

Ram Shankar Nanda

KABUKI Kabuki is one of two major forms of commercial theater created by actors and playwrights for audiences of urban commoners during the Edo or Tokugawa period (1600/1603–1868) in Japan.

History

In 1600, an attractive woman dancer, Okuni, captivated spectators in the capital city of Kyoto by singing sensuous love songs and acting in comic-erotic sketches. Her dance while dressed as a male samurai, called Kabuki (*kabuku*, "slanted"), was the rock or punk performance of the time. Later "ka-bu-ki" came to be written with the Japanese characters for "music-dance-acting," thus

Two Kabuki actors in the 1890s. One portrays a samurai and the other a woman. (MICHAEL MASLAN HISTORIC PHOTOGRAPHS/CORBIS)

identifying the three arts basic to Kabuki performance. Government edicts banning women and boys from the stage in 1629 and 1652, respectively, resulted in adult males taking female roles (*onnagata*, "woman's form"), a happenstance that contributed to creating Kabuki's unusual sensuous appeal.

During the Genroku era (c. 1688–1720), Sakata Tōjuro (1644–1709) created the gentle style (*wagoto*) of acting romantic leads that suited the refined tastes of Kyoto audiences. His most famous role was in *Kuruwa bunsho* (Love Letter from the Licensed Quarter, 1678), written for him by Chikamatsu Monzaemon (1653–1724). The martial spirit of the city of Edo is reflected in the masculine style of bravura acting (*aragoto*) created by Ichikawa Danjuro I (1660–1704) and his son Danjuro II (1688–1738), in plays that featured heroes of superhuman strength. Danjuro I himself wrote *Narukami* (Narukami the Thunder God, 1684) and *Shibaraku* (Wait a Moment! 1692). Danjuro II melded the Kyoto and Edo acting styles when he created the dashing hero in *Sukeroku yukari no Edo zakura* (Sukeroku: Flower of Edo, 1713). In the nineteenth century, a new form of gritty "raw domestic dramas" (*kizewamono*) reflected the declining authority of the shogunate and the disintegration of feudal morality. In *Sakura hime azuma bunsho* (The Scarlet Princess of Edo, 1813), by Tsuruya Nanboku IV (1755–1829), and *Benten kozo* (Benten the Thief, 1862), by Kawatake Mokuami (1816–1893), the leading roles were thieves and murderers drawn from society's underclass.

Characteristics

Kabuki developed over some three hundred years as a spectacular theater art for rich and poor alike. Dazzling productions in large, indoor theaters made

use of mechanical stage lifts, revolving stages, and impressive stage tricks—flying in the air, real rain, and instant costume changes. Performances began at dawn and continued until dusk. Adjoining teahouses provided tea, sake, food, and tobacco, as spectators socialized and watched the dramas unfold on stage. Six programs a year matched Japan's calendar of religious festivals. The season began in November with the important "face showing" (*kao mise*) play that introduced the theater's acting company and ended the following September with an autumn "remembrance play" (*nagori kyogen*), when spectators bid farewell to departing actors. The three plays in a program typically included a multiact history piece (*jidaimono*) that featured samurai or nobility, followed by a shorter domestic piece (*sewamono*) that dramatized the lives of commoners. A dance play accompanied by music in *nagauta*, *kiyomoto*, *tokiwazu*, or *takemoto* style followed either the first or the second play. This could be a solo dance (*shosagoto*), such as *Musume Dojo-ji* (The Maid of Dojo Temple, 1756), to show off the skills of an *onnagata* actor, or a dance drama (*buyogeki*) like the highly dramatic *Kanjincho* (The Subscription List, 1841). Some dance plays were based on fifteenth- to sixteenth-century masked Noh plays, and about one-third of the repertory was adapted from plays written for the Bunraku puppet theater, Japan's other traditional commercial theater form.

Some important themes in Kabuki plays are the moral conflict between duty (*giri*) and human compassion (*ninjo*) and the plight of lovers driven by circumstance to take their lives (*shinju*). Powerful acting techniques include a dynamic "frozen moment" pose (*mie*), leaping exit (*roppo*) along the bridgeway (*hanamichi*) from the stage through the auditorium, beautifully choreographed fights (*tate* or *tachimawari*), and musicalized speech in poetic passages written in phrases of seven and five syllables (*shichigo-cho*). The black-robed stage assistant (*koken*) of Kabuki, who assists the actor with properties and costume on stage, is known throughout the world.

In the twenty-first century, Kabuki continues to be one of Japan's most honored theater forms. Month-long programs can be seen at the Kabuki-za and the National Theater in Tokyo, the Shochiku-za in Osaka, and the Minami-za in Kyoto.

KABUL (2002 est. pop. 2.1 million). At the base of the Kabul River in Afghanistan and at the foot of the Khyber Pass in the Hindu Kush mountains lies the city of Kabul, the capital of Afghanistan. For thousands of years, the country of Afghanistan has been the crossroads of commerce, immigration, and invasion for India, Iran, Pakistan, and the area now com-

prising the Central Asian countries of Turkmenistan, Tajikistan, Uzbekistan, Kyrgyzstan, and Kazakhstan. Located on the eastern edge of modern-day Afghanistan, the populated areas of the Kabul River are thought to be over 4,000 years old.

The earliest reports of a city called Kabul come in ancient Indian songs dating back to 1000 BCE. In the ancient villages that are thought to make up modern-day Kabul, there was a particularly lush oasis that traders and merchants used as a stop for their camels. Its strategic location at the base of the Khyber Pass, which leads into Pakistan, and the availability of fresh water and arable land allowed a population to grow and prosper.

The number and variety of empires that used the city to control the numerous Afghan tribes mark the history of Kabul. Alexander the Great and his Greek army took over Kabul between 330 BCE and 326 BCE during his campaigns through Central and South Asia. The Arab conquests of the seventh century CE reached as far as Kabul. In the sixteenth century, Kabul was the capital of the Mughal empire from 1504 to 1526. From 1747 until 1979, Kabul was ruled by the Durrani kings;

BEAUTIFUL KABUL

The description below from 1908 is far different than the images of Kabul 2002—which now show a city and region destroyed by over twenty years of war and political unrest.

The Kabul river basin includes the most beautiful, if not the most fertile of the romantic valleys of Afghanistan. The great affluents of the north which find their way from the springs and glens of the Hindu Kush are as full of the interest of history as they are of the charm which ever surrounds mountain-bred streams, giving life to the homes of a wild and untamed people. The valleys of Ghorband and of the Panjshir are valleys of the Hindu Kush, scooped out between the long parallel flexures which are the structural basis of the system. With Kohistani villages below and battlemented strongholds above, breaking here and there into widened spaces where the ancient terraces of modern cultivation, and thick groves of apricot and walnut trees are grouped round the base of the foothills and the walls of the scattered villages, there is no more enchanting scenery to be found in the [Swiss] Alps than in these vales.

Source: Imperial Gazetteer of India: Afghanistan and Nepal. (1908) Calcutta: Superintendent of Government Printing, 2.

Afghans in the street in front of war-damaged buildings in Kabul in 1995. (BACI/CORBIS).

in 1979 it was occupied by the Soviet Union. The city remained under nominal Soviet control until the Soviet Union withdrew its troops in 1989, leaving the city in the hands of the Mujahideen rebel forces.

Mujahideen control was short-lived, as civil war soon broke out throughout the country of Afghanistan. Various tribal groups and political parties controlled Kabul until 1996, when the city came under control of the Taliban regime. The Taliban moved the capital of Afghanistan from Kabul to Kandahar and left Kabul in shambles. The Taliban lost control of Afghanistan in December 2001 to U.S. forces, sent by the U.S. government to remove the Taliban because of the Taliban's support of Osama bin Laden, the mastermind behind the 11 September attacks in New York City and Washington, DC.

Modern-day Kabul is undergoing massive reconstruction. The interim government of Hamid Karzai has received funding to rebuild the city and reestablish Kabul as the capital of Afghanistan.

Jennifer Nichols

KABUL RIVER The Kabul is a river approximately 700 kilometers (435 miles) long running mostly through eastern Afghanistan and a short distance in northwestern Pakistan. A tributary of the Indus River, it originates in the Sanglakh mountain range west of Kabul, the capital of Afghanistan. It then flows east, passing Kabul and the major cities of Jalalabad in Afghanistan and Peshawar in Pakistan. Soon thereafter it joins the Indus at Attock, not far from the Pakistani capital of Islamabad. It has several major tributaries, including the Lowgar and the Konar.

Agricultural civilizations have existed on its banks for several thousand years, and it was known as far as ancient Greece, where it was called Cophes. Alexander of Macedon had used its valley as the route for his aborted invasion of India in the fourth century BCE. In the nineteenth century major battles between the native guerrilla groups and British forces were fought along its banks, immortalized in Rudyard Kipling's poem "Ford o'Kabul River."

A hydroelectric plant was built on the river but came into disuse during the prolonged period of warfare started by the Soviet invasion in 1978. Because much of the river has been tapped for irrigation over the years, often inefficiently, due to poor infrastructure and continuing economic stagnation and warfare, much of the river west of the city of Kabul dries up in the summers. The Peshawar-Kabul highway—a major truck route between Afghanistan and Pakistan—passes through the Kabul River valley. The Kabul River is navigable by flat-bottomed light vessels downstream of Kabul city.

KACHIN "Kachin" is the collective name for a related family of highland peoples who live in north-eastern Myanmar (Burma) as well as adjoining parts of China's Yunnan Province and northeast India. The Kachin language is classified as a branch of the Tibeto-Burmese linguistic group, and the Kachin people are culturally distinct from the Shan, Burman, and Chinese communities that inhabit many of the same areas.

Within Kachin state, six ethnic subgroups are regarded as the main branches of the Kachin peoples: the Jinghpaw, Maru, Lashi, Azi, Nung-Rawang, and Lisu. Elsewhere in Myanmar the Lisu are not included as Kachin. Moreover, there are significant variations in language and dialect among the different Kachin subgroups. In recent decades, this has led to the promotion of the dialect of the Jinghpaw majority as the standardized form of Kachin. The nationality term "Wunpawng" is also used by most Kachins to describe themselves.

The Kachins are thought to have been among the last migrants to arrive in present-day Myanmar, crossing the mountains from China within the past thou-

A Kachin couple in northern Myanmar in 1942. (BETTMANN/CORBIS)

sand years. Today Kachin-speakers are the majority ethnic group throughout much of the Kachin state and also parts of the northern Shan state where around 100,000 Kachins live. Population statistics are disputed, with Kachin leaders claiming a Kachin population in Myanmar of around 1 million, compared with government estimates of half that number.

Until the British annexation of present-day Myanmar in the nineteenth century, most Kachins were traditional spirit-worshippers, inhabiting the higher mountain regions where they practiced swidden (slash-and-burn) agriculture. Under British rule, however, many Kachins converted to Christianity and moved down to the plains. In modern Myanmar, most Kachins are Christians, predominantly Baptists.

Traditional customs nevertheless persist in many areas, including the *manau* celebration festivals, where costumed dancers progress in snaking columns around brightly decorated spirit posts. The Kachins have also retained a determined reputation for independence and for martial abilities in conflict. These were highlighted during World War II when many Kachins, nicknamed the "Amiable Assassins," fought on the Allied side against the Japanese occupation from 1941 to 1945.

A particular characteristic of the Kachin peoples is their unique clan system, which links all subgroups and

individuals together. All Kachins have a familial tie through their clans, and there are customs prescribing which members of which clans can marry one another. The clan system was analyzed by the British anthropologist Edmund Leach, who published his famous study, *Political Systems of Highland Burma*, in 1954.

Despite the civil war that broke out in 1961, many traditional aspects of Kachin culture survived the following decades of conflict. Kachin communities, however, suffered enormous dislocation and loss of life before the 1994 cease-fire between the government and the insurgent Kachin Independence Organization.

KACHIN INDEPENDENCE ORGANIZATION Founded in February 1961, the Kachin Independence Organization (KIO) is the leading armed opposition force among the Kachin people in north-eastern Myanmar (Burma). An earlier Kachin uprising led by Burmese army mutineer Naw Seng in 1949 failed to find widespread support, but in the early 1960s a new generation of Kachin leaders quickly struck a popular chord.

Striking out from northern Shan State, by the mid-1960s KIO units had penetrated much of Kachin State. Fierce fighting with the Burmese army and rival Communist Party of Burma (CPB), as well as internal divisions, halted the KIO's advance. These events led to the deaths of KIO president Zau Seng and his two brothers in 1975. However, under the revived leadership of Brang Seng (1931–1994), a former high school headmaster, the KIO quickly reestablished itself as one of the most effective insurgent groups in the country, with an estimated 8,000 troops under arms.

Bolstered by control of the black market trade in jade, the KIO became a leading voice in the National Democratic Front, which it joined in 1983 following abortive peace talks with the Ne Win government. The KIO was also one of the main architects of the Democratic Alliance of Burma after the Burmese army's suppression of pro-democracy protests in 1988.

Following the CPB's collapse in 1989, however, the KIO came under increasing pressure. This was compounded by the cease-fires of local NDF allies as well as the defection of several hundred troops in Shan State who formed a rival Kachin Defense Army. Anxious to be part of political discussions within the country at large, KIO leaders agreed a cease-fire with the State Law and Order Restoration Council government in 1994 under a new strategy they termed "peace through development." In a major policy change, the KIO opened offices in the towns and began resettlement and development programs in several parts of northeastern Myanmar. Political problems, however, persisted for the KIO, partly due to the slow pace of reforms, and this saw a leadership struggle during 2001 in which the KIO president Zau Mai was replaced by another party veteran, Tu Jai.

KACHIN STATE (2002 pop. 1.3 million). Located in northeastern Myanmar (Burma), Kachin State is a land of deep mountains, forests, and rivers, as well as several areas of broad plains. Comprising eighteen townships and 699 wards or village-tracts, it is Myanmar's second largest ethnic minority state, with an area of 89,041 square kilometers. It is situated between the People's Republic of China to the east and north, Arunachal Pradesh in India to the northwest, the Sagaing Division to the west, and Shan State to the south. The capital is Myitkyina. Other important towns include Bhamo, Mohnyin, Mogaung, and Putao.

Kachin State was founded at the time of Myanmar's independence in 1948, but economic progress has been held back by ethnic and political conflict. Population statistics are disputed by the different parties,

but in the 1990s the State Law and Order Restoration Council government estimated the population at 1.08 million people, of whom over 400,000 were Kachins (including Lisus), 310,000 Burmans, and 250,000 Shans. Historically, Kachins have tended to live more in upland areas, whereas Shans and Burmans have inhabited the plains and towns. However, there has been considerable civilian dislocation since the outbreak of insurgency in the 1960s and resettlement continued at the turn of the twenty-first century. There also are small local populations of Chinese and Indians, who play an important role in business.

Agriculture is the principal occupation of most inhabitants. Paddy, sugar cane, and groundnut are all commercially grown in the valleys and plains, and there is local cultivation of various fruits as well as orchids in the hills. Illicit opium production has also been a social problem in a number of areas.

The state also contains a variety of natural resources, including gold, silver, coal, lead, iron, copper, and jade. The world-famous jade mines are located at Hpakhant in the southwest of the state. Another important resource is timber, with teak and other valuable woods growing in the deciduous and evergreen forests that cover much of the territory.

Since the 1994 cease-fire by the Kachin Independence Organization (KIO), exploitation of all these resources has increased, and attempts have been made to upgrade the infrastructure of the state, which is handicapped by its distance from other markets. In the latter years of the twentieth century, the road between Myitkyina and Bhamo reopened; a bridge was constructed over the Irrawaddy River, near the capital; and various business enterprises were started, including the KIO-run sugar mill at Namti.

Economic development, however, continues to be slow. The spread of HIV/AIDS in the state became a matter of concern during the 1990s, accelerated by factors such as intravenous drug use and the rush of migrant workers to the jade mines at Hpakhant. Concerns were also expressed over a notable increase in logging as well as gold-dredging operations in the Irrawaddy River. Such extractive enterprises cause environmental degradation and put little investment into local communities.

Another field that has been targeted for economic expansion is tourism. The state is a region of unusual biodiversity, including the source of the Irrawaddy at the junctions of the Mali-Kha and N'Mai Kha rivers; the upper tributaries of the Chindwin River; Myanmar's largest lake, Indawgyi; and the country's highest mountain, Hkakabo Razi (5,881 meters). In these

regions, species such as elephant, tiger, and musk deer, although under threat, were still relatively common at the beginning of the twenty-first century.

KAEMA PLATEAU The Kaema Plateau (Kaema Kowon), "the roof of Korea," stretches across north and south Hamgyong Province to the east and the provinces of North and South P'yongan to the west in North Korea. The height of the plateau ranges from 1,000 to 2,000 meters above sea level. It is the largest tableland on the Korean Peninsula, with an area comprising about 40,000 square kilometers. The plateau slants down on the side of the Amnok River (Yalu) in the northern sector and it builds a steep slope on the northern and eastern sides. The plateau stretches across several counties, including Kapsan, Changjin, and Musan, that are dissected by the tributaries of the Amnok and Tumen Rivers. Subsistence-level farming products such as foxtail millet, oats, soybeans, barnyard grass, and potatoes are produced using fire-field agriculture (slash-and-burn farming) on the west side of the plateau. Dams have been made to harness the power of the Hochon, the Changjin, and the Pujon Rivers, all of which flow northward into the Amnok River. The greatest benefit from the damming of these river basins has been the increase of hydroelectric power.

KAESONG (1993 pop. 335,000). Kaesong is located in southern North Korea (People's Democratic Republic of Korea), 160 kilometers (100 miles) southeast of the capital city of P'yongyang and 8 kilometers (5 miles) from Panmunjom near the Demilitarized Zone. The city has been under direct administration of the

Chinese and North Korean officials at Kaesong in August 1951 where talks were held to end the Korean War. (HULTON-DEUTSCH COLLECTION/CORBIS)

capital since 1955. Kaesong was the capital of the Koryo kingdom (918–1392) and an important commercial center during the Choson dynasty (1392–1910).

The city prides itself on its rich cultural heritage. Major historic sites include the Southern Gate of the Kaesong fortress built between 1009 and 1029, the Sonjuk Bridge, the Kaesong Observatory, and several temples. The site of the Songgyun Institute, once the Koryo dynasty's premier educational institution, has been transformed into the Koryo Museum, which displays many artifacts unearthed in and around Kaesong. Of the Koryo royal palace of Manwoldae, built in 918 CE and destroyed in 1361 CE, only an elevated platform and foundation stones remain.

Several royal Koryo tombs are located on the outskirts of the city, such as the tomb of King Wang Kon (918–943), the founder of the Koryo dynasty, and the tomb of the thirty-first Koryo king, Kongmin (1352–1374), and his queen. Kaesong is known for the production of ginseng and products derived from it. Other industries include textiles, food processing, and machinery.

KAFIRNIGAN RIVER The Kafirnigan is a river in Tajikistan and a large tributary of the Amu Dar'ya, which it joins about 36 kilometers downstream of the

confluence of the Pyandzh and Vakhsh Rivers. The Kafirnigan is 387 kilometers long with a basin area of 11,600 square kilometers. It rises in two branches from the southern slopes (partly from glaciers) of the Gissar Range and flows south through the Gissar Valley. The river is fed primarily by snow. The average annual discharge at the mouth is 156 cubic meters per second. In the lower reaches the banks are covered with reeds and *tugai* (riparian) forests.

The river's waters are used for irrigation. During the Soviet period, important irrigation development took place in the Kafirnigan River basin. Together with Uzbekistan, in 1940 Tajikistan built the large Gissar Canal, which carries water from the Dushanbe River into the basin of the Surkhandarya River (in Uzbekistan). The total irrigated area in the Kafirnigan basin is 49,000 hectares. Three of the nineteen dams (fourteen on the Amu Dar'ya) in Tajikistan are on the Kafirnigan.

Bakhitor Islamov and Sharaf Arifkhanov

KAGAWA (2002 est. pop. 1 million). Kagawa Prefecture is situated in the northeastern region of Japan's island of Shikoku, where it occupies an area of 1,883 square kilometers. Kagawa's primary geographical features are coastal lowlands in the north, the Sanuki Mountains in the south, and many small offshore islands. Kagawa is bordered by the Inland Sea and by Ehime and Tokushima Prefectures. Once known as Sanuki Province, it assumed its present name and borders in 1888.

The prefecture's capital is Takamatsu. In 1588, Ikoma Chikamasa (1526–1603) erected a castle to monitor Inland Sea maritime traffic and Takamatsu grew around this fortress. The Matsudaira family later took control of the castle town. With the initiation of a ferry route between Honshu and Shikoku, Takamatsu became the terminal, making it into the administrative and economic center of Shikoku. The completion of the bridge link to Honshu in 1988 rendered the ferry obsolete. The city manufactures machinery and processes foodstuffs, including *udon* noodles. Its more traditional crafts are lacquerware and tissue paper. Nearby is the Yashima Peninsula, a battlefield of the war between the Taira and Minamoto warrior clans in 1185. The prefecture's other important cities are Sakaide and Marugame.

Kagawa's main crop long has been rice, later supplemented by cotton, sugar, and salt, of which the prefecture once was the nation's largest source; the salt works were shut down in 1972. In the early 2000s, the

economy also depends on fruit and livestock production, along with fishing. Shipbuilding is one of the few heavy industries; there is some processing of paper, textiles, and foodstuffs. Visitors are drawn to Inland Sea National Park, and historic Kotohira Shrine is a pilgrim destination.

KAGOSHIMA (2002 est. pop. 1.8 million). Kagoshima Prefecture is situated in the southern part of Japan's island of Kyushu, where it occupies an area of 9,167 square kilometers. Situated in a subtropical region, it is often swept by typhoons. Among its geographical features are the major volcanoes Kirishimayama, Kaimondake, and Sakurajima, one of the world's more active. Offshore are various islands. Kagoshima is bordered by the Pacific Ocean and the East China Sea and by Kumamoto and Miyazaki Prefectures. In 1896 it subsumed the ancient provinces of Satsuma and Osumi and assumed its present name and borders.

The prefecture's capital is Kagoshima city, situated on Kagoshima Bay. In 1602, the Shimazu family erected a castle on the site, and the city flourished. It is the birthplace of Meiji Restoration leaders Okubo Toshimichi and Saigo Takamori. Saigo later led disempowered samurai in the 1877 Satsuma Rebellion, the last armed uprising against Meiji reforms. The city was severely bombed in World War II. It is the major departure port for Okinawa and other islands and is home to Kagoshima University. It produces *tsumugi* silk fabric, woodcrafts, and foodstuffs. The prefecture's other important cities are Sendai, Kanoya, and Naze.

The prefecture has a long history, as indicated by artifacts from the Jomon (14,500 BCE–300 BCE) and Yayoi (300 BCE–300 CE) cultures. Later it was inhabited by the Kumaso and Hayato tribes. From the Heian period (794–1185), Fujiwara regent families, Buddhist temples, and Shinto shrines owned landed estates in the region. Shimazu family rule lasted until the 1868 Meiji Restoration. Westerners, including the missionary Francis Xavier, first set foot in Japan in Kagoshima in the mid-sixteenth century.

Agriculture and forestry dominate the economy. Rice, sweet potatoes, and other vegetables are the leading crops, supplemented by the specialty crops of sugar cane, tea, tobacco, and citrus fruits and by the raising

of livestock. Black Satsuma ceramics are a notable regional craft. Kirishima-Yaku National Park is popular with visitors.

KAIN BATIK *Kain batik* ("cloth" in Bahasa Indonesia, *tik* from Bahasa Malaysia meaning "drops or dots") is cloth produced by a resist-dyeing technique. A resist medium, such as a combination of waxes or occasionally rice starch, is applied to cotton or silk cloth using a pen (*canting*) or a metal stamp (*cap*) to stop the penetration of dyes into the cloth in specific areas of the chosen design.

In preparation for the batik process the cloth is first carefully washed and may be soaked in vegetable oil to enhance the absorption of the dye. It is then starched so that the wax will not penetrate too deeply and pressed to give a smooth surface on which to apply the wax. A suitable resist medium, made from a combination of waxes, is then liquefied and applied to the cloth with a *canting*, a copper pen with one or several spouts, depending on the size and shape of the design. The untreated area of the cloth absorbs color in the dye bath; the waxed area remains undyed. The wax is then melted, scraped, or boiled away—an activity usually performed by men. For subsequent colors and additional design elements more wax is applied, up to four times. This style of batik is known as *kain batik tulis*. Each *kain panjang batik tulis* (a hip wrap worn by both men and women), generally 2½ by 1 meter, takes several months to create. *Kain batik tulis* was superseded in part in the mid-nineteenth century by the use of a *cap* with a waxed surface, facilitating increased production and using male labor. Special finishing treatments include gilding and glazing.

Kain batik is found in Java, southwest Sumatra, central Sulawesi, and Malaysia. Its origins are thought to be Indian; however, it may have been indigenous to Java. It is known to have been part of the court culture of central Java by the sixteenth century. Designs and colors were specific to different regions, and sumptuary laws governed the wearing of particular designs, especially in the royal courts of Yogyakarta until the early part of the twentieth century. Women still wear *kain panjang batik* throughout Southeast Asia, although silkscreen and machine prints of old and new designs are prevalent. *Kain batik* has become an icon

of Javanese culture and is used by contemporary batik artists and in contemporary fashion and the decorative arts.

KAIN SONGKET The art of *kain songket* ("brocaded cloth"), the manufacture of silk and cotton fabric brocaded with gold or silver thread, has been known throughout western Indonesia since at least the seventh century, the time of the early Buddhist and Hindu kingdoms in Sumatra, Java, and Bali. Brocade weaving was most likely introduced to the archipelago by Indian craftsmen or merchants, along with many other crafts and art forms. The most luxurious silk brocades were worn by the nobility as part of their ceremonial attire; less valuable cotton brocades were used for classical dance costumes. Brocade weaving was the prerogative of noble women. With the introduction of cheaper raw materials, however, such as rayon and artificial silk in the 1930s, brocade manufacture gradually spread to the lower socioeconomic classes. In recent decades the Indonesian government has encouraged the manufacture of traditional local products. Home production has become an important economic activity, and brocade weaving has provided a decent, if not lucrative, income for many female household members, particularly in Bali and Lombok, where *kain songket* are still worn in numerous traditional rituals. The raw materials, mainly imported from abroad, are available even in small village markets.

KALIDASA (flourished fifth century CE), Indian playwright and poet. Kalidasa was the greatest poet of India's classical age, which lasted from 500 BCE to 540 CE. Despite numerous legends about him, little is known of his life. He may have been a Brahman and a devotee of Siva. He excelled in all literary genres except the novel. Tradition associates him with the semi-legendary king Vikramaditya, who is now thought to have been the great Gupta monarch Candragupta II. If correct, we have a ruling date for the king in Ujjain from 375 to 413 CE.

Kalidasa's best-known work, still sometimes performed, is the Sanskrit play *Abhijnana Shakuntala* (The Recognition of Shakuntala), which is the last of three dramas and a clever dramatization of part of the *Mahabharata*. Kalidasa's great skills in characterization, the construction of the plot and dramatic situations, and the clarity of his Sanskrit are the features that have brought praise to this love story. Kalidasa also wrote a comedy, *Malavikagnimitra*, about a king who falls in love with a maiden (despite already having a queen). Other plays included *Vikramorvasiya*, which is another love story based on a legend in the Vedas, and *Satapatha Brahmana*. Of his several poems, "Meghaduta" is one of the most fascinating in Sanskrit literature: just over a hundred verses telling of a minor folk deity who becomes separated from his master. In addition, another epic poem, *Raghuvarsha*, and several incomplete poems of Kalidasa's are extant.

KALIMANTAN (2000 pop. 10.4 million). Kalimantan occupies the southern three-quarters of the island of Borneo in Indonesia. It is divided into four provinces: West, Central, East, and South Kalimantan. The largest ethnic groups are the Malay-Indonesians, the Chinese, and the Dayaks.

The history of Kalimantan is a patchwork of Chinese, Malayan, Hindu, Muslim, and Dutch influences. Hinduism reached Kalimantan around 400 CE, and the islands were ruled by Hindu kingdoms until, with

the introduction of Islam, several sultanates emerged in the fourteenth century. The Dutch arrived on the island in the seventeenth century, and despite both Dutch and British interests in Kalimantan, the Dutch managed to strengthen their position as the main colonial power. The Japanese occupation of the island at the beginning of World War II ended Dutch rule. In 1945, Indonesia's independence ended the Japanese occupation and created Kalimantan as an official province of Indonesia.

Approximately 60 percent of the territory is forested. Kalimantan has one of the world's richest natural environments, including more plant species than in all of Africa. The fauna consists of species such as orangutans, crocodiles, giant butterflies, and freshwater dolphins. Kalimantan also contains great reserves of mineral resources: oil, natural gas, coal, gold, and uranium. Kalimantan is the second leading oil producer in Indonesia after Sumatra. Exports include oil, coal, and plywood. The oldest inscriptions in Indonesia have been discovered in Kalimantan. They are in Sanskrit and date from the beginning of the fifth century CE.

KALMAKANOV, BUKHARZHRAU (1693–1789), Kazakh poet. The Kazakh poet Bukharzhrau Kalmakanov (or Bukhar-zhyrau Qalmaqanuly) was active at the court of Abylay (1711–1781), the khan of the Middle Horde. As his name-element *zhyrau* signifies, he was a poet and singer (*zhyr* means "song"), but he also acted as the khan's courtier and counselor. In his poems Bukharzhrau addresses political and topical themes, praising the khan for his deeds, advising him in his wars and negotiations with his neighbors, and urging the Kerey tribe to make peace with Abylay. The genre of poetry that he favored was the *tolghau*, a didactic and meditative poem, in which the poet expresses his views on the right form of living and utters words of wisdom generally taken from oral lore (proverbs, folk aphorisms). Bukharzhrau did not compose any epics, although the term *zhyrau* came to denote the singer of epics in the Kazakh language.

KALYM *Kalym* refers to the Central Asian tradition of the bride-price, a ransom paid by a man or his parents to the parents of the woman he chooses to marry. Payment is made after the parties negotiate an agreement in accordance with their social and financial status but before the wedding.

The custom of the *kalym* appeared in pre-Islamic times and was widely accepted and institutionalized in the Islamic period. The size of the *kalym* varies in different regions of Central Asia, and it should be distinguished from *mabr*, maintenance that the bridegroom provides for the bride, all of which remains the bride's personal and exclusive property. *Kalym* is distributed in three parts: one part to the fiancée, another part to her parents, and the third to be used by the fiancée's family for the wedding expenses.

A man from a poor family, or one who for another reason cannot pay the complete *kalym* in advance, may pay it in installments before and after the wedding. Traditionally *kalym* consisted of livestock, clothing and fabrics, and foodstuffs. In modern times the Central Asian *kalym* is usually given in the form of a cash equivalent, to hide the fact of negotiations for the *kalym* arrangement, which was legally forbidden. The practice of the *kalym* still occurs among rural Uzbeks, Turkmen, Tajiks, Karakalpaks, Kyrgyz, and other peoples of Central Asia.

KAMA SUTRA *Kama Sutra* is a classic treatise on the science of sex. It was written by a famous Indian sage, Maharshi Vatsyayana, fifteen hundred years ago during the golden period of the Gupta dynasty. It is based on ancient Indian scriptures and treatises such as the Vedas—perhaps the world's oldest sacred text. The Vedas describe a fourfold purpose of human life—*dharma* (duty), *artha* (wealth), *kama* (pleasure), and *moksha* (liberation of the soul). Of them, *kama*, or sex, is considered indispensable for complete human self-fulfillment and happiness.

What makes Vatsyayana's *Kama Sutra* a unique work is its universal appeal and the value it places on the systematic treatment of sex both as a science and an art. It lays down scientific principles of various forms of lovemaking while fully taking the human anatomy and psychology into account. *Kama Sutra* lays out sixty-four lovemaking practices. Vatsyayana recommends maintaining absolute privacy while studying the art and practice of sex. His erotic arts are known as Panchali. A woman well versed in its sixty-four practices is known as a *ganika* (courtesan). A *ganika* is a woman much sought after by kings, the rich, and other men highly placed in society. She is compensated by generous offerings of money and precious gifts.

In *Kama Sutra*, male and female are each divided into three categories: man as rabbit, bull, and horse; woman as dove, mare, and she-elephant. The rabbit is handsome, tender, and soft-spoken. The bull is stout and well shaped, emitting semen with a salty odor; the horse is sturdy, long-faced, and sexually passionate. Similarly, the woman characterized by the dove is exceptionally beautiful, engaging, and soft-spoken; her discharges are as fragrant as the blossoming lotus. A mare woman is slim, tall, and easily seduced. She emits a fishy aroma. The she-elephant woman is fat, gluttonous, awkward in demeanor, and highly

sexed. The size of the animal is related to the size of the genitalia. Thus, a happy and harmonious sexual relationship between a man and woman depends on having compatible qualities. Otherwise, *Kama Sutra* maintains, their sexual and married life will prove disastrous.

Vatsyayana describes eight steps to achieving sexual gratification. These include embracing, kissing, scratching with fingernails, biting, caressing, reversed coitus, and oral sex. He outlines three kinds of kissing by women: limited kiss, throbbing kiss, and probing kiss; five kinds of kissing by men: straight kiss, oblique kiss, evolving kiss, pressed kiss, and hard-pressed kiss. He also recommends the use of various Ayurvedic (India's traditional science of medicine) recipes for those men and women who cannot perform sexual intercourse successfully because of physical or psychological impediments. The text is remarkable, not only for providing detailed sexology, but also for being one of the very few ancient treatises referring to the geography of India. Vatsyayana imposes a kind of geographic determinism by maintaining that women have varying sexual proclivities relative to the climate of different regions of India they are native to.

KAMAKURA PERIOD Japan's Kamakura period (1185–1333) was the first time a truly non-aristocratic regime held sway over the nation. Toward the end of the Heian period (794–1185), two warrior clans, the Taira (or Heike) and the Minamoto (or Genji), came to have increasing power, as various aristocratic and imperial factions came to depend on them for protection. The Taira wielded great influence from 1156 until 1185, when they were defeated by the Minamoto in the Battle of Dannoura, but the more powerful they became, the more they divorced themselves from their military roots, adopting the habits and lifestyle of the court nobles. The Minamoto did not make that mistake, and their rule marked a new cultural and political age.

In 1192 Yoritomo had himself appointed Sei-itai shogun (Barbarian-quelling Generalissimo), or

shogun, by the emperor, and proceeded to establish a military government (*bakufu*) in Kamakura, some 400 kilometers away from the imperial capital in Kyoto. Minamoto control of the *bakufu* ended with Yoritomo, however: After his death, the Hojo family, natal family of Yoritomo's wife, established themselves as regents for the Minamoto shoguns, thereby usurping control.

Although the civil (imperial) government continued to exist during the Kamakura period, it was the military government that held real power in terms of land management, taxation, and policing. During the Heian period, more and more land had become exempt from taxation by the civil government; the Kamakura *bakufu* assigned a steward to all such estates and saw that the *bakufu* received a portion of the wealth from each. It also assigned constables to each estate to marshal the estate in times of conflict.

Culturally, the Kamakura period saw the flowering of popular, faith-oriented, sects of Buddhism. Pure Land Buddhism, which taught that the Western Paradise of the Buddha Amida could be attained through the recitation of the Buddha's name, became very popular as it promised relatively easy salvation for all. True Pure Land, introduced by the monk Shinran (1173–

JAPAN— HISTORICAL PERIODS

1262) in 1224 as an offshoot of Pure Land, simplified matters further by requiring only one such recitation, if made sincerely. The monk Nichiren (1222–1282) ascribed the same benefits to recitation of praise for the Lotus Sutra and denigrated other forms of Buddhism as false religion. Two schools of Zen Buddhism (in Chinese, Chan Buddhism), Soto and Rinzai, were also introduced during the Kamakura period and were adopted by the warrior class, who found their self-discipline and asceticism in keeping with warrior values. With Zen came the habit of drinking tea and the beginnings of the Japanese tea ceremony. In literature, war romances were popular, as were oral recitations of the *Heike monogatari* (Tale of the Heike), the story of the rise and fall of the Taira clan. The Buddhist theme of the evanescence of all things (*mujo*) permeates the tale.

KANAGAWA (2002 est. pop. 8.6 million). Kanagawa Prefecture is situated in the central region of Japan's island of Honshu, where it occupies an area of 2,403 square kilometers. Its main geographical features are western mountains, southeastern plains, and the rivers Sagami-gawa and Tamagawa. It is bordered by Tokyo and Sagami Bays and by Tokyo, Shizuoka, and Yamanashi Prefectures. Once known as Sagami Province, it assumed its present name in 1876 and present borders in 1893.

The prefecture's capital is Yokohama (2002 estimated population 3.5 million), beside the nation's major harbor. Yokohama was a small fishing village until 1858, when it was opened to Western ships and soon housed a residential compound of foreign diplomats and traders. In 1872, the nation's first railway linked its port to Tokyo. The 1923 earthquake leveled sixty thousand buildings and took twenty thousand lives. World War II bombing raids destroyed nearly half the city in 1945. Present-day Yokohama is at the heart of

the Keihin Industrial Zone, which extends to Tokyo. The prefecture's other important cities are Kawasaki, Yokosuka, Fujisawa, Sagami-hara, and Hiratsuka.

During the Kamakura shogunate (1185–1333), Japan's military capital was in Kamakura, along the southeastern coast. During the Edo period (1600/1603–1868), the region linked Edo (Tokyo) to the western areas of Japan. Today as a major industrial center, Kanagawa produces automobiles, steel, electric appliances, and chemicals and processes petroleum and foodstuffs. Visitors are drawn to Kamakura's historical sites and to its mammoth Buddha statue. A vacation spot popular with Tokyo residents is the Hakone region of Fuji-Hakone-Izu National Park.

KANDAHAR (2002 est. pop. of city 339,000). Kandahar, in southern Afghanistan, is the country's second largest city and capital of Kandahar province. Its strategic location—especially when linked with Kabul 483 kilometers to the northeast—has contributed to its political significance in the region since antiquity. It has also been a center for local trade and a nexus in extraregional trade networks since early times. It is the largest urban center of Afghanistan's Pashto-dominated south.

According to some sources, Kandahar was a city in the Achaemenid empire from the sixth through fifth centuries BCE. Other sources trace its origins to the Greek Alexandria Arachosiorum, founded by Alexander of Macedon in the fourth century BCE—the city's name apparently deriving from the eastern variation of Alexander (Iskander). Kandahar's independence from Safavid Persia in the eighteenth century was a critical event in the eventual rise of an Afghan state. The city was Afghanistan's capital for almost three decades in the eighteenth century and was later occupied by British forces twice during nineteenth-century Anglo-Russian struggles over Eurasia.

Kandahar had well-irrigated gardens and orchards and was famous for its grapes, melons, and pomegranates, but these were made inaccessible by land mines or destroyed outright in the conflict between the Soviets and the mujahideen, Islamic guerrilla fighters during the Soviet occupation. The city is of significant strategic importance in the region due to the

KANDAHAR IN 1908

This 1908 description provides some understanding of the importance of Kandahar and of southern Afghanistan as a route for trade goods that flowed east and west across Asia.

Kandahar is one of the principal trade centers in Afghanistan. There are no manufactures or industries of any importance peculiar to the city; but long lines of bazars display goods from Great Britain, India, Russia, Persia, and Turkistan, embracing a trade area as large probably as that of any city in Asia. The customs and town dues together amount to a sum equal to the land revenue of the entire province. The Hindus are the most numerous and wealthiest merchants in Kandahar, carrying on a profitable trade in with Bombay and Sind. They import British manufactures, e.g. silks, calicos, muslins, chintzes, broadcloth, and hardware; and Indian produce, such as indigo, spices, and sugar. They export asafoetida, madder, wool, dried fruits, tobacco, silk, rosaries, etc. In 1903-4 the exports to India from Kandahar were valued at nearly 35 lakhs, and the imports at 33 lakhs.

KANDY (2001 pop. 105,000). Kandy is an ancient capital city situated in the central highlands of Sri Lanka, some 120 kilometers inland by rail from the capital of Colombo. Its hilly location is 560 meters above sea level. Kandy is chiefly famous among Buddhists for the Dalada Malagawa, the Temple of the Tooth, which enshrines as a relic a purported tooth of the Buddha. There are a dozen other Buddhist temples and several Hindu ones. In the center of the town

is a beautifully placed artificial lake, constructed by the last king, Sri Vikrama Raja Singha (reigned 1798–1815), in 1806. Nearby, at Peredeniya, a fine botanical garden and the main campus of the University of Sri Lanka can be seen.

In 1472–1473, the city became the capital of a Sinhalese kingdom under Vimala Dharma (reigned 1592–

KANDY—WORLD HERITAGE SITE

The picturesque hilltop city of Kandy was designated a UNESCO World Heritage Site in 1988. The sacred city, the last capital of the Sinhalese empire that ruled for 2,500 years, remains an important destination for Buddhist pilgrims.

A row of stores on a street in Kandy, Sri Lanka. (CHARLES & JOSETTE LENARS/CORBIS)

1604). In 1763, it was occupied by the Dutch. Forty years later, the British took possession of the territory, but the garrison was subsequently massacred, and it was only in 1814–1815 that Sri Vikrama Raja Singha was defeated and dethroned. From 1815 to 1948, the kingdom formed part of the British Crown Colony of Ceylon.

A particular style of ritual dancing, called Kandyan dance or "devil dancing," has developed in this area. It is typically marked by loud drumming and stamping with the feet splayed wide apart. It is best observed during the great annual religious procession through the city, called the Perahera.

KANG YOUWEI (1858–1927), Chinese reformer. Born in 1858 in Hainan, Guangdong Province, China, Kang Youwei was a precocious scholar who was impressed both by British-run port cities and later by the Meiji Restoration in Japan. Kang wrote directly to the Guang Xu emperor (1871–1908) in 1888 asking for a comprehensive reform to enhance China's power.

Kang then became famous as a key figure in a long-running and complex debate over the relative merits of new or old texts of Confucian classics. He rallied more than one thousand scholars who were participating in official examinations in Beijing in 1895 and petitioned the emperor to refuse the Shimonoseki Treaty that China signed with Japan after the first Sino-Japanese War (1894–1895) and to carry out more radical reforms. He received his degree that year despite conservative opposition.

He then had a forum for his ideas, and he bitterly attacked the old ways in China and called for dramatic changes in the Qing dynasty's (1644–1912) system of government, all within the context of reinterpreting the Confucian classics. For a brief time, during the so-called Hundred Days Reform, the impetuous young emperor listened to Kang, but when the conservatives counterattacked, Kang had to flee China, and the pace of change thereafter overtook his once-radical ideas. Kang Youwei died in 1927.

The peak of Mount Kangchenjunga as seen from Darjeeling, India. (BRIAN A. VIKANDER/CORBIS)

KANGCHENJUNGA, MOUNT Mount Kangchenjunga (also Kinchenjunga), in the eastern Himalayan range, is the third-highest mountain in the world. The highest of its five peaks rises to 8,598 meters, only a few meters less than K2, also in the Himalayas. Its Tibetan name, Gangchhendzonga, means "Five treasures of the snows," in reference to its peaks, which the Sikkimese consider sacred.

The mountain rises on the Sikkim-Nepal border close to Tibet. The Zemu glacier lies on the eastern face of Kangchenjunga, or Kumbhakaran Lungur as it is called in Nepali. The mountain is best seen from the Indian hill-station of Darjeeling, making a grand spectacle on the northern horizon as it dominates all its surroundings.

Many attempts to scale Kangchenjunga from 1929 onward ended in failure and disaster. In 1955 a British expedition led by the Welsh mountaineer Charles Evans succeeded in ascending Kangchenjunga, but stopped a few meters short of the peak to honor the beliefs of the Lepcha inhabitants who consider the mountain a deity.

KANGWON PROVINCE (2002 est. combined pop. 3.2 million). Kangwon Province, one of two provinces divided between North and South Korea, is located on the central eastern coast of the Korean Penin-

sula. Its combined area is 28,050 square kilometers, with 16,898 square kilometers in the south and 11,152 square kilometers in the north. Until 1395 the province was known as Kangnung-do. It is among the least densely populated areas of Korea. The populations of Kangwon in North and South Korea are roughly 1.6 million, respectively. The capitals of Kangwon are Ch'un ch'on in the south and Wonsan in the north. Other important cities in the south include Kangnung and Wonju.

The province is widely known for its great natural beauty, especially along the coast and in the mountains. The Taebaek mountain range, the backbone of the peninsula, runs north-south along the east coast of the province, with its crest approximately 16 kilometers inland. This range is home to Mount Keumkang and Mount Sorak, two of the most scenic mountains in North and South Korea, respectively. Forest still covers 81 percent of the province.

During the World War II Japanese occupation and postwar period, the economy of southern Kangwon was based on mining, agriculture, and heavy industry. In recent years the mining industry has declined, and tourism has emerged as an important economic activity.

KANNO SUGA (1881–1911), Japanese political activist. Kanno Suga was born in Osaka. Her mother died when she was ten, and her father remarried a woman who was the proverbial bad stepmother to Kanno. At fifteen, Kanno was raped. She became acquainted with socialism by reading an essay defending rape victims. At seventeen, she married into a merchant family in Tokyo to escape her stepmother. She did not return to Osaka until 1902 after her stepmother had left.

Kanno began working at a newspaper and became involved in a Christian women's movement fighting the legal brothel system. When the Russo-Japanese War broke out, she joined the Christian-socialist peace movement. In 1906, she took over a newspaper in Wakayama Prefecture and began a common-law relationship with socialist Arahata Kanson (1887–1981).

After moving to Tokyo, she attended a socialist-anarchist rally where prominent movement leaders were arrested in the Red Flag Incident of June 1908. When visiting her friends in prison she was arrested. After two months she was released and became acquainted with anarchist Kotoku Shusui (1871–1911). They started the publication of an anarchist journal, which was banned by authorities. Kanno was sent back to prison. While in prison, her involvement in a plot to assassinate the emperor was uncovered. With twenty-three others, Kanno was sentenced to death, and on 24 January 1911 she was hanged.

KANPUR (2001 est. pop. 2.5 million). A major industrial city on the Ganges River in Uttar Pradesh State in northern India, Kanpur was called Cawnpore under British rule, from the ancient town Kanhpur ("city of the husband"), referring to the Hindu god Krishna. Acquired by the British in 1801, it grew rapidly from a village to 123,000 people by 1872 and almost two million by 1991. In the nineteenth century it hosted a large military base. Situated on major highways and railroads, it became a manufacturing center for textiles, leather goods, and ordnance, later supplemented by commerce and banking.

The city gained notoriety as the center of the Indian Mutiny or First War of Independence (1857–1858), a great uprising against British rule, in which

native forces killed and dismembered British women and children as well as soldiers. The British press used the event to illustrate the barbarity of the Indian people. Equally brutal British reprisals followed.

Kanpur boasts several colleges and technological, sugar, and textile institutes, including the Indian Institute of Technology and the National Sugar Institute. Of historical and religious importance is the Valmiki Ashram (associated with the epic poem *Ramayana*), a Hindu glass temple; the Shri Radhakrishna Temple; and museums with antiquities dating from 600 to 1600 BCE.

KANSAI REGION Kansai is a region in central Japan extending from the Sea of Japan to the Pacific Ocean. It includes the Kinki Region in Honshu (the prefectures of Kyoto, Osaka, Mie, Shiga, Hyogo, Nara, and Wakayama), and more broadly is extended to Fukui Prefecture and a part of Shikoku. The term "Kansai" usually connotes a cultural and historical viewpoint, whereas the Kinki Region is an administrative and geographical designation that has clearly defined boundaries. Kansai means "west of barriers" and was used in comparison to Kanto, "east of barriers." A barrier is a checkpoint or *seki* set up on the frontier between the emperor's residence and the outside world. During the Kamakura period (1185–1333), Kansai and Kanto were separated by three checkpoints, "Suzu station" (today Mie Prefecture), "Fuwa station" (Gifu Prefecture), and "Arachi station" (Fukui Prefecture).

Kansai has a rich cultural heritage and played an important role in politics, economics, and culture from ancient times. The capitals of Japan were located in Kansai, Heijo-kyo (Nara City) from 710 and Heian-kyo (Kyoto City) from 794 until the seventeenth century. Presently, Kyoto-Osaka-Kobe form the center of the Kansai Region—the second economic pole after Tokyo (in the Kanto Region).

KANTO REGION (2001 est. pop. 40.1 million). Located in the east central part of Honshu in Japan, Kanto contains the prefectures of Tokyo, Chiba, Saitama, Kanagawa, Gumma, Ibaraki, and Tochigi. It has an area of 32,421 square kilometers. It is referred to in contrast to the Kansai Region. Kanto is the most populated region and the political, economic, and cultural center of the nation. The region's core is the metropolitan area with Tokyo, Yokohama, Kawasaki, and Chiba. There are some criticisms about concentration of these different functions, and suggestions that it may be necessary to decentralize some of them to other locations in Japan for a more balanced regional development. The Japanese government has even considered transferring the capital.

The Keihin (Tokyo-Yokohama district) Industrial Area is Japan's leading commercial and industrial area. Agriculture is declining but still plays an important role in the region's economy. The Tone River has the largest basin of all Japanese rivers and is an important source of water for agriculture in the Kanto Plain as well as for urban and industrial use. Coastal fishing in the Pacific Ocean and Tokyo Bay has declined because of vastly increased catches by deep-sea fishing trawlers and also because of the pollution and land reclamation in Tokyo Bay.

KAO-HSIUNG (2002 est. pop. 1.5 million). Kao-hsiung (in Pinyin, Gaoxiong) is Taiwan's second-largest city. It is situated on the southwest coast of the island. The city was founded during the Ming dynasty (1368–1644) and was under Dutch occupation from 1624 to 1660. In 1863, Kao-hsiung became a treaty port for trade with the European colonial powers. During the Japanese occupation (1895–1945) of Taiwan, Kao-hsiung was transformed into a major industrial center, and the port sustained heavy damage during World War II. The port was rebuilt, and in the 1970s and 1980s it became Taiwan's single-most important seaport, covering an area of 154 square kilometers. It has shipyards, steel mills, and other heavy industry, as well as Asia's biggest oil refinery with large petrochemical industries. Thus, it is not surprising that the city is among the most heavily polluted in Taiwan. The port also has a large fleet of fishing boats, and agricultural products are exported from Kao-hsiung by ship. Kao-hsiung is of strategic importance with its big naval

base. The city enjoys equal status with Taipei and is administered directly by an executive committee (*yuan*) instead of the Taiwan provincial government. Kao-hsiung has a university and several higher education institutions and an international airport.

KAPITAN CINA The Kapitan Cina (Chinese captains) were Chinese individuals appointed by local native chiefs and colonial authorities in Asia to mediate with the heterogeneous migrant Chinese populace in their provinces and colonies. The honorific title conferred upon an individual the highest status of leadership of the community.

In Melaka on the Malay Peninsula, the Kapitan system was first adopted in the sixteenth century, first by the Portuguese colonizers and then by the Dutch colonizers. This system continued during British rule and was extended to the Straits Settlements (consisting of Melaka, Penang, and Singapore) and then the Malay States. However, as British power consolidated throughout the peninsula, and as more Chinese immigrants poured into the urban centers, mines, and plantations, the political power of the Kapitan system was seen as a threat to the colonial administrators. It was thus phased out, first in the Straits Settlements and then in the Malay States by the beginning of the twentieth century. It was replaced by various administrative institutions such as Chinese Advisory Boards.

The responsibilities of the Kapitan Cina included looking after the general welfare of the Chinese populace, enforcing law and order, and collecting revenue for the authorities. As Kapitan Cina, they were supposed to transcend the clan and dialect differences among the Chinese populace. In reality, however, the Kapitan Cina were appointed from the dominant dialect groups, and their interests were subsequently better looked after. Minority groups, in turn, formed their own dialect organizations to pool their resources for collective self-help.

Before their appointment as Kapitan Cina, most of these individuals were already established leaders among their Chinese dialect groups. Many were also successful *towkays* (merchant-entrepreneurs) and "rev-

enue farmers" who held monopoly rights to collect taxes on alcohol, opium, and so forth supplied to the workforce in the mines and plantations.

Neither funds nor manpower was usually extended to the Kapitan Cina by the colonial authorities in carrying out their official duties. For many Kapitan Cina, Chinese temples thus became their de facto administrative centers. Additionally, many forged close links with Chinese secret societies in order to enforce their authority and power. When secret societies were eventually banned (in 1890) by the colonial authorities, the Kapitan Cina redirected their attention to dialect organizations.

KARABAG Karabag (Karabagh, Karabakh) is a region in southeastern Azerbaijan, between the Caucasus and Karabakh mountain ranges. The chief towns are Xankandi and Shusha. Karabag contains many mineral springs as well as substantial deposits of limestone and marble. Farming, sheep herding, and light industries are the primary economic activities. The population is approximately 76 percent Armenian with a substantial Azeri minority and smaller Russian and Kurdish communities.

The region was part of the ancient kingdom of Caucasian Albania before being taken over by Armenia in the first century CE. It was ruled by the Armenian princes of Artsakh (as vassals to various Arab regimes from the seventh century) until conquest by the Seljuks under Alp Arslan (c. 1030–1072/73). It was first called Karabag (Turkish for "Black Garden") during the rule of the Ilkhanid Mongols in the 1300s. It was fought over by Turkey and Persia (Iran) before gaining independence under the Djevanshir family in the mid-1700s. The khanate of Karabag became a vassal to Russia in 1805 and was fully incorporated in 1822. Following the establishment of the Soviet Union it was attached to Azerbaijan as the Nagorno-Karabakh Autonomous Oblast (1923).

In the late 1980s, Armenia and Azerbaijan went to war over Karabag. By the end of 1993, Armenian forces had conquered much of the region, displacing over 1 million refugees. A cease-fire was reached with Russian aid in 1994. In 1996, the parliament of Nagorno-Karabakh declared independence, largely unrecognized by the international community. The ultimate disposition of the territory and refugees has yet to be resolved.

KARACHI (1998 pop. 9 million). Before 1725 CE, Karachi, the capital of Pakistan's Sindh Province, was just a desolate geographic region, with the waters of the Arabian Sea lapping over it on three sides. It now boasts a population of over 9 million and is a commercial and industrial center for Pakistan.

Karachi is a city of contrasts where old and new elements blend together. Bazaars reflect the heritage of trade that is at the economic foundation of this city, while a nuclear power plant and higher learning institutions denote its place in the modern era. It also is home to the largest international airport in Pakistan as well as being the chief terminal point for Pakistan's railway transportation system.

Being located on the shores of the Arabian Sea makes Karachi the ideal shipping port. As a result, about 15 billion tons of cargo come through its harbor every year. The sea and Karachi's exceptional weather of constant sunshine throughout the year also

A broad view of Karachi, Pakistan. (NIK WHEELER/CORBIS)

make available recreational and sport activities, such as sailing, yachting, and scuba diving, to its inhabitants as well as foreign tourists to the area.

KARAKALPAKS The Karakalpaks (or Qaraqalpaq) are an ethnic group living mainly in the Republic of Karakalpakstan, which occupies the northwestern part of Uzbekistan, bordering Kazakhstan in the north and Turkmenistan in the southwest. There are approximately 600,000 Karakalpaks (based on a 2001 estimate), and about 95 percent of them live in Karakalpakstan. The rest live in various regions of Afghanistan, Kazakhstan, Kyrgyzstan, and Russia. The Karakalpak language belongs to the Kipchak or Kipchak Nogay linguistic subgroup of the Central Turkic group of the Altaic language family (it is close to Kazak, with a strong Uzbek influence). Karakalpaks used the Cyrillic alphabet until 1992; however, under Uzbekistani government pressure, they changed to the Latin alphabet in the mid-1990s (the process is still incomplete due to financial restraints and other difficulties). The majority of Karakalpaks belong to the Hanafi school of Sunni Muslims, like the Kazakhs and Uzbeks. As a part of the independent republic of Uzbekistan, the Karakalpaks became independent from the Soviet Union on 1 September 1991.

Early History

The Karakalpaks have a rich history, rooted in the ancient Turkic tribal confederations in Central Asia. There are several competing schools of thought that attempt to explain the origin of the Karakalpaks. One school, which includes many Karakalpak historians, believes that their ancestors derived from the early Turks, who arrived in Central Asia between the sixth and eighth centuries, and the Oghuz and Pechenegs, who controlled the territory that is now west Kazakhstan and south-central Russia between the eighth and tenth centuries. These historians claim that the name "Karakalpak," which means "Black Hat" in Turkic, may be seen in the twelfth-century Russian chronicles in the form *Chernyi Klobuki*, which means "Black Hats" in Russian.

The opposing school argues that this similarity in terminology has no significance and that the Karakalpaks probably began to distinguish themselves from other Central Asian Turkic tribal confederations in the sixteenth century. According to this theory, after the devastating Mongol invasion of 1219–1221, which resulted in the death or disappearance of a sizable proportion of the population as well as in the destruction of a significant portion of the irrigation system that had been developed by the settled population of the Khorezm khanate, the ancestors of the Karakalpak tribes came under the Nogay Horde, which occupied territory in the Northwestern Central Asian region, including present-day Turkmenistan, western Kazakhstan, and southern Russia. Probably around the fifteenth and sixteenth centuries, Islam established itself among these tribes (mainly through the activities of the Sufi orders), although early contacts with the Islamic world can be traced to the tenth and eleventh centuries.

By the sixteenth century, the Karakalpaks had begun clearly to differentiate themselves from the Kazakh, Turkmen, and Uzbek tribes and their neighbors and started calling themselves the Karakalpaks. The Karakalpaks controlled the territory of the lower delta of the Syr Dar'ya River, although they frequently moved north and south of this area due to pressure from neighbors and ecological changes, such as droughts and desertification. They gradually consolidated into an amorphous tribal confederation, building their economy on trade with neighboring states, agriculture, and animal husbandry. Throughout the seventeenth and eighteenth centuries, the Karakalpaks were subjects of the Bukhara khanate (1753–1920), the Kichi Dzhuz (one of the three Kazakh tribal confederations), and the Khiva khanate (1511–1920). In the eighteenth century, there was another important change as most of the Karakalpak tribes moved to the lower delta of the Amu Dar'ya River (this territory corresponds to the present Karakalpak state).

In the early nineteenth century, declining regional trade, technological backwardness, and the Khiva khanate's inability to secure political stability led to economic depression in the area populated by the Karakalpaks. These were the main factors that led the Karakalpaks to offer no or little resistance to Russia's advancement into their land. In 1873, the Karakalpaks' territory became a protectorate of the Russian empire as Russia advanced into Turkistan. Russian rule brought some positive changes, ending the numerous conflicts and political instability in this area, although emerging Russian capitalism aggravated the economic disparities in Karakalpak society.

Soviet Rule

After the Russian empire collapsed in 1917, the Bolsheviks struggled to establish their dominance in Central Asia. They overcame the resistance of the Basmachi movement (a popular militant resistance often sponsored by the British government), and by 1920 they had established full control. In 1925, as the result of national delimitations in Central Asia, the Karakalpak Autonomous Province was established (as part of the Russian Federation), uniting most of the territory populated by the Karakalpaks into a single political entity. In March 1932, it was transformed into the Karakalpak Autonomous Soviet Socialist Republic (part of the Russian Federation). In December 1936, the Karakalpak Autonomous Soviet Socialist Republic was transferred to the Uzbek Soviet Socialist Republic.

Under Soviet rule, the Karakalpaks experienced major changes such as modernization, industrialization, urbanization, eradication of mass illiteracy, and establishment of a modern system of education. The Soviet authorities encouraged the creation of codified written languages, changing from the Arabic alphabet to the Roman alphabet (1928) and then to Cyrillic (1940), and promoted the development of literature, art, and science in the Karakalpak language. The literacy rate was lifted from 1.3 percent in 1926 to 98 percent in 1989; major diseases and the high child mortality rate were halted (at the beginning of the twentieth century, the Karakalpaks had been under threat of extinction due to the absence of medical services, high infant mortality, and epidemics); and a comprehensive social-welfare system was established. However, the Karakalpaks paid a heavy price for these changes, as the political opposition and pre-Soviet era intelligentsia disappeared in Stalin's brutal purges, and intensive agriculture, notably cotton growing, caused ecological disasters such as the Aral Sea's dramatic shrinkage, drinking-water pollution, and salinization of arable land.

Independence

On 1 September 1991, Uzbekistan declared its independence from the Soviet Union. In December 1991, the founding member-states of the Soviet Union signed the historic document of dissolution of the U.S.S.R. This action peacefully ended almost seventy-two years of Soviet rule. The first post-Soviet constitution of Uzbekistan granted to the Karakalpaks the status of a "sovereign republic" with its own constitution and separate judiciary, but retained Tashkent's control over defense, foreign policy, and taxation, among other issues.

Karakalpak Society

Most Karakalpaks live in predominantly rural areas and preserve many major features of their traditional life. Large families with more than four children are quite common; in 1999, the average size of a Karakalpak rural family was 6.7 people, down from 7.1 in 1989. Several generations often live in the same household or in close neighborhoods. Groups of extended families form a subclanic unit called the *kosbe*; several *kosbes* make up the *uru*. People are still expected to trace their ancestors back as many as seven generations and to know their tribal affiliation. During major events and family gatherings, the *bakbsy* (folk singers) or the *zhyrau* (storytellers) are often invited to sing the songs of heroes, the *dastans* (epics), and to play traditional musical instruments, such as the *dutar* (a two-stringed, plucked instrument), the *kobuz* (bowed instruments), and various others. Many Karakalpak families still create such craft items as homemade rugs, carpet braids (*akkur*), broad fringes (*zhanbau*), and silver jewelry.

KARAKALPAKSTAN—PROFILE (2002 est. pop. 1.6 million). Karakalpakstan, officially the Republic of Karakalpakstan (Qoraqalpokiston Respublikasy in Karakalpak, Karakalpakia in Russian), is an autonomous republic within the Republic of Uzbekistan in central Asia. It is bordered by Kazakhstan in the north, Turkmenistan in the southwest, and Uzbekistan in the east. It also shares with Kazakhstan the southern portion of the Aral Sea. The nation has an area of 165,600 square kilometers, and it is the largest administrative entity in the Republic of Uzbekistan, occupying almost 37 percent of its territory. Karakalpakstan's capital city, Nukus, is located in the northeast of the nation, a few kilometers from the border with Uzbekistan.

According to its constitution, Karakalpakstan has a broad autonomy in cultural, economic, and social issues, although in reality it is under strict centralized control of Uzbekistan's government.

Population

The population of Karakalpakstan is approximately 6 percent of the Uzbekistani population. It is a predominantly rural nation, with 48.4 percent of the population living in cities and towns. Nukus was home to about 254,000 people in 2002, up from 139,000 in 1985. The republic's population is young, with 37 percent below the age of fourteen and only 5 percent older than sixty-five. Karakalpakstan has a population growth rate of 1.6 percent or higher and a net migration rate of -2.18 migrants per 1,000 people. It is difficult to project the dynamics of population growth because of the remoteness of Karakalpakstan, scarce statistics, and a high infant mortality rate of more than 72 deaths per 1,000 live births in 1999. Karakalpakstan still has one of the lowest population densities in central Asia, standing at nine people per square kilometer. However, since the 1990s a number of young people have moved from rural areas to the areas around the capital in search of jobs and new opportunities.

Karakalpakstan is a multiethnic nation with a very diverse population. Karakalpaks make up approximately 32 percent of the population, Uzbeks around 30 percent, Kazakhs around 26 percent, and Turkmen around 4 percent; Russians, Tatars, Koreans, and other small groups make up the remaining 8 percent. Historically, the territory of Karakalpakstan was populated by ethnic groups of Turkic origin that migrated with their sheep and camels through the area. During Russian and Soviet rule, many Russians and people from different parts of the USSR were settled in the republic, many of them forcibly. Since 1991, the ethnic structure has changed slightly, as many urban Russians and other ethnic groups emigrated from Karakalpakstan, although the precise number is unknown.

In the late nineteenth and early twentieth centuries, the Karakalpaks were under the threat of extinction due to diseases, a high mortality rate, and the absence of medical services. After 1920, the Soviet government invested heavily in medical services and built a number of hospitals in the republic. The Soviet government also promoted the policy of population growth. For these and other reasons, the number of Karakalpaks almost doubled between 1926 and 1970 and again from 1970 to 1989, reaching 411,870 in 1989. According to the official estimates, there were around 600,000 Karakalpaks in 2001, most of them (around 95 percent) living in the republic.

Society, Religion, and Culture

The Karakalpak language belongs to the Kipchak or Kipchak-Nogay linguistic subgroup of the Central Turkic group of the Altaic language family (it is close to Kazakh with strong Uzbek influence), and it is the official language of the nation, along with Uzbek. The majority of the population, including ethnic minorities, speaks Karakalpak and Uzbek, although during the Soviet era the Russian language was widely used in administration and education. After 1991, Turkey offered assistance to Uzbekistan, and consequently to Karakalpakstan, in shifting from the Cyrillic to Latin script (Soviet authorities initiated the shift from the Arabic alphabet to Latin in 1928 and then from Latin to Cyrillic in 1940).

The majority of Karakalpakstan's population (around 96 percent) is Muslim. The Karakalpaks embraced Islam mainly through the activities of the Sufi (Muslim mystic) orders in the thirteenth and fourteenth centuries, although some elements of shamanistic rituals from the pre-Islamic era may still be traced in the republic.

The people in Karakalpakstan strongly preserve major features of a traditional seminomadic society, and interethnic marriages and migration outside of the republic are still rare. Tribal affiliation still plays an important role in everyday life in Karakalpak society. Groups of extended families usually live together and form a subclanic unit called the *kosbe*; several *kosbes* make up an *uru*. Soviet modernization contributed to the preservation of these traditional structures by encouraging the Karakalpaks to settle and to join the *kolkhozy* and *sovkhozy* (state-controlled collective farms) in the 1920s and 1930s. Whole families and *kosbes* settled collectively in the same place and joined the same *kolkhozy*. Karakalpaks, especially in rural areas, continue to keep ancient secrets of their traditional arts of homemade rugs, carpet braids (*akkur*), broad fringes (*zhanbau*), and silver jewelry for family use, for dowry, and increasingly for commercial sale in the market.

Political System

The Karakalpaks are first mentioned in various sources in the sixteenth century. Their political organization resembled typical nomadic political entities, which were characterized by an absence of strong centralized political authority and rigid political organizations. The tribes and subtribal groups were governed by the *bis* or *batyrs* (representatives of tribal nobility and armed leaders). Various historical sources mention that the Karakalpaks were subjects of the Bukhara khanate in the seventeenth century and then subjects of the Kazakh khans in the eighteenth century. In the

late eighteenth and early nineteenth centuries, the Khiva khanate became increasingly active in the areas traditionally populated by the Karakalpak tribes, and by 1811 most of the Karakalpak tribes came under the rule of Khiva, in spite of their considerable resistance and uprisings. The Khiva khanate itself became a Russian protectorate in 1873. This development divided the Karakalpak tribes: those who lived on the right bank of the Amu Dar'ya River became subjects of the Russian empire, and those who lived on the left bank were still subjects of the Khiva ruler.

After the 1917 Bolshevik Revolution, the Karakalpak territory on the right bank of the Amu Dar'ya was incorporated into the Turkistan Autonomous Soviet Socialist Republic (TASSR), whereas a significant number of the Karakalpaks remained under the Khiva khanate, and later, after its abolishment, under the Khorezm People's Soviet Republic. In 1924, the TASSR government agreed to bring together the land populated by the Karakalpaks into one political entity, and in 1925 the Karakalpak Autonomous Province was established as a part of the Russian federation. This action united most of the territory populated by the Karakalpaks into a single political entity. In March 1932, the Karakalpak Autonomous Province was transformed into the Karakalpak Autonomous Soviet Socialist Republic (KASSR) within the Kazakh ASSR (still a part of the Russian federation). In December 1936, the KASSR was transferred to the Uzbek Soviet Socialist Republic. Under the Soviets, there was an attempt to replace the traditional political organization of the society with a system based on political parties, parliamentary legislation, and Communist ideology. Karakalpakstan preserved its one-party political system, dominated by the Communist Party, until 1991.

On 1 September 1991, Uzbekistan declared its independence from the Soviet Union, and in December 1991 the founding republics of the Soviet Union signed a historic document mandating the peaceful and voluntary dissolution of the USSR. On 8 December 1992, Uzbekistan adopted its first post-Soviet constitution. It granted the Karakalpak ASSR the status of a "sovereign republic," its own constitution, independence in administrative issues, and a separate judiciary. This constitution was influenced by the Soviet legal tradition, especially in arranging the center-province relations and defining the terms for cultural and political autonomy. Constitutionally, Karakalpakstan, as a part of the Republic of Uzbekistan, enjoys broad autonomy in internal administrative and cultural affairs, although the conduct of foreign policy and foreign trade is firmly in the hands of the central authorities in Tashkent, the capital of Uzbekistan. Karakalpakstan has its own gov-

ernment and, theoretically, the right to leave the Republic of Uzbekistan through national referendum, although the detailed procedure for the referendum was not established. Karakalpakstan, along with Uzbekistan, abandoned the one-party political system in 1991. At present, any political party is tolerated as long as it acts within the framework of the law, is loyal to the regime, and is officially registered by government authorities. According to official reports, at present there are several active parties in the republic. All of them are progovernment parties, approved by the Uzbekistani government, and often they act as the branches of larger Uzbekistani parties, such as the People's Democratic Party (formerly the Communist Party), Vatan Tarakiyoti (Fatherland Progress Party), Milly Tiklanish (Democratic National Rebirth Party), and others. However, tribal and ethnic political mobilization is still strong in Karakalpakstan and plays an important role in domestic politics.

Economy

Karakalpakstan has a relatively small economy due to its small size (slightly larger than the state of New York), harsh climate, small population, and extremely limited natural resources. Agriculture and agricultural-product processing are the two main sectors of the national economy. Traditionally, most of the Karakalpaks were engaged in subsistence animal husbandry, raising sheep, goats, and cattle, and a few of them were engaged in crop cultivation (mainly around the Amu Dar'ya River). Most of Karakalpakstan is dry land unsuitable for crop cultivation without substantial irrigation, although vast areas in the west and northwest of the republic could be used as pasture for sheep and goats. The areas in the south traditionally have well-established irrigation systems, and these areas produce most of the cotton and silk. The areas in the north, mainly near the Aral Sea, were affected by salinization caused by the intensive use of water from the Amu Dar'ya River for the irrigation of cotton fields in other regions of Uzbekistan. In the 1980s and 1990s, almost the entire outflow of this river was taken for irrigation, causing shrinking of the Aral Sea from 68,000 square kilometers in 1960 to 33,800 square kilometers in 1992 (the sea's volume was reduced by around 75 percent). Despite this natural disaster the republic has significant economic potential because it has unexploited natural resources, including oil and possibly minerals.

After establishing the Soviet political system in the middle of the 1920s, the Soviet authorities introduced major economic changes throughout the Soviet Union. They nationalized most businesses, banned private ownership of land, and introduced central state

planning and control over the economy. Most Karakalpaks were drawn to *kolkhozy* and were encouraged to abandon subsistence agriculture in favor of intensive agricultural production for the all-union market. Karakalpakstan significantly increased production of cotton, meat, wool, and other products for the Soviet market. Karakalpakstan established its industrial sector based mainly on agricultural-product processing. The government built new roads, electrical power stations, and new industrial enterprises. At the same time, private entrepreneurship was strongly discouraged, and cost inefficiencies and ecological downsides of large-scale production were ignored. Karakalpakstan relied heavily on subsidies from the central state budget due to price and other economic distortion and extensive centralized control.

After dissolution of the USSR, the government of Karakalpakstan, along with the government of Uzbekistan, adopted a policy of gradual change, slowly abandoning the centralized planning and easing state control over enterprises, dismantling collective farms, and privatizing most small and medium-sized enterprises. Subsidies to support local enterprises were significantly reduced, but unlike in Kazakhstan and Kyrgyzstan, they were not abandoned completely.

Karakalpakstan, along with Uzbekistan, experienced painful economic decline after independence as the Soviet market on which it had depended collapsed. It did not suffer in this regard as severely as neighboring Kazakhstan or Turkmenistan, however. Statistical data for Karakalpakstan are often unavailable, but its economic development is largely in line with Uzbekistan's as its economic policy is defined in Tashkent. According to the World Bank, Uzbekistan's agricultural sector accounts for 32.9 percent of gross domestic product (GDP), with industry accounting for 24.5 percent and services 37.8 percent. Between 1989 and 1999 average annual GDP growth in Uzbekistan was negative, declining at an annual average of around 1.0 percent, with industrial production declining at an annual average of 4.0 percent and agriculture 0.2 percent.

Agriculture is not only the most important sector of Karakalpakstan's economy, but also the source of income for almost half of the population. Animal herding provides everyday food and a mode of transportation; livestock are also an important export. The Karakalpaks migrate around vast prairies and deserts raising horses, sheep, goats, cattle, and camels. In 2000, livestock numbers in Karakalpakstan reached 383,800 cattle, 466,900 sheep, and 16,800 horses. Crop cultivation (cotton, rice, corn, vegetables) in Karakalpakstan is limited due to the extremely dry continental climate and a chronic water shortage. After privatization of the large state-controlled

farms and the creation of a system of small private farming, crop production fell sharply. A combination of mismanagement and ecological disaster related to the declining level of the Aral Sea led to depression in the agricultural-product processing industries. Since 1991, many farmers have struggled to adapt to the new economic realities and have turned to a subsistence economy. In 2000, Karakalpakstan experienced its worst drought in decades, and its government requested food assistance of 80,000 metric tons of wheat and 3,000 metric tons of vegetable oil for distribution to 1.1 million people in rural regions.

The industrial sector is relatively small and includes light industry (leather goods and carpets), agricultural-product processing plants, food-processing plants, and mining. Oil, limestone, gypsum, asbestos, and marble are major natural resources of export significance. Karakalpakstan still relies largely on Russian technology in this sector of the economy, although Russian involvement began to diminish during the 1990s, and multinational corporations started to move into the mining sector.

Tourism is an underdeveloped sector of the economy, limited by lack of accommodation facilities and transport infrastructure. However, it has great potential, especially in adventure tourism, due to the fascinating history of the Silk Road and rare historical sites, including the ancient ruins of Toprak-Kala (dating to approximately the first or second century CE). The retail sector is also quite underdeveloped by Western standards and consists of numerous small shops and restaurants.

Electrical power is supplied by the Takhiatash and other electric power stations, covering the republic's needs and exporting the balance to other parts of Uzbekistan. However, due to inadequate maintenance and underinvestment, power cuts are frequent, and some remote areas still live without electricity, using instead diesel, wood, and dried cattle and camel dung as fuel. In the 1950s, a railway was built, connecting Uzbekistan with the Russian railway system via Karakalpakstan. Highways are unevenly distributed, and only 1,172 kilometers are paved, mainly in the southeastern part of the republic. In the north and northwest, horses and camels are still important modes of transportation.

Since the early 1990s, the government of Uzbekistan has been conducting a policy of economic liberalization and deregulation, encouraging the private sector and foreign investments. According to the Ministry of Macroeconomics and Statistics (MMS), the 9,069 small and medium-sized enterprises registered in Karakalpakstan in July 2000 accounted for 4.6 percent of all en-

terprises in Uzbekistan. Their total exports reached \$33,105,000 in 1999. Karakalpakstan attracted 13.8 billion sums (the currency of Uzbekistan) of investments (official exchange rate in 2000: 141.4 sums per \$1) or 9,100 sums per capita (fourth highest among regions in Uzbekistan). Karakalpakstan increasingly relies on the export of raw materials to the international market, and it is extremely vulnerable to fluctuations in world prices for its major export products—cotton and wool.

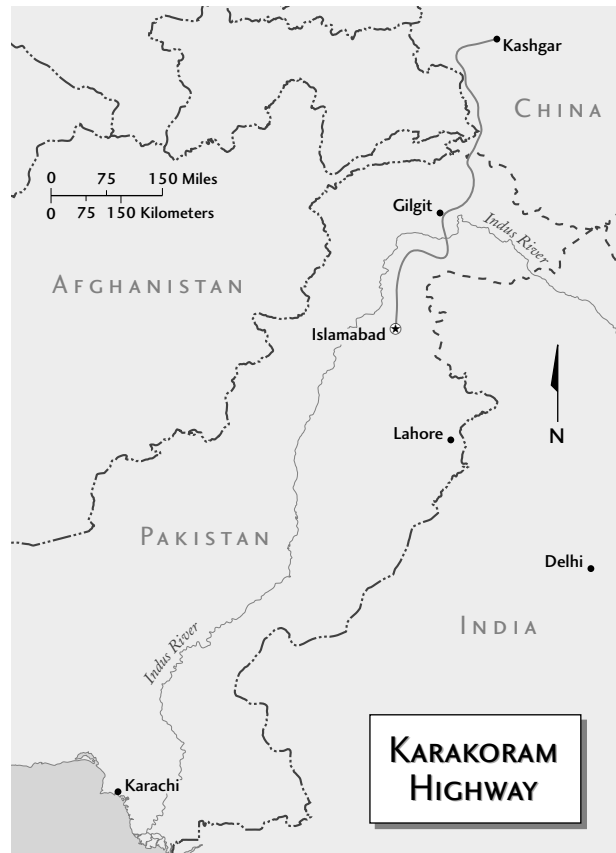

The economic changes of the 1990s, including the partial liberalization of the economy and abandonment of state guarantees of employment, hit the population of Karakalpakstan hard. According to the MMS, in Karakalpakstan the labor force stood at 484,000 in 2000, and the number of registered unemployed was around 8,700 or 2 percent. However, international assistance organizations and experts put the unemployment rate much higher, at 20–25 percent of the labor force. In 1999, the United Nations Development Programme (UNDP) Human Development Index put Uzbekistan in 106th place, behind Moldova and Cape Verde but ahead of Algeria, Vietnam, and Indonesia. According to the Uzbekistani national UNDP report, in Karakalpakstan the real GDP per capita was 42.4 percent lower than in Uzbekistan overall in 1999.

KARAKORAM HIGHWAY The Karakoram Highway, known to the Chinese as the Friendship Highway, is an engineering masterpiece. It is a stretch of highway that was built in the north of Pakistan, where some of the mountains extend to altitudes of seven to eight thousand meters. The Karakoram

Highway runs along the Indus River and then dips into the Gilgit and Hunza valleys, culminating in a climb of 4,800 meters to the Khunjerab Pass, which serves as a dividing line between Pakistan and China. It took twenty years to complete the highway, which began in 1966 as the brainchild of both Chinese and Pakistani engineers to facilitate trade between China and Pakistan. Several hundred people lost their lives during its construction, which involved pushing, blasting, and leveling the terrain between Islamabad and Kashgar. The highway follows the path of what was once known as the Silk Road because of the caravans that followed it with loads of silk and other valuable trade goods.

The Karakoram Highway opened in Pakistan in 1982, finally opening to travelers to and from China in 1986. Today, heavy traffic flows between Pakistan and China's Xinjiang Province. Due to the many beautiful cities and sights along the way, which include Kohistan, Gilgit, Hunza, and Skardu, the Karakoram Highway is a popular way for visitors to travel in this area.

KARAKORAM MOUNTAINS The Karakoram Mountains extend 500 kilometers (310 miles) from India's Ladakh Himalaya, northwest through Pakistan to the Afghan Hindu Kush. The icy summits separate South Asia's Pakistan and part of India to the southwest from Central Asia's far western China and Tibet to the northeast. The colliding Indian Ocean and Eurasian tectonic plates have uplifted over forty peaks above 6,000 meters (20,000 feet) into numerous parallel ridges occupying 207,000 square kilometers (80,000 square miles). All four non-Himalayan 8,000-meter (26,250 feet) peaks are located here, of which K2 (8,611 meters; 28,251 feet) is second only to Mount Everest. The longest midlatitude glaciers (five exceed 48 kilometers; 30 miles) in length supply meltwater for 10 million downstream farmers along the Indus (South Asia) and Tarim (Central Asia) Rivers. The summer monsoon brings Indian Ocean moisture into the parched southern Karakoram, but high peaks create a rain shadow north of the crest where annual precipitation averages just 100 millimeters (4 inches).

Human settlement is concentrated on the moister southern slopes of the Pakistan Karakoram. The towns of Gilgit and Skardu number 40,000 people. The population in the Ladakh region of India is localized in Leh (9,000 people) and in over one hundred small villages throughout the mountains. Shi'ite Muslims predominate in Pakistan, while Tibetan Buddhists prevail in Ladakh. Minority Tajiks, Kyrgyz, and Uighurs are common in the more remote northern Karakoram. Subsistence farming and livestock raising dominate the economy. The primary crops are wheat, barley, buckwheat, corn, and potatoes. Apricots and walnuts are an important but declining food source.

Since 1975, Indian and Pakistani troops have fought on the Siachen Glacier to adjudicate their international frontier. National pride, ethnic enclaves, and the headwaters of the mighty Indus River are at stake. In 1994, the governments of China and Pakistan opened the Karakoram Highway to the public. This renewed tourism, commerce, and immigration along this ancient Silk Road artery.

KARAKORUM Karakorum (also known as Kharakhorin), located in Ovorhangai, Mongolia, on the Orhon River, was the thirteenth-century imperial capital of the successors of Genghis (or Chinggis) Khan. At its height, the city was a busy metropolis served by soldiers, merchants, and craftspeople, many of the latter imported from lands conquered by the Mongolian military. The ancient city, with an area of 400 meters by 400 meters, was protected from attackers by a fortified wall, and near each of the wall's four gates, four giant granite turtle sculptures were said to protect the city from a potentially more dangerous threat: periodic floods. Only one of these statues remains today. The town's most exotic monument was designed by the French sculptor Guillaume Bouchier, who lived in the twelfth century CE. The fountain he designed allegedly flowed with five different libations—honey, vodka, wine, cow's milk, and *airag* (fermented mare's milk).

Archaeological evidence from the eighth century demonstrates that Karakorum was not the first settlement on this site, neither was it the last. After being destroyed by Chinese invaders in the fourteenth century, the settlement and its building stones were recycled in 1586 to build the Erdene Zuu monastery, a Buddhist religious center. Although the ruined city was lost for several centuries, its precise location was redetermined by two Russian scholars in 1889.

KARA-KUM CANAL The V. I. Lenin Kara-Kum Canal, which diverts about 40 percent of the waters of the Amu Dar'ya across the Kara-Kum Desert to southern Turkmenistan, flows for almost 800 kilometers and in 1973 irrigated 440,000 hectares of land mostly used for cotton cultivation. The canal originates at Oba, Turkmenistan, 10 kilometers from the Afghan border and 10 kilometers from Kerki. The main areas of irrigation are the Mary, Tedzhen, and Ashkhabad (Ashgabat) oases.

The canal was approved in 1947, although engineering work was not begun in earnest until 1954. The initial 400 kilometers from the Amu Dar'ya to the Merv oasis was completed in 1959. By 1960 a further 140 kilometers to the Tedzhen oasis had been built. In 1962

the canal reached Ashkhabad and in 1967 the 300-kilometer section from Tedzhen to Goek Tepe was completed. The canal ends at the Kopet Dagh Reservoir, which has a capacity of 190 million cubic meters. There are a further two reservoirs at Ashkhabad of 6 million cubic meters and 48 million cubic meters. The canal is navigable for 450 kilometers. Catfish, carp, and barbel are commercially fished from the canal's waters.

Although the canal has been described as one of the most impressive technical feats of Soviet engineering, it has been the cause of a number of environmental problems. Some estimates suggest that as much as 45 percent of the water entering the canal is lost to evaporation and seepage. These losses result in more diversion from the Amu Dar'ya and cause a major reduction in the Amu Dar'ya's flow, contributing to the disappearance of the Aral Sea. Seepage has also led to soil salinization due to a rise in the water table.

KARA-KUM DESERT The Kara-Kum (Gara-gum) Desert (in Turkish *gara* means "black" and *gum* means "desert") is a large midlatitude desert occupying approximately 80 percent of the territory of the Republic of Turkmenistan and portions of southwestern Uzbekistan. Even though most of the desert is

composed of sand, sand dunes, and hard rocky surfaces (*takir* in Russian), portions have been used as pasture for camels and, during the Soviet period, as irrigated cotton acreage.

The Kara-Kum Canal, begun in 1954, runs along the southern part of the desert. It diverts water from the middle course of the Amu Dar'ya River westward, crosses the Murghab River delta in the southeastern portion of the desert, and runs along the northern foothills of the Kopet-Dag toward the Caspian Sea. It is approximately 1,400 kilometers long and provides most of the water for personal and agricultural uses in Turkmenistan.

Most of the canal is unlined, and waterlogging and soil salinization are major problems in areas of the desert around the canal because of seepage. The canal is also the greatest single contributor to the shrinking of the Aral Sea, as the canal diverts the largest amount of water among all the irrigation structures in the Aral Sea basin.

KARAOKE The word *karaoke* (literally, "empty orchestra") refers to both amplified singing to prerecorded accompaniment and the equipment designed to enable that practice. Although various claims have been made to its exact origins, most scholars agree that karaoke's birth came in the early 1970s in Japan, when

bars began to use professional recording machinery to accompany amateur singers. The tremendous popularity of karaoke throughout Japan, other areas of Asia, and many parts of the world made it a global phenomenon by the 1990s.

In Japan, karaoke's popularity stems from a long-standing tradition of amateur music-making at social gatherings. At these gatherings, singing is regarded as something both to participate in and to perform. The social etiquette surrounding karaoke in Japan emphasizes participation: all singers receive applause, but little critique. At the same time, an industry of singing lessons, amateur organizations, ranked competitions, and instructional publications and television programs emphasize song performance.

In 1978, karaoke extended from bars into homes through the development of a low-budget version called "home karaoke." This encouraged the development of karaoke as a hobby. In the meantime, karaoke equipment included an increasing number of vocal enhancers, including reverberation. The switch from audiotape to compact disc in 1983 resulted in greater ease and range of musical transposition, allowing people to sing a wider variety of songs. In the mid-1980s, videodisc and, later, laser disc use introduced video-projected images to karaoke. This shifted the experience from a strictly musical one to a visually enhanced, and some might say visually dominated, performance. In 1986, the development of karaoke "boxes" (business establishments that rent out private rooms equipped with karaoke machines) transformed commercial karaoke from a public performance into a private one. The spread of "boxes" and expansion of business into daytime hours extended karaoke beyond the late-night bar scene, into the everyday worlds of housewives, students, and even children.

In Asia, karaoke is regarded both as a local practice in the singing of local songs and as a Japanese import, especially as the manufacture of equipment, satellite broadcasting of songs, and online video networks all originate in Japan.

KARATE Karate is a modern Japanese martial art that developed in the early twentieth century and is based on traditional Okinawan unarmed combat techniques. Karate involves the use of punching, striking, kicking, and blocking to ward off an opponent and to counterattack. Since the founding of the Nippon Karate Kyokai (Japan Karate Association) in 1957, karate has become a popular martial art and sport around the world, with an estimated 15 million practitioners. Important in the spread of karate to the West were the Bruce Lee and other kung-fu movies and television shows of the 1970s and 1980s. Other than Lee, those responsible for the development and spread of karate are the founder, the Okinawan Gichin Funakoshi (1868–1957), who brought karate to Japan, and Matsutatsu Oyama, who brought it to the United States in 1952.

Karate is now used as a form of physical training, as a form of self-defense, and as a competitive sport and is especially popular with women. Because of its rather late development, it is not so heavily imbued with the philosophical and spiritual elements of other Asian martial arts. Nonetheless, there are distinct schools of karate and a basic division between those who prefer the traditional noncontact style and those who prefer the contact sport style.

KARBALA (2002 est. pop. 550,000). Karbala is a city in central Iraq, eighty-eight kilometers southwest of Baghdad. It is one of the holiest cities of Shi'a Islam (adherents of the Shi'a branch of Islam today account for one-tenth of the world's Muslim population) and a center of pilgrimage. Prior to their mass expulsion during the Iran-Iraq War (1980–1990), people of Iranian descent constituted one-half of the city's population.

In 680 CE the plain upon which Karbala later rose was the site of a battle between the army of the Umayyad caliph (the spiritual and political leader of followers of Sunni Islam, the largest branch of Islam) and

a small band led by Husayn ibn 'Ali (c. 626–680), the grandson of the Prophet Muhammad, the third imam of Twelver Shi'a Islam (the dominant sect of Shi'a Islam), and its foremost symbol of martyrdom. It is believed that after the defeat of his rebellion, Husayn's decapitated body was buried where it fell. A few years later his tomb had already become a center of pilgrimage, and by the mid-eighth century a shrine was built over it. The shrine was damaged and rebuilt several times, most notably in 1801 by desert nomads and in 1991 during Baghdad's suppression of the mass rebellion that followed the Persian Gulf War (1990–1991). Today the sanctuary surrounding the shrine, with its three minarets, gilded dome, mosque, and adjoining Shi'a college, is one of the greatest in the Islamic world. Nearby is a smaller sanctuary and shrine built for al-'Abbas, Husayn's half-brother and standard bearer. Because popular Shi'ite belief guarantees paradise to all who are buried in Karbala, the outskirts of the city are dominated by large cemeteries. To the west of the city are the ruins of al-Ukhaydir, an early Abbasid castle.

Thaabit Abdullah

KAREN Despite their large numbers, the Karen (Kayin) are one of the least documented peoples in the history of Myanmar (Burma). Even the modern Karen population figure is disputed. Karen nationalists claim a total of 7 million, whereas government statistics put the figure closer to 3 million. Part of the difference is due to the number of Buddhist Karens in the Irrawaddy Delta region who no longer speak Karen. A further factor is the diversity of Karen subgroups inhabiting different parts of the country. They share, however, many aspects of language, culture, and myth.

The Karen language displays many singular characteristics, usually being categorized on its own as a remote branch of Sino-Tibetan. Legend ascribes the migration of the Karen peoples into Burma from across the "River of Shifting Sands," identified by some Karens as the Gobi Desert. The first Karens are thought to have arrived in Upper Burma during the early centuries CE and then to have migrated southward through the Irrawaddy, Sittang, and Salween river valleys. In modern-day Myanmar, Karen-speaking peoples can be found from the Irrawaddy Delta in the west through the Pegu Yoma highlands in the center to the mountains of the Karen, Shan, and Kayah borderlands in the east. Here, in the hills above Toungoo, the greatest diversity of Karen subgroups live. An estimated 200,000 Karens also live in neighboring Thailand.

A twelve-year-old Karen boy poses with a rifle in a Karen rebel camp on 31 January 2000, the 51st anniversary of Karen Revolution Day. (REUTERS NEWMEDIA INC./CORBIS)

Around twenty subgroups have been identified among the Karens in Myanmar. By far the most numerous are the Pwo and Sgaw. Other large populations include the Pao (Taungthu), Kayah, and Kayan (Padaung). From these communities, four distinctive political identities emerged during the twentieth century: the mainstream Karen, the Pao, the Karenni of Kayah State, and the Kayan, who inhabit the Shan-Kayah borderlands.

Karen nationalism in its present-day forms first began during British rule. Following the inception of the Karen National Association by Christian Karens in 1881, the drive for self-determination accelerated. At the turn of the twenty-first century, perhaps only 20 percent of Karens were Christians; most Karens are Buddhists. During the colonial era, however, the British were initially perceived as protectors against historical aggression by their Burman neighbors, and many Karens joined the British army, fighting on the Allied side against the Japanese and Aung San's Burma Independence Army during World War II. Karens also achieved high office in government, notably Dr. San C. Po (1870–1946), who in the 1920s was the first to advocate the creation of an independent Karen homeland, to be known as Kawthoolei.

Po's dream, however, was never achieved, and it was not until 1952 that a much reduced Karen State was created in the Thai borderlands. Various Karen insurgencies have continued over subsequent decades, reflecting continuing demands for greater autonomy and political freedoms. Despite their long-standing sufferings in the conflict, many Karen communities, especially in the Thai borderlands, have continued to offer staunch resistance to central government control. This resulted in continuing Myanmar army of-

fensives in border areas, the displacement of many Karen villages, reports of forced labor and other human-rights abuses, and the flight of more than 100,000 Karen refugees into Thailand.

KAREN NATIONAL UNION Since its establishment in February 1947, the Karen National Union (KNU) has been the leading opposition voice among the Karen people in Myanmar (Burma). Saw Ba U Gyi and the KNU's founders were largely pro-British intellectuals who advocated legal methods to achieve self-determination for a pan-Karen state. But after boycotting the 1947 general election, the KNU became increasingly marginalized from decisions affecting the country's future.

In January 1949, against a backdrop of rising intercommunal violence, the KNU resorted to armed struggle. Joined by defectors from the Karen Rifles in the Burmese army, KNU forces seized large areas of territory, including, at one stage, Mandalay and Toungoo. Saw Ba U Gyi was killed in a 1950 ambush and the KNU was forced back from the towns, but remained the largest insurgent force in lower Burma throughout the 1950s.

A damaging ideological split occurred in 1963–1964, and KNU president Saw Hunter Thamwe and several hundred followers made a unilateral peace deal with the military government of General Ne Win, who had seized power in 1962. For the next decade, leadership of the KNU in the Irrawaddy Delta and Pegu Yoma regions was taken over by a left-wing faction, the Karen National United Party (KNUP), headed by

an ethnic Pwo Karen named Mahn Ba Zan. Meanwhile, the KNU's "Eastern Division" along the Thai border remained under the control of pro-Western nationalists, led by Bo Mya (b. 1926), a local Sgaw hill Karen. Mahn Ba Zan rejoined with Bo Mya in 1968.

After enduring repeated Burmese army offensives, the remaining KNUP/KNU forces in the Irrawaddy Delta and Pegu Yoma were destroyed by 1975, with only a few hundred soldiers escaping to KNU territory in the mountains in the east. Here, under Bo Mya's hard-line leadership, the reunited KNU flourished over a ten-year period, controlling much of the lucrative black market trade with Thailand. As a result, the KNU became the dominant force in the eleven-party National Democratic Front, which shared the KNU's headquarters at Mannerplaw. It was also into KNU territory that thousands of students and democracy activists fled after the military State Law and Order Restoration Council (SLORC) assumed power in 1988.

During the 1990s, however, the authority of the KNU was steadily undermined. Constant Myanmar army offensives as well as cease-fires by NDF allies and defections from KNU ranks (notably by the breakaway Democratic Karen Buddhist Army) saw many KNU base areas collapse, forcing around 100,000 Karen refugees to flee into Thailand. In 1995–1996, the KNU held unsuccessful peace talks with the SLORC government, and, in 2000, Bo Mya was replaced by Padoh Ba Thin as president. But five decades after its founding, the party is struggling for its very survival.

KAREN STATE (1992 est. pop. 1.3 million). The present-day Karen (Kayin) State was created in 1952 by parliamentary legislation to a background of political controversy. A mountainous and landlocked territory covering 30,383 square kilometers, Karen State consists largely of the former Salween Division under the British Frontier Areas Administration, with the ad-

dition of the adjoining Thandaung, Paan, Hlaingbwe, Kawkareik, and Kyain districts. With a capital at the then village of Paan (Hpa-an), it probably did not include even one-quarter of the Karen population in Myanmar (Burma) at that time.

As a result, Karen nationalist demands were not met and development in Karen State has been greatly hindered by the armed conflict that has continued ever since. The 1992 population was calculated by the government at 1.26 million, of whom over 700,000 were Karens (including 70,000 Paos), 220,000 Mons, and 170,000 Burmans, as well as small numbers of Shans, Indians, and other nationalities. Demographic statistics in Karen State are unreliable, however, because of the fighting of past decades. As many as one-third of the population is internally displaced from their homes, and over one hundred thousand refugees have fled into Thailand.

The state is dominated physically by the Dawna Range, which runs along the border with Thailand, before merging with steep mountains that continue northward above the town of Papun. These mountains are flanked by the Kayah and Shan states to the east and the Mandalay and Pegu (Bago) divisions to the north and northwest. The highest peak is Nattaung, which stands at 2,623 meters.

The most important river is the Salween (Thanlwin), which runs southward through the state into the broad plains area that adjoins Mon State in the southwest. Paddy, tobacco, betel nut, rubber, sesame, groundnut, and sugar cane are the principal crops under cultivation. Natural resources include antimony, copper, tin, and iron. Over half the land area is also covered with forests, but many of the most valuable teak and other timber reserves have been depleted by the logging trade with Thailand that accelerated during the 1990s and has been little controlled.

Under the State Law and Order Restoration Council government, which assumed power in 1988, there were attempts to upgrade the roads and local infrastructure. A principal objective was to speed up communication between the nearby estuary port of Moulmein (Mawlamyine) in Mon State and Thailand in the east through the border towns of Myawaddy and Three Pagodas Pass. This latter outpost was captured from insurgent Karen National Union (KNU) control in 1990.

Economic change, however, was slow, because of the continuing fighting as well as the lack of investment and long-term planning. In the mid-1990s, Paan was opened up to foreign tourists for the first time after a cease-fire by the New Mon State Party and a breakaway from the

KNU by the Democratic Karen Buddhist Army, which resettled several thousand villagers in surrounding areas. But despite its strategic position in the geopolitical region, at the beginning of the twenty-first century it seemed that progress in Karen State remained unlikely without peace and political reform.

KARIMOV, ISLAM (b. 1938), President of Uzbekistan. For over a decade, Islam Karimov has been the central figure in the politics of the Central Asian nation of Uzbekistan. Islam Karimov was born on 30 January 1938 in a town outside of Samarqand in present-day Uzbekistan. He graduated from the Polytechnic Institute in Tashkent in 1960 and worked as an engineer at the Tashkent Aviation plant from 1960 until 1966. At that point, having completed a degree program at the Institute of National Economics, Karimov took a job at the State Planning Agency (Gosplan), where he worked from 1966 to 1983. He was appointed minister of finance of the Uzbek Soviet Socialist Republic in April 1983 and rose to the rank of

President Karimov (right) at a press conference with U.S. Defense Secretary Donald Rumsfeld on 5 October 2001. Rumsfeld was in Uzbekistan to discuss the use of Uzbekistan territory to launch attacks against the Taliban in Afghanistan. (AFP/CORBIS)

first secretary of the Communist Party of Uzbekistan in June of 1989. In March 1990, the Supreme Soviet elected him president, a position he carried over into the post-Soviet era.

Karimov was able to weather the breakup of the Soviet Union by declaring Uzbekistan independent in August 1991 and winning a December 1991 presidential election with 86 percent of the vote. He pushed through a referendum in March 1995 that extended his term and overwhelmingly won reelection in January 2000. In addition, by crafting a constitution that emphasized presidential authority, he has been able to maintain a tight grip on the political system of the nation. Furthermore, President Karimov has been able to thwart efforts on the part of a weak and divided opposition to seriously challenge his authority. The West has often criticized him for his nation's poor human rights record—to which he has responded that such actions are necessary to maintain stability.

KARIZ IRRIGATION SYSTEM *Kariz* (also known as *kareze* or *qanat*) is an ancient underground channel irrigation system invented in Persia (Iran). It is a sloping tunnel that brings water from an underground source in a range of hills down to a dry plain at the foot of these hills. Its advantage over an open-air aqueduct is that less water is lost by evaporation on its way from the hill to the plain.

In 714 BCE, when Sargon II invaded Armenia, he saw an irrigation system not yet known in Bet-Nahrain, called by its Arabic name *qanat* or the Farsi *kariz*. He brought the secret back to Assyria. *Qanat* irrigation was then spread over the Near East, as far as North Africa, and is still used.

In Tajikistan, as early as the fourth to fifth centuries BCE, a canal was constructed in the Vakhsh River Valley, near present-day Qurghonteppa (Kurgan-Tyube), which irrigated fifty square kilometers of land. Subterranean canals and reservoirs, with containers made of copper (known as *kariz*), were extensively constructed in the northern parts of Tajikistan in the ninth and tenth centuries CE. These *kariz* carried copious sup-

plies of fresh water from the mountains to waterless plots of land, often many kilometers away. Sometimes as deep as forty meters, they were constructed underground to prevent evaporation of water as it crossed the sun-baked steppe. They were carefully engineered to bring the water to the surface at just the point it was required so that pumping was unnecessary.

In Turpan and Hami Prefectures of China's Xinjiang Uygur Autonomous Region, *kariz* comprising wells connected by underground channels were known as one of the three ancient projects in China, along with the Great Wall and the (Beijing-Hangzhou) Grand Canal. Although there is plenty of rainfall on the slopes of the Tengri-Tagh Mountains, the Turpan Basin is extremely dry and blazingly hot in the summer. Taking advantage of the natural incline of the land and the rich underground water source, the people of Turpan created a unique irrigation system. During the golden age of *kariz* development, 1,700 *kariz* covering a length of 4,400 kilometers were constructed in Turpan Prefecture. At present, *kariz* are facing dropping water levels and drying. Experts are worried about the future of *kariz*, the symbol of Chinese water culture.

In the high and dry plains of Afghanistan, agriculture is often impossible without irrigation. The Afghans have put in place a system for harnessing the water: the *karez* tunnels.

Bakhtor Islamov and Sharaf Arifkhanov

KARNATAKA (2001 est. pop. 52.7 million). Karnataka, a land of natural beauty and historical monuments, is the eighth largest state in India in terms of area (191,791 square kilometers) and population. It is situated on the western edge of the Deccan plateau surrounded on three sides by the neighboring states of Goa, Maharashtra, Andhra Pradesh, Tamil Nadu, and Kerala, with a coastline of approximately 300 kilometers on the western side along the Arabian sea. Karnataka got its name from a local word, *karanadu*, meaning lofty land, because it is located in a high plateau area.

Karnataka was formed in 1956 by combining territories from the erstwhile princely states of Mysore and Hyderabad and the British provinces of Bombay and Madras along with the small principality of Coorg. Originally named Mysore, it was given its present name on 1 November 1973. The state's formation marked the fulfillment of the aspirations of the Kannada-speaking people to merge in a cohesive sociopolitical unit.

The history of the area is associated with Bali and Sugreeva, characters from the popular Indian epic

PATTADAKAL—WORLD HERITAGE SITE

A UNESCO World Heritage Site since 1987, Pattadakal, located in the state of Karnataka, typifies the seventh- and eighth-century blending of artistic and architectural forms in India. Nine ornate temples and one Jain sanctuary make up the Pattadakal site in Karnataka, with the Temple of Virupaksha being the most impressive in artistic and physical scope.

Ramayana. Subsequently, the region passed under the reigns of some of the most powerful Indian dynasties, including the later Muslim and British rules. Modern Karnataka bears traces of this long history in the form of well-preserved monuments and landmarks, of which the city of Mysore presents a good sample. Belur, Hampi, and Halebid contain remains of old buildings and rock carvings. The state is now divided into twenty-seven districts and it has a bicameral legislature. The Legislative Assembly has 224 members and the Legislative Council has 75 members.

The state's capital, Bangalore, is very attractive, with wide boulevards and modern shopping malls. Famous for key educational institutes and corporate offices, Bangalore is projected as the software capital of India. Apart from the fast-growing information technology industry, it has been a producer of telephones, aircraft, watches, and machine tools. The growth of Bangalore and similar industrial centers in the state has been facilitated by the steady generation of surplus hydroelectric power.

Karnataka's mineral resources include high-grade iron ore, copper, manganese, chromite china clay, limestone, and magnesite. The Kolar gold mines are a major Indian source for the precious metal. The state has a reputation for fine ivory and sandalwood handicrafts. The economy of Karnataka is predominantly rural and agrarian. Almost half of the state's income comes from the agricultural sector, with 71 percent of workers engaged in farming activities. The state accounts for a major share of coffee, millet, oil, and silk production in India. The people of Karnataka like to eat rice, fish, and a special pudding called *bittu*. Festivals celebrated in the state include Dasehra and, in particular, the Mysore Dasehra in the month of October, which draws huge crowds.

KARS (2002 pop. 103,000). Kars, capital of the province of Kars (2002 pop. 323,000) in eastern Turkey, lies above the Kars River in a mountain range near the Russian border. Its position on a mountain top leaves the city open to high winds; one of the coldest regions in Turkey, it is covered by snow for at least five months of the year. Kars was inhabited by the Armenians in the ninth and tenth centuries, serving as the capital of the Bagratid dynasty. When the Armenian capital was transferred to nearby Ani, Kars lost some of its importance. Kars was conquered by the Seljuks in the mid-eleventh century, the Mongols in the thirteenth, and Timur (Tamerlane) in 1387. The Ottomans took Kars in 1534, and the city was of great military importance during the Ottoman-Safavid conflicts.

The Russians gained control over Kars in 1828 and 1855, but the city was transferred back to the Turks under subsequent peace treaties. In 1878, after eight months of war, the Treaty of Berlin transferred Kars to the Russians. It remained under Russian control until the Fifteenth Army Unit commanded by Kazim Karabekir Pasha recaptured the city on 30 October 1920. Kars was officially returned to Turkey in 1921. Today the city is an active military base.

KARSHI (1998 est. pop. 190,000). Karshi, in the southern part of the republic of Uzbekistan in Central Asia, is an ancient city on the old trade route between Afghanistan and Samarqand. Situated in a fertile oasis of the Kashka Darya River, today Karshi is the administrative center of the Qashqadaryo Province on the Afghanistan border.

The Turks founded a fort here in the fourteenth century, at a site called Naksheb or Neseef, on a caravan route from Samarkand and Bukhara to Persia and India. Karshi was part of the Bukhara khanate (chiefdom) (1583–1740) and the Bukhara emirate (princi-

pality) (1747–1920). After the Uzbek Soviet Socialist Republic was formed (1924), Karshi received the name Bek-Budi in 1926 and in 1937 was renamed Karshi. Until 1991 the city was the administrative center of the Kashkadarya province of Uzbekistan and became the administrative center of Qashqadaryo Province in 1991, after the collapse of the Soviet Union.

Present-day Karshi is a large railway junction and gas-production center. It has cotton processing and carpet industries, major irrigation facilities, a state university, and a theater. The Kok-Gumbez Mosque was built in Karshi in the late sixteenth century.

KARUN RIVER AND SHATT AL ARAB RIVER

The Karun River begins in the Zagros Mountains of western Iran and flows south to Iraq, where it empties into the Shatt al Arab. In Iran the Karun River extends for 720 kilometers, and by 1888 it had become a major route of foreign trade for Iran. Today it remains that country's primary inland navigation system. During World War II the construction of a rail line between the river port of Khorramshahr and the main Iranian railway system, however, caused the Karun trade route to lose its significance. Nowadays the Karun is used as a transportation corridor for oil exports and commodity imports, accessible only to shallow-draft vessels. The river also serves agricultural needs: Shushtar dam blocks the river to irrigate an area of 1,300 square kilometers. Due to its economic and strategic significance, control of the Shatt al Arab has long been contested. The earliest documented dispute was settled by a treaty signed in 1639, which was intended to establish a boundary between Iran (then Persia) and the Ottoman empire, including today's Iraq. Because of the vagueness of this and other treaties, the conflict over the Shatt al Arab has persisted. There has been continual treaty negotiation and annulment since World War I, and the increase in regional oil production in the 1960s and 1970s served to intensify the conflict. Control of the Shatt al Arab was one of the main reasons for the Iraqi invasion of Iran and the ensuing 1980–1988 war.

KAS (2000 pop. 6,500). A lively Mediterranean coastal resort town in Turkey, Kas lies between Antalya and Fethiye. The economy depends entirely on seasonal tourism and civil service jobs. The easternmost of the Greek Dodacanese Islands, Kastellorizon (or Meis, as Turks call it), is just four kilometers offshore. Like many coastal towns that had Greek populations prior to 1922 (when Greece and Turkey repatriated their respective citizens), the local populace sustains ties with offshore Greeks that began a century ago out of economic necessity. The isolated location of both Kas and Kastellorizon fostered covert friendship and an economic interdependence that continues today. Many Greek-style buildings remain.

In ancient times (1200–600 BCE), Kas was known as Antiphellus, and it prospered because of trade in timber and sponges. A small amphitheater remains from this era. During the first and second centuries BCE, Antiphellus gained prominence as a safe harbor and an important city in the Lycian federation. More recently Kas was called Andifli, but until the advent of tourism in the 1960s it remained virtually landlocked by the Taurus Mountains. With the advent of tourism in the 1960s, a coastal road was built, making the town

accessible for vehicles and ending centuries of dependence on sea trade.

The town has an abundance of pensions and hotels established by villagers who abandoned rural agriculture for tourism. But tourism has scarcely encroached on traditions like weddings, sacrifice holidays, or the custom of salting babies soon after birth, a practice believed to ward off evil.

KATHMANDU (2002 pop. 713,000). Built in 723 CE by King Gun Kamdev and the Newar peoples, Kathmandu, located in the southern Himalayas at an altitude of 1,220 meters (4,000 feet) near the Baghmanti and Vishumanti rivers, is the capital city of Nepal. Legend has it that the site was originally a lake that was made habitable when Manjushree cut open the channel to south Chovar and let the water flow out of the lake. The original inhabitants, the Newars, are thought to be the descendants of several different ethnic groups.

During the seventeenth century, small city-states occupied the valley, and Nepal was an important trading

Durbar Square in Kathmandu in 1996. (STEPHEN G. DONALDSON PHOTOGRAPHY)

link between Tibet and the north Indian plains. The city's finest temples and palaces were built during the reign of the Malla kings in the seventeenth and eighteenth centuries. The city-states were unified in 1768 by Gorkha King Prithvi Narayan Shah when he captured Kathmandu and made it the capital. The shah closed the borders to the country in 1816, and the country remained isolated until the mid-twentieth century.

Places of interest in Kathmandu include the Freak Street area, which also is known as Jochne, but which received the name Freak Street from the hippie culture of the 1960s and 1970s, when travelers were in search of spiritual enlightenment. Durbar Square is located in the old Kathmandu area, with numerous temples and shrines. Located there is the Kasthamandap, the oldest building in the valley, supposedly built around the twelfth century. The Great Bell to ward off evil spirits, the Taleju Temple, the Jaganath Temple, and the Kala Bhairab are also located in Durbar Square. Another area of interest is the Hanuman Dhoka (Old Royal Palace).

KATHMANDU VALLEY (2002 est. pop. 1.5 million). The Kathmandu valley, the site of modern-day Nepal's national capital, has long been among the most important administrative, economic, agricultural, and cultural centers in the Himalayan region. Lying at an elevation of approximately 1,350 meters, the valley is located in Nepal's middle hills, surrounded by peaks averaging 2,400 meters. Known for its deep alluvial soils deposited by a long-vanished lake, the Kathmandu valley has historically been one of the most productive agricultural regions of South Asia and one of the most densely populated areas in the Himalayas.

The Kathmandu valley rose to regional prominence mainly because of its role as an important entrepôt in the trans-Himalayan trade linking the Tibetan plateau and East Asia with the civilizations of the South Asian lowlands. In the Kathmandu valley, two of the most important trade routes from Tibet converged, and principal cities emerged at key points along these ancient transit corridors. Trade brought the valley great

KATHMANDU VALLEY— WORLD HERITAGE SITE

Several religious monuments and classic royal buildings in the Kathmandu Valley were designated as World Heritage Sites in 1979 in recognition of their immense historical significance to the several cultures converging in Nepal.

wealth, making it a center for architectural, religious, and artistic achievement.

Early History

Details of the valley's prehistory remain obscure, but linguistic evidence suggests that the valley was settled by the ancestors of people who later became known as Newars. The historical record begins with Sanskrit inscriptions left by an Aryan Licchavi dynasty that occupied the valley in the fourth century CE and that ruled until the late ninth century. A range of Hindu and Buddhist sects flourished during Licchavi times, all of which benefited from royal patronage. Most of the Kathmandu valley's main religious structures are built on Licchavi foundations. Following the decline of Licchavi power, the Kathmandu valley went through several centuries of unstable political rule, punctuated by devastating raids by powers from neighboring Himalayan regions as well as from the northern Gangetic plain.

The Malla Dynasty

The next major era began in the thirteenth century, with the establishment of several lines of Hindu kings adopting the honorific title "Malla." Once again, the Kathmandu valley was the seat of a prosperous, powerful state that rebuilt religious structures, strengthened administrative systems, and patronized the arts. After 1482, the unified Malla kingdom splintered into three antagonistic ministates, based in the valley's three primary cities of Patan, Bhaktapur, and Kathmandu. During the Malla era, Sanskrit gave way to Newari, still the vernacular of the Kathmandu valley, as the language of the court. Although all of the Malla kings were devotees of the valley's principal Hindu deity, Siva Pasupati, they also continued to patronize Buddhist shrines.

From the sixteenth century onward, each of the valley's city-states became not just a walled fortress but also a center for conspicuous patronage of temples,

festivals, institutions, and artisans. Each Malla ruler sought to outdo his valley rivals in the grandeur of his palaces, religious ceremonies, temples, and public facilities such as water tanks. Almost all of the remaining traditional structures in each of the three cities' central Durbar Squares—along with the stunning examples of Newar craftsmanship in stone, metal, and wood—date from the Malla era. The art of metallurgy, already developed during Licchavi times, reached its pinnacle during the fourteenth and fifteenth centuries, with demand for Nepali cast bronze statuary and other ritual objects from as far away as China. But the competition that left a rich cultural legacy also served to make the Kathmandu valley desirable to outsiders and vulnerable to attack.

The Shah Kings and the Rana Era

In 1744, Prithvi Narayan Shah (1722–1775), king of Gorkha—a small hill state west of the Kathmandu valley—captured a strategic hilltop fortress guarding the northern route into the valley, thereby setting in motion a decades-long war that ended with conquest of the Kathmandu valley. Gorkhali forces encircled the valley, played one Malla king off against another, and cut off trade and supply routes; in 1768, the Gorkhali forces finally stormed Kathmandu on the night of the annual Indraajatra festival when the walls were undefended. Prithvi Narayan Shah took control of the other cities in the valley, and he (and his successors) went on to conquer large parts of the central Himalayas, thereby establishing the modern state of Nepal, with Kathmandu as its capital.

The Shah kings gradually fell under the control of other powerful families in the Gorkhali court, eventually becoming mere figureheads. In 1846, Jung Bahadur Kunwar (1817–1877) seized control of the court at Kathmandu, declared himself and his offspring to be hereditary prime ministers, and claimed the honorific title of Rana. It was during the Rana era (1846–1951) that the Kathmandu valley most clearly began to realign itself with the shifting regional political economy. After the British conquest of India was complete, Nepal found itself on the periphery of a world imperial power.

Whereas earlier artistic and architectural practices had incorporated foreign influences into local traditions, during the Rana era, elites favored the wholesale importation of European styles and lifestyles. The Ranas eagerly acquired all the accoutrements of a Western-elite lifestyle—including the enormous European-style palaces that still dot the valley—even while prohibiting commoners from any contact with foreigners or foreign goods. During the Rana era, the

gap between rulers and ruled became a chasm, severe travel restrictions were put in place, and the Kathmandu valley became virtually isolated from the rest of the world.

In 1951, Nepali nationalists overthrew the Rana regime, reinstated the Shah king, and initiated a series of experiments in democratic governance that continue to the present. Since 1951, the Kathmandu valley has become a regional center for international communications, foreign imports, and, since the 1970s, a popular tourist destination. In addition to government offices, the valley is also home to most of Nepal's institutions of higher education, international and local nongovernmental organizations, and media enterprises. Handmade carpets (developed originally in the Tibetan refugee community) and garments are the valley's main export industries. Today, the valley residents must contend with serious air- and water-pollution problems, suburban sprawl, and severely overburdened electrical, sewage, road, and water-supply systems.

KATO TAKAAKI (1860–1926), Japanese politician. Of samurai lineage from the Owari domain (present-day Aichi Prefecture), Kato Takaaki was one of imperial Japan's ablest diplomats and most powerful champions of parliamentary government. Graduating at the top of his class from Tokyo University, Kato joined Mitsubishi Enterprises in 1881 and at age twenty-three spent two years in London studying the shipping trade. In 1887, he entered the Foreign Ministry and became Japanese minister (1894–1899), then ambassador to London (1908–1912). As foreign minister (1900–1901, 1906, 1913, 1914–1915), he was Japan's most fervent supporter of the Anglo-Japanese alliance.

Kato orchestrated Japan's entrance into World War I and in 1915 presented China with a list of demands aimed at expanding Japanese continental privileges (the Twenty-One Demands). His greatest legacy, however, lies in his effort, as foreign minister, then prime minister (1924–1926), to shift the locus of policymaking from the extraconstitutional "elder statesmen" to the civilian cabinet. Under his leadership, the

Kenseikai Party (successor to the Doshikai, later renamed the Minseito) implemented universal male suffrage and army retrenchment (1925) and became the most powerful engine of social, political, and economic reform in interwar Japan.

KAUTILYA (flourished c. 300 BCE), Indian political author. Kautilya or Canakya is usually identified as the minister of the Emperor Candragupta Maurya (321–287 BCE). However, there have been reputable scholars who dated Kautilya's major work, the *Arthashastra* (if it is his), to around 300 CE, thus making it a work of the Gupta period (c. 320–c. 500 CE) rather than a Mauryan work. The book, a manual of practical politics, has often been compared to Machiavelli's *The Prince*. It covers numerous governmental and military topics: the education and discipline of princes, the qualifications of government ministers, the different kinds of spies, the regular duties of a king, the organization and superintendence of government departments, the administration and fortification of towns, regulation of prostitution, civil law, filling the king's treasury, salaries of government servants, seven elements of kingship, six lines of policy, vices of a king, calamities and disasters affecting the state, military campaigning, guilds and corporations, how to win wars, how to become popular in a conquered country, recipes for various mixtures (though not gunpowder) that might spread disease and aid in warfare, and a final description of Kautilya's plan of the work. It is written in Sanskrit and has many obscure technical terms, though in other respects its language is clear.

KAVERI RIVER India's Kaveri or Cauvery River, 760 kilometers long, was originally called the Daksina Ganga, or "southern Ganges," and the whole of its course is holy to Hindus. It rises in Coorg District to-

ward the southern end of the Western Ghats and flows across southern Karnataka and northern Tamil Nadu states in a southeasterly direction, to empty into the Bay of Bengal from a wide delta, which forms the richest agricultural land in Thanjavur District. Its chief mouth there, to the north, is called the Coleroon or Kolladam, and a second one to the south is Kaveri. The river is fed by a number of tributaries, including the Bavani, and is a major source of hydroelectric power.

Its drainage basin has been estimated at 71,740 square kilometers. In its tortuous course, the river creates three famous islands. One is Seringapatam, near Mysore City, the ruined capital of Tipu Sultan (1753–1799); a second is Sivasamudram, the site of an ancient city and the celebrated Falls of the Cauvery, a succession of rapids and broken cascades; and the third is Srirangam, 3 kilometers outside the city of Tiruccirappalli, the site of an important ancient temple dedicated to Vishnu. The only traditional form of navigation on the river was in basketwork coracles covered with buffalo hides. Ptolemy mentions the Kaveri River as Khaberos, and another ancient Sanskrit name was Ardhajahnvi.

KAWABATA YASUNARI (1899–1972), Japanese novelist. Born the son of a doctor in Osaka, Japan, Kawabata Yasunari lost both parents, his grandmother with whom he lived, and a sister before he was nine, and then nursed his terminally ill grandfather. Determined early on to become a writer, Kawabata enrolled in the Japanese literature course at Tokyo Imperial University, where he came to the attention of well-known novelist Kikuchi Kan (1888–1948), who became his mentor. In the 1920s he helped to found the Shinkankaku-ha, or Neo-Sensationalist school, which went against the prevailing Realist trend in Japanese literature at that time and is characterized by unusual visual imagery and synesthesia.

Among Kawabata's most prominent works are "The Izu Dancer" ("Izu no odokiko," 1926), *Yukiguni* (*Snow Country*, 1948), *Senbazuru* (*Thousand Cranes*, 1951), *Meijin* (*The Master of Go*, 1954), and *Yama no oto* (*The Sound of the Mountain*, 1954). Kawabata constantly reworked even published pieces, later adding passages, and often leaving them incomplete. Characteristic of his works is a delicate balance between the human characters and the lyrically described natural

background into which they seem constantly on the verge of disappearing. There is little in the way of plot or structure, but instead the works move from image to image, like the art of linked verse. Throughout his works is a preoccupation with death and loneliness and what he saw as the close relationship between beauty and sadness.

In 1968, he won the Nobel Prize for Literature. In 1972, Kawabata was found dead in a gas-filled apartment near his Kamakura home. It was generally assumed that he took his own life, although some close associates held it was an accident.

KAWASAKI Kawasaki is a major Japanese manufacturer of ships, locomotives, railway cars, engines, aircraft, motorbikes, and missiles. In 1878, Kawasaki Shozo (1837–1912) founded the Kawasaki organization in Tsukiji in Tokyo as a shipyard. In 1881, the Kawasaki Hyogo shipyard was established in Hyogo, and in 1896 it was merged with the Tsukiji shipyard to form the Kawasaki Shipyard Corporation. The group adopted its present name in 1939 after expanding into the manufacture of locomotives, passenger coaches, freight cars, bridge girders, steel plates, and aircraft.

Kawasaki's production of freighters during World War II was augmented after the war by production of submarines and supertankers. After World War II, Allied Occupation authorities broke up Kawasaki. In 1950, the steel-making division was incorporated separately as the Kawasaki Steel Corporation. Kawasaki Dockyard merged in 1969 with two of its previous subsidiaries, Kawasaki Rolling Stock Manufacturing and Kawasaki Aircraft, to become Kawasaki Heavy Industries, a major corporation. Kawasaki remained until the 1970s one of Japan's leading shipbuilders. The company has constantly developed new technologies through the development and production of automated ships, the development of liquid natural gas (LNG) carriers, and future-oriented marine technologies.

KAYAH STATE (2002 est. pop. 243,000). The Kayah (Karenni) State is the smallest ethnic minority state in Myanmar (Burma), but it has a unique history of independence. The inhabitants are predominantly ethnic Karen hill peoples. They take their collective name of Karenni from the largest subgroup, the Kayah, who were originally known as Karenni ("red" Karen) because of the color of their clothing. Other related subgroups include the Kayaw, Paku, Bre, Manu, and Kayan (Padaung), whose "long necked" women are famed for wearing brass coils around their necks. In valley areas, there are also many Shans, and modern-day immigration has brought in increasing numbers of Burmans and other nationalities.

The historic anomaly of the state began prior to British rule (1886–1948) when the local Karenni chieftains modeled their authority on the hereditary system of the neighboring Shan *Sawbwas* (princes). Subsequently, Karenni independence was recognized by both the British and Burman King Mindon in an 1875 treaty. As a result, the Karenni substates were never formally incorporated into British Burma.

At the British departure in 1948, the tradition of Karenni independence was recognized when the territory was granted the same political terms as Shan State with a similar right of secession after ten years. Armed conflict, however, began between the government and Karenni forces in August 1948, and this continued through the rest of the twentieth century and into the twenty-first. In 1951, the territory was renamed Kayah State by the government, and in 1959 the Karenni chiefs agreed to renounce their traditional powers as rulers.

Central government authority, however, has continued to be resisted. As a result of conflict, the present-day state is one of the poorest regions in Myanmar. Adjoining Thailand, Shan State, and Karen (Kayin) State, Kayah State is a mountainous territory with an area of 11,733 square kilometers, and it has few infrastructural links with its neighbors. The state is also dissected by two powerful rivers—the Salween and the Pon—making transportation difficult in many areas.

In the 1990s, the population was estimated by the government at 210,000 inhabitants, dwelling in six townships, but there has been considerable internal displacement during the fighting of past decades. Over ten thousand refugees have fled into Thailand.

The state's main produce is paddy. Other crops are grown in a variety of lowland and upland environments, including sesame, groundnut, fruits, and vegetables. Most economic investment by the government, however, has centered on Myanmar's largest hydroelectric power station at Lawpita, which is located west of the state capital, Loikaw. There are also marble mines near Loikaw, as well as wolfram, tin, and tungsten mines at Mawchi in the south of the state. Another important natural resource, the once abundant forest reserves—containing teak, pine, and a variety of other woods—were badly depleted by overlogging during the 1990s.

Armed opposition groups have impacted day-to-day affairs in the state. The largest force, the Karenni National Progressive Party (formed 1957), agreed upon a cease-fire with the government in 1995, but this broke down shortly afterward. In contrast, in the west of the state, the 1994 cease-fires by the rival Karenni State Nationalities Liberation Front (formed 1978) and allied Kayan New Land Party (formed 1964) both endured until the end of the twentieth century. Destruction and internal displacement, however, remained on a considerable scale within the state, which, in consequence, has some of the worst health, educational, and social indicators in any part of Myanmar.

KAYSONE PHOMVIHAN (1920–1992), president of Laos. Kaysone was born in Savannakhet, the son of a Vietnamese civil servant father and Laotian mother. He studied law in Hanoi, where he became actively involved in the Viet Minh (Viet League, or fully, League for the Independence of Vietnam), an umbrella organization of Vietnamese Communists seeking independence from the French regime in In-

dochina (Laos had been a protectorate in the French Indochinese union since 1893). When the French returned to gain control of Laos following the Japanese occupation of the nation at the end of World War II, Kaysone fought to thwart their attempts but was unsuccessful.

Kaysone joined the Indochinese Communist Party in 1949 and became the defense minister of the Pathet Lao, or Lao Nation, a nationalist resistance movement. Kaysone assumed command of the Pathet Lao armed forces, precursor of the People's Liberation Army of Laos of which he later became commander, and waged guerrilla war to take control of Laos.

In 1953, Kaysone and Prince Souphanouvong (1909–1995) established northern Laos as the Pathet Lao stronghold and in 1955 formed the Lao People's Party, to which Kaysone was elected general secretary. In 1975 Kaysone became prime minister of Laos after the socialists gained control of the nation. As prime minister, he stressed the importance of leadership by the party and strict adherence to socialist doctrine. He strengthened Laotian ties with Vietnam and the Soviet Union while distancing the nation from the People's Republic of China. In the 1990s, after the breakup of the Soviet Union, Kaysone loosened restrictions on private ownership of land and the practice of Buddhism, promoted a market economy, and fostered cordial relations with China. Kaysone became president of the Lao People's Democratic Republic in 1991 and, following his death, remains revered by Lao citizens as a national hero.

KAZAK The *Kazak* was a Kazakh-language newspaper published in Orenburg, Russia, between 1913 and 1918. After 1917 it became the principal organ of the Kazakh political party and the Kazakh autonomous government Alash Orda (The Horde of Alash). It first appeared on 2 February 1913 and continued as a weekly until 1915, when it was published twice a week. The initial print run was three thousand, but by 1916 it reached eight thousand, making it the most popular prerevolutionary Kazakh periodical. Subscribers included individuals from as far away as China and

Turkey. The editorial board included Akhmet Baitursynov (1873–1937), Mirzhaqyp Dulatov (1885–1935), Alikhan Bokeikhanov (1866–1937), and other well-known Kazakh writers, poets, and scholars.

Kazak focused its editorial attention on a variety of topics. Czarist colonization policies received significant attention, as did education and land, religious, and economic issues. In addition to the editors, the writer and social activist Zhusipbek Aimauytov (1889–1931), the scholar Mukhtar Auezov (1897–1961), and the writers Saken Seifullin (1894–1938), Maghzhan Zhumabaev (1893–1938), Sabit Donentaev (1894–1933), Sultanmakhmud Toraighyrov (1893–1920), Beiimbet Mailin (1894–1938), and Mustafa Shoqaev (1890–1940), leader of the Kokand autonomous government, wrote for the paper. *Kazak* also published articles advocating female emancipation and cessation of the bride-price, including articles by Nazipa Qulzhanova (1887–1934).

Following the February 1917 Russian Revolution *Kazak* became the official organ of Alash Orda, which opposed the Bolshevik seizure of power. It continued publication until its press was destroyed during the Russian civil war in September 1918.

KAZAKH UPLANDS The region known as the Kazakh Uplands (Qazaqtyng Usaqshoqylyghy), or Kazakh Hillocky Country, is a plateau in eastern Kazakhstan between the Turanian Lowland to the west and the Altay Mountains to the east. The Ishim River, a major tributary of the Irtysh River, originates in the Kazakh Uplands and flows northwestward into the Irtysh and then north to join the Ob River in Siberia, eventually draining into the Arctic Ocean. The Nura River also flows through the Kazakh Uplands westward as it empties into Lake Tengiz in the central portion of the region.

The Kazakh Uplands represent the gradually eroded remains of a larger mountain chain in eastern Kazakhstan. Exposed rock layers have yielded a large amount of valuable raw materials for industrial use. It has developed as an important region for heavy ind-

ustry based on large local coal and iron ore deposits. Several rare earth minerals, such as beryllium, molybdenum, antimony (used as alloys for strength and corrosion resistance), and uranium, are also found in the region. One of the largest copper deposits in the world is located near Dzhezkazgan in the western part of the Kazakh Uplands. Other large deposits of copper, lead, and zinc are found along the shoreline of Lake Balkhash in the southern part of the region.

KAZAKHS The Kazakhs are a central Asiatic Turkic people whose language belongs to the Kipchak group of the Altaic family. Most Kazakhs identify themselves as Sunni Muslims. According to a 1997 population estimate, approximately 9 million Kazakhs resided in the central Asiatic republic of Kazakhstan. In addition, there were about 1.1 million Kazakhs in China, 808,000 in Uzbekistan, 636,000 in Russia, 120,000 in Mongolia, 88,000 in Turkmenistan, 37,000 in Kyrgyzstan, 9,600 in Tajikistan, and 13,000 in other countries.

Emergence of the Kazakhs

The Kazakhs emerged as a distinctive people in the fifteenth century. At the time, different parts of present-day Kazakhstan were controlled by Mongols, Uzbeks, and other Turco-Mongolian peoples. In the mid-fifteenth century, about 200,000 Uzbeks, dissatisfied with their leader, or khan, moved from an area of present-day Uzbekistan to an area between the Chu and Talas Rivers; before this time, the ancestors of this group had been converted to Islam by Sufi mystics who had spread Islam in central Asia. These separatist Uzbeks became known as Kazakh Uzbeks or "independent Uzbeks." They adopted a nomadic pastoral way of life, in contrast to the sedentary farming of their Uzbek forebears. In the late fifteenth and early sixteenth centuries, these people, now known simply as Kazakhs, formed a confederation called the Kazakh Horde, which controlled much of the steppe region.

The Kazakh pastoral nomads dwelled year round in portable, dome-shaped tents called yurts, with felt coverings over wooden frames that could be taken apart and reassembled after a move. They migrated seasonally to find pasturage for their livestock, which included horses, sheep, goats, cattle, and camels. They

Kazakh men riding horses in 1983 near Urumqi, Xinjiang Province, China. (CARL & ANN PURCELL/CORBIS)

lived primarily off their herds and especially savored fermented mare's milk (*koumiss*) and horse flesh.

The Kazakhs originally organized themselves into hordes (*ordas*) that were subdivided into tribes, clans, and lineages. Groups at various levels in the tribal hierarchy had chiefs or khans, but only rarely were all Kazakhs, or even one of their hordes, united under a single khan. Descent and membership in lineages and clans were traced patrilineally. Lineages and clans were subdivided into smaller camping groups that consisted of several extended families each. These families usually included parents, unmarried children, and married sons and their families.

Russian and Soviet Periods

The Russian advance onto the Kazakh steppe began in the early eighteenth century, and by 1848 Russia had taken control of the area. During the nineteenth century, as part of Russia's colonization program, about 400,000 Russians flooded into Kazakhstan to convert steppe pastures into farmland. In the early twentieth century, approximately a million Slavs, Germans, Jews, and others also immigrated to the region. These immigrants crowded Kazakhs off the best pastures and watered lands, rendering many tribes destitute.

On 26 August 1920, the Soviet government established the Kirgiz Autonomous Republic, which in 1925 changed its name to Kazakh Autonomous Soviet So-

cialist Republic. From 1927, the Soviet government pursued a vigorous policy of transforming the Kazakh pastoral nomads into a sedentary population. The Soviet regime's brutal imposition of collective farming on the traditionally pastoral nomadic Kazakhs resulted in a marked decrease in the Kazakh population. Between 1926 and 1939, more than 1.5 million Kazakhs died, mostly from starvation, disease, and violence. About 300,000 Kazakhs fled to Uzbekistan, 44,000 to Turkmenistan, and thousands to China. In addition, Stalin's purges destroyed much of the Kazakh intelligentsia. Another large influx of Slavs into Kazakhstan occurred from 1954 to 1956 as a result of the Soviet so-called Virgin and Idle Lands project, which opened up the vast grasslands of northern Kazakhstan to wheat farming. The Soviet Union also located its space-launch center and a substantial part of its nuclear-weaponry and nuclear-testing sites in Kazakhstan.

Post-Soviet Period

Kazakhstan declared its independence from the Soviet Union on 16 December 1991. In the early years of independence, significant numbers of ethnic Russians left Kazakhstan by emigrating to Russia, and many diaspora Kazakhs immigrated to Kazakhstan. Even by the mid-1990s, Kazakhs made up only 45 percent of their country's total population. By 1995, Kazakhs constituted about half the population of Almaty, the country's largest city and, until 1997, its capital.

Today, about three-fifths of Kazakh families live in rural areas. Most Kazakhs are settled farmers who still recognize membership in larger kin groupings based on patrilineal descent. In Xinjiang in northwest China, many Kazakhs still follow the nomadic way of life. Urbanization in Kazakhstan has resulted more from the immigration of foreigners than from the influx of Kazakhs into the cities from the countryside.

During much of their long nomadic period, the Kazakhs' adherence to Islam remained rather lax and informal. However, some young Kazakhs had studied Islamic theology in religious schools, known as *mak-tabs* or *madrasabs*, in the larger towns and cities. Consequently, there was an Islamic intelligentsia in the urban areas before the Soviet Communists took over in the early 1920s. Thereafter, Soviet authorities actively suppressed and discouraged religious teaching and practice in Kazakhstan. Since independence, Kazakhs have enjoyed freedom of religion, and there has been a religious revival.

Urban Kazakhs of both sexes dress in modern, Western clothing, while women and some men in rural villages continue to wear traditional costume. Some Kazakhs weave traditional carpets for home use and sale, and less-Russified Kazakhs often decorate their homes with *qosbmas*, bright-colored felt rugs.

Kazakhs, probably more than any other Central Asian people, show the impact of nearly two centuries of close contact with Russians. Unlike those Central Asians to the south of them, Kazakhs look more to Russia than to Islamic countries for inspiration in the post-Soviet period. Despite this, Kazakh scholars and intellectuals are actively working to reclaim Kazakh traditions and distinctive ways of life, including the literary and spoken language of a people whose experience has been greatly influenced by Russian culture, literature, language, and thought.

Oral epics formed the main literary genre among the largely illiterate Kazakhs until the nineteenth century. In the eighteenth century, the Russians established a series of outposts along the border of the Kazakh northern steppe. As a consequence of Russian contacts, some Kazakhs added written, poetic forms to their literature. Poetry remained the primary genre until prose stories, short novels, and drama were introduced in the early twentieth century, before the end of the czarist era in 1917. Today, urban Kazakhs can enjoy modern theaters that offer Uighur, Korean, and Russian musicals, opera, ballet, and puppet performances. They also enjoy cinemas and can participate in dance ensembles and music groups.

KAZAKHSTAN—PROFILE (2001 est. pop. 16.7 million). Situated in central Asia, Kazakhstan, at 2,717,300 square kilometers, is the second largest of the Commonwealth of Independent States (CIS), the association of former Soviet states. It shares borders to the north and on the west with the Russian Federation, on the east with China, and on the south with Kyrgyzstan, Turkmenistan, and Uzbekistan. The Kazakhs are the largest of the country's 126 ethnic groups, accounting for 51 percent of the population, followed by Russians (32 percent), Ukrainians (4.5 percent), Germans, Uzbeks, Tatars, and others. The relative weight of the Kazakh ethnic group has increased since the country's independence, mainly due to the emigration of non-Kazakhs and the return of many ethnic Kazakhs to the country. Historically, Kazakhstan belongs to the Turkic-speaking world.

Geography

The climate of Kazakhstan is sharply continental. Average temperature in January varies between -19° and -4°C , while the average July temperature fluctuates between 19° and 26°C .

The largest of the country's 8,500 rivers are the Ural and the Emba, which flow into the Caspian Sea; the Syr Dar'ya, which flows into the Aral Sea; and the Irtysh, Ishim, and Tobol, which all run across the republic to eventually reach the Arctic Ocean. The largest of its many lakes are the Aral Sea, Balkhash, Zaysan, Alakol, Tengiz, and Seletengiz. Kazakhstan shares the larger portion (2,340 kilometers) of the northern and half of the eastern Caspian seacoast.

Steppes comprise 26 percent of the territory of Kazakhstan. Deserts (44 percent) and semideserts (14 percent) cover 167 million hectares, and forests occupy 21 million hectares.

Resources

The country is rich in minerals. The Tengiz oil field ranks as one of the largest in the world. Kazakhstan also has the world's second-largest deposit of

KAZAKHSTAN

Country name: Republic of Kazakhstan
Area: 2,717,300 sq km
Population: 16,731,303 (July 2001 est.)
Population growth rate: 0.03% (2001 est.)
Birth rate: 17.3 births/1,000 population (2001 est.)
Death rate: 10.61 deaths/1,000 population (2001 est.)
Net migration rate: -6.43 migrant(s)/1,000 population (2001 est.)
Sex ratio: 0.93 male(s)/female (2001 est.)
Infant mortality rate: 59.17 deaths/1,000 live births (2001 est.)
Life expectancy at birth—total population: 63.29 years; male: 57.87 years; female: 68.97 years (2001 est.)
Major religions: Muslim, Russian Orthodox
Major languages: Kazakh (Qazaq, state language), Russian (official, used in everyday business)
Literacy—total population: 98%; male: 99%; female: 96% (1989 est.)
Government type: Republic
Capital: Astana; the government moved from Almaty to Astana in December 1998
Administrative divisions: 14 oblystar and 3 cities
Independence: 16 December 1991 (from the Soviet Union)
National holiday: Republic Day, 25 October (1990)
Suffrage: 18 years of age; universal
GDP—real growth rate: 10.5% (2000 est.)
GDP—per capita (purchasing power parity): \$5,000 (2000 est.)
Population below poverty line: 35% (1999 est.)
Exports: \$8.8 billion (f.o.b., 2000 est.)
Imports: \$6.9 billion (f.o.b., 2000 est.)
Currency: Tenge (KZT)

phosphorite, and the phosphorite deposits of Zhanatas and Karatau are notable for their depth and quality. The republic is one of the greatest producers of aluminum in the world, and has an abundance of copper ore, salt, and construction materials.

Political Structure

Nursultan Nazarbayev (b. 1940) was elected president in April 1990. On 1 December 1991, after the collapse of the Soviet Union, he was reconfirmed as president by nationwide ballot in newly independent Kazakhstan.

The constitution provides for a tripartite structure of government with power divided between the executive, legislative, and judicial branches. It establishes

and sets out the powers and functions of the president, the parliament, the constitutional council, and local government and administration, and establishes an independent judicial system.

The political structure comprises the president (who is head of state); numerous presidential advisory bodies that focus on such areas as national policy, mass media, family and women, and human rights; and Parliament, consisting of the Senate and the Majlis. The republic has an array of political parties.

History

Formed from different tribes, the Kazakhs were mainly pastoral nomads until the twentieth century. Russian influence in the region began in the sixteenth

century, when Cossacks settled along the Ural River in the west of the country. In the eighteenth century the Russian government sent large numbers of Russian peasants to the Kazakh territory. In 1866 the garrison town of Verny (now Almaty) was founded under Russian administration.

