Marriages were traditionally arranged by the heads of clans and served to strengthen the relationship between two clans, who often depended on each other in times of need. Family size varied, with as many as 15 or more individuals living in one household. Herders with large herds were able to afford more than one wife. “Bride price” might include reindeer, furs, money, or other goods and was paid to clan leaders. A bride brought a dowry to the marriage, including such things as household goods, clothing, sleds, and her own reindeer. All of these things were her property (as was anything she herself produced during her marriage), and if she divorced, she kept them. Only men inherited goods and animals, however. Marriages today are generally personal matters between adults.

There are strict divisions between the activities of men and women in traditional Nenets society. Women have the power and ability to both give life (through childbirth) and assure death. For example, in some Nenets folklore, women are called upon not to actually fight enemies but to assure their death by breaking male/female taboos in their presence.

Taboos that governed the relationships between men and women were observed, especially with regard to childbirth and menstruation. Although women were generally considered subordinate, the strict division of labor between men and women in the arctic made relations more equal than not.

## **9 LIVING CONDITIONS**

Reindeer herding is a nomadic occupation, requiring herders and their families to move with the reindeer across the tun-

dra to find new pastures throughout the year. Herding families live in tents made from reindeer hides or canvas and take their personal possessions with them as they travel, in some cases as many as 1000 kilometers in a year. Although official Soviet policy was to force people to settle in permanent, Russian-style homes in villages and towns, reindeer breeding makes this difficult, and many people still live nomadic lives. On the Yamal peninsula, for example, 51% of the indigenous population were nomadic in 1994, and more than half of this nomadic group was female, indicating that whole families, not just men, still lead somewhat traditional lives. These nomads are administratively attached to certain villages and towns, but they travel throughout the year with the reindeer herds. Nentsy engaged in non-traditional occupations live in Russian log houses or elevated apartment buildings, as do the non-Native residents of their territory. These Nentsy shop, attend school, and live in much the same way as non-Natives in their territory.

Transportation in the tundra is often by sleds pulled by reindeer, although helicopters, airplanes, snowmobiles, and all-terrain vehicles are also used, especially by non-Natives. The Nentsy have different types of sleds for different purposes, including traveling sleds for men, traveling sleds for women, and freight sleds.

## **10 FAMILY LIFE**

Patrilineal clans were traditionally the basic units of Nenets society. Each clan had its own specific pastures, hunting grounds, fishing grounds, burial places, and sacred sites. Today there are still approximately 100 Nenets clans, and the clan name is used as the surname of each of its members. Although most Nentsy

have Russian given (first) names, they are one of the few Native groups to have non-Russian surnames. Clan affiliation today is being used as the basis for legal claims to land and the protection of sacred sites. Kinship and family units continue to be the main organizing features of society in both urban and rural settings and often serve important functions in linking urban and rural Nentsy. Social behavior is focused on family and community, not on the individual. Rules regarding appropriate behavior are observed and often punished according to traditional guidelines handed down from elders to young.

### 11 CLOTHING

Clothing is most often a combination of traditional and modern. People in towns and cities tend to wear modern clothes made of manufactured cloth, perhaps with fur coats and hats in winter. There are also modern clothes in rural villages and in the tundra, but traditional clothes tend to predominate as they are more suitable for the lifestyles of people in these areas. In the tundra, traditional clothing is generally worn in layers. The *malitsa* is a hooded coat made of reindeer fur turned inside-out. A second fur coat, the *sovik*, with its fur turned to the outside, would be worn on top of the *malitsa* in extremely cold weather. Women in the tundra might wear the *yagushka*, a two-layered open coat made with reindeer fur on both the inside and the outside. It extends almost to the ankles, and has a hood that is often decorated with beads and small metal ornaments. Fur boots (*pimy*) were worn by all. Generally speaking, there are no special traditional summer clothes. Older winter garments that are wearing out are used, and today lighter-weight manufactured garments are often worn. Each woman also has a reindeer-skin purse uniquely decorated to carry her personal belongings. Reindeer skins are the primary source of traditional clothing, but domestic dog, polar fox, and seal are also used, especially in collars, hoods, and decorative elements. Today many manufactured items are also used.

### 12 FOOD

Reindeer are the most important source of food in the traditional Nenets diet. Russian bread, introduced to the Native peoples long ago, has become an essential part of their diet, as have other European foods. Tundra Nentsy rely on reindeer for food, whereas Forest Nentsy rely on reindeer primarily for transportation and rely instead on fishing and hunting for food and clothing. Nentsy hunt for wild reindeer, rabbits, squirrels, ermine, wolverine, and sometimes bears and wolves. Along the arctic coast, seal, walrus, and whales are hunted as well. Tea is a preferred beverage and is usually purchased on trips to villages, although traditionally it was made from cranberry leaves or the roots of various plants. Many foods are eaten in both raw and cooked forms. Fish, for example, can be eaten fresh, frozen, boiled, or dried. Meat is preserved by smoking and is also eaten fresh, frozen, or boiled. In the spring, reindeer antlers are soft and grisly and may be eaten raw or boiled. A type of pancake is made from frozen reindeer blood dissolved in hot water and mixed with flour and berries. Gathered plant foods were traditionally used to supplement the diet. Beginning in the late 1700s, imported foodstuffs such as flour, bread, sugar, and butter became important sources of additional food. Reindeer meat, antlers, and game are readily available in small villages, whereas non-traditional, imported foods are predominant in cities and towns.

### 13 EDUCATION

When the Soviets came to power, Nentsy children were sent to school, sometimes in their village, but often to boarding schools far from their parents and other relatives. The Soviet government believed that by separating children from parents, they could teach the children to live in more modern ways, which they would then teach their parents. Instead, many children grew up learning the Russian language rather than their own Nenets language and so had difficulty communicating with their parents and grandparents. Children were also taught that traditional ways of living and working were bad and should be abandoned in favor of life in a modern industrial society. Thus, they learned little about their cultural traditions and the land on which their families depended. Settling families in permanent homes in villages was another means of educating children, and today most small villages have nursery schools and "middle" schools that go up to eighth grade and sometimes tenth. After the eighth (or tenth) grade, students must leave their village to receive a higher education, and such a journey for 15- and 16-year-olds can be quite daunting. Today, attempts are being made to change the educational system to include studies of Nentsy traditions, language, reindeer herding, land management, and so on. Educating children of herders, who spend most of the year away from any village, is still a difficult task. Traveling teachers who could move with the herding groups are one possible solution to this problem, but even this system would have limitations, especially as children grow older and require more specialized instruction. Educational opportunities at all levels are available to the Nentsy, from major universities to special technical schools where they can learn modern veterinary practices regarding reindeer breeding.

### 14 CULTURAL HERITAGE

The territory now inhabited by the Nentsy had long been inhabited by other non-Samoyedic people. These people hunted wild reindeer on the tundra, fished in the numerous lakes and rivers, and hunted seals, walrus, and whales along the arctic coast. Archaeological and linguistic evidence has shown that Samoyedic peoples and their languages came north, mixing with and eventually assimilating peoples who had been in those areas previously. The Nentsy seem to have first been concentrated around the mouth of the Ob' river, and from there they moved north approximately 1000 years ago. The first mention of Samoyedic people in Western sources is in the Nestor Chronicle, where they are mentioned in connection with events that took place in the year 1096. Samoyedic peoples, have, therefore, long had some contact with Europeans. The Nentsy and other Samoyedic peoples did not willingly accept the interference of either Czarist Russia or the Soviet government in their affairs, and beginning in at least the 14th century they often put up fierce resistance to attempts to conquer and control them. Today they continue to struggle for control of their own lives.

### 15 WORK

Nentsy have traditionally been reindeer herders, and today reindeer are still a very important part of their lives. Oral traditions from the early 1900s tell of Nentsy clans in Yamal whose livelihood focused on coastal sea-mammal hunting, and evidence exists of Nentsy involvement in commercial hunting

and fishing in the arctic seas in the 1700s. Today, sea-mammal hunting is secondary to reindeer herding in the overall economy of the Nentsy. In traditional Nentsy society, the basic social unit was the individual family; in reindeer herding, however, the basic unit was the herding camp, composed of two to five families, each related to the other by blood, marriage, or other partnership ties. Although collectivization and forced sedentarization often seriously disrupted this system, herding groups today continue to be formed around a family core or group of related people.

Reindeer herding among the northern Tundra Nentsy is characterized by the year-round pasturing of reindeer under supervision of herders and the use of herd dogs and reindeer-drawn sleighs. Herds are kept in well-defined pasture areas and moved at specific times of year. Seasonal migrations cover great distances, as much as 1000 kilometers (more than 600 miles). In winter, herds are grazed in the tundra and forest-tundra. In the spring, the Nentsy migrate north, some as far as the arctic coast; in the fall, they return south again. Herding dogs are important in helping herders control and move herds, which may number in the thousands of animals.

The Forest Nentsy who live to the south have smaller herds, which are grazed in the forest. Their winter pastures are only 40 to 100 kilometers (25 to 60 miles) from their summer pastures. In the summer, the Forest Nentsy turn their reindeer loose while they fish along the rivers. In the fall, the herds are gathered back together and moved to winter grounds. These herds usually number twenty or thirty animals. Reindeer-herding families among the Forest Nentsy also make extensive use of forest and river resources, including hunting and fishing, to supply food and other products for their families.

In addition to food and clothing, reindeer provide transportation (pulling sleds) and additional income (from the sale of antler velvet, or *panty*, which is used in Korea for medicinal purposes). Some families have herds large enough to support themselves independently of the state economy, but others combine work for the state with herding to make a living. Families with few reindeer often live close to rivers and lakes, where they can focus on fishing and hunting while giving their reindeer to a relative to tend. A fairly strict division of labor between men and women is characteristic of Nenets society. Men are primarily responsible for subsistence activities, and women are responsible for the dwelling, clothing, food preparation, and children. There are, of course, times when women gather plants foods and fish, and when men supervise children and cook. Nentsy living in urban areas work as: teachers, nurses, doctors, store clerks, and so on. In rural areas, most Nentsy are engaged in at least some aspects of traditional livelihood, although some are teachers, cooks, or store clerks as well. In villages or the city, women are still responsible for children and the home in addition to working outside the home.

## 16 SPORTS

There is little information on sports among the Nentsy. Recreational activities such as bicycle riding occur in the villages.

## 17 ENTERTAINMENT AND RECREATION

Children in urban communities can enjoy riding bicycles, watching movies, or television, and other modern forms of recreation, but children in rural settings are more limited. In villages, there are bicycles, manufactured toys, televisions,

radios, VCRs, and sometimes movie theaters. In the tundra, there might be radio and an occasional store-bought toy, but children also depend on their imaginations and the games and toys of their nomadic ancestors. Balls are made of reindeer or seal skin. Dolls made from felt with heads made from birds' beaks are not only toys but important items in Nentsy tradition. These dolls play the roles of: father and mother, host and guest, bride and groom, and in such play children learn the roles of males and females in their societies. The destiny of a doll is said to be the destiny of its owner, so a doll is a special part of a child's world.

## 18 FOLK ART, CRAFTS, AND HOBBIES

There is generally little spare time to devote to hobbies in Nentsy society. Folk arts are represented in the figurative art that adorns traditional clothing and some personal items. Other forms of expressive arts include carving on bone and wood, inlays of tin on wood, and wooden religious sculptures. Carvings are sometimes used to decorate sleds, smoking pipes, and *kolotushki* (scrapers to remove snow from fur), but this practice is not widespread. Among some Nentsy, tin and sometimes lead were used to decorate wooden objects such as the handles of knives and tobacco boxes. Wooden sculptures of animals or humans as representations of gods took two basic forms: wooden sticks of various sizes with one or more crudely carved faces on their upper portions and carefully carved and detailed figures of people, often dressed with real furs and skins. The ornamentation of women's clothing was especially widespread and continues to be important. Medallions and appliqués are made with furs and hair of different colors and then sewn on to the clothing.

## 19 SOCIAL PROBLEMS

The economic basis of Nentsy culture—the land and the reindeer herds—are threatened today by the development of natural gas and oil. Economic reforms and democratic processes in Russia today present both new opportunities and new problems for the Nentsy. Natural gas and oil are critical resources that Russia's economy desperately needs to develop. On the other hand, the reindeer pasture destroyed by resource development and the construction of pipelines is critical to the survival of the Nentsy culture. These two land use strategies compete with each other, and complex negotiations are needed to ensure that pasturage is protected and resource development is environmentally safe and not without limits.

Unemployment, inadequate health care, alcohol abuse, and discrimination all contribute to declining standards of living and increased morbidity and mortality among the Nentsy (and other northern indigenous groups). Social welfare payments for children, pensioners, and the disabled are essential to the well-being of many families unable to support themselves entirely through jobs or traditional means. Native peoples throughout the Russian North have begun to organize and discuss solutions to these problems and to assert their rights as distinctive ethnic groups in a multiethnic society. In Yamal, for example, the Nentsy have formed *Yamal Potomkan* ("Yamal for Future Generations"), an organization through which they can work with legislative and political bodies in their region to improve social, economic, and political conditions for the Nentsy.

## 20 GENDER ISSUES

Within the family, work is divided along gender lines. Women are responsible for the home, food preparation, shopping, and child care. Some men follow traditional occupations, and others choose professions such as medicine or education. They might also take jobs as laborers or serve in the military. In towns and villages, women may also have non-traditional jobs as teachers, doctors, or store clerks, but they are still primarily responsible for domestic chores and child care. Extended families often include some individuals engaged in traditional occupations and some engaged in non-traditional work. Communication and exchange in such families is important in helping to maintain cultural traditions in the villages and in ensuring that manufactured goods are sent to the tundra. Among the traditional Nentsy women had strong property rights with respect to reindeer. During the Soviet era, especially following Collectivization, women's property rights, together with private property as a whole, were strongly degraded. Since the collapse of the Soviet Union traditional women's property rights with respect to reindeer herds have begun to make somewhat of a comeback.

# NETHERLANDERS

**ALTERNATE NAMES:** Dutch

**LOCATION:** The Netherlands

**POPULATION:** 16.6 million

**LANGUAGE:** Dutch

**RELIGION:** Roman Catholic; Protestant (including the Dutch Reformed Church); small populations of Muslims, Hindus, and Jews

## 1 INTRODUCTION

The Netherlands is a small, flat country located on the shores of the North Sea in western Europe. The whole country is often referred to as Holland, although this term is actually the name for certain provinces in the northwestern part of the country. Over many centuries, the Dutch people literally built their nation by shoring up its lowlands against the sea with dikes, dunes, and windmills. Its coastal location has historically made it an important trading center. Through the efforts of the Dutch East India and Dutch West India companies in the 17th century, the Netherlands acquired colonial territories on every continent to become one of the world's most powerful nations.

In the 20th century, the Dutch recovered from the devastation of World War II and helped found the European Community (EC) in 1957. In the 1990s, this institution became the European Union, offering the Netherlands, like its fellow members, new opportunities as part of a single trading bloc with enhanced economic powers. Meanwhile, the nation's lowlands are sinking at the rate of 45 cm (1.5 ft) per century, and the North Sea is rising, meaning that the Dutch will have to continue waging their ongoing struggle against the sea.

## 2 LOCATION AND HOMELAND

The name "Netherlands," meaning "lowlands," derives from the fact that much of the western part of the country is low-lying land (called *polders*) that has been reclaimed from the sea by dikes and dunes. In addition, windmills, called polder mills, pump excess underground water to keep these areas dry and farmable. Other geographic areas include sand dunes along the western coast and higher land in the eastern and southeastern areas.

Most of the 16.6 million Dutch people belong to the same ethnic group, descended from Frankish, Saxon, and Frisian tribes. A measure of diversity has been added by the arrival of immigrants from the former Dutch colonies of Indonesia and Suriname and foreign workers from Turkey, Morocco, and southern Europe. Throughout history, the Dutch have been known for tolerance of different ethnic and religious groups. They welcomed Jews and Huguenots (French Protestants) in the 16th and 17th century, and played a role in aiding Jews fleeing Nazi persecution in World War II. The most famous of these Jewish refugees was Anne Frank, whose family hid for several years in a secret annex in Amsterdam, aided by their Dutch employees. Tragically, the Franks' hiding place was discovered in the final year of the war, and the whole family except for Anne's father, Otto, died in concentration camps. However, the famous *Diary of a Young Girl*, kept by Anne during the war years, bears witness to the courage of ordinary Dutch citizens

who risked their lives attempting to save this German Jewish family.

### 3 LANGUAGE

Dutch, a Germanic language, is the official language in all 12 provinces of the Netherlands and the language in everyday use everywhere but in Friesland, where ancient Frisian is spoken. Dutch dialects can vary enough to make it difficult for speakers from different regions to understand each other.

#### COMMON WORDS

Man	Man
Woman	Vrouw
Mother	Moeder
Father	Vader
Yes	Ja
No	Nee
Right	Rechts
Left	Links
Breakfast	Ontbijt
Lunch	Middageten
Dinner	Avondeten
Milk	Melk
Beer	Bier

### 4 FOLKLORE

Dutch mythology is strongly linked to the sea and characters associated with it, such as mermaids and pirates. There is also a tradition of tales about devils who tempt people with riches in order to gain their souls; one of the popular subjects of these tales is the devil Joost. Many popular Dutch tales, riddles, and rituals were suppressed over time by wealthy burghers promoting high culture in their stead, but some survived as part of the country's Christian traditions. The Dutch Father Christmas (named, like the American Santa Claus, for Saint Nicholas) is called *Sinterklaas* and has a dark-faced assistant called Black Peter who is said to carry disobedient children to Spain in a sack.

### 5 RELIGION

An estimated 31% of the Dutch people are Roman Catholics, while 20% belong to six major Protestant groups, of which the largest is the Dutch Reformed Church. There are smaller populations of Muslims, Hindus, and Jews. Approximately 40% of Netherlanders claim no religion. Traditionally, the northern and eastern parts of the country have been Protestant, while the south has been Catholic. Since the mid-19th century, the Dutch have practiced a kind of religious "apartheid" known as *verzuiling* (in English, "columnizing" or "pillaring"), that mandated the establishment of separate Protestant and Catholic schools, newspapers, political parties, radio stations, and other institutions. This system has weakened somewhat since the 1960s, but it still controls many facets of life in rural areas.

### 6 MAJOR HOLIDAYS

Legal holidays include New Year's Day, the Queen's birthday (April 30), Memorial Day (May 4)/Liberation of the Netherlands (May 5), and the Christmas holidays. In addition, many Dutch people observe the other standard holidays of the Christian calendar. The Dutch are great celebrators of birthdays. On their birthdays, the Dutch stay in bed late and family

members come into the bedroom singing "Lang Zal Hij Leven" ("Long May He Live"—for females, "Lang Zal Zij Leven"). Gifts are presented, and the festivities continue at school or work, and, in the evening, with a party for family and friends. The Queen's birthday is considered an especially important occasion, marked by flag displays, parades, and girls wearing orange ribbons in their hair in honor of the royal family, the House of Orange. The Memorial Day holiday in the spring has two contrasting parts. At eight o'clock on the evening of May 4, people throughout the country stop whatever they are doing to remember the Dutch war dead and pray for peace. The next day, May 5, is a time of festivals and celebrations.

### 7 RITES OF PASSAGE

The Netherlands is a modern, industrialized, traditionally Christian country. Hence, many of the rites of passage that young people undergo are religious rituals, such as baptism, first Communion, confirmation, and marriage. Religious minorities observe their own rituals. In addition, a student's progress through the education system is marked by many families with graduation parties.

### 8 INTERPERSONAL RELATIONS

On the whole, the Dutch are a reserved people who do not speak readily to strangers. Public interaction, usually marked by close eye contact, is direct but formal. (Close friends, however, do greet each other with a kiss on the cheek.) Restraint and moderation can be seen in many aspects of Dutch life,

from cars (medium-sized and -priced) to clothing (casual and unostentatious). The primary Dutch focus is on the family and on being *gezellig thuis*, or “cozy at home.”

Popular Dutch sayings include:

“You’ll face the wind” (Je krijgt de wind van voren)—comparable to the American phrase “face the music”

“I’ll row with the oars I have” (Ik roei met de riemen ik heb)—i.e., I’ll make the best of the situation

“God’s mills grind slowly” (Gods molens malen langzaam)

## 9 LIVING CONDITIONS

Traditionally, the Dutch have striven to make their homes *gezellig*, which means “homey” or “cozy.” They favor knick-knacks such as colorful tiles and blue-and-white Delft porcelain. Most homes have colorful flower gardens in front, typically featuring the tulip, the Dutch national flower. With the nation’s high population density, Dutch cities suffer from overcrowding and housing shortages. Many of the tall, gabled traditional houses in cities like Amsterdam have been divided into apartments. One popular response to the scarcity of dwellings is living in a houseboat, generally a converted barge. By 2008 there were approximately 2,400 such boats anchored on the canals in the center of Amsterdam.

The Dutch receive modern, high-quality health care. While most health-care facilities are privately operated, costs are covered by a national health insurance system. In 2008 the average life expectancy was 79.25 years, and the major causes of death were heart disease, cancer, and traffic accidents. Privately funded home nursing is provided for children, the elderly, and pregnant women. Home birth has always been popular in the Netherlands; the government finances a 16-month training program for midwives, who assist doctors with delivery and provide postnatal care for mother and infant.

The Netherlands has an extensive network of highways. Dutch cities and suburbs have good public transportation, although a major expansion is slated for completion by the year 2010 in order to reduce pollution. Bicycles are a favorite form of transportation, and the country has about 9,920 km (6,200 mi) of bicycle paths. A state-owned railway system links most Dutch cities and also offers daily express service to cities in Belgium and France. Rotterdam, in the heart of one of Europe’s major industrial centers, is one of the busiest ports in the world.

## 10 FAMILY LIFE

The Dutch place great value on family life. A traditional Dutch saying is “Your own hearth is worth gold” (*Eigen haard is goud waard*). The nuclear family—called the *gezin*—has traditionally been at the center of Dutch life, especially since the 19th century. Since World War II, there has been an increase in the incidence of unmarried people living together, and the divorce rate has risen as well. The Dutch tend to have small families and to lavish care and attention on their children. The concept of *deftig*, or respectability, is important to the Dutch family and is related to an age-old custom known as *schmeren*. At sundown, the Dutch traditionally leave their curtains open with the lights on low, leaving themselves visible to neighbors or passersby behind their large front windows. This practice is

often interpreted as a symbolic attempt to show their neighbors that all is *deftig* within, although some have attributed it to the desire to check up on what is going on outside, or even as a thrifty way to make use of all available daylight.

## 11 CLOTHING

In everyday life, the Dutch wear typical modern Western-style clothing for both formal and casual occasions, although people who work outdoors may still wear the wooden shoes (*klompen*) popularly associated with the Dutch. Due to the efforts of animal rights activists, fur coats have become unpopular. Traditional folk costumes vary from region to region, but most feature baggy black pants and wide-brimmed hats for men and full black dresses with embroidered bodices and lace bonnets for women. The popular image of the Dutch people often includes a woman wearing wooden shoes and the white cap of the Volendam region with its high peak and wing-like folds at the sides. Traditional costumes may still be seen in Volendam and Marken, where they are a tourist attraction.

## 12 FOOD

Dutch food is wholesome and simply prepared, often with butter but not thick sauces or strong spices (although the spicier Indonesian *rijsttafel* dishes have gained popularity in recent years). Seafood is widely eaten, especially herring, which are traditionally lifted by the tail and dropped head first into one’s upturned mouth. Dairy products are a dietary staple, and the Dutch are known worldwide for their cheeses, the most popular being Gouda, which is round and flat, and Edam, which is shaped like a ball. Many desserts come with whipped cream, and popular beverages include tea, coffee, beer, and *Jenever*, a Dutch gin made from juniper berries.

The Dutch breakfast is generally a cold meal of sliced bread, meat, and cheese. This is followed by a modest midday meal, also cold, and a large dinner, served at about 6 PM, which typically includes soup and a main dish containing meat and vegetables. Popular snacks include french fries—*patat frites*—often served with mayonnaise or ketchup, and waffles, smothered in whipped cream or caramel sauce.

## 13 EDUCATION

The Dutch are a well-educated people with virtually no illiteracy. Schooling is compulsory between the ages of 5 and 16. At the age of 12, students take an exam which tracks them into either general, pre-university, or vocational school, although it is generally possible to change schools at a later time. At the age of 16, school certificate exams are taken in a variety of subjects. Students in the pre-university, or gymnasium, track can advance automatically to a university at the age of 18, while others must take an exam. Higher education is offered at nine universities and four technical institutes. The oldest university, which is at Leiden, dates back to 1575.

## 14 CULTURAL HERITAGE

The 17th century was the golden age of Dutch painting, marked by the work of such masters as Rembrandt van Rijn, Jan Vermeer, and Jacob van Ruisdael. Supported by the rich burghers and merchants of the upper middle class, these works are known for their depiction of everyday scenes showing middle-class life. The great 19th-century painter Vincent van

Netherlanders selling cheese in a market in Alkmaar, The Netherlands. (© Benoit Roland/The Image Works)

Gogh was born and lived most of his life in the Netherlands before moving to Arles, France, two years before his death in 1890. The 20th-century *De Stijl* movement, which advocated simplicity, is represented in the works of Piet Mondrian and Theo van Doesburg. The Netherlands was home to two great philosophers, Desiderius Erasmus in the 15th century and Baruch Spinoza in the 17th. The 19th-century novel *Max Havelaar*, by Edouard Douwes Dekker, caused a public outcry over Dutch treatment of the people in its colonies and led to eventual government reforms. In music, the Renaissance composers Jan Sweelinck and Jacob Obrecht were renowned throughout Europe. Twenty-first century Dutch popular music has African and Middle Eastern influences.

### 15 WORK

The Dutch economy expanded from World War II until economic growth slowed in 1973 due to rising world oil prices. Over the next decade unemployment skyrocketed from 3% to 17%. In 2007 it stood at 4.1% of the work force. The main industry of the 20th century was the production of petrochemicals. Agriculture, which accounts for only 3% of workers, is still an important part of the national economy, with many Dutch specializing in dairy farming and flower-growing. Industrial activity in the 2000s is predominantly in food processing, chemicals, petroleum refining, and electrical machinery. Many people in the Netherlands go into the family business,

eventually taking it over from the older generation. Foreign workers, who first entered the country in large numbers in the 1960s, perform low-paying, unskilled work.

### 16 SPORTS

At least 4 million people belong to sports clubs. The largest is the Royal Netherlands Football (i.e., soccer) Association, which claims about a million members. The Dutch won the European soccer championship in 1988. Other popular sports are tennis, swimming, and hockey.

### 17 ENTERTAINMENT AND RECREATION

The Dutch enjoy many forms of outdoor recreation. Fishing is extremely popular, as are boating, sailing, and camping. Throughout the country, bicycles are used for recreational outings and races, as well as transportation. Winter sports include skating, curling, ice boating, wind-assisted skating (performed wearing a kite-like triangular sail on one's back), and many kinds of races and endurance tests. As many as 16,000 people compete in the 200-km (124-mi) Elfstedentocht skating race over frozen canals connecting 11 towns in Friesland. (However, in many years temperatures do not drop low enough for this event to be held.) Another traditional sport popular in Friesland is *fierljeppen*, a form of pole-vaulting.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional Dutch crafts include pottery, tile work, glassware, and silver. The famous Delft pottery has been produced in the city of that name since 1653. Plates, vases, pitchers, and a multitude of other decorative pieces are still made by workers who enter the trade at ages 16 or 17 and receive eight years of training. Over a thousand different types of objects are produced, and no two pieces are the same. The designs were originally copied from fine Chinese porcelain that entered Holland during the 17th century.

## 19 SOCIAL PROBLEMS

The generous Dutch program of social benefits has been abused by a multitude of persons claiming sickness or disability: in the early 1990s one-fourth of Amsterdam's population was living on welfare. Absenteeism at work is also a problem. Overcrowding in the cities has resulted in the illegal occupation of buildings by squatters. The position of Amsterdam as one of Europe's main entry points for illegal drugs has led to a drug problem, which the government has addressed with strong anti-drug laws. However, the number of addicts using hard drugs in the Netherlands is low compared with the rest of Europe and considerably lower than that in France, the United Kingdom, Italy, Spain, and Switzerland. Dutch rates of drug use are lower than US rates in every category.

## 20 GENDER ISSUES

Progress on women's rights issues has been realized in the Netherlands in the last 50 years. In the mid-20th century, women still needed their husbands' consent to enter into employment contracts. The percentage of women in the labor force jumped from 22% in 1960 to 56% in 2006; just 10% of women leave the workforce after having their first child. The Netherlands has a goal of having 65% of all women working at least 12 hours per week by 2010. Still much remains to be done to fully achieve gender equality in government and society. A Law on Child Care entered into force in January 2005. The Netherlands has invested considerably in child-care facilities. There were 200,000 child-care facilities in 2007 and all schools were required to provide child care from 7:30 AM to 6:30 PM. Child care has been made affordable for all income groups. Parents pay no more than one-third of child care costs. Working parents are entitled to parental leave and tax breaks during that leave.

The Netherlands is also taking steps to combat domestic violence, sexual violence, honor-related violence, and human trafficking. Prostitution in the Netherlands is legal. Eighty percent of women working as prostitutes are foreigners, and 20% are of Dutch origin. The Dutch Parliament, citizens, and Dutch non-governmental organizations broadly support the legalization of brothels. The government asserts that that policy protects sex workers, with the government having more control over the sex industry and combating human trafficking. Local authorities can issue work permits for brothels and can thus control safety, health, and working conditions.

The Netherlands is known for its liberal policies on gay rights. The public widely supports tolerance and equal rights for homosexuals, although conservative Christians and Muslim immigrants tend to be more conservative in their beliefs about gender and sexual norms. The 1993 Equal Rights Law prohibited discrimination on the grounds of sexual orienta-

tion. In 1998 the Dutch parliament granted same-sex couples domestic partnership benefits and in 2001 the government legalized same-sex marriages. The Netherlands was the first country in the world to do so. A 2006 European Union member poll showed the Dutch to be the strongest supporters of same-sex marriage at 82%.

# NIVKHS

**LOCATION:** Russia (Siberia, Sakhalin Island, Amur Estuary region)

**POPULATION:** 5,162 (2002)

**LANGUAGE:** Russian, Nivkh

**RELIGION:** Traditional form of shamanism, Eastern Orthodox Christianity

## <sup>1</sup> INTRODUCTION

The Nivkhs are an indigenous people of extreme southeastern Siberia (also called the Russian Far East) who inhabit the island of Sakhalin and the Amur River Valley. Their traditional economic occupations are fishing and, to a lesser extent, hunting. It is believed on the basis of archaeological, anthropological, and linguistic evidence that they are the descendants of the earliest inhabitants of the region. Archaeologists have found evidence of ancient settlements on Sakhalin dating from the Neolithic era (5,000 BC–1,000 AD) and is quite possible that their inhabitants were the ancestors of the Nivkhs. The Nivkhs' affiliation, if any, to other ethnic groups of northeastern Asia has long been a matter of speculation. Some scholars have concluded that the Nivkhs may be ethnically and linguistically related to the Koriaks and Chukchi of far northeastern Siberia and perhaps some native peoples of Alaska. Other researchers have tentatively suggested possible links between the Nivkhs and the ancient inhabitants of Southeast Asia.

The Nivkhs call themselves *Nivkh* (plural *Nivkhgu*), which simply means “person.” The term *Nivkhi*, which is the Russian plural of *Nivkh*, is often used as both a singular and plural form in Western ethnographic literature. Russian and Western ethnographers formerly called the Nivkhs the *Gilyaks* or *Giliaks*. There has been considerable disagreement among scholars as to the origin of the name *Gilyak*. Some suggest that it is derived from *Kile*, the name of a nearby Tungusic-speaking group whom early Russian explorers may have mistaken for Nivkhs, while others believe that it may be an obsolete Tungusic name for Nivkh.

Although linguistically isolated from their neighbors, the Nivkhs maintained trade and marriage relations for centuries with the Nanais and other Tungus-speaking peoples of the Amur and the Ainu of southern Sakhalin. Contacts with the Ainu were sometimes hostile; the two groups occasionally raided each others' settlements and took slaves. Contacts between the Nivkhs along the Amur and the Chinese began as early as the 12th century AD: Nivkhs exchanged furs for Chinese cloth (mainly silk, cotton, and brocade), alcohol, tobacco, beads, and metal disks that were fashioned into jewelry. During the 18th century, Chinese officials claimed control over Nivkh territory and appointed headmen in the Nivkh village communities to serve as liaisons between the Nivkhs and the Chinese government and to collect taxes from their compatriots. These headmen had no real authority among the Nivkhs, however, as they merely served as ceremonial figureheads in dealings with Chinese officials. Nivkh-Japanese trade, which became extensive in the early 19th century, involved the exchange of sea-eagle feathers gathered by the Nivkhs and used by the Japanese in certain religious rituals for Japanese metal goods such as cooking pots and knives. Nivkh blacksmiths of-

ten melted down metal trade items into various tools, arrowheads, spear and harpoon points, hooks, and earrings.

The first Russian-Nivkh contacts began in the 17th century, when Russian explorers encountered Nivkh settlements along the Amur; these meetings were not always cordial, and the Nivkhs earned a reputation among the Russians as ferocious warriors. During the 19th century, the Nivkhs became Russian subjects: treaties between Russia and China in the late 1850s and early 1860s gave Russia control over the Amur River valley, and several decades of conflicts and negotiations between Russia and Japan resulted in Russia's acquisition of Sakhalin in 1876. (Russia ceded the southern half of Sakhalin to Japan in 1905, when it lost the Russo-Japanese War; southern Sakhalin did not return to Russian/Soviet control until Japan's defeat at the end of World War II.) Henceforth, Nivkh territory was flooded by tens of thousands of Russian colonists, and the Nivkhs became a minority in their own land. The Russian government encouraged the colonization of both areas of Nivkh settlement—the lower Amur and Sakhalin—but for different reasons. Since the Amur River basin bordered on China, it was considered an area of strategic significance, and the Russian government did not wish to leave it sparsely populated by non-Russian natives. Sakhalin's damp, cold climate and poor soil provided little attraction for colonists, but it was geographically isolated not only from Central Russia but also from the Far Eastern mainland, so it presented a suitable location for a prison colony. By the end of the 19th century, the Russian population of Sakhalin included almost twice as many prisoners and exiles as free colonists.

Both along the Amur and on Sakhalin, Russian newcomers seized Nivkh lands and cheated the Nivkh out of their furs and other goods; at the same time, extensive commercial fishing by Russian and Japanese firms caused fish stocks to decline. As a result, poverty and hunger became widespread in Nivkh communities. The Nivkhs on Sakhalin faced additional dangers from escaped prisoners and ex-convicts, who often robbed Nivkh households, beat or killed Nivkh men, and raped Nivkh women. Some Sakhalin Nivkhs were forced by economic necessity to work as prison guards or to track escaped prisoners for the Russian prison administration; this naturally caused friction between Nivkhs and local Russians, many of whom were themselves former prisoners. During the Civil War that followed the Bolsheviks' seizure of power in October 1917, the Nivkhs were drawn into bloody conflicts between supporters of the Communist Red Army and the anti-Communist White Army and Japanese forces who saw in the prevailing chaos an opportunity for Japan to gain territory and influence in Russia's eastern borderlands.

During the 1920s, the Nivkhs' situation improved somewhat. The Bolshevik government provided economic relief and basic Western medical care and established a few schools in Nivkh territory. (Nevertheless, the Nivkhs had little influence on local government, which was, as before, dominated by Russians.) Economic exploitation of Nivkh lands by Russians—particularly the overfishing that had led to Nivkh famines before the Revolution—lessened during the first decade of Soviet rule. Ethnographers and Bolsheviks sympathetic to the Nivkhs and other numerically small nationalities persuaded the central government to put native needs before the state's interest in developing the area economically. After Stalin's rise to power in 1929, however, this policy was abandoned. Many

Nivkhs were forced out of their widely scattered settlements and shipped to a handful of larger villages. The government's economic planners assumed that this form of centralization would render fishing and hunting more efficient and productive; instead, it resulted in the depletion of fish and other natural resources (besides disrupting Nivkh communities). The Nivkhs suffered, along with the other peoples of the USSR, from the widespread political hysteria and mass arrests of the Stalinist purges. Local agents of the NKVD (the forerunner to the KGB) filled their arrest quotas by seizing Nivkhs on false charges of espionage for Japan (particularly among the Sakhalin Nivkhs), anti-Soviet sentiments, and economic sabotage. Forestry, mining, oil-drilling, and industry were developed in the Amur region and on Sakhalin without considering the economic consequences, which caused serious environmental damage to Nivkh territory.

The 1930s policy of resettlement was resumed with increased vigor in the 1960s, when government officials embarked upon a campaign of closing settlements they considered lacking in economic potential. However, the towns to which the Nivkhs were relocated offered few economic opportunities; dispersed among Russian majorities and denied instruction in Nivkh language and culture in local schools, many young Nivkhs were robbed of their cultural heritage. The Nivkhs had to bear in silence the economic and cultural damages wrought by the resettlements until Soviet leader Mikhail Gorbachev's relaxation of censorship allowed them to air their grievances.

## 2 LOCATION AND HOMELAND

According to the 1989 Soviet census, the Nivkhs numbered 4,631, practically all of whom live in the Russian Far East. There were 2,008 Nivkhs living on the island of Sakhalin, and an additional 2,368 Nivkhs inhabited the lower Amur River valley in the Nizhne-Amurskii and Takhtinskii Districts (Russian *raion*) of Khabarovsk Territory (Russian *krai*). The remaining 255 Nivkhs lived scattered throughout the Russian Federation. As of the 2002 Russian census, the number of Nivkhs topped 5,000.

In the territory of the Amur Nivkhs, winters are characterized by high winds and heavy snows. January temperatures usually range between  $-28^{\circ}\text{C}$  and  $-20^{\circ}\text{C}$  ( $-18.4^{\circ}$  and  $-4^{\circ}\text{F}$ ). Summers are damp and moderately warm, averaging between  $16^{\circ}$  and  $20^{\circ}\text{C}$  ( $60.8^{\circ}$  and  $68^{\circ}\text{F}$ ). Rains are heavy in late summer and early fall, thanks to Pacific monsoon winds, and flooding along the Amur is common. Larch, yew, birch, maple, lilac, honeysuckle, and swamp grasses predominate in low-lying areas; at higher elevations, mixed forests of larch, spruce, fir, ash, lime, maple, and walnut are the most common forms of vegetation. (The tops of the highest mountains are covered by cedar and lichens). Rivers have traditionally teemed with fish (particularly salmon) and otters. Foxes, bears, squirrels, sables, hares, boars, Siberian tigers, elks, grouse, and deer are the most typical animals along the lower Amur.

The climate in which the Sakhalin Nivkhs live is quite harsh. Winters are long and cold, with average temperatures of  $-19.6^{\circ}\text{C}$  ( $-3.3^{\circ}\text{F}$ ) in the north and  $-13.2^{\circ}\text{C}$  ( $8.2^{\circ}\text{F}$ ) in the south. Summers are much warmer—median temperatures are  $15.2^{\circ}\text{C}$  ( $59.4^{\circ}\text{F}$ ) in the north and  $17.8^{\circ}\text{C}$  ( $64^{\circ}\text{F}$ ) in the south—but the climate is unstable, so temperatures often drop significantly without warning. The northernmost part of the island consists of barren tundra with sparse stands of larch and birch trees and various grasses; rugged mountainous taiga forests of larch, birch, spruce, and fir predominate further to the south. Sakhalin is very damp and windy, and violent hurricanes and blizzards frequently lash the island. Bears, foxes, otters, lynx, and reindeer are Sakhalin's most typical forms of wildlife; its rivers, particularly the Tym' and Poronai, are rich in fish, especially salmon. Seals and sea lions are found along Sakhalin's coastline.

## 3 LANGUAGE

The Nivkh language is sometimes classified together with Chukchi, Koriak, Kamchadal, and several other Siberian languages in the Palaeoasiatic language family, but in reality it shares few features in common with them. In fact, Nivkh is an isolate—a language that cannot be proven to be related to any other known tongue. The grammar of Nivkh is quite complex. For example, numerals can take more than 20 different forms depending on the characteristics of the items being counted. Small, round objects; long objects; large, round objects or objects with an indeterminate shape; thin, flat objects; animals and insects; humans and spirits with human-like forms; objects that occur in pairs; and so on—all of these use different words for the same number. Thus, one person (*nivkh*) is *nivkh nin*; one dog (*kan*) is *kan n'yn'*; and one tree (*tig'r*) is *tig'r nekh*. The Nivkh language is divided into two dialects: the Amur dialect, which is spoken along the Amur River and on northern Sakhalin; and the Eastern Sakhalin dialect, which is spoken by the remainder of the Sakhalin Nivkhs. The Nivkh language

was unwritten (except for the academic transcriptions of linguists and ethnographers) until 1931, when Soviet linguists created a Nivkh writing system based on the Amur dialect and written in the Latin alphabet. Publications in the new alphabet (chiefly schoolbooks) soon began to appear, and literacy in the native language began to spread. However, the new alphabet was banned five years later: the Russian chauvinism typical of the Stalinist regime had led the government to oppose the use of the “foreign” Latin alphabet. A new alphabet based on the Cyrillic (Russian) alphabet was to have been adopted in 1936, but for reasons that are unclear, it does not seem to have come into widespread use until the 1940s or 1950s. (The Stalinist suspicion of non-Russian peoples and their cultures and languages may have in some way been behind this delay.) Nivkh is now written in the Cyrillic alphabet, with numerous extra letters and diacritics to represent specifically Nivkh sounds. Until 1979, only the Amur dialect of Nivkh had a written form. In that year, a separate writing system (also based on the Cyrillic alphabet augmented with special letters and diacritics) was developed for the Eastern Sakhalin dialect; this form of written Nivkh is used mainly in textbooks for Nivkh children.

Nivkh personal names are usually formed by adding special suffixes to nouns, verbs, and adjectives or their roots. Male personal names use suffixes ending in *-n*, while female names are formed by adding suffixes that end in *-k*. Many Nivkh personal names reflect the Nivkhs’ natural surroundings, such as the male names *Kharkhin* (derived from *khar*, “wasp”) and *Tutin* (from *tu*, “lake”), and the female names *Chryguk* (from *chry*, “river bank, beach”) and *Chngyruk* (from *chngyr*, “grass”). Some names refer to a pleasant item or reflect a physical or moral characteristic that the parents wish the child to have—e.g., the female names *Aisik* (from *ais*, “gold”) and *Iazruk* (from *iazrud*, “to respect”), and the male names *Pilgun* (from *pila*, “big”) and *Smedun* (from *smod*, “to love”). Other names refer to a person’s behavior or appearance in infancy: examples of this type of name are *Togun* (male) and *Toguk* (female), which are based on the verb *tod*, “to cry”; *Vadun* (male) and *Vaduk* (female), which are derived from *vad*, “to fight”; and *Ngokhtik* (female, from *ngokh*, “fat”). A child may be named in reference to an event that took place at the time of his or her birth. Thus, if a dogsled broke down when a girl was born, she might be named *Myiguk* (from *myid*, “to go to ruin, to fall down”). It is for this reason that there are many Nivkh names of otherwise inexplicable origins—for example *Taligun* (male, from *tali*, “bag, sack”) and *Chvark* (female, from *chvar*, “chain”). Russian personal names such as *Vladimir* (male) and *Zoya* have become common in the 20th century. The Nivkhs did not use surnames until the Soviet period, when the government demanded that they, along with the other Siberian and Far Eastern Peoples, adopt surnames in the interest of bureaucratic convenience: Nivkh surnames are based on the personal name of the male who was the head of the family at that time.

#### 4 FOLKLORE

The Nivkhs possess a rich heritage of oral literature that has been passed on from generation to generation since time immemorial. Besides riddles, songs, and short folk tales, there are longer, more elaborate forms of folklore, such as the *t’ylgund* and *ngastund*. *T’ylgund* (singular *t’ylgu*, *t’ylgursh*), or myths, describe the creation of the universe and man, the origins of

the Nivkh clans and ancient wars between them, and the adventures of fantastic heroes, spirits, and beasts. In traditional Nivkh society, the *t’ylgund* were considered to be true. The *t’ylgund* have a fixed form and are not subject to improvisation or embellishment. (Some scholars, such as the Russian ethnographer Lev Shternberg, have compared the Nivkh *t’ylgund* to the mythological stories of the ancient Greeks and Romans on these grounds.) The *ngastund* (singular, *ngyzit*), or mythological tales, also center on mythical heroes. In some of the *ngastund*, the protagonist is a hunter who defeats evil spirits, cold, and hunger to survive and prosper; in others, he is a warlike hero who avenges wrongs done to his relatives or rescues women taken as brides against their will. Unlike the *t’ylgund*, the *ngastund* were not considered to be accurate representations of prehistoric events, even in traditional Nivkh society. They were told for amusement, not enlightenment, and were consciously embellished and altered by adding and changing details and plots.

#### 5 RELIGION

The traditional Nivkh religion is a form of shamanism. Nivkh shamanists believe that fire, mountains, stars, constellations, forests, and rivers have spirits, and that man’s survival and prosperity require that these spirits be respected. Certain animals, such as bears, dogs, and whales, are also considered sacred and are eaten only at ritual meals. The Nivkhs divide the universe (*kurng*) into three parts: the Upper World (*Tly Vo*) is the domain of the Master of the Heavens (*Tly Nivukh*). Humans, animals, and various deities such as the Master of the Mountains and Forests (*Pal Ys*) and the Master of the Waters (*Tol Ys*) dwell in the Middle World (*Mif*, or “Earth”). The Lower World (*Mly Vo*) is inhabited by the dead and is believed to more or less exactly resemble the world of the living. The Nivkh shaman (*ch’am*) communicates with the spirits by chanting and singing prayers while dancing and beating a large, flat, round drum called a *k’as* during rituals intended to ward off bad fortune and heal the sick. Nivkh shamans can be either men or women, but they must be chosen by the spirits. Shamans are respected but feared, because they are believed to have the ability to use magical powers for evil purposes if they so choose. During the imperial Russian era Russian Orthodox missionaries were active among the Nivkhs, converting a portion of the population. However Orthodox Christianity continued to coexist with the older beliefs. Many Nivkh shamans were imprisoned and executed during Stalin’s anti-religious campaigns; as a result, shamanism was driven underground. The Nivkhs have practiced their religion more openly since Soviet leader Mikhail Gorbachev ended the Soviet government’s persecution of religion during the 1980s.

#### 6 MAJOR HOLIDAYS

The most important Nivkh holiday is the Bear Festival (*Chkhyf-Lekherno*; literally, “bear game”), a shamanist ceremony held to honor the bear-spirit and the memories of departed ancestors. The Bear Festival does not have a fixed date, but in pre-Soviet society it was usually held in January or February and was celebrated separately by each clan. Preparations for a Bear Festival sometimes took several years. Each celebration required a live bear, which was sometimes captured or purchased while still a cub. The bear was held in captivity in a small log building and fed by the clan’s members. (Tradition-

al Nivkh villages usually had several such cages, each holding an animal to be used in future Bear Festivals). A few months before the festival was to take place, the participants gave the bear's master food and money to be used in preparing a feast. On the day of the ceremony, the bear was tied between several elaborately carved poles or trees, killed with a bow and arrow, and butchered in a lengthy and complex ceremony. Dogs were also sacrificed at this time. The clan feasted on the bear's meat and celebrated with games, music, and dancing. Observance of the Bear Festival sharply declined during the Soviet period as a result of anti-religious persecution and the dispersal of Nivkh communities, but it was revived in the 1980s. The Bear Festival is celebrated by modern Nivkhs less as a religious ceremony than as an expression of Nivkh cultural identity.

## 7 RITES OF PASSAGE

In the traditional societies of the Nivkh and other Amur-dwellers, all couples wished to have many children, since this was considered a sign of prestige, especially for men. At the same time, pregnancy and childbirth were viewed as dangerous. (This is understandable, given the absence of medical care beyond shamanist rituals and certain herbal medicines.) For this reason, there were a host of taboos intended to ensure a safe delivery. Pregnant women were forbidden to sew clothing and footwear, repair fish nets, set animal traps, or perform any other activity that involved "tying" or "closing." In the last few months of pregnancy, this prohibition extended to other members of the household. Childbirth took place in a small temporary lean-to called a *lanraf*, from which men were barred. (Menstruating and birthing women were considered to bring bad fortune; they were forbidden to touch fishing and hunting equipment, and their husbands were not allowed to hunt or fish). Upon delivery, mother and child remained in the birthing hut for several days before returning to the family household. Both parents were forbidden to work for the time it took the child's umbilical cord to wither and drop off.

Cremation is the traditional form of burial among the Nivkhs. (In pre-Soviet society, Nivkhs who died in infancy were not cremated; instead, they were placed in coffins in the forks of trees in the hope that their spirits might fly off, to return one day to the clan.) Soon after death, the deceased is dressed in fine clothing (usually white), and a white cloth band called a *niakh tiakh* was used to cover their eyes. Food, drink, and tobacco are placed next to the body and periodically consumed by the mourners. After several days have passed, the body is removed from the house and cremated outdoors. The ashes and remaining bones are collected and placed in a *raf*—a small raised house a few feet square—in the settlement's graveyard.

## 8 INTERPERSONAL RELATIONS

In view of the harsh environment of the territory occupied by the Nivkhs, it is not surprising that hospitality has long been an esteemed trait. In traditional society, it was expected that any Nivkh experiencing economic hardship could receive food and shelter at any home for an indefinite time and that the favor would be returned when needed. Travelers to the Nivkh lands in the 19th century reported that this practice was often extended to strangers as well, even though the Nivkhs regarded outsiders with a certain degree of suspicion. (Nivkhs who abused this system of mutual aid were, however, roundly

despised.) Elderly people, especially old men, were held in high esteem. Although they held no special positions in the community (there was no traditional post of "elder") and enjoyed no special privileges, their advice was often sought on important personal and community matters. The forced dispersal of most Nivkh communities in the Soviet period has undoubtedly done much to lessen the influence of these values on everyday behavior.

## 9 LIVING CONDITIONS

Because of the Nivkhs' reliance upon fish for most of their food, their settlements were traditionally established along rivers or seashores. High ground was chosen to provide protection from tides and floods. Most villages contained five or fewer extended-family households, although some had as many as 20. In addition to residential buildings, Nivkh villages contained doghouses; elevated sheds for storing weapons, tools, and preserved food; platforms and racks for drying fish; and raised log houses called *lezng* that held the skulls and bones of bears sacrificed during the Bear Festival. The Nivkh were semi-nomadic and had separate winter and summer settlements. Winter houses (*tulf tyf*) were built near hunting grounds and occupied from October until April or May. There were two basic types of winter dwelling. The most ancient was called a *to ryv* in the Amur dialect, and a *to* in the Eastern Sakhalin dialect. The *to ryv* was a round dugout about 23 feet in diameter shored up by wooden poles and covered with packed earth and grass. Wide, low benches along the walls also served as beds. A fireplace in the center of the *to ryv* provided heat and light, and a smokehole in the center allowed smoke to escape and light to enter. The other type of Nivkh winter house was the *chad ryv*. The *chad ryv*, like the Nanai *dio*, was modeled after Chinese or Manchu houses of the Amur region. It was a large, rectangular house of dried earth with wooden supports and a grass or bark roof. Adobe stoves on either side of the door provided warmth, and the inhabitants sat and slept on benches lining the walls. The windows of the *chad ryv* were covered with fishskin. Summer houses, or *ke ryv*, were built along fishing grounds and were occupied from May until September. The *ke ryv* were rectangular wooden buildings between 36 and 45 feet long that were raised several feet above the ground on poles. Entry was by way of a notched log used as a ladder. Virtually all Nivkhs now live in one-story Russian-style wooden houses or prefabricated concrete apartment buildings.

Prior to the 20th century, dogsleds and skis were the most common form of Nivkh winter transportation. In summer, journeys were made on foot, in light bark boats (*hivmu*), or in long, flat-bottomed wooden boats (*kylmr mu*). Dogsleds, skis, and traditional boats are now used much less frequently than motorboats, automobiles, trucks, and buses.

## 10 FAMILY LIFE

Traditional Nivkh society was divided into several dozen clans (*k'al*) of related nuclear families that took part in the Bear Festival and other religious rituals, avenged wrongs done to their members by members of other clans, and shared hunting and fishing grounds. Two clans often formed *pandf*, marriage alliances according to which each agreed to give wives to, or receive wives from, only the other clan. Because this practice resulted in a high degree of interrelatedness among the Nivkhs, there were strict and very complex rules on the degree

A Nivkh family rest at home in the village of Nogliki on Sakhalin Island, Russia. The main businesses of Sakhalin people are fishing and the oil industry. (Laski Diffusion/East News/Liaison/Getty Images)

and type of blood relationship permitted between marriage partners. Although the complex obligations and rules surrounding the clan system are no longer observed, the Nivkhs are still conscious of their clan affiliations and the locations of traditional clan territories. Since the Second World War Nivkh family life has generally followed the same patterns as Soviet and Russian family life.

## **11 CLOTHING**

The traditional Nivkh garments for both men and women were robes (*siky* for men, *hukht* for women) that fastened on the left side of the body with three buttons and were worn with trousers (*varsh*). Winter garments were made of fish-skin, seal-skin, sable, otter, lynx, fox, and dog furs; summer garments were sewn from cotton and silk cloth purchased from Japanese, Russian, and Chinese traders. (Only wealthy Nivkhs wore silk.) Women's *hukht* extended below the knee and were made of light or multicolored furs, skins, or cloth, while the *siky* worn by men were slightly shorter, used dark materials, and had pockets built into the sleeves. The collars, hems, and sleeve ends of women's robes were elaborately ornamented with beads, Chinese coins, or other metal disks, glass trade beads, embroidery, and appliqué. Men's robes were decorated more modestly and only on the sleeve ends and the left lapel. Boots (*myn'd'kh*) were made of fish-skin, seal-skin, or deer-skin; stockings (*kanyng kamys*) were made of dog fur. Fur hats

(*hak*) were worn in winter. Women were particularly fond of *tlyhi hak*, hats whose crown and back were decorated with, respectively, the ears and tail of the animal that had provided the fur. In summer, Nivkhs wore conical birch-bark hats called *hif hak*. Men always wore seal-skin belts from which hung knives, tools, amulets, and pouches for tobacco, flint, and tinder. (Although women also wore belts on occasion, belts were generally considered a sign of manhood.) Men's *siky* were protected from water damage while hunting and traveling by dog-sled by a loose kilt called a *kosk*. Underclothing consisted of skin loin-cloths or cloth undershorts and undershirts; in winter, women wore richly embroidered fur and cloth chest coverings for additional warmth. Today, the Nivkhs usually wear Western clothing (cloth dresses, shirts, trousers, stockings, socks, and underclothes, and leather shoes), but traditional clothing is worn on holidays and other special occasions. Modern Nivkh women sometimes sew traditional patterns onto store-bought cloth dresses.

## **12 FOOD**

Fish, particularly salmon, is the mainstay of the traditional Nivkh diet and is usually eaten raw, dried, or boiled. Dried fish (*ma*) is prepared by hanging fresh fish in the wind and sun. Seaweed, wild garlic and onions, caviar, wild apples, cedar nuts, hazel nuts, cranberries, cloudberries, whortleberries, and edible roots, fungi, and grasses add variety to Nivkh national

cuisine. In traditional society, meat was consumed much less frequently than fish and usually consisted of deer, elk, seal, sea lion, and dolphin; bears and dogs were almost never eaten outside of shamanist rituals. A favorite Nivkh dish is *mos'*, which is made by pulverizing dried fish and mixing it with fish skins, water, seal fat, and berries until the mixture has the consistency of sour cream. Salt, sugar, rice, millet, legumes, liquors, and tea entered the Nivkh diet within the last few centuries as a result of contacts with Chinese, Japanese, and Manchu traders; Russian/Soviet influence has led the Nivkhs to adopt bread and flour, vodka, potatoes, butter, and canned vegetables, fruits, and meats. Prior to the Soviet era, the Nivkhs stored food in birchbark or wooden containers, cooked in iron kettles of Chinese manufacture, and ate from wooden platters and bowls with wooden spoons; now, they use mass-produced metal, plastic, china, and enamel vessels, utensils, and plates.

### 13 EDUCATION

Education and literacy were unknown among the Nivkhs until the Soviet government began to establish public schools in the 1920s; these schools used Russian textbooks and teachers and operated in Russian until the creation of a Nivkh alphabet in 1931. Primary schooling is now universal among the Nivkhs; almost all attend at least some secondary school, and many go on to college. All Nivkhs are fluent in spoken and written Russian, knowledge of which is essential for entry into institutions of higher learning. Because teaching in native Siberian languages was neglected, and often officially discouraged, during much of the Soviet period, many young and middle-aged Nivkhs have little or no understanding of their own people's language. According to information from 2006 only 23.3% of the Nivkhs speak Nivkh as their mother tongue. (In some Nivkh communities, fewer than one in ten speak Nivkh as their first language). The remainder speak Russian as their first language, although at least some in this group know Nivkh at varying levels of fluency.

### 14 CULTURAL HERITAGE

The cultural heritage of the Nivkhs includes thousands of songs, most of which have yet to be recorded or written down. Some Nivkh songs are of great antiquity and have been sung for centuries. The ability to improvise new songs is also highly valued among the Nivkhs. Nivkh women are considered especially talented at composing beautiful and poetic songs on a moment's notice. The most popular Nivkh songs are the *alkhtund* (singular: *alkhtursh*), or love songs. The *alkhtund* usually concern the tragic consequences of an ill-fated love: a typical theme is the suicide of two lovers who cannot marry either because they are members of the same clan or because the woman has been given in marriage to another man.

Nivkh songs are often accompanied on the *t'yngring*, a violin-like one-stringed instrument with a round, hollow birchbark body and a fish-skin soundboard. The *t'yngring* is played with a bow made of wood and horsehair. Another Nivkh instrument is the *kangga*, a copper, iron or wooden mouth instrument that resembles a jaw harp. A log was sometimes suspended between two trees and beaten like a drum during the Bear Festival. During the Soviet period, these instruments were largely replaced by European instruments (guitars, wind instruments, accordions, etc.), but they are still played at public performances by Nivkh folklore ensembles.

### 15 WORK

Fishing has traditionally been the Nivkhs' primary economic activity, and they have developed a variety of skillful methods of netting, hooking, and trapping fish, particularly salmon. Nets were formerly made by hand from nettle fiber but now mass-produced rope or plastic-filament nets are purchased in stores. Nets are sometimes used in conjunction with an L-shaped trap called a *myr*, or *chkhyl'*. The *myr* is placed in a river or stream at a right angle to the riverbank in such a manner as to force schools of fish to run into it; when they attempt to turn, they are caught in a net. By using this combination of trap and net, a fishing expedition of three to ten men can catch four or five thousand fish in the space of a few days.

### 16 SPORTS

Nivkhs have long enjoyed dogsled racing, boat racing, archery contests, and fencing with sticks. These sports are an integral part of Bear Festival celebrations. Children play tug-of-war and ball games (for example, one player tosses a grass ball to another player, who attempts to catch it on a stick). Curiously, although the Nivkh have traditionally lived near rivers and other bodies of water, swimming did not become popular in the Soviet period.

### 17 ENTERTAINMENT AND RECREATION

Most Nivkh households now own televisions and radios with which they receive news and entertainment broadcasts in Russian from both Moscow and local stations. Nivkh cultural activists have recently begun to suggest that local studios also produce native-language programs on Nivkh cultural themes. Modern Nivkhs also enjoy attending concerts of classical, popular, and Nivkh traditional music and Russian and Nivkh plays.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Nivkh men have traditionally been skilled at engraving intricate decorations on wooden spoons, storage trunks, knife handles and sheaths, and metal knife blades and spear tips. Women's artistic skills find expression in embroidery and appliqué, with which they adorn clothing and blankets. Common themes of Nivkh engraving and sewing are symmetrical spirals and other abstract geometric designs, fish, dragons, deer, bears, birds, snakes, and turtles. Sculpture in wood and bone originally centered around the representation of shamanist spirits, such as the "Master of the House" (*Tyv ys*) that protected each family. In the 20th century, its repertoire has expanded to include animal and human figures as well as hunting scenes and other themes from traditional life.