During the Soviet regime, Kazakhstan became the Kazakh Soviet Socialist Republic. The style of life changed dramatically during the period of collectivization and industrialization. Forced collectivization brought mass repression. Nearly 700,000 families died during that period.

During World War II, many people—including Russians, Ukrainians, Germans, and Tatars—were moved from the western USSR to Kazakhstan. This migration initiated the industrialization of Kazakhstan.

In the 1950s the Virgin Lands Project, designed to expand the use of Kazakhstan's vast territory, was implemented in northern Kazakhstan by the Soviet government. This brought thousands of people to Kazakhstan.

From 1959 to 1986 Dinmukhamed Kunaev (1912–1993) was first secretary of the Communist Party of Kazakhstan. His rule was controversial and mixed. His achievement was the direction of a high level of cap-

ital investment to the republic, which he was able to accomplish partly because he was a close friend of Leonid Brezhnev (1906–1982). He divided managerial positions between Russians (industry) and Kazakhs (agriculture). Under Kunaev's authority the republic achieved its most prosperous results.

In 1986 Kunaev was criticized for failing to meet economic goals by Mikhail Gorbachev (b. 1931), who at that time was general secretary of the Communist Party of the Soviet Union. Kunaev was replaced by Gennadiy Kolbin (1927–1998), who had previously held the post of first secretary of the Communist Party in Ul'yanovsk Oblast (in Russia). Many Kazakhs disagreed with Moscow's decision and demonstrated in Almaty. As a protégé of the central administration, Kolbin tried to keep reforms in the republic moving in the same direction as in the USSR as a whole.

In 1989 Nursultan Nazarbayev was appointed first secretary of the Communist Party of Kazakhstan. In March 1991 a referendum passed that favored preserving the USSR, but the coup in August destroyed any hope of saving the USSR as a country. The Republic of Kazakhstan formally became independent on 16 December 1991. It is a signatory to the agreement putting a formal end to the Soviet Union and creating the Commonwealth of Independent States.

International Organizations and International Relations

Kazakhstan has established diplomatic relations with over 120 countries. It is a full member of the United Nations, the International Monetary Fund, the International Bank for Reconstruction and Development, the United Nations Educational, Scientific and Cultural Organization (UNESCO), the International Atomic Energy Agency, the European Bank for Reconstruction and Development, the Asian Development Bank, the International Finance Organization, and the Islamic Development Bank. Kazakhstan has the status of an observer with the World Trade Organization.

KAZAKHSTAN—ECONOMIC SYSTEM

Before 1991 Kazakhstan was part of the Soviet economic system, and its development was defined by the Union's needs, as was the case for the economies of all the republics constituting the Soviet Union. In accordance with the Union's labor specialization, only a few sectors (perhaps even just parts of sectors) of Kazakhstan's economy were relatively developed, namely, coal-production centers in the Karaganda and Yekibastus areas, oil-production facilities at Emba, and copper mining at Balkhash and Karsakpau. For the Soviet economy Kazakhstan represented the single source of raw materials such as copper, zinc, chrome, and rare metal deposits. Kazakhstan was the second-largest oil producer in the Soviet Union, with the major oil fields of Tengiz (north Caspian Sea), Karachaganak (northwest Kazakhstan), Uzen (Manghystau region), Kumkol (central Kazakhstan), and Zhanazhol (near Aktyubinsk), as well as three major refineries.

The industrial sector was based on raw materials, but manufacturing production did not receive adequate development. Kazakhstan was heavily dependent on the other former republics of the Soviet Union, especially Russia.

From 1954 the Virgin Lands project (Northern Kazakhstan) was implemented; this project defined

Kazakhstan's role as a main producer of grain (about one-fifth of the Soviet Union's grain). Kazakhstan was to specialize in grain and other crops, such as vegetables and potatoes.

Nevertheless, under Soviet rule, Kazakhstan gained significantly in human development and social conditions: whereas before the Soviet era few people received education through the secondary-school level, nearly all people did by the end of the Soviet era, for example. Kazakhstan's industrial sector and infrastructure benefited from Soviet investments.

The New National Economy

Since independence in 1991, Kazakhstan has begun a painful economic transformation. The gross domestic product (GDP) fell almost 50 percent from 1991 to 1995. For nearly two years Kazakhstan was unable to conduct its own monetary policy, remaining in a monetary union with Russia under the supervision of the powerful Central Bank in Moscow. Price liberalization (decontrol of prices and liberalization of domestic trade) paralyzed the Kazakstani economy, and hyperinflation created a cash shortage.

On 15 November 1993 the new national currency (the tenge) was introduced, but it was rapidly devalued after three weeks. The nonconvertibility of the tenge pushed Kazakstani enterprises to pay their former union partners in hard currency (such as U.S. dollars), which caused difficulties with the calculations of the value of deliveries between enterprises. As a result barter was expanded, interenterprise arrears were increased (as enterprises were unable to pay the businesses they owed money to because they themselves were waiting for payment), and output continued to decline. The economic crisis worsened in 1994, characterized by hyperinflation and a further collapse in output in the industrial and other sectors of the economy. In 1994, only 3 percent of a total industrial decline of 28.5 percent was connected to the narrowing sales market; the other 25.5 percent resulted from financial problems. In the same year, 26 percent of the rise in Kazakstani prices was caused by interenterprise arrears: Knowing that payments owed them were not forthcoming, enterprises required eventual payment in hard currency, which kept on rising in value in comparison to the tenge, thereby generating a price increase. By the first half of 1995, more than 54 percent of the rise in Kazakstani prices was caused by interenterprise arrears. Since the end of 1994 the National Bank of Kazakhstan has adopted a tight monetary policy.

After independence, following the unraveling of its existing trade links with other former Soviet republics,

Kazakhstan began to look for new international markets. Traditionally Kazakstani exports included raw materials, light industrial goods, machinery, and chemical products. From the former Soviet Union, Kazakhstan imported machinery and metal products, oil and gas, light industrial goods, and food. In the first years of independence Kazakhstan focused on the development of the oil and gas sector, which quickly became a major export item. In 1993 the Kazakstani trade deficit reached \$615.6 million, four times higher than the previous year.

The economy needed a coherent strategy that would be able to prevent economic turmoil. The problem with all of the Kazakstani anticrisis programs of that time was the nation's unclear economic position and the absence of concrete aims for reform. The first years of the economic transition in Kazakhstan were also plagued by objective difficulties, such as the nation's dependence on members of the Commonwealth of Independent States (CIS; the confederation of former Soviet nations) and the fact that extraction of raw materials was the dominant industrial sector.

Structural Reforms and Present Economic Performance

The Kazakstani government began privatization upon independence in 1991. The main challenge of this process was the interlocking of political and economic aspects. Privatization included three major steps: housing privatization (whereby government-owned housing was put up for sale), mass privatisation (whereby government-owned businesses were put up for sale), and privatization on the basis of individual projects. The most dominant method of privatizing state enterprises in industry, construction, transportation, and wholesale trade was the creation of joint-stock companies of both open and closed types. In some cases enterprises were purchased for speculative resale, using fluctuations in both the rate of exchange and the growing monthly rate of inflation. Corporate governance in many newly privatized enterprises remains weak. The privatization process is nearly complete; the government has now sold most of what it wanted to sell. Privatization revenue (revenue earned from the sale of state enterprises) was tenge 35.9 billion in 1999 (compared with tenge 50 billion in 1998).

The decline in output has been constant since 1991. Sectors such as chemicals, petrochemicals, food, and light industries began to disappear, and the industrial structure grew worse. From 1990 to 1997, production of various types of manufactured goods that are basic either as consumer goods or as industrial inputs were virtually eliminated. A decade of transition has elimi-

nated much of the industrial base and left an economy dependent upon the exploitation of raw materials (especially oil), agriculture, and, to a lesser extent, food processing. Far from diversifying, the economy has become more dependent upon just a few sectors. Its risk exposure has thus increased, because its terms of trade are more vulnerable to price fluctuations in global oil and raw-materials markets. In short, a decade of transition has left Kazakhstan with many of the features of a resource-dependent economy. In the raw material sectors the situation is more positive, but the Asian and Russian financial crises (1997 and 1998, respectively) pushed Kazakhstan into recession and led to massive tax losses, as enterprises that were not working or were producing very little had little revenue from which to pay taxes.

When oil prices declined dramatically in 1998, the government decided to increase its emphasis on domestic processing of the country's mineral resources and particularly to stress the importance of finished-goods exports. A new industrial policy included light and chemical industries and mechanical engineering as major priorities.

The development of the banking sector in Kazakhstan has been impressive in comparison with other countries of the former Soviet Union. The Central Bank has managed to slow inflation through tight monetary policy and has tried to supervise the work of commercial banks as well as to create some measures for stimulation of small and medium businesses, including microcredits (microloans), credits for agriculture, and so on.

The security market is still rudimentary but it is the most advanced in the Central Asian region; Kazakhstan was the first country of the former Soviet Union to issue international bonds. In 1998 Kazakhstan embraced an ambitious pension reform dominated by a mandatory, privately managed pension scheme, the results of which remain to be seen.

In the late 1990s, Kazakhstan experienced a steady decline in the standard of living and a falling birth rate. However, from the end of 1999 Kazakhstan began to move out of economic crisis. The GDP grew because of the growth of world prices for oil and nonferrous metals, the devaluation of the tenge, and bumper crops of cereals. Agriculture, which has been badly affected by privatization, is important for the future of Kazakhstan due to the nation's sociodemographic structure (43 percent of the population is located in rural areas) and national traditions (many of the peoples of Kazakhstan were formerly nomadic). The rich harvest of 1999 played a crucial role in the fact that the GDP rose by

1.7 percent. However, the Kazakstani economy remains vulnerable to commodity-price fluctuation.

KAZAKHSTAN—EDUCATION SYSTEM

The education system in Kazakhstan was strongly influenced by the Russian and Soviet education systems. In the late nineteenth and early twentieth centuries, the czarist government attempted to Westernize the Kazakh education system by sponsoring Russian-language schools and gymnasiums and encouraging the Kazakh elite to study at Russian universities. Yet a majority of ordinary people studied at local *maktabs* and *madrasabs*, where religious subjects were an important part of the curriculum. According to various estimates, at the beginning of the twentieth century the literacy rate stood at about 9 to 14 percent among the male ethnic Kazakhs and below 5 percent among the female ethnic Kazakhs. Since the early 1920s the Soviet government sponsored a free system of general and tertiary education that emphasized sciences, mathematics, and practical skills. Mass illiteracy in the republic was eradicated in the 1930s. In 1929, the alphabet of the written Kazakh language had been changed from Arabic to Latin; in 1940, it was changed from Latin to the Cyrillic script. In the 1970s and 1980s, Kazakhstan was able to maintain its literacy rate at about 98 percent, but could not catch up with the information technologies. In the 1980s, practically no schools in Kazakhstan had computers or access to computer technologies.

After the dissolution of the Soviet Union in 1991, there were three major changes in the education system of Kazakhstan. First, using the Kazakh language as the medium of instruction was increasingly empha-

A young boy studies in a Kazakhstan classroom in 1996. (JON SPAULL/CORBIS)

sized. Second, there were significant cuts in the state funding of education. Third, the country made several attempts to reform the education system to meet economic changes and shifting labor market demands.

The constitution of Kazakhstan (1995) stipulates that general education is mandatory and free, and that citizens have the right to receive a free tertiary education on a competitive basis. According to the constitution, the state sets uniform compulsory standards in education, as the Ministry of Education has to approve curriculum, textbooks, budgets, and so forth. This effectively put all public and privately funded education institutions under state control. Kazakh and Russian are the major languages of instruction, but the state provides support for education in other languages for ethnic minority groups (for example, Uzbeks, Germans). The constitution also stipulates separation of church and state, and no religious education is allowed in public schools.

At the age of three, children usually begin kindergarten, where they receive some basic reading and mathematics skills. At the age of seven, they begin an eleven-year compulsory education program, a primary four-year cycle, and a secondary seven-year cycle. The official figures for 1999 listed about 1,900 preschool establishments attended by 185,000 children. Approximately 8,280 elementary and secondary schools were attended by more than 3.1 million students. In addition, there were 244 specialized secondary schools (about 222,000 students), 131 gymnasiums and 85 lyceums (both are specialized elite schools), 62 evening schools, and 21 training centers. Approximately 85 percent of children of the relevant age group are enrolled in the secondary schools.

After completing secondary schooling, students may enter tertiary education institutions (universities and

institutes), which usually offer five-year programs. Most of the education at the tertiary level is conducted in Kazakh or Russian, although throughout the 1990s there were some attempts to introduce English as a medium of instruction at some universities or at least at some faculties in major universities. According to the official statistics, in 1999 there were 132 tertiary education institutions, including 59 that were state-owned, attended by approximately 260,000 students, and 73 private institutions, attended by approximately 60,000 students. Private universities and some state-owned universities charge between \$500 and \$1,000 per academic year (2000–2001 academic year estimates).

After completing a five-year program, students may apply for a three-year *aspirantura* (postgraduate studies program), which combines course work and a dissertation. Upon completion of the *aspirantura*, students get the degree of *kandidat nauk* (equivalent to a master's degree). To receive a doctorate, students must have practical experience in the field (teaching or research) and complete an additional three- to five-year program.

During the 1990s, the education system in Kazakhstan experienced a serious crisis, as state funding dwindled, along with the quality and prestige of higher education. The Kazakh government has tried to reform the education system, emphasizing computerization, supporting private investment in educational institutions, and encouraging the introduction of new courses, which are in demand in Kazakhstan. Recently, the possible introduction of a U.S.-style credit system in some private universities has been under discussion.

KAZAKHSTAN—HISTORY The collapse of the Soviet Union in 1991 paved the way for the emergence of its largest Asian republic, Kazakhstan, as an independent state. Located in central Asia, early twenty-first century Kazakhstan borders Russia (north), China (east), Kyrgyzstan, Uzbekistan, and Turkmenistan (south), and the Caspian Sea and Russia (west). It is the world's ninth largest country, with an area of 2,719,500 square kilometers and a population of about 18 million. Because it is a neighbor of two nuclear powers (China and Russia) and has substantial oil and gas reserves, Kazakhstan is a potentially significant country in world politics.

As a state with a central political system and with its current geographical and ethnic characteristics, Kazakhstan is not a very old phenomenon. Its history is mainly the history of various nomadic groups and empires that ruled the region during the last two millennia.

The Arrival of Turkic Peoples

Like the rest of central Asia, Kazakhstan today is populated mainly by Turkic speakers, but its indigenous inhabitants were Iranians. The seven-century-long migration of Turkic ethnic groups from regions of today's Mongolia and adjacent Chinese territory eventually "turkified" portions of central Asia by the thirteenth century. The nomadic Turkic peoples gradually replaced the Iranian people and populated those parts of central Asia that are now considered the nomadic regions (i.e., Kazakhstan, Kyrgyzstan, and parts of Turkmenistan). The other two current central Asian countries (Tajikistan and Uzbekistan) are considered sedentary regions as their populations are not primarily nomadic.

The seventh-century Arab invasion of central Asia introduced Islam to the region, but the nomadic population escaped the Arab occupation. The Arabs conquered only small parts of southern Kazakhstan in the eighth and ninth centuries and ruled there until the Mongols overran all of central Asia in the thirteenth century.

The Turkic Era

The Turkic era (sixth–twelfth centuries) was a period of constant fighting among various Turkic ethnic groups who contested the control of today's central Asia; as a result, different groups ruled different regions,

KEY EVENTS IN KAZAKHSTAN'S HISTORY

- 6th–12th centuries** During the Turkic era, Turkic peoples from Mongolia migrate to Central Asia and compete for land and political dominance.
- 8th–9th centuries** Islam is brought to Central Asia by Arabs.
- 9th–11th centuries** Kazakhstan is ruled by the Oghuz Turks, Kimaks, and Kipchaks.
- 1219–1221** The Mongols invade and conquer the ruling tribes and states.
- 1511–1523** The Kazakh tribes are united as a single people and a distinct Kazakh ethnic identity emerges in the region with Islam the primary religion.
- 16th century** The Kazakhs are divided into the Great Horde, Inner Horde, and Lesser Horde.
- 18th century** Mongol rule ends in Central Asia and Russian incursions begin.
- 1884** All of Kazakhstan is under Russian control.
- 1918–1920** Kazakhstan forms an independent government, which is suppressed by the Soviets.
- 1936** The Soviet Union establishes the five Central Asian republics.
- 1986** Kazakh students riot in opposition to Soviet rule and are repressed.
- 1991** Kazakhstan declares independence from the Soviet Union.
- 1996** The capital is moved from Almaty to Astana.

whose territories frequently expanded and contracted. The three Turkic groups who had a major impact on the region were the Qaznavian (Qaznavy), who established the Qaznavian dynasty; the Seljuks, who established the Seljuk dynasty; and the Khawrazmshahians, who established the Kharazmshahian dynasty.

The first khanates (kingdoms) of central Asia, which ruled over parts of today's Kazakhstan, Uzbekistan, and Tajikistan, emerged under the control of various Turkic tribes in the second half of the sixth century and remained in power as loose federations of nomads until the eighth century, when the Qarluqs, another Turkic tribe, established a state in eastern Kazakhstan. This was overrun by a larger Turkic state, the Qarakhanid, whose territory included parts of eastern Kazakhstan and western China.

The Qarakhanids accepted the authority of the Arab Abbasid caliphs in Baghdad, but engaged in about a century of infighting as well as wars with the Seljuk Turks who dominated southern central Asia. The Qarakhanids' territory was gradually conquered in the 1130s by a Turkic federation of tribes from northern China, the Karakiti. From the ninth to the eleventh centuries, the Oghuz Turks governed western Kazakhstan, while the Kimak and Kipchak groups ruled over parts of its eastern region. The Karakiti state collapsed when the Mongols invaded central Asia in 1219–1221.

The Mongol Era

The thirteenth-century Mongol occupation of central Asia ended the short-lived states of the rival Turkic ethnic groups in today's Kazakhstan. The Kazakh lands became part of the Golden Horde, the western branch of the Mongol empire. Rivalry among various Mongol khans led to the division of the empire into several khanates by the early fifteenth century. Mongol rule over Kazakhstan lasted until the eighteenth century.

Kazakhstan began to emerge only in the late fifteenth century, when the Kazakhs came to be recognized as a distinct ethnic group. The majority of the tribes forming the Mongol forces were Turkic. The demise of the Mongols as an empire in the fifteenth century led to the disintegration of their forces and the rise of rivalry over territories among the Turkic tribes formerly loyal to the Mongols. Late in the fifteenth century, some of them (including the Qebchaq, Naiman, Uzun, and Dulta tribes) stationed in current Kazakhstan emerged as Khazak tribes, which were united in the early sixteenth century by Khan Kasym (reigned 1511–1518). In the sixteenth century the Kazakhs formed three hordes, or clans, with their own local states: the Great Horde in southern Kazakhstan, the Inner (Middle) Horde in north central Kazakhstan, and the Small (Lesser) Horde in western Kazakhstan. Those states

survived until their incorporation into the Russian empire in the first half of the nineteenth century.

The Russian Era

Russia gradually conquered Kazakhstan through war and diplomacy. It began seizing western Kazakh territory in the seventeenth century when the Kazakhs were focused on the threat to their east posed by the Kalmyk, a Mongol group. The Small Horde sought Russian assistance in 1730; late in the eighteenth century, Russia subjugated the remnants of the Small and Inner Hordes in the Kazakh lands neighboring today's Siberia. The Russians captured the entire Inner Horde by 1798 and dismantled the Inner and Small Hordes in 1822 and 1824, respectively. Threatened by a southern Central Asian state, the khanate of Quqon, the Great Horde requested Russian protection in the 1820s, which led to its subjugation in 1847.

Having annexed that portion of Kazakhstan that had been under the control of the three Hordes, Russia was faced with the three Central Asian khanates of Quqon, Bukhara, and Khiva. By 1884, using both warfare and diplomacy, Russia conquered and annexed all of Central Asia, including the remaining parts of Kazakhstan. During the lengthy annexation process, the administrative structure of Central Asia changed several times. In the end, the areas between Siberia and the Aral Sea and Lake Balkhash, whose main inhabitants were the Kazakh groups, were annexed as one entity, and the rest of the region was annexed as another (Turkistan). The Russians faced various unsuccessful armed uprisings by Kazakhs seeking to regain their independence in the nineteenth century.

Russian rule changed the nomadic structure and ethnic makeup of Kazakhstan. The influx of Russian settlers turned many fertile Kazakh lands into farms, resulting in limited pasture for cattle breeding, the major economic activity of the Kazakhs, and forcing them to become sedentary. The Russians also created infrastructure (for example, roads and schools) and established some industries in Kazakhstan.

The Soviet Era

The Bolshevik Revolution of 1917 and the establishment of the Soviet Union did not bring independence to Kazakhstan. The Soviet regime suppressed several antiwar, anti-Russian, anti-Soviet, and independence movements in Central Asia during the period 1917–1933, including the independent Kazakh government (1918–1920) created by a group of secular nationalists called the Alash Orda. The Soviets di-

vided and redid the region until 1936, when it finally settled on the establishment of the five so-called ethnically based republics. Henceforth Kazakhstan took its current geographical shape and borders.

The Soviet era had a major impact on the development of Kazakhstan and its ethnic makeup. Agriculture and industries were expanded significantly, but they were far less developed than in the European Soviet republics. Kazakhstan was therefore heavily dependent on those republics for agricultural and industrial products at the time of independence. The Soviet efforts to develop Kazakhstan's economy and the relocation of many industries from the European parts of the Soviet Union to Kazakhstan during World War II led to the massive migration of Russians and other Slavs to Kazakhstan. This migration made Kazakhstan the only Soviet republic where the "dominant" ethnic group (Kazakhs) was in the minority.

Kazakhstan was the Soviet republic least interested in freedom from the USSR, as reflected in its lack of a strong pro-independence movement before the fall of the Soviet Union. Soviet Secretary-General Mikhail Gorbachev's anticorruption campaign in Kazakhstan did however provoke limited anti-Soviet movements in the late 1980s. Hence the December 1986 replacement of the first secretary of Kazakhstan's Communist Party, Dinmukhamed Kunayev, an ethnic Kazakh, by Gennadiy Kolbin, an ethnic Russian from outside Kazakhstan, provoked riots (mainly by students), which Soviet forces brutally suppressed. In June 1989, Nursultan Nazarbaev, a reform-minded Kazakh, replaced Kolbin and became the president of the republic in October 1990. Nazarbaev remained a strong supporter of the Soviet Union, as he considered Soviet republics too interdependent to survive independence. He consolidated his power by winning an uncontested presidential election in December 1991, a few days before the dissolution of the Soviet Union.

The Post-Soviet Era

Kazakhstan was the last Soviet republic to declare independence (15 December 1991). On 21 December, Kazakhstan and ten other former Soviet republics signed the Almaty Declaration, named after the country's capital, to create the Commonwealth of Independent States (CIS). In 1996, Astana became the new capital of Kazakhstan.

Like other former Soviet republics in transition from a socialist economy to free enterprise, Kazakhstan has experienced a decline in industrial and agricultural production and in living standards while suffering from growing unemployment and poverty. It has gradually

shifted from its advocacy of democracy in the first years of independence to an authoritarian regime dominated by the Nazarbaev family and friends.

If developed fully, Kazakhstan's significant oil and gas reserves could help the Kazakhs address their current economic problems and build a more prosperous future. Russia's dissatisfaction with Kazakhstan's growing ties with the West, particularly the United States, and Russia's practical exclusion from the development of Kazakhstan's oil industry dominated by American oil companies could lead to serious conflicts between Kazakhstan and Russia. Accounting for about 40 percent of Kazakhstan's population, ethnic Russians have been losing to ethnic Kazakhs the preeminent social, economic, and political status they had enjoyed during the Soviet era. This situation creates the potential for Russia's manipulation of Kazakh Russian dissatisfaction to achieve its own objectives.

KAZAKHSTAN—POLITICAL SYSTEM

Kazakhstan is a new nation, established as an independent, sovereign state only in 1991, when it emerged from the breakup of the Soviet Union. In its first decade of national independence, Kazakhstan's government demonstrated a strong commitment to establishing the foundation for an open, democratic form of government with a market-based economy. Kazakhstan won praise from the international community for this approach and for taking an unprecedented initiative in voluntarily relinquishing its status as a nuclear power. Kazakhstan's progress in the transition from a Communist-era system to a political system in accordance with international standards is significantly greater than that of its other Central Asian neighbors, which also became independent as a result of the breakup of the Soviet Union.

The political transition in Kazakhstan began as early as 1986, with the perestroika (restructuring) and glasnost (openness) reforms introduced under Mikhail Gorbachev (b. 1931), the last Communist Party leader of the USSR. True political reform in the Soviet Union began in 1988, when Gorbachev announced at the Nineteenth Conference of the Communist Party of the Soviet Union his intention to sponsor free elections. By December 1988, the Soviet government had adopted a new election law permitting national and republican multislate elections, the first free elections in the USSR since 1918.

In Kazakhstan's first free election in February 1990, Nursultan Nazarbaev (b. 1940)—then the first secretary of the Kazakhstan Communist Party—was elected chairman of the Kazakhstan Supreme Soviet, the Soviet-era parliament. A month later, parliamentary elections in Kazakhstan seated a new parliament. In one of its first official acts, the new parliament elected Nazarbaev president of the Soviet Republic of Kazakhstan in April 1990.

A short time later, the parliament passed the Kazakhstan Declaration of Sovereignty. Kazakhstan became a sovereign government, but remained within the USSR. As the Soviet Union began to unravel in autumn 1991, Nazarbaev scheduled a presidential election. Running without opposition, he won the election, easily becoming the country's first popularly elected president on 2 December 1991. Just two weeks later, Kazakhstan's parliament adopted the Kazakhstan Declaration of Independence. Kazakhstan became a sovereign and independent state with Nazarbaev as the head of state.

Kazakhstan under Nazarbaev

Nazarbaev was a pragmatic and forward-thinking leader. Even during the Soviet period, he had sought to move Kazakhstan's government toward a market economy and a relatively open political system. During his early years in power, legislation was adopted to promote privatization in the economy and multi-party public participation in the political system. In 1992, a new constitution was adopted. It prescribed a representative government with a separation of powers among three coequal branches of government, based on popular sovereignty through free elections.

Despite the formal descriptions of checks and balances on power, however, the president exercised a decisive voice in agenda setting, policy, budgeting, and dispute resolution. This became clear in 1993, when disputes over economic policy emerged in Kazakhstan's legislature. The legislature was internally divided and

yet, following its constitutional mandate, anxious to exercise greater control over economic issues, particularly privatization. The parliament eventually became deadlocked in a competition between those who supported Nazarbaev's market reforms and those who favored a partial restoration of the economic machinery of the Soviet period. In December 1993, a contingent of parliamentarians favoring reform voted to disband the deadlocked parliament. Nazarbaev recognized the vote immediately and, acting as head of state, dismissed the parliament and ordered that the legislative chambers be locked. With this act, Kazakhstan's Soviet-era parliament came to an end.

The election for a new parliament was held in March 1994. This new, more openly experimental deliberative body met in April 1994. The second Kazakhstani parliament quickly asserted its constitutional mandate to exercise control over legislation and the powers of the purse. A number of parliamentary committees began to exert direct influence over legislation related to privatization. Several parliamentary politicians assumed a watchdog function over the privatization process.

But the March 1994 parliamentary election had been a carefully structured process, with the most important decisions having been made during the nomination process rather than during the election itself. For these and other reasons, the election was criticized as fundamentally flawed by international election observers, particularly the Conference on Security and Cooperation in Europe (now known as the Organization for Security and Cooperation in Europe). Several unsuccessful candidates filed court challenges to the election. A challenge lodged by one unsuccessful candidate, Tatiana Kviatkovskaia, resulted in a constitutional-court ruling in March 1995. The court, ruling in favor of the plaintiff, rather surprisingly found the entire parliamentary election to be invalid. Nazarbaev vetoed this decision, but the court then overruled his veto. Yielding to the court, Nazarbaev dismissed the parliament.

Nazarbaev took advantage of the absence of a legislature to call a referendum to extend his own term of office. He easily won a five-year extension of his mandate in a referendum of 20 April 1995. A new constitution also won popular approval by nearly 90 percent of the voters in a referendum in August 1995. This new constitution granted expanded powers to the executive branch, established a bicameral parliament, and did away with the constitutional court in favor of a constitutional council. It gave the president an unambiguous mandate to issue decrees with the force of constitutional law. Parliamentary elections took place in December 1995.

Kazakhstan's Governmental Structure

Kazakhstan's bicameral parliament consists of the Senate and the *majlis*. The upper house, the Senate, has forty-seven seats, seven of which are appointed by the president. Other senators are popularly elected, two from each of the former oblasts and the former capital of Almaty. The senators serve six-year terms. Some senate seats come up for reelection every two years. The *majlis* has sixty-seven directly elected seats and ten party-list seats for a total of seventy-seven. *Majlis* deputies are elected to five-year terms. *Majlis* elections were held in fall 1999 and were next scheduled to be held in 2004.

For most of the period of the Soviet Union's existence (1917–1991), there was only one political party in Kazakhstan, the Communist Party. Although the Communist Party was not actually referenced in the Constitutions of the USSR, the Soviet Union maintained a one-party system with the Communist Party at the focus of activity. The Party served, in the words of a political slogan of the time, as the mind, honor, and conscience of society. It did not serve as a competitor in a competition of ideas. Competition of ideas existed, but the party's job was to direct and implement rather than to debate and deliberate. The period of perestroika and political reform in Kazakhstan inaugurated a period of experimentation with political movements. Eventually, political parties in Kazakhstan were legalized. During the 1999 presidential elections, there were nine political parties registered with Kazakhstan's Ministry of Justice. The Kazakh 1995 constitution specifically legalized political parties acting within the confines of the law. However, the registration of parties is complex and highly controlled.

Kazakhstan's Political Parties

Kazakhstan's most important political parties and political movements include (1) Otan, the "Fatherland" party, formed in March 1999 as a result of the combination of the Kazakhstan Liberal Movement, the Kazakhstan People's Unity Party, the Democratic Party, and the For Kazakhstan-2030 movement; (2) the Kazakhstan People's Congress, formed in October 1991 by the leaders of the Nevada-Semipalatinsk movement and Aral-Asia-Kazakhstan movement, the Union of Kazakhstan Women, the Birlesu independent trade union, the Kazakh Tili society, the Association of Young Builders, and national cultural centers; (3) the Kazakhstan Civil Party, formed in November 1998; (4) the Kazakhstan People's and Cooperative Party, formed in December 1994 on the initiative of Kazakhstan cooperatives; (5) the Kazakhstan Communist Party, re-formed in September 1991 as the successor to the Communist Party of the Soviet Union;

(6) the Kazakhstan Revival Party, formed in March 1995, and the Kazakhstan Social Party, formed in September 1991 following the reformation of the Kazakhstan Communist Party; (7) the Republican Political Labor Party, formed in 1996; (8) the Kazakhstan Republican People's Party, formed in December 1998 under the leadership of the former prime minister Akezhan Kazhegeldin; (9) the Kazakhstan Agrarian Party, formed in January 1999; (10) the Alash National Party, formed in May 1999; and (11) the Justice Party, formed in January 1998.

Successes and Failures of the Political System

Kazakhstan's political system has functioned effectively in some areas. Kazakhstan established a legal foundation and regulatory system for a private economy. It introduced a national currency, the tenge, which became and has remained fully convertible. It established sound monetary and fiscal policies, particularly in taxation and spending. It actively encouraged international trade and foreign investment and established a regulatory structure for the private banking and financial sector. It turned major enterprises over to the private sector, including the majority of power-generation facilities and coal mines. It passed environmentally sound oil and gas legislation that meets international standards.

Kazakhstan's political reform has made less headway in other areas. Kazakhstan's agriculture remains without adequate investment in infrastructure such as roads, processing equipment, and farm inputs. Moreover, the banking system has virtually ignored agriculture, failing to provide much-needed credit for farm expansion. Kazakhstan adopted a private pension system, moving ahead of other former Communist countries, but the social safety net has worn thin in many areas. With a per-capita income of \$1,300, most citizens have yet to see the benefits of macroeconomic reform and the resurgence of world prices for the country's significant oil, gas, and gold deposits. There have also been declines in the health status of the people of Kazakhstan, as well as declines in benefits for senior citizens and education opportunities. Dramatic increases in infectious diseases, such as drug-resistant tuberculosis, pose serious threats. Kazakhstan has drawn significant criticism from human-rights organizations for its inability to protect individual rights, provide for free and fair elections, combat nepotism and official corruption, and guarantee fundamental freedoms such as freedom of speech, the media, and political assembly.

KEDAH (2002 est. pop. 1.7 million). Kedah State is situated on the northwestern coast of peninsular Malaysia and borders Thailand. The state is commonly known as the "Rice Bowl of Malaysia." Recent government initiatives, however, have sought to diversify its mainstay economic activities, particularly in the areas of industry (e.g., Kulim Technological Park) and tourism (e.g., Isles of Langkawi).

In ancient times, Kedah was a well-known destination for trade. Lively commerce between India and Kedah existed some two thousand years ago, as indicated by contemporary Indian literature. Kedah was variously known in Tamil and Sanskrit as Kadaram, Kidaram, Kalagam, and Kataha. Its fame also reached civilizations in Greece and China.

Malaysia's most extensive archaeological site is also found in the Bujang Valley (in southern Kedah) where ruins of an ancient Hindu-Buddhist kingdom were uncovered. The oldest surviving written sources, in the form of stone inscriptions, bear witness to the region as an important landfall port (at Sungei Mas), and later, as an entrepôt (at Pengkalan Bujang) between India and China from as early as the fifth century CE. Additionally, artifacts in the form of bronzeware, ceramics, amber, glass, and beads originating from China, Indochina, Thailand, West Asia, and India indicate the vitality of these commercial links. Its importance, however, waned with the founding of the Melaka sultanate and the dawning of Islam from the fifteenth century CE onward.

KELANTAN (1995 est. pop. 1.3 million). Kelantan, located on the northeast coast of the Malay Penin-

sula, covers an area of 14,943 square kilometers. It is an agrarian state with lush paddy fields, fishing villages, and palm-fringed beaches. Its main cash crops are paddy, rubber, tobacco, and fruits. Fishing, livestock rearing, and timber production are also important economic activities, besides its handicraft cottage industry. The population is approximately 94 percent Malay, 4.5 percent Chinese, and 0.5 percent Indian. With its predominantly Malay population, Kelantan has kept its traditional character. Kota Bharu, its capital, is a center for the arts and crafts, particularly batik and silverwork, for which the state is famous. The womenfolk in Kelantan dominate life in the markets and hawker centers while their menfolk are mainly fishermen or farmers. The Kelantanese are Malaysia's most conservative Muslims and have voted a hard-line Islamic opposition into power.

Historically, Kelantan had always been a vassal. By the fourteenth century, Kelantan was under Siamese suzerainty. At that time, it was also under the influence of the Javanese Majapahit empire. During the fifteenth and sixteenth centuries, Kelantan was sending tribute to the Melaka sultanate and its successor, Johor. Problems of leadership and internal strife were part of Kelantan's history during most of the seventeenth and eighteenth centuries. In 1800, one local chief, Long Mohammad, proclaimed himself the first sultan of Kelantan. Upon the death of the heirless Sultan Mohammad, succession disputes again erupted. In 1909, through a treaty, Siam (Thailand) ceded its suzerainty of Kelantan, Kedah, Perlis, and Terengganu to the British. Together with Johor, these became the Unfederated Malay States. In 1948, the Unfederated Malay States became part of the Federation of Malaya. The federation gained independence from British colonial rule in 1957. Together with Sabah and Sarawak, the federation formed the country Malaysia in 1963.

KEMAL, YASAR (b. 1922), Turkish novelist, journalist, short-story writer. One of Turkey's most prominent writers, Yasar Kemal draws his ideas from

Turkish folklore, cultural traditions, and everyday life. Yasar Kemal's real name is Kemal Sadik Gogceli. He was born in the small village of Hemite (Gokceli) in the province of Adana. His father, while praying in a mosque, was shot dead in front of five-year-old Kemal, and the shock caused a speech impediment until the boy was twelve. He later lost his right eye in an accident. He finished elementary school in 1938, the first person in his village to do so. Kemal moved to Adana (the provincial capital) the same year to continue his education, but had to quit to support himself before he finished the eighth grade. Between 1941 and 1946 he held menial jobs until he became a schoolteacher. During the same period he studied folklore and wrote poems, which were published in several journals.

Kemal was arrested in 1950 for contributing to the organization of a communist party and spent a year in prison. The following year he earned fame as a journalist while working in Istanbul for the newspaper *Cumhuriyet*. In 1952 Kemal married his closest companion, Thilda, the English translator of his work. He received his first journalism award in 1955 from the Society of Journalists. In the same year Kemal's novel, a tale about a bandit and a folk hero, *Ince Memed* (Memed, My Hawk), was published and immediately became a national and international success. It earned him the Valik Literature Prize for best novel of the year in Turkey and has been translated into more than twenty-six languages. Kemal's other literary honors include the French Légion d'Honneur, the Prix du Meilleur Livre Étranger, and a spot on the shortlist for the Nobel Prize in literature. In 1962 Kemal became a member of the Workers' Party of Turkey but resigned in 1969. In 1971 he was imprisoned for twenty-six days, then released without being charged. Kemal took an active role in organizing the Writers' Syndicate of Turkey in 1973 and became its first chairperson in 1974. In 1995, following the publication of an essay in the German weekly *Der Spiegel* (The Mirror), which accused the Turkish government of oppressing the Kurds in Turkey, Kemal was accused of "separatist propaganda" undermining the "indivisible integrity of the state." Himself of Kurdish descent, Kemal, however, had not advocated a separate Kurdish state.

Kemal is considered Turkey's most influential living writer, who speaks for the persecuted and dispossessed. His novels and short stories, based on epic tales, folk songs, and popular literature, poetically describe the beauty of the Cukurova plain in southern Turkey and life in the countryside and coastal villages. His works include *Ince Memed II* (*They Burn the Thistles*), the three-volume *Orta Direk* (The Wind from the

Plain), *Yer Demir Gok Bakir* (Iron Earth Copper Sky), *Olmez Otu* (The Undying Grass), and *Yilani Oldurseler* (To Crush the Serpent).

KENDO Kendo ("way of the sword") is a Japanese martial art. It is the art and sport of sword fighting, although in its modern form the sword is actually a bamboo rod. Kendo developed more than a thousand years ago as a training technique for the samurai warrior class. After the samurai class was officially abolished in 1871, kendo began its transformation into a sport.

It was introduced into the secondary school curriculum in 1914 and became compulsory in 1931. From Japan, it spread to Korea (which Japan colonized from 1910 to 1945), where it remains popular, and to other nations in the Japanese diaspora. Kendo was employed as a hand-to-hand combat training exercise by the Japanese military before and during World War II and was banned by the occupying American officials after the war because it was believed to support Japanese militarism. It was revived in 1953, after the U.S. occupation ended, as a modern sport, and became popular with older people and women as well as young men.

Kendo contests take five minutes, with the first contestant to score two points being the winner. Points are scored by striking portions of the opponent's body with the bamboo sword. The areas on one's opponent that one must hit to score points are the head above the temple, either side of the trunk, the right forearm if the arm is at waist level, or either forearm if both hands are raised. The throat may be struck only by thrusting. The International Kendo Federation (IKF) is the sports governing body, with chapters in thirty nations.

David Levinson

KERALA (2001 pop. 31.8 million). The state of Kerala is located in southwestern India bordering the Arabian Sea. It was formed in 1956 by merging the British districts of Malabar and Calicut, the district of South Kanara, and the princely state of Travancore-Cochin. Though measuring only 38,863 square kilometers, Kerala is one of the most densely populated

regions in the world. The mountains of the Western Ghats separate this narrow strip of tropical land, where access can be gained only through mountain passes, from the rest of the Indian peninsula to the east.

Kerala differs in many ways from the rest of India. Almost the entire population speaks Malayalam, a Dravidian language with significant Sanskrit influences, Kerala being the only Indian state to speak the language. Its population of Hindus (60 percent), Muslims (20 percent), and Christians (20 percent) enjoys interreligious harmony. Christianity supposedly came to Kerala in 52 CE, with the Apostle Saint Thomas, who founded one of the earliest Christian settlements in the world here. Islam also came not by conquest but through trade from Arabia. Hinduism as practiced here exhibits rather different customs from the rest of India, such as matrilineal inheritance. Other religions in Kerala include Buddhism, Jainism, and Judaism, although most Jews have now emigrated to Israel.

Kerala's traditional association with spice production attracted traders from the early Romans to the Chinese (first through fifteenth centuries CE) to Western Europeans (from 1498 onward). Kerala developed as an important entrepôt connecting Europe, Arabia, Persia, South Asia, Indonesia, and China. The major international ports were Cochin and Calicut. The European commercial and military intervention, beginning with the Portuguese, gradually eliminated trading rivals and finally culminated in British control. The British ruled Malabar in the north and indirectly controlled the princely states of Travancore and Cochin in the south.

Modern Kerala was the first major region in the world to have a democratically elected Communist government (1957). The present ruling coalition is headed by the Communist Party of India (Marxist). Today Kerala surpasses the rest of the country in literacy, health care, population control, equitable distribution of income, and popular participation in governance. Kerala's mortality and fertility indexes surpass China and are on a par with advanced Western countries. Though the state is the most advanced in India in its social indicators, it lags behind a number of other Indian states in terms of per-capita income.

The domed roof of the bazaar in Kerman in 1993. (K. M. WESTERMANN/CORBIS)

KERMAN (2002 est. province pop. 2.2 million; city pop. 419,000). In ancient times Kerman, a province in southeastern Iran, was known as Carmania (in Persian, "bravery and combat") and formed part of the province of Ariana in the Persian empire. The modern province has an area of about 186,000 square kilometers. The capital city, also Kerman, was founded as early as the third century CE by Ardashir I, founder of the Sasanid dynasty.

Kerman's history was violent: Arabs, Buyids, Seljuks, Turkmens, Mongols, and Persians invaded and ruled it and left their mark on the region. The Safavid ruler Ganj Ali Khan (1005–1034 CE) especially contributed to Kerman's prosperity.

Kerman borders the modern provinces of Khorasan and Yazd to the north; to the south, Hormuzgan, the Persian Gulf, and the Gulf of Oman; east, Sistan and Baluchistan; and west, Fars. Western Kerman is mountainous, while northern and eastern Kerman is desert, with little water. Its most important permanently flowing river is the Halil. To alleviate the shortage of surface water, the province developed many subterranean water canals known as *qanat*, an ancient Iranian method of groundwater use and transport; some *qanat* systems have been in use for thousands of years. Due to its aridity, Kerman has a low population density, with ten major urban areas scattered throughout the province.

The language spoken in Kerman is Persian, with provincial and local differences and expressions. Turk-

ish and Baluchi languages are also spoken by some regional nomadic tribes, who form a very small portion of the total population. Most people are Muslims, with some religious minorities such as Zoroastrians, who have been living in the area for thousands of years.

The economy of Kerman is based on agriculture and industry, as well as its rich copper mines. Agricultural products include grains, beets, henna, cumin, cotton, and citrus fruits; pistachios and dates are two of Kerman's major export items. Major nonagricultural exports are hand-woven carpets and rugs known as *gelim*. Kerman's carpets are known throughout the world for their delicacy, strength, and colors. The provincial capital, 1,060 kilometers from the Iranian capital of Tehran, is linked to it by road, rail, and air. Kerman also has good access to the Persian Gulf ports.

KEUMKANG, MOUNT Mount Keumkang (Keumkangsan, or "Diamond Mountain") is a range of spectacular peaks in Kangwon Province in eastern

North Korea. Keumkangsan includes some 12,000 individual peaks, as well as valleys and spectacular waterfalls. The highest peak within the range is Biro-bong, with a height of 1,698 meters. The range known as Manmulsan is unique in that its rugged terrain appears to change as light passes over and recedes from it. Keumkangsan is the northern extension of the Taebaek mountain range, which includes Soraksan (Mount Sorak) to the south. Like Soraksan, Keumkangsan has tremendous sentimental significance to Koreans because of its natural beauty and myths associated with it.

Keumkangsan's name is derived from a Buddhist poem that speaks of "the diamond mountain where the Bodhisattva lives." Legend holds that the region was originally controlled by nine dragons, which were defeated by the fifty-three Buddhas of the Yujeon Temple.

The region is largely undeveloped, although several archaeological and cultural sites exist there. The best-preserved of these dates from 670 CE during the Unified Shilla period (668–935 CE). In the late 1990s the region also became politically significant when the government of North Korea began to admit organized tours from South Korea. These tours were arranged by the Hyundai Corporation, which has begun economic development in North Korea.

Thomas P. Dolan

KHAI HUNG (1896–1947), Vietnamese writer. After graduating from senior high school, Tran Khanh Giu (Khai Hung) started teaching in a private institution called Thang Long School. The French authorities considered it an establishment in which liberal ideas and socialist doctrines were freely cultivated. It was there that Khai Hung made friends with patriots and writers who were to give a definite direction to the rest of his life. With a few young, politically and socially minded writers, he founded, in 1933, Tu Luc Van Doan, a literary, social, and political club. One year later, he published his first novel, *Nua chung xuan* (In Mid-Spring), followed by many more that made him into one of the most influential and popular authors of the time. In his novels, he attacked the traditional stratified society and showed the vacuity of Confucian virtues, which he felt were all there to make life miserable for everyone concerned. During this period, he was involved in many social endeavors. Finally, as the war portended drastic changes to the colony, Khai Hung launched himself into the political arena by joining the Dai Viet Party, which sought Vietnamese independence

by collaborating with Japanese occupational forces. After the war, as the Communist Party was establishing its political control over Vietnam, he sided with the rival old Nationalist Party. Early in 1947, a few months into the Franco-Vietnamese war, Khai Hung was kidnapped and assassinated by parties unknown.

KHALKHA Khalkha is the official language of Mongolia and is spoken by approximately 90 percent of its population, about 2.4 million in 2000. Khalkha is actually a dialect of Mongol. In addition to Khalkha, other important Mongol dialects include Dariganga, spoken in southern Mongolia, and Chakhar, Urat, Kharchin-Tumet, Khorchin, Ujumchin, and Ordos, all spoken in Inner Mongolia. Khalkha encompasses a number of dialect variants, but differences are as minor as the differences between Khalkha and the other Mongol dialects, all of which are mutually comprehensible. The real differences are historical rather than linguistic. When Khalkha's direct connection with China ended after 1911, Russian became a dominant influence; the other languages of the Mongol group, with the exception of Dariganga, continued to be influenced by Chinese. The Mongol languages of China also continued to use the Uighur script and a spelling that is somewhat archaic and less precise but has the advantage of deemphasizing phonological variations.

Prior to 1940, Khalkha was also written with the Uighur script, but since that time a slightly modified Cyrillic script has been used that better reflects the phonological patterns of everyday speech. Since 1991, the Uighur script has made a comeback. From the standpoint of Mongolian linguistic nationalism, a general return to the Uighur script would be extremely important. All speakers of Mongol would write the same way, although terminological differences would persist.

After more than sixty years of development as a distinct literary language, Khalkha has now become a sophisticated medium of exchange and a Mongolian national language in every sense. The evolution of Khalkha has accelerated since the end of Communist rule, with the introduction of new social and economic institutions and vocabularies to support them. Whole

new sectors associated with concepts that simply did not exist in Mongolia prior to the 1990s, such as modern banking and computer science, have developed their own vocabulary. Most of the new terminology is based on Mongolian roots rather than borrowings. Nonetheless, in many highly technical areas the Mongols still have recourse to English, which has replaced Russian for them as the preferred language of international communication, at least until established Mongolian terminology has emerged.

KHAN, ABDUL GHAFAR (1890–1988), Pakistani politician. Abdul Ghaffar Khan played a major political role in the North-West Frontier Province (NWFP) of the Indian British empire (now part of Pakistan). He was born in 1890 at Charsadda (NWFP) into an important Pashtun family. He became very popular among the Pashtun population there for his movement devoted to the education of the illiterate. In the 1920s he joined the Indian National Congress, leading the provincial branch of the party in the Pashtun areas. As a member of the central executive committee of the Congress, he was jailed several times by the British.

In 1947 he opposed the partition of the Indian subcontinent into two different states (Pakistan and India). After the creation of Pakistan (1947), he became a member of the Pakistani National Assembly, but was later imprisoned and then expelled (1958) from Pakistan to Afghanistan because of his nationalistic radicalism. He struggled for the survival of the traditional way of life of the Pashtuns (who are the majority ethnic group in Afghanistan) and for their political reunification in a single state, called Pashtunistan. In 1970 he returned to Pakistan, having softened his political stance. He died at Peshawar, Pakistan, on 20 January 1988.

KHAN, VILAYAT (b. 1928), Indian musician. Vilayat Khan is a well-known exponent of Indian instrumental music. His many renditions on the sitar, a stringed instrument belonging to the lute family, have earned him international recognition. Born into a family of noted musicians in 1928 in East Bengal, Vilayat Khan spent his childhood in Calcutta. He later moved to Delhi after the death of his father, Ustad Inayat Khan, in 1938. Vilayat Khan was musically inclined at a very young age and showed great promise and determination. He cut his first album at the age of eight in 1936 and developed a distinctive style of his own in the course of his musical career. Vilayat Khan's music is marked by fluidity, sweetness, and a certain impatient energy of inventiveness. He is credited with forging the *gayaki ang* style of sitar playing, identifiable by its innovative deployment of vocal technique. By reducing the number of drone strings from seven to six, he created new tunings, making the sitar more supple and versatile. This unique style opened up new possibilities in Indian instrumental music. For his distinctive contribution Vilayat Khan has earned the title *afzaab-e-sitar*, "the radiant star of the sitar." He is known for his fierce and independent spirit, having declined state awards twice. A staunch defender of the purity and continuity of multiple local traditions, the sitar maestro has called for innovative experimentation within the existing repertoire of Indian classical music in view of its marked decline in recent times.

KHARARKHI Distilled alcoholic beverages, generically *khararkhi* ("black *arkhi*" in Mongolian), have a considerable antiquity among the Mongols and other Central Asians. In the thirteenth century they occurred in two forms: (1) various brandies and vodkas, mostly imported, judging from largely Turkic names (Mongolian *arkhi* is from Arabic via Turkic *arajhi*, meaning "properly distilled") and (2) various products of freeze distillation. In freeze distillation, a liquor is started in the normal way, and the product is then stored in an ice cellar as a semifrozen slush. Unfrozen portions are gradually ladled off and stored, yielding a concentrated drink of up to 60 proof. Most of the

freeze distillates in the Mongol court dietary *Yinshan zhenyao* (Proper and Essential Things for the Emperor's Food and Drink) were intended for medicinal use and were to be cut with water. However, straight concoctions using fruit and other fermentables served concentrated for the simple pleasure of it were in use as well, with the Arabic *sharbat* tradition embracing a similar range of fruit drinks as one influence. Certainly, in the *Yinshan zhenyao*, Mongolian native drinks have been improved with more sophisticated Arabic traditions in mind.

The Mongols continued to drink distilled alcoholic beverages after their empire. There are no further references to freeze distillation, but the method must have continued in use since it is such an obvious one and well suited to Mongolian conditions. The range of ingredients was probably less exotic. Most of the true hard liquors continued to be imported from the sedentary world, better equipped to produce them, but easily portable distillation apparatus was generally available by the fourteenth century if not much earlier, judging from Mongol-era content in the popular encyclopedia *Zhujia biyong shilei* (Things That One Must Put to Use at Home), which clearly describes portable distillation apparatus of a type easily usable by Mongols.

In the twentieth century the Mongolian hard liquor of choice has become vodka, mostly imported from Russia, but the Mongols also make their own, too (for export), primarily from local wheat. Many varieties of moonshine exist, too. Almost any liquor that can be distilled is and with far better stills than the primitive ones in use among the Mongols prior to the twentieth century.

Under traditional conditions, alcoholism was uncommon among the Mongols. Hard liquors were available only sporadically and, in the case of those locally produced, only seasonally. This situation changed for the elite during the era of empire and has changed for Mongols generally in recent times. Alcoholism, as throughout the former Soviet bloc, is now a serious problem. Given the cheapness and ready availability of *khararkhi*, it is likely to remain so.

KHASI Khasi (Ki Khasi or Ri Lum) is the name of a tribe inhabiting the Khasi and Jaintia Hills of Meghalaya State in northeast India. Originally from Southeast Asia, Khasis migrated to the Khasi and Jaintia Hills, establishing small chiefdoms there by the mid-sixteenth century. British expansion into Assam in the early nineteenth century exposed the Khasis to missionary activities and Western cultural influence.

Khasis speak a Mon-Khmer language of the Austro-Asiatic family. Traditionally they practiced an animistic religion focusing on propitiation of spirits by a priest (*lyngdoh*) and a female priest (*Ka-sob-blei* or *Ka-lyngdoh*). Nowadays, however, the majority (67 percent) has adopted Christianity. The Khasis are divided into exogamous clans, each tracing their descent from an ancestress (*kiaw* or grandmother). The youngest daughter inherits the ancestral property. Although many have entered other occupations, agriculture, both intensive paddy cultivation and shifting agriculture (*jbum*), is still the main economic activity.

There is much political and social turmoil among Khasis today, especially surrounding the vexatious question of political rights and limited economic opportunities in the region. Conflicts with nontribals resulted in formation of proactive groups such as the Khasi Students' Union (KSU) and the Federation of the Khasi, Jaintia, and Garo People (FKJGP). There is also increasing resentment of traditional Khasis against Christianity, giving rise to the Seng Khasi movement to preserve traditional religion.

KHIEU SAMPHAN (b. 1933), Cambodian political figure. Khieu Samphan was an important member of the Communist Party of Kampuchea, which ruled Cambodia between April 1975 and January 1979—a period when more than 1.5 million Cambodians lost their lives. Born the eldest son of a Kompong Cham judge in 1933, Samphan attended the Collège Norodom Sihanouk and the Lycée Sisowath. He completed his studies at the University of Paris, where he wrote a thesis about Cambodia's economic development that many later mistakenly believed was

a blueprint for the radical economic policies of the Khmer Rouge. It was during his time in Paris that Khieu Samphan became a dedicated Communist.

When he returned to Cambodia from France, Samphan taught at a private school and edited the left-wing newspaper *L'Observateur*. His writings about social justice and veiled criticisms of the injustices of the ruling regime made him a popular figure among Cambodia's students. In 1962 he was elected to Cambodia's National Assembly and was also appointed secretary of state for commerce. He was reelected in 1966, before disappearing into the maquis in 1967, fearing for his life after Sihanouk had begun to crack down heavily on Communists and suspected Communists.

Samphan occupied several important posts in the Democratic Kampuchea regime (1975–1979) and, after it was ousted by the Vietnamese, continued to represent the movement on the international stage. He played an important role in negotiating the 1991 Paris Peace Agreements, before withdrawing to the region of Cambodia's border with Thailand, where the Khmer Rouge continued its struggle against the ruling regime. Following the death of Pol Pot and the disintegration of the Khmer Rouge movement in the late 1990s, Samphan eventually surrendered to the Cambodian government. He was allowed to retire to the former Khmer Rouge stronghold of Pailin, to await a decision on whether he would be called to appear before an international genocide tribunal.

KHILAFAT MOVEMENT The *khilafat* (caliphate) was the unique position occupied by the Muslim emperor of the Turkish (Ottoman) empire who was also the spiritual head (*khalifa* or caliph) of the Muslim community worldwide. The Khilafat Movement was a protest movement by Indian Muslims angry at the decision of the British and Allied governments after World War I to dismember the Ottoman empire and thus disperse the Islamic holy shrines and the rule of their spiritual leader, Abdul Hamid II. The Muslims had fought gallantly for the British during the war on the assurance that their religious interests would be protected, and Britain's

treatment of the Turks after their loss in the war was seen as a betrayal of this trust.

Some Muslim leaders formed themselves into a *khilafat* conference; 27 October 1919 was designated as Khilafat Day; and a joint conference was called with Hindu leaders on 23 November over which Mohandas Gandhi presided. A *khilafat* deputation to the viceroy on 19 January 1920 proved unsuccessful, and in May 1920, by the Treaty of Sevres, peace terms were formally signed, sealing the fate of the Ottoman empire. The *khilafat* leaders formally joined ranks with the Indian National Congress and adopted Gandhi's noncooperation agenda, which saw nationwide mass peaceful protests by the Indians against British rule from 1920 to 1922. Thus the *khilafat* issue served to unite the Hindus and Muslims politically in the nationalist cause. The Jamiat-ul-Ulema issued a fatwa (religious decree) advising Muslims to boycott elections under the new constitution, boycott schools and colleges, give up titles, and refuse to serve in the army. Though *khilafat* leaders like the Ali brothers—Muhammad and Shaukat—contended that all Indian Muslims were equally enraged by these developments, it is also true to argue that to an extent an emotive issue was utilized by certain Muslim organizations to further political gains and that the issue itself and the distance from India meant that few Muslims could be directly inconvenienced by Allied actions. Meanwhile Turkey itself was undergoing a revolution with the Young Turk movement capturing power, ousting Hamid and abolishing the khalifat. By the early 1920s, therefore, the movement itself had run out of steam.

KHIVA, KHANATE OF The khanate of Khiva was a state centered in the basin of the Amu Dar'ya River in Central Asia from the early sixteenth century

until 1920. Khiva was a successor state of the ancient and powerful state of Khorezm, founded by two descendants of Genghis Khan. The Uzbek chieftains Ilbars and Balbars conquered Khorezm, the land south of the Aral Sea and west of the Syr Dar'ya River, plus part of Khurasan, in 1511.

During much of Khiva's early history it was embroiled in wars between its own Uzbek and Turkmen populations and with its neighbors, Iran, Bukhara, and Turkmen nomads. At the same time the khanate government went through much change. Originally the khanate was a loose confederation of independent holdings all nominally owing allegiance to a great khan. By the early seventeenth century the confederation had been replaced by a system of powerful regional governors, or *inaqs*, who vied to control the khan. These *inaqs* were drawn from a powerful aristocratic class of Uzbek families, of whom the Qongrat and Manghits were the most powerful.

Khiva was handed a series of blows in the mid-eighteenth century as the khanate of Aral seceded in the northeast and Nadir Shah of Iran conquered the nation in 1740. In 1747 Iranian domination gave way to near anarchy as wars between the Qongrat and Manghit tribes, the khanate of Aral, and other Uzbek and Turkmen tribes tore the nation apart. The khanate hit a low point in 1767 when Yomut Turkmens captured the city of Khiva.

Muhammad Amin Inaq, a member of the Qongrat tribe, reconquered Khiva from the Yomut Turkmens and established his authority over the khan. During the reigns of Muhammad Amin's successors, Eltuzer and Muhammad Rahim, the Qongrat dynasty was established as Eltuzer deposed the khan and declared himself khan in 1804. Muhammad Rahim reunited Khiva by conquering the Aral khanate and breaking the power of the other Uzbek tribes.

Khiva was soon drawn into a fatal confrontation with Russia. The two clashed as early as 1839. In 1873 an overwhelming Russian force invaded Khiva. The resulting treaty made Khiva a protectorate of the Russian empire and stripped it of some territory but left Khiva's internal affairs intact. The Russian Revolution of 1917 sparked a short-lived seizure of power by Junaid Khan. Bolshevik and Khivan forces overthrew him in 1919 and abolished the khanate in 1920.

KHMER The Khmer are the numerically and politically dominant ethnic group of Cambodia. They make up 90 percent of Cambodia's 12 million inhabitants, approximately 10.8 million people. Khmer also live in northeast Thailand, southern Laos, and southern Vietnam as minority groups. Khmer is also the name of the language this group speaks, a member of the Mon-Khmer group of the Austroasiatic ethnolinguistic family. The earliest-known inscription in the Khmer language is dated 612 CE. However, the Khmer did not begin to be unified as a people until the reign of the Angkorian king Jayavarman II (770–850, reigned 802–850).

Modern Khmer live much as their ancestors did. The majority of Khmer society is agrarian (85 percent), focusing on paddy rice cultivation. Prior to the twentieth century, each household practiced subsistence agriculture, using simple technology to farm. The Khmer traditionally established their villages near a water source, natural or man-made. Even today, the majority of the population inhabits one-third of Cambodia's arable land, primarily around the Tonle Sap (Great Lake), extending east and south to the Mekong River. The proximity to water also makes fish a staple of the Khmer diet.

The construction of a rural Khmer house has not changed over centuries. Khmer in rural areas continue to live in wood houses that are elevated off the ground for better air circulation and protection from wild animals and dangerous spirits.

Social Organization

Khmer society is hierarchical, traditionally divided into royalty, nobility and officials, and the peasantry. These classes continue to dominate contemporary society. Royalty was viewed as having semidivine status; officials taxed and administered the majority of society; and peasants and landless laborers cultivated the land. Merchants were traditionally excluded from this system, since local traders were either women, whose social status was defined by gender, or of a different ethnicity, such as Chinese. Brahman priests and Buddhist monks were associated with royalty and occupied a prestigious category outside society's hierarchy. Slaves were used during Angkorian times (802–1431) to work on the king's and the nobility's estates, but slaves were usually not of Khmer descent.

Hierarchical relationships continue to define day-to-day relationships among individuals. Elders are authority figures, and their status depends not only on age but sex, wealth, political position, occupation, and religious piety. Social order is dependent on respect-

ing elders and maintaining one's position in society; those positions are supported by Buddhist concepts of karma and merit. Disorder is viewed as dangerous and is exemplified by the wild jungles lurking on the edge of a village. Oral codes of conduct (*chbab*), which are based on Buddhist teachings, help maintain the moral fiber of society.

In Khmer society, many roles are determined by gender. In rural areas men are responsible for plowing the fields, caring for large animals such as water buffalo, building houses, and other work with wood, while women plant the rice fields, care for smaller livestock, care for children, weave cloth, and cook meals. Men are seen as superior to women; a husband always assumes the position of elder in relation to his wife. Men are legally heads of households and responsible for providing money for the family, but women possess a great deal of authority in managing the household and are in control of monetary matters. Outside the home, women are traders at the market and participate in agricultural work, but men do the heavy tasks.

Kinship is traced through both the mother and father, and sons and daughters possess equal inheritance rights. The society is matrifocal (focused on the bride's family) in that the groom's family must pay a bride-price to the bride's family before the marriage occurs, newlyweds reside near the bride's parents, and the groom usually works for the father-in-law. Marriages are also arranged by parents and sometimes with the assistance of a matchmaker, demonstrating the importance of the elder in decision-making processes.

Community Organization

The formal unit of social organization among the Khmer is the nuclear family, and there is little cohesion beyond the family unit. A weaker sense of kinship extends to grandparents, aunts, uncles, nephews, nieces, and first cousins. However, neighbors and relatives provide a network of cooperation if help for the construction of a house is required, for example. A patron/client relationship also exists in Khmer society to provide greater support. A patron provides monetary loans and physical protection, and in exchange the client will be politically loyal to the patron and give physical labor as requested by the patron.

Eighty-five percent of the population live in rural communities or villages. A village is defined by the presence of a Buddhist temple and a village headman, who is employed by the government. The *neak ta* cult of guardian spirits also loosely unites the village members, but solidarity among the community is weak.

A Khmer refugee from Cambodia in a refugee camp in Thailand in 1988. (DAVID & PETER TURNLEY/CORBIS)

Religion

The Khmer are Theravada Buddhists but practice a popularized form of Buddhism infused with their animist beliefs. Buddhist concepts of karma and merit heavily influence daily life, and appeasement of the multitude of spirits in the Khmer belief system is considered very important. *Neak ta* are ancestral or guardian spirits that the Khmer pay homage to in their homes, villages, and the surrounding forests.

Contemporary Khmer Society

Khmer daily life was primarily unaffected by external forces until the mid-nineteenth century, when Cambodia became a French colony. The French introduced cash crops such as rubber and changes to land ownership. Many rural Khmer lost land rights and were no longer self-sufficient, since they had to devote a portion of their land and energy to raising cash crops. World War II and the two Indochina wars disrupted Khmer life, and U.S. bombing of Cambodia in

the early 1970s devastated the lives of many people. Cambodia began to experience food shortages.

The Khmer Rouge regime (1975–1979) caused the most severe changes. The regime intended to erase all Khmer traditional institutions, such as family, religion, and hierarchical relationships. The regime was responsible for the death of 2 million people (estimates vary widely), primarily through execution and starvation. It destroyed temples and animist shrines, separated families, and emptied urban areas. The years following the removal of the Khmer Rouge from power in 1979 have returned some stability to the Khmer, but military unrest persisted into the late 1990s, despite the fact that elections were held in 1993.

More than 800,000 people fled to Thailand and Vietnam in the 1970s and early 1980s. Some of the refugees then resettled in countries such as the United States, Australia, Canada, and France. The displaced Khmer have sustained their cultural traditions in their new countries. Khmer classical dance and musical performances are common, as the younger generations are learning these classical arts. Heritage language classes also teach the generations born outside of Cambodia the native language of their parents and grandparents. Khmer community networks exist globally, and the Internet assists in the maintenance of strong links among the Khmer diaspora.

KHMER EMPIRE With control over an area that once encompassed parts of modern Thailand, Cambodia, the Malay Peninsula, and the Lao People's Democratic Republic, the Khmer empire flourished in Southeast Asia between the sixth and mid-fifteenth centuries. Arising from lands originally ruled by the

Kingdom of Chenla (550–800 CE), when Cambodia was called both Funan and Chenla, the Khmer empire reached its apex during the rules of Jayavarman II (802–850 CE), Yasovarman I (889–910 CE), Suryavarman I (1002–1049 CE), Suryavarman II (1112–1152 CE), and Jayavarman VII (1181–1201 CE).

Characterized by cultural expansion and conquest, the Khmer rulers were strongly influenced by Hindu traders from India. Jayavarman II originally established the Kingdom of Kambuja in honor of Kambu, the legendary first-century founder of the Kingdom of Funan, and the root of the current English term "Cambodia." After declaring his independence in 802 CE from the Javanese who controlled Cambodia, Jayavarman II climbed atop Phnom Kulen (Lychee Mountain) in northern Cambodia, where he proclaimed himself a *devaraja* (god-king). Identifying himself with the Hindu god Shiva, he then asserted power over rainfall and soil fertility, and began construction of a "temple mountain" to symbolize the holy mountain at the center of the universe. Both acts were to be repeated over the next four hundred years by Cambodian kings ascending the throne.

From their capital at Angkor, a city that encompassed nearly 120 square kilometers (75 square miles) of fertile plains north of the Tonle Sap (Great Lake), the Khmer leaders presided over a civilization that was one of the strongest and most advanced in the Greater Mekong subregion between the ninth and twelfth centuries. However, frequent infighting among rivals, as well as wars with Champa (a kingdom of southern Vietnam) and the Annamese of northern Vietnam left the Khmer weakened, and the empire eventually succumbed after repeated invasions by the Thais in the mid-1400s.

The longevity and success of the Khmer empire can be attributed, in part, to its location near the Tonle Sap and the major trade routes connecting the Bay of Bengal to southern China, as well as the ability of its leaders to regulate seasonal variations in the water supply through the use of huge canals and reservoirs, or *baray*. These made it possible to irrigate crops and to feed the population during the dry season. In addition, most of the Khmer kings appear to have ruled wisely, building schools, libraries, and roads that connected cities with rice-growing areas. Several rulers were also noted for their patronage of the arts.

The power of the Khmer empire is also a reflection of the artistic and religious significance of Angkor itself. Yasovarman I founded and relocated the Khmer capital from the banks of the Mekong to an island near the present-day provincial capital of Siem Reap, where it remained until 1431 CE. According to temple in-

scriptions, Yasovarman I thought so highly of his skills that it was as if he had created the arts and sciences.

Suryavarman I, known as the "King of the Just Laws," reunified and expanded the Khmer empire into Thailand and Laos. Consolidating his power by requiring all four thousand local officials to swear allegiance to him, he also continued construction of Angkor's irrigation system, building a huge *baray* near the current site of Angkor Wat. Nearly 8 kilometers long and 1.6 kilometers wide, the reservoir was capable of holding more than 567 million liters of water. Suryavarman I also made Buddhism the state religion, though people were permitted to continue worshiping Hindu gods if they wished.

Suryavarman II came to power in the twelfth century. Like Suryavarman I, he was an outsider who killed a rival in a battle for the throne. He also succeeded in uniting the kingdom through wars in Vietnam, Myanmar (Burma), and Champa. But Suryavarman II is best remembered as the king who commissioned Angkor Wat, a temple-mountain designed to represent Mount Meru, the mythical dwelling place of the Hindu kings. Characterized by extensive bas-relief statues of Khmer warriors, dancing girls, and mythological creatures from the *Ramayana*, the construction of Angkor Wat took thousands of laborers and artisans more than thirty years to build.

For much of the three decades following Suryavarman II's death, internal conflicts over succession and continuous warfare with Champa plagued the Khmer people. In 1177 CE, Angkor was captured by a Cham army and its inhabitants slaughtered. Demoralized by the loss of their capital, the Khmer empire nearly collapsed. However, Jayavarman VII, a relative of Suryavarman II and a devout Buddhist living in exile, rallied his people and not only drove the Chams out of Cambodia, but also conquered Champa and much of present-day Laos, Thailand, and Malaysia.

Jayavarman VII's reign marked the largest construction program in Cambodia's history; he built Angkor Thom as his new capital. Larger and more magnificent than the capital it replaced, Angkor Thom was surrounded by a stone wall with four-sided stone images facing in each direction. In the city's center, Jayavarman VII placed his own temple-mountain, the Bayon. One of the most photographed structures in Cambodia, the Bayon contains fifty towers of varying heights, each bearing stone faces and eyes that appear to stare straight at the viewer. Equally remarkable, the bas-relief walls depict ordinary Cambodian scenes from the twelfth century rather than the religious and royal icons depicted on every other Khmer building.

Following the capture of Angkor by a Thai army in 1431 CE, the Khmer rulers abandoned the site and relocated their capital to Phnom Penh, where it remains today. For the next four hundred years, Angkor remained buried in the jungle until it was "rediscovered" by the French explorer Henri Mouhot in the late nineteenth century. While much of the statuary and carvings have disappeared, the five towers of Angkor Wat are portrayed on the Cambodian flag, and the temple complex—the most visited tourist site in Cambodia—is considered a World Cultural Heritage site.

KHMER ROUGE The Khmer Rouge was a radical Maoist-oriented Communist party that ruled Cambodia from 17 April 1975 to 7 January 1979 and was responsible for the death of 2 million Cambodians (estimates vary widely). The Khmer Rouge had its roots in the Khmer People's Revolutionary Party, which was founded in 1951 by Vietnamese-influenced Cambodian radicals, and was renamed as the Workers' Party of Kampuchea (WPK) in 1960, as the Communist Party of Kampuchea (CPK) in 1971, and as the Party of Democratic Kampuchea in 1982. Prince Norodom Sihanouk called this movement *les Khmers rouges* ("the red Khmers") when they attempted to end his rule in the 1960s.

A number of future leaders of the movement, including Pol Pot, Ieng Sary, Thiuouunn Mumm, Thiouunn Prasith, Hou Yuon, Khieu Samphan, Khieu Thirith, and Khieu Ponnary, were radical young Cambodians who were studying in Paris in the 1950s. Many had joined both Ho Chi Minh's Indochinese Communist Party (ICP) and the French Communist Party. Returning to Cambodia, the students made contact with the Communist underground, at that time a group of approximately two thousand members of the Vietnamese-dominated ICP who were fighting the French in what is known as the first Indochinese War

(1946–1954). The movement suffered a series of setbacks during the 1953–1960 period, beginning with independence, which took away anticolonialism as their platform. Unlike their Lao and Vietnamese counterparts, Cambodian Communists did not participate in the 1954 Geneva Conference that ended the first Indochinese War. The Final Accords of the Geneva Conference called for the Viet Minh to withdraw their troops from Cambodia, and with them they took nearly one thousand Cambodian Communists, including the leader, Son Ngoc Minh, leaving a much reduced party infrastructure. Afterward Prince Sihanouk began arresting all known leftists. Pol Pot and other leftists went underground, working as teachers, bureaucrats, and journalists, while participating in clandestine party work and recruiting activities.

A Marxist-Leninist party organization was established in September 1960 to lead a Communist revolution, though Vietnamese-trained guerrilla fighters rather than the Paris-trained intellectuals dominated the leadership. The WPK had two platforms: ameliorating the country's landholding patterns, which kept the landless in a cycle of poverty and reinforced socioeconomic inequality, and continuing to wage a non-violent struggle against the government, as the WPK had almost no armaments at the time.

In 1961 Sihanouk reversed his policies and endorsed three leading leftist intellectuals (all clandestine members of the WPK) for election into Parliament. Two, Hu Nim and Khieu Samphan, became government ministers responsible for economic affairs. But the WPK continued to be an illegal organization, and Communist-led strikes and student protests caused Sihanouk to launch another crackdown. After the party's second congress, in 1963, the new leaders fled Phnom Penh to the sparsely populated northeast of the country, where they began waging a violent struggle against the government.

The WPK received little external assistance, because both Beijing and Hanoi considered Sihanouk to be too important to their own goals (he allowed the North Vietnamese to use Cambodian territory for transport, logistics, and as a staging ground for the war in South Vietnam). In 1965 Pol Pot made a secret trip to Hanoi and Beijing to request material assistance; he was told that the Cambodian revolution would have to wait so as to not distract from the ongoing revolutions in Laos and South Vietnam. The North Vietnamese began to arm the WPK in the late 1960s, but never to the Khmer Rouge's satisfaction. The movement grew steadily from a few dozen men to a several thousand-strong fighting force due to peasant dissat-

isfaction, higher taxes, and the secret American bombing campaign that began in 1969.

In April 1970 U.S. President Richard Nixon authorized the invasion of Cambodia to stop Hanoi's supply lines and eliminate Viet Cong sanctuaries. The Vietnamese and Khmer Rouge retreated westward, where they routed the Cambodian army. Responding to Communist gains, in May 1970 General Lon Nol took over power while Sihanouk was in France. Wary of Lon Nol's ties to the United States, the Chinese brokered an agreement with the Khmer Rouge leadership that made Sihanouk their titular head, greatly improving the movement's public appeal. The WPK, renamed the Communist Party of Kampuchea, made huge gains following America's withdrawal from Indochina in 1973, and their peasant-based army captured Phnom Penh on 17 April 1975.

In power, the Khmer Rouge implemented a series of radical policies. Cities were evacuated, and all citizens were forced onto massive agricultural collectives. Many irrigation works were established to facilitate rapid agricultural growth. Private plots were collectivized, private property was made illegal, the commercial and banking sectors were shut down, and private markets were abolished, because all economic functions were controlled by a central plan.

Under the Khmer Rouge, there was a wholesale slaughter of intellectuals, artisans, doctors, lawyers, any members of the former Lon Nol regime, ethnic minorities, and any other political enemies. These executions, along with famine and disease, were behind Cambodia's staggering death toll during the Khmer Rouge regime.

Any economic gains from collectivization were not shared by the population, as nearly all surpluses were exported to China to pay for armaments. The xenophobic CPK, always concerned about Vietnamese domination, became more fearful upon Hanoi's calls for the establishment of an "Indochinese Union." The Khmer Rouge resisted and even provoked Hanoi by launching a series of border attacks. Hanoi made diplomatic protests but was rebuffed by both Phnom Penh and its patron, Beijing. In 1978 Hanoi launched a punitive strike into Cambodia and quickly withdrew.

The ease with which the battle-tested Vietnamese were able to penetrate Cambodia led to a series of re-creations. Leaders from the eastern zone were summoned to Phnom Penh, where they were tortured and executed at the infamous Tuol Sleng Prison. In all, nearly one hundred thousand Khmer Rouge cadres and their families were executed at this time for treason.

The Khmer Rouge continued their attacks on Vietnam, and on 25 December 1978, after signing a mutual defense treaty with the Soviet Union, Vietnam intervened in Cambodia, driving the Khmer Rouge into enclaves along the border with Thailand. Hanoi occupied Cambodia with some one hundred thousand troops for ten years and installed a government comprising former Khmer Rouge leaders who had defected to Vietnam during the purges, as well as Cambodians who had trained in Vietnam since the 1950s.

Continuing to receive assistance from China, the Khmer Rouge regrouped near the Thai border and began an eleven-year guerrilla war. In 1982 the Coalition Government of Democratic Kampuchea (CGDK) was established with the backing of China, the United States, and members of the Association of Southeast Asian Nations. The coalition government, headed by Sihanouk, included the Khmer Rouge and two non-communist guerrilla forces fighting the Vietnamese. Through the CGDK, the Khmer Rouge continued to hold Cambodia's seat in the United Nations. The well-armed Khmer Rouge fought the Vietnamese to a standstill, and in September 1989 the diplomatically isolated and financially burdened Vietnamese unilaterally withdrew. The Khmer Rouge was able to take advantage of the Cambodian government's weakness and controlled nearly one-third of the country by the time the U.N.-sponsored peace accords were signed in October 1991.

Though a signatory to the Paris Peace Accords and a member of the interim coalition government, the Khmer Rouge leadership refused to disarm or allow U.N. peacekeepers into their territory. The Khmer Rouge withdrew from the peace process and attacked U.N. Transitional Authority in Cambodia (UNTAC) personnel but in the end did not disrupt the May 1993 elections or stop the \$2 billion UNTAC operation. After the elections, the coalition government of the incumbent Cambodian People's Party and the Khmer Rouge's former ally, the royalist FUNCINPEC (the French acronym for National United Front for an Independent, Neutral, Peaceful, and Cooperative Cambodia), renewed their offensive against the Khmer Rouge. The Khmer Rouge, having lost much of their aid from the Chinese after the Paris Accords, were able to continue to finance their war effort through the sale of gemstones and timber from the territory they controlled. But the movement faltered as royal amnesties and war weariness led to mass defections in the 1996–1998 period. Many top leaders, such as Ieng Sary, Khieu Samphan, and Nuon Chea, defected to the government side. As a result of these defections and fearful of others, Pol Pot ordered the murder of

several top Khmer Rouge leaders, including Minister of Defense Son Sen. The remaining Khmer Rouge leadership then arrested Pol Pot and put him on trial, ostensibly as a bargaining chip to ensure the movement's survival. With Pol Pot's death on 15 April 1998, almost the exact anniversary of the Khmer Rouge capture of Phnom Penh, and the capture of the last remaining guerrilla leader, Ta Mok, the Khmer Rouge was no longer an effective fighting force. The government of Cambodia was under intense international pressure to turn over the former Khmer Rouge leaders to an international war crimes tribunal, but the Cambodian government refused on grounds of sovereign rights. The Cambodian government, most of whose leaders were former members of the Khmer Rouge, was concerned that they could be brought to trial as well, and hence wanted to control the scope of the trial. The United Nations was concerned that Cambodia did not have the legal capacity or expertise to try the Khmer Rouge leaders, and that the trials would be highly politicized, and entered into prolonged negotiations with the Cambodian government over establishing a tribunal in Cambodia that would include international jurists. In August 2001, the Cambodian Parliament passed a law establishing a war crimes tribunal for the remaining Khmer Rouge leadership, but it has fallen short of the law envisioned by the United Nations.

KHMU Lao history indicates that the earliest inhabitants, predating the arrival of the Lao-Tais, were the Mon-Khmer, the Khmu being one subgroup of the Mon-Khmer peoples. Khmu belongs to the Khmuic branch of the larger Mon-Khmer line of the Austroasiatic language family. According to legend,

Khmu children in front of a thatched building in northern Laos in 1995. (BRIAN A. VIKANDER/CORBIS)

the Khmu are supposed to have come out of a certain round, red pumpkin (*ple' goek r-mwng*). This pumpkin was born to a brother-sister couple (the only survivors of a big flood). When the people came out of the hole that was pierced with a glowing branding iron, the Khmu were the first to come through that hole, before everybody else emerged from the pumpkin. Therefore, the Khmu say that they are the "people from that burned hole (*bntu' srne*)" in the pumpkin."

Today the Khmu number more than half a million people living throughout the north of Laos, particularly in the provinces of Luang Prabang, Oudomsay, and Phongsali, and in the bordering highland areas of Thailand, Vietnam, China, and Myanmar (Burma). The Khmu constitute the second-largest ethnic group in Laos after the Lao. The lowland Lao often call the Khmu the Lao Theung, which can be translated as "the Lao who live on the middle slopes of the mountains." Historical literature on Laos also knows the Khmu as Kha, a word carrying the connotation of "slave," which was used to designate other ethnic groups.

Most of the Khmu are still mountain dwellers who farm mountain fields where they plant rice, corn, cotton, vegetables, fruit, and tubers. The Khmu also depend on the upland forests for finding additional food, such as different leafy plants, mushrooms, bamboo shoots, fruits, and different types of animals and fish from mountain streams.

The Khmu, as well as other Austro-Asiatic peoples, have had a special relationship with the spirits (*broey*) of the land. This relationship was institutionalized for many centuries as Khmu holy men performed elaborate rituals to pay respect to the spirits of the land in the Luang Prabang royal courts. The Khmu have a rich and varied nonmaterial cultural heritage that is expressed in their ritual traditions, legends, and stories, which are passed down from generation to generation.

With growing population pressure in Laos, new migrants from burgeoning farm families in the lowlands are expanding into the upland areas already occupied by Mon-Khmer groups, including the Khmu. The traditional way of life of the Khmu is threatened as conflicts over land tenure occur between the migrants and the upland populations.

KHOMEINI, AYATOLLAH (1902–1989), Islamic religious leader. Ayatollah Ruhollah Khomeini, an Islamic religious leader, was the architect of the Islamic Republic of Iran. Born to a cleric and property owner, Khomeini's name was originally Ruhollah Musawi, but he changed it to reflect his birthplace (Khomeini, a town south of Tehran). In 1920 Khomeini moved to Arak to study at a school run by Ayatollah Abd al-Karim Ha'eri. Two years later Ha'eri relocated to the Shi'ite holy city of Qom, and Khomeini followed him there. After completing his studies in ethics and spiritual philosophy, Khomeini taught Islamic philosophy and law. In 1929 he wed Khadijeh Saqafil, daughter of a well-known cleric, who bore him two sons and three daughters. Eventually his studies and publications resulted in his receiving the title of ayatollah ("likeness," or "sign," "of Allah"), one of the highest titles awarded clerics of the Shi'ite sect of Islam.

Khomeini was imprisoned in 1963 for his speeches against Mohammad Reza Shah Pahlavi and his policies; his arrest caused major disturbances, which the shah contained with force. Under public pressure Khomeini was released to house arrest in Tehran and a year later was exiled to Turkey. Khomeini spent a year in Turkey before moving to Iraq, where there are several Shi'ite shrines. In exile he further developed the concept of *veleyet-e-faqih*, or rule of religious jurisprudence, which he had outlined in a previous work. His lectures on this subject culminated in the publication of *Hokumat-e Eslami* (Islamic Government).

In October 1978 Saddam Hussein ordered Khomeini to leave Iraq. He went to Paris to organize opposition groups against the shah and returned to Iran in January 1979, when the shah was forced to leave the country. He oversaw the establishment of the Islamic Republic of Iran on 11 February 1979. Ayatollah Khomeini appointed an Assembly of Experts to review and revise a draft constitution prepared by the provisional government, to reflect Khomeini's principle of *veleyet-e-faqih*.

He became Iran's first *faqih* (religious leader), a position he held until his death. His policies as *faqih* were anti-American and left little room for opposition to the regime he had established, although he tried to maintain a balance between conservative and moderate factions in Iran. Khomeini hoped to export revolutionary

Islam to other countries, but with little success. Moreover, his tenure coincided with the Iran-Iraq War, which brought enormous hardships to Iran. Khomeini's reputation rests not only on the creation of the Islamic Republic of Iran but also on his challenge to the Western notion that religion and politics should be separate.

KHON KAEN (1999 est. province pop. 1.8 million). Khon Kaen is the name given to both a city and province in northeast Thailand. The province is located 450 kilometers from Bangkok and covers an area of approximately 10,886 square kilometers. The province has twenty districts and three subdistricts. It is the center for various regional development projects, but is also a transportation hub and education center, home of Khon Kaen University, founded in 1964.

The city of Khon Kaen was originally established near Phra That Kham Kaen. These early settlements never truly developed and were abandoned several times over the course of centuries. A ruler from Suwanaphum founded the present-day city in 1789 and gave it the name Kham Kaen, later changed to Khon Kaen.

Primary recent development in the area occurred in the 1960s, concurrent with Thailand's new national role in serving the needs of the United States Air Force during the U.S. war in Vietnam. An air base was located near the city. Transportation based in Khon Kaen serves the entire region. In addition to its highway system, the city has a major airport and is a stop on the northern railway line, which runs to Nong Khai, a gateway to Laos situated on the Mekong River.

KHOROG (2000 est. pop. 22,000). The Tajikistan town of Khorog is located at an elevation of 2,200 meters in a narrow valley at the base of the Pamir Mountains, at the confluence of the Gunt and Pyandz Rivers. Khorog is the principal administrative, commercial, and population center of the semiautonomous region of Gorno-Badakhshan in southeastern Tajikistan. For much of each year the region suffers from geographical isolation from the outside world. Winter snows block the only road connections to Osh (Kyrgyzstan) and the Tajik capital of Dushanbe. Air connections to Dushanbe are intermittent due to weather and insufficient airport instrumentation. Political tensions have closed the route south into Afghanistan. Although the rain-shadow location yields only 150 millimeters of annual precipitation, abundant irrigation from melting snow and ice in the adjacent mountains supports wheat, sunflowers, barley, and many orchard crops. A small service industry, textile and food processing factories, a hydroelectric station, and government services employ a people of Mountain Tajiks (Pamiris) and Kyrgyz ancestry. The Pamir Botanical Gardens (founded in 1951) are nearby. Since Tajik independence in 1991, persistent food shortages have plagued this isolated corner of Central Asia.

KHUBILAI KHAN (1215–1294), Mongolian ruler. Khubilai Khan (or Qubilai Qan), founder of the Yuan dynasty (1279–1368), as the Mongol khanate of China became known, was the last ruler of Mongol China to be born on the steppe. The second of four sons of Tolui (c. 1190–c. 1231), who was the youngest son of Genghis Khan, he began life as just another Mongol prince, until his elder brother, Mongke (d. 1259), came to the throne. Khubilai, then in his mid-thirties, became his brother's viceroy in China, a role he performed very successfully with the help of a variety of advisers savvy in local administrative tradition. Most but not all were Chinese and most went

on to be among the founding ministers of Khubilai's new dynasty.

As Khan Mongke turned south to campaign against the Southern Song dynasty (1127–1279), Khubilai went along, in part because Mongke was becoming distrustful of his brother's independent power base. During a campaign lasting several years, much of it in difficult terrain at high altitude, Khubilai advanced as far as Yunnan where he helped establish a Mongol administration under Bukharan Sayyid Adjall (1211–1279).

Khubilai Becomes Khan

The sudden death of Mongke in 1259 found Khubilai heavily involved in his campaign. Anxious to assert his own candidacy for the now vacant Mongol imperial throne, Khubilai quickly hurried north and gathered his supporters. His principal rival was his younger brother Arigboke (d. 1266), who enjoyed more support in the Mongolian world as a whole. To forestall Arigboke, Khubilai convened a rump *quriltai* (assembly) and had himself elected khan. Arigboke quickly did the same and prepared for war.

The civil war lasted more than four years and ended with Khubilai's victory thanks to his superior resources. Khubilai now had unrestricted control in Mongol China and in most of Mongolia, including the old Mongol imperial capital of Karakorum, although his rule was never unchallenged in Inner Asia.

Once free of competitors, at least in the immediate vicinity of China, Khubilai set about building up his new successor khanate of China, initially confined to the north. Although Mongolian-style administration continued to function side by side with Chinese, khanate China increasingly had a Chinese structure, on paper at least. It was also given a Chinese capital, Daidu, founded (c. 1266) by Khubilai. Although Daidu (later modern Beijing) was considered the capital, strictly speaking, the khanate of China had no single capital since the court nomadized between summer pastures in Shangdu, Khubilai's old princely headquarters, and winter pastures near Daidu.

Establishment of the Yuan Dynasty

In 1271 Khubilai took a Chinese dynastic designation, Yuan, meaning "origin." The new Yuan dynasty quickly came to rule all China with the conquest of the Southern Song in 1279, reunifying China for the first time since the early twelfth century. But the conquest of Song did not mark the end of Mongol expansion. It continued toward Japan, into Vietnam, Burma, and across the sea to Java. For the first time in its history China became a base for a most aggressive sea power.

Although Khubilai had established a "Chinese" dynasty, his new regime was strongly aware of its Central Asian roots. Not only was the ruling family and much of the military if not civilian leadership Mongolian, but Khubilai continued to employ non-Chinese of every persuasion, not just Mongols, in his government to the extent that Persian and Turkic dialects were important as court languages. He also consciously pursued a cultural policy that sought to provide something for everyone. Nowhere is this clearer than in the official court cuisine, in which Mongol soups and roast wolf were served side by side with Iraqi-Persian, Turkic, Kashmiri, and other dishes. Khubilai also had a universal script created, the aPhags-pa alphabet, to write all the languages of his empire.

Another of the Inner Asian aspects of the Mongol Yuan dynasty was religion. Although Genghis Khan had flirted with Taoists and even a Zen monk, among other religious practitioners, and Christians from the West competed for imperial attention under Mongke, Khubilai and his house became converted to the Buddhist religion—and not to any of its Chinese varieties, but to Tibetan Buddhism, which was rich in shamanic traditions close to Mongol native beliefs. Tibetan Buddhism has remained the religion of the Mongols down to the present, pointing up the importance of this conversion.

Khubilai died in 1294, at a ripe old age. No subsequent ruler of Mongol China ever rose to his stature, and decline set in after his death. But despite this decline, Khubilai remains to this day the very symbol of the Oriental potentate and of China, thanks to Marco Polo. It was the China of Khubilai that the Portuguese and other Europeans went in pursuit of in the fifteenth and sixteenth centuries, inaugurating the age of Western ascendancy.

KHUIJAND (2000 est. pop. 162,000). Khujand, on the left bank of the Syr Dar'ya River in the fertile Fergana Valley, is one of the oldest towns in Central Asia. It is the second-largest city in the republic of Tajikistan, a Central Asian state, and the administrative center of Viloyati Soghd (Soghd province) in northern Tajikistan.

Khujand was established around the fifth century BCE. In 329 BCE during his conquest of Central Asia, Alexander of Macedon founded a fortress named Alexandria Eskhat (the furthest) on the site of present-day Khujand. From the first century BCE Khujand was an important trading center on the great Silk Road, the major caravan route linking China and India with the Mediterranean, and later was part of the Bukhara (1583–1740) and Kokand (1710–1876) khanates or chiefdoms. Russia invaded the Kokand khanate in 1866, and Khujand became included in the Russian empire in 1868. From 1924 to 1929 the western part of the Fergana Valley including Khujand formed part of the Uzbek Soviet Socialist Republic, but in 1929 the region was turned over to the Tajik Soviet Socialist Republic. In 1936 the city was renamed Leninabad (city of Lenin), but it regained its original name—Khujand—in 1992, after the Soviet Union's collapse in 1991. Today the city is a major industrial center, famous for silk manufacturing and decorative and applied arts.

KHUN CHANG, KHUN PHAEN *Khun Chang, Khun Phaen* is one of the classics of Thai literature. It was written in verse during the reign of Rama II for *sepha* recitation (a method of solo recitation in which emotion is conveyed by changes in voice quality). Several different authors, each of whom was allocated various scenes, were involved in its composition, including the famous poet Sunthon Phu. The story is believed to have been based on fact. It tells of two men, the villain Khun Chang and the hero Khun Phaen, who had been childhood friends but later become bitter rivals for the love of Wan Thong. Wan Thong at different stages of the plot marries both her suitors, but when called upon to choose between them, is unable to do so and is therefore condemned to death.

Many of the convoluted twists in the plot are engineered by the protagonists' use of sorcery, while the work is also renowned for its use of images from nature in flimsily disguised passages of erotic description. A prose translation into English by H. H. Prince Prem Purachatra (Prem Chaya), *The Story of Khun Chang, Khun Phaen*, provides a good retelling of the story but conveys little of the aesthetic qualities for which Thais admire the work.

David Smyth

KHUNJERAB PASS A long, level, and open ridge at 4,700 meters that marks the frontier between China and Pakistan, the Khunjerab Pass is the continental watershed divide between the Indus River of South Asia and the internal drainage of Central Asia's Tarim Basin. The ridgeline unofficially separates the Afghan Hindu Kush from the Karakoram ranges. The pass is also the highest point on the 1,300-kilometer Karakoram Highway that connects Kashgar (Xinjiang, China) to Rawalpindi (northern Pakistan). In the local Tajik language, Khunjerab means River of Blood, after the rust-colored water that seeps from the pass. Local Pakistanis and Wakhi tribesmen simply call it "top."

The mostly paved Karakoram Highway that crosses this pass was built along an important artery of the ancient Silk Road. It has been operational since 1973 for construction workers and commerce. In May 1986, it opened to all travelers, starting a boom in tourism and Sino-Pakistani trade that continues today. The pass is normally open from 1 May until mid-November, although recurrent harsh weather, flooding, washouts, and landslides can delay travel. The broad summit area fringes the Khunjerab National Park (established in 1975), where Marco Polo sheep (*Ovis poli*) and snow leopards (*Uncia uncia*) abound. The border-post towns of Sost (in Pakistan, 96 kilometers south of the pass) and Pirali (in China, 49 kilometers north of the pass) are the customs, health, and immigration checkpoints.

KHURASAN (2002 est. pop. 6.1 million). Khurasan (translated as "sun rising") is the largest province of

Iran, occupying one-fifth of the nation's territory. Located in northeast Iran, it covers an area of 324,000 square kilometers. To its north and east, Khurasan borders Turkmenistan and Afghanistan. To the west, it shares borders with Iran's internal provinces. Its capital is the city of Mashhad. Though most of its population speaks Persian, Turkmen, Kurdish, and some local dialects are also spoken. Besides Islam, the major religion of the province, a small number of its inhabitants profess the Baha'i, Christian, and Zoroastrian faiths.

After the conquest of Iran by the invading Muslim army, many Arabs settled in Khurasan. Khurasan was the first region of today's Iran to come under attack by invading Turkic nomads. Despite the successive hegemony of central Asian Turkic dynasties, however, Khurasan preserved its language and in fact emerged as a bastion of Persian literature. Not only did the inhabitants of Khurasan not succumb to the language of the nomadic invaders, but they imposed their own tongue on them. The region could even assimilate the Turkic Ghaznavids and Seljuks (eleventh and twelfth centuries), the Timurids (fourteenth–fifteenth centuries), and the Qajars (nineteenth–twentieth centuries).

The landscape of the region is mainly mountainous and arid. There have been periodic earthquakes in Khurasan; in 1997, an earthquake killed thousands of people and destroyed many villages. Agriculture is the major contributor to the economy, producing grains, beets, saffron, cotton, fruits, and refined sugar. The province is the site of light and heavy industries as well, including textiles, carpets, turquoise, and wool. Khurasan is rich in mineral resources, such as natural gas; the largest natural gas reserves in the world are said to be located there.

At the beginning of the eighth century, Abu Muslim (728–755) from Khurasan began his campaign against the Arab Umayyad dynasty (661–750). The province contributed to the power of the caliphs of the early Abbasid dynasty (749/50–1258). In the 1150s Khurasan was devastated by the Oghuz Turks and from 1220 to 1222 by the Mughals. In 1383 Tamerlane (1336–1404), emperor of the Mughal empire, invaded the province.

Khurasan was home to Al-Ghazali (1058–1111), the renowned Islamic theologian, philosopher, and mystic. Al-Ghazali was appointed professor at Baghdad in 1091, but after a spiritual crisis in 1095 he abandoned his career to become a Sufi mystic. He is credited with attempting to reconcile mysticism with Islam. His chief work, *The Revival of the Religious Sciences*, outlines

a complete and orthodox system of the mystical attainment of unity with God.

KHUSHAL KHAN KHATAK (1613–1689), Pashtun poet-warrior. Khushal Khan Khatak, a chief of the Khataks, one of the Pashtun tribes inhabiting the North-West Frontier Province in present-day Pakistan, is best known for his poetry in Pashtun, an Iranian language. Khushal Khan also wrote prose on subjects such as religion, society, politics, Pashtun-Afghan national unity, war, love, chivalry, philosophy, and even sports and falconry. Altogether, his works make up forty thousand verses. His *Tarikh-i-Murassa* (Jewel-Studded History), which his son, Afzal Khan (d. 1748?), compiled, sheds light on events of Mughal (1526–1857) rule in India during the mid-seventeenth century.

Khushal Khan was critical of Aurangzeb Alamgir (1618–1707), a Mughal ruler and son of Shah Jahan (1592–1666), who denied him chieftainship of the Khatak tribe and appointed other Pashtun warlords as local governors. Khushal Khan was contemptuous of Aurangzeb's religious fanaticism and greed for power: Aurangzeb jailed his father and killed his brothers to gain the throne of India. Khushal Khan spent most of his lifetime fighting against the Yousazais, a pro-Mughal fellow Pashtun tribe.

KHUSRAU, AMIR (1253–1325), Indian poet. A renowned poet of medieval India, Amir Khusrau is a legendary figure in the history of Indian music, lan-

guage, and poetry. Born in the village of Patiali in north India to Amir Saifuddin, a migrant from Transoxiana (a region northeast of the Khorasan), Khusrau settled in Delhi in 1260 after the death of his father. A close confidant of Sufi saint Nizamuddin Auliya (1236–1325), he also enjoyed the patronage of the Delhi sultan Ghiyasuddin Balban and his sons.

Tubfa-tus-Sighr (Offering of a Minor), *Wastul-Hayat* (The Middle of Life), *Khamsa-e-Khusro* (Five Classical Romances), and *Nihayatul-Kamaal* (The Height of Wonders) are among his important works of poetry. His historical works such as *Khazain-ul-Futub* (The Treasures of Victories), *Tughlaq Nama* (The Book of Tughluq), *Nuh Sipibr* (The Nine Heavens), and *Duval Rani-Khizr Khan* (Romance of Duval Rani and Khizr Khan) shed light on the social and political life of north India at that time.

Khusrau's *ghazals*, or lyrical poems, became very popular, and he is credited with fusing Indian and Persian elements, which influenced subsequent developments in Indian music. His dictionary of Hindi, Persian, and Arabic, *Khaliq-e-Bari*, helped to expand the vocabulary and the development of the Urdu language. Khusrau's accomplishments as musician, singer, and composer of Hindi and Persian verses earned him the sobriquet the Parrot of India.

KHUZESTAN (2002 pop. 4.5 million). The discovery of oil at Masjed-e Soleyman in 1908 in the province of Khuzestan changed the fortunes of the region. Khuzestan lies in southwestern Iran bordering on Iraq and the Persian Gulf and occupies an extension of the Mesopotamian valley situated between the Zagros range and the sea. The province, with an area of 66,532 square kilometers, is a low alluvial plain formed by the deposits of the Karun and Karkheh rivers. Its climate is extremely hot, and rainfall is meager, but under irrigation the fertile northern and central lands produce sugarcane, dates, melons, and vegetables. Due to poor drainage, the low coastal areas in the south are covered with tidal salt marshes and mudflats.

The provincial capital Ahvaz is an important communications center: a river port on the Karun, an oil-pipelines nexus, and a link on the Trans-Iranian Railway

A water pipeline crosses over an oil pipeline and then under power lines in Khuzestan. (ROGER WOOD/CORBIS)

connecting the Persian Gulf with Tehran and the Caspian Sea. The discovery of oil in the province led to the establishment of the Abadan oil refinery south of Khorramshahr on an uninhabited island, which is now one of the world's largest oil-producing centers. The oil industry has almost recovered from the devastation of the 1980–1988 Iran-Iraq War. Khuzestan has the third largest oil reserves in the Middle East and the fourth largest in the world.

KHWAJA MU'IN AL-DIN CHISHTI (c. 1141–1236), Muslim leader of South Asia. One of the most significant Muslim personalities in premodern South Asia was Mu'in al-Din, the eponymous "founder" of the Chishti Sufi order (the most widespread and popular Islamic mystical order in India). As with other Islamic mystics, it is hard to reconstruct a factual account of his life; most anecdotal evidence

comes from later hagiographic sources, which aimed to construct a behavioral paradigm that the Sufi community could emulate.

Mu'in al-Din did not write any books, but many statements are attributed to him in later writings. Some may reflect oral traditions linked to him. Mu'in al-Din's teachings are summarized in the following pearl about the qualities of a spiritual traveler: "generosity like the ocean, mildness like the sun, modesty like the Earth" (Lawrence 1992: 11). His disciples formed the so-called golden age of the Chishti order; his deputy, Qutb al-Din Bakhtiyar Kaki (d. 1236), established the order in Delhi and initiated Fardi al-Din Ganj-i Shakar (d. 1265), who became the master of Nizam al-Din Awliya (d. 1325).

Mu'in al-Din eventually settled in the Hindu state of Ajmer, where he died. His shrine complex established there became a major pilgrimage site, not just for Chishtis, but for Muslims from the entire subcontinent and even for Hindus. Mughal emperors often displayed their piety by undertaking pilgrimages to Mu'in al-Din's shrine. The emperor Akbar (reigned 1556–1605) is said to have walked on foot to Ajmer. In an even more fantastic account, Jahanara, Mughal princess and daughter of Shah Jahan (builder of the Taj Mahal), supposedly swept the saint's tomb with her eyelashes. The accuracy of these accounts may be questionable, but they convey the devotion to Mu'in al-Din attributed to the Mughal rulers of India.

The annual festival commemorating the death of Mu'in al-Din, called Urs (literally, "wedding night"), usually sees millions of devotees gathered in Ajmer.

KHWARIZM Since its earliest days Khwarizm was an agrarian outpost centered on an oasis and in contact with successive waves of nomadic peoples. Khwarizm is a region in central Asia extending south

of the Aral Sea along the lower Amu Dar'ya river basin and bounded by the Kara-Kum and Kyzyl-Kum deserts and the trans-Caspian steppe. The region was ancient Chorasmia, which became a satrapy of the Persian empire in the fifth century BCE.

Khwarizm's remoteness meant that local rulers were often independent of regional powers. The Afrighids (305–995) held at bay the Sasanian emperors of Persia (third–seventh centuries) and then the Arabs, until internal strife allowed the Muslim conquerors to gain political control in 712. Within a century the Afrighids had converted to Islam and continued to rule from the city of Kath. The Ma'munids (995–1017) next claimed the crown and moved the capital to their stronghold Gurganj or Urganch, on the caravan route between Siberia and the Volga steppes.

During the early centuries of Islam, Khwarizm was an important center of learning. Among the world-famous scholars who found generous patronage at the Khwarizmian court were the philosopher and physician Ibn Sina (Avicenna; d. 980) and the polyhistor al-Biruni (d. 1051), a native of Khwarizm. The Ghaznavids (977–1186), however, annexed the province and left it in charge of Turkic slave governors, thus ending the rule of local dynasties. The Seljuks (1038–1194) continued the practice of slave governors, and their appointee Anushtigin Garcha'i (c. 1077–1097) made the office hereditary. Anushtigin's descendants, the Khwarizm-shahs (c. 1077–1231), ruled a domain stretching from Afghanistan to Baghdad and south to the Persian Gulf, but they fell to the Mongols in the early 1220s.

Under the Golden Horde, Urganch became a thriving caravan trade center until Timur (Tamerlane, 1336–1405) destroyed it in 1388. A khanate established in the early sixteenth century by a new wave of Chinggizid nomads, the Uzbeks, was in constant rivalry with the Bukharan khanate and suffered many incursions by nomadic Turkmen raiders. In the nineteenth century a new dynasty of military chiefs of the Qungrat tribe held the nomads in check and vigorously resisted Russia's expansion into the area.

In 1873, however, the khanate became a Russian protectorate. The last khan was forced to abdicate in 1920, after the Bolshevik Revolution. The khanate was replaced by the short-lived Khoresmian People's Soviet Republic, which, four years later, was divided along ethnic lines between the Turkmen and Uzbek Soviet Socialist Republics. Presently the oasis is part of the Khorezm subdivision of Uzbekistan.

KHYBER PASS The Khyber Pass is the northernmost strategically important mountain pass between Afghanistan and Pakistan, connecting Kabul with the historic Pakistani region of Peshawar. The pass is 56 kilometers long and some parts of it reach over 914 meters in elevation. Most of the pass can be more correctly described as a gorge formed by two rivers. Contained by sheer cliffs made mostly of limestone, the pass becomes a narrow defile as one approaches the Afghani border. A number of villages and old forts are perched on the rocks along the pass.

Traditionally, the Khyber Pass was both a crucial trading and invasion route. Persian and Macedonian armies probably followed the route in antiquity. Most recently, the pass was used and fought over by the British in the nineteenth century and the Soviet invasion forces in the 1980s.

The pass's value for trade is indicated by the presence of several market towns on the cliffs overlooking its winding road. The largest, Landi Kotal, is situated on the highest point in the pass (elevation 963 meters), where a powerful fort once stood. The pass had been used as a caravan route for thousands of years, helping tie Central Asian commercial centers of Bukhara, Samarqand, Merv (now Mary), and others with the prosperous marketplaces of the Indian subcontinent. In the fifth century BCE King Darius of Persia marched his huge army through the pass to the Indus River, probably enlarging it in the process. Future conquerors from Alexander the Great to Babur also passed through this road. In 1925 a railway was opened through the pass, featuring thirty-four tunnels and ninety-four bridges and culverts, increasing its commercial importance. There is also a fairly good hard-surface road in the pass. Today the Pakistani Khyber Agency has the authority over the pass, at least its Pakistani sector.

KILLING FIELDS On 17 April 1975, the first day of Year Zero, the Khmer Rouge (Cambodian Communists) overthrew the military-led government of the Khmer Republic (Cambodia) and U.S.-backed General Lon Nol (1913–1985), after a five-year civil war that left 600,000 Khmer dead. Their leader, Pol Pot (1925–1999), otherwise known as "Brother Number One," then began a reign of terror that would eventually kill perhaps as many as 2 million Cambodians (estimates vary widely) of every socioeconomic class, religious belief, and ethnic group.

In only four years, nearly 25 percent of all the people in Cambodia lost their lives in the Khmer Rouge revolution and the state-sponsored violence it perpetuated as part of a social experiment gone amok. At its peak, more than thirteen hundred persons died each day—indiscriminately killed for reasons both personal and political. Men, women, and children succumbed to horrific conditions of abuse, overwork, and starvation. An additional 200,000 persons were tortured and executed without trial, judged as "class enemies" by the Khmer Rouge.

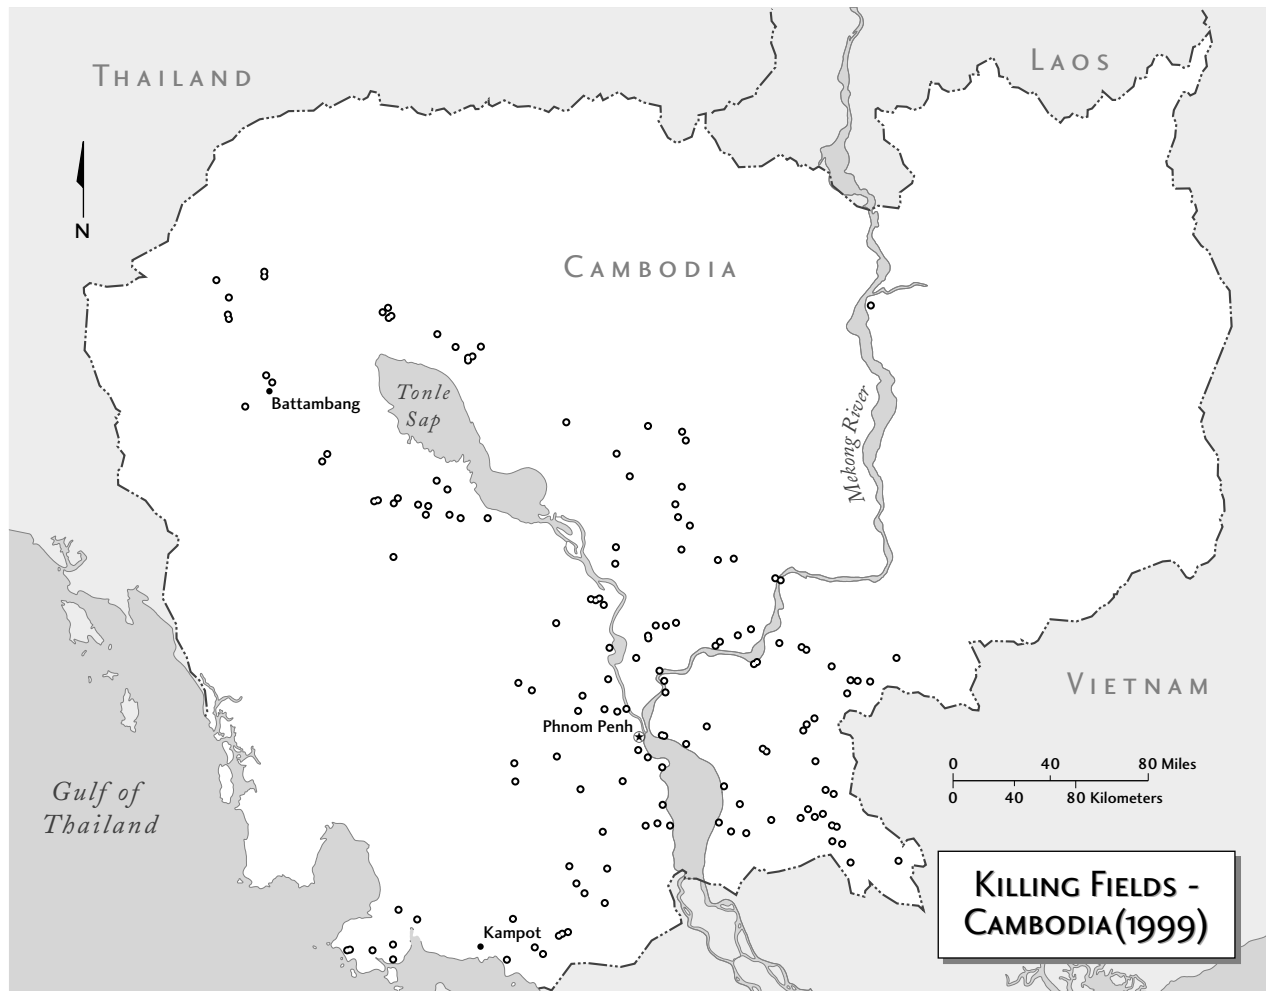

Many of the executions occurred at Security Prison 21 (Tuol Sleng, or S21), a former high school in the capital city of Phnom Penh. Anyone accused of work-

ing for the U.S., Russian, or Vietnamese governments was summarily executed, as were civil servants and soldiers associated with the former Cambodian government, teachers, doctors, lawyers, monks, dancers, and artists—even those who wore eyeglasses were arbitrarily slain, because they were assumed to be intellectuals. Victims were warned by signs at S21 not to cry while being subjected to electric shocks and beatings, and barbed wire outside the doomed prisoners' rooms prevented escape from punishment and execution. Outside the city, the bodies were dumped into the mass graves of Choeung Ek, the Khmer Rouge extermination camp located approximately 15 kilometers southwest of Phnom Penh that came to be known for this reason as the Killing Fields. Some fourteen thousand people were killed there. By May 2000, 520 such killing fields had been uncovered throughout Cambodia, containing more than ten thousand mass graves.

Between 1975 and 1979, the Khmer Rouge effectively dismantled the country's existing economic infrastructure and depopulated every urban area. Forcibly driving the 2 million residents of Phnom Penh and other towns into the rural countryside only two days after capturing the capital, Pol Pot effectively initiated one of the most brutal and radical transformations of a society ever attempted in recorded history. Cambodian survivors today relate stories of families forcibly separated and sent to agrarian collec-

The major product of the killing fields, a pile of skulls, in a deserted school in Siem Reap, Cambodia. (MICHAEL FREEMAN/CORBIS)

tives in different parts of the country, while monks not murdered outright were forced to disrobe and to marry. Children were co-opted into spying on—and often murdering—their parents and elders. Rural youths, often illiterate, were encouraged to punish those they found lacking in revolutionary spirit, while workers—forced to work twelve to fourteen hours a day—subsisted on meager bowls of watery soup with a few grains of rice for nutrition each day.

Symbols of Cambodian society were equally disrupted. Social institutions of every kind—stores, banks, schools, hospitals, churches, even the Khmer language and currency—were purged or torn down. Nothing was sacred outside the autarkic vision of Angka, the regime's mysterious organization that claimed to have "more eyes than a pineapple" and that maintained control through a constant atmosphere of fear and uncertainty.

Pol Pot's ideological intent was to create a purely agrarian society or cooperative. Practically isolated

from the outside world, his "Democratic Kampuchea" was completely devoid of money, property, cities, all but the most primitive health care, traditional education, religion, and arts (including traditional dance and music). Pol Pot's harsh, utopian policies made the Cambodian revolution one of the most murderous in the twentieth century.

The revolution derived its energy, so the Khmer Rouge believed, from the empowerment of the rural poor, from their recent victory over the Phnom Penh military, and from what they thought was the intrinsic superiority of Cambodians to the hated Vietnamese. Pol Pot assumed that the Cambodian revolution would be swifter and more authentic than anything Vietnam could carry out, and his Chinese patrons said they agreed. By mobilizing mass resentments, as Mao Zedong had done in China, Pol Pot inspired tens of thousands of Cambodians—especially teenagers and those in their early twenties—to join in dismantling Cambodian society and liberating everyone from their past.

The methods he chose were naive, brutal, and inept. In 1976 a hastily written four-year plan sought to triple the country's agricultural production within a year—without fertilizer, modern tools, or material incentives. The plan paid no attention to Cambodia's physical geography nor did it use common sense. Already crippled by the preceding years of civil war, Cambodian farmers were expected to meet impossible quotas. Yet, Khmer Rouge workers, frightened of reprisals by their leaders if production failed to satisfy the goals, cut back the grain allotted for residents' consumption. As a consequence, tens of thousands of Cambodians starved to death, while many more collapsed from exhaustion and the absence of adequate medical equipment and care.

Sporadic violence flared between the once nominal allies, the Khmer Rouge and Vietnam, in 1977, as the former mounted occasional raids against Vietnamese villages along the border. Exasperated, Vietnam launched a full-scale war in 1978. Refused troops or assistance by the Chinese, Pol Pot's troops found themselves outgunned and outmaneuvered by the superior forces and training of the Vietnamese, who had in the preceding four decades defeated the militaries of France, the United States, and South Vietnam.

On Christmas Day, 1978, the Vietnamese entered Cambodia with more than 100,000 soldiers and ousted the Khmer Rouge regime. Pol Pot escaped to Thailand by helicopter when the Vietnamese entered Phnom Penh on 7 January 1979, leaving the city deserted. The Vietnamese quickly installed a new government, first under Heng Samrin (b. c. 1934) as president of the People's Revolutionary (Communist) Council of Kampuchea and then briefly under Prime Ministers Pen Sovann (b. 1936) and then Hun Sen (b. [officially] 1951), a former cadre in the Khmer Rouge who had fled the country in 1977 when he feared that he would be executed in S21.

After the Vietnamese liberated the Cambodian people, 600,000 Cambodians fled to Thai border camps to escape continued conflict and terror (though most have returned since the 1998 coup). Meanwhile, nearly 10 million land mines were sown throughout the countryside by opposing guerrilla groups during the late 1970s, more than one for every person in the country. As a result, though the years of genocide have effectively ended, the killing of Cambodians by Cambodians continues.

KIM DAE JUNG (b. 1924), president of South Korea and winner of the 2000 Nobel Peace Prize. Kim Dae Jung, a long-time opposition leader, was elected president of South Korea in December 1997. He was born on 6 January 1924 in South Cholla Province, where he attended school, eventually graduating from high school in 1943. During the Korean War (1950–1953), Kim was captured by North Korean troops and sentenced to death as a traitor because he worked for the Japanese. Kim managed to escape his captors, finding his way back to Seoul.

Kim entered politics in 1960 as an opposition member in the national assembly. Eventually, in 1971 Kim ran as the New Democratic Party's presidential candidate against sitting president Park Chung Hee (1917–1979). Kim lost to Park by a narrow margin, thereby setting the stage for his becoming a vociferous critic of the Park regime. Park considered Kim such a danger that he had him kidnapped in Japan by the Korean Central Intelligence Agency and brought back to Seoul to stand trial by a secret military court for treason. Under heavy diplomatic pressure, Park rescinded Kim's death sentence, which was later commuted to three years' imprisonment, and Kim was released from jail.

Kim Dae Jung at the Asian Pacific Economic Cooperation Summit in Brunei in November 2000. (AFP/CORBIS)

Following the coup that brought Chun Doo Hwan (b. 1931) to power in 1979, Kim was again arrested, jailed, and sentenced to death. Kim's sentence was again commuted, and he was allowed to leave for the United States, where he was to receive medical treatment. Kim returned to South Korea in February 1985 and again became involved in Korean politics, first as an adviser to the Council for Promotion of Democ-

racy and then as a member of the Reunification Democratic Party. Kim ran for the presidency in 1992, losing to Kim Young Sam. In 1997, he again stood as a candidate and, with support from Kim Jung Pil, leader of the opposition Democratic Republic Party, was elected president of South Korea.

Kim's election marked the first time that a peaceful transition of power took place in the South since the

formation of the Republic of Korea. Kim's presidency was marked by a historic trip to P'yongyang, capital of North Korea, in June 2000 to open North-South dialogue on the possible reunification of Korea.

KIM IL SUNG (1912–1994), State leader of North Korea. The longest-serving head of state in the twentieth century, Kim Il Sung dominated North Korean politics for nearly fifty years, from his installation by Soviet occupying forces in fall 1945 until his death on 8 July 1994. Given his intense Stalinist personality cult and the extreme concentration of power under him, one could say that he *was* North Korean politics.

Born Kim Song Ju on 15 April 1912 near P'yongyang, he emigrated to Manchuria with his family in 1926. Imprisoned briefly for membership in the Communist Youth League in 1930, he joined (and some accounts claim later led) a guerrilla band fighting against the Japanese two years later. At this time, he took the nom de guerre Kim Il Sung, after an earlier

Korean guerrilla leader. He went to the Soviet Union in 1941, or earlier, receiving military and political training in Moscow, the Soviet Far East, or both.

As chairman of the Soviet-supported People's Committee of North Korea in 1945, he quickly consolidated power and became the first premier of the Democratic People's Republic of Korea in September 1948. Eager to unify the two Koreas by force, he obtained conditional support for an invasion of South Korea from the Soviet leader Joseph Stalin and the Chinese leader Mao Zedong. After nearly conquering the South, his regime was almost destroyed by an American counterattack in fall 1950, and he was saved only by Chinese military intervention. Agreeing with the Chinese to an armistice in 1953, he never accepted a divided Korea, and until his death he worked to undermine what he viewed as an illegitimate U.S.-supported government in Seoul.

During the 1950s, Kim reconsolidated power and purged Communists he viewed as loyal to Beijing or Moscow. He sought to preserve a measure of independence by carefully balancing relations with the neighboring Communist giants through a policy often called equidistance. Up through the 1970s, his government pursued high growth by means of heavy industrialization and gradual collectivization of agriculture. Even so, the North was heavily dependent on aid from and barter trade with the Soviets and Chinese. Beginning in the 1950s, Kim propounded his opaque *juche* (self-reliance) philosophy, which purported to explain Korean uniqueness and in time

North Korean officers and officials seated in front of a portrait of Kim Il Sung on 14 April 2000, the eve of his birthday, celebrated as Sung Day in North Korea. (AFP/CORBIS)

eclipsed Marxism-Leninism as the state's core ideology. North Korean society became even more regimented than its Soviet or Chinese counterparts, and over all the godlike Kim personality cult (what historian Bruce Cumings calls an extreme form of corporatism) loomed large.

Economic growth halted in the 1980s, and Kim refused to consider a reform-and-opening policy like that employed in China. With the collapse of Soviet and Chinese support in 1990, the North Korean economy gradually fell apart. In 1972, Kim had begun to retire from some of his formal positions and to groom his son Kim Jong Il (b. 1941) as his successor. The elder Kim nonetheless retained ultimate authority and oversaw the ventures that were to mark North Korea as a "rogue state": arms sales to authoritarian regimes in the Middle East, international terrorism aimed at destabilizing South Korea, and the development of long-range missiles and nuclear weapons. The latter led to Kim's final crisis in 1994, and a second Korean War was averted when Kim agreed with the former U.S. president Jimmy Carter to halt the nuclear-weapons program in exchange for moderation of international economic sanctions and talks with the United States on nuclear and other issues. Kim died of a heart attack, and his funeral was an occasion for a mass outpouring of grief from a people who had known no other leader.

KIM JONG IL (b. 1941), leader of North Korea. Son of the founder of the People's Democratic Republic of Korea (North Korea), Kim Jong Il was born on 16 February 1941, probably in the Soviet Far East or Manchuria, although Pyongyang (the capital of North Korea) claims he was born on the sacred Mount Paektu. As a boy, he was sent to China during the Korean War (1950–1953) and later took pilot training in East Germany. Graduating from Kim Il Sung University in 1964, he went to work in the Korean Workers' Party secretariat, where he assisted with political purges in 1967. He married in 1966, divorced in 1971, and remarried in 1973. Groomed to succeed his father from 1973, when he became the unofficial Korean Workers' Party leader (referred to as the "party center"), Kim gradually became the second most powerful figure in North Korea.

Formally acknowledged as successor in 1980, he was thenceforth known as the "Dear Leader" and was absorbed into his father's personality cult. Information about him at this time is sketchy, but he reportedly was in charge of key party and personnel decisions and directed North Korea's foreign terrorism campaign. He was said to be highly interested in new production methods and was heavily involved in labor-mobilization campaigns. Foreign news reports described him as a hard-drinking playboy, much interested in movies and fast cars. He was invariably pictured with a bouffant hairdo, wearing a jumpsuit, square glasses, and elevator shoes.

Kim took power upon his father's death in July 1994 yet curiously remained out of public view for some time. Though already nominal military leader, he did not assume any of the elder Kim's military roles until he was named secretary general of the Korean Workers' Party in October 1997. North Korea's economy

virtually collapsed under his rule, and, due to floods and drought, an extended famine greatly affected many rural areas. His government admitted that several hundred thousand people died, though foreign relief agencies felt that the numbers were much higher. Kim talked often about the need for economic changes and introduced modest liberalization, yet the Stalinist structure and *juche* (self-reliance) ideology inherited from his father remained essentially intact.

Kim also continued his father's nuclear and missile development programs, but in late 1994 he agreed to give up the former in exchange for a foreign-built nuclear reactor and assented to a moratorium for the latter in 1998. He became increasingly reliant on the Korean People's Army (KPA) for political support and maintenance of public order, and most of his appearances were at KPA events. Kim surprised many observers by his ebullient reception of South Korean leader Kim Dae Jung at a Pyongyang summit in June 2000. He agreed to a second summit to be held later in Seoul, South Korea.

KIM MYONG-SUN (1896–1951), Korean writer. Kim Myong-sun (pen name, Tansil) is considered to be Korea's first modern woman writer. Her first work, "Uisim ui sonyo" (Suspicious Girl), was published in the literary journal *Ch'ongch'un* (Youth) in 1917. The story mirrors Kim's own harsh and dismal life as the daughter of a rich man and his concubine, a former kisaeng (entertaining woman). Kim was born around 1896 in Pyongyang. After her mother died in 1907, she was raised by her stepmother. She graduated from high school in 1911 and went on to college but did not finish.

Throughout the 1920s Kim wrote many stories about love, a common literary theme of the period. Her protagonists were usually women conflicted by their love for the wrong men. Kim belonged to two important literary groups, Changjo (Creation) and Pyeho (Ruins), each centered in a literary journal of that name.

Kim wrote in every genre of literature from fiction to poetry and drama. She also acted in and starred in movies. Despite her talents, Kim lived most of her adult life in poverty. She published her last poem in 1939 and spent the remainder of her life in obscurity, disdained by Korean society for her sexually liberated lifestyle, which flouted traditional role expectations for women. She died in 1951 in a Japanese mental asylum.

KIM PU-SHIK (1075–1151), Korean historian and statesman. Kim Pu-shik was one of the most notable scholar-officials of Korea's Koryo dynasty (918–1392) and a figure of central importance in Korean historiography for his role as chief compiler of the *Samguk sagi* (A History of the Three Kingdoms). He came from a family of noteworthy scholar-officials of the mid-Koryo and traced his lineage back to the royal line of the Shilla kingdom (57 BCE–935 CE). Under several Koryo kings, Kim Pu-shik served key roles in the kingdom's administration, even leading a Koryo army to defeat a dynasty-threatening internal rebellion in 1136. His crowning achievement came with the compilation of the *Samguk sagi*, a history of the three kingdoms of ancient Korea (Shilla, Paekche, Koguryo), commissioned by Koryo's King Injong (1123–1146) and completed in 1145. Its importance today lies primarily in the fact that it is the oldest surviving native Korean history and the chief source for the history of the three kingdoms.

Kim Pu-shik was an unapologetically Confucian scholar, trained and nurtured in Chinese literary technique and tradition, and always espoused Korea's politically subservient role vis-à-vis China, a fact that has made him the prime target of much latter day Korean nationalist criticism. Yet Kim Pu-shik was also a practicing Buddhist, and his surviving magnum opus reveals a just pride in Korean achievements and recognition of Korea's unique cultural development.

KIM SOWOL (1902–1934), Korean poet. Sowol (his sobriquet) Kim Chong-shik was born in Korea and attended Osan Middle School near P'yongyang in today's North Korea, a famously activist, nationalist academy. He left when the academy was closed because of its involvements in the 1 March 1919 Independence Movement and went to Seoul, following his teacher and mentor Kim Ok. Sowol became a student at the Paejae Academy in Seoul and after graduation in 1923 left for Japan, to enter Tokyo Commercial College.

Sowol soon returned to Seoul, however, and tried for a time to make his way in the literary world. With Kim Ok's help, he published poems in a number of journals, including many in *Kaebiyok* (Genesis). His single book of poems, *Chindallas kkot* (Azaleas), named for his most popular poem, came out in 1925, but he was unable to sustain himself as a writer, returned to his home area of Osan, and tried various small-scale business endeavors. He published few poems in the last years of his brief life. He died in December 1934, possibly a suicide.

Sowol's poems are noteworthy for their lyrical elegance, their folksong themes of loneliness and separation, and their stunning command of the expressive possibilities of the Korean language. While his best-known poems seem almost deliberately to overlook concerns about Korea's national identity during the Japanese colonial period, a subject that engaged many other writers, Sowol, in attending to particular place-names and to the routes or modes of transportation that connect them, seems to have addressed the subtle issue of how Korea was being remapped, reconfigured as a geographical space, by the colonial occupation and modernization.

KIM YOUNG-SAM (b. 1927), South Korean president. Kim Young-sam served as president of the Republic of Korea from 1993 until 1998, when he was defeated by longtime personal and political rival Kim Dae Jung. His presidency was noteworthy in two respects. Kim was the first civilian president in the post-war period, and he oversaw the first civilian transfer of power in South Korea's short history.

Kim was born in 1927 on Koje Island in South Kyongsang Province. After graduating from Seoul National University in 1952, he entered government service. His political debut came soon thereafter: he won a seat in the National Assembly in 1954 as a member of the ruling Liberal Party. Shortly after, however, Kim switched his political affiliation and defected to the opposition Democratic Party.

In 1972 Kim lost his bid to become the New Democratic Party's presidential nominee, as factionalism within the party divided support between Kim Dae Jung and himself. Although set back by his defeat, Kim became leader of the New Democratic Party in 1974, but he was expelled from the National Assembly in 1978 in the political crisis that enveloped the presidency of Park Chung Hee. Following the coup that

Kim Young-sam speaking to the media during the 1987 presidential election campaign. (DAVID & PETER TURNLEY/CORBIS)

brought Chun Doo Hwan to power, Kim was placed under house arrest until May 1983. Although banned from political activity, Kim became cochair of the Council for Promotion of Democracy in 1984 and became an adviser to the New Korea Democratic Party in 1986.

In the preceding year, Kim established a new political party, the Reunification Democratic Party, and ran as its presidential candidate against Roh Tae Woo and Kim Dae Jung. Defeated in the presidential election, Kim merged his Reunification Democratic Party with the New Democratic Republican Party to form the Democratic Liberal Party, of which he was chosen chairman.

Kim ran in and won the 1992 South Korean presidential election. Kim Young-sam's term in office can be best characterized by its cold relations with North Korea, the trials of former presidents Chun Doo Hwan and Roh Tae Woo, and the trial of his own son for corruption and tax evasion.

KIM YU-SIN (595–673), general and statesman of the Shilla kingdom. Kim Yu-sin was one of the primary architects of Shilla unification of the peninsula in 676 and is still revered as one of Korea's leading historical figures and national heroes.

Kim Yu-sin was born of a Shilla aristocratic family in 595, at a time of increasing rivalry between Korea's three dominant kingdoms (Paekche in the southwest, Koguryo in the north, and Shilla in the southeast), and was brought up in the tradition of strict military and Buddhist discipline common to the youths of Shilla nobility.

For almost two centuries the three Korean kingdoms had fought an ever-shifting struggle for territory on the Korean peninsula. By the early seventh century, with China unified under the Sui (518–618) and then the Tang (618–907) dynasties, their mutual struggle intensified to one for complete peninsular hegemony. After Shilla secured an alliance with the Tang dynasty, Kim Yu-sin in 661 led Shilla forces in a combined Shilla-Tang attack upon Paekche that culminated in that kingdom's defeat. The defeat of Koguryo, again through a Shilla-Tang alliance, soon

followed in 668. The defeat of Koguryo, again through a Shilla-Tang alliance, followed in 668. Soon after these victories, however, Tang China moved to consolidate its power on the peninsula by creating Chinese protectorates of former Paekche and Koguryo territory, an event that soon led to war between Tang and Shilla. Though Kim Yu-sin would die before he could witness Korean unification with Shilla's defeat of Tang forces in 676, he is still viewed more than any other historical figure as the father of Korean unification. His tomb can still be seen in the historic city of Kyongju, the former capital of the Shilla kingdom.

KINABALU, MOUNT Mount Kinabalu, the highest mountain in Southeast Asia, is located in the Crocker Range of Sabah, a Malaysian state located on the island of Borneo. At 4,101 meters the mountain is a spectacular sight, described as a rectangular indented parapet rising above the rest of the range and Sabah. Botanists and zoologists have found Mount Kinabalu to be a reservoir of plants and animals. Half of the world's genera of flowering plants are to be found on Mount Kinabalu. Among these are the world's largest flowers, the *Rafflesia*, and well over one thousand species of orchids, including the slipper orchids for which Mount Kinabalu is renowned among orchid enthusiasts. Mount Kinabalu also has the largest variety of pitcher plants in the world.

Only the upper 300 meters of the mountain are bare; the rest is covered with vegetation, the type of which varies according to the elevation. Primary rainforest below 600 meters marks the boundary of the Kinabalu State Park, which was established in 1964 and covers about 76,700 hectares. The terrain above then ranges from rich lowland dipterocarp forest to montane oak/chestnut, shrub, and conifer forests be-

Mount Kinabalu rises behind the capital city of Kota Kinabalu, Sabah, Malaysia. (NIK WHEELER/CORBIS)

fore giving way to a mossy forest and finally the treeless alpine peak.

Mount Kinabalu is considered a young mountain and is actually younger than its surrounding rock. It is a great granite pluton (an intrusive body of igneous rock) that pushed its way through the Crocker Range between one and three million years ago. The rest of the range is approximately nine million years old.

The Dusun and Kadzan tribal people who live in the foothills of Mount Kinabalu hold the mountain sacred. They named it Aki Nabal, which means "the revered place of the dead." Legend has it that the name

of the mountain dates to the arrival of the Chinese in Sabah centuries ago. The word Kina is supposedly derived from the name Cina, or "China," and *balu* means "widow." A Chinese prince was believed to have climbed the mountain in search of a great pearl guarded at the summit by a dragon. According to the legend, he finds the pearl, kills the dragon, and marries a Kadzan girl but eventually leaves her and returns to China. His wife climbs to the "spirit mountain" to mourn the loss and is then turned to stone.

The first person documented to have climbed Mount Kinabalu, in 1857, was Sir Hugh Low, then a British colonial secretary stationed in Labuan. The highest peak on Kinabalu—Low's Peak—is named for him, although he never reached it. A zoologist, John Whitehead, was the first to reach the summit, in 1887.

KINKI REGION (2001 est. pop. 22.2 million). The Kinki Region is located in the western part of Central Honshu in Japan and consists of Osaka, Hyogo, Kyoto, Shiga, Mie, Wakayama, and Nara Prefectures. It has an area of 33,075 square kilometers.

Most of the region has mountainous topography, but there are numerous coastal plains on the Inland Sea, Osaka Bay, and the Kii Channel. The Kii Peninsula in the southern part has a rainy climate and is warm in winter. The northern part facing the Sea of Japan is affected by northwest winds, and the winds off the Tsushima Strait bring heavy rainfall and snow. Rice, citrus fruits, vegetables, and floricultural products are cultivated. The Hanshin Industrial Zone, in and around Osaka-Kobe, is dominated by heavy industries such as metal, machinery, chemicals, and textiles. The area is characterized by many small and medium-scale factories specializing in the production of machine parts, blankets, and footwear. Efforts have been made to promote regional development. The city of Kobe is being rebuilt after the Great Hanshin-Awaji Earthquake of 1995. In the late 1990s, the new Kansai International Airport, built in Osaka Bay, was opened. Plans also focus on new technologies through industry, government, and academic linkages in the thirty-year Kansai Science City project that started in 1987.

KIPLING, JOSEPH RUDYARD (1865–1936), British writer. Rudyard Kipling was born in Bombay, India. His parents, John Lockwood, the principal of an art school, and Alice Macdonald Kipling, sent him to England at the age of six (1871) for school where he was subjected to nightmarish treatment that left psychological scars (recalled in his novel *Stalky and Co.*, 1899). His experience at the United Services College in north Devon (1878–1882) was also unpleasant. In 1882, Kipling joined his parents in Lahore, India, where his father was curator of the museum. Seven years' experience in journalism as a reporter and editor of two Indian newspapers, the *Civil and Military Gazette* and the *Pioneer of Allahabad*, developed his superior writing skills. It also gave him a unique look at two very different societies—British colonialists and their Indian subjects, whose stories enriched his lifelong writing career. Kipling's first publication of poetry, *Departmental Ditties* (1886), met with success. His first volume of short stories, *Plain Tales from the Hills* (1887), which was followed by five more volumes (1888–1889), as well as the two *Jungle Books* (1894) and *Kim* (1901), brought him the indelible reputation of a

Rudyard Kipling in the early 1900s. (UNDERWOOD & UNDERWOOD/CORBIS)

great storyteller. Kipling won the Nobel Prize for Literature in 1907, the first British writer to be so honored. He lived the last years of his life in London.

KIRKUK (2002 est. pop. 729,000). Kirkuk, a city in northern Iraq, has been occupied for thousands of years, from at least the third millennium BCE. The city is bounded by the Little Zab River to the northwest, the Jabal Hamrin to the southwest, the Diyala River to the southeast, and the Zagros Mountains to the northeast. Kirkuk is strategically located as an entry to one of the few passes through the rugged Zagros Mountains and, hence, to the Iranian plateau. Medieval Arabs knew the city as Karkhina, the name that some inhabitants still used in the late twentieth century.

The area of Kirkuk was a region of contention between the Ottomans and Safavids from the sixteenth to nineteenth centuries. In 1555 the Treaty of Amasya assigned it to the Ottomans, and many Kurds in the region accepted Sunni Islam. Kirkuk became an important garrison town, commercial center, and source of petroleum products for the Ottoman army. In 1926 Kirkuk was incorporated into Iraq as part of the new province of the Mosul.

From ancient times Kirkuk was known for its sulfur, bitumen, and oil (*naft*). In 1927 a huge oil gusher discovered at Baba Gurgur near Kirkuk became the largest oil field in the world until the discovery of the Gawar field in Saudi Arabia in the 1950s. Between World War I and World War II, Britain allowed U.S. oil companies to participate in exploiting the Kirkuk fields to encourage American support of British imperialism. By 1935 oil production from the Kirkuk fields had made Iraq the eighth-largest producer in the world. In 1935, 1948, and 1949, pipelines were built from Kirkuk to the Mediterranean ports of Haifa, Tripoli, and Banias. In the 1980s two more pipelines traversing Turkey were extended to Dörtyol on the Mediterranean.

After the 1958 Iraqi Revolution the government aimed to nationalize oil production, which was achieved in 1972. Although the southern Iraqi oil fields, especially Rumaila, became more important in the 1970s, Kirkuk's oil was still significant at the end of the twentieth century. Throughout the 1960s, oil revenue, largely from the Kirkuk fields, provided around 27 to 40 percent of Iraq's total national income, 50 percent of all general revenue, and 90 percent of all foreign exchange.

Kirkuk remained a district of Mosul province until 1975, when it was reorganized as one of the eighteen *mubafaza* (governorates) of Iraq. From 1975 onward the Iraq government pursued a policy of Arabizing Kirkuk and removing the Kurdish and Turkmen people who formed the bulk of the population. Some 4,000 Kurdish villages and some 400,000 Kurds, a substantial number from Kirkuk, were deported to other regions of Iraq. After the conclusion of the Iran-Iraq war in 1988, in the ethnic cleansing campaign called *Anfal*, 180,000 Kurds were killed. After the Gulf War in 1991 the Iraqi government heightened its ethnic cleansing practices in the Kirkuk region to ensure that the region and the oil resources remained under Iraqi control in any future settlement with the Kurdish nationalist government. That part of the Kirkuk region not under Iraqi control was held by the the Patriotic Union of Kurdistan under the leadership of Jalal Talabani, one of two main Kurdish nationalist organizations. The

partitioning of Kirkuk *mubafaza* and the allocation of its oil resources have remained unsettled disputes between the Kurds and the Iraq government since 1960.

In 1965, the population of the city of Kirkuk included 71,000 Kurds, 55,000 Turkmen, 41,000 Arabs, and several thousand Chaldeans and Nestorians. In 2000, due to massive migration, urbanization, and ethnic cleansing, it was difficult to estimate the population. Kirkuk *mubafaza* may have held 200,000 to 250,000 Turkmen, and Kirkuk city 65,000 to 75,000. The remainder of the population was Arab, due to the Arabizing policies of the Iraq government, which increased during the 1990s.

KISHI NOBUSUKE (1896–1987), prime minister of Japan. Born in Yamaguchi prefecture in November 1896 to the Sato family, Kishi was the second male in a family of ten children. During his teenage years, he was adopted into the family of his father's older brother in order to marry his cousin Yoshiko. Subsequently he took the family name Kishi.

Kishi attended Tokyo Imperial University and was offered a position on the law faculty upon graduating in 1920, but he entered the Ministry of Agriculture and Commerce instead. After assignments in the United States, Europe, and China, Kishi became the minister of commerce and industry in Tojo Hideki's cabinet. For this he was purged from politics after World War II. Regaining his political rights in 1948, Kishi entered the Liberal Party in 1953 and later helped form the Democratic Party in 1954. He worked behind the scenes in a conservative merger that led to the formation of the Liberal Democratic Party in 1955.

He was elected the prime minister of Japan in February 1957 and held that post until his resignation in July 1960, following demonstrations in Tokyo against the revision of the United States–Japan Security Treaty earlier that year. In addition to securing the revision of this treaty in an effort to strengthen bilateral relations, Kishi visited some thirty countries during his time as prime minister, including two successful

visits to Southeast Asia and Oceania, the first visit of a Japanese prime minister to this region. In addition, Kishi proposed the creation of an Asian Development Bank with \$700 million in funds for Southeast Asian development, using U.S. funds and Japanese know-how. The plan did not materialize due to a lack of interest on the part of the United States and Southeast Asian countries. Although Kishi resigned as prime minister in July 1960 and officially retired from politics in 1979, he exercised behind-the-scenes influence on Liberal Democratic Party politics until his death in 1987.

KISHLAK The word *kishlak*, from a Turkic word meaning "winter quarters," refers to settled agricultural villages in Uzbekistan, Tajikistan, and Kyrgyzstan. The *kishlak*, along with its nomadic counterpart, the *aul*, was an important social unit in Central Asia, traditionally inhabited by extended family groups.

Kishlaks are densely settled, crowding fifty or more houses into a relatively small area, a style that the Russians who came to the area called "nesting." Houses are built around courtyards that open directly onto the street, which is typically crooked. In mountainous areas *kishlaks* are often terraced. Before the Russian annexation of Central Asia, *kishlaks* were usually defended by walls, which like most of the *kishlaks'* buildings were made of mud brick. A *kishlak's* fields lie outside and around the town, and a common irrigation system is maintained for the use of everyone in the community.

Until the Soviet period *kishlaks* were administered by village elders called *aksakals*. Most *kishlaks* also housed a mullah, a Muslim cleric often called on to assist the *aksakal* in making decisions. During the Soviet period an attempt was made to replace *aksakals* with soviets of workers' deputies.

KISTNA RIVER Kistna or Krishna River, 1,370 kilometers long, rises in the Western Ghats of India near the town of Mahabaleshwar, only 65 kilometers from the Arabian Sea, at a source that is sacred to Hindus. The river flows eastward across southern Maharashtra, northern Karnataka, and Andhra Pradesh states to empty into the Bay of Bengal through two principal mouths, after crossing a broad delta valuable for its rice agriculture. In its lower course, an important irrigation work, the Bezwada Anicut, a dam with two canals, was begun in 1852 by Sir Arthur Cotton, just below a gorge where the Kistna bursts through the Eastern Ghats and the channel is over a kilometer wide. The river's two great tributaries are the Bhima and the Tungabhadra, and the Kistna is also joined by five other important rivers. The channel is too rocky, and the stream too rapid, to allow any navigation on the Kistna. During the dry season, the depth of water may be no more than two meters. The drainage area of the Kistna covers some 245,000 square kilometers in the central Dekkan plateau.

Paul Hockings

KITES AND KITE FLYING Kites are toys that fly in the air at the end of a line, and kite flying is a popular pastime in Asia. Many kinds of kites exist, but most have light bamboo frames covered with paper or cloth and are attached to a long string held in the hand. Brightly colored and decorated, Asian kites may take the shapes of birds, insects, butterflies, or geometric forms. One of the popular Chinese kite forms is the jointed dragon.

The oldest record of a kite is from the fifth century BCE in China. Plane-surface kites were diffused into Europe in the fifteenth century, and after the sixteenth century many other kinds of kites were introduced into Europe.

In East Asia kite flying is a traditional custom with religious meaning. In Japan and Korea people fly kites during the New Year celebrations. In China the ninth day of the ninth month is a holiday honoring kites. Koreans and Chinese sometimes write words representing evils on the surfaces of kites, then they burn the kites or let them fly away in the air after the New Year. The kites are thought to carry the evils away.

Kite flying is also popular in Thailand, where in March the air is filled with a variety of kites. Historically, the people of Thailand used kites at a ceremony to hasten the end of the rainy season, believing that the wind whistling through the bamboo frames of the kites blew away rain clouds. Kite fighting has survived as one

KITES IN KOREA

This account of kite flying in Korea provides details of the activity in the late nineteenth century and also provides a glimpse into the rivalry that existed between the Koreans and Chinese.

It is customary for all classes in Korea from His Majesty, the King, down to fly kites. Women sometimes fly kites from their yards, but it is said that anyone can tell a kite flown by a woman. The owner of a kite is often considered unable to fly it, and when he goes away, another who understands kite-flying will take the reel and play it.

The Koreans say that the Chinese do not know how to fly kites, and that when a Chinaman grows tired after having sent up his kite with a heavy string, he will tie it to a tree and lie down and watch it.

The time for kite-flying is the first half of the first month. After this time, if any one should fly a kite he would be laughed at, nor will any one touch a lost kite.

On the fourteenth of the first month it is customary to write in Korean characters on kites a wish to the effect that the year's misfortunes may be carried away with them. Mothers write this for their child, with his name and date of birth. The letters are placed along bamboo frames so that they may not be seen by any one who might be tempted to pick the kite up. Boys tie a piece of sulfur paper on the string of such a kite, so that when the kite goes into the air the string will burn through and the kite fall.

of the major sports in Thailand, and the national championships are held in Bangkok every spring. Competitors attempt to bring their opponent's kites to the ground by severing the strings to which the kites are attached. There is also a kite championship in Malaysia. Participants demonstrate the height, sound, and beauty of their kites. Malays introduced kite flying to India, where, as in Japan, it remains popular.

KIZEL IRMAK RIVER At 1,355 kilometers, the Kizel Irmak (Kizilirmak) River is the longest in Turkey. In ancient times it was called Halys, meaning "salty flowing water." It flows from the southern slopes of Kizildag east of Sivas to the southwest and then turns north through the industrial city of Kirikkale to the Kizil Irmak delta, where it empties into the Black Sea at Bafra in Samsun Province. It is fed by rain and snow. The river drains an area of 78,000 square kilometers and is dammed in four places. The river supplies farmers with rich sediment that also is used by potters in Avanos. At Kirikkale it picks up visible pollution from local industry. At the delta it forms several shallow lakes and waterways; people living in the

delta region earn money by cutting the reeds that grow there. Agriculture and fishing are also important delta activities.

KOBYZ The *kobyz* (*qobyz*) is a Kazakh two-stringed, bowed instrument that is similar to a lute or fiddle. A comparable instrument is the *kiak*, familiar to the Kyrgyz; similar instruments are found among many other Central Asian peoples. The *kobyz*'s ancestry can be traced to ancient musical instruments dating back at least two thousand years. The modern *kobyz* dates from the eighth or ninth century CE. Typically, the *kobyz* is made from a single piece of wood, with a long neck and a pear-shaped body. A leather membrane covers the oblong part of the *kobyz* and is traditionally made from the skin of a camel, an animal revered throughout Central Asia. The strings and bow are made from horsehair. The instrument's body is angled, making a bridge unnecessary. It also lacks frets along the neck.

Most scholars believe that these instruments originally were plucked and that bows were used only later. Indeed, many scholars believe that bowing was developed in Central Asia. The music was played by using the fingers to shorten the strings rather than pressing them to the neck. A *kobyz* was often used by a shaman in ceremonies to fend off spirits; this practice has diminished along with shamanism among the Kazakhs. The *kobyz* is a solo instrument but is often played with accompanying vocalists.

Kazakh mythology traces the first *kobyz* to a certain Korkut, considered to be the father of Kazakh music. Korkut, a shaman in some versions, was unable to accept death and escaped from people, seeking truth and immortality in nature, only to discover that nature could not grant him eternal life. He fashioned the first *kobyz*, thus finding immortality in art and music.

KOCHI (2002 est. pop. 800,000). Kochi Prefecture is situated in the southern region of Japan's island of Shikoku, where it occupies an area of 7,107 square kilometers. Kochi's main geographical features are the Ishizuchi Mountains, intersected by river valleys. The prefecture is bordered by the Pacific Ocean and by Ehime and Tokushima Prefectures. Once known as Tosa province, it assumed its present name in 1871 and its present borders in 1880. The capital of the prefecture is Kochi city, situated on Urado Bay.

During the Sengoku (Warring States) period (1467–1568), the Yamanouchi and Chosokabe warrior families, among others, exerted power over the province. The town then grew around a castle erected there in 1603 by Yamanouchi Kazutoyo. During the late Edo period (1600/1603–1868), samurai from Tosa were active in the pro-imperial movement to overthrow the Tokugawa shogunate.

The city has relatively little industry aside from some production of cement, chemicals, steel, and ships, together with processing of lumber, paper, and foodstuffs. Kochi Castle, the scenic Katsurahama shore, and the Tosa Shrine are among local attractions. The prefecture's other important cities are Nankoku, Tosa, and Nakamura.

In the early 2000s, the prefecture's main economic activity remains agriculture, its subtropical climate sometimes allowing two plantings of rice per year. Fishing also is important, as are the processing of paper and lumber, harvested from the region's thick forests. Kochi is famous for breeding the fighting dogs known as Tosaken. Visitors are drawn to its scenic mountains and shore, part of Ashizuri-Uwakai National Park.

KODAMA YOSHIO (1911–1984), Japanese right-wing ideologist. Kodama was born in Nihonmatsu in Fukushima Prefecture and raised in Tokyo. In 1920, at the age of nineteen, Kodama went to Korea to live with relatives. There he worked industrial jobs. In

1928, he became very active in right-wing and nationalist societies. In 1932, he formed the *Dokuritsu Seinen Sha* (Independence Youth Society) in Japan, which was an ultra-right-wing youth group, and attempted to assassinate opposition cabinet ministers and Prime Minister Admiral Saito Makoto (1858–1936). Kodama was arrested and sentenced to spend three and a half years at the Fuchu Penitentiary. In 1937, he went to China and Manchuria on a fact-finding mission for the Japanese Foreign Ministry and also acted as guard and adviser to Wang Ching-wei (1883–1944), who was then chairman of the national government of China.

After resigning from his position over a disagreement with Tojo Hideki (1884–1948), Kodama returned to Shanghai as a naval air force procurement agent in order to build a network through his own agency, Kodama Kikan, for securing military materials for the Japanese war effort. During World War II, his agency bought and sold radium, cobalt, copper, and nickel, and he made a fortune. At the end of the war his industrial empire was worth \$175 million. At the age of thirty-four, he became the second wealthiest man in Japan and was promoted to rear admiral by the Japanese government. At the end of World War II, he was appointed adviser to Prime Minister Higashikuni Naruhiko (1887–1990), but in early 1946 he was listed as a Class A war criminal, a designation given only to cabinet officers, ultranationalists, and high-ranking military persons, and was sentenced to jail. He spent two years in Tokyo's Sugamo Prison before he was released in 1948.

After his release from prison, Kodama became a behind-the-scenes force in politics and used his fortune to help finance conservative parties and politicians in Japan. When, in 1955, the Liberal Party merged with the Democratic Party to form the LDP (Liberal Democratic Party), Kodama emerged as its principal spokesman. In the late 1960s and early 1970s, Kodama became the most powerful figure in Japan. Then, in 1976, he was accused of involvement in the Lockheed scandal. According to his accusers, he had received about \$2.1 million in payoffs from officials of the Lockheed Corporation who were looking for advantage in the Japanese market. Lockheed had solicited Kodama's help in selling Lockheed's TriStar L1011 in Japan, which faced tough competition from Boeing and McDonnell-Douglas. Kodama suffered a stroke and died in 1984, before the trial started.

KOHIMA (2001 pop. 79,000). The capital of Nagaland State in northeastern India, Kohima was built by the British in the nineteenth century. It was the point of farthest Japanese advance into British India during World War II. Spread across a wide mountain ridge at an elevation of 1,495 meters, Kohima formed a pass through which the Japanese hoped to reach the plains of India. A war memorial, immaculate gardens, and a cemetery with twelve hundred bronze epitaphs dominate the town and commemorate the Allies who fell during the three-month Battle of Kohima, which ended in April 1944 after claiming over ten thousand lives.

Above Kohima, the old village Bara Basti—once an impregnable stronghold—boasts a wooden gate adorned with a scimitar of horns of buffalo to greet the visitor as a commemoration of the bravery of the Angami Nagas, one of the sixteen Naga tribes. A complex system of bamboo water pipes irrigates terraces growing twenty types of rice. The state museum is known for its log drum, woodcarvings, Naga jewelry, and figures displaying costumes and lifestyles of the Naga tribes, with their common love of music, dance, and pageantry.

KOMEITO The Komeito, or Clean Government Party, is the only party in postwar Japan with links to religion. Its sponsor, Soka Gakkai, is the laymen's affiliate of the Nichiren sect of Buddhism. Founded on 17 November 1964, it defined itself as the "party of ordinary people," oriented toward low-income groups and women.

With a basically conservative philosophy, the party stressed a commitment to fundamental values. It advocated a program of social welfare to elevate the status of those at the bottom of the social pyramid. In foreign policy, the party advocated greater Japanese involvement in the promotion of global peace. The Komeito's success at the polls was due in large measure to the

effective local organizational strength of Soka Gakkai. The Komeito came under criticism for the energetic proselytizing of Soka Gakkai, efforts that bordered on pressure and intimidation.

In 1994, the Komeito joined with a group of defectors from the Liberal Democratic Party to form the New Frontier Party. This party in turn broke up in 1997. Former Komeito members began to explore ways to revive the party, and in November 1998 they joined with the New Peace Party to form the New Komeito.

KOMODO DRAGON Descended from ancestors 100 million years old, the Komodo dragon (*Varanus komooensis*) is a member of the monitor lizard genus and inhabits the Indonesian archipelago, particularly Komodo Island National Park on the island of Komodo in south-central Indonesia.

An adult male Komodo dragon is the largest lizard in the world. Three meters long, weighing 135 kilograms, and having long talons, stout body, and a long tail, the Komodo dragon is a formidable predator. Carnivorous, these lizards can swallow their prey whole; their diet includes everything from small insects and lizards to pig, goat, buffalo, horse, and even an occasional human being. Although they can run fast enough to reach speeds of 20 kilometers per hour, Komodo dragons usually lie camouflaged waiting to attack. The olfactory and Jacobson's (in the roof of the

A Komodo dragon on Komodo Island, Indonesia. (WOLFGANG KAEHLER/CORBIS)

KOMODO NATIONAL PARK— WORLD HERITAGE SITE

Komodo National Park was designated a UNESCO World Heritage Site in 1991 because the islands that form the park are the home of the Komodo dragon.

mouth) sensory organs allow the animals to detect carcasses by perpetually flicking their forked yellow tongues, which taste and smell the surrounding air.

Once thought to be poisonous, the dragons can cause fatalities only through the saliva from their bite, which may produce septicemia (from the bacteria ingested when a dragon eats carrion). A Komodo dragon can live to the age of twenty years or even longer. Unfortunately they are presently on the endangered species list.

KOMPONG SOM BAY Chhak Kampong Saom (Kompong Som Bay) is framed by the Chuor Phnom Kravanh (Cardamon Mountains) and Chuor Phnom Damrei (Elephant Mountains) on the northeast and the Gulf of Thailand to the south and west. Famed for its tropical beaches, and site of Cambodia's only deep-water port, Kampong Saom (Sihanoukville), the bay's natural advantages include deep water inshore and a string of islands stretching offshore across the mouth of the bay, which afford a degree of protection from storms. Proximity to Phnom Penh, as well as the major trading centers of Bangkok and Singapore, also makes the bay attractive for recreation and maritime traffic.

Constructed by King Norodom Sihanouk (b. 1922) in the late 1950s, Kampong Saom gained some notoriety when the SS *Mayaguez*, a merchant ship sailing between Hong Kong, Thailand, and Singapore in support of U.S. forces in Southeast Asia, was captured one week after Saigon fell to the North Vietnamese army in May 1975. Forced into the bay by Khmer Rouge

Men fishing from small boats in Kompong Som Bay in 1996. (KEVIN R. MORRIS/CORBIS)

gunboats, the *Mayaguez* was eventually released under pressure by the U.S. and Chinese governments.

At the beginning of the twenty-first century, with the assistance of the U.N. Development Program and the Asian Development Bank, efforts are underway to conserve the bay's biological diversity through the creation of ecotourism activities in Preah Sihanoukville (Ream National Park) near Sihanoukville. Such efforts are intended to mitigate the pollution and erosion associated with the port's operation and expansion.

KONFRONTASI In the early 1960s, Indonesian president Sukarno (1901–1970) grew openly critical of the West. He viewed the 16 September 1963 establishment of the Federation of Malaysia, including Malaya, Singapore, and former British Borneo (Sarawak and Sabah), as a continuation of colonial rule. In early 1963, Sukarno launched a military campaign to "crush" Malaysia in what was known as Konfrontasi—the Confrontation. Most of the guerrilla war

happened in the rainforest of Borneo, with incursion into the Malayan peninsula in September 1964. Britain sent troops to help Malaysian forces seal the border on Borneo island, while Australia and New Zealand lent support. International condemnation forced Indonesia to abandon membership in the U.N. Sukarno's military campaign, largely intended to deflect attention from Indonesia's paralyzed economy, proved the death of Sukarno's regime. Unbeknownst to Sukarno, some leading army officers and foreign ministry bureaucrats contacted Malaysian officials in 1964 to scale down Konfrontasi. An alleged communist-led coup in September 1965, which saw the deaths of six leading generals, led to the successful counter-coup by General Suharto (b. 1921). The ensuing military assumption of power removed Sukarno and effectively ended Konfrontasi, though this was not officially announced until 1966. At the height of Konfrontasi an estimated 15,000 to 30,000 Indonesian soldiers and irregulars tried to infiltrate the porous Malaysian border, while 50,000 British personnel were stationed in the Southeast Asian theater. British troops in Borneo, assisted by Malaysian forces, were spread thinly along the border to limit incursions.

KONG XIANGXI (1881-1967), Chinese politician. Better known to Westerners as H. H. Kong, Kong Xiangxi was born in 1881 in Taigu, Shanxi Province, China, and claimed to be a direct descendant (seventy-fifth generation) of Confucius (551-479 BCE). Educated at Oberlin College (Ohio), he also received a master's degree in economics from Yale. Kong was a loyal supporter of the Guomindang (Nationalist) government of Sun Yat-sen (1866-1925) and Chiang Kai-shek (1887-1975), who were his brothers-in-law. After 1928, he held various high positions in the Nationalist government, including prime minister (president of the Executive Yuan) from January 1938 to November 1939. In his long tenures as minister of finance (1933-1944) and president of the Central Bank of China, he made major reforms in China's monetary, financial, and fiscal systems. These reforms greatly benefited China's war against Japanese invasion, although they were also partially responsible for China's later hyperinflation. Criticized as the patron of widespread corruption among government officials and his family members (including his wife and children), he was removed from the Ministry of Finance in 1944 and the Central Bank of China in 1945. After the fall of the Nationalist government in 1949, Kong went to live in the United States, where he remained active in the China lobby until his death in 1967.

KONOE FUMIMARO (1891-1945), Japanese prince and politician. Konoe Fumimaro was a prominent politician between World War I and World War II and the prime minister of three cabinets between

1937 and 1941. Born in Tokyo of imperial ancestry, he held the title of prince. In his university years, Konoe came to view international relations as a class struggle between overbearing "have" nations and grasping "have-nots." The latter group, according to Konoe's world vision, included Japan, which he believed was held in its inferior status by the major powers and their handmaiden institution, the League of Nations.

Konoe's belief that a Japanese hegemonic role in Asia was essential to keep order in the region played into the hands of the military. In 1937, while prime minister, he ushered in a full-scale war to assert Japanese mastery over China. The China Incident, as this invasion was known among Japanese, began with a skirmish with Nationalist troops outside Beijing and eventuated in the capture of China's capital, Nanjing, and coastal provinces. Konoe also initiated wartime economic and military mobilization at home. Three years later his government signed the Tripartite Pact with Germany and Italy. He failed in his efforts to resolve the China Incident and to construct détente with Great Britain and the United States in the months before the Japanese invaded Pearl Harbor. When the German invasion of the Soviet Union and U.S. economic sanctions threatened his foreign agenda, Konoe resigned in October 1941 and was replaced by General Tojo Hideki (1884-1948).

In the final year of the war, Konoe engaged in maneuvering to terminate the conflict. Early in the Allied Occupation, General Douglas MacArthur (1880-1964) tapped him to draft a revision of the Meiji Constitution. However, Konoe's concepts of a reformed constitution fell far short of Occupation authorities' visions. For his prewar policies, the War Crimes Tribunal indicted Konoe as a Class A war criminal. On the day he was to report to prison, he committed suicide.

KONYA (2002 pop. 696,000). Konya is the capital of the province of Konya in south-central Turkey, the country's main agricultural region. The city is sur-

rounded by fertile, well-irrigated plains, which have produced grains and cereals for millennia.

The earliest settlers were the Hittites, who called the city Kuwana; they were followed by the Phrygians who used the name Kowania. In the third century Iconium (as it was known under the Greeks) became a Hellenistic city although the Phrygian population continued to maintain its cultural identity. After having been expelled from Antioch, St. Paul and St. Barnabas delivered sermons in Iconium in 47, 50, and 53 CE, but they were not favorably received and Christianity had little impact on the local population. In Byzantine times, Iconium served as a military base, subject to frequent attacks by the Arabs. After the Seljuks defeated the Byzantines at the Battle of Manzikert (1071), Iconium became a part of the Seljuk Empire. Seljuk Sultan Kilic Arslan I (1092–1107) later moved his capital to Konya after losing Nicaea to the Byzantines during the first crusade (1097). Konya was relatively free of the constraints posed by warfare, and under Seljuk rule the city flourished. This is especially true with regard to its architecture and tile work, which display a distinctly Seljuk style and remain a major tourist attraction today. In 1313, Konya was occupied by the Karamanid dynasty and officially became part of the Ottoman empire in 1475.

Konya is also the heart of the Mevlevi Sufi sect (known as the whirling dervishes) whose founder, the poet and philosopher Jalal-al-Din Rumi (1207–1273), is buried in Mevlana Museum; his shrine is a major pilgrimage site. An annual dervish festival takes place every December.

KOREA—HISTORY Archaeologists generally posit 30,000 to 50,000 years before the present as the date for the Korean peninsula's earliest known inhabitants. These Paleolithic (Old Stone Age) peoples—who moved into the peninsula while the glacial climate of the ice ages made Korea contiguous with central China—inhabited caves, hunted and gathered for sustenance, used crude tools fashioned from stone or wood, and knew the use of fire. From about 8000 BCE, Neolithic (New Stone Age) populations appeared in

Korea. Arriving in a series of migrations, they carried with them elements of the Siberian cultures from which they had emerged. These included shamanistic religious beliefs, communal or clan organization, and specialized pottery techniques represented by the so-called comb-pattern design. Neolithic habitations were mostly limited to coastal areas and along inland waterways.

Bronze culture arrived in Korea, probably via more advanced and Tungusic-speaking peoples who migrated into the peninsula from the northeast Asian steppe from around the eighth century BCE; around the fourth century BCE, the ancient states of Puyo and Choson appeared in the northern peninsula and in Manchuria. Rice production apparently began on the peninsula during this time. This period also saw the appearance of dolmens, imposing structures characterized by the piling of several large stones in a table-like formation, which probably served as both tombs and places of ritual.

Iron production was introduced via China around the fourth century BCE, as were elements of the advanced Chinese culture. The Chinese Han dynasty (206 BCE–220 CE) overcame the Korean tribal states to establish a network of colonies on the Korean peninsula and in present-day Manchuria from around 100 BCE, which went far in introducing Chinese technology, wealth, and concepts of rulership into a still rather primitive Korean peninsula.

By the first century BCE, the state of Koguryo appeared, perhaps as an offshoot of the Puyo state, which had occupied large portions of northeastern Manchuria along the Sungari River as early as the fourth century BCE. South of the Han River, the so-called Three Han States emerged, tribal confederations whose exact makeup remains debated. It was from the southern Han

GOCHANG—WORLD HERITAGE SITE

The cemeteries of Gochang, Hwasun, and Gangwha in South Korea, World Heritage Sites since 2000, contain hundreds of ancient dolmens—stone slab tombs structures—that date back to the first millennium BCE.

KEY EVENTS IN KOREAN HISTORY

- c. 30,000–50,000 BCE** Humans first occupy the Korean peninsula.
- c. 8000 BCE** Neolithic peoples are living in Korea.
- 8th century BCE** Bronze Age culture is present in Korea.
- 4th century BCE** The states of Puyo and Chosen emerge in the north. Elements of Chinese culture enter Korea.
- c. 100 BCE** The Chinese Han dynasty establishes colonies in Korea.
- 18 BCE–663 CE** Period of the Paekche kingdom in the southwest.
- 37 BCE–668 CE** Period of the Koguryo kingdom in the north.
- 57 BCE–935 CE** Period of the Shilla kingdom in the southeast.
- 668 CE** The Shilla kingdom unifies the peninsula.
- c. 900 CE** The Shilla kingdom has weakened and provincial leaders have assumed control in parts of the peninsula.
- 918–1392** The period of the Koryo kingdom with Korea reunified.
- 1231** The Mongols invade Korea and Korea comes under Mongol control.
- c. 1368** Mongol rule ends with the rise of the Ming dynasty in China.
- 1392–1910** Period of the Choson dynasty.
- 1471** Confucianism is established as the ideology of the state.
- 1592** Korea is invaded by Japan and again in 1598.
- 1627** Korea is invaded by the Manchu and again in 1636 and comes under Manchu (Qing dynasty) control.
- 1860s** Peasant revolts mark the emergence of the Tonghak movement.
- 1894** Japanese and Chinese troops intervene to halt the Toghak-led revolt.
- 1876** The Treaty of Kanghwa with Japan opens up trade with the west as treaties with the United States, Britain, and France follow.
- 1905** Japan makes Korea a protectorate.
- 1910–1945** Period of Japanese rule.
- 1919** The March First Independence Movement fails to end Japanese rule.
- 1945** Korea is liberated from Japanese rule and the peninsula is divided at the thirty-eighth parallel.
- 1948** In a U.S.-backed election, Syngman Rhee is elected president of the First Republic of Korea while the People's Democratic Republic of Korea is established in the north.
- 1948–1994** Period of rule of Kim Il Sung in North Korea.
- 1950–1943** Period of the Korean War.
- 1960** Syngman Rhee's presidency ends; he is replaced by Park Chung hee in a military coup.
- 1960s** The South Korean economy begins several decades of rapid expansion.
- 1966** *Juche* ideology emerges in North Korea.
- 1970s** North Korea begins to experience economic difficulties.
- 1981** Martial law is lifted in South Korea.
- 1988** South Korea hosts the Summer Olympics.
- 1992** Kim Young Sam becomes the first civilian president since 1960 in the south.
- 1994** President Kim Il Sung of North Korea dies and is later replaced by his son, Kim Jong Il.
- 1996** South Korea experiences a major economic crisis.
- 1998** Kim Dae Jung is elected president of South Korea.
- 2000** The first meeting between the leaders of the north and south takes place in P'yongyang, North Korea.

states, however, that more centralized kingdoms eventually developed.

From about the middle of the fourth century CE, three states began to emerge as primary contestants for power on the Korean peninsula: Koguryo in the north, Paekche in the southwest, and Shilla in the southeast. Paekche is traditionally dated to 18 BCE; Shilla emerged last as the strongest among various small tribal units in the south around the fourth century CE. It was the Shilla kingdom that unified the Korean peninsula when an alliance with Tang China gave it the commanding strength needed to prevail over its rivals in 668. The northernmost stretches of the kingdom of Koguryo, however, were not annexed by Shilla but instead broke off to become the kingdom of Parhae (Chinese Bohai). Founded by remnants of the Koguryo state, Parhae persisted as an independent kingdom until its defeat by the Khitans, a northern people, in 937.

Unified Shilla (668–935)

Following Shilla's unification in 668, Korean culture entered a new stage. Buddhism, introduced into Korea during the Three Han States period, continued to be central to Shilla life, but institutional borrowing from Tang China, in the form of Confucian-inspired government administration, became more widespread. Shilla routinely sent delegates of scholars, artisans, and monks to China, bringing back Chinese learning and culture. Shilla's capital of Kyongju grew to upward of a million inhabitants, its rich cultural landscape still discernible today. This period also saw the introduction of Son (Chinese Chan, Japanese Zen) Buddhism, which gained great support among powerful provincial families.

The Shilla monarchy never succeeded in extending its control nationwide. By 750, provincial strongmen were emerging (sometimes called "castle lords"), armed with powerful private armies. By 900, the provinces, and their tax bases, had slipped from central control. The so-called successor states, Later Paekche and Later Koguryo, emerged in the provinces. It was the self-proclaimed king of Later Koguryo, Wang Kon (King T'aejo, 877–943), who was finally able to overcome his rivals and establish his new state, now shortened to Koryo, in 918. In 936, he crowned his victory, and ensured his legitimacy, by securing the abdication of Shilla's last king.

Koryo (918–1392)

Koryo (from which the English word "Korea" is derived) extended the borders of the Korean state north-

ward, farther than Shilla had been capable of doing, as far as the Yalu and Tumen Rivers, roughly to Korea's present-day borders.

The fourth king of Koryo, Kwangjong (925–975), took a momentous step when he adopted the Chinese civil service examination, which tested aspirants for government posts in the Confucian classics of Chinese tradition. In this way, Confucianism took its first sure steps toward becoming the orthodox doctrine of Korean social and government life.

Despite the increased reliance on Chinese-Confucian learning and institutions in the state bureaucracy, Buddhism retained a pivotal role in Koryo society and culture. Koryo-period Buddhist silk paintings are masterpieces of East Asian art. The entire Tripitaka (the Buddhist canon), carved into nearly 80,000 wooden tablets, was completed not once but twice; the second version survives at Haein Temple in South Korea. The Koryo period also saw the development of movable metal type, almost two centuries before its development in the West. Perhaps the crowning creative achievement of the Koryo period was the development of celadon ware, a porcelain typified by its unique blue-green hue and refined designs.

The Koryo dynasty faced a series of formidable aggressors during its 474 years in power. The first were the Khitans, the northern people who had defeated Parhae. They menaced Koryo as well, launching particularly brutal attacks in 1010 and 1018 before suffering a debilitating defeat. Only the Koryo agreement to pay tribute to another northern people, the Jurchen, prevented a similar large-scale invasion.

In 1170, aristocratic civilian rule in Korea was overthrown in a revolt by military leaders. This coup may be seen in part as a final act of open resistance against the growth of a Confucian-oriented and aristocratic officialdom, in which military figures were increasingly kept from leadership positions and high social status. The revolt may also be viewed as protest against the luxury and moral decline into which many in the military thought Koryo had sunk. In further bloodletting, another coup in 1196, led again by military elements, ensured the dictatorship of the Ch'oe house, which monopolized Koryo politics until the assassination of the last Ch'oe ruler in 1258 in the midst of the Mongol invasions.

The first in a series of Mongol invasions of Koryo came in 1231. Though the kingdom bravely resisted, it eventually surrendered to Mongol suzerainty. What ensued was a humiliating acquiescence to Mongol terms, including the intermarriage of the Koryo and Mongol ruling houses, large tribute payments, and

even Koryo's assistance in two failed Mongol attempts to subdue Japan in 1274 and 1281. It was in the midst of this Mongol dominance that the Ch'oe house and power returned to the king and his civilian ministers. Meanwhile the Mongol (Yuan) dynasty in China continued to face a series of challenges posed by a more intensive native Chinese resistance. The establishment of the Chinese Ming dynasty in 1368 soon led to the end of Mongol suzerainty in Korea as well.

It was a Koryo general, Yi Song-gye (King T'aejo, 1335–1408), who finally toppled Koryo from within, first staging a court purge and then in 1392, with the compliance of literati (members of the educated class) officials, proclaiming himself the founder and first king of the new Choson dynasty.

Choson (1392–1910)

The Choson dynasty, whose namesake was the ancient Bronze Age Korean state, was the longest lived of Korea's dynasties, ruling the country continuously until Japanese annexation in 1910. It witnessed the gradual but full implementation of Neo-Confucianism as the functioning ideology of public and private life. It also saw extreme social stratification emerge as a salient characteristic of Korean society, and factionalism become a prominent element of the nation's political landscape.

Yi Song-gye (or King T'aejo) situated the new Korean capital at Hanyang (present-day Seoul). Despite periodic turmoil in the form of succession struggles, during their first century Choson kings managed to diminish the privileged power of the aristocracy and establish Confucianism as the ruling ideology of the state, notably with the promulgation of a new national law code (the *Kyongguk taejon*) in 1471. They also succeeded in carrying out overarching land reforms that in effect nationalized land and helped set the foundation for a strong central government. The reign of King Sejong (1397–1450) stands out in particular for its cultural and institutional advancements, the most noteworthy being the development of the Korean alphabet (hangul), though it would not become widely used until the twentieth century due to the opposition of the learned aristocracy. Sejong also assembled the greatest Korean scholars of the day into the "Hall of Assembled Scholars" (*Chiphyonjon*), a sort of think tank of the era. He instituted land surveys and directed the improvement of irrigation and farming techniques that greatly increased production.

Neo-Confucian principles, while increasingly serving to order social behavior, also served to weaken the power of the Korean monarchy by making it liable to checks

and balances by literati officials. At numerous times during the Choson period, notably in the sixteenth century, this resulted in royal purges of literati officials in largely failed attempts to regain royal initiative.

In the social realm, Confucianism eventually stripped women of their power and identity outside the home, while segmenting society as a whole into a strict hierarchy of peasant, "middle people," and landed aristocrat (or *yangban*), with social mobility coming to a virtual halt. As the Choson period advanced, the rights and hereditary privileges of the *yangban* aristocracy were extended, including immunization from most taxation, all of which served to increase the burden on the peasantry and prepare the way for revolts in the nineteenth century. Buddhism during this period lost its official sanction and indeed became an all but proscribed sect.

In foreign affairs, Choson's first two centuries of peace contrasted sharply with the period of unprecedented national destruction brought on by the Japanese invasions of 1592 and 1598 and the Manchu invasions of 1627 and 1636. The Manchu attacks, preceding the ones that eventually toppled the Chinese Ming dynasty in 1644, resulted in Korean submission to the Manchu state (after 1644 the Qing dynasty).

The two centuries following the Japanese and Manchu invasions were also times of relative peace. One of the primary achievements of the period was the promulgation of a new tax system, the "Uniform Land Tax Law," which was finally instituted nationwide by 1708. By substituting a confusing array of taxes with a uniform tax based on land quality, government revenues increased and peasant tax burdens were greatly alleviated. This in turn stimulated commerce and the emergence of national markets.

Nevertheless, by mid-Choson, after centuries of aristocratic privilege, destructive factionalism, foreign invasion, and peasant misery, Korean social and political structures were under increasing strain. One response to this was the emergence of the Sirhak ("True Learning" or "Pragmatic") movement. As the name suggests, its proponents, including such scholars as Yi Ik (1681–1763) and Chong Yag-yong (1762–1836), through a wide-ranging examination of knowledge, rejection of dogma, and reliance on empirical fact, sought new approaches to Korea's ills. Though little successful in influencing policy, in their endeavors they added immeasurably to Korea's literary heritage.

A series of peasant revolts in the early nineteenth century were preludes to the rise of the Tonghak (or "Eastern Learning") movement. First appearing in the 1860s as a native religious movement combining ele-

LADY HONG (1735–1815)

Memoirist Lady Hong, also known as Lady or Princess Hyegyong, was born into a prominent *yangban* (aristocratic) family caught in the quagmire of seventeenth-century political factionalism in Korea. Her husband was Crown Prince Changhon (1735–1762, also known posthumously as Sado, meaning "mournful thoughts"), heir to the throne of King Yongjo (reigned 1700–1776). The crown prince, however, was mentally ill and grew increasingly violent. Finally, in the summer of 1762, King Yongjo ordered his son to be imprisoned in a rice chest where the young prince perished from heat and starvation. King Yongjo was succeeded by his grandson (son of Sado and Lady Hong) who became King Chongjo (reigned 1776–1800).

Lady Hong wrote four separate memoirs in 1795, 1801, 1802, and 1805. The first memoir was written to her nephew, head of the Hong family. The other three memoirs were written to her grandson, King Sunjo (reigned 1800–1834). These four works vividly depict Lady Hong's childhood and palace life, political factionalism and Catholic persecutions of the late eighteenth century, and painful recollections of her husband's fight with the demons in his mind. Through her writings, it can be seen that Lady Hong was both powerless as the widow of the ill-fated Sado, yet influential as mother and grandmother to kings.

ments of Confucianism, Buddhism, Taoism, and even Christianity, the movement soon took on antiestablishment notions, with calls for the punishment of corrupt officials, reform of tax laws, and rejection of Confucian notions of hierarchy. It was the specter of mass, Tonghak-led revolt in 1894 that initiated the intervention of Japanese and then Chinese troops, which in turn triggered the Sino-Japanese War of 1894–1895.

In Korea, as in other regions of the world, the coming of the Western powers marked a stark new chapter in national history. Choson Korea had for a long time maintained a policy of isolation from all but China and Japan (though it tolerated the presence of clandestine French Catholic missionaries until 1866). But as China and then Japan found themselves overwhelmed by Western pressures to open, Korea's opening too became inevitable. Despite victorious clashes with French and American forces (in 1866 and 1871), in 1876 Korea finally gave way before the pressure of

Japan, which had greatly transformed itself since its opening by the West in 1858. The Treaty of Kanghwa (1876) between Japan and Korea was soon followed by treaties of amity and commerce with the various nations of the West, including the United States (1882), Great Britain (1884), and France (1886).

Unlike Japan, which was able to summon its national will and resources to bring about rapid Western-style modernization, Korea languished. Though various attempts at reform were attempted, they ended in failure and conservative backlash. Meanwhile, in the last quarter of the nineteenth century, Japan, China, and Russia emerged as primary rivals over Korea. While China continued to maintain jealously its traditional relationship with Korea, with the latter as a tributary state, Russia and Japan began to entertain territorial ambitions on the peninsula. This in turn heightened the anxieties of other Western powers. But Japan's victory over China in the Sino-Japanese War (1894–1895)

and over Russia in the Russo-Japanese War (1904–1905) ensured Japanese hegemony in Northeast Asia. By the early twentieth century, as Russia and China both became mired in social and political upheaval, Western nations turned a blind eye as Japan encroached ever further on Korean sovereignty. Japan made Korea a protectorate in 1905 and annexed it in 1910.

The Japanese Colonial Period (1910–1945)

Japan's colonial policy in Korea was ultimately one of assimilation—an attempt to eradicate all vestiges of Korean national identity. Though this policy waxed and waned in intensity, from shortly after annexation it was always central to Japanese planning. Ironically, this ideal of assimilation was pursued while denying Koreans the same rights and privileges as Japanese. Yet Japanese rule also constituted an era of tremendous industrial and institutional change that launched Korea decisively down the road toward modern development with a single-mindedness the Koreans themselves had been unable to achieve. Accomplishments included the construction of a national communication and transportation infrastructure, institutions of higher education, and development of important industries.

By 1910 Japanese troops had all but silenced Korean armed resistance to Japanese rule. National aspirations and frustrations continued to stew under the surface and finally erupted in the March First Independence Movement of 1919, during which a broad spectrum of Korean society rose up in massive anti-Japanese protests. Though this popular plea for independence ultimately failed, the movement did spark the emergence of Korean nationalist movements abroad, including the establishment of a Korean Provisional Government in Shanghai in April 1919 and a Korean Communist Party shortly thereafter. The 1919 independence movement also resulted in a more "enlightened" policy by the Japanese government in Korea, which for a period afterward tolerated the establishment of Korean nationalist organizations and expansion of the Korean vernacular press. This policy came to an end as Korea was increasingly industrialized and exploited to serve the Japanese war effort. From 1931 until the end of World War II, Korea was again ruled by a strict military regime with complete cultural assimilation the order of the day.

Liberation, the Korean War, and National Division

The euphoria following Japan's defeat, and Korea's liberation, in 1945 was short lived as Soviet and American policy makers opted to divide Korea under a joint protectorship. The American decision to rely heavily

on Japanese sympathizers to manage the country in the south was a source of immediate resentment.

In the north the Soviets began to groom a Communist leadership, headed by a young guerrilla leader named Kim Il Sung (Kim Il-song, 1912–1994). The cooling of U.S.-Soviet relations stalled negotiations for nationwide elections to bring an end to the protectorship, and when the Soviets refused to cooperate in a 1948 United Nations–brokered election, voting proceeded in the south alone, which thousands boycotted in protest. The winner was Syngman Rhee (Yi Sung-man, 1875–1965), a Princeton-educated conservative and lifelong friend of the United States, who was inaugurated president of the First Republic of Korea in 1948. That same year saw the formal establishment in the north of the People's Democratic Republic of Korea. By the following year most Soviet and United States troops had been withdrawn.

On 25 June 1950, North Korean forces crossed the border along the thirty-eighth parallel en masse, catching both South Korean and remnant U.S. forces by surprise. In a successful appeal to the United Nations, the United States oversaw the establishment of a U.N. force with a mandate to reunify the peninsula under a single Korean government. Initial U.N. success changed abruptly in the face of massive intervention by Chinese troops, and U.N. forces were driven back to the outskirts of Seoul. A strategic stalemate, and the unwillingness of the United Nations to risk a larger conflict with China and perhaps the Soviet Union, ultimately resulted in a 1953 armistice, with Korea divided along roughly prewar lines.

Autocratic Rule and Ideological Conflict

"Autocracy" accurately describes the political situations in both North and South Korea from the Korean War until at least 1981, the year in which martial law was lifted in the south. Though this autocracy was more manifest in North Korea, following the Korean War, South Korea too was ruled by the autocratic regime of Syngman Rhee and then by a series of military governments, which took the Communist threat as primary justification for authoritarian rule.

North Korea was led by Kim Il Sung from 1948 until his death in 1994. Kim consolidated his initially tenuous hold on power through systematic purges of rival Communist factions, resulting in his rise to absolute power by 1960. From the 1960s, Kim Il Sung's rule was increasingly characterized by a cult of personality that credited him with fantastic exploits and even superhuman abilities. Closely tied to this was Kim Il Sung's appeal, notably after 1966, to *juche* ideology,

characterized by an emphasis on self-reliance and ultranationalism, which has remained to this day a salient characteristic of North Korean life and thought.

Enjoying the lion's share of mineral resources, though lacking the agricultural base of the south, North Korea during the first two decades of its existence actually surpassed the south in economic development, and perhaps only massive U.S. aid to South Korea prevented the north from renewing a military drive for reunification. The situation in the north began to deteriorate in the 1970s, however, with the steady loss of foreign aid, heavy military expenditures, booming population, and low agricultural output. The collapse of the Soviet Union in 1990 and a series of natural disasters in the 1990s made things more critical. Massive food and medical aid, predominantly from Western nations, has helped stave off national catastrophe.

In South Korea, the Syngman Rhee presidency ended in violent student-led protests in 1960. Hopes for democratic civilian rule were soon dashed, however, when the South Korean general Park Chung Hee (Pak Chong-hui, 1917–1979) seized power in a military coup. Park's efforts to create a centrally engineered economy were largely successful, and from the mid-1960s the South Korean economy began a long and remarkable period of growth. During the 1980s, South Korea became known as one of Asia's "tiger economies," as it surged ahead in gross national product and industrial output, far surpassing North Korea, which now languished because of poor management and a lack of capital and material support. South Korea's hosting of the 1988 Olympic Games stands out as testament to that country's tremendous economic strides. Despite the south's miraculous economic advances, however, financial crises throughout Asia, combined with structural and managerial defects in Korea's centrally engineered economy, led to a severe economic crisis in South Korea in 1996.

Economic progress in the south naturally engendered calls for political plurality. Following Park Chung Hee's assassination in 1979, control passed to another military general, Chun Doo Hwan (Chon Tu-hwan, b. 1931). In 1980, hundreds, perhaps thousands, of South Koreans died in the city of Kwangju protesting military rule. Free elections were finally held in 1987, though they still resulted in the election of a military man, Roh Tae Woo (No Tae-wu, b. 1932). It was not until 1992 that Kim Young Sam (Kim Yong-sam, b. 1927) became the first civilian president since Syngman Rhee. But in a greater test of democracy, in 1998 power transferred peacefully from Kim Young-sam to his elected successor, Kim Dae Jung (Kim Tae-jung, b. 1924).

In a move toward reunification, North and South Korean leaders Kim Jong Il and Kim Dae Jung read papers reporting on their 14 June 2000 summit meeting. (AFP/CORBIS)

North-south relations since 1953 have mostly been characterized by tense mistrust and ideological rancor. The death of Kim Il Sung and the eventual succession of his son Kim Jong Il (b. 1941) in the north, and the election of Kim Dae Jung as president in the south, marked a sea change in north-south relations, occasioned in part by Kim Dae Jung's "sunshine policy" toward North Korea, which stressed cordial relations and constructive dialogue. In June 2000, the first meeting between North and South Korean leaders occurred in the North Korean capital of P'yongyang, from where the leaders issued a joint communiqué calling for a peaceful resolution to national division.

KOREA BAY Korea Bay lies between the southwestern coast of North Korea's North and South P'yongan provinces and the Liaodong Peninsula of China, forming the northeast arm of the Yellow Sea. The water is shallow, and since the tidal land is wide along the shore of Korea Bay, with a big difference in the ebb and flow, there are salt fields in many places. During the wintertime, seasonal winds from the northwest have created large sand dunes on the seashore. The fishing industry in Korea Bay has not developed according to general expectations. Korean sources suggest that this is due to the unique conditions of the bay: shallow water and water temperature that is surprisingly lower than expected during cooler months. During the spring a warm current flows north past Cheju Island, causing several species of fish from Korea's Namhae (South Sea) to flourish. These include croakers, flatfish, cod, sciaenoid fish, small octopi, and crabs.

KOREA INSTITUTE OF SCIENCE AND TECHNOLOGY The Korea Institute of Science and Technology (KIST), known as Hanguk Kwahakweon in Korean, was one of the first modern research institutes in the developing world dedicated to industrial technology; it became a model for similar insti-

tutes in other developing countries, especially in Southeast Asia. The KIST was established in Seoul, South Korea, with a U.S. seed grant, at the behest of the South Korean president Park Chung Hee (1917–1979) and was organized to assist the nation's export drive. It has at least formal administrative independence and has conducted its work for both South Korean businesses and state-run laboratories on a contract basis.

Through the 1970s, the institute was Korea's most important research and development center and performed various industrial engineering projects under the direction of the ministry of science and technology. By the late 1980s, KIST was eclipsed by newer state-led laboratories such as the Electronics and Telecommunications Research Institute, and by corporate research and development, especially in electronics. Accordingly, KIST shifted to a supporting role in triad partnerships (corporate, academic, and government laboratories) or carried out specialized contract work for corporate clients. However, it was able to maintain a measure of political and research importance by playing a leadership role in the state's high-profile Group of 7 (G-7: Canada, France, Germany, Italy, Japan, United Kingdom, United States) industrial research projects, which were intended to elevate Korean technological advancement to the level of the most advanced industrial countries during the 1990s.

In 1981, KIST merged with the Korea Advanced Institute of Science (KAIS), a science and engineering graduate school established in 1971, to form the Korea Advanced Institute of Science and Technology (KAIST). Both institutes moved their major facilities from Seoul to the Daedok Science Town near Taejeon. KIST was split off from KAIST in 1989 to resume its strictly research role.

KOREA STRAIT The Korea Strait lies between the southeast coast of Korea and the north coast of Kyushu, Japan (the southernmost island), and the southeast coast of Honshu, Japan. It connects the East China Sea (Yellow Sea) to the East Sea (Sea of Japan). At the narrowest point, the strait is 195 kilometers wide; it is generally 90 meters deep. The strait bisects the Tsushima Islands, forming a western channel commonly called the Chosen Strait and an eastern channel called the Tsushima Strait. The western channel is slightly narrower and deeper. The warm Tsushima current passes through the Korea Strait in a northerly direction.

The Korea Strait was the site of the kamikaze winds that destroyed the Mongol armada in 1281, which had been preparing to attack and invade Japan. It was also the site of the Battle of Tsushima (27–28 May 1905), which ended with the annihilation of the Russian fleet by the Japanese during the Russo-Japanese War (1904–1905).

Brandon Palmer

KOREA-JAPAN TREATY OF 1965 Japanese-South Korean normalization was a five-year process that took place between 1961 and 1965. Throughout the late 1940s and the 1950s, the Republic of Korea (ROK) was governed by Syngman Rhee (1875–1965) a man who had dedicated much of his life to publicizing the illegitimacy of Japanese rule in Korea. The Park Chung Hee regime (1961–1979) was different, as it included many Koreans who had been trained by the Japanese. This change in the administration breathed life into the possibility of Japan and the ROK signing a treaty of normalization.

The United States was a leading force between the two countries, commencing negotiations to reach this goal. Friendly relations between Japan and South Korea were necessary for the economic and political strength of both states; their healthy relations would help strengthen the U.S. containment policy against the Soviet Union. The treaty, ratified on 14 August 1965, provided the ROK with both grants (\$300 million) and loans (\$200 million); another \$300 million arrived in the form of private investment.

The signing of the treaty boosted the Korean economy, but it ended the possibility of Koreans making further claims to the Japanese government for compensation. This latter concern has resurfaced in negotiations over the nature of compensation for former Korean comfort women, whom the Japanese military had forced into prostitution to serve its troops during

World War II, as well as those with the North Koreans over normalization possibilities.

KOREAN LANGUAGE The Korean language is spoken by approximately 72 million people around the world. In addition to the 42 million people in South Korea (Republic of Korea) and 20 million in North Korea (Democratic People's Republic of Korea; DPRK), Korean is spoken in Korean communities in China, Japan, United States, Canada, the former Soviet Union, and South America, among other places.

Origins and Development

Korean is generally said to belong to the Altaic language group of central Asia, Siberia, and Mongolia. Some linguists maintain that Korean also belongs to the larger Ural-Altaic family, which includes Hungarian and Finnish. Archaeological and anthropological evidence, as shown in similarities in shamanism, language, and archaeological remains, supports the theory that Korean civilization is linked to that of its neighbors in central Asia and Siberia.

People on the Korean peninsula spoke different languages through the Three Kingdoms period (57 BCE–667 CE) until 668 when Shilla unified the lower two-thirds of the peninsula. When the Later Three Kingdoms arose and Shilla fell in 935 to Koryo (918–1392), the northern dialect of Kaesong (also called Kaegyong; the capital of Koryo) became dominant. The language of the Choson dynasty (1392–1910) was similar to the dominant language of Kaesong.

In the early 2000s, there are two official dialects of the capitals of Seoul, South Korea, and P'yongyang, North Korea. South Koreans call their official dialect *p'yojunno* (standard language), while North Koreans call theirs *munbwao* (cultured language). The two dialects are very similar and show only minor differences, as in the use of foreign loanwords. There are also numerous regional and provincial dialects, but they are also mutually understandable.

Grammatical Features

Korean has fourteen consonants (five of which can be doubled) and ten vowels (with eleven additional

vowel combinations or diphthongs). A morpheme is the smallest distinct unit of the Korean language, similar to an English syllable. A Korean morpheme must be formed of least one consonant and one vowel, but may have one or two additional consonants at the end.

Korean sentences are verb-final and are ordered subject-object-verb (I-flower-see), whereas English is subject-verb-object (I see a/the flower). The subject or object or both may be omitted in some cases, and in others, the subject and object order may be flipped to convey a specific meaning. The most important point is that the verb is always at the end, and every sentence must have a verb, although it need not have a subject or object.

Korean lacks articles such as *a* or *the*, but there are other means of distinguishing a specific noun. For example, *ku* (that) can be used similarly to the English word *the* when referring to something that has already been introduced into the conversation.

While there is a plural noun marker (*dul*), it is often omitted. In the previous example, the listener must discern from context whether the speaker sees one flower or many flowers. Korean nouns are not masculine or feminine, as in French and Spanish. Korean also does not have specific masculine or feminine pronouns such as *he* or *she*.

The most commonly used pronouns are *I* or *we*. *You* is rarely used, as Koreans generally use the listener's name and/or title instead. Instead of *he/she/they*, a speaker might use the referent's name or title or both, or a generic phrase such as *this/that person*.

Korean is a highly agglutinative language with numerous suffixes that can be added to word stems and each other. These suffixes help clarify the meaning of a sentence. For example, markers can indicate the subject (*i/ga*), topic (*un/nun*), or object (*ul/rul*) of a sentence. The first marker in each example (*i*, *un*, *ul*) is used if the preceding morpheme ends in a consonant. If it ends in a vowel, the second marker (*ga*, *nun*, *rul*) is used. Modifiers precede the nouns they modify. For example, "the flower that is in bloom" would be expressed in Korean as "in-bloom flower."

Korean has different speech levels, specific to the relative social positions of the speaker, the subject of the sentence, and the listener. There are at least six levels of speech in contemporary Korean, but the four most commonly used levels are formal polite (deferential) style (verb stem + [*su*]*mnida*), informal polite style (verb stem + *ayo/oyo*), plain (essay) style (verb stem + [*nu*]*nda*), and casual style (verb stem + *a/o*.)

A verb stem is the root of any verb minus the *da* ending from its dictionary (infinitive) form. The use of *ayo/oyo* in the informal polite style and *a/o* in the casual style depends on the vowel harmony rule and the "bright" (*a* or the long *o*) or "dark" vowel (*u* and the short *o*) in the verb stem. Bright vowels combine with *a*, and dark vowels combine with *o*. This is called the vowel harmony rule because bright vowels complement other bright vowels.

A speaker will choose the speech level most appropriate to his or her relationship to the listener. The speaker also must consider the subject of a sentence in determining if subject honorifics are needed. For example, verbs and certain nouns must be changed to their honorific forms if the subject is older or in some other way superior to the speaker or listener.

Korean language is highly dependent on context. Because nouns and topics are often omitted, and pronouns are not commonly used, the listener must often infer the speaker's intent from nongrammatical clues such as nuance and conversation flow.

Loanwords

Korean has numerous loanwords in its vocabulary, most of which are derived from Chinese. Chinese loanwords have corresponding Chinese characters, but in many cases there are also native Korean counterparts. In recent years, there have also been many loanwords from Japanese and English as well as some European languages. Japanese and English loanwords have become common because of the economic and cultural ties among Korea, Japan, and the United States. The loanword, however, may not retain the exact meaning it had in its original language.

North Koreans do not use as many foreign loanwords because of their relative isolation from other countries. This was further enforced by the North Korean *juche* ideology, which literally means "self-reliance" and refers to the official nationalist discourse of the DPRK.

Writing Systems

Prior to the 1446 promulgation of the *bunmin chongum* (proper sounds to instruct the people), there was no native writing system. Official documents were translated into and written in classical or literary Chinese. Because of the difficulty of learning Chinese characters, literacy in Korea was generally limited to males of the upper class.

There were two native writing methods involving Chinese characters. *Idu* was a system utilized by clerks

for administrative purposes and was widely used even into the nineteenth century. In *idu*, some Chinese characters were used for their meaning while others were used to stand for Korean syntax. *Hyangch'al* was another system that used Chinese characters, but only for their phonetic value. This system was used predominantly to record literature.

Hunmin chongum was used primarily by women and commoners. Official documents continued to be written in classical Chinese and *idu*. From the 1890s, *hunmin chongum* became revitalized as the official script and is known today as hangul.

The ease of learning this phonetic script is the reason why Korean literacy is nearly 100 percent. Non-native speakers often can learn the basics of the modern Korean script in a matter of days. While Chinese characters (*hanja*) are used less and less in South Korea, and most newspapers are written in hangul, students learn 3,600 Chinese characters by the time they graduate from high school.

KOREAN WAR The Korean War (1950–1953) was a civil struggle that originated in the division of Korea after World War II, and entered into a phase of conventional war on 25 June 1950, when North Korean forces crossed the dividing line and invaded the South. Soon the United States entered the fighting under the banner of the United Nations, along with small contingents of British, Canadian, Australian, and Turkish troops. In October 1950, Chinese forces in large numbers joined the war on the North's side. By the time a cease-fire agreement was signed on 27 July 1953, U.S. casualties were 33,629 dead and 103,284 wounded. South Korea had lost hundreds of thousands of soldiers and over a million civilian lives. Although no precise figures exist for Communist losses, North Korea suffered perhaps 3 million military and civilian casualties and the obliteration of nearly every modern building, and China lost almost 1 million soldiers. The 1953 armistice ended the fighting, but Korea remained divided for decades thereafter and subject to the possibility of a new war at any time.

The Korean War has been subject to frequent reinterpretation since it was fought in the early 1950s. For President Harry Truman (1884–1972), Korea was a

"police action" that began, in the official American view, when North Korean forces backed by the Soviet Union launched a full-scale, unprovoked invasion across the thirty-eighth parallel. By the 1960s, Westerners had renamed it "the limited war," a conflict different from the world wars in being less than a total war and in being shaped by political decisions taken in Washington: mainly the Truman-MacArthur controversy, with President Truman seeking to limit the conflict to the Korean peninsula, and General Douglas MacArthur (1880–1964) seeking to extend the war to China. Under this interpretation Korea was a success for Truman's containment policy, but a failure for MacArthur's strategy—a stalemate yielding a substitute for victory.

The Korean War after Vietnam

The U.S. war in Vietnam influenced another revision of meaning, as scholars in the 1970s increasingly came to see Korea as a civil war in which anticolonial nationalism confronted a status quo-oriented United States. Attention focused on the Korean experience of American and Soviet occupations after World War II, political and guerrilla conflicts (1945–1949) and small border wars (1949–1950), and Korea's colonial experience with Japan, during which time the military leaderships of North and South Korea were formed (northerners had been anti-Japanese guerrillas, whereas the high command of the South Korean Army had fought with Japan), with a corresponding de-emphasis on the conventional "start" of the war in June 1950, and a significant spreading of responsibility for the initiation of this war.

The Korean War Viewed from the 1980s

By the 1980s, however, Korea was "the forgotten war." Books and documentaries by that title proliferated, and the war entered an ambiguous realm: not World War II, not quite Vietnam either, more a question mark than a known quantity. Korean War veterans protested their exclusion from the American popular memory. This was also a decade of new light on the war, however, as scholars exploited reams of newly declassified documents. Most historians questioned the assumption that Joseph Stalin launched the war for his own purposes; the conventional assault in June 1950 was thought to be the idea of North Korea's Kim Il Sung (1912–1994), with perhaps more Chinese than Soviet support. The direct American role in suppressing left-wing politics in the South during its military occupation (1945–1948) was definitively proved, and captured Korean documents showed that the origins of the North Korean regime were much

U.S. marines on a road heading toward North Korea in November 1950. The mountainous terrain made movement difficult and also made soldiers in the open valleys easy targets for machine gunners in the hills. (BETTMANN/CORBIS)

more complex than had been thought, with significant indigenous and Chinese influence in addition to the Soviet role. Both Korean sides were deeply implicated in the border fighting that ensued from May through December 1949. New materials showed that the American decision to march into North Korea was taken by Harry Truman, not Douglas MacArthur, under a frankly stated "rollback" doctrine; Truman also thought long and hard about extending the war to China, and sacked MacArthur in April 1951 mainly because he wanted a reliable commander in place should that happen.

New Chinese materials also showed how difficult the decision to intervene in Korea was, with Mao Zedong (1893–1976) taking the lead but also deeply conflicted. Chinese materials also depicted a combined North Korean-Chinese strategy to lure United Nations forces deep into the interior of Korea after the famous amphibious landing at Inchon, hoping to stretch supply lines and gain time for a dramatic reversal on the battlefield. That reversal came as 1950 turned into 1951, when Sino-Korean forces threw U.N. troops back well below the thirty-eighth parallel and captured Seoul again; finally, General Matthew Ridgway (1895–1993) organized a successful defense that stabilized the front

well south of the thirty-eighth parallel. U.N. forces then resumed the offensive, retaking Seoul and reestablishing a Korea divided roughly along the lines of the demilitarized zone that still exists today. Here the war could have ended, but it continued through two years of difficult peace negotiations.

The Korean War after the Cold War

The 1990s have brought new interpretations, based mostly on newly declassified Russian documentation. These materials show more involvement by Stalin than most scholars had thought in the outbreak of conventional war in June 1950, although his involvement was ambiguous and wavering. Kim Il Sung held several secret meetings with Stalin and Mao in early 1950, hoping to gain their backing for a conventional assault on the South. Stalin was reluctant and worried, but ultimately supportive; the full record of Kim's discussions with Mao remains secret, but Beijing was also supportive, particularly because Kim had been a member of the Chinese Communist Party in the 1930s and had many Chinese allies from that period. Ultimately though, the dominant impetus—and responsibility—for taking the existing conflict to the level of conventional war was North Korea's.

All these are Western views. For Koreans in North and South, the likelihood of war came with the division of the ancient integrity of the Korean nation, through the unilateral action of the American officials in mid-August 1945, to which Stalin quickly acquiesced. For the South it was a just war to recover "lost territories" in the North and to resist Soviet and Chinese expansion. For the North it was a just war to resist American imperialism and reunify the homeland. For Koreans and thirty-seven thousand American soldiers, the war still continues today through a cold peace held only by the 1953 armistice, and with a hot war an ever-present possibility, given that more than a million soldiers still confront each other along the demilitarized zone. But in June 2000, the leaders of South and North Korea met for the first time since the country was divided, and the southern leader, longtime dissident Kim Dae Jung (b. 1925), has determined to try to bring a final end to the Korean War before he leaves office in 2003.

Eventually the Korean War will be understood as one of the most destructive and one of the most important wars of the twentieth century. In the aftermath of war two Korean states competed toe-to-toe in economic development, both turning into modern industrial nations. Finally, it was this war and not World War II that established a far-flung American base structure abroad and a national security state at home, as defense spending nearly quadrupled in the last six months of 1950, reaching a peak of \$500 billion (in current dollars) that was never reached again during the Cold War. Today Koreans continue to seek reconciliation and eventual reunification of their torn nation, and Americans have a massive and expensive military-industrial complex that has lost its original *raison d'être* with the collapse of the Soviet Union, but which continues apace as the primary American legacy of the Korean War.

KOREANS Koreans are the people of the Korean peninsula in northeast Asia. The peninsula's northern boundary is formed by the Amnok (Yalu) and Tumen Rivers, which separate Korea from the Manchurian region of the People's Republic of China. There is also a short 16-kilometer border with Russia near the city of Vladivostok along the peninsula's northeast corner.

The Korean peninsula is currently divided into the Democratic People's Republic of Korea (North Korea) and the Republic of Korea (South Korea), which together have an area of 221,607 square kilometers, roughly the size of Great Britain. About 68 million Koreans lived in the two Koreas in 2000: 22 million in the north and 46 million in the south. Another 6 million live in other parts of the world, such as China, Japan, the United States, the former Soviet Union, and South America.

Homogeneity

Koreans pride themselves on racial homogeneity based on an assumption of shared blood, common origins, culture, and language, as well as the perceived sharing of a common history and destiny. The Chinese people form the largest ethnic minority group in Korea today. Recently, many ethnic Koreans have returned

THE CORE OF KOREAN NATIONAL CULTURE

"The great virtue which the Koreans possess is the innate respect and daily practice of the laws of human brotherhood. We have seen above how the various bodies, above all the family, form closely united corps to defend, support, second and help one another. But this sentiment of brotherhood extends well beyond the limits of kinship and association, and mutual assistance, generous hospitality toward all are distinctive traits of the national character, qualities which, it must be admitted, place the Koreans well above the peoples invaded by the egotism of our contemporary civilization."

Source: Christopher Dallet. (1954). *Traditional Korea*. New Haven: Human Relations Area Files, 149.

Korean officials light the torch to open the 1998 Olympic Games in Seoul, South Korea.

to Korea from such places as China's Yanbian region (in Korean, Yonbyon) in search of better lives.

Foreign invasions (Mongol invasions in the thirteenth century, Japanese invasions in 1592 and 1597, and Manchu invasions in 1627 and 1636) also contributed to this sense of racial unity. United efforts at defense helped forge a shared identity for Koreans.

Origins

The Korean Peninsula has been inhabited for half a million years, but these indigenous people are not thought to be the earliest ancestors of the Korean people. Instead, Koreans are believed to be descendants of Altaic immigrants from Central Asia who displaced the earlier residents in the Neolithic period (5500–800 BCE).

Evidence indicates that Koreans and Siberians share common roots. Based on archaeological findings of Scytho-Siberian bronze artifacts, the ancestors of the Koreans probably originated in Siberia and Central Asia, and the existence of iron implements from the same period indicates extensive exchanges with Sinitic (Chinese) iron culture. Furthermore, Korean shamanism is similar to Siberian shamanism. And while the Korean language is distinct, it is linguistically similar to other Altaic languages spoken in Mongolia, Manchuria, and Siberia.

According to the Korean foundation myth, Koreans trace their origins to the founding of Old Choson in 2333 BCE by Tangun. Tangun is said to have been the son of a deity and a female bear who became human after proving her patience and perseverance. The Tangun myth is significant because it points to non-Sinitic origins of Korean culture.

As with any culture, it is impossible to pinpoint the historical moment when a common ethnic or national

consciousness was formed. People of prehistoric times did not think in terms of a shared nationhood. Over time, linguistically and culturally disparate groups merged to share a language, culture, and polity. By the time of the kingdoms of Koguryo (37 BCE–668 CE), Paekche (18 BCE–663 CE), and early Shilla (57 BCE–668 CE), there was a clear sense of the peninsular peoples as being ethnically distinct from their Chinese neighbors. It was, however, not until the Unified Shilla kingdom (668–935) or the Koryo kingdom (918–1392) that the peninsula became unified. Unified Shilla controlled only the southern two-thirds of the peninsula, leading some to argue that the peninsula was not unified until Koryo extended the border northward. Unified Shilla, however, is to be credited with achieving linguistic, cultural, and political unity within its own borders.

Cultural Characteristics

The official adoption of Buddhism by Koguryo in 372, Paekche in 384, and Shilla in 534 helped each kingdom unite its people. Buddhism adopted some of the indigenous shamanic deities and bolstered royal authority by bestowing on kings religious and social legitimacy. There were many religious observances to ensure longevity for the king and kingdom. Religious architecture and artwork, especially sculptures and statues of the Buddha, flourished. Agricultural festivals had tremendous social, recreational, and religious importance. Today, Buddhism is still the most popular religion among South Koreans.

Confucianism is another important facet of Korean culture, past and present, in both Koreas. The Choson dynasty (1392–1910) became thoroughly Confucianized by the mid-seventeenth century (albeit a Koreanized form of Confucianism). Social order or hierarchy is a key aspect of Confucianism, characterized by patriarchy, respect for one's elders, and great value placed on education and position. These ideals are upheld in both Koreas today. For example, the symbol of the (North) Korean Worker's Party includes not only the hammer and sickle, but also the calligraphy brush, to signify the intellectual alongside the laborer and farmer. Patriarchy is embodied in North Korea's reverence for their two leaders, Kim Il Sung (1912–1994) and Kim Jong Il (b. 1941).

Nationalism is another key feature of the Korean people. In North Korea, nationalism is seen in the *juche* (self-reliance) ideology. In South Korea, there are different kinds of nationalism, such as conservative nationalism, *minjung* (people's) nationalism, and ultra-conservative nationalism. Nationalism has been a democratizing force in South Korea, advocating national autonomy and reunification. The tendency to

place nationalism above all else has upheld the interests of the elite and the state, marginalizing issues of class, gender, and region. Regionalism falls along provincial boundaries, which echo the earlier borders of Koguryo, Paekche, and Shilla. Regional discrimination was particularly prominent under the Choson dynasty and continues to be a problem today, especially in South Korea.

Koreans also share a sense of loss and longing called *han*. The loss of Korean sovereignty to Japanese colonial rule (1910–1945), the 1945 division of North and South under a Soviet-U.S joint trusteeship, the formation of separate states in 1948, and the Korean War (1950–1953) have engendered a strong sense of anxiety among Koreans. Despite recent attempts at reunification, the two Koreas remain deeply divided. For older Koreans, however, there is a strong imperative that they must see Korea reunified within their own lifetime.

KOREANS IN CENTRAL ASIA The presence of a Korean minority in Central Asia resulted from the Stalinist ethnic purges of the 1930s, when the Soviet premier Joseph Stalin ordered the mass deportation of ethnic Koreans residing in the Vladivostok region and the Far East Maritime Province to the Central Asian republics of Kazakhstan, Kyrgyzstan, and Uzbekistan. Some 175,000 Soviet Koreans were forcibly removed from their homes, loaded onto railroad freight cars, and transported to Central Asia.

Following the annexation of Korea by Japan in 1910, Koreans had begun migrating to the Russian Far East and over time had integrated themselves into the local Soviet culture and economy. However, as tensions between the Japanese empire and the Soviet Union escalated over Manchuria and the Korean peninsula, Stalin became fearful that Koreans residing in the Russian Far East harbored pro-Japanese sympathies. Thus on 21 August 1937, he ordered the transfer of Koreans to Central Asia, and the forcible displacement occurred from September to November 1937.

During the long period of deportation, many children and elderly people died of malnutrition and disease. Scurvy, typhoid, diphtheria, dysentery, measles, and scarlet fever took the lives of those who were weak

and infirm, as families were forced to live in unsanitary conditions aboard the freight trains, with little or no food for most of the trip. On their arrival in Central Asia, regional and local governments did what they could to feed and house the Korean refugees, but many families were forced to live in warehouses, barns, mosques, and converted prisons while they struggled to build homes for themselves.

Following World War II Koreans remained in the Central Asian republics and began integrating and assimilating into Soviet society, where they soon thrived as agricultural technicians, agronomists, and managerial professionals. To this day, there are still large Korean communities in Kazakstan and Uzbekistan.

KOREANS IN JAPAN The Koreans constitute the largest minority group in Japan. Japan annexed Korea in 1910. The 1939 National Service Draft Ordinance on the eve of World War II resulted in

A young Korean boy studying a Korean book with his instructor in Chefoo, Hokkaido, Japan, in 1990. (BOHEMIAN NOMAD PICTUREMAKERS/CORBIS)

KOREANS IN JAPAN

The integration of Koreans into Japanese society has always been a major social, economic, and political issue. The following description of Korean housing in Japan in the late nineteenth century indicates that house style was one cultural element that distinguished Koreans from Japanese.

It will be seen by these brief extracts how dissimilar the Korean house is to that of the Japanese. And this dissimilarity is fully sustained by an examination of the photographs which Mr. Lowell made in Korea, and which show among other things low stone-walled houses with square openings for windows, closed by frames partly covered with paper, the frames hung from above and opening outside, and the roof tiled; also curious thatched roofs, in which the slopes are uneven and rounding, and their ridges curiously knotted[,] differ in every respect from the many forms of thatched roof in Japan.

Source: Edward S. Morse ([1896] 1961) *Japanese Homes and Their Surroundings*. New York: Dover Publications, 345.

6 million Koreans arriving in Japan as conscripted laborers and military draftees to satisfy the manpower shortage. During the war, many Koreans also voluntarily migrated to Japan in search of better employment.

During the war, Koreans were given Japanese nationality. The introduction of the Alien Registration Order in 1952, whereby all non-Japanese were regarded as aliens, changed the status of Koreans. Since the legal process of becoming a naturalized citizen is complicated, many Koreans choose not to take up Japanese citizenship. As aliens, the Korean minority is denied many of the normal legal and social benefits enjoyed by the Japanese population.

Today approximately 687,000 Koreans live in Japan. They are slowly being Japanized, so much so that many don't speak Korean or even use their Korean name in public. Differences in status and racial prejudices have alienated the Koreans from the Japanese society at large. There are limited employment opportunities, and most Koreans hold low-paying jobs and suffer from exploitation from their Japanese employers. Some are involved in private businesses in the entertainment and service industries.

The Koreans are divided between supporters of North and South Korea. The Mindan (Association of Korean Residents in Japan) supports South Korea, and

Chongryun (General Association of Korean Residents in Japan) supports North Korea. This division has created separate education systems. As a divided community with differing goals, it is difficult for the Koreans to fight for better social and economic conditions, and difficult for the Japanese government to implement any changes.

KOREANS, OVERSEAS Some 5 million Koreans—more than 7 percent of the peninsula's population—live outside Korea. They are scattered among 140 nations, with about 93 percent living in China, the United States, Russia, and Japan. These overseas Ko-

reans fall into two categories: first-generation emigrants, who were born in Korea and are culturally and linguistically Korean; and their descendants, who are ethnically Korean but who have adapted culturally and linguistically to their local environment and often can't speak Korean.

The History of Korean Immigration

The first wave of overseas migration started in the second half of the nineteenth century and lasted until 1910. It was a large-scale movement, primarily to avoid famine and poverty. Koreans moved to Manchuria and the Russian Far East, where they pioneered wet rice farming. Another group, some seven thousand strong, went to North America as indentured laborers. Most worked on sugarcane farms in Hawaii, and some later migrated to the U.S. mainland and to Mexico and Cuba.

A second wave of several hundred Koreans left between 1910 and 1945, during Japan's colonial rule of Korea. Fleeing Japanese oppression, most moved to Manchuria and the Russian Far East. A number migrated to Japan in the hope of finding better employment, but during World War II the Japanese government conscripted laborers in Korea to work under quasi-military conditions in Japanese military industries to support the war effort.

By 1945, there were 2.4 million Koreans in Japan and more than 2 million in Manchuria. After Korea became independent, most Koreans in Japan went home, but 700,000 remain in Japan today.

The 1945–1970 period may have been the most difficult in Korea's history. The country split into North and South, and the Korean War raged from 1950 to 1953. The period from the 1950s to 1965 saw an attempt to rebuild the country, and there was little emigration. External migration was very difficult until 1965, when the U.S. immigration law was changed and many Koreans moved to America for better economic prospects. During this period Koreans had little contact with foreigners except Americans and did not consider emigration as an option.

During the 1970s and 1980s, Korea was industrializing fast, its economy was growing rapidly, and many Koreans were working overseas for Korean companies. Some decided to stay abroad to establish themselves in the developed world, particularly in the United States. A number of Korean students studying abroad also opted to stay, which caused a "brain drain" to the United States and other Western countries.

Since the early 1990s, immigration patterns have changed yet again. Korea's economy had peaked, and

A strip mall in Koreatown, Los Angeles, in 1997. (NIK WHEELER/CORBIS)

countries such as the United States, Canada, Australia, and New Zealand attempted to attract immigrants with money or useful skills. The resulting emigration of well-educated, prosperous Koreans contrasts sharply with that of forced laborers or citizens fleeing political persecution.

Overseas Korean Communities

The largest number of overseas Koreans—2 million, or 39 percent—live in China. They are mainly concentrated near the Korean–Manchurian border, and most live in the Yenbien Korean Autonomous Prefecture of Jirin Province. Pioneer rice farmers and their descendants, they have formed communities with well-established education systems in which Korean is spoken and accepted as an official language.

The second-largest number of overseas Koreans—1.5 million, or 31 percent—live in the United States. Some are descended from of the early sugarcane

laborers, but most are post-1965 immigrants and their families. Many were highly educated, with professional careers in Korea, but were unable to overcome linguistic and cultural barriers in America and wound up running small businesses such as grocery stores and laundries. California is home to most Koreans living in the United States—Los Angeles has a sizable Koreatown—followed by New York.

With 700,000, Japan has the third-largest number of overseas Koreans—about 14 percent. Most are descendants of the immigrants who were drafted as laborers for the war industry or who came to Japan seeking better jobs. They are concentrated in the industrial Osaka area and many no longer speak Korean, although they are ethnically and culturally Korean and identify themselves as such.

The fourth-largest number of overseas Koreans—460,000, or 9 percent—are in the former Soviet Union. They are mainly the descendants of immigrants who moved to Russia's maritime province before or during the Japanese takeover of Korea. Under Stalin, these Koreans were forcibly moved to Central Asia. In an area inhabited by Turkic nomads who raised livestock, the Korean immigrants introduced wet rice farming, as they had in Manchuria. The largest number of Koreans in the former Soviet Union, about 200,000, live in Uzbekistan. The Russian Republic and Kazakhstan have 100,000 each, and the other Central Asian republics have the remaining 60,000.

The remaining 340,000 overseas Koreans—about 7 percent—are scattered among Canada (70,000), Australia (40,000), Europe (60,000), Southeast Asia (25,000), and New Zealand (almost 10,000). Koreans are generally known as hardworking people and have established themselves quickly. Their communities have introduced aspects of Korean life such as kimchi (Korea's spicy vegetable pickle) and the martial art taekwon do to their host countries and brought foreign culture back to Korea.

KOROGHLI The epic of *Koroghli* is a cycle of oral epics found from the Balkans to Central Asia. The central hero of the cycle is called Koroghli (the son of the blind man) or Goroghli (the son of the grave), depending on whether it is told that the hero's father was blinded or that the hero was born in the grave after the death of his mother. In all versions the hero gathers a group of warriors around him with whom he performs various heroic exploits. In the versions collected from Turkish and Azerbaijani singers, the hero is a kind of minstrel outlaw who fights against the sultan or *padishah*. In the Central Asian versions (Turkmen, Uzbek, Karakalpak, Kazakh), Koroghli is depicted as a powerful ruler holding a splendid court with his group of brave retainers. This epic cycle is not only popular with the Turkic-speaking peoples but also with the Iranian-speaking Tajiks. In the various Turkic traditions, the epic is in a mixture of verse and prose, while in Tajik the epic is in verse. The epic cycle is thought to have originated in the sixteenth century, in connection with the Jalali movement in Turkey and Azerbaijan, directed against the Ottoman sultan and the Persian shah.

KORYO KINGDOM A series of uprisings near the end of the ninth century led to the fragmentation of the declining Unified Shilla kingdom (668–935 CE). In the northern part of the Korean Peninsula, rebel leaders established the later Koguryo kingdom (901–918) with the aim of regaining the glory and vast ter-

ritory of the former Koguryo kingdom (37 BCE–668 CE). With Wang Kon (877–943) as Koguryo's leader, the Shilla king abdicated in 935, the later Paekche kingdom (892–936 CE) bowed to Koguryo's superior military force the following year. The peninsula was thus reunified. Wang Kon (King T'aejo, 877–943) married Shilla royalty, changed the kingdom's name to Koryo, derived from "Koguryo" and from which "Korea" derived, and became the first king of the Koryo dynasty (918–1392).

Koryo's northern border extended to the Yalu River. Across the border, the Liao kingdom of the Khitans conquered Parhae in 926 and then became a threat to Koryo. Liao attacked repeatedly until peace was achieved in 1022 without loss of territory. Domestically, Koryo began to prosper more rapidly to reach its height in the 1100s. From the outset, the government adopted Buddhism as the state religion, like Shilla before it. Temple construction flourished, as did Buddhist sculpture, painting, and wood-block printing, including the six thousand chapters of the *Tripitaka* (Three Collections). Inspired by vigorous Buddhist faith, the arts and scholarship flowered under the centralized Chinese-style government. The ceramics industry, which produced exquisite Koryo celadons, was particularly distinctive.

By the end of the twelfth century, however, Koryo's power began to wane. Powerful aristocratic clans and the military vied with the royal family for political power. In 1170, a revolt of the military leaders resulted in the complete overthrow of aristocratic rule, assumption of power by military leaders, and a puppet role for the throne. The powerful Mongols overran Liao to the north and became a threat to Koryo. Consecutive invasions forced the royal family to flee to Kanghwa Island, west of present-day Seoul. Hop-

KOREAN KINGDOMS AND DYNASTIES

Koguryo kingdom (37 BCE–668 CE)
Paekche kingdom (18 BCE–663 CE)
Shilla kingdom (57 BCE–935 CE)
Unified Shilla (668–935 CE)
Koryo kingdom (dynasty) (918–1392)
Choson dynasty or Yi dynasty (1392–1910)

ing for divine intervention, the king ordered a new set of Buddhist canon woodblocks produced to replace the *Tripitaka* destroyed by the Mongols. This extant replacement, the *Tripitaka Koreana*, consists of 81,137 wooden blocks of exquisite workmanship. By 1259, however, the Mongol conquest was complete. Under Mongol suzerainty, which lasted for a century, Koryo was stripped of its political freedom. Kings had to marry Mongol princesses, and Mongol officials supervised the activities of the Koryo government.

In the fourteenth century, rebellions broke out throughout China, and the Mongols were finally driven from power, which freed Koryo from Mongol domination. Koryo made efforts to reform its government but was stymied by opposing pro-Mongol and pro-Ming China factions. This was not the only problem to hinder Koryo recuperation. Most of the land was now in the hands of military officers and government officials favored by the Mongols. There was rising animosity between the Buddhist clergy and Confucian scholars, and highly organized Japanese marauders raided the country.

This was the situation in 1388 when the king dispatched an outstanding military general, a member of the rising new class of nobles of the pro-Ming faction, as part of an expedition of forty thousand men to attack the Ming. When this general, Yi Song-gye (1335–1408), reached the northern border, he turned his men around, marched into the undefended capital, and took control of the government. Four years later, General Yi (King T'aejo, reigned 1392–1398) ascended to the throne, ushering in the Chosun dynasty (1392–1910).

KOTA KINABALU (2000 est. pop. 354,000). Kota Kinabalu ("fort of Kinabalu," formerly Jesselton) is a city on the northwest coast of Borneo Island; it lies between rain forest, mountains, and offshore coral reefs that are a national park. The city takes its name from the nearby Mount Kinabalu, at 4,101 meters the highest peak in the Malay Archipelago; Kinabalu means "sacred place of the dead," and the inhabitants of the region regard the heavily forested mountain as a holy site.

An important commercial, educational, and cultural center in eastern Malaysia, Kota Kinabalu is the capital of the state of Sabah, the second-largest state of the Federation of Malaysia. It is situated 1,600 kilometers east of Malaysia's capital, Kuala Lumpur, on the coast of the South China Sea.

In the nineteenth century, Kota Kinabalu was a small, sleepy town until it was destroyed by anti-British rebels led by Mat Salleh in 1897. In 1899, the British North Borneo Company established a colonial settlement and a deepwater seaport, naming it Jesselton, after Sir Charles Jessel, then a director of the British North Borneo Company. During World War II, the city was occupied by Japanese troops, but by the end of the war it was in ruins due to extensive Allied bombing.

In 1946, Jesselton replaced Sandakan as the capital of what then was British North Borneo, and in 1968 it was renamed Kota Kinabalu. Between the 1960s and 1990s, Kota Kinabalu grew significantly and became an important commercial center in Sabah state, with well-developed agriculture, furniture manufacturing, wood processing, and lately tourism. Kota Kinabalu has an international airport, which was recently modernized, and is connected with the rest of Borneo Island through a well-maintained network of highways and railroads.

KOTO Originally used for court music (*Gagaku*) and called *gakuso*, the koto is a heterochord zither related to the Chinese *Zheng*, the Korean *Kayagum*, and the Vietnamese *Dan tranh*. Practiced as an independent genre known as *Tsukushi-goto* on Kyushu Island through the sixteenth century, the koto was popularized by Yatsushashi Kengyo (1614–1685) in seventeenth-century Kyoto. Today, the instrument is central to the *sokyoku* (koto instrumental) and *sankyoku* (chamber) repertoire maintained by two major schools, Yamada Ryu and Ikuta Ryu.

With a vaulted *kiri* (paulownia) wood sound box 180 to 190 centimeters long and 48 centimeters wide, the koto has thirteen strings of equal gauge, originally of silk but now more frequently of nylon. Movable bridges, most commonly of ivory or plastic, support the strings and determine pitch. The tunings are pentatonic (five-tone scale), covering two-and-a-half octaves. Three ivory picks (*tsume*) with leather rings are attached to the underside of the player's thumb and first two fingers of the right hand. The shape, rounded or square, indicates the school. The left hand manipulates pitch and sound quality. Innovations include a seventeen-string bass koto, *jushichi-gen*, introduced around 1920 by Michio Miyagi (1894–1956), who is therefore considered the father of modern koto.

KOUTA *Kouta* (short song) is a type of Japanese vocal music, the most widely known form of which is a song accompanied by a *shamisen* (three-stringed lute) and performed by female musicians, usually geisha, at traditional, small-scale, Japanese social events. The term, however, has not always been so applied but has been used to denote a variety of other song forms throughout the history of Japanese music.

From the tenth to the twelfth centuries, *kouta* was generally used to indicate all manner of short or colloquial songs, in contrast to the longer, more formal pieces that were a common part of court rituals. By the sixteenth century, however, the term had become exclusively associated with a type of short song that used verses of four lines based around groups of five and seven syllables (7+5+7+5 / 7+7+7+7 / 7+7+7+5 / or 7+5+7+7); this is noted in several important *kouta* compilations of the period, including *Kangin shu* (1518) and *Soan Kouta shu* (late sixteenth century). By the Edo period (1603–1868), the term had evolved to include both certain types of unaccompanied folk songs and some of the *shamisen* songs common in the Kabuki theater of the time. In the Meiji period (1868–1912), the term became associated with the short *shamisen*-accompanied song that is common today. This type of *kouta*, generally one to three minutes in duration, is sung by a female vocalist in a small chamber known as an *ozashiki*; usually the singer accompanies herself on the *shamisen*. The instrument is plucked with the nails—unusual, in that most *shamisen* music calls for a special plectrum—and maintains the rhythm, above which the vocal melody provides subtle musical ornamentation to augment the seven-and-five-syllable verses. Although this type of *kouta* was primarily the cultural property of the geisha, it filtered into the public domain in the 1950s and 1960s. Today, although *kouta* does not attract the level of interest it once did, it represents a musical tradition that embodies a broad spectrum of Japanese emotions and images.

KUALA LUMPUR (2002 pop. 1.5 million). Kuala Lumpur (or "KL," as it is commonly known) is the federal capital city of Malaysia. In comparative historical terms, Kuala Lumpur is a young city. Its genesis is traced to the middle of the nineteenth century, when a settlement of Chinese tin miners grew up on the muddy confluence of two rivers (Gombak and Klang); hence its place name: "Kuala Lumpur" means "muddy confluence." Although Malay and Sumatran

The Kuala Lumpur stock exchange in 2001. (MACDUFF EVERTON/CORBIS)

village settlements had existed in the vicinity, Kuala Lumpur's meteoric rise as a major trading center and, later, as the colonial and postcolonial capital, is attributed to a number of fortuitous factors. Among others, they include a boom in tin prices and the pioneering entrepreneurship of various individuals. In particular, Yap Ah Loy, a Hakka Chinese immigrant who had come to seek his fortune in the Malay States, is customarily credited with playing an influential role in Kuala Lumpur's formative stages. From 1868 to 1885, he ruled the town as the third Chinese *kapitan*.

In 1880, recognizing the growing commercial importance of Kuala Lumpur, the British relocated their state administrative capital 35 kilometers from Klang. In 1896, Kuala Lumpur was chosen to become the capital of the Federated Malay States (FMS) when this political unit (comprising Perak, Selangor, Negri Sembilan, and Pahang) was formed to standardize governmental policy and practice. This initiated the modernization of the town as the British put into place municipal planning practices and erected ornate administrative buildings. Following the Japanese occupation of British Malaya between 1939 and 1945, Kuala Lumpur became the capital of the Federation of Malaya created in 1948. When the country achieved political independence from Great Britain in 1957, Kuala Lumpur was the natural choice as the capital for the new nation.

It achieved city status in February 1972 and was ceded to the federal government by the Selangor state government in 1974. In the 1990s, its landscape and skyline were transformed dramatically. The enforced demolition of squatter colonies, the completion of the light rail transit system and the ring roads, and a construction boom in the property market are some of the driving forces of this transformation into a bustling metropolis. Emblematic of these changes is the Petronas Twin Towers, at 452 meters the tallest building in the world when it was completed in the late 1990s. Moreover, in keeping with city hall's efforts to project Kuala Lumpur as a recognizable world-class city, the motif of "The Garden City of Lights" pervades its official discourse and transformative activities.

KUCHING (2000 pop. 496,000). Kuching is today the capital city of Sarawak, Malaysia's largest state, situated on the island of Borneo. Pangiran Mahkota, a nobleman of Brunei and governor of Sarawak in the 1830s, founded the city. Pangiran Mahkota was in Kuching during the arrival of James Brooke (1803–1863), the first White Rajah of Sarawak. Kuching was formerly known as Sarawak, as it was located in the valley of the Sarawak River. The river, town, and country shared the appellation Sarawak until 1872. It is a common practice among the natives of Sarawak to name places and people after the river that flows there. Its name was changed to Kuching, after the name of a rivulet that flowed at the east end of the town before joining the Sarawak River, by Charles Brooke in 1872. The name, which means "cat" in the Malay language, is said to derive from a lychee-like fruit tree, called *mata kuching* (*Nephelium nalarensis*) that grew on the hill opposite the stream that ran there. Some sources say that the name originated from the Chinese word *gu chin* which means "harbor."

Kuching has a long history as a trading center, primarily for antimony (which in the Malay language is known as *serawak*) and jungle produce. Currently timber and petroleum are its main resources. Since 1963, when Sarawak became part of the Federation of Malaysia, Kuching has changed and developed into a modern city.

KUKAI (774–835), Japanese Buddhist monk. Kukai, also known as Kobo Daishi, was born in Shikoku; at age seventeen, he went to Kyoto to attend the university, where he studied Chinese classics. Renouncing the life of the scholar-noble, he became a mountain ascetic and eventually encountered the Great Sun Sutra, one of the central texts of Shingon esoteric Buddhism. This stimulated a desire to travel to China to study the deeper meaning of the sutra.

Sailing to China in 804, Kukai reached Chang'an, where he studied Sanskrit before approaching Huiguo, the master he had been seeking. Within three short months, Kukai received the formal transmission of the major esoteric teachings, becoming the dharma heir of Tantric Buddhism. When Kukai returned to Japan in 806, he brought translations of texts of esoteric Buddhism and the ritual implements necessary for transmission of the dharma lineage. Saicho, eventual founder of the Tendai school of Japanese Buddhism, initiated a correspondence with Kukai by asking to borrow certain texts which Kukai had copied in China.

Gaining patronage at the imperial court in Kyoto, Kukai spread the teachings of Shingon esoteric Buddhism, founded a monastic center on Mount Koya in 816, and was granted the prestigious Toji temple as headquarters for Shingon training. Credited with creating the kana syllabary, constructing various waterworks, and originating the eighty-eight-temple pilgrimage on Shikoku, as a scholar Kukai is remembered for his ten-volume *Ten Stages of the Development of the Mind*. It came to be believed that Kukai remains in eternal samadhi in the Okunoin, the inner shrine on Mount Koya.

KULI, MAKTUM (1733?–1782?), Classical Turkmen poet. Maktum Kuli (Makhtumkuli, Maxtumquli, Magtymguly) is probably the most important Turkmen classical poet. He was born sometime in the fourth decade of the eighteenth century and died sometime in the ninth decade. His father was the famous poet Azadi. Maktum Kuli studied for three years in the *madrasah* of Khiva and during his life traveled widely in central Asia. The poet, who also used the pseudonym Firaqi (the separated one), left a rich body of work of over ten thousand verse lines. Many of his poems are of mystic inspiration, and a great part of his poetry is devoted to religious and moral themes (for example, the Last Judgment, mortality, the corruption of the rich and powerful, falseness, and deceit found among all walks of life). There are poems dealing with the poet's personal experiences with death (the death of his father and his sons, who died in childhood), love,

loneliness, and aging. Maktum Kuli also composed poetry on political and social issues in which he urges the Turkmen tribes to unite against the threat of subjugation emanating from the Persian shah, the khan of Khiva, and the emir of Bukhara.

KULOB (2002 est. pop. 81,000). Kulob (Kulyab), the third-largest city in southwestern Tajikistan, lies in the mountains north of the Amu Dar'ya River. The city is situated in the Yaksu River valley, in the piedmont zone of the Khazaratish range, 200 kilometers southeast of Tajikistan's capital Dushanbe. In the thirteenth–fourteenth centuries Kulob was founded as a trading post on the caravan route linking the Hisor (Gissar) valley in southern Tajikistan with Persia. Kulob was part of the Bukhara khanate (1583–1740) and the successive Bukhara emirate (principality) (1747–1920).

In 1934, the city became the administrative center of the Kulyab province of the Tajik Soviet Socialist Republic (established in 1929). After the 1991 dissolution of the Soviet Union, the newly independent Tajikistan's southern provinces of Kulob and Qurghonteppa (Kurgan-Tyube before 1991) merged in 1992 into Khalton province, with the capital city in Qurghonteppa. Though deprived of its capital status, Kulob has remained the largest city of the province. The Kulob region was the hardest hit during the civil war in Tajikistan (1992–1997). Kulob is Tajikistan's key cotton-producing and industrial center.

KUM RIVER At 401 kilometers, the Kum River is the third longest river in South Korea and the sixth longest on the Korean peninsula. It originates from a valley in Mount Shinmu east of the city of Chonju in north Cholla province in southwest Korea and weaves its way north into northern Chungchong province. It then arches west into south Chungchong just north of the city of Taejon and flows southwest back into north Cholla to its mouth at the city of Kunsan on the East China Sea. Its main tributaries are the Muju, Miho, Namdae, and Chongja Rivers. In 538, the Paekche kingdom (18 BCE–663 CE) established its last capital, Sabi (now Puyo), on the southern bank of the Kum River. Sabi served as the cultural center of Paekche until it fell to the Shilla kingdom. The Kum River basin is only 6,107 square kilometers but is currently home to roughly 4 million people. The river is navigable for 130 kilometers from its mouth, making it an important highway for transporting rice grown on the Honam plain. In 1980 and 1990, dams were built to control the seasonal floods.

KUMAMOTO (2002 est. pop. 1.9 million). Kumamoto Prefecture is situated in the western region of Japan's island of Kyushu, where it occupies an area of 7,408 square kilometers. Its main geographical features are the active volcano Asosan, a generally mountainous south and northeast encircling a broad central plain, and part of the Amakusas, a group of about one hundred offshore islands. Kumamoto is bordered by the Amakusa Sea and by Fukuoka, Oita, Miyazaki, and Kagoshima Prefectures. Once known as Higo Province, it assumed its present name and borders in 1876.

The prefecture's capital is Kumamoto city, the Higo Province seat of power since the seventh century. In 1588, Kato Kiyomasa (1562–1611) was assigned to restore order after a long samurai uprising. In 1607, he completed Kumamoto Castle, one of Japan's most massive fortresses. The city later came under the control of the Hosokawa family and then was a Meiji era (1868–1912) military post. Today the city is home to Kumamoto University. The prefecture's other important cities are Yatsushiro, Arao, and Hitoyoshi.

Excavations of the prefecture's numerous ornamented tombs, similar to the wall-mural tombs of the Asian continent, indicate cultural exchanges during ancient times. During the Kofun period (300–710 CE), this was Kumaso tribe territory. Various warlords ruled from the late eighth century until the late six-

teenth century. In 1637, Kyushu's Shimbara uprising of discontented peasants and masterless samurai spread to the Amakusa Islands, a hiding place for persecuted Japanese Christians.

In present-day Kumamoto Prefecture, the primary economic activity is agriculture, with rice, vegetables, and fruit, particularly mandarin oranges, the chief crops. Also important are dairy and livestock herding, as well as forestry. The regional industrial base is relatively small. Visitors are drawn by the volcano Asosan and the coastal scenery of the Amakusa Islands.

KUMAR, DILIP (b. 1922), Indian cinema actor. Yusuf Khan (screen name Dilip Kumar) was born in Peshawar. He came to Pune after a quarrel with his father and worked as an assistant in the army canteen. Devika Rani, the actress, introduced him into the world of Indian cinema. His acting career began with the movie *Jwar Bhatta* in 1944. The "tragedy king of the Hindi cinema" has left an indelible impression on the public mind for his roles in *Aan*, *Andaz*, *Dag*, *Devdas*, *Ganga Jamuna*, *Karma*, *Kobinor*, *Madbumati*, *Mughal-e-Azam*, *Naya Daur*, *Paigam*, *Ram aur Shyam*, *Saudagar*, and *Shakti*. His penetrating eyes, cultured voice, and histrionic talent have created a special niche in the annals of Indian cinema. In 1967, he married the actress Saira Banu.

He was awarded the coveted Dadasaheb Phalke award. The Pakistani government awarded him the *Nishan-e-Imitiaz*, the national award of excellence. This generated a lot of controversy because of the political animosity between India and Pakistan; Indian political parties like Shiva Sena told Kumar to return the award, but he refused. Kumar preferred to act in India and declined an offer to work in David Lean's *Lawrence of Arabia*. He has a great passion for soccer. Although Hindu communal organizations have accused him of supporting Pakistan, soft-spoken Dilip Kumar by sheer charisma and contribution to Hindi cinema has been one of India's most popular actors.

KUNAEV, DINMUKHAMED (1911–1993), Kazakh Communist leader. Born in the rural region around Alma-Ata (now Almaty), Dinmukhamed Akhmedovich Kunaev worked his way through the ranks of the Communist Party of Kazakhstan (CPKaz). After World War II, he assumed a leadership role in the Council of Ministers of the Kazakh Socialist Soviet Republic. In the late 1950s, Nikita Khrushchev (1894–1971), the general secretary of the Communist Party of the Soviet Union (CPSU), initiated an agricultural reform program for northern Kazakhstan. The Virgin Lands campaign, as it was called, met with some initial failures, resulting in the sacking of several top Kazakh officials. In December 1959, Kunaev was appointed first secretary of the CPKaz and placed in charge of the agricultural reform program. However, by March 1962, Kunaev was blamed for continued shortcomings and was eventually removed from office in December 1962. Khrushchev's own ouster in October 1964 gave new life to Kunaev's career, and the Kazakh was reappointed by the new general secretary, Leonid Brezhnev (1906–1982), to be the CPKaz first secretary. In the early 1970s, Kunaev was elevated to full membership in the CPSU Politburo, the primary decisionmaking organization of the Soviet Union, thus becoming one of the most powerful Central Asian figures in the Soviet Union.

With the death of Brezhnev in 1982, and the eventual accession of Mikhail Gorbachev (b. 1931) in March 1985, Kunaev's fortunes waned. Gorbachev considered Kunaev to be representative of the corrupt, ossified CPSU old guard and removed him from office in December 1986. Gorbachev replaced Kunaev with an ethnic Russian, Gennadiy Kolbin (b. 1927), prompting ethnic riots in Alma-Ata. Kolbin's eventual successor, Nursultan Nazarbaev (b. 1940), partially rehabilitated Kunaev in the early 1990s, although the elder statesman never returned to active politics again. Dinmukhamed Kunaev died in 1993, after Kazakhstan's independence.

KUNANBAEV, ABAI (1845–1904), Kazakh writer, poet, lyricist, social philosopher. Born in Kazakhstan in Semey province, Abai Kunanbaev (Ibragim Qunanbaiuly) was educated at home and then sent to a *medressa* (Muslim religious school) where he learned Arabic and Persian and became acquainted with Eastern literature and poetry. His father ordered him home to train as his successor as clan chieftain, but appalled by what he regarded as his father's autocratic and brutal leadership, Kunanbaev broke with his family and at the age of twenty-eight returned to his studies in Semey city. While there, he actively participated in the city's intellectual life, studied Russian and Western classics by Pushkin, Goethe, and Byron, among others, and translated many of them for the first time into Kazakh. He also began writing poetry and prose and reinterpreted Krylov's Russian fables to suit Kazakh cultural sensibilities.

Kunanbaev's works were influenced by his belief in human reason. He was attracted to Western Enlightenment thinking and wove criticism of Kazakh culture into his works, most notably in his collection of poems called *Qarasoẓder* (often translated as the Book of Words). He criticized Russian colonial policies and encouraged his fellow Kazakhs to embrace education and literacy to escape from colonial oppression.

Most scholars consider Kunanbaev the first Kazakh to use poetry and prose to broaden the Kazakh literary milieu and to express social and political ideas designed to arouse the Kazakh nation. His writings, first published five years after his death and many times afterward, deeply influenced early-twentieth-century Kazakh activists. His life has been retold in films, operas, and novels, the best known being Auezov's *Abai zholı* (The Path of Abai).

KUNASHIRO ISLAND (2000 est. pop. 4,100). Kunashiro Island (or Kunashir, as the Russians know it) is a long, narrow volcanic island located approximately

twenty kilometers from the eastern coast of the Japanese prefecture of Hokkaido. It is separated from this larger island by the Nemuro Kaikyo. It is 122 kilometers in length and ranges from 6.3 to 32 kilometers in width, with a total area of 1,500 square kilometers. The highest volcano is the Mont Chacha (Tiatia), which is 1,822 meters high.

The mineral deposits found on the island are tin, zinc, lead, copper, nickel, sulfur, and metallic sulfides. It has a maritime climate with an annual average temperature of 7°C. It is also characterized by abundant precipitation throughout almost the entire year, which encourages the island's rich flora. The annual average precipitation is 110 centimeters. Forestry, mainly of conifers, and mining were an important part of the island's economy until World War II. Located on the southwestern side of the island are the main fishing ports of Tomari (Golovnino) and Furukamappu (Yuzhno-Kuril'sk). The fishing products characterizing Kunashiro are green and brown kelp, salmon, trout, king crab, and scallop. Livestock farming prospered before World War II, but nowadays people do it as their second activity. The harsh weather and poor infrastructure make farming very difficult. The common practice is to cultivate small gardens for family consumption.

The Ainu people inhabited the island from the beginning of 1600s. The island was occupied by the Soviet Union in August 1945. At that time, approximately 7,000 Japanese people resided there. As of 2001, Kunashiro Island was still disputed territory, under the administration of the Russian Federation but claimed by Japan.

KUNLUN MOUNTAINS The Kunlun Mountains are a range that is about 2,300 kilometers long and that follows an east-west direction on the northwestern border of the Tibetan Plateau. The mountain

range stretches from the Pamir Highlands in Central Asia to central China, where it forks out into three ranges, the Altun Shan range, the Arkatag mountains, and the Hoh Xil mountains. The Kunlun range constitutes the border between Tibet and the Xinjiang Uighur Autonomous Region and extends into Qinghai Province. The width of the range differs in various locations but seldom exceeds 200 kilometers. The height of the mountains varies between 4,000 and 7,000 meters, and in the higher western part, where the range is composed of three parallel ridges, peaks like Kongur and Muztag reach over 7,700 meters. The southern slopes fade into the 1,500-meter lower Tibetan Plateau, while the northern slopes are extremely steep. On the Tibet-Xinjiang border, the Kunlun range has a glaciated area of about 4,000 square kilometers, and the glacial streams of the northern slopes are important for the oases in the Taklimakan desert. The area is mainly populated by pastoral nomads whose economy is based on yak, sheep, goats, and, to a lesser extent, cattle. There is only a little farming in the region.

KUOMINTANG. See **Guomindang.**

KURDS The Kurds are known in the West as the victims of both Saddam Hussein's oppression and the ethnic cleansing practices of the Turkish Armed Forces (TAF), which warred against the Partyia Kakaran Kurdistan (Kurdistan Workers' Party, or PKK). The Kurds have long lived in contiguous regions that they refer to as Kurdistan, that is, "The Land of the Kurds," now largely within the confines of four Middle Eastern countries: Turkey, Iraq, Iran, and Syria. A half million Kurds also live in former countries of the Soviet Union, especially in Armenia and Azerbaijan.

The Kurds in Turkey number approximately 15 million and make up 21 percent of the population. Half of the Kurdish population lives in fourteen predominantly Kurdish provinces of the southeast; the other

half lives in the large cities of Istanbul, Ankara, and Izmir and in the western provinces. From 1980 to 2000, some 3 million Kurds fled from the southeast and east to the western provinces in the wake of Turkish persecution. Iran has the second-largest Kurdish population; Kurds number around six and a half million, or 10 percent of the population, and live predominantly in the provinces of West Azerbaijan, Ardalan, and Bakhtaran (formerly Kermanshah). Hundreds of thousands of Kurds also live elsewhere in Iran, especially in the cities of Tabriz, Tehran, Isfahan, and Shiraz.

In 2000, Iraq's Kurdish population was estimated at approximately 4 million, or 22 percent of the population. From 1920 to 1975, Kurds lived predominantly in the provinces of Mosul, Kirkuk, Arbil, Sulaymaniya, and Diyala. In 1975, eighteen governorates replaced the provinces, and three of them—Sulaymaniya, Dohuk, and Arbil—formed the Autonomous Kurdish Region. In 1992, the Kurdish Regional Government (KRG) was created. In 2000, more than a million Kurds lived in regions of Iraq outside the control of the KRG, especially in Baghdad, which had a population of a half million. In Syria more than a million Kurds live predominantly in the region along the border with Turkey. The cities of Damascus, Aleppo, Hims, and Hama all have Kurdish populations.

Language

The Kurdish language belongs to the Iranian language group and hence is part of the Indo-European family. In Turkey, Kurds speak the northwestern dialect called Kurmanji. There are also some 4 million Zazaki (Dimili) speakers; most Zazaki speakers speak Kurmanji as well. Many Kurds in Turkey speak only Turkish. In Iran, Kurds speak four Sorani subdialects. In Iraq, Kurds speak Kurmanji and subdialects of Sorani.

History

Wherever they reside in the Middle East, educated Kurds consider themselves an ancient people associated with the Urartian (thirteenth through seventh centuries BCE), Medes (625–550 BCE), and Neo-Babylonian (612–539 BCE) cultures. Many Kurds think they were ancestors of the Medes, although scholarly evidence does not support this claim. Xenophon (writing c. 401–400 BCE) first used the word *Karduchoi* to describe a people living in Bohtan, the region between Lake Van and the present-day border between Turkey and Iraq. Many scholars think the Karduchoi were ancestors of the Kurds.

Starting in the 640s, historians of the Arab conquests gave ample coverage to the Kurds and their

A Kurd woman votes in the 3 February 2000 election in the city of Suleimaniyeh in northern Iraq. (AFP/CORBIS)

dynasties, the most important of which included the Shaddids (951–1075), Hansanwayhids (959–1095), Marwanids (984–1083), Annazids (991–1117), Barrids (1101–1312), Zangids (1127–1250), Kurkbroids (1144–1232), and Ardalans (1168–1861). Salah ad-Din, the Saladin of the West, who established the Ayyubid dynasty (1169–1260), was a Kurd. Many Kurdish principalities were destroyed by the Seljuk invasions (1055–1258). During the Seljuk period the term *Kurdistan* first appeared in Arabic texts.

The Ottoman (1300–1923), Safavid (1501–1724), and Qajar (1795–1925) Periods From the sixteenth to the twentieth centuries, the Ottoman, Safavid, and Qajar empires dominated the Kurds. After the battle of Chaldiran in 1514, the Kurds and Kurdistan acted as bulwarks for the Ottomans against the Safavid Shi'is for the next four centuries. The semiautonomous Kurdish emirates in Turkey and Iraq were crushed during the Ottoman reform period (1839–1876), and the hereditary rulers (emirs, *pirs*) were replaced by religious leaders called *shaykhs*. This change resulted in a new governance in Kurdistan in which religious persons, primarily leaders of the Naqsbandi *tarikqat* (Muslim Brotherhood), exercised political authority.

Some historians consider a Naqsbandi *shaykh*, 'Ubaydallah of Nehri (d. 1883), to be the leader of the first rebellion in which Kurds demanded political autonomy. Further Kurdish attempts to gain greater political autonomy occurred in the early 1890s. Kurds participated in the ethnic cleansing of Armenians from the 1890s through the genocide of 1915, and many grew wealthy and powerful as a result of acquiring abandoned Armenian lands. After the creation of the Republic of Turkey in 1923, the new Turkish government left powerful Kurdish leaders (*aghbas*) in control

of much of Kurdistan in return for their loyalty to the state. Nevertheless, Kurds launched the large rebellions of Shaykh Said (1925), Ararat (1930), and Dersim (1937–1938), which were met with brutal suppression. Not until the 1980s under the banner of the PKK did the Kurds of Turkey again commence armed conflict with the state. War raged from 1984 to 2000; over forty thousand people, mostly Kurds, were killed; thirty-six hundred villages and hamlets were destroyed, and some two million Kurds were forced to flee to the large towns of Kurdistan in Turkey's eastern provinces. The capture of the PKK leader, Abdullah Ocalan, in February 1999, and his sentencing to death on 29 June, seemed to indicate that the armed conflict, at least on the PKK's part, was ending. As of 2000, however, the death sentence had not been carried out. The challenge of Kurdish nationalism remained the most significant problem confronting the Turkish state.

The Kurds in Iran

In Iran, the Kurds became increasingly separate from Kurds in the Ottoman empire after the treaty of Zuhab in 1639. During the seventeenth and eighteenth centuries, Kurds moved throughout Iran as they followed their leaders, who were dispersed by order of the ruling powers. The division and control of Kurdistan remained a central focus of the Ottomans and Iranians in the nineteenth and twentieth centuries. As in Turkey, Iran's main objective after 1921 was to crush ethnic groups, principally the Kurds.

The Kurds of Iran, under the leadership of Komala-e Zhian-e Kurdistan (Committee for the Resurrection of Kurdistan), with the aid of the Soviet Union, succeeded in establishing the Kurdish Republic of Mahabad, which lasted from 23 December 1945 to 17 January 1946. After the Soviet Union withdrew its support, the Iranian government crushed the Republic. Nevertheless, the Kurdish Republic of Mahabad has been a symbol of hope for all Kurds who still work and fight for an independent Kurdistan.

After the assumption of power by the Islamic Republic of Iran in 1979, warfare continued between the Islamic Republic and the Kurds until the end of the century. From the inception of the Islamic Republic to 2000, Kurdish leaders negotiated with Tehran for political autonomy. Their efforts received a setback when the leader of the Kurdistan Democratic Party of Iran (KDPI), Abulrahman Qassemou, was assassinated by Islamic Republic agents in 1989 in Vienna, where he had gone to negotiate with Islamic Republic officials. Relationships between Tehran and the Kurds soured again when Islamic Republic officials assassinated Sadegh Sharafkhani,

the leader and Secretary-General of the KDPI, and six companions in Berlin in 1992. The election of Mohammad Khatami in August 1997 resulted in promises of economic aid, but there was little movement on the Kurds' demands for political autonomy.

The Kurds in Iraq

In Iraq, the Kurds played a crucial role in the establishment of the modern state. After World War I, Kurds were a majority of the population in the province allocated to Iraq under British mandate by the 5 June 1926 treaty between Turkey, Iraq, and Britain. The British wanted to use the Kurds to control the Saudi Arabian-originated Hashemite dynasty that the British installed in Iraq in 1921 to head the Sunni Arab government in Baghdad. From 1926 to 1958, the Iraq government chafed against this arrangement. After the Iraqi revolution in 1958 through the remainder of the twentieth century, there was intermittent war between Baghdad and the Kurds.

After Shaykh Mahmud, leader of the first Kurdish rebellion, Molla Mustafa Barzani was the most important leader of the Kurdish nationalist movement in southern Kurdistan. He was leader of the Kurdistan Democratic Party (KDP) from its inception in the 1930s to his death on 1 March 1979. Leadership then went to Molla Mustafa's two sons, Ma'sud and Idris. After the death of Idris in 1987, Ma'sud took the reins of power and still held them in 2000.

During the 1991 Gulf War, Allied forces led by the United States created a safe haven in part of northern Iraq and extended air cover for the entire region above the thirty-sixth parallel. As a result, from 1992 onward, much of Kurdistan Iraq in the governorates of Dohuk, Arbil, and Sulaymaniya was controlled by the Kurdish Regional Government (KRG). After 1992, both the leaders of the KDP and the Patriotic Union of Kurdistan (PUK) took pains to stress that the Kurds in northern Iraq did not demand independence, but rather political autonomy in the state of Iraq. Whether the KRG in southern Kurdistan could maintain its de facto independence well into the twenty-first century remained unclear in 2000, but Kurds throughout Kurdistan and in the diaspora hoped that the Kurdish entity in southern Kurdistan and northern Iraq would mature into an independent state.

The Kurds in Syria

The international border delimited between Turkey and Syria in 1921 left several hundred thousand Kurds in Syria. From 1930 to the 1980s, Kurds, like many other ethnic groups in Syria, were beset with

many problems, which made it difficult for them to organize against the government. In the 1980s, Kurds in Syria once again began to play a major role in the Kurdish national movements. Late in 1979, just before the 1980 military coup in Turkey, Abdullah Ocalan escaped to Syria where for the next twenty years he received the support of the Syrian government and of the Kurds of Syria in his war against the Turkish government. During this period, up to 20 percent of the PKK guerrillas fighting in Turkey were Kurds from Syria. Turkey threatened to invade Syria in October 1998 if it did not evict Ocalan and 400 PKK fighters from Syria. Ocalan, as mentioned earlier, was captured in 1999. The eviction of Ocalan and the PKK from Syria reduced Syria's ability to use the PKK "card" against Turkey to compel Ankara to increase the downflow of Euphrates river water from Turkey to Syria, as did Turkey's military and intelligence alliance with Israel (officially announced in early 1996). This alliance, in turn, compelled Syria to enter into negotiations with Israel in early 2000, which demonstrated the paramount role of the Kurdish question in the pursuit of peace in the Middle East.

KURMANJAN DATKA (1811–1907), leader of the Alay mountain Kyrgyz. Kurmanjan Datka exer-

cised skilled governance and diplomacy during the turbulent period when control over the southern Kyrgyz passed from the collapsing khanate of Quqon to expanding czarist Russia. Born into an ordinary family of the Kyrgyz Mungush tribe east of Osh, Kurmanjan was strong-willed and independent. She divorced her first husband in 1832 and married Alimbek, a Quqon governor, assisting him in his work until his murder in 1861. In recognition of her influence over the Alay Kyrgyz, in 1863 the emir of Bukhara, and later Khan Khudayar of Khiva, awarded Kurmanjan the high title *dadkbwab* (Kyrgyz: *datka*).

In 1876, with the Quqon khanate fallen to Russian forces and most of the Kyrgyz withdrawn to secure mountain pastures, Kurmanjan Datka negotiated with General Skobelev for the safety of her people and persuaded the Kyrgyz to submit peacefully to Russia. Called "Queen of the Alay," she governed her people as a loyal Russian subject for another three decades and received the rank of colonel. She was a fine orator and a wise judge who was much sought after for settling disputes. Kurmanjan Datka continued to live as a nomad in the Alay mountains, riding on horseback and living in felt tents, until her death at age ninety-six. She is buried in Osh, Kyrgyzstan.

KUROKAWA KISHO (b. 1934), Japanese architect. Kisho "Noriaki" Kurokawa's stature was established early. By 1959, he had published a study of industrial housing in the Soviet Union. (Over three dozen books in Japanese and a dozen in English followed.) Kurokawa became known globally the following year as one of the founders of Metabolism, a postwar movement concerned with exploiting technological advances in a new, adaptable architecture. His 1970 Nakagin Capsule Building in Tokyo confirmed him among Japan's leading architects. In the building, rooms made from shipping containers ("capsules") were attached to a fixed core and were theoretically easily removed or reconfigured.

Kurokawa's Toshiba IHI Pavilion for Expo '70, the first modern international architecture exposition held

in Asia, was one of the earliest buildings designed using computers, reflecting his ongoing fascination with technology. Throughout his career, however, he countered the rational with a love of poetry and philosophy. In the 1980s, Kurokawa brought these approaches together in his theory of Symbiosis—a postmodern challenge to all architects to look beyond Western precedents. Kurokawa has embraced regional culture over sentimental traditionalism, in projects ranging from studies of the physical character of streets to nuanced interpretations of *sukiya*, the "artless simplicity" of teahouse architecture.

Kurokawa's learned approach brought him commissions from the art world, including highly regarded museums in Hiroshima, Nagoya, Wakayama, Belgium, and Holland. The diversity of his practice is demonstrated by his proposal for revitalizing Tokyo and by his designs for ecological cities in Japan and China. The 1998 Kuala Lumpur Airport summarizes Kurokawa's strengths: finely detailed, high tech, and framing lush natural spaces.

KUTAHYA (2002 province pop. 714,000; 2002 city pop. 181,000). Kutahya, the capital of the province of Kutahya, on the Porsuk River in northwestern Turkey, was once the largest city of ancient Phrygia, when it was known as Cotyaeum, city of Cotys or Cybele. After the Battle of Manzikert (1071) it fell under Seljuk rule. Kutahya was later captured by the Greeks, recaptured by the Seljuk ruler Kilic Arslan II (1155–1192) in 1183, lost to the Byzantines, and retaken by the Seljuks in 1233–1234. In the fourteenth century, Kutahya was transferred to the Ottomans when Ottoman Sultan Yildirim Bayezid (1389–1402) married Dewlet Khatun, daughter of Suleyman Shah Celebi (c. 1363–1398) of the kingdom of Germiyan-oghullari. After the Mongols defeated the Ottomans in 1402, Timur (Tamerlane) made his son governor. Kutahya fell to the Karamanids in 1411 but was recaptured by the Yakub Germiyani, ruler of the Germiyan-oghullari kingdom, with help from

the Ottomans. When Yakub died in 1429, he left Kutahya to Ottoman sultan Murad II (1421–1451).

Kutahya flourished under the Ottomans. Sultan Selim I (1512–1520) brought Persian and Armenian potters from Tabriz to Kutahya after capturing Persia in 1514, and Kutahya acquired a reputation for ceramic tiles rivaling those of Iznik. Today Kutahya continues to produce ceramic tiles, which are considered its greatest tourist attraction.

KWANGJU (1999 pop. 1.3 million). Kwangju is the capital of South Cholla Province (Cholla namdo) in southwestern Republic of Korea (South Korea). It has a total area of 744.22 square kilometers. The administratively autonomous Kwangju Metropolitan City, however, occupies only 478.37 square kilometers, with the rest of the area divided among Changsong, Tamyang, and Hwasun counties and the city of Naju.

Kwangju is located in the fertile basin of the Kungnak River (a tributary of the Yongsan River). Kwangju is also surrounded by six mountains. Populated since prehistoric times, Kwangju was a part of the Paekche (18 BCE–663 CE) and Later Paekche (892–936) kingdoms during the Three Kingdoms period. In between, it was a part of the Later Shilla Kingdom (668–892). Prior to 940, the region was also known as Mujin or Muju.

Some of the key industries based in Kwangju are telecommunications and information technology; material, electrical, biotechnology, and environmental engineering; energy; manufacturing; export; and service sectors.

Kwangju has been the site of two historic uprisings. In 1929, students rose up against the Japanese colonization of Korea (1910–1945). In 1980, civilians protested Chun Doo Hwan's 1979 coup and ensuing events, such as the imprisonment of dissident Kim Dae Jung.

KWANGJU UPRISING One of the darkest moments in the history of South Korea, the Kwangju Uprising has had a long-lasting impact on domestic Korean politics. What began as a mass protest by students and residents of the city of Kwangju in South Cholla Province against indiscriminate attacks by South Korean Special Armed Forces on students and bystanders led to full-scale battle between students and the Special Armed Forces units from 18 to 27 May 1980.

In the months following the assassination of President Park Chun Hee in October 1979, opposition politicians and students increasingly demanded the lifting of martial law and the setting of a date for presidential elections. As the number of student-led protests grew nationwide, Major General Chun Doo Hwan ordered the arrest of the student leaders as well as leading opposition political figures, including the "three Kims" (Kim Dae Jung, Kim Young Sam, and Kim Jong Il), instituted full martial law, and closed the National Assembly at bayonet point. The army then moved in and occupied college campuses, closing all universities.

Following the announcement of martial law, government soldiers arrested Kim Dae Jung and his closest political advisers. The news of the arrest of Kim

Dae Jung ignited student-led demonstrations in Kim's hometown of Kwangju, and as a result, clashes between students and riot police broke out. Special Armed Forces arrived to help subdue the demonstrators; however, following three days of indiscriminate attacks on protesters and residents that left hundreds either injured or dead, residents of Kwangju seized military vehicles and weapons from munitions depots and fought a pitched battle with the Special Armed Forces in the city center that left hundreds, perhaps thousands, wounded or dead. Unable to control the demonstrators, the Special Armed Forces units withdrew to the outskirts of Kwangju. The following day thirty thousand residents gathered in front of the provincial administration building to support the demands of the students that the government release those in detention, that troops withdraw from Kwangju, and that compensation be paid to the families of the dead and wounded. After a four-day standoff, the army with support of Special Armed Forces units moved back into Kwangju with tanks and percussion bombs to reimpose martial law. In the ensuing action, the remaining student demonstrators were either captured or killed.

In succeeding years citizens of Cholla Province voiced their opposition to Presidents Chun Doo Hwan and Roh

KYE There has long been a history of communal cooperation for mutual benefit among the villages and townships of Korea. This was once most apparent in reciprocal labor arrangements (*pumassi*) at key points

in the planting, harvesting, and kimchi-making seasons. It was also demonstrated in the organized groups of friends, family, and acquaintances who gathered together on a regular basis to share a subject of interest, invest money, or prepare for some future event such as a wedding, funeral, or parent's birthday party or funeral. These meeting groups were loosely known as *kye*. Usually such a group would designate a leader, a set number of members, and a fee payable at each meeting to cover costs and expenses. *Kye* mainly provided an essential venue for socializing and also for a limited form of social welfare, but some were set up with the aim of investing or mobilizing a large amount of capital. The most common way in which this was achieved was through the creation of a rotating credit association. Every month all the members would be expected to contribute a set amount of money or rice to the *kye*, the sum of which was given to one of the members. The *kye* would then continue until all the members had received a monthly total to spend as they chose.

In the cities and urban landscapes of modern Korea, many of the more traditional forms of social and community organization have become outdated. In

A DEATH KYE DOCUMENT

This is a translation of a death kye document of 1651 kept in Puan County in North Cholla province. It outlined the rules of a local funeral kye started in 1651.

If a member's parents die, then the other members will collect 10 hama of rice between them and give to the member.

If a member doesn't attend the regular kye meeting, he has to pay 5 dwae (4.5 kg) of rice.

The kye shall have a leader and the leadership shall rotate through the members with a new leader every year.

There will be a manager who takes care of the rice. If he is careless in his duty he will be receive 50 strokes on his buttocks with a wooden stick.

If a member creates a bad relationship with the other members he will receive 5 mal (45 kg) of rice and ejected from the kye.

If one of the member's family members die, the member will receive 1 pil of cloth.

If a member needs to discuss anything, they can discuss it with the leader and reach a decision with him about funeral arrangements, etc.

contrast, perhaps because of its flexibility and the social, economic, and networking opportunities it offers, the *kye* has both adapted and flourished during the painful upheavals of urbanization and modernization. In particular, socially premised *kye* are often portrayed as being essential for the maintenance of geographically dispersed networks of kin, friends, classmates, and business associates. The *kye* remains a fundamental and deeply embedded institution within Korean society.

KYOIKU MAMA *Kyoiku* mama (education mama) is a stereotypical term referring to Japanese mothers who go to extraordinary lengths to develop their children's aptitude (particularly boys) and place them on the best educational track directed toward entry into a top-ranked university and subsequent employment with a prestigious company. Depicted as having sacrificed both career and personal aspirations, these mothers devote themselves to their children's education, staying at home full time to make lunches, clean and mend school uniforms, and help their children prepare for the following day's lessons at school. They also arrange for supplemental lessons at cram schools or private tutoring, continually urging their children to study hard and improve their academic performance. During important examination periods, other activity in the home is kept to a minimum in order to create a quiet place to study. As children study late into the evenings, mothers prepare and deliver snacks to them to symbolically show support and mutual involvement. Ultimately, if their children do well at school, the devotion and efforts of these mothers are deemed successful. Extreme versions of this stereotype portray zealous and intensely competitive mothers preparing infant children for entrance examinations to prestigious preschools or kindergartens that offer students an inside track to an affiliated high-ranking university.

KYONGGI PROVINCE (1999 pop. 9 million). Kyonggi Province (Kyonggido), in the northwest region of South Korea (Republic of Korea), has an area of 10,188 square kilometers. The province borders part of the demilitarized zone (DMZ) to the north and the Yellow Sea to the west. Seoul (the nation's capital) and Incheon (a port city) are both located within Kyonggi Province, but the two cities are independent administrative units and thus are autonomous from Kyonggi.

Kyonggi Province is composed of twenty-three cities and eight counties (*kun*). The region is heavily populated and industrialized because of its proximity to Seoul. The satellite cities of Songnam, Anyang, Suwon, and Puchon are also busy urban centers.

Seoul (formerly Hanyang) was the capital of the Choson dynasty (1392–1910); as a result, Kyonggi is home to many historical points of interest, such as Kanghwa Island, where the royal court fled during the Mongol invasions. Kanghwa's fortress later protected Korea's west coast from foreign incursions during the nineteenth century. Another historic site is Panmunjom, in the DMZ; since the Korean War (1950–1953), Panmunjom has been the site of ongoing negotiations and peace talks between North and South Korea.

There are also numerous ski resorts, golf courses, and fishing lakes for sports enthusiasts. The province is home to three major theme parks, including the Korean Folk Village (Minsokch'on), where visitors can observe traditional Korean folk customs.

Manufacturing, automotive parts, aircraft, electronics, medical equipment, and satellite communications are among the diverse industries in Kyonggi Province. The province is also important agriculturally, most notably for rice, fruits, beef, and poultry. Kyonggi's coastline hosts fisheries and salt production. Kyonggi is also home to many artisans who carry on centuries-old traditional methods of producing pottery; the province has abundant clay sources.

KYOTO (2002 est. pop. 1.5 million). Located in southern Kyoto Prefecture in central Honshu, 50 kilometers northeast of the industrial port of Osaka, Kyoto was the residence of the Japanese emperor and imperial court from 794 to 1868. Originally named Heian-kyo ("capital of tranquillity and peace"), the city was constructed in the 790s after a fire destroyed much of the former capital city at Nara. During later centuries the city was also called Saikyo ("western capital") to distinguish it from the shogun's capitals at Kamakura and Edo (Tokyo). In 1997 Kyoto's population was 1.5 million, making it the seventh-largest urban center in Japan, after Tokyo, Yokohama, Osaka, Nagoya, Sapporo, and Kobe.

The original plan for the city of Kyoto was, like the earlier capital at Nara, modeled after Changan—the capital of the Tang dynasty (618–907) in China. The city was laid out on a grid pattern 23.4 square kilometers in area. During the Kamakura period (1185–1333), the city lost some of its importance as political and military power shifted to the Minamoto shogun's headquarters at Kamakura. During the Muromachi period (1333–1573), Kyoto regained some of its status, as both the shogun and the emperor took up residence in the city. It was during this period that many of the city's great temples were constructed, including the Nanzenji, Kinkakuji (Temple of the Golden Pavilion), and Ginkakuji (Temple of the Silver Pavilion). With the victory of Tokugawa Ieyasu (1543–1616) at

the battle of Sekigahara in 1600, the seat of political power was again moved, as the new shogun established his capital at Edo in eastern Honshu. During the Tokugawa period (1600/1603–1868), Kyoto retained some of its stature because of the presence of Nijo Castle—a temporary residence for the shogun during his visits to the imperial court and inspection tours of central Japan. The city also continued to grow as an artistic and religious center during this time.

After the Meiji Restoration of 1868 and the transfer of the nation's symbolic and administrative governance to Tokyo, Kyoto was forced to remake itself, emerging as one of the most modern cities of the Meiji period (1868–1912); it claimed the first streetcars in Japan, as well as a thriving industrial quarter. Spared

by U.S. bombers during World War II, Kyoto survived the conflict to become an important center of higher education and culture, and a major transportation hub. While tourism, finance, and education are the leading industries in Kyoto, the city is also home to light industry and numerous producers of traditional Japanese products, including porcelain, textiles, and works of art. The city also boasts numerous museums, Buddhist and Shinto temples, and historic sites, making it an important center in the preservation of traditional Japanese culture.

KYRGYZ The Kyrgyz are a largely Muslim people of Turko-Mongol origins whose language, Kyrgyz, is a member of the central, or Kipchak, branch of the Turkic linguistic group. The Kyrgyz language is divided into northern and southern dialects, and there are also historical and cultural differences between northern and southern Kyrgyz people. In 2001, about 2.5 million Kyrgyz lived in the central Asian nation of Kyrgyzstan, although Kyrgyz also inhabit Uzbekistan, Kazakhstan, Tajikistan, northwestern China, and other nations. Traditionally pastoral nomads, some Kyrgyz live in the steppe and others live at the edges of mountains. Many other contemporary Kyrgyz are city dwellers.

History

Kyrgyz have been divided into clans for many centuries. The word "Kyrgyz" derives from the Turkic words *kyrk* (forty) and *yz* (clans). Clan membership is determined by paternal ancestry. Kyrgyz tribes settled in the area of Kyrgyzstan between the thirteenth and sixteenth centuries. Some of the early Kyrgyz were traders along the Silk Road, and others were farmers and herders. Many were forced into Tajikistan by the Oirat Mongols in 1685.

The Uzbeks' khanate of Quqon ruled the Kyrgyz during much of the nineteenth century. During the

1860s, many Kyrgyz allied with the Russian empire against the khanate of Quqon. By 1876, most of the territory of present-day Kyrgyzstan had been taken by the Russian czar. Many Russians and Ukrainians came to settle in Kyrgyzstan. The new Slavic immigrants were given prime farmland at the expense of the Kyrgyz, who were driven from the lowlands into higher terrain where the land is less suitable for herding and farming. Mining and manufacturing industries also came to Kyrgyzstan during the czarist period. Some Kyrgyz migrated to Afghanistan and Tajikistan.

In 1916, the Kyrgyz revolted against Russian rule, but the Russians retaliated with great force, and many Kyrgyz fled to China to escape repression. Czarist rule came to an end in 1917, but Russian domination did not. On 14 October 1924, the Soviets created the Kara-Kyrgyz Autonomous Region, which was soon renamed the Kyrgyz Autonomous Republic. The Kyrgyz Soviet Socialist Republic was established on 5 December 1936.

Soviet dictator Joseph Stalin (1879–1953) ordered the destruction of many animal herds and forced the Kyrgyz to collectivize their farms, which changed the Kyrgyz lifestyle from nomadic to more settled and caused widespread famine. Another consequence of Soviet rule over the Kyrgyz was the dramatic growth in literacy. Prior to 1917, most Kyrgyz schools were *madrasabs* (Islamic religious schools), and almost all Kyrgyz were illiterate. But after the founding of the Soviet Union, all religious schools were forcibly closed, and children were required to attend public schools. This led to almost universal literacy and exposed the Kyrgyz people to new ideas as the Kyrgyz became familiar with the Russian language, Cyrillic alphabet, and Russian culture.

Kyrgyzstan declared its independence on 31 August 1991, following the collapse of the Soviet Union. Many Kyrgyz revived their old traditions and customs, but fluency in Russian is still prevalent. The Kyrgyz forged new ties with the outside world, including Turkey, Israel, and the United States.

Poverty increased sharply among the Kyrgyz of Kyrgyzstan during the 1990s, affecting approximately 55 percent by 2000.

Traditional Culture

Nomadic Kyrgyz traditionally lived in *yurtas*, or yurts (felt tents), and although most Kyrgyz today live in more permanent structures, *yurtas* are still used to entertain guests during special events. Kyrgyz women make felt carpets called *shyrdaks* that often decorate the *yurtas*. Some of today's Kyrgyz still live a seminomadic

The "group" nature of Kyrgyz culture is demonstrated by the large number of guests at this wedding celebration in the Alaisky region of Kyrgyzstan in 1995. (JANET WISHNETSKY/CORBIS)

lifestyle, residing in *yurtas* during the summer months and returning to their permanent houses in the autumn.

Kyrgyz are known for their hospitality, offering traveling guests samples of the rich Kyrgyz cuisine. *Kymys* (in English, koumiss), a popular Kyrgyz beverage, is fermented mare's milk. Kyrgyz also drink tea, vodka, and *bozo* (a fermented millet drink). Other components of Kyrgyz cuisine include meats (especially lamb), potatoes, bread, rice, pasta, and yogurt.

For centuries, Kyrgyz have practiced the arts of storytelling and singing, and a rich heritage of oral literature accompanied by music has developed. The primary Kyrgyz folk instrument is the *komuz*, a three-stringed lute. In the years following Kyrgyzstan's independence, the three-part epic poem *Manas* emerged as a key element of Kyrgyz literature. *Manas* was preserved over the centuries by wandering bards called *manaschi*. Several versions of *Manas* have assumed written form, and *Manas* has become a major component of modern Kyrgyz identity and government ideology. Popular pastimes among Kyrgyz men include hunting with the aid of *berkut* (steppe eagles) and playing games of skill on horseback.

The extended family remains vital to rural Kyrgyz, but for many urbanized Kyrgyz the basic family unit is the nuclear family. Kyrgyz women used to be restricted to household chores (cooking, cleaning, hosting, and raising children) and crafting but now have more career opportunities.

The practice of bride stealing, in which a woman is taken (often involuntarily) by a man to be married, was common until Soviet times and has revived in recent years among rural Kyrgyz, despite the fact that it is prohibited by Kyrgyzstani law.

Religious Beliefs

The principal religions among Kyrgyz are Islam and ancient folk beliefs, including shamanism, animism, and totemism. Islam was well established among Kyrgyz by the eighteenth century. The vast majority of modern Kyrgyz are at least nominally Sunni Muslims. Islam is practiced in a relatively pure form among the southern Kyrgyz, whereas elements of shamanism and animism still persist among the northern Kyrgyz. However, some southern Kyrgyz are practitioners of Sufism, a mystical school of Islamic thought.

Under Soviet rule, Islam was officially discouraged, and atheism was encouraged. But in the mid-1980s, Islam began to grow in popularity again, and by 2001 there were over two thousand mosques in Kyrgyzstan.

KYRGYZSTAN—PROFILE (2001 est. pop. 4.8 million). Kyrgyzstan is a mountainous, landlocked central Asian country; more than half of its land area is above 2,500 meters in elevation. Kyrgyzstan borders Kazakhstan on the north, Tajikistan on the south and west, and the Xinjiang Uygur Autonomous Region of the People's Republic of China on the east. Its total area is 198,500 square kilometers. High mountains whose peaks range from 4,880 to 7,200 meters, glaciers and snow, valleys, and river basins dominate the landscape, with few lowland areas. There are several mountain rivers in Kyrgyzstan and one large lake, the

Issyk-Kul. The country has a continental climate with little rainfall and hot, dry summers and low winter temperatures. Kyrgyzstan became independent of the former Soviet Union on 31 August 1991. The country's official name is the Kyrgyz Republic and its capital is Bishkek (formerly Frunze).

History

Most scholars believe the Kyrgyz people to be of mixed Mongolian, Eastern Turkic, and Kipchak descent. The formation of the Kyrgyz as a distinct ethnic group was completed in the sixteenth century, when they started migrating to modern-day Kyrgyzstan. In the seventeenth century, the Kyrgyz territory came under the control of the Mongols until the Manchus overthrew them in 1758. In the nineteenth century, the Kyrgyz lands became part of the Quqon

khanate, Turkic rulers of a powerful kingdom in present-day eastern Uzbekistan. When the Quqon khanate started to lose power, mostly due to expanding Russian influence, the Kyrgyz people came into contact with the Russians. The Kyrgyz territory was incorporated into the Russian empire in 1876 as part of the Quqon khanate, and the region remained under the rule of czarist Russia until the Bolshevik Revolution in 1917. In 1918, the territory of the Kyrgyz was included in the Turkistan Autonomous Soviet Socialist Republic within the Russian Federation. On 14 October 1924, the Kara-Kirghiz Autonomous Oblast (political subdivision) was created within the Russian Federation; in 1925 the oblast was renamed the Kirghiz Autonomous Oblast with its capital at Bishkek. Bishkek was renamed Frunze in 1925. On 1 February 1926, the Kirghiz Autonomous Oblast was raised to the status of the Kirghiz Autonomous Soviet Socialist Republic. On 5 December 1936, the Kirghiz Soviet Socialist Republic was established, and Kirghizia became one of the fifteen union republics of the Soviet Union. On 15 December 1990, Kyrgyzstan declared its sovereignty.

Politics and Administration

Kyrgyzstan has six oblasts, each having its own provincial capital. In the north, there are four oblasts:

Talas (capital: Talas), Chu (capital: Bishkek), Issyk-Kul (capital: Przheval'sk), and Naryn (capital: Naryn). These four administrative regions have dominated the political life of the country during the Soviet era and after independence. In the south there are two oblasts: Osh (capital: Osh) and Jalal-Abad (capital: Jalal-Abad). These two administrative regions, dominated by the fertile lands of the Fergana Valley, were politically under represented during the Soviet era.

The president of the republic, Askar Akaev (b. 1944), was elected on 28 October 1990 and started his third term of office in October 2000. The president shapes the political life of Kyrgyzstan. Kyrgyzstan has a bicameral legislative assembly, the Zhogorku Kenesh (Supreme Council). The upper chamber is the Assembly of People's Representatives, and the lower chamber is the Legislative Assembly.

Kyrgyzstan was one of the countries of central Asia most determined to realize a successful post-Soviet transition toward a democratic political order and a market economy. During the first half of the 1990s, the republic was seen as an island of democracy, because there were several different political parties and movements, such as Ashar (Mutual Help), Asaba (Banner), Erkin Kyrgyzstan (Free Kyrgyzstan), the Kyrgyz Democratic Wing, Osh Aymagy (Osh Oblast), and

Adolat (Justice). President Akaev also adhered to economic reform guidelines established by international economic organizations such as the World Bank and the International Monetary Fund. Akaev, who was a physicist, had never been part of the Soviet party hierarchy, and as such he was distinguished from other central Asian republican leaders. However, in the latter part of the 1990s, Akaev gradually drifted to more authoritarian policies by increasing his presidential powers and putting pressure on the opposition.

Economy

The Kyrgyz economy is primarily agricultural. The agricultural sector accounts for around 30 percent of the gross domestic product (GDP) and employs 40 percent of the active population. The main crops are grain (wheat, barley, maize), cotton, vegetables, fruits, tobacco, sugar, and silk. Kyrgyzstan also has the world's largest natural-growth walnut forest. In addition to crops, animal husbandry is common in Kyrgyzstan. Cattle raising and sheep and horse breeding remain key agricultural activities in all areas of the republic.

Kyrgyzstan has important reserves of various minerals such as coal, mercury, uranium, zinc, lead, gold, and antimony. It has some limited oil and natural gas as well.

Kyrgyz industry accounts for about 30 percent of GDP and employs about 30 percent of the active population. With its fast-flowing rivers, Kyrgyzstan has abundant hydroelectric power. In addition to the production of electricity, mining, engineering, metalworking, light manufacturing, food and thread, and construction are other key industries.

People

The Kyrgyz people are basically rural, with their traditional occupations of agriculture and stock breeding. About 90 percent of all Kyrgyz live in Kyrgyzstan, even though Tajikistan, Uzbekistan, China, and Afghanistan have small Kyrgyz communities. The Kyrgyz make up about 56 percent of the population of the Kyrgyz Republic, followed by Russians (18 percent), Uzbeks (13 percent), Ukrainians (2 percent), Germans (1 percent), and other smaller groups (10 percent).

Kyrgyz speak a Turkic dialect called Kipchak, which belongs to the Altaic family of languages. The Kyrgyz are Sunni Muslims of the Hanafi school. However, Islam came to the Kyrgyz at a relatively late date; their widespread conversion dates only from the second half of the seventeenth century. In Kyrgyz society, Islam is mixed with some of the pre-Islamic practices and beliefs of shamanism. Furthermore, loyalties at the level

of tribe and clan are still important in the private and public lives of the Kyrgyz people. There are three clan groupings, or wings, in Kyrgyzstan: the *sol* (left wing) is in the north and west; the *ong* (right wing) and *ichk-ilik* (insider) are in the north. A Kyrgyz belongs to one of these groups and then to a particular tribe.