### 19 SOCIAL PROBLEMS

The modern Nivkhs face a number of problems shared to one degree or another by all of Russia's Siberian and Far Eastern Peoples. Alcoholism, pollution, and a low standard of living exacerbated by late Soviet and post-Soviet economic upheavals have resulted in poor health and a low life expectancy. Nivkhs are sometimes subject to economic discrimination in the areas where they live; that is, they are paid less than Russians for equivalent work or find it more difficult to obtain well-paying employment. Overfishing and ecologically unsound fishing, logging, and industrial practices have caused

significant environmental damage to the Nivkh lands. Issues of cultural survival, too, present a formidable challenge. Soviet policies toward minority peoples after the 1920s tended more and more to suppress their cultures and languages in favor of Russian culture and language. The “small peoples” of Siberia and the Far East in particular saw their histories, cultural achievements, and languages steadily and inexorably removed from educational institutions and public life. By the 1970s, the Nivkh language was no longer even taught as an elective subject in local schools, as Soviet officials had decided that such a “backward” people’s language was not worthy of preservation. Since *perestroika*, Nivkh teachers, activists, journalists, and scholars have achieved some success in expanding knowledge of Nivkh history, language, folklore, and arts. A small but vigorous native rights movement led by Nivkh author Vladimir Sangi emerged during the *glasnost*’ era with the long-term goal of a Nivkh autonomous territory inside the Russian Federation; it has already obtained the return of some Nival lands to communities dispersed during the 1960s resettlements. Perhaps the most prominent Nivkh cultural figure today is the novelist Vladimir Sangi, who in the late 1990s was openly critical of Russian cultural and economic policies regarding the Nivkhs, including issuing a call for reparations from the Russian government to the Nivkh community.

## 20 GENDER ISSUES

Men and women had separate economic roles in the Nivkh community, and children were taught early on how to perform the activities suitable for their sex. Women processed skins and furs, cleaned fish and game, sewed clothes, and cleaned house; men hunted, fished, built homes, carved household items from wood, and made various weapons and tools. Boys and girls were considered of marriageable age at puberty. Young men and women were often sexually active before marriage, although this was often frowned upon (at least as far as the behavior of young women was concerned).

During the Soviet era, particularly following collectivization and during the Second World War, the full incorporation of Nivkh economic life into the Soviet system resulted in the gradual integration of Nivkh women into the Soviet workforce. In addition, Nivkh women were granted access to Soviet educational opportunities.

# NORWEGIANS

**LOCATION:** Norway

**POPULATION:** 4.7 million

**LANGUAGE:** Norwegian in two forms: Bokmål and Nynorsk

**RELIGION:** Evangelical Lutheran Church of Norway; small numbers of Roman Catholics, Greek Orthodox, Methodists, Baptists, Anglicans, Muslims, and Jews.

## 1 INTRODUCTION

The Kingdom of Norway is part of Scandinavia in northern Europe, together with its neighbors Denmark and Sweden. Norway is bounded on the west by the Atlantic Ocean for most of the country's length, on the southwest by the North Sea, and directly to the south by the Skagerrak, an arm of the North Sea. To the east, Norway shares a long border with Sweden, and for a short distance in the north with Finland and the Russian federation.

Most Norwegians live within a few kilometers of the sea, which has played a pivotal role in their country's history. Norway's great Viking era took place during the 9th century AD, when the Vikings extended their territory as far afield as Dublin and Normandy. Their leader, Harald Fairhair, unified the country around the year 900, and King Olaf converted the Norwegians to Christianity. The Vikings were the first to cross the Atlantic Ocean, a feat accomplished with Erik the Red's voyages to Iceland and Greenland. According to tradition, Erik's son, Leif Erikson, landed on the coast of North America in the year 1001. The year 1380 began Norway's long period of union with Denmark, which lasted over 400 years, until 1814, when the Norwegians adopted their own constitution. Their short-lived independence ended as Norway was united with Sweden under one head of state until 1905. That year marked Norway's peaceful secession and installation of its own monarchy. Since Norway, long a subject people, had no royal family of its own, it chose Prince Carl of Denmark to become the new nation's first king, as Haakon VII, an ancient Viking name like that given to his son, Olav.

Norway remained neutral during World War I, but was invaded by Germany early in World War II. Norwegian resistance to German occupation resulted in severe reprisals as the Nazis attempted to destroy the underground movement. The Norwegian merchant fleet played a vital role in aiding the Allies. Although it lost half of its fleet, the country recovered quickly after the war. In 1957, King Haakon died and was succeeded by his son, Olav V, who died in January 1991. In June of that year, Olav's son was crowned king of Norway as Harald V. Although Norway joined the European Free Trade Association (EFTA) in 1960, it rejected membership in the European Community (EC) in 1972, and decided against joining the new European Union (EU) in 1994. In 1992, however, Norway became a member of the newly created European Economic Area (EEA), through which it participates in the European single market and contributes to the budget of the EU.

## 2 LOCATION AND HOMELAND

Norway stretches across the north and west of the Scandinavian peninsula. It is a long country with bulges at the north and south, while its mid-section is as narrow across as 6.28 km

(3.9 mi) at one point. It has an area of 323,882 sq km (125,051 sq mi)—roughly the same size as the state of New Mexico. Norway is the longest country in Europe and one of the most mountainous: only one-fifth of its total area is less than 152.4 m (500 ft) above sea level. Almost one-third of the country lies within the Arctic Circle. In this so-called “land of the midnight sun,” the sun shines almost continuously through every 24-hour period at the height of summer and never sets at all on Midsummer's Day (June 23), a date celebrated with bonfires throughout the country. Overseas territories claimed by Norway include: the Svalbard islands, the volcanic island of Jan Mayen Peter I Island and Queen Maud Land, both north of the Arctic Circle.

With 4.7 million people, Norway has the lowest population density of any country in Europe—15 people per sq km (38 people per sq mi). Ethnically, it has a largely homogeneous population of Nordic, Alpine, and Baltic origin. However, there are also minority populations of some 30,000 Sami (Lapps), some of whom still maintain the traditional reindeer-herding life of their people. Norway also has about 7,000 residents of Finnish origin, and, more recently, immigrants from southern Europe and a variety of Third World countries, many of whom first arrived as guest workers.

## 3 LANGUAGE

Norwegian is a Germanic language closely related to Swedish and Danish. There are actually two forms of Norwegian, both of which are considered official languages and can be understood by all Norwegians. *Bokmål*, the more common of the two, was developed from Danish during the nineteenth century, while *nynorsk* grew out of nationalistic impulses at the same time. *Nynorsk* is a combination of rural dialects intended to be a distinctly Norwegian language, one not influenced by Danish. Today, *bokmål* is mostly spoken by people living in cities and towns. A third form of Norwegian, *samnorsk*, which was earlier proposed as a way of simplifying language use in Norway by combining elements of *bokmål* and *nynorsk*, has now been abandoned.

### EXAMPLES

(B= bokmål; N= nynorsk)

one	en (B); ein (N)
two	to
three	tre
four	fire
five	fem
six	seks
seven	sju (N and B); syv (B)
eight	åtte
nine	ni
ten	ti
church	kirke (N); kyrkje (B)
breakfast	frukost (N); frokost (B)
open	open (N); åpen (B)
closed	stengd (N); stengt (B)

## 4 FOLKLORE

Norwegian mythology originated from the ancient religion of the region, whose chief god, Odin, lived in a walled city called Valhalla and was escorted into battle by nine warrior maidens called the Valkyries. Norway has a strong tradition of sto-

rytelling, and its folklore is full of odd, sometimes grotesque, creatures. The *hulder* is a woman with the tail of a cow which will only disappear if she marries; thus these beings are always chasing after men to marry. Others include the *fossegrimen*, a benign water spirit found at the base of waterfalls; the *nokken*, a mischievous water spirit who lures boys and men to their death; and the *nisse*, a small white-bearded man with a red cap and wooden shoes. Probably the most famous feature of Norwegian folklore are the trolls—large, powerful, grotesque creatures. Some trolls are considered friendly, while others delight in plaguing human beings. Trolls appear as mascots, in Norwegian place names, in folk art, and in many folk tales.

## 5 RELIGION

Norway's official religion is the Evangelical Lutheran Church of Norway. While 83% of the population are members, fewer than 10% are regular churchgoers. Norway also has small numbers of Roman Catholics, Greek Orthodox, Methodists, Baptists, Anglicans, Muslims, and Jews.

## 6 MAJOR HOLIDAYS

Constitution Day on May 17 is the Norwegian equivalent of the Fourth of July in the United States. It is celebrated with parades and other gala events throughout the country, often with traditional folk costumes. In Oslo a parade of schoolchildren is greeted by the king. Midsummer's Eve on June 23 is another major holiday. It marks the longest day of the year and is celebrated with bonfires along the country's lakes, rivers, and fjords. Celebrants continue eating, drinking, and dancing throughout the night. All Saints' Day is celebrated on November 1, but Christmas is Norway's major winter holiday. On Christmas Eve, families celebrate with a traditional festive dinner that often includes pork and *surkål*, a cabbage dish. Afterwards they sing carols around the tree, which is decorated with white candles, and open the Christmas presents. Traditionally, the Norwegians perform a thorough housecleaning before Christmas, which actually extends until January 2, the end of the holiday season. Other religious holidays include Easter, Maundy Thursday, Good Friday, and Ascension Day.

## 7 RITES OF PASSAGE

Most Norwegian babies are born at hospitals or at special lying-in clinics (*fødestuer*). Although Norwegians are not particularly religious, the overwhelming majority of parents have their children christened as infants. Norwegian children engage in a lot of unsupervised play, as the crime rate is very low and even the larger cities are very safe environments. Most teenagers go through confirmation, the primary rite of passage for young men and women in Norway, at approximately age fifteen. Military service is compulsory for males starting at the age of nineteen.

## 8 INTERPERSONAL RELATIONS

Norwegians are a hard-working and self-reliant people, with an independence fostered by their harsh climate, with its long dark winters. Emotionally reserved, they avoid direct confrontations in their relationships with other people. They are courteous and polite, and their social encounters are marked by repeated handshaking, by both men and women. A common greeting when shaking hands is "*Takk for sist.*" Norwegians are

also known for their hospitality, especially during the Christmas season. Guests in a Norwegian home do not touch their drinks until the host offers a toast using the word "*skål.*"

## 9 LIVING CONDITIONS

Norway has one of the highest standards of living in the world, enhanced by the discovery of petroleum and natural gas in the Norwegian section of the North Sea in the late 1960s. Norwegian houses are typically of stone or wood, with one or two stories. Many farm homes include a detached wooden building called a *stabbur*, a general storage facility, as well as the requisite barn.

Norway's state-supported health-care system covers most medical expenses for its residents. Average life expectancy in 2007 was 79 years, up from 56 years a century earlier. Like those in other industrialized nations, Norway's leading causes of death include cancer and heart disease. As the average life span of Norwegians has increased, a shortage of nursing and retirement homes has developed.

In spite of Norway's rugged terrain, the country has a modern, efficient transportation network. The best-developed roads are found in the southeast, where there are fewer natural barriers. Most of Norway's roads are paved. Although most Nor-

wegians own cars, good public transportation is available, with express service provided between large cities and towns. Shipping is a mainstay of the Norwegian economy.

### 10 FAMILY LIFE

The typical marriage age for men is 25–30, for women 20–25. Norwegian families are getting smaller, and it is not unusual for women to decide not to have any children. The parent or parents of one spouse generally live with the family, often in a separate suite of rooms in the house or a nearby separate apartment. Husbands and wives generally share decision-making responsibilities. The divorce rate, while low, is rising, with incompatibility and alcoholism cited as the primary causes.

### 11 CLOTHING

Norwegians wear modern Western-style clothes for casual, business, and formal wear. At festivals, one may still see traditional costumes. Women's costumes include high-collared white blouses with embroidered or plaid bodices and ankle-length skirts, often in blue or red. This outfit may be completed by a hat of lace or other fine cloth. Men wear broad-brimmed hats, white shirts, colorful embroidered vests with dressy buttons, and tight black knee-length breeches with white hose and silver-buckled shoes.

### 12 FOOD

Norwegians eat four meals a day, of which the main one is *middag*, a hot meal usually eaten between 4:00 and 6:00 PM. A typical *middag* meal would be fish served with boiled potatoes and vegetables. The remaining meals are cold meals featuring the typical Scandinavian open-faced sandwich, called *smørbrød* in Norway, and consisting of ingredients including cheese, jam, salmon spread, cucumber, boiled eggs, and sardines, served with bread and crackers. While fish is often served in mildly flavored forms such as fish loaf and fish balls, the more pungent smoked salmon (*røkelaks*) and aged trout (*rakørret*) are popular as well. Commonly eaten meats include mutton and meat balls. Lingonberry jam is a popular accompaniment to meals, and for dessert one may be served fresh berries, *rømmegrøt* (cream pudding), or fruit soup. Coffee is the most commonly served beverage. In recent years American-style fast food has become very popular.

### 13 EDUCATION

Literacy is nearly universal in Norway. School is compulsory between the ages of 7 and 16. After this point, students choose between vocational and college preparatory training. Higher education, which is free, is offered at seven universities and a number of other institutions. In 2007, 208,000 students were enrolled in higher education, which is equivalent to more than 4% of the population. Opportunities for vocational education also abound, and it is the policy of the government that all youth have the right to education up to the age of 18.

### 14 CULTURAL HERITAGE

Norwegian literature begins with the Sagas and Eddas of the medieval Vikings, written in Old Norse and found mainly in Icelandic texts. Norway's most illustrious writer during the period of Danish rule was the 18th-century playwright Ludvig Holberg, whose comedies are still performed in Norway and

Denmark (and to whom the composer Edvard Grieg dedicated a suite of pieces). Norway's liberation from Danish rule in 1814 marked the beginning of the country's modern literary tradition. Its most famous author is the playwright Henrik Ibsen, whose works of realism and social criticism—including *A Doll's House*, *An Enemy of the People*, and *Peer Gynt*—are known and performed throughout the world. Other prominent 19th-century authors included Henrik Wergeland and Bjørnstjerne Bjørnson (a 1903 Nobel laureate). In the 20th century, Knut Hamsun's novels have explored social problems, and Sigrid Undset—who won the Nobel prize for literature in 1928—portrayed the Norwegian past in sweeping historical novels, the most famous being the trilogy *Kristin Lavransdatter*.

In the visual arts, the painter Edvard Munch—known worldwide for his famous painting *The Scream*—pioneered expressionism in Norway during the late 19th and early 20th centuries, and Gustav Vigeland is known for his sculptures. Norway's most famous composer is Edvard Grieg, who incorporated elements of Norwegian folk music, culture, and history into his compositions.

### 15 WORK

Much of Norway's formerly agricultural employment has shifted to both small industries (paper, textiles, and food and beverage processing) and larger ones, such as shipbuilding, shipping, as well as North Sea oil development. Today only about 4% of the workforce is engaged in farming, while industry employs 22% and the service sector 74%. Government regulations limit the work week to 38 hours, prohibit more than 200 hours of overtime in one year, and require employers to provide workers with job security.

### 16 SPORTS

Skiing—which was once a means of transport—is the Norwegian national sport. Children learn to ski at an early age; downhill, cross-country, and slalom skiing are all popular. Other winter sports include ice-skating and a game called bandy, which is similar to hockey. Soccer is the most popular summer sport, and tennis is widely played as well.

### 17 ENTERTAINMENT AND RECREATION

Norwegians enjoy watching televised competitive skiing and speed skating events. Hunting and fishing, including ice-fishing, are popular outdoor activities, as are hiking, boating, and white-water rafting. Many people take skiing vacations in the mountains during Easter week. Summer vacations are often spent either in cabins in the mountains or along the coast, especially in the south. Vacationers can enjoy swimming, sailing, relaxing on the sandy beaches, and viewing waterfalls. Many Norwegians also vacation in warmer climes, with Spain, Greece, and Thailand as popular destination.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Norwegian craftspeople turn out knitted and woven goods and wood products including utensils, bowls, and furniture. Another leading craft is the production of traditional Norwegian costumes. Folk dancing and singing are enjoying a revival, and are practiced at festivals throughout the country.

## 19 SOCIAL PROBLEMS

Traditionally, binge drinking and the resulting alcoholism have been Norway's most important social problem. Since the 1960s, drug use has been a significant problem as well. Drugs have not been legalized in Norway, and liquor and wine are only available through state-operated liquor stores. Human trafficking has become a problem as women from Eastern Europe and Africa have been forced into prostitution in many Western European countries, including Norway.

## 20 GENDER ISSUES

The struggle for women's rights has deep roots in Norway, going back to the 1850s. A number of women's organizations had been founded before 1900, and women were given the right to vote in 1913. The Equality Act, first passed in 1978 and revised in 2005, prohibits both direct and indirect discrimination. Compensation levels must be established according to the principle of comparable worth, governing boards must have at least 40% women and 40% men among its members, and both men and women have the right to paid leave to care for newborns. It is very common for women to serve in high government positions and as members of parliament. Abortions up to the end of the twelfth week of the pregnancy were made available on demand in 1978 and are paid for with public funds. Discrimination based on sexual orientation is illegal, and as of 2008 it seemed likely that the marriage law would be changed to remove any difference between the legal status of heterosexual and same-sex marriage.

# OSSETIANS

**LOCATION:** Caucasus Mountains between Russia and Georgia (Ossetian territory)

**POPULATION:** 680,000 (2001)

**LANGUAGES:** Ossetian; Russian; Georgian

**RELIGION:** Orthodox Christian; Muslim

## 1 INTRODUCTION

The Ossetians, who live in the Caucasus Mountains between the Russian and Georgian Republics, are the descendants of an ancient people, the Alans, who occupied this territory as early as the 5th century AD. This ancient people spoke a language belonging to the Iranian branch of Indo-European and were distantly related to today's Iranians and Afghans. Even during the 20th century, Ossetians have defended their right to live in the territories of Ossetia by tracing their roots in the region back to the ancient Alans. In the 1990s, to honor these origins Moscow renamed North Ossetia as North Ossetia–Alania.

Throughout the 20th century, the Ossetian nation has suffered from interference with its territorial boundaries. In 1918, following the collapse of the tsarist Russian Empire and the rise of the Soviet regime, the Ossetian territory was divided into North and South Ossetia. North Ossetia was defined as part of the Russian state, while South Ossetia was considered to be part of the Georgian Republic. Ossetians still protest the division of their territory, preferring a single, united Ossetia. Some consider the division of Ossetia to have been an attempt on the part of the Soviet government to weaken the culture and national identity of Ossetians.

In 1989, the government of the Georgian Republic dissolved the separate territory of South Ossetia and declared the citizens of South Ossetia to be merely "settlers." The Georgian government urged Ossetians to leave South Ossetia and settle in the North. The Ossetians resisted the Georgian attempts to destroy South Ossetia. The resulting conflict between Georgia and South Ossetia lasted for almost four years, and erupted into war from 1991–92. North Ossetia assisted the South Ossetians in their struggle. During the war, more than 80,000 Ossetians were forced to flee South Ossetia and live as refugees in North Ossetia. Many young men from North Ossetia volunteered to fight on the Ossetian side in South Ossetia. Although the war ended formally in 1992 with a series of peace agreements, relations between South Ossetians and neighboring Georgians remain tense. Occasional armed clashes continue to break out.

North Ossetia had its own territorial difficulties. In 1944, the North Ossetian state was expanded, receiving territories that had formerly belonged to the Ingush, a neighboring people to the east. The Soviet regime had suspected the Ingush of betrayal during World War II. In the spring of 1944, the entire Ingush population was forcibly deported to areas of Central Asia and Siberia. North Ossetia was granted a portion of territory formerly occupied by the Ingush. When the Ingush were permitted to return in 1956, they received most of their former territories. However, a portion of the territories remained within North Ossetia, in the Prigorodnyi region. Thus, some Ingush families who returned to the Prigorodnyi region some-

times found that the land they had occupied prior to the deportation was now settled by Ossetians, who refused to leave.

The conflict between North Ossetians and neighboring Ingush was relatively quiet until the early 1990s. With the collapse of Soviet power, the Ingush became more vocal in their demands for the restoration of their former territories. The Ossetians continued to resist these demands. The dispute escalated into armed conflict in October–November 1992. Russia attempted to resolve the conflict, and the two sides reached an agreement in 1994. However, feelings of mutual hostility between the Ingush and Ossetians remain and occasional fighting continues to occur.

Historically, Ossetia's relationship with Russia has been peaceful. The South Ossetian government has declared its wish to leave the Georgian Republic and join North Ossetia in Russia. However, in 1994 the North Ossetian government threatened to separate from Russia because of Russian interference in the conflict between North Ossetians and the Ingush. North Ossetia also demanded greater autonomy in economic affairs. In 1995 Russia granted North Ossetia considerable autonomy, and the conflict between Russia and North Ossetia appears to be resolved.

## 2 LOCATION AND HOMELAND

The Ossetian territory is located between the Black and Caspian Seas, in the Caucasus Mountains. The mountains have helped to isolate Ossetians from contact with others. Therefore, despite the small size of the population, the Ossetian language

and culture have been very well-preserved. The mountainous terrain and alpine meadows help to support sheep raising, the most common rural occupation. Most of the territory is mountainous, but the plains in the North of the Ossetian territory allow for farming of vegetable and fruit crops.

Although North and South Ossetia share a border, North Ossetia–Alania is a state within the Russian Republic, and South Ossetia lies within Georgia. In 1989, 164,000 Ossetians lived within the Georgian territory and approximately 400,000 in North Ossetia. As of 2007, there are 445,000 Ossetians in North Ossetia–Alania and perhaps 45,000 remaining in South Ossetia, the changes being due in part to refugees who have moved north.

The largest city in Ossetia is Vladikavkaz, in the North. Since the 19th century, Vladikavkaz has been an important administrative center for the entire North Caucasus region. Administrators and politicians from the central government in Moscow have been sent to Vladikavkaz. Therefore, most Ossetian residents of Vladikavkaz have a fluent command of Russian. A southern suburb of the capital has been reassigned its ancient Ossetian name of Dzauzhikau.

The capital of South Ossetia is Tskhinvali, and most residents speak both Ossetian and Georgian. The war with Georgia has resulted in the devastation of Tskhinvali. Many buildings remain destroyed, and many people fled to claim refugee status in North Ossetia. However, since the conflict has lessened, the former residents of Tskhinvali are returning to help rebuild the city.

## 3 LANGUAGE

The Ossetian language is in the Iranian family of languages, although Ossetian and Iranian (Farsi or Persian) are not mutually comprehensible. There are three main dialects of Ossetian: Digor, Iron, and Tual. The Digor speakers live mainly in North Ossetia, the Tual in the South, and the Iron in both North and South Ossetia. The Iron is the largest dialect group, and many Digor and Tual speakers can also speak the Iron dialect.

In North Ossetia–Alania, the two official languages are Ossetian and Russian. Most North Ossetians can speak Russian competently, although often with a distinct accent. The two official languages of South Ossetia are Ossetian and Georgian. Both official languages are taught in school, as are Ossetian and Russian in North Ossetia. However, many South Ossetians also have a command of Russian.

Perhaps the most popular name for Ossetian males is Alan. This name honors the Alans, the ancient ancestors of the Ossetians. The name Ossetian itself reflects that of the ancient As, a group even older than the Alans.

## 4 FOLKLORE

For hundreds of years, Ossetians have told a series of epic folktales called Narty. The stories tell of the exploits of the giant heroes (the Narts) and also feature magical animals with mysterious powers. To this day, the Narty are popular and well-known among Ossetians. The Narty tales have been published in Ossetian and Russian editions for folklore specialists, in collections for interested adults, and also in illustrated children's versions.

## 5 RELIGION

Prior to the adoption of Christianity or Islam, Ossetians celebrated an active and ancient pagan faith. Khitsau, the God of Gods, can be traced back to the ancient Alan people. One of the most important gods, whose name is used even in the late 20th century, is Wastyrji. He is considered the patron of men and warriors. Aside from these gods, who were acknowledged throughout Ossetia, many families had totem animals, such as deer or wolf. Families would try to protect their totem animal and celebrate yearly feasts in the animal's honor. Ravens were significant animals for some families, and snakes were the totem animal of others. To this day, some rural families remember their totem animal and avoid killing such animals. Most of the totem animals also play roles in the Nart folk tales.

Contemporary religion was adopted by Ossetians relatively recently, in the mid-19th century. Most Ossetians adopted the Orthodox Christian faith. However, a significant minority, between 15% and 20%, adopted Islam, the faith of many neighboring ethnic groups. While both Christians and Muslims celebrate the major holidays of their religions, many pagan customs have remained part of the religious practices of both groups. Thus, Ossetian Christians and Muslims have similar, uniquely Ossetian celebrations surrounding the events of death and marriage.

Both Christians and Muslims celebrate St. George's Day on November 10. However, the Ossetians call St. George by the name of Wastyrji, the pagan god of men and warriors. Thus, the Ossetian religious culture transforms St. George into Wastyrji, a uniquely Ossetian figure who can be recognized by both Muslims and Christians. Roadside shrines, dedicated to the saint and bearing his picture, are found along the highways of North and South Ossetia. A large pile of stones marks the shrine, and the picture of Wastyrji is housed in a small lean-to or shack. Traditionally, passing motorists would stop at the shrine, throw a stone on the pile, remove their hats, pray for a successful journey, and leave some silver or money as a dedication to Wastyrji. It is considered bad luck to pass a shrine without stopping, and many Ossetians still pay their respects at the shrines. Sometimes, families will slaughter a lamb or sheep at the shrine in honor of Wastyrji. Most villages have similar shrines.

Sacred groves remain important. The trees therein are decorated with ribbons tied around their trunks.

## 6 MAJOR HOLIDAYS

A traditional festival honoring Wastyrji takes place in July, at the site of a shrine. Because Wastyrji is the patron of men, women do not attend this celebration for fear of offending the saint. The men—Christians and Muslims alike—drink beer, which is the traditional celebratory drink of the Ossetians. They sing songs, dance around the shrine, and dine together. Although the women are prohibited from celebrating the holiday, they cook the food for the celebration and bring the food to the shrine. Although some Ossetians, especially those living in the city, have ceased to observe this holiday, the celebration is still held in many rural areas.

In the spring two clans, the Alægætæ and the Borætæ, stage a mock battle. The significance of this ritual warfare has been forgotten, but the ritual itself seems to be very ancient, since the first name reflects a form of the name Alan, while the sec-

ond is the same name as used in the ancient Indian epic, the *Mahabharata*, or *Bharata*.

During the years of Soviet power, the major national holidays were the Day of the Revolution on October 7 and the Day of International Socialism on May 1. Since the collapse of Soviet power in 1991, the Ossetian governments have tried to create new holidays, with significance for Ossetians, to replace the Soviet holidays.

New Year's Day is celebrated throughout Ossetia, and most people receive a few days off from work and school at this time. Like North Americans, Ossetians have summer holidays, and schools are closed. Children may attend summer camp, vacation with their families, or work on the farm. Most adults, except for those working on their own farms, are able to take some weeks of vacation in the summer.

## 7 RITES OF PASSAGE

Many of the traditional Ossetian rites of passage are pagan in origin and were later incorporated into the Christian and Muslim faiths. When a child is born, families and friends will celebrate the baby's first time in the cradle and first haircut. Males are particularly valued, and special celebrations attend the birth of a boy. For instance, a celebration is held on the day that the boy's name is chosen, and another takes place on his first birthday. At one time, the entire village would have attended these celebrations. Many families still celebrate these occasions, but the festivities are more private and modest.

Males remain the focus of many rites of passage. A boy's initiation into adult male society was celebrated when he first went out to work in the pastures. More recently, the occasion of choosing a career is celebrated as an initiation.

In traditional Ossetian society, children moved quickly into adulthood without an interim teenage stage. As soon as children were old enough to work, they were initiated into adult responsibilities. Traditionally, girls were expected to marry at age 13 or 14, and boys at age 15 or 16. Now, because of mandatory high school education, young people have several years in their teens before they are expected to assume adult roles. Entry into adulthood is celebrated as the young person graduates and takes up a career, or when he or she marries.

Death is marked with a funeral rite and a series of wakes. Although funerals are conducted according to Christian or Muslim rites, some pagan practices are included in the funeral service. In mountain regions, Ossetians still celebrate the ritual of dedicating a horse to the deceased. In ancient times, the horse was sacrificed and buried with the dead man. In a contemporary version, the horse is decorated with a fancy bridle and saddle and led three times around the grave. Finally, a small cut is made on the horse's ear and the horse is led away. In the towns and cities, this custom is not practiced. However, it is common to bury some favorite personal belongings with the deceased.

A wake is held on the two days following the funeral. The family of the deceased holds a large feast. According to folklore, the food does not strengthen those who eat it, but the strength is transferred to the spirit of the dead person. Another wake is held a year later. This wake usually includes the lighting of a fire (either a candle or a bonfire), at the home of the deceased, as fire is associated with renewal and rebirth.

## 8 INTERPERSONAL RELATIONS

Male friends and acquaintances greet one another with handshakes. Traditionally, women were expected to behave modestly and deferentially in the company of men, keeping their eyes lowered. They did not shake hands, either with each other or with men. In contemporary life, however, women will shake hands with co-workers in a professional setting and interact with men in a direct, professional manner.

Ossetians take pride in their customs of hospitality to guests. A guest in an Ossetian home can expect to receive good meals, friendly company, and comfortable accommodation. Ossetians frequently visit one another, and guests are expected to return invitations.

Dating became a traditional part of Ossetian social life. Marriages between young men and women were customarily arranged by the families, usually when the couple was quite young. In contemporary times, this has changed. Most young people choose whom they will marry, although many ask for parental approval. By North American standards, dating among Ossetians is very restrained and conservative. Young men and women will get to know each other in public settings, such as school or with friends, and may go out with groups of friends. Taking walks together is the most common dating sce-

nario, and young couples have little opportunity for privacy. Premarital sexual relations are discouraged.

## 9 LIVING CONDITIONS

Until recently, part of Ossetians lived in isolated mountain villages. They built large, three-story stone houses to accommodate large extended-family groups. In the North, on the plains, the villages were larger, people lived with fewer family members and, therefore, built smaller, single-story wooden dwellings. According to the last census data 225,500 Ossetians live in the villages and 454,500 live in cities. In particular, the populations of the larger cities, such as Vladikavkaz and Tskhinvali, have risen sharply since the mid-20th century. Most city dwellers live in small bungalows or apartment buildings.

Living conditions in Ossetian homes can be challenging, as they lack many of the conveniences that North Americans take for granted. Some rural dwellings do not have indoor plumbing. In the cities, the supply of hot water is not always guaranteed, and some homes may have hot water for only a few hours each day. Dryers and dishwashers are very rare. However, most homes have refrigerators, washing machines, televisions, and DVD players, and many people have cars. Fresh meat and vegetables are common at any time of a year.

Because of the war with Georgia, living conditions in South Ossetia have been extremely harsh. The dangers of war forced many people to flee to North Ossetia. Some South Ossetian refugees were able to live with friends or relatives, but others were housed in army barracks and summer-camp facilities. The destruction of much of South Ossetia meant that shelter was inadequate, and consumer goods were in short supply. Water, heat, and electricity were cut off in many areas. After 1992, the Ossetians began to repair the devastation of the war. However, the reconstruction process remains incomplete, as the economy is unable to support an efficient, large-scale effort and tensions with Georgia remain high.

## 10 FAMILY LIFE

In the mountainous regions, Ossetian families traditionally lived in large, extended family units. The sons, and their wives and families would often live with the parents in a single large home. The farming activities of a mountain family required much labor. If a family was not large enough to provide its own labor, it would be forced to hire workers. Thus, an Ossetian proverb states: "To live alone is to live poorly."

Since the mid-20th century, few families have lived in the traditional, large family groups. Sons are still encouraged to start their own families in their father's house, moving out only after several years of marriage or after the birth of the first child. One son, usually the youngest, is expected to remain at home and raise his family in the house of his parents. A couple will rarely live with the wife's family. Even now, Ossetian men consider living under the roof of the wife's father to be dishonorable.

According to traditional custom, marriages were arranged by extended families. Women were expected to provide a dowry, and men paid a bride price, of similar value to the dowry, to the bride's family. If two young people wished to marry but could not obtain parental consent, they would arrange with the friends of the groom to stage a mock "kidnapping" of the bride. The couple would be whisked off to be married. Sometimes, if a man wished to marry a woman, he would arrange to

kidnap her without her consent. If the man was of lower wealth or social standing than the woman, these marriages could result in a feud between his and her relatives.

In contemporary society, arranged marriages are rare, although most couples will obtain parental permission before marrying. If the parents will not give consent, a couple may resort to the traditional mock kidnapping. A couple who has married without parental consent will often choose to live in a different town or city for a few years until the parents accept the marriage.

In earlier times, relations between family members and in-laws were governed by “avoidance customs,” taboos that restricted contact between various family members. Avoidance customs were practiced as soon as a couple announced their engagement. Once engaged, a couple was not permitted to appear together publicly and was discouraged from meeting prior to the wedding. During the wedding ceremony, the bride and groom were separated. The bride would sit quietly in a corner, surrounded by other women. The groom would not be present for much of the festivity. On the wedding night, the groom would sneak into the bride’s bedroom. The next morning, the couple was considered officially married and was permitted to appear together. In contemporary conditions, couples rarely observe avoidance customs, although displays of intimacy prior to marriage are discouraged.

Other avoidance customs limited the relations of a son-in-law with his mother-in-law. A son-in-law was not allowed to speak to, or even see, his mother-in-law. Although this custom is no longer strictly observed, sons-in-law are not expected to have close relationships with their mothers-in-law. Similar customs restricted contact between a daughter-in-law and her father-in-law. Traditionally, a new wife, who would be living with her in-laws, was expected to veil her face and did not speak directly to her father-in-law. These restrictions were lifted after an unveiling ceremony. Although these customs are no longer observed, a woman is expected to behave respectfully and deferentially toward her father-in-law.

## 11 CLOTHING

The traditional costume of Ossetian women was modest but elaborate. Women wore a long dress with a flowing skirt and sleeves. The bodice was tight-fitting and high-necked, with elaborate embroidery. The head, but not the face, was covered with a long veil of fabric or lace. The veil was draped over top of a tall, pillbox-shaped hat. Gold or silver jewelry, with detailed metalwork, was worn for special occasions.

Men wore a jacket, tightly belted at the waist, with a flared hem and a high stand-up collar. The breast of the jacket was decorated with bullets, which were sewn on, and a silver sword was worn at the belt. For ease on horseback, men wore loose trousers tucked into black leather riding boots. The hat, which was made of Persian lambs’ wool and dyed black or dark grey, was worn almost all the time.

Contemporary everyday clothes bear little resemblance to the traditional national costume. Men dress in the North American style, wearing suits to office jobs and preferring jeans or work pants for casual occasions. Some old men in the villages continue to wear the woolen hats, and men who work on horseback wear traditional riding boots. Women have also adopted Western clothing, although women almost always wear skirts or dresses, rarely trousers or jeans. Few women

wear head coverings, and most women use make-up and wear contemporary Western hairstyles.

## 12 FOOD

The staples of the everyday Ossetian diet are bread, milk products, vegetables (particularly beans and tomatoes), and lamb or mutton. In the winter, pickled vegetables and preserved fruits are common. Dried fruits, especially prunes and apricots, are common throughout the year and are often used to make deserts. The Christian Ossetians have no food taboos. Ossetian Muslims, like all Muslims, do not eat pork or pork products.

Stuffed flatbread (*fidjin*) is a unique Ossetian dish. The bread may be stuffed with white cheese, cooked beans, or a mixture of lamb, garlic, and onion. Nearly every Ossetian homemaker is a proficient baker of these stuffed breads, and they are sold at most bakeries and cafeterias.

In traditional Ossetian families, men and women dined separately. The men would eat together in the dining room as the women cooked and served the food. Women and children ate in the kitchen. Most families no longer observe this segregation, although older women may refuse to eat in a room with the men.

Beer is the traditional drink of Ossetians. Even Muslims, who are prohibited from drinking alcoholic beverages, drink the traditional beer. Ossetians take great pride in their unique brewing methods, which are said to have been passed down from the 5th-century Alans.

## 13 EDUCATION

Under the Soviet regime, education to grade 10 was mandatory for both boys and girls. Universities and trade institutes throughout Ossetia, and in both Russia and Georgia, offer further career training to high school graduates. Because virtually all Ossetians receive an education, literacy is high. Most Ossetians graduate from high school, and many go on to post-secondary education.

Parental expectations vary according to the occupations of the parents. City dwellers usually want their children to receive the best education possible. Furthermore, most parents encourage their children to improve their career prospects by learning either Russian or Georgian. Rural parents may have entirely different aims for their children, as they will likely encourage at least one child to live and work on the family farm. In South Ossetia, education was interrupted by the war with Georgia. Many children did not attend school on a consistent basis for the four years of the war.

## 14 CULTURAL HERITAGE

The Ossetians take great pride in the preservation of their culture. The national folk epic, the Nart epic, appears in various editions for both children and adults. During the years of Soviet power, the central government controlled both the educational curriculum and the writing of national histories. Ossetians were forced to teach the history of their nation according to the Soviet government’s version of events. Since the collapse of the Soviet government in 1991, Ossetians have developed a new school curriculum with greater instruction in the Ossetian language. History books describe the Ossetian, rather than Moscow’s, interpretation of national history.

Traditional Ossetian music and dance are still enjoyed by Ossetians. During dances, couples do not touch. They play out

a kind of courtship scene in which the man performs bold, athletic movements to display strength and honor while the woman keeps her eyes modestly lowered and sways gracefully. Occasionally, a street musician, often playing accordion in a city park, will attract a throng of passers-by who dance to the music.

### **15 WORK**

The traditional occupation of Ossetians was farming, particularly sheep farming. In the 20th century, opportunities for urban employment have grown, and many people choose to leave farming, obtain higher education, and work in towns or cities.

After the collapse of Soviet power, many jobs that had formerly been sponsored by the government were no longer funded. The post-Soviet years have been difficult for many, especially the elderly, who have had difficulty fitting into a market economy. However, there are many opportunities for new types of work, especially in business, computer technology, and import/export. Because most North Ossetians are comfortable speaking and working with Russians, they are able to take advantage of economic opportunities with Russia.

The employment situation in South Ossetia is difficult, however. Because of the war with Georgia, the destruction of South Ossetian cities and towns, and on-going tensions, many people can no longer return to their former occupations. South Ossetia has experienced financial problems as a consequence of the war. However, with reconstruction, the economic situation of South Ossetians is slowly improving, though problems persist. South Ossetia seeks unification with North Ossetia–Alania and hopes that this will provide security and better conditions.

### **16 SPORTS**

Soccer is one of the most popular sports in Ossetia. Children may play with teams organized at school, and teenagers and adults can join amateur teams. Ossetians also enjoy watching televised soccer or attending games.

Wrestling and contests of strength are popular with boys. Such activities are usually informal and incorporated into games. However, some Ossetians undertake rigorous training in sports, such as wrestling and weight-lifting, and Ossetia has produced a number of world-class athletes in these events.

### **17 ENTERTAINMENT AND RECREATION**

In towns and cities, cinemas and theatres offer evening entertainment. There are also a lot of cafes and restaurants. Spending time in the cafes in the early evening is a favorite pastime. In the summer, most people will go out for a walk after dinner, to meet friends and socialize.

Most Ossetian homes have television. Ossetians receive programs from their own local stations, as well as from national Russian or Georgian stations. DVDs are very common and a variety of videos, including North American and European movies, are available.

Most people have iPods and CD recorders, and classical, folk, and rock music are widely available. Young people enjoy Russian, European, and North American rock, as well as traditional Ossetian music.

### **18 FOLK ART, CRAFTS AND HOBBIES**

Traditional crafts and folk art include pottery, metalworking, weaving, and knitting. Because fashionable clothing was often difficult to obtain during the Soviet period, many women became proficient at sewing. In school, children have opportunities to learn music and visual arts.

### **19 SOCIAL PROBLEMS**

The most pressing social problems in Ossetia have arisen because of Ossetian conflicts with neighboring peoples. Although the war between South Ossetia and Georgia and the clashes between the North Ossetians and the Ingush have subsided, tensions in these areas remain high. Especially for South Ossetians, many of whom lived as refugees in North Ossetia, the war brought instability, loss, and poverty. Lingering conflicts in both North and South Ossetia create difficult conditions for establishing a stable, secure way of life.

### **20 GENDER ISSUES**

The traditional role of women was to maintain the household and raise the children. Few women attended school, and women rarely had their own careers. This has changed, however. The status of women in modern Ossetia is in many ways similar to the overall gender picture in the North Caucasus, but at the same time it has some significant differences, which are determined by objective factors. First, in the past decade Ossetia has experienced two wars: with Georgia for the independence of South Ossetia and with Ingushetia over the land border. The problems of refugees, poverty, unemployment, and depression, were the consequences of this war. Secondly, in Ossetia there is a religious division—83% of the Ossetian population is orthodox Christian, 17% is Sunni Muslim. Ossetian women must find a balance between religion, tradition, and the need to survive in the face of economic instability.

Many laws, that sometimes prescribe a woman to total isolation from public life, now cease to be relevant. Ossetian women have access to higher education and are on equal terms with men. They are officially unlimited in the choice of profession. However, they suffer discrimination in hiring and firing practices and, in general, women receive lower wages than men with the same qualifications. The involvement of women in politics and business remains miserable. In 2008, there was one female minister and two women in parliament.

The women's social activism movement was most evident in connection with the tragedy in Beslan, where hundreds of children became victims in a school seized by terrorists. Ossetian women were united in two human rights organizations: Beslan Mothers and Voice of Beslan. Women, who at the beginning were only trying to investigate the tragedy, soon found themselves in stiff opposition to the regime of the Kremlin. The women from Voice of Beslan may be remembered throughout history of Russia as citizens of the country who sued the ex-president of Russia, Vladimir Putin, for the murder of their children.

Permanent fear of war or terrorist attacks and the feeling of insecurity increased after Beslan. In the years after the tragedy, Ossetia has experienced the lowest number of births. According to the statistics of the Ministry of Health in Ossetia, the idea of having children whom they are powerless to protect from the government or terrorists is frightening to many

women. This indicates that the overall social depression in the Caucasus is deeply felt by Ossetian women.

Working hard on building a career does not free women in Ossetia from their everyday routines. Even though many women spend as much time at work as do men, women are still expected to run their households and raise children with little help from their husbands.

# PEOPLES OF DAGESTAN

**LOCATION:** Dagestan in the Caucasus Mountain region between Russia, Azerbaijan, and Georgia

**POPULATION:** 2,600,000 [total population; see Introduction for each ethnic group]

**LANGUAGE:** Languages of each ethnic group; Russian

**RELIGION:** Muslim (majority); Christian; Mountain Jews

## <sup>1</sup> INTRODUCTION

The name Dagestan refers only to the territory of Dagestan. The territory of Dagestan is shared by numerous ethnic groups, 14 of which are officially recognized ethnic groups. The mountainous terrain of Dagestan, in the Caucasus range, has isolated many of its ethnic groups from outside influences.

The most recent official census in Dagestan was taken in 2002. At that time, the list of officially recognized ethnic groups and their populations was as follows:

ETHNIC GROUP	POPULATION
Avar	758,000
Agul	23,000
Azeri	88,300
Chechens	92,200
Dargin	426,000
Kumyk	366,000
Lak	140,000
Lezgin	337,000
Mountain Jews	13,000
Nogai	38,000
Rutu	24,000
Russians	150,100
Tabasaran	101,000
Tsukhur	20,000

Many of these groups are quite small in population, yet they have been able to retain their distinct languages and cultures. The Agul, for instance, comprise only 21 villages. The Mountain Jews are a small group that has managed to preserve their distinct religion, although they are surrounded by Muslims.

The large Caucasus region of the former Soviet Union has a long history of conflict and bloodshed among its peoples. In this context of ethnic tension, Dagestan is remarkable for its stability. Although many ethnic groups live within one relatively small republic, the peoples of Dagestan have little history of fighting among themselves. This is especially striking in the late 20th century, when many ethnic groups throughout the world are trying to separate from larger, multiethnic state structures and form their own sovereign states. For the most part, separatist groups in Dagestan have attracted very little support, and most citizens seem content with a multiethnic state governed by a parliamentary system.

The peoples of Dagestan are drawn together by years of common history. During the 19th century, most of the peoples of Dagestan fought against Russia in the Caucasian Wars. Although badly outnumbered, the Caucasian mountaineers managed to engage Russia in a war that lasted nearly 100 years. Russia subdued the mountain people with great difficulty after years of violence. The Caucasian Wars are legendary in Dagestan and are the basis for many folk-tales and stories of heroism

and suffering. Shamil, the great leader of the Caucasian mountaineers, was an Avar, one of the peoples of Dagestan. He is still regarded as a national hero by many. One of the political parties in Dagestan, the Shamil Popular Front, is named after this leader. The main street in a capital city Makhachkala is named after Shamil.

When the Tsar fell from power in 1917, the Soviet government took over and began to make changes throughout the newly founded Soviet Union. In the 1920s, the Soviet government discouraged religious expression and ethnic identity and tried to encourage people to embrace communist ideas and join the party. Many of the peoples of Dagestan resented the intrusion of the Soviet regime and joined a large-scale, armed rebellion in the early 1920s. The Avars, known in Dagestan for their aggressive and militaristic values, led the rebellion. Although the rebellion was quelled by the mid 1920s, Dagestan groups continued to show resistance to Soviet power. Thus, Dagestan was the last area in the former Soviet Union to adopt the collectivized, socialized agricultural practices of the 1930s.

The peoples of Dagestan are predominantly Muslim. This religious unity has contributed to the peaceful coexistence of the various ethnic groups in Dagestan. Dagestan is an important center of Islam in the Caucasus and former Soviet Union. Makhachkala, the capital city of Dagestan, is the seat of the Muslim Spiritual Board of the North Caucasus and Dagestan. Since the 19th century, Dagestan has housed many religious schools for training new Muslim clergy. Religion is a strong force among most of the peoples of Dagestan, and multiethnic political movements and parties have attracted considerable support.

The few peoples of Dagestan who are not Muslim include the Mountain Jews, who follow Judaism rather than Islam, and the Cossacks, who are Christians. Cossacks are not identified in official census data but live as a distinct ethnic group in Dagestan. Despite their religious differences, the various groups appear loyal to Dagestan. Another basis for this loyalty is the common history and the large number of common customs shared by the various ethnic groups, such as clothing (both traditional and contemporary), social values, and economic activity.

As Soviet power weakened in the late 1980s, and eventually collapsed in 1991, the peoples of Dagestan became increasingly interested in their own cultural and religious self-expression. Although some independence movements sprung up in the early 1990s, most of these were short-lived as people remained loyal to the multiethnic state. Indeed, after the collapse of Soviet power, the peoples of Dagestan endeavored to create a state in which all native ethnic groups would be treated fairly. Thus, electoral districts were reorganized to ensure that no single ethnic group would be able to dominate. In 1993 citizens of Dagestan held a referendum opposing the creation of a presidency in Dagestan. Instead, the people expressed a strong preference for a parliamentary system to better reflect the special, multiethnic character of Dagestan.

## 2 LOCATION AND HOMELAND

Dagestan is located in the Caucasian mountain range. It is nestled between Russia to the north, Azerbaijan to the south, Georgia to the west, and the Caspian Sea to the east. For the most part, the terrain is very mountainous. The high mountain regions are cold, with alpine meadows, forests, and rocky

outcroppings. The spaces between the mountains are more temperate, consisting of wide basins and flat valleys. The coastal land on the Caspian sea is warm, with many resorts and beaches. Historically, the coastal border has given the peoples of Dagestan the opportunity to engage in trade with other countries, particularly Muslim neighbors.

The ethnic groups of Dagestan live in neighboring mountain villages, which are isolated and protected by the mountains. The mountains have also provided important military refuge so that the relatively small population of Dagestan has managed to mount tough resistance to Russian and Soviet encroachment.

## 3 LANGUAGE

Each officially recognized ethnic group in Dagestan has its own distinct language. While some of these languages belong to the same linguistic families (either Turkic or Caucasian), many are not mutually understandable. In the 19th and early 20th centuries, Arabic was a common language spoken by educated peoples of Dagestan and was used to relay messages between various ethnic groups. In addition, Avar, the language of the largest and most powerful Dagestani ethnic group, was spoken by many other people.

Most of the peoples of Dagestan did not have an official written language until the 1920s, when the central Soviet government sponsored the creation of written national languages. Some of the smaller groups, however, still do not have their own written languages. The Agul language, for example, is closely related to the language of the Lezgins, a much larger group. Thus, Aguls used the Lezgin written language. Similarly, the Rutuls and the Tsakhurs used the written language of Azeri. In the late 1990s Agul, Rutul, and Tsakhur were elevated to literary status.

In the 1920s, when the Soviet government consolidated power throughout the territories of the former Soviet Union, Russian became another official language in Dagestan. Instruction in Russian became mandatory in schools, and a policy of Russification (Russianization) in Dagestan was pursued throughout the Soviet years. In the 20th century, Russian has replaced Arabic as a common language. Despite Soviet efforts to promote Russification and curtail education and publication in the native languages of Dagestan, the peoples of Dagestan have managed to retain and use their languages. The remoteness of their mountain villages has been a factor, and the relatively peaceful conditions in Dagestan have provoked little active interference from Russia in educational and cultural issues.

## 4 FOLKLORE

Each ethnic group has its own particular folkloric tradition. Folk tales are passed orally from generation to generation, and some themes common to the peoples of Dagestan emerge. The tales are usually epic in nature, emphasizing heroism in battle, bravery, and loyalty to clan, village or family. In particular, the history of the Caucasian Wars has captured the imagination of many ethnic groups, and the themes of the struggles with Russians often enter the folkloric narrative. Only in the late 1990s did much interest develop in gathering these folk tales into written collections. Also, biographies of national historical heroes, such as the Imam Shamil, have been published.

In addition to epic bravery and historical detail, religious themes find expression in folkloric form. The Muslim peoples

tell of events from the life of Muhammad and histories of local Muslim figures. Similarly, the Mountain Jews tell stories from their own religious tradition.

## 5 RELIGION

Aside from the Mountain Jews and the Christian Cossacks, the peoples of Dagestan are almost exclusively Muslim. Islam has an ancient history in Dagestan, some historical accounts suggesting that Islam was introduced to Dagestan in medieval times. Islam remains a very strong force in Dagestan, and state efforts throughout the Soviet years to curtail the practice of Islam and enforce atheist ideas were not successful. In the capital of Makhachkala, most demonstrations are of a religious, rather than ethnic, nature. Dagestanis of various ethnic groups will often join together to work toward a common goal related to Islam. For instance, the peoples of Dagestan have joined together to demonstrate in favor of diverse Islamic causes ranging from protesting Russian and American interference in the Middle East to objecting to the rising costs of airplane tickets for the pilgrimage to Mecca.

Although the Mountain Jews and the Cossacks do not observe Islam, they have been treated respectfully by the Muslim majority. These two groups have been able to observe their religious beliefs relatively free from interference by Muslim peoples. In particular, the Mountain Jews have retained an ancient Jewish faith featuring a unique blending of Caucasian Mountain practices and Jewish religious traditions.

Fundamentalist Islam had made inroads, especially among some highlanders. Russia is seeking to discourage the spread of this form of Islam.

## 6 MAJOR HOLIDAYS

Many of the Muslim peoples celebrate the Muslim festivals of Eid al-Fitr and Ramadan. During Ramadan, adults fast during the daytime, abstaining from both food and water as long as the sun is up. Children, the sick, and pregnant women are not obliged to fast. The festival of Eid al-Fitr marks the end of Ramadan and is celebrated by sumptuous feasting.

During the Soviet period, official holidays were introduced. These included the celebration of the 1917 Revolution (November 7) and the Day of International Socialism (May 1). Schools and workplaces were closed on these days, and the state sponsored cultural events and fireworks displays. The officially atheist Soviet government also sponsored a New Year's holiday, which was acceptable because of the lack of religious significance. While the other Soviet holidays were not of great cultural significance to most Dagestan peoples, New Year's Day was, and still is, widely celebrated.

## 7 RITES OF PASSAGE

For the peoples of Dagestan in general, the birth of a boy is celebrated with greater festivity and enthusiasm than that of a girl. For all ethnic groups but the Cossacks, the ceremony of circumcision marks the initiation of a baby boy into the family and community. There is no similar ceremony for girls. However, babies of both sexes are registered with local authorities, and relatives, friends, and neighbors visit and bring gifts of welcome for the baby. Traditionally, young boys and girls spent most of their time with their mothers, learning the basic expectations regarding social behavior. Girls would work alongside their mothers, grandmothers, and other female relatives

to learn the skills of cooking, spinning, weaving, and household maintenance. Boys developed many skills by playing and rough-housing with each other. Once a boy was able, he would join his father and other male relatives to learn the farming skills of their mainly agricultural way of life. Many Dagestani peoples view a boy's first trip to the pastures as a rite of passage and mark this development with a celebration in recognition of the boy's approach to manhood. The start of formal schooling for both boys and girls at age seven marks another transition in a child's life.

Traditionally, Dagestani teenagers did not have the opportunity to enjoy a period of youthful freedom. Young men were expected to marry by their mid-teens, and girls even earlier, so that young people quickly assumed the responsibilities of adult life. Furthermore, as the youngest adults in the family group, they were expected to behave deferentially and respectfully toward parents and elders. Today, young people usually complete their education before marrying, and thus do not enter into adult life directly from childhood. However, by Western standards, young people in Dagestan marry young, usually by their late teens or early twenties. Young people are expected to treat their elders with great respect and live up to traditional expectations.

As young couples have children, and as their younger siblings marry, they acquire greater authority in the household. The couple gains even further status as elder members of a household when their children marry.

Particularly in the mountain villages, the death of a community member is observed by the entire community. Despite attempts of the Soviet regime to develop and encourage atheist funeral rites, religious observance of funerals and wakes is well-established and practiced throughout Dagestan. While the different peoples observe various customs surrounding death, burial, and remembrance, in almost all cases the family of the deceased holds a large feast, to which all extended family and community members are invited. Such feasts are usually very expensive undertakings because a skimpy funeral is regarded as a sign of disrespect to both the deceased and the guests.

## 8 INTERPERSONAL RELATIONS

Generally, men greet each other with handshakes. Women rarely shake hands, either with each other or with men. This is especially so in rural regions. In larger cities, women involved in professional careers will shake hands as a form of greeting and professional courtesy.

Social life in Dagestan follows traditional patterns, and children and young people are expected to assume responsibilities at home. Between household obligations and school, especially in families involved in agriculture, young people in Dagestan have relatively little time for leisure and socializing with peers. In the teenage years, young women and men are not encouraged to spend time in each other's company unless they are in a large group or accompanied by an adult. In formal circumstances, many families observe gender segregation, with women and men socializing and dining separately from one another. Young people tend to be more flexible, spending more time in groups with both genders.

Throughout the Caucasus, traditions of hospitality are firmly rooted and observed. This is true for the peoples of Dages-

tan, who are known for their hospitable reception of guests. Guests are expected to reciprocate any invitations, however.

## 9 LIVING CONDITIONS

Traditionally, the peoples of Dagestan lived in villages with others from the same ethnic group. The enclosed courtyard, which houses all the family buildings behind a high fence, is a traditionally Caucasian type of dwelling and is found throughout Dagestan. The family courtyard and living arrangement is almost always patrilocal, meaning that family members always lived under the roof of male, rather than female, relatives. Each family usually had its own plot of land, but pastures and meadows, where the sheep grazed, were considered the common property of the entire village.

In contemporary times, rural conditions remain fairly traditional, and people continue to live with their extended families in courtyards. While most villages have electricity, many homes lack central heating and running water. Some mountain villages are quite remote, and villagers may have a difficult time getting to the city for medical attention, supplies, or services, especially during the winter.

In the course of the 20th century, the Dagestani peoples have gradually begun to move into urban areas to take advantage of educational, economic, and professional opportunities.

In the cities, conditions more closely resemble European or North American life. Many people live in apartments. While newlyweds and young couples will often share the apartment of the groom's parents, most aspire to move into a place of their own.

After the collapse of Soviet power, many essential services in Dagestan declined. In the cities, water and electricity supply can be irregular and unreliable. In 1994, Dagestan faced a serious medical crisis during a cholera epidemic. The cholera was suspected to have originated in Saudi Arabia and carried back by Dagestani pilgrims returning from Mecca. A decaying water purification system allowed the cholera to spread quickly. The government lacked the medical and technical resources necessary to control the spread of the disease and was forced to apply to Moscow for assistance. Repairs of the decaying infrastructure are dependent on a strengthened Dagestani economy during the transition from a Soviet, state-run economy to a stable free-market system. Until such time as Dagestan can sustain a strong economy, it will rely on heavy subsidies from Moscow, as it did during most of the 20th century.

## 10 FAMILY LIFE

Traditionally, for most of the peoples of Dagestan, the paternal extended family was the basic social and economic unit. Grandparents, parents, and children lived within a single courtyard, either in the same dwelling or in separate dwellings, depending upon the local customs of the particular village or ethnic group. Generally, the father of the household's sons was considered the elder of the household and had the ultimate decision-making power. The wife of the elder man presided over the running of the household and of the younger women. Rural families still organize their households according to these traditions, but many urban families live in nuclear family units, consisting only of parents and young, unmarried children.

In marriage, the wishes of the elders played a strong role in the choice of a spouse, although young people sometimes made their preferences known to their parents. A couple who wished to marry against the wishes of their parents might carry out a mock kidnapping, with the young man and his close male friends abducting the bride and taking her off to be married. Sometimes the mock kidnapping would be arranged in advance by the couple. Less frequently, a young man who was unable to obtain the consent of the girl he desired might kidnap her forcibly.

Most of the ethnic groups of Dagestan strongly encourage young people, particularly girls, to marry within their ethnic group. Young people have been willing to comply with this stipulation, and have thus helped to ensure the survival of their particular ethnic group. Traditionally, a woman would enter marriage with a dowry, which included household supplies, livestock, foodstuffs, and even land. The groom's family would pay a cash bride-price to the family of the bride. Dowries and bride prices were outlawed during the Soviet period, but continue to be part of the wedding arrangements of many peoples of Dagestan.

For most of the peoples of Dagestan, a bride would go to live in the household of her husband's parents. As the junior woman in the household, she could expect several years of hard work, until a younger woman or new bride joined the household and assumed the unfortunate role of junior female. In

the cities, however, conditions have changed, and most young couples try to move out on their own, especially after having children.

In cases of divorce, Muslim law held that the children of the marriage should remain in the custody of the father. The Mountain Jews are the exception to this, and children traditionally remain with the mother. In recent times, Soviet and state laws have favored maternal custody of children. Traditionally, women were allowed to retain the value of their dowries upon divorce.

Although urbanization and modernization have brought some changes to the structure of family life in Dagestan, most of the peoples of Dagestan, particularly those in remote mountain villages, have remained loyal to traditional values. Since the collapse of Soviet power, traditional values have grown more popular among young people, who are often even more conservative than their parents.

### **11 CLOTHING**

The traditional attire of men in Dagestan was similar to that worn by men throughout the Caucasus. High-collared shirts, usually white, with long, full sleeves were worn under a short-sleeved, tunic-like garment. Belted tightly at the waist, this tunic was otherwise full and flared, and usually made of black or dark grey cloth. The jacket was decorated with bullets, which were held in special fabric loops. The number of bullets traditionally increased with a man's battle experience, local prestige, age, and alleged bravery. Long, black leather boots and loose trousers tucked into the boots were suitable for horseback riding. Men usually wore a head covering—a tall, pillbox-shaped sheepskin hat.

The traditional female dress featured a fitted, lined bodice with full sleeves that could be cuffed at the wrists or left hanging loose, and a long wide skirt. For formal occasions, the dress featured a decorated insert sewn into the front of the bodice. Women wore slippers indoors and leather boots outdoors. The boots were similar to the men's, but were more highly decorated and made in brighter colors. Women also wore head coverings, usually kerchiefs or headscarves made of various fabrics, with woolen or simple cotton fabrics for everyday use, and silk for ceremonial occasions. Generally, older women wore darker colors like black, dark grey, or brown, while younger women wore brighter scarves. For funerals or somber occasions, darker scarves were worn. Women also wore gold or silver jewelry, often highly ornamented.

Today, both men and women have adopted conservative Western-style dress. Most women wear skirts and rarely wear jeans or trousers. Both men and women continue to wear head coverings, particularly older people in rural regions. Jewelry continues to be popular, and Dagestani metalworkers produce highly decorative gold and silver jewelry.

### **12 FOOD**

The Muslim peoples of Dagestan and the Mountain Jews observe similar traditional dietary restrictions. Meat is slaughtered according to a prescribed ritual that is common to both the Muslims and Mountain Jews. Pork is not consumed by either Muslims or Jews, and Muslims traditionally do not drink alcohol.

Throughout Dagestan, the staple meat is lamb or mutton. *Shashlik*, or shish-kabob, is one of the most popular ways of

preparing lamb. In addition to *shashlik*, popular lamb dishes include roast lamb, peppers or tomatoes stuffed with lamb, and lamb stew. Many of the peoples of Dagestan prepare a dish of boiled dumplings, stuffed with a mixture of lamb, garlic, and onions. Another traditional dish is made of grape or cabbage leaves rolled in cigar-like shapes, stuffed with a mixture of lamb, rice, and onions.

Rice or wheat porridge is a common breakfast food, as is bread and cheese. Side dishes for lunches and dinners include potatoes, rice pilaf, tomatoes, and stewed beans. Desserts are usually simple, featuring fresh fruits in season, jams and preserves, dried fruits, and sweet breads. Tea and coffee are imported and frequently served, especially after the evening meal.

### **13 EDUCATION**

Traditionally, most children did not receive formal education, but were educated at home in the tasks of running the household. Some boys were sent for religious training and received their education in clerical academies. After the Soviet government came to power, primary education became mandatory. Throughout the 1920s, schools were built in both rural and urban areas, and families were required to send their children to school. At first, many families were reluctant and did not see the value of formal education, especially for girls. However, this resistance was overcome.

Although some children in urban areas may attend nursery school or kindergarten, most children start school in the first grade at age seven. Children are educated in both Russian and their own ethnic language. Graduation from the eleventh grade, the highest grade of basic education, marks a point of transition as young people must decide whether to pursue further education, a trade, or, in many cases, to remain in the village to work on the family farm. For rural families, it is expected that at least one son will choose to remain on the farm. Although Dagestan has various institutes and a university, ambitious and exceptionally bright students may apply to prestigious universities in Moscow or St. Petersburg. Some young women may elect to marry and raise a family rather than pursuing a career or higher education.

### **14 CULTURAL HERITAGE**

The peoples of Dagestan take great pride in their ethnic and cultural identities and customs. They strongly resisted government attempts to promote the adoption of Russian and European culture and values during the Soviet period. Each particular ethnic group adheres to its own customs, encouraging each successive generation to marry and raise a family within the ethnic community. Since the collapse of Soviet power, the peoples of Dagestan have made efforts to improve education and popularization of traditional customs and practices.

The peoples of Dagestan are also loyal to the common, multiethnic state of Dagestan. Because each ethnic group is protective of its own customs and traditions, separatist movements have made little headway in Dagestan. The common experiences of war, repression by Russian and Soviet governments, and many common cultural values have created a harmonious multiethnic state.

## 15 WORK

Agriculture is the traditional occupation of the peoples of Dagestan. While most families kept gardens, and wheat was grown in some of the lowland areas, sheep farming was the main form of agriculture. The high mountain pastures and alpine meadows were well-suited for sheep farming, and men lived a seminomadic life, taking the sheep to various pastures and returning home on a regular basis.

Many rural families continue traditional agricultural employment. Although the Soviet government tried to nationalize agriculture, turning the farmers into land-users and state-farm workers, the nationalization of agriculture met with limited success. For the most part, traditional patterns of agricultural activity persisted, although farmers were obliged to give a quota of their produce to the state.

With urbanization and modernization, more career opportunities have become available for citizens of Dagestan. The Caspian coast offers opportunities to engage in import/export businesses with other countries.

## 16 SPORTS

Horse-racing and trick riding are traditional sports common to many Dagestani ethnic groups. Children learned to ride at a very young age and competed with peers. Aside from its function as recreational activity, the equestrian sports helped boys develop the riding skills that they would need later in life as herdsmen.

Boys in particular are encouraged to engage in sports. Displays of strength and speed are valued, making both wrestling and soccer popular. In rural areas, horseback riding continues to be a popular sport.

## 17 ENTERTAINMENT AND RECREATION

Home entertainment is one of the most common forms of recreation. Because there are few restaurants or cafés, people usually visit each other's homes. Hospitality is an important social value in the Caucasus, and hosts consider themselves responsible for a guest's pleasure.

Young people socialize at school or at work. They may visit each other's homes, although these are rather formal occasions presided over by parents. In warm weather, people of all ages enjoy going for strolls, especially in the early evening. For young people, this provides a welcome opportunity to get together free of parental company.

## 18 FOLK ART, CRAFTS, AND HOBBIES

A variety of arts and crafts are practiced among the peoples of Dagestan. Commonly practiced crafts include spinning, weaving, and knitting. Some men excel in woodworking and carpentry. While these crafts are common to peoples of the Caucasus Mountains generally, some other arts are unique to Dagestan.

Metalworking, especially the creation of ornaments and jewelry in silver and gold, is a traditional Dagestani craft. A certain ornate style, combining gold and silver with an oxidized black design and textured ornamentation, is unique to Dagestan and is sold throughout the former Soviet Union. Ceremonial daggers, ewers, rings (for both men and women), earrings, and bracelets are among the more commonly-produced items.

Another craft practiced in Dagestan is carpetmaking. Dagestani carpets are of unique design. They resemble Persian or Turkish carpets, except that the Dagestani artists tend to make greater use of earth-tone colors and animal shapes. Dagestani carpets rival the more famous Turkish and Persian carpets for quality of workmanship and artistry of design.

## 19 SOCIAL PROBLEMS

The most pressing social problems have been brought on by the transition from the state-run, Soviet system to the present, free-market system. While most people are pleased to have gained greater political and cultural freedom, many aspects of life have grown more difficult. Unemployment is high, especially in cities, and citizens have little knowledge of how to cope in such conditions. Many people who formerly held prestigious or powerful positions now find themselves out of work. The elderly are often impoverished, their pensions rendered nearly valueless by severe inflation. The general impoverishment and financial difficulties of Dagestan have resulted in declining maintenance of basic sanitation, water supply, electricity, and medical services. Thus, social anxiety, cynicism, and sense of hopelessness can be felt in many sectors of society. The new oil wealth that flows through Russia proper to the north and through the Azerbaijani south has yet to trickle through Dagestan.

Another social problem involves the rise in violence in the region. While Dagestan has been relatively free of conflict, wars and armed clashes in neighboring regions have resulted in the ready availability of weapons. Thus, in Dagestan, such crimes as armed robbery and vandalism are rising. With the increase of import/export opportunities, smuggling has also increased. Occasional political violence erupts as assassinations or bombings in Makhachkala.

## 20 GENDER ISSUES

The results of modern research suggest that, in Dagestan, there is discrimination of women and infringement of women's rights in all spheres of private and public life. The unemployment rate, the incidence of severe disease, and the mortality rate among women of Dagestan are traditionally higher than among men. About 92% of the women of Dagestan call unemployment their main problem. In cities, women have the opportunity to study and work, but take only minor jobs and service posts. Business and politics are closed spheres for the Dagestan women. According to Islam, which is practiced in Dagestan more strictly than in other parts of Northern Caucasus, a woman cannot be considered equal to a male business partner in a transaction and cannot even participate in the negotiations. In the mountains, women are deprived not only of work but also of basic necessities for life, such as health care.

The leader of a charitable fund for women, Ayshat Magomedova, describes the lives of modern women in the mountains of Dagestan: "In mountain villages there is no gas, light or water. A woman in a mountain village works for a full light day. She is the main instrument for carrying weights. During the day, one woman takes the brunt of all the needs for water, firewood to cook food and warm the house, and hay for the animals. To see a doctor, a woman must also undergo a long walk of 50 kilometers to get to a district centre, because the villages do not have a paved way, so they cannot travel by transporta-

tion. It often happens that a seriously ill or pregnant woman takes the road and simply dies halfway.”

The state is indifferent to the problems of Dagestani women. The only charity hospital in the capital of Dagestan, supported by foreign funds, has been closed in 2007 by the authorities after the tightening of a law in Russia on non-governmental organizations, banning foreign funds to carry out its activities on the Russian territory.

## 1 INTRODUCTION

Between the Black and Caspian Seas rise the Caucasus Mountains, stretching in a line 1,000 km (600 mi) long from the northeast corner of the Black Sea, near the Sea of Azov, south-eastward to Baku, the capital of Azerbaijan, near northwestern Iran. The region has traditionally been considered the southeast corner of Europe. As such, it contains the highest mountains in that continent: Mount Elbruz, whose twin peaks rise to heights of 5,621 m (18,441 ft) and 5,642 m (18,510 ft), and Mount Kazbek at 5,047 m (16,512 ft), all of which are higher than Mount Blanc in the Alps, 4,810 m (15,781 ft). In the north, the region extends into the plains of southern Russia and is bordered by the Kuban and Terek rivers. In the south, it runs into the highlands of eastern Turkey and northern Iran, where it may be thought of as ending at the borders of these two nations, which in part follow the Aras River. The region is a meeting place for European, Central Asian, and Middle Eastern civilizations and exhibits a mixture of features from these cultures as well as some that are strictly its own.

There are roughly 50 languages indigenous to this region, and the ethnic complexity of the Caucasus is unequalled in Eurasia, with nearly sixty distinct peoples, including Russians and Ukrainians. The Trans or South Caucasus is home to three new nations that formed at the breakup of the Soviet Union: Georgia, Armenia, and Azerbaijan. Georgia has a history dating back to the 2nd century AD. It was annexed by Russia in 1801. Armenia is the sole surviving fragment of the Armenian nation, which at one time occupied most of eastern Anatolia (Turkey). It was annexed by Russia in 1828. Azerbaijan was once a part of Iran called “Aran.” It has emerged as a mixture of Turkic peoples who have mixed with and assimilated the earlier Caucasian Albanians or Alwanians. Azerbaijan was also annexed to Russia in 1828. The North (or Cis) Caucasus has seven republics, all part of the Soviet legacy and located within what is now the Russian Federation. From west to east, they are: Adygheya, Karachay-Cherkessia, Kabardino-Balkaria, North Ossetia-Alania, Ingushetia, Chechnya (Ichkeria), and Daghestan. In addition, the southern portion of Krasnodar *kray* (district) extends south of the Kuban. The central region of the North Caucasus traditionally looked to Moscow for protection against raids from the Krim Khans (Crimean Tatars) and formed political links early (1774 in the case of Ossetia). The northwest region traditionally turned to the Ottoman Empire for trade and hence saw Russia as an enemy. It was only annexed in 1864 after prolonged and bitter warfare. The northeastern region traditionally looked south to the Middle East and hence also saw Russia as an adversary. This area was annexed by Russia in 1859 after prolonged resistance led by the

famed Imam ShamyI. To some extent, this threefold west-to-east division crosses over into the south as well and in many ways rivals the customary north-south division in its social and political importance.

The region is potentially wealthy. Gold, iron, zinc, molybdenum, copper, lead, aluminum, tungsten, oil and coal deposits exist. Semi-precious stones, fine mineral springs, hot baths, and ski resorts also can be found. Agriculture is well developed. Tea, tobacco, cotton, walnuts, melons, apples, peaches, pears, and citrus fruit are grown; cattle, oxen, sheep, and fine horses are raised. Most important, however, are vast reserves of oil and natural gas; particularly, it was known to exist in Chechnya's case but during the last few years oil was found in Kabardino-Balkaria and Ingushetia as well. The crude oil from the latter is the finest known, emerging from the earth nearly clear.

Political stability could bring prosperity, but the Caucasus is the most unstable region of the former Soviet Union. Since 1989, the region has witnessed six wars: Nagorno-Karabakh (Armenia-Azerbaijan) (1989–1995), South Ossetian-Georgian (1991–1992), Abkhazian-Georgian (1992–1993), North Ossetian-Ingush (1992), and two Chechen-Russian (1994–1996, 1999-present). Not only have these wars been ruinous in terms of loss of lives and property, but also they have occurred in a region whose economic collapse was abrupt. Furthermore, nearly every area has some serious conflict over borders or land rights that stem from Communist patterns of abuse and manipulation. The two wars in Chechnya have been exceptionally destructive, with the second war still simmering as sporadic guerrilla action. Tensions have spread from Chechnya out across most of the North Caucasus. Uprisings and terrorist attacks erupt with tragic consequences, as with the school attack in Beslan, North Ossetia-Alania on 1–3 September 2004; the uprising in Nalchik, Kabardino-Balkaria, on 13 October 2005; or with ongoing turmoil in and around Nazran, Ingushetia, and tension in Karachay-Cherkessia. Further turmoil can be expected in what the West has only just begun to realize is a geopolitically crucial region.

## **2 LOCATION AND HOMELAND**

The Caucasus region is roughly the size of Spain (approximately 388,498 sq km/150,000 sq mi). The South Caucasus is arid in portions that constitute the eastern extremity of the Anatolian highlands, primarily Armenia. Azerbaijan is arid toward its Iranian border, but becomes lush as it rises into the foothills of the Caucasus. Georgia, by contrast with these two, is lush and well watered. Even in its highlands, it enjoys substantial rainfall from the winds off the Black Sea. This verdant landscape is semi-tropical along the Abkhazian coast of the Black Sea and becomes colder but still verdant across the mountains in the north. Only in the east, in Dagestan, does this pattern alter and the land become dry, all the rain having been taken by the high summits. The lowlands along the Caspian Sea coast are arable, but the Dagestani highlands can vary from alpine pastures to alpine deserts.

The ethnic makeup of two of the three southern states is relatively simple. Armenia and Nagorno-Karabakh are almost wholly Armenian (nearly 3 million), with a few enclaves of Kurdish speaking Yezidis (1.3%). Azerbaijan (8.1 million) consists almost wholly of Azeri Turks, close kin of the Turks of Turkey and the Turkmens of Central Asia. A few Dages-

tani peoples spill over into it, but these will be treated with the North Caucasians. At the extreme eastern end of the mountain chain (the Apsheron peninsula) are the Iranian-speaking Tats (10,900). Adjoining Iran at the extreme southeast is an Iranian-speaking people called the Talysh (400,000), most of whom (1 million) live across the border.

Georgia (4.6 million) is by far the most ethnically complex of the southern states. Recently 18 ethnic groups could be found there, but three have either been driven out or emigrated. In the southwest, there are Ajars, Mingrelians, and Laz, the last extending well across northern Turkey to the city of Trabzon. The Ajars are Muslim and inhabit the eastern tip of a large Georgian-speaking region in eastern Turkey. These Muslim Georgians and the Ajars form a cultural continuum, but the Laz and Mingrelians stand apart from the rest of Georgia both in language and customs. In this southwestern region dwelt a Turkish-speaking group called Meskhetians, who were deported to Central Asia in 1944. In 1989, following riots against them in Uzbekistan, most of them relocated to Azerbaijan. In addition, there are in the south large groups of Armenians, Greeks, and Azeris. In the center of Georgia are the Georgians proper (formed from four earlier groups: the Gurians, Imeretians, Kartlians, and Kakhetians). In the highlands are found Georgian-speaking peoples so distinctive as to form separate ethnic groups. These are the Khevsurs (who wore chain mail and fought with broad swords and bucklers until World War I), the Pshavis, and the Tushetis. A Georgian-speaking Shiite Muslim people, the Ingiloi, who wear Maltese crosses on their clothing, reside across the border in western Azerbaijan. Also located in the Georgian highlands is one village of people who speak a language related to Chechen and Ingush, the Batsby or Kists. A few Dagestanis (Avars) were driven from their highland villages in 1991. By contrast, only recently have the Udis found refuge from religious turmoil in Azerbaijan among their kin in the village of Oktomberi in eastern Georgia. The Udis, a Dagestani people, were the central ethnic group around which the old Christian kingdom of the Caucasian Albanians, or Alwanians, was formed. The central highlands are home to the South Ossetians, who fought a war of secession (1992-3) in an effort to unite with their kin in North Ossetia-Alania. To their west live the Svans, a people only distantly related to the Georgians but who are nevertheless content to be part of this nation. Along the northwest coast, however, live the Abkhaz, who fought a war (1992-3) to establish their own state. Finally, Georgia was once home to a distinctive community of Jews who now dwell in Israel.

The northwest Caucasus was home to five ethnic groups, the first three of which are related: Circassians, Abazas (northern Abkhaz), Ubykhs, Mountain Turks, and the distinctive Caucasianized Kuban Cossacks. In 1864, after more than 150 years of warfare, the Russians, aided by the Cossacks, expelled nearly all of these people into the Ottoman Empire. At most 10% remained, with the exception of the Ubykhs, who were all expelled. Today the remaining Circassians are scattered in and around three republics: Adygheya (116,000), Karachai-Cherkessia (49,600), and Kabardino-Balkaria (500,000). The 32,000 Abazas are located in Karachai-Cherkessia. Population figures are suspect, but a total of about 658,000 is possible if the numerous Circassian villages to the west of Adygheya are counted. This should be contrasted with roughly 3 million Circassians, 0.5 million Abazas, and 50,000 Ubykhs in Tur-

key. The tendency to distinguish the ethnic groups Adyghey, Cherkess, and Kabardian has some basis in dialect diversity and some political motivation (the Kabardians, being in the center of the North Caucasus, tended to have good relations with Moscow). Nevertheless, they themselves do not recognize these divisions, referring to themselves simply as Adyghey. A small population of Circassian-speaking Jews is also considered to be Adyghey. Similarly the Mountain Turks are now called Karachay (169,000) and Balkar or Malkar (105,000), but here, too, the latter are distinctive merely in their proclivity to see in Moscow an ally because they fall in the center of the North Caucasus as opposed to the Karachay.

Although one can speak of the Kabardian Circassians and the Balkar Mountain Turks as being Central North Caucasians, the North Ossetians (445,000) are the only people largely treated as such by the Russians. There is a distinctive western group, the Digoron, and an eastern, the Iron. The southern Ossetians are called *tuallaeg*, which simply means “mountain men.”

To their east are the Ingush, but this too is case of political proclivities splitting an ethnic group in two. Together with the Chechens (1.1 million) further east, the Ingush (361,000) form the Vai Nakh peoples (which include the 5,000 Kists or Batsby of Georgia) and are relatives of the Dagestanis of the Northeast Caucasus. Prior to the Chechen-Russian War, there was a small population of Chechen-speaking Jews, but these have fled to Israel. The northern reaches of Chechnya are also home to the distinctive Terek Cossacks, old Russian-speaking settlers who have adopted many local ways.

Dagestan (2.6 million) is unquestionably the most complex of the Caucasian republics, with 32 indigenous ethnic groups. Turkic nomads are found in the lowlands: Kumyks (366,000), Noghays (38,000), and a few displaced Turkomans (18,000). In the northern highlands are the Akhka Chechens (88,000), the Avars (758,000), and higher still are the Andis (9,000), Karatas (5,000), Chamalals (4,000), Bagwalals (4,000), Akhwakhs (5,000), Botlikhs (3,000), Godoberis (2,500), and Tindis (5,000). Still in the high valleys, but going south toward the Georgian border, are the Tsez ([Dido] 7,000), Hinukhs (200), Hunzibs (400), Khwarshis (1,000), and Bezhitas ([for Kapuchis] 3,000). South of the Avar are the Laks (140,000), Dargwas (426,000), Kubachis (3,000), and Khaidags (28,000), all forming a closely related group of peoples. In one high village, standing apart from them, are the Archis (1,000), whose links lie further south with the so-called Lezgian peoples, the Aghuls (23,000), Tabasarans (101,000), and Rutuls (24,000). A part of the Lezgis (337,000) and most of the Tsakhurs (8,000) spill over into Azerbaijan in the south. Other Dagestanis who are restricted to northern Azerbaijan are the Kryz (6,000) in one mountain village and three coastal ones, Budukhs (1,000), Udis (formerly 6,000), and Khinalugs (2,000). There is in Dagestan a group called “Mountain Jews” ([Givrij or Dagchifut] 13,000), who speak an Iranian language. They are sometimes called “Tats,” but are not to be confused with the Muslim Tats of Azerbaijan. In addition, there are a few Dagestani Cossacks who are strongly assimilated to indigenous patterns.

It must be emphasized that all of these groups are distinct peoples, however small they may be. Many are further subdivided by tribes, clans, and blood lines. Conversely, most traditionally form larger units for self-defense when threatened. This is particularly true of the smaller peoples of Dagestan. In

ethnographic, social, and political terms, the Caucasus is like a miniature continent.

In physical appearance, the people in the South Caucasus tend to be Mediterranean, with dark hair and olive complexions. The Dagestanis often have olive complexions that are suffused with a ruddy undertone, an adaptation to cold mountain air in the form of enhanced blood flow to the skin. The Armenians tend to have marked aquiline features, while the Azeris have features typical of Persians. The Georgians exhibit features also seen among the northern Caucasus. Georgians and North Caucasians often have dark hair with light skin, though individuals who are almost brown-skinned can be seen. Aquiline profiles are also common. Most Georgians and North Caucasians look much like central Europeans or northern Italians, with facial features that often have a fine, chiseled quality. The Ingush are the tallest people in the Caucasus, while the Circassians and Karachay-Balkars are famous for their beauty, tall stature, and graceful movement. Among the Ubykhs and Circassians are many individuals with blond or red hair and pink complexions. The variety of its people reflects the region's complex history.

### 3 LANGUAGE

Known as the Mother of Tongues, the Caucasus is home to five language families, three of which are indigenous. In the north, four Altaic languages are spoken: Karachay, Balkar, Noghay, and Kumyk. These belong to the Kipchak Turkic branch. In the south, two Turkic languages, Meskhetian and Azeri, are found, both belonging to the Ghuzz branch, to which Turkish and Turkoman belong. These Altaic languages show rich verbal inflection (person, tense, mood), and elaborate case systems (alternation of the nouns to reflect their roles in a sentences), but are very regular and transparent in their formation. They have a pleasant, mellifluous sound. Only Azeri is a written language, and it now uses a Latin-based script. Turkic Karachay and Malkar/Balkar use Cyrillic.

Of the Indo-European family, the Slavic branch is represented by Russian and Ukrainian. The Kuban and Terek Cossacks speak Russian. These complex languages have large case systems that extend both to their nouns and adjectives, with many irregularities. Further, nouns come in three categories, called genders: masculine, feminine, and neuter. The Slavic verb is highly sensitive to “aspect,” the degree of completion of an action. There are more than a dozen verbs of motion that reflect subtle differences in movement. The languages are mellifluous, having unusual sustained intonation patterns that give them a song-like quality. One of their hallmarks is palatalization, raising of the tongue to produce a y-like sound along with the main consonant. The Iranian branch is represented by Tat, Talysh, and Kurdish in the South, and by Ossetian in the North. This last is the sole surviving form of the language of the ancient Alans, Sarmatians, and Scythians, nomadic horsemen of classical antiquity. While retaining verbal aspect, much as does Slavic, the grammars of these languages have lost most of their case systems and have leveled out most irregularity. Only Ossetian has kept an elaborate case system due to neighboring Ingush and Chechen influence. Iranian languages make abundant use of fricatives (s- sh- and kh-like sounds). Armenian forms a distinct branch of Indo-European in the south. In grammatical complexity, it stands midway between Iranian and Slavic. It is remarkable for its elaborate consonant clusters.

Russian, Ukrainian, Ossetian, and Armenian are written languages. The first three use a Cyrillic-based script, while Armenian has its own distinctive national writing.

The Southern Caucasian or Kartvelian language family consists of Georgian, Mingrelian, and Laz (collectively called Zan or Chan), and distantly related Svan. Only Georgian is written, using its own national alphabet. These languages have complex sentence formation (syntax), with Georgian and Svan being “ergative.” Ergative languages mark the person (or thing) undergoing an action by the absolutive case, whether it is done by the person alone (intransitive) or brought upon it by another (transitive). The person or thing that brings the action upon another is marked by a special case, the ergative. For example, (using English), a Georgian would say the boy (absolutive) sleeps, but the teacher (ergative) scolded the boy (absolutive). If the action is incomplete, then the case marking switches with the subject in the absolutive and the object in a sort of geometric role (dative case): the teacher (absolutive) is scolding/will scold at the boy (dative). Word formation is highly irregular and highly unusual in that material is added both to the front and end of a root (circumfixation). The noun exhibits a large number of cases, while the verb inflects not only for person, but also for intentions, distinguishing between accidental, purposive, direct, and self-serving actions. The sound systems show enormous and difficult consonant clusters, as in *mtskheta* (a place name), Tbilisi (the name of the capital, which means “of the warm spring”), *tqbili* (sweet), or *prtkhili* (careful). Long strings of vowels are also possible. A contrast between regular (k) and back (q) k-sounds occurs. Glottal ejectives, characteristic of the Caucasus, also occur. These are consonants made with a slight popping sound by shutting the vocal cords and causing a momentary smothering sensation.

The Northeast Caucasian languages are also ergative. Most word modification is by means of attaching material at the end of a root (suffixation). The verb is relatively simple, in most cases not even inflecting for person, though some, as in Archi or Chechen, can be elaborate. Most complexity resides in the noun system, where large numbers of cases are used to denote almost every conceivable grammatical role or spatial relationship. Cases even have cases and can express, for example, not only whether something crosses something else (the “translative”), but whether the crossing took place either horizontally, or from above to below, or from below to above. Some languages, such as Lak and Tabasaran, have nearly 50 cases, the largest such systems known anywhere. These systems are suited for the geometric complexity of their mountainous environment. The nouns further belong to class systems. These are gender systems like those found in Slavic, but with as many as nine categories: male, female, neuter, animal, plurals, mass objects (sand, water, etc.), long objects, edible objects, and so on. The sound systems have a profusion of fricatives (s-, sh-, or kh-like sounds), many of them gutturals (made in the back of the mouth or in the throat). One form of Aghul makes such sounds in more places than any other known language: at the soft palate (velars), at the back of the mouth (uvulars), at the back of the mouth with the throat contracted (pharyngealized uvulars), in the upper throat (pharyngeals), in the lower throat (epiglottals or adytals), and in the voice box (laryngeals). Prolonged consonants also occur, as do glottal ejectives, and rounded consonants (simultaneous kw or tw, for example). Many languages show a profusion of laterals (l-like) sounds,

(Archi has 11), some of which are made in the back of the mouth. Elaborate vowel systems occur, with ordinary vowels (oral), vowels made with the nose open (nasalized), with the throat constricted (pharyngealized), or with the epiglottis lowered (adytalized). Some languages, such as those of the Andi group (Andi, Botlikh, Godoberi, Chamalal, Bagawalal, Karata, Akhwakh, and Tindi), have tone (like Chinese), as well as breathy voiced vowels, and “stiff” vowels. Chechen and Ingush are written languages, as are Avar, Lak, Dargwa, Tabasaran, and Lezgi. In the 1990s, Aghul, Rutul, and Tsakhur were raised to literary status. All languages use a modified Cyrillic script.

As complex as the South and Northeast families are, the Northwest family is more complex still, approaching what may be some sort of maximum. The family consists of Circassian, Abkhaz, Abaza, and Ubykh. Their syntax is ergative, but shows a wide range of alternative patterns depending upon the exact relationship of actor and object. The verb inflects for every noun in the sentence, as well as expressing a plethora of geometric information by the unusual means of attaching material to the front of the root (prefixation). Some sentences have two objects (ditransitives), while others have two subjects (causatives). In fact, the verb is so expressive that conversations in these languages often turn into a series of verbs once the speakers know the nouns they are talking about. The case system on the noun is simple (Circassian, Ubykh) or absent (Abkhaz and Abaza). The vast majority of nouns are made up of simpler terms. For example, *na-pa* (literally “eye-nose”) means “face,” *sh’ha-pq* (“head-bone”) means “skull,” *wuna-pq* (“house-bone”) means “frame of a house,” and *woradi-pq* (“song-bone”) means “melody.” The sound systems, however, are the most unusual feature of the family. All the languages have enormous consonantal systems, with rounded, labialized (simultaneous p-, b-, f-, or v- made with the sound), palatalized (raised tongue), and pharyngealized (constricted throat) consonants made at almost every possible point in the mouth and throat. Kabardian has the fewest with 48 consonants, while Ubykh has the most with 81. (For example, Ubykh has 14 guttural fricatives and 27 s-, ts-, sh-, and ch-like sounds.) These sounds also occur in elaborate clusters, especially in Abkhaz and Abaza. As hard as the consonants are, the vowels are harder. This family is known for its “vertical vowel system,” in which vowels contrast only in degree of openness. By some analyses, these languages have four, three, or only two vowels. Some linguists have even argued that the vowels of Kabardian are all predictable and therefore not really part of its sound system (phoneme inventory). Two dialects of Circassian serve as written languages: Chemgwi (West Circassian) and Kabardian (East Circassian). Both Abkhaz and the closely related Abaza are literary languages, while Ubykh, still spoken by a handful of people in Turkey, has been extensively documented by linguists and folklorists. The literary languages use highly modified Cyrillic scripts, while Ubykh has been recorded in an elaborated Latin one. Many families across the North Caucasus have rune-like symbols, *tamghas*, as emblems of identity. Many of these reach back to old symbols used by nomadic hordes in antiquity.

In the Northwest, special membership in hunting bands carried with it knowledge of a special language for its male members. In old Circassian, this was *she-ko-bza* (“hunting-go-language”). In Abkhazia, a woodsman language is still used. There are spotty reports of a women’s language that seems to

have been spoken until recently across the entire North Caucasus. One old Ossetian related how his mother and sister would speak in a monosyllabic language with tone (like Sumerian of ancient Mesopotamia).

Scholars have tried to find links between various Caucasian languages and some of the languages of the Ancient Middle East and Anatolia, such as Hattic (with Northwest Caucasian), Sumerian (with Georgian or Dagestani), Urartean and Hurrian (with Dagestani). One such proposal that has attracted much interest and some support is that linking Proto-Indo-European with the Northwest Caucasian family.

Bilingualism is virtually universal among Caucasians. Nearly everyone speaks Russian in addition to his or her own language. The only people to be predominantly monolingual are the Russians, who tend to dominate in urban centers. The villages and countryside remain bastions of the native languages.

In the North as opposed to the South Caucasus, the family name comes first and then the given names. In Russian, practice this is reversed, but the original order is retained in the social practices of the individual peoples.

#### 4 FOLKLORE

The Caucasus is rich in folklore. In the southern highlands, tales of a mountain sorceress, Dal, are widespread. Dal is beautiful and glowing and a protector of the alpine wildlife, but she can lure hunters to their doom. Other tales show strong Zoroastrian influences from ancient Iran. In the North, there are tales that recount battles with the ancient Goths, Huns, and Khazars, the last a Turkic people who ruled the Caucasus and adopted Judaism wholesale. One of the most noteworthy traditions is that of the Nart sagas, dramatic tales of a race of ancient heroes in which the figure of the all-wise and all-fertile Lady Satanaya is pivotal. Other figures include a villainous shape changer (Sosruquo), a mighty hero who is resurrected from the dead and returns to annihilate his enemies (Pataraz or Batradz), a giant or hero who, like the Greek Prometheus, is chained to a mountain top as a punishment for trying to return fire to humankind (Nasran), and a cyclopean giant (Yini-zh). There are numerous links to the myths of ancient Greece, ancient India, and Norse Scandinavia. There is even a sort of Christmas-tree figure, Lady Tree, and a "Forest Mother," Amazon, from which the Greeks took the figure of their women warriors, the Amazons.

There is widespread belief in the western Caucasus of wild men in the high mountain forests, especially among people who dwell in the upper villages. These hairy people are reputed to be about five feet tall and to travel in small family groups. Occasionally, they are said to come into the lowland fields at harvest time and feed on the ripening ears of corn. Men are said to be very brave if they can go into the high forests and trade with these wild men, because after having met with one or two of them in a clearing to offer trinkets, they run the risk of being ambushed by the whole band as they return through the high, dense rhododendron forests. It is worth noting that in 1991 and 1992 fossils of small early humans were found at Dmanisi in Georgia. Perhaps these Wildman tales are based on encounters with relic forms of *Homo georgicus*.

#### 5 RELIGION

The nation-states of Georgia (Georgian Orthodox Christian), Armenia (Armenian Orthodox Christian), and Azerbaijan

use religion as central components in their identity. The first two claim to be the oldest Christian nations and have nationalist churches. Azerbaijan is Shi'ite Muslim (Azeri Turks and Georgian-speaking Ingiloi), Sunni Muslim (southern Lezgi Dagestani peoples), and Alwanian Christian Orthodox Christian, now a branch of the Georgian patriarchate (the small Udi community). These nations-states feel a sense of privilege in comparison with the smaller peoples of the Caucasus and have used their religion as a part of their pride. The Nagorno-Karabakh war (1989–1995) involved serious ethnic clashes between Azeris and Armenians that resonated with religious and ethnic hatred.

By contrast, religious tolerance is one of the strongest features of the North Caucasus, where Christians (Orthodox), Muslims (Sunni), and Jews can be found living side by side. Even during the recent wars in the North, religious hatred never emerged as a motive. The highlands also had mystical traditions of meditation and martial arts that in the east have become Sufi practices. In Dagestan, holy men often have shrines, usually placed at the highest point of the village. Pagan elements persist throughout the Caucasus, and many Abkhaz are avowedly pagan. The Abkhaz even had women shamans. Religion is always socially and conceptually subordinated to ethnic identity throughout the Caucasus.

There are enigmatic relics of older beliefs. For example, Ossetia preserves "beehive" mortuaries made of flat stones, which must reflect an older, local religion of unknown character. Dagestan shows many old beliefs surrounding animals, such as snakes, horses, and especially bears. This last totemistic animal is associated with sacred rocks and even a half-bear/half-man creature. Sacred rocks of heaven are also mentioned in some of the Nart sagas of the Northwest Caucasian Abazas. These are considered the heaviest stones and might even have been nickel-iron meteorites.

Islamic societies, *jama'at*, are appearing across the North Caucasus. Many of these have fundamentalist Salafi leanings, unlike the usually Hanafi form of Sunni Islam. Given the turmoil and economic stress in the North Caucasus, Islam seems to be emerging once again, as it did in the 18th and 19th centuries, as a unifying principle.

#### 6 MAJOR HOLIDAYS

Major holidays are those of the Orthodox Christian and Sunni Muslim faiths. The Northwest Caucasians (Circassians, Ubykhs, Abazas, and Abkhaz) in the diaspora mark deportation day (21 May 1864), the anniversary of their expulsion from the Caucasus. In Dagestan, the "first plowing" in the spring is widely celebrated with a ritual plowing of a furrow by a bull and with festivities, races, and tests of strength.

#### 7 RITES OF PASSAGE

Apart from Muslim and Orthodox Christian rites of circumcision and christening, there are no rites of passage into adulthood. Both boys and girls are considered mature between the ages of 16 and 18. Marriage is the chief change in life for both men and women.

Funeral rites vary, but almost all groups set out a place setting at the table to mark the missing dead at feasts. After three months a monument is erected and a day of remembrance observed. In Abkhazia the next of kin gather when an elder lies dying and sing to her or him.

## 8 INTERPERSONAL RELATIONS

In all Caucasian societies, siblings were supposed to be married in order from oldest to youngest. In all cases, the bride went to live in the extended family of her husband (patrilocal marriage). Whether arranged or through love, marriage was viewed as the linking of two families. Accordingly, matters of social rank between them were always a concern.

Marriage was by abduction among the Northwest Caucasians. These were often prearranged by the couple in love, and mock abductions are still performed. A leather corset with many knots was worn by the bride for those prearranged abductions. After the first night, the man had to present this corset with its thongs intact to both families as a sign of his courtesy to his new wife and of his restraint. Marriages often took place when the couple was in their thirties, which is extraordinarily late for a traditional society. Premarital life was filled with decorous and discrete romance. Young girls had a room in their family homes in which they were free to entertain their suitors. Trysts were arranged for an amorous young couple by the youth's maternal uncle, while a young woman's well-being was the responsibility of her brothers. In Ossetia, marriage was generally for love, with couples marrying in their twenties, but family rank was still an important factor. In the Northeast Caucasus, marriages were usually arranged, with young people marrying in their teens. Among the Chechens actual abduction of a woman still takes place. Brides were subservient to their in-laws. In the South Caucasus, a similar pattern was followed in Armenia, where family negotiations and an engagement of their teenage children were begun as early as two years before the marriage. Brides were subservient to their mothers-in-law and had to observe a ritual silence in their new families, often for years. In public, their faces were veiled or even tightly wrapped until they had a child. Among the Georgians, young people marry by mutual consent in their twenties, with civic and church ceremonies. The bride is supposed to have an agreeable, but respectful relationship with her in-laws. Among the Azeris, couples marry in their twenties. Rural marriages are usually arranged, but even those urban marriages that are motivated by love are expected to take place between families who are known to one another or even related. The latter case is unique in the Caucasus, where strict exogamy (marriage outside a clan or lineage) is otherwise the rule.

Throughout the Caucasus, hospitality to strangers is one of the foremost social imperatives. Lavish feasts are given for guests and, in theory, a host would even give his life to defend a guest. In return, a guest is expected to act discretely and respectfully to his host and so bring honor to the host's family. Even a prisoner of war or an enemy could be treated hospitably if he had shown great valor. In the midst of a duel, it was possible for one adversary to seek a suspension of hostilities for a period of time as long as several days. The combatants would then resume their struggle at an agreed upon time and place. This chivalric code has been eroded by modern warfare, however.

People who are strongly attracted to one another or who admire one another can declare themselves to be "milk" sisters or brothers. Such a bond can cross gender lines. To be chosen as a milk sibling is one of the greatest honors that can be bestowed upon someone by a Caucasian. Such bonds last for life and have all the force of true kinship. Often a man and a wom-

an who cannot marry for some reason will instead form a life-long bond in this way.

Four other marked features are found throughout the Caucasus. First, elders are revered. The old are expected to have full and passionate lives, although women are cautioned that "a man past one hundred is no longer much of a man." The elderly also have economic roles in the community, sorting fruit or tending gardening, which permit them to contribute without taxing their powers. Young people are greatly honored to wait upon or care for an elderly member of their clan or their community. Many groups have choruses or dance troupes in which all the members are 100 or more years old. These have special dances and distinctive songs.

Second, almost all peoples have clan structures of one sort or another. These play a vital role in their societies. Social support, kinship bonds, economic support, socializing, and vengeance obligations are or were defined by clan affiliation. In some cases, as with the Chechen clans, called *teips*, war has weakened their role, and warlord-like allegiances have come to dominate. In other cases, as among the Circassians and their kin, expulsion has also weakened these old links, reducing them to matters of family pride rather than active social organizations.

Third, vengeance was a dominant theme in the Caucasus, especially the north. Even the accidental death of a clan member forced upon all its males an obligation to seek revenge from the offending clan, even by taking the life of someone who had no role in the incident. Only males were involved in such vendettas.

Fourth, dance was a central social activity of every people. Men and women entered into joint dances, although single gender dances, and solo performances, also existed. Dance is still important, even among Diaspora communities.

Two features found in the Northwest Caucasus, among the Circassians and their kin are the high social prestige and sexual freedom that women enjoy. Among these peoples women are seen as the sources of fertility, social grace, and intellectual knowledge. Until recently, a woman could halt the most vicious fight simply by tossing her scarf between the two men. Women have the right to initiate altruistic friendships with men or even embark upon sexual ones if they do so discreetly. Such overtures are difficult for a man to reject, because he would be rejecting her whole family, so women do not make such overtures lightly. One opener is for a woman to ask to borrow a pen or other small item even when it is obviously not needed. To comply is to show interest. In Dagestan, sexual prerogatives of women can be more circumscribed, with the prowess of men being important. This can be shown when the men set water buckets out on their porches in the evening for nocturnal ablutions after sexual intercourse: the bigger the bucket, the greater his presumed sexual prowess. Some men even set out two. The somewhat lower rank of women in Dagestan correlates with a greater economic burden of toil on their part. Women remain subservient in Dagestan. Efforts to promulgate traditional Muslim norms in Chechnya are met with resistance from women. As in Russia, older women in the Caucasus, especially in the North East and South, often cover their heads with scarves.

*A man drives his cattle across a snowy mountain outside of Vladikavkaz. This road through Russia's Caucasus Mountains has been shut down many times because of heavy snowfall. (Kazbek Basayev/Getty Images)*

## **9 LIVING CONDITIONS**

Living conditions are relatively good in the South and Northwest, where the land is verdant, but life is difficult in the Northeast where mountain deserts dominate. Life in the high reaches of Dagestan is especially harsh due to the prolonged winters and barren land. Men go on long outings to earn money in the lowlands, while the women remain behind to maintain the households through strenuous work. One advantage to living in the highlands is that every step is either up or down, and the resulting exercise contributes to many people being long-lived. Whatever their age, people are often extremely strong and youthful looking.

The typical Northwest Caucasian house is long with one floor, much like a ranch-style home. It is made of wattle covered in clay daub. Villages were formed of compounds containing a main house and several outbuildings, including guest housing, that were originally strung out like necklaces along riverbanks. Tower fort homes were common in the highlands of Svan territory (Svanetia), Ossetia, and the Circassian and Abkhazian highlands. These striking buildings, sitting within a walled yard, were made of stone, with a first floor for livestock, a second floor for humans, and a high tower in which all could take refuge when under siege from a blood feud. The Northeast Caucasian stone houses run on top of one another, the roof of the lower serving as the porch of the upper, as they cling to hillsides to form compact villages called *auls*. Andi aul of Muni is so compact that it forms one giant building with enclosed streets. Houses in such auls were usually made of local

stone and had two floors; the first for livestock, and the second for people (also to be above the snows).

The cities, many of which were founded as Cossack forts, have a blend of older 19th-century housing and modern Soviet high-rise apartments. Most of these cities are attractive, with large parks and tree-lined boulevards.

## **10 FAMILY LIFE**

Extended patrilocal families are the norm across the Caucasus. In highlands, people often live to be very old, so great-grandparents or (even great-great-grandparents) are part of the family. Children must respect elders and older siblings. Brothers have very close, protective relationships with their sisters. Boys have very close ties with their maternal uncles, while they have relatively formal relationships with their fathers. This is part of the Circassian kinship system, where the husband's relationship to his wife is formal, and the wife's bond to her brother is spontaneous and deep. The eldest man is master of the extended family unit insofar as he rules over disputes or regulates social relationships with the outside world. Within the confines of the home, however, the eldest woman is supreme and runs the details of the household. Often she works hard to organize feasts, supervising her daughters-in-law or even poor female relations who may come to help, but she can be rewarded after the dinner by having her family and guests gather outside the kitchen to applaud her while she takes a bow.

Family life is further integrated into the community by tight networks of clans and blood lines. These are centered

around villages in Dagestan, where such clans will have their own tea houses for their members to gather. Clan houses are merely meeting houses among the Chechens and Ingush. With the Ossetians, Northwest Caucasians, Mountain Turks, and Armenians, clans are vital to social organization and have local “seats,” but clan houses do not exist. In Georgia, a loose network of noble families serves a similar function, with clans being absent. In Azerbaijan, clans and wider social structures are lacking. Even there, extended families are a social reality and define family matters, such as marriages.

The clans were also the basis for the blood feud or vendetta. Customary law, called *adat*, stipulated that if a member of one clan killed or even accidentally brought about the death of a member of another, then every man in the offended clan had the obligation to restore “the balance of life” by killing the man responsible or, if that was too difficult, another male from the killer’s clan. This obligation passed down the male line for seven generations. There were only four ways to stop the bloodshed. First, one clan eventually killed all the males of the other, which sometimes happened. Second, a blood price was stipulated, usually in livestock, and the offending clan was able to meet this demand. Third, an exalted social figure, an elder or an imam (Muslim cleric), forced the offended clan to renounce their obligation or risk taking the blame for humiliating him in turn. Sometimes this peacemaker would have to threaten suicide to force such a renunciation. Fourth, the killer could sneak up on a woman from the victim’s clan, seize her, tear off her blouse, and place his lips to her breast. Such an act, however fleeting, would suffice to create a kinship bond between the two clans that precluded further bloodshed. This was not an easy feat, because many Caucasian women will fight and are sometimes armed with small daggers. During war, vendetta was suspended so that men could form an army and fight beside their blood enemies. In recent decades, Soviet courts had begun to assume the role of arbiters of justice in such cases, but with the collapse of Soviet authority, vendetta has reemerged.

In the Northwest Caucasus, princely and noble families practiced fosterage: they would give their sons to trusted retainers to be reared. This was nearly the highest honor a retainer could know because it linked his family to that of the nobility by fictive kinship bonds. The highest honor was when the foster child refused to return to his natural family at 16 years of age, but chose instead to remain in the household of his foster parents.

## 11 CLOTHING

Distinctive to the Caucasus and borrowed by the Cossacks is a man’s garment called a *cherkesska*. This is a robe-like suit, tightly fitting on the upper torso, and flaring out from the waist, with long flaring sleeves. On either side of the chest cylindrical pockets were sewn on in a row for cartridges or to hold cases of measured powder charge for a musket. A long-sleeved, collarless shirt is worn under it, together with fitted trousers. In the Cossack variant, the trousers are baggy. As the name suggests, this dashing outfit originated among the Circassians (the “Cherkess” in Russian). Over it can be worn a heavy, rectangular sheepskin cape, the burka, which can even serve as a makeshift tent. In Dagestan, sheep’s wool leather coats with long sleeves dangling below the hands were common as well. Lamb’s wool hats are worn, some high and cylindrical, others shorter and flaring or shaggy and spherical,

depending upon the region. Footwear consisted of a boot that resembled a leather knee sock. No man was considered dressed without a long dagger, the *kinjal*, hanging from a narrow leather belt. The belt itself was adorned with hanging weighted straps that served to balance a dagger or sword.

In the Northwest and South Caucasus the traditional woman’s garment is a long, flowing gown with pendant sleeves and either a high, crown-like hat, or a pillbox hat with a trailing scarf attached to it. Shoes are pump-like slippers, but in older times noble women wore platform shoes. Northeast Caucasians had woolen sweater-like tunics and heavy socks and mittens to ward off the winter cold. Dagestani women often wore baggy trousers and tunics. Dagestani, Chechen, Ingush, and Karachai-Balkar women often wear head scarves, sometimes hanging far down their backs, but they did not wear veils. Women often wear pendant earrings, necklaces, and bracelets. Some Dagestani women wear large broach-like pieces of silver on their foreheads attached to their head scarves. Outside Dagestan modern dress is now the rule except for parties or festivals when the traditional costumes are worn.

## 12 FOOD

Outside Dagestan, food is relatively plentiful and varied in the Caucasus. Common foods include chicken, mutton, cornmeal, and millet mush, all seasoned with garlic or, in the South, with hot spices, as well as yogurt, a walnut paste, fruits, watermelons, wine, cognac, and millet beer. One popular dish that has spread beyond the Caucasus is “chicken Circassian,” which consists of cornbread served with ground chicken that has been mixed with onions and walnuts and topped with a cream garlic sauce. Traditional diets were low in fat, and people were slender. Now, the diet is high in fat and starch and people thicken with age. One item eaten nowadays that reflects such dietary changes is ground liver spread in a layer and then topped with a layer of lard. The whole thing is rolled up and sliced like a jelly roll. Even though feasting could last for days and drinking was heavy, overeating and drunkenness were considered disgraceful lapses in etiquette. The clan or community feast was an important affair and was run by the *tamada*, a Circassian word, *t’hamata*, that has spread across the Caucasus, up into Russia and down into Iran. Invariably a man was elected, and he determined seating and set the tempo for courses and drinks. A person was judged by the eloquence of his or her toasts; even women were permitted to offer them among many groups. Only the Aghuls of Dagestan stand apart in that no toasting takes place at their feasts. Dagestanis are noted for grinding grains that have begun to sprout, a practice that enhances the vitamin content of the flour.

## 13 EDUCATION

All children were reared from an early age to observe formal etiquette, to honor elders, and to dance. In the highlands, training in hunting and stalking was important. In lower lands, training in the details of horse breeding was often vital. Formal education is conducted in local languages up to high school, but then is usually in Russian. Up until the Russian conquest, the religious universities (Medrassas) of Dagestan were renowned throughout the Muslim world. The Russians discouraged such institutions, but they did introduce widespread literacy in both Russian and many of the native languages, and they opened up the Caucasus to modern urban culture and sci-

ence. In the South Caucasus and in parts of Chechnya, Russia is giving way to English and German as the preferred second language. The Caucasus region has a high percentage of scientists, intellectuals, and artists.

#### 14 CULTURAL HERITAGE

The Caucasus is a refuge for many peoples who were driven from the steppes of Eurasia. The region has preserved many values and customs that seem ancient. Since the Russian conquest and with the advent of modernity, Caucasians have faced many challenges to their heritage and sense of identity. The issue of heritage is difficult for the Circassians, Abazas, Abkhaz, and Ubykhs because their expulsion from the Caucasus in the 19th century, when Circassians lost 90% of population during the war with Russia and deportation. Internal deportations play a similar vexing role for the Karachai-Malkar and for the Chechen-Ingush. These peoples were deported to Siberia and Central Asia by Stalin in 1944 and were allowed to return under Khrushchev only in 1956-7. Many died and much was lost. One dominant theme, however, emerges from the array of local concerns. All Caucasians wish to be a part of modern culture in some sense, even those who are otherwise staunchly Muslim. There is a desire to enter upon the stage of world culture as a respected and distinct form of civilization. They feel that they have much to offer, but they have trouble sorting out the details and finding new roles for old values.

Caucasians face a range of difficulties in finding a modern identity for their warrior heritage. They are still outstanding fighters, but urban culture offers them roles and goals that are new. Furthermore, the Diaspora and the home populations have differing needs. The former seek to retain or revive aspects of identity in their new homelands, chiefly Turkey, while the latter try to find viable roles for older customs in the new urban centers established by the Russians. Despite these challenges certain core traits still form part of the heritage of most Caucasians: honoring of elders, keeping of one's word, showing hospitality, showing restraint, feeling the imperatives of vendetta and vengeance if not often acting upon them, forming fictive kinship bonds (milk siblings), avoiding a mercenary attitude toward money, adhering to old home territory if in the Caucasus, observing proper conduct and etiquette, and cultivating good humor and a sharp wit.

Other aspects of Caucasian heritage are dance and music. Music was played at one time on violins and oboe-like instruments, but now clarinets and accordions are preferred. Drums, gourd rattles, and wooden clackers form the rhythm section. Long horns (like Swiss alp horns) were used in Ossetia to communicate between valleys. Poetry recitals are another important cultural element. Women as well as men can be bards in the Northwest. In times past, in Dagestan, bards (only males) would hold contests in eloquence, with the loser reputedly losing his head.

Another vital heritage that has been carried down to modern times is an elaborate tradition of herbal medicine. This is especially active in Dagestan among the men and in the Northwest highlands among the women. It has spread to Russia with Caucasian immigrants and is a highly valued service among the population at large. Its practice is open only to the initiated, and scholars or doctors have yet to study these remedies and techniques.

#### 15 WORK

Labor is specialized by gender across the Caucasus. Men work with livestock and in the open fields, whereas women tend gardens, thresh grain, do household chores, and tend to sewing. Men do metal working and leather tooling. In Dagestan, women both young and old can often be seen carrying enormous loads of hay or kindling on their backs or large jugs of water on their heads. Children and the elderly are also given tasks suitable to their abilities that contribute to the prosperity of the village. Despite the gender-based specialization, both sexes accord mutual respect to their roles.

Some Caucasians engage in careers that carry on older cultural specialties. For example, many diaspora Caucasians have become military leaders in Russia, Turkey, and the Middle East, following the earlier example of the Circassian Mamelukes (hired warriors) who ruled Egypt in the 13th to 15th centuries. The Mongols were finally defeated in their onslaught by the Circassian Sultan Kutuz. The same name was borne by General Kutuzov of the imperial Russian army who defeated Napoleon 500 years later. The name "Kutuz(ov)" is still common among the Chechens. One effect this warrior heritage has on modern society is that one cannot offer to help a Caucasian man without offending him, since such an offer implies that he is incapable of accomplishing his task. He must ask for help. Another effect is the heavy emphasis throughout the Caucasus on etiquette and proper conduct in order to curb the excesses of the warrior code in normal social life.

Other diaspora Caucasians have become skilled machinists, pharmacists, or physicians. The Ubykhs, for example, who were reputed for their healing skills back in the Caucasus, are frequently doctors in Turkey. Others raise horses, and others are merchants.

#### 16 SPORTS

A popular reworking of the old warrior ethic appears to be the sport of soccer, the most popular sport in the Caucasus. A close second is wrestling, which combines a kick-boxing-like manner of fighting, perhaps descended from the older martial traditions of hand-to-hand combat. Caucasian dance has the quality of a sport, demanding enormous strength in jumps and leaps and attended by a pervasive grace. The men twirl, strut, and leap with a proud bearing, while the women glide and swirl in a demure manner. Arm motions are an important part of the dance, with the arms often held straight upward and then brought downward while flexing the hands at the wrists. Chechen dance adds to these features one that exemplifies the Caucasian virtue of self-control. While the woman glides about, the man whirls around her, moving in and out. At unexpected moments, he will shout abruptly and loudly into her face or ear, and if she is a skilled dancer, she will neither flinch nor even bat an eye. Skill at horseback riding and horse racing are valued. One of the most spectacular feats on horseback is to lean over and cut through 21 oranges (the product of two magical numbers, 3 and 7) with a saber without moving even one of them. It is achieved by pulling the razor-sharp saber toward you while you sweep it through the lined up oranges. The nobles of the Circassians, Ubykhs, and Abkhaz still practice a martial art form. From the age of 12 they toughen their hands by thrusting them into huge bags of clay. In close combat, they were said to have been able to thrust their hands into an ene-

my's body and rip out his heart. The rule was "in a fight, don't get close to a noble."

### 17 ENTERTAINMENT AND RECREATION

Many of the cities have national museums, theatres, and dance troupes based upon local ethnic customs, and these are well attended. Music, dance, and bardic recitations are still popular forms of entertainment. The arrival of a guest is an opportunity for such entertaining, as well as for feasting with a *tamada*. In the highlands, hunting boars, badgers, stags, and bears is a popular pastime.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The peoples of Dagestan are famous for their woven rugs, tapestries, and textiles, with each ethnic group having its own distinctive repertoire of forms. The peoples of the Northwest Caucasus make felt rugs and folk costumes. Their favored decoration is a pleasing open exfoliate pattern (resembling leaves and vines). Poetry is an active folk art, with some groups, such as the Abaza, producing volumes of popular poetry by hundreds of amateurs. Some groups, such as the Kubachis of Dagestan, are famed for their metal working. Kubachi metal goods, including swords and daggers, are considered among the best examples of Islamic metal working in the world. Many Dagestani peoples supplement their meager incomes with home knitting of socks, mittens, and sweaters. These are often done by hand in a matter of hours or days by the women and then sold in Georgia or in Russia by the men.

### 19 SOCIAL PROBLEMS

The problems faced by Caucasians, both in the Caucasus and among the diaspora, are numerous and acute. In the Caucasus, endemic violence, dislocations in social structure, high youth unemployment, new and seemingly arbitrary borders, sharp ethnic rivalries, the recovery of lost practices and identities, and a coming to terms with the communist legacy are all problems that must in some sense be solved. In the damaged hierarchical Northwest Caucasian societies, where there were once princes, nobles, freemen, and slaves, there is now a chronic struggle for prestige and rank, as former princes and noble no longer command deference from former freemen or slaves. In North Ossetia–Alania, problems center around ethnic identity and union with the South Ossetians. North Ossetians are highly Russified, but have been brought up short in this evolution by the influx of conservative South Ossetian refugees. Northeast Caucasian societies are also hierarchical except for Chechen–Ingush and Lezgi. In this region, the major problem is balancing the competing claims of the numerous ethnic groups. The Chechens face the acute problem of rebuilding after the disastrous wars with Russia and of normalizing their relations with vastly more numerous former imperial masters. These tasks are made even more difficult by the horizontal organization of Chechen society in clans. Chechens are not accustomed to following a hierarchical authority, even when it is their own. Georgian society has endured acute economic collapse, which was exacerbated by South Ossetia and Abkhazia having fought wars of secession. The role of the old Georgian noble families are being revived and reappraised in an effort to enhance social cohesion. Armenia and Azerbaijan are locked in a stalemate over Nagorno-Karabakh, with Armenian forces holding more than one-third of what was Azerbaijani territo-

ry. Azerbaijan has embarked upon a strategy of ethnically and religiously homogeneous social identity that seems ill-suited to accommodate the Lezgi, Tsakhur, Kryz, Budukh, Khinalug, Ingiloi, or Udi peoples who live within its borders, not to mention the Armenians of Nagorno-Karabakh.

Wars have devastated Georgia, Abkhazia, South Ossetia, Ingushetia, Chechnya, Azerbaijan, Armenia, and Nagorno-Karabakh. Preventing renewed or future hostilities and rebuilding in the aftermath of those past will be a major challenge for the future of the region. Russian policies under President Putin have aggravated many local problems. Chief among these irritants has been Moscow's policy of appointing regional governors and heads. Often such individuals are corrupt and indifferent to local needs. They have frequently failed to restore the confidence of their populaces.

These same wars have reawakened ethnic identity among the diaspora Caucasians in a vivid and abrupt way, and these people face their own array of social problems. The foremost problem is to find ways to accommodate their newly revived ethnic identities within their host countries, and to find tangible forms of expression for these identities after six generations in exile. Most recently younger members of the Caucasian diaspora have used the internet to establish electronic forms of identity, even going so far as to devise ways of writing their languages in Latin script. This is tied in with another problem among the diaspora: native language literacy. There is a renewed desire both to publish in the languages of their heritage and to learn and preserve those languages. The last few Ubykh speakers in Turkey, for example, are making an effort to revive this language. Ubykhs have emerged as visible components of most diaspora communities, having regained a sense of identity.

Turkey has shown political tolerance and innovation by permitting its large Caucasian minority to establish a North Caucasus Studies Center and to record the languages. A limited amount of publishing in the Caucasian languages is allowed. Jordan and Israel have long allowed their Caucasians language rights. The diaspora offers the promise of assisting other Caucasians through trade and investment.

### 20 GENDER ISSUES

The role and status of women in the traditions of the North Caucasus in the past and current times differs substantially from Islamic norms. Despite the fact that the peoples of the Caucasus profess Islam, the behavior of women, their status in the family and society is increasingly governed by ethnic laws, which are more liberal than Islamic laws. In the culture of Dagestan, Vai Nakh, (Chechen and Ingush) and others it is *adat*, for the Ossetians, *aeghdau*, and for the Circassians, *habze*.

Women of almost of any nation in the Caucasus have largely similar rights, responsibilities, and privileges. But, there are significant differences. For example, a woman of Dagestan, in the past, had the right to choose her husband. The selected man had no right to refuse, but had to marry, even if he did not like the woman. In the tradition of the Circassians, a woman submitted to the will of her father (or a senior in age) in the choice of a husband. On the other hand, a Dagestan woman was responsible for much manual labor, because it was a disgrace for a Dagestan man to carry anything on his back or shoulder. Often, women gather everything that is needed for the house-

hold, including wood and hay. This tradition is still observed in the mountains and in the cities of Dagestan, where you can observe a man and a woman walking together, while he is freely waving hands and she is carrying heavy bags. In Circassian and Ossetian societies, however, such things are not allowed. Traditions do not permit a woman to lift heavy weights if there is a man nearby.

In today's Caucasian society many of the most severe restrictions on women are not as urgent as in the past. There is a freer European style of dress. The ban on women visiting cafes, restaurants, and discotheques was removed. Family members are more or less equal, although the strict adherence to traditional primacy of men is still shown in public life. In Chechnya, a strong tradition of a father's privileges still remains. After a divorce, the children stay with their father and the mother is prohibited for life in seeing her children.

The ban on jobs is no longer widely practiced and modern Caucasian women have the opportunity to get an education and make a professional career in various fields. Nevertheless, the range of occupations remains fairly narrow. Feminine professions are considered school teachers, doctors, university professors, and government employees of average level. Rarely or never are Caucasian women in politics or leading positions in governments.

After Gorbachev's time the market became one of the ways of survival for many families in the Caucasus. Women are actively engaged in buying and reselling items and products. They go to various countries, mostly to Turkey, from where they import large quantities of clothing to the Caucasus. Many trade in the market themselves from 6 am to 4 pm outdoors in all seasons. That business, by local standards, is considered is very profitable, although it only helps families make ends meet, and women pay their health for it. Meanwhile, a major financial, constructional, and tourist or oil businesses remain a closed zone for women in the Caucasus.