The north-south division in the republic further distinguishes the Kyrgyz people from one another. In northern Kyrgyzstan, people are historically nomadic, more sophisticated, economically better off, less traditional, and less religious, whereas in southern Kyrgyzstan, people are sedentary and agricultural, economically poorer, more religious, and more conservative.

However, despite these differences, the Kyrgyz nevertheless consider themselves one people. This is the basic theme of the Kyrgyz oral epic *Manas*. Manas was a famous Kyrgyz warrior, and the epic tells of various Kyrgyz tribes and their survival despite numerous hardships. The *Manas* legend has been a binding force among the diverse Kyrgyz for centuries. One of the meanings of the word Kyrgyz is "forty clans," and today the forty spreading beans of the Kyrgyz flag represent these Kyrgyz clans.

Current Issues

After more than a decade of independence, Kyrgyzstan faces several economic, political, and social problems. Shortly after independence, President Akaev started implementing an economic reform program to enable transition to a market economy. He was the first Central Asian leader to break out of the ruble zone by introducing a Kyrgyz national currency, the som. Akaev started a privatization program in industry as well as in agriculture by legalizing the sale of land. However, the immediate results of these reforms were not promising. There were drastic falls in GDP and industrial and agricultural output. Inflation and unemployment increased dramatically. Corruption and crime rates rose. The sudden end to the transfers and subsidies from the budget of the Soviet Union and the collapse of inter-republican trade resulted in a sharp fall in government revenues. As a result, social services came close to breakdown. In the early 2000s, most Kyrgyz people faced the threat of real poverty.

As economic problems increased, President Akaev has become more concerned with political stability. He has increased his presidential powers and grown less tolerant of opposition groups and the media. He is also concerned about potential inter-ethnic unrest in Kyrgyzstan and about Russian emigration from the republic. The departure of Russians results in a shortage of much-needed professional and technical skills,

further complicating the economic problems. In order to prevent Russian emigration, the Kyrgyz leadership declared Russian the second state language. This official bilingualism is to remain in effect until 1 January 2005.

KYRGYZSTAN—ECONOMIC SYSTEM

Despite nearly seventy years of Soviet industrialization Kyrgyzstan's economy remains primarily agricultural. According to World Bank statistics, agriculture contributed an estimated 44.2 percent to gross domestic product (GDP) in 1997. Grain production generally accounts for more than 50 percent of agricultural production. Other products such as hay, forage, potatoes, and vegetables are also grown, primarily in the southern regions of Osh and Jalalabad. Livestock production, which once contributed significantly to the overall agricultural output, has declined since independence, partly because of the reduction in state subsidies and partly because of unregulated sale or consumption by the rural population. Agriculture employed more than 48 percent of the labor force in 1998, although, given the mountainous topography, only 7 percent of the land is arable. Private family farms cultivated an estimated 35 percent of the arable land in 1998, while the remainder was farmed collectively in the old Soviet style. The percentage of agriculture's contribution to GDP declined 4.6 percent during the 1990–1996 period, but the agricultural sector rebounded beginning in 1997 and registered growth rates of 15 percent and 12 percent in 1996 and 1997, respectively.

Industry, Services, and Foreign Trade

Industry accounts for approximately 16 percent of GDP. Manufacturing, including food processing, textiles, machinery, and nonferrous mineral products, has remained largely stagnant since the breakup of the So-

viet Union. The sector employed an estimated 10 percent of the working population in 1997. Kyrgyzstan has considerable mineral resources, including gold, coal, tin, mercury, zinc, tungsten, and uranium. The gold deposit at Kumtor, the eighth-largest in the world, has made a sizable contribution to GDP since 1998. The construction industry also benefited from the development of the Kumtor site, but construction growth declined after the completion of projects related to the mining industry in 1997. The energy sector is dominated by the hydroelectric production for which Kyrgyzstan has an ideal topography. Oil and gas deposits are small, and the country depends on imports from Kazakhstan.

In 1997 the services sector accounted for an estimated 33 percent of GDP. The sector is the economy's second-largest employer. Foreign trade accounted for approximately 10 percent of GDP in that year.

Economic Policy

Designed to satisfy the requirements of industrial centers outside its territory, Kyrgyzstan's economy has suffered a significant decline since the breakup of the Soviet Union. The process of restructuring the economy has been slow and uneven, despite substantial financial support from Western countries and major global donor agencies such as the World Bank, the International Monetary Fund (IMF), and the European Bank for Reconstruction and Development (EBRD). In 1993 President Akayev introduced an ambitious economic reform program, calling for macroeconomic stabilization, privatization, trade and price liberalization, and a new currency, the som, introduced in May. The conservative parliament opposed the program, which touched off a power struggle that led to the president's decision to disband the parliament and introduce constitutional amendments in 1994 and 1995. His victory resulted in the resumption of the economic reform program largely supported and financed by the IMF and the World Bank. Since 1995 the government has embarked on reforms of the banking sector and the tax structure and has privatized large enterprises. The reform program suffered a setback in the aftermath of the collapse of the Russian economy in 1998 and the decline in the price of gold, a major foreign-exchange earner for Kyrgyzstan.

Privatization

The privatization of the economy entered its third phase in 1998, with the aim of selling shares in large enterprises such as the Kyrgyztelecom and the energy company, Kyrgyzenergo. Although the government retains controlling stakes in these and other large enter-

prises, the entire process has yet to be completed. The first stage of privatization included small enterprises in service and retail sectors and was largely completed by 1995. The second stage, designed to sell shares of medium-sized enterprises, came to an abrupt halt in 1997, as allegations of corruption and nepotism resulted in an audit of previously privatized enterprises. The public received privatization coupons to be used toward the purchase of company shares. Unfortunately, the privatized industries have remained either stagnant or completely insolvent because the Soviet-era inter- and intra-enterprise order system has collapsed.

Fiscal Reform

Decline in output and insufficient tax revenue collection have combined to create a chronic budget deficit since independence. According to the IMF, the budget deficit was 9.9 percent of GDP in 1998 and was estimated at around 10 percent of GDP in 1999. A new three-year Poverty Reduction and Growth Facility program was signed with the IMF in February 2000. It replaced the Enhanced Structural Adjustment Facility program in effect since 1992 and accurately predicted a budget deficit of 7.4 percent of GDP in 2000, to be reduced to 4.6 percent by 2002. Inflation has been pegged at 20 percent, 9.9 percent, and 5.0 percent for 2000, 2001, and 2002, respectively. Thus far, the targets have not been met. Between 1994 and 1998 inflation amounted to 51.6 percent. An estimated 60 percent of government spending is devoted to social-welfare programs. The government has been planning to introduce private land ownership, but the issue has generated considerable controversy, which has delayed the process.

Real GDP declined by nearly 50 percent between 1991 and 1995. Growth returned to the economy in 1996 as a result of foreign investment projects in the mining sector and as positive agricultural growth. GDP continued to grow in 1997 but suffered a decline in 1998, achieving only 2 percent real growth. Private consumption has constituted an estimated 65 percent of GDP in recent years, but the continued economic uncertainties will adversely affect the level of consumption for some time to come. A 1997 World Bank survey revealed that an estimated 60 percent of the Kyrgyz population lives in poverty, the majority residing in the impoverished south of the republic.

External Sector

Much like the other central Asian republics, Kyrgyzstan's trade with the Commonwealth of Independent States (CIS) has declined since independence. The figure for 1998 indicated an export contraction

of nearly 30 percent in CIS trade. In dollar terms the trade with CIS members accounted for 44 percent of exports and 52 percent of imports. In 1997 many of Kyrgyzstan's exports were nonferrous metals, notably gold (36 percent), followed by electricity (14 percent), food processing (13 percent), machine construction (10 percent), and agriculture (8 percent). Oil and gas topped the import list at 25 percent, followed by machine construction (22 percent), chemical and petrochemical production (14 percent), and food processing (12 percent). The major non-CIS trading partners included China, the United States, Germany, Switzerland, and Turkey.

Kyrgyzstan has accumulated a sizable foreign debt since 1993: nearly \$1 billion in 1998, or 54 percent of GDP. In 1999 the government reallocated \$60 million to prevent a possible default on servicing its loan. More than \$600 million is owed to multilateral institutions. The government restructured its loans to Turkey and Russia in 1996 and 1998, and the EBRD allowed it to delay payments on the \$75 million partially due in 1999. To prevent further defaults, the IMF extended an additional loan of \$29 million in 1999. A total of \$99.1 million was earmarked for the three-year period from January 2000 through December 2002. Between 1992 and 1999 the World Bank disbursed an estimated \$500 million to help the republic's transition to a market economy. Foreign direct investment, which is also critical in preventing further decline of the economy, amounted to nearly \$400 million between 1993 and 1999.

The Kyrgyz national currency, the som, was the first currency to be allowed to float freely in central Asia. Since its introduction in 1993 the som experienced a steady nominal depreciation from \$1 to 4 som to \$1 to 42 som in 1999. In real terms the som lost more than 50 percent of its value by 1998. Kyrgyz foreign reserve currency has fluctuated since 1998, as the government has attempted to address its foreign debt and current account obligations. The reserves in early 1999 could cover only three months of imports. Foreign reserves amounted to \$163 million, 70 percent of which was held in dollars.

KYRGYZSTAN—EDUCATION SYSTEM

The education system in Kyrgyzstan today is a synthesis of Soviet-type public education, Western-type private high schools and colleges, and newly emerging Muslim religious schools. The collapse of Communism and the emergence of democratization encouraged multiple forms of education, although the government plays a key role in regulating public education. The Ministry of Education is responsible for developing curriculum, setting national standards and educational policy, developing certification examinations, and awarding degrees. The ministry is divided into departments for general education, higher education, and material support. Below the ministry level, the education hierarchy includes the six provinces and the separate city of Bishkek, representatives from each of which provide input to the ministry on local conditions. The level of basic local administration is the district (*raion*); the district education officer hires faculty and appoints school inspectors and methodology specialists.

Instruction

General education has traditionally been accessible to nearly all children in Kyrgyzstan. In primary and secondary grades about 51 percent of students are female; that number increases to 55 percent in higher education, with a converse majority of males in vocational programs. There is little difference in school attendance between urban and rural areas or among the provinces. Higher education, however, became more accessible to urban and wealthy segments of the population as a consequence of independence in 1991.

In line with the reform of 1992, children start school at the age of six and are required to complete grade nine. The general education program has three stages: grades one through four, grades five through nine, and grades ten and eleven. Students completing grade nine may continue into advanced or specialized (college preparatory) secondary curricula or into a technical and vocational program. The school year is thirty-four weeks long, extending from the beginning of September until the end of May. The instruction week is twenty-five hours long for grades one through four and thirty-two hours for grades five through eleven.

In 1992 about 960,000 students were enrolled in general education courses, 42,000 in specialized secondary programs, 49,000 in vocational programs, and

58,000 in institutions of higher education. About 1,800 schools were in operation in 1992. That year Kyrgyzstan's state system had about 65,000 teachers, but an estimated 8,000 teachers resigned in 1992 alone because of poor salaries and a heavy workload that included double shifts for many. Emigration has also depleted the teaching staff. In 1993 the national pupil-teacher ratio for grades one through eleven was 14.4 to 1, slightly higher in rural areas, and considerably higher in the primary grades. The city of Bishkek, however, had a ratio of almost 19 to 1.

Despite restructuring there is a shortage of schools, and 37 percent of general education students attend schools operating in two or three shifts. Construction of new facilities has lagged behind enrollment growth, the rate of which has been nearly 3 percent per year.

General education is financed by district budgets, and college preparatory and higher education programs are financed by the national budget. For the former category of expenditures school principals negotiate their requirements with district officials, but the central government sets norms based on previous expenditures and on the relative resources of the provinces.

Curriculum

The language of instruction remains Russian, but the Kyrgyz language is becoming increasingly important as nonindigenous citizens leave the country and textbooks in Kyrgyz slowly become available. In 1992 the first major curriculum reform provided for mandatory foreign language study (English, French, or German) beginning in grade one; computer science courses in grades eight through eleven (a program hampered by lack of funds); and replacement of Soviet ideology with concepts of market economy and ethnic studies. The reformed curriculum requirements also leave room for elective courses, and instructional innovation is encouraged.

Higher Education

In 1997 Kyrgyzstan had forty-three institutions of higher learning, almost all of them located in Bishkek. Seven of the institutions were private and the remainder state funded. Approximately 4,700 faculty were employed there, of which only 150 had doctoral degrees and 1,715 were candidates, the step below the doctorate in the Soviet system, which is still used in Kyrgyzstan. The language of instruction remained predominantly Russian in the mid-1990s, although the use of Kyrgyz has increased yearly. Long-term plans call for a more Western style of university study, so that universities can begin to offer a baccalaureate degree. In 1992 President Akayev created a Slavic Uni-

versity in Bishkek to help Kyrgyzstan retain its population of educated Russians, for whom the increased "Kyrgyzzification" of education was a reason to emigrate. Because Russian students from outside the Russian Federation had lost their Soviet-era right to free education in Russian universities, Akayev hoped to provide a Russian-language institution for Russian-speaking students from all the Central Asian states.

The multicultural character of educational policy was underlined in the establishment of Bishkek Humanities University in 1994. The Humanities University has three major departments: the Department of Kyrgyz Philology with a major in Kyrgyz language and literature; the Department of Russian Philology with a major in Russian language and literature; the Department of Oriental Studies and International Relations with majors in Turkish, Korean, Japanese, Arabic, Persian, and Chinese languages; and the Department of German Philology with majors in German and English.

In 1996 the Kyrgyz Turkish Manas University was established as a sign of advancing cultural ties between predominantly Muslim Kyrgyzstan and the Muslim world. The official teaching languages of the university are Kyrgyz and Turkish. The university admitted one hundred students in the 1997–1998 academic year and five hundred students in the 2000–2001 academic year. The university is sponsored by the government of Kyrgyzstan and the Turkish National Lottery Administration. All education is free of charge, and some financial aid is provided to all students.

As soon as market reform began in Kyrgyzstan in 1992, the need for new managers with knowledge of market institutions became urgent. The government encouraged the establishment of the Bishkek International School of Management and Business, which was reorganized under the Academy of Management headed by the president of the Kyrgyz Republic on 19 March 1997. The Academy of Management is a government-sponsored university with a strong similarity to U.S. business schools that offer business training and masters of business administration degrees. At the same time it functions as the government academy, providing continuing education for government managers, as well as courses for managers and owners of private businesses.

During the transition from state socialism, the Kyrgyz education system experienced a drastic change. Ideologically there was a shift from justifying Communism and castigating capitalism to promoting market-economy ideology. Structurally there was an emergence of new forms of educational institutions. Despite the difficulties of the first years of transition

the government managed to continue educational reforms. Achievements include an increase in public expenditures for education from 4 percent of gross domestic product in 1993 to 5 percent in 1997; an increase in the enrollment ratio for all levels of education from 61 percent in 1993 to 71 percent in 1997; and an increase in the number of universities from eighteen in 1993 to forty-three in 1997. Among discouraging trends, on the other hand, was a decline in the tertiary enrollment ratio for women from 62 percent in 1993 to 51 percent in 1997.

KYRGYZSTAN—HISTORY The ancestors of today's Kyrgyz people were nomadic pastoralists living in the upper reaches of the Yenisey River in Siberia before migrating south to the Tian Shan region around the tenth century CE. They were ruled by various Turkic peoples until 1685, when they were conquered by the Mongols, who ruled the region until 1785, when they were displaced by the Manchus. In the early nineteenth century, the territory inhabited by the Kyrgyz was under the control of the khanate of Quqon. The Russians moved into the area in the mid-nineteenth century, and by 1876, the Kyrgyz were incorporated into the Russian empire as part of Russian Turkistan. The Russian empire exercised dominance over the khanate from 1876 until the Bolshevik Revolution of 1917, after which the entire Central Asian region commonly known as Turkistan was incorporated into the Soviet Union. The Kyrgyz staged major uprisings against Russian rule, but all failed, and many Kyrgyz migrated to the Pamirs and Afghanistan. In 1916, Russia's suppression of a massive Kyrgyz revolt led to many Kyrgyz deaths and a large immigration to China. In 1918, Kyrgyzstan was included in the newly created Turkistan Autonomous Soviet Socialist Republic.

The Soviet Period

In 1924, the Kara-Kyrgyz Autonomous Region was established, renamed the Kyrgyz Autonomous Republic

in 1926. The nomadic Kyrgyz tribes were forced to settle beginning in the 1920s, when the Soviets began to establish urban centers and impose agricultural collectivization. Kyrgyzstan was granted union republic status in 1936. Although some local self-rule was allowed in the 1920s, in the early 1930s, Joseph Stalin (1879–1953) launched massive purges of local cadres and cruelly collectivized the largely nomadic society.

In the Osh region, on the eastern edge of the fertile and densely populated Fergana Valley, a major ethnic conflict broke out between Kyrgyz and Uzbek residents in June 1990, leading to scores of deaths. That region, although a part of Kyrgyzstan, is populated mostly by ethnic Uzbeks. The conflict led many in Kyrgyzstan to demand the ouster of Kyrgyz Communist Party leader Absamat Masaliyev for mishandling the Osh events. When the Kyrgyz Supreme Soviet convened in October 1990, a democratic bloc of deputies narrowly defeated Masaliyev's bid for the post of president, a new office created by the progressive Soviet Communist Party General Secretary Mikhail Gorbachev (b. 1931), and elected Askar Akaev, ending Masaliyev's career.

The Post-Soviet Period

A forty-six-year-old ethnic Kyrgyz, Akaev was a well-respected computer engineer and mathematician who was president of the Kyrgyz Academy of Sciences. Because of this respect he was elected in 1989 to the newly created Soviet Congress of People's Deputies and served in its smaller Supreme Soviet legislative body. Similarly, he was elected a full member of the Soviet Communist Party Central Committee in 1990, a high-ranking party post. He opposed an August 1991 coup attempt against Gorbachev by Communist reactionaries and moved after the coup's collapse to suspend Kyrgyz Communist Party activities. Afterward, the Kyrgyz Supreme Soviet declared Kyrgyzstan an independent democratic state and scheduled a direct presidential election for October 1991. Akaev was overwhelmingly reaffirmed as president in this election. After the dissolution of the Soviet Union in early December 1991, Kyrgyzstan and other Central Asian states joined Russia and other former Soviet republics on 21 December 1991 in founding a cooperative group called the Commonwealth of Independent States (CIS). Akaev was reelected as president in December 1995, winning 72 percent of the vote in a three-way race. Legislative elections held that same year, although marred by some irregularities, were judged by international observers to be largely free and fair. Socialist-oriented parties won the largest proportion of party-contested seats, reflecting popular discontent

with economic decline and with scandals associated with several democrats, although the Kyrgyz Communist Party also showed poorly. Ethnic Kyrgyz won most seats. Akaev criticized the electoral process, stating that he would have preferred a mixed system of voting that included party lists, a social organization list, and quotas for women and ethnic minorities, so that the legislature would be representative in its composition.

About 95 percent of voters approved a 1996 referendum on constitutional changes that gave Akaev greater powers to veto legislation, as well as the power to dissolve the legislature and appoint all ministers (except the prime minister) without legislative confirmation while making impeachment more difficult. Despite those new restrictions on its powers, in 1997–1998 the legislature showed increasing signs of independence from executive power. Moving to further weaken it, Akaev spearheaded another referendum on 17 October 1998 that further curtailed its power. The referendum also provided for private land ownership, opposed by most in the legislature, and upheld freedom of the press.

In July 1998, the Kyrgyz Constitutional Court decided that Akaev could run for a third presidential term, even though the constitution permitted only two terms, on the technicality that Akaev's October 1991 election had occurred before the enactment of the current constitution. The Central Electoral Commission reported that Akaev won 74.5 percent of 1.46 million votes cast, but many international observers reported major irregularities, including bribing of voters, governmental intimidation of voters, media bias and intimidation, ballot box stuffing, and manipulation of vote tabulations. Monitors from the Organization for Security and Cooperation in Europe concluded that the election represented a further setback to democratization, although it hailed the democratic sentiments of many election officials and voters as promising for the future. Feliks Kulov, a major opposition leader who had been disqualified from running because he refused to take a Kyrgyz language competency test that was required for running, was convicted of corruption by a military tribunal in January 2001 and sentenced to a seven-year prison sentence. According to many observers, the irregularities of the election and the efforts to quash the opposition mark the growing authoritarianism of Akaev's rule.

Economic and Foreign Policy

Foreign assistance has been a significant factor in Kyrgyzstan's budget. The International Monetary Fund and the World Bank have been major lenders to support economic reforms and stabilization; in fact,

debt servicing has become an increasing burden to the Kyrgyz state budget. The United States and other developed nations also have provided major humanitarian and economic aid. After independence, the Kyrgyz economy declined by over 50 percent of GDP until beginning to recover in the late 1990s. The Russian financial crisis and declining world gold prices harmed the Kyrgyz economy in late 1998, contributing to reduced Kyrgyz exports to Russia, increased budget deficits, and increased inflation. The economy improved somewhat in 2000. Crime and corruption are threats to economic recovery. A major fraud shook the state natural-gas company and contributed to the failure of several banks in 1999. Illegal drug production in Kyrgyzstan, and drug trafficking, particularly along routes leading from Afghanistan through Tajikistan's Gorno Badakhshan region to Kyrgyzstan's city of Osh, increasingly threaten Kyrgyzstan's legitimate economy and the rule of law. In his inauguration address on 9 December 2000, Akaev pledged to carry out a ten-year economic development program that would create a new "Silk Road" transport network linking Kyrgyzstan to the outside world, combat corruption, and raise standards of living.

Akaev's March 1999 foreign-policy concept called for close relations with ancient Silk Road route nations, including China, former Soviet republics, and Turkey, Iran, India, and Pakistan. Akaev has stressed that landlocked Kyrgyzstan must rely on its neighbors for access to world markets. Akaev has stressed close relations with Russia, hoping for economic and trade benefits and security ties to alleviate concerns about Chinese and Uzbek intentions. Akaev and Boris Yeltsin (b. 1931) signed a Friendship and Cooperation Treaty in 1992, and Akaev gave early support to the 1992 CIS Collective Security Treaty, which called for mutual military assistance in case one of the signatories is attacked. Akaev has urged that the CIS cooperate on economic and security matters. Seeking amicable ties with China, Akaev joined leaders from Russia, Kazakhstan, and Tajikistan in 1996 and 1997 in signing agreements with China on demarcating and demilitarizing the former Soviet-Chinese border.

Outside Threats and Kyrgyzstan's Military

Although Akaev preferred that Kyrgyzstan not be faced with the expense of maintaining its own armed forces, he established a defense ministry and armed forces in 1992. Kyrgyzstan's armed forces numbered about ninety-two hundred ground, air force, and air defense troops in 2000. Most of the troops are ethnic Kyrgyz conscripts, although some officers are Russians. Kyrgyzstan has about three thousand border

troops. In joining NATO's Partnership for Peace (PFP) in June 1994, Akaev hoped that the PFP would provide aid in working out Kyrgyzstan's defense doctrine, converting defense industries, abating environmental problems, and overcoming natural disasters. Kyrgyz officers and troops frequently participate in PFP exercises.

Kyrgyzstan faced a major threat to its territorial integrity when several hundred Islamic extremist guerrillas and others invaded Kyrgyzstan in July–August 1999. The guerrillas seized hostages, including four Japanese geologists, and several Kyrgyz villages, stating that they would cease hostilities if Kyrgyzstan provided a safe haven for refugees and would release hostages if Uzbekistan released jailed extremists. The guerrillas were rumored to be seeking to create an Islamic state in south Kyrgyzstan as a springboard for a jihad in Uzbekistan. Some observers argued that the guerrillas were trying to seize major drug-trafficking routes in southern Kyrgyzstan. Kyrgyzstan called out reservists and admitted that its military was unprepared for combat. With air support from Uzbekistan and Kazakhstan, Kyrgyzstan succeeded in forcing virtually all the guerrillas into Tajikistan. According to some observers, the guerrilla incursion indicated both links among terrorist cells in Kyrgyzstan, Uzbekistan, and Russia (Chechnya) and the weakness of Kyrgyzstan's security forces. After the incursion, Kyrgyzstan worked to upgrade its defense capabilities and stepped up its defense cooperation with Russia, the CIS, and NATO's PFP.

A reported five hundred insurgents launched another attack in early August 2000, taking foreigners hostage and causing thousands of Kyrgyz to flee the area. Uzbekistan provided air and some other support, but Kyrgyz forces were largely responsible for defeating the insurgency by late October 2000. Hailing the performance of professional (rather than conscript) troops in halting the incursion, Kyrgyzstan in early 2001 considered both downsizing the military and converting it completely to contract-based forces.

KYRGYZSTAN—POLITICAL SYSTEM

Bordering Kazakhstan to the north, China to the east, Uzbekistan to the west, and Tajikistan to the south, Kyrgyzstan is a presidential republic that declared independence in 1991, shortly before the collapse of the Soviet Union. Its first elected president, Askar Akayev (b. 1944), was elected by the parliament in October 1990 and then elected in nationwide elections in October 1991. He was reelected to a second term in December 1995 and to a third term in October 2000.

Background

The Kyrgyz lived a pastoral-nomadic life along the upper reaches of the Yenisey river before migrating south to the Tian Shan region around the tenth century. Ruled by various Turkic peoples until 1685, the Kyrgyz tribes came under Mongol rule until 1785, when the Manchus conquered the region from the east. In the early nineteenth century the territory inhabited by the Kyrgyz came under the control of the khanate of Kokand. The Russian empire exercised dominance over the khanate from 1876 until the October Revolution of 1917, after which the entire Central Asian region commonly known as Turkistan was eventually incorporated into the Soviet Union. In 1918 the newly created Turkistan Autonomous Soviet Socialist Republic included Kyrgyzstan. In 1924 the Kyrgyz Autonomous Oblast (region) was established, and

two years later, it was renamed the Kyrgyz Soviet Socialist Republic.

The Kyrgyz tribes were forced to settle beginning in the 1920s, when Soviet administrative rule began to establish urban centers and impose agricultural collectivization. Subsequently, ethnic Russians dominated the government structures until the late 1950s. Not until Leonid Brezhnev headed the Soviet Union (1962–1982) did Soviet central authority finally allow an ethnic Kyrgyz elite to assume the republic's top posts. Brezhnev encouraged a patrimonial system and demanded loyalty to Moscow in exchange for partial transfer of power to local cadres. This arrangement fostered systemic corruption that still persists.

The Soviet Union's election of Mikhail Gorbachev in 1985 and the subsequent introduction of perestroika and glasnost allowed the emergence of informal political and social movements and organizations with various agendas. Although the Communist Party opposed these movements, it could not control the growing demand for greater political freedom or contain ethnic hostility. In 1989 one such organization, Osh Aymagi, called for the distribution of vacant land among the ethnic Kyrgyz to alleviate acute housing shortages in the southern region of Osh. Uzbek and Kyrgyz inhabitants clashed violently in disputes over land and housing, with casualties estimated at one thousand. In October 1990, two months after the Osh disturbances, the Kyrgyz Supreme Soviet called for the selection of a new president to restore normalcy. Askar Akayev, a physicist by profession, replaced Abasamat Masaliyev and abolished the post of First Secretary of the Communist Party.

Akayev called for liberalization of the polity and encouraged political pluralism. Later he introduced sweeping economic reforms that accelerated the republic's transition to a market economy. In 1991 Akayev replaced the Council of Ministers with a Western-style cabinet and appointed reformist politicians. A combination of parliamentary hostility and allegations of high-level corruption led to an open confrontation between the reform-minded president and the largely Communist-oriented parliament. In 1994 a referendum led to the dissolution of the old unicameral parliament in favor of a bicameral legislature. Since 1995 Akayev has curbed the earlier press and political freedoms, forcing the opposition to limit its criticism of the government and its policies.

Constitution and Institutions

The first post-Communist constitution of Kyrgyzstan, adopted on 5 May 1993, called for the sepa-

ration of powers and a limited government. Subsequently, however, several amendments increased presidential powers to parliament's detriment. These amendments included a provision for creating a small 105-seat bicameral assembly, the Jogorku Kenesh, to replace the 313-seat Supreme Soviet. The new parliament had a permanent thirty-five-member lower house and a seventy-member People's Assembly (upper house). In October 1998 yet another referendum was held to amend the constitution to allow Akayev to stand for a third term. The voters also approved a constitutional provision calling for an increase in the representation in the lower house to sixty-seven and a reduction in the membership of the upper house to thirty-eight. These changes took effect in 1999.

Parliament members are elected for a five-year term. The president is elected directly for a five-year term with tenure in office limited to two terms. He is head of state and commander-in-chief and holds extensive executive powers. The prime minister is appointed by the president, subject to confirmation by the parliament. Although the constitution calls for an independent judicial branch, Akayev is largely in control. The president nominates appointments to the highest judicial bodies, the Constitutional Court, the Supreme Court, and the Higher Court of Arbitration. In 1996 President Akayev established the Security Council, which functions as an inner cabinet. Unlike the cabinet of ministers, this thirteen-member council is not accountable to the parliament and has become the main instrument of policy making in the republic.

The Kyrgyz political structure also allows for the establishment of a multiparty system. Since 1991 a number of political parties ranging from nationalist to social democratic and Communist have been registered by the justice ministry. However, the relative power of these parties has been significantly diminished as a result of constitutional amendments increasing the power of the executive branch. The Party of the Communists of Kyrgyzstan has been one of the largest opposition parties. The Ar-Namys (Dignity) Party, established by a presidential opponent, Felix Kulov, in 1999, has been kept under strict scrutiny and its leader jailed. Nationalist parties such as Asaba and Erkin have also been marginalized.

Regional and International Relations

Kyrgyzstan became a member of the Central Asian Union, joining Kazakhstan, Uzbekistan, and Tajikistan, in January 1994. Designed to create a single economic space, the union has accomplished very little in this respect. Several perennial disputes continue to hamper efforts to bring about meaningful regional

economic reforms that would benefit each republic. Border disputes, outstanding water, gas, and electricity bills, and competition for regional leadership have driven a political wedge between the member countries. In addition to these issues, the growth of militant Muslim activities has become a source of friction between Uzbekistan and Kyrgyzstan. In the summer of 1999 a group of Uzbek Muslim activists crossed into Kyrgyzstan from Tajikistan and held several Japanese hostages for more than three months.

Kyrgyzstan's structural dependence on Russia has forced the republic to be extremely flexible in its dealing with Moscow. Akayev has signed bilateral and multilateral security treaties with Russia. In 1996 Kyrgyzstan joined a customs union treaty with Kazakstan, Russia, and Belarus, which has yet to produce positive economic results. But Kyrgyzstan's admission to the World Trade Organization in 1999—which requires strict adherence to its membership provisions—has drawn criticism from Russia, whose trade regulations do not conform to international conventions.

Kyrgyzstan has also established ties with China and is a signatory to the Shanghai Five treaty, which unites China, Kazakstan, Kyrgyzstan, Russia, and Tajikistan. These parties signed the treaty in April 1997 as a security guarantee to reduce tensions along the old Chinese-Soviet border. To appease China, Kyrgyzstan has curbed the activities of Muslim Uighur separatists on its territory, a policy that has led to many arrests and extraditions. Xinjiang Uygur, an autonomous region in northwestern China, is home to a relatively large Uighur population, and an estimated 40,000 Uighur Chinese live in Kyrgyzstan.

At the same time, Akayev has established close ties with the European countries whose assistance has been critical in facilitating economic transition. The United States, together with major international donor agencies, has provided economic and technical assistance since 1993. Akayev has embraced the Partnership for Peace program, and Kyrgyz troops have been participating in a Central Asian peacekeeping battalion, which has held joint exercises on an annual basis since 1996.

KYUSHU (2001 pop. 13.4 million). Kyushu is located at the westernmost part of the Japanese archipelago and consists of numerous islands stretching toward Taiwan to the southwest. It is made up of the prefectures of Fukuoka, Nagasaki, Saga, Kumamoto, Oita, Miyazaki, and Kagoshima. When the Kyushu region is referred to as a larger administrative unit, it includes Okinawa Prefecture and has a total area of 44,420 square kilometers. Historically, Kyushu has been the contact point between Japan and foreign culture.

The northern part of Kyushu is characterized by a coastal climate with warm temperatures and rainfall, the Inland Sea coast has a typical Inland Sea climate, and the southern part has a Pacific Ocean coastal climate. Typhoons often hit Kyushu in August and September. The geography of Kyushu is very diverse and is characterized by volcanoes, coastal plains, and hot springs. The active volcano Mount Aso (1,592 meters) in Aso Kujū National Park has the world's largest caldera, or crater. Others active volcanoes are Unzen-dake and Sakurajima. The latter is a stratovolcano composed of the peaks Kitadake (1,117 meters), Nakadake (1,060 meters), and Minamidake (1,040 meters). Most of the plateaus in southern Kyushu are covered with volcanic ash and pumice (*shirasu*). Heavy rains very often cause landslides. Agriculture on the *shirasu* is difficult because of frequent drought, so to cope with this, irrigation projects have been developed. Agriculture has become more commercialized and diversified since World War II, and the products include rice, vegetables, sweet potatoes, tobacco, mandarin oranges, tea, and strawberries, which are grown

in greenhouses. Southern Kyushu is a leading producer of beef in Japan, and fishing is important particularly on the west coast. Tourism is also an important economic activity.

Kyushu leads the nation in industrial production in many fields, accounting for almost one-third of the nation's shipbuilding, motorcycle manufacturing, and production of integrated circuits. The Kita-Kyushu Industrial Area is a major industrial area of Japan. Its development began in 1901 with the mining industry (Yawata Iron Mill); however, the iron and steel industries have since declined because of competition from China and South Korea. New industries, including electronics, precision instruments, and information and communication technologies, now account for an increasing share of this area's economic activity. When a part of Yamaguchi Prefecture is added, this region is called "Kyushu-Yamaguchi Economic Sphere." Traditional industries such as furniture making, ceramics, and distilled liquor (*shochu*) are also still important. Most of the high urban functions (information technologies, leisure activities, and international exchange) are centered in and around Fukuoka city, which had a 2001 population of 1.28 million. Secondary cities are Kitakyushu (2001 pop. 1 million), Kumamoto (2001 pop. 650,000), Kagoshima City (2001 pop. 543,000), Oita (2001 pop. 436,000), and Nagasaki (2001 pop. 421,000).

LABU SAYONG The *labu Sayong* (water calabash) is a Malay earthenware container. It takes its shape from the gourd or starfruit and is used as a water container. The clay used for Malay pottery is a terra-cotta clay found by streams, riverbanks, and paddy fields. A potter's wheel is not used in Malay pottery making. The *labu* is coated with river silt with a high iron content, and the surface of the pottery is burnished to a smooth polish with a pebble, a technique carried out by potters at the town of Sayong on the Perak River in West Malaysia. At Sayong, a pot is placed inverted on a rack made from tree branches, with a fire pit below, and after four to five hours the pot is placed into the glowing embers. The color can range from yellowish brown to rust-red, depending on the iron content. A pot is usually decorated with foliage motifs. It was traditionally part of the paraphernalia used in rituals performed during a healing ceremony whereby the water kept in the *labu* was blessed with incantations. Traditional Malay pottery sites are found on or near ancient routes that connect the tributaries of the Perak and Pahang Rivers. One such site is Sayong.

LAC LONG QUAN (b. 2879 BCE), mythological founder of the kingdoms of Vietnam and southern

A woman making a *labu Sayong* in the village of Kepala Bendang, about 300 kilometers north of Kuala Lumpur. The vessels are the main source of income for the 500 people in the village and in 2000 sold for from \$1.30 to \$21 each. (REUTERS NEWMEDIA INC./CORBIS)

China. Lac Long Quan is the mythological descendant of Than Nong (Shen Nong in Chinese) and the founder of the first Vietnamese kingdom, which received the name Van Lang. His name means the dragon (*long*) king or chief (*quan*) of the Lac family or clan. According to legend, Shen Nong sent his great-great grandson, King De Minh (De Ming in Chinese), on an inspection tour of south China. Arriving at the Wu Ling Mountains in Hunan, De Minh married an immortal woman and sired several sons. Loc Tuc, one of his younger sons, ruled over the south of China under the title of King Duong Vuong. His land was called Xich Quy.

In 2879 BCE, Loc Tuc's son, Lac Long Quan, was born. He too married an immortal woman, Au Co, who gave birth to a pouch containing one hundred eggs, producing one hundred children. Legend has it that after he succeeded his father to the throne of Xich Quy, he told his wife that their marriage could not last because he was of the dragon race and therefore belonged to the water, whereas she, an immortal, belonged to the mountains. He suggested that she take fifty of their children and establish them in the mountains, while he would live on the coastal plains with the other fifty. He then sent one of his children to rule over a southern part of his kingdom, in a country called Van Lang (Vietnam). That son's descendants were known as the Hung kings. There were eighteen in all, and they ruled from approximately 2879 BCE to 258 BCE.

LACQUERWARE Wares made of wood, porcelain, or metal to which lacquer has been applied are known as lacquerware. Lacquer is the sap or resin of the lacquer (*rhus verniciflua*) or varnish tree. The tree is native to central and southern China and possibly to Japan. When applied to wood, porcelain, or metal, the lacquer gives the wares a hard, smooth, transparent, and shiny surface. True or Far Eastern Asian lacquerware has been used since ancient times in China and Japan. The natural sap of the lacquer tree has been used as a protective and decorative varnish for art objects as well as those used in everyday living. The lacquer is applied in thin layers on the wooden objects or inlaid on metal wares. When solidified, lacquer also has been used as a medium for sculpture. Like porcelain, lacquerware has been much appreciated not only

in Asia but also Europe, where it has been collected since the sixteenth and seventeenth centuries. Lacquerware includes beautifully decorated items, and many that were household utensils provided waterproof and durable service in Asian households. They would have been popular in Asia where wood was once plentiful. Wood fashioned into lacquerware provided great versatility, as evident from the wide range of objects included among the wares.

East Asian lacquer is not at all similar to the type of lacquer that is the basis of some of the varnishes used in the "japanning" of European furniture from the sixteenth century onward. There are differences in chemical composition and also sources, since the English resin lac or shellac comes from a substance deposited on trees by certain species of insects.

Two broad classes of lacquer objects are distinguished. In one category, the lacquer has been applied largely for the purposes of protection and decoration. Therefore, the lacquer application does not change the form of the objects, such as wooden chairs, so decorated. In the second category, the objects are made mostly of leather, supported by a nonlacquer core or substrate. These objects include lacquer boxes and containers. The core can be hemp cloth, wood, or metal, but it is encased in a lacquer coating thick enough to modify the form of the object. The lacquer coating gives the objects a plump, fleshy shape that can be decorated by carving or by using techniques of inlay and painting.

Lacquer objects, including all those in the second category and also those in the first category in which lacquer forms a significant part of the decoration, are works of art. Other objects, such as lacquered chopsticks, would be essentially lacquered. Lacquer as an art form developed in China. There was pictorial or surface decoration and also carving of the lacquer. After the tenth century, the techniques of *qiangjin* (engraved gold), *diaotian* (filled in), and *diaoqi* (carved lacquer) gradually evolved. Lacquer art dates from about 1600 BCE, during the Shang dynasty in China (1766–1045 BCE). Carved lacquer is a uniquely Chinese achievement. It is considered lacquer art in its pure form.

In Japan, lacquer art surface decoration is paramount. During the Nara period (710–794 CE), lacquerware with gold and silver foil inlay was produced. This was considered to have been transmitted from Tang (618–907 CE) China. *Makie* (gold or silver) lacquer is a unique and supreme achievement of Japanese decorative art. Japanese Negoro ware is also well known. These are objects with a thin layer of lacquer

LACQUERWARE

Lacquerware is an important export from some nations in Southeast Asia. The following excerpt describes in much detail how lacquerware was made for personal use in Myanmar (Burma) in the late 1800s.

Drinking cups and boxes for carrying the necessary ingredients for betel-chewing are made of lacquered-ware and are manufactured principally in Upper Burma, but they are also made to some extent in the Prome district. A box of the required size and shape is prepared of exceedingly fine bamboo wicker-work; the finer this is the more valuable is the box. On this is evenly applied a coat of dark pure vegetable oil, known as thit-tsee and obtained from the *Melanorrhoea usitatissima*, which is allowed to dry thoroughly. When it is dry a paste composed of pure sawdust, thit-tsee and rice-water is thickly and evenly laid on and when this is dry, the box is fastened to a rude lathe and carefully smoothed with a piece of silicious bamboo, which is used instead of sand-paper. The next coat consists of a paste of finely-powdered bone-ashes and thit-tsee which is allowed to dry and smoothed in the same way and the grounding is now complete. In colouring the boxes three colours only are used but of different shades. For *yellow*, yellow orpiment is carefully pounded and washed several times, being allowed to dry between washing, until a pure and impalpable powder remains, reduced three parts in bulk from the raw powder; with this is intimately mixed a small portion of a kind of tragacanth and the whole dried in the sun. This is worked with a vegetable oil called shan-tsee to the proper consistency and a little thit-tsee is added but not enough to injure the colour. For *green* finely-ground indigo is added to the orpiment in a sufficient proportion to give the required shade and the rest of the process is the same. *Red* is prepared from finely-ground vermillion mixed with a little thit-tsee and worked up with shan-tsee. A coat of the colour and shade intended for the foundation is thickly and evenly applied and when it is thoroughly dry the pattern which is to appear in the next shade or colour is engraved with a style and the colouring matter applied all over the box. When it is dry the box is placed on the lathe and the second colour removed by means of a bit of silicious bamboo so that it remains only in the lines of the engraved pattern. A similar process is followed for the different colours till the design is complete. Lastly one or two coats of a varnish of eight parts thit-tsee (wood-oil) and one part shan-tsee are applied.

that has usually worn away, leaving a surface that has the appearance of an abstract painting. In Korea, lacquer surfaces were decorated with metal foil inlay during the Unified Shilla period (668–935 CE), which was

more or less contemporary with the Tang period in China. Subsequently, Korea developed its own style of lacquerware, the finest of which appeared during the Koryo (918–1392) and early Choson (1392–1910)

periods, with fine mother-of-pearl inlay often in combination with tortoiseshell. Another area in East Asia that is well known for its tradition of fine lacquer manufacture is the Ryukyu Islands. Now part of Japan, the islands were once a kingdom, and the growth and decline of the lacquer industry actually paralleled that of the kingdom, which began in the fourteenth century and ended in 1872. Chinese lacquer techniques were a major influence on Ryukyuan lacquer objects.

Lacquerware comprised large and small objects from chopsticks, bowls, cups, and vases to coffers, bamboo baskets, and containers, as well as screens and even suits of leather armor. The lacquer vases produced in Soochow, China, resembled fine porcelain with their intricate carvings on wood stained in coral and then lacquered. These were made for the emperor during the Ch'ien Lung period (1736–1796) of the Qing dynasty (1644–1912). They were among the treasures used in the summer palace. Other types of lacquerware include the Japanese ware in black and gold lacquer inlaid with gold, silver, and mother-of-pearl. Chinese and Japanese screens of lacquered, painted, and gilt wood are familiar not only in Asian homes and institutions today but also in fine arts museums. These screens are often painted by hand, sometimes by well-known artists or copyists. Korean suits of armor of the seventeenth and eighteenth centuries, made of gold-lacquered small plates, gilt-copper brown lacquer plates, and scarlet, are prized collectors' items.

Modern lacquerware from Japan and Korea is highly finished in appearance when compared to that still produced in China and other parts of Southeast Asia. The Straits Chinese or Peranakan society in Southeast Asia reproduced lacquered basketry, originally produced in China, for carrying special gifts offered to deities in temples or during occasions such as weddings and festivals. Lacquerware items remain important in most East and Southeast Asian households, although they tend to be more expensive than either ceramics or plastic.

LADAKH (2001 est. pop. 118,000). Ladakh, formerly called Middle Tibet, is a mountainous district of Jammu and Kashmir that forms the northernmost area of the Indian Republic. It covers 82,665 square kilometers of very high and rugged country, and is the biggest administrative district anywhere in India. Elevations range from 3,000 to 5,000 meters. Aside from its mountains, the most important physical feature of Ladakh is the great valley of the Indus River, which crosses the entire district as it flows northwestward from its source in Tibet, thus separating the Karakoram Range from the Zaskar Range. Near Leh, the district headquarters, the Indus is 3,350 meters above sea level. The observatory at Leh is said to be the most elevated one in Asia. It records a mean annual temperature of 4.4°C, dropping in the coldest months (January and February) to about –8°C.

The culture is basically a Tibetan one, with numerous lamaistic monasteries. But while the bulk of the population are Lamaistic Buddhists, the Baltis in the west are Shi'ite Muslims. There is very little arable land, but this remote region abounds in valuable minerals: lead, gold, copper, sulfur, coal, iron, borax, gypsum, and precious stones. Ladakh has long been an area involved in trans-Himalayan trade, difficult as this is.

LAHORE (1999 est. pop. 7 million). Lahore is the capital of the Punjab province of Pakistan and is the country's cultural and industrial center and its second-largest city. There are contrary views as to the origin of its name. According to folklore, Lahore was established by Loh, the son of Rama, the renowned hero of the Hindu epic the *Ramayana*. However, others believe it derives from the word *loh-awar*, which means a fort as strong as iron and which refers to the fort built to protect the city.

Historically, Lahore has played a significant role in the region. It has been the capital of Punjab province for almost a thousand years. The city first achieved this status during the Ghaznavid dynasty (977–1187). It continued as such under the rule of Muhammad of Ghor as well as under several sultans of Delhi. Qutb-ud-din Aibak became the first Muslim sultan in

the area after being crowned in Lahore in 1206. From 1524 to 1752, the Mughal dynasty (1526–1857) raised the level of prominence of Lahore by adding considerably to its architecture and size. Akbar (reigned 1556–1605) was responsible for overseeing the construction of the Lahore Fort, which was built over an old fort. In addition, he had a red-brick wall with twelve impressive gates constructed around the city. Shah Jahan (1592–1666) and Janghvir (reigned 1605–1627) contributed palaces, tombs, and gardens to the city landscape and enlarged the fort. The last great Mughal, Aurangzeb, had the famous monument the Badshahi Mosque built along with the Alamgiri gateway to the fort.

The eighteenth century witnessed constant invasions throughout the region, which laid Lahore open to capture by Ranjit Singh (reigned 1801–1839) in 1799. His control over Lahore afforded him the legitimacy that he needed to become emperor. Unfortunately, the Sikh era was not kind to Lahore; the existing structures were not well maintained, and few new ones were built. When the British arrived in Lahore in 1849,

The Badshahi Mosque in Lahore. (CORBIS)

**FORT AND SHALAMAR
GARDENS IN LAHORE—
WORLD HERITAGE SITE**

Shah Jahan's Mughal gardens and fort were designated UNESCO World Heritage Sites in 1981 and added to the list of World Heritage Sites in Danger in 1999 when the garden's water tanks were destroyed. It is hoped that growing international awareness will help preserve the beautiful terraced gardens and gilded marble fort.

they initially constructed practical facilities for the administration of the capital. Later, however, they worked to preserve some of the ancient structures and eventually added their own Victorian style of architecture, named Mughal-Gothic, to the city.

In 1940, Lahore was the site of a significant Muslim League session during which the Lahore Resolution was proposed. This resolution called for a separate state for the Muslim population of India, leading to the creation of Pakistan on 14 August 1947. Lahore is now a major industrial and cultural center and home to several leading institutions of higher education. Its mix of numerous styles of architecture, from ancient to modern, is a significant tourist attraction.

LAKSAMANA *Laksamana* is a Malay honorific title given to the supreme military commander, the counterpart of the highest Malay state official, the *bendahara*. This is expressed in the saying "The *bendahara* rules the land, the *laksamana* rules the sea." Since the Malay states were generally maritime empires, the position of *laksamana* became equated with "admiral." He was the "ruler of the sea" and the "warden of the coast." It is unknown when the term first came to be used, but it probably derives from Laksmana, the name

of Rama's half-brother in the *Ramayana*. The oldest written Malay version of the Indian *Ramayana* dates from between the thirteenth and seventeenth centuries. In this epic it is told that Laksamana drew a magic figure (*baris Laksamana*, i.e., "Laksamana's line") to protect Sita against the assaults of Ravana.

At the court of Perak (and perhaps also at other Malay courts) the *laksamana*, when ashore, was also in charge of the sultan's harem. During processions the *laksamana's* post was by the sultan's palanquin. When the sultan rode in state upon an elephant the *laksamana* followed, bearing the ruler's sword. Considering the *laksamana's* position and functions, it is worth noting that in the *Ramayana*, Laksamana behaves toward Rama more like a servant than a prince. In the Malay version of the *Ramayana*, Laksamana is furthermore presented as a great ascetic, which might explain why he could be entrusted with the task of looking after the sultan's harem.

According to the *Sejarah Melayu* (Malay Annals), which depicts the world of Melaka in the fifteenth and early sixteenth centuries, the association of the name with the office was fortuitous. Hang Tuah, the legendary fifteenth-century Malay hero, was always comparing himself to the epic Laksamana. In time he was nicknamed Laksamana and finally given the name as a title. This title later went to his successors with his office of warden of the coast. In the *Sejarah Melayu*, which were probably commissioned by a Melaka *bendahara*, the activities of the *bendahara* steal the spotlight from all other senior officials. The importance of the *laksamana's* office, however, cannot be ignored, because of his military prominence, commanding the *orang laut* fleets. The Orang Laut—the sea and river peoples in the western half of the Malay-Indonesian archipelago—were crucial to Melaka's security and prosperity, for they represented a strong naval power and transported sea products to Melaka's busy market. After the Portuguese conquered Melaka in 1511, the *laksamana's* position in the sultanate of Johor, Melaka's successor state, became more important than that of the *bendahara's*.

LAKSHADWEEP (2001 est. pop. 61,000). Lakshadweep is an Indian union territory (capital, Kavaratti) that includes the Laccadive, Minicoy, and Amindivi islands, which are scattered in the Arabian Sea some 300 kilometers off the Malabar Coast of South India. An isolated and picturesque archipelago of twelve tropical atolls and three reefs and submerged sand banks, Lakshadweep's thirty-six small islands cover a total area of only thirty-two square kilometers located between between 8° and 12°N latitude, 71° and 74°E longitude. The coral archipelago is built on the submarine Chagos Ridge, like the Maldives archipelago farther south. The Amindivi Islands occupy the northern part of Lakshadweep, the Laccadive Islands the central part, and Minicoy is the southernmost island.

Due to their exposed location, the islands were ruled by the Portuguese, Indian rajas, Tipoo sultans, and British rulers until the islands were absorbed into independent India. Ten of the islands are inhabited; island-to-island traffic is either by boat or helicopter. Though originally Hindu, the population has followed the Muslim faith since the fourteenth century. They are classified as Scheduled Tribes (ethnic subgroups who have faced discrimination and economic privations). They speak Malayalam, except on Minicoy, where they speak a Sinhalese dialect. The isolation of Lakshadweep's population has meant that they suffer from health and education deficits when compared with mainland Peninsular India. Lakshadweep is seriously overpopulated, with nearly two thousand persons per square kilometer, and this overpopulation is causing tremendous economic problems as the economy is mainly based on coconut products, fisheries, and tropical fruit and vegetable gardening, though dairies and poultry farms were established in the 1980s. Tourism was introduced in 1988 with the opening of the resort on Bingaram Island, intended to diversify the narrow and backward economy. This formerly uninhabited island is ringed by a fringed coral reef. The favorable dry and sunny tourist season is from October to April. At other times of the year, the channels between the islands are often affected by harmful currents. Heavy monsoon storms also visit the Lakshadweep islands and seas.

LAND MINES First identified as a humanitarian concern in Afghanistan and Cambodia in the late 1980s, land mines have become an international issue. Afghanistan, Cambodia, and Angola are the world's most seriously affected countries; other Asian countries adversely affected by land mines include Myanmar (Burma), Iran, Iraq, Jordan, Laos, Lebanon, Sri Lanka, Tajikistan, Turkey, and Vietnam.

Land mines continue to endanger civilians long after wars end. The Convention on the Prohibition of the Use, Stockpiling, Production, and Transfer of Anti-Personnel Mines and on Their Destruction was signed in Ottawa in 1997; by March 2001, 139 states had signed and 111 had ratified. Important Asian states that have not signed include Pakistan, India, and China. The treaty, negotiated outside regular disarmament forums, was an outstanding achievement, and the 1997 Nobel Peace Prize was awarded to the International Campaign to Ban Landmines (ICBL) and its coordinator, American activist Jody Williams (b. 1950).

Although not a subject of the convention, antivehicle land mines and unexploded ordnance (UXO) are nevertheless significant threats. In Laos, and

more recently in Afghanistan, for instance, so-called bomblets—small submunitions from U.S. cluster bombs—often fail to explode after hitting the ground, posing great risk for civilians.

In addition to causing injury and death, land mines can force nomads to change their traditional migration patterns (as in Afghanistan), prevent agricultural cultivation (as in Cambodia), or block important infrastructure. In Afghanistan and Cambodia, land mines became a significant concern when repatriated refugees returned to areas with massive mine problems.

Since the late 1980s, new humanitarian projects have been designed to increase awareness of the risks associated with land mines. Unfortunately, these efforts have been less successful among populations who have lived with mines for years. In many cases, civilians will enter a minefield by compulsion, searching for basic means of survival. Although the cost is often high and progress slow, Humanitarian mine clearance operations have made a significant impact. A 1999 U.N. report states that the Afghanistan program had cleared 166 square kilometers of an identified 311-square-kilometer high-priority area. By mid-2000,

UNICEF ON LAND MINES

"Land mines pose particular dangers for children. Naturally curious, children are likely to pick up strange objects, such as the infamous toy-like 'butterfly' mines that Soviet forces spread by the millions in Afghanistan. In northern Iraq, Kurdish children have used round mines as wheels for toy trucks, while in Cambodia, children use B40 anti-personnel mines to play 'boules', notes the report."

"Land mines also have more catastrophic effects on children, whose small bodies succumb more readily to the horrific injuries mines inflict. In Cambodia, an average of 20 per cent of children injured by mines and unexploded ordnance die from their injuries. Children who manage to survive explosions are likely to be more seriously injured than adults, and often permanently disabled. Because a child's bones grow faster than the surrounding tissue, a wound may require repeated amputation and a new artificial limb as often as every six months—although the prosthesis is not likely to be available. Moreover, competing demands for scarce medical services also mean that children injured by mines seldom receive the care they deserve. Only 10–20 per cent of children disabled by mines in El Salvador receive any rehabilitative therapy."

however, some countries with substantial landmine or UXO problems, including Vietnam and Tajikistan, still lacked clearance capacity.

LANGUAGE PURIFICATION Purification is a conscious, deliberate attempt to remove from a language the elements that are borrowed from a "foreign" language or even from a dialect of the language. Borrowing and purification are products of language contact and conflict and occur on all levels of language use and structure.

Asia is an area of intensive language contact and conflict. The continent has the largest number of languages, 2,165, which constitutes 32 percent of the total 6,703 languages of the world (1996 data). In Asia, some of the world's most important classical languages—Arabic, Chinese, Persian, and Sanskrit—have strongly influenced other tongues. Although the phenomenon has occurred in premodern societies as well, purifying language from "foreignisms" has turned into "purist movements" in modern times. Thus purism is closely tied to Asia's nationalist movements from Korea in the east to Kurdistan in the west and is often a nationalist response to domination, assimilation, and "linguistic imperialism."

Purification varies in scope, forms, and intensity. For instance, while classical Tibetan and Chinese are known for their conservatism, Japanese has been more receptive to loans from diverse languages. In each language, too, purist attitudes and behaviors constitute a spectrum, ranging from "linguistic chauvinism" or "linguistic xenophobia" to moderate purges of "foreign" elements. Purist movements are, at the same time, important trends in the formation of standard national languages such as Baluchi, Korean, Mongolian, Nepali, and Tamil.

Loanwords are the main, but not only, targets of purification. Vietnamese and Korean, for example, finally discarded the Chinese writing system in the latter part of the twentieth century, while Japanese continues to use it in mixed and modified forms. In West Asia, Turkey, under the rule of nationalists, re-

placed the Arabic script with the Roman in 1928 but was less successful in its sweeping purge of Arabic and Persian loanwords. Extremist purists in Kurdish have tried to purge phonemes and letters of the alphabet that they consider to be imposed by Arabic.

Languages in all parts of Asia are experiencing increasing contact and conflict in the unceasing process of globalization, the formation of a "world linguistic order," characterized by unequal relations among languages, proliferation of new communication technologies, and ongoing ethnic, nationalist, and religious conflicts. Under these conditions, which also perpetrate "language death" and "linguicide" (the deliberate killing of a language), speakers of endangered tongues resist by various means, especially purification.

LAO PEOPLE'S REVOLUTIONARY PARTY

The Lao People's Revolutionary Party (LPRP) has been the sole party governing Laos since 1975. The Laotian prince Souphanouvong (1901–1995) and Kaysone Phomvihane (1920–1992), both influenced by the Indochinese Communist Party, emerged as Laos's communist leaders and cofounded the party in 1955 as the Lao People's Party. In 1956, the party was renamed the Lao People's Revolutionary Party (LPRP) and operated in secrecy. The party emerged to govern Laos when the communists took power in 1975. The LPRP is Marxist-Leninist and, like other Lao institutions, is influenced by the North Vietnamese model. The party planned to transform Lao society into a socialist one by completely eliminating traces of French colonialism and American imperialism through the leadership of the party in all aspects of society. Power was held by the small politburo of the party's central committee and a secretariat that was abolished in 1991.

The relaxation of socialist ideology began in the 1980s due to the failure of communist initiatives with *chintanakan mai* (New Economic Mechanism). *Chintanakan mai* lifted restrictions and introduced new policies such as private land ownership and a free market economy to Laos. At the fifth party congress in 1991, many party veterans such as Souphanouvong retired from the central committee, but the party re-

mained in complete power. After the death of Kaysone in 1992, leadership passed to the third most powerful man in the party, General Khamthay Siphandon, the current president. The LPRP continues to govern Laos with a membership of approximately 1.1 percent of the population.

LAO SHE (1899–1966), Chinese author and playwright. Lao She, pen name for Shu Qingchun, was one of modern China's most celebrated humorists; his satirical novels, short stories, and plays are highly appreciated. He is also renowned for his sympathy with the underprivileged. After graduating from Beijing Teacher's College, in 1924 he went to England, where he taught Mandarin Chinese, studied at the School of Oriental and African Studies, and was inspired by reading the novels of Charles Dickens. When he returned to China in 1930, Lao had already written three novels and had achieved a reputation as a humorous writer, and he continued to write while teaching. By his death in 1966 in the early stages of the Cultural Revolution (1966–1976), Lao had written more than twenty plays in praise of the Communist Chinese regime. Among his most famous works are the 1938 novel *Luotuo Xiangzi* (Xiangzi the Camel, also known as *Rickshaw Boy*) and the 1957 play *Chaguan* (Teahouse).

LAOS—PROFILE (2001 pop. 5.6 million). The landlocked and multiethnic Lao People's Democratic Republic has passed through many vicissitudes of history. It has maintained its unity and national identity in spite of foreign invasions and interference, poverty, and ideological conflict.

Geography

Situated in the northern part of the Indochinese peninsula in mainland Southeast Asia, Laos is bordered by China in the north, Myanmar (Burma) in the northwest, Thailand to the south and west, Vietnam to the east, and Cambodia to the south. It is 236,800 square kilometers in area. Some 1,835 kilometers of the Mekong river flows through it from north to south. Rugged lands, dense forests and mountainous terrain dominate most of the country. Two-thirds of the country is thick subtropical forest. Laos has a tropical monsoon climate, with a rainy season from May to October and a dry season from November to April.

People

With an average of nineteen people per square kilometer, Laos is one of the least densely populated countries in Asia. There are four broad population groupings in Laos: the Lao Lum (valley Lao, 68 percent), the Lao Theung (mountainside Lao, 22 percent), Lao Sung (mountaintop Lao, including Hmong and Yao, 9 percent), and ethnic Chinese and Vietnamese (1 percent). Diverse ethnic groups have settled in Laos in different periods of its history. The Lao Lum, originally a Tai people from southern China,

LAOS

Country name: Lao People's Democratic Republic
Area: 236,800 sq km
Population: 5,635,967 (July 2001 est.)
Population growth rate: 2.48% (2001 est.)
Birth rate: 37.84 births/1,000 population (2001 est.)
Death rate: 13.02 deaths/1,000 population (2001 est.)
Sex ratio: 0.98 male(s)/female (2001 est.)
Infant mortality rate: 92.89 deaths/1,000 live births (2001 est.)
Life expectancy at birth: total population: 53.48 years, male: 51.58 years, female: 55.44 years (2001 est.)
Major religion: Buddhist
Major languages: Lao (official), French, English, and various ethnic languages
Literacy: total population: 57%, male: 70%, female: 44% (1999 est.)
Government type: Communist state
Capital: Vientiane
Administrative divisions: 16 provinces, 1 municipality
Independence: 19 July 1949 (from France)
National holiday: Republic Day, 2 December (1975)
Suffrage: 18 years of age; universal
GDP—real growth rate: 4% (2000 est.)
GDP—per capita: (purchasing power parity): \$1,700 (2000 est.)
Population below poverty line: 46.1% (1993 est.)
Exports: \$323 million (f.o.b., 2000 est.)
Imports: \$540 million (f.o.b., 2000 est.)
Currency: kip (LAK)

migrated to Laos from the seventh century onwards. Belonging to the Mon-Khmer stock, the Lao Theung are the oldest inhabitants; they arrived in prehistoric times. Emigration from Laos became frequent after Laos became Communist in the latter part of 1975. At the start of the twenty-first century, 10 percent of the world's Lao population lived in Thailand, the United States, France, Canada, and Australia. About 80 percent of the population in Laos itself lived in rural areas. Lao is the nation's official language. The Marxist government sanctions Buddhism as the state religion.

History

A number of kingdoms, centered on urban settlements, arose in the beginning of the first century BCE. Parts of Laos came under the control of the Mon kingdoms of Dvaravati and Funan before the seventh century CE, but Prince Fa Ngoum (1353–1373), a Lao,

founded the first unified state, Lan Xang (land of a million elephants) in 1353. The powerful Lan Xang kingdom ruled Laos and areas of the Cambodian plateau, northeastern Thailand, and parts of Yunnan. In 1559 Laos lost control over the Vientiane region to Bayinnaung (1550–1581), the ruler of the Burmese Toungoo dynasty; the area remained under Burmese control until 1637, when the Lan Xang kingdom reasserted itself. Internal dissension and powerful neighbors brought its decline in 1713, and it splintered into the three kingdoms of Luang Prabang, Vientiane, and Bassac. Laos became a French protectorate in 1893. During World War II, the Japanese took control of Laos and declared it independent; after the war, the Franco-Laotian Convention of July 1949 granted Laos internal autonomy only, leaving France in control of Laos's foreign and defense affairs. The Pathet Lao, a Communist nationalist movement, opposed the reestablishment of French con-

trol, and Laos was soon engulfed in the First Indochina War. Civil war continued through the 1960s, with the only hopes for peace pinned on the outcome of the conflict in Vietnam. On 2 December 1975, the Pathet Lao succeeded in establishing the Lao People's Democratic Republic. Suffering from the effects of three decades of war, Laos became dependent on Vietnam, with whom it signed a twenty-five-year treaty of friendship in 1977.

Toward the end of 1980s, Laos's leadership moved away from ideological rigidity and began a program of liberalizing the economy. A new liberal constitution was promulgated in August 1991, and relations with China, Thailand, the United States, and other Western countries improved. Laos became a member of the Association of Southeast Asian Nations (ASEAN) in July 1997. In spite of these advances, charges of human-rights violations are still made, with the allegation that the government has been responsible for the disappearance of some 300,000 people from 1975 to 2001. In March 2001, the Lao National Assembly decided to retain party chairman Khamtay Siphandone as president but made Bounngang Vorachit the premier.

Economy

The people of Laos have one of the lowest per capita incomes in the world (300 dollars), with about 46 percent of the population living below the poverty line. However, using the purchasing-power parity measure, gross domestic product per capita is estimated to be a much higher \$1,700, reflective of the relatively low cost of living in the country. About 70 percent of the people are farmers; common crops include rice, sweet potatoes, and coffee. Laos is rich in natural resources, including tin, copper, gold, lead, and timber. Its main items of export are electricity, timber and wood products, tin, textiles, and coffee, and its leading trade partners are Thailand, Vietnam, and Japan. Laos imports petroleum products, machinery and equipment, vehicles, cement, and steel. Although Asia's regional economic crisis of the mid-1990s hurt Laos, by the middle of 2000 its economy had stabilized. As a member of Mekong River Commission Council (MRCC), which Laos joined in 2001, Laos expects to boost rice production. At the start of the twenty-first century, its currency, the kip, hovered at between 7,500 and 8,000 to one U.S. dollar.

Culture

Interaction with the Khmer, Thai, and Indians has enriched the indigenous culture of Laos. Classical Lao literature, inscriptions, and language show Sanskrit and Pali influence. Themes from Indian literature are in abundance in folk songs, dramas, and theater. The

Laos is a largely rural nation. Here, men stand with their cattle in the village of Pan Phanom in Luang Prabang Province. (BOHEMIAN NOMAD PICTUREMAKERS/CORBIS)

Lao version of the *Ramayana*, the *Phra Lak Pha Lam*, reflects the environment and culture of Laos. It is a dance-drama performed to the accompaniment of Lao classical music.

Religion According to tradition, Buddhism came to Laos during the reign of the Indian emperor Asoka (reigned c. 265–238 BCE). Sculptures of Buddha in a standing position are distinctively indigenous. Lao religious life also is marked by belief in wandering spirits and souls of departed ones (*phi*).

Festivals Popular festivals include Boun Pimai, which celebrates the Lao New Year over the course of several days in April. In Luang Prabang, Boun Pimai celebrations include ablutions for Buddhist icons. Boun Bang Fai celebrates the start of the rainy season in May. At this festival, giant homemade bamboo rockets are launched skyward to summon the rains. The festival of Haw Khao Padap Din, which occurs in August, is a time to pay respects to the dead. November is the occasion of a huge festival at the temple of That Luang (the national symbol of Laos) in Vientiane. It takes place on the week of the full moon.

Music Although Laos has a long history of classical music, decades of warfare and instability have led to its decline. Folk music remains popular; the most common form of musical instrument is the *kbean*, or Lao panpipe, seven pairs of pipes made of bamboo. It provides the music for the most popular folk dance, the *Lamvong*, or Circle Dance, a folk dance in which couples move in circles.

Laos in the Twenty-first Century

In the early twenty-first century, Laos continues to move prudently from ideological orthodoxy to

economic pragmatism. There are signs of relative openness in society, although the regime still does not tolerate dissent. It is evident that the predictions of some pundits that Laos would cease to exist as a nation-state were wrong. Tentatively, Laos is moving toward a better future.

LAOS—ECONOMIC SYSTEM Laos is one of the poorest countries in Asia. This is a result of such factors as a small population, the burden of a colonial past, and the adverse effects of geography. The socialist Pathet Lao (Lao Country party) government has opened the country to a limited form of market forces and is sustaining free-market conditions for its people, but that system has brought with it problems. For example, with a market-determined exchange rate, there was a dramatic and quite severe fall of the kip, Laos's currency, in 1998–1989.

Economic Geography of Laos

Laos is a landlocked country bordered by Vietnam to the east, China to the north, Cambodia to the south, Myanmar (Burma) to the northwest, and Thailand to the west and south. Borders are generally not firmly established and often follow geographical features; hence, cross-border movement is difficult to regulate and cross-border economic transactions may be beyond the reach of governments.

Much of the country is mountainous and heavily forested. The people are spread thinly across its extent, with only Vientiane (population of the city proper approximately 190,000) and the much smaller centers of Savannakhet, Pakse, and the ancient capital of Luang Phrabang representing major urban centers.

Transportation links are very few, although recently these have been improved. The paucity of the infrastructure makes it very difficult for central authorities to control patterns of development within regions.

There are both east-west and north-south divisions within the country. The southern regions possess the advantages of greater forest cover and of more fertile lands. They enjoy greater access to more flourishing markets based upon the exploitation of forest goods and of an agricultural surplus not available in northern provinces. Most of the population, meanwhile, is concentrated on the western border with Thailand, which is a region offering much greater opportunities for trade and communication than the eastern border with Vietnam which, while important for political reasons, remains an undeveloped zone economically. A small number of links across borders represent important nodes for development and communication. The link between the Thai town of Nong Khai and the Lao capital Vientiane, represented by the Australian-financed Friendship Bridge across the Mekong river, has become a vital conduit of commerce, and many Vientiane households routinely tune in to Thai television and radio broadcasts.

The country itself is ethnically diverse, and the principal ethnic groups are themselves composed of a variety of elements. The main ethnic groups are usually divided into three main categories, each of which has differential access to political power and economic opportunities. The most populous group are the Lao Loum (lowland Lao), who represent some 60 percent of the population; next are the Lao Thoeng (midland Lao), with 30 percent of the population; finally there are the Lao Soung (Lao of the highlands), with 10 percent of the population. Lao Soung and even Thoeng are sometimes referred to as *kha* (slaves), which is an offensive term and reflects popular public perception of them; they remain underrepresented at all governmental levels. Lao Thoeng are the oldest inhabitants of the country; they coexisted and borrowed from their Mon and Khmer neighbors. Toward the end of the first millennium CE, the Tai-speaking peoples migrated to the region and eventually enforced political superiority, forcing the Lao Thoeng upland, away from prime agricultural positions. Upland Lao have mostly migrated to Laos over the last century or so, largely from southern China and as a result of persecution of some kind or another; they wish to continue the swidden (slash-and-burn) agriculture that is their tradition. Some of these peoples have been active in growing and trafficking in opium to raise income and to sustain an armed struggle for independence. Groups such as the Hmong were involved in the Vietnam War

(1954–1975) on behalf of the United States and against the interests of the eventually victorious Pathet Lao government. Subsequently, many thousands have emigrated to the United States and elsewhere. The dispersal of an already small population has been a significant factor in the reduction of the level of human capital in the country.

Various attempts have been made by successive central administrations to bring the upland Laos and other ethnic groups into the mainstream of Lao political life—although this does not mean that upland Lao or women or other groups are appropriately represented within political life. However, as in neighboring Thailand, these attempts have been contested on the grounds that they are intended to change or damage the peoples' traditional lifestyle or otherwise infringe on their customs. That local officials are often obliged to act at a distance from central authority, with all the dangers of the potential for corruption or malfeasance that this represents, has exacerbated the situation. As in the case of the majority of mainland southeast Asia, certain remote regions are effectively under the control of unofficial local leaders who can operate beyond the reach of the law with respect to such activities as illegal logging, gambling, and cultivation of narcotics.

The Mekong river, which is a principal part of the western border of the country, represents a significant source of potential hydroelectric power and hence a stimulus to economic development. Already, a large station has been built at Nam Ngum, although the effects of the Asian financial crisis have significantly reduced demand for power regionally and so total capacity remains superfluous. Various mineral deposits have been surveyed, but these remain mostly unexploited owing to difficulties with infrastructure or else are worked only in a primitive fashion. Manufacturing is at a very low level and agriculture is primarily at the subsistence level; hence, exports are much lower than necessary imports. Foreign aid assistance represents a considerable source of income and skills within the economy.

Historical Patterns of Economic Development

Lao of the lowlands are a Tai people who began to migrate to mainland Southeast Asia, probably from southern China and northwestern Vietnam, from perhaps as early as the eighth century CE. However, evidence of settled Lao communities is sparse, and it is not until the end of the first millennium CE that evidence of settlements is unambiguous.

The Tai practiced a form of political and economic organization that emphasized the two-way connec-

tions between a prince or other official and his followers in a complex web of personal interaction and loyalties upon which geography had little bearing. In other words, the physical location of people and their leaders was of less importance than the personal, familial, or social ties which bound them together. There was little incentive therefore to attempt to delineate formal borders or to institute taxation schemes. Instead, institutions such as *corvée* labor were formalized to provide a tangible outcome to the accumulation of a surplus. Surplus labor could be used for public works, such as building temples. This system proved durable and did not change in essence until the arrival of the Europeans, when it was perverted by the French colonists who required that *corvée* labor be used to their direct benefit. The French also taxed the population. The requirement to provide both labor and taxes to rulers who seemed to provide nothing in return was met with outrage; indeed, Lao historians still have nothing good at all to say about colonization.

The period of colonization spawned and was succeeded by the spread of Communism throughout the region, and the armed struggle against the colonialists led to the intervention of other Western powers, notably the United States in its war against Vietnam and its unofficial offensives against Laos and Cambodia. Subsequently, Laos received per capita the heaviest aerial bombardment ever recorded. Ultimately, victory was achieved by the Pathet Lao, considerably supported by the Vietnamese. The Pathet Lao immediately instituted a series of revolutionary social and economic policies, including collectivization of agriculture and the abolition of many traditional practices and the much-revered lifestyle of monks. (Soon after coming to power, however, the Pathet Lao realized the necessity of embracing Buddhism, which it did.)

Contrary to the tenets of Marx, the party sought the institution of a socialist state without what had been considered to be the necessary intermediary step of capitalist development. The resources available to the Pathet Lao administration, therefore, were inadequate to rapid modernization. Given the numerous constraints and the war-weariness of the country, it is not surprising that the measures instituted were extremely difficult to enact and in some cases deeply resented. Political opposition was a part but not the whole of this. The agricultural system of rice farming, for example, is not amenable to the type of collectivized agriculture developed with a view to the very different conditions of the steppes of the Ukraine, while the demands for administrative and managerial competence necessarily enforced upon the population

were far more than they could generally accommodate. Aid from the Soviet bloc, meanwhile, was much lower than had been arriving from the Western world. Regulations on economic freedom and personal mobility persuaded many within the Chinese and Vietnamese communities within Vientiane and elsewhere to return to their homelands, taking as much capital with them as possible.

The period until 1986, when the New Economic Mechanism was announced and introduced, was therefore characterized by the inability of the government to enforce its developmental aims and subsequent disillusionment of the population. Difficulties were exacerbated by the Chinese-Vietnamese war of 1979, which forced Laos to take sides against one of its key allies and led to isolation from China.

Vietnam's *doi moi* (Renovation) economic plan (1986) and China's increasing economic liberalization under Deng Xiaoping helped to inspire a similar movement in Laos. This was formalized in the New Economic Mechanism of 1986, which aimed to provide a unique Lao solution to the problems of market development by combining a measure of economic freedom with a closed political system. This has led to improved ties with the outside world, most notably with Thailand, from which most external stimulus to growth has derived and is likely to continue to derive. Subsequently, such economic gains as have been achieved have outstripped even more the ability of the administration to deliver them equitably, and so income disparities and gender inequalities have been rising.

Economic Systems of Laos

The diversity and division within Laos have led to the development of a variety of more or less closed economic systems within and across its borders. These range from rice agriculture and some cash cropping in lowland regions, swidden (slash-and-burn) agriculture in the highlands, and some manufacturing and service activities for the small urban class. One important system that links Laos with its neighbors is border trading, which consists of numerous informal and occasionally illicit trading arrangements organized by small-scale traders particularly on the borders with southeastern China and eastern Thailand.

For those activities over which the government is able to exercise some authority, activities are regulated in accordance with specific policy goals. The further away from the center that activities take place, the less likely they are to receive government support or for the activities to support government policy. An important developmental goal for the Lao government

will be to integrate the activities of the periphery into a national economic system or systems that can provide a more equitable distribution of income and opportunities than presently exists or that is customarily provided by a market-driven system.

Constraints to Development

It is clear that the various economic systems pursued in Laos today are both inadequate to fulfill political national objectives and to compete internationally in a globalizing world. While there is plenty of advice from international bodies on how to liberalize trade, invite inward investment, and change (or "reform") government practices, there are difficulties attempting these initiatives. Difficulties include:

1. The small size and density of the population, together with the low levels of wealth, which means that there is little prospect for developing an indigenous manufacturing industry or for creating a domestic market with sufficient demand to attract foreign investment.
2. The paucity of the country's infrastructure—measured both in terms of lack of transportation links, social-welfare provision, and the ability of government to enact and enforce its policies, together with the underdeveloped nature of the human capital (that is, the low levels of education and training)—makes both the extraction of natural resources and the distribution and marketing of goods more demanding and expensive.
3. The lack of a modern business environment, including a firmly established legal framework and the presence of essential supply-chain components (for example, office supplies, market research, and advertising services, as well as skilled labor and manufacturing supplies) adds risk and delay to all business processes.

The most likely method of overcoming the problems is some form of integration with Laos's neighbors. This means setting up systems that will allow Laos to take advantage of the complementary advantages available in the region (for example, entrepreneurial competence and capital from Thailand and organized labor pools from Vietnam and China) in return to access to the resources within Laos.

Future Prospects

Future economic prospects depend to a considerable extent upon whether the states can deal with external forces and create mutually beneficial partnerships and alliances. In a market-led economy featuring openness to the world economic system, the Lao government's

relationship with significant trading partners such as Thailand and China will be of considerably more importance than the relationship with the politically important partner, Vietnam. Indeed, there is likely to be friction with Vietnam as competitiveness succeeds cooperation in relations between the two states. Laos will also need to manage its relationships with global players such as the International Monetary Fund and the World Bank. Over-precipitous opening of the economy will not benefit the Lao people, since very few will be able to secure the fruits of economic opportunities in a competitive environment. The government must continue to try to draw the country together and seek to develop its human capital while identifying and strengthening industries that might provide sustainable comparative advantage. The Seventh Congress of the Lao People's Revolutionary Party, which took place in March 2001, reiterated commitments to creating a market economy in Laos while giving few if any concessions to political liberalization. However, the acknowledgment of difficulties with the economic planning process and of critical lack of resources gives some support to the belief that a greater cooperative effort will be possible in the future. Identifying which officials seem set to occupy leading positions within the party remains of considerable importance since there remains little in the way of transparency or openness in political circles. While personalities continue to rank in importance with policies, prospects for the future remain needlessly clouded.

LAOS—EDUCATION SYSTEM The Lao educational system has a long history, extending from early, traditional temple education to contemporary

education in the transitional economy of the Lao People's Democratic Republic. The current regime faces complex challenges in improving education in the context of the country's increased global connections and amid economic problems exacerbated by the Asian economic crisis of 1997.

Historical and Political Background

A major motif of Lao history is the country's remarkable survival as a distinct political and cultural entity despite small population and being landlocked and surrounded by large, powerful neighbors such as China, Vietnam, Thailand, and Myanmar. The original Lao kingdom that flourished between the fourteenth and eighteenth centuries was known as Lan Xang (land of a million elephants). Seriously weakened in the early eighteenth century when it broke into three smaller kingdoms, Lan Xang fell into the Siamese orbit and then under French colonialism.

Traditional Temple Education

As in neighboring countries such as Thailand and Cambodia, Buddhist priests traditionally provided basic education, moral training, and the fundamentals of a literary culture to children in village temples. But given the limited roles of women in the Buddhist priesthood, this system did discriminate against women. Because education at temple schools provided preparation for becoming a monk, it was limited to males because females could not become monks. Women's education was informal in the family context for rural women or in royal compounds for elite women.

French Colonial Influence on Lao Education (1893–1975)

After Laos became a French colony in 1893, the traditional Buddhist educational system became less important as the French introduced elitist, secular French-language education oriented to the "civilizing" mission of the colonial power. In 1946, only a miniscule 2 percent of Lao school-age children were enrolled in school. The reason for the low enrollment was French unwillingness to support education in the countryside. Even after Laos gained nominal independence in 1949, the elitist, French-language educational system continued to dominate until genuine independence was finally achieved in 1975. U.S. influence during the 1954–1975 period led to considerable expansion of Lao education with the establishment of high schools, vocational schools, and teacher training institutions. Enrollments in 1971–1972 were seventeen times higher than in 1946.

EDUCATION AND NATIONALISM IN LAOS

Phoumi Vongvichit, a leading Laotian intellectual, reflects on education and nationalism in Laos.

The leading idea in my research and writing of this book *Lao Grammar* is for the grammar of Lao to belong to the nation, and to the people, and for it to be progressive, modern, and scientific. . . . Every principle, and every term used herein is intended to be simple, so that the general populace, of high or low education, may easily understand and utilize the principles and various terms in the easiest possible way.

Every country in the world has its own principles of speech and writing, its own linguistic principles which may demonstrate the style and honor of the nation, and demonstrate the cultural independence of the nation, along with independence in political, economic, and other arenas.

Source: Phoumi Vongvichit quoted in "Lao as a National Language" by N. J. Enfield. (1999) In *Laos: Culture and Society*, edited by Grant Evans. Chiang Mai, Thailand: Silkworm Books, 269–270.

Educational Reforms of the Lao PDR (1975 to Present)

The Lao People's Democratic Republic (Lao PDR), established 2 December 1975, initiated three major reforms. The first was to consolidate independence and replace French schooling with a Lao-language, mass-education system. Reflecting this commitment, 1996–1997 primary school enrollments were over three times higher than in 1971–1972. Expansion was hampered, however, by a lack of qualified teachers and poor infrastructure.

The second major reform occurred in 1986 when the Lao PDR adopted a new economic policy (the New Economic Mechanism, or NEM) calling for increased use of market mechanisms in the economy and decreased state and central planning. This meant that education had to be rationalized to serve the needs of an increasingly privatized economy. This reform also permitted privatization within the education system in order to expand opportunity and reduce the financial burden on the government.

The third major reform began in 1991 and continued throughout the 1990s. In the initial stages of socialism, responsibility for education had become highly decentralized, resulting in growing regional disparities.

In 1991 education began to be recentralized, with greater authority resting with the Ministry of Education.

With the opening of the Lao economy following the collapse of the Soviet Union in 1991, the Lao government actively sought international educational assistance from agencies such as the World Bank, the Asian Development Bank (ADB), and bilateral donors such as the Nordic countries and Switzerland. The country has used such external funds for enhancing physical infrastructure, developing textbooks, and providing training of educational administrators, teacher educators, and teachers for Lao nationals. Partly thanks to external assistance, Lao expenditures on education in 1996–1997 represented 2.9 percent of GDP, a figure higher than that of China, the Philippines, and Indonesia. In 1996–1997, 15.8 percent of the national budget went to education, putting Laos ahead of countries such as Malaysia, India, and Indonesia, and nearly equal to Korea.

Lao primary education currently lasts five years, followed by three years of lower secondary, three years of upper secondary, and then three to seven years of tertiary education, depending on the field. In 1995, the National University of Laos (NUOL) was established by consolidating four existing tertiary institutions.

Major Contemporary Problems Facing Lao Education

Despite the major reforms initiated during the twenty-five years of socialism, major educational problems persist. Relatively few Lao young people complete the various levels of education. For the 1996–1997 school year, 20 percent received no education at all, while only 13.9 percent completed primary education, 8.6 percent lower secondary, 4.8 percent upper secondary, and 4 percent tertiary education.

Given the country's sparsely populated remote areas and many ethnic minorities, access to education is problematic, and significant regional disparities exist. The 1995 national census indicates that 47.5 percent of the population were of diverse ethnic minorities. As a result, roughly half of those entering grade one are taught in a language that is not their native tongue.

There are also serious gender issues in Lao education, exacerbated by high fertility levels in Laos and

heavy household burdens for women and female children. The government's establishment of a special Gender and Ethnic Minorities Education Unit within the Ministry of Education reflects its concern about such access issues.

Though the Lao PDR devotes considerable funds deriving from international assistance to education, recurrent funding of education is low compared to other countries in the region. It is thus often difficult to sustain educational projects initiated with external assistance.

Since 1998 the Lao government has faced a severe economic crisis. Major inflation and a significant devaluation of the Lao kip (the nation's currency) have adversely affected the economy and the government's ability to finance improvements in education. Despite these serious problems mainly related to formal schooling, the Lao PDR excels in areas such as fostering strong moral education, quality parenting, social cohesion, and a sense of national identity. As well, the adverse effects of media are carefully controlled and restricted.

LAOS—HISTORY The modern boundaries of Laos date only from 1907, and include only a fraction of the people who have historically called themselves Lao. Throughout its history, the classical Lao kingdom of Lan Xang (fourteenth–eighteenth centuries) and its successor kingdoms covered territory that now falls within northeastern Thailand. Any history of Laos cannot avoid, therefore, including territory and people that no longer fall under the jurisdiction of modern Laos.

KEY EVENTS IN LAOS HISTORY

- 500 BCE** The culture of the Plain of Jars flourishes.
- c. 500 CE** Small Indian-influenced kingdoms emerge.
- 14th–18th centuries** Period of the Lan Xang Kingdom.
- 18th century** Lan Xang splits into three antagonistic kingdoms, which fall under Siamese domination.
- 1893** France forces Siam to cede all Lao territories east of the Mekong.
- 1907** A treaty between France and Siam establishes the present frontiers of Laos.
- 1945** The Japanese displace the French, and Laos declares its independence.
- 1946–1954** Period of the First Indochinese War.
- 1946** France regains power, the Laos government is forced into exile, and the Kingdom of Laos is established.
- 1949** Laos is granted limited independence.
- 1950** Nationalists declare the government of the Pathet Lao.
- 1953** Laos becomes an independent nation.
- 1957–1958** Laos moves toward reunification with reintegration of the two Communist provinces.
- 1959–1960** A series of coups destroys the coalition government and civil war begins.
- 1963–1973** During the Vietnam War, Laos remains a divided nation and the government is under U.S. control.
- 1975** The Lao People's Democratic Republic is formed.
- 1977** Laos signs a 25-year Treaty of Friendship and Cooperation with Vietnam.
- 1980s** Political and economic reforms encourage capitalism and open elections.
- 1994** The first bridge across the Mekong River is opened near Vientiane.
- 1997** Laos joins ASEAN.
- 1997–1998** The economy is damaged by the Asian economic crisis.

In modern Laos, lowland or ethnic Lao comprise not much more than half the population. The remainder is made up of people speaking other Tai dialects, Austroasiatic languages, Hmong-Mien, and Tibeto-Burman languages. The history of Laos, therefore, is also a history of these ethnic groups, the last two of which only began entering Laos from southern China early in the nineteenth century.

Human occupation of Laos goes back to the Stone Age. Bronze and Iron Age cultures developed both in northeast Thailand and on the Plain of Jars. The culture of the Plain of Jars flourished around 500 BCE and was characterized by massive carved stone mortuary urns, the "jars" after which the plateau is named. We know little about these people, but it is likely that they were ancestors of the Khamu, the largest Austroasiatic-speaking group in northern Laos.

The Lao Kingdom of Lan Xang Hom Khao

By the middle of the first millennium CE, small Indianized kingdoms were being established in the middle Mekong basin. Over the next few centuries, Tai-speaking peoples began spreading into northern Laos, forcefully founding their own principalities (*meuang*). In the early thirteenth century the kingdoms of the middle Mekong were absorbed into the expanding Khmer empire. Within a century, however, as Khmer power declined, larger Tai kingdoms were established. Among these was the Lao kingdom of Lan Xang Hom Khao (A Million Elephants and the White Parasol), a title signifying both military might and royal kingship.

For two centuries, Luang Prabang was the capital of the Lao kingdom. During this time, Theravada Buddhism became established as the dominant religion; it legitimized kingly rule in return for royal patronage. As Lao settlers continued migrating south, the center of population shifted. In the face of Burmese invasions in the mid-sixteenth century, King Xetathirat (1533–1571) moved the Lao capital to Viang Chan (Vientiane).

The seventeenth century marked the apogee of Lao power. The first European merchants and missionaries to reach the Lao capital left glowing reports of the wealth and pomp of the court of King Surinyavongsa (1615–1694). Already, however, the balance of power was shifting in mainland Southeast Asia to the maritime kingdoms that could benefit from increasing trade with China and the West. In the early eighteenth century, Lan Xang split into three antagonistic kingdoms, each of which soon fell under Siamese domination.

French Occupation and World War II

In 1827, King Anuvong (1767–1828), the last ruler of Vientiane, made a desperate attempt to free his kingdom from Siamese suzerainty. Bangkok's response was swift. The Lao were defeated and their capital was sacked. French explorers who reached the Lao territories in the 1860s found a beautiful but impoverished

land. It was the situation of these territories astride the Mekong that attracted the French, for they hoped the river would provide navigable access to China. That hope proved ill-founded, but the French were determined to expand their Indochina empire.

In 1893 France forced Siam to cede all Lao territories east of the Mekong. A subsequent treaty in 1907 established the present frontiers of the Lao state. As their new possession provided little economic benefit, the French allowed Laos to remain a sleepy backwater. Some ethnic minorities fought the imposition of French rule, but among the lowland Lao, nationalist feelings were slow to develop.

Laos was woken from its slumber by World War II. Siam, renamed Thailand in 1939, took advantage of French weakness to seize Lao territories west of the Mekong. In response to the pan-Thaïism emanating from Bangkok, the French deliberately encouraged Lao nationalism. When in April 1945 the Japanese overthrew the French administration, the king of Luang Prabang (1885–1959) was forced to declare the independence of Laos.

Six months later Japan surrendered. The king promptly abrogated his declaration of independence, but nationalists of the Lao Issara (Free Lao) quickly took advantage of the power vacuum to establish an independent government under the leadership of Prince Phetxarat (1890–1959). This lasted only six months before the French forcibly reoccupied Laos, forcing the Lao Issara to seek exile in Thailand. From there they waged a diplomatic and guerrilla campaign against continued French control of their homeland.

Impact of the Indochinese Wars

With the outbreak of war in Vietnam in 1946, the French recognized that some concessions to Lao aspirations were inevitable. The country was unified as the Kingdom of Laos, with the king of Luang Prabang as head of state. A constitution was drawn up, with Laos designated a member state within the French Union. Greater though still limited independence granted in 1949 was enough to convince the moderate wing of the Lao Issara led by Prince Souvanna Phouma (1901–1984) to accept an amnesty and return home to take part in the political process.

The radical wing refused an amnesty and instead joined forces with the Viet Minh, the Communist-dominated revolutionary movement fighting the French in Vietnam. In August 1950, close to the Lao-Vietnamese frontier, the radical nationalists, under the leadership of Souvanna Phouma's half brother, Prince

Souphanouvong (1909–1995), proclaimed their own government of Pathet Lao (Land of the Lao), the name by which the Lao revolutionary movement was known thereafter.

For the next four years, Laos was caught up in the First Indochinese War. At first it was relatively sheltered, as the Pathet Lao were militarily weak. In April 1953, however, Viet Minh forces struck deep into Laos, threatening the royal capital of Luang Prabang. The king refused to leave the city, and the Viet Minh eventually withdrew. As they left, they handed over large areas of northeastern Laos to the Pathet Lao. It was to prevent a second such invasion that the French established a base at Dien Bien Phu, in Vietnam. And it was the fall of Dien Bien Phu in May 1954 that ended the First Indochinese War.

In the meantime, however, France had granted full Lao independence in October 1953. Two years later, in December 1955, the Kingdom of Laos was granted full membership of the United Nations. Under the terms of the Geneva Agreements that formally concluded the First Indochinese War, the Pathet Lao were assigned two provinces in northeastern Laos as regroupment areas for their forces. These were to be reintegrated into the Kingdom through fair and free elections to be held within two years.

The process of reintegration did not, however, proceed easily. Negotiations continued throughout 1955, without success. In December, elections were held in all but the two provinces under Pathet Lao control, and Souvanna Phouma formed a new government. Immediately he entered into new negotiations with Souphanouvong with a view to accepting the Lao Patriotic Front as a legitimate political party that could take part in a coalition government of national unity. In doing so, however, he encountered concerted opposition from the United States.

By early 1956 the United States had replaced France as the dominant Western power in Cambodia, Laos, and South Vietnam, countries that it was determined to save from Communism. In the context of the Cold War, any government including Communists was anathema to Washington, and over the next two years the U.S. embassy in Vientiane did all in its power to torpedo Souvanna Phouma's negotiations with Souphanouvong. Souvanna pushed resolutely on, however, and on 19 November 1957, the Lao National Assembly unanimously endorsed formation of a government of national union in which the Pathet Lao were given two ministries in a cabinet of fourteen. Supplementary elections the following May gave them

representation in parliament, much to American alarm.

The immediate American response was to throw its weight behind both the political right and the Royal Lao Army (RLA). In July 1958, American aid was withheld from the coalition government. Souvanna was forced to resign, to be replaced by a more conservative leader. Negotiations to integrate two Pathet Lao battalions into the RLA meanwhile collapsed, allowing Pathet Lao troops to return to the Lao-Vietnam border area, where they could again be supplied by the North Vietnamese.

In December 1959 military strongman General Phoumi Nosavan (1920–1985) mounted a coup d'état. A military-dominated government took power and Pathet Lao members of the National Assembly were imprisoned. New elections were held, blatantly rigged to ensure that no leftist candidates were elected, even from areas under Pathet Lao control. All pretense of coalition between conservatives and Communists was at an end, and fighting recommenced.

The descent into civil war horrified many Lao. On 9 August 1960, Captain Kong Lae (b. 1934), commander of an elite paratroop battalion, staged a coup in the name of national reconciliation and neutrality. Souvanna Phouma was again named prime minister. The United States, however, threw its weight behind General Phoumi, who assembled his forces and, in the Battle of Vientiane, seized the capital. The neutralists withdrew to the Plain of Jars, where they joined forces with the Pathet Lao. The country was again divided, with two governments: one in Vientiane recognized by the West, and one on the Plain of Jars recognized by the Communist bloc.

This was the situation faced by the new administration of U.S. President John F. Kennedy in 1961. Laos, rather than Vietnam, had become the Cold War flash point in Asia. Kennedy decided to seek a political resolution of the crisis. A new international conference was convened in Geneva, which in July 1962 agreed on the neutrality of Laos and formation of a second coalition government, again with Souvanna Phouma as prime minister. But already it was too late. Political polarization had gone too far, and Laos could not avoid being dragged into the war the United States was fighting in Vietnam. Within a year the coalition had collapsed, and Lao neutrality was but a mask behind which North Vietnam and the United States fought a clandestine war in Laos.

This war was fought in two theaters. In northern Laos, particularly in the region of the Plain of Jars,

Pathet Lao forces, massively reinforced by Vietnamese "volunteers," were opposed by a secret army, trained and equipped by the U.S. Central Intelligence Agency. This secret army was recruited mainly from among the Hmong and other ethnic minorities and was commanded by the Hmong general Vang Pao. The second theater was the Ho Chi Minh Trail, the network of jungle tracks through southeastern Laos along which North Vietnamese troops infiltrated south to join the fighting in South Vietnam. In both areas the United States conducted a secret bombing campaign, which, by the time the war ended with the cease-fire of February 1973, left Laos the most heavily bombed country, per capita, in the history of warfare.

During the decade from 1963 to 1973, the United States ensured that Souvanna Phouma remained prime minister, while Souvanna turned a blind eye to violations of Lao neutrality. During this period, the U.S. Agency for International Development constituted what amounted to a parallel administration in Laos, while massive amounts of military and economic aid kept the country afloat. While it spared the towns along the Mekong River, the war had a devastating impact. Tens of thousands died, with casualties among the Hmong particularly high.

The Lao People's Democratic Republic

Yearlong negotiations led in 1974 to formation of a third coalition government, this time with half the ministries held by the Pathet Lao, to reflect their greater military and political strength. Like earlier coalitions, however, it lasted barely a year. Communist seizures of power in Cambodia and South Vietnam in April 1975 opened the way for the Pathet Lao to dispense with the pretense of coalition government in Laos. On 2 December 1975, the six-century-old Lao monarchy was swept aside to make way for the Lao People's Democratic Republic, but only after thousands of Royal Lao civil servants and military officers had been incarcerated in reeducation camps. Souphanuvong was named president of the new republic, but real power lay in the hands of Kaysone Phomvihane (1920–1992), secretary-general of the Lao People's Revolutionary Party (LPRP), which had secretly been the guiding force behind the Pathet Lao throughout what they called their "thirty-year struggle" for power since 1945. Kaysone was half Vietnamese and enjoyed close relations with the Vietnamese Communist leadership. In 1977 Laos signed a twenty-five-year Treaty of Friendship and Cooperation with Vietnam. Relations were also close with the Soviet Union.

At first the new government instituted a hard-line policy along strict Communist lines. Economic controls were placed on the production and distribution of goods, and the government nationalized what little industry there was. Personal freedoms were curtailed and limitations placed on the practice of religion. The previous constitution and legal framework were abolished and replaced by the arbitrary rule of the LPRP and people's courts. As the bubble economy that had been maintained by American aid collapsed, and more and more people were sent off for reeducation, thousands of Lao fled across the Mekong into Thailand. Eventually some 300,000 people (10 percent of the population) fled, including many Hmong and most of the country's educated class.

Centralization of power in the upper echelon of the Lao People's Revolutionary Party and a desperate lack of qualified personnel made it difficult to administer the country efficiently. Drought and the decision to cooperatize agriculture only exacerbated the situation. Then in January 1979 Vietnamese forces occupied Cambodia, overthrowing the Khmer Rouge regime of Pol Pot, China reacted by attacking Vietnam, and Laos found itself once again embroiled in the animosities of its neighbors. Laos sided with Vietnam, making a new enemy of China and bringing an end to China's much-needed economic assistance.

In the face of a deteriorating security situation (anti-Communist Lao insurgents were operating out of Thailand and China), the Party was forced to rethink its economic policies. The agricultural cooperatization program was terminated, and the government admitted that, given the stage of Lao economic development, there was after all a place for private enterprise and initiative. Social controls were loosened, and even Party members began attending Buddhist festivals. As the economy improved and the international situation became less threatening, the Party felt secure enough to hold its Third Congress, its first since coming to power.

Reforms in both the structure of the Party and the government, including a crackdown on corruption, were followed by the decision further to reform the economy—but only after furious debate within the Party. Under what became known as the New Economic Mechanism (*chintanakan mai*), capitalist foreign investment was welcomed. Meanwhile relations were mended with Thailand and China. As the economy began moving inexorably toward a free market system, the first elections were held for the Supreme People's Assembly in March 1989. Two years later a constitution was finally promulgated and elections held for the new National Assembly in December 1992.

By this time Communism had collapsed in Eastern Europe and the Soviet Union, and Laos could only look to Vietnam and China for political support. For desperately needed foreign aid to meet chronic deficits in both the budget and balance of payments, however, Vientiane turned to international lending institutions and Western aid donors. In the 1990s the country enthusiastically embraced regional integration. In April 1994 a first bridge across the Mekong was opened near Vientiane, road construction was stepped up, and Laos embarked on an ambitious program of hydroelectric dam construction.

All this was cut short by the Asian economic crisis of 1997–1998. Investment dried up and the Lao currency collapsed. This did not stop Laos from joining the Association of Southeast Asian Nations in July 1997, but it did lead to a slowdown of economic reform, as the more conservative military took control of the Party (following the death of Kaysone, and his replacement by General Khamtai Siphandone as Party and state president). Laos thus entered the new millennium with some trepidation, in desperate need of both economic and political reform, neither of which seemed likely.

LAOS—POLITICAL SYSTEM The major motif of Laos's political history has been the struggle

THE FOUNDING OF THE LAO PEOPLE'S DEMOCRATIC REPUBLIC

Below is the statement from the Declaration of the National Congress of People's Representatives of 2 December 1975, the day of founding of the Lao People's Democratic Republic:

This victory signifies a fundamental change in the destiny of our nation and society, opening a new era of rapid and vigorous progress of our motherhood on the road of independence, unity and prosperity, and ensuring the well-being, freedom and happiness of all the ethnic groups for all time.

Source: Kayson Phommavhane. (1981) *Revolution in Laos*. Moscow: Progress Publishers, 9.

for unity and political independence. Laos as a political identity dates back to 1353, when King Tiao Fa Ngum, a national hero, unified the country and formed the kingdom of Lan Xang (the land of a million elephants). This kingdom was a conservative, traditional monarchy for centuries, until 2 December 1975, when, after a successful revolutionary struggle, the country was transformed into the Lao People's Democratic Republic.

Pre-Colonial Laos

The major challenges facing ancient Laos were threats from its neighbors, particularly the Siamese and the Burmese. Lan Xang achieved its greatest glory under the reign of King Surinyavongsa (reigned 1683–1695). At this time, Laos controlled more territory than at any other time in its history, including what is now northern and northeastern Thailand. Following Surinyavongsa's rule, succession disputes resulted in Lan Xang's breaking up into three separate kingdoms (1707–1713). The subsequent weakness caused Laos to fall into the Siamese orbit within a century (1779).

The French Colonial Period, 1893–1949 Through actual armed confrontation between the French and the Siamese in 1893, the French gained complete control of Siamese Laos. Thus, "French Laos" became a reality in 1893 and, importantly, led to the reunification of the country.

Auguste Pavie served as France's first commissioner-general for Laos, and he was determined to "make of Laos a French country" (Stuart-Fox 1997: 23). Examples of the attempt to do this included the education of elite Lao in the French language and the mandating of French as the language of instruction in schools. French treatment of Laos could be termed adverse neglect. Both a head tax and corvée labor caused resentment among the Lao. Not surprisingly, numerous rebellions against the French ensued, resulting in the eventual formation of the Lao Issara (Lao independence) movement.

"Independence," the Neocolonial Period, and Revolutionary Struggle, 1949–1975

At the end of World War II, the French returned to the region to resume their control of Laos. On 19 July 1949, Laos became "independent" under the French Union, with French influence continuing until 1975. As the result of the Geneva Agreements, Laos in reality became a torn country, with the Pathet Lao (a Communist revolutionary movement) taking control of so-called liberated areas in the northeast of the country. Thus, Laos was drawn into the vortex of the Cold War, and civil war continued until 1975.

The Current Political System of the Lao People's Democratic Republic

The major pillars of the ideology of the victorious socialist regime were peace, independence, democracy, welfare, and unity. These are not simply slogans but fundamentally reflect the political culture of modern Laos under the leadership of the Lao People's Revolutionary Party (LPRP). After assuming power, the Party even introduced a policy to reform the Lao language, to make it both easier to learn and more egalitarian, eliminating many feudalistic aspects of the language. For example, many honorific titles and status identifiers were removed.

In 1986, the Lao also moved to implement economic reforms to allow for free-market mechanisms (*chintanagan mai*). After the collapse of the Soviet Union in 1991 and the loss of aid from the Eastern-bloc countries, the LPDR began to foster relations with the West, leading to considerable multilateral and bilateral assistance in the 1990s.

Nature of the Lao Power Structure and System of Governance Interestingly, it was not until 1991 that a new constitution was introduced. The national sym-

bol was at the same time changed from the hammer and sickle to the That Luang Buddhist temple, reflecting the regime's early realization that it would be pragmatic to embrace Buddhism, given the popularity of the religion among the masses.

Laos remains a one-party state but does have an elected National Assembly (formerly known as the Supreme People's Assembly). Basically, national policy is determined at Party Congresses (held every four to five years), and the National Assembly debates and discusses the laws necessary to implement those policies. The government ministries are then responsible for administering the laws. There is usually a balance in the power structure within each ministry between strategically placed Party people and technocrats, which provides a rather unusual system of checks and balances.

The Party Congress elects the Central Committee and the Politburo. The most powerful political body is the Politburo, still dominated by an older generation with revolutionary experience, but who generally have limited formal education. It has eight members, who are drawn from the Party's Central Committee, which is currently composed of forty-nine members. The members of the Politburo hold key positions in the power structure of the country. Six members of the current Politburo are generals. Their average age is approximately sixty-six.

To be elected to the National Assembly, it is not necessary to be a member of the Party. Numerous non-Party candidates are commonly elected. Elections for the National Assembly take place every five years, with the last one having been held in 1997. The National Assembly appoints the president, who in turn appoints the prime minister and cabinet.

Media (controlled by the state) discussions of politics are always dominated by the phrase *pak lae lat* (party and state). Interestingly, the word "Communist" is never used. Free expression in terms of opposition to the current one-party political system is simply not tolerated.

Lao Political Leaders General Khamtai Siphandon (b. 1924), who has been LPRP chairman since 1992, has been president of the LPDR since 1998. General Sisavat Keobounphan, prime minister since 2001, co-founded the Lao People's Army with Khamtai. Laos's most revered political figure is the late Kayson Phomvihane (1920–1992), a revolutionary hero who was the nation's major political leader (serving first as prime minister and then as president) until his death.

Local Politics and Governance Local authorities have considerable independence in decision making, and the 1991 constitution "has left governors, mayors, and district and village chiefs free to 'administer their regions and localities without any assistance from popularly elected bodies'" (Brown and Zasloff 1995: 224). Both women and minorities have served as governors.

Major Challenges Facing the Lao Polity and Party

Currently the LPRP faces some of its most serious challenges since coming to power. A major question currently being discussed internationally is how effective the Lao political system will be in dealing with the economic challenge stemming from the aftermath of the 1997 Asian economic crisis, which led the Lao currency to fall in value approximately ninefold by June 1999.

With its amalgam of socialist politics, capitalist market mechanisms, and Buddhism, Laos has a unique political system. The LPDR, with a highly favorable ratio of people to natural resources, also has the potential to become a Switzerland of Southeast Asia. To achieve such a goal, it must have inspiring political leadership. The future of the current political system depends fundamentally on the extent to which it remains faithful to its revolutionary ideals and demonstrates genuine commitment to and success in improving the welfare of the Lao people.

LAOS-THAILAND RELATIONS The lowland peoples of Laos and Thailand are both ethnically Thai and share important cultural traits such as cooperative, wet-rice cultivation and a belief in Theravada Buddhism. The Lao and Thai languages, while different in important ways, are mutually intelligible. Since Laos became communist in 1975, however, the languages have diverged significantly. Over time the Lao Isaan language of northeast Thailand has become Thai-ized, while Lao has become more egalitarian and simplified to facilitate enhanced literacy. Approximately one-third of Thailand's current population is ethnically Lao.

At the apogee of its power in the 1600s, the Lao Kingdom of Lan Xang (land of a million elephants) controlled much of present-day northeast and northern Thailand. In the early 1700s, succession conflicts caused Lan Xang to split into three independent kingdoms. Subsequent weakness led to Laos falling under the Siamese orbit in 1779. In both 1778 and 1828, Siamese armies sacked the Lao capital, Vientiane, and during the 1778 attack they captured the precious Emerald Buddha. Also many Lao were relocated to Siam to serve as *corvée* labor. In 1893, Siam began to lose its Lao territories to the French and Laos eventually became part of colonial French Indochina.

Laos achieved independence in 1951 but was subsequently drawn into the Cold War and conflict in Vietnam. Thailand and the United States actively supported the rightist faction in Laos, while the Soviet Union, North Vietnam, and China supported the revolutionary Pathet Lao. U.S. bombers, using Thai air bases, continually bombed Laos for eight years (1965–1973), making it the most bombed country in history. The United States also paid Thai mercenaries to fight against the leftist Pathet Lao. After prolonged civil war, the Lao People's Democratic Republic (Lao PDR) was founded on 2 December 1975.

Relations between the Lao PDR and Thailand were tense for the next fifteen years, reflecting their Cold

The Thai-Lao Friendship Bridge crosses the Mekong River near Nong Khai, Laos. (NIK WHEELER/CORBIS)

War alignments. In early 1988, there was a three-month border war between the two countries. With the Soviet collapse and the end of major Soviet economic support, Laos liberalized its policies toward Thailand and other noncommunist countries. In the 1990s Laos-Thailand relations improved greatly, and Thailand became Laos's major economic partner, source of external investment, and also supplier of tourists. As Thai influence in Laos increased, there was considerable concern about excessive Thai cultural and linguistic influence. In this regard the Lao-Thai relationship mirrors the Canada-United States relationship.

After the Asian economic crisis, ignited by the devaluation of the Thai baht on 2 July 1997, Thai investments in Laos dropped dramatically to only 4.8 percent of total international investment (1999), and Laos increasingly turned to its socialist neighbors, China and Vietnam, for economic and political support. Both Thailand and Laos have demonstrated skill in "bamboo diplomacy"—remarkable flexibility in adjusting to complex, changing, and threatening situations—a means of preserving their cultural identities and sovereignty.

LAOS-VIETNAM RELATIONS In 1479 a Vietnamese army invaded the Lao kingdom of Lan Xang and sacked its capital, Luang Prabang. Although Vietnam at times exercised political control over the Plain of Jars in the north, not until 1953 was Luang Prabang again threatened by a Vietnamese army. At that time the city was spared, and the Vietnamese had Lao allies in the form of the Pathet Lao, the Lao revolutionary movement.

Throughout the First (1946–1954) and Second (1954–1975) Indochina Wars, both the political and military wings of the Pathet Lao enjoyed close relations with their Vietnamese counterparts. Vietnamese Communists advised the fledgling secret Lao People's Party (later the Lao People's Revolutionary Party). Vietnamese "volunteers" trained, equipped, and fought

This Vietnam War liberation poster which hangs in a war museum in Laos symbolizes the strong relations between the two nations. (TIM PAGE/CORBIS)

alongside Lao People's Liberation Army forces. At the same time, right-wing elements within the royal Lao government and military developed friendly relations with the Republic of (South) Vietnam.

With the formation of the Lao People's Democratic Republic in December 1975, relations with the unified Socialist Republic of Vietnam became even closer. In July 1977 the two countries signed a twenty-five-year Treaty of Friendship and Cooperation, under the terms of which not only did Vietnam supply Laos with economic advice and assistance but also Vietnamese troops were stationed in Laos. In fact up to fifty thousand Vietnamese troops remained in Laos until 1989, when they were withdrawn at the same time that Vietnamese forces were withdrawn from Cambodia, as a precondition for improved relations between Hanoi and Beijing.

The strength of Lao-Vietnamese relations was demonstrated in 1979 when Laos sided with Vietnam

against China in the aftermath of the Vietnamese invasion of Cambodia. This led to difficult relations with China, which did not improve for several years. Meanwhile relations with Vietnam continued to be multifaceted, covering everything from training of party cadres and advice on economic planning to media, communications, and provision of educational materials. As between communist states, relations operated on three levels: government to government, party to party, and military to military, and in the early 1980s Laos was little more than a client state of Vietnam. What led to the loosening of the Vietnamese embrace was the need to diversify sources of foreign aid and investment, and that meant improving relations with Thailand and the West.

Close relations between Laos and Vietnam continued into the 1990s, however, based on the twin foundations of common revolutionary experience as comrades-in-arms and commitment to a common ideology. This was particularly so after the collapse of the Soviet Union and the return of Cambodia to a multi-party political system. Though Laos opened up its economy to foreign, especially Thai, investment, political and military relations with Vietnam remained paramount. For Laos the relationship reinforced regime security; for Vietnam it kept alive old ambitions to dominate Indochina.

Following the Asian economic crisis of 1997–1998, Laos again turned for assistance and advice to Vietnam. Given the dominance of the military in the upper echelons of the Lao People's Revolutionary Party, relations are likely to remain close well into the new millennium.

LAO-TAI LANGUAGE Lao is the official language of the Lao People's Democratic Republic. Lao is spoken by the political majority, the Lao Loum or

Lowland Lao, and by other ethnic groups as a second language. The Lao Loum are composed of the Tai Lao, primarily occupying river valleys, and upland Tai groups, together making up 68 percent of the 5.4 million inhabitants of Laos (1999). Other Tai groups in Laos include the Tai Lue, Tai Daeng, Tai Dam, Phu Thai, and Saek.

Lao is a monosyllabic, tonal language, and its structure is based on the initial consonant, vowel nucleus, optional final consonant, and tone. Lao has six tones: low, mid, rising, high, low falling, and high falling. Polysyllabic words found in Lao have been borrowed from Pali, Sanskrit, and French. Lao has also borrowed from Vietnamese, especially since 1975.

There are many regional dialects of Lao, such as Luang Prabang dialect, Xieng Khouang dialect, and Vientiane dialect. These regional dialects vary in phonology, tones, and vocabulary. Vientiane dialect, the language spoken in the capital, may be considered the national standard, but its use is not enforced. Lao has its own written script originating from the Khmer script, consisting of thirty-three consonants and twenty-eight vowels.

The socialist regime has attempted to standardize the written language. Phoumi Vongvichit, a Pathet Lao revolutionary and a strong supporter of Lao identity and culture, wrote the book *Lao Grammar* in 1967 prior to the revolution and influenced the standardization of Lao grammar and spelling. His work also simplified the language to facilitate literacy efforts and eliminated feudalistic aspects of the language associated with Lao royalty to affirm the revolution's egalitarianism.

Lao is a member of the Southwestern Tai language group in the Tai-Kadai ethnolinguistic family. Tai languages range west from Assam province in India, with the written Ahom language, east to Hainan Island in China, inhabited by the Li. Tai speakers are found in northern Myanmar (Burma), Thailand, Laos, northern Vietnam, and southern China. Tai-speaking peoples began to inhabit Laos and other parts of Southeast Asia a thousand years ago after migrating from the area around southern China and northern Vietnam and established autonomous political entities two hundred years later.

The Lao government claims that the country's literacy rate (reading and writing at a fourth-grade level) is 85 percent. However, other agencies, including the World Bank and UNESCO, set the adult (age fifteen and over) illiteracy rate at about 44 percent, with the male adult (age fifteen and over) illiteracy rate 30 per-

cent and the female adult illiteracy rate 50 percent. Ethnic minorities of the Lao Thoeng and Lao Soung ethnic categories experience lower literacy rates due to the lack of formal educational institutions in their villages and because they speak a different native language.

LAO-TZU. See **Laozi**.

LAOZI "Laozi" (c. sixth century BCE) is both the name of a philosopher and of the work attributed to him, which is also entitled *Daodejing* (in Wade-Giles, *Tao Te Ching*, meaning "The Way and Its Power"). Taoists (or Daoists) often celebrate anonymity. It may be the case that the author or authors of the *Daodejing* were able to preserve their anonymity. However, every text needs its author and every philosophical approach needs its founder, and so the name Laozi denotes the founding author of Taoism.

There is a good deal of controversy concerning whether there actually was a historical person named Laozi. When Laozi's biography was written in the *Records of the Historian (Shiji)*, the historical data concerning Laozi was already very obscure. The biography implies that Laozi may have been one of three people: Li Er, also called Li Dan; Lao Laizi; and Dan the Historian. Some ancient texts attribute sayings to a fellow known as Lao Dan that are passages found in the *Daodejing* or that reflect Taoist attitudes. Literally, "Laozi" means the "old master," and it could simply

DAODEJING

Below is the opening chapter of Laozi's *Daodejing* ("The Way and the Power").

1. The Tao that can be trodden is not the enduring and unchanging Tao. The name that can be named is not the enduring and unchanging name.
2. (Conceived of as) having no name, it is the Originator of heaven and earth; (conceived of as) having a name, it is the Mother of all things.
3. Always without desire we must be found,
If its deep mystery we would sound;
But if desire within us be,
Its outer fringe is all that we shall see.
4. Under these two aspects, it is really the same; but as development takes place, it receives the different names. Together we call them the Mystery. Where the Mystery is the deepest is the gate of all that is subtle and wonderful.

A classic drawing of Laozi riding a sacred cow. (BETTMANN/CORBIS)

be a general term for any and all old masters who taught the way of nature (*dao* in English is often seen as 'Tao'). Because the character for "master" also means "boy," when the *Daodejing* was chanted as a sacred text in the Han dynasty (206 BCE–220 CE), a legend developed that Laozi was born at the mature age of sixty, gray haired and able to speak. For the follower of temple Taoism, Laozi, or Lord Lao, is considered to be the human incarnation of the cosmic Way.

There is an old legend that Confucius went to see Laozi, but he left baffled, not being able to comprehend him. This legend has been used both to argue that Laozi must have been a historical person and that there was no such person. After reading the *Daodejing*, one might realize that the academic debates concerning the historicity of Laozi are moot. The important things to be grasped are the profound ideas expressed in the text and their affect on the development of Chinese culture, politics, art, and poetry.

The *Laozi* has been translated more often than the Bible. The phrases "A thousand mile journey begins with the first step" and "he who knows does not speak" come from the *Laozi*. The *Laozi* is clearly giving guid-

ance to a ruler and his high ministers. The text advocates a type of limited anarchy. The ruler is unknown to the masses; he does not personally undertake projects; he does not micromanage affairs. He does nothing, yet everything is completed. The *Laozi* describes the way of nature and suggests that people, especially the ruler, follow the model of nature, especially water. Water exhibits the power (*de*) of nature in that it returns (*fan*) to the source; it nourishes all things without discrimination or possessing them; it is soft, frictionless, and feminine, yet it wears down mountains. One of the most paradoxical concepts in the *Laozi* is "acting by not acting" (*wei wu wei*). If the root images of the *Laozi* are grasped, then this expression is not as paradoxical as it first seems. "Not acting" is not literally doing nothing at all, but acting naturally. It is not acting artificially in a contrived manner, but acting without resistance in a spontaneous manner.

LAXMIBAI (d. 1858), Indian nationalist. Laxmibai—or the Rani (queen) of Jhansi, as she is also known—came to prominence in India after the British East India Company sought to consolidate its power in the mid-nineteenth century. Under the leadership of Lord Dalhousie, the company adopted a policy called the "doctrine of lapse," which allowed the British to annex an Indian state if the ruler did not have a male heir. This policy, in effect from 1848 to 1856, led to the British annexation of many Indian states. Resistance to the policy, and events surrounding the Great Mutiny of 1857, brought the Rani of Jhansi, the widow of the last ruler of the state of Jhansi, into the political spotlight. Jhansi "lapsed" to the British in 1853. In the period following this debacle, Jhansi was faced with political challenges from rival claimants to its throne, specifically the rulers of Orchha and Datia. This saga was unfolding as war continued to rage in northern and central India in late 1858. After being politically cornered, Laxmibai, together with Nana Sahib (the adopted son of Baji Rao II, the last Maratha ruler) and his artillery expert Tattia Tope, fought the British army until she was killed

while fighting on horseback. Remembered as the "Joan of India," the Rani of Jhansi remains a major figure in the pantheon of Indian nationalist icons.

LE DUAN (1908–1986), Vietnamese politician and nationalist. Le Duan was born in Quang Tri province in Central Vietnam. In 1928 he joined the Revolutionary Youth League (Thanh Nien), and in 1930 he helped found the Indochinese Communist Party (ICP). Following the 1931 uprisings in northern Vietnam, he was arrested and convicted of sedition. He received a twenty-year prison sentence but was pardoned and released in 1936 after the Popular Front's victory in France.

Le Duan rose in the ranks of the ICP, but he was arrested again in 1940 and sent to Poulo Condore prison (Con Dao Island) until 1945. Following his release, he briefly worked with the Ho Chi Minh government in Hanoi. In 1946 he was sent to southern Vietnam, where he became secretary of the Central Office for South Vietnam (COSVN). While in southern Vietnam, Le Duan led the Viet Minh military in its efforts against the French.

Le Duan, on the right, with Pham Van Dong, prime minister of North Vietnam, in 1969. (BETTMANN/CORBIS)

In 1957 he returned to Hanoi as a prominent member of the Politburo. He became secretary-general of the Lao Dong (Workers') Party in 1959. Following Ho Chi Minh's death in 1969, Le Duan became one of the most influential members of the Lao Dong Party. He became secretary-general of Vietnam's Communist Party in 1976 and served in that position until his death in 1986.

LE DUC ANH (b. 1920), president of the Democratic Republic of Vietnam. Le Duc Anh was born in Truong Ha, near the city of Hue in central Vietnam. He was president of the Democratic Republic of Vietnam (North Vietnam) from 1992 to 1997. Le Duc Anh joined the Vietnamese revolutionary movement in 1937 and became a member of the Indochinese Communist Party in 1938. He joined the Vietnamese army in 1945 and was promoted to the position of general in 1984. He was deputy commander during military campaigns against South Vietnam in 1975. In 1978, he was field commander of the Vietnamese forces responsible for the attack on Phnom Penh in Cambodia. In 1979, he became the highest-ranking commander of Vietnamese troops in Cambodia. His political career paralleled his military career and soon after he became deputy minister of defense.

Due to his accomplishments and to the patronage of Le Duc Tho (1911–1990), Le Duc Anh was admitted to Vietnam's Politburo in 1981. He became minister of defense in 1987 and served that position until 1991. In 1992, he was elected president of Vietnam by the Vietnamese National Assembly. In 1997, months after having suffered a stroke, Le Duc Anh announced he would not be a candidate for the presidency at the Tenth National Assembly.

LE DUC THO (1910–1990), Vietnamese revolutionary and founder of the Indochinese Communist Party. Le Duc Tho was born in Nam Ha Province in northern Vietnam. He was the son of "a French functionary" in the colonial government in Vietnam, so he probably was born into upper-middle-class status at least. He was educated in French schools before he joined the revolution against France. He became an influential member of the Lao Dong (Communist) Party Political Bureau and Secretariat, often guiding party directives, and served as the chief negotiator for the Democratic Republic of Vietnam (DRV) at the Paris peace talks between the DRV and the United States from May 1968 until January 1973. Tho spent time in the French island prison of Poulo Condore in the 1930s and served as the party chief commissar for the Indochinese Communist Party (ICP) southern region of Vietnam during most of the First Indochinese War (the war between Vietnam and France, 1946–1954). During the Second Indochinese War (the war be-

Le Duc Tho in Ho'Ville, Vietnam, in 1985. (TIM PAGE/CORBIS)

tween the United States and Vietnam, 1955–1975), Tho played a major role in directing the war in South Vietnam for the DRV. For his efforts in negotiating the Paris Peace Accords, Tho received, with the U.S. chief negotiator, Henry Kissinger, the 1973 Nobel Peace Prize. He refused to accept the award because the war in Vietnam continued. He returned to Vietnam to guide the final DRV push to take Saigon in 1975. After the war Tho remained an active member of the Vietnamese Communist Party Central Committee and also directed the Party Organization Department for the country. Tho retired from public life in 1986.

LEE KUAN YEW (b. 1923), Singaporean statesman. During his tenure as prime minister of Singapore from 1959 to 1990, Lee Kuan Yew led the country's transformation into a modern, clean, green entrepot city-state with highly successful manufacturing, financial and banking, and communications sectors. Under colonial rule prior to the 1960s, Singapore was known for its considerable squalor, poverty, disease, and ignorance and had a reputation as a hotbed of communist radicalism.

Lee studied in the United Kingdom at the London School of Economics and Cambridge University, earning double first honors. Returning to Singapore, in 1954 he founded the People's Action Party to fight for Singaporean independence. In 1959, at the age of thirty-five, he became prime minister, only eleven years after taking his first degree at Cambridge.

Lee emphasized the development of Singapore as a multicultural, multiracial nation with a distinctive identity. He personally practiced this ideal, speaking six different Asian languages as well as English. He favored social engineering, social conservatism, and Asian values. A pragmatist, Lee wanted to create an effective socialism in Singapore. Noted for his corruption-free leadership, Lee was nevertheless seen by many in the West as practicing an authoritarian democracy with harassment of opposition groups and little tolerance of dissent.

Lee Kuan Yew in September 1965. (BETMANN/CORBIS)

Lee was one of the few world leaders to give up power voluntarily (in 1990), providing for a smooth succession in political leadership. He will be remembered as a transformative leader of the twentieth century who helped Singapore become one of the world's most competitive economies.

LEE TENG-HUI (b. 1923), President of Taiwan. Lee Teng-hui was the first Taiwanese native to lead the government and Nationalist Party of Taiwan. Under his presidency, democracy was fully established on Taiwan. Born in 1923 when Taiwan was a Japanese colony, Lee Teng-hui received a Japanese education until the end of World War II when Taiwan returned to Chinese control. In the 1950s, Lee was among the first generation of Taiwanese students to undertake graduate studies in the United States. He alternated between studying in the United States and working

for the Joint Commission for Rural Reconstruction, a combined Chinese Nationalist–American effort at land reform on Taiwan. Taiwan's land reform stressed legal procedures along with agricultural improvement projects and contrasted sharply with the Communist Party's populist, confiscatory, and often violent land reform on the Chinese mainland.

In 1968, Lee earned a Ph.D. in agricultural economics from Cornell University. Back in Taiwan he emerged as a rising Taiwanese figure in the Nationalist Party. His appointments included mayor of Taipei and governor of Taiwan and then, in 1984, vice president. Lee's elevation marked acceptance by the mainlander Nationalist Party that its future was tied to Taiwan and needed support from the Taiwanese majority. When President Chiang Ching-kuo, who did much to further Lee Teng-hui's career, died unexpectedly in January 1988, Lee succeeded him. He served as president until 2000 and earned the deep enmity of the leaders of the People's Republic of China on the mainland for his strong advocacy of Taiwan's continuing political separation from China.

Constitutionally barred from a third term as president, Lee was forced into retirement in 2000 but has remained a significant force in Taiwan's politics. His open support for Chen Shui-bian, the leader of the Democratic Progressive Party (DPP) who succeeded him as president, exacerbated his differences with the Nationalist Party's leadership. In the run-up to the 2001 parliamentary elections, the party expelled Lee from membership, and he responded by organizing a political party called the Taiwan Solidarity Union, which captured thirteen seats. So, Lee has become identified with a minority party in parliament that is sympathetic toward the DPP and its policies.

LEH (1999 est. pop. 15,000). The most northerly town in India, Leh is the capital of Ladakh district in eastern Jammu and Kashmir State. Located in the

mountainous region often called "the roof of the world," Leh was built as a terminus for caravans from Central Asia. At 3,523 meters, it is one of the highest permanently inhabited towns on earth. In the sixteenth century, King Sengge Namgyal shifted his court here to be closer to the head of the Khardung La-Karakorum corridor into China. Within a generation, the town had become one of the busiest markets on the Silk Road. In the 1920s and 1930s, the bazaar received over twelve camel trains daily. The prosperity ended with the closing of the Chinese border in the 1950s but resumed when the border was opened up to foreign tourists in 1974. In the winter, the economy is supported by military families from nearby bases, a reminder of the sensitive borders nearby. Leh is dominated by the nine-story medieval Tibetan-style palace of the Ladakhi royal family. Its Dukhar temple houses a thousand-armed image of the goddess Tara. Other notable structures include a Mughal mosque and several ancient, still-functioning Buddhist monasteries. The annual Ladakh Festival features a spectacular march of monks, troupes, and refugees, with dancing, archery, polo, concerts, ceremonies, and exhibitions.

LENINSHIL ZHAS The principal newspaper of the Kazakh SSR Communist Youth Union, or *Komsomol*, the *Leninsbil zhas* was published five times a week. The roots of the *Leninsbil zhas* are found in the prerevolutionary Kazakh youth organization *Birlik* (Unity) and its newspaper, *Sary arka* (often translated as "The Wide Steppe"). *Birlik* followed the editorial line of the Kazakh political party Alash Orda (The Horde of Alash [mythical founder of the Kazakh people]), which advocated greater political and cultural autonomy for Kazakhs.

Leninsbil zhas was first published on 22 March 1921 as *Zhas Alash* ("Young Alash"), with the goal of educating Kazakh young people in the virtues and attitudes sanctioned by the Communist Party and the government. On 8 February 1924 the name was changed from *Zhas Alash* to *Leninsbil zhas* to honor Vladimir Lenin and to weaken the nationalist tendencies among Kazakh intellectuals.

Numerous Kazakh writers, poets, and scholars published articles in its pages, including Akhmet Baitursynov, Saken Seifullin, Turar Ryskulov, and Mukhtar Auezov. During the 1950s many articles were devoted to the Virgin and Idle Lands program and to agricultural and industrial development in Kazakhstan. In March 1991 the newspaper's name was changed back to *Zhas Alash*, and presently it generally supports current Kazakh government policies.

Steven Sabol

LEOPARD, CLOUDED The clouded leopard (*Neofelis nebulosa*), the largest of the arboreal (tree-living) cats, inhabits the tropical forests of Southeast Asia, from Nepal to Sumatra and Borneo. Its name refers to the dark cloud-shaped markings on its golden-brown coat. Its tail is ringed with black stripes.

The head and body measure about one meter in length, and the long tail acts as an effective balancing aid. A stocky body, powerful limbs, and sharp claws make the clouded leopard an expert climber. Its primary prey is primates, which it stalks through the trees, but it also eats birds, small mammals, and fish. Its extremely long, sharp canine teeth enable the hunting of still larger game such as deer and wild pigs.

Clouded leopards are largely nocturnal. They live an average of fifteen years, and females produce litters of two to four cubs. They are considered sacred by a number of Southeast Asian peoples. Clouded leopards are an endangered species protected under the Convention on International Trade in Endangered Species, but illegal hunting for their coats, teeth, and bones continues and deforestation is eroding their habitat. Secretive and hard to study in the wild, they have also proved difficult to breed in captivity.

LEOPARD, SNOW The snow leopard or ounce inhabits the harsh, high mountain environments of Central Asia from Russia and Mongolia south to China, Tibet, and the Indian subcontinent. This includes part or all of the upper reaches of the Himalaya, Karakoram, Hindu Kush, Pamirs, Kunlun Shan, Tian Shan, Altay Shan, and Sayan Mountains. Experts place

the snow leopard in the genus *Panthera* or, citing its unique skull and vocal apparatus, classify it as the lone member of the genus *Uncia* (*Uncia uncia*).

A mature snow leopard is 2.1 meters (7 feet) long, including its 0.9-meter (3-foot) tail, which is used for balance on rocky and snowy terrains. The leopard attains a 0.6-meter (2-foot) shoulder height, weighs 20 to 40 kilograms (40 to 90 pounds), and lives for 15 to 18 years. The cubs are born two to three to a litter in early spring following an average gestation of ninety-three days, and they remain with their mothers for eighteen months. The animal's small head has tiny ears and a heavy brow. Large paws support powerful limbs that are short in relation to the body size. The rosettes and spot markings common to all leopards are more muted on the snow leopard, and its soft, woolly textured fur is 5 centimeters (2 inches) on the top and sides and up to 10 centimeters (4 inches) on the underparts of the animal. Weakly developed fibroelastic tissue in the throat prevents this cat from emitting a loud roar.

Snow leopards hunt argali, bharal, markhor, and ibex in rock outcrops, canyons, plateaus, and mountain ridge tops at heights of between 2,000 and 5,500 meters (6,500 and 18,000 feet). They also pursue numerous birds and hare along with marmots, yak, musk deer, and domestic stock. During winter they descend, with their prey, into the more protected upper margins of lowland forests.

By most estimates only five thousand snow leopards remain, although inaccessible terrain and this mammal's highly furtive character make it difficult to take an accurate census. Despite legal protection in 90 percent of its range, it remains an endangered species on *The 2000 World Conservation Union Red List of Threatened Animals*. Unless poaching for its fur and for its bones, purported to have healing powers, is halted, the snow leopard may become extinct in the wild.

LHASA (2000 est. pop. 400,000). Presently capital of the Tibet Autonomous Region of the People's Republic of China and historically the capital of the Tibetan state, Lhasa is situated in the central Tibetan province of U on the Kyushu River at a height of 3,650 meters, with a population of about 200,000 for the central city and 400,000 for the whole municipality.

The name Lha-sa (pronounced Ha-sa) in Tibetan means divine ground, and Lhasa has always combined a religious and a political role. There are two main

Barkhor Jokhang Temple | Lhasa in July 1996. (STEPHEN G. DONALDSON PHOTOGRAPHY)

LHASA IN THE 1840s

The following description of Lhasa written by two French missionaries in the mid-nineteenth century provides a good example of Western attitudes about Asia and about Buddhism.

The morning after our arrival at Lha-Ssa, we engaged a Thibetan guide, and visited the various quarters of the city, in search of a lodging. The houses at Lha-Ssa are for the most part several stories high, terminating in a terrace slightly sloped in order to carry off water; they were whitewashed all over, except the bordering around the doors and windows, which are painted red or yellow. The reformed Buddhists are so fond of these two colours, which are, so to speak, sacred in their eyes, that they especially name them Lamanesque colours. The people of Lha-Ssa are in a habit of painting their houses once a year, so that they are always perfectly clean, and seem, in fact, just built; but the interior is by no means in harmony with the fine outside. The rooms are dirty, stinking, and encumbered with all sorts of utensils and furniture, thrown about in a most disgusting confusion. In a word, the Thibetan habitations are literally whited sepulchers; a perfect picture of Buddhism and all other false religions, which carefully cover, with certain general truths and certain moral principles, the corruption and falsehood within.

Source: Huc Evariste-Regis and Joseph Gabet. ([1851] 1987) *Travels in Tartary, Thibet, and China, 1844–1846*. New York: Dover Publications, 168–169.

phases in its existence. Lhasa was established as the capital by the first Buddhist king, Songtsen Gampo (609?–649), in the seventh century CE to house the sacred image of Buddha, or Jowo. Using geomancy, it was determined that the heart of Tibet, where the image should be kept, was in an island on a lake on the site of today's Lhasa. After subduing the local demon of the lake, a temple was built for the statue and called the Jokhang (House of the Lord Buddha). The Jokhang is to this day Lhasa's holiest shrine. The next phase was in the seventeenth century, when Lhasa was reestablished as the capital of the Dalai Lamas. The Potala Palace was built on the Marpo-Ri, or Red Hill, as the center for the joint religious and secular government of Tibet.

Around the Jokhang is the Barkhor, or circumambulation path, along which pilgrims walk or prostrate themselves. The Norbulingka, summer palace of the Dalai Lamas, lies to the west. Other sites include the

ancient Ramoche temple. The historic monasteries of Ganden, Drepung, and Sera, headquarters of the dominant Yellow Hat sect of the Dalai Lamas, are close to Lhasa and have wielded enormous influence over the town.

Since Chinese rule, modern Lhasa has expanded, dwarfing the Tibetan area, large parts of which have been knocked down. Lhasa suffered during the Tibetan uprising in 1959 and was extensively damaged during the Cultural Revolution in the 1960s. In the 1980s, the Chinese started restoration work, and a Chinese city expanded in the area to house the administration and business. Today, the Tibet Heritage Fund has helped to preserve some areas of historic Lhasa around the Barkhor.

Modern Lhasa has been described variously as drab, featureless, or like a bustling frontier town. Under the Chinese plan of modernizing Tibet and developing its economy, small-scale manufacturing, beer brewing,

and now the Internet have come to the city. Lhasa's importance as a pilgrim center for Tibetans and as a tourist spot has allowed it to preserve some of its main features, while the Chinese plan for Tibet has created a completely new city. China has ambitious plans for Lhasa as part of its policy of developing the western regions of the People's Republic, including building the world's highest railroad linking Lhasa to the nearest railhead in Qinghai Province.

LI BAI (701–762), Chinese poet. Li Bai, or Li Bo, also known as Taibai and style named Qinglian, is often mentioned along with Du Fu as one of the two greatest Tang dynasty (618–907) poets. Although Li's hometown is recorded as a site in present-day Jiangyou District, Sichuan Province, his ancestors were said to be merchants from Central Asia, where it appears that he was actually born.

Li Bai is known in Chinese poetic history as the "Transcendent of Poetry." This epithet captures some of Li's personal and poetic style; his preoccupation with transcendence and with supramundane realms is directly related to his close association with Taoist beliefs, practices, and practitioners. The fantasy of knight errantry forms another aspect of Li Bai's temperament and style. Upon encountering painful experiences, he turned to drinking, and his poetry is characterized by a cyclical alternation between high spirits and despondency. Enamored of hyperbole, Li wrote with an impetuous exuberance, mostly "ancient style" poems and quatrains in simple language. Li also made significant contributions to landscape poetry.

LI HONGZHANG (1823–1901), Chinese official. Li Hongzhang was a leading Chinese official of the latter half of the nineteenth century. A Confucian scholar, Li served under Zeng Guofan (1811–1872) and helped suppress the Taiping Rebellion (1851–1864) and Nian Rebellion (c. 1852–1868). He was appointed governor of Zhili Province and remained in that position for a quarter of a century, serving in many respects as an unofficial prime minister of China.

Li was one of the prime movers behind the flawed Self-Strengthening Movement, which was an effort by the Qing dynasty (1644–1912) to restore power to resist Western encroachments, especially after the Second Opium War. Although he recognized the need to modernize and to borrow appropriately from the West, he was not capable of accepting or instituting changes necessary to meet the challenge of late-nineteenth-century imperialism. Still, Li helped establish the Jiangnan Arsenal, the Nanjing Arsenal, the Tianjin Machine Factory, the China Merchants Steam Navigation Company, the Imperial Telegraph Bureau, and the Beiyang Fleet. Li was unable to stop Japan in the 1894–1895 conflict, although he did negotiate the peace and was responsible for the protocols that ended the western occupation of Beijing after the Boxer Rebellion (1900). He also helped accelerate the trend of power away from the capital and hence the coming warlord period of the 1920s and 1930s.

LI PENG (b. 1928), Chinese premier. Born in Chengdu, Sichuan Province, in October 1928, Li Peng is the orphaned son of a Chinese Communist Party (CCP) worker and was adopted by Chinese premier Zhou Enlai (1898–1976). Li was trained as a power engineer in Moscow from 1948 to 1955. After his return to China, he was the director and chief engineer

Li Peng, on a four-day visit to Kenya in November 1999, is greeted by Kenyan President Daniel arap Moi. (AFP/CORBIS)

at several power plants from 1956 to 1966 and later in various bureaucratic or party positions relating to power generation. In 1979, partly due to the backing of his stepmother, CCP Central Committee member Deng Yingchao (1904–1997), Li began a swift ascent up the hierarchy, first as deputy minister of power production (1981), then as a member of the Central Committee (1982) and vice-premier in charge of energy and communications (1983). In 1985, he became a member of the Standing Committee of the CCP Politburo and in 1988 became premier, a post he held until 1998.

Li achieved his greatest notoriety during the Tiananmen Square incident of 1989. Strongly opposed to the student takeover of the square, he was seen as patronizing during meetings with student leaders and was hectored at a televised meeting with hospitalized hunger strikers. He sided with other hard-liners against Zhao Ziyang (b. 1919), who was removed as party leader. Later, news media and students frequently referred to him as the "butcher of Beijing" for being the first official to publicly support the People's Liberation Army's bloody crackdown during the night of 3–4 June.

After 1989, Li cooperated with CCP leader Jiang Zemin and economics czar Zhu Rongji to rein in China's high inflation and begin sweeping reforms of state-owned enterprises. Elected chair of the National People's Congress despite an unprecedented two hundred negative votes in 1998, Li remains an influential voice in policy making.

LI SHIZHEN (1518–1593), Chinese physician and pharmacologist. Li Shizhen is best remembered for his *Bencao Gangmu* (Compendium of Materia Medica), one of the most frequently mentioned books in the Chinese herbal medical tradition. He was born in 1518 at the height of the Ming dynasty (1368–1644); his grandfather was an itinerant doctor and his father a traditional physician. As a result of these influences and a bout with tuberculosis when he was twenty, Li decided to become a doctor at the age of twenty-four. At the age of twenty-nine he took a position in government practicing medicine, but, having found many problems with existing herbal literature, he left this position within the year and began work on the *Bencao Gangmu*. He traveled throughout China, experimenting with various herbs, collecting local folk remedies, and consulting virtually every medical book available (over eight hundred). His fifty-two-volume book took twenty-seven years to produce and was completed in 1578. The book describes 1,892 medicines (374 of which were new) and 11,096 prescriptions. Finally published in 1596 (three years after his death), the book has been translated either whole or in part into Japanese, Latin, French, English, Russian, and German and was a standard text on Chinese herbal medicine until 1959.

LIANG QICHAO (1873–1929), Chinese scholar and essayist. Liang Qichao was a reform-minded Chinese scholar and essayist who rose to prominence following the humiliating defeat of China in the Sino-Japanese War (1894–1895). In 1898, he was among the leading participants of the ill-fated "Hundred Days of Reform" sponsored by the progressive Guangxu emperor. Following the reactionary restoration of Empress Dowager Cixi, Liang fled to Japan, where, for the next fourteen years, he edited a series

of influential journals and wrote an impressive range of persuasive and inspiring essays and monographs. His writings at this time advocated political reform or revolution and introduced his contemporaries to Western liberalism, nationalism, and science.

In the aftermath of the Republican revolution of 1911, Liang returned to China and formed the moderate Progressive Party (Jinbudang) that contended with the ruling Guomindang in the nascent National Assembly. He twice served as a cabinet-level minister. With the onset of warlordism in 1917, Liang withdrew to a life of teaching and scholarship during which he wrote prolifically on Chinese culture, literature, and history. These later writings reflected his predominant aspiration for a new cultural synthesis in China that would combine the most worthy and enduring elements of Chinese Confucianism with the social and political principles of Western liberalism.

LIAONING (2002 est. pop. 44.6 million). Liaoning Province is in the southern part of Northeast China. Bounded by the Yellow and Bo Hai Seas in the south, with a coastline 2,187 kilometers long, it has a total area of 145,900 square kilometers. Jilin Province, Inner Mongolia, and Hebei Province surround it. The Liao River, the principal waterway of the province, flows through the middle part of Liaoning from north to south. The Yalu River on the eastern fringe forms the boundary between China and North Korea. The Liaodong Peninsula juts out between the Yellow and Bo Hai Seas from the landmass. Liaoning has a zigzag coast and many rocky islands and fine natural harbors. It has a population of 40.57 million (1996). Ethnic groups living there include Man, Mongolians, Koreans, and Xibo.

Liaoning has a temperate continental monsoonal climate, with hot, rainy summers, long, cold winters with little snow; and short, windy springs. It has an average annual temperature of 6–11°C, a frost-free period of 130–180 days, and a mean annual precipitation of 400–1,000 millimeters, which decreases notably from southeast to northwest.

Liaoning grows sorghum, maize, rice, and soybeans and the cash crops of cotton, tobacco, and peanuts. It is also the major tussah-silk grower of China. The apples of southern Liaoning and the pears of western Liaoning are known throughout China. The province also produces ginseng and antlers, valuable ingredients for traditional Chinese medicine. The fishery industry is developed along the coast.

Liaoning has rich mineral resources, especially iron ore and coal mines. Fushun and Fuxin, popularly called the "coal capital" and the "coal sea," produce top-quality coal as the largest open-cast mining centers in China. With a well-grounded heavy industry, Liaoning is one of China's major industrial bases. It leads the country in the production of iron and steel, aluminum, sulfuric acid, soda ash, heavy machinery, magnesia, and talcum. With its railway mileage exceeding 4,000 kilometers of tracks, Liaoning has the densest network of rail lines in the country.

Shenyang, the provincial capital, is the largest city of Northeast China, with a population of more than 6.5 million, and is one of its economic, communications, and cultural centers. Shenyang is known throughout China for its machine-building industry.

Dalian, the most famous city in Liaoning, lies at the southern tip of the Liaodong peninsula. One of the most beautiful cities in China, it is a tourist paradise, with European-style architecture framing its skyline and miles of beaches along the oceanfront.

LIBERAL DEMOCRATIC PARTY—JAPAN

The Liberal Democratic Party (LDP) has dominated Japan's postwar politics. It was formed in 1955 when the Liberal and Democratic Parties combined. Despite its name, the LDP is a conservative party with strong ties to business. Except for a short period following World War II when the Japan Socialist Party organized a coalition government, the LDP held power until 1993, when it lost control of the lower house of the Diet, the national legislature, to a coalition of seven parties. But this setback was only temporary; the LDP regained control in 1996.

The LDP's philosophy has two key elements: a commitment to economic growth and the maintenance of good relations with the United States, including supporting the security alliance between the two countries. Under LDP leadership, Japan followed U.S. policy guidance during the Cold War. Aligning itself with the United States allowed Japan to prosper economically, but Cold-War antagonisms restricted commercial opportunities with the Soviet Union and especially with China.

The LDP has traditionally been divided into factions, usually five in number. These factions are made up of members of the Diet who are committed to following the leadership of a senior party leader. In return for their support, faction members can expect to receive substantial amounts of money from their leaders. Individual LDP Diet members use this money to maintain a local electoral organization and to do favors for constituents.

Factions govern the process whereby party leadership and important government posts are filled. Competition among factions has been intense. In fact, competition among LDP factions has been a more significant aspect of Japanese postwar politics than competition among parties has been. The leader of the most powerful faction plays an important role in the selection of the prime minister. Ministerial positions in the cabinet are allocated through a bargaining process on the basis of faction strength.

The LDP lost control of parliament in 1993, following a series of highly publicized scandals involving bribery and corruption charges against top officials in the party. The substantial weakening of the Japanese economy in the 1990s also contributed to the LDP's decline in popular support. But opposition parties had problems of their own and failed to form a cohesive alternative. The LDP regained control of the government following the 1996 election, but lacking a majority in parliament, it had to form a coalition. After the 2000 election, the LDP continued to rule through a coalition.

LIGHT, FRANCIS (c. 1740–1794), British officer and founder of Penang. Francis Light started his career as a naval officer. At the age of twenty-three he

became the ship's captain for the firm Jouruain, Sullivan and De Souza in Madras. It was through this voyage that Light reached the Malay Peninsula. Light traveled extensively in the Malay Peninsula and Sumatra, learning the Malay and Siamese languages in order to conduct trade negotiations.

At the time Light was in Kedah (in the northwestern Malay Peninsula), Siam was constantly threatening it. At this time too the British East India Company (formed in 1600 for conducting spice trade with the East Indies) was interested in securing a trading port at the Eastern of Bay of Bengal. It was also the British government's interest to control the spice trade and compete with the Dutch monopoly. Light found that Penang, at that time a part of Kedah, was a sustainable port and that it would serve the British interest well.

The sultan of Kedah, who was aware that the British were in his land, asked Light if the British army would help him handle the attacks from Siam. Light used this opportunity well and signed a pact with the sultan stating that the sultan would give Penang to the British and that in return the British would protect Kedah from their vantage point in Penang, if Kedah were attacked.

On 11 August 1786, Light inaugurated Penang and named it Prince of Wales Island (however, this name was not popular), and named the new port George-town. At the time Light arrived, the population in Penang was one thousand; by 1804 it had risen to twelve thousand. The inhabitants of Penang were conducting trade with Great Britain and India, trading mainly cloth, metalware, and opium. After expending much effort in developing the state, Francis Light died in 1794.

LIJIANG, OLD TOWN OF The old town of Lijiang, one of the largest traditional towns left in China, is located in the southwest of the country in the part of Yunnan Province that borders on Tibet and Sichuan. The town, at the center of Lijiang Prefecture, sits on a high plateau, just south of the 5,000-meter-high Jade Dragon Mountain. Lijiang has a long history, taking its present form in 1253, when members of Khubilai Khan's (1216–1294) Mongol army set-

LIJIANG—WORLD HERITAGE SITE

The Old Town of Lijiang, a masterwork of Chinese feudal architecture, was designated a UNESCO World Heritage Site in 1997. So intact that its intricate ancient waterworks are still in use today, the site demonstrates several centuries of different cultural influences and adaptation to the difficult mountain topography.

tled in the area. They, along with the Naxi, one of several ethnic groups that populate the region, developed the town around a market square that still exists to this day. From the 1300s until 1723, the town was gradually incorporated into the Chinese empire. As other groups, including the Tibetan and Han, came to settle in Lijiang, a distinct architectural style developed, characterized by two-story sun-baked brick and clay-tile houses with carved wooden windows. Also unique is the town's centuries-old water system, which is still in use. Lijiang's inhabitants divert streams from the mountain's glaciers into a network of swift canals that run through the town streets. In 1997, UNESCO added the old town of Lijiang to its World Heritage Site list.

LIM CHIN SIONG (1933–1996), Singapore politician. Lim Chin Siong was a great orator in Chinese. He was one of the conveners of the People's Action Party at its founding when he was twenty-one years old. As a trade unionist, he was a charismatic leader who cared deeply for the welfare of workers.

Lim Chin Siong was involved in organizing strikes and boycotts among workers and Chinese middle-school students in the early 1950s, when Singapore was trying to break free of British colonialism. He contested the 1955 general election and was one of three

PAP members, one of whom was Lee Kuan Yew, elected into the Legislative Assembly. In 1959, when PAP came into power, he was appointed political secretary to the finance minister, Goh Keng Swee. He was sacked from his post two years later when he joined twelve PAP assemblymen to oppose the party leadership. He then became the secretary-general of the newly formed Barisan Sosialis. The PAP government accused him of being a communist "open-front" leader with links to the Malayan Communist Party and arrested him in 1963. He was placed in detention until 1969, when he decided to quit politics and resigned from the Barisan Sosialis. He went to London and stayed there for ten years before returning to Singapore, where he lived until his death.

LIM CHONG EU (b. 1919), Malaysian physician and politician. Born in Penang, Malaysia, Lim Chong Eu began his career as a medical officer in the armed forces in China from 1944 to 1945. In 1946, he served as the personal physician of General Chen Cheng, chief of staff of the Chinese armed forces. Between 1946 and 1947, he lectured in English literature at the Fudan University in Shanghai.

In 1957, he returned to Malaysia to practice medicine at his father's dispensary in Penang, remaining there until 1950, and then serving from 1950 to 1951 as a medical officer in the Malayan Air Force. By 1951, he was involved in local politics and had joined the Penang Straits Settlements Council as a councillor. In the same year, he founded and served as vice-chairman of the Penang Radical Party. In 1953, he became the party's chairman but refused to defend the post in June 1954.

Instead, he joined the Malaysian Chinese Association (MCA), another Chinese political party. In January 1955, he was elected councillor of the Penang Straits Settlements Council for the area of Kelawai. In March 1955, he was appointed a member of the

Alliance National Council, a coalition of three political parties, each representing a racial group in Malaysia. (MCA was the party representing the Chinese.) In the same year, he became the Alliance chief whip in the federal Legislative Assembly.

Lim Chong Eu became the president of the MCA in 1958, when he defeated the incumbent, Datuk Tan Cheng Lock. Lim, however, resigned from the presidency of the MCA in 1961, when the party failed to secure from the Malay political party, the United Malay National Organisation (UMNO), certain rights for the Chinese.

He then founded and became vice president of the United Democratic Party (UDP), thus assuming the position of a leader of the Chinese political opposition in Malaysia. In 1963, he became the UDP's secretary-general. He was elected as the member of Parliament for the constituency of Tanjung in the 1964 general elections and in the same year was elected assemblyman for the Penang State Legislative Assembly for the Kota seat.

In 1968, he founded and became vice president of the Gerakan Party. He was reelected to both his parliamentary and state assembly seats during the 1969 elections. The Gerakan Party subsequently joined the Barisan Nasionalis, a newly named coalition of political parties, each representing a racial group.

Datuk Lim Chong Eu was chief minister of the state of Penang, Malaysia, from 11 May 1969 until October 1990 and served as the president of the Gerakan Party in 1971. In the 1974 general elections in Malaysia, he was elected to a third term to both his parliamentary and state assembly seats. He held his seat, the constituency of Kota in the state of Penang, for three terms, during the general elections in 1978, 1982, and 1986. In the 1990 general elections, he lost the state assembly seat to the leader of an opposition party, Lim Kit Siang, of the Democratic Action Party, by 706 votes.

LIM, SHIRLEY (b. 1944), Chinese-Malaysian writer. Shirley Lim is an award-winning Chinese-Malaysian writer who immigrated to the United States and became a prominent academic and literary figure, especially in Asian-American literary circles. Her work

examines relocation, belonging, and hybrid identity, both in the Asian and American contexts, and analyzes cross-cultural and minority gender experiences. Born in a small village in Malaysia, she overcame poverty, going on to higher education at the University of Malaya and Brandeis University. She rose to fame when her debut collection of poetry, *Crossing the Peninsula*, became Malaysia's first winner of the Commonwealth Poetry Prize in 1980. Widely anthologized for her poetry and short stories, Lim has also written a memoir, *Among the White Moonfaces*, and a novel, *Joss and Gold*. *Among the White Moonfaces* won the American Book Award in 1996, as did a feminist anthology she edited, *The Forbidden Stitch: An Asian American Women's Anthology*, in 1990. Her work has recently been included in the English Language Syllabus of the National Secondary School Curriculum in Malaysia. Lim has had a distinguished academic career in the United States and in 2002 was professor of English and Women's Studies at the University of California, Santa Barbara.

LIN BIAO (1908–1971), Chinese soldier and politician. Lin Biao was among the youngest and perhaps best of the Communist generals during China's long civil war with the Nationalists (Guomindang) and the anti-Japanese resistance. Lin played a critical role in helping the forces of Mao Zedong (1893–1976) defeat the Nationalists in Manchuria and largely settle the civil war. He showed a genius for partisan warfare.

However, Lin's accomplishments were limited by periodic and severe illnesses, and he was often forced to take leave from his official duties. Still, he was, for a time, a great favorite of Mao, and after Lin became minister of defense in 1962, Mao relied on Lin to keep the army loyal and under control of the Communist Party in the period leading up to and during the Cultural Revolution (1966–1976). Indeed, Mao named Lin as a successor, but that may have been a ploy to isolate Lin and make him more dependent on Mao's favor. Perhaps at the peak of his ascendancy, Lin ei-

ther attempted a coup d'état or merely tried to flee to save his life, and it was reported that he, his wife, and some fellow travelers died in 1971 in a plane crash while seeking sanctuary in the Soviet Union.

LINGAYAT The Lingayats are a Hindu sect concentrated in the state of Karnataka (a southern provincial state of India), which covers 191,773 square kilometers. The Lingayats constitute around 20 percent of the total population in that state and are also common in Bijapur, Belgaum, and Dharwar.

The Lingayats do not call themselves Hindus. They are known as Virasaivas because of their single-minded and deeply passionate devotion to Siva (a deity who is venerated both by upper- and lower-caste Hindus, as well as other marginal groups in Hindu society), manifested in a lingam, or male phallus form. Followers carry the lingam either around their necks or across their chests; children may have the image tied to one arm. The *Lingadbaranachandrika*, the religious treatise of the Lingayats, makes it compulsory for all devotees to wear a lingam on their body, even in death.

The Lingayat religious movement challenged the deep-rooted Brahmanic system on which high Hinduism or Vedic Hinduism rested. Beginning in the twelfth century as a miniscule socioreligious movement in north Karnataka and founded by a government minister named Basavanna, the religion gained momentum over a period of time throughout Karnataka.

Basavanna assimilated the tenets of dominant Saivite (Siva-worshipping) religious traditions prevalent during his time in Kashmir, Gujrat, and Tamil Nadu and transformed them so that they retained their functionality within the broad framework of Lingayat religion. The Lingayat religious doctrine emphasizes the mutual dependence between Siva and individual human beings. Siva is believed to have constituted the Parama Sakti (ultimate cosmic force), that is, Siva and the cosmic force are considered to be identical. Lingayat religious doctrine holds that prior to the creation of the cosmos, Siva was absolute self in terms of

purity, beyond space and location, beyond pattern, nameless, shapeless, and deedless.

Through this philosophy, Basavanna and other Lingayat preachers tried to combat the polytheistic forces of Brahmanic Hinduism. Basava's monotheism not only dethroned the Vedic deities (venerated by the followers of Vedic Hinduism), but also exposed the fallacies of the Brahmanic interpretations of the Hindu scriptures. Consequently, Lingayat religion favored a social order that was devoid of the caste system and social servitude. As a result, it initially countenanced the conversion of men and women from all Hindu castes, including the lowest.

The movement's egalitarianism struck at the core of the Brahmanic tradition: It disavowed caste segregation and hierarchy, the system of fourfold division of society, the multitude of gods and goddesses, ritualism, and the notions of pollution and rebirth. The Lingayat movement, however, went beyond a merely negative critique of the Brahmanic order. It developed its own opposing and parallel structures, involving reinterpretations of monotheism, the guru (spiritual teacher), the lingam, the *jangama* (itinerant priest), and *kayaka* (calling).

The Lingayat religious culture, which stresses the principles of individuality, equality, and fellowship, created a political awareness among its followers. Though the Lingayat culture was an apolitical culture in the early decades of the twentieth century, it envisaged a populist style of politics that assigned the community the role of political critic. The communitarian social outlook of the Lingayats found expression in the creation of the state of Karnataka in 1956. Because of their numbers, the Lingayats in the early 2000s decide the political fortunes of the major political parties in Karnataka.

LINH NHAT (1905–1963), Vietnamese novelist. Linh Nhat is the pen name of Nguyen Tuong Tam, who was one of Vietnam's most prominent novelists

in the first half of the twentieth century. Born in central Vietnam in 1905, he was an ardent nationalist and in 1933 with Khai Hung (1896–1947) cofounded the Self-Strengthening Literary Group to promote Vietnamese vernacular literature. Linh wrote primarily about the plight of the urban bourgeoisie constrained by both traditional Vietnamese culture and French colonialism. His writings, critical of arranged marriages, were applauded by women's organizations. A prolific author, Linh's most famous works include *Autumn's Sunlight* (1934), *Breaking Away* (1934), *A Lonely Life* (1936), *Two Golden Afternoons* (1937), *Two Friends* (1938), *White Butterfly* (1939), *Cau Moi Hamlet* (1958), and *Thanh Thuy River* (1961). These novels were some of the first major works in vernacular Vietnamese and set the standard for the genre. During World War II, Linh had some contact with Japan; he hoped that Japan would grant Vietnam independence. Linh fled arrest by the French authorities to southern China, where he lived for more than a year. He returned to Vietnam in September 1945 with other nationalists. Although Linh was critical of the Republic of Vietnam (South Vietnam) regime, his works were banned after 1975 because of his staunch anticommunist stance. It was not until December 1987, when the Vietnam Communist Party issued Resolution Five, that writers and artists were given more intellectual freedom and bans were lifted on many literary works, including those by anticommunist writers such as Nhat Linh. Linh's works remained popular in South Vietnam.

LION, ASIATIC Once a symbol of royalty in West Asia, the lion was hunted and killed only by kings in ancient Mesopotamia (modern Iraq). Today the Asiatic, or Indian, lion (*Panthera leo*) is virtually extinct in Iran and Iraq but survives in the Gir Forest National Park in India. The Asiatic lion is the same species as the African lion, which includes the Cape Lion, the Masai lion, the Senegal lion, the Barbary lion, the Somali lion, and the Persian lion, *Panthera leo persica*, once native to southwestern Asia. During Pleistocene times, a million or more years ago, lions lived over much of the earth, but they disappeared from North America about ten thousand years ago, from the Balkans about two thousand years ago, and from Palestine during the Crusades. Scarcely any still exist in western Asia where they once flourished, as

they did too in central and northern India; but the Gir Forest, in Gujarat, western India, is a sanctuary created in 1913 for the protection of Indian lions. Their tourist appeal may ensure their survival here, but local herders are now their chief enemy.

Lions average 275 centimeters in length, whether in Africa or India (the largest-known Indian specimen was 292 centimeters long, the largest-known African one 323 centimeters). The male weighs up to 200 kilograms. Lions have not been domesticated except in isolated instances for circuses and film work; but the two hundred or more inhabiting Gir Forest today seem remarkably tame and tolerant of tourists. They eat large animals including cattle but are not normally manhunters unless sick.

As is the case with the African lion, the Indian female begins breeding at about three years of age; there is no particular breeding season, and she produces two or three cubs every one-and-a-half or two years, after a gestation of about 116 days. The color of the Asiatic lion's coat is the same sandy brown as that of African lions, but the male's mane tends to be a little thinner, and the coat otherwise somewhat thicker, than in the African varieties.

LITERATURE—CAMBODIA, KHMER The earliest dated stone inscription in the Khmer language, which could be regarded as the beginning of Khmer, or Cambodian, literature, is from 611 CE and was found in Takeo province. Over a thousand inscriptions in Old Khmer and Sanskrit that were produced throughout Cambodia and the former Khmer regions of northeast Thailand, southern Laos, and southern Vietnam between the seventh and fourteenth centuries survive. The Cambodian inscriptions are of great significance for general history as well as for the history of art and linguistics.

Classical Literature

The period of inscriptional literature ended after the decline of the Angkor empire in the fourteenth century. The four centuries from the abandonment of Angkor in 1432 to the establishment of the French protectorate in 1836 were considered to be the dark ages in the history of Cambodia, but it was in this period that the literary works regarded as classics appeared. Written on palm leaves, classical Khmer literature was exclusively composed in verse. Prose was not regarded as an artistic medium and was reserved

for practical documents such as legal texts and chronicles. There are more than fifteen forms of verse composition, each with its own strict rules on syllable length and internal and external rhyme schemes. As with other kinds of Khmer art, the beauty of Khmer poetry lies in the delicacy and richness of harmonious ornamentation. Several techniques, such as the use of high-style vocabulary, paired synonyms, alliteration, and assonance, must be skillfully manipulated to produce the most euphoric effect. Therefore, literary production was only in the hands of the intelligentsia, who had sound knowledge of the Khmer, Sanskrit, and Pali languages. Indian literary influence was undoubtedly very strong, but always the Khmer authors modified what they adopted to suit their own traditions and tastes.

Classical Khmer literature, which was composed by kings, court poets, and Buddhist monks, can be divided into ten categories. The most important genres include verse novels and didactic poems. The best-known and earliest verse novel is the *Reamker*, the Khmer version of the Indian epic *Ramayana*, written between the sixteenth and eighteenth centuries. The story of Rama, which was adapted to match the culture and beliefs of the Cambodians, has pervaded all art forms: the bas-reliefs at Angkor, the frescoes on temple walls, the shadow theater, the masked dance, and the chief repertoire of the Royal Ballet. Apart from the classical *Reamker*, popular versions of *Reamker* also exist that were recited by storytellers in public performance. The *Cbap*, or the Code of Conduct (didactic poetry written to encourage good social behavior consistent with the observance of Buddhist morality), was also highly influential. The *Cbap* has enjoyed remarkable popularity; it was constantly written, copied, and memorized from the early seventeenth century right up to the present. Two of the most famous examples are *Cbap Prob* (Code of Conduct for Men) and *Cbap Srey* (Code of Conduct for Women).

During the early eighteenth century, the *Satra Lbaeng*, verse novels recounting the Buddha's birth stories, developed. The oldest example, *Khyang Sang* (The Conch Shell), dates from 1729. Portraying the Buddhist concept of karma, many of the *Satra Lbaeng* were used by monks as texts to teach Khmer boys to read and write. Later, they came to be dramatized both in the court and the popular dance drama. A number of Khmer verse novels also draw their story lines from old local folktales and legends. A favorite with Cambodians is *Tum Teav*, the story of the ill-fated romance between Tum and Teav, based on a true love story said to have occurred in the fifteenth century. Unlike other verse novels, which are Hindu-Buddhist in their

inspiration, *Tum Teav* is almost free from supernatural and mystical elements, and ordinary Khmer life is described with striking realism.

Early-Twentieth-Century Literature

During the early part of the twentieth century, the Khmer novel emerged as a result of Western influence. The appearance of the first two novels, *Sopbat* (The Story of Sopbat) and *Tik Tonle Sap* (The Water of the Tonle Sap), during the last years of the 1930s marked a new era in the history of Khmer literature. These innovative and realistic literary works, reflecting the life of the emerging middle class, aroused considerable interest among the public. From 1940 to the end of the colonial era in 1953, more than fifty novels were published, with the main trend being toward romanticism. Many of them were created with serious social and political motives, and nationalism was the main inspiration for writers, although patriotic sentiment had to be shown in an indirect way. Among the best early novels are *Kulap Pailin* (The Rose of Pailin), *Pbka Srapon* (The Faded Flower), and *Mealea Duongjit* (The Garland of the Heart).

Postindependence Literature

After independence in 1954, the novel underwent tremendous growth and became the most popular literary genre in Cambodia. Between 1953 and 1975, almost one thousand titles were published. Love stories constituted a major portion of the postindependence novels, with the favorite theme being the arranged marriage. Another outstanding type was the historical novel; these were written mainly to cultivate a spirit of nationalism and loyalty toward the monarchy. The adventure novel, packed with exciting battles, was also very popular among the Khmer readers. The authors of these novels were heavily influenced by Western adventure novels as well as by Chinese epics and films. In the late 1950s, the social novel appeared after the government and the Association of Khmer Writers introduced literary competitions. The award-winning novels mostly dealt with such contemporary social problems as the struggle of Khmer women in modern society and the life of the urban working class. An outstanding example is *Preah Athit Thmey Reah Loe Phaendey Chab* (The New Sun Rises on the Old Land), which reflects the struggle of the working class against oppression and exploitation by urban capitalists.

Khmer Rouge and Later Periods

Khmer literature degenerated during the Khmer Rouge regime between April 1975 and January 1978.

As a result of revolutionary policies, at least 1.5 million Cambodians were killed, including a great many writers and literary scholars, as well as members of the reading public. Schools were closed, libraries were demolished, books were deliberately destroyed, and writers were not able to express their ideas and feelings. Literature, in the form of poetry and proverbs, was written to support Khmer Rouge ideology and values. After 1979, cultural and literary activity was reorganized by the government of the People's Republic of Kampuchea. Khmer poems and novels of the 1980s were written to support the socialist policy of the government and to encourage the Cambodians to participate in the work of national security and reconstruction. Their recurring themes are the tragic life during the Pol Pot years, the heroic acts of soldiers in the revolutionary army fighting against the Khmer Rouge and the noncommunist resistance factions, and Cambodian-Vietnamese friendship and solidarity. In Europe and America, Khmer refugee writers also produced novels, stories, and collections of poems with the principal theme of the dramatic events between 1975 and 1979 and their suffering and nostalgia for the homeland. From 1980 on, the horrors of the Khmer Rouge reached a much wider audience through the autobiographical accounts of survivors written in English and French. Among the first was Pin Yathay's *L'Utopie Meurtière*, published in Paris in 1980. This book is considered by general readers as well as scholars of Cambodian studies as one of the best of the survivors' accounts. Later, it came out in English under the title *Stay Alive, My Son*.

In the 1990s the Association of Khmer Writers was reestablished, and two literary competitions have been organized since 1995. Khmer fiction in this decade developed in two directions: one returning toward the novelistic tradition of the postindependence period, and the other continuing the socialist influence from the former decade.

LITERATURE—CENTRAL ASIA It is difficult to imagine Central Asia without literature. Of the epic literature and poetry produced by numerous Central Asian ethnic groups, scholars are most familiar with Turkish and Persian literature and, to a certain extent, writings and oral compositions in Arabic and Urdu. Some of the oldest forms are odes to Tengri, the predominant monotheistic belief system of the eleventh through thirteenth centuries. Next came the *chorchok* (also known as *sav*, *jir*, *dastan*), oral histories, as well as didactic stories drawn from that genre.

Poetry writing was one of the earliest pastimes in Central Asia. Folk poets still perform poetry at tea-houses, as they accompany themselves with a stringed musical instrument generally known as the *kobuz*. Other performers often join in, contesting for top honors and monetary and other awards. This music-poetic competition has always been an eagerly awaited entertainment feature at special occasions such as weddings and funerary feasts. Or a traveling minstrel may recite and act out an entire epic, such as the *Manas* (c. 995, the national epic of the Kyrgyz people, centering on a heroic figure called Manas), *Iskandarnamēh* (The Book of Alexander the Great, by the Persian poet Nezami, c. 1141–1203), or *Shah-namēh* (The Book of Kings, compiled by the Persian poet Firdawsi, c. 935–c. 1020).

Poetry Written by Rulers

From the Samanid rulers of the ninth century through the sixteenth-century rulers of the Uzbeks and Timurids, a new ruler usually issued a collection of his poems in a specially prepared volume in order to win the respect and allegiance of his subjects. This collection was duplicated by scribes and read aloud at tea-houses. The ruler's prestige was increased when people enjoyed such poetry on aesthetic grounds, an especially desirable achievement if the new ruler was establishing a dynasty to replace a previous one. *Hikmet*, by Shibani Khan (d. 1510) of the Uzbeks, is an example of such poetry written in the early sixteenth century.

Mirrors for Princes

Manuals prepared to instruct future rulers and to improve the abilities of reigning kings, termed "Mirrors for Princes," include such works as the *Kutadgu Bilig* (published in English as *Wisdom of Royal Glory*), the *Kabusnameh* (*A Mirror for Princes*, eleventh–twelfth centuries), and *Siyasatnameh* (The Book of Government). The *Kutadgu Bilig* was written by Yusuf of Balasagun and dedicated to Tavgach Bugra Khan of the Karakhanid dynasty (999–1212), in 1170. The *Kabusnameh* was produced shortly afterward as a series of admonitions from the ruler to his son and heir, detailing how to extract the most from the earthly pleasures in his realm. The *Siyasatnameh* was presented by Nizam al-Mulk (1018/19–1092), the prime minister of Alp Arslan (c. 1030–1072), the Seljuk ruler, as his testament and as a defense of his own political actions.

Dastans and Other Oral Compositions

The form of epic poem known as the *dastan* is the principal repository of the ethnic identity, history, customs, and value systems of its composers and their peoples. The events commemorated in a *dastan* may date from a very early period. For the Central Asians, the oral record, particularly as preserved in *dastans*, is an integral part of identity, historical memory, and the historical record itself. The oral tradition in Central Asia precedes the common era and has been preserved across multitudes of generations. It stands, as it always has, as the final line of defense against any attempts to dominate the Central Asians culturally or politically.

Stylistically Central Asian *dastans* differ from Islamic epic poetry, the bulk of which appeared and spread after approximately the twelfth century, and especially since the fifteenth century. In Central Asia, the tradition of expression and celebration of ancestral exploits and identity predates the use of the word *dastan*, which appears as a later borrowing into Turkic dialects.

Certainly the idea of marking important events with versified narrations or songs is not new. In fact, each significant event in the lives of Central Asians had its own type of "marker" song. The *suyunju* celebrated good news, including the birth of the *alp* (leader), especially after a tribe or individual had experienced difficulties. The *yar-yar* was sung at weddings. More than merely celebrating the union of the bride and groom, however, it also signaled the beginning of other courtships at the wedding feast. The *koshtau* was sung on the departure of the *alp* for a campaign and the *estirtu* when an *alp*'s death was announced. The *yogtau* was sung at *yog ashi*, the memorial feast (after burial) to lament the death of the *alp*.

The term *jir*, as in *batirlik jiri*, is equivalent to *dastan* and includes all these components. In most cases, the celebration of the *alp*'s tribulations and ensuing victory is referenced by the name of the *alp* only. Oghuz Khan, Manas, Koroglu, Kirk Kiz are some examples of *alps* whose exploits are recorded in epics of the same name. At other times, the term *batir* or *alp* is appended to the name of the individual thus honored: Kambar Batir, Chora Batir, Alp Er Tunga. However, despite the prevalent use of the terms *jir* and *kokcho* (still used in various portions of Central Asia), the term *dastan* is employed throughout this work when referring to this type of epic composition, in keeping with the usage of the secondary literature.

When celebrating the *alp*, the exemplary individual's attributes were always compared to natural phenomena, since he or she possessed rare qualities. Thus the *alp* can run as swift as lightning; his hair glows as bright as the sun; his body, in his prime, is as sturdy as the strongest tree; his punch is mightier than a thunderbolt. Such nature imagery draws upon the values of shamanism, the dominant belief system of Central Asian Turks prior to the arrival of Islam in the eighth century. Moreover, the use of the term *bahsi* (also *ozan*) to designate the reciter of the epic also has shamanistic connotations.

Traditionally, a *dastan* is composed by an *ozan* in order to celebrate a memorable event in the life of his people. The *ozan* will usually set the events in verse and recite them while accompanying himself on a stringed instrument. The *dastan* typically depicts the *alp* fighting against the collective enemies of his people and tribe. Under his leadership the longed-for victory is achieved. The trials and tribulations endured by this preeminent leader, though aggravated by one or more traitors, are in due course alleviated by a full supporting cast. Nor is the theme of love a stranger to the plot. Often the loved one is abducted by the enemy, only to be rescued after much searching, fighting, and sacrifice. There are attempts by the foes and the traitors to extort favors of various sorts from the lovers, but this does not deter the resolve or the eventual triumph of the principal personages. The traitors, frequently from the same tribe as the *alp*, collaborate with the enemy or abuse the trust of their people and their leaders. However, none of this prevents the inescapable success of the *alp* in the end. The traitors receive their due, being now and then executed for their sins but customarily forgiven and allowed to roam the earth in search of reconciliation between themselves and God.

Reference to similar past experiences is standard and reinforces the very important link to earlier *dastans*.

Motifs or whole episodes from earlier *dastans* may be repeated, sometimes with variations, in new *dastans*. Religious motifs emerge in descriptions of practices and beliefs. Among the Islamic practices earlier modes of worship are apparent. The narration of the *dastan*, in verse or prose, may also allude to supernatural powers.

The *dastan* travels with the Central Asians and, like its owners, it is not limited by geographic frontiers. Indeed, the idea of boundaries in the Western sense was alien to the nomadic societies of Central Asia and imposed on them late in their history. The necessity to undertake biannual migrations in search of fresh pastures for the livestock complicated the definition of a rigidly defined homeland. In the event that the heirs of a *dastan* face new threats to their freedom, the importance of the *dastan* is reinforced. Should the enemy somehow prevail, the *dastan*, by providing an unbreakable link to the past, affords the inspiration to seek independence once again.

Conversion Literature

Before the arrival of Islam in the tenth through thirteenth centuries, several dominant belief systems coexisted in Central Asia, including Tengri, Zoroastrianism, and Buddhism. Special literature was created or translated for the purpose of disseminating each newcomer religion, when it arrived. These missionary works were rendered into the Central Asian languages dominant at the time that the religion reached the region and, in some cases, were translated out of them for dissemination in other regions. For example, Buddhism made its way from India into China by way of the Uighurs, who translated sacred Buddhist texts from Sanskrit into Uighur and then into Chinese. Christianity established a small foothold in western Central Asia with the *Codex Cumanicus* (c. 1300), a Latin guide to the language of the Cumans, a people of Central Asia, which included passages from the Bible in translation.

In eastern Central Asia, the Ghaznavids (977–1187) and Karakhanids held sway as the Islamization of the region got underway. In the central area of Central Asia, the Seljuk or Oghuz Turks (1038–1157) and the Timurids (fifteenth–sixteenth centuries) were the dominant powers. The Mongol Golden Horde khanates (fourteenth–sixteenth centuries) held the northwestern region. Farther west were the Ottoman Turks (1453–1922), who were sometimes involved in Central Asian affairs. These polities and dynasties all directly or indirectly participated in the proliferation of Central Asian literary traditions.

Under these rulers, Islam popularized two new literary genres in Central Asian polities. The first dealt

with the myths associated with the conversion of Central Asian populations to Islam, and the second was concerned with the struggle of Islam against the extant belief systems in Central Asia, in the form of tales of battles during the conversion process. The Persian poet Mawlana Jalal ad-Din ar-Rumi (1207–1273) was one such figure making use of the genre. Rumi relied on his voluminous poetry to spread the word of his Sufi (Islamic mystic) sect.

Philosophy, Astronomy and Other Sciences, and Mathematics

The rulers of polities provided the patronage and favorable environment for the production of masterpieces, by which the rulers would be remembered for eternity. Therefore, regardless of the nature and objectives of the writing, Central Asians adhered to certain rules in their works. This is evident even in books not entirely devoted to belles lettres. Among them are the writings of the Turkish philosopher Abu Nasr al-Farabi (c. 878–c. 950) and the Arab historian Muhammad ibn Jarir at-Tabari (c. 839–923), who wrote in Arabic and Turkish. Their works were translated into Western languages and published from the sixteenth century on. Ulugh Beg (1394–1449), the grandson of the Turkic conqueror Timur (1336–1405), ruled Samarkand and the environs and was the author of astronomical and mathematical works that influenced European studies, when, beginning in the seventeenth century, they were translated into Latin and printed in Oxford, England.

Reportedly of Uighur descent, Mir Ali Shir Nava'i (1441–1501) was one of the premier literati and statesmen of his time. He wrote voluminously and with apparent ease in Chagatay, a Turkic dialect, and in Persian and long served as prime minister of the Timurid ruler Huseyin Baykara (reigned 1469–1506) of Herat and Khorasan. Much of his tasteful poetry remains untranslated, but among his prose works, *Mubakemat al-lughateyn* (Consideration of Two Languages) has been translated into English. Babur (1483–1530), another direct descendant of Timur, established the Mughal empire in India. He was also an accomplished author in Chagatay; his memoirs are still highly praised and regarded. Jami (1414–1492), a Persian poet and mystic, was Nava'i's friend and fellow man of letters of the period in Herat.

The Czarist Period

As Russian armies proceeded to invade Central Asia, the literature began to reflect the struggle between the invaders and the defenders. The Russian in-

vasion attempts were not always successful. In 1506, Shibani Khan of the Uzbeks sent a quatrain to Muhammed Amin, the khan of Kazan, congratulating the latter for turning back the Russian attack on Kazan. Shortly afterward, *dastans* were pressed into service as well. The 1552 variant of the Chora Batir *dastan* described the fighting over Kazan. In 1905, Ismail Gaspirali, (1851–1914), an influential Tatar journalist, wrote a poem to admonish his detractors: "If my arrow would hit the target / If my horse should win the race / Chorabatir is valiant / If my arrow could not reach its target / And my horse cannot win the race / Tell me, what could Chorabatir do?" (Paksoy 1986: 265).

The Basmachi and the Semi-Independence Period

During the nineteenth century, when the greatest portion of Central Asia fell under Russian armies, the response of the Central Asian leadership was to have medieval Central Asian literature collected and published. In 1916, the Basmachi (Turkistan National Liberation Movement) began fighting, at first spontaneously, later in a planned and coordinated manner, to construct a Turkistan polity. For a time, the movement was successful. According to Zeki Velidi Togan (1890–1970), a prime mover of the initiative, the *dastan Koroglu* not only kept morale high but also served as a role model because the historical Koroglu (sixteenth century) had fought for freedom against all odds.

When Central Asian peoples could not openly circumvent Russian censorship, they resorted to writing highly coded satire. The journal *Molla Nasreddin* is a prime example. Named after a "people's philosopher" who lived prior to the thirteenth century, it was founded by Jelil Memmedkuluzade (1866–1937) and published in Tbilisi, Tabriz, and Baku from 1906 to 1920. Exercising an enormous influence on its readership, it spawned dozens of emulators across continents. When Mikhail Gorbachev instituted perestroika, the Soviet policy of economic and governmental reform, in the mid-1980s, the journal was reprinted in Baku, as a reminder of what had gone before. Those who reprinted *Molla Nasreddin* had the same objective as its founder, Memmedkuluzade: autonomy and freedom.

The Soviet Period

When the 1917 Bolshevik revolution began, Central Asian people were endeavoring to commit their vast and ancient literature to print. After 1924, when Central Asia was divided among various Soviet Socialist Republics, the Oriental Institutes, now Sovi-

etized, worked to regain control of the process. One method they used was to collect and record on paper the oral literature as if the materials were intended for publication, but then to bury the collected manuscripts in a myriad of inaccessible archives. Some manuscripts were supposedly lost, their reciters who had carried on the oral tradition murdered. When other methods failed, the Soviet bureaucracies charged with the "management" of Central Asian literature began mounting court trials of books during 1950–1952. The court trials were designed to purge national cultures of those elements deemed incompatible with a Marxist-Leninist world view. Typically, attacks would begin with derogatory comments in a local newspaper or national newspaper. This would be picked up by the local Communist Party and then by various local, political, social, academic, or literary organizations, and finally by an organization of national standing. The culmination of the attack would be the universal condemnation of local intellectuals, who would be charged with idealizing the bourgeois-nationalist aspects of their national literature. At this time, traditional literatures of the countries of the USSR were banned. After the accession of Nikita Khrushchev (1894–1971) to Communist Party leadership, the publication process resumed—but with new methods. Rather than allowing the originals to be disseminated, the Oriental Institutes insisted on issuing approved sanitized versions. Also, purported *dastans* on such themes as Ode to the Tractor and Ode to the Collective Farm were issued to replace the traditional ones.

One solution used in the 1930s to circumvent censorship was fiction literature. During the 1980s, the genre continued to survive in works like *Olmez Kayalar* (Immortal Cliffs) by Mamadali Mahmudov, *Kuyas ham Alav* (Sun Is Also Fire) by Alishir Ibadinov, *Singan Kilich* (Broken Sword) by Tolongon Kasimbekov, *Baku 1501* by Azize Caferzade, and *Altin Orda* (Golden Horde) by Ilyas Esenberlin. Despite being fiction, all these novels contain, to various degrees, footnotes with historically accurate information and provide details of how Central Asia was invaded by Russian armies. The Soviet apparatus, spearheaded by the Oriental Institutes, tried to pressure these and other authors to rewrite portions of their novels to cast the Soviet Russians in a better light. Failing that, the Soviet bureaucrats endeavored to have the authors recant their written assertions. Despite the efforts of the Soviet bureaucracies, defiant works kept appearing.

A number of authors took advantage of the Soviet state's atheism policy to disseminate views not otherwise printable. Aliser Ibadinov, in his *Kuyas ham Alav*, insisted on the necessity of remaining true to

ancestral beliefs, which predated not only Soviet ideology but also Islam. This Ibadinov accomplished by portraying how Central Asians resisted the spread of Islam.

The Post-Soviet Period

Some Central Asian authors were sent to Soviet jails simply for writing. In some cases, world attention focusing on the plight of these writers managed to get them freed. One such case involves Mamadali Mahmudov, who was imprisoned by the Uzbeks for including criticisms of the Soviet government in his writings. One of the reasons that the government was willing to free him was, perhaps, that Mahmudov was simply quoting passages from older works, such as the *Dastan Dede Korkut* (committed to paper in the sixteenth century although dating from a much earlier period). After the Uzbek Republic declared independence in the post-1991 era, Mahmudov was rewarded for his earlier work by being given the newly instituted Cholpan Prize. Named after a Central Asian author who perished in Stalin's Soviet jails, the Cholpan Prize was meant to honor Mahmudov's skill in transmitting historical documentation and narration under the guise of fiction. In 1999, Mahmudov was abducted and jailed once again. To what extent his new incarceration is due to his past sins of the Soviet period is yet to be understood. His case has been taken up by various groups and governments, including Amnesty International, Helsinki Watch, Human Rights Watch, and Digital Freedom Network.

Perhaps the ancient literature of Central Asia is continuing to serve the original intent of its creators. The following poem was printed in *Mubbir* (Tashkent, November 1982), the official organ of the Uzbek Communist Party Authors' Union. The message is still valid:

Give me a chance, my rebellious dreams
My father has erected his statue in my memory
May years and winds be rendered powerless
May his legacy not be erased from my conscience

Give me a chance, my rebellious dreams
Grant my father a holy Dastan
May years and winds be rendered powerless
May his remembrance never be allowed to fade

H. B. Paksoy

LITERATURE—CHINA From earliest times, literature in China was considered to include philosophical and historical writing along with prose and poetry; literature was writing that met social needs or expressed one's deepest feelings, or both. Oral literary forms were often respected, and most written forms through time regularly drew material from the folk tradition; conversely, the dominant written forms helped shape the ethics and aesthetics of popular oral traditions as well.

NOBEL PRIZE FOR GAO XINGJIAN

In 2000, the Nobel Prize for Literature was awarded to Chinese writer Gao Xingjian for his novel, *Soul Mountain*. The novel, which was translated into English by Mabel Lee and published by HarperCollins, is an account in various literary forms of Gao's travels (physical, mental, and spiritual) through modern China and a less than favorable comparison with the China of the past. Gao was born in 1940 and became known in China for his writings on the Cultural Revolution, which he burned for fear of being imprisoned. After that his work was both tolerated and repressed by the government, and in 1987 he immigrated to France. His book is based in part on his travels for a year and a half through southern China.

David Levinson

Earliest Forms and Functions

China's earliest extant texts presumably reflect the spoken language of the time, but writing was increasingly reserved for the social and political elite; consequently, the language of classical literature (*wenyan*, or "cultured language") was not allowed to reflect changes as spoken language developed through time. Thus the language of formal literature became archaic and demanded extensive study for thorough comprehension. Its difficulty was enhanced by the welter of allusions to a broad range of earlier literature, which adorned the work of learned writers. Although classical Chinese literature required years to master, the preservation of a standard written language and its rich literary tradition served to link successive generations of writers and readers of diverse backgrounds throughout China and elsewhere throughout East Asia to produce what is arguably the world's richest literary tradition. Those who succeeded came to be called *wenren* (people of culture), or literati, in contrast to the bulk of the Chinese people, who could merely read practical texts or who were illiterate. The high status associated with high levels of education, like many of China's literary forms and genres, had remarkable tenacity, lasting hundreds of years until the twentieth century, when Western influences swept through Chinese culture as well as through its political system.

Dominant Literary Forms—Poetry

Unquestionably, the dominant Chinese literary form was always poetry. Among the oldest preserved writings are hymns and dances from the courts of

the Shang (1766–1045 BCE) and Zhou (1045–256 BCE) dynasties, twelfth and eleventh centuries BCE. These and folk songs make up the earliest collection assembled around 600 BCE, the *Shijing* (Classic of Poetry/Book of Songs), which was memorized by generations of budding writers for the imagery of its poems and for the moral teachings each poem was thought to embody. Most were read as oblique references to contemporary political events and social situations.

For two thousand years, this collection has been identified with the Confucian school of moralistic teaching; this poetic tradition grew up in the states of the north China plain, the Confucian homeland. By around 400 BCE, a second tradition was developing farther south, around the Chang (Yangtze) River. These poems more closely reflect religious, even ecstatic, practices and beliefs. This tradition, preserved in the collection *Chuci* (Songs of Chu), contributed a more diverse prosody as well as fantastic images and motifs to the maturing poetic tradition. Marked by a caesura in each line, this form may have influenced the development of the prosy *fu*, or rhapsody, during the Han dynasty (206 BCE–220 CE); it died out when the political power of the north became dominant.

A new form, *shi*, or lyric poetry, was to develop toward the end of four centuries of unified Han rule. Written in equal numbers of lines of five syllables (or words, in largely monosyllabic early Chinese), *shi* were often composed in couplets; later, seven-syllable lines also became common. Poems in this form served as the vehicle for the most profound philosophical speculation as well as deep emotion and even literary play.

THE CHINESE VIEW OF WESTERN APPRECIATION OF LITERATURE

The extract of text written by the Protestant missionary Mary Isabella Bryson in 1890 provides an interesting insight into the Chinese opinion of Western civilization.

But what is the business of the man who is approaching us, carrying two large deep bamboo baskets, each with a tiny flag attached to one of them bearing the legend, "Respect Printed Paper"? As he proceeds, a door here and there opens, and a manservant comes out with a waste basket, emptying its contents into the large basket carried by the collector of scraps. This man is employed by some Chinese benevolent society to go round and collect even the smallest scraps of printed paper so that they may be carried to some temple courtyard, and destroyed by fire in a furnace set apart for the purpose, for the kitchen stove would be considered too secular of a place for performing such a sacred duty. This is one of the works of merit which the Chinese believe accumulate for them a sort of balance, to be set against the sins for which they have committed when they are judged by the king of the infernal regions at the end of life.

Probably few things have contributed so much to the idea that foreigners are uncivilized barbarians as our light regard for our own printed or written paper. They see us using it in all sorts of ignominious ways. We wrap parcels in it, and frequently carelessly tread it underfoot, consequently the Chinese not unnaturally conclude that we can have nothing of the name of a language or literature, or we should not treat the printed page in so disrespectful of a manner.

Source: Mary Isabella Bryson. (1890) *Child Life in China*. London: William Clowes and Sons, Limited, 58–59.

They served as the cornerstone of virtually all writers' collected works—and reputations. The "classical" form of such poetry, *gushi*, reached maturity in the third century and was used as a vehicle for poets' most intensely felt emotions until the twentieth century. During the Tang dynasty (618–907), a highly formalized version became popular, the *lushi* (regulated poetry), written in eight lines of either five or seven syllables. Over fifty thousand *shi* are preserved from the Tang period, a high point in poetic expression; from the subsequent Song dynasty (960–1279), hundreds of thousands still exist.

China's most famous poets include three who were contemporary, Wang Wei (d. 761), Li Bai (often romanized Li Bo or Li Po, 701–762), and Du Fu (712–770), all members of the educated elite of the Tang period. Although their differences are some-

times exaggerated for the sake of contrast, each is identified with a major philosophical school of the times: Wang Wei with Buddhism, Li Bai with Taoism, and Du Fu with Confucianism. This is because many of Wang Wei's poems reflect the stillness of meditation, Li Bai's works express the mental freedom associated with philosophical Taoism, and Du Fu frequently addressed the calamities of the day, particularly the sufferings caused by the An Lushan rebellion that began in 755. In this, Du Fu was performing the duties of the faithful Confucian minister of state, although his stern advice brought him dismissal from office.

Also during the Tang, another new form of poetic expression developed in the entertainment districts of the Tang capital, the *ci*, or song lyric. Such poems had lines of irregular lengths to match melodies then pop-

ular and most frequently extolled romantic love. After the music was forgotten, poets continued to write new words, often having far more philosophical import, to these old song patterns, and they do so today. Even Mao Zedong (1893–1976) wrote his revolutionary verse to *ci* song patterns hundreds of years old.

Dominant Literary Forms—Historical Writing

Most early Chinese prose constitutes what later would be considered historical writing. Rarely is it in the form of connected accounts; instead it records facts, primarily the words and deeds of both important individuals and important groups in early Chinese society. The most famous, *Shiji* (The Historical Records), compiled by Sima Qian (145–87? BCE), is also considered a model for prose style. Its strength lies in its presentation of biographical material with an eye to demonstrating how individuals fulfilled (or failed in) social roles. This approach led, in later histories, to a tendency to type individuals at the expense of the psychological detail that might distinguish them.

Dominant Literary Forms—Philosophical Writing

Philosophical writing, especially the early canonical works of major schools, were also considered part of the literary canon. The period during which Confucius (Kong Qiu, termed Kong Fuzi or Master Kong, 551–479 BCE) lived was considered the time of the "Hundred Schools," because of the lively philosophical debates of the time, during which few schools seemed to be mutually exclusive in their ideas and texts were quoted relatively freely among them. Most philosophical writings from that time were collectively produced; identifying authorship is thus a futile effort. The most important school of thought to emerge was Confucianism. Its moral teachings and political values were adapted to fit the needs of the Han state, and its ideology, though frequently modified, remained nominally dominant until the fall of China's final dynasty, the Qing (1644–1912). The Confucian school claimed many of the writings of highest antiquity, such as ritual texts and the *Yijing* (Classic of Changes), to take the position of guardians of China's cultural traditions.

The second most important school is Taoism. An early gnomic text known as the *Laozi*, or more commonly in recent decades, the *Daodejing* (or *Tao-te ching*, The Classic of the Way and of Virtue), apparently began as an allusive treatise on proper governing, but it has often served as a source of inspiration for poets when read as a mystical text. References to such early

"IMMORTAL BY THE RIVER"

Written by Su Shi (1037–1101)

I was drinking that night on Eastern Slope,
I sobered up and got drunk again,
and when I went back it seemed about midnight.
My servant boy was snoring
it sounded like the thunder,
When I knocked at the gate, no one answered,
then I leaned on my staff
and listened to the river.

I've always resented how this body
has never been my own,
will the time ever come when I can forget
being always busy?
The night ended, the winds calmed,
the wrinkled waves grew flat,
I'll set off from here in my small boat,
on river and lakes lodge the rest of my days.

Source: Stephen Owen (1997) *Anthology of Chinese Literature, the Beginnings to 1911*.
New York: W. W. Norton, 578.

philosophical works recur throughout Chinese writing until the present day.

Dominant Literary Forms—Fiction

Chinese fiction began as an informal mode of philosophy, through parables and brief moralistic tales. Called *xiaoshuo* (lesser discourses), fictional narratives in the classical language served as an elegant amusement for some. But especially after vernacular-language writings developed around 1300, highly educated authors increasingly used fiction as a vehicle for social and political commentary. This is despite the conventional evaluation of fiction as less artistic than poetry, hence less worthy of serious consideration as an art form. The earliest fictional genre has been termed *zhiguai*, or "records of anomalies." These terse accounts, which began to appear around 250 CE, are generally anonymous and have been collected into a number of popular anthologies without regard to period of composition or authorship. Such anecdotes record the appearance of ghosts, uncanny events involving animals or plants, or magical objects. A subset, termed *zhiren* (records of persons), includes observations about the habits of eccentric individuals, their witty remarks, and critical evaluations of their literary and artistic skills. Later examples of the form

tend to be longer, with more fully developed plots and characterization. Nearly five hundred of the best known and finest are assembled in *Liaozhai zhiyi* (Liaozhai's Notes on Strange Matters) by Pu Songling (1640–1715). Many have to do with intrusions of the ghostly and the supernatural into the lives of lonely scholars, seemingly projecting the aspirations and fears of this group into the realm of the supernatural.

A somewhat longer fictional form, also written in the formal language, was the *chuanqi xiaoshuo*, or classical tale (literally, "transmissions of the strange"), which became popular during the Tang and subsequent Song periods. Romantic in subject matter, the best known involve romantic liaisons between young scholars and beautiful women, heroic acts of larger-than-life men and women knights-errant, and satirical attacks on contemporary figures and points of view. Justly famous is *Yingying zhuan* (The Story of Yingying) by the poet Yuan Zhen (779–831), a sad tale of unwise passion between young lovers, presumably based on personal experience.

Although material from oral traditions can be discerned in these classical-language narratives, folk literature is usually assumed to have played a larger role in the development of vernacular fiction. Professional entertainers had been active from the earliest times; through the Tang period, most were known for singing and dancing. But by the Song period, the capital was home to narrators of a variety of coherent tales, ranging in subject matter from historical and religious figures to romantic adventures of knights-errant, criminals, and illicit lovers. Literati summaries of these narrations may have circulated in written versions as book printing became increasingly common after around 1000 CE, but the earliest extant vernacular short stories date from around 1550. From that time onward, these stories, subsequently termed *buaben xiaoshuo* (oral tales fiction), became an artistic form for literati writers, whose works constitute examples of the most complicated fiction in the language.

Some of these stories take up the lives of common people during traumatic historical events such as invasions by foreign peoples; others explore the complex motivations of adulterous couples or the events leading up to heinous crimes. Feng Menglong (1574–1646), the editor of the most outstanding collection of 120 stories, described their content as most effectively limited to one individual or a single event.

The Chinese vernacular novel developed around the same time, presumably on the basis of unrefined lengthy historical narratives termed *pinghua* (plain[ly told] tales), written between around 1280 and 1450.

The first novel was *Sanguo zhi yanyi* (Romance of the Three Kingdoms), attributed to Luo Guanzhong (c. 1330–1400), although its earliest edition appeared only in 1522. It traces a terrible period during the third century when China was wracked by civil war and ultimately, but temporarily, divided into three warring states. The novel focuses on human motivations and shortcomings as one leader after another struggles to unite the country.

Within a few decades, by the middle of the sixteenth century, many other novels had appeared. Most narrated historical periods, with endless scenes of battlefield carnage and palace intrigues, focusing on the human motivations behind historical events. Others included tales of individual bandit heroes (*Shuibu zhuan*, or Outlaws of the Marsh) or adventures of a magical monkey during his quest for Buddhist scriptures (*Xiyou ji*, or Journey to the West). They were popular among the educated elite, but a genuine breakthrough in narrative writing came with the circulation, in manuscript form, of *Jin Ping Mei* (The Plum in the Golden Vase) in the late 1580s. This novel is set in the household of a wealthy merchant and explores the tortuous relationships between its male protagonist and his many wives and lovers. The work of a literatus of prodigious knowledge, it is jammed with quotations from and allusions to all forms of popular culture, songs, proverbs, jokes, and slang expressions. It is infamous for its descriptions of sexual behavior, but all are couched in flowery euphemisms.

By around 1600, a number of novel genres had appeared: romantic but artistically refined encounters between men and maids, pious tales of religious figures, fantastic journeys, and, of course, the ever-popular novelistic versions of the lives of historical figures and ruling houses. But the high point of Chinese fiction came with the development of the literati novel during the eighteenth century, the most outstanding being *Shi'tou ji* (Story of the Stone, also known as *Honglou meng*, or Dream of Red Mansions/the Red Chamber) by Cao Xueqin (1715–1764). Like other literati novelists, Cao worked on his masterpiece for several decades; indeed, he died before it was completed. Story of the Stone presents a lovingly detailed description of life in a declining but still extravagantly wealthy household, presumably based on the author's childhood experiences. It is also an engaging but ultimately tragic love story involving three cousins, a boy and two dissimilar teenage girls. But the novel's dominant theme is the disparity between appearance and reality, a theme that abounds with religious significance as various characters struggle with the competing appeals of Buddhist detachment and the realm of

emotional commitments. Other literati novels explore the frustrations of young men who aspire to the high status of the literati but who fail in the increasingly sharp competition for limited places among the political elite.

Dominant Literary Forms—Drama

Drama evolved from the religious fairs and puppet entertainments of antiquity into fully developed combinations of plot, instrumental and vocal music, acting, and physical display around 1250. The first major form was the *zaju* (variety show), of the Mongol Yuan period (1279–1368). Each play had only one singing role, and the story was presented from the perspective of this one character. Early playwrights, including Guan Hanqing, Ma Zhiyuan, and Bai Pu, rapidly developed characterization and plotting in this form, with the result that their plays later were widely read among the literati. The highlight of the form was the sequence of five plays collectively known as *Xixiang ji* (The Story of the Western Wing) by Wang Shifu (flourished 1250–1300), based on the Tang-period story *Yingying zhuan*.

Literati developed their own dramatic form during the sixteenth century, in the Ming period (1368–1644). Termed *chuanqi*, or romances, these lengthy plays interwove contrasting plots and subplots with all the major characters singing; consequently the form became known for the rich poetry of its many arias. Although many deal with romantic attachments and were based on earlier *chuanqi* classical-language tales, major plays such as *Taohua shan* (Peach Blossom Fan) by Kong Shangren (1648–1718) and *Changsheng dian* (Palace of Long Life) by Hong Sheng (1645–1704) examine the nature of love and commitment as the lovers' world collapses around them. Perhaps the most famous is *Mudan ting* (The Peony Pavilion) by Tang Xianzu (1550–1617); it questions the arbitrariness of dreams and wakefulness, even of life and death, in the face of powerful human emotions.

Modern Developments

Although traditional literature continues to be admired and to influence contemporary writers, influences from Western cultures have made a dramatic impact over the last 150 years. Twentieth-century Chinese literature is marked by experimentation in both form and content, movements that began during the waning years of the Qing period as nineteenth-century novelists turned ever more to contemporary events and social problems as subject matter. Generally considered the preeminent pioneer of China's new

literature, Lu Xun (1881–1936) brought European-style psychological realism into his explorations of contemporary social problems, beginning with his story *Kuangren riji* (Madman's Diary) in 1918. This trend for "critical realism" was followed by several decades during which China's writers were exhorted by their political leaders to become ever more instrumental in bringing about revolutionary change. One of the more successful of these writers was Ding Ling (1904–1985). Because many of her writings use a first-person narrator superficially like herself, unsophisticated male readers misconstrued her work as inappropriately subjective for wartime literature.

The death of Mao in 1976 and the increasing internationalization of Chinese culture heralded striking developments in modernist and postmodernist fiction in both the mainland and Taiwan. Among the most noteworthy writers in this category are Mo Yan (b. 1956) from northeast China, whose *Hong gaoliang jizazu* (Red Sorghum, 1988) was made into a widely heralded film, and Wang Wen-hsing (b. 1939), who grew up in Taiwan. The idiosyncratic style and vulgar expressions of his irreverent novel *Jiabian* (Family Catastrophe, 1972) outraged moralistic critics at the time, but the novel has since been heralded as a masterpiece. In marked contrast to old Chinese practice, many outstanding contemporary writers are women, including Wang Anyi (b. 1954) from Shanghai and Zhu Tianwen (b. 1956) from Taipei.

LITERATURE—INDIA Some of the earliest literature in the world originated in India, beginning with writings in Vedic Sanskrit (an Aryan language), which may well be the oldest literature in any Indo-European language (Hittite being its only competitor for this position). Because of India's warm, damp climate and insect life, however, few existing manuscripts are as old as a thousand years; ancient literature was passed down by word of mouth and by the incredible rote learning of the Brahmans. If there was any literature in the Indus Valley earlier than that produced by the Aryan speakers, it is not known to have survived; only unreadable inscriptions (dating roughly from 2700–1500 BCE), so short that they never exceed two dozen characters, have been preserved from this time. These are presumed to be brief business documents.

The Vedas

The Rig Veda is the oldest of the four Vedas, long religious texts composed in an early form of Sanskrit around 1500–1000 BCE. It was followed by three other Vedas; taken together, these books, called the Samhitas, are something like a bible, being collections of liturgical texts of diverse origin, style, date, and authorship. The Rig Veda, the most important Veda, contains 1,028 hymns, ranging in length from just one to fifty-eight stanzas. The hymns are addressed mostly to the gods, among them the sovereign Varuna, the fire god Agni, and the warrior god Indra.

The Yajur Veda has two sections: the Black Yajur Veda with magical formulas and commentaries and the White Yajur Veda with formulas that were once part of a larger text. The Sama Veda (Book of Melodies), is the oldest text on Indian music. The last of the

Vedas, the Atharva Veda, is a collection of corrective magic. By about 500 BCE the form of these Vedic texts was essentially fixed.

The Brahmanas

The *Brahmanas* (c. 1000–800 BCE) are exegetical commentaries on the four Vedas, two for the Rig Veda, ten for the Sama, one for the Atharva, and two for the Yajur Veda. The *Brahmanas* were the first texts to justify the superior status of the priesthood in Vedic society, by placing Brahman priests above rulers and warriors. The *Brahmanas* include some texts called *Aranyakas*, ("forest texts," that is, fit for recitation in isolation), as well as the better-known Upanishads (speculations). The fourteen principal Upanishads were perhaps written during the ninth through sixth centuries BCE, the earlier ones in prose, the later ones versified, to explain the esoteric meaning of sacrifice. Additional Upanishads were written later, as condensations of religious teachings. Their total number is hence indeterminate, though it approaches two hundred.

The Tripitaka

During the fifth through third centuries BCE the Tripitaka (Three Baskets), the Buddhist canon in the Pali language (closely related to Sanskrit), was fixed for all time. It was soon to become the most influential body of literature in the eastern half of Asia and has remained so until the present day, especially in its Chinese and Japanese translations.

Secular Sanskrit Writing

The first significant secular document in Sanskrit was a linguistically sophisticated grammar by Panini, which fixed the structure of Sanskrit, in the fourth century BCE. Probably during the reign of the emperor Candragupta Maurya (d. c. 297 BCE), the text of the great epic *Mahabharata*, the world's longest poem, was established (c. 300 BCE). The *Mahabharata* contains about 100,000 distichs (two-line stanzas); it deals with a great war that possibly occurred around 900 BCE and was fought on the plain of Kurukshetra, in the Punjab. One section of the poem is particularly well known as the *Bhagavad Gita*, a debate of high moral caliber between the deities Arjuna and Krishna, which was probably inserted into the poem at a later date. Another later inclusion in the *Mahabharata* was an abridged version of the *Ramayana*.

The *Mahabharata* is made up of a number of distinct sections, incorporating tales, fables, and parables, as well as disquisitions on morals, politics, and law; in

fact it is a sort of encyclopedia. Yet the poem cannot be considered a historical document. It took hundreds of years to complete, is of unknown authorship, and in its final form probably dates to the second century CE. There are numerous later adaptations and translations of the story, in several languages, including those of Bali and Java.

The second great and lengthy Sanskrit epic, the *Ramayana*, is dated around 200 BCE and probably assumed its final form some two centuries later. Both epics must have incorporated material from extant folklore. Tradition has Valmiki as the author of the *Ramayana*, and it indeed appears more like the work of one person than does the *Mahabharata*. The *Ramayana* includes seven books, the first and last of which were later additions.

The *Ramayana* has only a handful of leading characters: Rama, who is a prince, his wife Sita, Rama's faithful half-brother Lakshmana, the Lankan demon Ravana, and Hanuman, the king of the monkeys. The characters and their moral dilemmas are richly drawn against a background of courtly life. A historical substratum of the story in the *Ramayana* may refer to the "Aryanization" (the northern cultural influence) of Central India. The poem had a wide influence on later literature, and there are versions in languages other than the original Sanskrit.

In this early era the image of the social structure of India was in a sense fixed by two books. During the late fourth century BCE, Kautilya wrote the *Arthashastra* (Treatise on the Good), which was rediscovered only in 1909 and is reminiscent of Machiavelli's *Il principe* (*The Prince*, 1513). In the second century CE came the *Manusmṛti*, a compilation of the laws of Manu, India's legendary first man. This treatise on religious law and social obligation described in detail a society, quite possibly utopian, in which there were four caste blocks or *varnas*, each of which had its own occupations, status, and religious duties. This work exercised an immeasurable influence on Indian society for the next two thousand years, and the *varna* model is still a popular image, or simplification, of Hindu caste society.

The outpouring of Sanskrit devotional literature continued with the major Puranas, eighteen in number (c. fourth century CE). Only two are of great importance, the Bhagavata Purana (some 12,000 verses in length) and the Vishnu Purana. Each Purana is a compendium of myths and legends, heroic polemics, and philosophizing, a mine of information about early Hinduism. Roughly contemporary with the main Puranas was the famous and internationally influential

anthology of anonymous fables and folktales the *Pan-catantra*, which had been translated into most western European languages by the eighteenth century.

Indian Literature in Other Languages

In the middle of the third century BCE, the first inscriptions in Tamil (a Dravidian language) in the Brahmi script appeared, and then, around 150 CE, there was established in South India the Tamil Sangam, a series of three academies of poets and philosophers, which lasted for decades. While its historicity is shrouded, the Sangam set the stage for an outpouring of medieval poetry in Tamil. Some of this was devotional, but much was secular in its appeal, including the first known works of Indian women authors.

A popular work of poetry was the *Purananuru*, an anthology of four hundred poems praising various Tamil rulers. Equally important was the *Kural*, an influential collection of moral maxims, compiled by Tiruvalluvar around the third to fourth century.

Sanskrit Plays and Novels

At about the same time as the third Tamil Sangam, Sanskrit drama flowered in northern India. In the fourth or fifth century lived the greatest of all Sanskrit poets, Kalidasa. The best-known plays that have survived from this era are *Shakuntala* and *Mṛichchakatika* (The Little Clay Cart), the former written by Kalidasa and the latter a comedy possibly written by him.

In the sixth or seventh century, Dandin's early Sanskrit novel, the *Dasakumaracarita* (Story of Ten Princes) appeared. It was a forerunner of the picaresque novel. Even earlier was a distinguished Tamil novel of epic dimensions, the *Silappadigaram* (The Stolen Anklet), by the prince Ilangovaligal (between the second and fifth centuries CE).

Medieval Indian Literature

During the Indian Middle Ages Sanskrit writings on science and philosophy flourished. There were works from the many schools of philosophy, from great mathematicians, surgeons, and astronomers. Perhaps the best known, if least scientific, work of this period was the *Kama Sutra*, a treatise on love, by Vatsyayana, who wrote it in a legal style of Sanskrit in about the third century CE, as a guide to the attainment of sexual pleasure.

The Middle Ages witnessed an outpouring of religious and philosophical literature, not just in Sanskrit, which was still the prime liturgical and scholarly language, but also in a number of regional languages.

Logic, metaphysics, devotional poetry, and commentary steadily developed.

In the period 850–1330 a new philosophical literature appeared in today's Karnataka, the *Kavirajamarga*. This was Jain literature, written in the medieval Kannada language. At the end of the twelfth century the first novel in Kannada, *Lilavati*, was written by Nemichandra. It was followed by other allegorical novels, as well as by Kesiraja's grammar of the medieval Kannada language in the thirteenth century.

Early Indian Poetry

Around 1020 CE Dravidian literature in the Telugu language appeared with the grammarian Nannaya Bhatta and the poet Nannichoda. At about the same time the Malayalam language became differentiated from Tamil. A century later the oldest known manuscript written in Bengali proclaimed the birth of that literature. Mukundaraj, who lived around the turn of the thirteenth century, was the first man to write poetry in Marathi. In the early fifteenth century two Bengali poets brought that literature into prominence: Chandidas and Vidyapati, the latter writing in Sanskrit as well as Bengali. Contemporary with them were two Telugu poets, Srinatha and Potana, as well as the best loved of the Hindi poets, Kabir (1440–1518). His was a medieval regional language closely related to Sanskrit. Although Kabir was a low-caste Hindu, he drew much of his inspiration from Sufism and criticized caste, ritualism, and idolatry.

Kabir was followed in 1540 by the first important Muslim poet of India, Mohamed of Jais (a town near today's Allahabad), who created the allegorical poem *Padmavat* in Hindi. Contemporary with Kabir was one of the greatest Indian female poets, the Rajput Mirabai, who wrote in both Hindi and Gujarati. A century before, Lalla, another female poet, had been writing in Kashmiri, while Manichand, also a woman, had written a historical novel in Gujarati. In 1574 the Hindi version of the *Ramayana*, by the poet Tulsidas (c. 1532–1623), appeared, a forerunner of numerous versions of the *Ramayana* in regional languages.

By this time there was a strong Persian cultural influence in some parts of India. A ruler of the Muslim province of Golconda (later Hyderabad), Mohammed Quli Qutub Shah, was a poet who wrote in both Persian and Urdu, which was a new dialectal form of Hindi containing much Persian vocabulary and written in an Arabic script. In later centuries Urdu poetry flourished in northern India.

In 1604 the Adi Granth, the canonical text of the Sikh religion, was established in Punjabi. Thirty years

later, also in northwestern India, appeared a work of Urdu prose, the *Sab Ras* of Vajhi. In southern parts of the subcontinent, the middle of the seventeenth century saw the writing of the Kannada poem *Rajasekhara* (1657), by Sadakshara Deva; the works of the Gujarati storyteller Premanand (1636–1734); and the influential Marathi-language poems of Tukaram (1607–1649). Another Telugu poet and bard was Tyagaraju (1767–1847), who influenced both Tamil and Malayalam verse.

Printed Indian Literature

With the arrival of the printing press in south India, Tamil literature underwent something of a renaissance. Arunachala Kavirayar (1712–1779) wrote *Rama Nataka Keerthanaigal* (The Tragedy of Rama) in 1728 (at the age of sixteen); the Italian Jesuit C. G. E. Beschi (1680–1746) wrote the Tamil poem *Tembavani* (an epic about the life of St. Joseph) in 1724 under the pen name Viramamunivar (published only in 1853). Another interesting author was the eighteenth-century "Indian Pepys," Anandaranga Pillai, a Tamil living in the French colony of Pondicherry. His fascinating and lengthy diary has been published in Tamil, French, and English.

During the eighteenth century Urdu poetry flowered at the hands of Vali, Hatim, Sauda, Inch'a, and Nazir (1740–1830). By the time of Nazir, British hegemony in India was well established, along with the spread of regional printing presses, the first modern universities, and the ever-widening influence of European literary forms, especially those in English.

Modern Novels

English influence is evident even in those writers who chose to publish works in their native languages. Bengal in particular saw a literary and intellectual renaissance in both English and Bengali, for example, in the novels of Bankim Chandra Chatterjee (1838–1894) and in the works of India's first Nobel Prize winner, the poet and dramatist Rabindranath Tagore (1861–1941).

A parallel literary renaissance occurred in Hindi at the beginning of the twentieth century, with the novels of Premchand (1880–1937). Tamil novels were also written under English influence. The sources of this influence were the novels of Dickens, Thackeray, Scott, Hardy, and many others, which were widely read in India.

India was also the setting for works of British writers who visited or lived and worked in this bulwark of

the empire, such as Rudyard Kipling (1865–1936) and E. M. Forster (1879–1970), author of *A Passage to India*. In the mid-twentieth century John Masters (1914–1983) wrote a number of popular novels about the British in India; his own family had served there for five generations. By the late twentieth century British memoirs and novels set in India had become a flourishing cottage industry in the United Kingdom.

But the novel also became a domesticated form in Hindi, Urdu, Bengali, Marathi, Malayalam, and Tamil. Indian literary forms continued to be modernized throughout the twentieth century, aided by the ease of publication and the ever-increasing size of the reading public. An unexpected development was the emergence of numerous world-class, prize-winning Indian novelists writing in English, beginning with Tagore, but these authors often no longer resided in India. Kamala Markandaya and R. K. Narayan are but two of a host who write for a worldwide English readership. Preeminent today are the New York-based Salman Rushdie, originally from Bombay (author of *Midnight's Children*, 1980, and the controversial *Satanic Verses*, 1988), and the Delhi-based writer Arundhati Roy, originally from Kerala (author of *The God of Small Things*, 1997). Some of their recent novels have been translated into dozens of languages.

Oral Literatures of India

As mentioned earlier, the bulk of classical Indian literature was memorized by the Brahmans rather than recorded in written form. But India is also home to dozens of other literatures that are oral in nature and passed on from one generation to the next solely by rote learning in a local language—just as the early Sanskrit texts were. Only during the past two centuries have folklorists and other scholars, most of them Westerners, taken the trouble to record some of this literature, and coverage has hence been spotty.

This oral literature exists in a large number of languages. Collections published as texts in English translations include *Folktales of India* (1987), edited by Brenda E. F. Beck et al.; *Myths of Middle India* (1949); *Folk-Tales of Mahakoshal* (1944); *Folk-Songs of Chhattisgarh* (1944); *Folk-Songs of the Maikal Hills* (1944); *Tribal Myths of Orissa* (1954); and *Folklore of the Santal Parganas* (1909). Several long ballads, of epic proportion, have been recorded in Tamil dialects, among them the so-called bow songs of the far southern tip of India.

LITERATURE—INDIA, TAMIL Of the four Dravidian literary languages, Tamil has the oldest recorded history. Its earliest records, inscriptions in an Asokan Brahmi script, date to around 254 BCE. Tamil literature, preserved in copper-plate inscriptions and on palm-leaf manuscripts, covers more than 2000 years. It is the only Indian language with an uninterrupted continuity between its classical and modern forms. Its vigorous literary development begins with short bardic poems about love and war. The grammar, *Tolkappiyam*, is characterized by richness and rigor in phonetics and phonology, morphology, semantics, prosody, and conventions of literary composition.

Predevotional Literature

The bardic corpus (200? BCE–250? CE) is represented by two large collections of poems in two main genres: *agam* (love poetry) and *puram* (war poetry).

The collections *Ettuttogai* (Eight Anthologies) and *Pattuppattu* (Ten Songs) are both of very high quality. The postclassical period (250–600 CE) is exemplified by the *Tirukkural* (c. fifth century), a collection of 1,330 couplets on ethical order, social activities, and pleasure, and by the *Silappadigaram* (The Stolen Anklet, fifth–sixth century), a narrative-dramatic poem ascribed to Ilangovaligal. *Silappadigaram* is a tragic story about Kannagi, a woman who proves the innocence of her husband, who has been accused of the theft of a golden anklet belonging to the queen, but only after her husband is executed. In anger, Kannagi destroys the city with fire before being taken up to heaven as a goddess.

Devotional Literature

Tamil is famous for the devotional literature of Saiva and Vaishnava poets (poets devoted to Siva and Vishnu, respectively). The two greatest Saiva poets were Appar (seventh century), also known as "The Lord of the Divine Speech," and Manikkavasagar (ninth century), whose mystical poems stress the love of the soul for God and his response with grace, as well as his immanence in all things. The lives of the sixty-three Saiva saints were told in *Periyapuranam* (The Great Purana) by Sekkilar (twelfth century) in 1,286 stanzas. Among the Vaishnava poets, the best known is the female poet Andal (eighth century), who sang about her love for and intense devotion to Krishna, an incarnation of Vishnu.

Kamban's (c. 1180–1250) magnificent poem *The Descent of Rama (Iramavataram)* in 40,000 lines is based on the Sanskrit *Ramayana*. According to many scholars, Kamban was the greatest of all Tamil poets.

Modern Literature

Modern Tamil literature may be said to begin with the first genuine novel *Kamalambal (Fatal Rumour)*, 1895 by B. R. Rajam Iyer (1872–1898), and the patriotic and lyrical poetry of S. Subrahmanya Bharati (1882–1921), the national poet of the Indian state of Tamil Nadu. Contemporary Tamil writing begins in the 1930s, with 1933 representing a watershed in the development of Tamil poetry and prose. In that year, *Manikkodi* (The Jewel Banner), a literary journal that has become a legend, was founded in Madras and soon attracted the best creative writers and critics of the period.

Tamil poetry went through decisive changes after 1959, when C. S. Chellappa (b. 1912) began publishing his review *Eluttu* (Writing), which opened its pages to things new and experimental. By 1965, avant-garde

poetry, dissociated from stock phrases, traditional conventions, classical meters, and repetitive themes, was firmly established in Tamil writing, represented by poets like S. Mani (b. 1936), T. S. Venugopalan (b. 1929), S. Vaitheeswaran (b. 1935), and Shanmugan Subbiah (b. 1924).

The novels of T. Janakiraman (1921–1982) are rich, colorful, and realistic portrayals of rural life. *Amma vantal (The Sins of Appu's Mother)*, 1972 has become a classic. In honesty, courage, social involvement, realism, and skill, Rajam Krishnan (b. 1925) is a superb novelist. She is noted for her scrupulous documentation, psychological insight, realistic approach, and great thematic variety. She has published many novels, including *Kurincitten (Honey of the Kurinci Flower)*, 1953) on the life of a tribal community in the Nilgiri Hills of South India.

D. Jayakanthan (b. 1934) is in many respects the most complex and the most widely read author among Tamil prose writers. Strongly influenced by Freud and Marx, as well as by Mohandas (Mahatma) Gandhi, in his later writings he has become a great humanist, uncommitted to any particular ideology. The heroine of *Some People at Some Time (Cila nerankalil cila manitarkal)*, 1970 is sexually exploited by her old sadistic uncle and ostracized by society. Almost the entire work is set within her interior monologue. In her figure, Jayakanthan has created an unforgettable character—a courageous and tragic woman.

L. S. Ramamirtham (1916) is a master craftsman and unsurpassed stylist who explores character and emotion with striking and multifaceted imagery. In 140 stories and 6 novels, his major concerns are language, emotions, and Hindu religious philosophy. Similes and metaphors of startling beauty abound in his works. Among his novels, *Apita (The One Who Cannot Be Touched)*, 1970 is the Indian illustration of Goethe's "The eternal feminine raises us to spiritual heights," while *Putra (The Son)*, 1965 expresses the author's belief in the indestructible chain of all life. Among Tamil writers, Janakthan and Ramamirtham, though different in language, theme, and style, deserve highest praise.

LITERATURE—JAPAN Japanese literature has flourished from the early eighth century to the present in a myriad of genres and styles reflecting the nation's cultural periods. The *Kojiki* (Records of Ancient Matters), the earliest Japanese text, was completed in 712. A history based on oral traditions, this work provides a justification for the supremacy of the imperial family and its right to rule and includes myths of creation documenting the foundations of the Yamato state, those clans along the Inland Sea that formed the nucleus of the early Japanese nation.

In the creation myths in *Kojiki*, the god and goddess Izanagi and Izanami describe creation in terms of the union of male and female and emphasize the importance of rituals and purity. They see humanity as part of nature and stress harmony over conflict. A second cycle of myths concerning Amaterasu, the sun goddess, and Susanoo, the storm god, describes solstice rituals and depicts an agrarian society. These myths are also political narratives reflecting a conflict between the Izumo culture on the Sea of Japan coast and the Yamato culture across the mountains from it. A parallel history, the *Nihon shoki* (Chronicles of Japan from the Earliest Times to 697 CE), compiled in 720, contains much of the same material as the *Kojiki* but is presented more formally in imitation of Chinese dynastic histories.

The *Manyoshu* and Its Poets

Within a generation of the appearance of the *Nihon shoki*, the first collection of poetry in Chinese, the *Kaifuso* (Fond Recollections of Poetry), was published in 751, and shortly thereafter, the first collection of poetry in Japanese, the *Manyoshu* (Collection of Ten Thousand Leaves), appeared around 756. The *Manyoshu* contains 4,516 poems arranged in twenty books. Drawing on ancient oral traditions of poetry, this collection is noted for the scope and variety of its verse, including poetry in the *tanka* (short song) and *choka* (long song) forms.

The first great poet of the *Manyoshu* is Nukata Okimi (c. 630–after 690). Her poem on the seasons, celebrating the primacy of autumn over spring, and her poems of love provided a model for later poets. Kakinomoto Hitomaro (flourished 685–705) wrote both public and private poetry. His public poems, such as one commemorating an imperial excursion to Yoshino, celebrated the great events of court, while his poem on separating from his wife is a masterpiece of private poetry expressing personal feelings of grief. "Dialogue on Poverty," a poem by Yamanoue Okura (660–c. 733), condemns social injustice, criticizing the

state for allowing people to live in destitution. The *Manyoshu* also contained poems written by people of the lower classes from Azuma, the eastern lands encompassing the area around present-day Tokyo. After the *Manyoshu*, poets no longer created such a wide range of poetry.

Literature in Japanese Courtly Society

The Heian period (795–1185) marks one of the richest flowerings of Japanese literature. While men generally wrote in Chinese, which was admired as the language of scholarship, women writing in Japanese created a series of masterworks. *Taketori monogatari* (The Bamboo Cutter's Tale, 909 CE) is often regarded as the grandparent of Japanese prose fiction. Other developments included poem tales (*uta monogatari*), such as *Ise monogatari* (*Tales of Ise*, probably written in several stages, the earliest versions late ninth century), which were characterized by a mixture of prose and poetry. Diary literature also became popular, beginning with *Tosa nikki* (Tosa Diary, c. 936) and including *Kagero nikki* (translated as *The Gossamer Years*) and *Izumi Shikibu nikki* (The Diary of Izumi Shikibu), both probably early eleventh century.

These developments culminated in Murasaki Shikibu's *Genji monogatari* (*Tale of Genji*, completed c. 1010), the world's first novel, often considered the finest work of Japanese literature. Composed of fifty-four chapters, this romance details the lives of three generations at court and centers on the activities of Hikaru Genji, the epitome of the Japanese courtier. The *Genji* presents a portrait of life in the Japanese court during the eleventh century, revealing the social, ethical, and aesthetic values of Japanese court society. *Eiga monogatari* (Tales of Courtly Splendor, early eleventh century) represents a genre of historical fiction.

The first decade of the tenth century saw the imperially commissioned compilation of the *Kokin waka shu* (Collection of Ancient and Modern Songs), which defined the standard for court poetry and served as a model for later imperial anthologies. Ki no Tsurayuki (d. c. 945), one of the editors, wrote a preface in Japanese, which was the earliest statement of Japanese poetics. Tsurayuki called for formality and elegance as the sine qua non of Japanese court poetry. The collection, in twenty books, has the poems arranged by topic, the greatest number being seasonal poems and love poems.

During this period a significant body of Chinese prose and poetry continued to be written. Sugawara no Michizane (845–903) brought the composition of

Chinese poetry to its peak. The collection *Wakan roei shu* (*Japanese and Chinese Poems to Sing*, 1013) and others featured a mixing of Japanese and Chinese poetic forms. In prose fiction, *Nihon ryōiki* (miraculous stories from the Japanese Buddhist tradition, which were compiled c. 822), a collection of morality tales written in Chinese, promoted Buddhism.

Literature in Japanese Warrior Society

Toward the end of the twelfth century, a bloody civil war broke out between two warrior clans, the Taira and Minamoto, bringing courtly society to an end and ushering in the warrior society of medieval Japan. The great war epic *Heike monogatari* (*Tales of the Heike*) described that war and laid the foundation for a new genre of *gunki mono* (war literature). The accounts presented in *Tales of the Heike* were originally recited by blind troubadour-priests known as *biwa hoshi*. From its opening homily, which reminds the reader of the transience and futility of human endeavor, to the concluding chapters, where Lady Kenreimon'in, the lone survivor, is left to ponder thoughts she cannot forget or bear to remember, the narrative is strongly liturgical in its rhythms.

In contrast to narratives of the great deeds of warriors are the accounts of recluses, men who chose to withdraw from worldly affairs. Faced with the brutality and violence of war, these hermits sought an alternative way of life. The most celebrated of such accounts is the essay *Hojoki* (*An Account of My Hut*, 1212), by Kamo no Chomei (1155?–1216), which describes the struggle, frustration, and pain of living in the world and contrasts that experience with the serenity of life as a hermit. More than a century later, another hermit priest, Yoshida Kenko (1283–1350), wrote *Tsurezuregusa* (translated as *Essays in Idleness*, c. 1330), describing his life of solitude and nostalgia for the lost glory of courtly society.

In poetry, the *Shin kokin waka shu* (New Collection of Ancient and Modern Songs, 1205) was compiled by Fujiwara Teika (1162–1241). This eighth imperial anthology of poetry was dedicated to the idea that old vocabulary should be used to create a new poetry, in this case characterized by elaborate poetic techniques. Reflecting an age of turbulence, poetry took on a darker tone. New aesthetic values included *sabi* (the quality of being old and tarnished) and *yugen* (the quality of mystery and depth). The *Shin kokin waka shu* collection may represent the high water mark of *tanka*, and from it emerged *renga* (linked verse).

The late fourteenth and early fifteenth centuries saw the emergence of the Noh theater under the guid-

ance of Kan'ami (1333–1384) and his son Zeami (1363–1443), with the patronage of the shogun (military ruler) Ashikaga Yoshimitsu (1358–1408). Originating in festival entertainments, Noh was elevated by Kan'ami and Zeami to the epitome of aesthetic and aristocratic performance. The strong influence of Zen Buddhism can be seen in the austere quality of performance. Although the costumes are elaborate, there are few props; the tempo of the plays is slow and dignified, while the texts themselves are spare. The aesthetics of Noh harmonize the values of elegant courtly society with the values of vigorous warrior society.

Both prose and poetry continued to be written in Chinese throughout the medieval period, mostly by priests from the five great Zen temples, and their work is known collectively as *gozan bungaku* (literature of the five mountains).

Literature of Unified Japan

After centuries of warfare, Japan was unified by Tokugawa Ieyasu (1543–1616) at the beginning of the seventeenth century, and peace and national isolation ensued for two-and-a-half centuries. The work of three writers, Matsuo Basho (1644–1694), Ihara Saikaku (1642–1693), and Chikamatsu Monzaemon (1653–1724), dominated the seventeenth century.

Basho followed the poetic conventions of his day, but in his middle years he established a style of his own, elevating the seventeen-syllable form (which we know today as haiku) to the level of serious poetry. Basho's best verse is characterized by simplicity of language and engagement with nature and is significantly influenced by Zen. Basho freed poetry from unremitting elegance to celebrate rustic beauty. His many travel diaries combine prose and poetry.

Saikaku came from the merchant culture of Osaka and represented that class, which was becoming a patron of the arts. A series of fictions written during the last decade of his life established his reputation. Beginning with works depicting the lives of amorous heroes and heroines, parodying the romances of the courtly period, he moved on to more serious explorations of the concerns of the newly wealthy townspeople. His twin themes were love and money. He explored all aspects of love—romantic, commercial, homosexual, illicit, and tragic. In the area of money, he showed how the merchant makes his fortune and how he can lose it, usually by being blinded by love. In these fictions, Saikaku created a sensitive picture of urban society.

Chikamatsu was a seminal playwright for both the Kabuki (a theatrical form using male actors and com-

binning music, dance, décor, and stage effects to produce a spectacle) and Bunraku (a theatrical form where characters are represented by dolls manipulated simultaneously by as many as three men) theaters, which became the most popular forms of drama. He wrote historical plays (*jidai mono*) celebrating the exploits of the heroes of the past, as well as domestic plays (*sewamono*), based on contemporary events such as love suicides. His love-suicide plays became so popular, and so many couples were inspired by them to commit suicide, that the government banned the use of the term "love suicide" in the titles of plays. Because Tokugawa society was rigid and repressive, Chikamatsu developed the theme of the conflict between duty (*giri*) and the urge to follow one's personal feelings (*ninjo*).

Literature during the Meiji Restoration

Following the Meiji Restoration of 1868, which ended shogunal rule of Japan as well as Japan's isolation from most of the rest of the world, Japanese literature began to modernize in several stages. First, translations of Western fiction were introduced as models, works such as *Robinson Crusoe* and *Around the World in 80 Days* being among the most popular.

Tsubouchi Shoyo (1859–1935) provided the second step toward modernization by writing *Shosetsu shinzui* (The Essence of the Novel, 1885–1886), an essay analyzing Western fiction and providing a blueprint for writing works in imitation of Western fiction. In the 1880s, writers like Futabatei Shimei (1864–1909) began to employ techniques such as interior monologue and psychological realism. By the first decade of the twentieth century, romanticism was being practiced by Kunikida Doppo (1871–1908), and naturalism was advocated by Tayama Katai (1872–1930) and Shimazaki Toson (1872–1943).

The best writers, however, remained aloof from literary movements. Natsume Soseki (1867–1916) explored the concept of the self in relation to society, in works such as *Kokoro*. Mori Ogai (1862–1922) wrote historical fictions, including *Sansho Daiyu* (Sansho the Bailiff), and Nagai Kafu (1879–1959) wrote eloquent elegies on the dying culture of old Edo.

Every writer of the new age had to find a balance between the new literature and the long, proud traditions of the old. Perhaps more than anyone else, Akutagawa Ryunosuke (1892–1927) maintained this balance by mining ancient Japanese fiction and retelling its stories in a Chekhovian mode by adding a modern psychosocial aspect.

Literature in Contemporary Japan

The two great writers of the mid-twentieth century, whose careers spanned the Second World War, were Tanizaki Junichiro (1886–1965) and Kawabata Yasunari (1899–1972). In the years before the war, Tanizaki wrote a series of erotic and grotesque stories, often historical fictions, exploring perverse aspects of human psychology. Following the war came his greatest work, *Sasame yuki* (translated as *The Makioka Sisters*), an elegy on the indolent lifestyle of upper-class society in the Osaka region in the years immediately before World War II. Following the war, Tanizaki produced several studies of aging and sexuality, including *Kagi* (*The Key*) and *Futen rojin nikki* (*Diary of a Mad Old Man*). Kawabata Yasunari dabbled in modernist techniques of writing, but created a highly traditional aesthetic in works such as *Yukiguni* (*Snow Country*). Largely in recognition of his ability to convey traditional Japanese aesthetics, he was awarded the Nobel Prize in 1968.

The years following the Second World War saw a great resurgence of writing. Dazai Osamu (1909–1948) captured the despairing mood of the immediate postwar years in works such as *Shayo* (*The Setting Sun*, 1947) and *Ningen shikaku* (*No Longer Human*, 1948). Mishima Yukio (1925–1970), who came of age during the war, wrote brilliant, often troubled works such as *Kikakuji* (*Temple of the Golden Pavilion*), exploring human psychology and motivation. Although in many ways innovative as a writer, Mishima held conservative and nationalistic political views that led to his celebrated suicide in 1970. Ibuse Masuji (1898–1993), generally known as a humorist, also produced *Kuroi ame* (*Black Rain*, 1965–1966), which raised the experience of the nuclear bombing of his native Hiroshima to mythic proportions. Abe Kobo (1924–1993) claimed to reject tradition and wrote about what it meant to be modern and live in a technological world, most notably in *Suna no onna* (*Woman in the Dunes*, 1962).

Women writers have come to play an increasingly major role in the literary world. Oba Minako (b. 1930) balances both traditional and modern views, including a global perspective, by writing about her experience of living for twelve years in Sitka, Alaska. She calls into question the very definition of national literatures by creating characters and settings that are not Japanese. Feminist and gender issues also form major themes in her work. Oe Kenzaburo (b. 1935) exemplifies the liberal, socially committed writer. Whether dealing with the loss of childhood innocence in a short story, "Shi-iku" ("Prize Stock," 1959), the personal tragedy of the birth of his brain-damaged son in *Kojinteki na kaiken* (*A Personal Matter*, 1964), or his nonfiction works such

as *Hiroshima Noto* (*Hiroshima Notes*, 1964) and *Okinawa Noto* (*Okinawa Notes*, 1969), he is a writer with a social conscience and a global perspective. For this he received the Nobel Prize for Literature in 1994. In recent years a new generation of writers, including Murakami Haruki (b. 1949), Yoshimoto Banana (b. 1964), and Yamada Emi (b. 1959), have challenged and enlarged the boundaries of the literary world.

Poetry began the process of modernization in 1882 with the publication of *Shintaishi sho* (*Selections of Poetry in the New Form*), a collection of nineteen poems, fourteen translated from English and five composed in Japanese in the new form—free verse. This became a model of a new form of poetry, which would be experimented with and developed through translations and original works.

The new form of poetry came into its own with the emergence of Hagiwara Sakutarō (1886–1942). His collection *Tsuki ni boeru* (*Howling at the Moon*, 1917) established his reputation, and although he often wrote in the traditional styles, Hagiwara is best known for his colloquial poetry in free verse. His poems experiment with musical rhythms and onomatopoeia. Takamura Kotarō (1883–1956) spent his youthful years in the United States, England, and France and is best known for a series of poems celebrating his love for his wife. In *Chieko sho* (translated as *Chieko's Sky*, 1941), he describes her insanity and death. Nishiwaki Junsaburo (1894–1982) is widely regarded as being responsible for both the resurgence of modern poetry and for the internationalization of the poetic perspective in the postwar years.

Traditional Japanese poetry has survived in the modern world. Surely the most popular *tanka* poet in modern times has been Ishikawa Takuboku (1886–1912), who wrote in both the traditional and free-verse styles. His reputation is based on two collections of traditional poems, *Ichiaku no suna* (*A Handful of Sand*, 1910) and *Kanashiki gangu* (*Sad Toys*, 1912). These poems, expressing immediate experiences with great emotional intensity, frequently depart from the conventions of traditional *tanka* in mood, subject, and vocabulary.

Yosano Akiko (1878–1942) represents the emergence of women in modern poetry. Her collection, *Midaregami* (*Tangled Hair*, 1901), is remarkable for its defiant sensuality, unusual syntax, irregular meter, and vocabulary that was new to *tanka* poetry. Masaoka Shiki (1867–1902) wrote both *tanka* and haiku but is known chiefly for leading a revival of Bashō's poetry and for modernizing haiku. Following Shiki, modern haiku developed in several directions, the main line

represented by the conservative ideas of Takahama Kyōshi (1874–1959) and the journal *Hototogisu*. Traditional poetry continues to thrive in Japan.

Like poetry, drama has developed in modern Japan in a broad spectrum, including traditional forms of Noh, Bunraku, and Kabuki, and also including modern Western forms of theater. The traditional forms survived the Meiji Restoration and World War II; they continue to be popular, and leading actors and playwrights in all forms have created adaptations and incorporated new material keeping these forms vital in the contemporary world. In the early years of the twentieth century, the Shingeki (new drama) movement began to create a modern theater. This movement has always struggled to maintain a balance between introducing works by Western playwrights and works by Japanese dramatists. In the early years the focus was on works by Tolstoy, Shakespeare, Ibsen, and Chekhov. In 1924, Osanai Kaoru (1881–1928) founded the Tsukiji Shogekijo, Japan's first modern theater, and concentrated on producing plays. Kishida Kunio (1890–1954) founded the Bungakuza theater, which focused on theatrical literary works. While never widely popular, Kishida's work was seminal in the creation of modern theater in Japan.

During the postwar years, Kinoshita Junji (b. 1914) wrote many plays based on traditional Japanese folktales, using language that reflected a wide range of Japanese dialects. *Yuzuru* (*Twilight Crane*, 1949) is his best-known play. Mishima Yukio, although better known as a novelist, produced works for the theater in every form from traditional Noh and Kabuki to the most contemporary forms. His work reflects a strong sense of what it means to be Japanese. In contrast, Abe Kobo has written a series of theatrical experiments focusing on movement, light, and sound while nearly eliminating dialogue. These plays depict contemporary urban society with no clue that they might be Japanese.

Japanese literature today is a remarkably rich and bewildering array of work in which all forms and genres are vigorous and which maintains traditional forms and styles while also being on the leading edge of literary development in a global sense.

LITERATURE—KOREA Korean literature consists of oral literature, literature written in classical Chinese or in any of several hybrid systems employing classical Chinese, and literature written in the Korean script (hangul). Classical Chinese was the literary language of the scholar-bureaucrats who constituted the Korean elite from early times to the end of the Choson kingdom. Hangul, though promulgated in 1446, did not gain universal acceptance in Korea as a literary script until the twentieth century. Korean literature is generally divided into the following periods: Three Kingdoms (57 BCE–667 CE); Unified Shilla (667–918 CE); Koryo (918–1392); early Choson (1392–1592); later Choson (1592–1910); and modern (1910–present).

Three Kingdoms

Recorded Korean history begins with the three kingdoms of Shilla (57 BCE–935 CE), Koguryo (37 BCE–668 CE), and Paekche (18 BCE–663 CE), which together occupied the Korean peninsula and part of Manchuria. The earliest surviving examples of Korean literature in a Korean text (a handful of ancient songs attributed to Koreans appear in Chinese histories) date from the sixth century and are recorded in the *Samguk yusa* (Memorabilia of the Three Kingdoms, 1285). These are the *hyangga* (native songs). This diverse group of songs includes works with oral origins as well as those composed and written down by individuals, primarily Buddhist monks and the Shilla warrior youth known as *hwarang*.

Unified Shilla

In 668 the Shilla state, for the first time in Korean history, unified the Korean peninsula under one ruling house. Over the next three centuries the *hyangga* form continued to develop. One of the best-known examples, "Ch'oyong ka" (Song of Ch'oyong, 879 CE), is a shaman chant, reflecting the influence of shamanism in Korean oral tradition and suggesting that *hyangga* represent a development of shaman chants into Buddhist invocations. Buddhism, officially recognized by Shilla in the sixth century, became the

dominant system of thought in Unified Shilla; it exercised great influence over literature and Shilla art in general.

Hanshi, poetry composed in classical Chinese and following Chinese principles of poetry, but written by Koreans, became widespread among the literati of Unified Shilla. In contrast with *hanshi*, there also existed by this time a rich oral tradition consisting of lyric folk songs, shaman chants, myths, legends, and folktales. The diverse genre of folk song comprises work songs, ceremonial songs, and, most numerous, songs both happy and sad that deal with problems encountered in daily life. Among this third group is "Ari-rang," probably Korea's best-known folk song.

Koryo

In 935 CE Wang Kon, king of the new Koryo state, extended his control over the entire peninsula, founding the Koryo Kingdom, which would survive until 1392. Koryo literature is distinguished by lyric folk songs, increased sophistication and diversity of poetry in Chinese, the prose miscellany called *shibwa*, and the appearance of *shijo*, a terse, intensely personal song that would be recorded and composed in hangul following the promulgation of that script early in the Choson kingdom.

Koryo lyric folk songs, often called *changga* (long songs) or *pyolgok* (special songs), are a diverse body of anonymous works such as Buddhist songs and shaman chants as well as songs composed by individuals. Many survived as court music but originated in orally transmitted folk songs, and thus combine folk song onomatopoeia and rhythms with refinements in diction and music.

Hanshi reached an early zenith in the works of Yi Kyu-bo (1168–1241), which achieve a consummate balance of the universal and the particular. The brevity, revelation, and self-reference of his poems characterize many other *hanshi* as well.

While poetry was the most widespread and popular form of literature, prose writing achieved popularity with the emergence of *shibwa* (talks on poetry), collections of random thoughts on life and poetry. Meant to entertain, these miscellanies combine the factuality of public records with the more poetic language of essays. A good example is *P'aban chip* (Collection for Dispelling Idleness, 1260), a posthumous compilation of works by Yi Il-lo (1152–1220). This and other collections prefigure the early Choson miscellany known as the *chapki*, which is weighted more heavily toward folktales and anecdotes.

Early Choson

Early Choson is the designation for the period extending from the founding of the Choson kingdom in 1392 to the Japanese invasions of 1592–1598. The two most important historical developments affecting early Choson literature were the promulgation of *hangul* by King Sejong in 1446 and the adoption of neo-Confucianism as the state ideology. Neo-Confucianism, with its emphasis on exemplary Chinese texts, meant that Korean literati would continue to study and use classical Chinese as a literary language. In fact, because mastery of Chinese ensured their monopoly on learning, the literati continued for the most part to write in Chinese for centuries after the creation of *hangul*. For its part, *hangul* in theory gave all Koreans a literary language of their own; in actuality, until the 1900s it was used primarily by women and commoners, most of whom were not literate in Chinese. One of the first works written in the new native script was *Yongbi och'on ka* (Songs of Dragons Flying to Heaven, 1445–1447), an *akchang* (set of lyrics and chants accompanying court music) celebrating the supposed virtues and moral authority of the Choson founders.

For recognition and advancement, Choson literati wrote in Chinese; for their own pleasure and amusement, and to express their innermost thoughts, they often wrote in Korean. Of the works they composed in *hangul*, *shijo* are the most numerous. *Shijo* were originally sung, and still are today. Three of the greatest *shijo* practitioners were Chong Ch'ol (1536–1593), Yun Son-do (1587–1671), and Kim Su-jang (1690–?).

The other major vernacular poetic tradition in Korea is the *kasa*. Appearing in the mid-1400s, *kasa* are generally longer than *shijo* and are variously narrative as well as lyrical. Chong Ch'ol, in addition to his accomplishments with *shijo*, is considered by many to have perfected the *kasa* form, as seen in his "Kwandong pyolgok" (Song of Kangwon Scenes, 1580).

Women have until recently occupied a low profile in Korean literary history. They almost certainly composed some of the traditional folk songs that have survived, and they should be credited with much of the oral tradition that is inspired by native shaman beliefs and rites (in Korea most shamans are women). But not until early Choson do we have examples of literature by identifiable women writers. In Choson times and earlier, women were discouraged from educating themselves in Chinese. And even after the creation of *hangul* gave Korean women an accessible literary language, the Confucian emphasis on women's place in the home made women reluctant to attach their name to their writings or to circulate them outside the home.

Still, a few aristocratic women such as Ho Nansorhon (1563–1589), as well as *kisaeng* (professional entertaining women) such as Hwang Chin-i (c. 1506–1544), managed to lift the veil of anonymity that for so long had shrouded premodern women's literature. These women have left us a small but eloquent body of *shijo*, *kasa*, and *hanshi*.

It is also in early Choson that we see what is often considered the first example of Korean fiction: *Kumo shinbwa* (New Stories from Golden Turtle Mountain) by Kim Shi-sup (1435–1493), consisting of five short romances written in Chinese. The aforementioned *chapki*, or literary miscellany—a collection of random writings such as character sketches, poetry criticism, anecdotes, and folktales—developed around the same time. A good example is the *P'aegwan chapki* (Storyteller's Miscellany) of O Suk-kwon (flourished 1525–1544).

Surviving examples of folk drama suggest that a rich variety of dramatic works existed by mid-Choson. The most important genre was the mask dance, a combination of song, speech, and dance that originated in local village festivals. Like much folk and oral literature elsewhere, mask dances expose the foibles of the powerful and elite, in Korea's case the aristocratic gentry known as *yangban*. Also serving as comic relief for the common people were puppet plays, which, like the mask dances, were performed in the open so as to be accessible to all.

Later Choson

From later Choson we have more writing by commoners and women and a corresponding increase in works surviving in *hangul*. It was against the background of the Japanese invasions of 1592 and 1597 and the feeble response by the Choson state that Ho Kyun (1569–1618) wrote *Hong Kil-dong chon* (Tale of Hong Kil-dong, c. 1610), usually cited as the first Korean fictional narrative written in *hangul*. A variety of fictional works in *hangul* followed, many originating in the oral tradition and most of them anonymous. By the eighteenth and nineteenth centuries these works had gained widespread popularity among commoners. Some 600 fictional works in *hangul* survive. A new fictional form that appeared late in the 1700s was the *kajok sa sosol*, or family saga. These works are forerunners of the multivolume novels widely read in modern Korea.

In contrast with the variety of vernacular fiction that is solidly grounded in Korean soil are romances such as *Kuun mong* (A Nine-Cloud Dream, c. 1689) by Kim Man-jung (1637–1692), which is situated in

ninth-century Tang China. *Kuun mong* is often honored as the first Korean novel written in hangul, but evidence increasingly suggests it was written in classical Chinese and that only hangul translations have survived.

Among the comparatively small amount of later Choson fiction written in Chinese, the works of Pak Chi-won (1737–1805), a *shirbak* (practical learning) scholar, stand out. *Ho Saeng chon* (Tale of Ho Saeng) and *Yangban chon* (Tale of a *Yangban*) are penetrating satires of the *yangban* class.

Writing by women was virtually unknown outside the home, but in the mid-1900s scholars began to discover a large amount of writing in hangul by later Choson women: diaries, travelogues, memoirs, biographies, and especially long instructive *kasa* passed down from mother to daughter and kept for generations within the family. *Shijo* by *kisaeng* and other women survive as well. Also dating from this period is *Hanjungnok* (A Record of Sorrowful Days), by Princess Hyegyong (1735–1815), a series of memoirs about her long life at court.

Poetry in Chinese would be written until the fall of the kingdom in 1910, but Korean-language verse continued to be favored for its greater expressive potential. Yun Son-do and Kim Su-jang, mentioned earlier, are the great *shijo* poets of later Choson. Kim himself was not a scholar-bureaucrat of the aristocracy but a functionary, reflecting the increasing production of literature by commoners during this period. It is perhaps these commoners who authored the majority of the great number of anonymous *shijo*, almost half of all surviving *shijo*.

As with *shijo*, more *kasa* were composed by women and commoners in later Choson than in early Choson. *Kasa* composed by commoners often describe the harshness of peasant life, criticize immoral individuals (and, by implication, an unjust society), or describe relations between the sexes.

Especially popular in the oral tradition was *p'ansori*, a long narrative partly sung and partly spoken by an itinerant performer (*kwangdae*) accompanied by a lone drummer. The *p'ansori* performances, developing in the southwestern part of the peninsula in the late seventeenth century, appealed especially to commoners, who were familiar, for example, with the Hungbu and Ch'unhyang stories, which became part of the *p'ansori* repertoire. Most of the *p'ansori* works conformed outwardly to Confucian values but implicitly criticized the application of those values in real life.

The Modern Period

The development of a modern literature in Korea was conditioned by two watershed events: (1) the modernization movement that swept East Asia at the turn of the twentieth century, and (2) the annexation of Korea by Japan in 1910. The modernization movement exposed young Koreans to enlightenment ideals such as literacy, education, equality, and women's rights and spurred many of them to study in Japan, where they encountered (in Japanese translation) new literary models. Annexation inspired a wave of nationalism that finally legitimized hangul as the literary language of all Koreans, and it forced Korean writers to come to grips with the necessity of preserving their own language and literature in an increasingly repressive colonial environment.

Modern Korean literature is dated by most to 1917, the date of publication of Yi Kwang-su's *Mujong* (Heartlessness). This novel is considered distinctly modern in its use of language and its psychological description. The first generation of writers of modern Korean literature were for the most part young men born around the turn of the century who had received their higher education in Japan and had there been introduced, in Japanese translation, to literature from the West. There resulted an influx of Western literary models into Korea, primarily realism in fiction and symbolism, imagism, and romanticism in poetry. The new generation of writers tended to gravitate toward literary journals (most of them short-lived) in which they published poetry, short fiction, and essays (both critical and personal, the latter form termed *sup'il*). Novels maintained the mass readership they had enjoyed since late Choson times; while novels continued to be serialized in newspapers, they were considered lowbrow entertainment by the literary elite. Important among the first generation of fiction writers were Yi Kwang-su (1892–1950?) for his enlightenment and nationalist agenda, Yom Sang-sop (1897–1963) for his psychological realism, Kim Tong-in (1900–1951) for his modernization of the Korean language and his art-for-art's-sake views, and Hyon Chin-gon (1900–1943) for his fictional slices of life of colonial Korea.

Early modern poetry is best represented by Kim Sowol (1902–1934), Chong Chi-yong (1903–?), and Han Yong-un (1879–1944). Kim (known better by his pen name, Sowol, than his given name, Chong-shik) utilized traditional Korean folk song rhythms to produce lyrics of exceptional melody. Chong Chi-yong was a master technician, drawing on both native and foreign sources for a rich bank of images in poems that are redolent of solitude, nostalgia, and nature. Han was a man of action, actively opposing the Japanese

occupation, working to reform Buddhism, and attempting to instill in his readers a sense of their cultural identity.

Proletarian literature was tolerated by the Japanese colonial authorities from the mid-1920s to 1935. This literature is cited today more for its historical interest than its literary value. Subsequently, many Korean fiction writers looked to the past or the countryside for their inspiration. A variety of new voices appeared: Hwang Sun-won (1915–2000), Korea's most accomplished short fiction writer; Kim Tong-ni (1913–1995), considered by Koreans the possessor of a uniquely Korean zeitgeist; Ch'ae Man-shik (1902–1950), a writer of wit and irony who employed a direct, conversational style; Yi T'ae-jun (1904–?), a polished stylist; Kim Yu-jong (1908–1937), who utilized an earthy, colloquial style rooted in the oral tradition; and Yi Sang (1910–1937), an avant-garde poet as well as a modernist fiction writer. Their combined efforts led in the mid- to late 1930s to an early high point in modern Korean fiction.

Korean literature after 1945 has to a large extent been conditioned by the realities of modern Korean history. Korean literati from premodern times to the present day have often felt a need to bear witness to the times, and authors from 1945 on have been no exception. The literature of the 1950s and 1960s is a good example. Reacting to the devastation inflicted on the peninsula by the Korean War (1950–1953), writers produced poems and stories portraying not just a shattered landscape but traumatized psyches and corrupted values. The stories of Son Ch'ang-sop (b. 1922) and the poems of Kim Su-yong (1921–1967) are excellent illustrations. The late 1960s and early 1970s gave voice to a new generation of writers, educated in their own language (their parents' generation had been educated in Japanese, and the literary language of their grandparents' generation was more often than not Chinese). With little or no experience of the period of Japanese occupation and exhibiting a sardonic attitude toward the authoritarian rule that marked South Korean politics from 1948 to 1987, they produced fiction and poetry that display a more free-wheeling use of language and a powerful imagination. Fiction writers Kim Sung-ok (b. 1943) and Ch'oe In-ho (b. 1945) are representative. Their contemporaries Ch'oe In-hun (b. 1936) and Yi Ch'ong-jun (b. 1939) are known for the intellectual rigor of their fiction.

The 1970s brought to the fore a collection of powerful voices that exposed the social ills attending South Korea's industrialization under President Park Chung Hee. There is no better fictional treatment of this sub-

ject than Cho Se-hui's (b. 1942) *Nanjangi ka ssoollin chagun kong* (A Little Ball Launched by a Dwarf, 1978), perhaps the most important one-volume novel of the post-1945 period. Yun Hung-gil (b. 1942) wrote of the scars of the civil war and of citizens coerced into supervising "subversive" neighbors. Hwang Sog-yong (b. 1943) wrote of itinerant construction workers, urban squatters, and refugees from North Korea. Cho Chong-nae (b. 1943), in his ten-volume novel *T'ae-baek sanmaek* (The T'aebaek Mountains, 1989), took a revisionist approach to modern Korean history. The 1970s also marked the debut of Yi Mun-yol (b. 1948), perhaps the most important Korean novelist at the century's end. Yi is concerned with retrieving Korean tradition amid the territorial division of the peninsula, the legacy of colonialism, and the challenges posed by modernization and urbanization.

Among the most important works of modern Korean fiction are the multivolume novels called *taeba sosol* (great-river fiction). These works have precedents in the family saga of premodern times and usually feature a historical background and several generations of family life. In addition to Cho Chong-nae's *T'ae-baek sanmaek*, the most important examples are *Im Kkok-jong* (1939) by Hong Myong-hui (1888–?), about a bandit leader of that name; *T'oji* (Land, 1994) by Pak Kyong-ni (b. 1927); *Chang Kil-san* (1984) by Hwang Sog-yong, also about a bandit leader thus named; and *Honpul* (Spirit Fire, 1996) by Ch'oe Myong-hui (1947–1999).

So Chong-ju, Shin Kyong-nim, Kim Chi-ha, and Ko Un stand out among poets of the post-1945 era. So (1915–2000) is Korea's most important modern poet, a master of the Korean language who mined Korean history and culture and the Buddhist worldview to produce short, revelatory lyrics and longer prose-poems, all of them inspired by native Korean tradition and, earlier in his career, French symbolism. Ko, Kim, and Shin have all exhibited a populist streak, and have incorporated the spirit of political activism in their poetry.

Modern Korean drama, like fiction and poetry, was subject to considerable Western influence early in the 1900s. Among the earliest examples of modern drama is *San twaeji* (Boar, 1926) by Kim U-jin (1897–1926). *Tomak* (Piece, 1932) by Yu Ch'i-jin (1904–1973) marked the advent of a new realist drama. Perhaps the most important contemporary playwright, O T'ae-sok (b. 1940), blends an innovative, Western-influenced style with texts drawn from Korean history and folklore recent and past. A good example is *Ch'unp'ung ui ch'o* (Ch'un-p'ung's Wife, 1975).

The most noteworthy trend in Korean literature at the end of the twentieth century is the prominence achieved by women fiction writers. Long marginalized by the overwhelmingly male literary establishment, Korean women writers, building on the pioneering efforts of writers such as Ch'oe Chong-hui (1912–1990), have since the 1970s gained both critical and commercial success through the technical and thematic innovations of Pak Wan-so (b. 1931), O Chong-hui (b. 1947), Ch'oe Yun (b. 1953), and others.

Little is known of literature produced in the Democratic People's Republic of Korea (North Korea). Around one hundred established writers migrated from southern Korea to what is now North Korea following Korea's liberation from Japanese colonial rule in 1945, but their works were unavailable in the Republic of Korea (South Korea) until the democratization movement of the late 1980s in South Korea. A full account of literature in North Korea must await reunification of the Korean peninsula. In the meantime, fiction writers in South Korea have begun to chronicle the experiences of Northern defectors to the South.

LITERATURE—LAOS The emergence of traditional Lao literature began after the founding of the first Lao kingdom, known as Lan Xang (1353–1694), during which many classic works, both secular and religious, were composed. The neighboring Hindu and Buddhist cultures influenced traditional Lao literature, which was composed in a number of poetic forms.

Early Lao Literature

The early manuscripts consisted of accordion-style folded paper or palm leaves, onto which Buddhist monks engraved the text with a metal stylus. The manuscripts were stored in Buddhist temple libraries or in private homes of the elite. Today they are preserved in temples as well as in the National Library in Vientiane, Laos, the National Library in Bangkok, Thailand, and in libraries in Europe.

The temple was the center for Lao literature since both secular and religious festivals were held on temple grounds. Monks and village elders might spend several days reciting both secular and religious stories to the public at these festivals. All levels of society enjoyed traditional Lao literature in this public forum.

Secular Literature Secular literature was written in Lao script, and the content was mainly folk tales, legends, and historical annals. Secular literature began as an oral tradition, but over the years the stories and legends were recorded on paper, although the identities of the writers and the dates they wrote are unknown. For example, the legend of Khun Bhrom traces the life of Khun Bhrom, the founding father of the Lao people. Some folk stories were risqué and humorous, such as the tale of Xieng Mieng, a cunning, lazy man who loved to outwit the king; it continues to be a popular story of the Lao people. Historical records traced the founding of a kingdom, acts of a king, and major events affecting the kingdom. One example is the *Muang Phuan*, a historical record of the kingdom of the Phuan people.

Religious Literature Religious literature was based on Hindu and Buddhist works, which were transformed into Lao. Lao characters replaced the Indian characters in the stories, and the settings were changed to Laos, often near the Mekong River. Popular religious stories included the five hundred *Jataka* tales, or stories of the Buddha's previous lives. Another fifty tales of the Buddha's past lives that influenced religious Lao literature came from the literature of the Lanna kingdom (1259–1931) and indirectly from the Mon kingdom Haripunchai (660–1281), both located in present-day northern Thailand. The Vinaya and the

Abhidhamma Buddhist texts also influenced Lao religious literature.

Popular religious stories were morality tales that focused on pious deeds. This type of literature aimed to teach people how to behave and how to accept their station in Lao society and in the greater Buddhist realm. The Indian Hindu epic *Ramayana* became *Pha Lak Pha Lam* in Lao literature; it was a favorite at the Lao court (as well as the Siamese and Khmer courts) and was portrayed in classical dance performances.

After the breakup of the Laos kingdom into three small kingdoms in the seventeenth century, classic Lao literature continued to be produced until well into the nineteenth century.

Emergence of Modern Lao Literature (1893–1954)

The Siamese and then the French, who came to dominate Laos, did little to improve education or the field of literature during the nineteenth century. The French began to introduce secular education with a Western-based curriculum in Laos during the 1930s, and the first lycée (French-model high school) opened in 1947. The French system moved away from the religious nature of traditional schools and literature and focused on teaching students that they were French subjects. Lao royalty and elite usually received a Western education in France and other European nations.

Fiction was introduced during this period. The first Lao novel, published in 1944, was a detective story, *Pha Phoutthabhoop Saksit* (The Sacred Buddha Image), by Somchine Nginn. The first Lao newspapers—*Lao Nhay* and *Pathet Lao*—appeared during the 1940s, and the first Lao news agency was called Agence Lao Presse.

Modern Lao Literature (1954–1975)

After World War II, Lao literature split into two camps, reflecting the political ideologies of the royalists and the Communists. Royal Lao writers included Pakian Viravong (who wrote under the pen name of Pa Nai), Dara Viravong (Duang Champa), and Duangdueane (Dok Ket) Viravong. These writers were children of Maha Sila Viravong, the famous Lao historian. Duangdueane Viravong married Outhine Bounavong (1942–2000), another royalist writer. Writers in this camp continued to be influenced by French writers and then in the 1960s by Thai writers. In the 1970s, Maha Sila Viravong founded a magazine devoted entirely to Lao literature, *Phai Nam*.

Literature of the Communists, or the Lao Patriotic Front (*Neo Lao Hak Sat*), such as *Rains in the Jungle*, was written in traditional Lao poetic forms in an attempt to reach the common people. The Lao Patriotic Front also began to publish a report with stories written by soldiers and party members. Seri Milamay (Seriphap) was a revolutionary writer who received the Southeast Asian Writers Award for his work.

Postrevolutionary Literature (1975–Present)

Since the Communist takeover in December 1975, the government has strictly controlled Lao writers. Literary criticism is nonexistent in Laos, and anything of a critical nature is usually published anonymously in Thailand. Royalist writers spent time in reeducation camps before being allowed to continue to write for the new regime. Outhine was the first Lao writer to have his short stories published in English, and works by other writers have been translated into Thai, Russian, and Vietnamese.

Revolutionary writers still active after the revolution include Chanti Dueansavan and Sonvanthone Bouphanovong, while Saisuwan Phengphong and Bounthanong Somsaiphon are writers who became popular after the revolution. Their works have been translated into Thai.

With the introduction of the New Economic Mechanism (*Jintanakan Mai*), censorship has relaxed, but Lao literature faces many obstacles. One is the lack of funding for producing books. Printing presses are located in the nation's capital, Vientiane, and the costs of publication are high. The country's lack of infrastructure and its rugged terrain hinder efforts to send materials to all parts of the country. The inadequate number of schools affects the illiteracy rate, which in turn affects the dissemination of literature. These hindrances have, however, enabled traditional forms of Lao literature to persist. Palm-leaf manuscripts were used until the mid-twentieth century, and temples continue to be education centers for traditional Lao literature and settings for festivals where literature is still recited.

LITERATURE—MYANMAR Burmese literature falls into three periods: monarchic (until 1885), colonial (1886–1948), and postindependence (1948 to the present). Although Burma was a parliamentary democracy right after independence, most of its subsequent history has been of military rule, one-party rule, or both.

The earliest example of writing using Burmese script is probably the Prince Raja Kumar's stone inscription, written around 1112 in four languages: Pyu, spoken by a group related to the Burmese; Mon, spoken by settlers of Lower Burma; Pali, the Indian language of Theravada Buddhism; and Burmese. The Burmese alphabet in this inscription is ultimately derived from the ancient Indian Brahmi script.

Appearing later solely in the Burmese language, these inscriptions are mostly records of donations. They mention the kinds of donations, the identity of donors, the occasions, and the locations. The inscriptions end with prayers or curses, written to scare people and prevent them from destroying the donor's act of merit. At this time, there were also texts written on terra-cotta plaques and in ink on stucco. Both of these forms usually appear beneath depictions of scenes from the *Jataka* tales (Burmese *Zat*, didactic stories of the Buddha's past lives).

Although the early stone inscriptions are written in prose, verse began to replace the prose after the thirteenth century, especially in palm-leaf manuscripts and in *parabaik* (folding tablets made of paper, cloth, or metal). This resulted in the appearance of longer forms of verse, including *pyui*' (epics), *mo'kvan*' (poems on historic occasions), *yadu* (lyrical odes on the

seasons, love, and so forth), and *e' khyan*' (poems for the young princes and princesses).

At first, the writers were usually monks writing religious tales, such as the life story of the Buddha and the *Jataka* tales in *pyui*' form. Later writers wrote non-religious tales in *pyui*' form. *Mo'kvan*' , on the other hand, is a verse form that courtiers used to record and eulogize the exceptional achievements of the king. *E' khyan*' is a verse form used in composing success stories of a child's parents and grandparents; these were sung as lullabies for princes and princesses to give them confidence and encouragement. *Yadu* is the shortest verse form, the style adopted by kings, monks, and those in the palace, including laypeople. Writers used the *yadu* form to write about personal affairs, the beauty of nature, and weather. Still other verse forms include "*khyui*" (four-stanza verse), *te'thap*' (lyric of eighteen lines), *bo' lay*' (plaintive song), and *lvam*' *khyan*' (poem or song of longing), which are closely related to songs.

Verses on country life and verses composed by people in the countryside begin to appear in the seventeenth century. Padāsa Rājā (1684–1744), a minister of the king, wrote verses about the countryside in the form of *'khyan*' (classical song). Some country people themselves also wrote about village youths in the style of *auin' khyan*' (folk song) addressed to their close friends.

After 1300, prose was written on many subjects. Buddhist monk Rhan'Maha Silavamsa (1453–1518) wrote *Pārāyana vatthu* (Stories Leading to Nirvana) based on Buddhist sermons and Buddhist texts, and many narratives based on Buddhism followed. The entertaining Buddhist narrative sermons of U" Punna (1807–1867), a literary figure known for his humorous writings, allowed people to enjoy both literary style and stimulating thoughts on Buddhism. While *Pārāyana vatthu* became the basis for Buddhist narratives, Rhan'Maha Silavamsa's *Rajavan'ky U* (Famous History) became the forerunner of later Burmese historical texts.

To satisfy the Burmese readers' thirst for knowledge, expository texts also began to appear. Among those, the *Rājadhamma san'gaba* (Precepts Incumbent on a King), written by Yo" Atvan"van U" (1729–1823), was a suggestion for modern administration. Also, travelogues such as *Pūtākē Capīn' Itālyam sva' mbat'tam*" (Journal of a Trip to Portugal, Spain, and Italy) by U" Khri" (1828–1883) and *Lan'dan' sva" ne zin' bmat' tam*" (Journal of a Trip to London) by Kan" van" Man" kri" U" Kon" (1821–1908) appeared in the nineteenth century.

Rhvēton' Sīhasū (1708–1748), a palace attendant, on the other hand, wrote *Ratana' kre" mum vatthu* (Treasured Mirror Stories) purely to entertain readers. Scholars consider this original composition the first Burmese legend, since the characters in the narrative are human beings, *nats* (supernatural animist beings), and dragons.

In the later part of the monarchy, plays and dramas to be performed in the palace were written both in prose and verse. U" Kran' U (1773–1828) and U" Punna wrote plays that lasted all night—the former based on the author's own ideas and the latter on Buddhist literature.

In the mid-nineteenth century, printing technology came to Burma, and printed materials replaced palm-leaf and *parabaik* literature. Newspapers and books were published both in Lower and Upper Burma. By the time the British conquered Burma (1885), printing was already well underway.

Literature during British Colonial Rule

Under the British, the Burmese began to translate Western literature. Readers came to understand more about Western popular literature when, in 1902, U" Phui" JU translated Daniel Defoe's *Robinson Crusoe* into Burmese. In 1904, James Hla Kyō (1863–1913) added his own story to sections of Alexandre Dumas's *The Count of Monte Cristo* and turned it into *Mōn' Ran' Mōn' Ma May' Ma Vatthu* (The Story of Maung Yin Maung and Ma Me Ma), which scholars consider the first modern Burmese novel.

Many other Burmese novels appeared at this time. Most were romantic with moral lessons until 1920. However, *Cabay' ban' vatthu* (Jasmine Plant Story) and *Rhve Pran n' Cui" vatthu* (The Story of Shewei Pyi So) by U" Lat' (1866–1921) were unusual in that the characters were true to life. After the anticolonialist movements in 1920, people started to write with a political or social agenda in mind.

Around 1930, university students created *khet' cam"* ("test the age") literature, whose style and topics differ from those of earlier times. Sippam Mon' Va (1899–1942) became a successful *khet' cam'* writer. Books on Western political thought published by the the Naga"nī Association, founded by young people in 1937, opened the political eyes of the Burmese.

While prose was developing, verse also bloomed. Sa khan' Kuito'mhuin'" (1875–1964) was the most famous poet of the colonial period; he wrote about Burmese culture and the fight for independence, and he encouraged anticolonialist movements. His *Le"*

khyui" kri" (Longer Four-Stanza Verse) poems followed ancient forms, but the language was closer to that of the countryside. Students from Rangoon University writing *khet' cam"* literature focused on writing in a simple style so that literature would be accessible to most people.

Burmese Literature after Independence

After independence, various literary styles appeared in response to the unstable political situation. A struggle developed between those who believed in literature for literature's sake and those who leaned toward leftist themes.

In 1962, the Revolutionary Council took power, and freedom of the press declined under the Burma Program Socialist Party. A Censorship Board was established so that literature that attacked party policy could be banned. Literary awards were presented only to authors whose topics supported party policy.

At present, the Censorship Board still controls publishing policy, but Burmese literature is alive despite the tight censorship. Authors must now write about political and social conditions indirectly to make their works acceptable to the Censorship Board, and the quality of the literature has even improved. Currently, literary criticism is playing a new role in Myanmar. Literature is now being viewed from the perspective of literary skills and values instead of from political perspectives, as before. In line with developments in world literature, the terms "modern" and "postmodern" have appeared in the Burmese literary world.

LITERATURE—PHILIPPINES Philippine literature, written in Filipino, English, Spanish, and Philippine languages (e.g., Cebuano, Ilocano, Tagalog, Hiligaynon, Pampangan, Hanunuo-Mangyan, and Bontok), has been influenced by colonization, economic and social systems, religion, and political movements. An oral tradition continues to exist through epics, riddles, poems, and legends of the country's around sixty ethnolinguistic groups, reflecting a culture linked with the Malay of Southeast Asia and the influence of Indian, Arabic, and Chinese cultures. With the colonization of the islands by Spain and the United States, Western forms such as the novel, short story, essay, and full-length play were introduced. However, resistance to colonization also produced a tradition of radical literature. Philippine literary texts have been records of everyday life, historical documents, receptacles of values, and either participants in the colonial discourses of the colonizers, or testaments to freedom and sovereignty.

Precolonial Literature (1564)

Among the literary forms during the precolonial period were riddles and proverbs, at the heart of which were the *talinghaga* (metaphor); the Hanunuo-Mangyan *ambaban* (a poetic form chanted without a predetermined musical pitch); the Tagalog poetic form *tanaga*; myths, fables, and legends; mimetic dances and rituals that at times involved a plot (for example, the *Ch'along* of the Ifugao); and epics, such as *Lam-ang* and *Labaw Donggon*. Created in communal societies, the subject matter and metaphors came from common village experiences. Literature was essential in daily life, rites of passage, and survival. Songs provided rhythm at work, rituals healed the sick, and epics validated community beliefs. Each member of the community was a poet or storyteller, and the conventions of oral literature—formulaic repetition, character stereotypes, and rhythmic devices—facilitated transmission.

The Spanish Colonial Period (1565–1897)

Literature during Spanish colonial rule consisted of both religious and secular literature, prevalent during the first two centuries, and a nineteenth century reformist and revolutionary literature that reflected the clamor for change and independence. Spanish colonial rule resulted in the establishment of a feudal system and the imposition of the Catholic religion. Religious orders monopolized printing presses; the first book, *Doctrina Cristiana* (Christian Doctrine, 1593), was published by the Dominicans. The first printed literary work in Tagalog, the poem "May bagyo ma't may

rilim" (Though There Be Storm and Darkness) was published in *Memorial de la vida Cristiana*, (1605), by friar lexicographer Francisco Blancas de San Jose. In 1704, Gaspar Aquino de Belen published "Ang mahal na passion ni Jesu Christong panginoon natin" (The Passion of Jesus Christ Our Lord), a narrative poem of the life of Christ.

Literature reaffirming religious values was dominant, including forms such as the *sinakulo*, a play on the passion of Christ, the *ejemplo*, which spoke of saints, and the *komedya*, which featured battles between Christians and Moors. Nationalist literary historians believe that these feudal and colonial discourses contributed to the country's colonization because they promoted beliefs and values such as acceptance of one's destiny, deferring to authority, superiority of the colonizer, and the supremacy of the Catholic religion over Muslim beliefs.

Spanish ballads, which inspired the *komedya*, also influenced narrative poetry, including the *awit*, with its four mono-rhyming dodecasyllabic lines, and the *korido*, with its four mono-rhyming octosyllabic lines. The most significant *awit* was "Pinagdaanang buhay ni Florante at Laura sa cahariang Albania" (The Life of Florante and Laura in Albania, 1838), by Francisco Baltazar (1788–1862). It is considered the first nationalist literary text and is known for its indictment of colonial rule, its popularity, and its skillful manipulation of language.

The growth of a nationalist consciousness resulted in literature that called for reform. Written by *ilustrados* (Filipino students in Spain), many of these works either parodied religious literature or introduced new literary forms to better articulate issues. Marcelo H. del Pilar (1850–1896) criticized religious orders using the *pasyon* and prayers, using monetary currency to describe the friar in the poem "Friar Ginoong Barya" (Hail Father Coins) a parody of "Aba Ginoong Maria" (Hail Mary, a popular prayer). National hero Jose Rizal (1861–1896) wrote the novels *Noli me tangere* (Touch Me Not, 1887), and *El filibusterismo* (The Subversive, 1891), works that portrayed Philippine society with a critical view, introduced realism, and are considered to be among the most important works in Philippine literature.

The revolutionary organization Katipunan published in its newspaper *Kalayaan* essays and poems emphasizing that the Philippines was a free land before the coming of the Spaniards, thus justifying the need for a revolution. "Ang Dapat Mabatid ng mga Tagalog" (What the Filipinos Should Know), by Andres Bonifacio (1863–1896), rallied Filipinos in the strug-

gle against Spain. The essay "Kalayaan" (Freedom), by Emilio Jacinto (1875–1899), asserts that freedom is a basic right of all human beings. Along with the revolutionary love songs of the period (*kundiman*), these anticolonial and nationalist discourses contributed to the Filipinos' struggle for independence.

The American Colonial Period (1898–1946)

Philippine independence, declared by the revolutionary government on 12 June 1898, proved to be short-lived, ending with the invasion of U.S. forces. Resistance was evident in allegorical plays known as the *drama simboliko* (symbolic drama). In *Tanikalang Guinto* (Golden Chains, 1902), by Juan Abad (1872–1932), and *Kabapon, Ngayon at Bukas* (Yesterday, Today, and Tomorrow, 1903), by Aurelio Tolentino (1868–1915), characters represent the Motherland (Inangbayan, Pinagsakitan) and revolutionary Filipinos (Taga-ilog, K'Ulayaw, Tanggulan). In many of these allegorical plays, the lead male character, who pretends to be dead but is actually alive, represents the revolutionary forces still fighting in the mountains. The anticolonial and nationalist discourses found in drama can similarly be found in poetry, whether written in Spanish, such as the poetry of Fernando Ma Guerrero (1873–1929) or in Tagalog, such as that of Jose Corazon de Jesus (1836–1932). While there were novels that dwelled on romantic love and adventure, and were reminiscent of the *komedya*, such as *Nena at Neneng* (1903), by Valeriano Hernandez Pena (1858–1922), many novelists gave a critical portrayal of society. *Pinaglabuan* (1907), by Faustino Aguilar (1882–1995), and *Banaag at Sikat* (1903), by Lope Santos (1879–1963), focused on the exploitation of the working class and introduced socialist ideas. These novels participated in the anti-imperialist discourses of such organizations as the Union Obrero Democratico (Democratic Workers' Union)

The imposition of English as the medium of instruction resulted in the dominance of literature in English. Although Filipino writers mastered the craft of poetry and fiction using Western aesthetics, several chose to portray the countryside, thus emphasizing local color. Collections such as *How My Brother Leon Brought Home a Wife* (1941), by Manuel Arguilla (1910–1944), may have painted idyllic portraits, but the emphasis on rural life was also read by critics as a protest against the industrialization brought about by U.S. colonial rule. A pioneering novel in migrant literature was *America Is in the Heart* (1946), by Carlos Bulosan (1913–1956); it focused on racial discrimination and the exploitation of workers in the United States.

During this period magazines such as *Liwayway* (1922, Tagalog), *Bisaya* (1930, Cebuano), *Hiligaynon* (1934, Ilongo) and *Bannawag* (1934, Iloko) became the primary outlet for short stories written in indigenous languages. Literary production was influenced by market and editorial policies, resulting in many works that used formulaic plots and deus ex machina endings. However, skillfully written stories such as "Greta Garbo" (1930), by Deogracias Rosario (1894–1936), "Kung Ako'y Inanod" (If I Am Swept Away, 1907), by Marcel Navarra, and "Si Anabella," (Anabella, c. 1936–1938), by Magdalena Jalandoni, indicted the colonial way of thinking, explored psychological realism, and created complex characters.

The tension between colonial and anticolonial forces in Philippine society was echoed in literature, with the "art for art's sake" philosophy of the poet Jose Garcia Villa (1906–1997) on the one hand and the social consciousness of Salvador P. Lopez (1911–1993), as emphasized in his essay "Literature and Society," on the other. Much work during this period was both a result of and a response to U.S. colonial rule and capitalist values.

The cultural policy of the Japanese occupation (1942–1945), which encouraged Tagalog writing, resulted in a harvest of works. These were compiled in the collection *Ang 25 Pinakamabubuting Katha ng 1942* (Twenty-Five Best Stories of 1942). By following the guidelines of the policy however, many of the works focused on everyday life that seemed untouched by war. Exceptions were several stories where males were conspicuously absent or characters seemed to be waiting for loved ones, making it possible for critics to read in these stories references to the Filipino guerrillas fighting the Japanese forces. Literature, through satirical skits performed by stage actors, and poems, songs, and plays performed by the guerrillas played an important part in the anti-Japanese movement.

Contemporary Literature

Contemporary literature has been influenced by various critical theories, among them New Criticism, which emphasizes the literary work as a verbal construct, and Marxism, which produces works political in intent and content. Experimental and eccentric form and language can be found in poetry collections such as Jose Garcia Villa's *Have Come, Am Here* (1942) and *Piniling mga tula ni AGA* (Selected Works of AGA, 1965), by Alejandro G. Abadilla (1904–1969). Among the works that focused on economic and social issues were the novel *Ilaw sa bilaga* (Light from the North, 1948), by Lazaro Francisco (1898–1980), the poetry

collection *Isang dipang langit* (A Stretch of Sky, 1961), by Amado V. Hernandez (1903–1973), and the novel *Dagiti mariing iti parbangon* (Those Who Are Awakened at Dawn, 1957), by Constante Casabar (b. 1929). The production of works that were anti-imperialist and revolutionary in content, such as Hernandez's prison poems, alongside works emphasizing a revolution in form, such as the comma poems of Villa, reflected a society that, although independent since 1946, had remained feudal, economically dependent on foreign capital, and heavily influenced by U.S. culture.

The search for national identity, an upsurge of nationalism, and debates on the national language have shaped Philippine literature. This is evident in the novels of Nick Joaquin (b. 1917), Francisco Sionil Jose (b. 1924), N. V. M. Gonzalez (1917–2000), and Edgardo M. Reyes (b. 1938), and in the poetry of Rio Alma (b. 1945) and Rolando Tinio (1937–1997). While Joaquin's search for identity led him to works that glorified a past era, Reyes's work centers on the poverty that led people to migrate to the city from the countryside, and the continuing exploitation they faced in urban centers. Two landmark collections, *Mga agos sa disyerto* (Streams in the Desert, 1964) and *Sigwa* (Storm, 1972), contain works that participate in discourses on class, gender, and imperialism.

Literature from the 1980s and 1990s saw renewed interest in regional language, the publication of anthologies of feminist and gay literature (for example, *Filipina I*, 1984), and programs geared toward developing writers among peasants and workers in the hope of creating a truly national literature.

LITERATURE—SOUTH ASIA, BENGALI

The Bengali language is as old as English, emerging from eastern dialects of Middle Indo-Aryan (standard colloquial Sanskrit, or Prakrit), sometime before 1000 CE. The earliest surviving literary texts in Old Bengali are mystic *caryapad*, "play-part" songs, dating between 1000 and 1200 CE and preserved in a single manuscript of Sanskrit commentary in the Nepal Darbar Li-

brary. These songs, composed in syllabic rhyming couplets with caesuras in mid-line, treat esoteric practices of yoga and tantrism in paradoxical, sometimes vulgar, code language. Their imagery, derived from everyday village life, is meant to reveal and conceal the inner meaning of the spiritual masters' (*acaryas*) yearnings for spiritual union and experiences in the process of attaining self-realization. These songs conclude with a signature couplet (*bbaita*) in which the poet identifies himself and comments obliquely on his theme. The *carya*-style song never disappeared entirely from Bengali folk culture.

Contemporary *baul* songs have forms and thematic concerns similar to those of *carya*-style songs. *Bauls* are members of a heterogeneous (Hindu and Muslim) syncretic sect of West Bengal and Bangladesh, originating in the sixteenth century CE, whose nondualistic beliefs and practices derive from Hindu Vaishnava, Buddhist Tantric, and Muslim Sufi teachings. The *bauls* traditionally led a wandering life, singing their distinctive devotional songs and playing folk instruments, especially at fairs and festivals, as their main source of livelihood. The *bauls* form a tolerated but marginalized subcaste in Bengali society; in the late 1900s, however, a number of the more talented and ambitious performers among them, such as Purna Chandra Das Baul, have become recording artists with international reputations. *Baul* songs have greatly influenced Bengali literary culture; Rabindranath Tagore (1861–1941), Bengal's Nobel Prize winner in literature, was much affected by the songs of Lalou Fakir (d. 1890), the most celebrated *baul* of all time.