In a region that was a hot spot for many years, human rights movements are one of the most dangerous political occupations and, strangely enough, it is women in the Caucasus who play a dominant role in these movements.

## POLES

**LOCATION:** Poland

**POPULATION:** 38.2 million

**LANGUAGE:** Polish

**RELIGION:** Roman Catholicism (94%)

### <sup>1</sup> INTRODUCTION

In AD 966, under the reign of Duke Mieszko, the Poles embraced Christianity and formed their first state. During the first seven centuries of its history, Poland steadily expanded to become one of Europe's largest countries. After union with Lithuania in the 14th century, it was the center of a multiethnic commonwealth. The 16th and 17th centuries are considered the Golden Age of Polish history, when the nation pushed eastward to take over its Slavic neighbors, dreaming of a kingdom that stretched from the Baltic to the Black Sea. By the end of the 18th century, neighboring countries destroyed Poland, and its territories were divided among the Austrian, Prussian, and Russian empires in three successive partitions—1795 marked the disappearance of Poland as a political entity for more than a century. Although separated politically, the Poles held fast to their cultural unity and were able to preserve their national identity without the framework of a nation-state.

Reunited and restored to independence after World War I, the country was able to sustain a parliamentary democracy for only a few years before Marshal Józef Piłsudski, a figure of heroic proportions in modern Polish history, seized power in 1926 and introduced authoritarian rule. Overwhelmed by Nazi Germany and the Soviet Union in 1939, Poland entered into the darkest period of its long history, suffering the deaths of more than six million of its population during World War II.

After the war, Poland's fate was determined by the victorious Allies. Its borders were shifted westward and the Soviet Union transformed Poland into a satellite state, the Polish People's Republic, founded in 1948. Although they were forcibly integrated into the Communist system, the Poles retained a spirit of independence, strengthened by their deep-rooted ties to Roman Catholicism. Membership in the Warsaw Pact did not mean that all aspects of the Soviet system were implemented in Poland. Agriculture, for instance, was never collectivized; instead, all farms were small. Protests against economic conditions and against violations of human rights were mounted in the late 1970s by a coalition uniting workers and peasants, the intelligentsia, and the church.

In 1980 and 1981 the independent trade union movement *Solidarność* (Solidarity), under the leadership of Lech Wałęsa, demanded recognition as an organization operating outside the control of the state or Communist party. In December 1981, however, Solidarity was disbanded, and its leaders were arrested. Martial rule was imposed by the prime minister and first secretary of the Communist Party, General Wojciech Jazurkowski, who assumed virtual dictatorial power as the head of a military junta. Personal freedoms were drastically curtailed, universities were closed, activities of all organizations (including Solidarity) were suspended, and over 5,000 activists, among them Wałęsa, were interned. In 1983 Wałęsa was awarded the Nobel Peace Prize.

Renewed labor unrest in 1988 prompted Jaruzelski to begin negotiations with the outlawed Solidarity movement, which resulted in far-reaching reforms of the political system. In the June 1989 elections, Solidarity won the majority and formed a coalition government with the Communists. In 1990 Solidarity leader Lech Wałęsa was elected president. The new government's radical plans to transform Poland's centrally planned economy into a free-enterprise economy —collectively known as “shock therapy”—quickly led to sharp price increases and high unemployment, creating discontent among the population and dissension within the government. Four different prime ministers held office in 1992 and 1993, and former Communists made impressive gains in the 1993 parliamentary elections. The government continued the transition to a free-market economy but at a slower pace. There are now multiple parties. More recently, conservative parties have regained the upper hand. Never apathetic, many Poles are opposed to siting U.S. missile defenses on their territory and are actively protesting rising food prices.

As early as 1989, Poland signed an agreement on trade and trade cooperation with the then European Community. On 1 May 2004 Poland became a member of the European Union. The currency is still the złoty, which is keeping up its value relative to the euro and thus gaining on the dollar. By 2012, however, Poland is slated to adopt the euro.

## 2 LOCATION AND HOMETLAND

Poland is bordered on the east and northeast by Ukraine and Belarus, on the northeast by Lithuania and Russia, on the south by the Czech Republic and Slovakia, on the west by Germany, and on the northwest by the Baltic Sea. The capital city is Warsaw.

Poland consists primarily of lowlands belonging to the North European Plain. The climate is transitional between maritime and continental, with cold, snowy winters and warm summers. There are mountains in the south. Forests occupy more than one-fourth of the total land area.

Poland's population of 38.2 million is highly homogenous, both ethnically and linguistically, although the country does have minority groups, including Ukrainians, Germans, Belarusians, and Roma.

## 3 LANGUAGE

Polish is a Slavic language that uses the Roman alphabet but has a number of extra characters and diacritical marks (ć, ł, ń, ś, ź, ż, ą, ę, ó). It also uses digraphs to express certain sounds; much as English uses the letter h to modify preceding consonants, Polish uses the letter z to do something similar in the combinations cz, rz, and sz. Spelling is a nearly-reliable guide to pronunciation, with the stress usually on the second-to-last syllable of a word.

Some common everyday words are: *tak* (yes), *nie* (no), *jak* (how), *dobrze* (OK), *dzień dobry* (good day), *cześć* (hello), and *proszę* (please).

## 4 FOLKLORE

There are many legends associated with Easter and Christmas, which are very important holidays in Poland. For example, a legend of the Christmas spiders tells of when Jesus was a little boy and came upon a poor farmhouse. He heard a family of spiders crying because there was not enough money to buy

decorations for the Christmas tree. The spiders let him in, and he blessed the tree. Within minutes it was decorated in silver and gold webs. This is why tinsel is used to decorate Christmas trees to this day.

A limestone cavern in the bluffs below the Wawel Castle in Cracow inspired the many legends of the Wawel Dragon. The dragon, it is said, was ravaging the countryside and, in particular, devouring young girls. Many knights failed to overcome it. Finally, a cobbler's apprentice stuffed a lamb with sulfur and laid it before the entrance to the dragon's cave. The dragon swallowed the lamb, began to burn inside, dashed down to the Vistula, drank half the river, and burst. The young hero went on to marry the king's daughter and founded the city of Cracow.

## 5 RELIGION

The Poles are a deeply religious people. Roman Catholicism is the religion of some 94% of Poles, and it exerts an important influence on many aspects of Polish life. Since the introduction of the Catholic Church in AD 966, it has remained a pillar of strength in Poland. The Polish church had a rather distant relationship with Rome until 1978, when a Pole, Cardinal Karol Wojtyła, was chosen to become Pope John Paul II, the first Polish person to be so honored. Poland has 2,500 convents with 28,000 nuns and over 500 monasteries. The Catholic university in Lublin and the Academy of Catholic Theology in Warsaw are the leading church-controlled institutions. Częstochowa, with its Black Madonna, is one of the most important pilgrim-

age centers in Europe. Other Christian denominations besides Catholicism include Russian Orthodox, the Uniate faith, which combines aspects of Catholicism and Orthodoxy, and a variety of Protestant churches. There are a few Jews left from a community that was large before the Holocaust.

## 6 MAJOR HOLIDAYS

There is a famous Polish saying, "Every day is good for celebration," and this is certainly true in Polish culture.

Important public holidays in Poland include New Year's Day, Good Friday, Easter, All Saints Day (November 1), Corpus Christi Day, and Worker's Day (May 1). Once a constant reminder of Communist power, Worker's Day is now a commemoration of solidarity's triumph over communism. Constitution Day (May 3) and Independence Day (November 11) are also important holidays in Poland.

Polish Catholics have an interesting annual tradition of pledging their vows to the Blessed Virgin Mary. The Mother of God, or Bogurodzica, is the patron of the Polish Crown. People usually come to Częstochowa, to the shrine of the Black Madonna, to renew their vows to her. The church calendar is based on two cycles, which culminate in the two biggest religious celebrations: Christmas (*Boże Narodzenie*) and Easter (*Wielkanoc*). There are also many saints' feast days, which are especially numerous for the Virgin Mary.

St. John's Eve, a few days after the summer solstice, is one of the most popular holidays. Originally a pagan celebration designed to drive out devils, it is now celebrated with great bonfires, around which young people dance and over which boys try to leap, carrying buckets of water with which to douse the girls.

## 7 RITES OF PASSAGE

Occasions such as baptism, first communion, and marriage are cause for festive celebrations.

A Polish wedding always promises a good time. Some traditional rituals associated with a Polish wedding included long blessings by the parents before the actual ceremony and greenery on the bride's headpiece symbolizing her virginity. Large weddings remain mainly in the countryside. Old customs are not always practiced today, and urban Poles have adopted Western-style wedding traditions, with generally smaller, simpler weddings. Wedding anniversaries are very special among Polish couples. The tenth wedding anniversary is the occasion for a major celebration.

Lively wakes are held after Polish funerals, with toasts and tributes to the deceased. In the past, Poles wore black for a year following the death of a family member; today, a black armband is worn instead.

## 8 INTERPERSONAL RELATIONS

Poles greet each other by shaking hands. Men and women often shake hands, but usually the man waits until the woman has extended her hand first. In general, Poles are more conservative and formal than Westerners, but they are known for their hospitality. When responding to a dinner invitation, it is considered polite to bring a bouquet of flowers for the lady of the house.

In any sort of business, tourist, or social situation outside the family, titles (i.e. *Pan* 'Mr.', *Pani* 'Mrs., Ms.', *Pan Doktor*

'Dr.')

 and occupational titles are used in greetings and in reference to others.

Poles often gesticulate enthusiastically when they talk. In rural areas, it is common to see women crossing themselves as a sign of faith when they come to a crossroads. The Polish good luck gesture (comparable to crossing one's fingers in the U.S.) is a thumb tucked into the palm of one's hand and covered with the other four fingers.

Common Polish civilities include *przepraszam* (excuse me), *Jest pan/pani bardzo uprzejmy/uprzejma* (Sir/madam you are very kind), and *dziękuję* (thank you).

## 9 LIVING CONDITIONS

The average life expectancy for Poles is 75.3 years, and the infant mortality rate is 6.0 per 1,000 live births. Government-funded medical care is no longer available to all Poles. Reforms in 1999–2000 made the system more complex, with 17 insurance funds, and left some people uninsured. Facilities are poor by OECD standards, while spending on medical care is low for an OECD country but rising fast. The availability of modern diagnostic equipment like MRIs and CTs has been growing rapidly. There is one doctor for every 400 patients and one hospital bed for every 179 people. Private medical care is available but very expensive. People express great dissatisfaction with the reforms. The number of smokers has fallen, although it is still somewhat higher than in comparable countries. Obesity has risen, though not to the level of other OECD countries. Alcoholism is a major health problem in Poland.

Poland faces a serious housing shortage, and young couples often live with one or the other set of parents for the first years after they marry. The shift to a market economy led to slowed housing construction, although the pace has picked up in recent years. Housing may be in short supply, but rents are only a small part of living expenditures, since subsidies have not been altogether abolished. Still, the 1991–92 reforms brought a steep rise in housing costs for most families. In urban areas, large tracts of apartment buildings are the norm, but one-family homes are becoming fashionable. In the villages, masonry structures with fireproof roofs have replaced the traditional wooden houses with thatched roofs.

Nearly half of all households own cars, and car ownership has nearly doubled in a decade and is on the rise. The classic Polish Fiat has not been produced since 2000. Poles are now buying Toyotas and many other world brands. To cope with a scarcity of parking spaces, many Poles park half-on-half-off the sidewalk. Hitchhiking used to be not only legal but actually encouraged in Poland through coupons that hikers could buy and give to drivers. It is still popular; there are now internet ride boards. Warsaw has a subway. Most cities have efficient bus and streetcar systems, and there are air and rail links to major cities.

While refrigerators are nearly universal, dishwashers are rare. Virtually every home has a television set and, by 2006, 73% had mobile phones.

## 10 FAMILY LIFE

Families in this predominantly urban country typically (88%) have one child; a few have two children; even among rural families it is rare for a couple to have more than two children. Traditionally, the Polish father is a stern authority figure, with the mother mediating between him and the children. The nu-

Villagers wearing traditional dress in Lyse, Poland, participate in a Palm Sunday procession between old and new village churches. (Wojtek Laski/Getty Images)

clear family is the norm, although aged parents or unmarried brothers and sisters may be part of the household. Single-parent households are becoming more common. In most families, both parents work, and children assume considerable responsibility for themselves at an early age, helping cook, clean, and care for younger siblings. However, grandparents also play a significant role in childrearing. Mother's Day is a big occasion for Polish children, who often put on performances for their mothers at school.

## **11 CLOTHING**

Poles wear modern Western-style clothing and generally dress elegantly, but conservatively. Clothing is very expensive, so wardrobes tend to be small, and it is still common to wear handmade clothing. Young people favor jeans and sweatshirts with American slogans or logos. Jeans are also popular among academics and people in the arts. In rural areas, older women can still be seen wearing full skirts, thick stockings, and head scarves.

Traditional costumes are reserved for Sundays or special occasions in the villages. Costumes vary considerably in the different regions, but some features are typical everywhere. A woman's costume has a blouse, a full skirt (often brightly striped), an apron, and perhaps a vest or jacket. Unmarried women may wear elaborate and varied headdresses. Men too

may wear highly decorated headdresses. Pants vary regionally from wide in the north to narrow in the south and are tucked into boots. The southern mountaineers wear moccasins.

Polish women are very fond of amber from the Baltic and coral beads, which are believed to bring many healthy children.

## **12 FOOD**

Meat is integral to Polish cuisine. Beef, pork, ham, and sausage make up many national dishes, such as *bigos* (sauerkraut with spicy meat and mushrooms), *flaki* (tripe boiled or fried), *golonka* (pig's leg), and *pierogi* (dough filled with cheese, meat, or fruit). Common fish include pike, carp, cod, crayfish, and herring. The Poles are known for their thick, hearty soups. Soups such as *borsch* (beet soup), *botwinka*, *chlodnik* or *krupnik* are preludes to Polish main courses. Sour cream and bacon bits are condiments necessary for almost every dish. Typical desserts include stewed fruit, fruit dumplings, pancakes with fruit or cheese, and jam donuts called *paczki*.

Poland has several varieties of vodka—a favorite drink that Poland claims to have discovered. Local bottled beers are popular as well as soft drinks made of strawberry and apple. Pepsi and Coke are everywhere, and tea, especially, is consumed with everything.

### 13 EDUCATION

Poland has an over 99% adult literacy rate and a near-universal attendance level in its schools. In 1773 a national education commission was established. The system this commission set up lasted for over 200 years, although in periods of partition and occupation it operated underground. The system was reformed in 1999. Compulsory primary school starts at age six or seven and lasts six years, followed by three years of compulsory lower secondary school, called *gimnazjum*. For upper secondary school there are choices: three years of *liceum* or four years of *technikum* both ending in an equivalent examination that is the key to entering higher education, or else two or three years of vocational technical school. In addition to the traditional focus on Polish history and culture, today there is a strong emphasis on foreign languages and computer skills. Rural schools, however, are having a hard time attracting qualified teachers. Students who have good grades or pass an entrance exam may attend one of Poland's 18 universities or many more technical institutes or other types of postsecondary institution. Higher education is in theory free, but there are not enough scholarships to go around. Poland has 466 institutions of higher education. The Jagiellonian University in Cracow, founded in 1364, is the second-oldest university in Central Europe.

### 14 CULTURAL HERITAGE

In the 19th century when Poland was split among three empires, art, literature, and theater were media through which Polish identity and protest against the state were voiced. Under Nazi Germany (1939–45), clandestine literature flourished and continued during Communist control, joined by theater and film as means of free expression of ideas. Polish movie posters became known internationally as a separate branch of graphic art.

Music is well represented in Poland. Such greats as composers Frederic Chopin and Witold Lutosławski, and pianists Ignacy Jan Paderewski and Artur Schnabel are known throughout the world.

Poland has over 20 symphony orchestras; even small cities have their own. Conservatories and music high schools make training for the talented publicly available. There are now also private music schools. In Warsaw, nightly operas, ballets, chamber concerts, and recitals are a popular recreational activity. Warsaw is also the home of the Jazz Jamboree festival—the oldest and biggest jazz show in Eastern Europe.

Village musicians often play at weddings and festivals. Their sound is a combination of the fiddle, wooden flutes, accordion, and a single-reed bagpipe.

The polka, known around the world, is not a real Polish folk dance, but the polonaise and mazurka are distinctively Polish.

Writers are considered important people in Poland. Adam Mickiewicz, a 19th-century poet, is the national bard. Many streets and squares are named after him. The following Polish-born writers have won Nobel Prizes for literature: Henryk Sienkiewicz for *Quo Vadis*, a story about the times of Roman emperor Nero; Władysław Reymont for *Chłopi* (*The Peasants*), an epic novel of Poland; and Czesław Miłosz and Wisława Szymborska for their poetry. Twentieth-century poets, such as Julian Przytycki and Julian Tuwim, have celebrated Polish uprisings and written both experimental verse and poetry with political messages.

The first Pole to win a Nobel Prize (1903 and again in 1911) was Maria Skłodowska (Madame Curie), who with her French husband studied radioactive elements. Poland was a world center in mathematics and logic before World War II. Jan Łukasiewicz found a way to write all logical formulas without using parentheses; it is now called “Polish notation” in his honor.

### 15 WORK

Poland has a long history as an industrial nation, beginning in the 19th century and intensively developed in the Communist period.

By 2004 most Polish industry was in private, overwhelmingly Polish hands. Manufacturing predominates with metal processing in first place, followed by clothing and fur, furniture, and other wood processing. In the past 15 years, the service sector has grown greatly. Industry has become a smaller part of the total economic output but, nevertheless, has been modernized and has grown at a far higher rate than in the rest of Europe. Electrical and machine products are important exports. Manufacturing accounts for 20% of employees, while agriculture has 16%.

There are large deposits of coal, including hard coal and lignite, which together provide most of the country's electricity. Copper and salt are also extracted.

Poland has been attracting foreign investment by offering a highly-skilled workforce at relatively low wages for Europe. Nevertheless, unemployment remains high at nearly 15%, and many Poles are working abroad, notably in Ireland.

Close to 4 million Poles belong to unions including a union of small farmers and farm workers that has been known to conduct militant protests.

### 16 SPORTS

For many years a big emphasis was placed on sports activities in Polish schools. Today, there is less funding for equipment, and parents often cannot afford to pay membership fees at private sports clubs.

Some popular sports include swimming, gymnastics, hockey, volleyball, and soccer. Streetball, similar to basketball, is played by children in the parks. On some Saturday mornings, part of a street may be closed off for a soccer game. Soccer, which is played at every school, is also the biggest spectator sport. Skiing is Poland's most popular winter sport. The beautiful ski resort of Zakopane (which means “a place buried in the ground”) is the most popular ski getaway for Poles. “When life gets unbearable, there is always Zakopane,” is a Polish saying.

Poles have taken new interest in Formula One automobile racing now that there is a Polish driver, Robert Kubica, in world competition. With cars ever more available, Poles have also become involved in typically illegal drag racing. The city of Łódź has taken this on by occasionally closing streets for legal drag racing.

### 17 ENTERTAINMENT AND RECREATION

Popular family activities include traveling, watching TV, listening to Polish, European, and American pop music, and in recent years shopping. Poland's cities are famous for theater and cinemas, opera houses, jazz and classical concerts, and discos. Outdoor activities include hiking, motorcycle racing, horseback riding, and hunting. Poland's spas are also popular leisure-time venues. The largest is Ciechocinek.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Among folk art specialties from particular regions are paintings on glass by the Zakopane mountain folk; red sequined Cracow folk costumes; the black pottery of Kielce; lacework from Koniaków; rainbow-colored cloth from Łowicz; and paper cutouts from Kurpie. The small village of Zalipie is famous for the flower paintings on its wooden houses, wells, wagons, and chairs.

Highly decorated Easter eggs are a folk art that is still used in holiday celebrations. So are Christmas tree decorations, as well as traditional Christmas carols.

In 1948 the government initiated a company called Cepelia to buy Polish folk arts and crafts and sell both small souvenir items and more valuable goods in local stores and internationally. The selection is unusually tasteful, and the project has helped to keep folk art viable in a changing economy. The company continues to this day, making Polish craft items available to Poles, tourists, and on the world market.

## 19 SOCIAL PROBLEMS

Social tensions are caused by the disparity in income between the poor and the wealthy, exacerbated by the fact that under the Communist regime wealth was associated with corruption. Inequality increased sharply between 1990 and 1993; since then the class lines have hardened. Other problems include housing shortages and inadequacies in the health care system.

Lustration is a Polish term for vetting or background checking. Specifically it means making former Communist officials, and anyone who collaborated with the Communist-era secret police, ineligible for responsible jobs in government, education, and media. How far such people should be kept out of public life continues to be highly controversial, even two decades after the end of communism. The surviving secret police files can contain false information accusing someone of having been an agent. Courts have declared several lustration laws unconstitutional.

While there are few speakers of minority languages in Poland, there are also few protections for their rights. Roma in particular face discrimination and violence.

A new social problem has been dubbed "Euro-orphanhood." Now that Poland is part of the European Union, Poles can leave freely to take work in other European countries. Some leave spouses and children behind; such marriages may be heading for divorce. In some cases children are left behind with no parents, and grandparents, siblings or neighbors care for them.

## 20 GENDER ISSUES

The advent of political democracy in Poland in 1989 actually reduced the rights of women. Previously, abortion had been readily available. With the influence of the Roman Catholic Church now dominant, an extremely restrictive law against abortion passed in 1993. In 1996 it was liberalized somewhat, then made somewhat more restrictive again in 1997. The present law allows abortion when the life or health of the woman is threatened, when the embryo is seriously and irreversibly damaged or incurably ill, or when the pregnancy is the result of an illegal act. However, practice has turned out to be more restrictive than the law, and many women whose pregnancies met the legal criteria have still been unable to get legal abortions. Most turn to illegal ones or, if they can afford it, go abroad. This is

exacerbated by a complete lack of sex education and by expensive contraceptives.

In addition, the United Nations Human Rights Committee noted in 2004 that women are paid less than men for their work and rarely promoted to senior positions. There is now little in the way of subsidized child care to help women who work. Domestic violence is another problem, with little training of police and inadequate shelter resources.

The Polish government has begun to address such issues by appointing the Government Plenipotentiary on the Equal Status of Women and Men.

The UN report also noted lack of protection from discrimination based on sexual orientation.

# PORTUGUESE

**LOCATION:** Portugal

**POPULATION:** 10.6 million (2007)

**LANGUAGE:** Portuguese

**RELIGION:** Roman Catholic; small Muslim, Jewish, and Protestant populations

## 1 INTRODUCTION

Portugal is located in the southwestern portion of Europe. Due to colonization and emigration, there are Portuguese-speaking peoples living in North and South America, Asia, Africa, and Australia.

Portugal was among the first European nations to be unified into a single entity, gaining independence with the accession of Alfonso I in 1143. The Portuguese Age of Discovery began in the 15th century, marking the beginning of a vast overseas empire which expanded for over three centuries. Portugal's prosperity and influence declined after the loss of Brazil in 1822. In 1910 the monarchy was eliminated and a republic was declared, only to be replaced by the authoritarian rule of António Salazar in 1926. The Salazar regime was finally overthrown in 1974, a democratic government was established, and a new constitution was adopted in 1976. During this period Portugal granted independence to its remaining colonies, including Angola and Mozambique. In spite of continuing poverty, especially in rural areas, the nation has seen numerous advances, most notably the consolidation of the first successful democratic system of government in its history.

## 2 LOCATION AND HOMELAND

Portugal occupies about one-fifth—and most of the western coast—of the Iberian Peninsula, bounded on the south and west by the Atlantic Ocean and on the north and east by Spain, its only neighbor. The two principal geographic areas are the mountainous interior (*meseta*) and the plain that lies along the Atlantic coast. Portugal's four major rivers are the Minho, Tagus, Guadiana, and Douro. North of the Tagus, the land reaches elevations of 396.2 m (1,300 ft) or more, while it is lower to the south.

Portugal's population of 10.6 million people is ethnically homogeneous, as the country had virtually no ethnic, tribal, racial, or cultural minorities for much of its history. There is a small Muslim population of guest workers from North Africa and small Jewish and Protestant communities composed mainly of foreigners. There may also as many as 100,000 Roma, mostly in the Algarve region. About 200,000 immigrants are from Eastern Europe.

## 3 LANGUAGE

The official languages are Portuguese and Mirandese. Portuguese is a Romance language that is most closely related to the Spanish dialect Galician. Over time it was modified by the Mozarabic language of the Muslim Moors living in lands taken over by Portugal. Mirandese is also a Romance language most common in Mirando do Douro in northeast Portugal. Mirandese has been given official status for local use.

## COMMON WORDS AND PHRASES IN PORTUGUESE

Good morning	bom dia
Good afternoon	boa tarde
Good evening	boa noite
Yes	sim
No	não
Please	por favor
Thank you	men say obrigado; women say obrigada
Goodbye	adeus

## 4 FOLKLORE

The Portuguese are a deeply superstitious people whose formal Catholicism is profoundly intertwined with pre-Christian lore and beliefs. Votive offerings to saints—intended to promote healing—hang on strings near many church altars, with images depicting whatever is to be (or has been) healed, including hands, heads, breasts, babies, and animals. Popular superstitions involve the phases of the moon, the healing power of fountains, and the evil eye, which is feared in a number of situations. Ceremonies surrounding death and the occult abound. Portuguese widows are expected to wear black for about seven years and many wear it for the rest of their lives. The loss of a parent is mourned for up to three years.

## 5 RELIGION

The overwhelming majority of Portuguese (85%) are Roman Catholics and Catholicism is at the center of Portuguese life. Although church and state were formally separated in the 1976 constitution, Portugal's holidays, its moral and legal codes, health and educational systems, and even many aspects of the national character are intertwined with its Catholic heritage. By a special arrangement between the Church and the government, Roman Catholic citizens may designate that 0.5% of their income tax be allocated to the Catholic Church. While only about a third of the population attends church regularly, almost all Portuguese are baptized and married within the church and receive its last rites when they die. Religious observance is greater in the northern part of the country than in the south.

Churches occupy a prominent physical location in almost every Portuguese village. However, many religious folk practices and beliefs are centered outside the church itself. Many Portuguese make pilgrimages (*romarias*) to religious shrines, of which the most famous is the one at Fátima where the Virgin Mary is said to have appeared before three children in 1917. The cult of the Virgin is very powerful in Portugal, and images of Mary and Christ are commonly seen even in such secular places as labor union offices. While the Virgin is the most popular religious mediator, belief in personal intercession by a variety of saints is also widespread, accompanied by direct offerings of gifts as well as alms for the poor.

Portuguese folk religion also contains elements of witchcraft, sorcery, and superstition, which are intertwined with Catholicism in the popular imagination, although frowned on by the church. In general, however, Catholicism in Portugal has the character of a benign and humanizing force: whereas saints and martyrs are depicted with agonized expressions in Spain, in Portugal their pictures are calm and peaceful.

## 6 MAJOR HOLIDAYS

Most holidays celebrated in Portugal are those of the Roman Catholic calendar. Those with the status of national holidays are Shrove Tuesday, Good Friday, Corpus Christi, All Saints' Day (November 1), the Immaculate Conception (December 8), and Christmas. Secular holidays include New Year's Day; Liberty Day (April 25), which commemorates the death of the national poet, Luiz Vaz de Camões, in 1580; Portugal Day (June 10), which celebrates the 1974 Revolution; Proclamation of the Republic Day (October 5), celebrating the founding of the Republic in 1910; and Restoration of Independence Day (December 1).

In rural areas, villagers honor their patron saint during the annual *feira*, a celebration that is both religious and secular. There is a procession, and people fulfill their religious vows (*promessas*) for the occasion. The festivities may last several days and often include such secular elements as picnics, dancing, fireworks, and bullfights.

## 7 RITES OF PASSAGE

Portugal is a modern, industrialized, Christian country. Hence, many of the rites of passage that young people undergo are religious rituals, such as baptism, first communion, confirmation, and marriage. In addition, a student's progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

When the Portuguese greet each other, they generally expect to be kissed on both cheeks. Those who live in the northern part of the country, which has historically been isolated from foreign influences, are formal, conservative, and reserved among strangers, while attitudes in the south are generally more casual, relaxed, and friendly. In the north, many people are referred to by nicknames (*alcunhas*), which are an important part of their identities.

## 9 LIVING CONDITIONS

Over 60% of the Portuguese own their own homes. However, according to a 2001 census, over 70% of all families lived in substandard housing. Rural villagers often live without electricity or running water. Migration to the cities intensified an already existing shortage of urban housing, resulting in the growth of shantytowns (*bairros da lata*) with substandard housing that often lacks sewage systems. Government housing programs have not been able to keep up with the demand for adequate housing.

Almost all sectors of Portuguese society have access to modern medical care. Portugal's national health service was inaugurated in 1979. While infant mortality rates were cut nearly in half between the mid-1970s and mid-1980s, the government program is still insufficient to meet the nation's health care needs and it is supplemented by church-supported services. While home birth was common as recently as the 1960s, as of 2008 almost all Portuguese women had their babies in hospitals. Life expectancy in 2008 was estimated at about 78 years (75 for men and 82 for women).

Bus service links all Portuguese cities, towns, and principal villages. Most road travel is on paved but winding roads. There are few highways, and many back roads are inaccessi-

ble to traffic. Like the roads, the state-owned rail system runs mainly north/south, branching eastward into Spain in places. The main ports are Lisbon, Setubal, and Porto.

## 10 FAMILY LIFE

While the patriarchal nuclear family is the cultural ideal throughout Portugal, actual family dynamics vary considerably according to class and region. Middle- and upper-class Portuguese and those in the southern part of the country are more likely to adhere to the patriarchal model, with women staying home to raise children and to run the household while men engage in business or the professions. Among the peasantry, especially in the northwest, the relationship between marriage partners is a more equal one. Households are headed jointly by the husband and wife, referred to as *o patrão* and *a patroa*. In farming families, women may work the fields alongside their husbands; fishermen's wives may help repair nets or sell the day's catch. Due to high rates of male emigration, a relatively large number of women in the north never marry and many have traditionally managed their own farms, remaining financially independent, as women in Portugal can both inherit and bestow property.

Much political and economic influence in Portugal is wielded through networks of extended family, in what is essentially a system of patronage. Many marriages are still determined by what kinds of advantages—in terms of land, property, or prestige—will result for the families of the bride and groom. Especially among the country's elite, it is considered important to

have kinship connections in the government and the political parties. Low-income groups, by contrast, have few ties outside the nuclear family. Among all groups, the relationship between children and their godparents (*padrinhos*)—who may or may not be actual relatives—is especially important throughout one's lifetime.

### 11 CLOTHING

Western-style clothing is the norm, and people in the cities, especially Lisbon, dress well. However, vestiges of traditional garb—such as berets and loose-fitting shirts for men and black shawls for women—may still be seen in some rural areas, in addition to the *capucha*, a hooded cape, and the *patocas*, a rain cape of reeds.

### 12 FOOD

Fish is the main staple of the Portuguese diet. Cod (*bacalhau*) is universally popular—the average person in Portugal eats about 45 kg (100 lbs) of it every year. Over the years, dried and salted cod, nicknamed *o fiel amigo*—faithful friend—has saved the lives of thousands of poverty-stricken Portuguese. *Bacalhau* is prepared so many different ways in Portugal that there is said to be a different recipe for every day of the year. Other commonly eaten seafoods include sardines, salmon, sole, sea bass, and hake, as well as eel, squid, octopus, and lamprey. Practically every Portuguese meal is accompanied by soup. The most popular is *caldo verde* (green soup), made with *couve galega* (Galician cabbage), sausage, potatoes, and olive oil. Another popular soup is *sopa alentejana*, simmered with bread, garlic (another staple of the Portuguese diet), and other ingredients. *Caldeirada*, a fish stew, is another popular national dish.

Portugal's varieties of succulent fruit, which vary regionally, provide some of its best desserts, including peaches, strawberries, oranges, figs, plums, pineapples, and passionfruit. Of the sweet dessert offerings, the most common is *arroz doce*, a cinnamon-flavored rice pudding. Flan, a custard with caramel topping, also graces most dessert menus.

### 13 EDUCATION

Although education is free and compulsory to the age of 15, traditionally some children drop out after primary school to begin working. Enrollment and completion rates have been increasing since the 1990s. In 2006 primary school enrollment was at 98% for all children, while secondary school enrollment was at about 86% for girls and 78% for boys. Secondary education is completed either at state-run high schools or at a choice of technical and professional institutes. The twelfth grade (at age 18) consists of preparatory study for university or technical college. Portugal's main universities are located in Lisbon, Porto, Aveiro, Coimbra, and Braga. There is also a government-supported adult education program, as well as hundreds of private schools, most supported by the Catholic Church.

### 14 CULTURAL HERITAGE

Portugal's most famous poet was Luiz Vaz de Camões (1524–1580), who wrote during Portugal's Age of Discovery and was also an explorer himself. His epic poem, *Os Lusíadas* (*The Lusíadas*), is based on the life of Vasco da Gama. Gil Vicente, the "father of Portuguese theater," is known for *autos* (religious dramas) and farces. In modern times, Fernando Pessoa (1888–

1935) has been acclaimed for his poetry. Freedom of expression has thrived in the period since the 1974 Revolution, which has seen the publication of formerly censored works as well as new ones by women writers such as novelist Olga Gonçalves and Portuguese-Africans, including Angolan Jose Luandino Vieira.

The Age of Discovery also produced the Manueline style in architecture, which expressed the national passion for exploration and the sea through flamboyant ornamentation with marine motifs, such as mariners' knots. Famous examples of this style include the Tomar and Batalha convents. Also unique to Portugal are the decorative tiles known as *azulejos*. Adopted from Spain, they were modified by the Portuguese, who added a variety of colors, most notably the blue, or azure (*azul*), from which they get their name.

In music, Portugal is known for its *fado* songs, the plaintive popular art form said to reflect the fatalistic Portuguese spirit of melancholy and nostalgia known as *saudade*. Performers of *fado* (which, roughly translated, means "fate") are known as *fadistas*.

### 15 WORK

Portuguese workers are known for being adaptable, hard working, and frugal. Industry employs about a third of the country's labor force, while nearly 60% work in service jobs, a figure partially accounted for by the rapid growth in civil service employment since 1974. Employment varies by region. The main occupation in the Azores and Madeira is agriculture. Madeira's embroidery industry employs about 70,000 women. In the south, the people of the Algarve find employment in agriculture, fishing, and the tourist industry. Fishing predominates in the coastal villages and cash-crop agriculture (wheat, corn, rice) in the Alentejo. Heavy industry, including steel working, shipbuilding, and iron production, is concentrated in the Lisbon-Setubal region to the south. Other occupations include forestry, furniture making, food processing, winemaking, and pulp and paper production. In 2005 the minimum monthly salary was about \$450. In 2007 the unemployment rate was 8%.

### 16 SPORTS

Soccer ("football") is the foremost sport in Portugal, as in much of Europe. Golf has grown increasingly popular, and the country now boasts more than 20 world-class golf courses. Tennis is widely played as well and auto racing becomes the focus of attention during the annual Grand Prix of Portugal held in September.

### 17 ENTERTAINMENT AND RECREATION

One of the most popular recreational activities in Portugal is bullfighting (*Tourada*), with *cavaleiros* dressed in 18th-century costumes that include tricornered hats, silk jackets, and riding breeches. In contrast to the violent bullfights in Spain and parts of Latin America, in Portugal the bull's horns are sheathed to avoid injuries, and bulls are not killed at the end of the event. Another well-known national pastime is dancing; the *fandango* and other popular folk dances are enjoyed throughout the country. Other forms of recreation include horseback riding, fishing, hunting, skiing, and water sports.

*Children play near Torre de Belem in Lisbon, Portugal. (© John and Lisa Merrill/Corbis)*

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Traditional craft industries can be found throughout Portugal. The people of Arraiolos in the south are renowned for their rug making, while fine embroidery is associated with Guimares, black pottery with Vila Real, and basket weaving with the Algarve. Characteristic folk art is also seen on floats carried in religious pageants.

## **19 SOCIAL PROBLEMS**

Violent crime is rare in Portugal; murders generally occur in the context of personal conflicts rather than during the commission of other crimes, such as robbery. Emigration has served as a release for social tensions and discontent, helping to keep the crime rate low.

Poverty is a primary concern in Portugal. In 2006 about 18% of the population was below the poverty level. In 2006 unemployment was at about 8% of the labor force and minimum wages were not generally considered to be sufficient to support a family. Many families live in substandard housing. Approximately 30% of all youth drop out of school before completing high school, often for the purpose of seeking employment to help their families.

Portugal has a problem with illicit drug use. In facing such a challenge, the government passed a law in 2001 that essentially decriminalized the personal use and possession of many illicit drugs, including heroin and marijuana. Under the new

law, those found to be in possession of small amounts of drugs are not sent to prison but are referred to a panel consisting of a psychologist, a social worker, and a legal adviser who question the individual and decide upon sentences that include mandatory counseling or treatment, fines, and in some cases community service. While many have criticized the new approach, the government maintains that the move toward treatment instead of punishment should have a positive effect in the long run. Drug sales and trafficking are still considered criminal offenses.

## **20 GENDER ISSUES**

The position of women in Portugal improved greatly after the ouster of the military dictatorship in 1974 and the drafting of the 1976 constitution, which guaranteed women full legal equality. By the early 2000s, women accounted for 55% of all persons enrolled in higher education. In 2007 women made up about 62% of the work force; however, the average salary for women was estimated to be about 23% lower than that of men. A 2004 study estimated that one in three women in the work force have experienced sexual harassment on the job. While sexual harassment is considered to be a crime, most cases are not reported by women who fear losing their jobs. Pregnant women and new mothers have faced discrimination in the work force.

Violence against women, particularly domestic violence, has been a cause for concern. The government has issued a number of laws against rape and domestic violence and generally enforces the laws with strict penalties. Unfortunately, many women do not report incidents of violence and only about 10% of all domestic violence cases are ever brought to trial. A majority of cases are mediated by lawyers outside of the court system.

# ROMA

**ALTERNATE NAMES:** Self-ascriptive names: Roma, Rom, Romanichals, Cales, Kaale, Kawle, Sinti/Manouches. Also known as Gypsies.

**LOCATION:** Dispersed population in Europe; parts of Asia, North, Central and South America, Australia, New Zealand, North and South Africa, the Middle East, and elsewhere.

**POPULATION:** 12–15 million (estimate)

**LANGUAGE:** Romani dialects; also the language of the host country

**RELIGION:** An underlay of Hinduism with an overlay of either Christianity or Islam (host country religion)

## 1 INTRODUCTION

The Roma people originated in India. By the 11th century AD they were located in the area called Gurjara, in what was then the Rajput Confederacy. The Rajputs were a group of clans. Each had its own ruler, a caste of military landowners, and a population belonging to the lower castes, composed of animal drovers, artisans, entertainers, blacksmiths, weapon smiths, and persons in other modest but necessary occupations. Among these supportive castes was a group called *Dom*, who belonged to the aboriginal peoples of India but had adopted the Hindu religion and an Indo-Aryan language derived from Sanskrit. Some groups of *Dom* were nomadic entertainers and artisans. The Hindus defined the word *Dom* as a lower-caste person who did jobs forbidden to higher-caste Hindus; however, to the *Dom* themselves, the word simply meant “man” and, in the plural, “the men,” or “the people.”

In the 10th century, a Muslim kingdom arose in what is now Afghanistan, with its capital at Ghasni. This was called the Ghaznavid Empire, and in 1017, its ruler, Mahmud Ghazni, launched a series of massive raids into India. He and successive rulers entered India, plundering and massacring the people, carrying off thousands of slaves, and laying waste to the countryside. The Rajputs contested these raids, and many battles took place, during which groups of people were displaced or forced to move out of desolated areas. At some point during the 11th century, the ancestors of the Roma made their way into the Upper Indus Valley from Gurjara and spent some time in this region, whose inhabitants spoke Dardic languages, which had an effect on their own.

The ancestors of the Roma then left India via the Shandur or Baroghil pass and entered Xinjiang in northwestern China. From there they followed the Silk Road, which led them to ancient Persia, then through Southern Georgia to an Armenian-speaking region around the city of Trebizond, and finally to the Byzantine Empire, borrowing words from these linguistic regions as they slowly migrated over many generations. From Constantinople (now Istanbul) they traveled up the Balkans and reached the Romanian Principalities of Wallachia and Moldavia by at least the 14th century. Some groups remained in the Balkans below Romania but many moved through Romania, traveling both west and east. By the end of the 15th century, Roma could be found as far west as the British Isles and Spain and as far east as Poland and Lithuania.

At some point during their migration from India, scholars believe, their original name, *Dom*, or *Domba* in the plural, was altered phonetically to *Rom* (singular) and *Roma* (plural), while the caste structure of the group gradually disintegrated until they intermingled and became one people culturally.

Millions of Roma now live in the post-communist countries of Central and Eastern Europe. The post-World War II communist governments of countries, such as Hungary, Romania, and Bulgaria, attempted to assimilate their Roma populations into economic and ethnic mainstreams. These efforts were, for the most part, unsuccessful. The political and economic turmoil that followed the fall of communism has harmed the position of millions of Roma in Eastern and Central European countries. Roma in Slovakia have faced forced residential segregation. Roma communities in Kosovo and other territories of the former Yugoslavia have faced ethnic cleansing from majority communities. In other countries, such as Bulgaria and Romania, Roma have been turned into scapegoats for the economic ills of the post-communist transition. The recent accession of many Central and Eastern European countries to the European Union has brought a new focus to issues of inclusion and human rights for European Roma communities.

## <sup>2</sup> LOCATION AND HOMELAND

Since the 15th century, Roma have been a dispersed ethnic population in Europe. Roma in the Romanian-speaking principalities, later including Transylvania, were enslaved. These Roma are known as Vlach Roma (the “ch” in Vlach is pronounced as *k*). After their emancipation in 1864, large numbers promptly departed and made their way into Central and Western Europe and the Balkans, eventually reaching North, Central, and South America by the 1890s. Today, they are the most numerous and most widespread group of Roma. In Western Europe, because of persecution in most countries, Roma were forced to become highly mobile nomadic groups, giving rise to the tradition in popular literature of the semi-mythological, footloose, vagabond “Gypsy.” In Spain, Roma were forcibly settled and their language and culture destroyed, surviving only in Flamenco music and in the Caló dialect. In Eastern Europe and the Balkans, Roma were tolerated but were considered to be outcasts at the bottom of the social ladder.

By now Roma from many groups have migrated from Europe into the Americas, Australia, New Zealand, North and South Africa, and elsewhere. They assume the nationality of their host countries and consider themselves American Roma, Canadian Roma, Australian Roma, or South African Roma,

depending on where they live. In the past, the colonial powers deported or transported Roma to their colonies in Africa, the West Indies, the Americas, and Australia, while Portugal even sent some to its colony in Goa, India, where they found people speaking a language closely related to their own. Since the fall of communism, hundreds of thousands of Roma have migrated from Central and Eastern Europe to Western European countries, such as France and Italy.

Accurately estimating the number of Roma is a difficult task, because official censuses often undercount Roma communities. Turkey is home to about 2 million Roma, making it the country with the largest Roma population. Current estimates put the number of Roma in Europe at approximately 10 million, making the ethnic group the largest minority in Europe. Of these 10 million, 1.8–2.5 million live in Romania, 600,000–800,000 live in Bulgaria, 500,000–1 million live in Hungary, 480,000–520,000 live in Slovakia, and 250,000–300,000 live in the Czech Republic. In Western Europe, France and Spain have the largest Roma communities. The French Roma population numbers between 500,000 and 1.2 million, while the Spain's Roma population is estimated to be about 700,000. The countries of the former Yugoslavia are home to over 750,000 Roma. The United States is home to approximately 1 million Roma.

### 3 LANGUAGE

The original language (proto Romani) spoken by the Roma when they arrived in Europe has evolved into numerous dialects. The speakers normally refer to the language as *Romani*, *Romani chib* (Romani language), or by the adverb *Romanes*, which means “like a Roma”; thus, they say *Vakiarel Romanes*, he speaks like a Roma (i.e. speaks Romani). The Romani dialects of some splinter groups have different names, such as Romnimus (in Wales), Kaale (in Finland), or Calo (in Spain). Most Romani speakers speak what is called inflected Romani, which has its own unique grammar, as opposed to adopting the grammar of the country in which they live. As an example, note the following comparative sentences:

#### ENGLISH

I am going into the village to buy a horse from the non-Roma man.

Inflected Romani

Jav ando gav te kinav grast katar o gadjo. (These are all words of Sanskrit/Indian origin)

#### ENGLISH ROMANI

I'm jall in' into the gav to kin a grai from the gorjo.

#### SPANISH ROMANI

Voy en el gao para quinelar un gras del gacho.

In the English and Spanish versions, the Romani grammar has disappeared and been replaced by the grammatical structure of English and Spanish, into which the original Romani vocabulary has been inserted. (How this happened is not clear and is disputed by scholars.) The inflected Romani example could belong to many different dialects, while the English and Spanish versions would be understood only by other people who spoke the same dialect.

While English makes use of prepositions, such as *with*, *from*, *to*, etc., inflected Romani dialects replace these by varying the endings of the words themselves (referred to as post-

positions). Below are examples of the inflection of the word *manush* (man).

Nominative	The man is coming	<i>O manush avel</i>
Accusative	I see the man	<i>Dikav le manushes</i>
Instrumental	I went with the man	<i>Gelem le manushesa</i>
Ablative	I heard from the man	<i>Ashundem le manushestar</i>
Genitive	It's the man's	<i>Le manushesko si</i>
Dative	I did it for the man	<i>Kerdem le manusheska</i>
Vocative	Listen, man!	<i>Ashun, manusha!</i>

There are only two genders in inflected Romani. Male persons and animals are masculine, female persons and animals are feminine, and inanimate objects are either masculine or feminine. A chair is feminine, while the house is masculine in Vlach Romani. As commonly spoken, Romani uses many idiomatic expressions, proverbs, and sayings, often with metaphorical qualities. For example, “He is retiring” in English would be expressed in Romani as: *Beshel lesko kam* (His sun is setting). This makes it difficult to write dictionaries of Romani with word-for-word equivalents, leading to the erroneous belief that Romani is not a complete language. For example, there is no verb for *to think*. All dialects employ a word borrowed from another language. However, in Romani itself, “What are you thinking?” is expressed as *So si tut ando shoro*, which means “What do you have in your head?”

Romani employs an English alphabet except for the letter *x* (pronounced like the Spanish *jota*) and *zh* (as in *azure*).

Roma in Christian countries usually take Christian names like those of the people around them, such as Milano, Yanko, or Zlatcho for men, and Mara, Tinka, or Pavlena for women. The last name is the genitive inflexion of the father's Christian name. Thus, a name is *O Milano le Yankosko*—the Milano, son of Yanko (Yanko's Milano), or *E Mara le Zlatchoski*—the Mary, daughter of Zlatcho (Zlatcho's Mary). When Vlach Roma meet they ask each other, *Kasko san tu*—“Whose son are you?” The Vlach Roma have no surnames. Other groups adopt last names similar to those of the people among whom they live. The Vlach Roma also do this for identity papers, driver's licenses, and other documents, but do not use these names among themselves. Many of these “non-official” Roma names are quite colorful. It is possible to find Roma named after famous politicians or celebrities from the entertainment industry. Some Roma names are also derived from distinguishing physical characteristics of the name's owner.

### 4 FOLKLORE

Roma have a rich folklore, which is contained in the *paramichia*, or folktales and legends. Stories would be told around the campfires at night while the adults, teenagers, and children sat around listening to their elders recite them. They later passed them on to the next generation. Like most other groups, the Roma have their ethnic hero. Among the Vlach Roma this is Mundro Salamon or Wise Solomon. Other Roma groups call this hero O Godjiaver Yanko. Among the Wels Kawle, he is Merlino (the Wizard), taken from Celtic folklore. Essentially, Mundro Salamon is the archetypal wise man who uses his mental powers and cunning to escape from those who would harm him or to save others from danger. Since the Roma always lived in small groups surrounded by strangers who out-

numbered them and had the law on their side, they were unable to resort to force of arms to defend themselves. Their defense mechanisms were wisdom and “the smarts,” which Mundro Salamon exhibits to the “nth degree.”

A typical Mundro Salamon story runs as follows: One day Mundro Salamon learned that the Martya, or Angel of Death, was about to come and claim the soul of the village miller who was his friend. He went to the Martya and asked her to spare the miller’s life because he had small children to support and the people of the village needed him to grind their corn. She refused, so Mundro Salamon tricked her. “How could you take his soul,” he asked her, “if he locked himself in a room?” “I would simply dissolve into smoke and slip under the door,” she told him. “Rubbish,” Salamon replied. “You mean you could slip inside this peashooter I am whittling for the miller’s son?” To prove it, the Martya dissolved into smoke and entered the peashooter. Salamon then plugged both ends of the peashooter, trapping the Martya inside. He locked the peashooter inside a metal box, rowed out to the sea in a boat, and dumped the box over the side. For seven years nobody died, until one day two fishermen casting their nets caught the metal box and retrieved it. They smashed it open, found the peashooter, and unplugged it, allowing the Martya to escape.

Now she began to search for Salamon to get her revenge. But Salamon had anticipated she might escape and had taken precautions. He had shod his horse backwards so that the prints of the horseshoes led the Martya to look for seven years in the wrong direction. She then realized her blunder and spent another seven years looking in the right direction. She finally found Salamon, now an elderly man. “Now I’m going to make you suffer,” she told him. “For seven years I will freeze you in ice. Then, for another seven years I will roast you in fire. Then, for seven years I will turn you into rotten pulpwood and you will be nibbled on by maggots. Only after this will I put you out of your misery and take your soul.” “Rubbish,” Salamon said mockingly. “How can you take my soul? You don’t have the power. You’re bluffing me.” “I’ll show you,” the Martya screamed, and blew three times on his face. Salamon died smiling. He had outwitted the Martya even in death!

Roma folklore often impacts the daily lives of ordinary Roma in very significant ways. For example, many Roma believe that diseases are caused by evil spirits (Hungarian Roma refer to these spirits as *beng*, or *bizuze*). According to some Roma traditions, these spirits can take the forms of a shepherd, a dog, a rabbit, or some other animal or human form.

## 5 RELIGION

As Roma tend to adhere to the religion of the country in which they reside, the vast majority of Roma are Christian. Roma in the United States tend to be either Protestant or Catholic Christians. In Europe, the majority of Roma are Catholic, although large numbers of Orthodox Roma live in Bulgaria, Greece, Ukraine and elsewhere. About 10–15% of the world’s Roma are Muslim. Most Muslim Roma live in Turkey, Bulgaria, and Albania. Evangelical Christianity is growing rapidly amongst Orthodox and Catholic Roma, as it allows for more accommodation of traditional Roma beliefs and practices.

Traditional Roma religious beliefs are rooted in Hinduism. Roma believe in a universal balance, called *kuntari*. Everything must have its natural place: birds fly and fish swim. Thus, hens, which do not fly, are considered to be out of balance (and

therefore bad luck), as are frogs, which can go into the water and also walk on land. For this reason, many Roma will not eat hens’ eggs and are afraid of frogs. The Roma also believe it is possible to become polluted in a variety of ways, including breaking taboos involving the upper and lower halves of the body. A Roma who becomes polluted is considered out of balance and must be restored to purity through a trial before the Roma tribunal of elders (called *Kris Romani* among the Vlach Roma). If declared guilty, he is usually given a period of isolation away from other Roma and then reinstated after a specified time. In severe cases of pollution, a Roma can be outlawed from the group forever, but this is rare today. Children are exempt from these rules and from pollution taboos until they reach puberty.

The surrounding host-culture religions are used for ceremonies like baptisms or funerals for which the Roma need a formal religious institution. Except for the elders who are the spiritual leaders, there are no Roma priests, churches, or Bibles except among the Pentecostal Roma, who are a growing minority. Despite a 1,000-year separation from India, Roma still practice shaktism, the worship of a god through his female consort. Thus, while most Roma worship the Christian God, they pray to Him through the Virgin Mary or St. Ann, his female consorts, just as they once prayed to one of the Hindu gods through his consort *Sat-Sara*, or *Kali/Durga/Sara*. In France, there is a shrine at the village of Les Saintes Maries de la Mer in the Camargue. Tradition says that the Virgin Mary, Mary Magdalene, and Mary Jacobee landed there after the death of Jesus, having come from Palestine in a small boat with their Egyptian servant, Sara. The three Marys then preached the Gospel among the local people and converted them to Christianity. Every year, in May, large numbers of Roma from Spain, France, and other European countries take part in a pilgrimage to the shrine, where they pay homage, not to the three Marys but to the servant girl, Sara, who does not exist as an official saint in the Catholic Church. In Romani Saint Sara is called *Sara E Kali* and identified with the *Kali/Durga/Sara* of Hinduism. In France the Roma carry a statue of Saint Sara on a large platform into the nearby Mediterranean Sea.

In Canada, at Sainte Anne de Beauré in Québec, there is a shrine where Roma of the Vlach Roma group make annual pilgrimages late in July during the Novena. The Roma women offer flowers and rice cakes to the statue of Saint Anne, the men prepare a feast table with a roasted lamb, and the Roma celebrate Saint Anne, whose statue appears on the feast table. The ceremonies the Roma perform differ radically from those of non-Roma Catholics, who also attend in large numbers.

## 6 MAJOR HOLIDAYS

Roma in different countries celebrate different holidays, and different holidays are observed by different groups of Roma as well. The Vlach Roma and many other groups celebrate Christmas, Easter, and All Saints’ Day. They have no specific Roma holidays except in Romania, where there are holidays commemorating the emancipation of Roma slaves. In Muslim countries Roma often observe Muslim religious holidays. In some countries Roma take part in the national holidays and play an integral part in religious festivals. In Canada and the United States some families travel to Sainte Anne de Beauré for the annual pilgrimage just to see friends and relatives and to socialize. Others do the same thing in Europe at Les Saintes

Maries de la Mer. Here they can celebrate their group culture, playing music, dancing, singing, and socializing. It also gives the teenagers a chance to meet other young people from different groups and sometimes meet someone they want to marry.

Christmas and Easter among the Vlach Roma are always celebrated by feasts. The head of each extended family will prepare a lavish table and invite all the Roma in the community. Sometimes family heads will get together and pool their resources to hold one large feast for the entire community. There will be music, dancing, singing and socializing. At Easter, each family will dye Easter eggs a special color and place them in a large bowl. These are given, one each, to every guest. There is also a ceremony called *chognimos*, or egg-whipping, where the visitor or guest will bring one of his own eggs and hold it in the palm of his hand. The host will do the same, and they will slap their palms together, usually cracking or crushing both eggs. This is believed to bring *baxt*, or good karma. Many Balkan Roma also celebrate St. George's Day, which they call *Ederlezi*. The holiday celebrates the spring season and is usually observed with feasts and picnics. Some Roma believe that wishes come true on the night of *Ederlezi*. Many also believe that *Ederlezi* is a time when people receive cures for their ailments and good luck.

## 7 RITES OF PASSAGE

Birth is a happy event among the Roma. They believe in fecundity, and large families are the norm. When the baby is born, the mother and her baby are considered agents of pollution and are separated from the rest of the household and from other Roma for a predetermined period, which varies among clans and groups. Once this period is over, godparents are selected from the Roma community. They take the baby to a church for the actual baptism ceremony. They also give the baby a small gold cross. When the godparents return with the baptized baby there is a feast called *bolimos*.

Children are pampered and protected by the Roma. When they reach puberty, they become *shave* (boys) and *sheya* (girls) and are initiated into the world of adults. Boys are taught to drive and to work with their adult male family members at the family trade. Girls are instructed by female adults in women's work and strictly chaperoned when they go to movies or shopping. Teenagers enter adulthood when they marry, which is generally at 15 or 16 for girls and from 16 to 18 for boys. The young married person becomes a *Rom* (male adult Roma) or a *Romni* (female adult Roma). The bride, or *bori*, must serve a period of apprenticeship in the home of her in-laws until the mother-in-law is satisfied that she is following the laws of respect and pollution to the family's satisfaction.

When adults become middle aged, they graduate to the ranks of the elders: men become spiritual leaders of the community and sit as judges on the tribunal of elders. Women, once they pass through menopause, can no longer pollute men and are then "sanctified" among the Vlach Roma. They too become spiritual elders who advise the younger women. Some gain a reputation for white magic and herbal remedies.

Death among the Roma is a serious affair. There is a one-year mourning period called *pomana*, with feasts for the dead at 3, 6, 9, and 12 months, as well as the actual funeral feast. Deceased Roma join the ranks of the ancestral dead who watch over the actions of the living and are called as witnesses at solemn events like the swearing of oaths at the tribunal of elders,

where they are assumed to be spiritually present and able to send a *prekaza*, or jinx, to any Roma who perjures himself. Roma do not discuss their dead. They say simply *Mek les le Devleste*—"Leave him to God to be judged."

Roma traditions have proven remarkably durable. They have survived repeated cultural assimilation campaigns in many of the countries in which Roma live. Furthermore, the phenomenon of Roma conversion to Evangelical Christianity has done little to change the traditional rites of passage of the Roma.

## 8 INTERPERSONAL RELATIONS

Roma greetings are respectful. When a guest arrives, the host will say "Welcome! God has sent you!" The guest or guests must also be served food and drink. Not to do so would be a sign of disrespect. The usual greeting is a handshake, although Roma men often embrace relatives and close friends and kiss them on the cheek. Women also embrace and kiss when they meet. The guest or guests must be shown the utmost in politeness, served food on clean dishes, and offered whatever they might require. Family members and friends are usually received more casually than adults from another clan or an unrelated family group. When such people visit, the host will often provide entertainment and ask his sons to play music and his eldest daughter to dance. Women must appear modestly dressed before guests and at group gatherings. Roma girls do not go on dates and must be chaperoned outside the home. Boys have more freedom and are allowed to go to dances and socialize with non-Roma teenagers.

Roma body language varies in different countries but most Roma are very expressive and impulsive. They make use of gestures, use their hands when talking, wink, snap their fingers, and indulge in mimicry. When talking about somebody else, they will imitate his or her voice or mannerisms. Among the Vlach Roma, behavior toward other members of the group, including the beliefs that govern taboos, is codified in the *Romaniya*. Whereas most modern cultures have two concepts of cleanliness (clean and dirty), the Roma have three: *wuzho*, or clean; *melalo*, dirty with honest dirt; and *marime*, which means polluted or defiled among the Vlach Roma (other groups use different words). Where Westerners regard a person who showers twice a day, even if he is a plumber, as clean, a Roma man who worked as a plumber would be defiled or polluted no matter how many showers he took, while a man who sold horses for a living might not take any showers but would be considered unpolluted. While non-Roma are concerned with visible dirt, Roma are concerned with invisible pollution.

Another central belief regarding cleanliness involves the upper and lower halves of the body. Roma do not take baths but shower standing up, since the lower part of the body is considered an agent of pollution. The body above the waist is considered clean, and the head is the cleanest and purest area of all. Clothing worn above the waist must be washed separately from clothing worn below the waist (also, men's clothing cannot be washed with women's clothing). This demarcation between the halves of the body accounts for another Roma custom that often amazes outsiders. Since the female breast is above the waist, it is not seen as a sex object. Many Vlach Roma women carry money, cigarettes, and lighters in their brassieres. It is not unusual for the husband to reach over and help himself to a pack of cigarettes and lighter concealed in his wife's low-cut

blouse. Women's legs, however, can only be visible below the knees, hence the traditional long skirts of Roma women.

Sometimes a Vlach Rom man will experience a string of *bibaxt*, or bad luck, and will assume that he has inadvertently done something that has placed him out of balance. Believing that God is punishing him, he will throw a lavish feast, or *slava*, to some saint, usually Saint Mary or Saint Ann or, among some groups, Saint George. He will rent a hall and prepare a long table, inviting all the local Roma in the town or in his *kumpaniya* (an economic unit of Roma occupying a specific geographical area). He hopes that the saint he honors with his feast will intercede with God to change his bad karma (*bibaxt*) and remove the *prekaza*, or jinx, from him, and provide him with good karma (*baxt*). This belief in *baxt* is fundamental to most Roma groups. One gets *baxt* by being in balance and one stays in balance by following the *Romaniya* (cultural taboos) and adhering to the *potchiyaimos Romano* (Roma code of respect).