The Old and Middle Bengali Periods

Although mystic, devotional song was not always thought to possess high literary value, religious themes predominated in Bengali poetry through the Old and Middle Bengali periods (c. 950–1350 and 1350–1800 CE, respectively). Poetry predominated as there was no prose to speak of until nearly 1800. Under Hindu rulers of the Pala and Sena dynasties (eighth to twelfth centuries), Bengal developed its own schools of Vedic Sanskrit studies and Buddhist Tantrism in monasteries, temples, and other learning centers. After Turkish invaders overran the Bengali kingdom of Nadia in 1201, the Muslim *darbar* (court) established in Gaur continued to provide patronage for over 200 years to court poets of the Middle Bengali period, who composed narrative poems of the exploits of gods such as the Vedic deity, Dharma, and the competing cults of the pre-Vedic goddesses Chandi, consort of Siva, and Manasa, a daughter of Siva and queen of serpents. The most popular narrative poetic themes, however, were

from the *Ramayana*, the legends of the god Rama, rendered into Bengali by poets such as the fifteenth-century Krittivas Pandit; the epic *Mahabharata*, chanted in Bengali by professional court poets; and tales of Lord Krishna, the most remarkable version of which, the secularized Srikrishnakirtana by Chandidas, dates from about the sixteenth century. In this rendition, a dramatic series of Bengali dialogue-songs interspersed with Sanskrit verses, Krishna and his lover Radha are not divine or mythical beings but youthful villagers carrying on their illicit affair with a full range of human emotions.

Role of Chaitanya

Bengali popular imagination was galvanized by the charismatic Vaishnava revivalist Chaitanya (1486–1533) who, though he composed only one poem, the Sanskrit Siksastaka (Lesson in Eight Verses), continues to exert influence over Bengali literature to this day. Born into a learned Brahman family in Navadvip, Nadia, the boy trained as a Vedic scholar. At age twenty he took initiation from a Vaishnava teacher and was transformed into a *bhakta*, a devotional mystic, who sought union with God by identifying with Radha and singing the names of her beloved Lord Krishna. The Vaishnava revival started by Chaitanya swept through Bengal, dissolving religious and caste barriers among his followers; for three centuries poets composed *Caitanyamagal*, narrative poems recounting Chaitanya's life and teachings, as well as *kirttan*, folk-influenced lyrics celebrating the love of Radha and Krishna. The *bauls* arose in Nadia during this period as a folk outgrowth of Chaitanya's movement, and both Sufi and Vaishnava poets composed or transcribed folk versions of tales of local Muslim saints, creating legends of syncretic deities with both Hindu and Muslim names and jointly celebrated festivals.

Transition to the Modern Bengali Period

Three centuries of Muslim governance, from Delhi or through semi-independent local rulers, had already enriched Bengali literature and language through the influence of Persian and Arabic, the languages of law, administration, and Islamic cultural life. With the advent of European trade and missionary activity in the early eighteenth century, followed by printing presses and the first Bengali type fonts (designed by an officer of the British East India Company), poetry as a literary genre, widely available in inexpensive printed form, began to diverge from traditional forms of song and narrative recitation. Prose developed first through vernacular translations of catechisms and Bibles, physicians' handbooks, grammars and readers for Ben-

gali language instruction to Europeans, and legal documents translated from English for purposes of provincial governance. Bengali culture, especially in the port of Calcutta and smaller market towns, was energized by European contact; colleges and universities modeled on the British system proliferated. Intellectuals, with English or traditional Sanskrit and Persian educations, soon distinguished themselves as prose stylists and founded the first Bengali periodicals to disseminate their work and foster greater intellectual exchange and social reform. The Modern Bengali period (1800 to the present) was underway.

Notable Prose Stylists

Rammohan Roy (1772–1833), polemicist, religious reformer, translator, grammarian, and forerunner of the nineteenth-century "Bengal Renaissance," wrote essays and treatises with equal facility in Bengali and Persian. Essayist, literary scholar, and social reformer Iswarchandra Vidyasagar (1820–1891), renowned for the clarity and concision of his prose, wrote treatises that shaped laws against polygamy and in favor of widow remarriage. Devendranath Tagore (1817–1905), hailed as Maharishi (Great Sage) by the educated public, refined an epistolary style and contributed to the new periodicals impelling Bengal's literary renaissance. Innovative plays on social themes, influenced by Shakespeare as well as Sanskrit drama, were staged in private and later in public theaters in Calcutta. English literary works studied in the new colleges were translated into Bengali, and some poets, most notably Michael Madhusudhan Dutta (1824–1873), ventured to write English verse. Despite his multilingual gifts and ambition to *become* as well as write in English, Dutta's greatest poem, the *Meghnadbadh Kavya* (*Meghnad's Fall*), is in Bengali, in traditional Sanskrit epic cantos; however, its rebellious hero Meghnad, brother of Ravana, the demon defeated in the *Ramayana*, is modeled on tragic Western characters such as Homer's Achilles and Milton's Satan. Dutta's true literary revolution, though, came in his final book, with the first Bengali sonnets, a form well-suited to the language's inherent concision and ease of rhyming, and in his use of a massive, multilingual vocabulary and allusions from many literatures.

The nineteenth century also saw the first recognized literary contributions by women. East Bengali village matron Rassundari Devi (1810–?), her days spent in exhausting rounds of housework and childrearing, clandestinely taught herself to read from her sons' primers and by scratching letters on the smoke-blackened kitchen walls; her two-part autobiography, *Amir Jaban* (1876 and 1909), was an astonishing achievement of

clear, succinct narration. The first Bengali novel, *Phulmani O Karuar Bibaran* (*The Story of Phulmani and Karuna*), published in 1852, was also by a woman, Calcutta-born Hannah Catherine Mullens (1826–1861), a Christian who may have been of English descent. Bengal's first prominent prose fiction writer was Bankimchandra Chatterjee (1838–1894), who brought a lively imagination to realistic character development and an informal and often colloquial style. His best-selling novels focused on upper-middle-class Victorian-era Bengali domestic life, as well as the first stirrings of anti-British nationalism; they endure as popular classics today. The Tagore family dominated literature from the mid-1880s until the mid-twentieth century. Dwijendranath, the eccentric eldest of Devendranath Tagore's fourteen children, wrote plays and an allegorical verse fantasy, *Swapnamayi* (*The Dreamer*), which owed much to *The Faerie Queene* and *Pilgrim's Progress*. Swarnakumari Devi (1856–1932), an elder sister of Rabindranath, was one of Bengal's first renowned literary women, writing novels, dramas, and poetry, and editing *Bharati* (India), the monthly magazine started in 1877 by her elder brothers.

Rabindranath Tagore

But it is the protean genius Rabindranath Tagore (1861–1941) who towers over all other literary artists of the language. Musician, actor, painter, social reformer, and educator as well as writer, he produced a vast output that included some sixty collections of poetry and other works, including novels, short stories, essays, plays, dance-dramas, and songs so distinctive that the style *Rabindra-sangit* (Tagore songs) is named after him. In 1913 he received the Nobel Prize, which led to worldwide recognition for Bengali literature. Two works available in English translation are the novel *Ghare Baire* (*Home and the World*), featuring multiple first-person limited points of view, a narrative strategy new to Bengali; and the self-translated *Gitanjali* (*Song Offering*), the poetry collection that won Tagore the Nobel Prize. This volume is a free rendering, disappointingly stripped of all specific Bengali literary, historical, and mythological allusions and echoes, based on Tagore's notion of what Western readers could relate to, so that the poems read more like Emersonian transcendentalist texts than Bengali songs. But Tagore was influential in abandoning formal literary language and adopting the standard colloquial speech of real people in his writings. Most of Tagore's work has not yet been rendered into English translations that capture the originals' subtleties, but Bengalis revere him; he is the only poet who has composed the national anthems of two countries, India and Bangladesh.

Other Major Writers

After Tagore, notable writers include the immensely popular novelist Saratchandra Chattopadhyay (1876–1938); Begum Rokeya Sakhawat Hossain (1880–1932), polemicist, educator, and pioneering Muslim feminist, whose utopian short story, "Sultana's Dream" (1905), and opinion pieces collected in *Avaroddbasini* (*Secluded Women*), battled verbally against the cruelties of purdah, the oppressive seclusion of women; novelist Bibhutibhusan Bandyopadhyay (1889–1950), author of *The Apu Trilogy* (as it is called in English), which was filmed by Satyajit Ray (1920–1992), writer and cinematographer whose own father, Sukumar Raychoudhuri (1887–1923), penned *Abol-Tabol* (which roughly translates to "helter skelter"), a beloved volume of children's nonsense verse in Bengali; and the popular Calcutta novelist and short story writer Ashapura Devi (b. 1909), author of an epic trilogy beginning with *Pratham Pratiruti* (*First Promise*). Notable poets include the East Bengali modernist Jibanananda Das (1899–1954); Kazi Nazrul Islam (1899–1976), a Muslim orphan nurtured on Persian verse who went on to become poet laureate of Bangladesh; East Bengali folk poet Jasim Uddin (1903–1976); and Begum Sufia Kamal (1911–1999), poet, social reformer, and educator, whose poetry collection, *Mor Jaduder Samadhi Pare* (*Where My Darlings Lie Buried*), became the defining voice of Bangladesh's 1971 freedom struggle. Mahasweta Devi (b. 1926) has written voluminously on the struggles of eastern India's oppressed and neglected tribal peoples; her stories and novellas, translated by the postcolonial scholar Gayatri Chakravorty Spivack, have received the University of Oklahoma's prestigious Neustadt Prize. Another chronicler of the Bangladesh Liberation War was Jahanara Iman (1929–1994), whose 1971 diary-memoir, *Ekattarer Dinguli* (literally, *Days of '71*, but translated as *Of Blood and Fire*), was a best-seller in both the Bengali original and in English translation.

Since the 1947 independence and partition of India and the creation of the nation of Bangladesh in 1971, Bengali literature has more closely allied itself to Western forms, both in prose (fiction and memoir) and poetry, while West Bengali and Bangladeshi writers maintain vital contacts among themselves. Magazine and book production by the more prosperous publishers in the two major literary centers, Calcutta and Dhaka, has been computerized; there are also flourishing literary publishing ventures in Bengali expatriate communities, particularly in London and New York City.

LITERATURE—SOUTH ASIA, SANSKRIT

Although almost entirely unknown to the average Western reader, the corpus of literary texts composed in Sanskrit constitutes one of the oldest continuing and most copious literary traditions in the world. The complete body of Sanskrit texts is of a size unparalleled, until modern times, by literature in any language except Chinese. It includes, in the broadest possible definition of "literature," all of the religious, philosophical, legal, historical, medical, inscriptional, technical, and scientific texts associated with the intellectual, theological, and political elites of South and Southeast Asia, from its beginnings in the middle of the second millennium BCE, through its period of greatest efflorescence in the sixth to thirteenth centuries, to the present. This corpus contains such relatively well-known works as the *Bhagavad Gita*, the *Kama Sutra*, the great Sanskrit epic poems the *Mahabharata* and the *Ramayana*, the laws of Manu, the Buddhist Lotus Sutra, and many individual works of immense size, such as the Puranas.

This entry concerns the compositions in poetry and prose that the Sanskritic tradition generally refers to generically as *kavya* or *sahitya*, writings in which the formal elements and the aesthetic response of the audience are as important as their content. This corpus is ancient, large, and still alive to some extent. It includes various genres in prose and verse, ranging from collections of short, pithy verses, or *subhashtas*, on a wide range of subjects, to lengthy narrative poems on epic, romantic, and religious themes, and a large body of plays ranging from short, one-act comic pieces to lengthy emotionally wrought dramas on various themes.

History

From a Western viewpoint the history of Sanskrit literature can be traced back to the earliest-known compositions in the language, the hymns of the Rig

Veda, which date from perhaps the middle of the second century BCE. Some of these hymns, particularly those invoking deities associated with phenomena of nature such as the dawn, the sun, or fire, are among the finest examples of religious poetry in any language. Some of the dialogue hymns and those that narrate stories have been associated by scholars with the origins of drama and the copious story collections for which Sanskrit literature is justly famous.

In the traditional Indian view, however, the Vedas, although regarded with an unparalleled reverence, are not primarily literary texts. For the majority of traditional Indian literary scholars and audiences the origin of poetry is traced to the divine inspiration of the legendary poet-seer Valmiki, who, in the wake of an intense emotional experience, composed his famous epic narrative poem the *Ramayana* in perhaps the fifth century BCE. The *Ramayana* is thus often regarded as the first true poem.

The corpus of Sanskrit literary texts begins to build in the first centuries BCE. Among the earliest are the two surviving narrative poems of the Buddhist poet Asvaghosa (flourished first–second century CE), the *Buddhacarita*, a poetic biography of the historical Buddha, and the *Saundarananda*, an account of the conversion of a prince to Buddhism, and a collection of dramas on themes drawn from Sanskrit epics and other sources attributed to the playwright Bhasa. Highly styled poetic composition is also found in Sanskrit royal inscriptions from the first centuries CE.

The Flowering of Sanskrit Literature

One of the earliest (although of uncertain date) poets of the efflorescence of Sanskrit literature, and by more or less general consensus the single greatest literary master of the Sanskrit language, is the poet and playwright Kalidasa, who is often associated with the imperial court of the Guptas, perhaps around the fifth century CE. This artist, sometimes known in modern times as "the Shakespeare of India," left four major poetic works and three dramas. Of the former, two, the *Raghuvamsa* and the *Kumarasambhava*, are considered masterpieces of the genre known as *mahakavya* or "great poems," long, multicanto narrative poems based on themes drawn from the epics and the Puranas. The first of these is a poetic rendering of the history of the great dynasts of the Raghu dynasty, including a retelling of the career of its most illustrious son, Rama. The second is an account of the courtship and marriage of the great divinity Siva and his wife, the goddess Uma or Parvati. A third piece, the *Meghaduta* or "Cloud Messenger," is an example of a

shorter genre (*khandakavya*) composed in a single poetic meter; it consists of the romantic message of a lovelorn demigod to his distant wife, which he imparts to a passing cloud. This piece is among the most imitated works of Sanskrit poetry and has inspired a whole subgenre of messenger poetry.

The dramas of Kalidasa are equally highly esteemed; one of them, *Shakuntala*, is often considered by Indian and Western critics alike to be perhaps the finest single work of the Sanskrit literary canon. This romantic play, based on an episode in the *Mahabharata*, captured the imagination of poets and scholars in late-eighteenth-century Europe and was showered with praise in a famous verse by Goethe in 1792.

Perhaps because of the genius, prolific production, and exalted reputation of Kalidasa, the genres he favored acquired considerable prestige in succeeding centuries. Thus the *mahakavya* form finds numerous exponents, some of whom established it as a major genre between the sixth and eighth centuries.

Drama, too, particularly the longer subgenres of multiact plays based on epics and invented themes, was further developed by early masters such as Bhatta Narayana (the *Venisambhara*), Shriharsha (the *Ratnavali*), and above all Bhavabhuti (the *Mahaviracarita*, the *Uttararamacarita*, and the *Malatimadbava*) during roughly the same period. Noteworthy also among the older dramas is a charming romance, the *Mrichchakatika* or "Little Clay Cart," attributed to a king Shudraka, whose date is a matter of continuing scholarly debate.

Along with the development of these verse forms (the dramas are largely verse interspersed with prose dialogue), early authors set high standards for the development of prose *kavya* in the form of lengthy narrative romances. Noteworthy here are the *Dashakumaracarita* (Adventures of the Ten Princes), by the writer and literary critic Dandin; the *Vasavadatta* of Subandhu; the historical prose poem the *Harshacarita*; and the romance the *Kadambari* of Banabhatta.

Narratives and Fables

The genres, periods, and authors of Sanskrit literature are far too numerous to summarize completely here. One important genre was the narrative tale and fable literature, which was highly developed in India and which traveled widely throughout Europe and Asia from this point of origin. Noteworthy works include the *Pancatantra*, a collection of moral beast fables; the riddling stories of the *Vetalapancavimshti*; and the great *Kathasaritsagara* (Ocean of Stories), by the eleventh-century Kashmiri poet Somadeva.

Although Sanskrit literature reached what was perhaps its pinnacle by the twelfth century CE, it by no means ended then. Poets and storytellers in many genres continued to compose abundantly in Sanskrit for many centuries afterward and continue to produce poems, stories, and plays in this ancient language down to the present day.

LITERATURE—SRI LANKA, SINHALESE

Sinhalese literature, or literature written in Sinhala, the language of the Sinhalese people of Sri Lanka, is distinguished from literature in other modern South Asian languages by its antiquity, its historical association with Buddhism, and the pervasive influences of long colonial domination in Sri Lanka. Buddhist monasteries became the center of intellectual activity after the conversion of the Sinhalese king to Buddhism in the third century BCE and remained so until modern times. The language and its literature declined under colonial governments (1505–1948) but have revived in recent times.

Classical Sinhala

Buddhist texts in the Pali language were at first preserved orally by monks; the monks also composed commentaries on these texts, including historical records, in Sinhala. The early literature is lost, but there are references to it in Pali texts and later writing in Sinhala. The *Mahavamsa*, the great chronicle of Sinhalese kings composed in Pali in the fifth century CE, apparently drew on Sinhala commentaries. The ancient sources praised the kings' literary ability. The Pali chronicle *Culavamsa* (41: 55) describes King Moggallana II (531–551 CE) as "having poetic gifts without equal." The oldest extant prose work in Sinhala

dates to the tenth century and is attributed to King Kassapa V (913–923 CE).

The restoration of Sinhalese rule by Vijayabahu I in 1070 after Sri Lanka's conquest by invaders from South India was followed by a cultural revival. Vijayabahu himself was considered a poet and patron of literature (*Culavamsa* 60: 80). King Parakramabahu II (1236–1271), another ruler who restored order after a foreign invasion, was the author of the *Kavsilumina*, one of the great poems of the classical period. Works in the thirteenth and fourteenth centuries were written in an ornate style with many words and literary conventions adapted from Sanskrit in what is considered the high point of literature in Sinhala. On the other hand, Gurulugomi in the thirteenth century wrote prose literature in a "pure" form of Sinhala known as Elu and limited the use of Sanskrit and Pali loan words. Sinhala diverged from other South Asian languages in this development of prose. Buddhist monks wrote commentaries and paraphrases of doctrinal texts, historical chronicles, works on grammar and rhetoric, stories of the life of the Buddha, and many translations of Sanskrit works. In the fifteenth century Sinhalese poets wrote in a style closer to the ordinary language than earlier poets did and wrote on more secular subjects. At the end of the sixteenth century, literature flourished under the patronage of the state and Buddhist monastic orders.

Colonial Domination

All this changed after the Portuguese conquered the southwest coastal region of the island, where the Sinhalese government had its capital. The Portuguese persecuted Buddhists, destroyed monasteries and libraries, and rewarded Christian converts. Buddhist monks and laymen moved from the coastal regions to the interior. For over two hundred years a Sinhalese kingdom survived at Kandy in the hilly interior, constantly threatened by Portuguese, Dutch, and finally British conquerors. Pali and Sanskrit scholarship declined, and popular literature developed, much of it influenced by Tamil sources. At the end of the eighteenth century Buddhism and classical literary forms revived under royal patronage in the Kandyan kingdom.

In 1815, the British annexed the Kandyan kingdom, and the island was united under Christian, English-speaking rulers. The British supported Sinhalese (and Tamil) schools but only for elementary education and primarily for the purpose of encouraging conversion to Christianity. Many educated Sinhalese preferred English literature and disregarded literature in Sinhala.

Nevertheless, Sinhalese printing presses began to reprint classical works in Sinhala, works that had been

preserved in village temples on palm-leaf manuscripts, and a literary revival began. Printing also made literature available to a nonscholarly audience, and journals, pamphlets, and newspapers discussed politics and literature in Sinhala. By the late nineteenth century there were frequent controversies over literary styles. Monks and others continued to write in classical styles, whereas Pali texts and foreign literature were translated into a more popular idiom of Sinhala.

Modern fiction in Sinhala has its origins in propagandistic Christian stories in the 1870s. The first novels, often romantic fantasies or morality tales, appeared in the 1890s and became popular in the early twentieth century. Detective fiction also became popular. The most popular author was Piyadasa Sirisena (1875–1946), whose writings emphasized the destructive effects of English influence on Sinhalese culture. His counterpart in theater was the playwright John de Silva (1857–1922). Poets in the early twentieth century continued to use traditional forms until a new generation of poets called the Colombo school rejected classical poetics and themes. They introduced modern themes in poems of romantic love and social criticism, and they were in turn succeeded by writers directly influenced by contemporary Western poets.

Independent Sri Lanka

W. A. Silva (1892–1957) and other novelists attracted popular followings in the 1940s and 1950s with escapist narratives and simple plots. The greatest of Sinhalese novelists, Martin Wickramasinghe (1891–1976), initially was not popular. His *Gamperaliya* (1944) tells the story of the disintegration of village life under the impact of modern conditions. It is considered the first serious novel in Sinhala, and it contributed to raising the standards of fiction in Sinhala. Wickramasinghe was the most influential literary critic of his period.

Another writer and critic, Ediriweera Sarachandra (1914–1996), devoted himself to raising the reputation of literature in Sinhala among the English-educated elite, as well as to encouraging serious fiction in Sinhala. Studies by faculty at the University of Ceylon (established 1942) increased scholarly interest in literature in Sinhala.

Throughout much of the twentieth century, literature written in Sinhala was somewhat overshadowed by works written in English. Two outstanding and, indeed, internationally influential writers were Leonard Woolf (1880–1969), the husband of Virginia Woolf and author of a novel, *The Village in the Jungle* (1914), drawing on his experiences in the Ceylon civil service,

and Michael Ondaatje (b. 1943), a distinguished contemporary writer born in Sri Lanka who now lives in Canada.

Radical changes occurred in 1956, when Sinhala became the medium of education for most schools and universities in the nation and the Department of Cultural Affairs (which became the Ministry of Cultural Affairs in 1970) moved literature in Sinhala away from both Western influences and the classical past. Wickramasinghe emphasized traditional Sinhalese-Buddhist values in his later works; he and other writers accused Sarachchandra and others based at the universities of being too influenced by Western literature.

At the beginning of the twenty-first century literature in Sinhala has come under increased political pressure. Sarachchandra was physically assaulted by government supporters after he wrote a satire following the 1977 election that blamed the government's social and economic policies for the deterioration of cultural values. The civil war that began in 1983 has led to increased use of Sinhala in public life, but also to censorship, a surge in Sinhalese chauvinism, and violence against writers. It may be that, as in the past, literature in Sinhala flourishes in times of crisis.

LITERATURE—THAILAND The earliest examples of Thai (Siamese) writing are stone inscriptions dating from the thirteenth century. The most famous of these is a four-faced pillar inscribed by King Ramkhamhaeng (flourished c. 1279–c. 1317) of Sukhothai in 1292. Although the content deals with the history and social organization of the kingdom of Sukhothai, it is generally regarded as a part of Thai literary history. Another important work believed to date from this period is the *Trai Phum Phra Ruang* (The Three Worlds of Phra Ruang), a Buddhist cosmology that describes, in prose, the worlds of desire, form, and formlessness.

Classical Literature

Classical literature is written in verse and can be traced back to the Ayutthaya period (1350–1767). One

early example, believed to date from the late fifteenth century, is the historical poem *Lilit Yuan Phai* (The Defeat of the Yuans), which recounts the victory of the Ayutthaya kingdom over the northern kingdom of Lanna. More difficult to date is the epic *Lilit Phra Lor* (The Story of Prince Lor), one of the most admired works of classical literature. It tells the story of Phra Lor's love for the two daughters of a hostile neighboring ruler; their illicit meeting is discovered, and all three lovers are subsequently killed in battle. The reign of King Narai (d. 1688) was a golden period, when poetry flourished at the court, and new verse forms, involving complex rhyme schemes, emerged. His reign saw the composition of two famous works drawn from Buddhist tales, *Samutthakhot Kham Chan* (The Story of Prince Samutthakhot) and *Su'a Kho Kham Chan* (The Tiger and the Cow). Some of the masterpieces of the *nirat* genre (travel poetry), such as *Nirat Hariphunchai* and the poet Siprat's *Khlong Kam-suan*, describing his journey into exile in Nakhon Sri Thammarat, also date from this period.

After the death of King Narai, the Ayutthaya kingdom became embroiled in war with the Burmese. In 1767, the capital was overrun and razed, resulting in the loss of most of its recorded literary material. King Taksin (1734–1782) established a new Thai kingdom based at Thonburi and began the task of literary restoration, but it was only after he was overthrown and a new dynasty established at Bangkok, under King Rama I (1737–1809), that real progress was made. The only complete version of the *Ramakien* was composed during his reign, by, as was customary at the time, groups of anonymous poets working on different sections. Literary revival continued during the reign of his son, Rama II (1768–1824), with the appearance of the epic poem *Khun Chang, Khun Phaen* and various works composed for dramatic performance, such as *Sang Thong, Kraitbong*, and *Inao*, all of which take their title from the names of the main protagonists. The literary career of Sunthorn Phu (1786–1856), Thailand's most famous poet and author of several famous *nirat* poems and the lengthy poem *Phra Aphaimani*, is also associated with the reign of Rama II.

Modern Literature

King Rama III (d. 1851) showed little interest in literature, but under his successor, Rama IV (King Mongkut, 1804–1868), printing technology was introduced into the nation by Western missionaries. This, together with the emergence of a potential reading public due to the growth of the education system, had, by the latter part of the nineteenth century, created the conditions for the emergence of prose fiction.

The first novels and short stories appeared in journals such as *Lak Wittbaya*, which were edited by Western-educated Thai princes or aristocrats; the contents were often serialized translations of popular Western writers of the day, such as Marie Corelli, Charles Garvice, Sax Rohmer, Arthur Conan Doyle, and H. Rider Haggard. The first Thai novel, *Khwammaiphayabat* (Non-Vendetta), by Luang Wilatpariwat, which appeared in 1915, was a deliberate response to the translation of Marie Corelli's novel, *Vendetta*, which had appeared in *Lak Wittaya* in 1901. By the mid-1920s, there was a growing demand for original Thai stories; most popular were adventure stories, often with masked villains, and romantic stories, typically involving a poor boy-rich girl theme, in which the plot was brought to a happy conclusion by a series of improbable coincidences. Novels, both then and now, were typically serialized in a magazine first and then reprinted later as a complete volume. By the 1930s, a number of writers were beginning to look beyond providing readers with escapist entertainment and attempting to address serious social issues; two classics of the period are Siburapha's *Songkhrum Chiwit* (The War of Life), written in 1932, which dealt with poverty, inequality, and the lack of freedom of speech, and K. Surangkhanang's *Ying Khon Chua* (The Prostitute), published in 1937, which, sensationally for the time, presented the prostitute-heroine as a sympathetic and virtuous character.

In the late 1940s, a number of writers, including Siburapha, were influenced by socialist realism; for a brief period, works highlighting social injustice and criticizing an exploiting ruling class appeared. But freedom to write such works was short-lived, and many writers were either imprisoned or stopped writing during the literary "dark age" of the 1950s and 1960s. One serious writer who did manage to escape interference from the authorities was Khamsing Srinawk (Lao Khamhom); yet some of the elegantly crafted stories in his collection *Fa Bor Kan*, published in English as *The Politician and Other Stories*, are rather more subversive than they appeared at first reading.

By the late 1960s, a new generation of writers was rediscovering the political fiction of twenty years earlier; the works of Siburapha and some of his contemporaries became a model for many aspiring writers, whose work became known as "literature for life," that is, literature that was intended to create, or lead toward, a better life for the masses. Such literature flourished in student and academic circles after the overthrow of the military government in 1973, but, with its often simplistic treatment of issues, it had little broad appeal and soon disappeared. With rapid economic and social change sweeping through Thai

society in the 1980s, new and more complex themes presented themselves; in the award-winning *Kham Phiphaksa* (The Judgment, 1982), for example, Chart Korbjitti chronicles the gossip and social hypocrisy that turn a lowly villager into an outcast within his own community. As one of the nation's most successful and accomplished writers, Chart is one of the few who can make a living entirely from writing; nevertheless, with a number of literary prizes to be won each year and considerable media attention, the literary scene remains vibrant.

LITERATURE—TURKEY Turkish literature is traditionally said to begin with the Kokturk inscriptions of the eighth century. Found in the region of the Orhon River in northern Mongolia, these inscriptions are the major written source for the history of all Turkic languages. Yet their influence on various national literatures in these languages can be dated only from the end of the nineteenth century, when the inscriptions were discovered.

Although today modern Turkish literature in the Republic of Turkey is considered to have developed from Ottoman Turkish literature, conceptualizing Ottoman Turkish literature as the traditional predecessor to modern Turkish literature is problematic. The influence of Ottoman Turkish literature on modern Turkish literature is overshadowed by the influence of Western literatures.

Development of Ottoman Literature

In Anatolia during the thirteenth and fourteenth centuries, under the patronage of several Turkish frontier states, a written language based on the Oghuz branch of Turkic languages was developed. The first written compositions in this language were Islamic treatises translated from Arabic and Persian. Under the influence of Islamic literary genres and themes,

this literary production reached its culmination in the fifteenth and sixteenth centuries, with the centralization of the Ottoman state. The Ottoman sultans and bureaucratic elite supported a class of learned men, most of whom were involved in writing poetry. Poets as well as prose writers were either associated with the court or were supported by other patrons who rewarded their literary accomplishments. This so-called court literature served to legitimize the claims of patrons to bravery, justice, and religious integrity. Authors of this state-sponsored literature were educated in Arabic and Persian literatures and languages and in Qur'anic and literary sciences.

During the Ottoman empire, the words for literature were *si'ir* (poetry) and *insa* (prose). Poetic genres were defined according to rhyme scheme and length. *Aruz*, a version of an Arabic metric system containing long and short syllables, was so influential in written literature that it completely displaced the older syllabic metric system typical of Turkish oral poetry. Lyric and panegyric (eulogistic) poems (*gazel* and *ka-side*, respectively) were compiled in poetry collections called *divan*. Several authors chose to display their poetic prowess by composing romances in verse (*mesnevi*) on various Islamic themes, such as Joseph and Potiphar's wife. Manuscript copies of story compilations such as *Sindbadname*, *Camasbname*, and *Forty Viziers* are also preserved in library collections.

Ottoman poetry was defined by a set of formal and thematic elements that poetically expressed a mystical understanding of life. Although on the surface the poetry may appear repetitive and lacking in originality, a closer examination of Ottoman Turkish literary production reveals a self-referential literature driven by an urge toward perfection of formal qualities. Authors composed works in competitive response to their predecessors as well as their contemporaries.

Ottoman literature existed mainly in the form of manuscripts. Ibrahim Muteferrika (1670–1745) established the first printing house (1729), but by the end of the eighteenth century it had published only seventeen books (none a work of literature). Printing developed only by the second half of the nineteenth century.

European Influence on Ottoman Literature

By the end of the eighteenth century, European influence became evident. After the observations of the great traveler Evliya Chelebi (1611–1681), the first major literary account of Europe appeared between the lines of the lyric romances, *Huban-name* and *Zenan-name* (Book of Boys and Book of Women by

Fazil-i Enderuni [d. 1810]). In the nineteenth century educational reforms in the Ottoman empire allowed several Ottoman students to study in a rapidly changing Europe. The ideals of modernization appealed to the Ottoman ruling elite, who saw them as the roots of European technical superiority. Restructuring educational institutions after European models generated a need for translations of European textbooks from European languages, primarily French and German. Along with this development, the literature of the empire gradually came under the influence of Western literary forms at the expense of Eastern forms. Throughout the nineteenth century new literary forms imported from the West and imbued with ideals such as democracy and freedom lived side by side with the classical Ottoman Turkish literary tradition, often engaging in debate with it.

In 1859 the first literary translations from French appeared: an edition of French poems and their translations, *Terceme-i Manzume* (Translations of Verse by Sinasi, 1826–1871); conversational pieces from Voltaire, Fontenelle, and Fenelon, *Muhaverat-i Hikemiyye* (Philosophical Dialogues) by Munif Pasa (1830–1910); and a version of Fenelon's *Les Aventures de Telemaque* (1699), *Terceme-i Telemak*, by Yusuf Kamil Pasa (1808–1876). These three books, which are really adaptations rather than literal translations, initiated a flurry of translations. Sinasi later published the first Turkish work for the theater, a comedy titled *Sair Evlenmesi* (*Wedding of a Poet*). The first Turkish short story, by Ahmet Mithat Efendi (1844–1912), appeared in 1870; the writer later published a series of such stories in *Letaif-i Rivayat* (The Best of the Stories, 1895). Semseddin Sami (1850–1904) wrote the first Turkish novel, *Taassuk-i Talat u Fitnat* (Love of Talat and Fitnat, 1872).

With the establishment of theater companies such as the Gedikpasa Ottoman Theater (1870), founded by an Ottoman Armenian artist, Agop Efendi (1840–1902), several dramas, mostly adaptations of Molière's plays, were staged with great success. Ahmed Vefik Pasa (1823–1891) translated sixteen plays of Molière, replacing several of his characters with Greek, Armenian, and Turkish characters.

Ahmet Mithat employed traditional minstrel storytelling techniques in his didactic fictional works emulating French novels. Other early novelists, such as Rezaizade Ekrem (1847–1914), had a more ornate style. After writing and staging the most popular political play of the period, *Vatan yabut Silistre* (The Motherland, or Silistre, 1873), Namik Kemal (1840–1888) wrote the novel *Intibah* (Awakening, 1876).

Intibab is the best example of early Turkish novels that portray social and political problems in the envelope of impossible love stories. The novelists of the period criticized the Westernization fad among elite circles and advocated a combination of Eastern and Western lifestyles in which the West represented the technical aspects of progress and development while the East represented the moral.

Later, under the influence of realist and naturalist literary movements in France, a group of authors established a movement called Edebiyat-i Cedide (New Literature, 1869–1901). The most prominent member of this movement, Halit Ziya Usaklıgil (1866–1945), wrote realist novels, perfecting the form with *Ask-i Memnu* (Forbidden Love, 1900). Even though his works followed the dictum of art for art's sake, a consciousness of decline as well as a philosophy of populism informed the thematic inclinations of poets of this movement such as Tevfik Fikret (1867–1915), who also revolutionized classical prosody through his innovations in *aruz* meter.

Gaining momentum under new parliamentary governance, nationalism as an ideology overtook the debates about Islamism and Ottomanism, further problematizing the trend toward Westernization and defining the character of modern Turkish literature. After the second parliament in 1908, a nationalist literature developed in reaction to ongoing nationalist movements among non-Muslim communities of the Ottoman empire. A group of authors based in Thessalonica published the journal *Genc Kalemler* (Young Pens, 1911). A linguistic nationalism, constructed around an idea of a Turkish Islam and an original homeland in Central Asia, was launched in this journal by authors such as Omer Seyfettin (1884–1920) and Ziya Gokalp (1875–1924). This movement was preceded by the publication of a book of poetry by Mehmet Emin Yurdakul (1864–1944), which was tellingly entitled *Türkçe Siirler* (Turkish Poems, 1899) and proposed establishing a pure Turkish language. While Ziya Gokalp was the ideological leader of the nationalist Turkish literature movement, Omer Seyfettin crafted a new Turkish discourse closer to spoken language through his short stories on nationalistic themes.

Literature under the Turkish Republic

After the establishment of the Turkish Republic (1923), Yakup Kadri Karaosmanoglu (1889–1974), Halide Edip Adivar (1884–1964), and Resat Nuri Guntekin (1889–1956) continued employing similar themes in fiction. Karaosmanoglu's *Yaban* (The Outsider, 1932), Adivar's *Sinekli Bakkal* (*The Clown and His*

Daughter, 1936), and Guntekin's *Yesil Gece* (Green Night, 1928) not only display a revolutionary break in the careers of these authors, but their texts are also symptomatic of a period of reorientation in Turkish literature. With their ideological orientation, these novels establish the major themes of modern Turkish literature until the 1950s. By then the Ottoman cultural legacy had already been defined as the "Other." During the 1940s, Sait Faik (Abasiyanik) (1907–1954) developed a straightforward language in his short stories, which focus on personalities from different subcultures in Istanbul, downplaying the national ideal as a core theme. In his short stories and novels, Sabahattin Ali (1906–1949) reflected a socialist realist depiction of Turkish society, developing a counterargument to the established nationalist discourse in his work.

Writers of nationalist literature disrupted attempts to reformulate classical poetic meter, and a set of poets hailed the syllabic meter as the national poetic meter of the Turkish Republic. Following a sentimentalist path, these poets drew on the tradition of oral folk poetry to describe the beauties of the Turkish landscape and Turkish villagers. Social themes were also handled in syllabic meter by poets such as Necip Fazıl Kısakurek (1905–1983), Ahmet Hamdi Tanpınar (1901–1956), and Cahit Sitki Tarancı (1910–1956). Under the impact of Futurism (an Italian movement advocating the expression of dynamism and movement), Nazım Hikmet (Ran) (1902–1963) experimented with free verse. His socialist realist perspective on Turkish realities, as well as his experimentation with different genres that combine poetry and prose, proved to be a fountainhead for modern Turkish poetry.

Nazım Hikmet spent many years in prison as a result of his Communist philosophy, finally escaping from Turkey in 1951. Prison experiences were the fate of many thinkers, authors, and poets, mostly leftist, including the novelist Kemal Tahir (1910–1973) and the satirist Aziz Nesin (1915–1993). Such attempts by the state to suppress freedom of speech further radicalized literature.

The publication of *Garip* (The Loner, 1941), a collection of poems in free verse, defined another vein of Turkish poetry characterized by free verse, playfulness, and a populist spirit. The leader of this movement was Orhan Veli Kanık (1914–1950). Oktay Rifat (1914–1988) and Melih Cevdet Anday (b. 1915), who were also outstanding poets of this movement, subsequently focused on more esoteric themes in line with the Second New Movement. Poets of this movement, such as Ece Ayhan (b. 1931) and Edip Cansever (1928–1986), employed symbolism to express psycho-

logical states and initiated a distant relationship with Ottoman lyric poetry by drawing on its rich imagery. The stylistic and thematic characteristics of socialist realism and the Second New Movement dominated Turkish poetry.

Bizim Koy (Our Village, 1950) by Mahmut Makal (b. 1930) spurred interest in village life, portrayed in the form of a socialist realist critique of the prevalent modernist-nationalist discourse. Under the impact of the village-realism movement, several authors who had come into close contact with provincial people while in prison shifted their interest from city life—the lair of nationalist modernization—to Anatolia. In his serial novel *Ince Me* (Memed, My Hawk, 1960), the prolific author Yasar Kemal (b. 1922) created a groundbreaking Turkish narrative style that originated from oral legends.

Politically engaged authors dominated the literary scene more and more after the military coups following 1960. They searched for new techniques in realism to elucidate sociopolitical themes in their novels and poems. Attila İlhan (b. 1925) advanced a unique vocabulary of imagery in his poetry and novels, and in his serial novel *Aynanın İcindekiler* (Inside the Mirror, 1973) he wrote a history of Turkey from the second half of the nineteenth century on. Adalet Agaoglu (b. 1929) depicted the impact of social and political events of the 1960s and 1970s on individuals. Sevgi Soysal (1936–1976), like Agaoglu a woman novelist, depicted representative characters to present class conflict in cities.

This realism was countered by the monumental work of Oguz Atay (1934–1977): *Tutunamayanlar* (The Misfits, 1971) was a critique of Turkish nationalism in the form of a Joycean narrative. But the real challenge to realism appeared much later, after the 12 September 1980 military coup. As strict censorship under the military regime was abolished, new thematic trends and narrative techniques appeared. Latife Tekin (b. 1959) recounted the experience of the Turkish radical left in her novels, the first of which appeared in 1983, *Sevgili Arsiz Olum* (Dear Naughty Death). The influence of magical realism in her novels blurs didactic tendencies.

During the 1990s, while these critical perspectives continued, historical novels experienced an unprecedented revival. This trend was initiated by the publication of *Beyaz Kale* (The White Castle, 1985) and *Kara Kitap* (The Black Book, 1990), both by Orhan Pamuk (b. 1952). The new millennium has witnessed an increase in historical novels dealing mostly with the Ottoman empire, such as the latest popular novels of

Ahmet Altan (b. 1950), for example, *İsyan Günlerinde Ask* (Love in the Days of Revolt, 2001).

Diverging from the dominant tendencies of various forms of realism, Yusuf Atılgan (1921–1989) reflected the influence of existentialism in his *Aylak Adam* (Free Man, 1959), with its alternative perspective on Turkish realities. Later Bilge Karasu (1930–1995) developed his own narrative style, using a stream-of-consciousness technique. His fractured narrations reveal a concealed gay identity, while his focus on the use of language is shared, in a different form, by another author, Murathan Mungan (b. 1950). Mungan's poetry, short stories, and plays draw on legends and fairy tales of eastern Anatolia. Metin Kacan (b. 1961) also displays a sensitivity to the use of language in his *Agir Roman* (Heavy Novel 1990), specifically through the slang of communities that live on the slopes surrounding Istanbul.

Criticism in Turkish literature has developed both in academic institutions and the popular press. While academic criticism tended to neglect post-1950s literature, popular criticism focused on radical leftist literature until the 1980s. In the realm of popular criticism, the subjective approach of Nurullah Ataç (1898–1957) and the 1940s humanist criticism of Sabahattin Eyuboglu (1908–1973) come together in the highly popular works of Fethi Naci (b. 1927). Recently the English literature specialists Berna Moran (1921–1993) and Jale Parla (b. 1945) have introduced critical theoretical approaches for the evaluation of Turkish literature, and Marxist criticism continues to generate valuable analyses.

Both Ottoman and nationalist Turkish literature embraces a wide array of generic, stylistic, and thematic trends. Moreover, modern Turkish literature's dialogue with Western literary forms is enriched today by a new interest in a variety of Third World literary traditions. Turkish literature is entering a new phase. Debates on Turkish literary history, the republication of several early Republican literary works with commentaries, the compilation of various anthologies, the publication of several literary journals, an interest in pre-Republican Turkish literatures, and a considerable break with traditional Western literary influence all point to yet another period of reevaluation of a rich literary tradition.

LITERATURE—VIETNAM Vietnamese literature refers to a body of writing that has evolved over many centuries and is linked with the history, culture, and language of the Vietnamese people. Vietnamese history is marked by long periods of domination by foreign powers; Chinese rule stretched for nearly a millennium from the second century BCE to the tenth century CE. The efforts by Vietnamese kings and lords to regain territorial integrity was partly realized in the tenth century, making the unity of Vietnam an ideal for which to fight. In the modern period, Vietnam was colonized by the French, who withdrew only in the mid-twentieth century. More recently, the Vietnam War renewed the historical experience of protracted agony for the people of Vietnam. Understandably, Vietnamese poets, scholars, and writers have sought to record the impact of this troubled legacy on the national consciousness. Vietnamese literature owes its creative impulse and continued vitality to this sense of a shared destiny in the face of interruptions and invasions. Writings originating in the Vietnamese culture are realistic, communicating the human need to participate in life despite its harshness. A similar spirit is

also evident in the folk literature of Vietnam, which is a rich storehouse of tales, proverbs, songs, and legends, providing ample evidence of the imaginative resources of the Vietnamese people.

Traditional Literature

Traditional Vietnamese literature is said to have its beginnings in the ancient period (tenth–fifteenth centuries) and to last until the eighteenth and nineteenth centuries. The beginning of this literature was tied to the Chinese occupation of Vietnam, when poetry was the favored literary genre. Monks, kings, scholars, and civil servants were the first poets in Vietnam, and they wrote in a literary language called *Han*. While the script and style were distinctly Chinese, in subject matter and perspective the poems were Vietnamese. At the outset, the themes were religious and philosophical, written under the influence of Chan (Zen) Buddhism and Confucianism. Gradually, however, poetry came to reflect the secular and aesthetic aspects of human experience as well. Many of these early poems have been lost because of foreign invasions and (in some instances, such as after the Ming occupation of 1407–1427) a deliberate policy of destruction by the new rulers. The extant poems, however, express the transience of life and delineate themes of birth, aging, sickness, and death. There was also a strand in early poetry that depicted aspects of court life, as well as the simple joys of nature. With the assertion of a Vietnamese identity by rulers of the Ly (1010–1225), Tran (1225–1400), and Le (1427–1791) dynasties, the community life of Vietnam became the principal theme for poetic exploration, as illustrated in the life and achievement of Nguyen Trai (1380–1442). The form of the early poems mostly followed strict metrical patterns set by Chinese models and was restricted by notions of decorum deemed necessary for the practice of literary art. An interesting later development was writing in *nom* characters, a demotic version of Chinese *Han* ideograms used to transcribe Vietnamese words. This type of writing became popular as a new mode of expression and paved the way for a vibrant vernacular literature that broke away from the elitist, imitative literature written in Chinese. In time, classical works were translated into a growing corpus of *nom* literature that was diffused among different strata of Vietnamese society. Prose forms for easy communication were devised. Verse narratives, a typical Vietnamese form, became popular, culminating in *The Tale of Kieu* by Nguyen Du (1765–1820), a poem of 3,254 lines considered to be Vietnam's national epic poem. *The Tale of Kieu* occupies a unique place in Vietnamese literature. It is the tale of a young woman of noble

character who sacrifices everything out of loyalty to her family and for love. Her sufferings and resilience find an echo in every Vietnamese heart. In addition to long narratives in verse, short poems with eclectic forms were composed by poets from diverse backgrounds. A good example is the work of the woman poet Ho Xuan Huong (1768–1839), who in lines of power and beauty protested against traditional institutions.

Modern Literature

Modern Vietnamese literature was written in the wake of Vietnam's contact with the West. This contact increased after the French began their formal occupation of Vietnam toward the end of the nineteenth century. For administrative reasons, the French favored the use of *quoc ngu* (the romanized Vietnamese script), which was instrumental in spreading literacy and culture. The rise of newspapers and magazines gave a new direction to Vietnamese cultural life, and the practice of literature was no longer restricted to the learned. With the growth of an educated Vietnamese public, circulation of innovative forms such as serialized novels increased rapidly. The nationalist resistance to the colonial regime used the *quoc ngu* script and writings to further its goal of forging a distinctive Vietnamese identity. Prose became a versatile medium of political and aesthetic expression, and ideas from other cultures stimulated the native intellectual climate. Literature in *quoc ngu* signaled a break with tradition and gave rise to novelty and experimentation. New journals like *Dong Duong Tap Chi* (The Indochina Review) in 1913 and *Nam Phong* (South Wind) in 1917, which were instigated by the colonial administration, prefigured publications by nationalist and progressive intellectuals. Traditional poetry was challenged by the individualistic efforts of poets like Nguyen Khac Hieu (1888–1939), who popularized a movement for the reform of poetry that culminated in the New Poetry Movement of the 1930s. The novel and short story utilized the emergent prose medium. Ho Bieu Chanh (1884–1958) in the south and Hoang Ngoc Phach (1896–1973) in the north introduced readers to new prose fictional forms. Phach's only novel *To Tam* (Pure Heart; 1925) is regarded as the first Vietnamese novel.

Since 1975, an attempt to redefine literary practice has raised methodological questions concerning the terms "social" and "socialist" as they were used to describe the outlook of writers in their efforts to portray the traumatic experiences of the Vietnamese people. Influential writers of the period were Duong Thu Huong (b. 1947), Bao Ninh (b. 1952), Nguyen

Huy Thiep (b. 1950), and Pham Thi Hoai (b. 1960). Beginning with the innovative efforts of the Tu Luc Van Doan (Independent Literary Group) writers between 1930 and 1935 until the creative mediation of the diasporic writers of modern times, Vietnamese literature has come a long way in shaping its distinctive identity.

LITERATURE—WEST ASIA, PERSIAN Islamic literatures have been expressed in two languages more than others: Arabic and Persian. Persian literature flourished not just in Persia (Iran), but also in Central Asia, Turkey, Afghanistan, and South Asia. A great deal of debate surrounds the rise and nature of Persian literature in the aftermath of the Arab conquest of Persia in the seventh century. Some scholars have argued that post-Islamic Persian literature is part and parcel of the attempt of Iranians (and, subsequently, other Persian speakers) to express their own identity as non-Arabs. At least some of these early expressions are no doubt connected to protonationalist *shu'ubi* movements in the early eras of Islam. Other scholars have identified Persian literature as quintessentially mystical, epitomized in the poetry of great masters such as Rumi (c. 1207–1273) and Hafiz (d. 1389). The truth, as usual, would seem to lie in neither extreme, nor in a convenient middle point. It is true that much of classical Persian literature is characterized by a high degree of Sufi (that is, Islamic mystic) imagery. However, the origin of much Sufi imagery can be traced to regal court poetry, which was subsequently applied to lover-beloved or spiritual master-disciple relationships.

There is also some ambiguity about the origin of this new Persian literature. The thirteenth-century literary historian Muhammad 'Aufi relates that Bahram Gur, a pre-Islamic Sassanian Iranian king who flourished in the fifth century, was the first to compose Persian poetry. Earlier figures from the eleventh century (Tha'alibi and Ibn Khurdadhbih) had also claimed that Bahram Gur was the first. The accuracy of such claims may be questioned; one is on much firmer ground in tracing the blossoming of Persian literature to the Samanid dynasty (864–999 CE).

An important figure in this early stage was the poet Rudaki (d. 940). He was affiliated with the Samanid ruler Amir Nasr ibn Ahmad. The *Chahar-maqala* of Nizami Arudi (d. 1174, an important author from Samarqand) states that once when the Samanid king had taken a longer than usual excursion from the much-loved Transoxiana city of Bukhara, the courtiers pleaded with Rudaki to write a line that would move the king to return home. The result was this much-loved and oft-recited line:

The Ju-yi Muliyan we call to mind
We long for those dear friends long left behind
(Arberry 1958: 33)

Firdawsi's Book of Kings

The next grand figure of Persian literature was Firdawsi (d. 1020 or 1026), whose monumental *Shahnameh* (Book of Kings) is the quintessential recollection of pre-Islamic Persian glory. Although not a historical text per se, this text has radically shaped the way that many later Iranians have come to imagine their historical heritage. Ironically, Firdawsi did not receive the compensation he was hoping for from the Ghaznavid Sultan Mahmud. Mahmud, a Turk who had positioned himself as the defender of Sunni Islam, was not impressed by the extensive glorification of pre-Islamic (largely Zoroastrian) Persian kings. A devastated Firdawsi responded with a scathing critique of the miserly sultan. Still, history seems to have verified Firdawsi's boast that through his thirty years of toiling over the composition of the *Shahnameh*, he resurrected Persian language and literature.

After Firdawsi, Persian literatures gradually became infused with the imagery of Sufism, the mystical expression of Islam. Almost from the start, the mystics sought to express the ineffability of their spiritual experiences through the terse and often-ambiguous medium of poetry. As early texts such as the *Asrar al-tawhid*—written by Ibn Munawwar in the twelfth century about the great early Sufi Abu Sa'id ibn Abi

'l-Khayr (d. 1049)—clearly demonstrate, poetry was often recited in Sufi gatherings. There were many significant Sufi-influenced Persian writings in this period. As with Firdawsi, medieval masters find a receptive audience even in contemporary Iran. One of the identifying features of Persian literature has been its continuity, to the point that even elementary school education in Iran today includes reading poetry from a thousand years ago.

Among other great figures such as Anvari, Nizam al-Mulk, Nasir Khusrau, Sana'i, al-Ghazali, Ibn Sina, 'Attar, Nizami of Ganja, and Amir Khusrau, the next monumental figure is Sa'di (c. 1213–1292). If Firdawsi has become the identifying mark of a nationalist Iranian consciousness, Sa'di more than any other figure has contributed to the articulation of a distinctly Persian, Islamic, spiritually influenced humanistic ethic that can perhaps best be represented by the term *adab* (cultured etiquette). Sa'di's *Gulistan* (Rose Garden) and *Bustan* (Orchard) are two classics of Persian literature. The *Gulistan* in many ways has become the model of prose works that are interspersed with lines of poetry here and there. The chapters of this important text deal with kingship, Sufi teachings, virtues of silence, old age and youth, and passionate love.

Rumi the Master

Living roughly a generation after Sa'di was the most luminous of all Persian Sufi poets, Mawlana (Our Master) Jalal al-Din Muhammad Balkhi, simply called Rumi in most English sources. Had he not composed a single line of poetry, he would still be recognized as one of the most important figures of Persian culture due to his elevated rank as a much-loved Sufi exemplar whose legacy has forever shaped the spiritual lives of Muslims in Iran, Turkey, Afghanistan, and South Asia. What is more relevant here is that he also composed masterful works of poetry: the *Masnavi* is perhaps the most widely read of all Persian didactic Sufi poems. His *Divan of Shams of Tabriz* contains 33,135 lines of passionate love poetry. The *Fihri ma fihri* is a prose collection of Rumi's table talks, gathered by his students. Rumi's literary output is now being transmitted to the West: in the past twenty years various translations and "versions" of Rumi's poetry have made Rumi the top-selling poet in America, according to the *Christian Science Monitor*.

Although Rumi is undoubtedly the master of explicitly Sufi poetry, the absolute pinnacle of lyric love poetry (*ghazal*) was to be achieved by Shams al-Din Hafiz, often called *Tarjuman al-asrar* (interpreter of mystical secrets) and *Lisan al-ghayb* (tongue of the un-

seen realm). Hafiz's *Divan* contains almost five hundred short love poems, often held to be the absolute finest example of Persian poetry. His poems are characterized often by a delicious ambiguity: one is never sure if the subject of the poem is a wine minstrel, a spiritual teacher, an earthly beloved, or God. Chances are that all of them are intended at the same time. Both Hafiz and his legion of admirers seem to revel in this deliberate ambiguity, which has characterized so many of the best examples of Persian literature.

No doubt some will object to such a selective reading of Persian literature that essentially stops in the fourteenth century. Much has been left out in the preceding, most of all prose works of ethics and philosophy, history, and other subjects. Also, a reading of Persian literature that ends at the fourteenth century tends to perpetuate historiographic models of a "golden age" inevitably followed by "decline," which have been so problematic in depicting many facets of Islamic society. These shortcomings are freely acknowledged. But it is no exaggeration to state that this literature, the grandest aesthetic achievement of Persian speakers, is also the single greatest contribution of Persian societies to humanity.

LIU SHAOQI (1898–1969), People's Republic of China president. Liu Shaoqi was a tragic political figure, symbolizing the political struggle occurring in China over the first fifty years of the People's Republic of China (PRC). Liu joined the Chinese Communist Party (CCP) in 1921 when he was studying in Moscow. After he returned to China, he became one of the CCP leaders working underground among workers. Along with Li Lisan (1899–1967), Liu organized a strike by 400,000 workers in 1922. In 1934, Liu participated in the Long March and played an important support role for Mao Zedong (1893–1976) during the Yan'an period.

After the PRC was founded in 1949, Liu was named chairman of the National People's Congress (NPC) in 1954. In 1956, he made a bold proposal to reform the Chinese economy, a move that eventually cost him his life. Along with Deng Xiaoping (1904–1997), Liu insisted that China's socialism should concentrate on increasing the productivity and development of the national economy. In 1959, Liu was promoted to the posts of president of China and chairman of the Defense Committee. He was also in charge of the daily work of the PRC and CCP before the Cultural Revolution. However, Liu began to struggle with Mao in 1960 regarding the national economic policy.

At the beginning of the Cultural Revolution in 1967, Liu was labeled as "taking the capitalist road" and arrested. Liu was physically abused by the Red Guards (students who adulated Mao during the Cultural Revolution), kicked out of the CCP, and died in Henan Province in 1968. In February 1980, the CCP rehabilitated his name, but only after fourteen years of humiliation.

LOCKHEED SCANDAL One of postwar Japan's worst political scandals broke in 1976 when it was discovered that Lockheed Aircraft had made illegal payments to airlines in Japan and other countries as a way to boost airplane sales and avoid bankruptcy. In Japan's case the scandal led to the prosecution of seventeen people for illegal activities. The money was funneled through three channels, the Marubeni Corporation (Japan's third-largest general trading company), All-Nippon Airways (ANA—Japan's major domestic airline), and Kodama. Those indicted in 1976 included Kakuei Tanaka (1918–1993), a former Liberal Democratic Party (LDP) prime minister (in office 1972–1974) and a central figure in this affair; a former secretary of Tanaka's; a former chairman of Marubeni and two of its executives.

Tanaka had influenced the Ministry of Transportation and ANA to buy Lockheed L-1001 Tri-Stars

instead of McDonnell-Douglas DC-10s, on which ANA had already taken an option. Around 1974, Tanaka was arrested for having accepted 500 million yen in bribes in violation of the Foreign Exchange Control Law. Following earlier corruption charges that involved real estate and construction companies, he resigned as prime minister in November 1974. In 1976, investigations in the Lockheed scandal revealed that through a right-wing fixer, Yoshio Kodama (1911–1984), business people and LDP leaders had received bribes.

Tanaka was convicted on 12 August 1983 by the Tokyo District Court. He was sentenced to four years in jail and fined 500 million yen, the amount of the bribe he had received. When the Tokyo High Court dismissed his appeals, he appealed to the Supreme Court, which eventually dropped his case when he died in 1993.

Miki Takeo (1907–1988) became prime minister from 1974 to 1976 and pursued the investigation into Lockheed corporate bribery, but political turmoil caused his government to fall.

The Lockheed case, the most serious scandal until the Recruit affair in 1988, revealed a side of Japanese politics and its lack of transparency that underlined the need for political reform. Japanese critics have referred to this close connection of elites formed of politicians, businessmen, and bureaucrats as "structural corruption."

LON NOL (1913–1985), leader of the Khmer Republic. Lon Nol is remembered as the leader of the Khmer Republic (1970–1975), which preceded the rule of the Khmer Rouge in Cambodia. He was born on 13 November 1913 in the village of Prey Chraing in Prey Veng Province, close to the Vietnamese border. Lon Nol was the son of a minor government of-

Lon Nol at Cham Car Mon palace in Phnom Penh in 1975. (FRANCOISE DE MULDER/CORBIS)

ficial, Lon Hin. After completing primary school in Cambodia, he was sent to Saigon, where he attended the Lycée Chasseloup-Laubat. He left school in 1934 and joined the Judicial Service, eventually becoming a magistrate in Siem Reap Province in northwestern Cambodia. He later transferred to the Administrative Service, taking up a post in Kompong Cham Province. Lon Nol's efficiency quickly came to the attention of his superiors, and he rapidly rose through the ranks of what was a French colonial administration.

In September 1947, Lon Nol, then the governor of Kratie Province, helped to found the Khmer Renewal Party. The party failed to win any seats in the elections of 1947, with Lon Nol placed last in polling for the seat he contested in Kompong Cham. The setback did not halt his rise through Cambodian government circles. He became police chief, transferred to the Royal Cambodian armed forces, and eventually became chief of the General Staff. He became minister of defense in October 1955.

Lon Nol's political rise accelerated sharply after the 1966 elections. A largely conservative national assembly appointed him as Cambodia's prime minister. He was remembered for his calm and quiet attitude and for the comprehensive dossiers he held on all of his friends, foes, rivals, and potential rivals. He was also remembered as a fervent Buddhist and as a devoted ally of Cambodia's national leader, Prince Norodom Sihanouk.

Along with Sihanouk's cousin, Prince Sisowath Sirikmatak, Lon Nol surprisingly led a coup against Sihanouk in March 1970, which would eventually lead to the rise of the Khmer Rouge. Lon Nol eventually became the leader of the Khmer Republic that succeeded Sihanouk's initial reign. His regime, supported by the United States, was embroiled in a bloody civil war against the local Communists, who had aligned themselves with the deposed Sihanouk and who were supported by North Vietnam and China. Lon Nol's regime was riddled with corruption. Lon Nol preferred to ignore the problem, ensconcing himself in a world of clairvoyants and mystics. In 1975, with his regime on the verge of collapse, he fled Cambodia. On 17 April 1975, as Communist soldiers marched victoriously into Cambodia's capital, Phnom Penh, Lon Nol was making a new home for himself in Hawaii. He would remain there until his death in 1985.

LONG MARCH The Chinese Communists' six-thousand-mile journey of retreat (1934–1935) across such provinces as Hunan, Guangxi, Guizhou, Yunnan, Sichuan, and Shaanxi has been glorified by the leaders of the Communist Party of China (CCP) as the "Long March." As a result of the retreat, the Communist revolutionary base was relocated from southeast to northwest China, an area beyond the control of the Nationalist troops under Chiang Kai-shek (1887–1975), leader of the Guomindang (Nationalist Party). Historians have considered the march a milestone in the history of modern China—the point at which the Chinese Communist movement started to forge its own path, independent of Comintern control, and the time that Mao Zedong (1893–1976) became the undisputed leader of the CCP. (Comintern, an association of national Communist parties founded

A speaker addresses a crowd of Chinese Communists in March 1938 after they had completed the Long March. (HULTON-DEUTSCH COLLECTION/CORBIS)

in 1919 for the stated purpose of promoting world revolution, actually worked like an agent of the Soviet Union to control the international Communist movement, including the CCP.)

The Formation of the Soviet in Jiangxi Province

The CCP was founded in the early 1920s. In 1924, the Guomindang agreed to form a "united front" (alliance) with the CCP in return for Soviet aid. But in 1927, after the Guomindang experienced some success in its expedition against warlords in the north, a bloody purge was carried out against all Communists in areas under the Guomindang's control. Communist movements in China were forced to go underground. In the early 1930s, there were up to fifteen Communist rural bases in south central China, but their links with the central committee of the CCP in Shanghai were shattered because of the purge. The CCP, whose leadership was dominated by a group of Moscow-trained Chinese students known as the Twenty-Eight Bolsheviks, came to rely all the more on Russia's support. In 1931, the central committee relocated from Shanghai to the Jiangxi Province (northern China) and the Chinese Communists declared the local government a soviet. Mao's influence in the Jiangxi Soviet was overshadowed by that of the Moscow-trained Chinese leaders, many of whom were adherents of the Soviet orthodoxy of revolution by urban workers. (Mao, by contrast, held that the revolution could be achieved by relying on the peasants who made up the bulk of China's population.) By redistributing and expropriating land in these soviet regions, Communist leaders enlisted support from the Chinese lower class and increased the popularity of the CCP in these regions.

Between 1930 and 1934, the Nationalists had launched a series of military encirclement campaigns against the Communists in an attempt to annihilate their bases. Using the tactics of guerrilla warfare developed by Mao Zedong, the Communists managed to fight off four campaigns, but in early 1934 the Communist central committee removed Mao from CCP leadership.

In October 1933, the Nationalists launched a fifth campaign against the Communists. With advice from German experts, Chiang Kai-shek mobilized about 700,000 men to build a series of cement blockhouses around the Communist troops. Slowly encircling the soviet areas in Jiangxi, the Nationalists enforced an economic stranglehold. About a million people died as a result of the economic blockade and the subsequent military conflicts. The Communists, using positional warfare tactics (the strategy of simple defense from

one's military bases, abandoning the former tactics of guerrilla warfare) against the better-armed Nationalist forces, suffered severe losses and were nearly crushed. By mid-1934, the Red Army was defeated. It had to move or be crushed.

The Communist Retreat, or Long March

On 15 October 1934, 86,000 Communist military personnel, as well as 30,000 Communist Party officials and civilian party members, broke through the blockade and fled westward. Along the route of retreat, core concerns were where the troops should go and who should lead the march, as the direction and leadership of the march were unclear. In the first three months of this journey of retreat, mainly under the leadership of Zhu De (1886–1976) and Zhou Enlai (1898–1976), the Communists were subjected to frequent bombardments and attacks by the Nationalist forces and suffered great losses. But on the way northwest, Mao's tactics of guerrilla warfare were gradually adopted. The demoralized Communists reached Zunyi, Guizhou Province, in early 1935, where Mao managed to gather enough support to establish his dominance in the CCP leadership. In a session lacking a quorum of the CCP Politburo (Political Bureau), Mao defeated the Soviet-trained faction and became the actual leader of the Communist Party. The era of Comintern direction of party leadership was ended.

Under Mao's leadership, the Communists proceeded toward Shaanxi. This Jiangxi contingent was later joined by the Second Front Army headed by He Long from its base in Hunan. In June 1935, the Fourth Front Army under Zhang Guodao (1897–1979), from the base in the Sichuan-Shaanxi border, also joined Mao's troop. After a bitter power struggle between Mao and Zhang, Zhang's group decided to move toward southwestern China, while Mao's troops headed toward northern Shaanxi, northwest China, where Gao Gang (1902–1955) had established another Communist base. Most of the route was mountainous, with few motor roads and little access to resources. To maintain marching speed, the Communists had to discard their heavy equipment, including medical and food supplies, along the route.

The march lasted for about a year. The Chinese Communists crossed eighteen mountain ranges and twenty-four rivers, averaging about seventeen miles a day. After a journey of about six thousand miles over mountains and dales, rivers and forests, the troops arrived at Shaanxi in October 1935, with only about eight thousand survivors. Although the Long March had set out from Jiangxi with about 100,000 followers

and had gathered many new recruits along the retreat, by the time it had reached Zunyi in January 1935, half had been lost. When these survivors finally reached Shaanxi in October 1935, only the leaders and a very small number of the troops remained, a small proportion of those who had set out from Jiangxi. Along the route of retreat, some had left to mobilize the peasantry, some had died on the way, and others had simply abandoned the endeavor.

In the middle of 1936, the remnants of several Red armies gathered in northern Shaanxi, with Yanan as their headquarters. By December 1936, the Red Army numbered about thirty thousand men. The mountains and difficult terrain made the new base secure and enabled the Red Army to reorganize its strategy against the Nationalists.

The Significance of the Long March

During the Long March, Mao Zedong secured his leadership role in the CCP. Before that, the core of the leadership had been the Twenty-Eight Bolsheviks, Soviet-trained leaders who believed that revolutions in China should be urban based and who had strong connections with the Comintern. These men regarded Mao's belief in guerrilla warfare and rural-based revolution as unorthodox. Under the military threat of the Nationalists, the Chinese Communists ignored the Soviet advisers and forged their own tactics. It was during this period that Mao started to develop his own version of Communist theory in writings and established himself as a theorist.

The rise of Mao as the CCP's new leader during the Long March brought dramatic changes in party-mobilization policy. Mao's views overrode the Soviet orthodoxy of a narrowly defined proletarian revolution and became the party's new key to establishing itself in the countryside. The Communists had gained local peasant support along the route of the March. From then on, the CCP made it a doctrine that imported Marxism was less important in China than China's own unique historical circumstances and economic situation. Mao believed that China's revolution should be guided and supported by the huge rural-based population, not the small number of working-class people in the cities.

The Long March allowed a new batch of CCP leaders to emerge on China's national political scene. Most of the later prominent leaders of the CCP, including Deng Xiaoping (1904–1997), Zhou Enlai, Liu Shaoqi (1898–1969), Zhu De, and Lin Biao (1906–1971), participated in the march. After 1949, these Long March veterans became top-ranking political leaders of the People's Republic of China.

The establishment of the CCP's new territorial base in northern Shaanxi had significant implications for the second Sino-Japanese War (1937–1945), as well as for Nationalist-CCP relations. After arriving in Shaanxi province in late 1935, Mao and the CCP leaders found that they were surrounded by desert on the west and the Huang (Yellow) River on the east. Although the geographical environment and the absence of motor roads in northwest China made Shaanxi a defensible area, the lack of food and other resources also meant that the new base was vulnerable to Nationalists' attacks. But when the second Sino-Japanese War broke out, the northwest became an important base from which a war of resistance was organized. The Long March inspired increased Chinese nationalism that bolstered morale in the face of advancing Japanese troops, and it helped to transform and consolidate the CCP's position inside and outside China.

LONGBOAT RACING Longboat racing is a national sport in both Thailand and Laos. Longboat races normally are held in late September through November when rivers are high. They serve as a traditional rite to mark the end of Buddhist Lent (which occurs during the rainy season). Popular Thai longboat races are held in October in Chiang Khan, Nong Khai, and Sakon Nakhon, areas along the Mekong River or its tributaries. Key longboat races also are held in Luang Prabang and Vientiane in Laos. The history of this popular sport goes back six hundred years to the Ayutthaya kingdom. Participation was considered excellent training for warriors. It was also a sign of masculinity.

The boats are made from dugout tree trunks and are quite long, accommodating up to sixty rowers seated two across. The boats are often elegantly carved, with prominent, elevated heads that are often

in the form of a *naga* (serpent). The *naga* is considered king of the river and a source of fertility. The races are thought to please the river gods and goddesses.

The races are held in any area with rivers, drawing many spectators. Prizes and trophies are given for the top-finishing boats, for the most beautiful boats, and on special occasions for beauty queens associated with the boats.

LONGMEN GROTTOES Carved into limestone cliffs near Luoyang, Henan Province, China, the Longmen (Dragon Gate) Grottoes are one of China's three most important Buddhist statuary sites. More than 1,350 caves, together with more than 2,100 grottoes and niches, numerous pagodas, and thousands of inscriptions, make Longmen an important repository of Buddhist imagery and texts dating from the fifth to the twelfth century.

A colossal seventeen-meter-high image of the Buddha Vairocana (Cosmic Buddha, source of all the phenomenal universe) was carved into the cliffside in the seventh century (Tang dynasty, 618–907 CE), largely funded by the imperial family, notably Empress Wu Zetian (625–705). Two disciples, Ananda and Kasyapa, along with guardian kings on adjoining walls, flank the seated Buddha. The open niche measures over thirty meters by thirty-six meters. Other important sites

within Longmen include the Cave of Ten Thousand Buddhas (carved 680), which actually contains more than fifteen thousand small Buddha figures; the Lotus Flower Cave (527), housing the smallest Buddha images; the Medicine Prescription Cave (575), with more than 120 prescriptions for ills ranging from headaches to madness; and the Bingyang Cave (500–523), which the Emperor Xuan Wu (reigned 499–515) dedicated to his parents, recording that it took 802,336 men to complete the work. In the year 2000, UNESCO designated Longmen a World Heritage Site.

LOUANGNAMTHA (2000 est. pop. 145,000). Located in the northwest corner of Laos, Louangnamtha is one of the country's sixteen provinces. Covering an area of 3,500 square miles (9,300 square kilometers), Louangnamtha is relatively small and sparsely populated. The only city in the province, Nam Tha, has just 20,000 residents but serves as the region's political and commercial center. Nearly 200 miles (320 kilometers) north of the Laotian capital, Vientiane, Louangnamtha is remote—much closer to the borders of China and Myanmar (Burma) than to the major cities of Laos. As is the case with the rest of Laos, the region's economy is primarily dependent on agriculture. However, with increasing international investment and aid coming into the country, economic diversification in Louangnamtha will likely occur.

Mountainous and forested, Louangnamtha is mostly pristine, although plans for a new "economic highway" through the region will likely change that soon. Timber operations, most owned by international companies, also pose a potential conflict between economic development and attempts to sustain natural resources.

Recently, Laos's communist government has relaxed many controls and opened up the country to tourism. Louangnamtha's rugged terrain is perfect for trekking. The region also has one of the country's few protected wildernesses, the massive Nam Ha Conservation Area. Louangnamtha offers great cultural diversity too. The so-called hill tribes, such as the Hmong, Lahu, and Akha, make up a large proportion of the region's population.

Arne Kislenko

LONGMEN GROTTOES— WORLD HERITAGE SITE

Designated a UNESCO World Heritage Site in 2000, the Longmen Grottoes in the Henan province of China illustrate the heights that stone-carved art reached in the Northern Wei and Tang dynasties. The Buddhist art is carved into the walls of these incredible caves.

LU, MOUNT Mount Lu (Cottage Mountain), is situated in China's northern Jiangxi Province and covers an area of over 300 square kilometers. Its highest peak, Hanyangfeng, is 449 meters above sea level. To its north is the Chang (Yangtze) River and to the southeast is Lake Poyang. Over three thousand species of plants can be found on its slopes, and the mountain encompasses approximately ninety peaks.

Famed scenic areas include the Peak of the Five Old Men; the Three Step Falls, which cascades over 150 meters; Great Tianchi Lake; the Flower Path; and the Cave of the Immortals, where the mythic Lu Dongbing achieved immortality. Mount Lu also houses the White Deer Cave Academy, one of China's oldest academies, and the East Forest Monastery (fourth and fifth century) where Pure Land Buddhism is said to have originated. The Incense Burner Peak inspired the Tang dynasty (618–907 CE) poet Li Bai (701–762). Guling town houses villas dating from the early twentieth century, when Mount Lu became a popular retreat for wealthy Chinese and Europeans. For hundreds of years, Mount Lu's beauty has inspired poets and painters. In 1996, it was declared a UNESCO World Heritage Site.

LU XUN (1881–1936), Chinese writer. Lu Xun was the pen name of Zhou Shuren, a Chinese fiction

writer, essayist, poet, translator, scholar, and patron of the arts who is widely considered to be the most influential man of letters in twentieth-century China. Born in Shaoxing, Zhejiang Province, Lu Xun went to Japan in 1902 to study medicine. As his autobiographical essays claim, he left medical school in 1905 to devote himself to a spiritual healing of the nation through literature. Returning to China in 1909, Lu Xun took up work at the Ministry of Education and also taught at schools in Shaoxing, Hangzhou, and Beijing. In 1918, he published *Kuangren riji* (Diary of a Madman), celebrated as the first piece in modern Chinese vernacular.

Lu Xun's collections of fiction, *Nahan* (Outcry, also known as Call to Arms, 1923) and *Panghuang* (Wondering, 1926), include short stories such as *A Q zhengzhuan* (The True Story of Ah Q) and *Zhufu* (New Year's Sacrifice), which portray with humor and sarcasm the delusions of villagers during the upheavals of the early twentieth century. As the stories offer a poignant criticism of contemporary social mores, they have come to represent of the ideals of the May Fourth Movement, an influential trend during the 1910s and 1920s that saw a new social order. In parallel, Lu Xun experimented with other forms of writing, starting with the prose-poems in *Yecao* (Wild Grass, 1927). After 1927, he wrote mostly essays, contributing to the burgeoning of the genre in twentieth-century Chinese literature. Altogether he published sixteen volumes of essays on subjects varying from sketches of everyday life to pointed political commentary. Lu Xun also influenced the literary scene through his journal editing and prolific translations, mostly of Russian and Japanese writers.

After moving to Shanghai in 1927, he used his status to support writers and other artists. Believing in the power of visual art to carry social messages, he advanced the woodblock print movement and collaborated with his brother Zhou Zuoren in publishing art prints. Despite his concern with social issues, he remained politically unaffiliated, engaging in debates with the poet Guo Moruo to the left and the essayist Lin Yutang to the right. In 1931, however, he joined the League of Leftist Writers, a fact used a decade later by Mao Zedong (1893–1976) to posthumously declare Lu Xun as the paragon of Communist writers.

LUANG PRABANG (2001 pop. 15,000). Surrounded by mountains on and around a peninsula between the Mekong and Nam Khan rivers, Luang Prabang is one of the most beautiful, historic, and least explored ancient capitals of Asia. Today the third or fourth biggest city in Laos, Luang Prabang was originally the center of Lane Xang ("land of a million elephants"), an empire that stretched across much of present-day Laos, northeastern Thailand, and southern China approximately 700 years ago. The name itself is taken from the Phra Bang, a golden image of the Buddha, which remains a revered object of the Lao people. Although the whereabouts of the authentic Phra Bang are a mystery, and little remains of the original city, Luang Prabang continues as a center of Lao history and culture. Renowned for its magnificent temples and the former Royal Palace, the city also boasts a unique mix of Lao and French architecture, a legacy from the country's colonial past. So rich is Luang Prabang's history that the city was designated a UNESCO World Heritage site in 1995, with 33 temples and 111 buildings protected or scheduled for restoration. Luang Prabang retains a magical, unspoiled quality. Quiet and small, with only about 15,000 residents, the city is widely regarded as the best-preserved historic town in Southeast Asia. Luang Prabang also stands as evidence of a glorious era in Laos's troubled history.

LUANG PRABANG—WORLD HERITAGE SITE

The town of Luang Prabang is noted for the attention given to the preservation of its many temples and other historic buildings. It was designated a UNESCO World Heritage Site in 1995.

LUCKNOW (2001 pop. 2.2 million). The capital of Uttar Pradesh, India's most populous state, Lucknow is a major commercial and cultural center 270 miles southeast of Delhi. In 1590 the Mughal emperor Akbar named it the seat of the governor of Awadh. Muslims constituted its ruling families. Modern Lucknow, known as the city of nabobs, was largely created by Oudh princes, descendants of the Persian adventurer Saadat Khan, who governed the province as a gift of the Mughal court beginning in 1732. The Mughal emperor Asaf-ud-Dawlah moved the court from Faizabad to Lucknow in 1775 and turned it into a center of Urdu poetry, courtly diction, music, and dance. The early nineteenth century saw the continued building of palaces and mosques and the cult of the sophisticated courtesan. The British annexed the area in 1856.

Today music festivals and dance made famous by the Oudh court continue in Lucknow. The city produces silver and *bidri* (ornamental metal) work and

HOUSING THE COLONEL IN LUCKNOW (OR LAKNAU)

"Colonel Martin's other residence . . . is a palace on a very extensive scale, but in which the singularity of the Colonel's taste is chiefly discernible. . . . Under the principal apartment are subterraneous rooms, intended for the hot season. This plan of living underground during the hot months being quite experimental, it would perhaps have been more reasonable to make the trial on a less expensive scale. The heat and smoke and smell, arising from the number of lamps necessary to light the dark chambers and passages, seemed alone sufficient to render the success of the scheme more than doubtful. In the middle of the largest of these dark rooms the Colonel had already raised his tomb, and the number of lights to be burned there, night and day, *for ever*, and the sum to be allotted for this purpose, were already mentioned."

trades in copper, brass, and cotton. It is an important rail junction with an impressive station reflecting Mughal and European influences. Also noteworthy is the Great Imambara, the tomb of the nabob Asaf-ud-Dawlah. Most residents are Hindus, but Lucknow is the principal Shi'ite Muslim center in India and still home to many Sunni Muslims.

LUDRUK *Ludruk* is a secular East Javanese folk-theater genre, performed by amateur and professional troupes for mass audiences. Its contemporary form began emerging in the 1930s, although evidence suggests that its roots go back several hundred years. *Ludruk* has become increasingly popular since World War II, heavily influencing many television productions.

Starting with a comic prologue, *Ludruk* consists mainly of spoken dialogue; songs and dances are performed at the opening of the performance and between the acts. *Ludruk* is usually accompanied by a gamelan—a traditional Indonesian percussion orchestra. The melodramatic stories often highlight social problems and social injustice, seen from the perspective of the masses. Clowns figure prominently; they mock the airs of social superiors and criticize their wrong behavior. Often the plot revolves around love and typically can involve the marriage of a lower-class beauty to the son of a rich man or the desperation of a youth of humble background who wins the heart of an upper-class beauty forbidden to marry him. Except for these female roles, all other women are characteristically played by men.

LUNA Y NOVICIO, JUAN (1857–1899), Filipino painter and revolutionary. Juan Luna y Novicio was the older brother of Antonio Luna (1866–1899), a general of the Filipino forces during the Philippine-

American War. Juan learned the rudiments of painting under Don Agustin Saez. He became a sailor, and his sea travels inspired him to continue pursuing painting. He enrolled at the Academy of Fine Arts in Manila under the tutelage of Don Lorenzo Guerrero and further trained in Spain under Don Alejandro Vera.

In 1884, his masterpiece, *Spolarium*, won first prize at the National Exposition of Fine Arts in Madrid. His friend Dr. Jose Rizal, national hero of the Philippines after his execution in 1896, praised his success as a triumph of Filipino talent in the face of Spanish prejudice toward Filipinos. Juan created other notable paintings in the academic style such as *Daphne and Cleo*, *Death of Cleopatra*, *Las Damas Romanas* (The Roman Women), *Españas y Filipinas* (Spain and the Philippines), *Peuple et Roi* (Purple and Red), *Vanidad* (Vanity), *Inocencia* (Innocence), and *El Pacto de Sangre* (The Blood Compact).

In 1885, he moved to Paris and in the following year married a woman belonging to the prominent Pardo de Tavera family. In 1892, he was arrested for murdering his wife because of her infidelity but was eventually released on the grounds of insanity, as the judge in the case felt that because Luna was such a talented artist, it was a shame to send him to prison. In 1894, he returned to the Philippines, and two years later, he and his brother Antonio were arrested for allegedly conspiring to overthrow the colonial government. They were pardoned in 1897, and days after their release, they left for Europe.

During the Philippine-American War (1899–1901), Juan served as a diplomatic agent for Emilio Aguinaldo, the president of the fledgling Philippine Republic. While stopping at Hong Kong on his way home, he died from a heart attack and was buried there. Afterward his remains were brought to the Philippines and interred at San Agustin Church.

LUZON GROUP (2002 pop. of Central Luzon 85.2 million). The largest island group in the Philippine archipelago, the Luzon group includes the main island of Luzon and the island provinces of Palawan, Marinduque, Oriental and Occidental Mindoro, Batanes, Cananduanes, Masbate, and Romblon. Together, these cover more than 109,000 square kilometers.

The Luzon group is divided into five regions based on geographic location and ethnolinguistic groupings of the population. Region 1, Ilocos Region, consists of Ilocos Norte, Ilocos Sur, La Union, and Pangasinan.

Region 2, Cagayan Valley, consists of Cagayan, Isabela, Nueva Vizcaya, Quirino, and Batanes. In 1981, several provinces formerly in Regions 1 and 2 (Abra, Apayao, Benguet, Ifugao, Kalinga, and Mountain province) were reconstituted into the Cordillera Autonomous Region, home to indigenous ethnic groups and cultural minorities with common historical and cultural heritages.

Region 3, Central Luzon, includes Nueva Ecija, Tarlac, Pampanga, Zambales, Bataan, and Bulacan. Angeles City and Olongapo City, in the provinces of Pampanga and Zambales, respectively, are independent of, although located in, those provinces.

Region 4, Southern Tagalog, consists of Rizal, Laguna, Cavite, Batangas, Palawan, Oriental Mindoro, Occidental Mindoro, Marinduque, Aurora, Quezon, and Romblon.

Region 5, Bicol Region, includes Camarines Norte, Camarines Sur, Albay, Sorsogon, Catanduanes, and Masbate. The national capital, Manila, is located in this region, in an enclave called the National Capital Region, which itself has twelve cities and five municipalities.

Luzon has a myriad of topographical features ranging from mountain ranges to volcanoes. At 2,928 meters, Mount Pulog is the highest mountain in Luzon. Several lakes and rivers, such as Laguna Lake, the largest lake in the Philippines, as well as a few active volcanoes, notably Mount Mayon in Albay and Mount Pinatubo in Zambales, are also in Luzon. Pinatubo's eruptions in 1991 and 1992 were so powerful that volcanic material rising into the upper atmosphere was carried around the world. Aside from the vast mineral and natural resources of the Luzon group, central Luzon is also the rice bowl of the Philippines, where most of the country's rice is produced.

Luzon is populated by people of different cultural and linguistic backgrounds. Tagalog, a member of the Austronesian family, is the most widely spoken language, though each region has its own local language.

Despite the diverse population, Catholicism is the predominant religion, with a few Protestant denominations and other local religions. The Luzon group is home to one of the simplest-living ethnic groups in the Philippines, the Negritos, occupying the hinterlands, while the most modern metropolis in the country, Metro Manila, is also in Luzon.

The capital city of the Philippines, Manila was a bustling community engaged in trade prior to the arrival of the Spanish. After the Spanish established themselves in Manila in 1572, the city became a launching point for further expeditions into the rest of Luzon to spread Catholicism and Western civilization. It was also in Luzon that the revolution for Philippine independence started and where Philippine independence was proclaimed in 1898.

MACAO (2002 est. pop. 465,000). A Portuguese colonial outpost in southern China for more than four centuries (1557–1999), the territory of Macao (Macau), or as it is known in Chinese, Aomen, consists of a narrow peninsula in southern Guangdong Province and the islands of Tiapa and Coloane. In 1996 the population of Macao was 415,850. Coupled with the territory's minute size (23.5 square kilometers, or 9 square miles), this makes it one of the most densely populated places in the world.

The Portuguese name "Macao" was possibly derived from either the Ma Kwok (Cantonese) temple that has stood in the city since the fourteenth century or the Cantonese term "Ama-ngao" ("Bay of the Goddess A Ma," the patron of sailors and fishermen). The Portuguese first settled Macao in 1557 and named the site *Provação do Nome de Deos na China*, or "Settlement in the name of God in China." It is not known why the Chinese authorities allowed the Portuguese to establish a settlement. Possible explanations are that the territory was both small and not of any value and that the presence of the foreigners would facilitate trade, or that the Portuguese were being rewarded for their perceived assistance in driving off local pirates. Regardless of the reason, the territory became an important base of operations for Portuguese merchants in East Asia from the sixteenth to nineteenth centuries. Reporting to authorities in Goa, India, the Portuguese governor in Macao oversaw a vibrant trade with the Ming and later Qing empires, and his city was an important headquarters for the Jesuit missionary movement in East Asia.

Other European powers, particularly the Dutch, were envious of Portugal's position in Macao, and on

several occasions the colony had to defend itself from attacks launched by the Dutch East India Company. The Macao colony did provide shelter for the families of Dutch and English merchants who were involved in the China trade at Guangzhou (Canton), 100 kilometers to the north; regulations there forbade merchants from permanently residing in the city and family members from accompanying them on trading missions. With the expulsion of all foreigners (except for a small number of Dutch traders) from Japan in 1635, Macao became the center of Sino-European trade until the end of the eighteenth century.

After the Opium War of 1840 and the opening of four new ports to foreign trade, Macao's importance as a point of commerce on the China coast declined. The Portuguese, however, remained in Macao, although much of the trade with the Qing empire shifted to Hong Kong and Shanghai. In 1845 the governor of Macao, João Ferreira do Amaral, ended the established practice of paying the Chinese an annual rent of 500 silver taels and evicted Chinese customs officials from the colony. In 1887 Portugal and China signed a treaty that formally recognized Portuguese sovereignty over Macao. Although now a foreign-controlled possession on the China coast, Macao's economy and importance continued to decline with Hong Kong's growing importance. During the Pacific War, Macao enjoyed a brief revival as a safe haven due to Portuguese neutrality in the worldwide conflict.

In 1987 the governments of Portugal and the People's Republic of China concluded negotiations for the return of Macao to Chinese rule. The reversion of Macao to the "motherland" on 20 December 1999 was an important event for the Chinese leadership in

Beijing and for many Chinese. The return of the last of the foreign-controlled territories to Chinese authority—like the earlier handover of Hong Kong in 1997—ended almost two centuries of unequal treaties that were a source of humiliation for many Chinese and signified that a new and strong China had at last come of age as an equal player on the world stage. The Beijing government hopes that successes in the Hong Kong and Macao Special Administrative Regions under the "one country, two systems" banner will eventually pave the way for the reunification of Taiwan and the People's Republic of China.

Apart from trade, some light manufacturing, and the local fishing industry, the economy of the Macao Special Administration Region is dominated by tourism and gambling. In the mid-1990s the colony was plagued by violence as Chinese criminal gangs, or triads, from Hong Kong moved into Macao prior to the handover of Hong Kong. These gangs fought for control of the

colony's gambling establishments, prostitution, and drug trade. The Macao Special Administration Region continues to serve as a popular holiday destination for the residents of Hong Kong, and the former colony's economy is being more closely integrated into that of the neighboring Zhuhai Special Economic Zone.

MACAPAGAL, DIOSDADO (1910–1997), President of the Republic of the Philippines. Born to a poor family on 28 September 1910, Diosdado Macapagal worked his way through law school and joined the largest U.S. law firm in Manila while the Philippines was still a U.S. colony. After independence he joined the Department of Foreign Affairs, rising to the position of second secretary of the Philippine embassy in Washington, D.C. While in Washington, Macapagal conducted graduate work in economics, earning a Ph.D. in 1957. He was twice elected to the Philippine Congress, serving from 1949–1956, and was vice president from 1957–1961. According to Marcos biographer James Hamilton-Paterson, in 1961 Macapagal successfully challenged incumbent president Carlos Garcia after making a tacit agreement with Ferdinand Marcos that if elected he would only serve one term, after which he would support a Marcos candidacy. In 1965, when it became clear that Macapagal was going to renege and run for reelection, Marcos ran as the opposition candidate, easily defeating the incumbent president, who ran a poor campaign. As president, Macapagal supported land redistribution but lacked the political support to implement sweeping reform. In 1963 he proposed legislation giving the government greater power to expropriate landed estates, but members of the elite resisted the reforms, and Congress

watered down the proposal, which was inadequately funded and poorly implemented. Although considered personally honest, Macapagal's administration was tainted by corruption, and he was threatened with impeachment when he protected political allies from prosecution. Out of office, Macapagal ran as a delegate and was elected president of the 1971 Constitutional Convention. Before the body was able to draft a new constitution, however, President Marcos declared martial law, rendering the convention powerless. Macapagal died in 1997, but his political legacy continues. His daughter, Gloria Macapagal Arroyo, became president in February 2001 following the impeachment trial of President Joseph Estrada.

MACARTHUR, DOUGLAS (1880–1964), U.S. military leader. Asia was central to the career of Douglas MacArthur, one of the most celebrated, yet controversial, U.S. military leaders. He had four tours of duty in the Philippines between 1903 and 1942. A visit to military installations in eleven Asian countries in 1905–1906 as an aide to his father, Lt. Gen. Arthur MacArthur, Jr., convinced him of the importance of Asia to America's future.

Asia was the site of MacArthur's worst defeats and greatest victories. Commanding U.S. and Filipino forces, MacArthur was unable to defend the Philippines against the Japanese invasion in 1941. Ordered to Australia by President Franklin Roosevelt in 1942, he declared, "I shall return." Implementing a brilliant island-hopping strategy that avoided Japan's main forces, MacArthur made good on his promise, landing on Leyte island in October 1944.

As supreme commander of the Allied Powers in Japan, MacArthur oversaw the rebuilding of Japan and the establishment of democracy, laying the foundation for Japan to become a major industrial nation. With the outbreak of the Korean War in 1950, MacArthur was appointed commanding general of U.N. forces. His amphibious landing at Inchon turned the war against North Korea. MacArthur's push to the Yalu River, however, brought China into the war and led to a policy dispute with President Harry Truman. Relieved of command in April 1951, MacArthur returned to the United States to a hero's welcome.

MACAULAY, THOMAS B. (1800–1859), English politician, writer, member of the Supreme Council of India. Thomas Babington Macaulay was a precocious scholar, with an extremely retentive memory. After studying at Trinity College, Cambridge, he began training in the law, but soon abandoned his studies to concentrate on writing for periodicals, chiefly the *Edinburgh Review*. In 1830, he entered Parliament as a Whig. In 1843, he accepted a lucrative post on the Supreme Council of India to help bolster the family finances when his father's business failed. He arrived in Madras, India, in June of that year with his sister.

His period in India was notable for two things. First, he took the lead in the creation of a criminal code, which established English common law as the basis of the Indian legal system. Second, he intervened in the debate about whether public funds should be used to promote the study of English language and learning or of traditional Eastern subjects and languages. Macaulay dismissed the achievements of Indian learning and argued in his famous "Minute on Education" (1835) that universities should teach the English language, science, and Western literature in the English language. His argument prevailed and played an important part in establishing English as the official language of India.

Macaulay returned to England in 1838, never to revisit India. Although he reentered Parliament, his final years were devoted to his *History of England*, which he left unfinished at his death in 1859. He was one of the greatest essayists of nineteenth-century English literature.

MACHINERY AND EQUIPMENT INDUSTRY—CHINA China's machinery industry started in the 1860s with three government-sponsored military

factories. By the start of the twenty-first century, it contributed over 5 percent of world total production and ranked fifth in the world.

History of Development

By 1933 China possessed 226 machine-building plants, 63 plants for manufacturing electrical equipment, and 34 shipbuilding and locomotive repair plants, which provided 2 percent of China's total industrial gross output. In Manchuria and North China, which came under Japanese occupation between 1931 and 1940, the Japanese expanded the machinery industry substantially to support their war effort. Manchuria had a total of 968 plants in 1940. In the interior areas that remained under the control of the Nationalist government during the war with Japan, the state and private industrialists built many machine-building factories, but only 77 remained in operation by 1944.

In 1945 the Soviet army occupied Manchuria and dismantled half the machinery factories. Industrial production was further disrupted by the 1946–1949 civil war between the Chinese Nationalists and Communists. At the founding of the People's Republic of China (PRC) in 1949, the machinery industry accounted for only 2.7 percent of total gross industrial output, not much of an increase since 1933.

The industry was given high priority in the Communist government's development plans, given its importance for national defense and for the technological transformation of the national economy. With the stimulus of the Korean War (1950–1953) and the inflow of Soviet technical assistance, the industry regained 1947 levels in 1952. It was assigned 26 percent of total investment in industrial capital construction in the first five-year plan (1953–1957), or 6.9 million yuan renminbi (RMB). Imports of machinery and transport equipment were given high priority. Foreign experts were invited to China, and many Chinese technicians were sent abroad for training. A number of comprehensive institutes were established, as were several new machinery industries, including heavy machines, mining equipment, machine tools, tractors, bearings, and electric equipment.

The launching of the Great Leap Forward of 1958–1960 led to a sharp rise in quantity of machinery produced, but much of it proved unusable because quality was sacrificed in the frenzy to increase production exponentially. Imports of machinery and transportation equipment, 94 percent from Communist countries, reached a peak of \$840 million in 1960. The economic disaster of the Great Leap Forward, coupled with the withdrawal of Soviet assistance after

the open rift between China and the Soviet Union, led to years of readjustment and recovery between 1961 and 1965. While imports plunged to a low of \$100 million in 1963, the machinery industry successfully absorbed and adapted previously imported technology, and the value of its output attained 9.7 billion yuan RMB in 1965, far surpassing the level of 3.5 billion in 1957. In 1966 the industry contributed 12 percent of total gross industrial output.

The outbreak of the Cultural Revolution in 1966 disrupted scientific research, because government agencies were paralyzed and many scientists and technicians suffered persecution. But with the PRC government's seating in the United Nations in 1972 and the establishment of diplomatic relations with Japan and a number of Western countries thereafter, technical imports under licensing agreements from the technologically advanced capitalist economies assumed importance. In 1973 imports of machinery and transportation equipment from non-Communist countries (\$501 million, or 63 percent) first surpassed those from Communist countries (\$296 million).

The end of the Cultural Revolution in 1976 and the beginning of economic reform after 1978 accelerated China's technical imports. Whereas earlier the bulk of the industry's production was geared toward the industrial and defense sectors, now much more attention was paid to its development for agricultural production and consumer goods. Emphasis shifted from import of complete sets of plants and equipment to import of single techniques, and from building new enterprises to the technical transformation of existing enterprises. In addition to licensing agreements, joint ventures, wholly foreign-owned enterprises (legal since 1980), and cooperative enterprises served to import advanced techniques. By 1996, there were nearly 5,300 officially

New red tractors at the factory in Luoyang, Henan, China. (LOWELL GEORGIA/CORBIS)

approved foreign-funded ventures, with a total direct investment of approximately \$5.5 billion.

The industry grew at an average annual rate of 16 percent from 1984 to 1989, and 24 percent from 1990 to 1995. Growth has slowed since: 10 percent in 1997 and again in 1999; 4.34 percent in 1998. With rising internal demand, an expansionary monetary policy, and the deepening reform of the state-owned enterprises, the industry is expected to expand at an annual rate of 11 percent or higher from 2000. Machinery production in 2000 rose by 14.7 percent over production in 1999.

Current Configuration

Currently, there are twelve major sectors in China's machinery industry: automotive, electrical equipment, heavy and mining machinery, petrochemical and general machinery, agricultural machinery, construction machinery, internal combustion engines, machine tools, instruments and meters, basic machinery parts, food processing and packaging machinery, and environmental protection machinery. As of 1997 there were 120,000 enterprises and 122 scientific research institutes, colleges, and universities, employing 20 million people. The Machinery Industry Bureau (formerly the Ministry of Machinery Industry) is responsible for overall planning of the modernization of the industry and for determining key areas for its improvement.

At the end of 2000, China's machinery industry contributed over 5 percent of world total production and ranked fifth in the world. Considerable technological advancement has been accomplished through imports and indigenization. Advanced manufacturing methods have been widely adopted in areas such as casting, forging, welding, heat treatment, and surface protection, while microelectronic technology has been spreading along with the Computerized Integrated Manufacturing System (CIMS).

Before 1973 machinery and equipment amounted to only 2 to 5 percent of China's total exports. China remained a net importer of machinery and equipment during the period of economic reform since 1978. A trade deficit in machinery and equipment peaked close to \$30 billion in 1993 and 1994. Imports accelerated from the mid-1980s up and exports from the early 1990s. In the late 1990s, as the industry became more sophisticated and competitive, the trade deficit dropped significantly. Exports of machinery and electronics increased by an annual rate of 32.7 percent between 1985 and 1998, from \$1.68 billion to \$66.54 billion, and assumed first place among China's lead-

ing export commodities. In 2000 total trade in machinery and electronic products, dominated by information technology products, electronics, home appliances, and complete equipment for power generation and engineering, equaled \$208.2 billion, or 43.9 percent of total foreign trade volume.

Technical Capabilities Shortfall

Technical levels in many sectors of the Chinese machinery and equipment industry remain below those of the advanced economies. The tenth five-year plan (2001–2005) aims to transform China's machinery industry from a large producer (quantitatively large but technologically not the most advanced or sophisticated) to a strong producer (state-of-the-art technology), from a large importer to a large exporter, and from an equipment department of the national economy to a sector serving the needs of both the nation and the consumers.

MADHYA PRADESH (2001 est. pop. 60.4 million). Madhya Pradesh is a central Indian state (named from a Hindi translation of the old British unit called Central Provinces). It is entirely landlocked, being bounded on the south by Maharashtra, on the east by Chhattisgarh, on the north by Uttar Pradesh and on the west by Gujarat. It is virtually bisected from east to west by the Narmada River. The state was formed in 1956, and its reduced area was 273,994 square kilometers in 2000, when the eastern third of the state was sliced off to create Chhattisgarh state. The landscape consists of forested hills with extensive plateaus and steep slopes. The Vindhya and the Satpura Ranges cover much of the northern and southern parts of the state, respectively. The capital is Bhopal (2001 est. pop. 1.4 million), though the largest city is Indore (2001 est. pop. 1.6 million). Although there are numerous towns, three-quarters of the inhabitants are rural. The greatest disaster in modern times in this state was the deadly gas leak on 3 December 1984, at the Union Carbide plant in Bhopal. This killed some 2,500 residents and injured another 2,000. Most survivors have received virtually no compensation.

Madhya Pradesh was a part of the Mauryan Empire in the fourth to third centuries BCE. Later it was a part of Harsha's Empire (seventh century, and then of the Delhi Sultanate (eleventh century). In 1527 the Mughal empire extended into this area when Babur conquered Chanderi; and in the later seventeenth century, a Bhopal State was formed when the Afghan chief Dost Mohammad conquered the area. In 1817 this was annexed by the East India Company, and was administered by the British until 1947.

Cultivated crops include cotton, rice, wheat, pulses, linseed and other oilseeds, castor, soybean, millet, mustard and tobacco. The diverse industries are located mostly in the western half of the state, and include electronics, aluminum, rayon, fertilizer, petrochemicals, paper, tires and tubes, industrial gases, and cables. But the state is primarily agrarian, with low productivity.

Land use in 1991 was 43.2 percent agriculture, 30.7 percent forest, and 26.1 percent other purposes. Some 93 percent of the population are Hindus, and 86 percent speak Hindi as their first language. Tourist sites of outstanding historical importance include Sanchi, Ujjain, Gwalior, Indore, and Bhopal. The state has 448 colleges but no university of major stature.

MADRAS (2002 est. pop. 4.3 million). Now officially Chennai, Madras is a large city on the southeast coast of India. Its name came from the Arabic *madrasa*, "a religious school," but recently the ancient Tamil name of the town (*Cennai*) has been asserted by local politicians. In the early days of its European settlement, it was known as Fort St. George, in reference to the main fortification, which still stands. In 1639 territory was given to Francis Day of the East India Company by a deputy of the Raja of Chandragiri, who was the last local representative of the foundering royal house of Vijayanagar. This grant was later confirmed afresh, in 1762, by the Nawab of Arcot (Arkattu).

From a small fort built there in 1644, the town slowly expanded as it became the most important trading center in that part of India. Among the town's more notable governors were Elihu Yale (1687–1691), who gave a small grant to found the noted American university that bears his name; Thomas Pitt (1730–1735); and Sir Thomas Munro (1820–1827). This was the first

settlement of any size belonging to the East India Company, and St. Mary's Church, built in 1678–1680, was the first English church in Asia. Even older, however, is the Roman Catholic Cathedral of San Thome, built by the Portuguese in 1547 and resting place of the mortal remains of St. Thomas. But the antiquity of the town goes back even further, for St. Thomas's Mount is mentioned by Marco Polo in the thirteenth century. According to legend, the apostle was martyred on this spot while kneeling on a stone, which now forms the altar in the cathedral. The seventeenth century Parthasarathi and Kapaleshvara Temples are the two main Hindu temples within the city.

Madras is located where the Cooum and Adyar rivers empty into the Bay of Bengal. It was the capital of Madras Presidency (at first called Carnatic, then just Madras) from early in the nineteenth century. At independence the presidency disappeared as a political unit, to be replaced by Madras Province and several other states. Today Madras is the capital of Tamil Nadu State, and its approximately 6 million people make it the fourth-largest city in India. It has many industries, several universities, and a multiplicity of government offices. It is a hub for railroad and bus transportation and has an important airport. It is also a major seaport, but this too is a twentieth-century development.

MADRASAHS A *madrasab* is an institution of higher education where advanced Islamic sciences are taught. Distinguished from *maktab*, which is an elementary school for the study of Islamic subjects, *madrasab* is the traditional equivalent of a college. The origin of *madrasab* may be traced back to early mosques in the Muslim Middle East, where clerics performed both religious and educational duties. By the early eighth century, prominent mosques evolved into complexes that provided lodging and other services for out-of-town students interested in receiving religious instruction, in addition to providing a place of worship for the believers. *Madrasabs* were financed primarily through religious endowment land, *waqf*, which provided a steady income to subsidize clerics, students, and pay for the upkeep of the mosques and other buildings within the complex. Early *madrasabs* focused entirely on the study of the Qur'an and Hadith (Sayings of the Prophet Muhammad). This grad-

ually led to the development of the discipline of Islamic jurisprudence and four prominent legal schools of interpretation within the Sunni tradition: Maleki, Shafi'i, Hanbali, and Hanafi. With the expansion of Islamic civilization beyond the Arabian Peninsula, various *madrasabs* provided religious education following one of these traditions. In addition to classical Islamic subjects (*fiqh*), *madrasabs* also offered a number of subjects in science and philosophy.

Western colonial expansion brought about a sizable decline in the status of *madrasabs* within the Muslim world, as modern education began to replace the traditional religious schools. However, the success of the Iranian Revolution in 1979 and the growth of Islamic fundamentalism have brought about a partial renewal of traditional Islamic education in some parts of the Middle East, North Africa, and South Asia.

MADURAI (2001 est. pop. 1 million). Madurai is one of the oldest cities in India—it has a demonstra-

ble history of some twenty-five hundred years. In ancient times, it was known as Mathura, as cited in the *Mahabharata*. One of the early descriptions, in the fifth-century *Silappadigaram*, is that of its fiery destruction. The city lies in south central Tamil Nadu state on the Vaigai River.

For many centuries, the city was the capital of the Pandya kingdom. The chief attraction in the city has long been the great temple of Sri Minakshi, the "fish-eyed goddess," who is associated with fertility. The temple compound also contains the even larger shrine of her consort, Sundareshvar. Much of the temple was constructed by the ruler Tirumala Nayak (1623–1660), but parts of the interior are much older and so are some of the bronze icons they contain. Although the inside of the shrines is rather dark, the outside presents a splendid view from a number of vantage points. The outer walls form a parallelogram of 258 by 222 meters, surrounded by nine massive pyramidal gateways (*gopuram*), of which the tallest is 46.3 meters high. All are elaborately decorated with hundreds of three-dimensional human figures. Perhaps the most remarkable sight within the temple is the Hall of a Thousand Pillars (actually 997 pillars), nearly all of which differ from each other.

Today, the city does a considerable trade in tea, coffee, and cardamom, all grown on the hills to the west. Local crafts include making silk cloth, woodwork items, brassware, and muslin weaving.

MADURESE The Madurese originate from the 5,304 square kilometer island of Madura, which is part of Indonesia's East Java province. There are about 10 million Madurese, making them the third-largest ethnic group in Indonesia after the Javanese and the Sundanese. However, more than half of the Madurese have moved to other parts of Indonesia, particularly to mainland East Java, where they have integrated with the Javanese. The harsh, arid, and unfertile land of the island of Madura, which can only be used during the rainy season, causes the migration of the Madurese to other areas. Reports show that by 1994, only about 3 million people were left in Madura. Many have also transmigrated to areas such as Kalimantan, Sumatra, and Sulawesi.

Madurese migrants in Indonesian cities are easily identified because they stay exclusively in their own areas, maintaining their language and customs. The Madurese are Muslims and are notable in their adherence to their religious leaders or *kiyai* (Islamic clerics), who also become their informal political and social leaders. The *kiyai* have an elevated status for Madurese. The fanatical supporters from East Java province of Indonesia's former cleric president, Abdurrahman Wahid, counted Madurese in their numbers.

Madurese men are protective of their women, and should their wife or girlfriend suffer an offense from another man, then the Madurese man must settle it by *carok* (a life and death duel) using a *churit* (a 30- to 40-centimeter half-circle knife). Madurese men must master *carok* as a martial art. Those who fully master this martial art are called *orang jago* and given *blater* (brave man) status. Traditional music and dances (*remo*) are regularly held in Madurese society to formally honor members of the *blater* group.

Migrant Madurese are usually small traders. In west and central Kalimantan, their presence has created difficult relations with the local people such as the Dayak, Malay, and Chinese. There have been a number of pogroms against the Madurese, including the brutal killings in 2001 in which thousands were beheaded in Central Kalimantan province after local Dayak people accused the Madurese of taking their land and of denigrating local customs and cultures.

MAGNETISM Among the greatest Chinese contributions to physics were the discovery of magnetism and the development of the compass. Though references to magnetism in Chinese sources do not date before the third century BCE, knowledge of the phenomenon was clearly widespread by this time, and experiments were being undertaken and documented by the first century CE. There were many early lodestone devices, such as the "south-pointing spoon" of the first century CE (which may have been invented a century earlier), and there are several intriguing references to the use of magnets to make "automatic" chess boards.

But magnetism seems to have been used predominantly in geomancy until the tenth century. Geomancy, or feng shui, was concerned with regulating human dwellings in relation to those currents of the spirit of the earth that affect people. The fact that knowledge of the compass was reserved for imperial magicians greatly restricted its spread, and it seems that for many centuries the compass served only as a tool for divination. Even when the compass passed into more general use, the primacy of canal and river traffic slowed the spread of the device to ocean-going vessels. Nevertheless, there were many adaptations and improvements in the form of compasses, which culminated in their use in navigation by the eleventh century.

Two of the most critical components in the development of the compass were the use of a needle rather than a lodestone or piece of metal and the discovery of magnetic declination (the deviation between true or geographic north and the direction that a compass needle points). The magnetization of needles was an important step in the development of the compass, because needles could float or be suspended by a thread and turn with a great degree of freedom. Also, steel holds magnetization longer than iron, and it was relatively easy at an early date to make small needles of steel; such compasses with steel needles could be used on long voyages. Steel came to China from India in the fifth century, but the Chinese quickly began to produce their own supplies. There is evidence to suggest that magnetized needles were used as early as the fourth century CE, and their superiority in the construction of compasses was quickly recognized.

The discovery of declination was also relatively early, sometime between the seventh and tenth cen-

turies. While the influence of nonscientific divinatory practices was clearly prominent in the development of the compass, much research and experimentation went into magnetism from the fifth century on.

MAGSAYSAY, RAMON (1907–1957), Filipino statesman. Ramon Magsaysay was born 31 August

1907, in Iba, Zambales Province, in the Philippines. He was educated at the University of the Philippines (1927) and later transferred to the Institute of Commerce at Jose Rizal College (1928–1932), where he was awarded a degree in commerce. When World War II erupted, Magsaysay—having taken an interest in auto mechanics—joined the motor pool of the Thirty-First Infantry Division of the Philippine Army. When the Japanese overran the nation, he helped to organize the Western Luzon Guerrilla Forces. In January 1945, Magsaysay was involved in clearing the Zambales coast of the Japanese prior to the landing of American forces.

After the war, he was appointed by the U.S. Army as military governor of Zambales, and in 1946, Major

RAMON MAGSAYSAY ON PHILIPPINES FOREIGN POLICY

In the following extract from an article written in 1956 Philippine president Ramon Magsaysay set forth the basics of Philippines foreign policy that linked Philippine interests to those of the United States.

In shaping its foreign policy the Philippines is primarily moved by three considerations: . . . first, the strengthening of our national security by suppressing subversion from within and building strength against attacks from without through participation in collective security arrangements with other free nations; second, the utilization of the machinery of our foreign relations for the promotion of our foreign trade and economic cooperation in order to strengthen our domestic economy and to contribute our share to the economic development of a free world; and third, the development of our political and cultural relations with countries of the free world with particular emphasis on our relations with our Asian neighbors through our membership in the United Nations and by participation in regional conferences, such as the Manila Conference of 1954 (SEATO) and the Asian-African Conference in Bandung (1955).

In the pursuit of our objectives and in the choice of our methods our government finds itself closely associated with the United States of America. It is an association immediately dictated by our community of objectives, the most urgent of which is the defense of our freedom against Communist aggression. But our policy of close relations with the United States is not a mere artificial creation of government policy makers, and it is not dictated exclusively by the accident of common purposes. It is the product of experience in serving the national interest.

President Ramon Magsaysay in November 1953. (BETTMANN/CORBIS)

Magsaysay was discharged from the army and was elected representative of Zambales, serving until 1950. In 1950, Magsaysay condemned his own Liberal Party for being corrupt and insisted on acceding to the demands for social and political reform that had been responsible for sparking the rebellion by the Hukbalahap (Huk), a group of peasant-rebels fighting for democratic rights throughout the nation. Magsaysay was appointed secretary of national defense in 1950, and for the next three years, with American aid, he not only cleaned up military corruption, but also launched an extensive sweep to eliminate the insurgents of the Huk rebellion. Unfortunately, many labor leaders, educators, and diplomats, along with an array of innocent people, were arrested and deprived of their rights under Magsaysay's policy.

In November 1951, Magsaysay was responsible for keeping national elections clean by deploying soldiers to oversee the election process. During the Korean War, he also sent Philippine forces to fight under the U.N. command.

Ramon Magsaysay enjoyed a reputation of being energetic and honest; as a result, he was immensely

popular with the people. On 10 November 1953, having quit the Liberal Party to join the Nacionalista Party and having U.S. support, he was elected the third president of the Philippines.

Aside from quelling the Huk rebellion, Magsaysay's presidency is remembered for the signing of the Laurel-Langley Agreement, which maintained the economic submissiveness of the Philippines to U.S. monopolies, as well as for the negotiation of the Agricultural Commodities Agreement with the United States in 1957, an accord that helped keep the nation's economy locked into a colonial pattern. Magsaysay was also responsible for establishing the Anti-Subversion Law, which limited citizens' democratic rights. Finally, he was a primary player in establishing the Southeast Asia Treaty Organization (SEATO). Ramon Magsaysay was killed in a plane crash on 17 March 1957.

MAGUEY Maguey is a crop that produces fiber for use in clothing textiles, rope, and heavy matting. The Spanish introduced the New World maguey (*Agave salmiana*, also known as agave) and the pineapple to the Philippines. Although there were small plantings throughout the country, the maguey has never flourished in the Philippines. Traditionally, a number of fiber sources have been used in the home and for the handicraft industry. Maguey produces a fiber similar to that of the abaca, the latter perhaps the most significant fiber crop grown in the Philippines.

Maguey plantings are distributed throughout most Philippine provinces, especially in those regions with pronounced dry seasons, although the plant has never developed into a major export crop. The cultivation of maguey peaked in the early twentieth century, when over 50,000 acres were planted. Farms growing maguey were usually small; most of these were on Cebu, an island in the central Philippines. Since then acreage has dropped drastically; fewer than 10,000 acres were planted in the 1960s, and by 2000 production was so insignificant that maguey was no longer reported in any official economic statistics. What lit-

tle fiber the crop does yield serves the domestic market; little goes to the export trade.

MAGWE DIVISION (2002 est. pop. 4.7 million). Magwe (Magway) Division, located in the central dry zone of Myanmar (Burma), has an area of 44,820 square kilometers. The town of Magwe, 530 kilometers from the national capital of Yangon (Rangoon), is its capital. The division is bordered by Mandalay Division to the east, Sagaing Division to the north, Chin State and Rakhine State to the west, and Pegu (Bago) Division to the south. Magwe's 1993 population was comprised of 3.75 million Burmans, 90,000 Chins, and 40,000 of other ethnicities.

Magwe Division is a center for the production of edible oils from the sesamum and groundnuts grown in the region; other crops are rice, maize, cotton, pulses, and tobacco. Oil was discovered in this region, and for centuries crude earth oil was extracted from shallow wells, many held by hereditary ownership and others by royalty. The Burmah Oil Company, formed in 1886, developed mechanized drilling to exploit Magwe Division's main oil fields of Yenangyaung, Chauk, and Mann (near Minbu). Until the mid-1930s, Yenangyaung was Myanmar's foremost oil field. The division's other industrial plants include cement, fertilizer and cigarette factories, and cotton textile mills. The division's main north-south transport artery is the Irrawaddy River, together with road, rail, and air links.

MAHABHARATA The monumental Sanskrit poem the *Mababharata*, attributed to the legendary poet-seer Krsna Dvaipayana Vyasa (fifth century? BCE), although perhaps not the oldest epic poem to have survived from antiquity, is certainly the longest and undoubtedly among the most influential in the world. Its complex characters and its grim and invo-

luted plot have left a profound and indelible impression on the peoples and cultures of South and Southeast Asia for at least two millennia, influencing the arts, literature, and religious, political, and social lives of many hundreds of millions of people throughout this vast region. One section of the immense text, the *Bhagavad Gita*, has come to be regarded as a seminal text of classical Hindu ethics.

The *Mababharata*, as it has come down to us in a large number of manuscripts from virtually all the regions and in virtually all the indigenous scripts of South Asia, is a lengthy epic narrative ranging (depending on the textual version) from some 100,000 to perhaps 120,000 Sanskrit couplets, although a few passages are in prose.

The Central Narrative

At its narrative heart, the poem is a political and military history recounting the origins of the ruling family (known variously as the Bharatas, the Pauravas, and the Kurus or Kauravas) of an early Indian kingdom that appears to have flourished in central northern India in the vicinity of the modern city of Delhi, probably around the beginning of the first millennium BCE.

The story involves a bitter succession struggle between rival claimants for the ancestral throne of this kingdom and culminates in a brutal and bloody civil war that leaves most of the aristocratic characters in the epic drama dead and the world of the Bharatas in ruins. The struggle originates in a complex set of displacements and disqualifications that muddy the clear stream of dynastic succession so that the sons, respectively, of a pair of royal brothers, each of whom is forced to give up his claim to the throne, are pitted against one another in increasingly implacable rivalry and enmity.

The poem casts the struggle not only in political terms but also as a conflict over dharma, righteousness itself. The protagonists of the poem, and the parties more clearly associated with dharma, are the sons of King Pandu, known as the Pandavas. Their rivals (sometimes called the Kauravas for the sake of convenience) are their first cousins, the sons of Pandu's older brother Dhritarashtra, who had to forgo sovereignty because of congenital blindness. As a consequence of a curse, Pandu cannot father children. His five heroic sons are, however, sired by a series of powerful Vedic divinities and are therefore regarded as earthly incarnations of these gods. The eldest and heir apparent to the throne, Yudhishtira, is the incarnation of the god of righteousness, Dharma. His brothers Arjuna and Bhima are the children of, respectively, the Vedic warrior and wind gods Indra and Vayu, and the two

youngest Pandavas, Nakula and Sahadeva, are the twin sons of the twin divinities, the Asvins. Their antagonists, the sons of Dhritarashtra, are led by the eldest brother, the angry and vengeful Duryodhana, who is regarded as an incarnation of a demonic being.

The two parties are rivals from childhood, and the Pandavas must endure threats, abuse, and assassination attempts by Duryodhana and his allies. At length a seeming resolution is reached when the kingdom is divided, with Duryodhana ruling in the ancestral capital of Hastinapura, and Yudhishtira, the eldest Pandava, building a fabulous new capital city at nearby Indraprastha. This device does not, however, long appease the envy and enmity of Duryodhana. He invites Yudhishtira to a rigged gambling match where he divests him of all his property, his brothers, and their common wife, the princess Draupadi. This ultimate catastrophe is averted at the last moment through the wit of Draupadi, but as a consequence of a second round of dicing, the Pandavas are forced to withdraw in exile to the forest for a period of twelve years and spend a thirteenth year incognito. They fulfill these conditions, but Duryodhana is obdurate in his refusal to share power with them. The two sides set about securing allies and preparing for battle. Complex bonds of loyalty obligate many of the epic's most powerful and venerable figures to ally themselves reluctantly with Duryodhana; the Pandavas, through the intervention of Arjuna, the foremost hero among the five brothers, manage to secure the latter's close friend and virtual alter ego, their cousin Krishna, as a noncombatant adviser and charioteer.

The long-brewing war at last breaks out, attended by massive slaughter on both sides, but at length the Pandavas, although outmatched by Duryodhana's forces, manage to achieve a Pyrrhic victory largely by adhering to the sagacious though often ethically questionable advice of Krishna. Yudhishtira reigns disconsolately over his hard-won but devastated kingdom for some years, until he and his brothers, along with their long-suffering wife Draupadi, abandon the world and trek off into the Himalayas in an attempt to enter heaven. The four younger Pandavas and Draupadi fall dead on the path, with only the supremely righteous Yudhishtira managing to enter the heavenly realm in his earthly body. Ultimately, however, all the heroes are reunited in paradise.

Cultural Significance of the Epic

This spare narrative, central though it is to the work, does scant justice to the dense layering of meaning and richness of substance that characterize the text of the epic that has come down to us. The core narrative was

used as a frame around which was attached a huge corpus of secondary texts incorporating a considerable amount of the systematized knowledge of ancient India. This takes the form of discourses and stories placed in the mouths of various characters, detailing mythological, cosmological, historical, theological, philosophical, political, social, and scientific knowledge preserved by the culture. Thus the *Mahabharata* is not merely an exciting story of treachery, intrigue, and war but a virtual encyclopedia of ancient India.

With its concentration on and magnification of the role of Krishna, who emerges in the poem as an earthly incarnation of the supreme Lord Vishnu, the poem has become one of the major early textual sources for Vaishnavism (worship of Vishnu), one of the sectarian forms of Hinduism. The triumph and salvation of the Pandavas are represented as artifacts of their (especially Arjuna's) devotion to and faith in Krishna. The *Bhagavad Gita*, a section of the epic's sixth book in which Krishna exhorts Arjuna to fight his righteous war and reveals himself as the all-loving god, became one of the central texts of Hindu devotionalism.

Although traditional Indian culture has always been cautious about the message of the *Mahabharata*, with its focus on intrafamilial conflict, the text lies close to the heart of the tradition and powerfully influenced the social, religious, political, and artistic sensibility of South and Southeast Asian peoples for two millennia or more.

MAHALLA The term *mahalla* is used by Uzbeks. It originated in Arabic and translates as encampment, neighborhood, or community. The term *guzar* is often used in place of *mahalla* among the Tajiks living in Uzbekistan; the term *avlod* is used by Tajiks living in Tajikistan. There are many other variants in existence throughout the Muslim world. Familiar institutions are not uncommon internationally, but they tend

to flourish more in societies that deemphasize contractual social relations. As such they are more common in Eastern societies.

The *maballa* is a social institution, providing goods and services to its constituent members, such as tables, utensils, and other practical items. A *maballa* can also be considered a small economy of sorts because of the interactive nature of its activities. Events such as weddings, funerals, birthdays, and so on are times where gifts are exchanged among participants. Whether the gift is in the form of goods, such as food, or services, such as entertainment or religious functions, there is a constant flow of material between members. This exchange of goods and services helps reinforce the members' loyalty to their community by adding a dimension of economic necessity to the familiar basis.

Today the entire population of Uzbekistan belongs to one of the more than ten thousand *maballa*. No other institution in Uzbekistan has as much influence as the *maballa*, and as such it is the definitive social, economic, and political institution of Uzbekistan. Presently the government of Uzbekistan employs the *maballa* as part of its means of maintaining power. The *maballa* is the primary site and source of state welfare assistance, with the local leader (*bokim*) having total control over who receives what and how much. In short, *maballa* are the center of Uzbek daily and economic life. They are largely based upon kinship, but that is not as strict a designation as it once was. They represent the basic administrative division of the country and the primary vehicle for the exercise of its power. The *maballa* serve as a means of surveillance and as vehicles for the construction of national identity. *Maballa* and their members are required to participate in all national festivals and cultural celebrations. The rural *maballa* have a greater degree of control over their economic fate than their urban counterparts due to their greater distance from the central power structure.

MAHANADI RIVER The Mahanadi River, 89 kilometers long, is known as one of the "great rivers" of India, crossing the state of Orissa and cutting through the Eastern Ghats by way of a gorge some 50

kilometers long. The Mahanadi's catchment area is estimated at 113,440 square kilometers, and in the rainy season it carries an immense amount of water, up to 51,000 cubic meters per second at the Naraj gorge. The river rises in Raipur District of Chhattisgarh, just south of Raipur city. After flowing eastward and passing the city of Cuttack (where in the rainy season it is 3 kilometers wide), the river enters the Bay of Bengal through a number of deltaic channels and two main estuaries. In the delta region is an extensive system of irrigation canals for the cultivation of rice. From July to February the river is navigable by boats for 740 kilometers from the sea.

MAHARASHTRA (2002 est. pop. 98.6 million). Maharashtra, the third largest state of the Indian Union in terms of area and population, lies on the west coast of India facing the Arabian Sea. The state shares its boundary with Gujarat, Madhya Pradesh, Andhra Pradesh, Karnataka, and Goa. A 720-kilometer by 80-kilometer coastal expanse called Konkan forms a continuous band along the coast. Parallel to this runs the Western Ghats mountain range, which is flanked, on its eastern side, by the fertile plateau that forms the dominant physical environment of the state. Three major rivers—Godavari, Bhima, and Krishna (Kistna)—flow through this region.

The soil of the plateau is rich and supports the extensive cultivation of cotton, sugarcane, peanut, and tobacco along with different varieties of mangoes, grapes, oranges, and bananas. The coastal region produces rice and coconuts in abundance. The state receives its rainfall mainly from the southwest monsoon which is very active in the coastal belt, but loses its vigor once it approaches the central parts.

Maharashtra's early history stretches from the time of the Mauryan empire in the third century BCE to the reign of the Yadavas in the thirteenth century. The high point of this history comes with the rise of Sivaji in the seventeenth century, who succeeded in establishing an independent Maratha kingdom despite repeated Muslim attacks. Sivaji's successors ruled the territory with occasional reverses till the British took control of the region in early nineteenth century. At the time of independence the state was part of the

Bombay presidency under the British. It got its present identity on 1 May 1960 when all the Marathi-speaking areas from neighboring states were united to form Maharashtra. The state has thirty-three administrative districts and has a bicameral legislature. It has a representation of nineteen members in the Upper House (Rajya Sabha) and forty-eight members in the Lower House (Lok Sabha) of the Indian Parliament.

More than 60 percent of the people in Maharashtra depend on agriculture for a living. In addition to a thriving agricultural sector, Maharashtra has a well-developed industrial base. Because of its convenient location as the link between northern and southern India, it functions as a bridgehead of financial and commercial activities. Mumbai (Bombay), the capital of Maharashtra, is the business capital of India and the largest stock exchange in the country. It has a big textiles market and a busy port. Many small and medium industries have grown around the city and it showcases products from all over India. Food products, breweries, tobacco and related products, textiles, plasticware, petroleum and coal products, paper, rubber, basic chemicals and chemical products, and crude oil are some of the items manufactured and marketed from Maharashtra. Major corporate houses in India are Mumbai-based. The city is also well known for its film industry, which is the chief source of the popular Hindi cinema.

MAHATHIR MOHAMAD (b. 1925), prime minister of Malaysia. Mahathir Bin Mohamad has significantly shaped his country's political landscape while also serving as an unofficial spokesman for the so-called Third World. Throughout his career, Mahathir has been an outspoken critic of the industrialized nations' foreign policies directed at developing nations, while espousing the virtue of Asian morals.

Mahathir was born in Alor Setar, capital of the state of Kedah in northern Malaysia. The youngest of nine children, he grew up in a stable, financially secure family, and his father held a prestigious position as schoolmaster of an English language school. He studied medicine, but his passion was politics. He joined the dominant United Malays National Organization (UMNO) party and aligned himself with the majority

Prime Minister Mahathir Bin Mohamad in Kuala Lumpur in October 2001. (AFP/CORBIS)

Malay population's needs. His book *The Malay Dilemma*, published in Singapore in 1970, which criticized the then-current Malay government, promoted a strident Malay nationalism and articulated his ideological beliefs. In the *Malay Dilemma*, Mahathir asserted that Malays were the indigenous people of Malaysia and demanded a policy of affirmative action to elevate their economic status to a level equal with the Chinese-Malaysians. At the same time, Mahathir also criticized certain Malay cultural traits and presented a theory steeped in Social Darwinism to explain the Malays' economic backwardness. Mahathir's open letter to Prime Minister Tunku Abdul Rahman in 1969 led to his expulsion from UMNO, but by 1972 he was reinstated.

After 1972, Mahathir's political star rose rapidly. Tun Abdul Razak, the second prime minister, appointed him to a cabinet position in 1974, and he became deputy prime minister in 1976 under the third prime minister, Hussein Onn. By 1981, Mahathir had himself become prime minister. During the 1980s, Mahathir consolidated his power and became more

authoritarian by successfully staving off political opponents through arrests and detention. He also eliminated the supreme court as a source of opposition, first by altering the constitution to weaken the court's power of review and then by forcing the resignation of several high-ranking members. In the 1990s, Mahathir promoted his economic plan, *The Way Forward* or *Vision 2020*, which proclaims that Malaysia will rank as a fully developed nation by the year 2020. Mahathir's *Vision* proposed a difficult economic growth rate that Malaysia has not been able to maintain. Nevertheless, Malaysia has prospered under Mahathir and the country's economic prospects remain solid.

MAHMUD OF GHAZNA (971?–1030), Afghan conqueror and emperor. Mahmud of Ghazna was an emperor during the Ghaznavid dynasty (977–1187) in Afghanistan. It was during his reign that the Ghaznavid dynasty amassed its greatest wealth and territory. The son of a Turkish slave who fled to Ghazni after a failed revolt against his masters, Mahmud rose to power by defeating his elder brother for control of Afghanistan and the Khorasan region of Iran. Using his military expertise, Mahmud extended his territory to the west and north of Afghanistan, as well as to the Punjab region. Mahmud led several raids into India, ransacking temples and converting the natives to Islam. With the wealth gained from his pillaging, he transformed his capital, Ghazni, into a cultural center, establishing universities and supporting scholars and poets; the well-known historians Al Biruni and Al Utbi, as well as the great poet Firdawsi (c. 935–c. 1020) were in residence at Ghazni. A devout Muslim, Muhammad also built a grand mosque. Mahmud died in 1130, after which the empire began a downward spiral until its dissolution in 1186.

MAHMUD SHAH (d. 1528), sultan of Melaka. The sudden death of Sultan Alauddin Riayat Shah (reigned 1477–1488) led to the installation of Mahmud Shah, his younger son and a nephew of the influential *bendahara* (prime minister) Tun Perak, who sought to perpetuate his dominance in the royal court by promoting the more pliant of the late sultan's sons.

Mahmud (reigned 1488–1511) was neither an able nor a forceful ruler. Philandering, obstinate, and impulsive, he left the affairs of state to Tun Perak and other ministers. Mahmud's ineptness notwithstanding, Melaka remained at the peak of its power, wealth, and prestige at the beginning of the sixteenth century, which attracted the covetous attention of the Portuguese.

In facing the Portuguese challenge, Melaka lacked strong leadership and mass support. Malay-Tamil rivalry resurfaced in court with the appointment of Tun Mutahir as *bendahara* in 1500, and intrigues and conspiracies led to his execution. The foreign mercantile community that dominated Melaka's trade and commerce—and hence its wealth—followed only its self-serving economic interests. The Melakan aristocracy shared in this wealth but little trickled down to the common people.

Despite a gallant defense by Mahmud and his son Ahmad, Melaka fell to the Portuguese in August 1511. Mahmud fled, initially to Muar, then to Pahang, and finally to Bintan in 1513. Between 1515 and 1524 he launched five campaigns to recapture Melaka but failed. He died in Kampar in 1528. His surviving sons, Muzaffar and Alauddin, established the Perak sultanate and the Johor-Riau empire, respectively.

MAILIN, BEIIMBET (1894–1938), Kazakh writer. Beiimbet Mailin was not only a writer but also a poet, a dramatist, and an educator in Soviet Kazakhstan. Born in the Kustanay region (now Qostanay) of Kazakhstan to a family of poor nomads, Beiimbet Mailin began his education in local religious schools when he was seven years old. In 1913 he started teaching at the local *madrasah* (seminary) in his native village. The same year he published his first poem, *Musylmandyq belgisi* (Notes of a Muslim) and continued to teach in various *madrasahs* and in the Russian-Kazak school in Kustanay. Following the 1917 Russian Revolution he was active in the Kazakh political party *Alash Orda*. After the Bolshevik victory in the Russian Civil War, he published his first full collection of poetry in 1923, and in 1926 he became the editor of *Qazaq Adebieti* (Kazakh Literature). During the 1920s and 1930s, he published some of his best-known works, including *Kommunistka Raushan* (The Communist Raushan) and the screenplay *Amangel'dy* (For the Noted Kazak Warrior). Between 1933 and 1936 his collected works were published in four volumes.

In 1938 he was arrested during the Stalinist purges and executed. His work was rediscovered in 1957, and a new six-volume edition of his collected works appeared between 1960 and 1964.

MAJAPAHIT Majapahit was the last medieval Hindu-Javanese empire to wield much influence in Southeast Asia. When emissaries from Mongol China appeared at Singhasari in 1289, the great warrior-king Kertanagara promptly arrested and expelled them. This provoked a punitive Chinese expedition to eastern Java in 1292; it arrived to find that Kertanagara had been killed in an uprising engineered by a prince of the displaced house of Kadiri. Kertanagara's son Vijaya was forced to flee to a village on the Brantas River named Majapahit (bitter fruit). Vijaya enlisted the support of the newly arrived Chinese forces to drive the Kadiri usurper out of Singhasari and recover the throne. He then compelled his Chinese supporters to withdraw and depart homeward.

The village of Majapahit became Vijaya's new capital. Gajah Mada was appointed prime minister in 1331, and under his direction Majapahit filled the political vacuum left by the fall of the Srivijaya empire and the dissolution of its temporary successor, Singhasari. As early as 1365, Majapahit could claim domination over most of Sumatra and the Malay Peninsula. Its hold on the latter extended as far north as Kedah, Langkasuka, and Pantai. Majapahit's influence extended to much of what now comprises Indonesia, extending to territories on the south and west coasts of Borneo, and to southern Celebes and the Moluccas. Some even claim that Majapahit power was felt as far away as the Indo-Chinese peninsula, in Siam, Cambodia, and Annam, though this is doubtful. The infiltration of Islam from the Straits of Malacca into the Southeast Asian archipelago gradually undermined the influence of Majapahit. In 1478 the Muslim coastal state of Demak invaded Majapahit itself, and by the late fifteenth century Majapahit was reduced to little more than an eastern Javanese state with a glorious past.

MAK YONG If "feminism" had been a term in the Malay court four hundred years ago, Mak Yong would have been seen as a feminist dance drama. This is because, except for the comedians, all parts were played (and still are today) by young women. The dance drama was meant for entertaining female royalty (queens and princesses) in the absence of their men when the latter were away at war. The "female space" was necessary to protect these women from falling into disgrace because their concerned husbands and fathers feared that they might commit immoral activities with male performers in their absence. The presence of women only was necessary to safeguard aristocratic honor. The women were free to do and say what they wanted without being conscious of male presence.

The dance originated in Patani (south Thailand) and spread southward into Kelantan in Malaysia. Mak Yong, originally performed as soul worshipping of ancestors, combines elements of romantic drama, dance, and operatic singing. There are no written texts, and hence no two performances are ever the same. The mu-

sic that accompanies the dance is played on a *rebab* (bowed lute), *tawak-tawak* (two hanging gongs), and *gendang* (two double-headed drums). There is a marked Middle Eastern flavor in the combination of a solo voice, a chorus, and musical instruments in Mak Yong.

A *parwang* (shaman) initiates the rituals of stage opening prior to a performance. The stories performed are from the old Malay tales, all of which are original and date back to the golden age of the Malay kingdoms of great culture and power. In the past, Mak Yong was a court entertainment, and the Malay Palace was the patron. Mak Yong would be performed four or five times a week at the royal residence. Today, Mak Yong has become a traditional drama for the common people.

MAKHAMBET UTEMISOV (1804–1846), Kazakh poet. Makhambet Utemisov (Maxambet Otemisuly) was a distinguished Kazakh poet and political activist. He is remembered for his leading part in the insurrection of the Kazakhs against the oppressive rule of the khan of the Inner Horde, Zhangir, as well as against Russian colonialism, in 1836–1837. The rebellion was crushed, and Makhambet had to flee with a price on his head. He was murdered in 1846.

Although Makhambet was sent to a Russian school in Orenburg, where he learned to read and write, his poetry stands in the tradition of oral Kazakh poetry. More than fifty poems attributed to him have been transmitted, some in writing, some orally. The first publication of one of his poems dates from 1908. Most of Makhambet's poems have a political and moral message, often protesting the unjustness of the khan's rule. In one directed against Khan Zhangir, Makhambet calls the khan a wolf, a snake, and a scorpion. A number of poems are of a warlike and heroic nature, some addressed to his companion-in-arms Isatay Taymanov. Makhambet also composed meditative poems (termed *tolghau* in Kazakh), on themes such as the decay of morals or the transience of human life.

MAKLI HILL One of the largest necropolises in the world, with a diameter of approximately 8 kilometers, Makli Hill is supposed to be the burial place of some 125,000 Sufi saints. It is located on the outskirts of Thatta, the capital of lower Sind until the seventeenth century, in what is the southeastern province of present-day Pakistan. Legends abound about its inception, but it is generally believed that the cemetery grew around the shrine of the fourteenth-century Sufi Hamad Jamali. The tombs and gravestones spread over the cemetery are material documents marking the social and political history of Sind.

Imperial mausoleums are divided into two major groups, those from the Samma (1352–1520) and Tarkhan (1556–1592) periods. The tomb of the Samma king, Jam Nizam al-Din (reigned 1461–1509), is an impressive square structure built of sandstone and decorated with floral and geometric medallions. Similar to this is the mausoleum of Isa Khan Tarkhan II (d. 1651), a two-story stone building with majestic cupolas and balconies. In contrast to the syncretic architecture of these two monuments, which integrate Hindu and Islamic motifs, are mausoleums that clearly show the Central Asian roots of the later dynasty. An example is the tomb of Jan Beg Tarkhan (d. 1600), a typical octagonal brick structure whose dome is covered in blue and turquoise glazed tiles. Today, Makli Hill is a United Nations World Heritage Site that is visited by both pilgrims and tourists.

MALAY STATES, UNFEDERATED Located on the Malay Peninsula in Southeast Asia, the Unfederated Malay States (UMS), were Johor, Kedah, Perlis,

Kelantan, and Terengganu. The main difference between the five UMS and the four Federated Malay States (FMS) was that British control was somewhat looser in the unfederated states. While British influence extended to all of the nine Malay states, which were ruled by sultans, internal government remained largely under the control of the traditional rulers. In each state, a British adviser was responsible to the British high commissioner. The four northern states of the UMS (except for Johor) were originally under the sphere of influence of Siam (now Thailand) and were among the poorest on the peninsula. In 1909, the king of Siam signed a treaty transferring the states to British control, but the sultans refused to join the FSM for fear of losing their de facto executive power; hence they maintained a modicum of independence. Johor also remained outside the FMS because its sultan, Abu Bakar, insisted on remaining independent.

The Union of Malaya, composed of the nine states of the USM and the FSM, was set up in 1946 and became the Federation of Malaya in 1948. In 1957, it achieved independence from Britain and joined the commonwealth. The next year, the name was changed to the Federation of Malaysia.

MALAY SULTANATE. See **Melaka Sultanate**.

MALAYAN EMERGENCY The Malayan Emergency was a reaction, through legal regulations, to counter the guerrilla war initiated by the Malayan Communist Party (MCP), led by Chin Peng, the party's secretary general, against the British Commonwealth administration and Malay forces. The war lasted from 1948 to 1960. The decision to undertake a guerrilla war was made by the MCP in response to British proposals for the Malayan Union Constitution and the 1948 Federation of Malaya agreement, which the MCP feared would put in place a strong anticommunist central government.

Political events elsewhere, such as Mao Zedong's guerrilla tactics against Chiang Kai-shek's forces in China, Indonesia's war with the Dutch government to gain independence, and the beginning of the Cold War between the Soviet Union and the United States, prompted the MCP to openly revolt against the British

in order to achieve independence and establish a communist Malaya. The MCP began attacking and terrorizing plantation workers and isolated estates, derailing trains, and burning workers' houses and buses. The Communists were jungle based and supported by the Chinese population, who lived mainly in cities and at the fringes of jungles. An underground organization called Min Yuen acted as a spy network and provided supplies, food, and information to the Communists.

A state of emergency was declared in parts of the states of Perak and Johore on 18 June 1948 by High Commissioner Sir Edward Gent after three British planters were found murdered in Sungai Siput, Perak. By 23 June, the whole country was in a state of emergency. The MCP, which had been legalized by the British at the end of World War II, was banned. The British also tried to thwart the Communists by establishing a national registration system. Those people without an identification card were considered illegal and were seen as Communist sympathizers. Furthermore, under the Briggs Plan (named for Sir Harold Briggs, a retired general appointed to coordinate and direct military and civilian operations during the emergency) to cut off interaction between the Min Yuen and the Chinese population of Malaya, the British resettled nearly 500,000 Chinese squatters from outlying areas to newly created and protected villages. This deprived the Communists of their supplies and information from the Chinese population. More important, the British used psychological warfare to win the "hearts and minds" of the population by seeking to unite the racially divided Malayan people to fight the Communist insurrection.

Other drastic measures taken by the British eventually cut off supplies and support to the Communists, who were trapped in the jungle and constantly hunted by British special forces. The Communists failed largely because of lack of support from the majority Malay community, who opposed the MCP due to its predominantly Chinese-based support. Eventually, the MCP tried to negotiate for peace at the Baling Talks of 1955, but the talks broke down because Chin Peng refused to dissolve the MCP. The MCP finally lost its struggle when Malaya was granted independence in 1957. The newly formed Malayan government declared the end of the emergency on 31 July 1960. The MCP surrendered on 2 December 1989 to the Malaysian government and agreed to terminate all activities.

MALAYAN PEOPLE'S ANTI-JAPANESE ARMY

The Malayan People's Anti-Japanese Army (MPAJA) was a guerrilla army that was part of the Malayan Communist Party (MCP). When Japan attacked Malaya in 1941, the MPAJA was the foremost local force carrying out guerrilla attacks against the Japanese. Because the Chinese population was harshly treated during the Japanese occupation of Malaya, the MPAJA membership consisted mostly of Chinese who were anti-Japanese. From 1942 onward, following their defeat in Singapore by the Japanese, the British forces in Malaya collaborated with the MCP by providing supplies and personnel with two objectives in mind: to train and equip the MPAJA to fight the Japanese and to prepare for an eventual Allied invasion of Malaya.

Even though the MPAJA was unsuccessful in driving the Japanese out of Malaya, it gained invaluable experience in guerrilla warfare and established a basis for future resistance against the British during the Malayan Emergency (1948–1960), a successful British counter, through civil, police, and military programs, to Communist insurrections. As part of the support network for independence, the fighters developed links with the rural communities on the fringes of the jungle. The MPAJA also constructed bases and hideouts in the jungle and accumulated a large quantity of weapons. When the war ended in 1945, the Japanese surrendered, and an Allied invasion of Malaya became unnecessary. In the same year, the MPAJA guerrilla fighters emerged from the jungle, and the British who returned to Malaya legalized the MCP. Unfortunately, MPAJA links with the rural community, as well as the training and weapons provided by the British, proved valuable to the MCP in fighting the British during the Malayan Emergency.

MALAYAN UNION Prior to World War II, Malaya (now Malaysia) comprised three different administrative governments: the Federated Malay States (Perak, Selangor, Pahang, and Negeri Sembilan), the Unfederated Malay States (Kedah, Kelantan, Perlis, Terengganu, and Johor), and the Straits Settlements (Melaka, Penang, and Singapore). During the Japanese occupation of Malaya, British authorities prepared a plan proposing a centralized government comprising these peninsular possessions, to be known as the Malayan Union.

The official arrangement of the Malayan Union was announced in a 1946 White Paper. Under this new system the Federated and Unfederated Malay States, and Melaka and Penang, were to be centralized under a British governor. Singapore, however, because of its strategic location, rapid economic development, and large Chinese population, was to remain a separate British colony. The centralized government was to consist of a governor, a legislature, and an executive board. The position of the Malay sultans would remain, although their sovereignty would be ceded by the British. Citizenship under the scheme offered equality of rights to all irrespective of race or creed, and also allowed dual citizenship.

The plan received widespread criticism and opposition from the Malays, the sultans, and also British officers who had served in Malaya, including Frank Swettenham and Sir George Maxwell. The Malays were reluctant to share their rights and political power with other peoples, namely the Chinese and the Indians. The sultans were dissatisfied with the way Sir Harold MacMichael, the British officer in charge, handled the negotiations: the sultans were coerced, threatened, and blackmailed.

As a result of this opposition about two hundred Malays representing forty-one associations gathered in Kuala Lumpur and formed the United Malays National Organization to protest the proposed Malayan Union. As a result of their efforts and criticism at

home the British government decided to scrap the proposal, replacing it with a milder plan to form the Federation of Malaya. The new proposal was seen as more palatable because citizenship is given to immigrants who have stayed more than ten years in Malaya. Apart from that, the sultans remain as leaders of Islam and Malay society.

MALAY-INDONESIAN LANGUAGE The national languages of Malaysia and Indonesia—Bahasa Malaysia and Bahasa Indonesia, respectively—are the Malay language as spoken in those countries; Malay is also spoken in Singapore and parts of the Philippines. In both Malaysia and Indonesia, knowledge of the language is necessary for gaining citizenship.

According to historical records, the rulers of the Srivijaya empire in Malaya used and popularized the Malay language in the seventh century, and it has remained the most important language of the archipelago ever since. Bahasa Malaysia and Bahasa Indonesia share common words, idioms, and roots, and both belong to the Western Malayo-Polynesian branch of Austronesian or Malayo-Polynesian, one of the world's largest language families. The Malay language is phonetic in character, with few prefixes and suffixes for verbs and nouns. It does not have gender, person, number, or tense, and verbs are not conditioned on the basis of conjugation, declension, or tense. Bahasa Malaysia and Bahasa Indonesia have been written with a common reformed spelling system since 1972.

Bahasa Malaysia

Malay as spoken in Malaysia—Bahasa Malaysia—is the national language and an important element in promoting nationalism and intracommunal harmony. Knowledge of the Malay language is essential for becoming a Malaysian citizen, and it is now the sole official language of the country. According to a census taken in 2000, in the total population of 22.3 million, Malays made up 66.1 percent, Chinese 25.3 percent, and Indians 7.4 percent. The Malaysian territories are more homogeneous than Indonesia, and Malay is used throughout the country. Although a significant number of Chinese and Indians speak other languages such

as Hakka, Mandarin Chinese, and Tamil, they have increasingly learned Bahasa Malaysia. The government of Malaysia has promoted English as a second language, and it is widely used in business and academic circles.

Britain, which ruled over the country as a colonial power, was more benevolent toward the Malays than were the Dutch toward Indonesians. The first Malay printing press was established in Malaya in 1848, and it published several works in Malay: autobiographies, studies of folk traditions, poetry, court chronicles, epics, the Qu'ran, other Islamic texts, and legal digests.

There was a resurgence of Malay nationalism during the Japanese occupation (1941–1945), when various publications in the Malay language awakened Malaysians to their subjugation and repression. Although some Malay authors of the era at first supported the Japanese occupation, they changed their emphasis after the end of the war and in 1948 founded an association, The Generation of 50, to promote the Malay language. The publication of essays, short stories, and novels analyzing issues of social concern were given prime importance at this time.

When the Federated Malay States became independent in 1957 and subsequently when the Federation of Malaysia emerged in 1963, the government declared Bahasa Malaysia the sole official language. This language is understood and spoken in all parts of the country, and no party or political group of significance questions its status in the national polity.

Bahasa Indonesia

In addition to Malay, more than 250 other languages or dialects are spoken in Indonesia; these include Acehnese, Batak, Sundanese, Javanese, Sasak, Tetum of Timor, Dayak, Minahasa, Toraja, Buginese, Halmahera, Ambonese, and Ceramese, all of which were influenced by Malay. Their vocabularies and idioms, like those of Bahasa Indonesia, have indigenized a number of words from Sanskrit, Arabic, Persian, Portuguese, Dutch, and English. The speakers of all these languages use Bahasa Indonesia as their lingua franca.

Bahasa Indonesia was systematized and organized in the twentieth century. At a youth congress held in Jakarta, Indonesia, in 1928, delegates pledged to promote Malay and to nurture it as their national language. Several political parties supported this resolution, and thereafter this language became the common medium for spreading revolutionary struggle.

The Japanese occupation actually fostered the acceptance of the Indonesian language. The conquerors banned the use of the Dutch language and ordered the

arrest of anyone speaking Dutch. The textbooks for primary and secondary education, which had previously been written exclusively in Dutch, were translated into Bahasa Indonesia. The Japanese thought that the use of the Indonesian language in schools and official proceedings would promote anti-Dutch sentiments and would aid in the eventual acceptance of the Japanese language. But the policy of replacing the Dutch language with Japanese was never carried out.

With Japanese support, scholars of the era established the Komisi Bahasa Indonesia (Commission for Indonesian Languages), which systematized the Indonesian language and published a literary magazine highlighting linguistic, cultural, and political issues. The commission simplified the spelling of words borrowed from Sanskrit, Arabic, Dutch, and English, which were pronounced and spelled differently in different parts of Indonesia.

Article 36 of the 1945 constitution of Indonesia declared Bahasa Indonesia the language of the state, although in 1959 President Sukarno (1901–1970) explained that areas of Indonesia possessing languages of their own were entitled to use them as well. Both

Presidents Sukarno and Suharto (b. 1921) nurtured the development of Bahasa Indonesia at the literary, academic, and official levels, not only as the language of Indonesians but as a bond to forge solidarity and kinship with the Malay world.

According to a 1990 census by the Central Bureau of Statistics, the use of Bahasa Indonesia falls into three categories: 15 percent use it for daily communication, 68 percent can speak it but do not use it every day, and 17 percent cannot understand it. The Indonesian government has set 2010 as the year in which all Indonesians will understand Bahasa Indonesia.

Survey of Asia's Regions and Nations

The *Encyclopedia of Modern Asia* covers thirty-three nations in depth and also the Caucasus and Siberia. We have divided Asia into five major subregions and assigned the thirty-three nations to each.

West and Southwest Asia

The West Asian nations covered in detail here are Turkey, Iran, and Iraq. Afghanistan and Pakistan form Southwest Asia, although in some classifications they are placed in Central and South Asia, respectively. Afghanistan, on the crossroads of civilizations for thousands of years, is especially difficult to classify and displays features typical of Central, West, and South Asia.

Despite diversity in language (Persian in Iran, Arabic in Iraq, Turkish in Turkey) form of government (theocracy in Iran, dictatorship in Iraq, and unstable democracy in Turkey) and international ties (Iran to the Islamic world, Iraq to the Arab Middle East, Turkey to the West), there are several sources of unity across West Asia. Perhaps the oldest is geographical location as the site of transportation routes between Europe and Central, East, and South Asia. Since ancient times, people, goods, wealth, and ideas have flowed across the region. In 2002 the flow of oil was most important, from the wells of Iran and Iraq through the pipelines of Turkey. Another source of unity is Sunni Islam, a major feature of life since the seventh century, although Iran is mainly the minority Shi'a tradition and there have long been Zoroastrian, Jewish, Christian, and Baha'i minorities in the region. Diversity is also evident in the fact that Turkey is a "secular" state while Iran is a theocracy, and in the conflict between fundamentalist and mainstream Islam in all the nations.

Another important common thread is the shared historical experience of being part of the Ottoman Empire and having to cope with British and Russian designs on their territory and, more recently, American influence. And, in the twentieth century, all three nations have sought to deal with the Kurdish minority and its demands for a Kurdish state to be established on land taken from all three nations.

Unity across Afghanistan and Pakistan is created by adherence to Sunni Islam (although there is a Shi'ite minority in Afghanistan) and the prominence of the Pash-tun ethnic group in each nation. Both nations also experienced British colonialism, although the long-term British influence is more notable in Pakistan, which had been

tied to India under British rule. West Asia is the only region in the world never colonized by Britain, although some experts argue that it did experience significant British cultural influence. In all nations resistance to external control—British, Russian, or United States—is another common historical experience.

Across the region (although less so in Afghanistan) is the stark contrast between the traditional culture and the modernity of liberation from imperial rule, still not complete across the region. This contrast is apparent in clothing styles, manners, architecture, recreation, marriage practices, and many elements of daily life.

In 2002 all the nations faced a water crisis of both too little water and water pollution. They all also faced issues of economic and social development, including reducing external debt, controlling inflation, reducing unemployment, improving education and health care, and continually reacting to the ongoing Arab-Israeli conflict, which exacerbates many of these problems. The governments also faced the difficult task of solving these problems while resisting Americanization and also while controlling internal political unrest. Political unrest is often tied to efforts at creating democratic governments and the persistence of elite collaboration with tyrannical governments.

Central Asia

Central Asia is known by many names, including Eurasia, Middle Asia, and Inner Asia. At its core, the region is composed of five states that became independent nations following the collapse of the Soviet Union in 1991: Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. Scholars sometimes include Afghanistan, Mongolia and the Xinjiang province of China within the label Central Asia. For this project, Central Asia is restricted to the five former Soviet countries, while Afghanistan is classified in Southwest Asia, and Mongolia and Xinjiang as part of East Asia. These states have a shared landmass of 1.5 million square miles, about one-half the size of the United States.

The region's unity comes from a shared history and religion. Central Asia saw two cultural and economic traditions blossom and intermix along the famed Silk Road: nomadic and sedentary. Nomadic herdsman, organized into kinship groupings of clans, lived beside sedentary farmers and oasis city dwellers. Four of the countries share Turkic roots, while the Tajiks are of Indo-European descent, linguistically related to the Iranians. While still recognizable today, this shared heritage has developed into distinct ethnic communities.

The peoples of Central Asia have seen centuries of invasion, notably the legendary Mongol leader Genghis Khan in the thirteenth century, the Russians in the nineteenth and the Soviets in the twentieth century. For better or worse, each invader left behind markers of their presence: the Arabs introduced Islam in the seventh century. Today Islam is the predominant religion in the region, and most Central Asians are Sunni Muslims. The Russians brought the mixed legacy of modernism, including an educated populace, alarming infant mortality rates, strong economic and political participation by women, high agricultural development, and environmental disasters such as the shrinking of the Aral Sea. It was under Russian colonialism that distinct ethno-national boundaries were created to divide the people of the region. These divisions largely shape the contemporary Central Asian landscape.

Today the five Central Asian nations face similar challenges: building robust economies, developing stable, democratic governments, and integrating themselves into the regional and international communities as independent states. They come to these challenges with varied resources: Kazakhstan and Turkmenistan have rich oil reserves; several countries have extensive mineral deposits; and the Fergana Valley is but one example of the region's rich agricultural regions.

Finally, the tragic events of September 11, 2001, cast world attention on Afghanistan's neighbors in Central Asia. The "war on terrorism" forged new alliances and offered a mix of political pressure and economic support for the nations' leaders to suppress their countries' internal fundamentalist Muslim movements.

Southeast Asia

Southeast Asia is conventionally defined as that subregion of Asia consisting of the eleven nation-states of Brunei, Cambodia, East Timor, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand, and Vietnam. Myanmar is sometimes alternatively classified as part of South Asia and Vietnam as in East Asia. The region may be subdivided into Mainland Southeast Asia (Cambodia, Laos, Myanmar, Thailand, and Vietnam) and Insular Southeast Asia (Brunei, East Timor, Indonesia, Philippines, and Singapore). Malaysia is the one nation in the region that is located both on the mainland and islands, though ethnically it is more linked to the island nations of Indonesia, Brunei, and the Philippines.

Perhaps the key defining features for the region and those that are most widespread are the tropical monsoon climate, rich natural resources, and a way of life in rural areas based on cooperative wet-rice agriculture that goes back several thousand years. In the past unity was also created in various places by major civilizations, including those of Funan, Angkor, Pagan, Sukhothai, Majapahit, Srivijaya, Champa, Ayutthaya, and Melaka. Monarchies continue to be significant in several nation—Brunei, Cambodia, Malaysia, and Thailand—today. Subregional unity has also been created since ancient times by the continued use of written languages, including Vietnamese, Thai, Lao, Khmer and the rich literary traditions associated with those languages.

The region can also be defined as being located between China and India and has been influenced by both, with Indian influence generally broader, deeper, and longer lasting, especially on the mainland, except for Vietnam and Singapore, where influences from China have been more important. Islamic influence is also present in all eleven of the Southeast Asian nations. Culturally, Southeast Asia is notable for the central importance of the family, religion (mainly Buddhism and Islam), and aesthetics in daily life and national consciousness.

In the post–World War II Cold War era, there was a lack of regional unity. Some nations, such as Indonesia under Sukarno, were leaders of the nonaligned nations. Countries such as Thailand and the Philippines joined the U.S. side in the Cold War by being part of the Southeast Asia Treaty Organization (SEATO). A move toward greater unity was achieved with the establishment of the Association of Southeast Asian Nations (ASEAN) in 1967, with the founding members being Indonesia, Malaysia, the Philippines, Singapore, and Thailand. Subsequently other Southeast Asian nations joined ASEAN (Brunei, 1984; Laos, Myanmar, and Vietnam 1997; Cambodia 1999). As of 2002, communism was still the system in Laos and Vietnam and capitalism in Brunei, Cambodia, East Timor, the Philippines Thailand, Indonesia, Malaysia and Singapore. Political, economic, and cultural cooperation is fostered by the Association of Southeast Asian Nations (ASEAN), with headquarters in Jakarta, Indonesia. Economically, all the nations have attempted to move, although at different speeds and with different results, from a reliance on agriculture to an industrial or service-based economy. All nations also suffered in the Asian economic crisis beginning in July 1997.

Alongside these sources of similarity or unity that allow us to speak of Southeast Asia as a region is also considerable diversity. In the past religion, ethnicity, and diverse colonial experience (British, Dutch, French, American) were major sources of diversity. Today, the three major sources of diversity are religion, form of government, and level of economic development. Three nations (Indonesia, Malaysia,

Brunei) are predominately Islamic, five are mainly Buddhist (Vietnam, Laos, Cambodia, Thailand, Myanmar), two are mainly Christian (Philippines and East Timor), and Singapore is religiously heterogeneous. In addition, there is religious diversity within nations, as all these nations have sizeable and visible religious minorities and indigenous religions, in both traditional and syncretic forms, also remain important.

In terms of government, there is considerable variation: communism in Vietnam and Laos; state socialism in Myanmar; absolute monarchy in Brunei; evolving democracy in the Philippines, Thailand, Cambodia, and Indonesia; and authoritarian democracy in Malaysia and Singapore. The economic variation that exists among the nations and also across regions within nations is reflected in different levels of urbanization and economic development, with Singapore and Malaysia at one end of the spectrum and Laos and Cambodia at the other. Myanmar is economically underdeveloped, although it is urbanized, while Brunei is one of the wealthiest nations in the world but not very urbanized.

In 2002, Southeast Asia faced major environmental, political, economic, and health issues. All Southeast Asian nations suffer from serious environmental degradation, including water pollution, soil erosion, air pollution in and around cities, traffic congestion, and species extinctions. To a significant extent all these problems are the result of rapid industrial expansion and overexploitation of natural resources for international trade. The economic crisis has hampered efforts to address these issues and has threatened the economies of some nations, making them more dependent on international loans and assistance from nations such as Japan, Australia, and China. The persisting economic disparities between the rich and the poor are actually exacerbated by rapid economic growth. Related to poverty is the AIDS epidemic, which is especially serious in Cambodia, Myanmar, and Thailand and becoming more serious in Vietnam; in all these nations it associated with the commercial sex industry.

Politically, many Southeast Asian nations faced one or more threats to their stability. Political corruption, lack of transparency, and weak civic institutions are a problem to varying degrees in all the nations but are most severe in Indonesia, which faces threats to its sovereignty. Cambodia and Thailand face problems involving monarch succession, and several nations have had difficulty finding effective leaders. Myanmar's authoritarian rulers face a continual threat from the political opposition and from ethnic and religious separatists.

In addition, several nations faced continuing religious or ethnic-based conflicts that disrupt political stability and economic growth in some provinces. The major conflicts involve Muslim separatists in the southern Philippines, Muslims and Christians in some Indonesian islands and Aceh separatists in northern Sumatra, and Muslims and the Karen and other ethnic groups against the Burman government in Myanmar. Since the economic crisis of 1997, ethnic and religion-based conflict has intensified, as wealthier ethnic or religious minorities have increasingly been attacked by members of the dominant ethnic group. A related issue is the cultural and political future of indigenous peoples, including the so-called hill tribes of the mainland and horticulturalists and former hunter-gatherers of the islands.

In looking to the future, among the region's positive features are the following. First, there is Southeast Asia's strategic location between India and China, between Japan and Europe, and between Europe and Oceania. It stands in close proximity to the world's two most populous countries, China and India. Singapore, the centrally located port in Southeast Asia, is one of two major gateways to the dynamic Pacific Basin (the other is the Panama Canal). Second, there is the region's huge population and related economic market, with a total population approaching that of one half of China's. Indonesia is the world's fourth most populous nation. Third, there is enor-

mous tourist potential in sites and recreational locales such as Angkor Wat, Bali, Borobudur, Phuket, and Ha Long Bay. Fourth, there is the region's notable eclecticism in borrowing from the outside and resiliency in transcending tragedies such as experienced by Cambodia and Vietnam. Fifth, there is the region's significant economic potential: Southeast Asia may well have the world's highest-quality labor force relative to cost. And, sixth, there is the region's openness to new technologies and ideas, an important feature in the modern global community.

South Asia

South Asia is the easiest region to demarcate, as it is bounded by the Hindu Kush and Himalayan ranges to the north and the Bay of Bengal and Arabian Sea to the south. It contains the nation-states of Bangladesh, Bhutan, India, Nepal, and Sri Lanka and the more distant island nations of the Maldives and Mauritius. Myanmar and Pakistan, which are considered part of South Asia in some schemes, are here classified in Southeast Asia and Southwest Asia, respectively.

While the region is diverse economically, culturally, linguistically, and religiously, there is unity that, in some form, has existed for several thousand years. One source of unity is the historical influence of two major civilizations (Indus and Dravidian) and three major religions (Hinduism, Buddhism, and Islam). Regionally, Sikhism and Jainism have been of great importance. There is also considerable economic unity, as the majority of people continue to live by farming, with rice and especially wet-rice the primary crop. In addition, three-quarters of the people continue to live in rural, agricultural villages, although this has now become an important source of diversity, with clear distinctions between urban and rural life. A third source of unity is the caste system, which continues to define life for most people in the three mainland nations. Another source of unity is the nature and structure of society, which was heavily influenced by the several centuries of British rule. A final source of political unity in the twentieth century—although sometimes weakened by ethnic and religious differences—has been nationalism in each nation.

South Asia is diverse linguistically, ethnically, religiously, and economically. This diversity is most obvious in India, but exists in various forms in other nations, except for the isolated Maldives, which is the home of one ethnic group, the Divehi, who are Muslims and who have an economy based largely on tourism and fishing.

The dozens of languages of South Asia fall into four major families: Indo-European, Austroasiatic, Dravidian, and Tibeto-Burman and several cannot be classified at all. Because of its linguistic diversity, India is divided into "linguistic" states with Hindi and English serving as the national languages.

Hinduism is the dominant religion in South Asia, but India is the home also to Buddhism, Jainism, and Sikhism. India also has over 120 million Muslims and the world's largest Zoroastrian population (known in India as Parsis) and Bangladesh is a predominately Muslim nation. India also has about twenty-five million Christians and until recently India had several small but thriving Jewish communities. Nepal is mainly Hindu with a Buddhist minority, and Bhutan the reverse. Sri Lanka is mainly Theravada Buddhist with Hindu, Muslim, and Christian minorities. Mauritius, which has no indigenous population, is about 50 percent Hindu, with a large Christian and smaller Muslim and Buddhist minorities.

Linguistic and religious diversity is more than matched by social diversity. One classification suggests that the sociocultural groups of South Asia can be divided into four general and several subcategories: (1) castes (Hindu and Muslim); (2) modern urban classes (including laborers, non-Hindus, and the Westernized elite); (3) hill tribes of at least six types; and (4) peripatetics.

Economically, there are major distinctions between the rural poor and the urban middle class and elite, and also between the urban poor and urban middle class and elite. There are also significant wealth distinctions based on caste and gender, and a sizeable and wealthy Indian diaspora. There is political diversity as well, with India and Sri Lanka being democracies, Bangladesh shifting back and forth between Islamic democracy and military rule, the Maldives being an Islamic state, and Nepal and Bhutan being constitutional monarchies.

In 2002, South Asia faced several categories of issues. Among the most serious are the ongoing ethnic and religious conflicts between Muslims and Hindus in India, the conflict between the nations of Pakistan and India; the ethnic conflict between the Sinhalese and Sri Lankan Tamils in Sri Lanka; and the conflict between the Nepalese and Bhutanese in both nations. There are also various ethnic separatist movements in the region, as involving some Sikhs in India. The most threatening to order in the region and beyond is the conflict between India and Pakistan over the Kashmir region, as both have nuclear weapons and armies gathered at their respective borders.

A second serious issue is the host of related environmental problems, including pollution; limited water resources; overexploitation of natural resources; destruction and death caused by typhoons, flooding, and earthquakes; famine (less of a problem today), and epidemics of tropical and other diseases. The Maldives faces the unique problem of disappearing into the sea as global warming melts glaciers and raises the sea level. Coastal regions of Bangladesh could also suffer from this.

There are pressing social, economic, and political issues as well. Socially, there are wide and growing gaps between the rich and middle classes and the poor, who are disproportionately women and children and rural. Tribal peoples and untouchables still do not enjoy full civil rights, and women are often discriminated against, although India, Sri Lanka, and Bangladesh have all had women prime ministers. Economically, all the nations continue to wrestle with the issues involved in transforming themselves from mainly rural, agricultural nations to ones with strong industrial and service sectors. Politically, all still also struggle with the task of establishing strong, central governments that can control ethnic, religious, and region variation and provide services to the entire population. Despite these difficulties, there are also positive developments. India continues to benefit from the inflow of wealth earned by Indians outside India and is emerging as a major technological center. And, in Sri Lanka, an early 2002 cease-fire has led to the prospect of a series of peace negotiations in the near future..

East Asia

East Asia is defined here as the nations of Japan, South Korea, North Korea, China, Taiwan, and Mongolia. It should be noted that Taiwan is part of China although the People's Republic of China and the Republic of China (Taiwan) differ over whether it is a province or not. The inclusion of China in East Asia is not entirely geographically and culturally valid, as parts of southern China could be classified as Southeast Asian from a geographical and cultural standpoint, while western China could be classified as Central Asian. However, there is a long tradition of classifying China as part of East Asia, and that is the approach taken here. Likewise, Mongolia is sometimes classified in Central Asia. As noted above, Siberia can be considered as forming North and Northeast Asia.

Economic, political, ideological, and social similarity across China, Korea (North and South), and Japan is the result of several thousand years of Chinese influence (at times strong, at other times weak), which has created considerable similarity on a base of pre-existing Japanese and Korean cultures and civilizations. China's influence was

greatest before the modern period and Chinese culture thus in some ways forms the core of East Asian culture and society. At the same time, it must be stressed that Chinese cultural elements merged with existing and new Korean and Japanese ones in ways that produced the unique Japanese and Korean cultures and civilizations, which deserve consideration in their own right.

Among the major cultural elements brought from China were Buddhism and Confucianism, the written language, government bureaucracy, various techniques of rice agriculture, and a patrilineal kinship system based on male dominance and male control of family resources. All of these were shaped over the centuries to fit with existing or developing forms in Korea and Japan. For example, Buddhism coexists with Shinto in Japan. In Korea, it coexists with the indigenous shamanistic religion. In China and Korea traditional folk religion remains strong, while Japan has been the home to dozens of new indigenous religions over the past 150 years.

Diversity in the region has been largely a product of continuing efforts by the Japanese and Koreans to resist Chinese influence and develop and stress Japanese and Korean culture and civilization. In the twentieth century diversity was mainly political and economic. Japanese invasions and conquests of parts of China and all of Korea beginning in the late nineteenth century led to hostile relations that had not been completely overcome in 2002.

In the post-World War II era and after, Taiwan, Japan, and South Korea have been closely allied with the United States and the West; they have all developed powerful industrial and postindustrial economies. During the same period, China became a Communist state; significant ties to the West and economic development did not begin until the late 1980s. North Korea is also a Communist state; it lags behind the other nations in economic development and in recent years has not been able to produce enough food to feed its population. In 2002 China was the emerging economic power in the region, while Taiwan and South Korea hold on and Japan shows signs of serious and long-term economic decline, although it remains the second-largest (after the United States) economy in the world. Mongolia, freed from Soviet rule, is attempting to build its economy following a capitalist model.

Politically, China remains a Communist state despite significant moves toward market capitalism, North Korea is a Communist dictatorship, Japan a democracy, and South Korea and Taiwan in 1990s seem to have become relatively stable democracies following periods of authoritarian rule. Significant contact among the nations is mainly economic, as efforts at forging closer political ties remain stalled over past grievances. For example, in 2001, people in China and South Korea protested publicly about a new Japanese high school history textbook that they believed did not fully describe Japanese atrocities committed toward Chinese and Koreans before and during World War II. Japan has refused to revise the textbook. Similarly, tension remains between Mongolia and China over Mongolian fears about Chinese designs on Mongolian territory. Inner Mongolia is a province of China.

Major issues with regional and broader implications are the reunification of Taiwan and China and North and South Korea, and threat of war should reunification efforts go awry. Other major regional issues include environmental pollution, including air pollution from China that spreads east, and pollution of the Yellow Sea, Taiwan Strait, and South China Sea. A third issue is economic development and stability, and the role of each nation, and the region as a unit, in the growing global economy. A final major issue is the emergence of China as a major world political, economic, and military power at the expense of Taiwan, South Korea, and Japan, and the consequences for regional political relations and stability.

Overview

As the above survey indicates, Asia is a varied and dynamic construct. To some extent the notion of Asia, as well as regions within Asia, are artificial constructs imposed by outside observers to provide some structure to a place and subject matter that might otherwise be incomprehensible. The nations of Asia have rich and deep pasts that continue to inform and shape the present—and that play a significant role in relations with other nations and regions. The nations of Asia also face considerable issues—some unique to the region, others shared by nations around the world—as well as enormous potential for future growth and development. We expect that the next edition of this encyclopedia will portray a very different Asia than does this one, but still an Asia that is in many ways in harmony with its pasts.

David Levinson (with contributions from Virginia Aksan, Edward Beauchamp, Anthony and Rebecca Bichel, Linsun Cheng, Gerald Fry, Bruce Fulton, and Paul Hockings)

MALAYSIA-PROFILE (2001 est. pop. 22.2 million). An independent federation in Southeast Asia, Malaysia is a constitutional monarchy whose capital is Kuala Lumpur, and whose major ports are Penang city and Klang. Its total area is 329,750 square kilometers.

Malaysian Territories, Geography, and Climate

Malaysia consists of two parts: West Malaysia, also called Peninsular Malaysia or Malaya, on the Malay Peninsula, including the states of Perlis, Kedah, Pinang, Perak, Kelantan, Terengganu, Pahang, Selangor, Negeri Sembilan, Melaka (Malacca), and Johor, and coextensive with the former Federation of Malaya and one federal territory, Wilayah Persekutuan, which is coextensive with the city of Kuala Lumpur; and East Malaysia, including the island states of Sabah and Sarawak (the former British colonies of North Borneo and Northwest Borneo) on the island of Borneo and two federal territories, Putrajaya and the island of Labuan. The two parts are separated by about 640 kilometers of the South China Sea.

West Malaysia borders Thailand on the north and Singapore on the south (separated by the narrow Johore Strait), with the South China Sea on the east and the Strait of Malacca and the Andaman Sea on the west. East Malaysia is bordered on the north by the South China Sea and the Sulu Sea, on the east by the Celebes Sea, and on the south and west by Kalimantan (Indonesian Borneo). Along the coast in Sarawak is the independent nation of Brunei.

Both East and West Malaysia have coastal plains and narrow, steep mountains in the interiors. In Peninsular Malaysia the Main Range, or Banjaran Titiwangsa, runs from the Thai border southward to

Negeri Sembilan. The highest point is in Sabah—Mount Kinabalu (4,101 meters). The longest rivers in the country are the Rajang (approximately 760 kilometers) in Sarawak, the Kinabatangan (560 kilometers) in Sabah, and the Pahang (322 kilometers) in West Malaysia.

Lying close to the equator, Malaysia has a tropical, rainy climate with high temperatures and high humidity. Nearly three-fourths of the land area is covered with tropical rainforest. Rice cultivation is practiced throughout the country.

Ethnic Mix

West Malaysia, with more than 80 percent of the total population of Malaysia, is more densely populated than East Malaysia. Most of the population of East Malaysia is concentrated on the west coast, which is economically more developed. Of the total population, about 60 percent are of Malay or indigenous descent, over 30 percent are Chinese, and some 10 percent are Indian or Pakistani. In West Malaysia, Malays make up about one-half of the population, Chinese one-third, and Indians and Pakistanis one-tenth. In East Malaysia, the two largest groups are the Chinese and the Iban (Sea Dayaks), an indigenous people, who together make up about three-fifths of the total population. Conflict between the ethnic groups, particularly between Malays and Chinese, has played a defining role in Malaysian political history.

Religion and Language

Islam is the religion of about half the people of Malaysia and is the official religion; nearly all Malays are Muslims. The Chinese are largely Buddhist,

MALAYSIA

Area: 329,750 sq km
Population: 22,229,040 (July 2001 est.)
Population growth rate: 1.96 % (2001 est.)
Birth rate: 24.75 births/1,000 population (2001 est.)
Death rate: 5.2 deaths /1,000 population (2001 est.)
Net migration rate: 0 migrant(s)/1,000 population (2001 est.)
Sex ratio—total population: 1.01 male(s)/female (2001 est.)
Infant mortality rate: 20.31 deaths/1,000 live births (2001 est.)
Life expectancy at birth—total population: 71.11 years, male: 68.48 years, female: 73.92 years (2001 est.)
Major religions: Islam, Buddhism, Taoism, Hinduism, Christianity, Sikhism; Shamanism is practiced in East Malaysia
Major languages: Bahasa Melayu (official), English, Chinese dialects (Cantonese, Mandarin, Hokkien, Hakka, Hainan, Foochow), Tamil, Telugu, Malayalam, Panjabi, Thai
Literacy—total population: 83.5 %, male: 89.1 %, female: 78.1 % (1999 est.)
Government type: constitutional monarchy
Capital: Kuala Lumpur
Administrative divisions: 13 states and 2 federal territories
Independence: 31 August 1957 (from U.K.)
National holiday: Independence Day/Malaysia Day, 31 August (1957)
Suffrage: 21 years of age; universal
GDP—real growth rate: 8.6% (2000 est.)
GDP—per capita (purchasing power parity): \$10,300 (2000 est.)
Population below poverty line: 6.8% (1997 est.)
Exports: \$97.9 billion (2000 est.)
Imports: \$82.6 billion (2000 est.)
Currency: ringgit (MYR)

Confucian, or Taoist, and the Indians are mostly Hindu. Christianity is also embraced by a small minority, and in Sabah and Sarawak the indigenous peoples generally follow traditional beliefs.

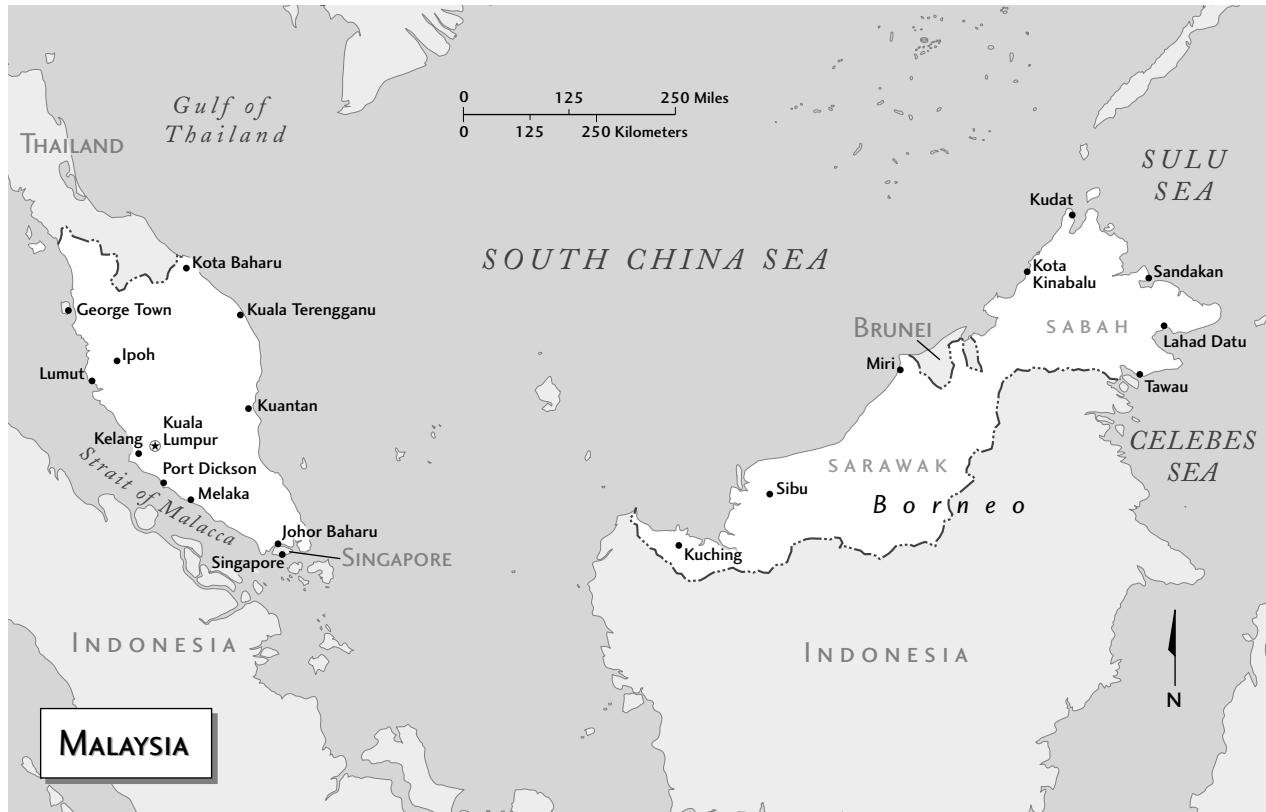

Bahasa Malaysia (Melayu), based on the Malay language, is the country's official language. Other principal languages are English, Chinese, and Tamil, an Indian language. Education is free between the ages of six and nineteen years. Primary education is provided in the four major languages, with English as the compulsory second language. Malaysia's institutions of higher education have increased to twelve in recent years. They include Universiti Kebangsaan Malaysia (National University of Malaysia) and the University of Malaya in Kuala Lumpur, Universiti Sains Malaysia

in Pulau Pinang, International Islamic University, University of Technology, and Universiti Utara.

Economy

The Malaysian economy is based principally on the production of raw materials for export, including petroleum, rubber, tin, and timber. The country also has significant textile and electronic-equipment industries. It has been one of the fastest-growing economies in Southeast Asia, largely because of its steadily expanding manufacturing, industrial, and electronic sectors, which propelled the country to an 8 to 9 percent yearly growth rate from 1987 to 1992.

During the early 1990s the Barisan government, dominated by the United Malay National Organiza-

tion and including the Malaysian Chinese Association, the Malaysian Indian Congress, and other parties representing ethnic groups, privatized large industries that had been under state control, but there were allegations of political corruption and nepotism in awarding privatization contracts. The Asian financial crisis of 1997 slowed the economic development of the country, but it quickly recovered toward the end of the 1990s as a result of the introduction of capital-control measures aimed at creating stable domestic conditions along with price stability.

The major cities on the Malay Peninsula are connected by railroads with Singapore, and an extensive road net covers the west coast, with the North-South Highway forming a main artery. The country has six international airports—Kuala Lumpur, Pulau Pinang, Kota Kinabalu, Johor Bahru (Senai), Kuching, and Tawau.

Government

Malaysia is a federal constitutional monarchy with a parliamentary democracy. The Malaysian constitution is derived from the constitution of the Federation of Malaya, which was promulgated on Merdeka (Independence) Day, 31 August 1957. The constitution of the Federation was the product of a constitutional

commission consisting of constitutional experts from Australia, India, and Pakistan. The Malaysian head of state is the king (the Yang di-Pertuan Agong), who is elected every five years by the nine hereditary rulers of Perlis, Kedah, Perak, Kelantan, Terengganu, Pahang, Selangor, Negeri Sembilan, and Johor. The king appoints the cabinet, headed by the prime minister, who must be a member of the cabinet and have the confidence of the house of representatives (Dewan Ra'ayat). The prime minister is the chief executive officer of the government and has tremendous power of patronage.

The parliament has two chambers. In 2000, the house consisted of 180 members, all elected by popular vote in single-member districts. Representatives of the lower house are popularly elected for five-year terms. Legislative power is divided between the federal and state legislatures. Senators serve for six years. Two senators are elected by each state legislature, and the rest are appointed by the head of state. Malaysia has universal adult suffrage.

Political Parties

The leading national political organization of Malaysia is the National Front, a multiracial coalition of thirteen parties. Its predecessor was the Alliance Party; in one incarnation or the other it has controlled the gov-

ernment since 1957. It is dominated by the United Malay National Organization, with the Malaysian Chinese Association, GERAKAN (the Malaysian People's Movement Party), and the Malaysian Indian Congress as other major parties. Other major opposition parties include the Democratic Action Party, the Pan-Malayan Islamic Party, and the Justice Party.

Legal System and International Associations

The Malaysian legal system reflects British influence as it adheres closely to the Westminster model of the U.K. parliament. It has two houses of parliament, namely the elected House of Representatives and the appointed House of Lords. The king is the supreme head of the government, assisted by the prime minister and the cabinet ministers. The judicial system consists of lower courts at urban and rural centers, two high courts having original and appellate jurisdiction, and a supreme court. Certain civil and domestic matters are under the jurisdiction of Islamic courts.

Malaysia is a member of the United Nations and many of its specialized agencies, such as the World Bank, International Monetary Fund, and the General Agreement on Tariffs and Trade. It also has membership in the Asian Development Bank, the Commonwealth of Nations, the Five-Power Defense Arrangement, the Movement of Nonaligned Nations, and the Association of Southeast Asian Nations.

MALAYSIA—ECONOMIC SYSTEM Malaysia, consisting of peninsular Malaysia (Malay Peninsula) and East Malaysia (Sabah and Sarawak), came into being as a political entity in 1963. The nation has experienced various economic systems from the maritime-based trading empire of the Malay sultanate of Melaka of the fifteenth century to the mixed-market economy of the late twentieth century.

Melaka, established in the early 1400s by a Majapahit refugee prince, was a maritime-based trading power with hegemony over the Malay Peninsula and central Sumatra. The Malay-Hindu rulers of Melaka embraced Islam, which was consistent with Melaka's

role as a port serving the East-West trade then under Muslim domination that stretched from the Red Sea to the Indian Ocean. Melaka's control of the Malacca Strait was the key to its economy in the long-distance East-West commerce in spices from the Moluccas (Spice Islands) to Venice. Described as the emporium par excellence, Melaka functioned as an entrepôt for the products of Southeast Asia and China in exchange for manufactures from India and Europe.

Trade was the lifeblood of fifteenth-century Melaka. The sultan, at the apex of the ruling hierarchy, derived his income from trade. Commercial tribute was exacted in a number of forms, namely as import and export tax on trade goods passing through the seaport, fees paid by merchants for the license to trade in selected commodities, and harbor dues imposed on vessels passing through the Malacca Strait. Melaka's navy enforced the sultan's pretensions. Although the palace engaged to a limited extent in direct trading, commercial activities were largely in the hands of foreign merchants (Arabs and Chinese), who were accorded trading rights by the sultan in return for tribute. The sultanate ensured an environment conducive to trade by maintaining law and order, security from piracy, provision of infrastructure facilities (for example, warehouses for storage of goods), and standardization of weights and measures. Barter trading coexisted with a fairly developed monetized economy.

Paralleling Melaka, the Malay sultanate of Brunei emerged as the dominant power over the northwestern part of Borneo (present-day Sabah and Sarawak) from the fifteenth to the seventeenth century. Brunei derived its power and wealth from trade with the Malay Archipelago and southern China. The Brunei ruler, at best, had only nominal overlordship over the coastal regions, where Brunei *pangeran* (chieftains) located at river mouths controlled and exacted commercial tribute. The *pangeran* possessed little authority over the various ethnic communities, who owed allegiance to none but themselves. The indigenous peoples of the interior engaged in subsistence cultivation of hill rice and root crops complemented by hunting and gathering of jungle produce; others, like the Penan, led a nomadic existence relying exclusively on hunting and gathering. In the coastal areas, the native peoples collected sea produce and swamp sago and fished. Although certain jungle and sea produce supplied the China trade, the majority of the inhabitants lived in subsistence-farming communities.

The Coming of the Portuguese

Melaka's preeminence in trade made it a coveted possession of European imperialists. Melaka featured

FIVE LARGEST COMPANIES IN MALAYSIA

According to *Asia Week*, the five largest companies in Malaysia are the following:

Company	Sector	Sales (\$ millions)	Rank in Asia
Petroleum Nasional	Oil, Gas, Refining	19,302.9	51
Tenaga Nasional	Energy	3,610.3	368
Sime Darby	Trading, Commodities	3,147.3	426
Malaysian Airline	Air Transport	2,356.9	567
Telekom Malaysia	Telecommunications	2,319.9	579

prominently in Portuguese expansionist goals and subsequently fell in 1511. The Malay ruling house fled to Johor in the southern part of the peninsula and attempted in vain to recapture Melaka. The Portuguese at Melaka continued the entrepôt trade in spices and other Southeast Asian products for the European market based at Lisbon. Like their predecessor, the Portuguese acquired commercial tribute in the form of import and export tax and harbor dues from trading vessels passing the Malacca Strait.

The transformation of Melaka from a Muslim to a Catholic entrepôt center under Portuguese control witnessed a resuscitated prosperity for Brunei as some of the Muslim mercantile elite relocated their commercial operations there. Other Muslim traders moved to the northern Sumatran Muslim port of Aceh.

Meanwhile, on the Malay Peninsula there emerged Malay sovereign principalities, such as Pahang and Perak, possessing ties with the former Melakan sultanate. These were followed later by Selangor and other states. The ruling elite of the peninsular Malay states imitated Melaka's economic system, albeit on a much lesser scale, by establishing hegemony over river systems. Unlike the sultan of Melaka, who had supreme control over his chiefs, rulers of Malay states possessed little authority over territorial chiefs, who might be more powerful than the rulers themselves. The sultan and the chiefs occupied strategic positions at river mouths and confluences to tax river-based commerce. As in Melaka, commercial tribute was the main source of income for the ruling class of the Malay states.

The livelihood of the Malay peasantry revolved around the production of rice. Where flat alluvial plains were abundant in the coastal areas, permanent

sedentary wet-rice cultivation was the chief means of subsistence; in the hilly interior, cultivation of hill rice predominated. It is uncertain if land rent was imposed by Malay rulers on their *rakyat* (peasant producers); it was, however, commonplace for the ruling class to act in an arbitrary manner toward the peasantry, such as by confiscating their produce without compensation. Furthermore, the peasantry was subjected to *corvée* (*kerah*), the forced labor demanded by the palace. Owing to the rapacious character of the ruling class and *kerah*, peasant cultivation was limited to subsistence and a little surplus for exchange (rice for cloth or salt). There was no capital investment in peasant production nor innovation or technical progress.

The economic situation in the Malay States, including Melaka, did not exhibit capitalist relations of production, namely involving the exploitation of free wage labor. The existence of slavery and debt-bondsmen and *kerah* afforded the needed labor required by the ruling class and worked against the emergence of a class providing free wage labor. Although capital existed, often in its usurious form, there was little capital investment in agrarian productive activities; likewise, commercial capital was negligible until the nineteenth century.

The Coming of the Dutch and the British

Denied access to Lisbon for spices, Dutch traders ventured to the Malay Archipelago themselves. By 1641, the Dutch seized Melaka from the Portuguese and sought to impose their monopolistic trade practices in the region. Attempts to exact a monopoly over the tin trade in the western Malay states proved problematic. The main focus of Dutch mercantilist ambition, however, was to make Batavia (Jakarta) in Java, and not Melaka, the center of the spice trade. The

Vereenigde Oostindische Compagnie (VOC, Dutch United East Indies Company), through force and treaty arrangements, asserted its political and economic hegemony over the entire Malay Archipelago. Meanwhile, the advent of the Spaniards in the Philippines from the mid-sixteenth century and the ascendance of the VOC in Java served to weaken Brunei's commercial and political power, which began to wane in the seventeenth century.

During the eighteenth century, individual English country traders and others associated with the English East India Company (EIC) vied against the VOC for control of the trade throughout the Malay Archipelago. EIC priorities were in the China trade. Circumstances in the last quarter of the eighteenth century—the Anglo-French struggle in India and the Anglo-Dutch rivalry in the Malay Archipelago—pressured the EIC to secure a land base on the western shores of the Malay Peninsula for naval and commercial purposes. In 1786, the EIC acquired Penang to protect British interests in the Strait of Malacca, the prime sea route to China.

Championing the principles of free trade, the British declared Penang a free port. Penang attracted Chinese merchants and European planters. Penang enjoyed moderate success as an entrepôt and port of call for the China trade. The opening of Singapore in 1819 by the EIC was an unqualified success; within a brief period, Singapore became the ultimate entrepôt port for the British in the Malay Archipelago. Both Penang and Singapore were collecting centers for Southeast Asian products for exchange in the lucrative China trade in tea and silks. Both these British free ports had a sizeable Chinese mercantile population.

Anglo-Dutch rivalry in the Malay Archipelago culminated in an agreement signed at London in 1824 that delineated spheres of influence between the British and the Dutch, with present-day Malaysia falling in the British sphere and Indonesia in the Dutch. In exchange for Bengkulu, the British acquired Melaka. In 1826, the British coordinated the administration of Penang, Melaka, and Singapore, which became the Straits Settlements that primarily served the British China trade.

Meanwhile, in the 1820s, Chinese from southwestern Borneo crossed into the mineral-rich upper Sarawak area to work the alluvial gold at and around Bau. The discovery of antimony ore in the vicinity brought Brunei's attention to the area. Forced labor was exacted from the local population to work the antimony. Disaffection with Brunei resulted in a revolt in the late 1830s. James Brooke, an English gentleman-adventurer, intervened to end the trouble. In

return the Brunei ruler proclaimed Brooke raja of Sarawak in 1841.

Tin had long been produced in small quantities in the Malay Peninsula. However, the discovery of large alluvial tin in Larut, Perak, in the late 1840s ushered in large-scale capitalist production of tin. Whereas in the past Malay chiefs relied on slaves and debt-bondsmen to undertake the mining, the chiefs now farmed out mines in return for a lump sum to Chinese entrepreneurs from the Straits Settlements, who in turn recruited labor from southern China. Chinese by the thousands entered the western Malay states of Perak, Selangor, and Sungei Ujong (later Negeri Sembilan). British capitalist investors represented through the agency houses (trading firms) in Penang and Singapore invested in tin mining owing to tin's high demand in the expanding Western tin-plating industry.

Unsettling conditions in the tin-producing Malay states throughout the 1850s and 1860s—marked by political and economic disputes among Malay chieftains, clashes between rival Chinese groups over tin concessions, and the pirate menace off the coast—combined to disrupt tin production and its trade. By the early 1870s, it became imperative on the part of the British to stabilize the troubled situation, thereby ensuring an uninterrupted supply of tin for the Western market, in which British capitalists had a substantial stake. The 1874 Pangkor Engagement opened the door for the imposition of British colonial rule over the Malay Peninsula. Pax Britannica over the Malay Peninsula was complete following the conclusion of the Anglo-Siamese treaty of 1909, which brought the northern peninsular Malay states of Kedah, Perlis, Kelantan, and Terengganu into the British colonial system.

Attempts to colonize North Borneo (Sabah) beginning in the 1850s culminated in the establishment of the British North Borneo Chartered Company (BNBCC) in 1881. Both the sultanates of Brunei and Sulu that possessed nominal sovereignty over Sabah's western and eastern parts, respectively, relinquished their rights to BNBCC.

British Malaya

Capitalist exploitation of the natural resources of British Malaya (the peninsular Malay states and the Straits Settlements) began in earnest from the last quarter of the nineteenth century and throughout the first half of the twentieth century. Tin and rubber were the main focus of the colonial economy of British Malaya, primarily fueled by British capital and immigrant (Chinese and Indian) labor. The colonial state sought to provide the necessary infrastructure, partic-

ularly in transportation (rail and road) and legislation to regulate smooth exploitation of resources aimed at facilitating maximum returns for entrepreneurs for their investments.

In the tin industry, Chinese capital and labor predominated from the mid-nineteenth century to the first decade of the twentieth century. In order to ensure success in mining ventures, Chinese capital (mainly from the Straits Settlements) utilized a variety of means for exercising control over Chinese labor through recruitment systems, kinship links, provincial connections, and operation of the powerful politico-socioeconomic organization of the *bui* (brotherhood). From the 1890s, the colonial state passed legislation (for example, in labor recruitment) to weaken the control of Chinese capital over Chinese labor and, at the same time, promoted British mining capital. By the first decade of the twentieth century, most of the surface alluvial tin deposits had been exhausted, resulting in greater financial investment for access to the deeper deposits via mechanization, namely utilizing the tin dredge. Under the circumstances and with greater resources, British capital that enjoyed support from the colonial state dominated the tin industry (mining, smelting, and trade).

Chinese miners exploited the gold fields of upper Sarawak. The Brooke government operated the Sadong collieries from the 1860s for local consumption. Owing to Brooke's pronative policies and an aversion to Western capital, only the Borneo Company Limited (BCL), a British company, was given the privilege to tap the mineral resources of the nation (antimony, mercury, and later gold). The BCL utilized new technology such as the cyanidization process for gold extraction. By the turn of the twentieth century, the BCL dominated the mining industry in upper Sarawak, whereas Anglo-Dutch Shell monopolized the petroleum industry from the time it sank Sarawak's first oil well in 1910 at Miri. Despite the Brooke government's cautionary stance toward Western capitalist ventures, the mining sector was solely controlled by British capital. The majority of the labor force in Sarawak's extractive industry was drawn from immigrant Chinese recruited from southern China.

The Rubber Industry

As in the extractive industries, British capital was favored by the colonial state in commercial agriculture in British Malaya. Several cash crops—spices, sugarcane, tapioca, and coffee—were tried during the nineteenth century, but it was rubber (*Hevea brasiliensis*) that paid handsome dividends to shareholders during its boom years early in the twentieth century. The

A fisherman and a crowded fishing boat in Kota Kinabalu, Sabah, Malaysia. (NIK WHEELER/CORBIS)

agency houses played a pivotal role in convincing British capital to invest in rubber during the late 1890s and early 1900s. Falling coffee prices, coupled with blight in the industry, paved the way for the emergence of rubber as the premier plantation crop. The expansion of the American auto industry during the first decade of the twentieth century dramatically pushed up the demand for plantation rubber. The colonial state again rendered almost exclusive support for British capital, which invested in thousands of acres of rubber estates. The colonial state not only improved upon the transport system already in place for the tin industry but also conveyed the best available land for rubber to British capital and invested in research to improve the rubber industry. The colonial state coordinated the recruitment of immigrant labor from southern India to offer a cheap and plentiful supply of workers for the hundreds of British-owned estates.

On a lesser scale, the rubber industry in Sabah developed along lines similar to those in British Malaya, with the company lending full support and granting privileges to British capital not unlike the preferential treatment it had accorded to European tobacco planters in the nineteenth century. In contrast, the Brooke government blocked the entry of Western capital into the state. Instead, family-owned native and Chinese rubber smallholdings were the rule, with a handful of European-owned large estates being the exception.

In addition to rubber, Sarawak exported pepper and gambier, which were grown by Chinese smallholders. Sabah was one of the major producers and exporters of tropical hardwoods, largely worked by British capital and Chinese labor.

In British Malaya, the agricultural policy of the colonial state worked against the Malay peasantry. It

WAWASAN 2020

Wawasan 2020 or Vision 2020 is the ambitious vision of Malaysia's longest-serving prime minister, Mahathir Mohamad. It was launched in 1991. Through this vision Mahathir aspires to see Malaysia an industrialized nation by the year 2020. Ideally, he wants to see Malaysia become a great country equipped to compete effectively in the information age.

One of the goals is to have Malaysia double its gross national product every ten years so that by the year 2020 Malaysia's economic output will be eight times what it was in 1990. However, the 1997 financial crisis that struck the entire Asian region, including Malaysia, could be a setback in meeting these goals.

With this vision in mind, the prime minister has launched a series of ambitious infrastructure projects to help Malaysia realize its goals. Among these are the Express Rail Link, Kuala Lumpur City Center, Kuala Lumpur International Airport (replacing the former Subang International Airport), Kuala Lumpur Sentral, Multimedia Super Corridor, Putrajaya, and many other large projects.

The vision is based on the nine challenges that are facing the nation as defined by Mahathir. They are:

[E]stablishing a united Malaysian nation with a sense of common and shared destiny. . . .

[C]reating a psychologically liberated, secure, and developed Malaysian Society with faith and confidence in itself. . . . This Malaysian Society must be distinguished by the pursuit of excellence. . . .

[F]ostering and developing a mature democratic society, practising a form of mature consensual, community-oriented Malaysian democracy that can be a model for many developing countries.

[E]stablishing a fully moral and ethical society, whose citizens are strong in religious and spiritual values and imbued with the highest of ethical standards.

[E]stablishing a mature, liberal and tolerant society in which Malaysians of all colours and creeds are free to practise and profess their customs, culture and religious beliefs and yet feeling that they belong to one nation.

[E]stablishing a scientific and progressive society, a society that is innovative and forward-looking. . . .

[E]stablishing a fully caring society and a caring culture, a social system in which society will come before self. . . .

[E]nsuring an economically just society. . . .

[E]stablishing a prosperous society, with an economy that is fully competitive, dynamic, robust and resilient. (Mahathir 2002)

Mala Selvaraju

was the expressed aim of the colonial state to maintain a Malay yeoman peasantry engaged in food crop (mainly rice) production to meet the consumption needs of the large and increasing immigrant labor force in the capitalist sector (mining and commercial agriculture). The goal of this policy was to minimize the outflow of foreign exchange in payment of rice and other food imports. In line with this policy, the colonial state discouraged rubber cultivation by the peas-

antry, for example, by restricting rubber cultivation on certain lands, such as Malay Reservation Land. Notwithstanding the official preference for large rubber estates managed by British capital, there emerged a considerable number of Malay smallholdings. These smallholdings suffered continuous discrimination by the pro-estate stance of the colonial state, particularly during the implementation of restriction schemes during the 1920s and 1930s.

The Effects of the Great Depression and World War II

The production and export of commodities—tin, gold, petroleum, rubber, timber—made British Malaya, Sabah, and Sarawak players in the world economy with its vicissitudes of price booms and slumps. Whereas British Malaya and Sabah, on a lesser scale, suffered severe dislocations during the Great Depression (1929–1931), Sarawak braved the depression years with minimal repercussions. British Malaya was dealt a crushing blow with the forced closing of mines and estates, widespread and massive layoffs of workers, repatriation of Indian and Chinese laborers, and bankruptcies. The extent of suffering mirrored the extent of involvement of British Malaya in the world economy. Owing to the restrictions placed by the Brooke government on large capitalist ventures and the continuous discouragement of rubber monoculture by native and Chinese smallholders, Sarawak experienced little economic dislocation. Sarawak's indigenous peoples, who had never discarded their subsistence mode of livelihood, were deprived of only the extra income derived from the sale of rubber.

The wartime economy during the three years and eight months of Japanese military occupation (1941–1945) of British Malaya, Sabah, and Sarawak was focused on food-crop production aimed at food self-sufficiency. Notwithstanding the relentless efforts largely achieved through coercion, there were widespread shortages of food, especially rice. Worst hit was the urban population, which had always relied on imported foodstuffs. Subsistence-based rural communities fared better during the occupation. The tin and rubber industries came to a halt during the war years. The Japanese managed to reactivate petroleum production at Miri despite scorched-earth tactics implemented prior to the Japanese landings. By 1944, the Japanese attained almost half the prewar output.

Malaysia after Independence

Sabah and Sarawak became British Crown colonies in 1946. In 1957, Malaya attained independence, excluding Singapore, which remained a British Crown colony. In 1963, Singapore, Sabah, and Sarawak joined the Federation of Malaya to form Malaysia. Two years later, Singapore seceded from Malaysia.

Malaysia's economic landscape experienced dramatic changes in the postcolonial period. The market economy of the nation at the time of independence was largely dependent on the production and export of primary commodities—tin, rubber, petroleum, and timber. At the same time, a conspicuous feature of the economy was a large concentration of indigenous peo-

ples (Malays in Peninsular Malaysia and the various native communities in Sabah and Sarawak) in the subsistence agricultural sector, with nonindigenous groups (mainly Chinese) playing pivotal roles in the modern rural and urban sectors.

Several major policy shifts were made in agricultural and industrial development during the four decades after independence. The immediate postindependence period was devoted to diversifying the agricultural and industrial bases, which during the colonial period had focused on the monoculture of rubber and the processing of raw materials for the world market. Oil palm cultivation was introduced in the early 1960s as an alternative to rubber. Growth in palm oil production was spectacular; by the mid-1990s, Malaysia accounted for half of world production. Cacao production expanded promisingly throughout the 1980s; by the early 1990s, cacao became the fourth most important agricultural commodity after palm oil, timber, and rubber. Sabah accounted for more than 86 percent of the nation's total cacao output. Whereas Sabah led in timber production and export during the colonial period, Sarawak took the lead in the 1960s. In the last quarter of the 1990s, Sarawak accounted for 36 percent of total timber production, Peninsular Malaysia 24 percent, and Sabah 20 percent.

Initially the strategy for industrial development was to promote import-substituting industrialization, which was pursued after independence until the late 1960s. Then, in the early 1970s, industrial policy was shifted to emphasize export-oriented industrialization whereby manufactures were added to the list of exports that hitherto comprised raw materials, hence broadening the ties to the world economy. During the 1980s, policy was shifted to emphasize the manufacturing sector. Consequently, by 1987, manufacturing overtook agriculture as the lead growth sector. The major manufactured exports then were electronic and electrical products, chemical products, wood-based and fabricated metal products, textiles and clothing, and transport equipment. The 1990s witnessed another reorientation in Malaysia's economy. In an effort to transform Malaysia into an industrialized nation by the year 2020, a strategic shift was undertaken to replace low-skill, low-value-added output with high-skill, high-value-added output. After the early 1970s, foreign direct investments were greatly encouraged through various incentives (free-trade zones, tax exemptions, and so on).

The extractive industries that had long relied on the tin industry shifted to petroleum and natural gas in the 1970s. Offshore oil and gas fields in Terengganu, Sabah, and Sarawak boosted the mineral sector, which

by the late 1990s accounted for 40 percent of industrial production. Tin output has steadily declined since the 1980s.

The New Economic Policy (NEP), launched in 1970, focused on two objectives. First, the NEP sought to reduce and eventually eradicate poverty, regardless of ethnicity, by increasing income levels and generating employment opportunities. Second, the NEP sought to restructure Malaysian society to correct economic imbalances between racial groups and uneven geographical development, thereby gradually eliminating the identification of race with economic function. At the end of the scheduled twenty-year period of the NEP, its achievements were encouraging. In 1991, the New Development Policy (NDP), which laid the basis of Malaysia's Vision 2020 program, was inaugurated to attain industrialized status for the nation by the year 2020. Emphasis was placed on the manufacturing sector to propel the economy forward; its share of exports was expected to increase to more than 90 percent by 2020. But the regional economic crisis of 1997–1998 has set back Vision 2020 by at least a decade.

MALAYSIA—EDUCATION SYSTEM Education and society in Malaysia, as in other nations, are inherently linked. The form of Malaysia's educational system can be traced to the era of British colonialism starting at the beginning of the nineteenth century. The impact of colonialism was twofold. First, under British rule, Malaya (Malaya was the preindependence [1957] term and Malaysia the postindependence one) developed into a multiethnic society, incorporating Chinese and Indians (brought to the colony primarily as laborers) within the indigenous Malayan society. Educational policies have since been highly influenced by this social structure. Second, Malaysia's educational system bears a heavy imprint of Britain's.

Today the Malaysian education system is a reasonably successful one, responding to the demands for equity among the different ethnic groups as well as the needs of a rapidly developing economy. The literacy rate is 84 percent, the figures for males and females being 89 percent and 79 percent, respectively. Primary school enrollment is above 90 percent for both males and females, while enrollment at the secondary level is 66 percent for females and 58 percent for males, presumably reflecting the higher labor force demands on males. At the tertiary level enrollment is 11 percent overall.

Religious education is found under the rubric "moral education," which allows for religious instruction without offending any specific ethnic group. The Malay language (Bahasa Malaysia) and English are compulsory subjects, with the latter recently receiving increasing attention. The other subjects taken at the secondary level depend on what options are chosen in addition to the usual required academic subjects—commercial studies, home science, agricultural science, and industrial arts.

Education in the Colonial Era

By the end of the colonial era in the 1950s, Malaya had four distinct educational systems. One was the English system, a result of the increasing need, from the late nineteenth century, for more English-speaking people to work in commerce and government. The other three, following the ethnic divisions in Malaya, were vernacular schools for the Malays, Chinese, and Indians. Whereas the vernacular schools provided ba-

A Muslim teacher writing in Arabic on the blackboard in a school on Pangkor Island in 1997. (EARL & NAZIMA KOWALL/CORBIS)

sic education in the Malay language or a Chinese or Indian dialect, the English system aimed at higher educational levels and was the path for upward mobility in the colony. It was not possible to attain higher education in the vernacular schools.

Education in Malaya after World War II

After World War II, British policy was oriented toward self-determination for Malaya. The primary purpose of the new educational system was to develop a common sense of identity among the peoples of Malaya with a view to furthering social stability following the granting of independence.

The Education Act of 1961 was one of compromise. Although the vernacular school system was retained, the Malay language was made compulsory as a subject and it became apparent that a long-term goal of the government was to make Malay the language of instruction for all children in Malaya—it would be the new national language (Bahasa Malaysia). In this regard, English was relegated to a secondary position for political reasons, although basic British educational structures, including the examination system, were retained.

Communal riots following the 1969 federal election led to significant social and economic changes in Malaysia, and issues related to language and education were of particular importance. Malay claims for parity became the basis for policy formulation. With regard to the medium of instruction in schools, the

minister of education announced a timetable for the progressive implementation of Bahasa Malaysia in all schools beginning in 1970 (it had become the nation's official language in 1967). This was a critical issue because, as in the past, ability in English had dominated access to higher education and therefore employment prospects and socioeconomic mobility.

The revised educational policies were set out in the New Economic Policy (NEP), the aims of which were included in the Second Malaysia Plan (SMP) of 1970–1975. The goal was to raise the socioeconomic circumstances of the Malay population and thereby dampen ethnic and racial frictions within Malaysia. An integral part of the NEP was a program designed to raise the number of *bumiputras* (meaning "sons of the soil," referring for the most part to ethnic Malays but including a small number of other indigenous groups) in the universities in Malaysia. A quota system in favor of the Malays was therefore established.

Ethnic Groups and Tertiary Places in Contemporary Context

The NEP has been quite effective at redressing the imbalances. This trend differs considerably from the trend early in the twentieth century, when non-*bumiputras* were overrepresented in the system in general, education in the English medium in particular, and later at the tertiary level (college or university level). However, the ethnic quotas—which were

adopted initially to redress Malay underrepresentation in universities and which were administered by implementing a requirement of higher entry marks for Chinese and Indians—resulted in the Malays being overrepresented in tertiary institutions.

Malaysia's educational system reflects a history of British colonialism, not only in the basic form of its structures, but also in the fact that educational policies are a response to the multiethnic society created under British colonialism. Although vernacular schools continue to function, funded primarily by private means, the educational system is dominated by publicly funded institutions in which Bahasa Malaysia is the medium of instruction. Recently there has been increased concern over the decline in the quality of students' English, and it appears that this language is enjoying a resurgence in the educational system.

The Malaysian government faces a dilemma in its policies. On the one hand, it must satisfy demands from the Malays for a greater role in the economy of the nation. To this end, the government has given this group preferential treatment in terms of access to higher education. On the other hand, if too many restrictions are placed on the other ethnic groups in terms of access to a reasonable share of the wealth of the nation, including entrance to tertiary institutions, communal tension could again build up. Moreover, non-*bumiputras* still play a dominant role in the economy of the nation. If people from this group feel that the restrictions placed on them are too great, they may emigrate, taking their skills and assets with them. Those who cannot emigrate are likely to become frustrated in the extreme. One safety valve for middle-class ethnic Chinese and Indians has been access to tertiary education in foreign branch campuses in Malaysia or educational institutions in other nations.

MALAYSIA—HISTORY Malaysia is one of the most developed countries in Southeast Asia, surpassed in per capita income only by Singapore and the small but oil-rich sultanate of Brunei Darussalam. In developing its economy, Malaysia traditionally relied on commodity exports of rubber, tin, palm oil, and petroleum. More recently, however, it gained competitiveness in export manufactures, especially in the electronics sector. Malaysia's mines and plantations have thus been transformed into urban high-rises, industrial estates, and middle-class housing tracts.

Over the past few decades, this rapid economic development has distinguished Malaysia in the region, capturing the attention of economists seeking strategies for eradicating poverty, as well as foreign investors searching for markets. But Malaysia has also confronted—and in some measure overcome—other challenges. For example, political struggles and great social pressures have periodically tested the country's democratic procedures, first introduced during the final phase of British colonialism. Yet unlike many other former British possessions, Malaysia has managed to perpetuate at least some of its formal democratic structures, including regular elections and a reasonably competitive party system. On the social level, Malaysia has often been characterized as a "plural" or "divided" society, with ethnic rivalries forming principally between Malays and Chinese. Ethnic imbalances and resentments have been alleviated over time, however, through a program of affirmative action known as the New Economic Policy, while some sense of cross-ethnic unity has been forged through a new notion of *bangsar Malaysia* (Malaysian race).

In 1997–1998, Malaysia's record of economic development was challenged by the financial crisis that struck Asia. The government responded imaginatively, if somewhat heretically, with capital controls that enabled Malaysia to recover more rapidly than neighboring countries that conformed to the dictates of the International Monetary Fund (IMF). Nonetheless, as

KEY EVENTS IN MALAYSIA'S HISTORY

- 15th century** The Melaka sultanate flourishes.
- 1511** Melaka is captured by the Portuguese, then the Dutch.
- 1824** The Dutch trade Melaka to the British, who combine it with Singapore and Penang to form the Straits Settlements.
- 1941-1945** Malaya is controlled by the Japanese.
- 1946** The United Malays National Organization is founded.
- 1957** British colonial rule ends.
- 1963** Malaya federates with Singapore, Sarawak, and Sabah to form Malaysia.
- 1965** Singapore becomes an independent nation.
- 1960s** Ethnic politics emerges as a major issue.
- 1969** The riots known as the May Thirteenth incident take place.
- 1970s** The New Economic Policy is enacted.
- 1981** The government under Mahathir becomes more repressive.
- 1980s-1990s** The economy grows rapidly.
- 1997-1998** The economy falters during the Asian economic crisis.

the twenty-first century dawned, Malaysia's industrial development was once again under strain as the contraction of the global economy reduced the demand for electronics goods. At the same time, the military action against the Taliban in Afghanistan quickened the pace of Islamic resurgence; although Islamic leaders cast their renewed fervor in nonracial terms, they still threatened to rekindle social unrest.

It is these features, then, that give Malaysia greater significance on the world scene than its population suggests. It has developed rapidly over the past few decades, earning a World Bank ranking as a middle-income country. It has preserved enough democratic procedures that its politics can be understood as a stable semidemocracy. And its pluralistic society, while not having converged in tight nationalist unity, displays much tolerance and accommodation.

Colonial Legacies and Independence

In precolonial times, the societies found on what is today the west coast of peninsular Malaysia reached their apogee in the fifteenth century, forming a maritime empire known as the Melaka sultanate. In 1511, however, Melaka was captured by the Portuguese, then seized by the Dutch. In 1824, it was traded to the British, who were already established in the port cities of Singapore and Penang. During the final quarter of the nineteenth century, the British used these three coastal outposts, known collectively as the Straits Settlements, to move deeper into the peninsula, gaining

control over the tin trade (which flourished thanks in part to new food-canning technologies that had developed during the U.S. Civil War) and rubber plantations (markets for rubber latex having emerged with the introduction of the pneumatic tire). British colonialists also ranged farther afield into north Borneo, which included the territories of Sarawak, the sultanate of Brunei, and what would later be christened Sabah.

Beyond the Straits Settlements, the British practiced "indirect rule" on the peninsula, relying upon local Malay sultans and aristocrats to exercise traditional forms of authority over the indigenous population. In order to perpetuate these social patterns and the political deference they encouraged, the British insulated the indigenous community from new economic undertakings. Hence, to operate the rapidly expanding tin mines and rubber plantations, the British recruited large numbers of immigrant workers, mainly from south China and India. Although the Chinese thus entered the economy's modern sectors and occasionally amassed great personal fortunes, they were viewed as sojourners without political rights. In this way, the politically sovereign but collectively poor Malays were counterbalanced by the economically empowered but politically disenfranchised Chinese. Most Indians remained both poor and disenfranchised, subsisting as tappers on often-remote rubber plantations. Meanwhile, behind the facade of traditional Malay sovereignty and indirect rule, British civil servants administered the territory through a deeply penetra-

tive bureaucratic apparatus. And atop the labor of Chinese tin miners and artisans, British investors and managers reaped the benefits of increasingly large-scale commercial activities.

At the start of World War II, the Japanese occupied Malaya, disrupting the complex ethnic balance that had been perpetuated by the British. In particular, the Japanese encouraged the political aspirations of Malay aristocrats, who could set their sights on the bureaucratic positions opened up by the flight or internment of British officials. At the same time, the Japanese neglected the wider Malay community and harshly discriminated against the Chinese. This triggered some Chinese guerrilla resistance, fortified by ethnic resentments and Marxist ideology.

After the war the British returned, and having conceptualized Malay wartime behaviors as collaborative, proposed a new governing arrangement, known as the Malayan Union. In this scheme, the standing of Malay sultans would be sharply diminished, while the Chinese would be rewarded with full citizenship and political rights. The Malay community was soon roused from its torpor, first protesting the Malayan Union, then forming a variety of organizations that cohered in 1946 under the leadership of Dato Onn bin Jaafar (1895–1962) as the United Malays National Organization (UMNO). The British then dropped the union proposals, thereby precipitating a new militancy among the Chinese, which gained force through the Malayan Communist Party (MCP), which launched an insurgency known popularly as the Emergency.

The British responded to the Emergency with a two-track approach, first mounting a counterinsurgency that was distinguished by innovative techniques. But they sought also to forge a moderate Chinese political party, one whose leaders could compete with the MCP for Chinese loyalties and effectively interact with leaders of the UMNO. To this end the British recruited a prominent Chinese businessman, Tan Cheng Lock (1883–1960), and assisted him in forming the Malayan (later Malaysian) Chinese Association (MCA). They also convened a series of Community Liaison Committee meetings through which elite-level cooperation could be forged across ethnic lines. In this way, the British encouraged both the competitive party organizations and interpersonal restraint that would make peaceful yet meaningful elections possible.

During the 1950s, the British introduced a staggered series of electoral contests, proceeding from local to national levels. In the course of waging these contests, the UMNO and the MCA formed a winning

coalition called the Alliance. These parties also recruited a third partner, the Malayan (later Malaysian) Indian Congress. Within this coalition, UMNO remained pivotal. However, the MCA and the MIC attracted significant support from the Chinese and Indian communities, respectively, thus bolstering the Malay support won by the UMNO. The Communist insurgency subsided, democratic procedures took root, and the party system grew more firmly institutionalized, encouraging the British to decolonize Malaya in 1957. The country grew in size in 1963, when the peninsula merged with Singapore, Sarawak, and Sabah, thereby transforming Malaya into Malaysia. Singapore departed from the new federation two years later, however, in somewhat acrimonious circumstances.

During the 1960s, the Alliance continued to flourish, winning parliamentary elections in 1964 and most state-level contests. However, as urbanization took place, many Malay rice farmers and fishermen gathered on the fringes of the cities, there to observe the market activities and relative prosperity of the Chinese. In these circumstances, many Malays turned gradually from UMNO to an opposition party, the more stridently ethnic Pan-Islamic Party of Malaysia (PAS). Many Chinese voters, equally alienated by what they viewed as the compromising outlook of the MCA, turned to new Chinese parties in opposition, the Democratic Action Party and the Gerakan Rakyat Malaysia (Malaysian People's Movement). Thus, when general elections were held on 10 May 1969, the Alliance won at the federal level, but with a much reduced majority in parliament. It was also defeated outright in several state assemblies.

In these circumstances, the Malay community contemplated the erosion of UMNO preeminence. Many Chinese, for their part, responded by celebrating the rise of the opposition. Three days after the election, street confrontations broke out between Chinese and Malays in the capital of Kuala Lumpur; these caused significant loss of life and extensive property damage, an event that is locally recorded as the May Thirteenth incident. After diagnosing the loss of Malay support for the government and the causes of the rioting, UMNO leaders began to restructure Malaysia's democratic political system and the largely free-market economy.

The Present

In order to renew its grip on state power, the UMNO coopted PAS and Gerakan into its ruling coalition, rechristening the Alliance as the Barisan Nasional ("National Front"). In expanding its coalition, the UMNO further heightened its own standing while effectively di-

FORMING A UNIFIED MALAYA

After World War II the British resumed control in Malaya and proposed a new governing arrangement, known as the Malayan Union. The scheme included granting citizenship to residents as set forth in the 1948 Federation of Malaya Agreement below and weakening the authority of the sultans.

Agreement dated the twenty-first day of January, 1948, and made between Sir Gerard Edward James Gent . . . on behalf of His Majesty and the [nine rulers of Johore, Pahang, Negri Sembilan, Selangor, Perak, Kedah, Perlis, Kelantan, and Trengganu]:

Whereas it has been represented to His Majesty that fresh arrangements should be made for the peace, order and good government of the Malay States of Johore, Pahang, Negri Sembilan, Selangor, Perak, Kedah, Perlis, Kelantan and Trengganu, the Settlement of Penang and the Settlement of Malacca:

And whereas His Majesty in token of the friendship he bears towards their Highnesses, the subjects of Their Highnesses, and the inhabitants of the Malay States, is pleased to make fresh arrangements as aforesaid to take effect on such day as His Majesty may, by Order in Council; appoint . . . :

And Whereas His Majesty has accordingly entered into a fresh agreement with each of Their Highnesses . . . for the purpose of ensuring that power and jurisdiction shall be exercised by Their several Highnesses in their several States and it is in each of such Agreements provided that it shall come into operation on the appointed day:

And Whereas it seems expedient to His Majesty and to Their Highnesses that the Malay States, the Settlement of Penang and the Settlement of Malacca should be forced

into a Federation with a strong central government and that there should be a common form of citizenship in the said Federation to be extended to all those who regard the said Federation or any part of it as their real home and the object of their loyalty:

And Whereas it is the desire of His Majesty and Their Highnesses that progress should be made towards eventual self-government, and, as a first step to that end, His Majesty and Their Highnesses have agreed that, as soon as circumstances and local conditions will permit, legislation should be introduced for the election of members to the several legislatures to be established pursuant to this Agreement:

Now, Therefore, it is agreed and declared as follows:

1. There shall be established a Federation comprising the Malay States, the Settlement of Penang and the Settlement of Malacca, to be known as the Federation of Malaya . . .

Provided that His Majesty and Their Highnesses the Rulers reserve to themselves the power by mutual agreement from time to time to admit within the Federation any other territory or territories as they shall see fit.

2. His Majesty shall have complete control of the defence and of all the external affairs of the Federation and undertakes to protect the Malay States from external hostile attacks, and for this and other similar purposes, His Majesty's Forces and persons authorised by or on behalf of His Majesty's Government shall at all times be allowed free access to the Malay States and to employ all necessary means of opposing such attacks.

minishing opposition forces. Furthermore, a series of constitutional amendments and sedition laws were passed, effectively prohibiting criticisms of the ruling coalition's policies by the opposition in parliament, while truncating civil liberties more broadly.

After Mahathir Mohamad (b. 1925) became prime minister in 1981, additional controls were incrementally imposed on free communication and assembly and were enforced through regular applications of preventive detention under the Internal Security Act, first

People march in the 31 August 1999 parade in Merdeka Square, Kuala Lumpur, marking the 42nd National Day after independence from British rule in 1957. (AFP/CORBIS)

introduced in 1960 as a way to control Communists. Indeed, amid a leadership challenge mounted from within the UMNO in 1987, Mahathir ordered the detention of over a hundred opposition leaders and members of nongovernmental organizations, an exercise known as Operation Lallang. He also brought an independent judiciary to heel, replacing many of its judges with more compliant functionaries.

The extent to which the judiciary had become subservient to the executive was made plain a decade later, during a challenge to Mahathir mounted by his deputy, Anwar Ibrahim (b. 1947). Amid the regional economic crisis of 1997–1998, forces aligned with Anwar tried to discredit Mahathir at a UMNO party assembly. In a highly publicized case that attracted the attention of legal observers from around the world, Mahathir expelled Anwar from the party and the cabinet, while his attorney-general brought charges against Anwar of corruption and sexual misconduct. Although the evidence appeared scant, Anwar was convicted and sentenced to fifteen years in prison. Meanwhile, security forces suppressed a broad-based movement for political reform that had been triggered by Anwar's downfall.

The New Economic Policy

After the May Thirteenth incident, the UMNO not only consolidated its political grip, but also entered deeply into the economy in order to reenergize its sup-

port among its ethnic Malay constituencies. The UMNO introduced a series of quotas on public and private employment, the distribution of equity ownership, and the issuance of state contracts, credit, and business licenses that heavily favored the Malays. This affirmative-action program, known as the New Economic Policy (NEP), is one of the most systematic programs of cross-ethnic redistribution ever attempted.

During the 1970s, when NEP quotas were most rigorously enforced, the Chinese community grew proportionately alienated, and many people emigrated. But over time, many members of the Malay community grew sophisticated in business dealings, while a new urban Malay middle class emerged. Hence, while the NEP doubtless fueled corruption in the UMNO, spawning a series of financial abuses and scandals, it appeared to mitigate ethnic Malay resentment. In this context, many Chinese came grudgingly to recognize NEP's social benefits. Put simply, with greater equality between ethnic communities established, violence on the scale of May thirteenth has never recurred in Malaysia. Furthermore, as part of Malaysia's Vision 2020 program for full economic and social development, Mahathir heralded the formation of a new national identity, with Malays and Chinese converging as *bangsawan Malaysia*.

Greater ethnic forbearance in Malaysia was encouraged not only by redistribution, but also by Malaysia's rapid industrialization. During the 1970s, the ineffi-

ciencies associated with NEP quotas were offset by the discovery and export of natural gas. And from the late 1980s to the late 1990s, the economy grew through foreign investment in Malaysia's electronics-manufacturing sector. Indeed, Malaysia attained some of the highest growth rates in the world during this decade, helping sustain new business conglomerates, a burgeoning middle class, relative ethnic harmony, and even a new nationalist identity and pride. It was during this time that Malaysia celebrated its achievements with a number of grand projects, including the world's tallest building, the Petronas Twin Towers.

During 1997–1998, however, the economic crisis that swept Asia halted Malaysia's record of development. Unlike other national leaders, however, who turned to the IMF for support, Mahathir invoked a series of capital controls that pegged the national currency to the U.S. dollar, banned the currency's offshore trading, and blocked the repatriation of capital gains by foreign investors. Despite attracting much international criticism, these measures were cheered by local businesspeople and consumers. Moreover, they appeared to promote faster economic recovery in Malaysia than IMF strictures facilitated in neighboring countries.

Nonetheless, Malaysia, like most of Asia, was beset by new economic difficulties in 2001, with global markets for electronics exports and tourism shrinking dramatically. Unemployment increased commensurately, rekindling social pressures. However, Malaysia's new nationalist identity appeared in some degree to take hold; social tensions were manifest less in terms of renewed conflict between the Malay and Chinese communities than between UMNO members and the more stridently Islamist PAS.

MALAYSIA-POLITICAL SYSTEM A former British colony, Malaysia attained independence on 31 August 1957. The nation is a federation of thirteen states, governed by a Westminster-style parliamentary system. It includes the nine states of peninsular Malaya and the two Borneo territories of Sabah and Sarawak. The population is approximately twenty-five million, 52 percent of whom are ethnic Malays, 35 percent ethnic Chinese, and 10 percent Indians.

Paramount Ruler

The head of state, the paramount ruler, is one of nine hereditary sultans who serve rotating five-year terms; he is constitutionally required to act with the advice of the prime minister. The paramount ruler is elected by the conference of rulers, which includes the nine hereditary sultans and four appointed governors and meets three to four times a year.

Parliament

There is a bicameral parliament consisting of a non-elected upper house and a popularly elected lower house. The senate, or Dewan Negara, has sixty-nine seats, forty-three of which are appointed by the paramount ruler and twenty-six by the state legislatures. The house of representatives, or Dewan Rakyat, has 193 seats; members are elected by popular vote to serve five-year terms. Malaysia has universal suffrage for all adults over twenty-one years of age. The electoral system is weighted toward the rural Malay population.

Head of Government

The head of the government is the prime minister, who is chosen from among the members of the house of representatives. Following legislative elections, the leader of the party that wins a plurality of seats in the house of representatives becomes prime minister and appoints a cabinet. The prime minister is in charge of day-to-day governance. Beneath the prime minister is a cabinet made up of the heads of all government ministries and ministerial-level commissions and bodies. The cabinet meets once a week. If the prime minister loses the confidence of parliament, he or she must resign, along with the cabinet, and ask the paramount ruler to dissolve parliament; popular elections must be held within sixty days (ninety days in Sabah and Sarawak), and a new government is formed after legislative elections are held.

National Parties and Government Stability

Malaysia has experienced relative political stability. There have been only four prime ministers since the

Demonstrators from Malaysia's opposition Parti Islam Se-Malaysia protest the United States military action in Afghanistan in Kuala Lumpur in October 2001. (AFP/CORBIS)

country's founding, the first three all scions of the sultانات. Mahathir Mohamad (b. 1925), the current prime minister, chosen in 1981, is the longest-serving premier.

The National Alliance, the grouping of the three major ethnic-based parties—the United Malay National Organization (UMNO), the Malaysian Chinese Association, and the Malaysian Indian Congress—has dominated the government since the first federal elections in 1955. As ethnic minorities, many Chinese and Indians believe that their interests are best served by working with the dominant Malay party, UMNO. Since the founding of the country, all four prime ministers have belonged to the UMNO, including the incumbent, Mahathir Mohamad.

There are several opposition political parties, including Parti Islam SeMalaysia (PAS), an Islamic party that is the main opposition party for ethnic Malays. Although an opposition party at the federal level, PAS controls two states in northeastern Malaysia, Kelantan and Terengganu, and has succeeded in winning eth-

nic Malay support away from the UMNO. The Democratic Action Party (DAP) is modeled on Singapore's dominant party, the People's Action Party. The DAP remains dominated by ethnic Chinese and has been unable to broaden its base of support; hence it wins only a portion of the Chinese vote. The National Justice Party (NJP), founded in 1998 by the wife of the former deputy prime minister Anwar Ibrahim, has helped to win ethnic Malay support away from the UMNO, especially from those Malays who want a more secular opposition party than PAS. In the house of representatives, the National Front coalition holds 148 of the seats; PAS has 27; DAP has 10; NJP has 5; and the Parti Bersatu Sabah has 3. Although the power of opposition parties has grown, they have been unable to forge a durable coalition to challenge the UMNO-dominated National Alliance.

Although the government has an electoral system that virtually guarantees that it gets returned to power each election because of the National Front's alliance with the three largest ethnic-based parties, it also uses a variety of authoritarian measures to keep the opposition weak. Several draconian laws were inherited from the colonial era, including the Internal Security Act (ISA), the Sedition Act, and the Official Secrets Act. Press freedoms are severely restricted as the government has the right to revoke or deny licenses to newspapers that aggravate national sensitivities or fail to serve national development goals. Journalists, editors, publishers, and printers are all punishable, and there is a lot of self-censorship. The government keeps tabs on all newspapers and maintains control over some media through direct ownership.

The ISA allows the minister of home affairs to detain anyone without trial if he or she is satisfied that such detention is necessary to prevent the person from acting in a way prejudicial to the security of Malaysia or to the maintenance of essential services. The supreme court has upheld the ISA, which however was slightly amended in 1988, so that the court can now review cases on procedural, though not factual, grounds.

The Sedition Act deters political discussion and debate on the country's most controversial issues. The Official Secrets Act is another broad British-based law that covers the publication of any information in the hands of the government, no matter how significant or widely known. This law has prevented journalists or opposition politicians from attacking the government on corruption charges.

Parliamentary rule was suspended once, following race riots in 1969 in which 169 people were killed after opposition gains at the polls. Martial law was im-

posed, and the country was ruled by decree by the National Operations Council for twenty-one months, until 1971. The government then implemented a radical affirmative-action program, the New Economic Program, designed to redistribute wealth and educational and career opportunities to the majority, but poorer, Malay community. The government believes that the dissolution of parliamentary rule and draconian laws and controls are necessary to maintain order in an ethnically divided society. But it also uses these controls to stifle opposition.

Federal System

Malaysia has a federal system of government, with thirteen states and two federal territories. On 16 September 1963, Sabah, Sarawak, and Singapore were constitutionally added to Peninsular Malaya to create the Federation of Malaysia; Singapore was subsequently expelled from the Federation on 9 August 1965. On Peninsular Malaysia, all states are governed by hereditary rulers; the governors of Melaka and Penang, as well as of the two Borneo territories of Sabah and Sarawak, are appointed by the federal government. Two federal territories are directly administered by the federal government: Wilayah Persekutuan, the national capital region that includes Kuala Lumpur and the new administrative capital of Putrajaya, and the island of Labuan. The federal system is quite weak, and most decision-making power and fiscal authority reside with the central government. Although all thirteen states have their own legislatures, there is a strong bias toward the federal parliament, and the federal government is able to control most states through the allocation of resources and transfer payments. The concept of federal supremacy pervades the legislative process, and federal law always takes precedence in cases of inconsistency or conflict with state law. It is illegal for states to pass laws that undermine the authority of the federal government.

Constitutions and Judiciary

Malaysia has had two constitutions, the Independence Constitution of 1957 and a 1963 constitution that saw the incorporation of Sarawak, Sabah, and Singapore. The legal system is based on English common law. The supreme court has the right of judicial review over legislative acts at the request of the paramount ruler.

Although Malaysia inherited a British system of common law, the judicial branch has lost much of its independence from the government. Supreme Court justices are appointed by the paramount ruler on the advice of the prime minister. But in 1988, Prime Min-

ister Mahathir Mohamad took the unprecedented step of sacking the chief justice and two of his associates. Since then the court has become highly politicized and infrequently adjudicates against the interests of the government. In addition to the secular court system, Malaysia has a parallel Islamic—or *shari'ah*—court system that adjudicates matters of family law and religion.

MALAYSIA-EUROPE RELATIONS

In world affairs, Malaysia maintains close relations with the United States, the European Union (EU), and Japan. Malaysian relations with the European non-members of the EU are still insufficiently developed, and there is a growing need for reinforcement of these relations, especially more effective economic cooperation. Trade between non-EU European countries and Malaysia is the most dynamic feature of this relationship, which also includes cultural and scientific exchange. The EU's dialogue with Malaysia has always been an inseparable part of the EU's (and before it the European Community, or EC's) relations with the Association of Southeast Asian Nations (ASEAN). The EU has no bilateral cooperation agreement with Malaysia. Economic cooperation between the EU and Malaysia is carried out mainly through regional programs, both within the framework of the 1980 EC-ASEAN Cooperation Agreement and through other programs.

Between 1967, when ASEAN was established, and the beginning of the 1990s, there were no particular political disagreements between the EC and ASEAN. In the 1990s, however, different approaches to political and social questions—particularly human rights, trade policy, and the impact of globalization—emerged. After the collapse of the Soviet bloc, the conflicting interests of these two regions became clearer. These conflicts have been mostly ideological, rather than economic, since both regions are trying to develop their own political and ideological cultures.

The Cenotaph, a British World War I memorial in Kuala Lumpur, Malaysia, is a reminder of the British colonial presence in Southeast Asia. (PAUL ALMASY/CORBIS)

In 1995 the European Parliament accepted the EU's new Asian strategy, wherein the ASEAN situation was considered. With the issuance of "Creating a New Dynamic in EU-ASEAN Relations" in 1996, a renewed focus was placed on the dialogue between Europe and Malaysia. During their official visit to Malaysia in 1996, EU leaders declared that they wished to develop a more meaningful political dialogue with Malaysia through a more frequent and direct exchange of views.

Asia-Europe Institute

There were series of Asia-Europe ministerial meetings in the 1990s, in which Malaysia took part. One important result was the establishment of the Asia-Europe Institute at the University of Malaya, the main mission of which is to further the integration of the Malaysian and European economies. Other principal tasks of the institute are promotion of the exchange of information on strategic business issues, analysis of the role of European banks in Asia before and after the 1997 Asian financial crisis, and comparison of the investment strategies of Asian and European banks. These tasks are undertaken in an effort to support the integration of the two financial systems.

EU-Malaysia Trade

In 1998, the EU was the third most significant export destination of Malaysian goods (behind ASEAN members and the United States), with a share of 16

percent (\$12 billion). Among EU members the main Malaysian export partners were the United Kingdom and Germany, with 4 percent and 3 percent of total exports respectively. The EU was the fourth largest source of Malaysian imports (behind ASEAN members, Japan, and the United States) with a share of 12 percent (\$7.1 billion). Among EU members the main Malaysian import partners were Germany and the United Kingdom, with 4 percent and 3 percent respectively. In 1998, Malaysia had a trade surplus of \$5.1 billion with the EU, compared to a surplus of \$250 million in 1997.

Malaysia's main exports to the EU are electronic equipment, textiles, and palm oil and palm oil products. The main imports from the EU are machinery, chemicals, and transportation equipment. Malaysia has adopted a broad range of import restrictions, especially on automobiles and heavy machinery.

EU Aid

The EU has never provided general development aid to Malaysia, but some specific activities have been funded, including forestry and pharmaceutical projects and support for refugees. European development assistance began in 1987 and for the most part has been limited to the environmental sector. The EC-Malaysia Forest Programme was agreed upon in 1992, after which several projects were implemented. The main purpose is to improve the efficiency of forest harvesting and reduce logging damage. Another aim of forestry projects is to contribute to the conservation and sustainable management of natural forests and their biological diversity. Forestry projects for Sabah, totaling \$419,000, were implemented in 1998. Total funding since 1980 for other activities amounted to nearly \$6.5 million.

Along with Singapore, Japan, the United States, and Taiwan, the EU is among the largest sources of foreign investment in Malaysia. In Sarawak, the EU is the main source of foreign investment, accounting for 30 percent of the total between 1995 and 2000. EU industrial investments in Sarawak come mainly from six countries: Netherlands (natural gas), United Kingdom (forestry and nonmetallic minerals), Germany (metals), Portugal (electronics), Finland (chemicals), and France (food manufacturing).

Anglo-Malaysian Relations

Great Britain has a special relationship with Malaysia, as it was the colonial power that controlled the Malaysian peninsula from the late eighteenth into the twentieth century. In 1786, the British acquired Penang Island, establishing a settlement called George-

town. In 1826, the British formed the Straits Settlements, a colony that included Melaka (Malacca) and the islands of Penang and Singapore. The British later colonized the interior of the Malayan peninsula when tin was discovered. By the beginning of the twentieth century, Britain had established many protectorates on the Malayan peninsula, as well as in East Malaysia (the states of Sabah and Sarawak in North Borneo). By 1914, Britain had either direct or indirect colonial control over all the lands that now comprise Malaysia. After World War II, Britain united its territories on the peninsula as the Union of Malaya (1946); Sabah and Sarawak became crown colonies. In 1948, Britain created the Federation of Malaya, which became an independent state within the Commonwealth in 1957.

Several critical issues affected Anglo-Malaysian economic and business relations in the last decades of the twentieth century. In the early 1980s, diplomatic relations deteriorated when Mahathir Mohamad, Malaysia's prime minister, launched a "Buy British Last" campaign to protest skyrocketing fees for overseas students and restricted landing rights at London Heathrow airport. In 1981, "Buy British Last" became state policy, the goal of which was to decrease Malaysia's economic dependence on England. The policy was reversed later in the decade. In February 1994, Anglo-Malaysian relations were disturbed for a second time, when Malaysia's cabinet decided that British companies would be excluded from competing for any new government construction contracts. As a whole, the Malaysian relationship with Britain was cool in the 1990s, but commercial relations began to pick up in the latter half of the decade.

The Future

In the latter half of the 1990s, EU-ASEAN relations were complicated by Myanmar's joining ASEAN, as the EU looked unfavorably on Myanmar's record in supporting democracy and human rights. The future of Malaysia-Europe relations to a large extent depends on the political situation in Malaysia—in particular political stability and human rights. Street protests in the fall of 1998, calling for the resignation of Mahathir Mohamad, unsettled Malaysia's reputation as one of the most politically stable countries in Southeast Asia. By 2000, the human-rights situation in Malaysia had deteriorated, largely because of Mahathir's determination to crush his political rivals.

MALAYSIAN CHINESE ASSOCIATION

The Malaysian Chinese Association (MCA) was established on 27 February 1949 by Tan Cheng Lock (1883–1960) a legislator in the British Straits Settlement and a leader of the Chinese community. The association was founded to protect the interests of the Chinese community of the British-controlled Federation of Malaya. The British colonial authorities had imposed a state of emergency in 1948 because of an insurgency led by the Malayan Communist Party, which was dominated by ethnic Chinese, and began to deport large number of Chinese. The British established some six hundred "strategic hamlets" where other Chinese and Malays could live away from Communist-controlled zones. The MCA began by working with colonial authorities to resettle and provide humanitarian aid to refugees from the insurgency. The MCA believed that only by allying with the majority Malay population could the rights and interests of the Chinese, who comprised 27 percent of the population, be defended.

In 1952, the MCA formed an alliance with the dominant Malay political party, the United Malay National Organization (UMNO). They later allied with a third communal or ethnically based party, the Malaysian Indian Congress, to form the National Front, which since its founding in 1957 has ruled first the Federation of Malaya and then Malaysia. The MCA favored the establishment of the Federation of Malaysia in 1963, but it had to compete for Chinese votes with the Singapore-based People's Action Party (PAP), led by Lee Kwan Yew (b. 1923). (Singapore was at that time part of the Federation of Malaya.) Owing to the PAP's electoral success, in 1964 Lee asked the Malaysian prime minister to drop UMNO's alliance with the MCA in favor of the PAP, but he was rebuffed. The MCA supported UMNO's decision to eject Singapore from the Federation of Malaysia in August 1965.

The MCA tacitly supported the notion of Malay dominance in government. After the race riots of 13 May 1969, the MCA supported the New Economic Program, which called for a radical redistribution of corporate wealth from Chinese ownership to Malays, as well as for an affirmative-action program in education and government that favored the Malays. The MCA is the dominant political party representing the

interests of Malaysian Chinese, and though it continues to advocate "Malaysianization" for the Chinese community, it is also the main advocate for Chinese language, education, and culture.

MALDIVES PROFILE (2001 est. pop. 311,000). Nature has blessed the Maldives with a living environment of tropical atolls and coral reefs that form a highly vulnerable marine ecosystem. Located in the Indian Ocean, approximately 700 kilometers off the southern tip of India and the west coast of Sri Lanka, the whole Maldivian archipelago spreads over 1 million square kilometers, and comprises a total of 1,190 islands belonging to twenty-four distinct atolls. Arranged in a long, narrow double chain of coral atolls stretching 820 kilometers from north to south and 130 kilometers from west to east, the total island area above the sea surface covers a mere 300 square kilometers, rarely more than two meters above sea level. As a result, the Maldives face serious infrastructural, communication, and developmental problems. Extreme isolation, remoteness, and global warming threaten the existence of the Maldives.

Geologically, the double chain of atolls are the tips of two parallel submarine ridges that rise 300 to 400 meters from a flat submarine plateau. Atolls vary in shape from circular and elliptical to pear-shaped. The lagoon, 40 to 60 meters deep, located around each atoll, is encircled by a fringing reef that serves as a natural barrier, sheltering the islands against the tides and floods. Eighty percent of all the islands are lower than one meter above mean high tide level. The islands vary in shape from small sandbanks to elongated strip islands and in size from 0.5 to 2 square kilometers.

Year-round temperatures are tropical, with a daily mean at around 28°C. Precipitation is high, at around 2,000 millimeters annually, mostly occurring as heavy showers. Comparably dry months coincide with the peak season of tourist traffic from January to April. Strong monsoon winds (and storms) do not hit the Maldives, and tropical cyclones are unknown.

The Maldives were first settled in the fifth century CE by settlers from Sri Lanka and southern India. The

Dutch controlled the region in the seventeenth century, and it was a British protectorate from 1887 to 1965, when the Maldives achieved independence. In the year 2001, only 202 islands were populated, with a further 87 uninhabited islands that were converted into tourist resort islands. With a total population of approximately 311,000 people on all 202 inhabited islands, the Maldives are overpopulated. The capital, Malé, located on an island in the center of the Maldivian archipelago, holds 75,000 people on only 1.5 square kilometers—therefore, a population density of 50,000 persons per square kilometer. Nearly half the population is under fifteen years of age, causing serious challenges of education and employment. Education levels in the Maldives are for the most part high, with a literacy rate of more than 90 percent, both for males and females. Secondary and higher secondary schools are located mainly in Malé, while primary schools are found on all islands, and a free education is offered to all. The Maldives, however, lack a uni-

versity. Major economic and employment sectors are tourism, fishery, manufacturing, and public and private services. As the coral soils are not very fertile, agriculture only plays a meager role.

Housing and urban problems seriously affect Malé. As the only urban center, Malé suffers from land shortage, traffic overcrowding, and declining freshwater quality and quantity. A large portion of Malé is reclaimed land on the reef flat; the island shores of Malé are in close proximity to the edges of the underlying reef platform. Malé is greatly burdened by a heavy migration of workers from other atolls and islands attracted by more favorable economic opportunities and better health and education services. Under the pressure of population, Malé capital was extended to the nearby former tourist island of Villingili; additionally, a new suburban town quarter is under construction

through land reclamation on the reef platform between Hulule airport island and Farukolhufushi island, formerly known as Club Med Tourist Resort island.

Interatoll and interisland traffic and transportation is handicapped by the large distances over sea and the slowness of the still prevailing traditional, albeit mechanized, Maldivian *dhoni* boats. Transportation problems represent a major constraint to equitable distribution of goods and services throughout the country. *Dhoni* craft satisfy the basic interisland trade and commerce of goods as well as of passengers. Speedboats and air taxis are in service only for quick transportation of tourists, mostly between the international airport and the tourist resort islands. Internal air transport is limited; the national carrier, Air Maldives, serves four domestic airports in addition to Hulule. Domestic air transportation is too expensive for

Maldivians, hence the continued popularity of *dhoni* sea-transport. There is a modern telecommunication network across all of the atolls and inhabited islands. Health services options are best in Malé, with outpost hospitals on several islands.

As the Maldivian islands abound in rich marine biodiversity, international tourism has become the leading component of the economy. After a mild start in 1972, tourism developed aggressively from the 1980s, under the First Tourism Master Plan. Resort islands were developed mainly in North and South Malé atolls, in close proximity to Hulule. When the Second Tourism Master Plan, valid for 1996 to 2005, came into effect, resort islands were regionally diversified to other atolls adjacent to Malé and Ari atolls, in order to spread the benefits of tourism.

Resort islands are restricted to foreign tourists only; the number of resort islands is projected to increase to more than one hundred in the early part of the twenty-first century. Tourist arrivals increased to an annual total of 465,000 in 2000. Two-thirds of all tourists come from central and western Europe; the remaining one-third comes from Asia.

Tourism development is under the strict control of the government of the Maldives, mainly to ensure a minimum impact of tourism on the marine environment and on cultural integrity. Tourism in the Maldives has an exclusive nature; this is manifested in the clublike style of most of the resort islands. Environmental problems are, in fact, the biggest threat to sustainable future development of the Maldives. Sea-level rise, due to global warming, is the one thing most seriously threatening the future of the Maldives.

MALDIVES-HISTORY The history of the Maldives is buried in obscurity owing to the islands' geographical isolation and their comparative insignificance throughout the centuries, even though they are strategically located along the sea routes between Europe and the Far East and were well known to ancient Arabian sailors. Significantly, the Arabs converted the people of the Maldives to Islam in 1153. Since then Islam has been the state religion. As stipulated in its constitution, each Maldivian citizen is a Muslim. The history of the Maldives under the ruling sultans is recorded continuously from 1153 to 1821 in the Maldivian *Tarikh* (a chronicle); it covers the reign of eighty-three sultans. Sultans continued to rule the Maldives until 1968, though their political power steadily diminished. The last sultan, Muhammad Fareed Didi, was a titular ruler only.

Early Visitors to the Maldives

At certain times casual visitors to the Maldives and sailors recorded valuable eyewitness accounts of the islands and their inhabitants. It is not known when the Maldives were discovered or who the first settlers were, and whether they migrated from India or Sri Lanka is disputed. Probably the oldest historical source, the work of the fourth-century classical writer Ammianus Marcellinus (320–390), carefully differentiated the islanders of the Maldives, whom he called "Divi," from the islanders of Ceylon (now Sri Lanka), whom he called "Serendivi." However, the famed Maldivian "Koimala Kalo" legend of the twelfth century describes the peaceful arrival on the Maldives of Ceylonese royalty, who were invited to settle there with the consent of the friendly aboriginal community of Giravaru Island.

Brief and vague notices of the Maldives appear in writings by Ptolemy (second century) around 150 CE, Moses Chorenensis in the late fourth century, and Cosmas Indicopleustes between 530 and 550. Arab travelers recorded valuable historical accounts, among them those of Lamma Mas-Oodhi in 947, Al-Becrooni in 1030, and Al-Idrisi (1099–1186). The greatest early Arab traveler, Ibn Battutah (1304–1368/69) visited the Maldives twice: first for a year and a half, from the beginning of 1343 until middle of 1344, and again two years later for a short visit at the end of 1346. Married to several Maldivian women, he was assimilated into the indigenous society.

The Coming of the Europeans

Until the European colonial era beginning in the sixteenth century, practically all of the Indian sea trade remained in the hands of Arab traders. The early Por-

tuguese commander Afonso de Albuquerque (1453–1515) in 1510 forced the sultan of the Maldives to pay a tribute to the Indian Cannanore Raja. After two unsuccessful expeditions to the Maldives, the Portuguese in 1558 captured the capital, Malé, which they ruled for fifteen years, until expelled by a Maldivian guerilla force. The Portuguese introduced Christianity for the only time in Maldivian history. In the seventeenth century, when Dutch, British, and French vessels also competed for the Maldivian trade, the Portuguese launched two fresh, unsuccessful attacks. Several times in the middle of the century Indian rulers attacked the Maldives, particularly Malé, from the Malabar Coast. In 1752 an expedition of the raja of Cannanore conquered Malé, destroying the palace and most of the town. The Malabar rulers, supported by the Portuguese colonial power in India, constantly harassed the Maldives. Subsequently the Maldivian sultan formed an alliance with the French rulers in Pondicherry, India, to protect the Maldives.

In 1887 the Maldivian sultan formalized an alliance with the British, who ruled the neighboring country of Ceylon. While the British government promised to protect the Maldives from foreign enemies and to abstain from interfering in local administration, the sultan agreed to pay tribute to the British government. The tribute obligation was lifted in 1948, but the Maldives retained the status of British protectorate. During World War II the British built a staging post on Gan Island in the South Maldivian Addu Atoll. In 1957 the post was converted into a British Royal Air Force base, which was abandoned in 1976. In 1953 the Maldives experienced a brief seven months as a republic with Amin Didi (d. 1954) as president. Though very modern (Westernized), the people of the Maldives disagreed with his politics and banished him on 31 December 1953 to Kurumba island, where he died. In spite of his ouster, Didi is considered the father of Maldivian nationalism. In 1965 the Maldives gained independence and membership in the United Nations.

Recent History

On 11 November 1968, President Ibrahim Nasir, who had taken over government from the last sultan, Muhammad Farid Didi, that same year, declared the (second) Republic of the Maldives and promulgated a new constitution that declared the Maldives an Islamic republic and vested great power in the president. He aimed at improving the economy and promoted the Maldives as a tourist destination. The political climate became unfavorable in 1974, escalating to actual revolt. Nasir resigned and fled to Singapore amid changes of political mismanagement. In 1978 Maumoon Abdul

Gayoom (b. 1937) was elected president of the Maldives. Credited with bringing economic and social progress to the country, he has subsequently been reelected four times. The Maldives is a strong member of the Non-aligned Countries and the Small Island States.

MALIK, ADAM (1917–1984), vice president of Indonesia. Adam Malik was Indonesia's vice president from 1978 until 1983. He also was one of Indonesia's most successful foreign ministers, a position he held during the early New Order from 1966 to 1976. He was distinguished as a shrewd diplomat, known by the nickname "mouse-deer," derived from a popular Malay fable, as well as for his diplomatic words, "everything can be managed." Born in Pematang Siantar, North Sumatra on 22 July 1917, Malik dropped out of secondary school because of his interest in political activism. At the age of twenty, he left his hometown for Batavia (Jakarta). With only one typewriter, he built the Antara News Agency, which became Indonesia's national news agency. During the struggle for independence, he was jailed several times by the Dutch. As one of the young emerging leaders in 1945, he and his friends kidnapped Sukarno (1901–1970) and forced him to declare the independence of Indonesia.

Malik served many government positions under both the Sukarno (1945–1966) and Suharto (1966–1998) regimes. Having no diplomatic background, he initially questioned Sukarno's decision to appoint him as ambassador to the Soviet Union in 1959. He nevertheless proved to be a capable diplomat, and Suharto entrusted to him the project of building a new image of Indonesia as a capitalist and pro-Western country. As foreign minister, Malik was active in reducing tensions between Indonesia and neighboring nations. He also was one of the founders of the Association of Southeast Asian Nations (ASEAN) in 1967. Malik was appointed the twenty-sixth president of the U.N. General Assembly in 1971 and was a member of the Willy Brandt Commission in 1977. Prior to becoming vice president of Indonesia, Malik briefly was the Speaker of People Consultative Assembly (Majelis Permusyawaratan Rakyat, MPR) in 1977. He died on 5 September 1984.

MALUKU (2002 est pop. 2.3 million). Maluku (Moluccas), a region of Indonesia formerly known as the Spice Islands, was once the source of cloves and nutmeg, spices highly valued for their aroma, preservative ability, and use in medicine before people learned how to cultivate the plants in other parts of the world. Maluku is a cluster of about one thousand islands totaling 74,504 square kilometers, forming part of the Malay Archipelago in eastern Indonesia near New Guinea. The region is divided into two provinces, Maluku (2002 estimated population 1.4 million), with its capital in Ambon, and North Maluku (2002 estimated population 913,000), with its capital in Ternate; other important islands in the group include Halmahera, Seram, and Buru.

Maluku lies in the transition zone between Asiatic and Australian flora and fauna and has a tropical climate. Maluku's flora include *meranti* trees and many kinds of orchids; distinctive fauna include *uscuses*, birds of paradise, wild goats, and parrots. The economy is based on subsistence agriculture, especially sago (the sago palm, producing a starch used in food), and on the export of such products as spices, cacao, coffee, coconuts, fish, and minerals. Important indigenous groups include the Ambonese.

The Portuguese reached Maluku in 1511, but the region was later colonized by the Dutch, who arrived in 1599. In recent times, there has been conflict between the large Ambonese Christian minority and the Muslim majority.

MAMADALI MAHMUDOV (b. 1940), Uzbek writer. A prominent Uzbek writer, Mamadali Mahmudov gained literary fame in the former Soviet Union in the 1980s. In 2001, he was given the PEN/Barbara Goldsmith Award. His most famous work is the his-

torical novella *Immortal Cliffs*, which was published in 1981. It won the Cholpan Prize in 1992.

Mahmudov believes in the unity of the Central Asian Turkic people and suggests that foreign concepts, such as Islam and Russian domination, have sapped their strength. His notion of unity implies understanding the shared heritage of these people and overcoming the alien elements that have crept into Central Asian culture, especially Islam and its ensuing Arabic influences.

In his work, Mahmudov draws heavily upon the oral *dastan* (accounts) tradition of Central Asia. A repository of a tribe's historical memory, a *dastan* is composed to commemorate an event, a person, or a battle and is often used to memorialize the struggles of the Turkic people against foreign invaders. *Dastans* are recited throughout Central Asia.

With independence, Mahmudov's aggressive nationalistic stance found little favor with the newly created nation of Uzbekistan. On 19 February 1999, he was arrested by order of the Committee for National Security and disappeared into the Uzbek prison system. He was officially charged with threatening the president, Islam Abduganievich Karimov, and seeking to destroy the nation's constitutional order. His arrest followed a series of explosions in Tashkent. He was allegedly tortured and forced to sign a confession, and in August 1999, he was sentenced to fourteen years in prison. He is presently in Chirchik Prison. Organizations such as PEN have taken up his cause and are seeking his freedom.

MANAS EPIC Among Turkic oral traditions, that of the Kyrgyz is justly celebrated as one of the richest and finest. The main Kyrgyz epic is *Manas*, an epic cycle of monumental proportions. In this century the cycle has been recorded by a number of singers; the most famous versions are those by Saghymbay Orozbekov, Sayakbay Karalaev, and Dzhusup Mamay (from the Chinese Xinjiang Uighur Autonomous Region). Saghymbay's version comprises over 180,000 lines, Mamay's around 210,000 verse lines, containing eight instead of the canonical three branches of the *Manas*

cycle, and Sayakbay's version no less than 500,000 verse lines. Generally, the epic cycle has three main parts. In *Manas* proper the subject is the miraculous birth of the hero, his fight against the enemies of his tribe, in particular the Kalmucks, his marriage to Kanykey, and his eventual death through treason. In the center of the second part is Manas's son Semetey, and his grandson Seytek is the subject of the third part. The epic cycle is full of detailed descriptions and lively dialogue and is packed with heroic and sometimes also romantic action. Not without reason, it has been ranked with the Homeric epics. The epics are in verse; the meter is a verse line of seven or eight syllables; the verses are linked together by rhyme and verse-initial alliteration to form stanzas of irregular length. Kyrgyz singers, called *manaschy*, perform the epic by singing and chanting the words to a number of melodic formulas without the use of instruments. The art of singing the epic is still alive among the Kyrgyz.

MANCHU The Manchus (or Man) are a minority people concentrated in the northeastern provinces of Liaoning, Heilongjiang, Jilin, and Inner Mongolia in China. In the 1990 national census, the number of Manchus in China was 9.84 million. The Manchus are descended from a group of peoples of northeast Asia collectively termed the Tungus. The Manchus also claim descent from rulers of the Jurchen Jin dynasty (1126–1234). In the late sixteenth century, the Manchu tribes were organized into a collective nation under the rule of the greatest of their chiefs, Nurhaci (1559–1626). Nurhaci's successor, Abahai (1592–1643), changed the name of his people to Manchu in order to remove the historical memory that as Jurchens they had been under Chinese rule. The Manchus continued to grow in military power in the border region northeast of the Great Wall and eventually overthrew the Ming

dynasty (1368–1644) and established China's last imperial era, the Qing, or Manchu, dynasty (1644–1912). The Manchus remained an important symbolic people in China during the twentieth century, as was demonstrated by their being named in 1912 as one of the five races that constituted the new Chinese Republic.

The Manchu language is a member of the Tungusic branch of the Altaic language family and has some structural similarities to Japanese, Korean, and Mongolian. During the Jin dynasty, Jurchen official documents were transcribed using a modified form of the Khitan script. In 1599, as part of his nation-building, Nurhaci commissioned two scholars to modify the Mongolian script in order to create a written form of the Manchu language. This form of written Manchu is called the Old Manchu script because it was further modified in the 1620s by the addition of dots and circles, which eliminated some of the linguistic ambiguities that had resulted from the first attempt to modify the Mongolian script. This new script remained the standard form of the written language throughout the Qing dynasty. Few native speakers of Manchu remain in China, although volumes of the written script are preserved as official documents of the Qing dynasty and are housed in the national archive in Beijing and provincial archives in the northeast.

MANCHURIA (1997 est. pop. 105 million). Manchuria, the region of northeastern China comprising the provinces of Heilongjiang, Jilin, and Liaoning (Fengtian), is referred to as Dongbei ("Northeast") in China. This Chinese terminology is part of a larger effort to distance the region's history from the colonial overtures associated with the term "Manchuria," the nomenclature of which was partly the creation of Russian and Japanese imperialists who hoped that the name would imply the region's separateness from the rest of China. Originally peopled by a number of tribal groups, the largest of whom were Mongols, Tungus,

and Manchus, Manchuria is rich in natural resources, including coal, iron, timber and forest products, furs, and ginseng. During the twentieth century, Manchuria's transportation infrastructure and industrial base were developed by foreign occupiers and later by Chinese administrators. Today the region, bordered to the southeast by Korea and to the north and northeast by Russia, is one of the most important industrial heartlands in the People's Republic of China.

The presence of Han Chinese in Manchuria can be traced back to the Qin dynasty (221–206 BCE) when a prefecture was established on the Liaodong Peninsula at the southernmost point of Liaoning Province. It was during the reign of the fifth Han emperor, Wu Di (reigned 140–87 BCE), that a more significant Chinese presence was established when Wu Di encouraged the settlement of Chinese both on the Liaodong Peninsula and in an area of what is today western Liaoning in order to strengthen the northern borders against the Xiongnu peoples. For much of China's imperial past, however, there was only a minimal presence of Chinese in this region that lay beyond the northeast border of the Great Wall. After their conquest of China in the mid-seventeenth century, the Manchu rulers of the Qing dynasty (1644–1912) sought to preserve Manchuria as an undeveloped ancestral homeland, and the early emperors, including Shunzhi (1638–1661), Kangxi (1654–1722), Yongzheng (1678–1735), and Qianlong (1711–1799), all issued edicts, of dubious effectiveness, forbidding the settlement of Chinese in the region.

Russian Annexation Feared

With the growing Russian presence in the Far East in the late eighteenth and early nineteenth centuries, the Qing emperors grew to fear Russian annexation of Manchuria more than the presence of Chinese settlers. The last of the old edicts were repealed, and northern Chinese were encouraged to settle in Manchuria. The arrival of British and French warships off the coast of southern Manchuria during the Opium Wars of the mid-nineteenth century had also alerted the Manchus that the region had strategic importance and that the development of its population and fortifications was required. These belated efforts by the Qing rulers were ineffective, and by the 1890s Manchuria was largely lost to foreign imperialists, first Russian and then Japanese.

In 1896, following the Sino-Japanese War (1894–1895), the Qing rulers, now more fearful of Tokyo's colonial ambitions than Russia's, granted permission to czarist Russia to build the Chinese Eastern Railway across Manchuria as a shortcut and alternative route to

the Trans-Siberian Railway. In 1898, Russia secured further concessions from a weakening Manchu court, including a twenty-five-year lease of the southern portion of the Liaodong Peninsula and the right to construct an additional southern route to the region's railway that would have the added benefit of having a year-round ice-free port as its terminus in the new leasehold. Following the Russo-Japanese War (1904–1905), the new Russian rights in southern Manchuria, along with the region's railway and harbors at Lushun (Port Arthur) and Dalian (Dairen in Japanese and Dalny in Russian), were transferred to Japanese control.

Manchuria as a Japanese Colony

The new Japanese governors in southern Manchuria continued to build on the original Russian plans, and their new colony blossomed during the soybean boom of the late 1910s. By the late 1920s, tension was building as Japanese colonial ambitions in Manchuria could no longer be satisfied by a small leasehold on the Liaodong Peninsula and the attempts by commanders in the local Japanese garrison force, the Guandong (Kwantung) Army, to manipulate the region's de facto ruler, the warlord Zhang Zuolin (Chang Tso-lin). On 18 September 1931, the Guandong Army launched an invasion of Manchuria. The following year, the birth of a new "independent" nation of Manchukuo ("Country of the Manchus") was proclaimed. The reality was that Manchukuo was a creation of the Japanese military and a puppet state with no real independence. Until the end of the Pacific War, Manchuria remained under Japanese occupation, supplying raw materials to the home islands and playing an important role in the creation of Japan's colonial ideology. Manchuria was viewed by many Japanese not only as a strategic buffer zone between their empire and the Soviet Union but also as a colonial frontier, even a potential utopia, awaiting the arrival of brave Japanese settlers who would develop the region's untapped potential.

Following Japan's surrender in 1945, the Russians returned to Manchuria. Having secured the restoration of Russia's former rights in the region at the Yalta Conference in February 1945 in return for a promise to enter the war against Japan, Soviet troops invaded the region in the final days of the Pacific War. Over the next couple of years, the Russians plundered the region, dismantling factories and sending them in pieces back to the Soviet Union on railcars. Because of its industrial capacity and abundant natural resources, Manchuria was a hotly contested territory during the Chinese Civil War (1947–1949) between the Communists and Nationalists.

Since the 1950s, Manchuria has been developed as China's industrial heartland. The steel mills at Anshan, the Fushun colliery, the giant factory complexes in the industrial cities of Shenyang (Mukden) and Changchun, and the commercial port of Dalian played important roles in the industrialization strategies of the Communist regime. With the move to create a market economy in China in the late 1980s and early 1990s, industrial Manchuria began to experience new challenges. Many of the inefficient state-owned enterprises either closed or severely downsized their workforces. One of the results was a high level of unemployment in a region that had traditionally been prosperous under the old state-planned economy. Decades of industrialization have also created serious environmental problems in China's Northeast, including high rates of respiratory diseases among its populace and high levels of toxins in its rivers and waterways. The former pristine reserve of the Manchus is now polluted and home to tens of millions of Han Chinese factory workers.

MANCHURIAN INCIDENT On 18 September 1931, the Japanese Kwantung Army (Japanese forces in Kwantung, China) claimed that Chinese bandits had blown up the main tracks of the Japanese-controlled South Manchuria Railway outside Mukden (Shenyang) in southern Manchuria. Japan had pinned much of its hopes for gaining economic self-sufficiency and being a world power on the slender thread of its control of the South Manchuria Railway.

Although Japanese trains traveled the railway soon after the "incident," Japanese forces, apparently acting without formal approval from the government in

Tokyo, used this incident as an excuse for a year-long campaign to gain control over all of Manchuria, a resource-rich Chinese province that had been the scene of increasing tension between rising Chinese and Japanese nationalisms and also between Japanese civilian and military officials in southern Manchuria and the government at home.

The Chinese government complained to the League of Nations, which appointed Lord Victor Bulwer-Lytton of England to lead a commission of inquiry. The resulting report harshly criticized the Japanese, and the Japanese government responded by withdrawing from the league.

Japan eventually sought to demonstrate the "independence" of Manchuria and established a government for what they termed Manchukuo ("Manchu country") under the last Qing (or Manchu) emperor, Henry Pu-yi, in early 1932. (The emperor had abdicated in 1912, ending the reign of the Qing dynasty over China, which it had ruled since 1644.) But despite the appointment of some Chinese officials, power clearly rested with Japanese "advisers."

Thereafter, Japan sought to force Chinese recognition of Manchukuo's independence and began a war of aggression. Throughout the 1930s, Japanese military forces took one Chinese province after another without being able to compel China to concede the independence of Manchuria. Eventually, to support this increased military commitment in China, Japan looked to widen the war into Southeast Asia and against the United States, leading to the disastrous Pacific theater of World War II.

MANDALAY (2002 est. pop. 1.1 million). Mandalay, located in the central dry zone of Myanmar (Burma) 620 kilometers (400 miles) north of Yangon (Rangoon), is Myanmar's second-largest city, with a population of between 653,000 and 1 million (including unregistered aliens). The sprawling city, built on a grid pattern of roads, covers an area of 25 square miles bounded on the west by the Irrawaddy River. Mandalay has lost much of its traditional char-

An elaborate Buddha statue in Kuthodaw Pagoda in Mandalay in 1992. (GEORGE W. WRIGHT/CORBIS)

acter due to devastating fires in the 1980s and massive development by Chinese entrepreneurs, the Myanmar military, and other investors following legalization of the lucrative Myanmar-China border trade in 1989. Many local residents have been forced to relocate to peripheral satellite towns. Mandalay is at the hub of a trading and communications network and, besides its river, rail, and road links, has a new international airport (inaugurated in 2000).

The last in a succession of royal capitals, Mandalay was founded in 1857 by King Mindon (1853–1878) in fulfillment of a prophecy that a great Buddhist center would be built at the foot of Mandalay Hill on the 2,400th anniversary of the Buddhist faith. Mandalay was also known by its classical name of Yatanapon (City of Gems) and Shwe-myo-daw (Golden Royal City). Mindon was renowned for his piety, and during his reign many new monasteries and temples were endowed, ancient sites restored, the Buddhist scriptures carved on 729 marble slabs, and the Fifth Buddhist Council convened. In 1885 Mandalay was occupied by the British, who deposed and exiled King Thibaw (reigned 1878–1885) to India and incorporated Upper Burma into British Burma with Rangoon as its capital.

Although Mandalay was Myanmar's capital for less than three decades, its royal past and religious patronage have ensured that it remains Myanmar's cultural heartland and a flourishing center of traditional crafts as well as an important religious center, with approxi-

mately 60 percent of the nation's Buddhist monks resident there. Mandalay Hill is a place of pilgrimage and affords a spectacular view. The royal palace and fort dominate the north of the city and occupy a perfect square, bounded by crenellated brick walls, each over a mile long and aligned with the cardinal points of the compass and encircled by wide moats. Mandalay Palace, which incorporated many carved teak structures from the old Amarapura Palace, was destroyed in the closing stages of World War II and reconstructed only in the 1990s. Part of the palace compound is occupied by army command headquarters. Besides the royal palace, Mandalay's most famous monuments include the Mahamuni (or Arakan) Temple, the Shwe-nan-daw Monastery, the Atumashi Monastery (destroyed by fire in 1890 and reconstructed in 1996), the Kutho-daw, the Kyauk-taw-gyi Temple, the Ein-daw-ya Temple, and the Shwe-in-bin Monastery.

MANDALAY DIVISION (2002 est. pop. 6.6 million). The Mandalay Division plays a pivotal role in the life of Myanmar (Burma) and accounts for approximately 15 percent of the national economy. With an area of 37,024 square kilometers (14,295 square miles), it is located on the major transport and communication crossroads between the north and south of the country. Consisting of 29 townships and 1,796 wards or village tracts, its 1992 population was calculated at 5.54 million, the majority of whom were ethnic Burmans. The political and economic hub is Mandalay, Myanmar's second largest city.

The main economy is agriculture. Lying in the dry zone, various dams and reservoirs have been constructed to promote irrigation, including thirty new such projects since 1988. The main crops are paddy rice, wheat, maize, peanut, sesame, cotton, legumes, tobacco, chili, and vegetables. A number of industries are also located within the division, including the Mandalay Brewery, textile mills at Meiktila and Paleik, and the sugar mill at Pyinmana. In addition, the division contains the important gem mines at Mogok.

Mandalay is the main tourist center. There are also the remains of other royal capitals at Amarapura, Ava (Innwa), and Pagan. Other destinations include the 4,981-foot (1,518-meter) Mount Popa, which has been a center of *nat* (spirit) worship and pilgrimage for centuries, and the former British hill station at Maymyo (Pyin Oo Lwin), which is situated on the main trade road to Shan State and China.

MANDALAY PALACE Mandalay Palace was the last Burman palace resided in by independent royalty during the latter part of the Konbaung Dynasty. Soon after Mindon (reigned 1853–1878) seized power from his brother King Pagan, in January 1857 he gave the order to move the palace from Amarapura to the new palace grounds in the new royal capital, Mandalay. The palace itself was completed and occupied in July 1858, but the outer walls were completed later.

After British conquest in 1885, the British neglected Mandalay Palace. Under Lord Curzon (viceroy 1899–1905) the largely wooden palace was declared a museum in 1901. In 1945 the palace compound was destroyed during the Allied bombardments, leaving only the outer walls in place with a few broken buildings. During the Burma Socialist Programme Party (BSPP) period it functioned as a military station. Mandalay Palace is a symbol of Burmese sovereignty in particular to the BSPP–State Law and Order Restoration Council government, which by 1989 made a decision to renovate and rebuild from scratch 89 of the originally recorded 114 buildings, with the aim of bolstering legitimacy and attracting tourists. This was completed in 1996. It is surrounded by a 7-meter wall backed by an earth rampart, and by a moat 68 meters wide and 3 meters deep.

MANDARIN The term Mandarin is generally believed to be a translation of Chinese *guanbua*—literally "official talk," which originated as a form of common language among speakers of different Chinese dialects. In linguistic terms, there are four different views of Mandarin: as a Chinese lingua franca, as Modern Standard Chinese, as a branch of the northern Chinese dialect family, and as Premodern Chinese. Each of these senses of the term Mandarin will be examined in detail.

Mandarin as a Chinese *Lingua Franca*

Mandarin is believed to have originated as a form of common language among speakers of different Chinese dialects, loosely based on some form of northern Chinese. The precise locale of this prestige northern dialect is not clear, but Beijing, Nanjing, and Luoyang are likely candidates. The Jesuit missionary Matteo Ricci (1552–1610), for instance, wrote in his travel journals (1583–1610) of a spoken language called "Quonhoa," which was used throughout the empire for civil and forensic purposes. In a way, the status of *guanbua* is similar to that of the "cultivated pronunciation" of the American Atlantic states existing alongside the local vernacular, with each state having its own version—its best approximation of the prestige dialect.

Mandarin as Modern Standard Chinese

The second meaning of Mandarin focuses on the area around Beijing—the Chinese capital for the past 500 years—whose local speech presumably had a prestige that conflicted with the prestige status of the *guanbua*. By the end of the nineteenth century, the two were extremely similar, with remnants of the old *guanbua* known as the "literary stratum" of Beijing Mandarin, and the local vernacular as the "colloquial stratum." An example of differences would be the word "to learn," which is pronounced *xue* in the literary stratum, but *xiao* in colloquial Beijing. Differences exist also in vocabulary, with *guanbua* leaning towards classical Chinese and colloquial Beijing being more abundant in localisms.

From the demise of the Qing dynasty (1644–1912) through to the early days of the Republican era (1912–1927), the recognition of Beijing Mandarin as a national standard took a more convoluted route. At a meeting of linguists in 1913 to decide upon the new official language, the standard of choice was not the speech of the capital, but an artificial language incorporating the maximum number of distinctions found in the major dialects, envisaged as a compromise between north and south. But it soon became clear that no one, not even the linguists themselves, could speak this linguistic Frankenstein, and the movement failed miserably. In 1920 Shiyi Zhang, a professor from Nanjing, called for replacement of the man-made standard with "the speech of Beijing locals educated to the level of secondary school." Though Zhang's proposal initially met with resistance, Beijing Mandarin gradually took over as the de facto national standard. In 1926, when the national language was revised, pronunciations were largely based on the literary readings of Beijing.

The new national language, up to this point, had been known as *guoyu*—"national language," a term borrowed from Japanese usage—and still goes by this name in Taiwan. On the mainland, however, the national language underwent a second revision in 1955, and switched to the name *Putonghua* ("commoners' language"), which is normally translated as Modern Standard Chinese. Differences between *putonghua* and *guoyu* are few, mainly in the adoption of colloquial pronunciations in the case of *putonghua* where *guoyu* retains the 1926 literary norms. A 1955 revision managed to define the nature of the national language, basing "its pronunciation on the speech of Beijing, its lexicon on the core vocabulary of Northern Chinese, and its syntax on the norms of exemplary vernacular literature" (Li 1999: 32).

Tone aside, Modern Standard Chinese contains between 398 and 419 syllables, depending on whether we are to include certain Beijing colloquialisms not

TABLE 1

Modern Standard Chinese initials				
Labial	<i>b</i> [p]	<i>p</i> [pʰ]	<i>m</i> [m]	<i>f</i> [f]

Velar	<i>g</i> [k]	<i>k</i> [kʰ]	<i>h</i> [x]	

part of the educated vocabulary. The syllable is traditionally analyzed into an initial consonant and a final. The possible initials and finals of Modern Standard Chinese are listed in Tables 1 and 2, given in both pinyin romanization (in italics) and the international phonetic alphabet (square brackets).

Full syllables in Modern Standard Chinese carry one of four tones, which play a role in distinguishing word meaning. (See Table 3.)

Tone 3 often rises when it occurs at the end of a sentence or utterance, and as such is sometimes referred to as the dipping tone. Grammatical particles, suffixes, and unstressed syllables in Mandarin Chinese are often stripped of their tonal value, a condition referred to as being in the neutral tone.

Regarding syntactic properties, it is worth noting that Mandarin, like most other varieties of Chinese, is relatively free of inflection—nouns generally are not marked for case, number, or gender, and verbs need not agree with the person, number, or gender of the subject or object. Therefore, much essential information is encoded in the word order of a sentence.

There is however much controversy regarding the characterization of Mandarin word order. While the simple declarative sentence in Mandarin retains the

(Note: H = high pitch; L = low pitch.)

Subject-Verb-Object (SVO) order of Old Chinese (600 BCE–265CE), Modern Standard Chinese contains characteristics of languages with the basic word order Subject-Object-Verb (SOV), such as the ordering of relative clauses and genitives before head nouns, the placement of aspect markers after verbs, and the presence of operations that change word order from SVO to SOV. In the early 1980s, some linguists saw this as evidence that Mandarin Chinese is in the process of switching over from SVO to SOV, most likely due to influence from the Altaic languages of northern China. But recent scholarship in language acquisition and Chinese corpus analysis point to the contrary, namely, that SOV structures in Mandarin are infrequent, marked forms that are not easily acquired by young children, and that such properties are not unusual in rigid SVO languages such as English and Biblical Hebrew. The prevailing view, for now at least, seems to be that Mandarin Chinese, like most other languages of southern and southeastern China, is a typical SVO language.

Mandarin as a Branch of Northern Chinese

In Chinese dialectology, Mandarin or *guanbua* refers to a branch of Northern Chinese, which includes dialects used throughout most of northern and southwestern China, the majority of which are descended from or have had extensive contact with the *guanbua* lingua franca. Mandarin, in this context, refers to an entire dialect family, the largest family in the Chinese branch of Sino-Tibetan in fact, in terms of both geographical distribution and number of speakers.

Within the Mandarin family, there are three main divisions comprising eight subdialects: (1) Southern Mandarin includes the Yangtze (*Jianghuai guanbua*) and Southwestern (*Xinan guanbua*) subdialects; (2) Central Mandarin includes the Central Plains (*Zhongyuan guanbua*) and Northwestern (*Lanyin guanbua*) varieties, and finally (3) Northern Mandarin includes Northeastern (*Dongbei guanbua*), North Central (*Jilu guanbua*), Peninsular (*Jiaoliao guanbua*), and Beijing Mandarin (*Beijing guanbua*).

Mandarin as Premodern Chinese

From the demise of the Tang dynasty (907) onward, the homeland of Mandarin's northern Chinese roots was successively occupied by peoples of Turkic, Mongol, and Tungus-Manchu stock. This resulted in the drastic simplification of Middle Chinese (265–1269) and produced *guanbua*, or Mandarin. Thus Mandarin, as a historical phonological entity, is synonymous with what historical lexicographers call Premodern Chinese, and refers to the language of northern China from the Yuan dynasty (1279–1368) to the present day.

Historical phonologists further divide the Mandarin period into three parts: Early Mandarin (1269–1455) is typified by the opera manual *Zhongyuan yinyun* (Rhymes of the Central Plains, 1324) of Zhou Deqing (1277–1365); Middle Mandarin (1455–1795) is preserved in Chinese-Korean pedagogical texts such as *Hongmu chongyun yokhun* (Standard Rhymes of the Reign of Hongwu, Annotated and Transcribed, 1455) and *Sasong t'onghae* (Thorough Investigation of the Four Tones, 1517), as well as the *Yunlue buitong* (1642) and other Chinese rhyme manuals. Mandarin from the mid-nineteenth century to the present is considered to have changed very little, and is referred to as Modern Mandarin or Modern Chinese.

MANGA *Manga* are Japanese comic magazines. These large, softcover magazines printed in monochrome are by far the most broadly read literary genre in Japan. Around 2 billion copies are produced annually. Some magazines are printed in 1 million copies or more each week. Many *manga* are reprinted later in pocketbook format.

Each *manga* magazine features stories and serials of broadly the same theme: education and training, romance, action, humor, history, or even violent pornography. Characters and stories from *manga*, *anime* (animated films), and computer games are often reproduced in each other. Drawing and dialogue conventions are more complex than are generally seen in, for example, American comics: odd-shaped panels, reduction or addition of detail for emphasis, use of varied camera point of view, and mixed (Japanese/Latin) script for effect are common.

Manga artists are generally organized into schools or studios, in traditional Japanese *iemoto* pattern, where a senior or master instructs junior artists, who eventually instruct juniors of their own. Members of a studio tend to have broadly similar drawing and expressive styles.

Otaku, young Japanese males who are obsessed with *manga* and *anime*, are considered something of a social problem in Japan because they are said to develop limited and difficult social relationships.

MANGALORE (2001 pop. 399,000). Mangalore, which was earlier known as Kodial Bunder, is the headquarters of the modern district of Dakshin (south) Kannada in the Indian state of Karnataka. Located on the Arabian Sea coast at the mouths of the Netravati and Gurgur rivers, it is marked by undulating landscape with areca nut (betel palm) groves, coconut palms, and other trees. The town has a tropical climate. Tulu is the most popular language. Mangalore is believed to have derived its name from the Managaldevi Temple located there. In addition, the town has several famous pilgrim centers.

This strategic port town had strong commercial links with the Persian Gulf for many centuries, and

various powers have fought for control over it. In 1526, Mangalore was taken over by the Portuguese from its Bidanur Nayaka rulers. In 1695, the town was burned by the Arabs in retaliation for Portuguese restrictions on Arab trade. In 1763, when the Mysorean ruler Hyder Ali (1722–1782) conquered the town, he built a dockyard and an arsenal here. The town was annexed by the British in 1799. The modern port is ten kilometers north of the town, and is now India's ninth largest cargo handling port. Mangalore's economy is dominated by agricultural processing and port-related activities, and it is also the major banking center for the region. The population is about 60 percent Hindu with significant Muslim, Christian, and Jain minorities.

MANGESHKAR, LATA (b. 1929), Indian singer. Lata Mangeshkar's mellifluous voice has enthralled millions of people for the last five decades. Born in Indore, Madhya Pradesh, India, Lata showed her talent early, acting and singing in scores of Hindi movies since childhood. *Pabli Mangalagaur*, released in 1942, was her first acting assignment. At the age of thirteen she recorded her first film song in Vasant Joglekar's *Kirti Hasaal*. Singing with equal ease in Marathi, Hindi, and Urdu, Lata performed thirty thousand solos and duets that entranced millions of people throughout the world. Purity, sharpness, clarity, and lyrical notes are hallmarks of her songs. Lata's song "Aye Mere Watan Ke Logon" (People of My Country) sung during the Sino-Indian war of 1962 aroused a patriotic fervor and brought tears to many, including the premier, Jawaharlal Nehru.

She has won many laurels during her career: a place in the *Guinness Book of Records* (for singing the most songs in twenty different languages); a platinum record for EMI London, *Padma Bhushan*, *Padma Vibhushan*; and the Dadasaheb Phalke award. In 2001, Lata won India's highest civilian award: the Bharat Ratna.

MANGROVES Mangroves are communities of plants and animals existing within swampy intertidal mudflats in the Tropics, mainly at estuaries, riverbanks, and coastal regions subject to brackish water. Asia has 46 percent of the world's mangroves.

Diverse communities are found in mangroves. Frequent inundation and continual silting make the soil soft and clayey in texture, lacking aeration. Mangrove flora are uniquely adapted to such conditions. The red mangrove (*Rhizophora mangle*) has prop roots growing from the trunk for stability and bears germinated seedlings with long radicles. The white mangrove (*Laguncularia racemosa*) develops a dense network of cable roots within the soft mud for stability. A feature of this and several other species is spongy vertical structures growing from the cable roots, protruding several centimeters above the soil surface. These breathing roots (pneumatophores) help the plants obtain air. The black mangrove (*Avicennia germinans*) achieves stability by a massive growth of knee-shaped pneumatophores around the collar of the tree.

An abundance of animal species inhabits mangroves, including mollusks, crustaceans, insects, and fish. The fauna feed on organic matter mainly derived from leaf litter. The group of crabs called sesarmids may rely on fresh mangrove leaves as a food source.