The *Romaniya* affect many aspects of Roma life. Dishes cannot be washed in the sink or in pans used to wash clothing. The floor is considered defiled, so food or anything connected with the intake of food, like dishes, cannot be placed on it. Anything that does has to be destroyed, because detergent cannot remove pollution. Roma wash their hands constantly—after touching their shoes or doorknobs, or doing anything considered necessary but potentially defiling. Menstruating women have the potential to pollute men.

If a Roma person is declared to be polluted, he or she may not socialize with other Roma nor have any dealings with them, since Roma believe that the pollution can spread from one person to another and contaminate the entire community.

The relationship between Roma communities and non-Roma communities is often strained. Since the fall of communism, the level of anti-Roma discrimination and violence has increased in Central and Eastern Europe. Discrimination and hostility towards Roma has fueled the social segregation of Roma from majority populations. Roma beliefs about cleanliness, along with a traditional aversion to *Gadje* (non-Roma people), also leads to the alienation of Roma from other communities.

## 9 LIVING CONDITIONS

The living conditions of Roma vary enormously, from the wealthier, technologically advanced countries like the United States and Canada to poor Balkan countries. In any society, Roma usually live at a somewhat lower standard than the non-Roma—in Albania, where the non-Roma have next to nothing, the Roma have even less. Roma are usually industrious and are always able to earn enough to feed and clothe themselves except in circumstances where they are prevented from doing so, such as under the former Communist regimes in Eastern Europe, where free enterprise was a crime against the state.

Roma fit well into societies where there is a surplus of consumer goods that they can buy and sell, or where there is scrap they can collect to recycle. While many Roma are nomadic, especially in Europe, others are sedentary. They might settle in trailer camps, living in horse-drawn wagons or travel trailers, or in modern apartments. Others live in shantytowns or *bidonvilles* in France and Spain, which are often bulldozed into oblivion by the town councils while the occupants are at a local feast. Many Roma in Western Europe are squatters, occu-

pying condemned buildings while trying to find more suitable accommodations. In the United States many Roma own their own homes or rent decent living accommodations. In Central and South America many are still nomadic and live in tents. In Portugal Roma travel with horses and wagons and sleep in tents.

The settled Roma of Eastern and Central Europe tend to live in ethnically homogenous villages or ghettos. In some cases, residential segregation is a choice of Roma families. In other cases, it is forced upon Roma. For example, in many Slovak towns, Roma have been forced from city centers and herded into crowded ghettos. In most of Europe, the infrastructure and social services available in Roma ghettos is of much lower quality than what is available to members of the majority-communities.

Nomadic Roma are often healthier than those who lead sedentary lives. The Roma diet was evolved for a nomadic and active people, and when they settle down and still eat the same types of foods, they often become overweight and suffer from health problems. Women generally live longer than men, who often pass away in middle age from heart attacks. Roma life can be stressful because of constant problems arising from their lifestyle, which is often misunderstood by the law enforcement agencies who move them on when they are traveling or, when they are sedentary, harass them over by-laws, work permits, and licenses. In Eastern Europe, there is a high mortality rate among Roma children and infants, and it has been reported that 80% of the orphans in Romania are Roma children suffering from diseases like AIDS (often caused by infected medical syringes).

Except in rural areas of the less developed countries, where they still use horses and wagons, most Roma have made the transition to cars, trucks, and travel trailers. In countries like the United States they fly to visit relatives or to attend weddings. In Europe they travel by train, bus, or in their own cars and trailers. The Roma in the United States and other developed nations see the car as a status symbol and try to own an impressive vehicle. Usually the interior sports torn upholstery and stains caused by children, but from the outside the vehicle reflects pride of ownership. The Roma have adopted the conspicuous consumption of their fellow Americans and love to show off their purchases to visitors. They often buy expensive jewelry, watches, home furnishings, and appliances as well as luxurious carpets and other furnishings. In Europe, Roma caravans are often full of expensive china dishes. They also buy tapestries and brass decorations. In general, Roma like to live in comfort. Even if they live in substandard housing, they will try to fill their homes with attractive furnishings and decorations.

Discrimination and poverty tend to the limit the access to health care of most Roma. One effect of poverty and lack of health care access has been an increase in the HIV rate amongst Roma. In Bulgaria one study found that Roma intravenous drug users were several times more likely than non-Roma intravenous drug users to contract HIV. Lack of information about safe sex and the increasing prevalence of sex work amongst impoverished Roma also leads to higher HIV rates.

## 10 FAMILY LIFE

Roma families are usually large and extended. The nuclear family is rare and unmarried adults are looked upon with suspicion. To be unmarried means to be out of balance according to the Roma beliefs. Among the Roma women are equal to men, but each sex has its own traditional role. The men go out to work and earn the larger sums of money, which tend to come in sporadically, while the women earn the day-to-day expenses needed to run the household. This is somewhat reversed in the United States, where the main income in many families comes from the reader/adviser parlors of the women. Here the husband acts as a manager/agent as well as working for himself in some trade or profession. This applies primarily to Vlach Roma, however. Other American Roma groups differ. Among the Bashalde, or Hungarian musician group, the men play music while the women generally remain at home and fulfill the role of wife and mother. Among the Romanichals the men earn most of the money, but the women also contribute by selling items or operating a tea room. The Roma woman, or Romani, is the absolute ruler of the home and plays a very matriarchal role. The eldest daughter, or *she bari*, also has a special role in the family. She replaces the mother in the role of housekeeper when the mother is sick or absent and is responsible for the meals, housecleaning, and the care of her younger siblings. Men do cook and do housework but their role is often limited to doing the dishes and cooking the lambs for a feast. Generally they clean the house only if their wives are unable to do so.

Pets are rare among the Roma since animals can pollute the Roma environment. Watchdogs are kept outside, while cats, which can jump and climb, are taboo. However, some groups are more relaxed toward pets. Horses are considered clean animals and many Roma like to own them even if they no longer need them to travel. Some families even own racehorses.

Since the fall of communism labor migration has become a common phenomenon for Roman males from Central and Eastern Europe. Labor migration often weakens familial ties in normally tight-knit Roma families, leading to higher divorce rates in Roma communities.

## 11 CLOTHING

There is no traditional male Roma costume. Women among the Roma wear a traditional costume composed of a voluminous ankle-length skirt tied on the left side at the waist, a loose, low-cut blouse, a bolero vest, and an apron. In the United States the bandanna of the married woman is often replaced by a thin strip of ribbon. In Europe the full traditional female costume is still in common use among the Vlach Roma and other more traditional groups. Roma men like to dress well and often adopt a particular style. In the United States during the 1980s the "J.R. look" from *Dallas* was popular: the Stetson, cowboy boots, and Western suit of the Texas oil tycoon. Roma men wear expensive suits but seldom wear ties, except for Western-style string ties. In Europe men in some groups, like the Romanichals of Britain and the Sinti of Western Europe, wear a *diklo*, a type of neckscarf, around the neck, often with an ornate ring that they slip over it to tighten it. Most Roma men like fancy belt buckles and lots of jewelry. Women also wear jewelry. Traditionally they wore gold coins, or *galbi*, on a gold chain around their necks. In modern societies too many have been mugged and their chains stolen. Nowadays they seldom wear them outdoors unless accompanied by men.

For everyday wear Roma dress casually. When working men wear a business suit without a tie, unless they are doing manual labor like sandblasting or spray painting, for which they will wear jeans and an old shirt. Hats are still popular among older Roma men and they also wear them indoors, at feasts and even just sitting in the living room. Teenagers and younger men adopt the local styles, such as baseball caps, sneakers, and windbreakers. Girls can wear jeans at home, but when guests arrive, they have to rush off and change into something more traditional. Miniskirts and other revealing garments are forbidden by the parents.

## 12 FOOD

Roma food differs from one country to another. The roasted lamb of American Roma feasts becomes the roasted pig at Hungarian Roma feasts. The Vlach Roma love stuffed cabbage rolls, which also appear among the foods eaten by Roma of some other groups. Stews are popular among most Roma groups and in the past nomadic Roma always kept a stewpot simmering in the camp, where the hungry members of the group could help themselves. Many items of small game were baked in clay in the fire, especially hedgehogs, which are a delicacy among some nomadic Roma.

The two basic dietary staples of the Roma are meat and unleavened bread, called *pogacha*, augmented by salads and fruit. Roma drink a lot of tea specially prepared their own way, not with milk, but with slices of fruit in glasses with sugar. Tea is

often made in a large silver samovar among the Vlach and Russian Roma. Most prefer cast-iron or copper pots for cooking and try to avoid modern aluminum pots and pans. Lambs are roasted outdoors on revolving spits and sprinkled with beer. The crusty skin of roasted lamb, called *chamb*, is considered a delicacy.

There are many taboos surrounding food. Certain foods like peanuts can only be eaten at a *pomana*, or funeral feast. Bread cannot be burned, and any food that falls on the floor is polluted and must be destroyed. Horsemeat is taboo to all Roma. Food served at a funeral feast must be eaten before sundown or given away to total strangers. Pregnant or menstruating women among the Vlach Roma and the other more traditionally minded groups cannot prepare food to be eaten by others, especially guests, and all foods must be washed and cooked in special containers used only for this purpose. Roma generally do not have set mealtimes. The biggest meal of the day is in the early evening when all the family is home. Food prepared by *Gadjes* is considered unclean. The inability of Roma to eat food prepared by non-Roma reinforces the cultural and social separateness of the Roma from majority-populations.

### 13 EDUCATION

Until the 20th century a formal education was virtually unheard of in the Roma community. Traditionally parents taught their children the skills they needed to survive as Roma. In the modern world, however, even the traditional Roma occupations, as well as the newer ones they are entering, require literacy. In Eastern Europe under Communism a fair number of Roma were educated and some have become doctors, journalists, teachers, nurses, and technicians. The Vlach Roma and other traditionalist groups tend to see education as assimilating their children, and the schools are viewed as dangerous places and agents of pollution. In Spain the illiteracy rate amongst Roma is 15%, and in Hungary the illiteracy rate amongst Roma is 23%. High Roma illiteracy rates are common in almost all countries where Roma live.

Once children of both sexes reach puberty, they are usually taken out of school and the boys begin to work with their male elders. The Roma would like schools where their children can be taught their own language, culture, and history, preferably by Roma teachers or non-Roma who are sympathetic to and familiar with Roma culture. In Europe most schools aim at assimilating Roma children into the dominant culture of their country. Today, the Roma have a flag, an anthem, and an educated elite that is growing among the younger generation. The concept of the Romani nations, rather than isolated groups of traditional Roma, is emerging. Many young Roma want to help educate their fellows but mass education for Roma belongs to the 21st century. Roma want the right to define themselves in education, not to be defined by outsiders.

In addition to cultural issues, discrimination often limits the access of Roma to educational opportunities. Many Roma children who live in post-communist European Union (EU) states are forced into remedial schools from an early age. These schools often serve as a means of segregating Roma children from the children of the dominant ethnicity. The combination of poverty, Roma culture, and outside discrimination has created a situation in which the number of Roma who complete higher education is miniscule.

### 14 CULTURAL HERITAGE

The Roma have a strong cultural heritage, which is expressed mainly in music and dance. The roots of Roma music go back to India and show traces of all the musical cultures to which the Roma have been exposed in their migrations. Roma music from certain countries has become world renowned. Foremost is the Flamenco of the Spanish Roma, who are called Cales. Developed in Andalusia, the former Moorish kingdom of Spain, Flamenco displays Roma, Moorish, and Spanish influences. The Roma Flamenco differs from the non-Roma Spanish Flamenco; it has always been performed and developed by a small number of interrelated families.

Equally well known is the Hungarian Roma music, played on violins and cimbaloms, which can be heard in many Hungarian restaurants, even in the United States and Canada. Russian Roma music has also become famous. Under the czars Roma choirs performed for the royal family and the nobility, while other musicians played for army officers and businessmen at restaurants and inns. In France the Sinti musician Django Reinhardt popularized Sinti swing, which became very popular worldwide. The tradition has been continued by other Sinti musicians. Roma music is also popular in Turkey. Roma musicians can be found serenading couples in many of the fashionable cafes of Istanbul. One import from Roma music is the Gypsy Kings, who play a mixture of traditional Flamenco and Salsa. More recently the rock group Gogol Bordello has gained international success. The group mixes traditional Roma melodies with punk rock, creating a new genre which is now known as Gypsy Punk.

Roma dancers are also world famous. Usually it is women like Carmen Amaya who are best known, but many male Flamenco dancers, such as Vicente Escudero, have also emerged on the popular scene. In the 1990s, Flamenco dancer Joaquin Cortes received wide acclaim in Europe and was labeled "the Demon of Dance." Music among the Roma has always been divided into the music of the professional musician class—clans and families whose vocation has always been entertainment—and the simpler folk music of the Roma in general, which until recently was never recorded or made available to outsiders. The songs are usually in Romani, and there are songs and dances for specific cultural events, like marriages, feasts, and other gatherings.

Among the Vlach Roma the fast step dance *baso* is performed by both men and women. It is a dance of respect, and at a feast, men will dance singly, calling out "I honor you (name of host)." Women can dance in groups or singly. There is also a folk dance called the *kolo* where Roma dance in a circle. Folk-songs are traditional and exist in many versions. The melodies can be ancient from now-forgotten sources or might be taken from modern popular music and given Romani words.

### 15 WORK

Since their arrival in Europe Roma have been self-employed artisans, entertainers, and middle men dealing in various commodities. There have always been Roma horse trainers, animal dealers, rat catchers, and other lines of work too numerous to list. The Roma economy has been built around self employment and the perpetuation of old skills, plus the acquisition of new skills to adapt to new technological developments. In the past, and to a large extent today, this involves commercial nomadism. Even in slavery, in the principalities that later became

modern Romania, each group of slaves had its own skill, from gold panners to ironsmiths, musicians, coppersmiths, brick makers, and bear trainers. Thus, work to the Roma not only served as a survival strategy but also defined to which group or class the individual Roma man belonged. Of course, musicians might trade a few horses and coppersmiths might temporarily switch to some other trade, as most Romas were multifaceted and able to turn their hand to different occupations as the economy demanded.

Roma men usually work in groups, either with relatives or with other Roma skilled in their profession. The profit from any work done is divided equally among all the partners who worked on the job, whether buying and selling automobiles or plating vats for a jam factory. Women also share the profits when they work in groups. An adult man or woman receives a full share of the profits, while unmarried members of the group receive half a share. Today, Roma have adapted to the modern marketplace and can be found dealing in real estate, selling diamonds, and buying and selling automobiles, trailers, antiques, clothing, and other items. Some are professional entertainers; others are scrap collectors. Wherever there is an economic niche, the Roma will find it and try to make a living as new work strategies become viable.

Since the early 1990s millions of Roma have migrated to Western Europe in search of work. Unemployment is a very serious problem amongst the Roma of Eastern and Central Europe; in Prague, one of the most prosperous cities of the post-communist world, the unemployment rate of Roma is estimated to be 70%. In contrast to previous movements of Roma, some of the current migration wave is made up of lone adult males. The destination of labor migrants often depended on which country they were leaving. For example, Roma labor migrants from Albania often moved to Greece. Roma from Romania often left for France or Italy in search of work. Roma men who work abroad often send home remittances to support their families.

## 16 SPORTS

While there are individual Roma who participate in mainstream athletic events, sports in general do not appeal to the Roma, although certain regional games can be found, such as Roma wrestling in Romania. Many Roma enjoy horse racing and will patronize local racetracks. Roma men and teenagers also like to play billiards, often for money with non-Roma. It is a status symbol among American Roma teenagers to be a good billiard player. Children play games, usually those of the surrounding culture. Nomadic Roma children make catapults and learn to hunt wild game. In Europe Roma participate in mainstream rather than Roma sports, and there are a few Roma soccer teams. Since they have always been a culture geared strongly toward survival, Roma have had little time or inclination to develop an ethnic sport.

## 17 ENTERTAINMENT AND RECREATION

Roma, especially children and teenagers, enjoy going to the movies. Roma do not care much for live theater, although some Romas have become actors, notably the late Yul Brynner, whose mother was Roma.

In a Roma home, the television, if there is one, is usually left on so that the children may watch it. Adults seldom have time for television. Roma are exposed to popular culture on televi-

sion but most adults take no part in it. Since Roma have little to do with non-Roma, except for business, many form their ideas of non-Roma culture from what they see on television. Teenagers may adopt the slang they hear from teenagers on television or copy their way of dressing, but for the most part the surrounding mainstream culture contravenes Roma taboos.

Some families, tired of the local routine, will decide to travel around for a while just to meet relatives, attend a social function in some other city, or camp out in a camper van like the Roma used to do when they were nomadic. Local fairs like Appleby Fair in Britain also attract many Roma, not only those who still deal in horses. Some will go to sell seconds of fine china or to hawk other wares. Some go just to be there and to socialize and perhaps turn a little business their way.

In recent years European Roma have begun to enjoy Romani-language television, radio, news and Internet publications. However, illiteracy and poverty have limited access to these media outlets. In addition most Romani media is produced by highly educated Roma elites, leading to a disconnect between ordinary Roma and the Romani media.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

While some individuals have excelled as painters or sculptors, and in other art forms, the majority of Roma practice few handicrafts. Some Roma men make belts or leather clothing and women may do elaborate embroidery work, while both sexes create artifacts, such as baskets, for sale.

The carving and fretwork designs seen on the Roma wagons in England became world famous and were later copied by European Roma in some countries. The original Romanichal caravans appeared around 1860 and were a Roma adaptation of the original English showman's wagon. These *vardos*, or caravans, were adorned with intricate carvings and fretwork designs, painted and even highlighted with gold leaf in some expensive versions. The last type to survive the automobile and the freeway was the bow top made from birch planks bent into a semicircle inside a wagon base, covered with canvas, and painted green to help hide it among the trees and away from the police. Today, some of the ornately carved versions are made for European collectors by Roma craftsmen, while some Romanichals build or buy one, not to travel with, but simply to own as a matter of nostalgia and prestige.

In Eastern Europe, Roma woodcarvers also make wooden bowls and trenchers. Others manufacture wooden flutes and other musical instruments. Among the Vlach Roma the *Kalderash*, or coppersmiths, make intricate copper objects of artistic merit, usually on order for some prestigious hotel or restaurant. Before the age of plastic, Roma also made wooden clothes pegs.

A new European Union push to foster Roma inclusion has led to renewed interest in traditional Roma crafts. Crafts are seen as a way of providing employment opportunities in Roma communities.

## 19 SOCIAL PROBLEMS

European Roma today are survivors of the Nazi Holocaust in which Roma, like Jews, were singled out as an ethnic group to be completely exterminated. At least a million Roma died in Nazi Germany and in the occupied countries. Others were annihilated by Nazi collaborationist regimes, such as Croatia under the Ustashi. Postwar Communism in Eastern Europe tried

to assimilate the Roma into the general populations, and in all countries they became an unwanted, surplus population denied their identity as a people.

Since 1977 Roma have been recognized by the United Nations as a legitimate people with rights to their own identity, language, culture, lifestyle, and religion. The challenge now is to have the governments of the former Communist countries of Eastern Europe recognize these rights. In most of these countries, as reports by Helsinki Watch, Human Rights Watch, and other organizations have attested, the official government policy toward Roma is ethnocide—the destruction of their language, culture, and identity in order to assimilate them. In Slovakia, the Czech Republic, Romania, and Hungary, Roma have become the new scapegoats and the target of skinheads and other lawless elements of society. In Slovakia Roma have been forcefully expelled from city centers and sent to squalid ghettos. In 2008 Roma communities in Naples, Italy were attacked by violent mobs and entire neighborhoods were burned to the ground. In other parts of Central and Eastern Europe Roma face routine violence and acts of discrimination. Part of the problem in Romania is that when Roma were slaves between the 15th and 19th centuries, they were stigmatized and regarded as inferior. The myth of the half-human, dangerous, dirty, uncivilized, and lazy Roma slave became part of the Romanian psyche, in much the same way that the myth of the racial inferiority of African Americans became part of the communal psyche in the southern United States. In other countries folk mythology reduced the Roma to the level of romantic misfits or backward savages who should be civilized and assimilated into the general population.

Large numbers of Roma have fled to Western Europe, where they have created a refugee problem. They are entitled to apply for asylum but many countries deport them for lack of documents or for false documents sold to them by underworld “people smugglers” who have helped them enter the country. The Roma in the Americas, Canada, and other countries outside Europe have much greater freedom and protection under the law, although still subject to ethnic stereotyping and discrimination and conflict with authorities over aspects of their lifestyle and economic practices.

Next to discrimination, poverty is the greatest challenge faced by most Roma. In 2006 the \$4.30/day poverty rate amongst Roma was over 45% in most countries of Southeast Europe. High unemployment rates, high levels of discrimination, and low levels of education attainment all create a vicious circle that leads to the continuation of poverty for Roma.

Alcoholism and drug abuse exist among Roma, although drugs are taboo under the pollution code of the Vlach Roma and other groups. While Roma used to drink only at feasts and on special occasions such as a betrothal ceremony or a funeral, today it is not uncommon for them to turn to alcohol as a temporary escape from their problems. The disease of alcoholism is not understood among the Roma. If a Roma gets drunk, the blame tends to fall on the alcohol, not on the person. The Roma say *Lya les e rakiya*—“The whiskey took hold of him”—as if it were some kind of malevolent spirit that entered and possessed him. Although forbidden, drug use has also taken hold amongst many young Roma. Intravenous drug use is increasing the spread of disease, such as HIV and hepatitis.

Traditionally Roma have not been dangerous criminals. Their crimes are generally of a petty nature, consisting of con-

fidence games, shoplifting, or other types of pilfering. Offenses like selling drugs, organized prostitution, arson, murder for hire, and loan sharking are all forbidden to them by their own code of laws. That said, abject poverty has led many Roma to commit such serious crimes. Crimes like these are thought to bring bad karma and place the criminal “out of balance.”

## 20 GENDER ISSUES

In traditional Roma households the roles of men and women are strictly defined. The duty of men is to provide for the family. Women may also contribute to the household income but their primary duty is to cook, clean, and raise children. Many Roma girls leave school early to help their mothers with housework. This has led to an imbalance in the literacy rates and levels of educational attainment between many Roman males and females. Roma tradition dictates that girls remain virgins before marriage. The consequences for girls suspected of premarital sex can be quite severe. It is uncommon for males to be seriously punished for similar activity.

Most Roma view homosexuality as an extremely negative phenomenon; homosexuals are regarded as unclean. If outed, gay and lesbian Roma are usually banished from their community. In many Roma communities, women and young people are challenging traditional values that pertain to gender and sexuality. However, change is difficult, because most Roma are quite resistant to transforming their culture to conform to that of the *Gadje*.

## ROMANIANS

**LOCATION:** Romania

**POPULATION:** 22 million, of whom 91% are ethnic Romanians

**LANGUAGE:** Romanian

**RELIGION:** Christianity (Romanian Orthodox Church; Greek Catholic Church; Protestantism)

### <sup>1</sup> INTRODUCTION

Romania has a long and heroic, but tragic history. The ancient historian Herodotus writes that the territory that comprises Romania today was inhabited by the Dacians and Getae as early as the 6th century BC. The ancestors of the Romanians organized a separate country known as Dacia, which developed and prospered to the time of King Decebalus (AD 87–106). Dacia increasingly became a menace to the expanding Roman Empire. After a few futile attempts to subdue the Dacians, the Roman emperor Trajan fought two fierce battles with them between AD 101–106 and finally conquered Dacia in AD 106. The victory over the Dacians was considered so important in Roman history that a monument was erected in the Forum at Rome to commemorate the event. Known as “Trajan’s Column,” it depicts battle scenes in bas-relief of Dacians in their native dress and habitat. It still exists today and is considered “the birth certificate of the Romanian nation.”

From 106 to 271, Dacia was a Roman province. Besides the indigenous Dacian population, a growing number of colonists from throughout the Roman Empire settled in this area. The province became one of the most prosperous in the Roman Empire and was known as “Dacia Felix” (happy and flourishing Dacia). As a border province, however, Dacia became increasingly difficult to defend against the barbaric invasions from the East. Therefore, Emperor Aurelian decided to retreat from Dacia with his armies in 271, ceding the country to the invading Goths. Most of the native population, which by this time was developing into a new nation, remained in Dacia. The use of the Latinized Daco-Roman language persisted in the region as a means of communication, commerce, and administration. This new language eventually evolved into the distinctive Romanian language. The language, religion, customs, dress, beliefs, behavior, techniques, tools, ideas, and many other vestiges of the early civilization prove without a doubt the Romanians’ Latin origin.

The drama of Romanian history is that of a people blessed with a beautiful and rich country, but also situated at the crossroads of invasion routes for the first millennium of its existence. Fortunately, most of the invaders came and left. After the Goths left in 375, and the Huns left in the 6th century, there was a slow but steady infiltration of Slavs among the Romanians. Though most of them proceeded on south of the Danube, some of them remained and were assimilated by the native Romanians, adding some of their linguistic, cultural, and social influences to the cultural mix.

Beginning in the 10th century, there was a gradual but steady penetration of Hungarians, especially among the Romanians of Transylvania, the cradle of the Romanian nation, which became a Hungarian province and remained so until it finally reverted to Greater Romania in 1918.

Romanian political units were formed in territories inhabited by them beginning in the 11th century, including Moldova and Wallachia. They eventually became principalities in the 13th century. Muslim Turks had a firm hold on Romanian territories. Nevertheless, Michael the Brave, after a number of victories, was able to unite briefly all the Romanians under one rule in 1601. Though short-lived, this unification contributed to the strengthening of Romanian identity.

The Ottoman Empire imposed its rule over the Romanian principalities for nearly 300 years. In the 18th century, the Turks sent Greek Phanariots to rule the Romanian principalities, from which they extracted considerable sums. To get back the money they had invested, the peasants were heavily taxed and harshly oppressed.

With the help of Russia, which defeated the Turks, the Romanians were given more freedom and granted a new constitution in 1829. Finally in 1859, Wallachia and Moldova were united into one country, with Prince Alexandru Ioan Cuza as ruler. Antagonizing some of the Romanian leaders, he was forced to resign, and in 1866 Prince Carol of Hohenzollern was invited to head the country. In 1881 Romania became a monarchy, and the new King Carol I ruled for over 30 years. After his death in 1914, he was succeeded by his nephew, King Ferdinand, who married Princess Marie, the granddaughter of Queen Victoria of Great Britain.

Romania fought on the side of the Allies during World War I and was rewarded the Austro-Hungarian provinces of Transylvania, Banat, and Bucovina in 1918, thus uniting most of the Romanians in one country for the first time in its history.

In 1940, General Ion Antonescu's government signed an alliance with Germany, which lasted until 23 August 1944 when the Romanians joined the Allies and the Russians entered the country. Two provinces (Bessarabia and present day Moldova) were taken by the Russians as spoils of war, and attached to the Russian Federation (the former USSR). With the forced abdication of King Michael, the few Romanian Communists gradually took control of the government, the educational system, and the economy. In 1965 a new constitution along communist lines was adopted and Nicolae Ceausescu became president of the country, which was known as the Socialist Republic of Romania. Under his harsh regime, the country faced a dramatic economic crisis with many shortages of foods and consumer goods.

With a single-party political system completely controlled by the Communist Party, the living standard of the average citizen eroded noticeably and the national debt rose abruptly. Citizens were summarily arrested, tried, and imprisoned. Many fled the country. It is believed that over 500,000 Romanians emigrated to Western Europe, the United States, and elsewhere throughout the free world. Most of the Jews and German-speaking citizens also left for Israel, Germany, the United States, and other countries.

Those who remained behind, especially the young people, showed their opposition by antigovernment demonstrations calling for changes. When the security forces opened fire on demonstrators in Timisoara on 16 December 1989, a state of emergency was declared, but the protests continued to spread and grow in Bucharest and throughout the country. As a result, Ceausescu was arrested, tried, summarily judged, and found guilty of genocide. He was hastily executed on 25 December 1989.

After the execution of Ceausescu and the ousting of many Communist officeholders, a hastily garnered government made up mostly of former Communists and headed by Ion Iliescu took over the reins. The situation did not improve much; in some respects, it even worsened. Inflation rose, living standards suffered, and corruption continued. Nevertheless, Ion Iliescu was reelected for a second term. He was finally voted out by a coalition of democratic parties in November 1996; Emil Constantinescu was elected as the first non-Communist president in over 50 years. The coalition government that took over power in 1996 was made up of former dissidents, intellectuals, and members of historical Romanian parties that survived Communist rule. While they were well intentioned, and openly tried to implement ambitious reforms, they were not seasoned politicians. Consequently, their four-year term was marked by internal power struggles, frequent cabinet changes, and a worsening of the economic, political, and social situation. Only towards the end of their rule, when Mugur Isarescu (president of the National Bank of Romania) was installed as prime minister did the situation improve slightly. In 2000 elections were held and power was won again by the former-Communists (christened under a new name—the Socialist Democratic Party). Ion Iliescu became president (for what some called an unlawful third term), and Adrian Nastase became prime minister. Although their rule was plagued by accusations of corruption, Romania enjoyed strong and sustained economic growth, and a general improvement of living conditions. In 2002 Romania was invited to join the North

Atlantic Treaty Organization (NATO), and finally did so in March 2004.

Following the 2004 elections, a coalition government (dominated by the Democratic Party and the National Liberal Party) took power, and Traian Basescu was elected president for a five-year term. This government was fraught with internal disputes, and split in 2007. As of 2008 Romania had a minority government headed by Calin Popescu Tariceanu of the National Liberal Party. Tariceanu and Traian Basescu (of the Democratic Party) openly criticized each other's policies, creating a tense political climate. Despite the contentious political situation, the Romanian economy continues to expand, and living standards are increasing rapidly. In January 2007, Romania joined the European Union (EU).

## 2 LOCATION AND HOMELAND

Romania is located in Eastern Europe at the mouth of the Danube River as it flows into the Black Sea. Situated west of Russia, east of Hungary, north of Serbia and Bulgaria, and south of Slovakia and Poland, it is slightly less than 238,000 sq km (92,000 sq mi), about the size of New York State and Pennsylvania combined.

The majestic Carpathian Mountains run from north to south through the middle of the country. Giving way to sub-Carpathian hills and finally to vast fertile fields, the mountains divide Transylvania, the largest province, from the Old Romanian Kingdom.

Romania has a population of about 22 million people with a density of 97 persons per sq km (252 persons per sq mi). Ethnic Romanians comprise 91% of the population. The remaining population includes Hungarians (6.7%) and various other minorities. Before World War II, Romania had a large Jewish population, most of whom have since emigrated to Israel, the United States, and Western Europe. It also had a sizeable German minority—mostly Saxons and Swabians—who had been in the country since the 13th century and who emigrated in large numbers to Germany, the United States, and elsewhere during and after World War II.

Romania is made up of about 200 cities and 15,000 villages, divided administratively into 42 counties. The capital is Bucharest, with a population of over 2 million people.

Romania is in the North Temperate Zone, with hot summers, cool autumns, and cold winters with snow and winds. It is primarily an agricultural country with 45% arable land. Among the natural resources are oil, gas, and coal, much of which has dwindled since Germany and the USSR siphoned them off during and after World War II. There is a growing industrial and commercial base, which employs about one-third of the labor force.

## 3 LANGUAGE

The Romanian Orthodox Church helped to formulate and promote the Romanian language and culture. The first schools were opened and the first books written and published in Romanian Orthodox monasteries.

The Romanian language is one of the major modern Romance languages of the world, alongside Italian, French, Spanish, Portuguese, and a few other minor ones. It is closest in structure to the Latin spoken in the first centuries AD by the average Roman citizen on the street. Romania's very name,

deriving from "Romanus," as the Roman colonizers of Dacia were known, is an indication of its Latin heritage.

In spite of attempts by foreign rulers—Turks, Greeks, and Hungarians—to impose their respective languages and cultures upon the Romanian people, its fundamental Latin origin emerged practically intact. Latin-derived Romanian is the language spoken and written by the overwhelming number of Romanians today.

## 4 FOLKLORE

Romanian culture is defined by a unique blend of folklore and learned culture. Up to World War II, Romania was a predominantly agrarian society, and even today, more than 40% of people still live in the country side. Folk creations were the main source of inspiration for early Romanian writers, and they remained the main literary genre until early 18th century. The best known folklore creation is the ballad *Miorița*, which describes Romanian spirituality.

Another popular folk tale is that of *Meșterul Manole* (roughly: The Master Builder Manole), which tells the story of a craftsman who was hired to build a monastery for the prince of Wallachia, Negru Vodă. The walls that Manole and his workers built during the day would crumble during the night. This caused Manole to pray to God for help and guidance. The response came in the form of a vision that showed Manole the only way he could finish his work: by walling his wife Ana inside the church walls. He reluctantly proceeded to do so and completed his masterpiece—the Curtea de Argeș Monastery. When he saw the finished work, Prince Negru Vodă became fearful that Manole might build another masterpiece that would be as—if not more—magnificent than his. He thus decided to leave Manole and his team stranded on top of the church. To escape, the workers built themselves wings out of shingles and attempted to fly to safety. All of them failed. The place where Manole fell to his death caused water to burst forth, and according to myth, the spot is marked by an actual fountain on one side of the church.

Many of the folk traditions have survived to this day in rural communities, and are carefully preserved by the Romanian Academy and the Museum of the Romanian Peasant. Traditional folk arts include wood carving, ceramics, weaving and embroidery, household decorations, dance, and folk music. Constantin Brâncuși (one of the most well known modernist sculptors in the world) drew his inspiration from Romanian folk art, and many of his masterpieces are throw-backs to traditional Romanian wood carving. Professional and amateur dance groups are trying to keep alive the rich variety of dances encountered throughout Romania, and some of these dances (such as *Călușarii*) have been declared by UNESCO to be "Masterpieces of the Oral and Intangible Heritages of Humanity."

Some of the Romanian folklore myths that have become part of international culture are the myth of the vampire (or *strigoi*—the undead), and the myth of the werewolf (*vârcolac*).

## 5 RELIGION

Religion has always played an important part in the life of the Romanians. Aside from the years during the Communist domination of Romania after World War II through 1989, there was a close relationship between the state and the church. The state funded the church, and religion was taught in schools.

After forsaking the pagan religion of their Dacian forbears, the new Daco-Romanians gradually adopted the Christian religion, establishing churches dependent upon the Eastern Orthodox Patriarch of Constantinople. Even though there was a Slavonic influence in the Romanian Orthodox Church beginning in the 9th century when the two Greek missionary brothers, Cyril and Methodius, introduced the Cyrillic alphabet into the country, and later when the Greek Phanariots also exerted their influence, the Romanian Orthodox Church never lost its Latin character.

When Romania finally became one unified country in 1918, over 80% of Romanians belonged to the Romanian Orthodox Church, while 10% belonged to the Greek Catholic Church (also known as the Uniate Church). The rest of the population belonged to various Roman Catholic or Protestant Churches.

The Romanian Orthodox Patriarchate was established in 1925 with metropolitans, archbishops, and bishops to oversee the 15 million members of over 15,000 churches, served by over 18,000 priests, thus making it the second-largest Orthodox Church in the world, after the Russian Orthodox Church. There are about 250 Romanian Orthodox churches (with about as many priests) outside of Romania proper in adjacent countries, as well as in Western Europe, the United States, and Canada.

## 6 MAJOR HOLIDAYS

The major Church holy days, besides their religious aspects and significance, are also occasions for rest and relaxation. No doubt, Christmas has more customs and observances than any other Church holy day. Beginning on 15 November, when Advent begins, the villagers prepare not only spiritually, but also socially, for the celebration of the Nativity of Christ. Adults slaughter and dress the hog, and bake and prepare goodies for the season, while children learn carols and their roles in the pageant of Christ's birth. Dressed in their best clothes, groups of carolers go from home to home on Christmas Eve, spreading the news of the coming of Christ in word and song. There is no other form of popular poetry more prevalent than the traditional carols, which have been passed down from one generation to the next. Christmas celebrations last for two weeks until the Epiphany on 6 January and take on many variations, such as family gatherings, reunions, visiting friends, dances, and social events.

New Year's Day is a secular holiday, but also a Saint's Day—Saint Basil. As in the world over, Romanian revelers ring in the New Year with partying, singing, and drinking at restaurants, social establishments, and in their homes. It is customary among the Romanians to go to the homes of friends and acquaintances, wishing them a happy, healthy, and prosperous new year. Some New Year's Day customs have prevailed throughout the centuries, dating from pagan Roman times, such as the *plugusotul* (plow). Boys dressed in sheepskin outfits pull a small plow through the village, wishing everyone a prosperous new year. Likewise, there are groups leading a *capra* (goat) or beating drums, reciting New Year's greetings in rhythmic verse.

Easter is the greatest religious holiday. With its six-week Lenten preparatory season, solemn Holy Week rituals, and bright midnight resurrection service, everyone rejoices in the renewal of spiritual life and of the spring weather. The coloring of Easter eggs in decorative Romanian designs is an art in

itself and reveals the artistic talents of the Romanians. Households are cleaned, repainted, and refurbished. New clothes are made or purchased. Soup, roasts, and casseroles of lamb are prepared. Nut and raisin kuchen are baked. Merrymaking abounds after church services. After the Lenten restriction on dancing for six weeks, the village dances are resumed and a happier atmosphere prevails.

Secular holidays change according to the political regime in power. During the 50 years of Communist government control, some of the traditional national holidays were not observed, such as 10 May, when Romania gained its independence and eventually became a monarchy. Instead, 23 August became the most important holiday during the Communist reign. It commemorated the "liberation of Romania from the German fascists by the Romanian Communist troops." When Communist control ended in 1989, this holiday was discontinued and the Romanian people reverted to the traditional 10 May day. The Communists also introduced May Day, which is observed by all Communists throughout the world, and Labor Day, honoring all workers. Ceausescu's birthday was celebrated as his cult grew but celebrations were discontinued when he was overthrown.

## 7 RITES OF PASSAGE

When an infant is baptized, there is always a celebration at the home of the child's parents, with godparents, relatives, and friends present. Godparents become spiritual parents to the newly baptized and maintain a special relationship with them throughout their lives. If anything should happen to the parents of the godchild, the godparents would usually take over some of the responsibilities to see that the child is brought up properly until maturity. At baptism, children are given the name of a saint, usually one whose feast day is nearest to the date of birth. In Romania, as in other Orthodox countries, the name-day of the person is often celebrated with more festivity than the birth date. It is an occasion of congratulations and socializing among friends and relatives.

Children are taken to Sunday church services from a young age and participate in the social life of the parish, such as parties, outings, and dances. Young people participate at village dances held on Sunday afternoons after Vespers. They are held in the church yard, school auditorium, village square, or in more spacious barns of prosperous peasants. They are occasions to socialize and meet other young people. Friendships are usually formed, which can result in dating and closer relationships, eventually leading to marriage.

Marriage is a very important time in a Romanian's life and is not to be entered into lightly. When young people decide to marry, they ask for the blessing of their parents. The girl usually has a dowry that her parents start when she is very young and to which she adds periodically. It consists of household linens, rugs, tablecloths, personal items, kitchen utensils, and family heirlooms.

After the marriage date is set and arrangements are made for the religious ceremony, the groom sends out emissaries to personally invite friends and relatives to the wedding. The invitation is sealed with a mutual sip of plum brandy, which means acceptance of the invitation. Weddings are held mostly on Sunday afternoons after church services. The male members of the bridal party, bedecked in their finest peasant clothes, usually come to church on horseback, while the bride

is brought in a carriage bedecked with flowers and peasant embroideries. After the nearly one-hour church ceremony, during which they declare their mutual love and exchange rings in token thereof, and after prayers asking for God's blessings, the bride and groom drink wine from the "common cup," signifying their sharing from now on, for better or for worse. Finally, they are crowned and encircle the front of the altar, venerating the icons as a symbol of their spirituality. With the joyous hymn wishing them many happy years, they leave the church and are accompanied by a band to the place where the festivities are to be held. The groom is very attentive to the new bride so that she will not be "abducted" by former buddies and have to be "redeemed" with a round of drinks.

The social celebration of the wedding lasts into very late hours of the night. It is probably one of the most lavish and generous events in the couple's life. Food is plentiful and drinks—usually wine, plum brandy, and beer—are available all evening, sometimes ending in overindulgence. Monetary gifts are given to the couple to start them off on their new conjugal life. Sometimes weddings last two or three days, with time out for some sleep and rest, but most are limited to a few hours.

Funerals also offer occasions for socializing in a more somber way and abound with many local customs and practices. When someone dies, he or she is properly "prepared" without being embalmed. After being washed and deodorized, the body is laid in a simple wooden coffin and is brought to his or her home, where there is a wake. Often "wailers" lament and in cadence review the life of the deceased. Two or three evenings before the funeral service in church, prayer services are held before the open coffin. On the day of the funeral, the coffin is brought to the church in a horse-drawn wagon and is carried inside on the shoulders of friends or relatives. After an hour-long ceremony, emphasizing the Resurrection and the positive aspects of death, the closed coffin is taken to the cemetery, which is usually next to the church, and is interred. The mourners return to the deceased's home, where a requiem meal is served. Food is provided by relatives and friends. After mourning, there is a period of relaxation and a return to the world, signifying the peasant's philosophy, "the living with the living, and the dead with the dead" and "life goes on."

## 8 INTERPERSONAL RELATIONS

Romania's greatest asset is the people themselves. After centuries of foreign domination and corruption, Romanians emerged as a self-reliant and intelligent people. From their Church, they learned to be humble, loving, and forgiving. They are noted for being kind and caring, which is reflected in their warm greetings and willingness to be of service to others. When visiting a Romanian, he or she is likely to offer you the best bed in the house, and the best food they can provide. As Romania is becoming more westernized, so are the customs of the people—especially in large urban centers. City dwellers nowadays are always on the run, always pressed for time, and less likely to engage in extensive interpersonal relations the way they used to during Communist rule.

In rural areas, interpersonal relations are nurtured and centuries-old customs are respected. When visiting a village, people will greet you with a nod of the head and a smile, even if they do not know you. Women are respected. A man tips his hat, offers his seat, kisses the hand, and offers to help women. The elderly are also respected. When encountering an elderly

person or a woman, the greeting *sărut mâinile* (kiss hands) is customary.

## 9 LIVING CONDITIONS

Romania developed a distinctive architectural style, known as the Brâncoveanu style, in which many churches and public buildings were built. A specific Romanian style was developed in Transylvania with wooden churches, characterized by a steep shingled roof and tall, sleek spire. In northern Moldova and southern Bucovina, a distinctive church style developed in the time of Stephen the Great. The nave was in the shape of a ship, with an overhanging roof and frescoes on the inside and outside.

After their liberation from serfdom, the Romanian peasants were able to build modest homes, which they lavished with Romanian decorations and motifs. Peasant architecture throughout Romania varies from the impressive two-story houses (*cula*) of the more-prosperous Romanians to the simple thatched-roof cottage. The more elaborate houses were surrounded by a terrace with an overhanging roof.

The typical one-story Romanian house usually includes an anteroom with an oven for cooking. In the rear is a pantry. Some homes have a living room with a fireplace and at least one bedroom with a large bed and a wooden chest to store linens, clothes, and personal belongings. The room may have a wooden bench and beams across the ceiling. The more prosperous peasants have a large enclosed yard with a garden, hay barn, stable, pigsty, chicken coop, corncrib, and outhouse.

In 1935, representative houses, churches, and other buildings from all regions of the country were disassembled and then reassembled in a large area outside Bucharest for a permanent display known as the museum of the village.

Romania has undergone many changes in the last 50 years, especially during the Communist regime. There was a large migration from villages to cities. Because of political persecution, many Romanians fled the country. The population in villages has decreased considerably. There was a tendency at one time to reduce the number of villages and to house the population in public housing. During the Communist regime, some villages were obliterated as inhabitants moved to the cities, where nondescript high-rise apartments were built to accommodate them. They can be seen on the outskirts of most of the major cities, but they lack the comforts, facilities, and amenities for more gracious living. This trend has stopped.

With the collectivization of farmlands, even though modern equipment was used, production decreased because of the uncooperative attitude of the peasants.

Young people between the ages of 9 and 14 belonged to the Young Pioneers, while those over 14 were enrolled in the Union of Communist Youth. They were expected to help out in workshops and collective farms. Communist youth organizations have been done away with, and most youth activities take place in schools and voluntary organizations in urban areas. American films, music, social behavior, and dress have had a marked influence on the youth of Romania. In the villages, however, life is more sedate and still revolves to a great extent around the family and the Church, which teaches restraint and modesty.

Life expectancy is 68 years for males and 77 years for females. Infant mortality is 25 deaths per 1,000 births. There is 1 hospital bed per 100 persons, and 1 doctor per 559 persons.

*A father and child walk through a neighborhood in Bucharest, Romania. Romania still struggles with widespread poverty. Despite these problems, Romania has made headway in fighting corruption and modernizing infrastructure to meet stringent EU standards.  
(Spencer Platt/Getty Images)*

Though the state is supposed to offer free health care to the citizens, there is a scarcity of hospitals, clinics, and other facilities. Doctors are poorly paid and lack much of the necessary equipment and medicine to adequately meet the health needs of the population. Because of poverty, some children are abandoned and end up in orphanages, which have a difficult time caring for them. Some of the orphans are adopted locally and others by families abroad. Though there are medical schools, which graduate a number of doctors, many of the graduates try to emigrate elsewhere for higher pay and better facilities. With the end of Communist rule, there is more private practice and conditions have improved somewhat, but there are still many pressing needs. It will be some time before the health care system will reach western standards throughout the country.

Following the economic boom of the new century, living conditions for most Romanians have improved dramatically. People have higher wages and access to a large assortment of consumer and household goods. A real estate boom has been witnessed in most major urban centers, as developers try to cover the rising need for new housing. There are more than 2 million Romanians working outside the country and most of them send remittances back home. This money is usually used for purchasing a new home and household goods.

Significant investments in infrastructure and the public sector have also led to a betterment of living conditions.

## **10 FAMILY LIFE**

Romanians are family-oriented and try to bring up their families in the highest moral Christian spirit. Traditionally, Romanians had large families. Many hands were needed to work the fields. The patriarchal system predominated. The elderly were respected and were usually the head of the extended family. Much of this tradition was done away with when peasants migrated to towns and were alienated from the more intimate village life.

Children are considered to be blessings from God and are brought up in the Romanian national tradition, greatly fostered by the Church. Respect for parents is a cornerstone of this philosophy. The family spirit is very strong, and relationships with relatives are quite close. Traditionally, promiscuity was rare, and abortion was frowned upon. One of the social problems was alcoholism among men, even though the average Romanian man could carry on his daily workload in spite of it. Divorce in the villages was at a minimum but was more prevalent in the cities.

Life in the villages is more tranquil and there are fewer social problems than in the city. The Church also has a greater influence over its believers in the village than in the city. Much of village social life revolves around the Church holy days and various religious events in the believer's life—at baptisms, marriages, and funerals.

City life is increasingly defined by western culture. Women are more mobile in the labor force and less likely to be dependent on a husband. Consequently, fertility rates are going down (1.38 children born to each woman in 2007), and divorce rates are going up. Many city dwellers are professionally oriented and family life often takes a secondary role.

### 11 CLOTHING

Among the most visible and attractive articles of clothing are the Romanian traditional costumes, especially the blouse, which varies greatly from one district to another. Each one is different and has its beauty, being lavished with intricate embroidery. They are much appreciated throughout the world.

The traditional Romanian male costumes were just as varied as the women's, but less elaborate. The trousers and the long shirt were mostly white. The men wore a leather belt. In cold weather, they wore sheepskin jackets. Footwear was usually leather moccasins, and the headgear was a rounded black hat with a narrow brim, or a lambskin cap in the winter.

In recent years, many new clothing stores have sprung up in most Romanian urban centers. Western fashion (especially Italian and American) defines the way people dress in cities. In rural areas, traditional costumes are seldom encountered any more. Peasants are more likely to wear second-hand clothes bought in the cities, or utilitarian clothes they take to the fields. Traditional garb is still worn for major celebrations.

### 12 FOOD

Romanian cooking was influenced by those nationalities living within the same areas, especially Hungarian and Serbian. Old Kingdom Romanians were influenced by Turkish, Russian, and other ethnic cooking. In all cases, the Romanians added their own touch and varied it to suit their taste. The more sophisticated Romanians availed themselves of French, Viennese, and other Western European ways of cooking.

*Mamaliga* (cornmeal mush) is one of the staples of the Romanian diet and, in a sense, is the national dish. It is easy to prepare, is very digestible, and is served in as many ways as the imagination can dream up. It is usually served as a side dish and sometimes in place of bread. Besides being used for cooking, corn is also used to feed the livestock.

Pork is the favorite meat of the Romanians. Almost every village household raises a few pigs for their own use and for sale. They are usually slaughtered before Christmas, smoked, made into sausage, and preserved for use throughout the year. Peasants working in the fields can make a meal out of a slab of smoked bacon, a generous portion of hard-crust black bread, and wine. Dishes using pork products, such as bacon or ham and eggs, stuffed cabbage, spare ribs, pork chops, sausage, and various cold cuts are favorites for the Romanians, much more so than beef.

For appetizers, Romanians prefer chopped chicken liver, eggplant spread, carp roe paste, and aspic. Soups include thick cream soups with sour cream, sauerkraut juice, lemon juice, or vinegar, to which are added various chunks of meats, vegeta-

bles, and potatoes. The Sunday meal is usually chicken soup with noodles or dumplings and roast chicken from the family's own back yard.

Romanians especially enjoy broiling meat. Aside from pork chops, spare ribs, flank steak, and lamb chops (especially during the Easter season), the undisputed favorites are the traditional *mititei*—small sausages made of ground pork, beef, and lamb, marinated and then broiled. Stews, roasts, and casseroles with vegetable, salads, sour pickles, and sauerkraut make up the usual main course.

Many Romanians observe the four Lenten seasons prescribed by the Orthodox Church and shy away from all meat and dairy products then. There is a whole array of foods that can be prepared to meet these Lenten requirements, such as Lenten bean, caraway seed, lettuce, mushroom, tomato, vegetable, and potato soups, to which are added vegetable dishes, such as mushroom stew, braised cabbage, Spanish rice, vegetable *ghiveciu*, and baked beans. Others are mashed beans, Lenten stuffed cabbage, potato stew, Lenten spaghetti, and fresh beans with tomato sauce.

Traditional Romanian desserts are made of raised dough, such as kuchen, Moldavian rolls, sweet dough, nut squares, *lichiu*, cheese cake, crescents, horns, strudel, water twists, and puff pastry, with crepes suzettes being the most common.

The art of Romanian cooking was passed down from generation to generation by word of mouth and by example. Eventually recipes were collected and published, the most popular being the cookbook of Sanda Marin, which became a sort of standard. Today, there are many Romanian cookbooks, some of which are published in other languages, including English. Romanian cooking is appreciated in many parts of the world.

### 13 EDUCATION

A good education is prized by every Romanian. People with a high educational achievement and intellectuals are highly respected. The education sector itself went through several reform processes, the boldest of them being implemented by Andrei Marga—the former Minister of Education, and currently the rector of the Babes-Bolyai University in Cluj-Napoca. Most of these reforms (which among others include curriculum changes, student assessment, teacher training, finance, and governance) need to be continued to improve education outcomes.

Now that Romania is part of the EU, its education sector needs to be revamped to satisfy the demand for a more skilled labor force. The most difficult challenge will be to bridge the divide between education in urban areas and education in rural areas. Without a centralized placement system, it is increasingly difficult to find teachers that are willing to work in remote villages.

As of 2008 the literacy rate was nearly 98%, with compulsory education for 10 years. The Babes-Bolyai University in Cluj-Napoca is, at over 60,000 students, the largest multi-cultural university in Europe. It offers programs of study in Romanian, Hungarian, German, English, and Roma.

### 14 CULTURAL HERITAGE

The first printing presses were brought to Romania and Transylvania by the Saxons in the 16th century. With the introduction of the printing press, Romanian books, still with Cyrillic letters, were published. The Romanian deacon Coresi published

the first book of the Gospels in Romanian at Bras, or in 1561. Metropolitan Varlaam of Moldova published the famous *Cazania* (explanation of the New Testament) in 1643, and Metropolitan Simeon Stefan published the New Testament in 1648.

Thereafter, a growing number of other Romanian books were published but still with Cyrillic letters. It was only after some Orthodox Churches in Transylvania united with the Roman Catholic Church in Rome (1698), and with the establishment of Romanian schools in the 19th century, that the Latin alphabet was reinstated officially. By the middle of the 19th century, a veritable educational and literary revival began. Romanian universities and other schools of higher learning were opened. Grade schools appeared in the villages, cultural organizations sprang up everywhere, and literary magazines and books started to be published in growing numbers.

Many poets, novelists, historians, essayists, and other writers flooded the market with their literary works. They enriched Romanian literature in all fields, and their number is legion, including such well-known poets as Vasile Alexandri, Grigorie Alexandrescu, George Cosbuc and Dului Zamfirescu; novelists such as Costache Negruzzi and Alexandru Odobescu; storytellers such as Ion Slavici, Liviu Rebreanu, Mihail Sasoveanu, and Ion Agarbiceanu; dramatists such as L. Caragiale, Barba Delavraucea, and Victor Eftimiu; historians such as Alexandra D. Xenopol, Nicolae Iorga, Titus Maiorescu, Sextil Prescariu; and many others too numerous to mention.

Music has always been a significant factor in the life of the Romanian peasant. Peasants sing when they are happy or sad, when they are spiritually moved, or when they want to express their patriotic, romantic, and pastoral feelings. There are different types of music for different moods.

Almost every village has at least one musical group to play at village dances and other occasions. The basic Romanian musical instrument is the violin. Others include the wooden saxophone and the cymbalon. Later, orchestras added the bass fiddle, the piano, the clarinet, and the accordion. Romanians are among the few people who have preserved the ancient "pipes of Pan."

Among the most popular styles of folk songs are the *doina*, love songs, and pastoral and patriotic songs. During the Christmas season, the Romanians sing a great variety of carols. There are many religious hymns and songs for various feast days, which are familiar to all Romanians. On special occasions, there are ballads, lamentations, wedding songs, and a variety of others.

One of the most common and generalized folk dances is the *hora* (circle dance), danced by men and women holding hands. A popular dance is the *Sârba*, with dancers holding each other by the shoulder in a semicircle. There is also the *Brâul* (straight line). The most popular dances in Transylvania are the *invârțita* and *hategana*.

## 15 WORK

Once Romania was known as the breadbasket of Eastern Europe, exporting large quantities of wheat and corn. Nearly half of Romania's arable land is given over to agriculture, but because it is divided into so many small plots, with a lack of fertilizers and modern farming equipment, the output is poor. At times not enough food is produced to meet domestic needs, much less to export.

Nevertheless, villagers with their small plots raise enough food for their own needs. Since there is not much of a surplus, they do not bother to sell any produce at markets in nearby cities. In this respect, villagers are more or less self-sufficient and not lacking in the bare necessities of life, whereas urban dwellers, who must buy all their food, have a more difficult time because of scarcities, inflation, and low salaries. The new democratic government is trying desperately to reverse this trend and to make agriculture once again one of the main sources of income for the Romanian people.

Romania, with its beautiful mountains, quaint towns with ancient architecture, picturesque villages, seaside resorts, and many other tourist attractions, always afforded vacations at reasonable prices. Foreigners flocked to Romania for good monetary exchange rates and the country's many attractions. Some of this luster wore off during the Communist regime, and the number of foreign tourists decreased considerably, but it is now picking up again. With new airlines, railroads, and other new services, Romania's tourism industry hopes to regain some of its former polish and sophistication offered by warm and friendly hosts.

With increased wealth, the work ethic of Romanians has improved. A profitable career is often the main goal of young urban dwellers. Enrollment levels within universities have increased substantially, and private and public investments have driven up salaries in most economic sectors. In addition, more than 2 million Romanians are working abroad. In 2007 they sent nearly \$7 billion to families and relatives back home. These remittances are an important source of economic growth, driving up consumption rates and development even in the most remote villages.

## 16 SPORTS

Romania is not especially known as a sports-minded nation, even though the people indulge in various kinds of sports. After working hard and long in the fields and factories, many are content to be mere spectators rather than participants. As in many European countries, the preferred sport is soccer. It is easy to lay out a playing field, and all one needs is a soccer ball. Aside from amateur teams and informal tournaments, Romania has a number of professional teams, which compete favorably with other countries. Each larger town has its own stadium, and some of them accommodate tens of thousands of spectators.

Besides soccer, Romanians also enjoy basketball, boxing, rugby, tennis, volleyball, and a few other sports imported from abroad. Sports such as hiking, swimming, mountain climbing, camping, hunting, and fishing are also popular.

Calisthenics, exercising, and other gymnastics are a part of the school curriculum. Some of the best students are specially trained to compete in international events. Nadia Comeneci is a world-renowned Romanian gymnast, and Ilie Nastase is a top-level tennis player. Some of the Romanian trainers who have produced Olympic winners have found more profitable employment abroad in their fields.

## 17 ENTERTAINMENT AND RECREATION

Most Romanians are addicted to *promenade* (or *corso*). On any Saturday or Sunday afternoon in good weather, one will meet most of the villagers and small townspeople out for a leisurely walk, stopping to chat with friends and acquaintances, win-

dow-shopping, and just relaxing, ending up in a restaurant or open-air eating place for a drink and snacks.

Romanians also enjoy folk dance groups, amateur theatrical groups, music ensembles, and a host of other entertainers. The entertainment business is bustling. There are movie houses galore for local productions, as well as imported films with Romanian subtitles. Solo entertainers and any number of groups tour the country and present all kinds of entertainment to enthusiastic audiences.

Romania has many radio stations, television stations, live theaters, opera houses, cabarets, and entertainment establishments. Western influence, especially American and Italian, is noticeable in the music, dancing, films, dress, and behavior of present-day Romanians.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Before the age of industrialization and commercialism, peasants made most of their own apparel, textiles, and domestic and household articles by hand, using materials that they grew, raised, or happened to have on hand. They purchased very few manufactured commodities.

The handmade articles were not only utilitarian, but also decorative. The Romanian peasants embellished not only their clothing and domestic utensils with colorful and intricate designs, but also the interiors and exteriors of their homes, their yards, their churches, and their cemeteries.

The basic textiles used by the peasants were made of hemp and wool. Cotton goods, linen, and silk were purchased. The hemp was cut, soaked, dried, beaten to free the fibers, tied to a distaff, and finally twisted into yarn on a spindle. After being bleached or dyed with vegetable colors readily available in the garden or the fields, the yarn was woven into a rough fabric on a loom. A similar procedure was followed to prepare and weave woolen fabrics. From these fabrics, a variety of garments, household articles, and decorative pieces were made, such as bed sheets, blankets, pillowcases, tablecloths, towels, shawls, and doilies.

Most of the tedious and intricate needlework was done at "spinning bees" during the long winter evenings at the homes of villagers. While the women sewed, knitted, and crocheted, the men were busy carving geometric designs or painting wooden articles and ceramics. These spinning bees were veritable cultural events, when epic stories were told, traditional songs were learned and sung, new folk dances were rehearsed, poems were recited, and personal experiences were exchanged.

Besides crafting textiles and wooden articles, Romanian peasants also wove rugs with unusual designs and pleasing colorful schemes. The rugs of Oltenia and Moldova are especially appreciated by connoisseurs of folk art. The floor rug, bench rug, and the wall rug are variations. Rugs are one of Romania's most prized and expensive exports.

Besides beautifully embroidered native costumes, rugs, and scarves, the artistic talents of the Romanian peasant were manifested in ceramics. Most peasant households had a variety of decorated plates, pots, vases, and jugs. Unglazed red pottery was used mostly for cooking and glazed pottery mostly for storing and carrying liquids. The more decorative pieces, varying in design, color, and shape, were hung on the wall or displayed on carved wooden shelves. Pottery was usually decorated with circles, spirals, stylized flowers, and other imaginative patterns.

Romanian peasants usually carried around a pocket knife, which had many uses, such as whittling and carving. Chip-carving is a specific Romanian art. The handiwork of these chip-carvers can be seen in their homes, such as carved picture frames, walking canes, ornamented boxes, distaffs and spindles, ladles, ax handles, cupboards, shelves, hope chests, chairs, tables, beams, window frames, doors, and gates. Along the roadside are to be found wayside shrines and, in cemeteries, many carved crosses and monuments. Various pieces of furniture and wooden items used in church are also carved with folk designs. Besides chip-carving, in some parts of Romania, peasants were adept at the art of pyrography, the process of burning designs into wood or leather.

A most unusual form of Romanian folk art is that of icons painted on glass. This art came to Transylvania from Bohemia in the 17th century and flourished for over 150 years before it nearly died out. It has been lately revived. The icon was painted backwards on a piece of glass, so it could be seen correctly when viewed from the front side. Rather amateurish, but flashy and unique, they originally sold mostly at local marketplaces.

Secular painting in Romania grew out of ecclesiastical art in the beginning of the 19th century, especially through the efforts of George Tatarescu, Theodor Aman, and Constantin Lecca. Nicolae Gregorescu, who started as an iconographer, became one of Romania's greatest painters with his rural scenes and landscapes. Many others followed, and their works are to be found in various galleries, museums, and private collections throughout Romania.

### **19 SOCIAL PROBLEMS**

Though Romania had to endure barbaric invasions, foreign domination, political upheavals, serfdom, suppression, and persecution, the population remained optimistic and had a vision of a brighter future. Sadly, Romanians' hopes were darkened by the Communist philosophy that was imposed on the people in the 20th century.

The transition period that followed 1989 was not easy, and incidents of civil unrest (such as miners' strikes in 1990 and 1991, or the 1990 inter-ethnic clashes in Târgu Mureș) made headlines in the years to follow. However, with the advent of better economic conditions in 2000, most social problems have been resolved. Romania now has one of the lowest crime rates in Europe.

### **20 GENDER ISSUES**

In the 1950s, Romania's newly laid socialist foundations created a desire for more independence for women. In 1957, abortion was legalized and an increasing number of women started to join the work force, albeit in predominantly feminized sectors. However, in 1966 abortion became illegal, which was an attempt on the part of the Communist regime to raise birth rates and rapidly increase the size of the population. These pro-natalist measures were unique in the region.

In the 21st century, equal opportunity legislation has been enacted to protect the rights of women and of ethnic and sexual minorities. However, men continue to earn on average more than women do.

President Traian Basescu took a bold stance in favor of gay rights. Although much progress has been made in the area of gay rights, much remains to be done. The 2007 Gay Parade in

Bucharest was met with protests from religious and extremist groups.

## <sup>1</sup> INTRODUCTION

The Russians are a people of mixed origins. Although they are primarily eastern Slavs, many Russians have a Finnish, Siberian, Turkish, or Baltic heritage. Since the Russians' domain has historically covered such a large territory, many culturally distinct subgroups have developed. These subgroups formed because of ethnic mixing, cultural assimilation, or isolation and include the following: Meshcheryak, Kerzhak, Bukhtarman, Semeisk, Polyak, Starozhil, Russkoustin, Markov, Yakutyian, Kamchadal, Karym, Kolymchan, Zatundra Peasants, Pomor, Polekh, and Sayan groups. Many of these smaller groups are Russian Orthodox Old Believer communities or mixed Cossack-Siberian peoples.

The Slavic ancestors of the Russians are believed to have first settled in the area north of the Black Sea. The ancient Greeks and Romans made mention of these ancient Slavic tribes in their writings, but little was known about them. By the 7th century AD, there were many Slavic tribes in the region between the Baltic Sea and the Black Sea, living in autonomous villages that cooperated in areas such as defense. The "Varangians" (the old Slavonic term for Vikings) came to rule over the Russians in Novgorod, and the Rurik dynasty was established as the first ruling family of Russia as head of the Kievan Rus state. Trade between the Kievan Rus state and Constantinople exposed the Russians to Byzantine culture and religion. Eastern Orthodox Christianity was introduced during the mid-900s, but it was not until 988 that the largest conversion to Christianity happened.

An event that had a profound effect on the development of Russian culture was the Mongol occupation (c. 1240–1480). For over two centuries, the Mongols used threats and force to make the Russians pay them tribute and taxes, but the Mongols let the ruling princes and the Russian Orthodox Church remain in power. At that time a very strong Tatar/Mongol admixture began with the Russians. Some scholars think that the occupation helped unify local leaders against a common foe, which led to the strong tradition of autocracy in later centuries. Other historians believe that the period of Mongol rule disrupted cultural links with the rest of Byzantium and Eastern Europe and is part of the reason why Russia was not influenced by the Renaissance, Reformation, or Industrial Revolution when those events occurred in Western Europe. By the end of the occupation, the village of Moscow had positioned itself as an important political and religious center.

The Rurikovich dynasty that claimed its Viking origin ended in 1598 when Fedor died with no heir. Then, a period of tumultuous power struggles ensued, which the Russians call the "Time of Troubles." In 1613, order finally returned to the

throne as the nobility elected Michael Romanov as the new tsar (a term taken from the Roman title “Caesar,” meaning “emperor”). During the 1600s, the Russian conquest of Siberia began. Out of the Romanov dynasty came the man who is usually considered to have been the greatest tsar in Russian history, Peter I (1672–1725), called Peter the Great. Peter instituted many policies to change or modernize Russian culture so that it would be more like that of Western Europe. During the reign of Catherine II (r.1762–96) the Russian Empire added substantial territory through conquest, and there was a mass migration and heavy presence of Germans in Russia.

For centuries, serfdom was a way of life for most Russian peasants who did not own any land. Serfdom was a feudal form of bonded servitude similar to slavery, except that a serf belonged to the master’s land. Whenever land was sold, the serfs who worked on that land became the property of the new owner. The victory over Napoleon’s army in the War of 1812 was one of the most important events to consolidate the Russian people in the early 1800s. Throughout much of the 1800s, the Russians (especially the nobility) held a passion for French culture and language. After the French retreated, the tsar, Alexander I (r.1801–25), tried to return to business as usual but eventually abolished serfdom in a few small areas near the Baltic Sea.

In 1825, the first organized revolt against the imperial government was instigated by a group of army officers called the Decembrists, who wanted to abolish serfdom and set up a constitutional government. Although the revolt was small and unsuccessful, its memory served to rally the people in later years. In 1861 Alexander II (1855–81) emancipated the serfs. By the late 1870s, however, there were already revolutionary stirrings present within Russian society that grew out of the nihilist and populist movements. In 1881, Alexander II was assassinated by terrorists. Industrialization helped improve the economy, but a financial crisis in 1899, crop failures, and a humiliating defeat in a 1905 war with Japan led to more civil unrest and strikes by organized labor. Millions of Russian peasants were moving from the country into cities. The urbanization made it possible for Russians to mobilize. At the turn of the 20th century, many Russians had come to believe that the imperial government was incompetent.

Relations with Germany and Austria had been tense in the 1880s and 1890s, and problems flared up again in 1908. A complex system of treaties and alliances caused the unrest in the Balkans to inflame tensions throughout Europe, which led to World War I. By 1914, the Russians found themselves fighting in a useless war that plunged the nation into economic turmoil and chaos. Nicholas II (r. 1894–1917) abdicated the throne. A provisional government was formed to be replaced by the Bolsheviks, led by Lenin (r. 1917–24). In 1918, Lenin had the entire royal family executed.

The Soviet era lasted from 1917 to 1991. During the Soviet years, there was a massive mixing of Russians with Ukrainians, Belarusians, Jews, Finno-Ugric peoples, etc. In the 1920s and 1930s, the Communist Soviet government under Stalin (r.1924–53) instituted policies of terror and persecution to consolidate its power. The government tried to control all property and access to information in order to keep people in line. Millions of Russians were eventually imprisoned, exiled, or executed on fabricated charges and suspicion. It has been estimated that as many as 20 million Soviet citizens died during

the period of 1928–38 from Stalin’s reign of terror and a series of famines that Stalin could have prevented.

The most profound event to unite the Russian people during the Soviet years was World War II, which Russians call “the Great Patriotic War.” An estimated 27 million Soviet citizens died in the war, half of which were civilians or prisoners. After World War II, the Soviet Union quickly rebuilt its military and became a leading ideological and military rival of the United States. During the 1950s and 1960s, the Soviet Union, under the leadership of Nikita Khrushchev (r.1953–64), and the United States began stockpiling nuclear weapons to use against each other in the event of warfare. However, the horror of mutual destruction served to prevent either nation from starting such a war.

The losses from World War II and the focus on the military afterwards deeply affected modern Russian culture. During the 1970s, political and economic stagnation in the Soviet Union became rampant, and daily life for many Russians reflected the spirit of those times. In the mid-1980s, widespread reforms began under the leadership of Mikhail Gorbachev (r. 1985–91), and these reforms ushered in a new optimism among the Russian people that eventually challenged the very existence of the authoritarian Soviet government.

When the Soviet Union ceased to exist in 1991, the Russian people (as well as those from the other republics) were filled with hope for a glorious future. The Russian people now had their first chance in history to freely choose their own leadership through democratic elections. During the 1990s, however, the naive expectations for many Russians disappeared when it became apparent that the transition from central planning to a market economy would not be quick and painless.

President Boris Yeltsin’s era brought Russia a democratic constitution and economic reforms resulting in a deep financial crisis and regional disintegration. Vladimir Putin came to power in 2000 just in time to implement a series of liberal economic reforms that rescued a faltering economy and stopped the spiral of hyperinflation. Putin achieved wide popularity among the Russian population by stabilizing the government. The economy grew both due to Putin’s reforms in banking, taxation, labor, and private property and rising oil prices. Putin’s political and economic policies were predicted to continue with his successor, Russian president Dimitry Medvedev.

In 2002, the North Atlantic Treaty Organization (NATO)-Russia Council was established, giving Russia a voice in NATO discussions. Russia is also a permanent member of the United Nations Security Council, the leading nation of the Commonwealth of Independent States, a member of the Group of 8, and other international organizations as well. Recently, Russia moved closer politically to the United States, especially after the 11 September 2001 terror attacks. At the same time recent consolidation of presidential powers, certain nationalistic movements, and instances of violation of human rights and freedom of expression prompt the West to question Russian democracy.

## **2 LOCATION AND HOMELAND**

The Russian homeland traditionally extended from the easternmost parts of Europe to the Ural Mountains. Beginning in the 1500s, Russia experienced a massive acquisition of territory. By 1600, Russia was already larger than any other country in Europe and extended eastward all the way to the Pacific

Ocean. By 1800, Russia consisted of much of Eastern Europe, extended well into Central Asia, and even had territorial claims in North America.

As of 2008, Russia is the largest country in the world. It occupies about 17,075,000 sq km (6,592,700 sq mi), covering nearly 12% of the world's land surface. Russia shares land borders with Norway, Finland, Estonia, Latvia, Lithuania, Poland, Belarus, Ukraine, Georgia, Azerbaijan, Kazakhstan, China, Mongolia, and North Korea. It is in near proximity (by Russian standards) to the United States, Sweden and Japan. Stretching from Europe to Asia, Russia envelops 11 time zones.

Russia is divided into a complex system of 83 distinct administrative units. This includes 46 *oblasts* (provinces), 9 *krais* (territories), the metropolitan cities of Moscow and St. Petersburg, 16 self-governing autonomous republics, 5 autonomous regions, 1 autonomous province (the Jewish Autonomous Oblast) and 4 autonomous *okrugs* (autonomous districts). Until recently, Russia had more units, but after several subsequent merges beginning in 2005 the number of units shrank to 83. Russia's population is about 140 million, and it has been estimated that about 80% of the population consists of ethnic Russians. There are also approximately 3 million people in the

United States who claim Russian ancestry. About 74% of the population lives in urban areas.

For many decades, most Russians were not permitted to freely emigrate from the Soviet Union. Many Russians did settle in the other republics of the Soviet Union, especially in urban or industrial areas. Since the end of the Soviet era, there has been a massive movement of Russians to and from the homeland. Many ethnic Russians in the other former Soviet republics chose to go back to Russia because some of those new governments were pressuring them to leave. At the same time, large number of Russians left and continue to leave Russia for the United States and Europe. Educated but unemployed or underpaid Russians (such as scientists) are now emigrating to the West in search of jobs to match their expertise.

### 3 LANGUAGE

Russian is the official language of Russia. In addition, Russia has more than 140 other languages and dialects. Modern Russian is an Eastern Slavic language. During the 10th century, two Orthodox monks, Cyril and Methodius, wanted to translate the Bible into the Russians' native language. This older language later came to be known as Old Slavonic, and it is

still used by the Russian Orthodox Church. Since the Russians had no written language, the monks created a new alphabet from parts of the Latin, Greek, and Hebrew alphabets to represent the sounds of Old Slavonic. The Cyrillic alphabet, as it is called, is used in Russian and some other Slavic languages (such as Ukrainian, Bulgarian, Serbian, etc.). During the Soviet era, many of the other languages used within the Soviet Union were changed to the Cyrillic alphabet (and now many have changed back), and so there are many other ethnic groups familiar with the Cyrillic alphabet.

Common male first names include Aleksander, Boris, Dmitri, Ivan, Leonid, Mikhail and Sergei. First names for women typically end with an “a” or “ya” sound and include Anastasia, Maria, Natalya, Olga, Sophia, Tatyana, and Valentina. Most of those names come to Russia with Christianity and therefore of Jewish, Greek or Roman origin. Furthermore, there are a few Slavic Russian names dating back to thousand years ago. Among them are Svetlana (of light), Lubov (love), Vera (hope, faith) and Ludmila (beloved by people) used by women and Vladimir (one who owns the world), Svyatoslav (holy glory), Vechelsav (eternal glory), Bogdan (given by God) used by men.

Examples of everyday Russian words include *Kak delah?* (How’s it going?), *da* (yes), *nyet* (no), *pozhaluistah* (please), *spaseebo* (thank you), and *do sveedanniya* (goodbye).

#### 4 FOLKLORE

Russian oral folklore fall into several categories: *bylinas*, legends, fairy tales, animal tales, and tales of everyday life.

Traditional Russian fairy tales are just as likely to have a sad ending as a happy one. A fairy tale hero is usually a prince such as Ivan Tsarevich or a simpleton, such as Emelya Durak (Emelya the Fool). Prominent evil figures include Baba Yaga, a witch who lives in a house on chicken legs; and Koshchey the Immortal, a dragon that can only be killed if the egg that holds the essence of its death is found. More often than not, Russian fairytale is a story about a young man’s or a young women’s venture into the outer world, often dangerous and unpredictable. As a quest, this venture may take spiritual, intellectual or physical forms. Along the way, the hero or heroine is required to perform various tasks ranging from the trivial to the breathtaking. Russian fairy tale heroes often overcome a dangerous quest through the help of magical animals or objects.

Russian heroic tales narrate the epic deeds of *bogatyrs* (mighty warriors). This genre consists of epic songs, known as *bylinas and legends*. *Bylinas* were sung by peasants and date back to before the 16th century. Some of the *bylinas* and legends such as those about Svyatogor the Giant or Volk Vseslavich (Wolf the Almighty) are probably over 1,000 years old. Many of heroic tales are set in an idealized vision of the Kievan Rus age or in Novgorod.

The heroes and heroines of *bylinas* and legends are diverse. Yet they have many commonalities in their goals including the main goal—to defeat the insidious and formidable adversary and liberate the homeland. As a rule, bogatyrs from their very birth demonstrate excessive physical strength and innate intelligence. Since their childhood they are local favorites and acclaimed community leaders admired by both men and women.

In the well-known story “Ivan Tsarevich and Storm Bogatyr” three identical heroes are born at the same moment

as a result of their three mothers drinking a fine soup made of golden-finned pike: Ivan Tsarevich, Ivan the Maid’s son, and Storm Bogatyr, who is also known as Ivan the Cow’s son. They have adventures, such as the mighty struggle on Kalinov Bridge with three Dragons who devastated the county side. All struggles are won by Storm Bogatyr. The dragons’ mothers and wives, powerful witches, try to work the ruin of bogatyrs, but Storm Bogatyr outsmarts them and destroys their plots.

Exaggeration of physical strength in Russian heroic tales is typical not only for male, but also for female personages. Thus, women-warriors, such as the sisters Polyanitsas, easily beat male bogatyrs in multiple contests. No bogatyr except for the main hero can withstand Polyanitsas. In addition to distinguished strength, the woman-bogatyrs are known for their loyalty, extraordinary beauty, and intelligence

Animal tales often deal with humorous interactions among animals that possess human qualities. Two of the most popular animal characters are Lisa Patrikeevna, a smooth-talking and cunning fox, and Mikhail Ivanych, a sometimes clumsy, sometimes wise bear. Through these anecdotes, Russian people convey absurdity of certain situations; laugh at foolishness; praise wisdom and kindness; and address other situations common in life.

More recent in folklore history are tales of everyday life. Such tales often incorporate practical jokes and satire. They illustrate people’s daily troubles and concerns and reveal their hopes and aspirations. It is common for these stories to see an underdog succeed despite great odds.

#### 5 RELIGION

Initially followers of paganism, Russians converted to Christianity in the 10th century. In AD 988, Prince Vladimir of the Kievan Rus state proclaimed Christianity as the official religion of the realm in order to ally his kingdom with the powerful Byzantine Empire. Although keeping close connection with Byzantine canons, Russian Orthodoxy developed its own distinct features and traditions. A typical Russian Orthodox Church is adorned with many icons (images of persons who are revered as holy). Most icons are of biblical characters or saints, but some are of prominent clergy or leaders. Large churches often display an iconostasis (a wall of arranged icons) between the sanctuary and the rest of the church.

Lavish ceremonies on holy days (such as Epiphany and Easter) are well incorporated into Russian Orthodox tradition. Russian Orthodox worship services follow a liturgical format with heavy usage of choirs. The congregation typically stands for the duration of the service (many churches have no pews) and move to various stations around the sanctuary. It is common to see a person of the Russian Orthodox faith cross himself or herself using three fingers, touching first the forehead, then the abdomen, followed by the right shoulder, and ending at the left shoulder (because it is closest to the heart).

During the Soviet era, religious intolerance became official policy. It has been estimated that 85% of all churches were shut down and the property seized. Communist leaders were atheists who perceived the Russian Orthodox Church as a player in the corrupt imperial system of the tsars. The tsars had claimed rule by divine right and were endorsed by the Russian Orthodox Church. To eradicate the Church’s influence, the Soviet government encouraged discrimination against Russians with religious beliefs, and some Russians were imprisoned or killed

*Nesting dolls in front of the Church of the Resurrection of Christ in St. Petersburg, Russia. (© Bo Zaunders/Corbis)*

for their faith. Ironically, the Soviet regime tried to establish its authority by manipulating and utilizing many of the traditional Russian religious symbols, customs, and beliefs to give them a new, Soviet-style meaning. For example, the people represented on icons changed from religious to ideological and political figures (such as Marx, Lenin, and Stalin).

However, the Soviet era did not eradicate religion completely. Many religious activities were conducted secretly. For many people religious and spiritual matters became a strictly personal rather than public affair. After the disintegration of the Soviet Union many of the closed churches reopened. Today, with nearly 5,000 religious organizations, the Russian Orthodox Church accounts for over half the total number of religious groups registered in Russia. Next in numbers come Muslim communities amounting to 3,000. Other religious organizations include Baptists, 450; Seventh Day Adventists, 120; Evangelicals, 120; Old Believers, over 200; Roman Catholics, 200; Krishnaites, 68; Buddhists, 80; Jews, 50; and Unified Evangelical Lutherans, 39.

Muslims are the second largest religious community in Russia. Current estimates indicate that Russia has over 19 million Muslims. They have over 800 parishes and mosques, mostly in Bashkortostan, Dagestan, Kabarda-Balkaria, North Ossetia, Tatarstan, Ingushetia, and Chechnya. Most prominent organizations include the Muslim Board for Central European region and the Moscow Muftiyat. Additionally, Russia has 42 Jewish

communities. Moscow alone accounts for over 10% of Russian Jews, and has three synagogues, one of which is Hasidic.

In recent decades, Buddhism has risen in popularity among Russians. Pockets of newly initiated Buddhists are spread across the whole country, while traditional Buddhism is re-establishing its prominence in Buryatia, Kalmykia, Tuva, and the Irkutsk and Chits regions. The Russian Federation currently has ten datsun monasteries and multiple Buddhist centers, with the total monastic body approaching 200. Another 10 monasteries are under construction.

Despite several decades of Soviet pragmatism and atheism, superstition and mysticism have long been an integral part of Russian spiritual culture. The Russians today are often more open than other people to the possibility of paranormal activities, such as psychic experiences, mental telepathy, and extra-terrestrial life.

## 6 MAJOR HOLIDAYS

There are several religious holidays that have been celebrated in Russia for centuries. Among them are Orthodox Christmas, Epiphany and Easter. The origin of one of the world's most famous Christmas traditions began with St. Nicholas of Myra, a patron saint of Russia. For centuries, St. Nicholas was honored in the Russian Orthodox Church with dignity and devotion, playing a central role in Christmas festivities. On Christmas

Eve it was customary to fast until after the first service in the Russian Orthodox Church. With the appearance of the evening star on Christmas Eve, the fast was over. Following the meal, families would walk around the neighborhood singing carols, dressed as the stable animals present at Bethlehem. Meanwhile, St. Nicholas would reward good children with presents.

However, under the Soviet regime, many religious holidays were lessened in importance or forgotten, while new holidays were created. New Year's Day became a major holiday among Russians. It adopted the St. Nicholas tradition replacing St. Nicholas with Grandfather Frost. Marked with conviviality, wonderful meals with friends and family, and songs and fireworks, this holiday is equally loved by children and adults. On New Year's Eve children eagerly await for the Grandfather Frost and the Snow Maiden. The two weeks preceding January 1 and a few days after are full of festivals. Crowds flock to the city square to celebrate with each other the end of the year and to enjoy illuminations, ice sculptures, ice slides, New Year skits, free concerts, champagne, food, and everything else that the festival has to offer.

February 23 or the Day of the Protector of the Motherland honors Russian men. All men receive presents, cards and appreciation. Children make handmade gifts for their fathers and grandfathers. Women's Day, another holiday remaining from Soviet times, is celebrated on March 8. This holiday celebrates women. Mothers, daughters, girlfriends, wives—all women—receive gifts and flowers. Loving husbands and fathers try to grant any wish their wives and daughters might have. First of May is no longer International Workers' Solidarity Day as it was during the Soviet era, but is now a festival known as Labor and Spring Day. Victory Day on May 9 commemorates the end of World War II in Europe and is usually observed as a time to solemnly honor those who died during that war. During that day each city holds numerous parades. The highlight of the day is fireworks. November 4, the Day of National Unity, is the newest Russian holiday. It allows Russians to celebrate their country and pride in their culture and traditions.

Recently, church feasts also have been revived. The Orthodox Christmas is gaining in popularity. It occurs on January 7 (the Russian Orthodox Church still follows the old Julian calendar, which differs from the modern Gregorian calendar by 13 days). Involving church rituals, Christmas is especially honored by the Christian community, but being an inseparable part of Russian culture for centuries, it is currently recognized nationwide. Often a day off, Christmas became another holiday to spend with family and friends. The Russian Church of course honors this day with elaborate rituals and extravagance. Epiphany, which occurs 12 days after Christmas, is another major holy day in the Russian Orthodox Church and is celebrated with much pageantry and symbolism. Easter (in March or April) is the most popular religious holiday. It was celebrated even under the Soviet regime, but now people try to revive Easter customs and traditions that were abandoned after the revolution. Importantly, Muslims, Jews and Buddhists also celebrate their holidays without fear of secular authorities.

## 7 RITES OF PASSAGE

Completion of high school or university are important moments that mark the passage into independent life. Entrance into military service is regarded in the same way. Weddings

symbolize path into adulthood and are usually followed by a trip in a special black limousine (crowned with two large interlinked rings on the top) to pay homage and leave flowers at a local memorial. The birth of one's first child and one's first professional job are other events that indicate a change of social status.

## 8 INTERPERSONAL RELATIONS

Generations of authoritarian influence have helped form a distinct division between public and private behavior in Russian society. This contrast came about because, until recently, people were often hesitant to speak freely in public because of what the government might do to them. In public situations, Russians are often very reserved and formal. However, in private and informal settings, Russians are very cordial and sincere. They often openly show deep feelings of affection when guests arrive and depart.

In public, (i.e. in the street, on the bus), Russians might appear cold and reserved. However, once the ice is broken—for example when a passerby asks for directions, Russians instantly display friendliness and eagerness to help. Russians place a great value in friends. People enjoy visiting each other. It is common to drop by unannounced and share a meal with the host. It is customary for Russians to treat their guests with tea and pastries, cookies, preserves, jams etc. Russians are especially hospitable to the foreigners. For centuries, foreigners and travelers have been revered in Russia. Foreign guests are sure to get the best meal and best possible accommodations.

Russians use patronymics (where the father's first name forms the root of the child's middle name) in formal and business situations. For example, the patronymic for the son of Pavel (Paul) is "Pavlovich," and "Pavlovna" for a daughter. Among adult acquaintances, even casual friends will usually address each other using the first name combined with the patronymic. Among family and friends, many common first names are shortened. For example, a man named Aleksander is often called "Sasha" by his friends and family. Sasha's parents or wife may sometimes call him "Sashen'ka," which would be a term of endearment. However, if they called him "Sashka," it would indicate anger or disappointment with him.

When one Russian asks another "How are you?" there is a genuine and sincere interest; it is not done merely as a courtesy. When asked such a question, it is not customary for Russians to feel compelled to give a short and positive response. To ask someone how they are doing and then to ignore or trivialize their response is considered rude.

War veterans are extremely revered in Russia, particularly anyone who defended or aided Russia during World War II. Along with handicapped persons and expectant mothers, veterans are commonly given preferential seating on public transportation. It is not unusual to see elderly Russian women and men wearing their medals in public, especially on national holidays.

Flowers are an important token of admiration or affection. Flowers are often given as presents when visiting friends, either in a bouquet or as a single blossom. Visiting a local monument or memorial to leave flowers has become a tradition among newlyweds. After an opera or dance performance, Russians often shower the stage with flowers as a sign of delight.

## 9 LIVING CONDITIONS

During the Soviet years, Russians received health care from a large state-run system that provided service free of charge. In theory, this socialist system supposedly served everyone equitably, made use of the most recent technology, promoted preventive medicine, and was open to recommendations from the population. In reality, however, resources were distributed unequally, with political elites receiving the best care and rural citizens served with the least adequate equipment and undertrained personnel. Although medical care was free, many health care professionals moonlighted to make some extra money because official health care usually involved long lines and waiting lists. Although the number of doctors doubled from the 1960s to the 1980s, health indicators such as illness rates, mortality rates, and life expectancy worsened during that time. After the 1990s the situation changed. Now people have to pay for almost all medical care and the system of medical insurance is being established. The visit to renowned specialist is the most expensive. There are still some free services offered for the poorest population, but those services are of inferior quality.

Pregnant Russian women go to special maternity homes for delivery. Newborns are wrapped in swaddling clothes because of the traditional belief that it will help the infant's fragile bones to grow straight. Russian women receive two months of paid maternity leave before delivery and two months of paid leave afterwards, in addition to another year of leave at half-pay.

The communal *banya* (bathhouse), where bathers soak and sweat together, has been a mainstay of Russian culture for centuries. The *banya* is like a large sauna and is especially popular in the winter. Some *banyas* may be open only to either men or women on certain days of the week, while others may have some separate and some combined facilities for both sexes. Russians often carry small birch brooms in the *banya* and will lightly swat themselves and others (if asked) with the birch because they believe that it helps improve circulation and draws out toxins from the body.

Standing in long lines to buy consumer goods was a fact of daily life during the Soviet era. Russians became used to the idea of on-the-go shopping, constantly keeping alert for anything they might need. Some families would even rotate the responsibility of a designated shopper—someone who spent the day standing in lines and looking for available items. Now things are changing. Many supermarkets and new stores are open. They operate 24 hours a day 7 days a week and carry all possible goods. However, not everyone can afford to shop in such stores. The average price for certain foods and other consumer items is higher than in the United States while the household income is much lower.

Today, Moscow is one of the most expensive cities in the world. In 2008, 7 out of the 25 wealthiest people in the world lived in Russia. Still 15% of the population lives below the subsistence level and very few have savings. The gap between rich and poor is rapidly growing and experts estimate that the middle class ranges from one-fifth to one-third of the population. That said, statistics indicate that in 2006 there were 112 fixed-line and mobile subscribers per 100 people in Russia. Purchase of clothes and footwear and other consumer goods has grown. In short, in contemporary Russia people put a lot of value in material things and work very hard to get them.

## 10 FAMILY LIFE

Russian women typically get married between the ages of 19 and 22, while men are usually between 20 and 24 years old at marriage. Marriages traditionally involved high ceremonies in the Russian Orthodox Church. During the Soviet era, celebration in the church was largely abandoned. Civil marriages became common, and new Soviet marriage customs developed. Couples who decided to marry would have to register at a local office, where they would be assigned a wedding date in advance with enough time to let them reconsider. These new marriage customs included a brief civil ceremony at a town "Wedding Palace," officiated by a woman from the local political council. Today many people include in their wedding a ceremony in the church. Although honeymoons are not a tradition among Russians, due to Western influence they have gained in popularity.

Despite the general lack of housing, Russian society highly reveres parenthood and large families. During the Soviet era, women who gave birth to five or more children were awarded medals and given special titles by the government. Although Russian society favors large families, the birth rate among Russians has been low since the 1970s, as a result of economic uncertainty and a high frequency of abortions among Russian women. This was especially true during the Soviet years, when contraceptive devices were often unavailable. Most urban Russian families have only one or two children, but rural families frequently have more. Recent governments have attempted to ameliorate the low birth rate by giving special rewards and privileges to parents with newly born babies. However, the birth rate is still low.

Russian society often focuses on children, who have a privileged role of honor. Russian adults typically do not hesitate to assist any child in need, and parents will often make tremendous personal sacrifices for their children. It is also common for Russian adults to scold any misbehaving child, regardless of relation.

## 11 CLOTHING

Most Russians wear European-style clothing on a daily basis and for special occasions. Jeans and other types of practical work clothes are often preferred as well. Russians usually try to appear as neatly groomed and dressed as possible when out in public. It is considered important, especially among women, to have clothes of the newest fashion. Many Russians cannot afford an extensive wardrobe, and demonstrate resourcefulness and creativity in getting and wearing garments of high quality. Well made, fashionable shoes are praised both by men and women.

During the winter, it is customary for Russian men and women wear the *ushanka* (fur hat), which has ear flaps that can be tied up or down depending on how cold it is. Many Russians wear fur in the winter—not as a status symbol but because of the harsh climate and the practicality of available fur. Today though, more and more Russians, especially teenagers, wear lighter sporty jackets and winter coats made of synthetic fabrics.

Traditional costumes are usually seen during cultural performances. For young girls costume items include colorful ribbons in the hair and for older women large kerchiefs. Other female garments comprise a long, loose, usually white robe and a bright colored *tsarafan* (dress) worn over the robe. Often

An older Russian woman sells hand-knit goods in an open-air market in Zaraysk, Russia. (Melanie Stetson Freeman/The Christian Science Monitor/Getty Images)

times robe and dress would have elaborate embroidery or lace on them. For men, a traditional outfit consists of a white or red spacious hip-long robe tied on the waist with rope and voluminous pants. Today, traditional headscarves are still widely worn by elderly women. Ethnic patterns are becoming increasingly incorporated into modern clothes. Also, in a recent Miss Russia beauty pageant, there was a traditional dress contest, for which the women had to appear in ethnic attire.

## <sup>12</sup> FOOD

Russians greatly enjoy drinking *chai* (hot tea). A typical Russian meal consists of *pervoye* (first), *vtoroye* (second), *zakuski* (side dishes), and *sladkoe* (dessert). *Zakuski* usually include salads, fish, cold cuts and pickles. Bread is an essential ingredient of every meal. “No dinner without bread,” goes the Russian saying. There are multiple varieties of wheat loaves, rye bread, and other types of bread. Also, Russians eat more rye bread than any nation in the world—a peculiarity of the Russian diet. *Kartoshka* (potatoes) are often served at meals, either boiled, mashed, as pancakes, or as a *kugel* (baked pudding).

Russians can boast an extensive list of traditional soups. *Borshch* is just one of the everyday Russian soups, made with red beets and beef, usually served with a dollop of sour cream. *Shchee* is another popular Russian soup, made from cabbage and meat stock. Another favorite soup is *solyanka*, which is tomato-based and has pieces of fish or meat, olives, and lemon. *Okroshka* is an exquisite cold soup with chopped-up meat, vegetables and broth made of *kvass* (traditional Russian drink made from rye).

*Bliny*, also a part of the national cuisine, are thin crepes served plain or with different types of fillings, and *pirozhki* are fried or baked pasties that usually have a meat or vegetable filling. Russians are great lovers of *pel'meni*—small Siberian meat pies boiled in broth and many enjoy *varenniki*—pot stickers with vegetable filling. Often times *pel'meni* and *varenniki* are served with mustard, horseradish, and/or sour cream. *Ikra* (caviar), a famous Russian appetizer made from harvested sturgeon eggs, is also a part of formal Russian cuisine. *Morozhenoye* (ice cream) is a popular year-round treat.

As the Russian custom has it, a festive table is not worth much without a bottle of good vodka. It is considered that Russian wheat vodka is the world's best. Vodka varieties range from the clear, colorless *Moskovskaya* and *Stolichnaya* to all imaginable flavored kinds with herbs and spices. Of ethnic Russian soft drinks, *kvass* is the best-known. Made of brown bread or malted rye flour, it is particularly appreciated on a sultry summer day.

## <sup>13</sup> EDUCATION

After Russian children are about 1 year old, they go to a day nursery called a *yasli* until they are about 3 years old. From ages 3 to 6 or 7, Russians attend *detski sad* (kindergarten). Elementary school (grades 1–4) is called *nachalnaya shkola*. At age 11, Russian children enter the fifth grade and stay in *srednaya shkola* (high school) through the tenth grade, usually at age 17. At the start of the middle school years, students typically study history, geography, biology, and begin a foreign language. In the eighth and ninth grades, physics, chemistry, and electives are taught. After the ninth grade, a student may follow one of three educational paths: vocational school, professional training at a *tekhnikum* (secondary specialized school), or two years of general high school as preparation for university studies. In order to go to a high school, students need to pass an exam in language and mathematics at the end of the ninth grade. In addition to advanced studies of subjects taught in the middle-school years, Russian high school students study information systems and computer technology, social studies, and astronomy.

Attending a university or science institute is difficult because there is much competition just to get in. There are a series of special examinations, and many students will spend an entire year studying for those tests. A college program takes five years for a masters degree (there is no equivalent to a bachelor's degree in Russian universities) or six years for a medical degree.

Children are often exposed at an early age to systems that stress or value collective efforts. For example, young children in nurseries are typically toilet-trained in large groups. Students in schools often perform in groups and are graded as a team rather than as individuals. Oral and written examinations are given frequently. Teachers will often tell students

their grades out loud, so that each person knows what grade the others received. Schools are often open 12 hours per day, but classes only take up about half of that time. The rest of the time, the school acts as a community youth and recreation center. Russian education emphasizes history, science, and math, and frequent homework assignments usually keep students busy in the evenings. Students are responsible for keeping the classrooms and hallways clean. Extracurricular activities that are not sports (such as clubs, bands, and drama groups) are usually sponsored by the community and not by the school.

#### 14 CULTURAL HERITAGE

Russian cultural heritage goes back over 1,500 years. One of the typical Yuletide observances by Russians is the singing of *kolyadi*, carols that have their roots in pagan culture. The verses usually have no connection to the Nativity but come from old sacrificial songs to the sun, moon, and stars. The themes relate to various gods and goddesses, and typically express the hope for abundant crops. When Russians converted to Christianity, some of the *kolyadi* incorporated Christmas words.

Russian folk music is often played with a variety of instruments. The most well-known folk instruments are probably the *balalaika* (a triangular guitar with three strings) and the *garmón'* (concertina). Some instruments, such as the *gusli* (psaltery), *gudok* (similar to a *rebec*, a primitive violin), *rog* (horn), wooden spoons and *treshchotka* (rattle) have been a part of Russian folk music for centuries.

During the Soviet years, the government tried to control and direct the types of music available. Popular Soviet music featured hundreds of ideological songs for youths, workers, and soldiers. In the 1970s and 1980s, official control over popular Soviet culture began to decrease and some imports of Western music were allowed. Jazz, which had been officially denounced in the past, saw a revival and is very popular among today's Russians. Since the collapse of the Soviet Union, there has been a surge in the amount of shocking and provocative music in Russian popular culture. This trend is probably a consequence of the decades of censorship that suppressed erotic, religious, and nonconformist artistic expressions.

Classical Russian literature plays a significant role in Russian culture. Poetry recitals, going to plays, and discussing novels are all popular activities for Russians. These activities are enjoyed by Russians of all social levels, not just by an educated elite. Russians usually refer to Alexander Pushkin (1799–1837) as the single most influential poet of the Classical era. Other important writers of the Classical era include Ivan Turgenev (1818–81), Fyodor Dostoevsky (1821–81), Leo Tolstoy (1828–1910), and Anton Chekov (1860–1904). Russians revere their poets, playwrights, and authors as popular celebrities.

Each city and town has an impressive array of theaters and cultural centers. The country's most renowned theaters are of course located in Moscow and St. Petersburg. Thus, the Bolshoi Theater in Moscow and the Mariinsky Theater in St. Petersburg are two centers that have always been and remain the major cultural symbols of the Russian nation. Being centers of the Russian and international traditions of opera and ballet, the Mariinsky and Bolshoi bring the Russian classical heritage into the context of changing cultural demands of Russian society.

St. Petersburg's Hermitage Museum and Moscow's Tretyakov Gallery are among the world's greatest art centers. While

the Hermitage offers an impressive collection of world art, the State Tretyakov Gallery is the national treasury of Russian fine art. The Tretyakov's collection consists entirely of Russian art and artists who have made a contribution to the history of Russian art or have been closely connected with it. The Gallery is home to over 130 000 works of painting, sculpture, and graphics, created throughout the centuries by successive generations of Russian artists.

#### 15 WORK

During the Soviet years, the government controlled the labor market by setting wages and conditions of employment. Individuals, however, did have the freedom of choosing where they wanted to work in later years. The Soviet labor market in the early years was focused on the rapid growth of heavy industries (such as coal mining and steel production) and the collectivization of agricultural production into *kolkhozy* (huge collective farms). Most workers were members of trade unions. The problems that came with bureaucratic control over the labor market, however, were immense. The system was such that workers had no incentive to be productive, while factory managers had little motivation to operate efficiently. A popular saying by workers during the Soviet years that summarizes the situation was, "We pretend to work, and they pretend to pay us." If there was one good thing about the Soviet system it was that it gave almost equal employment opportunities for women and men.

With the collapse of the Soviet Union, many workers found themselves without an employer. As a result, unemployment and destitution became visible in post-Soviet society. However, private business and entrepreneurial enterprises blossomed. The transition to a market-oriented economy greatly impacted the work ethic and working style of the Russian population. If before Russians would often work inefficiently and sluggishly, now many employers require their staff to be efficient, detail-oriented, punctual, and hardworking.

Since 2000 the Russian economy has undergone continuing expansion and growth with the annual gross domestic product (GDP) growth averaging at 6.4% per year. However, this growth is mainly due to the development of the oil and gas sectors. Construction is the fastest growing sector of the economy, expanding by 14%. The main private sector services, including wholesale and retail trade, banking and insurance, and transportation and communications, amount to about 10% of economic growth. In contrast, public sector services such as education, health care, and public administration suffer low investment and low growth.

In general the Russian population is highly educated and skilled. Yet it is largely mismatched to the rapidly changing needs of the Russian economy. Official unemployment has dropped in recent years to 6.9%. At the same time, unemployment remains high with many Russian workers being underemployed. Unemployment is particularly felt among women and young people.

#### 16 SPORTS

About one-fourth of all Russians participate in some kind of sport. Soccer and hockey are popular team sports that Russians (primarily men) enjoy playing as well as watching. Russians usually do not have to look very hard to find a soccer or hockey match on television. Sports societies and organizations

were prominent in the Soviet years, and the government liberally advocated public participation in a wide variety of sports. Many of the former “sports palaces” built by the Soviet government have been converted to health clubs. The role of sports in Russian life makes international competitions, such as the Olympics, very important social rallying events.

Skiing and ice skating are popular recreational activities. Tennis has become increasingly more popular since the mid-1950s. Gymnastics and acrobatics are also prominent, perhaps due to the influence of ballet and the circus on popular culture. Baseball, basketball, and golf have been growing in popularity as well. Women’s boxing has attracted its share of fans in recent years.

Physical activity is stressed as a part of education. When a student is about 11 years old and shows special ability in a particular sport, he or she is often encouraged to switch over to a “sports school.” This type of school has regular academic classes in the mornings and special sports classes in the afternoons.

Russian society is known for its penchant for *shakhmahty* (chess), qualifying it as a sport. The Soviet government began promoting chess in the 1920s as a way to emphasize discipline and training. As its popularity grew, chess masters became highly respected members of society and often received special privileges and honors. Chess instruction starts in kindergarten, and children study the strategies and techniques of champions before they begin serious competition at around age 10. There are thousands of Russian children who have achieved the International Chess Federation’s rank of chess master.

Although Russians are in general avid sport lovers and strive to participate and win gold medals in all possible world contests, such as the Olympics and World Cup, in recent years there has been a shortage of funds for sport clubs and other athletic activities. As a result, many of the best Russian hockey and soccer players take contracts with professional teams abroad.

## 17 ENTERTAINMENT AND RECREATION

Russians are fond of outdoor activities. It is not unusual to see people outdoors playing chess or musical instruments and singing, even during the cold winters. The circus is traditionally a popular form of entertainment enjoyed by Russian families. Russia has hundreds of circus schools, where performers train for up to four years to develop and perfect their acts.

Russians also have a strong ballet tradition, which started in 1738. During the reign of the tsars, ballet schools became prominent and were patterned after the classical French style. During the 1800s, many new ballets were choreographed using traditional Russian themes and compositions. Russian ballet is known for its elaborate choreography and stages.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional Russian folk art often utilizes elaborate designs on everyday objects such as wooden spoons, bowls, magazine tables, plates, cutting boards, jewelry boxes, brooches—the list goes on. Ornate designs placed on wooden objects are typically covered with lacquer to ensure the longevity of colors. The patterns sometimes resemble whimsical spirals or other nonrepresentational shapes from fantasy land, but they might also be scenes from fairy tales or of famous people or places.

Some regions and villages in Russia developed their distinct craft tradition. Over the centuries, a given location would perfect the craftsmanship it is known for. Thus, the most popular handcrafts in present-day Russia are named after the region they originated from. For example, the vivid and fanciful gold and red drawings on wood (spoons, bowls, jars etc.) are called Golden *Khokhloma* (after the village of *Khokhloma*). *Gzhel* village gave its name to artistic ceramics of blue and soft pink patterns on white surfaces. Ethnic clay toys are called *Dymkovo* and *Filimonovo* after their respective towns.

Perhaps the best-known lacquered Russian folk art piece is the *matryoshka*, a series of wooden dolls that nest inside each other. The dolls usually depict a woman in traditional dress, but in recent years other themes have become popular, such as political figures and holiday motifs.

Lacquer painting on jewelry boxes and chests portraying various scenes from Russian fairytales and legends is known as *Palekh*, *Mstera* and *Kholui*. The colors employed by *Palekh* artists are so vivid and drawings are so elegant and magical that one can easily perceive the centuries of Russian soul invested in this art. The harmony of colors, cheerfulness, and creative patterns found their way into the decorative tray painting of *Zhostovo* and *Troitskoe*. Then there are of course some regions, including Vologda, Vyatka, and Yelets, that are renowned for their lace making and some that are acknowledged for their imaginative embroidery, golden thread needlework, pattern weaving, and rug making.

Russians also take pride in their artistic metalworking. The most famous metal crafts include *Veliky Ustiug* silver, *Rostov* enamel and *Kazakovo* filigree. Mountain regions in Russia have first-class masters in stone work. Tyva is recognized for carved sculpture while the Ural region can boast its jewelry, sculptures and other articles made of malachite, garnet, and other semiprecious stones. The Ural stonework impresses with its grace and lightness. When one looks at this sculpture long enough, it seems that it is coming to life.

In sum, the expanses of land and centuries of history allowed Russia’s regions to create and master their unique craft traditions, whether they be wood carving, earthenware, artistic ceramics, metalwork, stonework, or lace making. Whatever kind of folk art is regarded, it reflects the richness and diversity of Russia’s soul and the splendor of the works crafted by Russian hands.

## 19 SOCIAL PROBLEMS

Since the collapse of the Soviet Union, Russians have been forced to confront many of the old social problems that existed during the Soviet era, as well as a new set of problems brought about by the rapid changes in opening up the society. Privatization across Russia has created new opportunities but has also resulted in high unemployment in many areas. Because of high inflation and economic instability, many elderly persons who live off of a government pension are now impoverished. Life expectancy and health rates have plunged as well. Reduced funding for road maintenance and rehabilitation over the last few years and the poor quality of roads and bridges have caused deterioration in Russia’s road network and a growing backlog of needed repairs.

Ethnic hostilities have begun flaring up in some parts of Russia that were either taken over by the Soviet government or conquered during the imperial Russian era. When the So-

viet government collapsed, it provided the instability for some areas to distance themselves or even try to break away from the Russian government. The fiercest fighting of this type so far has occurred in Chechnya, a region in the Caucasus Mountains near Georgia. Thousands of Russian troops have been sent into the area, and many people on both sides have been killed.

Alcohol abuse has traditionally been a problem for the Russians. Temperance movements were not prominent in Russia's history. Family violence in households is often a consequence of alcoholism. Crime rates have risen rapidly in Russia since the end of the Soviet Union, which has made the economic situation even worse. Much of the crime problem is due to the extortion and violence caused by organized crime, which has considerable power in some areas. Organized crime is also aided in some places because of corruption among local politicians and officials. Decades of socialism have encouraged a manner of thinking where class envy is common. Russians, therefore, often scorn the "new rich," who are assumed to be racketeers. Vladimir Putin put significant constraints on oligarchs and the "new rich," but organized crime and corruption remain significant problems.

Right after the breakdown of the Soviet Union prostitution became a popular way for women to make money. Many teenage girls believe that a career in prostitution will pay more than most legitimate professions ever would, regardless of education. About one-fourth of Russia's prostitutes have received some sort of higher education. Although since 2000 the economic situation has improved, female unemployment is still high. The number of girls going into the hospitality business is gradually decreasing, but not very significantly.

Furthermore, currently Russia faces a serious demographic crisis. Russia's population of 142.9 million is rapidly falling. Births lag far behind deaths, the population is aging, and the average male hardly lives to age 60. Cardiovascular disease, cancer, traffic injuries, suicide, alcohol poisoning, and violence are some of the major causes of death. In 2007 life expectancy at birth was only 59 years for men and 73 years for women. In the past 20 years, lower birth rates and higher death rates have reduced Russia's population at nearly 0.5% per year. A substantial increase in HIV/AIDS infections and tuberculosis worsens the problem. Some reports indicate that Russia has one of the highest growth rates of HIV infection in the world, with the estimated number of HIV-infected persons at approximately 3 million.

The Russian government acknowledged that Russia is facing a demographic crisis. President Putin initiated a series of reforms attempting to improve the situation. Reforms included measures to improve birth and mortality rates and increase population through immigration, primarily the return of Russian-speaking foreigners.

## 20 GENDER ISSUES

The Soviet ideology promoted equal rights for all, opening the doors for women to enter higher education and professional careers. Continuing this trend, in the period from 1992 to 2000, the number of female students at higher educational establishments rose by 50%. In fact, in 2008 approximately 57% of university students were women and 43% men.

However, despite possessing a higher average level of education, women in Russia earn less than men, averaging 60–70%

of men's wages. Women are underrepresented in legislative bodies and are not represented in the government at all. Female workers face discrimination in employment-related matters, including promotion. Furthermore, most women have to combine professional work with the lion's share of work at home.

At the same time, the unemployment rates of women and men have been roughly equal, standing at 6.7% and 6.5% respectively in 2006. In 2006 women comprised over 48% of the economically active population. In the face of recent political and economic change, men have retained their economic advantage, but women have maintained their presence in the labor market. In fact, some men were experiencing greater problems in adapting to the new Russia than women. Meanwhile, the gender restructuring of employment during transition favors men in a sense that men increased their presence in the now-lucrative, but once female-dominated, spheres of banking and commerce, while women continue to make up the overwhelming majority of employees in the poorly-paid "budget sector" areas of health care and education.

Although women are in a disadvantaged economic position, they appear to be healthier and emotionally happier than men. Data indicate that in 1989 male life expectancy was at 64.3 years of age while in 2008 it barely reached 59. However, female life expectancy proved to be more constant, declining from 74.4 years in 1989 to 73 in 2007. Bearing the main responsibility for the well-being of a family binds women to a web of on-going relations with family members and female acquaintances. By contrast, men's social networks tend to revolve around their workplace. While this undoubtedly has positive effects in terms of job search and promotion prospects, it entails that men's safety networks can be endangered in the face of changes in employment status. Men who become unemployed or marginalized at work can find themselves cut off from their contacts causing men great mental distress. Distressed men often turn to drinking which further intensifies the problem. *Alcohol consumption in Russia is 10 times higher among men than among women.*

In sum, women in Russia are more likely to live in poverty, but it seems that men are more vulnerable to its effects. Women have to cope with the double burden of work and household management, but this has turned out to have hidden benefits in a period of economic crisis, while men's freedom from domestic responsibilities and license to drink have proved very dangerous to their health. Women and men have almost equal opportunities for education, and women have increasingly higher prospects of career advancement, yet men still earn more and dominate in certain positions, including positions in administration and government. Women still have to confront negative gender stereotyping. However those trends are gradually changing. While competition for top jobs and other opportunities is always fierce, the right mindset combined with an excellent education and good contacts can be and is the hammer in women's hands that shatters the foundation of a traditionally patriarchal society.

## SAKHA

**ALTERNATE NAMES:** Yakut

**LOCATION:** Russia (Eastern Siberia)

**POPULATION:** 443,852 (2002 census)

**LANGUAGE:** Sakha (Yakut), Russian

**RELIGION:** Eastern Orthodox Christianity and native religious practices

### 1 INTRODUCTION

The people who call themselves Sakha are termed *Yakut* in some European literature. An older term derived from legends is *Urangkhai Sakha*. The Sakha are the farthest north of the Turkic language speakers. They live in the Sakha Republic of the Russian Federation, in the far east of Siberia. Their territory was called Yakutia, or the Yakut Autonomous Republic, when it was part of the former Soviet Union.

The Sakha claim that their ancestors once lived farther south, and ethnographic and archeological data confirm an area near Lake Baikal for an aboriginal homeland where Sakha predecessors, identified in some theories with the Kuriakon people, may have been part of the Uighur state bordering China. By the 14th century, Sakha ancestors came north, perhaps in small refugee groups, with herds of horses and cattle. After arrival in the Lena valley, they fought and intermarried with the indigenous Evenk and Yukagir nomads.

When the first parties of Russian Cossacks arrived at the Lena River in the 1620s, the Sakha received them with hospitality but also wariness. Several skirmishes and revolts followed, led by the legendary hero Tygyn. By 1642, the Lena Valley was under tribute to the czar. Peace was won only after a long siege of a formidable Sakha fortress. By 1700, the fort settlement of Yakutsk (founded in 1632) was a bustling Russian administrative, commercial, and religious center and a launching point for further exploration into Kamchatka and Chukotka. Some Sakha moved northeast into territories they had previously not dominated, further assimilating indigenous neighbors. Most Sakha, however, remained in the central meadowlands, sometimes assimilating Russians. Sakha leaders cooperated with Russian commanders and governors, becoming active in trade, fur tax collection, transport, and the postal system. Fighting among Sakha communities decreased, although horse rustling and occasional anti-Russian violence continued. For example, in the 19th century, a Sakha Robin Hood named Manchaari led a band that stole from the rich (usually Russians) to give to the poor (usually Sakha).

By 1900, a literate Sakha ("Yakut") intelligentsia was influenced by Russian merchants and political exiles. A party called the Yakut Union resulted. Leaders such as Oiunsky and Amosov led the revolution and civil war, along with Bolsheviks such as the Georgian Ordzhonikidze. The 1917 revolution took several bloody years to consolidate, with extensive opposition to Red forces by Whites (czarists) under Kolchak lasting until 1920, and unrest until 1923. After relative calm during Lenin's New Economic Policy, a harsh collectivization and anti-nationalist campaign under Stalin ensued. Intellectuals such as Oiunsky (founder of the Institute of Languages, Literature and History) and Kulakovsky (an ethnographer) were persecuted in the 1920s and 1930s.

Traditionally, kinship and politics were mixed in a hierarchical council system that guided various levels of Sakha social organization. Sakha ideas of themselves as a people were conveyed by their word *dzhon*, which means “community” or “tribe” in a territorial sense. Councils were composed of ranked circles of elders, usually men, whose leaders, *toyons*, were called nobles by the Russians. Lineage councils decided major economic issues, inter-family disputes, and questions of “blood revenge” for violence committed against the group. Full tribal councils were infrequent, dealing with issues of security, revenge, alliance, and (before Russian control) war. In war, prisoners were captured to serve as slaves in the wealthiest households.

By the 20th century, councils were rare, although the demise of the Soviet Union has led some Sakha to argue for a return of community councils. Under a Sakha constitution passed in 1991, an elected Sakha parliament, called *Il Tumen* (“meeting for solidarity”) has become influential, in addition to an elected Sakha president. A bilateral treaty with Russian Federation leaders signed in 1995 outlined the terms of the republic’s political and economic relationship to the central government.

## 2 LOCATION AND HOMELAND

The Sakha Republic covers 3,100,000 square kilometers (1,200,000 square miles), or more than four times the area of Texas, in eastern Siberia. Located at approximately 56°–71°N latitude and 107°–152°E longitude, it is bounded by Chukotka to the northeast, Buriatia in the south, and the Evenk region to the west. Its northern coast stretches far above the Arctic Circle, along the East Siberian Sea, and its southern rim includes the Stanovoi mountains and the Aldan plateau. Its most majestic river, the Lena, flows north along cavernous cliffs into a long valley, and past the capital, Yakutsk. Other key river systems, where major towns have developed, include the Aldan, Viliui, and Kolyma. About 700,000 named rivers and streams cross the territory, which has some agricultural land, but is primarily non-agricultural taiga with vast resources of gold, minerals, gas, and oil. Tundra rims the north, except for forests along the rivers.

Notorious for extremes of long, cold winters and hot, dry summers, the republic has two locations residents claim to be the “coldest on earth”—Verkhoiansk and Oimiakon, where temperatures have dipped to -79°C (-110°F). More typical are winters of 0° to -40°C (32° to -40°F) and summers of 10° to 30°C (50° to 86°F).

Spread throughout the republic, the Sakha are no longer a minority in their own republic. The 2002 Russian census recorded a total population of 949,280 for the Sakha Republic. The Sakha totaled 443,852 (432,290 in the republic) in 2002. The proportion of Sakha in their republic has been gradually increasing. In 1989 they made up 35%, and by 1996 they made up approximately 40%. In 2002 they constituted the single largest ethnic group in the Sakha Republic, making to 45.5% of its population. By contrast in the 1920s, Sakha constituted about 82% of their republic’s population. Sakha outside their republic are mostly in the Far East and the major cities of Russia.

The Sakha have become increasingly urban over the past 20 years, although at a slower rate than the majority Slavic population. Whole villages in central and northern regions remain solidly Sakha, while the major cities of the republic are heavily Russian. The republic population was 65% urban in 1989. In-

terethnic marriages between the Sakha and other groups were as high as 10% in the 1970s, but this percentage had halved by the 1990s. As of 2002 Sakhas were approximately 65% rural dwellers and 35% urban dwellers.

## 3 LANGUAGE

The Sakha, more than 90% of whom speak Sakha (or Yakut) as their mother tongue, call their language *Sakha-tyla*. A North-east Turkic language of the Altaic branch of Ural-Altaic, it is divergent from most other Turkic languages, although related to Dolgan. The current Sakha written language, developed in the 1930s, uses a modified Cyrillic script. Before this, several written forms were tried, including a Latin script developed in the 1920s and a Cyrillic script introduced by missionaries in the 19th century. The first books in the Sakha language were published in 1862.

Many Sakha names are variations on Russian, for example, *Iuban* (Ivan). Names sometimes derive from folklore—for girls, for example, *Tuiaarima* (a heroine), *Aisa* (a good spirit), and *Sardana* (a kind of lily), and for boys, *Niurgun* (a hero), *Aisin* (a good spirit), and *Ellei* (an ancestor).

## 4 FOLKLORE

Sakha folklore includes legends of a written language lost after they traveled north to the Lena valley. Oral histories begin well before first contact with Russians in the 17th century. *Olonkho* (epics) date at least to the 10th century, a period of inter-ethnic mixing, tensions, and upheaval that may have been a formative period for Sakha tribal affiliations. Today, few young people memorize the sung epics, which rival in size the Greek *Iliad* or Finnish *Kalevala*, but parts of the epics are performed in contests. Other folklore includes stories of benevolent or malicious animal spirits and the feats of traditional spiritual leaders or shamans.

## 5 RELIGION

Sakha religion derives from Turkic, Mongolic, Tungusic, and Russian ideas. Labels such as “animist,” “shamanist,” or “Russian Orthodox” do not suffice. Ideas of sin are syncretized with concepts of contamination and taboo. Saints are seen as shamanic spirit-helpers, as are bears. Christ is identified with the Bright Creator Elder God Aiyy-toyon. A pantheon of gods, believed to live in nine hierarchical eastern heavens, was only one aspect of a complex traditional cosmology that still has meaning for some Sakha. Sakha also believed in the spiritual power of blacksmiths, because iron-working was an important part of traditional Sakha culture.

A crux of belief is the *ichchi* (spirit-soul) of living beings, rocks, trees, natural forces, and objects crafted by humans. Most honored is the hearth spirit, *yot ichchite*, and it is fed morsels of food and drink by believers. Deep in the forest, *al lukh mas* (giant trees) are especially sacred; their *ichchi* are given small offerings of coins, scarves, and ribbons. Belief in *ichchi* is related to ancient ideas of harmony and equilibrium with nature and to shamanism.

Sakha shamanism is a Turkic, Mongolic, and Tungusic blend of belief in the supernatural with emphasis on the ability of “white,” or benign, shamans to intercede through prayers and séances with eastern spirits for the sake of humans. “Black” shamans, communing with evil spirits, can both benefit and harm humans. Shamans can be male (*oiuun*) or female

(*udagan*), with debate over which gender is more powerful. Shamans use drumming to enter into a trance during séances to ascertain the cause of illness or other problems.

In the 19th century, Russian Orthodox priests spread through Siberia, but their followers were mainly in the major towns. A few Sakha leaders financed the building of Russian Orthodox churches, and many Sakha declared themselves Christian, but this did not mean they viewed Christianity and shamanism as mutually exclusive.

Although shamans with full powers are rare, in the 1990s, urban as well as rural Sakha have adapted shamanic rituals. Current Sakha shamans combine medical and spiritual practice. Despite centuries of Russian Orthodox and Soviet discrediting of shamans as greedy charlatans, some Sakha maintain belief in shamans and supernatural powers. Others, struggling to recover spirituality after rejecting Marxist-Leninist materialism, accept aspects of shamanic philosophy. Still others, influenced by Soviet education and science, reject all religion as superstition.

## 6 MAJOR HOLIDAYS

The most important Sakha ceremony, associated with founding ancestor Ellei, is the annual summer *yhyak* festival, a celebration of seasonal change, of *kumys* (fermented mare's milk), and of kin solidarity. It was declared a national republic holiday in 1990. Once religious, and led by a shaman, the ceremony has become a mostly secular celebration of Sakha traditions. Practiced in villages and towns, it features opening prayers (*algys*)

and libations of *kumys* to the earth. Although some debate its "authenticity," the festival still includes feasting, horse racing, wrestling, and all-night line dancing to improvised chants. It lasts three joyous days in Suntar, where it is especially famed. Other major holidays include New Year's, (1 January) and World War II Victory Day (8 May).