Humans also benefit from mangroves. In countries such as Bangladesh, mangroves are the main source of livelihood for coastal populations. They derive fuel, medicines, and building materials from mangrove trees. Mangroves are also reliable sources of food: fruit such as Nipah palm nuts, and crabs, prawns, snails, and bivalves are constantly harvested. The complex structure of pneumatophores and fallen branches, and the abundant detritus, make mangroves nursery grounds for commercial varieties of fish, prawns, and crabs. Mangroves also help prevent erosion of the shore or riverbanks as their dense root networks help stabilize the soil.

More than 75 percent of the coastlines of tropical and subtropical countries were once covered with mangrove forests, which help to protect the shorelines. However, it is estimated that fewer than 50 percent of these remain today. The loss of mangroves in several countries is caused largely by urbanization, land reclamation, deforestation for charcoal and timber, mounting pollution problems, as well as the recent pressure from commercial shrimp farming. Industrial shrimp aquaculture has led to the clearing of large tracts of mangrove forest in Southeast Asia, Latin America, Africa, and the Pacific Islands. Furthermore, the pollution caused by organic waste from shrimp is

an additional problem. In view of the importance of mangroves, several initiatives are being implemented in several of the countries mentioned to restore degraded mangrove forests and regenerate these on new mudflats. Active research is also being conducted internationally to develop sustainable models on how to derive benefits from the mangrove forests without destroying the ecosystem.

MANGYSHLAK PENINSULA The Mangyshlak Peninsula (in Kazakh: Mangghystau Tubegi), is located along the western boundary of the Republic of Kazakhstan, an internal political division of the USSR until its independence in 1991. It is part of a greater political-administrative region of Kazakhstan known as the Manggystau Province (Oblysy). The peninsula extends westward into the Caspian Sea.

The Mangyshlak Peninsula is at the heart of a larger oil and gas region that Kazakhstan inherited with independence from the Soviet Union in 1991. Rich in fossil fuels and other natural resources, the peninsula yielded over half the republic's oil output in the early 1990s. The peninsula sits at the southern margins of the giant Tenghiz oil field, which extends to the north. Tenghiz oil reserves have been estimated to be around 25 billion barrels, or about twice the amount of Alaska's north slope. Chevron Oil entered into a joint venture with the Kazakh government in 1992, called Tengizchevroil, to extract oil in the region. Several problems have limited the development of the field in recent years, including decreased demand by Russian Siberian refineries that imported most of the oil, and pipeline access across the borders of the Russian Federation. In addition, the high sulfur, paraffin, asphalt, and tar content of much of the oil makes it difficult (that is, more expensive) to process.

Kazakhstan also inherited the Soviet Union's only fast breeder nuclear reactor, built in 1972 and located on the Mangyshlak Peninsula near the port city of Aqtau (Shevchenko). The reactor was built mainly to desalinate brackish Caspian Sea water for both personal and industrial uses. For economic as well as security concerns, the Kazakh government shut down the reactor in 1992.

The Caspian Sea is in reality the world's largest lake, with the Volga River supplying more than 80 percent of its inflow. It has no outlet and loses water through evaporation. Regional climate changes and changes in river flow into the Caspian have caused it to rise in the latter part of the twentieth century, leading to the evacuation of small towns and villages along the coast due to flooding.

Because of its high latitude (50°N), far from the moderating influences of oceans, the peninsula experiences a very continental climate. It sits on the western margins of the dry Kazakh steppe region. Horse, sheep, and camel herding, as well as some irrigated farming, are the main occupations of the inhabitants of the peninsula.

MANHATTAN INCIDENT Thailand's *Manhattan* Incident of 1951 was the result of a bitter interservice rivalry between the more politically moderate navy and the conservative, royalist army, which was in turn tied up in the ongoing conflict between Pridi Banomyong (1900–1983) and Field Marshall Pibul Songgram (1897–1964), the leaders of Thailand's 1932 Revolution, which ended the absolute monarchy. Following World War II, Premier Pibul was forced to resign because of his alliance with the Japanese. He was replaced by the leading democrat, Pridi, who implemented sweeping constitutional changes designed to keep the military out of politics. Pridi's leftist economic reforms worried many in the army and royal family, who implicated him in the 1946 death of King Ananda. Therefore, despite his 1946 electoral victory, Pridi resigned, installing his close friend Admiral Dhamrong as premier.

In March 1947 Pibul reentered politics, resigning from the army and founding an ultranationalist party.

Dhamrong was ousted in a 7 November 1947 army coup; he and Pridi were given refuge by the navy before fleeing abroad. Pibul denied planning the coup and was immediately named chief of Thailand's armed forces; he consolidated his power by September 1948, scrapping Pridi's liberal constitution and giving the army full control over the legislature. Corrupt and authoritarian, Pibul saw his legitimacy wane.

Pridi had a lot of popular support but had already disbanded his wartime Free Thai Movement, which had been allied with the West against Pibul's pro-Japanese government. Pridi also feared the prospect of a full-scale civil war, and both the United States and Great Britain urged the navy not to participate in a civil war against the army-led government. Pridi lived in exile but remained a threat to the regime as the navy laid the groundwork for his return, and on 26 February 1949 he secretly returned to lead an abortive coup by the navy and marines that was quickly crushed, forcing Pridi back into exile.

Pibul sought to improve the economy and began to shore up his anti-Communist credentials, winning American aid. As part of the aid program, the United States provided Thailand with a dredger, the USS *Manhattan*. At the 29 June 1951 ceremony transferring the dredger to the Thai government, a naval officer forced Pibul into a naval launch at gunpoint. He was taken to the battleship *Sri Ayudhya*, where he was held.

The navy, which had been biding its time since the February 1949 coup attempt, was hoping to oust Pibul, but army, air force, and police units responded quickly and on 30 August, the air force bombed the battleship. Pibul survived, and swam ashore, and within thirty-six hours was back in full control. In total, there were some 603 civilian casualties and an untold number of military casualties. Pridi died in exile, and Pibul was ousted in a September 1957 coup by Field Marshall Sarit Dhanaret. The lasting result of the 1951 *Manhattan* Incident was that the army consolidated its political power and would continue to dominate Thai politics for decades.

MANIAM, K. S. (b. 1942), Malaysian writer. K. S. Maniam was born in Bedon, Kedah, Malaya. Trained as a teacher in Britain, he taught for several years in

Kedah before graduating from the University of Malaya in 1973. He is the author of some of the most significant Malaysian fiction in English. In 2000, he won the international Raja Rao Award for literature, which was conferred by the Samvad India Foundation. His novel *The Return* is considered a landmark for creating a distinctive Malaysian voice in the English language. His national award-winning short story "Haunting the Tiger" is similarly regarded as a groundbreaking piece of stylistic innovation for the genre of the Malaysian short story.

The Return has been included in the newly formed national canon of English-language writing for the national secondary schools curriculum. This inclusion is also the first official acknowledgment of contributions by Malaysian writers in languages other than the national Malay language.

Two of Maniam's plays, *The Cord* and *Sandpit*, marked the beginning of a resurgence in original Malaysian theater in English, which took off in the early 1980s. His work draws on the historical experiences of Indian-Malaysians and is concerned with the creation of new mythological and symbolic languages that integrate immigrant experiences into the multiracial national psyche of Malaysia. K. S. Maniam was associate professor of English at the University of Malaya and is now an independent writer.

Mohan Ambikaibaker

MANILA (2002 Metropolitan Manila est. pop. 10 million). Manila is the capital and the primary city of the Philippines. Manila proper (1995 population 1.6 million) is the Philippines' second-largest city after Quezon City (1995 population 2 million) in terms of population. Manila is located in southern Luzon Island on the Pasig River and Manila Bay. The Pasig River divides the city into north and south sections, with the old city, government buildings, and tourist facilities in the south and commerce, large slums, and Chinatown in the north. Present-day Manila is a major manufacturing, commercial, educational, cultural, and political center. It is a major port, the endpoint for the island's highways and railroads, and it has the nation's major airport. Major industries include processing plants for hemp and tobacco, pharmaceuticals, chemicals, steel, automobile assembly, and textiles. It also has over twenty colleges and universities and a reputation as the entertainment center of East and Southeast Asia with many restaurants, nightclubs, and theaters.

From the twelfth century, the territory that was to become Manila was a Muslim trading port with ties to

The skyline of Quezon City, Manila, in 1998. (STEPHEN G. DONALDSON PHOTOGRAPHY)

Brunei and Melaka to the south and west. It was conquered by the Spanish colonizer Miguel Lopez de Legazpi (c. 1510–1572) in 1571; Legazpi made it the center of Spanish colonization of the Philippines. The name Manila is a Spanish corruption of Maynilad, meaning "where the *nilad* grows." (The *nilad* is a small white flower that used to flourish on Pasig riverbanks.)

Under the Spanish, Manila became the center of education, commerce, and religion; it was administered from distant Mexico City. The Spanish actually created two cities: the Intramuros, a walled city south of the river, where the Spanish lived, and an Extramuros, outside the walls, where the Malays and Chinese lived. For two centuries it was mainly a regional trade center for the flow of goods and wealth between China and Mexico. After the Spanish developed the Philippines as an agricultural colony early in the nineteenth century, Manila became the primary trade city both for intra-island and external trade. As the major trading center, it attracted the Spanish elite and became a cosmopolitan city and the home to Spain's major educational and religious organizations in Asia. It

was this elite that played a major role in the Philippine revolution (1896–1898) and who worked with U.S. colonial officials to create an independent Philippines in 1946.

Manila was occupied by the Japanese from January 1942 until February 1945. It suffered much damage in both the Japanese assault and the American recapture, with the old city almost entirely destroyed. In 1948 Quezon City was made the national capital; Manila became the capital again in 1976. Since the end of World War II the city has been rebuilt and has experienced enormous growth.

Metropolitan Manila, or Metro Manila, is an administrative region composed of twelve cities (Quezon City, Manila, Caloocan, Makati, Pasig, Marikina, Mandaluyong, Pasay City, Muntinlupa, Paranaque, Las Pinas, and Valenzuela) and five municipalities (Taguig, Malabon, Navotas, San Juan, and Pateros). Metro Manila was created in 1975 by Ferdinand Marcos (1917–1989), the Philippines' leader from 1966 to 1986, to make coordination of regional services such as sewage disposal, garbage collection, housing, and water supply more efficient. Marcos appointed his wife, Imelda, the first governor of the district. Each of the cities and municipalities maintains its autonomy and elects its own mayor and council.

MANILA ACTION PLAN On 24 and 25 November 1996, the Asia-Pacific Economic Cooperation (APEC) nations held their annual meeting in Manila, the Philippines. Security at the meeting was especially tight, as the host nation was undergoing considerable political unrest and it feared possible violence from Islamic fundamentalists.

The Manila meeting followed a lackluster conference in Osaka the previous year where little of substance was accomplished. Some anticipated a similar result for Manila because of differences among the member countries over tariff reductions.

The signature issue of the conference was loosening restraints on the trade in advanced technology, especially computers and communication equipment. As the world's leader in these areas, the United States pressed for liberalized trade rules. But other nations had developing industries in these market segments and were reluctant to let them fend for themselves in a brutally competitive world market. China, especially, was reluctant to go along with U.S. proposals.

Rather than let a second consecutive conference end in relative failure, President Bill Clinton proposed a compromise that set the year 2000 for the elimination of national tariffs on technology. The resulting "action agreement" was, however, nonbinding and no enforcement provision was adopted. This somewhat lame agreement was the only real item of business for the conference, which also split over the issue of human rights, with China and the United States once again in opposition.

Robert K. Whalen

MANIPUR (2001 est. pop. 2.4 million). Bordering Myanmar (Burma), Manipur is a small state in north-eastern India. The state is a rough rectangle with an area of 22,327 square kilometers. One-third of the people, living in the rugged hills, belong to twenty-nine tribes, which are part of either the Kukis or the Nagas ethnic groups. The other two-thirds of the population, in the valley, are primarily Meitei. In the 1700s Bengali influence led to the adoption of Vaishnavism by the elite. British conquest in 1891 increased the social distance between the elite and the masses. Efforts to revive Meitei culture and religious rituals and to replace Bengali with Manipuri script strongly challenged the national government and the Vaishnavite Brahmans. Resistance in the hills was violent, with a 1917 rebellion against the British and a union of Naga groups into the anti-Christian Zeliangrong movement in Nagaland (1927–1932).

During World War II Manipur was occupied by the Japanese, with 250,000 British and Indian troops trapped under siege. Since 1972 violent self-rule campaigns and a war between the Kukis and Nagas have disturbed the state. Agriculture and forestry predominate; small-scale industries produce cotton and silk textiles, milled rice, crude sugar, and wooden wares. More than 200,000 hand looms yield designed cloth in demand throughout India.

MANORA *Manora*, also known as *menora*, *nora chatri*, or simply *nora*, is a traditional Malaysian folkdance drama. Some scholars believe that *manora* originated in India and later spread to Java and Malaya before reaching southern Thailand. Other scholars believe that *manora* is a primitive performing art, originating in southern Thailand, and could have evolved from the ritual of propitiation of hunters. Today, *manora* is largely performed as an art form for the common people.

The word *manora* derives from the name of the heroine in the Manohra tale in Buddhist literature. There are two types of *manora*. One is performed for a specific ritual purpose (e.g., the release of a vow, or to celebrate coming of age). The other is performed purely for entertainment at weddings, fairs, or festivals. *Manora* is popular in the northern and eastern states of Malaysia (Kedah, Perlis, and Kelantan), as well as in various provinces in southern Thailand.

Manora is similar to Mak Yong, another traditional Malay dance drama. However, they are different in terms of their presentation of music and dance. The musical instruments that accompany the dancing and singing in a *manora* are much more numerous than those in Mak Yong. *Manora* is performed on a low platform with the audience sitting or standing on three sides. Mak Yong, on the other hand, is performed on the level ground and is open on all sides so that performers can sit and move freely and are visible to the audience at all times. *Manora* emphasizes the dance rather than the stories, which derive from *Ramayana* and *Mahabharata* epics. Unlike Mak Yong, all performers of *manora* are men, who cross-dress to play female roles. The language used depends upon the local dialect. In Kelantan, for example, actors use the Kelantanese dialect, while in Perlis, a mix of Thai and Perlis dialects is used. *Manora* music is adapted from Thai folk music, and instruments usually include a double-reed oboe, a pair of single-headed stick drums, cymbals, and bamboo or wooden clappers.

MANSUR SHAH (d. 1477), Malay Melakan sultan. During Mansur Shah's reign (1459–1477), the sul-

tanate of Melaka reached the zenith of its political, territorial, and religious influence in the Malay Archipelago. Mansur succeeded his father, Muzaffar Shah (reigned 1445–1459), owing to the support of his powerful and influential uncle Tun Perak, the *bendahara* (prime minister). Throughout his reign, Mansur was assisted by Tun Perak, Tun Ali, the treasurer, and Hang Tuah, the *laksamana* (admiral).

The power and status of the sultan was consolidated due to the efforts of Tun Perak. Melaka expanded its hegemony through diplomacy, political maneuvering, religious influence, and military conquest, and Tun Perak planned and executed this expansionist policy. Eastern Sumatra, the Malay Peninsula, and the Riau-Lingga archipelago submitted to Melaka. Through trade and Islamic propagation, Banda, Brunei, and the northern Javanese ports also came within Melaka's sphere of influence. Mansur's marriage to both a Chinese and a Javanese princess further strengthened relations with China and Majapahit, respectively.

The pleasure-loving Mansur was neither an efficient administrator nor an exemplary ruler. He presided over a royal court rich with ceremonies. He preferred literature and religious discourse and left state affairs to his ministers. The well-known Tuah-Jebat duel exemplified Mansur's misuse of his power as an absolute monarch. Out of blind loyalty to his ruler, the *laksamana* Tuah killed his friend, Jebat, who had revealed the monarch's injustices. The Tuah-Jebat conflict struck at the heart of the traditional Malay concepts of unquestioned loyalty and justice.

MANTO, SAADAT HASAN (1912–1955), Indian writer. Saadat Hasan Manto, the much acclaimed and controversial South Asian Muslim literary figure, was born in Sambrala, in the Ludhiana district of the Punjab. As a young man, Manto began his literary

career with an Urdu translation of Victor Hugo's *The Last Days of a Condemned Man*. Early in his career, Manto was deeply influenced by French and Russian realist writers such as Hugo, Guy de Maupassant, Anton Chekhov, and Maksim Gorki. During the 1930s, Manto was also peripherally involved with the Indian Progressive Writers Association, a literary movement committed to articulating the ideals of social uplift and justice through literature.

During his career, Manto wrote more than two hundred stories and a number of essays, film scripts, and radio plays. However, his greatest contributions to Indian literature were his mastery of the short story genre and his use of the Urdu language. Some of his well-known Urdu short stories include "Bu" ("Odor"), "Khol Do" ("Open It"), "Thanda Gosht" ("Cold Meat"), and "Toba Tek Singh," translated into English after Manto's death.

After the partition of India in 1947, Manto left his home in Mumbai (Bombay), where he had lived since 1936, and returned to Lahore, Pakistan, in January 1948. Although Manto's last years in Pakistan were filled with financial hardship, failing health, and relative obscurity, they were also witness to some of his greatest literary achievements. Manto was survived by his wife Safiyah and three daughters.

MANUFACTURING INDUSTRY—INDONESIA Indonesia's economic performance from 1969 to 1996 has been remarkable. From the mid-1960s to the early 1980s, gross domestic product (GDP) grew by more than 7.5 percent per annum (p.a.). After a mild economic recession due to the collapse of the price of oil in 1980–1985, the economy rebounded again and grew by 6.7 percent p.a. from the mid-1980s to 1996.

Continued economic growth transformed the structure of Indonesia's economy. In 1970, agriculture accounted for 45 percent of GDP, and manufacturing 12 percent. By 1996, agriculture had declined to 17 percent of GDP, whilst manufacturing rose to 24 percent.

Structural Transformation—Key Features of the Manufacturing Sector

Between 1970 and 1980, the manufacturing sector grew by more than 14 percent per year. However, In-

onesia was confronted with a series of problems in the 1980s, and a large decline in oil prices hurt Indonesia's balance of payments. The government then launched economic liberalization programs to increase economic efficiency, and made development of non-oil and gas exports a top priority. The impact of these measures on non-oil manufacturing exports was quite remarkable; they experienced a 57 percent growth in 1987. After experiencing slower growth in 1980–1985 (8.5 percent), the sector grew by 10.7 percent in 1985–1990 and 10.4 percent in 1990–1995.

In 1997, however, Indonesia faced a serious economic crisis. The rupiah fell to a record low of 17,000 to the dollar in January 1998, and the economy shrank by 13.2 percent. In 1998 the manufacturing sector experienced negative growth of –11.4 percent while the overall economy declined by –13.2 percent. The overall economy slightly improved in 1999, experiencing 0.2 percent growth while the manufacturing sector grew by 2.2 percent. The share of the manufacturing sector to the total GDP was relatively stable during that period, implying a stagnation in structural change in this sector.

To understand about the structure of the manufacturing sector, it is important to observe how the structural change took place within it. Food products (International Standard Industrial Classification number 31, or ISIC 31), which accounted for 47 percent of total non-oil manufacturing in 1975, had declined to 23 percent of total manufacturing by 1995. On the other hand, the share of labor-intensive industry (ISIC 32 and 39) in total manufacturing continued to rise, from 11 percent in 1975 to 19 percent of total manufacturing by 1995.

Internationally, Indonesian exports were dominated by non-oil manufacturing products, particularly after the mid-1980s. In the 1970s, manufacturing exports contributed less than 3 percent to total exports, and primary goods dominated, but by 1987 the share of manufacturing exports had surpassed that of primary exports.

Before the mid-1980s, manufacturing exports were dominated by the Agriculture Resource Intensive (ARI) group. In the 1970s, ARI exports represented 90 percent of all non-oil manufacturing exports, and Unskilled Labor-Intensive (ULI) only 5 percent. But ULI exports grew rapidly, surpassing the ARI share in 1985. That year, ULI was 44 percent of total manufacturing exports, while ARI was 42 percent. The share of ULI continued to increase, reaching 54 percent in 1992, while that of ARI continued to decline, to 25 percent. This notable performance of labor-intensive

The Arco oil company's offshore facility in the Java Sea. (HANAN ISACHAR/CORBIS)

exports can be attributed to the trade liberalization that began after 1985, which allowed Indonesia to exploit its potential comparative advantage in labor-intensive products.

Another important feature of the Indonesian manufacturing sector was the high dispersion of trade protection among the industries, particularly during the period 1975 to 1998. But trade protection in the manufacturing sector was not random. In the 1970s it was mainly influenced by national policy, such as protection for infant industries. Particularly after the mid-1980s, it was strongly influenced by crony capitalists and various interest groups.

The period since 1985 has seen outstanding performance in the Indonesian manufacturing sector. This rapid expansion can be credited to factors such as the devaluations of the rupiah in 1983 and 1986, high savings and investment rates, and economic liberalization since 1985. Indonesia's remarkable growth in the manufacturing and export sectors during the pre-crisis era and this achievement can be attributed to credible macroeconomic management, a political predisposition towards moderate inflation, and trade liberalization during the 1980s.

During the 1997 economic crisis, the share of manufacturing in the total GDP remained relatively stable. After 1998 the manufacturing sector rebounded in line with the improvement of Indonesia's economic growth.

MANUFACTURING INDUSTRY-MALAYSIA

The manufacturing industry in Malaysia became a significant contributor to the country's economy in the postindependence period beginning in the 1960s. During the colonial period, the country had been a major producer of raw materials, namely, tin and rubber. Secondary industries then were related to tin, rubber, timber, foodstuffs, and petroleum.

Historical Overview

Tin smelting started in Kuala Lumpur in the early 1880s. In 1885, a reverberatory furnace was in operation in Telok Anson (now Telok Intan), Perak (now a state in Malaysia), for smelting low-grade ores. The Straits Trading Company erected smelting plants on Pulau Brani (c. 1887) and at Butterworth (1902) in Penang state. A Chinese-owned smelter at Datuk Keramat that started operation in 1897 was bought by the Eastern Smelting Company.

Oil was struck at Miri, Sarawak, in 1910. A Shell-owned distillation plant for crude oil at Lutong came into operation in mid-1919 to serve the needs of the

oilfields of Miri and Seria, Brunei. The Borneo Company processed gold by utilizing the cyanidation process at its plants in Bau (1899) and Bidi (1900) in Sarawak.

Some light-engineering works involved motor repairs of machinery in tin mining, irrigation, and transportation (road and rail) equipment. Service maintenance of locomotives and coaches was an industry supporting the transportation sector. The manufacture of consumer goods (soap, matches, etc.) for domestic consumption was on a very small scale. There were also indigenous handicraft and cottage industries (textiles, foodstuffs, etc.). Beginning in the 1960s concerted efforts and programs were implemented to promote and develop the manufacturing industry in the country.

Contemporary Status

The manufacturing sector is now a dynamic and flourishing component of the national economy, accounting for about one-third of the gross domestic product (GDP) as shown in Table 1.

The electrical, electronics, and machinery-products industries experienced rapid growth and expansion during the 1970s. Malaysia progressed from assembling electrical goods and machinery to manufacturing a wide range of these products by the 1980s. The electronics industry is the largest in the region, and Malaysia is the leading exporter of semiconductor components to the United States. Multinationals like Intel, AMD, Sony, Sharp, Motorola, and others are well entrenched with huge amounts of capital investments.

The Rubber Industry

Complementing its market position as the world's major producer and exporter of natural rubber, Malay-

sia also leads in the manufacture of latex goods. The manufacture of rubber-based products has attracted a constantly growing number of foreign manufacturers and investors, including Goodyear of the United States, Viking Askim of Norway, Ansell of Australia, BDF Beiersdorf AG of Germany, Pirelli of Italy, Sagami of Japan, Dongkuk Techco of South Korea, and others.

The Food Industry

The food, beverages, and tobacco industries are the province of small- and medium-scale (SMIs) establishments. Food manufacturing continues to be heavily dependent on imported inputs. Efforts are being undertaken to encourage import substitution in this sector.

The Petroleum Sector

Optimism is high for the petroleum industry and the manufacture of related products. From its beginning in Lutong in 1919, Malaysia had five oil refineries by 1998: two are owned by PETRONAS (Petroleum Nasional Berhad), the national petroleum company, two by Shell, and one by Exxon Mobil. The PETRONAS-owned Liquefied Natural Gas (LNG) plant at Bintulu, Sarawak, which started operation in 1983, is the world's third-largest LNG exporter. The Association of Southeast Asian Nations (ASEAN) Bintulu Fertiliser plant, an ASEAN joint-venture project that commenced operation in 1985, is reputedly the world's largest in terms of production-train capacity. Another joint venture, the Middle Distillate Synthesis plant that converts natural gas into diesel, kerosene, solvent, and so on, is a project by PETRONAS, Shell Gas BV, Mitsubishi Corporation, and the Sarawak state government. It started production in 1993. There are also several petrochemical industries operating under PETRONAS.

Heavy Industry

The heavy-industry sector can trace its beginnings to the period of large-scale tin mining in peninsular Malaysia from the mid-nineteenth century. The manufacture of cast-iron parts for tin mines was important then. When railways were introduced, steel casting of replacement parts for locomotives and coaches was undertaken by this sector. In 1967, the country's first integrated commercial steel mill (Malayawata Steel Bhd.) was established. Foreign vehicle giants like Toyota, Honda, and Volvo have had assembly plants in Malaysia since the 1960s. Two national car projects and one national motorcycle project boosted the heavy-industry sector. Malaysia has emerged as a producer and exporter of motor vehicles since the ap-

TABLE 1

Gross Domestic Product (GDP): Sectoral Performance, 1999			
	Growth	Share of GDP	Contribution to growth
Agriculture, Forestry, and Fishing	4.6	9.4	10.1
Mining	-1.2	7.6	-2.3
Manufacturing	8.9	29.2	68.0
Construction	-3.6	3.7	-3.4
Services	2.4	54.6	31.3
Less imputed bank service charges	3.7	7.4	6.4
Plus import duties	21.6	2.9	12.7
GDP	4.3	100.0	100.0

pearance of the Proton Saga (1985), Perodua Kancil (1992), and Modenas Kriss (1995). In Malaysia, Proton held more than 60 percent of the market share for automobiles throughout the 1990s.

The Chemical Industry

The chemical industry in Malaysia continues to rely on imported intermediate chemical and petrochemical products in production ranging from household items to material inputs for the rubber, palm-oil, and timber industries. The chemical-industry sector has a conspicuous foreign participation, including ICI, Unilever, Colgate Palmolive, Borden, Exxon Mobil, Shell, and Mitsubishi Chemical Industries.

The Timber, Textile, and Plastics Industries

The timber-based industries manufacture a wide range of wood products including sawn timber, plywood, prefabricated houses, doors, window frames, wall panels, fiberboard, particleboard, wood briquette, wood wool, timber moldings, veneer, and block board. Furniture and wood fixtures are produced for the domestic and foreign markets.

The textile industry focuses on textiles and yarn production and garments and knitwear that cater for local and international markets. The industry is dominated by local enterprise.

The manufacturing sector also produces plastics (containers, pipes and hoses, electrical components), precision products (surgical, dental, photographic, optical), palm oil-based products (margarines, shortenings), clay-based products (bricks, ceramic articles), and leather goods.

Industrial Organizations and Government Organs

The Federation of Malaysian Manufacturers (FMM, 1968) focuses on creating and sustaining a dynamic business environment. Its membership of more than two thousand is representative of the various sub-sectors of the Malaysian manufacturing industry. The FMM Institute of Manufacturing offers skills training. FMM operates and manages the Malaysian Product Numbering System as well as being the authorized body for issuing and endorsing certificates of origin.

The manufacturing industry in Malaysia comes under the purview of the Ministry of International Trade and Industry (MITI). Specifically the Industrial Policy Division and the Industries Division in MITI oversee the promotion and development of the manufacturing sector. Other related government organizations and agencies include the Malaysian Industrial Development Authority (1965), Malaysian Industrial Development Finance Berhad (1960), and Malaysian Industrial Estates Sdn Bhd (1964).

In concert with the National Development Policy, the Second Outline Perspective Plan (1991–2000) and the Seventh Malaysia Plan (1996–2000), the Second Industrial Master Plan (IMP2) targets the manufacturing sector as a major contributor to the national economy. The industrial sector is entrusted with the pivotal task of propelling the country toward industrialization and sustainable economic growth and development. IMP2 emphasized the strengthening of Malaysia's industrial base as well as diversifying the export of manufactured products. The promotion of foreign investment in the manufacturing sector will continue to be adopted as one of the pivotal strategies in developing and expanding the sector.

MANUFACTURING INDUSTRY-PHILIPPINES A critical goal of the Philippine economy has been an expansion of its product manufacturing base to take advantage of its labor surplus and position itself favorably in the regional economy. The Philippines is a labor-surplus country, and the government has traditionally encouraged the development of labor-intensive industries, such as textile production and the assembly of electrical and electronic equipment. However, manufacturing has made only a relatively small contribution to employment. So far, the Philippine manufacturing industry has not exhibited the same structural changes as have neighboring countries.

Historical View

The roots of modern manufacturing in the Philippines can be found in the closing years of Spanish rule in the last decades of the nineteenth century. Few industrial establishments began operations in the 1880s, and most of those that did produced food, tobacco, and beverages. Over the first four decades of the twentieth century, manufacturing developed slowly and irregularly. Industrial expansion was primarily directed to the processing of agricultural products (sugarcane and coconuts), the manufacture of apparel, and the production of ceramics, cement, glassware, and wooden and rattan furniture. During the period immediately following World War II, industrial production was geared to the domestic market, and manufacturing was assisted by high levels of protection. Protection depended initially on import quotas and foreign exchange control. Later, in the 1970s, the main forms of protection became tariffs and foreign-exchange controls administered by the Central Bank.

Much industrial growth took place in the 1950s. By 1960 manufacturing accounted for 20 percent of the gross domestic product (GDP), whereas the range in the other member countries that would later join the Association of Southeast Asian Nations (ASEAN) was 9 to 13 percent. However, growth rates dropped appreciably after the late 1950s, as the main opportunities for import substitution became exhausted. The government made a mistake in not moving away from

the policy of import substitution in the 1960s. The 1970s experienced some reorientation toward exports, stimulated by the floating of the Philippines peso, the Export Incentive Act (1970), and the Export Processing Zone project (1972). However, in the beginning of the 1980s, the main thrust of industrial policy continued to be the protection of domestic manufacturing aimed at import substitution.

Since the mid-1980s, the performance of nontraditional manufactured exports has shown its growing importance to the Philippine economy. Within this category are electronics, furniture, wood products, and fashion garments, shoes, and leather goods. Most of these industries depend on imported raw materials that are assembled or fashioned in some of the Philippine special economic zones: the Bataan Free Trade Zone, Baguio, and Cebu.

Contemporary Status

Manufacturing is the second most important economic sector after services, employing 9.8 percent of the labor force and contributing 22 percent of the GDP in 1998. In the 1990s, manufacturing was the most dynamic sector in the Philippine economy. According to the Asian Development Bank, the GDP of the manufacturing sector increased by an annual average of 2.8 percent in the 1990–1997 period; manufacturing GDP declined by 1.1 percent in 1998 (as a result of the 1997 Asian financial crisis) and increased by 1.4 percent in 1999.

Manufacturing is dominated by the private sector. Firms employing over 100 workers together contribute 75 percent of the added value. Concentration is most pronounced in beverages, tobacco, cosmetics, paper and paper products, and household appliances. Many factories are licensees of foreign companies or act as subcontractors for foreign firms, turning out finished products for export from imported intermediate goods. In 1997 the most important branches of manufacturing, measured by gross value of output, were food products, machinery and transport equipment, and chemicals. (See Table 1.)

Modern manufacturing production is concentrated on processing and assembly operations of the following: food, beverages, tobacco, rubber products, textiles, clothing and footwear, pharmaceuticals, paints, plywood and veneer, paper and paper products, small appliances, and electronics. Heavy manufacturing contributes less than 40 percent of the total added value in the 1990s. It is dominated by the production of cement, glass, industrial chemicals, fertilizers, iron, steel, and copper and refined petroleum products. (See

TABLE 1

Structure of Manufacturing							
(percentage of total)							
Year	Value added in manufacturing, (in billions of dollars)	Food, beverages, and tobacco	Textiles and clothing	Machinery and transport equipment	Chemicals	Other manufacturing	
1980	8.354	30	13	12	14	31	
1997	18.333	33	9	15	13	29	

SOURCE: National Statistical Information Center (1999).

Table 2.) In the 1990s the electronics industry was the fastest growing sector not only in manufacturing but also in the Philippine economy as a whole. Exports of electronic production increased from \$3 billion in 1992 to \$20 billion in 1998; they contributed two-thirds of Philippine exports in 1998. The electronics industry is also the branch where the most employment has been gained.

Manufacturing is highly dualistic, consisting of a modern sector, which has considerable export potential, and a cottage sector, which contributes only a small amount to total added value but employs over half the manufacturing labor force.

Urban Base

The government's industrial strategy places high priority on the dispersal of manufacturing capacity

outside the capital. However, the industrial sector remains concentrated in the urban areas, especially in the metropolitan Manila region, and has only weak links to the rural economy. Over 60 percent of the manufacturing establishments are still concentrated in the Manila area and the southern Luzon region. The ability of the Philippines to reach a new level of industrial growth may depend on its achieving diversification outside urban areas.

MAO ZEDONG (1893–1976), leader of the Chinese Communist Party and chairman of the People's Republic of China. Mao was one of the leading figures of the twentieth century. Beyond serving as the head of the Chinese Communist Party (CCP), his ideas and policies served as a model for many other political leaders in the Communist world.

Mao was born in the village of Shaoshan, Xiang Tan County, Hunan Province in 1893. As a boy he resisted working on the family farm and instead sought every opportunity to obtain an education. In 1911 he joined the army and after six months service returned

Mao Zedong in a classic portrait. (ROMAN SOUMAR/CORBIS)

to his education. Six months spent reading on his own in the library proved of immense value and in 1913 he returned to formal schooling. Patriotism was perhaps the major motivating force in his life, and he saw education as a means to improve the lot of the Chinese people and the nation.

In 1919 he became involved in the May Fourth Movement (a reform movement aimed at strengthening China); through the movement he met Chen Duxiu and Li Dazhao, the founders (1921) of the Chinese Communist Party, of which Mao was an original member. In July 1921 he led the Hunanese delegation to the First Congress of the Chinese Communist Party in Shanghai. Thereafter, he devoted himself to revolutionary activities mainly in Hunan and Guangzhou. At first shut out of CCP leadership by a pro-Soviet faction that favored a traditional urban proletariat revolution, Mao came to power after the Long March (1934–1935) from southeastern to northwestern China. From that time forward, Mao's vision of a peasant revolution took hold. Mao's agrarian Marxism won

the CCP the support of the people to the detriment of the Nationalists. His supremacy in the party was confirmed at the Seventh CCP Congress in April 1945, where "Mao Zedong Thought" was adopted as the official ideology. Following Japan's surrender in 1945 at the end of World War II, the CCP defeated the Nationalists in China's civil war (1945–1949).

In the first ten years after the establishment of the People's Republic (1 October 1949), Mao, as the chairman both of the government and the party, worked to unify the nation and rebuild it after decades of war. He instituted land reform and oversaw the transition to a socialist economy. However, de-Stalinization in the USSR from 1956 brought about a radical shift in Mao's thinking.

Determined to avoid what he saw as the rise of bourgeois elements in the Soviet Union, he instituted his Great Leap Forward (1958–1960), an attempt to industrialize China at the rural level. Not only was the attempt a failure, the diversion of resources from agriculture caused widespread famine. Undeterred from his vision, Mao launched the Cultural Revolution in 1966; it was an attempt to keep the CCP and society at large from restratifying, but its result was societal chaos. Nevertheless, the CCP concluded officially in 1981 that Mao's contributions to the Chinese revolution far outweighed the "gross mistakes" he committed during his final years. Mao died on 9 September 1976 and his body remains on display in Tiananmen Square in Beijing.

MARCH FIRST INDEPENDENCE MOVEMENT The March First Independence Movement (*Samil undong*) was a Korean popular movement against Japanese colonization that resulted in a Korean declaration of independence from Japan and the fostering of Korean national liberation movements worldwide.

In 1919, Korean nationalists both in Korea and living abroad were inspired by President Woodrow Wilson's concept of national self-determination for all peoples, hoping that Korea could regain its independence from Japan, which had annexed it in 1910. As a

result, nationalist Korean intellectuals planned an appeal for independence from Japan to coincide with the World War I peace negotiations at Versailles. The death of Korea's former Emperor Kojong (reigned 1864–1907) in early 1919, and his planned public funeral for March of that year, gave the opportunity for Korean nationalist leaders to express their call for independence. In March, thousands of Koreans gathered, no doubt angered by rumors of the emperor's poisoning at the hands of the Japanese. Demonstrations were also planned in regional cities.

On 1 March 1919, Korean intellectuals presented to the Japanese governor-general in Seoul a "Declaration for Korean Independence" signed by Korean religious, political, and intellectual leaders. The declaration was proclaimed publicly the same day. The independence movement that erupted in Seoul on March 1 soon spread throughout the country in the form of spontaneous demonstrations for national independence. Among the demonstrators were farmers and craftsmen, Christians and Buddhists, housewives and school children, as well as intellectual and political leaders. The Japanese authorities were caught completely off guard by the movement's scale and spontaneity and their first reaction was one of brutal repression. Throughout the year conflicts between Koreans and Japanese resulted in thousands of deaths before the Japanese authorities were able to regain control.

The movement ultimately failed to free Korea of Japanese rule. The symbolic Declaration of Independence and national show of solidarity, however, provided the needed impetus for the Korean nationalist movement, which had languished since the time of annexation. Nationalist organizations began to appear both in Korea and among Koreans overseas. The Provisional Government of the Republic of Korea was established in Shanghai in April 1919, and became a focal point for subsequent independence efforts. Japanese policy in Korea also changed, as the authorities relinquished their initial heavy-handedness. Greater freedom of the press and organization was allowed, which aided the development of nationalist writings in Korea. After the suppression of the movement, however, the incentive towards Korean national independence moved overseas.

MARCOS, FERDINAND (1917–1989), Philippines president. Ferdinand Marcos was president of the Philippines; he was deposed and his initial successes overshadowed by his imposition of martial law, systematic human rights abuses, and massive corruption. Born on 11 September 1917 in the northern province of Ilocos Norte to a family of teachers, Marcos attended the University of the Philippines, obtaining a law degree in 1939. A year earlier, he had

Ferdinand Marcos at his inauguration in January 1966. (TED SPIEGEL/CORBIS)

been implicated in the murder of Julio Nalundasan, a congressman and political rival of his father. Marcos was imprisoned and subsequently posted bail to enable himself to take the bar examinations. He topped the exams amid allegations of cheating. He successfully defended his high scores with the university dean but months later was found guilty of murder and sentenced to imprisonment. He appealed his own case before the Supreme Court and was acquitted. During World War II, Marcos asserted that he was an anti-Japanese guerrilla, but documents appeared to show substantial collaboration with the Japanese. In 1949, Marcos successfully ran for Congress on the Liberal Party ticket, becoming the youngest member of Congress.

In 1954, Marcos married Imelda Romualdez, a beauty queen who belonged to a prominent political family in the south. They had three children. Marcos was reelected to Congress twice (1953 and 1957) and successfully ran for the Senate in 1959. In the 1961 presidential race, he supported Diosdado Macapagal, with the understanding that Macapagal would serve for only one term and would support Marcos's presidential run in 1965. When it was clear that President Macapagal was going to run for reelection, Marcos joined the rival Nacionalista Party and easily won the presidential nomination. He defeated Macapagal and became the nation's sixth postwar president. He was reelected in 1969, but, facing a constitutionally imposed term limit, he declared martial law in 1972, dismantled Congress, suspended civil and political rights, outlawed political parties, and shut down the independently owned press. In 1973, he promulgated a new constitution and rigged a nationwide referendum that allowed him to remain in office. In 1981, Marcos decided to lift martial law and call for elections. In what critics called a "cosmetic" lifting, he was reelected president for another six-year term. Two years later, he declared that congressional elections would be held in 1984. In preparation for these elections, Benigno Aquino, Marcos's long-time rival and head of the opposition party, returned from exile in 1983. He was assassinated as he was led from the plane to the airport tarmac, sparking mass unrest. In 1985, Marcos called a presidential "snap" election and was quickly challenged by Aquino's widow, Corazon Aquino. In 1986, Marcos declared himself the winner in an election fraught with voter intimidation, fraud, and violence. A popular uprising ensued, and in a clear demonstration of people power, Marcos was removed from office. He and his wife Imelda fled to Hawaii, where he died on 28 September 1989. Marcos was accused of plundering the nation's treasury of up to \$5 billion. In 1988, he, Imelda, and eight others were indicted in a U.S.

court for racketeering. To date, much of the Marcos family assets remains in family hands despite attempts by the Philippine government at recovery.

MARCOS, IMELDA (b. 1929), Philippine former first lady. Born on 2 July 1929 in Manila, onetime beauty queen Imelda Romualdez Marcos is best known as the spouse of Ferdinand Marcos (1917–1989), whom she married in 1954 when he was a young member of the Philippine congress. After her husband was elected president in 1965, as first lady she embarked on a beautification program for run-down Manila, commissioned orphanages, homes for the aged, and daycare centers, distributed seeds for backyard gardens, and arranged free medical care for the poor—while allegedly confiscating wealth from the rich for her personal bank accounts. In 1974, Marcos appointed her governor of Metro Manila. In 1978, after she was elected to the interim parliament, the Batasan Pambansa, she became minister of human settlements. As her husband's health deteriorated, Imelda began to run the civilian government, even campaigning for him. In 1986, when he was ousted by the People Power movement, she fled with him to Honolulu. In 1991 she returned to the Philippines and ran unsuccessfully for the presidency. In 1993, Imelda Marcos was convicted of corruption but appealed the case, which in 2002 was still pending. In 1995, she was elected to the Philippine House of Representatives. Although for a time the

Imelda Marcos, rumored to be seeking public office, at a mosque in Manila in July 2000. (AFP/CORBIS)

world's richest woman, she has been accused of helping her husband steal nearly \$5 billion, for which she faces lawsuits in the Philippines for alleged illegal money transfers and tax evasion.

MARMARA, SEA OF The Sea of Marmara, in northwest Turkey, is a small intercontinental basin that covers about 11,474 square kilometers between the Aegean Sea and the Black Sea and partly separates the Asiatic and European parts of Turkey. It is 280 kilometers long and 80 kilometers wide. On the east it is connected to the Black Sea through the Bosphorus and on the west to the Aegean through the Dardanelles.

The Sea of Marmara derives its name from the Greek word for marble (*marmaros*), which has been quarried since ancient times on the island of Marmara to the west of the Marmara Sea. Istanbul, Turkey's largest city, is situated at the entrance of the Bosphorus into the Sea of Marmara.

The Sea of Marmara has become severely contaminated due to the flow of heavily polluted Black Sea waters and the waste discharges from Istanbul. Turkish authorities and environmentalists fear further environmental degradation in the Sea of Marmara because of the increasing passage of oil tankers carrying Caspian and Central Asian oil through the Turkish straits from the Black Sea.

Earthquakes are common in the Marmara Sea area. The epicenter of the devastating earthquake of 17 August 1999, which claimed over 17,000 lives and caused widespread destruction of property, was located near Golcuk, a town near the city of Izmit at the eastern end of the Sea of Marmara.

MARRIAGE AND FAMILY—CENTRAL ASIA "A person separated from the family will be eaten by wolves." This Central Asian proverb reveals much about the pervasive belief system in this region regarding the importance of families and the need for members to remain interconnected. The central imperative to preserve the family unit is also seen in various marriage practices, such as giving *kalym* (bride wealth) and dowry, bride stealing, and the appointment of guardian parents for newlyweds.

Prior to Soviet collectivization in the 1920s, the economic demands of pastoral nomadism as practiced in parts of Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan required alliances among the patrilineal kinship groups to maintain grazing pastures and water rights for their horses, sheep, or cattle. Solidifying economic relationships with neighboring tribes was accomplished through arranged exogamous marriages. These agreements formed the foundation of economic relations that often lasted for several generations, since new wives had to originate from their mother's tribal group. Members of these two groups were expected to share grazing lands and to protect one another's animals from raids by neighboring tribes. Often matchmakers arranged marriages between tribal groups prior to the births of children. Families honored the agreements even in the event of the death of a husband, when the customary law of levirate required that a brother or another relative marry the widow. When a wife died, the children of that marriage remained with their father. The husband was free to remarry.

Marriage

In Central Asia the good of the family is considered a higher priority than the good of an individual, therefore traditional marriages are based more on productive relations between the families than on the bride and groom themselves. In the early twentieth century, in accordance with Islamic and customary laws, marriages typically were arranged by close relatives or a matchmaker. A girl might marry at the age of nine, and a man might have up to four wives if he could support each wife equally. The Soviet laws introduced in the 1920s prohibited girls from marrying before they were sixteen years of age and permitted men to have only one wife.

Following the dissolution of the Soviet Union, the five individual governments of Central Asia took over legal regulation of matrimonial relations. Nevertheless, the customary practices of marriage arrangements and the dowry and *kalym* traditions bestow upon the bride greater status and increased

security over official marriage registration. As a practical result the Muslim traditional marriage remains of far greater importance than the state-granted contractual marriage.

Kalym and Dowry

Giving *kalym* and dowry is among the more enduring marriage practices in spite of Soviet laws that once opposed it. In pre-Soviet times *kalym* was not only a reflection of highly developed property relations among Central Asians but also a sign of wealth, influence, and prestige. Cattle originally were central in the *kalym*, which was given to the bride's tribe instead of directly to the father of the bride. The size of the *kalym* depends to a large extent on the social and material position of the groom's family. For many families in rural regions, *kalym* consists of cash and animals (sheep or horses) as well as gifts of fabric, warm coats, hats, boots, and blankets to every member of the woman's extended family. The worth of the dowry is often based on the size of *kalym*. Since *kalym* is given at the time of engagement, it often assists the bride's family in preparing the dowry, even though the collection of a dowry begins when a female child is born.

Kalym and dowry gifts have significantly increased in value since 1991, when Soviet constraints were removed. By 1994 the wedding itself was estimated to cost between \$1,000 and \$5,000, depending on the economic status of the family. Given the low salary of the average Central Asian (\$35 per month according to 1999 figures), the costs associated with this ritual often leave a family in debt.

Bride Stealing

With the changing economic conditions, paying *kalym* to the bride's family has become excessively burdensome. Many men have chosen to "steal a bride" instead, which does not involve *kalym* and consequently costs a family much less money. Bride stealing is also an alternative when a bride's relatives are uncooperative or when the parents of both the bride and groom oppose the marriage.

In the rural regions bride stealing has long been a common feature of marriage agreements. Even though it is illegal, perpetrators are rarely brought to court since it brings only additional disgrace to the bride's family. Stolen brides are expected to capitulate so as not to shame their relatives.

Bride stealing typically occurs when a family is not able to pay the high price of *kalym*, so an agreement is made to "steal" the girl. Afterward the groom's fa-

ther asks the bride's father to pardon his son. Settlements usually include a smaller fee than would be expected with the payment of *kalym*.

Although bride stealing was illegal during the Soviet period, it nevertheless occurred, especially in the rural villages. Since 1991 the practice has experienced a resurgence. The Kyrgyz historian Anara Tabyshalieva has estimated that one in five marriages involves bride stealing and attributes the increase, especially in the cities, to people considering it a fashionable fad signifying that the bride is a good Muslim.

Guardian Parents

The practice of arranging guardian parents (*okul apa* and *okul ata* in Kyrgyz) for the newly married is highly important to Central Asian marriages. In this custom the parents of the groom arrange for an established married couple to act as sponsors, confidants, and mentors to the newlyweds. The practice reflects the societal belief that it is better for the couple to take their marital problems to someone other than their own parents. It also expresses the importance of maintaining positive relations between the families of the bride and groom.

According to the tradition, after the guardian parents have been identified it is left up to the young couple to contact them. If the new couple makes no contact, it is just a formal process, and no gifts are exchanged. But if the young couple seeks out the guardian parents, the relationship serves two aims. First, the guardian parents provide a good role model for the couple, and second, the guardian parents strengthen ties between unrelated families.

The guardian parent relationship is seldom discussed among Central Asians, as it is understood to be a private and confidential relationship. In part it is kept confidential also because it was once considered anti-communist to have guardian parents.

In summary, marriage practices in Central Asia must be considered more as building alliances between families than as creating unions of two individuals. Although formal laws regarding marriages exist, many customary regulations take precedence over the state institution of marriage. The giving of *kalym* and dowry is still paramount for forging family alliances through marriage, even though they are not legal. Similarly, the old custom of bride stealing has been rejuvenated in post-Soviet times due to the excessive costs of traditional weddings. Nevertheless, the aim remains the same, that is, to preserve the institution of marriage not only for the individuals but also for the respective

families. Therefore, the guardian parent custom plays a unique role in protecting family alliances through the preservation of the marriage.

MARRIAGE AND FAMILY-CHINA For 2,500 years of Chinese history, through stable and relatively secure times, and through stormy catastrophic times, China's family system has provided powerful continuity in the social structure. In keeping with the precepts of Confucius (551–479 BCE), clans based on male kinship coordinated village life under the autocratic rule of China's dynasties and subordinate elites. Even today, after a century of wrenching changes and social development, China retains a family system remarkably similar to its historical pattern.

The patriarchal system was perpetuated through marriages arranged between the family of the prospective groom and a family, usually from a different village, whose daughter was a suitable bride. Marriage was so nearly universal that the vast majority of people found their social place in this family structure. At the beginning of the twenty-first century, the previous century of modernization and liberation of women have still not deeply shaken China's patrilocal (brides living with the groom's family) marriage and family system in the rural areas.

The Traditional Ideal and Reality

The ideal Confucian family was an extended family consisting of three or four generations living un-

der the same or nearby roofs. Family decisions were supposed to be made by the highest-ranking male, perhaps in consultation with other male kin, and obediently followed by all others in the rigid family hierarchy under him. The result, theoretically, was family harmony and smooth functioning. Land, houses, animals, tools, furniture, and other possessions were to be held by the extended family unit. When the patriarch died or became unable to function, his sons were supposed to become the heads of their extended families, with family land and other possessions distributed among them. The practice of ancestor worship provided cultural support for this system, as reverence for dead ancestors was extended into reverence for the living older generation, especially the family patriarch. Sons were needed to lead some of the ceremonies—daughters did not qualify.

Nearly every male outranked almost every female, except that young boys had to obey adult women in the family. Females were considered perpetual outsiders, because the marriage system brought a bride from an outside family and village into her husband's village and family. Even daughters born into the extended family were seen as low-status temporary sojourners there, as they were destined to marry out.

The reality bore some resemblance to this ideal, because females and subordinate males were economically dependent on the patriarchal family. They risked social isolation and even destitution or starvation if they rebelled against the system of patriarchal controls. But China's people were not necessarily as pliant and submissive as portrayed in this harmonious ideal. Their different personalities, perspectives, and preferences naturally clashed with some of the system's expectations. Dire poverty also necessitated adjustments at odds with the prescribed scenario. Besides, demographic reality prevented the achievement of the extended family ideal most of the time. Illness was frequent and the death rate was extremely high. Data from 1929–1931 show that females and males in Chinese rural farm families had average life expectancies of only twenty-four and twenty-five years, respectively. The low average life expectancy was due in part to extremely high infant and young child mortality rates (three-fifths of children died before age five). However, even those children who were lucky enough to survive to age five could expect to live only to age thirty-eight on average. It was difficult to have both parents in a nuclear family live long enough to raise their children to adulthood. Three-generation families tended to last a short time, as death claimed the older generation and many in the younger generations. Four-generation families were very rare.

WIVES AND THEIR MOTHERS-IN-LAW

In China, and in some other East Asian societies, the most difficult relationship for a young, married woman is with her mother-in-law. This is especially the case in rural areas where a woman goes to live in the house or village of her husband. The text below outlines the difficulties faced by the young wife and also some factors that might make the situation easier.

In the household situation as Fei described it, the most difficult relationship for the young wife was that with her mother-in-law. It was taken more or less for granted that the mother-in-law was a potential enemy of the daughter-in-law, who had come as an unloved stranger into the house where the mother-in-law had been the female authority. The mother-in-law would wish to retain her authority and would seek to make the daughter-in-law subservient by constant criticizing and scolding. She also resented her daughter-in-law for breaking the singleness of her son's affectionate relationship with her. The son himself was in a difficult situation. To side with his wife in quarrel with her mother-in-law meant a quarrel against his mother, which besides being unpleasant and contrary to both his ideals and natural affection added fuel to her resentment of the daughter-in-law. Generally in the early years of the marriage he sided with his mother, which meant that his wife suffered doubly.

In cases of extreme conflict, the daughter-in-law might be repudiated, usually on the initiative of the mother-in-law, who might repudiate her against the will of her son. If she could find any recognized ground for such action, such as adultery or sterility, no compensation would be asked. Otherwise compensation, amounting to sixty or seventy yuan, had to be given to the daughter-in-law.

There were positive checks on the mother-in-law. There was, first, the positive value which the community placed on harmony between mother-in-law and daughter-in-law, making it the subject of special praise. Secondly, there was the negative sanction of harmful action by the daughter-in-law. She might threaten to commit suicide. Since she would then become a spirit, able to revenge herself, the threat was usually enough to effect a reconciliation. Furthermore her brothers might seek a physical revenge, even destroying part of her husband's house. Finally a husband might decide to support his wife against his mother and the household would be divided in two.

Fei says that the extent of the disharmony which could result from conflict between mother-in-law and daughter-in-law should not be exaggerated. The danger of it, however, was great enough to influence the form of marriage.

Changes in the Twentieth Century

China entered the twentieth century with the Qing dynasty (1644–1911/12) in near collapse and colonial and imperialist powers intruding on China from all sides. In desperation, Qing government leaders and revolutionary leaders alike searched for a new path to save China from disintegration and foreign incursions. They considered importing and implementing foreign ideas and systems, such as foreign-style industrial and military production, a new form of government, such as a republic or a democracy, and modern educational systems. China's leading thinkers also noted that China's autocratic and patriarchal family and marriage system was a powerful conservative force preventing or slowing necessary change. Therefore, they adopted ideologies that would overturn China's traditional family system. In particular, Nationalist leaders and Communist leaders opposed arranged marriage and supported the concept of equality between men and women. Notably, both the Communists and the Nationalists opposed the oppressive practice of female foot binding.

Marriage From the beginning, China's Communist government was determined to overturn China's patriarchal family and marriage customs. The very first major law passed by the People's Republic of China (PRC) was the Marriage Law of 1950, which outlawed arranged marriage, child marriage, prostitution, polygamy, and concubinage; it also allowed divorce and free choice of marriage partner and set a minimum marriage age of eighteen for women and twenty for men. The government promoted the idea of male-female equality. The government also weakened the economic power of the family, especially by collectivizing agriculture under the commune system.

During the second half of the twentieth century, China's system of marriage underwent a slow transformation under the government's leadership. Ages at marriage rose slowly in the early PRC decades and rapidly in the 1970s. In 1929–1931, the average age at first marriage was 17.5 years for women and 21.3 years for men. By the late 1990s, the mean age at first marriage had risen to twenty-two for women and twenty-four for men. Some marriages in China are still arranged by the families, but the law requires that marriages be registered, and that the marrying man and woman tell the registration official that the marriage is voluntary. Some marriages today are love marriages freely chosen by the two young people. But most marriages in China are contracted through a system of introductions, in which family, friends, or colleagues introduce the potential partners and their families to one another. After a number of meetings, if the man

and woman and their parents all agree, the marriage is contracted.

Marriage in China is still essentially universal: in 1995, 99.7 percent of women aged thirty-five through thirty-nine had married, as had 95.4 percent of men in the same age bracket. The remaining single men cannot marry because of China's constant shortage of women caused by earlier female infanticide and maltreatment of girls.

The Position of Males and Females Males were traditionally so important in Chinese society and females so unimportant that many historical family genealogies recorded males only, generation after generation, entirely overlooking the female half of the family. The birth of a son was cause for rejoicing. From birth, sons were groomed for eventual dominance. If food or money for medical treatment were in short supply, these scarce commodities were directed toward the boys and men. As China's economy has industrialized, most of the nonagricultural jobs have gone to men, and the men in the family are still seen as its economic core.

China's Communist Party has worked with determination against this formidable belief system since coming to power, with significant positive results. Yet even today, most families in China, particularly rural families, believe that they must have a son. There are objective reasons, such as the lack of an old age security system in rural China. Parents feel that they require a son to take care of them when they grow old (a daughter will marry out of the family, but a son will bring in a daughter-in-law to help care for all their needs). Yet even if such practical needs can be met in other ways, the emotional preference for sons remains.

Female Infanticide Female infanticide was common in imperial times at all economic levels in society. Selective neglect of daughters also meant that they died in excess throughout childhood. In the Communist period, killing infants was outlawed. Female infanticide and maltreatment of girls gradually declined. The lowest point of female losses was reached in the 1960s and 1970s, when excess female child mortality (mortality beyond the expected rates) killed about 2 percent of girls in each birth cohort. But after the introduction of China's one-child family-planning policy in 1978–1979, excess deaths of young girls rose suddenly to 3 percent of each birth cohort. In the 1980s and 1990s, the introduction of technology that can be used for sex-selective abortion of female fetuses has led to major losses of females in utero. In 1999, there were 120 boys per hundred girls at ages 0–4, one of the worst sex imbalances in the world. Analysis of data from successive censuses of China suggests that life-threatening

discrimination against females is now mostly confined to the prenatal period and the first couple of years of life. After that, girls still experience discrimination, but the most recent data suggest that it seldom leads to death after the first two years of life.

Family Planning In the 1950s and 1960s, women in China averaged six births each. After the famine of the Great Leap Forward, China's government began to take seriously the need to slow down population growth. Cities conducted a vigorous campaign to persuade or require couples to have fewer children. Urban fertility declined to three births per woman by 1966. Then, in the early 1970s, the government waged an increasingly compulsory campaign in China's rural areas, demanding that couples cease childbearing at three births, then two births. In the late 1970s, based on population projections, the PRC government decided that the only way to stop population growth soon was to require couples all over China to stop childbearing at one child. Financial rewards were given for couples who pledged to have only one child, with special education and health benefits given to the single child. But urban and rural couples who resisted the one-child limit were penalized with fines, forced abortion, required use of an intrauterine device (IUD) after one birth, and required sterilization (usually of the wife) after two or more births. Rural fertility dropped from 6.4 births per woman in 1970 to 3.1 in 1977; meanwhile, urban fertility declined further to 1.6

births per woman. China's population growth rate was reduced from almost 3 percent per year in the late 1960s (for a population doubling time of about twenty-five years) to 1.5 percent in the 1980s (doubling time just under fifty years).

The most concentrated campaign of coercive family planning was waged in 1983, when medical teams went to the villages to carry out forced sterilizations, abortions, and IUD insertions. This led to a popular backlash, and the government lessened the coercion temporarily. Meanwhile, an associated rise in female infanticide alarmed the government. The demand for a son in rural families was so great that most provinces changed their rural family-planning policies to allow couples with a firstborn daughter to have a second child, while sticking with the one-child limit if the first child was a son.

From the 1970s on, China's family-planning policy has required couples that want a child to apply for permission to have a pregnancy and birth. If the authorities give them a "birth quota," they may proceed to have a child; otherwise they are in potentially serious political and economic trouble. For most women, insertion of an IUD is required after one birth, and a sterilization operation is required after a second birth whether the birth was allowed or not. These are "passive" forms of birth control that will stop pregnancy even if the couple actually wants a child; this is why China's government usually insists on these tech-

A family planning billboard in Chengdu in 1985. The signs reads, "Family Planning—a Basic National Policy of China." (OWEN FRANKEN/CORBIS)

GIRLS AND THE "ONE-CHILD" RULE

Between 1985 and 2000, there were approximately 24,000 adoptions of children from China—primarily girls—by families in the United States. The excerpt below attempts to explain to these young girls how their birth parents could love them yet abandon them.

Remember that China is a very old country, so some ideas have been around for thousands of years. One of those ideas is that a son should take care of his parents when they get older. You see, parents usually live with their son until they die. Of course parents love their daughters very much. But if they only have daughters, the daughters will get married and move away to live with their husbands, where they will help take care of their husband's parents.

Most people in the countryside do not have enough money to take care of themselves when they get old. So if a mother and father are allowed to have only one or two children, they feel they desperately need at least one son—someone to take care of them when they become too old to work.

But what does this have to do with you? Well, when you were born in China, you may have been born to parents who did not have a son. Your birthparents so much wanted to take care of you *and* try to give birth to a son. But having another child would break the government's rule about the number of children they could have in their family, and they would be punished. They would have to pay a very big sum of money, more money than they had. Your birthparents couldn't find a way to keep a daughter in their family and still have a son to take care of them later in life.

niques. Of couples using contraception, 48 percent have one partner sterilized and 45 percent are using an IUD. In the 1990s, China's fertility level was below replacement-level fertility, at about 1.8 births per woman. Since 1998, China's population growth rate has been below 1 percent per year, which is extremely low for a developing country.

China's compulsory and often coercive family-planning program has been condemned by some international funding organizations and some governments. In response, China is conducting a high-profile pilot program in selected localities to implement a more client-friendly family-planning program. The new program gives couples more choices of birth-control techniques, but they are still not allowed to have more

children than permitted before. China remains the only country with a compulsory family-planning program.

China's low death and birth rates have had mainly good effects. Today in China, most people live to advanced years. Therefore, health and educational and other financial investments in children and adults pay off because the recipients live relatively long lives and can contribute to society. Small numbers of births combined with rising incomes means that each child can get more food, health care, education, clothing, and attention than was the case with larger families in the past. Low fertility reduces female deaths from pregnancy and childbirth; it also frees women to pursue careers and opportunities beyond childrearing. Nevertheless, compulsory family planning is harmful

to families, couples, and women in many ways. Those who love children and want another are usually prevented from having more than their assigned limit. Ubiquitous family planning clinics use either x-ray or ultrasound to inspect the abdomens of women every few months to confirm that the IUD is still in place; use of frequent x-rays may harm the women's health. Forced abortions are often in the second and third trimester, which is dangerous for the health of the mother. Even putting aside health issues, compulsory abdominal x-ray or ultrasound inspections, IUD insertions, abortions, and sterilizations are violations of women's bodies and their rights.

Almost everyone in China now marries, as in the past, and almost every couple has at least one child. This means that the family structure is very much intact, in spite of low fertility. Currently, people mostly live as part of an extended family, or a "stem" family (three generations living together, but with just one son and his wife and child or children in the household), or a nuclear family (parents and children only). Often, the families of the older parents, the sons and their spouses and children, and sometimes the married daughters in urban areas, continue to have very frequent contact even if they live in separate dwellings.

But low fertility and mortality mean that China's population is aging. In future decades, the proportion of elderly will rapidly increase; there is great concern that the smaller numbers of children and grandchildren will be unable to cope with or financially support their family elderly, and there are grave doubts about the government's ability to step into the breach.

Divorce Divorce remains rare in China. Of the population aged fifteen and older, only 1.1 percent of men and 0.7 percent of women are divorced (more divorced women than divorced men have remarried). In the leading cities, however, divorce rates are rising.

Economic Reform and the Family

Since the death of Mao Zedong (1976) and the implementation of economic reforms (started 1978), the proportion of the total population living in cities has increased from 18 percent to 36 percent. Chinese urban life has weakened the patriarchal nature of the family (partly because access to agricultural land is not a factor), raised the position of women, reduced illiteracy, and improved educational levels.

In rural China, economic reforms have renewed the power of the family, because the rights to use agricultural land, to make decisions about its use, and to sell the products for profit have reverted to the family unit from the communal "production team." In-

come and wealth once again belong to the patriarchal family unit, though the gradual shift out of agriculture gives some decision-making power to the men and women who earn outside income. Rural marriage is still usually patrilineal and patrilocal. Continuing limits on permanent migration out of the village reinforce the rural family's control over its members. While temporary migration from the village is allowed, most migrants have to assume that they cannot permanently get out of the rural areas.

Today China's strengthened rural family is, from an economic perspective, a flexible and positive force in the midst of rapid economic change. The rural family keeps its tiny pieces of arable land and farms them, but at the same time, frees up its surplus laborers to work in rural industry or services, or to migrate for work. The family diversifies its sources of income and spreads its risk across different economic sectors and into different places. It pools its resources for family goals. Meanwhile, the rural family supports its dependents—children, elderly, the unemployed and underemployed, the sick and disabled. This is important, given that there is barely any social safety net in China's vast rural areas.

The Family as a Source of Stability

China's rural families today are robust in the face of considerable uncertainty. The historic transition from agriculture into nonagricultural sectors of the economy in rural China today is happening inside the family, as it has for the last century in the rural families of the United States. The strong family is also helping urban China weather the destabilizing storms of massive layoffs of workers in state-owned industries and widespread loss of medical insurance benefits.

China's traditional marriage and family systems have been buffeted by political attacks, legal changes, communal farming, economic development, the sharply rising status of women, and foreign ideas and influences. Certain changes have been real and deep, such as the decline of arranged marriage. Within today's families, decision making is less hierarchical, and more shared and consultative, than in the past. Ancestor worship is no longer a strong belief system.

But in spite of the genuine changes that have taken place, China's patrilineal and patrilocal family remains very strong. It has survived and has experienced renewal because it works. As China tries to move toward a market economy, hundreds of millions of people have to change what they are doing to earn a living. Many tens of millions are displaced or sidelined during the transition, and the confusion and dislocation are profound. China's people need their families to fall back

on, and that is what they are doing. Family life and the institution of marriage are surprisingly strong in China today, and they show few signs of weakening.

MARRIAGE AND FAMILY—EAST ASIA

Until the early part of the twentieth century, marriage and the family system in East Asia (China, Japan, and Korea) followed patrilineal and patriarchal principles with some variations. In traditional East Asian families, the family head, whose position was taken by the most senior male member of the most senior generation, possessed great authority and responsibilities. He managed family property and made important decisions for family members regarding their marriages and living arrangements. He was also responsible for offering appropriate respect to the ancestors by officiating at memorial rites and making sure that descendants were produced and family traditions were preserved. The concept of family (*jia*) included the lineage that would be preserved from generation to generation. Under the traditional patrilineal family system, the daughters were normally excluded from their family of birth upon marriage.

In China, the extended family system was viewed as the ideal, whereas in Japan the stem family system prevailed. Under China's extended family system, all sons brought their brides to their parental home and lived there until the death of the parents. The brothers formed separate households after the death of their parents and, in general, inherited an equal share of

THE GENERATION GAP IN EAST ASIA

According to surveys in Japan and South Korea reported in *Asia Week*, there is a growing generation gap between adults who value tradition and serving society and their children who are most interested in their own happiness and success. In Japan, for example, 27.3 percent of teenagers wanted "to live each day happily" and only 50 percent felt responsible for looking after their elderly parents. Similarly, in South Korea, some 20 percent of youths say that they don't respect their parents. Other research suggests that the trend is not confined to East Asia as young people feel the same way in Thailand and Hong Kong. Experts say this is part of a global trend of youths wanting happiness, freedom, and wealth.

their father's property. The extended family system necessarily required large and growing landholdings or ownership of a business by the family. It is not surprising, then, that the practice of the extended family system was largely limited to upper-class Chinese.

Under the stem family system practiced in Japan, the eldest son brought the bride to his parental home and lived there while other sons established their own households upon marriage. In Japan the eldest son inherited nearly all of the father's property. Kin networks played lesser roles in the socioeconomic lives of individuals.

In Korea the residential patterns followed the stem family system. The social and economic aspects of family life, however, resembled the extended family system. The eldest son lived with the parents and enjoyed the privilege of being the designated heir of the family, but the concept of family extended beyond the "main" household where the eldest married son lived with his parents. Other married sons, who usually resided in separate houses, were under the control of their father and eldest brother and were obligated to participate in important family affairs such as memorial rites for the ancestors. Unequal division of family property was the common practice of inheritance in Korea, with the eldest son taking a larger share than other sons.

MARRIAGE, FAMILY, AND THE COMMUNITY

This extract of text from an anthropological study of a Taiwanese village makes it clear that marriage in East Asia is not just about the woman and man who are getting married. Because of the importance of kinship, family and community attitudes matter a great deal.

The preference for marriage beyond the village limits also rests on the feeling that it is not a good thing to have one's in-laws too close or to have the bride in too close proximity to her parents' home. When the two families live nearby, there is too much opportunity for bad feeling to develop between them. When the two families are in the same village, every detail of how the daughter-in-law is treated by her husband's family immediately reaches her own family, and it is far too easy for the girl to run home with complaints about every hardship, real or imaginary, in her new family. This sort of thing can easily cause interfamily conflict. In intravillage marriages in Hsin Hsing there have also been instances where a daughter-in-law has spent too much time in her old home, helping her mother instead of always being available in her husband's house to do whatever work is asked of her. Of the twelve marriages between Hsin Hsing families, relations between the two families in five cases were not considered good for a variety of reasons.

Another factor favoring marriage outside the village is the village parents' fear of gossip about the circumstances of the marriage. If both families live in Hsin Hsing village there is a good chance that the boy and girl knew each other before marriage; this in itself is considered improper, and people are very likely to say that this was a "love marriage" forced upon the two families because the young couple had been secretly seeing each other and having sexual intercourse. When one hears village discussions of marriages having taken place between Hsin Hsing villagers, one gets the idea that almost all of them have been the result of a secret love affair. Such secret affairs do usually force the two families to agree eventually to a union between the two young people. Thus, in most instances, neither the couple nor their parents will willingly discuss the reasons for an intravillage marriage. When they do, they usually say that the marriage was arranged because both families felt the boy and the girl were well suited. They feel it is necessary to defend such a marriage from the inevitable talk. Family members usually remark that they had firsthand knowledge without needing the word of a matchmaker, that the girl would be a good worker and an asset to the family. However, no matter what reasons are given, other villagers openly discuss the matter, often good-naturedly teasing those involved and making jokes about the "real" basis for the marriage.

In China and Korea, families that shared a common ancestor, that is, members of the same clan, usually lived in clusters and owned some property jointly. Villages where families from one or two clans constituted the majority of the population were common. The kin network played important roles in educating children and providing economic assistance and social welfare to its members.

Under the patrilineal family system, marriage and child rearing were regarded not only as important steps in life but as essential duties for loyal family members. At the same time, filial piety was viewed as the most important and basic human behavior. Thus, fathers were obligated to produce sons, and sons were obligated to obey fathers. When a couple failed to bear a son, one was adopted. In Korea, the adopted son had to come from the paternal kinship group of the appropriate generation. In China and Japan, adoption of the son-in-law was frequently practiced. Adoption of nonrelatives was also practiced in Japan. Moreover, even when a biological son was available, adoption of an "heir" was still possible in Japan if the head of the family so desired. Thus, in China and Korea, preservation of family lineage had to be accomplished through biological descendants, whereas in Japan it was the preservation of the social institution of the *ie* that was viewed as important.

In China and Korea, the most commonly practiced marriage pattern was for the bride and groom not to come from closely related families, and not from the same clan. In contrast, marriage between close relatives was common in Japan. The marriage process often began with the groom's parents seeking a future daughter-in-law. An intermediary, or a go-between, played a major role, especially in China and Korea, in searching for appropriate candidates and in negotiating the terms of marriage. The prospective bride and groom had no say in deciding whom they would marry. The decision was made by the head of household. A woman, in effect, "moved to her permanent family" after marriage. She would spend the rest of her life with this family, and after death she would be remembered by the descendants in this family. It was considered a great dishonor for her natal family if a married daughter was sent back to her parents' home. From an early age, women were taught to obey and serve their future husbands and parents-in-law.

Marriage was universal and early in China and Korea. Married couples, in turn, were expected to have as many children as possible and as early as possible in China and Korea. In Japan, marriage was universal but relatively late, and having many children was not emphasized. Although having many children was

A dairy farming family eating breakfast on Hokkaido in 1989. (MICHAEL S. YAMASHITA/CORBIS)

viewed as one of life's blessings, evidence indicates that married couples in historic Asian populations often practiced fertility control as a strategy for sustaining a desired living standard. Fertility control was more widespread in Japan than in China and Korea.

Sons were viewed as much more precious than daughters in China and Korea, where the continuation of the family line depended more heavily on male descendants. This attitude resulted in female infanticide and high female infant and child mortality in China and Korea, creating a shortage of adult women and leading to a large proportion of men living their entire lives as bachelors as well as to a large number of prostitutes. In Japan, due to the custom of adoption of a son-in-law or a nonrelative as heir, daughters did not suffer higher levels of infanticide or child mortality.

The rules of divorce and remarriage were different for men and women. Women were not allowed to divorce their husbands, but men could divorce (or send wives back) for reasons such as committing a crime, not bearing a son, being unfaithful, being jealous, or being too talkative. Men were allowed or even encouraged to remarry after a divorce or after the death of a spouse, but women were not allowed to remarry after divorce or widowhood. A widow would spend the rest of her life with the family of a deceased husband unless she was sent back to her parents for committing a crime such as adultery. Norms about extramarital sexual behavior also differed for men and women. It was considered natural for adult men to engage in sexual activity outside marriage, but women's sexual activity was strictly limited to within marriage.

The lives of men and women were separate both conceptually and physically. Economic and other "external" roles were reserved for men. Although wives helped their husbands in farms and family businesses,

their economic role was considered secondary; their main role was the management of housework and providing care for the elderly, men, and children. In upper-class families in East Asia, women rarely went outside their residences. Within the family, interaction among men and women was minimal. Even interaction between husbands and wives was restricted and reserved and often was subject to supervision by the members of an older generation. Men often sought sexual pleasure from concubines and female entertainers rather than from their wives.

Beginning of Changes

The family system in East Asia began to change with the modernization process in the region. Political and social reform began to take place with the Meiji Restoration (1868) in Japan, with the fall of the Qing dynasty (1911) in China, and with the Japanese occupation of Taiwan (1885) and Korea (1910). Modern education became accessible to the majority of the population, and the concept of equal individual rights became popular. Critical evaluation of the patriarchal family system began, and efforts were made to abolish parental dictation of the marriage decision, child marriage, concubinage, widespread prostitution, exclusion of women from inheritance, and unfair divorce and remarriage customs.

By the mid-twentieth century, family laws in East Asian countries took a modern form, establishing a minimum age for marriage and women's legal and economic rights. Women and men have equal legal bases for employment and inheritance of their parents' assets. The family registration system, which forms the legal basis for such rights as citizenship, however, continues to favor men over women in the inheritance of family lineage even after the latest amendment of the civil code.

Post-World War II

Further changes in marriage behavior and the family system took place after World War II. It is generally believed that the change was brought about by rapid economic development, migration, urbanization, a higher level of education, especially among women, and increased contact with the outside world. In mainland China, economic development and contact with the outside world started late, but government policies and programs played a large role in changing family lives after 1948.

Extended families disappeared, nuclear families became more common, and the kinship network weakened. The fertility level declined, marriage became late

and nonuniversal, and intergenerational relationships weakened. More women took employment outside the home, and increasing proportions of women refused to give up employment for family responsibilities. To a lesser extent, the divorce rate increased, and premarital sexual relationships became more common.

As of the late 1990s, marriage was very late in Japan, Taiwan, South Korea, and some urban areas in China. Furthermore, some women, especially well-educated women, were not marrying at all. For example, among thirty-five- to thirty-nine-year-old women with a college education, in Japan 11 percent were not married in 1994, and in Taiwan 14 percent were not married in 1990. Nonmarital cohabitation and childbearing, however, were rare in East Asian populations even in the late 1990s. Increasing proportions of adolescents and young adults, however, were sexually active before marriage. As of the mid-1990s, most men and a substantial proportion of women in East Asia had sexual experience before marriage. The level of premarital sexual activity was higher among men than among women. Gender differences in premarital sexual behavior and remarriage patterns reflected the influence of the patriarchal family system. Women's premarital sexual activities were closely related to marriage: most women engaged in sexual activity only with men they intended to marry. Conversely, large proportions of men engaged in sexual activity with women they did not intend to marry. The gap was often filled by commercial sex workers. Divorce increased in all East Asian populations. The pattern of remarriage after divorce or widowhood was less common among women than among men up to the mid-1990s.

In general, intergenerational ties weakened. Parents' involvement in selecting children's spouses declined dramatically. In Taiwan and Japan, only about 10 percent of marriages that took place in the 1995–1998 period were acknowledged to have been arranged. Economic dependence of elderly parents on adult children weakened, and the proportion of married adults living with their parents declined. The intergenerational residential pattern observed in the mid-1990s, however, continued to reflect patriarchal tradition: eldest sons were much more likely to live with their parents after marriage than were other sons and daughters. At the same time, changes were taking place. The proportion of elderly parents who lived with married sons who were not the eldest or with married daughters became more common, especially in Japan. Married daughters, although not living with their parents, were maintaining close relationships with natal parents.

Two aspects of intergenerational relationships, parents' devotion to and involvement in their children's ed-

THE JAPANESE HOME

Japanese homes reflect the Japanese cultural traditions of precision, detail, and craftsmanship. The following is a description of some of the design details found in Japanese homes in the late nineteenth century.

Simple and unpretending as the interior of a Japanese house appears to be, it is wonderful upon how many places in the apparently naked rooms that the ingenuity and art-taste of the cabinet-maker can be expended. Naturally, the variety of design and finish of the *tokonoma* and *chigai-dana* is unlimited save by the size of their areas; for with the sills and upright posts, the shelves and little closets, sliding-doors with their surfaces for the artists' brush, and the variety of woods employed, the artisan has a wide field in which to display his peculiar skill. The ceiling, though showing less variety in its structure, nevertheless presents a good field for decorative work, though any exploits in this direction outside the conventional form become very costly, on account of the large surface to deal with and the expensive cabinet-work required. Next to the *chigai-dana* in decorative importance (excepting of course the ceiling, which, as we have already seen, rarely departs from the almost universal character of thin boards and transverse strips), I am inclined to believe that the *ramma* receives the most attention from the designer, and requires more delicate work from the cabinet-maker. It is true that the areas to cover are small, yet the designs may be carved or latticed—geometric designs in fret-work, or perforated designs in panel—must have a strength and prominence not shown in the other interior finishings of the room.

ucation and their support of adult children before marriage, did not change much or can even be characterized as having intensified. Parents in East Asian countries are known to have invested excessively in their children's education to the extent of affecting mothers' employment patterns in the mid-1990s. A large proportion of adult children lived with their parents and often were supported economically by their parents.

The nature of women's economic activity changed drastically with economic development in East Asia. In all of the East Asian populations, employment among single women increased substantially and by the end of 1990s had come close to being universal. Patterns of employment among married women showed substantial variations. The most traditional pattern was observed in South Korea, where the employment rate among married women was low and

most women stopped their employment at the time of marriage. Some women returned to work after they had passed the prime childbearing age, but they did so at low rates. In addition, the proportion of women working in semiprofessional, technical, or clerical occupations drastically decreased after marriage, whereas the proportion of those working in sales and service areas increased. In Japan, women's employment was disrupted by marriage and childbearing to a lesser extent than in South Korea. Married women's employment in Japan, however, continued to be affected by their husbands' income and their family situation (for instance, the presence of a preschool-aged child in the family), and not by their personal characteristics, such as their level of education. In fact, among married women, the most educated were the least likely to be employed in Japan. In Taiwan, women's employment

was minimally interrupted by marriage and childbearing. Furthermore, the employment pattern of married women was affected mostly by their own characteristics, such as their level of education. There, the most educated women were most likely to be employed even after marriage.

Current Trends

While the role of women has expanded to include employment outside the home, their role within the family sphere has not been reduced, mainly because the role of men has not changed much. In East Asia, women continue to carry most of the responsibilities of managing household affairs and providing care for the elderly, men, and children regardless of their hours of employment. Thus, married employed women often face the extreme difficulty of balancing their responsibilities at work and in the family. Many women in East Asia seem to respond to potential conflict between work and family life by postponing marriage until a very late age or by not marrying at all. Some marry but do not have any children. Surveys conducted in the mid-1990s in Japan and Korea document that single women tend to anticipate their lives changing for the worse after marriage, whereas single men tend to view their lives as not changing much after marriage.

The continuing trend toward later marriage and the increasing numbers of those who decide not to marry at all are threatening an even further decline of fertility in East Asia, as well as an ever heavier social and economic burden of caring for the elderly.

MARRIAGE AND FAMILY—INSULAR SOUTHEAST ASIA The large number of ethnic groups in insular Southeast Asia accounts for the variety of patterns and practices relating to marriage and the family. However, intermarriage between ethnic groups means that the situation is never totally straightforward, and conceptions of kinship and behavior relating to them have always been fluid. There are also differences between urban and rural groups; economic and social development has led to more rapidly changing patterns in recent times.

Kinship Patterns

In the eastern islands of the Indonesian archipelago as well as in North Sumatra, patrilineal groups trace descent through the male line. In West Sumatra the matrilineal Minangkabau trace descent through the female line. In such unilineal descent systems, individuals belong to one kin group according to their parentage. In one or two parts of the archipelago, as in the Toraja highlands, kinship may be traced down both male and female lines, with individuals choosing the group to which they wish to belong. In a few other cases, such as the island of Savu, an individual may belong to two groups: one patrilineal and one matrilineal. However, the majority of the population of island Southeast Asia belong to ethnic groups whose kinship patterns are normally termed "cognatic," as is the case

with the Javanese, Malays, and the Filipinos. Among such groups, equal recognition is given to the relatives of both parents in deciding who are kin.

In Javanese, Malay, and Filipino societies, the core of the family unit is the conjugal couple and their children. However, the boundaries of the household are very flexible, and many others may join, either through adoption or fostering. Children may move from one household to another, often being raised by persons other than their biological parents. Members of the extended family are expected to help each other on a reciprocal basis both in everyday life and in crisis. In the Philippines, as in Malay and Javanese systems, when a man and wife marry, each becomes a part of the spouse's family, and the two families are united as kin.

A characteristic feature of many families in Southeast Asia is the importance of seniority and of siblingship. In many societies, the link between brothers and sisters is considered as important as the link between parent and child. In terms of deference and respect, age differences between family members are more important than differences in gender, with older siblings especially having responsibilities toward their younger siblings.

Courtship and Choice of Marriage Partner

Although in the past Malay, Javanese, and Minangkabau men were free to take more than one wife, this practice has become increasingly rare in Southeast Asia. Among Filipinos, marriage is strictly monogamous. Among all groups, there is usually strong pressure to marry, and widowed or divorced individuals are expected to find a new partner and marry again. Although families take a considerable interest in their children's marriage partners, children are not normally forced to marry against their will, and many find their own partners. In Malay, Javanese, and Filipino groups, courtship is generally carefully supervised, and dalliance by either sex is frowned upon. Parents in these groups are more concerned about their daughters than their sons in terms of courtship and sexual activity, and during adolescence, young people tend to go out in groups rather than as separate couples. Among the Batak of Indonesia, however, premarital chastity is not highly valued, and meetings between adolescent boys and girls are less strictly supervised.

In Java, marriages between distantly related couples are preferred. Ideally, a husband should be older than his wife, and after marriage she will address him respectfully as "older brother." In the Philippines, there is a tendency to take a partner from a similar background in terms of class, religion, and ethnic grouping.

To win favor with the ancestors, a woman makes an offering at the family shrine in Bali, Indonesia. (JACK FIELDS/CORBIS)

Unilinear groups such as the Minangkabau and the Batak have rules and prohibitions concerning the choice of marriage partner. The Minangkabau are forbidden to marry someone of their own matriline, and there is a preference for marriage within the village. In Batak society, a boy will ideally marry his mother's brother's daughter, thus reinforcing relations between the two families, and he should not marry a bride from his own lineage.

Marital Residence

Among the Javanese, Malay, and Filipinos, newly married couples may live with either set of parents but will most often live with the wife's parents initially, setting up an independent home when they have the resources, often after the birth of the first child. Family ties are important in ensuring basic security. Among Malays, there is a tendency for new homes to be established near the wife's parents, and in traditional rural contexts, clusters of related females are often found, providing a supportive network of local ties.

In accord with tradition, the families of the bride and groom negotiate the wedding arrangements on Sumba Island, Indonesia. (WOLFGANG KAEHLER/CORBIS)

In both Malay and Javanese societies, one married daughter usually remains behind to care for the parents in their old age and to take over the house after their death.

Child Rearing

Relationships between husband and wife are relatively egalitarian in most cases, with each responsible for his or her own domain. In all parts of insular Southeast Asia, generally the mother has overall responsibility for child rearing. However, because she is likely to be engaged in some sort of economic activity as well, this responsibility is likely to be shared by older siblings, aunts, uncles, and grandparents as well as between the biological parents themselves. Age commands respect, and there is an emphasis on strong sibling relationships.

Divorce

In Java, divorce is relatively rare in urban areas but common among the rural population, particularly in the early years of the marriage. In the event of divorce, traditional Javanese law provides for each spouse to retain personal property, usually property brought into the marriage. Anything acquired by the husband and wife during their marriage is divided between them, generally in a 2:1 ratio favoring the husband. These rules are flexible and depend on circumstances.

If a couple divorces, the question of the custody of children arises. Young children tend to stay with the mother, whereas older children may be allowed to choose.

The divorce rate has been high among Malays, although it has decreased in recent years. Experts have suggested that this decrease is a result of the influence of Islam, which strongly discourages divorce. As in Java, in Malaysia customary law is more likely to be invoked than Muslim law in determining how property should be divided and what arrangements will be made for the custody of children after a divorce.

In the Philippines, arrangements are relatively equitable in the division of property between the divorcing husband and wife. The mother's position is quite strong in respect of the custody of children, but she may be expected to become wholly responsible for them.

Patterns of marriage and family life in insular Southeast Asia are undergoing change. In general, there has been in recent decades a tendency toward living in smaller household units. Especially in urban areas, family planning programs have had some impact, and couples are choosing to reduce the number of births. Geographic mobility and social mobility have also contributed toward making the extended family a less central institution than before. Never-

theless, traditional patterns of family relationships continue to have a fundamental importance that permeates social intercourse.

MARRIAGE AND FAMILY—MAINLAND SOUTHEAST ASIA Practices and patterns relating to the family vary widely in mainland Southeast Asia for a number of reasons. The present population is made up of a variety of ethnic groups speaking many languages and being influenced by cultural traits introduced partly through migrations from the north in historic and prehistoric times. The cultural practices of these groups differ in many ways, and although there has been much assimilation, with war, globalization, and their effects having blurred the boundaries to some extent, there is still considerable variation in the forms and behavior relating to marriage and the family.

In terms of family structure, there is a key distinction between those groups who consider family membership in terms of descent from a common ancestor and those with a broader notion of family membership that includes relatives on both the mother's and the father's side. In general, it is chiefly the many and varied upland groups who follow the former pattern, where there are rights and obligations between lineage members that extend to fairly distant relatives. The mainly lowland Buddhist peoples who form the majority of the population of mainland Southeast Asia, such as the Tai (the ethnic group, not to be confused with Thai, the nationality), ethnic Burmese, and Khmer, fall into the latter category, and here the family is a smaller entity.

Marriage and Family Life among Burmese and Tai Peoples

Among the Burmese and the ethnic Tai (the latter group including the majority population of Laos), conception of who belongs to the family group is loose. Both the male and female lines are relevant in determining descent, so that each individual regards relatives on both his or her mother's and father's side as belonging to the same family grouping. The nuclear family is emphasized more than the extended family.

Tai marriage partners are generally chosen by the individuals themselves, subject to parental approval. Elopement to avoid parental objections is relatively common. Young Burmese are also generally allowed to find marriage partners for themselves, though this may still be supervised to some extent. Parents make arrangements for the actual marriage, so that their approval is important. As with the Tai, marriages by elopement are not uncommon because the recognition by the community that a couple are cohabiting is the chief essential in marriage, and parents tend to agree to a wedding if cohabitation is already established.

In Burmese societies, polygyny (having more than one wife) was in the past officially condoned, but in practice few men had more than one wife. Some Tai men take a "minor" wife, a practice that usually causes some distress to the first wife. For a first marriage, choice of partner is essentially voluntary for both daughters and sons among the Burmese and the Tai, though parents have always been concerned that their children should make "good" marriages, and many attempt to influence their children. However, elopement is a source of shame for parents, and they will generally fall in with the choice of their child, even if they disapprove of it, to avoid an elopement. Parents prefer their children to choose a partner who is of the same ethnic group and religion (Buddhist) and of similar or superior socioeconomic status. Ideally the husband should be a few years older than the wife, and there is a preference for a local choice. Astrological considerations are another factor, though a relatively minor one, in determining whether the choice of partner is a good one. Courtship among the Burmese is initiated by the boy, usually through a go-between. In traditional Burmese communities, courtship is strictly supervised, and sexual contact of any kind is strictly prohibited.

Tai marriages are accompanied by the payment of bride-price, that is, the parents of the groom offer property to the family of the bride. This differs from the Burmese custom, in which the groom brings with him to the marriage a "dower," that is, property from his family that is offered specifically to the couple and

CARING FOR INFANTS IN SOUTHEAST ASIA

"*Capturing a Cold.* Young babies are liable to become ill easily, because their bodies are still delicate. For example, they might take cold and have blocked noses so that they cannot breathe easily. If a child has these symptoms they must make a medicinal poultice to apply to the top of the head. They use onion or bulbs of sweet *pron* pounded and mixed with turmeric, red lime and liquor. They dip cotton into this medicine and form it into a flat, thin plaster, and apply this to the child's head. The juice of the pounded onions remaining from making the poultice for the head is used to apply to the bridge of the nose and to the body. This method of applying a poultice to the head and smearing the body of the child until it appears red and blotched all over is called 'capturing a cold.'"

Source: Donn V. Hart, Phya Anuman Rajadhon, and Richard J. Coughlin. (1965) *Southeast Asian Birth Customs: Three Studies in Human Reproduction*. New Haven, CT: Human Relations Area Files, Inc., 167.

over which they have control. It has been suggested that the importance of the wedding ceremony is that it is the occasion when the amount and nature of the dowry are announced. The dowry is a symbol of the girl's and her family's status, and thus the wedding is an important occasion even though a marriage can in fact be established without such a ceremony.

Young Tai couples may live with the wife's parents for a time, but they will normally hope to set up an independent household after a while, and this may be some distance away. Relationships with friends and neighbors are likely to be as important as relationships with relatives beyond the immediate family. Burmese couples are also likely to set up a new home after marriage. Again, if they do stay for a short while in the home of a parent, it is likely to be the house of the bride.

Divorce is in principle relatively easy for both husband and wife in Tai groups, as it is with the Burmese. Desertion, cruelty, a wife's adultery, and a husband's remarriage are considered proper grounds for divorce. The rate of divorce is relatively low, however. Traditionally, a spouse seeking divorce should ask the village headman, and the headman's intervention may be

one reason why, despite frequent quarreling and dissatisfaction within marriages, the actual divorce rate is low in rural areas. Divorce is in any case a difficult choice for a woman because it is often hard to obtain support for any children of the marriage. A divorce is not usually granted without the consent of both parties unless the matter is taken to court, and few women have the resources to do this. Male children of a divorced Tai couple normally stay with the mother, whereas girls stay with the father.

A Burmese man whose wife dies may be expected to marry the sister of his deceased wife; a similar situation occurs if the husband dies, though in this case the new husband may already have a wife.

Marriage and Family Life among the Khmer

It has been argued that there is a matrilineal bias in the Khmer kinship system that has been obscured by other sociopolitical factors, but the ideology of descent is clearly cognatic (bilateral, that is, descent is traced on both mother's and father's sides). For example, the spirits of the mother and father are worshiped and commemorated and are consulted at life crises. Relationships beyond the nuclear family group are not formally structured.

Most Khmer marriages are arranged by the families of the bride and groom, and it is considered the duty of parents to arrange their children's marriage. The marriage may be organized by a go-between, and in rural areas the arrangements are made while the children are quite young. The groom's family offers compensation in the form of bride-price to the bride's family for the loss of their daughter; the amount varies according to the girl's position in the family and the reputation and wealth of the family. The oldest and youngest daughters are most highly valued. In the past, it was common for the son-in-law to move in with his wife's family and to work for the father-in-law until the young couple were ready to set up a household of their own, usually near the wife's parents' home.

In rural Cambodia, widows and women without husbands for whatever reason lose status to a considerable degree and rarely participate in temple festivals and other village ceremonies. Unless they have children to support them, they are likely to live without proper means of subsistence, and because of the shame of poverty many do not participate in village decision making or public life.

Vietnamese Marriage and Family Life

The Vietnamese as a nation regard themselves as having common descent, and this means that there is

an underlying sense of brotherhood generally. However, ancestry is the key element in Vietnamese concepts of the family, with descent counted through the male line. Allegiance to one's clan is very important, and the most honored place in every home is reserved for the ancestors' altar. Traditionally it is the oldest son who presides at ceremonial rites of death and burial. In a burial procession, the eldest son walks in front of the coffin, whereas the rest follow behind it.

Vietnamese households may include three or four generations, and in rural contexts neighboring households in a village will almost certainly be made up of closely related kin. It was traditionally the pattern for the eldest son to live with his wife in his father's house, other sons settling in the vicinity with their wives. Although the pattern is changing in urban areas, these traditions are still strong. The concept of the family is thus reinforced by the presence of large numbers of kin from the same lineage living close by. Although in the modern Vietnamese family some members may move into the city a long distance away, they are likely to return at New Year's, and their shared feasting and offerings to ancestors reinforce the sense of kinship.

In Confucian models, on which the Vietnamese notions of family life were broadly based in the past, women had little status and few rights outside their relationship with their fathers, their husbands, or their sons. They had no legal right either to own personal property or to inherit anything from their parents. Marriage was arranged by the parents, often through an intermediary, who made certain that there was no existing family relationship between the man and woman. For the woman, marriage was an official transference of loyalty from her father's family to that of her husband. A wife would be expected to serve her husband and comply with his wishes absolutely. After his death her service was transferred to her eldest son.

In practice, however, the Vietnamese never followed the Confucian code strictly. For example, women in north and central Vietnam often inherited land alongside their brothers. They also took part in the administration of land held by the lineage. Only in aristocratic groups was the Confucian code adhered to rigidly. Another aspect of Vietnamese society, derived from a Chinese model, is that of polygyny and the taking of concubines. This was once common practice in Vietnam, especially among the more affluent, but it was made illegal by legislation passed in South Vietnam in 1958. Attitudes toward women and their role have changed under Communism, although within the home there are still strong echoes of such traditional values.

In South Vietnam, divorce and separation were declared illegal without government approval in 1958, whereas in the north, the right to divorce for both men and women was established under the Communist regime. However, formal channels for reconciliation were established, and couples were encouraged to settle their differences and stay together. Since unification, this has become the norm across Vietnam.

Marriage and Family Life among the Hmong

The Hmong, who live in the border areas in the north of Vietnam, Thailand, and Laos as well as in southwestern China, trace their descent from a common ancestor, and women marry into their husband's lineage. Among the Hmong there are about twenty surname groups or clans. The household may consist of just one nuclear family, but it is more likely to include three generations. The eldest male is the household head. In addition to parents and children, there may be grandparents, unmarried uncles or aunts, and widowed relatives. Adoption is also quite common. Those adopted are usually girls and almost invariably of non-Hmong origin, but they are treated as close kin.

The man and woman in Hmong couples must come from different clans. A woman may have only one husband, whereas a man may have as many wives as he can afford. However, most marriages are monogamous because only the wealthy can afford more than one wife. A first wife is the most privileged in any case and has authority over subsequent wives.

Parents may have preferences, but the Hmong are relatively free to choose their marriage partners, and premarital sex is tolerated. The Hmong New Year in December is the best opportunity for a young man to find a bride or for a couple to demonstrate their intentions toward one another. Boys must find a girl from outside their clan to marry; the ideal is for a boy to marry his father's sister's daughter or his mother's brother's daughter. This strengthens the alliance between two families who are already related. It also allows the girl to remain in contact with family and friends.

When a boy has found a girl to marry, his father has to provide bride-price to be handed to the father of the girl. The amount of this, usually a considerable sum, must be agreed to on both sides. It is traditionally paid in silver, acquired from the proceeds of as much as an entire year's opium harvest. The size of the bride-price required means that a son is dependent on his father until he is married and that his father has considerable control over his behavior. Similarly, the groom is under pressure to treat his wife

well. If he does not, the girl may return to her family, and the bride-price will be lost.

If a Hmong couple elope, the boy's father is still obliged to pay the bride-price. Sometimes the couple have children before the transfer of the bride-price, and in this event the children are deemed to belong to the bride's father's clan. The groom may be allowed to work for his father-in-law for a year or two instead of paying the bride-price, but this is regarded as demeaning for the boy, and the situation is generally avoided.

Divorce is rare among the Hmong. A man has the right to divorce if his wife misbehaves badly by becoming addicted to opium or committing adultery, and in such cases he can demand the return of the bride-price. A woman is also free to leave her husband, but unless her husband is proved guilty of cruelty her family must return the bride-price, and this would be humiliating both for her and her family. If she does decide to leave her husband, she returns to her original clan. Custody of the children normally goes to the man, but rarely, if the woman is the innocent party, she may retain custody.

If a Hmong woman is widowed, she should normally marry her husband's younger brother if he is willing (in which case no bride-price need be paid), but this rarely happens in practice, and she may marry elsewhere.

Family Life Today

Family life is still an important feature of life in mainland Southeast Asia, despite greater geographic and social mobility connected with new employment opportunities, urbanization, and global influences. For the majority, particularly those who belong to the lowland cognatic societies, the definition of the boundaries of the family is fairly loose. Even so, there is generally a strong sense of duty and obligation between members of the nuclear family. For unilineal societies, such as the Hmong and the Vietnamese, common ancestry and residence near the husband's family mean that the sense of what constitutes the family is both larger and more clearly defined. Although globalization, industrialization, and the migration associated with them have affected traditional values, fundamental structures in society have been fairly resilient, and especially in rural areas the pace of change in attitudes toward marriage and the family is still relatively slow.

MARRIAGE AND FAMILY—SOUTH ASIA

Almost every form of marriage is practiced by cultural groups in South Asia. In some districts in mountainous Himachal Pradesh, bride-capture initiates a marriage, while among the Garo in mountainous Assam, bridegroom-capture initiates a marriage. Fraternal polyandry, marriage of one wife to two or more brothers—a rare form of marriage from a worldwide perspective—occurs among some of the hill people in northwest India and among Tibetan residents in Nepal, as well as among the Todas in the Nilgiri Hills in the southern Indian state of Tamil Nadu. Nonfraternal polyandry, also rare, was found in the matrilineal caste of Nayers of Kerala and among groups in Sri Lanka. In the Jaunsar-Bawar hilly area of Uttar Pradesh is practiced what the anthropologist D. N. Majumdar called polygynandry, a simultaneous combination of polygyny (the custom of one husband married to two or more wives) and polyandry—within the same family.

About a quarter of the population of South Asia is Muslim. The Qur'an permits polygyny; a man may have as many as four wives. In practice, almost all South Asian Muslims are however monogamous, as are the vast majority of Hindus, Christians, Sikhs, Jains, and Parsis.

More than half of the people of the Indian subcontinent are peasants living on the northern riverine plains and on the Deccan plateau to the south. This account focuses on them.

Marriage and Family in the Context of the Caste System

Marriage and family in peasant South Asia should be seen in the context of the Indian caste system. "Indian" is used here rather than "Hindu" because non-Hindus—Muslims, Sikhs, Christians, even those residing in Bangladesh and Pakistan—are organized into castes (a system of ranked segments of society). An individual is born into a caste, that of his or her parents, and he or she must marry within caste—that is, castes are endogamous. Due to rigidly enforced rules of inheritance and endogamy, a caste as a lived-in institution is a set of families whose children marry only among themselves.

For example, the potters residing in perhaps fifty villages in an area, all within walking distance of one another, may form a *jati*, the term anthropologists use for the endogamous caste group. The potters of this set of fifty villages do not marry among other potters of other villages, even though outsiders may see all potters in a region as belonging to a single caste of potters—caste as an occupational specialty group.

Within a South Asian village, from one to three dozen castes may be represented. Castes are ranked, with (among Hindus) Brahmans often at the top and untouchables almost always at the bottom, and castes such as cultivators of land, merchants, various artisans, and servants between the two extremes. In some villages, there may be no untouchable castes; in some, there may be so-called tribals, who hunt, fish, or both, whom villagers may consider lower than untouchables. Families of a particular caste, almost always related through ties of blood and marriage, usually reside near one another, often in their own section of a village.

Patrilineal and Fraternal Joint Families

A widespread South Asian ideal is a patrilineal joint family—one composed of an older couple, their unmarried children, and one or more of their married sons with their wives and children. Less common is a fraternal joint family—one composed of two or more married brothers and their wives and children. While a joint family is generally the ideal, such families are usually in the minority in any count of family households in a village because of the low life expectancy for South Asians. Furthermore, due to crowding or problems in maintaining fraternal harmony, adult married brothers in most parts of South Asia usually do not continue to live together in the same house, and parents may live with only one married son at a time.

Most of South Asia emphasizes patrilineal descent, although something will be said about matrilineal peo-

A multigenerational Indian family in a small village in Rajasthan, India, c. 1996. (VINCE STREANO/CORBIS).

ple below. The north requires patrilocal residence; that is, after marriage a couple lives with the husband's relatives, usually with his parents and unmarried siblings, until crowding in the living quarters or disharmony among members of the different nuclear families prompts the decision to have a junior couple and their children move out.

The 1961 census of India showed that the highest proportions of joint families in India were found in the states of Rajasthan and in eastern Uttar Pradesh. What facilitated the high frequency of joint families in these places was the comparatively early age of marriage; several districts had unusually high proportions of married females in the five-to-nine-years age group and unusually high proportions of married males in the ten-to-fourteen-years age group. In a marriage system with very young brides and bridegrooms, a joint family is required, since a young-teenaged couple is too inexperienced to run their own economic enterprise or to rear children without help. The older couple, either the groom's parents or his older brother and his brother's wife, are both protectors and teachers of the young married couple (who in general would not cohabit before puberty).

Whether an Indian lives in a joint family or not, he or she is likely to live among many relatives. Among patrilinealists, brothers' or father's brothers' houses are likely to be next door to one another. Among the much less common matrilinealists, sisters' or mother's sisters' houses are likely to neighbor one another. It is not uncommon for an individual to be related to all the other members of his caste-chapter within a village.

Rules of family hierarchy are almost universal. Juniors should defer and show respect to seniors. Females should defer and show respect to both adult male and female members of the family, especially in their

husbands' families. A daughter-in-law must obey her mother-in-law. A son must obey his father and his elder brother. Given the emphasis on the importance of patrilineal descent, the most important duty for a newly married bride is to produce a son or sons to carry on her husband's patrilineage into the future.

Matrilineal Families

There continue to be some castes and ethnic groups that trace descent and structure of families on matrilineal lines—in Kerala and Karnataka in the southwest and in Assam and other parts of the northeast. Most famous are the Nayars of Kerala and the Naga groups of Assam.

Until about 1900, among the Nayars, adult brothers and sisters ideally resided together. The fathers of the women's children did not reside with the women, but rather with their sisters and their mother and her sisters and brothers. Many of the Nayars, until about one hundred years ago, had extensive agricultural estates with large households of matrilineally related kin. Children born to female members were raised in their mother's home with her siblings and her mother and her mother's siblings. The head of the matrilineal household was usually the eldest mother's brother or mother's mother's brother. As in patrilineal households, children had to obey their elders, but especially they had to obey the *karnavan*, the mother's brother who was head of the household.

Among matrilineal groups and even among a few patrilineal groups in south India and Sri Lanka, women inherit landed property. This is rarely the case in patrilineally oriented north India, Pakistan, or Bangladesh.

Characteristics of Marriage in Northern South Asia

Almost universally in South Asia, marriages are not romantic attachments but are arranged by the bride's and bridegroom's older male relatives—father, grandfather, uncle—although possible mates for children are often suggested by the women of a family. In much of the north, there is a rule of three- or four-*gotra* (a named patriline of fathers and children over generations, which has no function other than proscribing marriage between its members) exogamy. One inherits the name of a *gotra* from one's father. If there is a three-*gotra* rule, then a child should not marry someone with the same *gotra*, or with the *gotra* of his or her mother or of the mother's father. If there is a four-*gotra* rule, then the child is also prohibited from marrying someone in the mother's mother's *gotra*. The

French social anthropologist Louis Dumont figured out that the three- or four-*gotra* rule had the effect of prohibiting marriage between a bride and groom related to each other more closely than third cousins. The rule facilitates marriage between strangers, although strangers of the same *jati*.

In the north, there is also a rule of village exogamy. That is, marriages must take place between a couple from different villages. A bride must marry a bridegroom from her own caste, but from a *gotra* other than the three or four prohibited and from another village. The patrilocal residence rule requires that after the wedding ceremonies have taken place in her village home, she must leave to join her husband's home in another village.

North Indians tend not to have two daughters married into the same family or into the same village. In parts of Rajasthan among Hindus, and in parts of Pakistan among Muslims, however, marriages between sets of brothers and sets of sisters are preferred. Two or three brothers of one family and village marry two or three sisters of another family and village, which can be achieved while still obeying a three- or four-*gotra* rule of exogamy. Since double or triple weddings may also accompany such an arrangement, wedding expenses are less than they would be for two or three separately timed weddings. At the same time, one wedding party represents both or all three bridegrooms, thus reducing the number of guests the bride's relatives must feast and entertain at the wedding and in the future. Many Rajasthani cultivators also like the strengthening of the fraternal joint families. Not only do brothers live together in the same household and work together in the fields, but their wives are sisters, more likely to get along well than if they were strangers, and so willing to take care of each other's children, freeing one sister to gather wood or to work in the fields.

A girl should be married between the ages of twelve and twenty to a boy of fifteen to thirty years. William Crooke in the late nineteenth century and others more recently have reported that infant marriage occurred and was even preferred and esteemed in some communities in both north and south India. Nowadays most of the youngest brides—those between the ages of eight and fourteen years—are found in Rajasthan, Uttar Pradesh, and Bihar, three north Indian states. In all these child-marriages, sexual relations between a couple do not occur until both have reached puberty. Widely in the north, there are two wedding ceremonies. In western Uttar Pradesh, for example, the first wedding ceremony is called *shadi*, the second *chala*. With rare exceptions, sexual relations between husband and wife do not take place until the bride is

mature (after first menstruation), so that she may have gone through both wedding ceremonies some time before she begins conjugal relations with her husband. In earlier decades, there may have been as many as five years between *shadi* and *chala*. A bride may be taken by the groom and his all-male party back to his village after the first wedding ceremony. During this visit, she stays with the women of her husband's family—her mother-in-law, her husband's brothers' wives, her husband's sisters—and might not see her husband at all. Then after a few days, she is taken back to her parents in her home village; she stays with her parents until the groom and his party come for the second wedding ceremony. She again goes to her husband's home and village after the second ceremony; if she is mature by now, sexual relations between husband and wife commence. If not, she again returns to her parental home until she is mature.

This scenario is still more or less accurate for the north, except for girls who have gone ahead in school. Only a minority of girls in Pakistan, Bangladesh, Nepal, and the north Indian states of Uttar Pradesh, Bihar, Rajasthan, and Madhya Pradesh go to school, even today. Probably a majority of girls in states such as Haryana and the Punjab go at least through elementary school, as do most girls living in cities. Relatively few girls go beyond fifth grade, but those who do generally have their marriages postponed until they have finished their education—whether at eighth, tenth, twelfth grade or higher. For such brides, the two wedding ceremonies may take place on the same day, since the bride is already mature and can begin married life right away. Boys' marriages similarly are usually postponed until boys have completed their education.

Much of Pakistan, Bangladesh, and northern India continues to practice purdah, the seclusion of married women. Housing arrangements separate women's quarters from men's quarters. The women of the joint family may each have a room in the ribbon of rooms around a courtyard. Men may have their own sleeping quarters in their cattle yard, clubhouse, or entryway to the women's quarters. A husband slips into his wife's room at night for sexual relations and then returns to his own quarters. The woman in a nuclear family often has a small one- or two-room house, while her husband sleeps with men in a neighborhood clubhouse.

A girl between the ages of four and thirteen years may move about freely in her parental village, but a married girl in her husband's village seldom goes out of the women's quarters, and when she does, she is carefully chaperoned. All married women cover their heads, and in the presence of men of the family older than their husband, or when they sally outside the

An Indian bride and groom at a traditional wedding ceremony in 1961. Both are adorned with garlands of flowers. (BETTMANN/CORBIS)

house, they cover their faces with the outer edges of their head scarves or the borders of their saris covering their heads; some Muslim women wear *burqas* in public, long, dark coats with hoods that cover the head with attached veiling in front of the face.

Characteristics of Marriage in Southern South Asia

As one moves south to Maharashtra and beyond, one finds that with rare exceptions women no longer cover their heads, and, except for unmarried pubescent girls and young married women, females generally move about their locales outside their houses more freely than in the north.

The northern three- or four-*gotra* prohibitions in mate selection contrast with preferences for cousin marriage among most south Indian Hindus and Christians and among some Muslims of both north and south. Until about twenty years ago, south Indians, including Christians, preferred marriages between cross-cousins (a father's sister's child marrying a mother's brother's child; in other words, a marriage between children of brother and sister) or between children of a mother's younger brother and an older sister's daughter (maternal uncle-niece marriage). Among some Muslims, there is or was a preference for marriage between parallel cousins, either between the children of brothers or between the children of sisters. Imtiaz Ahmad, however, has written that most Muslims in India do not follow this rule, although it is

often followed among Muslims of the Middle East. Indian Muslims, he suggests, have been influenced by the north Indian Hindu idea that cousins are equivalent to siblings, so that cousin marriage is considered a form of incest and is avoided. Both forms of cousin-marriage, the cross-cousin marriage of the south and the parallel-cousin marriage of some Muslims, are justified by assertions that such marriages keep property within the family. South Indians tend not to have two children married to the children of the same mother's brother or father's sister.

Marriages between cross-cousins and maternal uncle and niece have become less frequent in recent decades due to at least two factors: education (parents prefer that their son marry into a wealthy stranger family rather than marrying one of his poor cross-cousins or elder sisters' daughters) and increasing awareness that marriage between close relatives is considered by Western science to be deleterious to offspring.

In south India generally, there is no rule of village exogamy, and a sizable proportion of marriages may be between bride and groom of the same village. South India differs from north India also in the equality between the two sides in a marriage. In north India, the bride's side is usually considered to be inferior to the groom's, while in south India, the two sides are more likely to be considered equal.

Weddings, Dowries, and Bride-Price

South Asians are often criticized for their elaborate and costly weddings. The bridegroom's party, until recently in the north composed entirely of male relatives and friends of the groom, comes to the bride's village and stays for three or four days, during which time the bride's family must house and feed them lavishly. In south India, the groom's party may include women, even the groom's mother, and since many couples in the south come from the same village, the burdens of entertainment may not be so heavy on the bride's people. In both north and south, relatives of the bride, such as her married sisters and mother's brothers and their families who reside in other villages, are also invited, as are members of her local caste-chapter.

In north India, the bride is also expected to bring a *dabej*, or dowry, composed in part of household goods and gifts—cooking vessels, beds and bedding, embroidered linens, toys for the children in the groom's family, saris for the women in the groom's family, her own saris, cosmetics, and silver and gold jewelry, and the gift of a finger ring for the groom. Accumulation of these dowry goods may begin as soon as a daughter is born.

Dabej may also include cash to be given by the bride's father to the groom's father. Until recent decades, only wealthy families gave cash or impressively sumptuous gifts in dowry. Most brides' families in the north bore the greater part of the expenses of the feasting and the household goods and gifts, the most onerous expense being that for the bride's jewelry. According to the Indian social anthropologist M. N. Srinivas, the giving of dowry in south India began only in the twentieth century. In south India generally, and in the mountainous parts of north India, bride-price given by the groom's people in the form of all or some of the following—food, clothing, cash, jewelry—made up most of the wedding expenses among almost all communities until recently.

Since Indian independence in 1947, there has been a considerable increase in modern education, especially for males. Many parents and elders with girls to marry off seek educated bridegrooms because they are believed to have excellent potential earning capacity. While literacy among males in India is now over 50 percent, there are still relatively few males who are well enough educated to achieve good occupations with good salaries, such as teaching, government work, or professional work. The elders in charge of arranging the marriage of a young engineer or medical doctor can demand a very large amount of cash and modern consumer goods in dowry from the bride's people—hundreds of thousands of rupees in cash, a television set, a scooter or automobile, and so on. Such elders usually also enjoy a wide choice in selecting a bride for their educated son. The parents of the bride selected may be hard pressed to provide all the items in dowry that they agree to and may postpone some payments until after the wedding. "Dowry-deaths" sometimes occur when the bridegroom's parents press the bride to persuade her parents to come up with the agreed-upon dowry payments, but they are unable to do so. The usual story is that the bride's sari caught fire in a fireplace used for cooking and she was burned to death—but in fact she has been murdered. In cities, and it is in cities that such cases may be reported to police and newspapers, some women's advocacy groups have managed to have the bride's parents-in-law prosecuted for such deaths in a few instances. With few exceptions, the elders of the educated groom can select another bride for him.

Dowry-deaths are a new phenomenon in India, just as the great increase in dowry giving is new. Both have come about with the increase in higher education for males and the consumerism that has arisen with new manufacturing and imports. It is relatively well-off middle-class people who perpetrate dowry-murders, not poor, uneducated villagers.

MATCHMAKING IN TWENTY-FIRST-CENTURY INDIA

In India, it is common for young men and women or their families to place advertisements for brides and grooms in the newspaper. The ads below are excerpted from actual classifieds in the *The Tribune* of Chandigarh.

Brides Wanted

Match for Ramagarhia Sikh handsome boy Electronics and Microcomputers Engineer, senior British government executive, annual income pound 55,000. Divorced after short marriage, no children, girl should be up to 32 years from status family.

Status alliance for very handsome Brahmin boy Engineer in reputed American Delhi based company drawing 6 lakhs pa, 5'-10"/26yrs; status family—father Chief Engineer in Coal India; attractive girl preferably Computer/IIT Engineer/having professional qualification.

Wanted—dependable slim simple companion For civil engineer Doaba (Punjab) based Hindu SC boy 29, 5'8", religion/caste/horoscope/dowry no bar.

Alliance for 21, 5/11" Jak Sikh Bhuliar boy, diploma Mechanical Engineer. Rural urban property. Mediocre family.

Alliance for very handsome, fair, Canadian citizen, 29 year old, 5'6" Hindu Punjabi, BE-Mechanical Computer networking Engineer, presently engaged in computer IT consulting, boy own property in India as well as Canada. Short marriage annulled. Wanted beautiful, educated girl willing to migrate, from a well educated decent family, caste no bar, the boy will visit India in late February, 2002 for 15 days.

Grooms Wanted

Extremely beautiful, educated Canadian citizen 29 yrs, 5'8", Ramagarhia girl working at Royal Bank of Canada, looking for compatible Canadian or US born professional or well established Indian resident. Caste no bar.

Khatri Sikh parents seek USA settled well educated Medico/Computer professional match for their smart intelligent professional daughter BE, MS, Database developer, working in USA green card shortly. 31/162, highly educated liberal professional family.

Dowry-deaths are more likely to be northern events than southern, because in north India the bride and groom in an arranged marriage are commonly almost total strangers to each other, as are the two families allied by marriage. In south India, even when the bride and groom are not cross-cousins or uncle and niece, they are likely to be more distant relatives and to be acquainted with each other, at least from their childhood days, since *jatis* in south India are smaller on average than in the north, and marriages can take

place between a bride and groom from the same village. Gift giving at south Indian weddings is also more likely to be balanced between the two sides. Dowry giving is a much more recently adopted custom, among even high-ranking south Indian castes, than in the north.

As in north India, dowry is becoming more important in southern India, as educated bridegrooms are allied with brides from unrelated wealthy families. Such marriages sometimes cross *jati* lines but are in

the same occupational caste, since it may be difficult to find educated bridegrooms for educated brides.

The Logic of Arranged Marriages

Why arranged marriages? There are at least four reasons. First, ancient Hindu religious law states that a father would be punished in afterlife if he has not got his daughter married off before her first menstruation. Second, arrangement of marriages by elders ensures that marriages take place within the *jati*. The stability of the caste system depends on arranged marriage. A third practical reason in areas where village exogamy is the rule is the impossibility of children's knowing potential mates in other villages. A fourth reason is the general disapproval of self-selection of a mate, called all over South Asia a "love marriage." There is the assumption that a love marriage must have involved some kind of premarital sexual contact between the couple, which violates the requirement that a bride be a virgin at the time of her wedding, held by all religious and caste communities in South Asia. This requirement that a bride be virginal encourages Muslims and Christians to arrange marriages for their daughters at young ages and to chaperone marriageable girls carefully.

Remarriage

High-caste Hindu women generally are not allowed to marry a second time. A high-caste widow may remain in her dead husband's joint household; if she is young, she may return to her parents' or married brother's home; if she is old and has no relative whom she can reliably turn to, she may have to try to find some means to support herself. Some Hindu widows become holy women visiting pilgrimage places such as Varanasi (Benares) and Haridwar on the Ganges. Many Hindu middle and lower castes allow widows to remarry, many following the rule of junior levirate, encouraging a widow to take her husband's younger brother as a second mate. Muslim and Christian widows are allowed to remarry.

Divorce was made legal in India after independence, but it is usually said that Hindus do not allow divorce. What this means in practice is that a barren first wife (for it is almost always due to infertility that a Hindu woman is abandoned by her husband) is taken home to her parents or to her married brother and left there. Her husband never comes again to get her; he then takes another wife. The abandoned wife usually cannot remarry. Muslim family law explicitly allows men to divorce their wives. Such divorces are probably more common among urban Muslim merchants than among rural Muslims, however, and are very easily achieved.

Kinship and caste ties are strong in Indian life. One's relatives and members of one's *jati* are ready to help, and in turn, one should help them. Loyalty and duty, toward one's family especially, but also toward one's *jati*, are emphasized in child rearing. Many Western observers of Indian family life have commented on the collectivistic ethic at its core and the absence of an individualistic ethic. Indeed, what might be interpreted as healthy individualism by a person from the West maybe seen by South Asians as selfishness.

Recent Developments

There has been much movement of Indians from their villages into towns and cities, especially since the mid-nineteenth century and increasingly in the twentieth century. Studies suggest that in towns with long-settled stable populations, there were neighborhoods associated with particular castes, but in rapidly growing metropolises such as Mumbai (Bombay), Delhi, Calcutta, and Madras, people are segregated more by economic class than by caste. Wealthy people live in certain estates or "colonies," poorer people in others. Even though the caste-cum-kinship neighborhood milieu may be gone in the city, and households may be nuclear in structure—a working man plus his wife and children—urban families are often joined by other relatives, by a nephew attending school or by an elderly parent of the husband or wife. Marriages continue to be arranged by elders and arranged almost always within the *jati*. The *jati* for the city dweller may be located around his home village, or it may be merely a network of scattered families, few in his own neighborhood. If enough families of his *jati* migrated to a town or city and have been there for a few generations, a new urban *jati* may have developed.

There has been much discussion of the so-called decline in the joint family in South Asia. With the increase in average life expectancy in South Asian countries during the twentieth century, there should be more lineal joint families since there should be more grandparents available to fill joint-families' upper generations. However, there are countervailing forces, such as outmigration from rural areas to cities, plantations, and abroad. There also has been an increase in the average age of marriage for both females and males, so that there are fewer junior members to fill the middle generation in the joint family. To the extent that more children survive infancy and early childhood than in past centuries, the problem of crowding is greater. Crowding tends to force some of the component couples in a joint-family household to take their children and move elsewhere. Population pressure and the patrilineal South Asian pattern of dividing land among all

male descendants has resulted in land fragmentation and a decline in resources for people in rural areas, making it difficult to accommodate a joint family.

MARRIAGE AND FAMILY—WEST ASIA

Family and marriage are important in the social economy of West Asia. The dominant religion of the area is Islam, and therefore the mores that govern marriage and family life in the region are derived from, and firmly rooted in, Islamic traditions. As such, society is strictly male-dominated, with women often serving the dual roles of mother and housewife. It is not unusual to see men in public while women are seen but rarely; when women are seen, they are draped in an all-encompassing veil, for a veil is said to protect and guard the virtue of a woman.

Family Structure

A typical family in West Asia is an extended one, in that several generations of the same family live in

one abode. Generally the eldest male is the head of the household. Family life is best described as clan-nish, wherein each member works for the benefit of the whole. It is highly unusual for sons to leave their parents home and set up a household of their own. Traditionally, a son gets married and his wife comes and lives in the family home. Conversely, the girl children of the household are married off and go to live with their in-laws. This sort of familial arrangement has age-old roots in West Asia. Certainly, the extended family predates the arrival of Islam, since earlier civilizations in the area show the same pattern of family life. In modern urban West Asia (that is, in the larger cities of Turkey and Iran), however, the nuclear family is becoming more common. Most modern Turkish and many Iranian young people, while recognizing the prevalence of the traditional pattern, would resist including themselves in it.

Choice of Marriage Partners

Traditionally, marriage is arranged by the parents, with the son or the daughter having little say in the matter. The concept of young people choosing their own life partners is alien to the culture of the region. Arranged marriages tend to be based on the concept of gain, in that a marital union will further the economic or social standing of the family. Also, it is often customary that marriages are arranged within the larger family group. Thus, there are frequent consanguineous arrangements with either first or second cousins. Such practices derive from ancient concepts of blood ties and the idea that marriages must be kept within the family. No doubt such customs stem also from the need to safeguard the family's property, and are fueled by ancient notions of procreation, in which the father is deemed the full progenitor of children, with the mother contributing little other than her womb as a place for the child to grow. In this context, the question of incest cannot occur.

Women are expected to be virgins at the time of their marriages. Indeed, there are many dire consequences if an unmarried woman is not a virgin. Traditionally, the sexual life of young women is strictly controlled and the mingling of boys and girls is not encouraged.

Dowry Gifts

The bride's family provides a substantial dowry to the groom, although the groom's family also gives the bride marriage gifts. Traditionally, the dowry ensured the marriage would remain stable, since dissolution of the bond would mean the groom would have to return much of the dowry the bride brought with her.

A dowry is often a heavy responsibility for the girl's family and contributes to the common view that girls are a burden. Traditionally, girls are married off as soon as they reach puberty. Although this practice of early marriage is now abating, it persists in many areas of the region.

Widowhood and Divorce

If the husband dies at a young stage, it is not atypical for the wife, who is already living with her in-laws, to be married to one of her brothers-in-law. This levirate arrangement serves to ensure the economic well-being of the woman, since she cannot fend for herself in a traditional society and needs the umbrella of a family. Traditionally, a widow would not be accepted back into her parents' home.

Given that the larger culture of the region is Islamic, it is perfectly permissible for a man to take four wives. Indeed, it is the duty of a Muslim man to marry. Each wife has equal rights in the eyes of the law, and her children are deemed full heirs to the father's property. However, having more than one wife implies that a man is rich enough to take care of them all; polygamy is thus also a status symbol within the larger society. A man is free to divorce as many times as he chooses. A man may divorce a woman by simply stating so, four times, without witnesses, and the pronouncement becomes binding. Divorce often results when children are not produced. It is perceived that the woman is literally barren, in that the man's seed cannot grow in her womb. Such ancient notions still predominate in the region.

Pleasure Marriages

Where Shi'a Islam prevails, another marriage pattern exists. This is the "temporary" or "pleasure marriage." In such arrangements, any woman (whether a divorcee, a widow, or a virgin) may unite with a man for a clearly defined period of time (anywhere from a few hours to many years) by simply uttering a phrase of consent. This verbal contract has loose rules, takes place without witnesses, and is not officially registered, although it is fully backed by Islamic religious tradition. Once the marriage expires, according to the dictates of the preset period of time, the woman must abstain from sexual intercourse for a period of three months, in order to determine the father in case of pregnancy. If during the pleasure marriage the woman falls pregnant, the father must take charge of the child. Such marriages are becoming popular in certain parts of West Asia, because they involve less financial commitment on the part of the husband. Critics of this practice view it as little more than prostitution. How-

ever, many men and women in parts of West Asia are now involved in such marriages.

MARSH ARABS Until the middle 1990s, when the Iraqi government began extensive drainage works that destroyed much of their traditional homeland, the Marsh Arabs inhabited much of the area extending southward from Kut on the Tigris River and Hilla on the Euphrates River, to Basra on the Shatt al- 'Arab. The area is alternately desert and marsh and originally covered 52,000 square kilometers (20,000 square miles). In the rainy season (March–July), 10,400 square kilometers (4,000 square miles) would be completely inundated; during the rest of the year the area was part marsh, part lake, and part dry land, covered with reeds and bulrushes. The inhabitants of the area, all nominally Shi'ite Muslims, were members of a number of different tribes, notably the Albu Muhammad, the Bani Lam, the Albu Salih, the Bani 'Isad, and the Bani Hashsham. Traditionally, villages were formed on small islands, with huts made of reeds; transport was by canoe or raft.

The only academic anthropological study of part of the region (published in 1962, based on research carried out in 1953) divides the inhabitants occupationally into cultivators (of rice, millet, wheat, barley, and vegetables), reed gatherers, and buffalo breeders; some of the larger tribes, especially the Albu Muhammad, had members in all three categories, buffalo breeding being the most socially prestigious. In 1947, when the population of Iraq was about 5 million, there were about 300,000 Marsh Arabs. Although the nation's population in 2001 was over 20 million, rural to urban migration has been a major feature of the last five decades, so there were probably no more than 600,000 Marsh Arabs as of 1990.

Traditionally, the marshes provided a place of refuge for those fleeing from conscription or from the tax collector. However, the system of air control introduced by the British mandatory authorities in the 1920s meant that recalcitrant tribes could be and were bombed for various acts of disobedience or for non-payment of taxes. Increasingly, the inhabitants of the rural south settled in larger villages or left the area al-

together. In the autumn of 1967, a splinter group of the Iraq Communist Party (the ICP–General Command, led by ‘Aziz al-Hajj) conducted a brief guerrilla campaign based in the marshes. After the uprisings in southern Iraq following Desert Storm in 1991, groups of rebels took refuge in the marshes, which caused the Iraqi regime to lay siege to the area. Movement in and out of the marshlands was forbidden, and two huge canals were constructed and a number of rivers diverted, deliberately draining the marshes to make them uninhabitable by their traditional population (because the water was a vital part of their way of life). Most of the population has fled to refugee camps across the Iranian border. It may be that the damage done so far is irreversible; in any case, if the new hydraulic works were to be abandoned immediately, it would take many years for the ecology of the area to recover.

MARSHALL, DAVID (1908–1995), Singapore politician. David Marshall was born in Singapore on 12 March 1908. Educated in Singapore and London, he was called to the Singapore bar in 1938. A volunteer in World War II, he was taken prisoner in 1942 and sent to Japan; he returned to Singapore in 1946 and established his reputation as a leading criminal lawyer. His involvement in politics began in 1949, when he joined the Progressive Party. In 1954, he founded the Labour Front and became its chairman. In 1955 Singapore became a self-governing colony of the United Kingdom and an election was held; Marshall was elected chief minister when his party won ten out of twenty-five contested seats. He resigned in May 1956, after failing to secure full independence from the British government. In 1957 Marshall formed the Workers' Party, which, with Communist support, emerged as a political force in the December 1957 city council election, but then faded, except as a vehicle for winning Marshall a parliamentary seat in the 1962 Anson by-election. He resigned from the party in 1963 because of ideological differences, and returned to the practice of law. Marshall was admired for his courage and integrity, and for his willingness to stand up to

authority on issues of conscience. In 1978 he was made Singapore's ambassador to France; later his portfolio expanded to include Spain, Portugal, and Switzerland. He retired from the diplomatic corps and returned to Singapore in 1993, where he practiced law until his death in 1995.

MARUYAMA MASAO (1914–1996), Japanese political scientist. Maruyama Masao is one of the most influential intellectuals in postwar Japan and is a representative political thinker. The son of a political journalist, he was born in Osaka Prefecture in 1914. In 1937, he graduated from the Law Faculty of Tokyo Imperial University (as the University of Tokyo was called until after World War II) and became a faculty member there. In 1950, he was appointed full professor and gave lectures on the history of political ideas in the East until his retirement in 1971.

Throughout his career, Maruyama analyzed Japan's social aspects and ideology from the perspective of democratic humanism (a philosophy promoting the worth of all people). His 1946 book *Chokokka shugi no ronri to shinri* (The Logic and Psychology of Ultrationalism) cataloged Maruyama's thoughts on the Japanese government. His analysis of the country's postwar democracy and the psychology of the Japanese imperial system revealed his criticism of Japan's system of government with an emperor as head of state. He wrote a series of other works that include the *Nihon seiji shisosho kenkyu* (Studies on the Intellectual History of Tokugawa Japan, 1952), *Gendai seiji no shiso to kodo* (Thought and Behavior in Modern Japanese Politics, 1965–1967), and *Senbu to sengo no aida* (Between the War and Postwar Eras, 1976).

MARXISM-SOUTH ASIA Marxist ideas have had a deep and enduring influence on political, economic, and literary thinking in South Asia, even though Communist parties have been in power in only a few regional pockets. This influence has advanced along two routes: anticolonial political movements and thoughts on economic development.

The Communist Party of India was established in 1925. From 1920, the idea of class struggle was closely linked with the nationalist movement, partly because such a connection was favored by Moscow and inspired by Lenin's thesis that imperialism was a mature stage of capitalism. Partly, it appealed to a section of nationalists disillusioned by the Indian National Congress's elite leadership. That feeling was strengthened after the sudden withdrawal of the noncooperation movement (1920–1922). This connection between class struggle and nationalism was for the Communists a source of both strength and weakness. Strength because it was expected to bring the working classes into the nationalist movement while staying at a distance from the Congress, which was seen as representing the national bourgeoisie, and weakness because it led to intellectual division. In the most famous dissent, M. N. Roy argued and almost persuaded the Comintern (the international association of Communist parties) that the two agendas, class struggle and nationalist movement, needed to be separate. Soon after, in 1926, Roy was expelled from the Comintern. The Communist Party of India, which followed Moscow closely thereafter, suffered credibility when it abruptly changed its line on anticolonial struggles after Russia entered World War II as an ally of the British.

Following India's independence from Britain (1947) and the creation of Bangladesh (1971), new national Communist parties were formed. These parties splintered for a variety of reasons: intellectual tensions arising from the appeal of Maoism and the emphasis on peasant struggles, regional tensions arising from local concerns, and political tensions concerning participation in parliamentary politics. A major development came in 1957 in Kerala when, for the first time in world history, a Communist state government was voted into power as a result of a democratic election. In the last six elections West Bengal, too, has produced Communist governments.

Before India's independence, a main current within the Indian National Congress was convinced of the need for state control of productive resources to en-

sure a more equal distribution of income and wealth. This socialist strand was inspired directly by the Soviet developmental model, with the emphasis on state ownership, redistribution, and central planning, and indirectly by classical Marxism with its accent on equity and fair distribution. Between the 1950s and the 1980s, these ideas were incorporated into India's developmental policy and philosophy and became part of an informal consensus among Indian intellectuals. Such Soviet-influenced developmental ideas were popular in greater South Asia as well. In this way, gaps were bridged between the political parties of the left and the mainstream intellectual tradition in political economy. The collapse of the Soviet Union, China's economic reforms and rapid economic growth in Southeast Asia and East Asia were some of the major forces that weakened the socialist development strategy and the link between leftist politics and policy discourse.

At the beginning of the twenty-first century, Marxism was on the wane both politically and intellectually. Struggles for representation and empowerment of the underprivileged carry on, but are not focused on the concerns of workers. Still, Marxism has left a deep and enduring impact on ideas about rural political change, on the trade-union movement, on historiography, and, in the cultural sphere, on theater and film.

MARXISM-LENINISM-MAO ZEDONG THOUGHT Marxism-Leninism-Mao Zedong Thought is a complex set of philosophical ideas and views, economic and historical theories and conceptions, and political doctrines, each integral part of which has its own history of emergence and development in China.

Marxism

The first Chinese to fasten their eyes on Marxism at the beginning of the twentieth century were reformers and revolutionaries. Due to their efforts, some writings of the classics of Marxism began to be translated and published in 1906. The founding of the Chinese Communist Party (CCP) in July 1921 was a landmark in the development of Marxism in China.

Since then, Marxism has been tightly connected to the CCP, and Marxism has been proclaimed the ideological basis of the party, which is engaged in the struggle for revolutionary transformation of society.

As a matter of fact, Marxism was ill-suited to this mission. The reason is that even Marxist theories about the general laws of historical development (let them be called "scientific Marxism" here) aimed in the long run to prove the inevitability of capitalist society's revolutionary transformation into a socialist society, characterized by a higher level of development, and therefore qualified as postcapitalistic in nature. As for Marxist revolutionary doctrines (let them be called "political Marxism" here), they dealt altogether with revolutionary transformation and the construction of the postcapitalist society only. But the CCP conducted its struggle in a precapitalist society and for this purpose had nothing to do with the transformation of capitalism into a "higher" stage of development. Moreover, contrary to the Chinese Communists' claims, this struggle was in essence intended not to build any "postcapitalist" society at all, but to prevent the emergence of a capitalist society. However, it is at this very point that the Chinese Communists' efforts coincided with the utopian views of political Marxism about both capitalism and socialism, which in fact neglected capitalism from the standpoint of precapitalist rather than postcapitalist society. That is why the Chinese Communists armed themselves with Marxism, using it as an ideological cover rather than an ideological basis. The CCP inherited Marxism from the Russian Bolsheviks in the form that later was proclaimed to be Leninism (the formula "Marxism-Leninism" came to usage in China only after its invention in the Soviet Union, after Lenin's death). The main feature of this form of Marxism was Lenin's representation of a struggle against capitalism from the standpoint of precapitalist society as a striving for a new, postcapitalist society. At the same time, once the Chinese Communists adopted Marxism, scientific Marxism provided a solid theoretical and methodological base for Chinese scholars who were conducting research in social sciences and humanities.

Mao Zedong Thought

Mao Zedong Thought developed in China during the second half of the 1930s and the first half of the 1940s, as Mao Zedong (1893-1976) consolidated his leadership position in the CCP. The term "Mao Zedong Thought" appeared for the first time in 1943, when it was declared to be an amalgam of Chinese Marxism-Leninism, Chinese Bolshevism, and Chinese Communism, as well as the correct road for Chinese

Communists. Mao Zedong Thought evidently referred to new policies adopted by the CCP. Their main features were revealed by Mao Zedong in his work *On New Democracy* (1940).

The new policies' cornerstone became the statement that China had not been ready for socialism. Therefore, the revolution conducted by the Chinese Communists had not been a proletarian and socialist revolution, but a bourgeois-democratic one. And it had to be guided, as before, by the CCP, not by the proletariat. The CCP was declared to be the leader of the peasantry and all the other democratic forces. The revolution was designed to establish a bourgeois-democratic regime of what was termed the "New Democracy" and to clear the way for the development of national capitalism. Therefore the Chinese Communists sought support for such a revolution not from the Soviet Union, but from the United States.

However, for quite a number of reasons, the New Democracy and the attempts to enlist the support of the United States failed. The Soviet Union remained the only potential source of external aid for the Chinese Communists. As a result, in the second half of 1948, on the eve of their victory over the Nationalist Chinese forces of the Guomindang Party, the Chinese Communists began to revise the New Democracy course and to return to orthodox Marxist lines, based on the leadership of the working class and on the principles of Marxism-Leninism and of Proletarian Internationalism. This process was finally completed after the establishment in October 1949 of the People's Republic of China (PRC).

Coalescence into Marxism-Leninism-Mao Zedong Thought

After independence, Marxism-Leninism regained its former dominant status. Mao Zedong Thought was subsumed into Marxism-Leninism, and Marxism-Leninism-Mao Zedong Thought as a whole was elevated to the status of something like a state ideology. In full accordance with this ideology's demands, China was declared to be "a socialist country," and the policies of the CCP fluctuated toward what was termed "Socialist construction."

The elevation of Marxism-Leninism-Mao Zedong Thought to the status of an official state ideology meant that the obligation to demonstrate loyalty to this ideology, to study its doctrines, and to use its theories as a methodological basis for scholarly research of all kinds, which had earlier been imposed on party members only, was extended to the entire citizenry. In the late 1950s and the early 1960s, a new elevation of

Mao Zedong Thought set in. Once again, it became tightly connected to a fundamentally new political course. Mao Zedong's leftist conceptions of the Great Leap Forward economic movement and class struggle under socialism, of continued revolution under proletarian dictatorship, and of the Cultural Revolution formed its theoretical and ideological basis and determined its domestic policies. Its foreign policy aspects included confrontation with the Soviet Union during the late 1950s and early 1960s and improvement of China's relations with the United States and the West as a whole in the early 1970s. In 1967, Mao Zedong Thought was proclaimed to be "the perfection of Marxism-Leninism" and Mao himself to be the "Lenin of the present age."

The failure of the Cultural Revolution's domestic policies and the adoption of the Four Modernizations course in 1978 led to the restoration of the status quo in the hierarchical relations between Marxism-Leninism and Mao Zedong Thought. Moreover, those aspects of Mao Zedong Thought that were considered the theoretical underpinnings of the rejected policies were strongly criticized. Simultaneously, the criticism was extended to many basic nonscientific and utopian doctrines of Marxism-Leninism itself, regarding the fundamental features of capitalist and socialist societies. Also, a considerable number of scholarly inquiries were published that were designed to eliminate from Marxist scientific theories of precapitalist societies' development all of the perversions generated by Soviet interpretations of Marxism. Nevertheless, the official status of Marxism-Leninism-Mao Zedong Thought as the leading ideology of the state was not called into question in China.

ANCIENT MERV—WORLD HERITAGE SITE

The ruins of Merv in Mary, Turkmenistan, an important city on the Silk Route, were designated a UNESCO World Heritage Site in 1999. The exceptionally well-preserved oasis city's architecture bears witness to four millennia of trade and cultural cross-pollination through its walls.

MARY (1998 est. pop. 123,000). Mary (formerly Merv), the third-largest city in Turkmenistan, lies near the very ancient settlement of Merv; in Hindu, Parsi, and Arab tradition Merv was thought to be the site of paradise and the home of the Aryans. Mary is situated in the southeastern part of the country, in a large oasis in the Kara-Kum desert, at the intersection of the Murghab River and the Kara-Kum Canal, a 1,400-kilometer-long waterway linking the Caspian Sea and the Amu Dar'ya River.

Mary was founded in 1884 under the name of Merv during the Russian conquest of Central Asia, 30 kilometers west of the ruined ancient city of Merv, known from early times under the names of Mouru, Margush, Margiana, and Maru. After establishment of the Turkmen Soviet Socialist Republic (1924), Merv, renamed Mary in 1937, was the administrative center of the Mary province until the dissolution of the Soviet Union in 1991.

Since 1991 Mary is the administrative center of the Mary province of the republic of Turkmenistan. At present it is a major railway junction and an important center for cotton growing and gas extracting. The major Shotlyk ("joy") gas field with recoverable resources of 460 billion cubic meters is located 20 kilometers west of Mary.

MASHHAD (2000 pop. 2 million). Mashhad (Mashad, Meshed), a city in northeastern Iran in the province of Khorasan, is located in the Kashaf River

valley near the borders of Turkmenistan and Afghanistan. The city was always an important center for travelers from India and for those moving north-south. Today, Mashhad is the provincial capital and Iran's second largest city.