## 7 RITES OF PASSAGE

Traditional rituals of birth that involved supplicating the goddess of fertility (*Aiyyghyt*) are rarely observed today, and some Sakha women mock the restrictions once associated with beliefs about female impurity. New rituals marking weddings, anniversaries, and graduations at all educational levels involve *serge*, or sacred marker posts, on which names of those honored are carved.

Sakha beliefs accord each person three souls. Before burial, the deceased's spirit is thought to visit every place traveled in life. Family members dress the deceased in finery. On the third day, bearers take the body to the graveyard, where a grave is prepared deep enough to touch permafrost yet shallow enough to be seen by escort spirits. A horse, steer, or reindeer is sacrificed, to help the deceased travel to the land of the dead and to provide food for family and grave preparers. One of the deceased's three souls is believed to travel skyward for life in a lush greenery-filled heaven until possible return in reincarnation. Some Sakha fear that souls, especially those of shamans, can stay on earth and haunt kin. Burial symbolism is observed more in villages than cities and a combination of shamanic and Russian Orthodox ritual prevails.

## 8 INTERPERSONAL RELATIONS

Travelers from afar once greeted each other with the request "Tell me what is new" and with a discussion of kin connections if the people did not know each other. Variations of this occur today, although most Sakha greetings have become Russified, with handshakes and kissing on both cheeks. To show a more traditional style of affection, people greet and part with a small sniff to the cheek. Couples are restrained in public, but warm and considerate at home. Visiting across considerable distances is common for special family and seasonal occasions. Couples usually meet through friendships of their families or through school, and dating takes place both in groups and more privately.

## 9 LIVING CONDITIONS

With the decline of shamans, most Sakha rely on Western medicine administered in hospitals and clinics. Folk medicine, however, including extensive use of herbal knowledge, is also prevalent. Traditional healers have long periods of apprenticeship and are specialized. There are herbal experts, bone setters, shaman's assistants, as well as various grades of shamanic power.

Housing is Russian in style, often rough-hewn log huts with broad, raised stoves. Many families, even in large towns, rely on outhouses and outdoor water pumps. Some collectives, however, let workers build more substantial individual family homes with modern amenities. Another style of housing is low concrete apartment buildings with indoor plumbing. The largest city is Yakutsk (187,000 in 1989), and the towns of Viliusk, Olekminsk, Neriungri, and Mirny are growing rapidly.

As horse and cattle breeders, the Sakha had a transhumant pattern of summer and winter settlements. Winter settlements comprised as few as 20 people, members of several closely related families who shared pasture land and lived in nearby yurts (*balagan*) with surrounding storehouses and corrals. The yurts were oblong huts with slanted earth walls, low ceilings, sod roofs, and dirt floors. Most had an adjoining room for cattle. They had substantial hearths and fur-covered benches lining the walls, with sleeping arrangements made according to social protocol. Yurts faced east, toward benevolent deities. In summer, families moved with their animals to larger encampments. The most ancient summer homes, *urasy*, were elegant conical birchbark tents, some of which could hold one hundred people. Their ceilings soared above a circular hearth at the center point and around the sides were wide benches placed in compartments that served as ranked seating and sleeping areas. Every pole or eave was carved with symbolic designs of animals, fertility, and lineage identities. By 1900, however, *urasy* were rare; summer homes became yurts or combination yurt-log cabins. By 1950, yurts too were obsolete, found only in a few museums. In the 1990s, new versions of collectives still send workers to summer sites to graze cattle away from large villages, and some families are returning to homestead-style cattle breeding.

## 10 FAMILY LIFE

Key kin relations are based on a patrilineage (*aga-usa*) that traces membership back as far as nine generations. Within this, children born to a specific mother are distinguished as a group (*ye-usa*) and may form the basis for different households (*korgon*). Historically, more distant kin were recognized on two levels, the *aimak* (or territorial *nasleg*), with 1 to 30 lineages, and the *dzhon* (or territorial *ulus*), composed of several *aimak*. These larger units were united by common defense alliances and economic relations and reinforced by councils and festivals. A lineage head was *bis-usa-toyon*, while respected warriors and hunters were *batyr*. Kin terms reflect gender and age distinctions, marking senior paternal lines from junior ones. All relations are called *uru*, which is also the term for wedding.

Wedding rituals, pared down from previous eras, center around carved memorial posts, with couples honored by blessings, special food, and dancing. Earlier (and sometimes today), a dual celebration would go from the bride's household to the groom's, where the couple traditionally lived. Since the 1970s, interest in aspects of ritual and gift exchange has been revived, although few couples are paired through matchmakers as previously. Multi-generational families often live together, although the movement of young families to cities has made smaller, less-extended families a more recent norm.

Traditionally marriage could be polygamous for wealthy Sakha. Monogamy was more common, however, with occasional remarriage after the death of a spouse. Arranged marriages were sometimes politically motivated. Patrilineage exogamy (marriage of a Sakha man to a non-Sakha woman) was reckoned with strictly; those one could marry were called *sygan*. Until the 1920s, marriages had many stages involving financial, emotional, and symbolic resources of the bride's and groom's extended families. This included a matchmaking ritual; several formal payments of animals, furs, and meat to the bride's family; informal gifts; and extensive dowries. Some

families allowed poor grooms to work in their households as replacement for "bride wealth." Occasionally bride capture occurred and may have been more common in pre-Russian times.

By customary law, land, cattle and horses were controlled by the patrilineage although used by households. Inheritance or the sale of animals or land had to be approved by elders. Men owned most of the wealth, and passed it down to sons, especially elder sons, although the youngest son often inherited the family yurt. Mothers could pass on dowries to daughters, unless the dowry had been forfeited by bad behavior. In theory, dowries included land as well as goods, jewelry, and animals, although in practice elders rarely gave land to another lineage. Soviet law limited inheritance, but new land laws have made families with small plots more secure. In addition, most apartments and summer houses are kept in families.

Children were reared to be good workers, with boys racing, hunting, playing games of strength while girls learned domestic tasks. Girls were expected to be shy, learning taboos that would become important in a husband's household. With education, however, youth, especially girls, have more freedom. After training, many opt to live away from their rural homes. Even so, the values of Sakha pride, language fluency, and the advisability of endogamy (marriage to other Sakha) are strongly instilled.

## 11 CLOTHING

Sakha women are fashion conscious, with a strong sense of style and access to European magazines. However, for weddings and the annual *yhyakh* holiday, women are returning to versions of traditional flowing gowns with ribbons and appliqué. Fur appliqué on coats and strong colorful designs on vests (especially with green and red) merge old and new styles. Long silver and gold earrings and elaborately carved breast and headdress jewelry are popular, especially since the resurgence of traditional Sakha crafts in the republic. Men usually wear European-style casual and more formal clothing. Both genders prefer beautifully made fur hats, coats, and boots during the cold winters.

## 12 FOOD

Dairy products and meat from cattle and horses are especially valued. Diet is augmented by hunting (deer, elk, squirrel, hare, bear, ferret, and fowl) and fishing (salmon, carp, *muk-sun*, and *mundu*). Because of Russian influence, agricultural products (cereals and vegetables) are grown or bought in stores and markets. Mildly alcoholic fermented mare's milk, *kumys*, varies in processing and taste, with one bubbly style considered the "champagne" of this traditional Turkic drink. A heavy whipped cream with berries called, *kerchek*, is labor-intensive and therefore a special treat. Horse-meat kabobs cooked over an open fire are served at holidays, and when the horses have been raised for their meat, the kabobs are tender. Bread and waffles have become popular through Russian influence.

Utensils are store-bought and European-style, although traditional carved wooden bowls and spoons are valued as serving implements. Carved wooden *kumys* cups, called *choron*, come in many sizes. With a single stem or three carved legs, they are said to be the shape of a woman's breast and symbolize fertility.

*Klaudia and German Khatylaeva are a husband and wife team of professional performers from the Sakha Republic. They performed at the Tibet House in New York, New York, on this their first visit to the United States. (© Viviane Moos/Corbis)*

### 13 EDUCATION

Before the Russian Revolution, a few Sakha children attended missionary schools, but most were illiterate. Literacy campaigns for both children and adults in the 1920s and 1930s improved basic education. The turmoil of Stalinist policies and World War II left many Sakha without their traditional homesteads and unused to salaried industrial or urban work. Education improved their chances of adaptation and also stimulated interest in the Sakha past.

By the 1980s, the intelligentsia of the republic was dominated by indigenous men and women in prestigious cultural, scientific, and political jobs. A Sakha man was director of the gold ministry, and a Sakha woman was head of the republic legislature. The Yakutsk State University was a main mechanism for advancement, as were various Russian Academy of Sciences institutes. In the 1990s, not every Sakha child who wants higher education can obtain it, but most Sakha have a high school education and know Russian. Technical schools and on-the-job training improve career chances, but republic leaders recognize that educational reform is needed. There are debates over the goals of education and the level to which training should continue in the Sakha language.

### 14 CULTURAL HERITAGE

Sakha linguists proclaim that the Sakha language, in oral and written form, has metaphoric flexibility that lends itself to poetry. Continuity of folk arts is strongest in exuberant improvisational poetry that accompanies a type of line dancing, called *ohuokhai*. A leader sings out a line of verse, which other dancers repeat in unison, giving the leader a chance to think of the next line. This rhythmic dance goes on for hours, traditionally during weddings and the seasonal summer celebration, but recently also at clubs. Similarly, a revival of the twanging mouth harp, *khomus*, has spread beyond its original familial and shamanic ritual context onto the Sakha stage.

Filmmakers, theater groups, opera, and dance companies enrich Sakha cultural life with performances that build on traditional themes in new ways. Tension between Russian influence and pride in Sakha identity is clear in many works. Sakha novelists and playwrights, such as Suoron Ommolon, have adopted Sakha pseudonyms, though their readers usually know their Russian family names. Sakha ethnographers explore their roots in widely read works.

## 15 WORK

In such a harsh climate, pastoralism requires homestead self-reliance, with intense devotion to calves and foals. Before 1917, rich families owned hundreds of horses and cattle while poor ones raised a few cattle or herded for others. Wealthy Sakha hunted on horseback using dogs. The poorest Sakha, without cattle, relied on fishing with horsehair nets and, in the north, herding reindeer like their Evenk and Yukagir neighbors. Sakha also engaged in the fur trade, relying on squirrel by the 20th century when luxury furs (ermine, sable, and fox) were depleted. Sakha merchants and transporters spread throughout the entire Northeast, easing communications and trade for natives and Russians. Staples such as butter, meat, and hay, plus luxuries such as silver and gold jewelry, carved bone, ivory, and wood crafts, were sold. Barter, Russian money, and furs formed the media of exchange. Guns were imported, as was iron for local blacksmiths.

Although occupations within a household were divided by gender and status, the atmosphere was usually one of productive group activity. Haymaking, cattle herding, and milking were done by all, although horses were more a male preserve and cattle a female responsibility. Women tended children and fires, prepared food, carried water, and made clothing and pottery. Men handled firewood preparation, house building, sled making, hunting, fishing, and mowing. Ivory carving and wood and metalworking were male tasks.

## 16 SPORTS

Horse racing is one of the most popular sports, and it is featured at the annual summer *hyakh* festival. Traditional male sports of wrestling, balancing across poles, rock lifting, hurdles and foot racing hone important skills and remain popular at festivals. Victors are awarded legs of cooked meat as well as more modern commercial prizes.

## 17 ENTERTAINMENT AND RECREATION

On dark winter nights, long epics were the most valued form of entertainment. A single traveling tale singer would take the parts of all the characters in a given drama, and families would cluster around a hearth for several nights running. Traditional tales have recently been transformed onto the stage and into movies by skilled Sakha artists. Other traditional entertainment included songs (*lada*), riddles, and comic, fast-paced tongue-twister dialogues.

There is television in nearly every Sakha home, introducing Sakha viewers to international films, news, and soap operas. But a Sakha language channel also offers home-grown popular songs and comedy, programs on nature, and critical commentary on issues of the day.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Iron-working from marsh ore preceded imported iron, just as ceramics from local clay preceded Russian pottery. Most home-made crafts are for household use, and include birchbark containers, leather bags, dairy-processing equipment, horsehair blankets, fur clothing, benches, hitching posts, and elaborately carved wooden containers. Sakha art takes many forms, sometimes rooted in ritual life, although since the Soviet period, it is often secular and commercial. Silver and gold jewelry, once considered talismanic, is now enjoyed for its aesthetic value.

The Sakha were once famous for their bone carvings, which included boxes, pipes, chess pieces, and dagger hilts. The most famous carvings were made from ancient mammoth bones and tusks that had been found in ice. Famed for ivory and wood carving, Sakha artists have recently branched out into graphic art, painting, and sculpture. A group of young artists called Flagiston brings traditional shamanic themes into new mediums.

## 19 SOCIAL PROBLEMS

During most of the Soviet period, crime was covered up with false statistics by Soviet officials engaged in corruption. In addition, elite Sakha helped kin obtain jobs and political positions that built on traditional obligations and were not defined by locals as corrupt. Bad Soviet management, nuclear testing, and disastrous mining practices have left the republic with serious social and economic problems. An environmental movement has formed in response, as well as some political reform agitation. Demonstrations erupted on Yakutsk streets several times in the 1980s, mostly by young Sakha protesting police inaction over violent incidents involving Russians and Sakha. Tensions exist between newcomers and natives, developers and environmental activists, and "internationalists" and "nationalists." Alcoholism and unemployment rates have increased since the Soviet collapse, thus aggravating already existing problems.

Non-Sakha indigenous minorities, such as the Evenk, Even, and Yukagir, have demanded greater cultural and political rights. In response, a national district, Eveno-Bytantaisk, was established in 1989 in the republic, and local self-rule councils are developing.

## 20 GENDER ISSUES

In traditional Sakha society the subsistence economy and its division of labor strongly affected gender roles. With the establishment of collective and state farms during the Soviet era women were integrated into the Soviet labor force and the Soviet workplace, particularly during and after the Second World War. While child-rearing and household duties generally remained the realm of women, Soviet Sakha women also gained access to educational opportunities. Divisions of labor continued through the 20th century in households of rural collectives, although possibilities for both sexes have expanded. Women now hunt, fish, and engage in crafts once associated with men. They have become doctors, nurses, teachers, engineers, bookkeepers, and politicians, and some work in the growing industrial sector. Men are engineers, tractor drivers, geologists, teachers, doctors, managers, and workers in the lucrative energy, metallurgy, gold, diamond, and building industries.

Since the collapse of the Soviet Union, in some rural Sakha communities the lines between division of labor have blurred to some degree, with men sharing household duties and also being involved in herding activities that beforehand had largely been the realm of women.

## SAMI

**ALTERNATE NAMES:** Lapps, Samer

**LOCATION:** Norway, Sweden, Finland, and Russia

**POPULATION:** About 100,000

**LANGUAGE:** Sami language in many dialects; also language of country in which they live

**RELIGION:** Lutheran

### 1 INTRODUCTION

While the Sami (also spelled Saami), or Lapps (as they were formerly called), are commonly thought of as the inhabitants of Lapland, they have never had a country of their own. They are the original inhabitants of northern Scandinavia and most of Finland. Their neighbors have called them Lapps, but they prefer to be called *Samer* or *Sami* (pronounced "Sa-mee"). (They refer to their land as *Sapmi* or *Same eatnam*.)

The Sami first appear in written history in the works of the Roman author Tacitus in about AD 98. Nearly 900 years later, a Norwegian chieftain visiting King Alfred the Great of England spoke of these reindeer herders, who were paying taxes to him in the form of furs, feathers, and whale bones. Over the centuries many armed nations, including the Karelians, Swedes, Danes, Finns, and Russians, demanded their allegiance and taxes. In some cases, the Sami had to pay taxes to two or three governments, as well as fines imposed by one country for paying taxes to another.

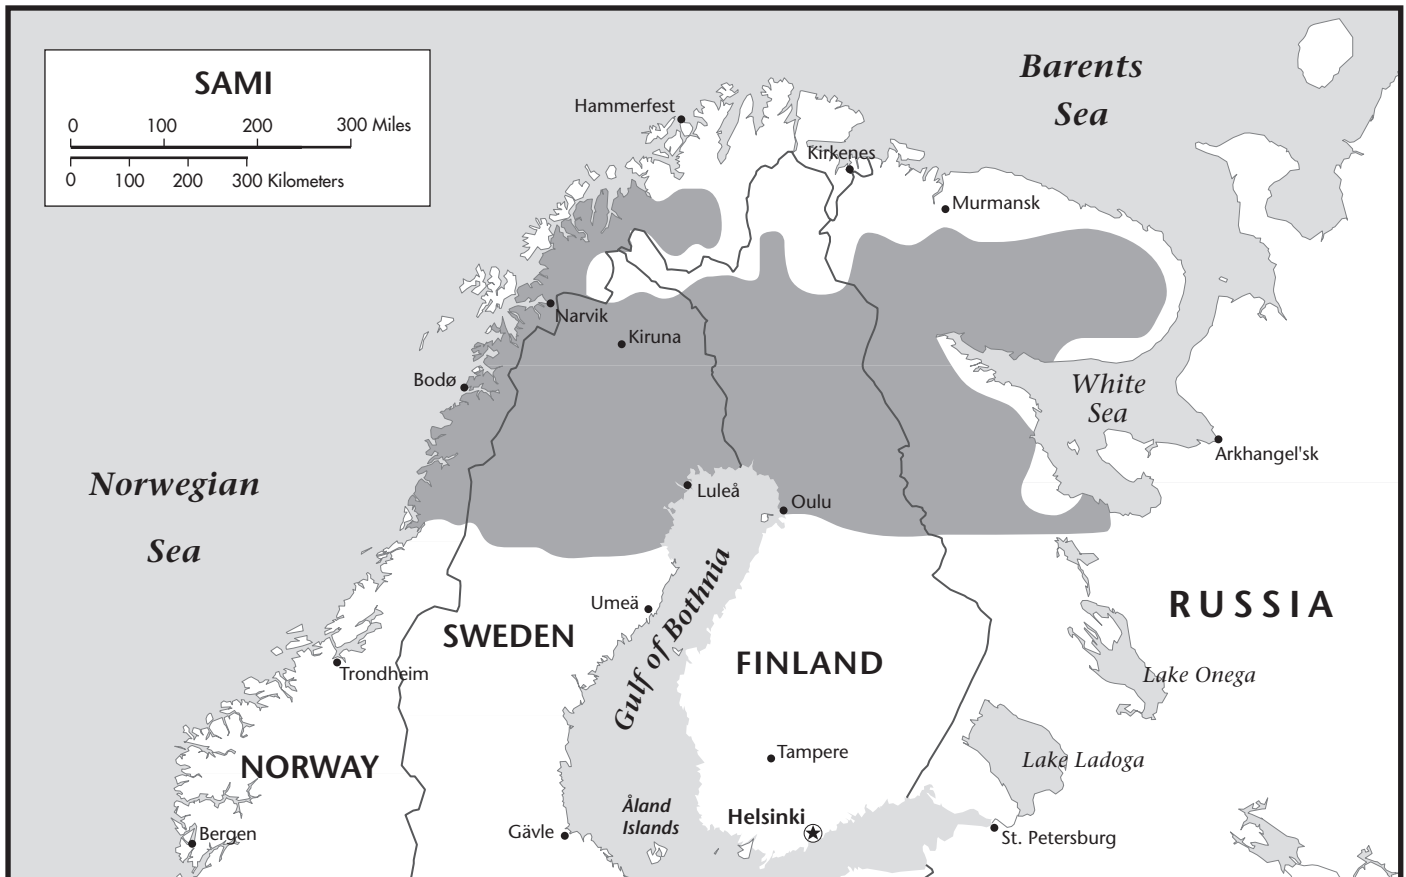

The Sami are now citizens of the countries within whose borders they live, with full rights to education, social services, religious freedom, and participation in the political process. At the same time, however, they continue to preserve and defend their ethnic identity and traditional cultural values. Until the liberalization instituted by the Gorbachev government in the late 1980s, the Russian Sami had almost no contact with those in other areas. Sami living in Finland, Sweden, and Norway formed the Nordic Sami Council (Nordisk Samerad) in 1956 to promote cooperation between their three populations. In 1992, the Russian Sami joined the organization, which then changed its name to the Sami Council (Sameradet). The Sami Council secretariat, based in Utsjoki, Finland, has had advisory status within the United Nations since 1989.

In 1973 the Nordic Sami Institute at Kautokeino, Norway, was founded to promote the study of the Sami language and culture and, in 1989, a Sami College was established there as well. The universities of Tromsø in Norway, Umeå in Sweden, and Oulu in Finland have Sami departments in which Sami topics are taught, both separately and as part of established disciplines.

### 2 LOCATION AND HOMELAND

The Sami live in tundra, taiga, and coastal zones in the far north of Europe, spread out over four different countries: Norway, Sweden, Finland, and the Kola peninsula in Russia. They live on coasts and islands warmed by the Gulf Stream, on plateaus dotted by lakes and streams, and on forested mountains. This land area inhabited by the Sami is referred to as the *Sapmi*.

Sami territory lies at latitudes above 62° north, and much of it is above the Arctic Circle, with dark, cold winters and warm,

light summers. It is often called the land of the midnight sun, which, depending on the latitude, may be visible for up to 70 days in the summer. The far north sees almost three months of continuous daylight. Balancing this out, however, is an equally long period of darkness in the winter, which may last from October to March. Beginning in November, the sun disappears for weeks. Much of the Samis' land is at high altitudes, rising to over 1,829 m (6,000 ft) above sea level. The highest point is Kebnekajse, at 2,121 m (6,960 feet).

Traditionally, the Sami lived in a community of families called a *siida*, whose members cooperated in hunting, trapping, and fishing. While exact numbers are not available, the Sami population in the four major countries of Finland, Sweden, Norway, and Russia has been estimated at 70,000 and 100,000 (or more). It is thought that between 60,000 and 100,000 live in Norway, 15,000 to 25,000 live in Sweden, over 6,000 live in Finland, and about 2,000 live in Russia. However, some think the actual number is considerably higher, perhaps up to 200,000. For many years, the Sami culture and way of life were disparaged by their neighbors, causing many to conceal their true identity. Thus, it is difficult to know how many Sami there actually are.

### **3 LANGUAGE**

Sami is a Finno-Ugric language that is most closely related to Finnish, Estonian, Livonian, Votic, and several other little-known tongues. While it varies from region to region, it does so based on the lifestyle of the Sami people rather than on the

national boundaries of the lands in which they live. In fact, the present official definition of a Sami is primarily a linguistic one. There are several distinct dialects; however, the language is usually grouped into three main categories: Eastern Sami, Central Sami, and Southern Sami. Today, almost all Sami also speak the language of their native country.

Sami is rich in words describing reindeer, with words for different colors, sizes, antler spreads, and fur textures. Other words indicate how tame a reindeer is or how good at pulling sleds. There is actually a separate word describing a male reindeer in each year of his life. A poem by Nils-Aslak Valkeapää, recipient of the Nordic Council prize, consists mainly of different Sami words for different kinds of reindeer. There are also hundreds of words that differentiate snow according to its age, depth, density, and hardness; terms exist for powdery snow, snow that fell yesterday, and snow that is soft underneath with a hard crust.

The availability of schooling in the Sami language has become an important issue to those concerned with the preservation of the Sami culture and way of life. In 1995, the Norwegian government issued the Sami Language Act, allowing for the use of Sami as an official language in several municipalities. Finland and Sweden have since passed similar acts. Sami may be used as the language of instruction throughout primary and secondary school. Sami is taught and studied at the university level as well.

#### 4 FOLKLORE

Traditionally, the Sami believed that specific spirits were associated with certain places and with the deceased. Many of their myths and legends concern the underworld. Others involve the Stallos, a race of troll-like giants who ate humans or sucked out their strength through an iron pipe. Many tales involve Sami outwitting the Stallos.

Some of the Sami epics trace Sami ancestry to the sun. In the mid-19th century, a Sami minister, Anders Fjellner, recorded epic mythical poems in which the Daughter of the Sun favored the Sami and brought the reindeer to them. In a related myth, the Son of the Sun had three sons who became the ancestors of the Sami. At their deaths they became stars in the heavens, and can be seen today in the belt of the constellation Orion.

#### 5 RELIGION

The traditional Sami faith contained elements of animism, shamanism, and polytheism. The Sami believed that both living beings and inanimate objects, such as trees, had souls. A priest or shaman, called a *noaidi*, acted as an intermediary between the spiritual and material worlds. He would consult with the dead while in a trance, induced by beating on a magic drum and performing a special kind of chanting called *yoik*.

Over the course of time, all of the Sami were converted to Christianity, either by choice or by force of assimilation through the governments of the countries in they live. One major move toward Christianity was brought about through the efforts of Lars Levi Laestadius, an evangelical Congregationalist who was the founder of the Laestadian Lutheran Church in the 19th century. Today, most Sami practice the dominant Lutheran religion of the Nordic countries in which they live.

#### 6 MAJOR HOLIDAYS

Sami observe the major holidays of the Christian calendar. Every Easter, a big festival is held at Kautokeino in northern Norway, complete with typical Sami entertainments, including sledge races and *yoik* singing. Many couples choose this setting for their weddings. Many Sami observe Finland's "little Christmas" (*Pikkujoulu*) early in December, marking the beginning of festivities that last through the twenty-sixth of the month. On Christmas Eve, special "midday trees" are adorned with candles, silver, and gold ribbons, and other decorations. After readings from the Gospels, a festive meal is eaten, typically consisting of salmon, ham, vegetables, and rice pudding. Boxing Day on December 26 is marked by sledge rides, lasso throwing, and other traditional games.

Secular holidays include the large spring celebrations held by the Sami every year, occasions on which they don their best clothes and gather with friends to mark the end of winter. Since 2004, Sami National Day has been celebrated on February 6 in Norway, Sweden, Russia, and Finland. The day commemorates the establishment of the first Sami congress in Norway in 1917. In Norway, Sami National Day is observed as a flag day by the government, meaning that both the Norwegian flag and the Sami flag are flown from the Government Administration Complex and the Storting (parliament building) on that day.

#### 7 RITES OF PASSAGE

The Sami observe major life cycle events within the Christian tradition.

Sami weddings are festive affairs and are primarily the responsibility of the bride's parents. In one traditional secular courtship ritual, a man circled the *lavvo* (tent) of his lover with his reindeer and sledge; if the woman regarded his suit favorably, she came out and unharnessed the reindeer.

Sami funerals and burials are generally conducted according to Lutheran customs. The Sami have little interest in an afterlife.

#### 8 INTERPERSONAL RELATIONS

Sami society is traditionally open and egalitarian, and the Sami are known for their courtesy and hospitality to outsiders. They willingly accept other Sami who may not be full-blooded; a person's attitude toward the treasured Sami language and traditions are more important than bloodlines. A knowledge of the Sami language is considered one of the main ways of identifying someone as a Sami.

#### 9 LIVING CONDITIONS

As a nomadic people, the reindeer-herding Sami traditionally maintained permanent dwellings, sometimes more than one, and spent part of their time living in tents. The permanent homes were either frame buildings or sod huts. The Sami tent, called a *lavvo*, has a circular framework of poles leaning inward like the teepee or wigwam of Native Americans and a floor of birch twigs covered with layers of reindeer fur. Both tents and huts are arranged around a central fire. Today, most Sami, who are no longer reindeer herders, live in typical Scandinavian houses with central heating and running water. Family life typically centers on the kitchen.

The Sami receive the same level of health care as other citizens of the countries in which they live. Like their Scandinavian neighbors, they have a high rate of heart disease. However, Sami are often active and well into their 80s. They sometimes supplement Western-style medical care with home remedies or treatment derived from old beliefs in the curing power of the word of the shaman, or medicine man.

#### 10 FAMILY LIFE

Traditionally, the Sami lived in a group of families called a *siida*. Today, the nuclear family is the basic social unit among the Sami, and families are close-knit with lavish attention paid to the children. The Sami language contains an unusually large number of words that refer to family relationships. Traditionally, the males of the family were occupied with herding, hunting, and making boats, sleds, and tools, while the women cooked, made clothing and thread, and cured the meat. Each family had its own mark (and children had their own marks as well). Herding families use these marks to distinguish their reindeer from those of other families.

#### 11 CLOTHING

Some Sami still wear the group's brightly colored traditional costume, known as a *kolt*. It is most easily recognizable by the distinctive bands of bright red and yellow patterns against a deep blue background of wool or felt. These bands appear as decorations on men's tunics (*gaktis*), as borders on the wom-

en's skirts, and on the hats of both sexes. Men's hats vary from region to region; some are cone-shaped while others have four corners. Women and girls may drape fringed scarves around their shoulders. Warm reindeer-skin coats are worn by both sexes. The traditional Sami might wear moccasins of reindeer skin with turned-up toes, fastened with ribbons. However, they wear no socks. Instead, they stuff their moccasins with soft sedge grass to protect their feet against the cold and dampness. Today, many Sami wear the styles of clothing typical to their home country, saving the kolt for special ceremonies.

## 12 FOOD

Reindeer meat has been a traditional dietary staple. Even the reindeer's blood is used for sausages. Fish caught in the many lakes of the Sami's homelands are eaten boiled, grilled, dried, smoked, or salted. Wild berries are another mainstay of the Sami diet, especially the vitamin C-rich cloudberry. To help them stay warm and alert in their cold environment, the Sami drink coffee throughout the day. Supper is the main meal of the day.

## 13 EDUCATION

Traditionally, Sami children learned what they would need to know as adults by observing and helping their parents. The goal of education was not simply to acquire more knowledge but to become a better citizen. In modern society, many Sami still maintain this attitude toward education and prefer an experiential approach to learning. Sami often attend the schools in the countries in which they live. However, there are now schools within Norway and Sweden where most of the subjects are taught in the Sami language. Sámi Allaskuvla, a Sami university, was established in Norway in 1989.

## 14 CULTURAL HERITAGE

The Sami have a rich tradition of oral storytelling. A Sami tradition that has recently been revived is the singing or expression of the *yoik*. The *yoik* might be considered as both a form of poetry and of song; however, the melody is based on non-Western scales and what might be considered as non-melodic vocalizations. Traditional *yoiks* are typically unaccompanied. They do not generally tell a narrative story, as the typical Western song might. Instead, a *yoik* presents an idea, a memory, or an emotion through the use of melody, rhythm, facial expressions, and gestures, as well as words. The *yoik* resembles the Native American practice of "melodizing" a feeling or mood. As new generations of Sami and their European neighbors have rediscovered the *yoik*, they have added to and reshaped the tradition. Musicians of pop, rock, and folk music have added *yoik* techniques and melodies to their music. An annual Sami Music festival is held in Kafjord, Norway.

The earliest Sami literature dates back to about the 17th century, with the earliest texts relating to religion and the Sami language, such as alphabet books. In 1991, Nils-Aslak Valkeapää of Finland became the first Sami writer to win the Nordic Council prize for literature with his book *Beaivi, Áhcázan* (*The Sun, My Father*).

The revival of the Sami language in recent years has also opened the door for the creation of Sami language theater productions, films, and newspapers.

## 15 WORK

About 10% of the Sami population in Sweden is still nomadic reindeer herders, making treks of up to 220 miles to provide pasture for their herds, which average about 500 animals. In 1947, Sami reindeer breeders formed the National Association of Norwegian Reindeer Breeders, which today plays an important role in the development of modern reindeer breeding. Handicrafts are a major source of income for some Sami, who find eager markets among tourists. While some Sami still work in the traditional occupations of fishing and hunting, a growing number of Sami live in urban areas and work in a wide variety of common occupations.

## 16 SPORTS

Outdoor recreation for the Sami is closely linked to the activities that provide their sustenance. They enjoy competing to see who can throw their reindeer lassos the farthest and with the greatest precision. Reindeer-drawn sledge races are another popular leisure-time activity, especially at the Easter festivals in the heart of Sapmi, which many tourists also frequent. Skiing is a popular sport among the Sami, who believe that their own ancestors were the inventors of skis. Soccer has also become a popular sport among the Sami.

## 17 ENTERTAINMENT AND RECREATION

Sami entertainment is provided both by expressive activities, including storytelling and *yoiking*, and physical contests such as sledge racing, skiing, lasso throwing, and soccer matches. The Sami also participate in the wide variety of entertainment options enjoyed by their fellow Scandinavian citizens.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The traditional style of Sami arts and crafts is known as *duodji*. Sami crafts usually had a very practical purpose in daily living, such as tools and utensils that are made from bone, wood, and reindeer antlers. However, these items are often highly decoration, designed to be pleasing to the eye as well as useful. *Duodji* has a spiritual aspect as well as a material one. Items are usually made from natural materials, with the expectation that they will be worn down and even destroyed through repeated use, perhaps to remind the user that all natural life is only temporary. Modern art in the Sami tradition is known as *Dáidda*, and includes items that are generally meant for display, rather than use. The Sami have also perfected a special kind of ribbon weaving. Their crafts are popular tourist purchases, although the Sami save many of their creations for their own use, and much of their artistic talent goes into the elaborate braided designs of their costumes.

## 19 SOCIAL PROBLEMS

In recent years, the Sami homelands have been affected by the encroachment of mining and logging concerns, hydroelectric power projects, communication networks, and tourism. A controversy that received particular attention was the building of the Alta hydroelectric dam in Norway, which flooded reindeer pastures important to the region's Sami herders. A group of Sami protesters traveled to the capital city of Oslo, where they set up *lavvos* (tents) in front of the Norwegian parliament and began a hunger strike. While their cause was unsuccessful,

their actions drew worldwide attention to their threatened way of life.

Since 1968, the National Association of Norwegian Sami (NSR) has been working actively for Sami political rights, as well as improvements in cultural, social, and economic conditions. Norway, Sweden, and Finland all have separate Sami parliaments addressing issues of concern for the Sami.

The Sami were also affected by the 1986 nuclear accident at Chernobyl in Ukraine, which contaminated some of their grazing areas, making their reindeer potentially unsafe for them to market or eat themselves. Fish, berries, and drinking water in the affected areas were poisoned as well. Another problem for the Sami has been the increase of tourists from the south, who deplete important Sami resources, such as gamebirds, fish, and berries, without actually bringing much money into their community.

Besides displacement by roads and other forms of development, the livelihood of the Sami herders is also threatened by overgrazing and uncontrolled breeding, which results in smaller, less healthy animals, and it is hard for the migrant Sami to find alternative forms of employment.

## 20 GENDER ISSUES

There has been some evidence to indicate that the traditional Sami embraced a matriarchal culture, in which women held a high level of authority in both the community and in the family. The tasks of raising children and providing food and clothing for the family were considered to be of great importance. Since women were the ones trained in accomplishing these tasks, women were held in high esteem. Traditional Sami religion, which included a number of female deities, may have also supported a culture in which men and women were viewed as equals. However, the introduction of Christianity and the influence of more dominant cultures resulted in a loss of authority to women. New Christian men and women were taught that women should be submissive to men. Assimilation into other Scandinavian societies also inspired a shift toward a more patriarchal attitude.

A Sami feminist movement began in the 1970s at the initiation of female reindeer herders who expected equality with their male herders. In 1988, Sami women formed the organization known as Sarahkka, which works to resolve issues important to Sami women. The group became a central force in the formation of the World Council for Aboriginal Women in 1989. Sarahkka continues to focus on projects that lead to greater education and social development among women.

Many Sami women still consider raising children and passing along the traditions and beliefs of their culture as their most important roles. These roles are also generally respected within Sami society. The creation and sale of *duodji*, traditional Sami handicrafts, has been taken up by some women as a primary or secondary source of income. Some Sami women, particularly in urban areas, have taken jobs typical of their female counterparts from their home countries. Sami women have also been elected to seats in the Sami parliament.

# SAMMARINESE

**LOCATION:** San Marino  
**POPULATION:** 29,973 (2008 est.)  
**LANGUAGE:** Italian; Romagna  
**RELIGION:** Roman Catholic

## <sup>1</sup> INTRODUCTION

The tiny nation of San Marino, located completely within the borders of Italy, is Europe's third-smallest country and its oldest independent republic. The people of San Marino are called Sammarinese. For hundreds of years, their country's mountaintop fortifications helped it maintain some distance from the recurrent power struggles that engulfed their region until the unification of Italy in the 19th century. Since then, a mutual defense treaty has guaranteed San Marino's continuing political independence from Italy, and the two nations have also formed a customs union. Today San Marino's primary sources of income are tourism, light manufacturing, and the sale of postage stamps to collectors throughout the world.

The only one of Italy's historic city-states to survive as an independent nation, San Marino had its beginnings in AD 301 when a Christian stonecutter named Marinus, fleeing persecution by the Roman Emperor Diocletian, founded a monastery atop Mount Titano. He was later canonized as Saint Marinus (San Marino in Italian). In the succeeding centuries, the population of the region grew, and its people remained independent of any outside civil or religious authority, eventually erecting fortifications consisting of walls and towers. A document from AD 885 called the *Placito Feretrano* establishes the existence of San Marino as an independent political entity prior to AD 1000. By the 11th century, it had developed a system of government that still survives today in a modified form, and by the 13th century, it had formed a militia to keep its territory free of foreign domination.

For hundreds of years, the tiny state fended off attempts by a succession of popes and ruling families to seize control of its territory. As part of a power struggle involving one of its popes, the Catholic Church excommunicated all the Sammarinese between 1247 and 1249, and tensions in the region erupted into open warfare in the 14th and 15th centuries. For a time San Marino allied itself with the Duke of Urbino, but eventually faced new threats when the surrounding states formed a papal union. In 1739, Cardinal Giulio Alberoni from the neighboring province of Romagna seized control of San Marino using troops under the church's command, but he was eventually forced out by the religious authorities. San Marino, as a political entity, remained separate from the 19th-century struggle for unification of the Italian states, although it provided a haven for many of the combatants, including the national hero, Giuseppe Garibaldi. In 1862, the new Kingdom of Italy signed an agreement recognizing the sovereignty of its tiny neighbor, finally ensuring San Marino's independence.

At the beginning of the 20th century, San Marino underwent a governmental reform that resulted in the establishment of an elected parliament, the Grand and General Council. The country's first democratic election took place in 1906. Although San Marino remained neutral in both world wars, it couldn't avoid being affected by the turmoil of the era. Be-

tween the wars, the Fascism that was sweeping Italy also gained a number of converts within the borders of its smaller neighbor. However, the government of San Marino remained neutral, and the country harbored thousands of refugees during the war, putting an enormous strain on its resources. However, the greatest suffering inflicted by the war occurred on 26 June 1944, when 63 people were killed and hundreds of others injured by the "friendly fire" of an ally: The British Royal Air Force inexplicably dropped 243 bombs on San Marino, although there were no enemy troops present at the time. The country later received financial compensation for the incident from the British government. During the postwar period, political control of San Marino has alternated between right- and left-wing parties. The nation established diplomatic ties with the European Community in 1983 and became a member of the United Nations in 1992. Before then, it had maintained permanent observer missions in various U.N. organizations. San Marino's foreign policy and social and political trends track closely with those of Italy. In 2006 more than 2.1 million tourists visited San Marino.

## <sup>2</sup> LOCATION AND HOMELAND

San Marino lies completely within the country of Italy, in the central Apennines about 22 km (13 mi) southwest of the city of Rimini on the Adriatic coast. Located on the summit and lower slopes of Mt. Titano, San Marino has an area of 60 sq km (23 sq mi) and a total boundary length of 39 km (24 mi). About one-third the size of Washington, D.C., the tiny republic is only 13 km (8 mi) long, and 9 km (5.5 mi) wide at its widest point. Mt. Titano, whose three main peaks—with fortresses atop each one—are pictured in the San Marino coat of arms, has an elevation of 750 m (2,460 ft). Two rivers, the Marano and the Ausa, flow through San Marino.

In 2008 San Marino had a population of nearly 30,000, making it one of the world's most densely populated countries. The capital city, also called San Marino, had a population of 4,500. Other population centers include the town of Dogana and the following locales, each with its own castle: Serravalle, Borgo Maggiore, Faetano, Domagnano, Chiesanuova, Acquaviva, Fiorentino, and Montegiardino. The Sammarinese are mostly of Italian ancestry, and most new immigration to the country is from Italy. The main destinations for those emigrating from San Marino are Italy, the United States, France, and Belgium.

## <sup>3</sup> LANGUAGE

Italian, the official language of San Marino, is spoken by all its people, although many also speak the regional dialect of Romagna, the part of Italy where San Marino is located. Even the standard, or Florentine, Italian of the Sammarinese contains certain words and idioms unique to San Marino.

## <sup>4</sup> FOLKLORE

Mt. Titano, on which San Marino is located, is named for the Titans, characters from Roman mythology who tried to dethrone Jupiter by piling one mountain on top of another in order to reach the sky.

## <sup>5</sup> RELIGION

Roman Catholicism is both San Marino's official religion and the faith of almost all its residents. Ceremonies marking many

state occasions are held in the country's churches. San Marino has nine parishes, all belonging to a single diocese. Some areas that are actually in Italy, such as the town of Rimini, belong to the diocese of San Marino.

## 6 MAJOR HOLIDAYS

In addition to the standard holidays of the Christian calendar (including Epiphany, Assumption, Easter Monday, Ascension, Immaculate Conception, and Christmas), legal holidays in San Marino include New Year's Day (January 1), Labor Day (May 1), August Bank Holiday (August 14–16), and All Saints' Day and Commemoration of the Dead (November 1 and 2).

San Marino also has five national holidays that commemorate important historical or political events. February 5 is celebrated both as the Anniversary of St. Agatha, the republic's second patron saint, and as the date on which San Marino was liberated from occupation by Cardinal Alberoni in 1740. The Anniversary of the Arengo, observed on March 25, marks the date in 1906 on which the first democratic elections to the Grand and General Council were held. April 1 and October 1, the two days of the year when San Marino's Captains Regent, its joint chief executives, are installed, are also celebrated as national holidays. Finally, on September 3, the feast day of its patron saint (Saint Marino), the republic celebrates the anniversary of its founding.

## 7 RITES OF PASSAGE

San Marino is a relatively modern Roman Catholic country. Hence, many of the rites of passage that young people undergo are religious rituals, such as baptism, first Communion, confirmation, and marriage. In addition, a student's progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

The Sammarinese show the same basic openness and friendliness found among the neighboring Italians, a quality that has been important in the success of their nation's busy tourist industry. Respect toward the elderly is an important social tradition.

## 9 LIVING CONDITIONS

Nearly all dwellings in San Marino have electricity and indoor plumbing. All Sammarinese are covered by a comprehensive national health care plan, which pays for both private treatment and care at the public state hospital. In 2008 the average life expectancy was 81.9 years. Although it is near the Adriatic Sea, San Marino is a landlocked nation and accessible only by motor vehicle or helicopter. The railway that once connected it to Rimini has been inoperable since being badly damaged by bombing in World War II, but there is regular bus service between the two locations.

## 10 FAMILY LIFE

San Marino's government provides family supplement payments to families with children. Until 1982, Sammarinese women who married citizens of other countries lost their San Marino citizenship. In 1973 women won the right to be elected to any political office in the land, including the highest one—Captain Regent.

## 11 CLOTHING

The Sammarinese wear modern Western-style clothing like that worn in the other countries of Western Europe. However, colorful ceremonial costumes are connected with some of their traditions. The corps of young flag-bearers, who continue a tradition that dates back to ancient times, wear brightly colored tights, black boots, and loosely fitting colored shirts with black belts. The honor guards for the Captains Regent—the nation's chief executives—wear black uniforms with gold trim, including a gold stripe down the trousers, and high plumed hats with blue and white feathers.

## 12 FOOD

Homemade pasta is one of the most popular foods prepared by the Sammarinese. *Fagioli con le cotiche*—a hearty bacon soup with bacon rind—is a special holiday dish traditionally eaten at Christmastime. *Nidi di rondine* (literally, "swallow's nest") consists of hollow pasta filled with smoked ham, cheese, and a meat-and-tomato sauce and baked in a white sauce. Other favorites include *pasta e cece*, a chickpea soup seasoned with garlic and rosemary and served with noodles; snails cooked with tomatoes, red wine, and fennel; and roast rabbit. Popular cuisine from the Italian province of Romagna, which surrounds San Marino, includes *tagliatelli* (a type of pasta that consists of

thin strips), as well as *ravioli* and *lasagna*, two dishes popularized in the United States by Italian-Americans.

Favorite desserts include *zuppa di ciliege* (cherries soaked in red wine and sugar and served with a special bread); *bus-trengo* (a traditional carnival dish made with milk, eggs, sugar, raisins, corn flour, and bread crumbs); and *cacciattello* (a milk-and-egg dessert served cold). San Marino is known for its local wines, especially a red wine called *Sangiovese*.

### 13 EDUCATION

San Marino has a literacy rate of about 96%. Its educational system is based on that of Italy, and school is compulsory between the ages of 6 and 16. High school graduates, after taking a qualifying examination, may attend colleges and universities in Italy, or at the Università degli Studi della Repubblica di San Marino which offers graduate and postgraduate studies.

### 14 CULTURAL HERITAGE

San Marino's long history has produced an impressive heritage of visual art, showcased in the republic's museums and churches, as well as in its outdoor public sculptures. The Valloni Palace, rebuilt after falling victim to "friendly fire" from the British in World War II, houses many of the nation's cultural treasures (although many others were destroyed by the bombing). Famous paintings kept there include *Saint Philip Neri* and *Saint Marino Lifting Up the Republic*, both by Guercino, and *Saint John* by Strozzi. The 14th-century Church of St. Francis, itself an architectural treasure, houses more historic paintings.

San Marino's national anthem is probably the oldest of any country in the world. Derived from a medieval chorale, it is unusual in that it is a purely instrumental composition with no words. San Marino has a military band, which performs at ceremonial and other events.

### 15 WORK

While agriculture provides a smaller percentage of San Marino's income than it did in the past, many Sammarinese are still farmers, growing barley, corn, vegetables, grapes, and other fruits, and raising livestock. The main agricultural products are wine and cheeses. Most of the wage labor force is employed by the tourist sector or in manufacturing, which includes textiles, ceramics, leather goods, and metalworking. The per capita level of output and standard of living are comparable to those of the most prosperous regions of Italy, which supplies much of its food. San Marino has a very low level of unemployment. In 2004 the unemployment rate was 3.8%.

### 16 SPORTS

The traditional national sport of San Marino is archery, practiced as an art of warfare in the distant past and as a recreational pursuit today. The tiny republic is known for the strength and skill of its champion crossbowmen, demonstrated every September in a competition in the palace square. Marksmanship also figures in two other favorite sports, pistol- and rifle-shooting. San Marino's location near Italy's Adriatic coast—at some points the distance is as short as 10 km (6 mi)—allows its residents to enjoy such water sports as swimming, sailing, and deep-sea diving. The Italian sport of *bocce*, lawn bowling with heavy metal balls, is a popular pastime that can be

played on almost any moderately flat surface. The Sammarinese also enjoy soccer, baseball, tennis, and basketball. In addition, their country sponsors a Grand Prix Formula One auto racing event, although it must be held over the border in Italy due to the lack of a suitable racetrack within San Marino's own borders. San Marino's National Olympic Committee manages all the nation's sports facilities.

### 17 ENTERTAINMENT AND RECREATION

In addition to a variety of sports and other outdoor activities, the Sammarinese enjoy socializing at cafés (including outdoor cafés in summertime) and attending movies, concerts, and plays. In addition, those with a taste for the visual arts may view fine art and sculpture in their museums and churches.

### 18 FOLK ART, CRAFTS, AND HOBBIES

San Marino's tourist industry has created a thriving market for its craftspeople, whose work is sold in a number of shops. A special association monitors the quality of all crafts sold in the country. The work of San Marino's potters encompasses both medieval designs and contemporary styles, and the region's white sandstone has been quarried and carved into statues, building stones, friezes, and other objects since ancient times. Other traditional crafts include painting, jewelry, wood carving, tilework, leather goods, and textiles.

Like Liechtenstein, another tiny European country, San Marino is famous for its stamps, internationally prized collectors' items that provide the republic with an important source of income. Designed by respected artists, they are known for their wide variety of themes, which has even included a Walt Disney series with such cartoon characters as Mickey Mouse, Donald Duck, and Goofy. San Marino's Philatelic and Numismatic Museum houses all stamps issued by San Marino since it began to produce them in 1877 under a postal agreement with Italy. San Marino's coins show the same artistic creativity as its stamps, and few circulate because, like the republic's stamps, they are usually snapped up by collectors. A series of coins minted in 1985 had as its theme the war on drugs, and the coins—ranging in value from 1 to 500 lira—depict nine stages of drug addiction. (Today most money circulating in San Marino is the euro).

### 19 SOCIAL PROBLEMS

With its small size, low rate of unemployment, and extensive social programs, San Marino has relatively few of the social problems that affect other modern nations.

### 20 GENDER ISSUES

Women enjoy the same rights as men, including rights under family law, property law, and in the judicial system. In 2007 there were eight women in the 60-seat Great and General Council and two women in the 10-member Congress of State.

Rape, including spousal rape, is a criminal offense. The penalty for rape is two to six years' imprisonment. In the case of aggravating circumstances, the penalty is 4 to 10 years' imprisonment. The law also prohibits violence against women. The penalty for spousal abuse is two to six years' imprisonment. In the case of aggravating circumstances, the penalty is 4 to 10 years' imprisonment. Prostitution is illegal and is not common. Sexual harassment is prohibited.

In 2001 San Marino's parliament voted for the repeal of part of its criminal code. Until this time homosexual contacts could be punished with imprisonment from three months up to one year, if they had been engaged in "habitually" and thereby caused "public scandal." A conviction under this law resulted in loss of political rights and removal from public office for a period from nine months to two years.

# SCOTS

**LOCATION:** United Kingdom (Scotland)

**POPULATION:** Over 5 million

**LANGUAGE:** Scottish dialect of English (also called Scots); Gaelic

**RELIGION:** Church of Scotland, a Presbyterian sect; Roman Catholic; small numbers of Baptists, Anglicans, and Methodists

## <sup>1</sup> INTRODUCTION

Scotland is one of four nations that make up the United Kingdom of Great Britain and Northern Ireland (the other three are England, Wales, and Northern Ireland). A small country—only 442 km (275 mi) long—it covers the northern portion of the island of Great Britain, which it shares with England and Wales. The name Scotland, first used during the 11th century, is derived from the name of a Celtic tribe from Ireland, the Scotti, who settled western Scotland during the 6th century. The Romans called the area Caledonia.

For centuries, social and political life in the northern (Highland) area of Scotland was organized around clans, communities of people with strong family ties, whose powerful chieftains commanded their loyalty in exchange for protecting them from invasion. (Today, the cultural tradition of clans such as MacGregor or MacDonald survives at ceremonial gatherings such as weddings.) The southern areas of the country were much more affected by English patterns of organization. Repeated disputes with the English sometimes led to war, and before the early 14th century, the Scottish were dominated by English monarchs. In 1603 a new era of cooperation began when James VI of Scotland became James I, King of Great Britain. In 1707 the Act of Union made Scotland, together with England and Wales, part of the United Kingdom, sharing a single parliament.

Scotland saw difficult times in the 20th century. The depression of the 1930s wrought havoc on its economy and began an era of unemployment which forced thousands to emigrate in search of a better life. However, the discovery of North Sea oil in the 1960s created as many as 100,000 new jobs, and emigration slowed. As a part of Britain, Scotland joined the European Community (now European Union—EU) in 1973. Since the late 1980s there has been a resurgence of Scottish national sentiment in favor of separation from England. In September 1997 Scotland voted in favor of establishing its own parliament. The 129-seat Scottish Parliament, which saw its first elections in 1999, has the power to increase or cut income taxes by up to 3%. The vote marked the most profound change in Scotland's relationship with the rest of Great Britain since the Act of Union in 1707. As of 2007 there were calls for television production and broadcasting to be devolved to the Scottish parliament, as some saw Scotland as being marginalized by the British broadcasting industry. For example, the British Broadcasting Corporation (BBC) had decreased its investment in Scotland by £30 million.

## <sup>2</sup> LOCATION AND HOMELAND

Located in the northern part of the island of Great Britain, Scotland can be divided into three principal areas: the South-

ern Uplands, a hilly region noted for its sheep-raising industry; the more densely populated Central Lowlands, consisting of flatter, more fertile land; and the Highlands, which account for the northern two-thirds of the country and include lochs (lakes), glens, mountains, and numerous small islands.

Scotland has a population of over 5 million, about three-fourths of whom live in the central Lowland area. Two hundred years ago, almost half the Scottish population lived in the Highlands. Ethnically, most Scots are descended from Celtic tribes that were the original inhabitants of their lands, as well as the Viking, Norman, and English invaders who followed each other in succession. There are fundamental population divisions between Highland and Lowland Scots, as well as between mainland dwellers and those living on the small islands off the coast, such as the Shetlanders and Hebrideans.

**3 LANGUAGE**

Scotland’s official language is English, but it is spoken in distinctive dialects and with a unique Scottish accent, or “burr,” that is especially prominent in words containing “r” sounds. Scottish English (also called Scots) contains words borrowed from Gaelic, French, Dutch, and Scandinavian languages, and its grammar sometimes differs from that of standard English, as in expressions like “Are you no going?” and “I’m away to bed.” Some examples of Scots dialects are Doric, spoken in the northeast, and Lallans, spoken in the southwest (and the dialect of poet Robert Burns). Gaelic is spoken as a second language by less than 2% of the population, mostly in the Highlands and Hebridean islands, although all Scots recognize at least a few words of Gaelic.

**COMMONLY USED SCOTS TERMS**

dinnae, cannae, willnae	don’t, can’t, won’t
wee	small
aye	yes
ken	know
greet	weep
kirk	church
breeks	pants
lassie	girl
bairn	child
bonny	pretty
bide	stay

**TYPICAL SCOTS PHRASES**

Ah’m fair farfochen.	I’m exhausted.
The bairn’s a wee bit wabbit.	The child’s a little tired.

**4 FOLKLORE**

The oldest Gaelic songs recount legends of warrior heroes battling Norsemen, magic rowan trees, and monstrous old women living in the sea. There is also a rich folk tradition revolving around belief in fairies and other supernatural forces. The most famous character in Scottish folklore is the dinosaur-like Loch Ness monster. Although this creature has supposedly been seen swimming in the deep by hundreds of people, no scientific evidence of its existence has ever been produced.

The “border ballads” of the southern regions and a wealth of urban folk songs, especially in the Glasgow region, comprise another segment of Scottish folklore.

**5 RELIGION**

With about 587,000 members, the Church of Scotland, a Presbyterian sect founded in the 16th century by John Knox, is the country’s dominant religion. Commonly known as “the Kirk,” it has been Scotland’s official religion since 1690. The Roman Catholic Church has about 212,500 members and other trinitarian churches have about 164,000 members. Catholics live mainly on the west coast. Scotland also has smaller populations of Baptists, Anglicans, and Methodists, as well as more modern evangelical sects. Church attendance in Scotland is very low with less than 10% of the population attending regularly.

**6 MAJOR HOLIDAYS**

Aside from the major holidays of the Christian calendar, the Scots celebrate the commemoration of Saint Andrew, patron saint of Scotland, on November 30.

Another unique holiday is the Hogmanay (New Year’s Eve) celebration. Until the 1960s, this holiday far outpaced Christmas as the major winter celebration. It involves the ceremony of “first footing,” the custom of visiting the homes of friends, neighbors, and even strangers, in the “wee sma’ hours” of New Year’s Day. Christmas, which was formerly frowned on by the Scottish church and only became a public holiday in 1967, resembles a modern Christmas in England or the U.S., with fir trees, carols, and gift-giving. Scots gather for dinner on Burns Night, January 25, to honor the Scottish poet Robert Burns. Traditionally, the Scottish national dish, haggis, is served as Burns’s poem, “Address to a Haggis,” is recited. Scottish Quar-

ter Day (40 days after Christmas) was a holiday celebrated widely until the 1950s; it is rarely celebrated today.

Interestingly, one of the most important celebrations of the Scottish year is Halloween, on October 31. Like “trick-or-treaters” in the United States, Scottish “guisers” go from door to door in costumes asking for candy or money. However, unlike their counterparts in the United States, they must perform a song or poem before receiving their treat. Another possible feature of the Halloween celebration is a party with supernatural themes and decorations such as the Scottish version of the American “jack-o’-lantern”: a scooped-out rutabaga called a “neep lantern.”

## 7 RITES OF PASSAGE

The Scots live in a modern, industrialized, Christian country. Although Scots are relatively casual about the practice of religion, many of the rites of passage that young people undergo are religious rituals, such as baptism, first Communion, confirmation, and marriage. In addition, a student’s progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

The Scottish are known for their taciturn and reserved manner. It is unusual for Scots to be seen holding hands, kissing, or touching in public. Within the household, however, family members maintain close relationships that include many “inside jokes.” The humor of the Scots tends toward the deadpan and ironic, and they tend to minimize direct expressions of enthusiasm. However, it is also considered unacceptable to criticize others in public, or to discuss personal problems with anyone other than close associates. As a form of greeting, the handshake is less common than in other parts of Britain.

## 9 LIVING CONDITIONS

Most Scottish houses have a small garden, and many are built in rows called terraces. Homes built before World War I were generally made of stone (single-story cottages of this type can still be found in some highland areas as well as urban areas), while most newer dwellings are built of brick or concrete blocks. Slate roofs are common, and many houses are covered by a painted coating of cement. Many Scottish houses are protected from harsh winters by the traditional “double door” arrangement: a heavy outer door, a vestibule, and a lighter inner door. Over half of all Scots live in “council houses,” low-cost housing built by local authorities. These generally consist of high-rise apartment complexes with small rental units. In the late 20th century, complexes of this type began to give way to terraced housing.

Scotland’s National Health Service has significantly raised the country’s level of medical care since it was instituted following World War II. However, as of 2007 Scotland was the worst performing small country in Western Europe in terms of health and other factors. The Federation of Small Businesses’ annual Index of Wealth compared 10 countries on economic performance, employment rates, health and education. Scotland also fell by one place, to 17th, in the Organization for Economic Co-operation and Development (OECD)’s table of the world’s 24 most developed countries. Scotland had the lowest life expectancy in the UK for both men and women in 2007. The figures were 74.2 for men and 79.3 for women, compared

to the UK average of 76.6 and 81 years. As well, the gap between rich and poor is widening. In 2007 Glasgow City was the worst performing local authority area in Scotland, with the poorest record in three of the four indicators: mortality, education, and employment. The leading causes of death in Scotland are heart disease, strokes, and cancer. The Scots smoke more and eat more sugar and fats than any other nationality in Europe.

Scotland has a modern system of highways and two-lane roads totaling some 88,500 km (55,000 mi) of paved roads altogether. In the western Highlands, however, many of the roads are single lanes with periodic passing places. Double-decker buses with an extra passenger level above the normal one are a common sight in cities and towns. The government-run railway system operates both diesel and electric trains and serves all major cities, linking Glasgow and Edinburgh to each other and to London. The mainland and the islands are linked by ferries and air service. Glasgow has a major international airport and Edinburgh and Aberdeen are served by both national and international air services.

## 10 FAMILY LIFE

The traditional role of women as laborers in the textile, jute, and fish-processing industries can be traced as early as the 19th century—and the economic independence it brought them has given them a relatively high degree of authority within the family. While traditionally male skilled trades like steelmaking and mining still do not hire female employees, increasing numbers of women are entering the professions, and there are nearly as many women as men at Scotland’s colleges and universities. Scots are legally allowed to marry by the age of 16, and many do marry as teenagers, although the early 20s are still the most typical marriage age. Although the divorce rate has risen in Scotland, it is still low relative to the American rate of divorce.

## 11 CLOTHING

When people throughout the world think of the Scots, most probably picture them in their famous traditional costume, the kilt. However, this skirtlike garment is only worn on ceremonial occasions by Scottish regiments of the British army, by ordinary citizens on formal occasions such as weddings and black-tie dinners, and for traditional festive events such as the Highland Games. Otherwise, the Scots wear standard Western-style clothing. Because of the climate, Scottish clothing tends to be made of heavier fabrics such as wool, including the native *tweed*. Each of Scotland’s clans has its own tartan (or plaid) developed over the centuries—there are at least 300 different designs in all. Women’s ceremonial costumes include tartan skirts and white blouses worn under snug black button-down bodices. Between 7 and 10 m (7–10 yds) of wool tartan are required for the average kilt.

## 12 FOOD

The Scottish national dish is *haggis*, a sausage-like food made from chopped organ meat of a sheep or calf mixed with oatmeal and spices and traditionally boiled in the casing of a sheep’s stomach (although today a plastic bag is often used). Dietary staples include oats (in porridge, oatcakes, and other forms) and potatoes, or “tatties.” These are commonly eaten as french fries (“chips”), as well as boiled, baked, or mashed. A

Scottish pipers take to the parade ground at Redford Barracks in Edinburgh, Scotland. Military bands braved the Scottish rain and gathered for a final rehearsal of the 55th Edinburgh Military Tattoo. (Chris Furlong/Getty Images)

side dish of mashed potatoes and rutabaga, called “clapshott,” is sometimes served with haggis. The main meal of the day is tea, served at dinnertime, usually around 6:00 PM (the midday meal is called “dinner”). However, in rural areas, the midday meal is still the main one. Besides oatcakes, typical Scottish desserts include shortbread, a rich fruitcake called “Dundee cake,” and a New Year’s specialty called “black bun.”

### **13 EDUCATION**

Despite the information seen in “Living Conditions” above, the Scots remain a well-educated people. Universal education has been an institution in their country for centuries, and Scots read more newspapers than any other European people. About 95% of adult Scots are literate. Their educational system is operated separately from England’s. After seven years of primary school, Scottish children attend secondary school for six years. The school day generally ends at 4:00 PM. Many private schools require students to wear uniforms, but they are optional at most other institutions. After secondary school, students can attend one of Scotland’s 20 institutions of higher learning, including universities and vocational schools. A great value is placed on higher education, and the universities of St. Andrews, Edinburgh, Aberdeen, and Glasgow are especially prestigious.

### **14 CULTURAL HERITAGE**

Of all the arts, the Scots have particularly distinguished themselves in the realm of literature, especially poetry and novels. Scotland’s most famous poet, Robert Burns, lived and wrote at the end of the 18th century, dying at the age of 37. Writing both poems and songs, he popularized the dialect of his homeland both at home and in England. The poet Lord Byron was born and educated in Aberdeen. Scotland produced the famous philosophers Thomas Carlyle and David Hume, as well as the renowned economist Adam Smith, who became famous for his work, *The Wealth of Nations*. Scotland’s other important writers include two authors of adventure novels, Sir Walter Scott, whose romantic tales often dealt with Scottish history, and Robert Louis Stevenson, author of *Treasure Island* and *The Strange Case of Dr. Jekyll and Mr. Hyde*. Arthur Conan Doyle, another Scot, created the famous fictional detective Sherlock Holmes, and his countryman J. M. Barrie authored the play *Peter Pan*, which has delighted generations of audiences throughout the 20th century. A contemporary Scottish author is fiction writer A.L. Kennedy (born in Dundee, 1965), who is also a stand-up comedienne and an Associate Professor with the Warwick University Creative Writing Program.

### **15 WORK**

Since the 1960s there has been a marked shift in the economy from manufacturing to service industries—including tour-

ism, with the service sector accounting for nearly four times the number of jobs as the manufacturing sector. Private services contribute about two-fifths of Scotland's gross domestic product (GDP), while public services account for more than one-fifth. Retail trade also creates many jobs in Scotland. Agriculture, forestry, and fishing make up a very small percentage of the economy. However, Scotland has a unique agricultural tradition, primarily in the Highlands, called crofting. Farmers living on crofts (a term that refers to both their land and to the family home) raise grains or vegetables individually on their own plots of land, and animals communally on a larger grazing area. Today, crofting rarely serves as a primary source of income or food, although some still rely on it for supplementary income. Most manufacturing is concentrated in the Central Lowlands. Important industries include textiles, chemicals, steel, electronics, whiskey, and petroleum products.

## 16 SPORTS

The Scottish national sport, soccer (called football), is associated with fierce rivalries between Catholic and Protestant teams that sometimes erupt into violence. The most famous pair of rival teams both belong to Glasgow: Celtic and Rangers, collectively referred to as the "Old Firm." Competition between the Scottish and English teams also arouses a high level of national feeling. The nation's second most popular sport (which it claims to have invented) is golf, which is on record as having been banned by the Scottish king, James II, in 1457. Present-day Scotland boasts over 400 golf courses. Scotland's third favorite sport is rugby, which is similar to American football. Tennis, lawn bowling, skiing, and curling are other popular sports.

## 17 ENTERTAINMENT AND RECREATION

Many Scots relax after work by watching television programs broadcast by Great Britain's government-owned broadcasting service, the BBC (British Broadcasting Corporation). Others visit local bars called pubs (short for public houses), where they can eat, drink, and socialize with friends. Popular outdoor recreation includes fishing, hunting, hiking, and mountain-climbing.

Scottish teenagers have many interests in common with other Western teenagers, such as popular music, clothes, and dating (according to local customs). The presence of fast food restaurants and U.S. television shows and movies are helping to narrow the gap between Scottish teens and their American peers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Crafts such as pottery (especially in the Celtic tradition), hand-knitting, jewelry-making, and weaving are widely practiced.

Scotland has two main traditions of folk song, Gaelic and Lowland Scots. Traditionally, each clan had a bard (a sort of poet/composer) to sing its praises and preserve its musical traditions. Bards commonly memorized as many as 350 different stories and poems. Many Gaelic work songs that were sung as accompaniment to such tasks as milking and harvesting have survived up to modern times. Women cloth-makers traditionally sang "waulking songs" around a narrow table, providing a steady beat for the music by thumping on the table. The most famous feature of Scotland's traditional music is its national

instrument, the bagpipe, which is played at weddings and other celebrations, in military marching bands, and as a hobby.

## 19 SOCIAL PROBLEMS

Scotland has a high rate of alcoholism, particularly on the islands of Lewis and Harris. Scots also have the United Kingdom's highest rate of hospitalization for depression. Another problem confronting Scotland is its dwindling population. Unemployment has traditionally been well above the British average, and thousands of people have emigrated to England and other countries in search of better job opportunities. As a result, the birthrate has fallen. In an effort to stem the tide of emigration and its attendant "brain drain" of many of the country's best and brightest, government and industry are cooperating to create new industries.

## 20 GENDER ISSUES

Women in Scotland have made great gains in equality with men since the 1960s. However, as of 2008 Scotland had one of the highest rates of unwanted pregnancies in Europe. Women made up 89% of single parent families in Scotland and 53% of single parent households are in poverty. In Scotland women in full-time employment still earn on average 75% of the average of their male counterparts.

Regarding homosexuality, the first International Gay Rights Conference was held in Edinburgh in 1974. In 1980 male homosexuality was decriminalized in Scotland (female homosexuality had not previously been criminalized in Scotland). In 2004 the UK passed the Civil Partnership Act, giving same-sex couples the same rights and responsibilities as married heterosexual couples. The first civil partnerships took place in Northern Ireland on 19 December 2005, followed by Scotland on 20 December and then England and Wales on 21 December 2005. Glasgow, Aberdeen, and Edinburgh have large gay communities.

# SERBS

**LOCATION:** central and western part of the Balkan Peninsula (Southeastern Europe), Serbia, Bosnia and Herzegovina, Montenegro, Croatia, Kosovo

**POPULATION:** 12.5 million (est.); 6.7 million in Serbia

**LANGUAGE:** Serbian

**RELIGION:** Serbian Orthodox (85%), Catholic (5.5%), Muslim (3.2%), Protestant (1.1%), Other (5.2%)

**RELATED ARTICLES:** Bosnians, Montenegrins, Croats, Kosovars

## <sup>1</sup> INTRODUCTION

The Serbs are a South Slavic people primarily inhabiting Southeastern Europe (commonly referred to as the Balkans) and Central Europe. Present day Serbs are said to have descended from Slavic tribes who migrated to the Balkans from the area of present day Poland, called White Serbia. Their movement to the area began in the 6th century through raids, but by the beginning of the 7th, century they began to settle. The point at which the Serbs emerged as an ethnic group distinctive from other neighboring Slav tribes, such as Croats, is disputed. Although the area on which future Serbs settled in the Balkans was Christianized by Byzantine missionaries before their arrival, the Slavic ruling class was converted to Christianity in the late 9th century, at which point there was still no distinction between Roman Catholicism and Eastern Orthodoxy. The rest of the population slowly converted from paganism to Christianity from that point on. Until the 11th century, Serbs were largely dominated by the Byzantines and neighboring Bulgarians. After the Great Schism in 1054, Serbs remained largely under Byzantine influence, resulting in the strengthening and consolidation of Orthodoxy among Serbs.

Serbia reached the height of its power during the Nemanjić dynasty, which ruled for 200 years and significantly expanded the Serbian state, achieving both political and religious independence from Byzantium. Stefan Nemanja, the founder of the Nemanjić dynasty, came to power in the mid-12th century in the area of present-day Montenegro. The Serbian Kingdom was established in 1217 and the Serbian Orthodox church became autocephalous in 1219. For the first time in history, the Serbs became a unified people. The Serbian state steadily declined from this point, and with the death of Stefan Uroš Dušan in 1355, it began to disintegrate.

By the late 14th century, Serb territory began to be invaded by the Ottoman Empire. Their first major defeat of the Serbs occurred in 1371 at the Maritsa River. In 1389 the Serbs were defeated in the Battle of Kosovo, which marked a turning point in the war, ensuring the eventual ultimate defeat of the Serbs. By 1459 Serbia was overrun by the Turks. Serbia was ruled by the Ottoman Empire for the next three centuries. During this period, thousands of Serbs were enslaved through the Ottoman practice of *Devşirme*, in which non-Muslim children were taken from their families and converted to Islam in order to later join the janissary corps—the Sultan's personal soldiers—in the Ottoman army. Under the Ottoman Empire, the Serbian Orthodox church was the only independently functioning Serbian institution. This contributed to the close relationship between the Serbian Orthodox religion and Serbian national identity that still exists today.

Serbian territory was also subsequently invaded by Hungarians, Venetians, and Habsburgs. It was not until the Serbian Revolution, which lasted from 1804 to 1815, that Serbs were able to establish an independent Serbian principality.

In 1914, Gavrilo Princip, a Bosnian Serb and member of the pan-Slavist secret society the Black Hand, assassinated Austrian Crown Prince Franz Ferdinand in Sarajevo, the capital of Bosnia. Austria then declared war on Serbia, which marked the beginning of World War I. By the end of World War I, both the Austro-Hungarian and Ottoman Empires had collapsed, paving the way for the creation in 1918 of the Kingdom of Serbs, Croats, and Slovenes. Its name was changed to Yugoslavia (literally “land of the Southern Slavs”) in 1929.

Yugoslavia experienced great turbulence during World War II, for while some factions fought against Nazi occupation and division of Yugoslavia, interethnic violence raged throughout the duration of the war. In 1945, the partisans, lead by Josip Broz Tito, defeated the Nazis and the Croatian fascist separatists known as Ustaše, taking complete control of Yugoslavia and establishing a Communist government. Throughout its Communist period, Yugoslavia remained independent from the influence of the USSR and the Warsaw Pact nations.

In 1991, the dissolution of Yugoslavia began when Slovenia, Croatia, and Macedonia declared independence. In 1992 Bosnia followed suit. Later that year, under the leadership of Slobodon Milošević, Serbia and Montenegro declared a new Federal Republic of Yugoslavia and began several military programs aimed at uniting the ethnic Serbs left on the territories of Yugoslavia's now independent neighbors. Serbs in Croatia formed the state of Republika Srpska Krajina. During “Operation Storm,” the Croatian government expelled more than 250,000 of these Serbs, resulting in thousands of deaths. Serbs in Bosnia-Herzegovina formed the state of Republika Srpska, which still exists today as an official political entity of Bosnia and Herzegovina. Territorial disputes over sections along the Drina River still exist between Bosnia-Herzegovina and Serbia.

As a result of the Milošević government's military campaigns, Yugoslavia was dismissed from the United Nations (UN), and violence continued until the ratification of the Dayton Peace Accords in 1995. Violence resumed in 1998, however, when Yugoslavia began a counterinsurgency campaign in the autonomous Serbian province of Kosovo against the ethnic Albanian majority. Western powers responded in 1999 with the North Atlantic Treaty Organization's (NATO) bombing of Serbia. Serbian military and police forces withdrew from Kosovo in June 1999 and the UN, in conjunction with NATO forces, created a secure environment and established various self-governing institutions for the inhabitants of Kosovo. After the war, more than 200,000 Serbs left Kosovo. These and the other Serb refugees from Croatia and Bosnia-Herzegovina settled primarily in central Serbia and in the autonomous Serbian province of Vojvodina. In 2000 Milošević was replaced as president by Vojislav Kostunica, a democratic reformist representing the coalition known as the Democratic Opposition of Serbia. Milošević was arrested in 2001 and tried at an international criminal tribunal for crimes against humanity. He died in 2006 before his trial was completed.

In 2001 Yugoslavia rejoined the UN and, in 2003, its name was officially changed to Serbia and Montenegro. In 2006 Montenegro peacefully seceded from Serbia. In 2008 Kosovo declared

independence from Serbia. As of mid-2008, Serbia, along with several other states, such as Russia, Bosnia-Herzegovina, Romania, Moldova, Georgia, Azerbaijan, and more, had either officially refused to recognize Kosovo as an independent state or remained silent. Kosovo was officially recognized as independent by the United States and 45 other UN member states. Ethnic Serbs still inhabit areas along Kosovo's northern borders, although Serbs make up less than 5% of the population of Kosovo. Several thousand NATO peacekeepers, known as Kosovo Force (KFOR), continued to keep peace between the ethnic Albanian majority and the Serb minority within Kosovo as of 2008.

## 2 LOCATION AND HOMELAND

The majority of Serbs inhabit Serbia, which was settled by Serbs in the 7th century. Serbia is located in Southeastern Europe, on the southeastern section of the Balkan Peninsula. It is bordered by Hungary, Romania, Bulgaria, Macedonia, Kosovo, Montenegro, Bosnia-Herzegovina, and Croatia. It covers an area slightly smaller than South Carolina. Its terrain is extremely varied, with rich fertile plains in the north, limestone ranges and basins in the east, and ancient mountains and hills in the southeast. Its winters are cold, with heavy snowfall in some places, and its summers are hot, humid in some areas and dry towards the south.

In total, there are over 12.5 million Serbs in the world. The population of Serbia is approximately 8 million, of which ethnic Serbs comprise roughly 83%. The rest of the population of Serbia is made up of Hungarians, Romany, or Gypsies, Bosnians, Montenegrins, Albanians, Bulgarians, Germans, Russians, Ruthenians, Slovaks, Slovenes, Ukrainians, Croats, and Czechs. Roughly 1% of Serbia's population still identifies itself as "Yugoslav." Its two largest cities are Belgrade, the capital of Serbia, and Novi Sad, the capital of the Serbian autonomous province of Vojvodina. Although the historic core of the Serbian homeland was originally located further south, the domination of the Ottoman Empire in the south prompted mass movements of Serbs in the 17th and 18th centuries towards the more Christian north. These population movements are known as the Great Serbian Migrations. They resulted in the permanent relocation of the Serbian center in the north.

The majority of Serbs who live outside Serbia live in Montenegro and Republika Srpska in Bosnia-Herzegovina. Until the exodus of August 1995, caused by the Croatian government's "Operation Storm," a large number of Serbs also lived in Republika Srpska Krajina in Croatia. Smaller numbers of Serbs can be found in Macedonia, Slovenia, Romania, Hungary, Kosovo, and Italy. Many capital cities of the former Yugoslav Republics, such as Zagreb, Skopje, Ljubljana, Sarajevo, and Podgorica, contain large Serbian minorities.

Large Serbian Diaspora communities also exist outside of Southeastern Europe, although exact numbers cannot be determined since census takers use varying criteria to identify Serbs abroad. Some counts reflect numbers of individuals who either still possess Serbian citizenship or have emigrated from Serbia, while other counts include individuals of Serbian descent. The most notable Serbian Diaspora communities can be found in Germany, Austria, Switzerland, France, Sweden, Brazil, Canada, the United States, and Australia. Many of the Serbs inhabiting regions in Central Europe today, such as Romania, and Hungary, and other former territories of the Habsburg Empire,

are descendants of Serbs who migrated there to escape the Ottomans. Several thousand also immigrated to Russia and settled the areas now known as Nova Serbia and Slavo-Serbia.

## 3 LANGUAGE

The Serbian language is a member of the South Slavic group of languages. Like other Southern Slavic languages, Serbian received a number of formative characteristics from the Glagolitic alphabet and other standardizing initiatives developed by Byzantine missionaries Cyril and Methodius during their efforts to Christianize the Slavs. The oldest documents written in the Serbian language date from the 11th century. Largely due to the work of Vuk Stefanović Karadžić, the Serbian language was standardized in the 19th century based on its vernacular form. In addition to its other variants—Old Serbian and Russo-Serbian, a type of Church Slavonic—the Serbian language has three dialects that are distinguished by the pronunciation of the Old Slavonic sound "yat."

Serbian names derive primarily from the Christian tradition, but many also have meanings in the Serbian language. Names often reflect character traits, such as *Miro*ljub from *mir*, peace, and *ljubav*, love. Many names are also nature-inspired and have origins in words for animals, flowers, and other natural phenomena. Most Serbian surnames contain the suffix *-ić*, which originally functioned to designate paternal lineage, much like "son" or "sen" in Nordic languages. The suffixes *-ov* and *-in* are also common and tend to correspond with certain regions. They derive from Slavic possessive case endings, thus also originally functioning to form patronymics. Combinations of these endings in one surname often occur as well.

Serbian is written using both the Cyrillic and Latin alphabets, and in spoken form, it is mutually intelligible to standard Croatian and Bosnian. Before the breakup of Yugoslavia, these languages were considered to be one, Serbo-Croatian. Since then, however, the differentiation of these languages has become a highly contentious issue, in part due to the historic role that language has played in the formation of identity for the peoples of the former Yugoslavia. In the 19th century, the Balkan intelligentsia argued that Serbs, Croats, Balkan Muslims, and Montenegrins were the same people since they spoke a very similar language to one another. Beginning in 1878 with the invasion of Bosnia-Herzegovina by the Austro-Hungarian Empire, this sense of unity through sameness of language was consolidated against the dominant languages of the occupying forces. The notion that a shared language indicated a shared ethnicity and identity eventually became one of the central pillars of the argument for the creation of a southern Slavic State, Yugoslavia. This notion still exists in the former Yugoslavia today. As a result, as groups have broken off from one another, they have made concerted efforts to differentiate themselves through systematic language reform efforts. Embracing existing linguistic differences, or creating new ones, has become a way for groups to distinguish themselves as nations separate from their fellow former Yugoslavs. The Croats made the greatest efforts to do so under Franjo Tuđman, the first president of Croatia after the breakup of Yugoslavia. Croats drew from pre-Yugoslav Croatian dictionaries to introduce new, distinctly Croat words for use by their population. As such, Serbian and Croatian are considered to be separate languages today, although some Croats are still learning a new, distinctive Croat vocabulary.

**4 FOLKLORE**

Much of Serbian folklore is rooted in pre-Christian, pagan belief and practice but was adapted into a Christian framework with the conversion of Slavs to Christianity. For example, the pagan belief in household gods was recast into the custom of *slava*, by which each family has its own saint that it celebrates

and passes down from generation to generation. Similarly, the pagan notion of a cult of ancestors today takes the form of the custom of *zadusnice*, in which families hold feasts at the graves of their deceased, lighting candles for them and making offerings of food and drink. This practice now largely follows the Orthodox religious calendar and corresponds to larger Christian events, such as Easter, Christmas, and various saints' feast

days. Many religious processions, such as *lazarice*, a procession of virgins and *koledari*, a masked procession at Christmas, originate from pagan rituals. Many of the rituals surrounding Serbian religious icons, such as special veneration, processions, and belief in their healing powers or animation, also originate from paganism.

Superstition and belief in magical powers still persists among some groups. Some still believe in the power of the evil eye—that an individual can be harmed by the envious look of another—and take various precautions to ward it off. Serbian folk beliefs about magical beings, such as witches, vampires, fairies and dragons, have been largely relegated to children's games and fairytales, but have left marks on Serbian culture in various ways. Dragons, for example, were believed to have protected people from evil and misfortune. Many of the heroes of Serbian folktales and poetry were said to have gotten their extraordinary powers from being part dragon. During the wars that accompanied the breakup of Yugoslavia, the trauma caused a resurgence of superstitious belief among some Serbs, who turned to modern-day commercial psychics for relief.

One of the most popular stories in the Serbian folk tradition is that of their defeat by the Ottomans at the Battle of Kosovo Polje (field) in 1389. Folk tales and poetry cast this event in Christian language, giving it a religious meaning for the Serbs, who it portrayed as martyrs. This event, and the stories surrounding it, proved to still resonate widely with Serbs over 600 years later when it was used by Slobodan Milošević and others after the breakup of Yugoslavia to mobilize Serbian nationalism with regard to events surrounding the then autonomous province of Kosovo.

## 5 RELIGION

The majority of Serbs are Serbian Orthodox. They were converted to Christianity from paganism beginning in the late 9th century, before Serbs had emerged as a distinct group from the southern Slavic tribes. Their conversion took place before the break between Orthodoxy and Catholicism in 1054, but because Serbs were largely aligned with the Byzantine Empire, they developed into an Orthodox people. The Serbian Orthodox Church became autocephalous in 1219. After the invasion of the Ottoman Empire in the 14th and 15th centuries, some southern Slavs converted to Islam.

Under communism, religion was largely repressed. Religion in Serbia today faces different problems. Because the Communist legislation on religion from Yugoslavia has been repealed but not been fully replaced, many religious communities face a great deal of institutional limitations. Attempts to adopt an Act on Religious Freedom failed because many critics opposed the fact that it named seven specific historical, traditional religious communities of Serbia, the most important being the Serbian Orthodox Church. Many believed that despite the law's intention to guarantee freedom of religion and separation of church and state, its recognition of the traditional religions of Serbia gave those religions special legal advantages over others. Although the law was never passed, for many reasons the Serbian Orthodox church nevertheless occupies a privileged position in Serbia.

## 6 MAJOR HOLIDAYS

National holidays in Serbia include New Year's Day (Nova Godina, January 1 and 2); Christmas (Božić, January 7, celebrated

by the Orthodox, or Julian, calendar); Day of Saint Sava, the founder of the Serbian Orthodox church (Savidan, January 27), also commonly known today as the Day of Spirituality (Dan Duhovnosti); Day of Statehood (Dan Državnosti, February 15), to mark the First Serbian Uprising in 1804; May Day, or Labor Day (Dan Rada, May 1 and 2); Victory Day (Dan Pobede, May 9); and St. Vitus' Day (Vidovdan, June 28), which functions as a sort of memorial day, specifically in relation to the 1389 Battle of Kosovo Polje (field). Other national holidays include Good Friday (Veliki Petak), Holy Saturday (Velika Subota), Easter (Vaskrs), and Easter Monday (Veliki Ponedjeljak), but their dates are tied to the Orthodox calendar and are determined by the movable Pascal Cycle each year. Other Christian religious feasts occurring on the holidays, such as Epiphany, Visitation, Palm Sunday, Ascension, and more, also play a large role in Serbian society.

Christmas in Serbia is surrounded by many traditions, most with Slavic pagan roots. Customarily, on the morning of Christmas Eve, the head of the house would cut down a young, dry oak tree, called a *badnjak*, and bring it to church for a blessing. Churches at this time of year will still cover their floors with hay on Christmas Eve in reference to the manger where Jesus Christ was born. Later, the blessed piece of oak would be stripped of its branches and burned as a sacrifice to God along with various grains in the hopes that the coming year would bring prosperity. Today, Serbs still receive small pieces of oak trees bundled with grains at church to be taken home and burned on Christmas Eve. Serb families prepare large meals of Lenten foods, avoiding certain animal products, on Christmas Eve. The traditional Christmas Eve meal includes beans, walnuts, and a special Christmas Eve cake. Christmas Day also has its own special feast, comprised usually of roasted pork, *koljivo*, a sweet wheat cake, and *česnica*, a special traditional bread with a coin hidden in it. The family member that finds the coin is thought to have a fortunate year ahead of them. Serbs traditionally exchange presents not on Christmas but on New Year's Day, although this is changing due to Western influences.

In addition to these general Christian feasts, Serbs also have their own particular religious celebrations, such as *slava*, the celebration of the patron saint of an individual family, *zavetine/litije*, a procession on the day of a particular community's saint, and *zanatlijske slave*, the celebration of the patron saint of a professional guild. There are approximately 150 patron saints in the *slava* tradition, the most popular of which include St. Dmitri, St. George, St. John, St. Michael, St. Nicholas, and more. Families celebrate the day before, *navece*, and the day after, *okrilje* or *sutradan*, the saint's feast day, as well as the feast day itself. Ritual objects involved in the celebration include icons of the saint, candles, and dried basil. Ritual dishes include *Slavsko Zito*, a sort of boiled wheat, and *Slavski Kolac*, a specially blessed bread. Family elders, friends, relatives, and neighbors are all invited to *slava*, and during the celebrations, guests sing folksongs and tell folktales.

## 7 RITES OF PASSAGE

Most Serbs observe major life events, such as birth, marriage, and death, according to the religious traditions of the Serbian Orthodox Church, although some of the traditions surrounding these events have their roots in pre-Christian practices. For example, many rituals are carried out during weddings,

such as sprinkling the couple with grains, are meant to ensure the couple's fertility and prosperity.

## 8 INTERPERSONAL RELATIONS

Shaking hands and kissing cheeks (most commonly three kisses) are standard forms of greeting among Serbs, depending on closeness. Standard salutations include *dobro jutro* (good morning), *dobar dan* (good day), and *dobro vece* (good evening). *Dovidjenja* means "good bye," and *daku noc* means "good night." When leaving for a journey, travelers are told *drečan put* (lucky journey). In rural areas, some older residents still greet each other with *pomaze Bog* (God helps). The traditional response is *Bog ti pomogao* (may God help you).

As in many other languages, modes of expressing respect and courtesy are built into Serbian grammar. Serbian has a second, more formal case for the second person. For example, in addressing a close or familiar acquaintance, Serbs use the word *ti* for "you." When addressing someone unfamiliar, or to convey a more formal, respectful relationship, Serbs use the word *vi* for "you."

Serbs enjoy entertaining at home. It is customary for guests to bring to their hosts a gift, such as a bottle of wine or some sort of alcohol, coffee, or flowers. The gesture for wishing someone good luck (the equivalent of crossing one's fingers in the U.S.) is to squeeze the thumb between the index and third finger. Hitting the bent elbow of the left arm with the right hand is a very offensive gesture.

## 9 LIVING CONDITIONS

Since the mid 20th century, Serbs have steadily migrated from rural areas to industrial and cultural centers within the former Yugoslav Republics and today within Serbia. Wars have also contributed to the flux of migrants into cities. This has resulted in the general depopulation and aging of the Serbian countryside. Many Serbs, especially those that live in cities, keep small weekend and vacation houses in the country. Historically, lodging in Serbia varied greatly—ranging from stone to mud to wood—because of the country's extremely varied terrain and because of the varied historical experiences of different areas, but now, lodging is much more uniform and is made primarily of brick and concrete.

During the early 1980s, Serbs enjoyed a generally adequate standard of living and productive agricultural and mineral resources. In the late 1980s and early 1990s, Serbia's economy began to worsen. This general trend was largely exacerbated by the economic sanctions imposed on Serbia by the West because of its actions during the breakup of Yugoslavia. Subsequently, a great deal of damage was done to Serbia's infrastructure during the 1999 NATO bombings. This, in addition to the problems Serbia has experienced in transitioning from a state-run, centrally planned economy has also set back modernization and the standard of living in Serbia significantly. The impact on daily life, levels of pay, and employment opportunities has been catastrophic. Educational, cultural, and scientific exchange with the rest of the world ceased for several years. As medical, educational and other professionals were either recruited into the military or fled from war, the quality of medical care, education, and other public goods suffered greatly.

Since 2000 living conditions in Serbia have begun to improve. Serbia is still struggling to modernize, as its growing telecommunications network still ranks below those of

its neighbors. In 2006 it was estimated that only 1.4 million inhabitants of Serbia had internet connection, although this number too, is rapidly growing. Roughly 6.5% of Serbia's population lives below the poverty line. Life expectancy for Serbs averages 75 years. Healthcare has greatly improved in the past decade, and immunization and other forms of preventative medicine are common practices. Medication, however, still remains unaffordable for many families.

## 10 FAMILY LIFE

Serbian society is very family-oriented. The most common family unit in Serbia is the nuclear family, although extended family is also very important and remains in close relation. Historically, Serbs lived in a large extended family community called a *Zadruga*. The Serbian language reflects this importance, for it has a number of specific terms for various familial relationships. For example, the word used to denote an uncle who is a father's brother is *Stric*, whereas the word used to denote an uncle who is a mother's brother is *Ujak*.

## 11 CLOTHING

Serbs wear modern Western-style clothing, including business attire for work, and jeans and T-shirts for casual wear. Until the end of the 19th century, clothes were largely homemade. On special occasions, or during festivals or holidays, some Serbs still wear traditional dress. For women, this includes embroidered wool knee socks, gathered, linen, embroidered skirts, aprons decorated with floral motifs, and shirts decorated with silver thread and other kinds of cording. In some areas, the female Serbian national dress consists of either a red or blue sleeveless, knee-length dress that was richly decorated and buttoned in the front. The traditional costume also includes a headdress of scarves and caps trimmed with cording and often decorated with metal coins or flowers. Women would also wear gold coin necklaces, earrings, and bracelets. For men, traditional Serbian dress includes leather shoes, upturned at the toes and decorated with leather strips that fasten the shoes to the legs, knitted, decorative socks, pants that stop and gather at the calf, a wide, woven, decorative sash around the waist, an embroidered white linen or silk shirt, and either a short, sleeveless vest or a long-sleeved jacket with ornate cording. The traditional Serbian men's costume also includes either a fur cap or a military cap from a later period, which became known as the Serbian national cap. Such costumes are usually very colorfully embroidered with thread and cord and adorned with silver and gold buttons and other ornaments. Traditionally, they were made of homespun cloth and sheepskin, but this is rarer today. Styles, colors, and accessories historically varied depending on region.

## 12 FOOD

Typical Serbian cuisine has been greatly influenced by Turkish, Mediterranean, and Austro-Hungarian traditions. Serbs generally eat three meals a day—breakfast, lunch, and dinner. The traditional main meal of the day in Serbia is lunch, but more Serbs are increasingly making dinner their main meal rather than lunch. Traditionally, Serbian families produce various foods and beverages in their own homes. They distill alcoholic beverages, preserve jams, and pickle peppers, cucumbers, cabbage, and more. Some even make their own sausages. Serbian cuisine is rich in spices and herbs, such as pepper, paprika, co-

A Serbian folk dancer wearing traditional clothing at the Edmonton Heritage Festival in Alberta, Canada. (© Richard Cummins/Corbis)

riander, cloves and more. *Ćevapčići*, seasoned, grilled meat, is the Serbian national dish, although Serbs also eat meat of all kinds, prepared a variety of ways. *Podvarak*, roasted meat with cabbage, is also a very popular dish. Fish is popular in communities near the Danube River. Serbian cuisine includes cheeses, such as *Kajmak*, boiled eggs, smoked or cured ham, soups, such as *Backa*—a four meat soup, potatoes, cabbage, and beans. Peppers or cabbage leaves are often stuffed with ground meat, rice, and various spices. These are called *Sarma*. Peppers can be filled with cheese and yogurt. Serbian salad usually consists of tomatoes, peppers, onions, oil and vinegar, and a soft white cheese. *Pita* is a Serbian dish that comes from Turkish influence. Pita dough is light, flaky and crispy and can be filled with both savory and sweet fillings. The most common kind of *pita* among Serbs is *Gibanica*, which consists of a cheese, cream, and egg filling.

Bread is one of the most pivotal elements of Serbian food culture and is tied to many traditions and rituals. Serbs welcome guests by offering them bread and salt. Some breads, such as *Koljivo* and *Moussaka Česnica*, are used in religious rituals on various Christian feasts. Because of bread's connection to ritual, in the past, Serbian households were wary of discarding old

bread. Serbian bread is mostly made of wheat, both with and without yeast, but it is also sometimes made of barley and rye. *Pogaca*, for example, is a bread without yeast that is prepared for special occasions.

The Serbian national drink is *Slivovitz*, a plum brandy. It is also often served warm in colder months. *Slivovitz* is a type of *Rakia*, or distilled fruit brandy. Many other types of *Rakia* exist as well, such as pear and grape. Many Serbs distill their own *Rakia*. Domestic wines are also widely drunk, mainly from the famous wine region of *Vrsac*. Beer is also popular. Popular non-alcoholic beverages include homemade fruit juices, *Boza*, a corn-based drink, and *Kvas*, a fermented drink made from rye or black bread. Turkish coffee (*Turska Kafa* or *Crna Kafa*) is very popular and drunk very often. It is served when guests make visits and also at the end of large meals.

### **13 EDUCATION**

Serbia has a literacy rate of 96.4%. Since the breakup of Yugoslavia, Serbia's poor economic situation has decreased investments in culture and in education in general. When Yugoslavia began to dissolve in the early 1990s, 10% of its population had no education, 50% had either an incomplete or a full primary education, 32% had a secondary education, 4% had a college degree, and only 5% had a university diploma. Today, roughly 6% of the population have had no schooling, 16% have an incomplete primary education, only 24% have a full primary education, 41% a secondary education, 24.5% a college degree, and 6.5% a university diploma.

In recent years, with the resurgence of the Serbian Orthodox church, religious instruction in public schools has become a central issue in education. The push to have religious instruction in public schools began immediately after the fall of Milošević in 2000. The issue was highly debated due to the implications it had for larger church-state relations. Today, legislation makes religious instruction in public schools an alternative subject that is taught for one hour per week. Religious instruction is not compulsory, and students have the option to attend civic education classes instead. The Serbian government provides finances for religious instruction on the seven recognized religious communities of Serbia (Serbian Orthodoxy, Catholicism, Islam, Judaism, Slovak Lutheranism, Serbian Lutheranism, and Hungarian Reformed Protestantism), but other religious communities are allowed to organize and fund their own religious instruction in public schools if students request it. The content of religious instruction is decided by the Minister of Education and Sports, who works with members of the various religious communities.

While lack of investment in education harms Serbian society as a whole, children with special needs, as well as children of refugees, migrants, and returning nationals have suffered disproportionately. Economic constraints have increased the level of educational exclusion these groups experience. Many Serbs believe that future economic improvement, combined with the government's drive to meet standards for accession into the European Union, will improve this situation and education in general. In the meantime, however, Serbian higher education suffers as well. As the world trend continues to favor knowledge and innovation-based economies more strongly, there is a need in higher education to develop new, modern research areas and to provide more interdisciplinary and more topical programs, such as management and computer sciences,

for students. The number of students interested in these areas has increased, however study programs cannot respond to these societal and market needs because they still reflect the traditional background of higher education staff. Higher education institutions are financed by the Serbian government and by private funds granted for various research projects. Both of these sources have been stifled by the economic situation of Serbia, and as a result, institutions of higher education cannot provide high enough salaries to attract qualified scholars of newly emerging research areas. Consequently, Serbian students of higher education can only choose from professions with increasingly slim employment prospects.

#### 14 CULTURAL HERITAGE

Orthodox Christianity has played a significant role in formation of the Serbian culture. Medieval Serbia was under the Byzantine sphere of influence, and when it emerged as a strong, independent kingdom under the Nemanjić dynasty, the Serbian Orthodox Church was its central institution. This cultural heritage can be most strongly seen in Serbia's rich medieval church architecture, icon painting, and manuscript illumination, which were directed largely by state patronage. Serbian churches boast domed ceilings, Byzantine-style frescoes, extensive sculptures, and numerous icons. Serbian church art benefited greatly from the Fourth Crusade on Constantinople in 1204, when many Byzantine artists sought refuge in Serbia and brought their artistic influence with them. Serbian epic poetry also flourished during the medieval period. Much of it was based on historic events, such as the battle of Kosovo in 1389. Although Orthodoxy has had the most extensive influence on Serbian culture, elements of Catholic and Ottoman culture are also perceptible, in some areas more than others. Throughout the history of the Serbs, Catholic influence penetrated Serbian culture through Austrians and Venetians, primarily in Vojvodina and along the coast of the Former Yugoslavia. Once Serbia gained autonomy and eventually independence in the 19th century, there was an increase in Serbian cultural activity, which included a resurgence of Serbian epic poetry and songs.

Despite the resurgence of the Serbian Orthodox Church, the primary capsule of Serbia's cultural heritage, Serbian culture experienced a decline during the Milošević era, when traditional Serbian culture was recast and used to bolster Milošević's power. This phenomenon became most widespread in the form of widely popular "Turbo-Folk" music—pop music inspired by traditional Serbian folk songs (with Russian, Turkish and Greek influences) but set to a techno beat, most often by scantily dressed women. Just as Serbs in the 1980s embraced Belgrade Rock in their attempt to break from Communism and open to the West, Turbo-Folk functioned as the soundtrack for the aggressive nationalistic politics of the 1990s. Its lyrics both glorified traditional Serbian culture and promoted the glamorous lifestyle of the new Serbian elite, consisting of powerful politicians, businessmen, war-profiteers, and individuals involved in organized crime. This manipulation of traditional Serbian culture undermined the morality and civil order of Serbian society by spreading a problematic system of values, lifestyle, and emotional nationalism. Turbo-Folk's popularity spread throughout Serbia contemporaneously with crime, disorder, and fear, offering to Serbs the government's official façade of wealth, glamour, power, and attractiveness during a time of poverty, war, chaos, international isolation, and de-

spair in Serbia. The occurrence and spread of Turbo-Folk was initiated by the changes in social conditions in Serbia as Yugoslavia dissolved. These social changes were precipitated by the long-lasting economic crisis, the wars in Croatia and Bosnia, the great numbers of war victims and refugees, Serbia's isolation from the world community, and later, the 1999 NATO bombings. To aid in the spreading of this new interpretation of Serbian culture, the government harnessed television programming. Television stations specializing in "folk" music and dance emerged in the early 1990s, bringing considerable changes to Serbia's cultural climate. These trends coincided with expansion of mass media in Serbia. It was in this period that television began exerting a growing influence on Serbian society. This spread of television and its use by the government combined with the economic hardships being experienced by rock and pop producers, and a shortage of material for television left an empty space for Turbo-Folk. Following the cultural isolation of the Milošević era, new musical styles, such as rap, have gained popularity in Serbia. Influences from the West are increasing. Serbian rappers and punk bands are now widespread. The Serbian city of Novi Sad hosts the annual Exit Festival of alternative music, which draws crowds from all over Europe. Turbo-Folk today is widely associated with the brutal nationalism of the 1990s, yet, it is still played in popular clubs and on radio and television.

#### 15 WORK

Serbs were traditionally very heavily involved in agriculture. Like other Eastern European countries, Serbia became more industrialized during the Communist era, creating manufacturing jobs in the production of agricultural machinery, electrical and communication equipment, paper and pulp, and transportation equipment. Since the end of the Communist era, the Serbian economy has undergone a major shift in composition. Today, over 63% of Serbia's GDP comes from the service industry, as compared to industry at 24% and agriculture at 12%. The majority of Serbia's workforce, however, is still employed in the industry sector. Only 24% of Serbia's labor force works in services, and 30% works in agriculture. Serbs grow wheat, corn, sugar beets, sunflowers, and raspberries, and raise livestock such as cows and pigs. The unemployment rate in Serbia in 2007 was almost 19%. It has consistently increased since the dissolution of Yugoslavia for a number of reasons. Economic activity and capital investment decreased as a result of war and instability, and the skills of the labor force do not meet the needs of the new market economy. Serbia's education system has not been adapted to train workers to respond to these changes, and as a result, the majority of people who are unemployed are under the age of 30. Alternately, Serbia has compulsory military service for men ages 19 to 35. During wartime, conscription can begin at age 16. Conscription is set to be abolished in 2010.

As a result of the high unemployment rate, many Serbs choose to move abroad in search of better work opportunities. Serbia is also experiencing a phenomenon known as the "internal brain drain," whereby trained professionals remain in the country but chose not to utilize their skills in formal careers. This occurs because of very low wages, slow career promotion, poor research facilities, lack of project funding, and restricted communication with professionals in other countries. A social element is also involved, for in Serbia's transitioning society,

businessmen and politicians who earn more money tend to be perceived as having a higher social standing than scientists or academics.

## 16 SPORTS

Soccer is one of the most popular sports in Serbia. It came to Serbia at the end of the 19th century via students who had studied in Switzerland. The first soccer clubs of Serbia, such as Soko (the Falcon), Srpski Mac (the Serbian Sword) were founded in the early 1900s. In 1991, a Serbian team won both the European and the World championships in soccer. In addition to team sports, Serbs also like wrestling, boxing, and judo. Serbs are also known throughout the world for being excellent tennis players. Some Serbian tennis players include Novak Djokovic, Ana Ivanovic, Jelena Jankovic, and more. Monica Seles is ethnically Hungarian but from the Serbian autonomous province of Vojvodina.

## 17 ENTERTAINMENT AND RECREATION

Television has become the main source of entertainment for Serbs, exercising enormous influence on Serbian family and social life. Serbs also often go to the cinema. More traditional forms of entertainment include folk festivals, which every town has each year over several days. Serbs also like to visit family and friends in their homes. Musical concerts are also a popular sort of entertainment. Younger Serbs often go to dance clubs.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Serbian folk music dates from the medieval period and has been strongly influenced by Serbian Orthodoxy. During the Ottoman period, Serbian Christian peasants developed a small, single-string instrument, called a *Gusle*, so that they could play religious music easily and undetected. Traditional Serbian folk music, as well and more modern forms like the Turbo-Folk mentioned previously, remains popular today, especially in rural areas.

Serbian culture also has a strong tradition of folk dance. The most common folk dance is a *Kolo*, in which dancers form a ring by holding on to each others hands, waists, arms, or shoulders. Such dances have various rhythms and steps. Depending on which direction dancers move in, the dance can take on different meaning. A reverse circle is made when the dance is being performed in memory of the dead, called a *Mrtvacko Kolo*. The *Kolo* is still danced at parties today. Several other folk dances, once ritualistic, still exist in various forms, but primarily for entertainment.

Serbs also have a strong tradition in various kinds of handicrafts, such as pottery and other ceramics, rug weaving, jewelry making, metalwork, leatherwork, hand-knitting of clothing, embroidery, wood carving, and stonemasonry. Traditional Serbian folk art decorates items used in everyday life, such as gravestones, ceilings and doors of homes, furniture, musical instruments, and other household objects.

## 19 SOCIAL PROBLEMS

The social problems that Serbs currently face are a reflection of Serbia's long-lasting economic crisis due to the Milošević administration's mismanagement of the economy, the civil wars endured at the dissolution of Yugoslavia, the great numbers of war victims, refugees, and internationally displaced persons,

Serbia's economic and cultural isolation from the rest of the world during war, and the damage done to its infrastructure by the 1999 NATO bombings. All of these factors have led to the general impoverishment of the population and to widespread crime.

As Yugoslavia has continued to dissolve, Serbia has taken in more than half a million refugees, primarily from Croatia, Bosnia-Herzegovina, and Kosovo. This has aggravated the ongoing problems of unemployment and lack of housing and has led in many cases to the destabilization of familial relationships. In search of relief from these conditions many Serb refugees have attempted to return to their homes in surrounding countries, but all ex-Yugoslav republics, especially those, such as Croatia and Bosnia, that were involved in war, went through similar processes of social disintegration and have fallen into similar impoverished and chaotic conditions. Despite government directed programs that are meant to aid in the process of returning, returnees often face many obstacles. Many of their homes have been destroyed or occupied by others, unemployment is high, and there is little infrastructure in the rural areas where most Serbs lived. Additionally, the majority of Serbs who attempt to return are older, and thus the youth and reproduction needed to regenerate these areas are largely absent. Moreover, ethnic tensions still linger and Serbs are largely discriminated against by titular nationalities.

Other Serbs have sought relief by emigrating to foreign countries, leading ultimately to what experts call a "brain drain," or the loss of intellectual and professional capital that society has developed over several years, through education, training and development of its young population. Because of a shortage of jobs in Serbia, the best Serbian professionals are moving mainly to Canada, the United States, and Australia. Previously, the outflow of Serbs with a university education was not very significant. Most Serbs who left went to Western Europe and were skilled workers, craftsmen, and technicians. This movement of population initially had a positive effect on the economy, for it decreased the rate of unemployment within Serbia and provided a steady inflow of remittances, or funds sent back by workers to their family members remaining in Serbia. As more educated Serbs leave, and as these movements become permanent rather than temporary, Serbian society as a whole is being negatively impacted.

This trend of emigration contributes to Serbia's extremely low population growth rate, which was actually registered to have been negative in 2001. The fertility rate in Serbia is 1.69 children per woman. The population of Serbia is growing older and the demographic and educational distributions will probably worsen as the small number of young university-educated individuals continues to leave. In the coming years, this will not only negatively impact Serbia's economy, but as work force and age distributions of the population change, Serbia's already weak social security system, infrastructure, educational system, and other systems will face even greater pressures and become more unsustainable. These trends comprise the greatest long-term social threat to Serbs.

## 20 GENDER ISSUES

Some of the main social and economic problems of the post-Communist transition of Serbia have had a disproportionately negative impact on female Serbs. During the Second World War and the Serbian fight for national liberation, Serb women

experienced a sort of emancipation themselves. Through their involvement in the national effort of supporting Serb partisan fighters, women emerged from their closed, traditional, patriarchal families. After the war, it became more common for women to move to cities, get jobs in factories, and receive an education. During the Communist period, women were no longer limited to simply getting married, having children, and remaining in the domestic sphere. In retrospect, however, scholars believe that the advancements made in gender equality during this period have been exaggerated, much to the detriment of the feminist movement today. On a practical level, despite the rights and liberties attained under Communism, Serb women remained largely subordinate to men and segregated as a group in society. On a theoretical level, the declaration that women and men were made equal under the Communist system produced in Serbian society a false comfort that the problem of gender inequality was solved. This general belief continues to diffuse and undermine the feminist movement by making gender equality a non-issue for society, which is problematic today since women's rights have continued to erode in Serbia with the fall of the Communist system for a number of reasons.

With the dissolution of Yugoslavia, war has proven to be the single most detrimental force to the female gender. In war-torn Yugoslavia, interpersonal and familial relationships were destabilized, and domestic violence grew substantially. The effects of economic hardships of war on Serb women were two-fold. First, unemployment, economic instability, and impoverishment made conditions within families very tense, causing domestic abuse to be more prevalent and more readily accepted by society. Additionally, the bad economy did not afford women who were being abused the chance to escape their situations and become monetarily self-sufficient, forcing them to remain reliant on their existing domestic relationship for economic security. Domestic abuse spiked in wartime Yugoslavia for other practical reasons as well. In addition to the tense family conditions it created, war also increased the number of weapons available. This did not necessarily increase instances of domestic abuse, but accessibility of dangerous weapons made it more brutal and deadlier than usual. Finally, institutional help for women experiencing domestic abuse was generally absent during this time, since attention and resources were allocated to more immediately pressing dangers. All of these factors made women the unseen victims of the civil wars of Yugoslavia.

The refugee crisis in Serbia caused by the wars of the 1990s has also had an extremely negative impact on women. Serbia's refugees in general went largely unacknowledged by the rest of the world, and as such suffered from insufficient international aid and received fewer chances for asylum or emigration. Many of the refugee women are from broken homes; some were widowed during the war or were separated from their husbands by various other social pressures. Many of the refugee women either act as single mothers or as the sole provider for their families. Possessing no valid citizenship, protection of rights, or secure employment opportunities, many refugee women began practicing prostitution, for it became one of the only possibilities for earning money. Others also work in smuggling. Some women have been able to get jobs outside of the shadow economy, but since they still do not have citizenship, their rights are not guaranteed and they receive no welfare, no healthcare, and no pension plan. Because they have not been fully integrated

into society, and because they are often single, refugee women also experience widespread sexual harassment.

Finally, the dissolution of Yugoslavia was accompanied by a strong surge in nationalism, and while such periods tend to effect ethnic minorities most greatly, recent nationalist efforts in Serbia have also translated into the restoration of traditional expectations about the role of women in society in general. This has resulted in gender discrimination against women both socially and civically. Increasing numbers of women choose to remain in the domestic sphere and not to venture into business or politics, and the gender gap in Serbia is becoming more visible. Regardless, the feminist movement among Serbs remains quite weak. The number of women's organizations in Serbia has grown since the beginning of the new democratic regime in 2000, but there are still very few. The concept of feminism is still generally rejected by mainstream Serbian society. Men tend to stereotype feminists and women's organizations, viewing them as enemies of the Serbian society and nation. Women largely distrust women's organizations and hesitate to become involved. Thus, while women's organizations are legal in Serbia, they still encounter both institutional and social hurdles.

## SLOVAKS

**LOCATION:** Slovakia, United States, Czech Republic, Serbia, Canada, United Kingdom, Hungary

**POPULATION:** 6 million (4.7 million in Slovakia)

**LANGUAGE:** Slovak

**RELIGION:** Roman Catholicism (69%); Protestantism (11%); Other (20%)

**RELATED ARTICLES:** Czechs, Hungarians

### 1 INTRODUCTION

Slavic peoples first settled on the territory of present-day Slovakia in the 5th century AD. The original territory inhabited by proto-Slovaks also included parts of present-day southeastern Moravia and approximately the entire northern half of present-day Hungary. A Slavic state was formed there under Samo, a Frankish merchant, in the 7th century. At this point, Slovaks were still indistinguishable from other Slavs. In the 8th century, the group of Slavs that would later become the Slovaks inhabited the Principality of Nitra, which eventually became a part of the Moravian Empire in the 9th and 10th centuries. It was during this period that the Byzantine missionaries Cyril and Methodius traveled to this region to convert pagan proto-Slovaks to Christianity. To aid in conversions, Cyril and Methodius developed Glagolitic, a precursor to Cyrillic, and provided Slavs with their first written alphabet. Great Moravia reached its peak during the reign of King Svatopluk between 870 and 894. In 907, Great Moravia was defeated by the Magyars, or Hungarians, in the Battle of Bratislava. Slovakia would continue to be under Magyar rule of some form until the beginning of the 20th century.

In 1526, Hungarians came under the rule of the Habsburg Empire. In 1867, Hungarians and Austrians struck a compromise and transformed the empire into a dual monarchy, but this changed very little for Slovaks. In the wake of the fall of the Austro-Hungarian Empire in World War I, Czechs and Slovaks united in 1919 to create the independent state of Czechoslovakia. Throughout the union of the two ethnic groups, the more numerous and powerful Czechs exercised greater political power than the Slovaks, and tensions between the two groups finally resulted in the dissolution of Czechoslovakia by 1939, when Slovakia declared its independence and allied itself with Hitler's Germany. The Slovak puppet government operated under German control during World War II. However, in 1944 Slovaks from the central and eastern parts of the country rebelled against the Nazis, but their revolt was quickly put down and an estimated 30,000 Slovaks were killed.

After the war, Czechoslovakia was reunited, and the Communists seized control of the country in 1948. Under Communist rule, as in the post-World War I era, the Slovaks were once again subordinate to the Czechs. In the 1960s, President Alexander Dubček, a Slovak, attempted to combine Communist ideology with democracy, an effort that culminated in the "Prague Spring" of 1968, which was crushed by military intervention from the Soviet Union, which occupied the entire country and abolished the democratic reforms of the preceding years. Twenty-one years later, through the peaceful "Velvet Revolution" led by dissident playwright Vaclav Havel and the Civic Forum party, the old order collapsed and Commu-

nism was overthrown. After the first democratic elections and the departure of the Soviet troops, old ethnic enmities resurfaced, with the Slovaks demanding separation from the Czechs. Prime Minister Havel and Slovak leader Vladimir Mečiar agreed to dissolve the union of the two peoples, and on 1 January 1993, in an event known as the “Velvet Divorce,” the Slovaks declared their independence, establishing their own parliament in Bratislava. In 1991, Slovakia joined the Czech Republic, Hungary, and Slovakia in the Visegrad Group, an alliance for the integration of these countries into greater Europe. In 1992, Slovakia joined the United Nations. Since 2004, Slovakia has been a member of the North Atlantic Treaty Organization (NATO) and the European Union (EU).

## 2 LOCATION AND HOMETLAND

Slovakia is a small, landlocked country located in Central Europe. It is about the size of Vermont and New Hampshire combined. Slovakia’s neighbors are Poland (to the north); the Czech Republic (to the northwest); Austria (to the southwest); and Hungary (to the south). It also shares a short eastern border with Ukraine. Much of Slovakia consists of unspoiled mountains and forests. The High Tatras, a part of the Carpathian Mountains, are the second-highest mountain ranges in Europe after the Alps. The Kriváň mountain peak, a Slovak national symbol, is located in the High Tatras. The land of the Slovaks slopes down from this high mountain range into lakes and fertile river valleys, which are traversed by several tributaries that drain into the Danube River. The Danube forms part of the southern boundary of the country. Other rivers that flow through Slovak territory include the Váh and the Hron. Slovakia has fertile farmland. Its winters are cold, cloudy, and snowy, and its summers warm.

In total, there are over six million Slovaks in the world. The population of Slovakia is approximately five and a half million, of which ethnic Slovaks comprise roughly 86%. The rest of the population of Slovakia is made up of Hungarians, Czechs, Ukrainians, Carpatho-Rusyns, and Romany, or Gypsies. Just under half of Slovakia’s population lives in rural areas, although significant migration from rural to urban areas is steady. The two largest cities in Slovakia are Bratislava, its capital, and Košice, in the east.

It is estimated that between 1.5 and 2 million Slovaks live outside of the Slovak homeland. Exact numbers cannot be determined since census takers use varying criteria to identify Slovaks abroad. Some counts reflect numbers of individuals who either still possess Slovakian citizenship or have emigrated from Slovakia, while other counts include individuals of Slovak ethnic descent. The largest numbers of Slovaks outside of Slovakia can be found in the United States, the Czech Republic, Serbia, Canada, the United Kingdom, and Hungary. Hundreds of thousands of Slovaks emigrated to North America in the late 19th and early 20th centuries, making the number of Slovaks and those of Slovak descent range today between 800,000 and 1.2 million in the United States and 50,000 and 100,000 in Canada. An estimated 200,000 to 375,000 Slovaks live within the borders of the Czech Republic. Because of centuries of Magyar rule, a sizeable Slovak population could be found in Hungary until the beginning of the 20th century. Since the fall of the Austro-Hungarian Empire, the number of Slovaks living in Hungary has steadily declined. Currently, roughly 20,000 Slovaks can be found in Hungary.

Historically, a considerable number of Slovaks could be found in the Balkans, primarily in Serbia and Bulgaria. After World War II, thousands of Slovaks left Bulgaria for Czechoslovakia in a state-run initiative to repopulate the Czech and Slovak lands. As such, a very small number of Slovaks remain in Bulgaria today. Roughly 60,000 ethnic Slovaks remain in northern Serbia today, primarily in the autonomous province of Vojvodina. Slovaks are the third largest of over 26 ethnic groups in Vojvodina. Slovak is one of the province’s six official languages. Most Slovaks in Vojvodina are the descendants of the late 18th and early 19th century Slovaks who settled in the region when it was still under Hungarian rule, after the retreat of the Ottoman Empire from the area. Since religion was a primary stimulant for many of the original Slovaks who immigrated to Vojvodina, one of the distinguishing factors of the Slovaks of Vojvodina today is that the majority of them are Protestant rather than Roman Catholic.

## 3 LANGUAGE

Slovak is a member of the Western Slavic language group. Of all other languages, Slovak is most similar to Czech. Although the two languages are clearly distinct from one another, they are mutually intelligible. Like other Western Slavic languages, Slovak received a number of formative characteristics from the Glagolitic alphabet and other standardizing initiatives developed by Byzantine missionaries Cyril and Methodius during their efforts to Christianize the Slavs. The present Slovak alphabet has 43 letters and is written using Roman characters.

This reflects the early change in religious orientation from the Greek Orthodox East to the Latin Catholic West and remains a distinguishing factor between the Western Slavic language group and the Eastern Slavic language group, which uses Cyrillic characters. There are three major Slovak dialects: Eastern, Central, and Western. The Western dialects of Slovak shade onto the Moravian dialects of the Czech language. Slovak words have an accented first syllable, and words with more than three syllables have a secondary accent as well. Like those of other East European languages, Slovak words feature many clusters of consonants. Some Slovak words, such as *smrt'* (death), *srdce* (heart), *slnko* (sun), and *yrt* (to drill, or bore), have practically no vowels at all.

Efforts to standardize the Slovak language began as early as the 17th century, primarily in the form of literature. The two main individuals credited with contributing the most to the standardization of the Slovak language were Anton Bernolák in the 18th century and Ľudovít Štúr in the 19th century. While Bernolák worked with the western Slovakian dialect, Štúr's use of the central dialect has become the basis of standardized Slovak today. The Slovak political experience, however, has proven to curtail the development and standardization of Slovak during the last three centuries. Under the Hungarian Empire, the Hungarian language was privileged over Slovak and Slovaks experienced heavy Magyarization efforts in education and other public spheres. During the existence of Czechoslovakia, the Slovak language was considered an official language of the country, but Czech was privileged over Slovak in politics, professions, education, and other public spheres. As a result, the Slovak language was heavily influenced by Czech and took on many Czech borrowings.

The Slovak Language is the official language of Slovakia, but both Czech and Hungarian are also widely spoken. Those who speak Hungarian primarily populate the southern region of Slovakia. Because of the rapid pace of globalization, borrowing from both Czech and other languages still occurs.

#### 4 FOLKLORE

Slovaks possess a very rich oral history that deals, like most peoples' folklore, with all aspects of life and nature. Because of Slovakia's predominantly agrarian history, however, themes of love, marriage, health, and agricultural bounty are particularly common.

Almost every ruined castle in the Slovak Republic has its legend. Sometimes these legends are extremely violent, like the story of Csejte, a ruthless countess who murders three young girls and bathes in their blood in an effort to renew her youthfulness. There are also many stories about Janosik, a well-known folk hero whose adventures date back to the Turkish invasions of the 16th and 17th centuries. These kinds of folk tales provided a great deal of inspiration for later Slovak literature. In the mid 19th century, Pavol Dobšinský worked to collect and publish anthologies of Slovak folk fairy tales like these. Such activities were closely related with the Slovak National Awakening.

Belief in witches, ghosts, and other supernatural beings persists as a remnant of pre-Christian paganism. One such figure is Morena, a goddess of death who is the object of a springtime custom by which young girls ritually "drown" a straw doll in waters that flow from the first thaw. In rural areas, some Slovaks still believe that illness and misfortune can be caused by

witches, demons, or the "evil eye" and seek the services of traditional healers who use folk remedies and rituals to protect or exorcise villages and homes.

Slovak folklore also includes a number of means by which individuals can determine and try to control their futures, most occurring around Christmas and the New Year. On November 30, lead is poured into boiling water, and the shape it takes is used to make predictions about the coming year. Young women have many ways of trying to discover who their husbands might be, such as peering upside-down at the water's surface in a well. On Christmas Eve, nuts are cracked and their contents are examined to determine what the coming year will bring. Additionally, food from the Christmas Eve feast is given to livestock in hopes that they be granted good health.

#### 5 RELIGION

Most Slovaks (about 70% of the population) belong to the Roman Catholic Church and are closely affiliated with their church communities. Slovak Catholicism is generally more traditional than the more liberal Czech version. The next largest group, 13% of the population, consists of those who claim either atheism or no religious affiliation. This is quite small compared to the 59% of neighboring Czechs in this category. Roughly 11% of the population identifies itself as Protestant and roughly 4% as Greek Catholic, a Christian religion that acknowledges the Catholic Pope but whose liturgical traditions follow those of Eastern Orthodoxy. Others include Calvinist Reformed, Eastern Orthodox, and Baptist. Slovakia's once populous Jewish community was destroyed in the Nazi Holocaust.

Churches and religion presented a strong obstacle to the Communists after World War II. The government banned religious activity and closed all private religious schools. In 1989, with the fall of Communism, churches were restored and religious schools reopened. Although most Slovaks have returned to the traditional Slovak religion of Roman Catholicism, the Protestant Evangelical movement in Slovakia, as in other former Communist countries of Eastern Europe, continues to grow in order to fill the religious vacuum created by the Communist ban on organized religion.

#### 6 MAJOR HOLIDAYS

National holidays in Slovakia include New Year's Day (January 1), Liberation Day (May 8), Cyril and Methodius Day (July 5), Slovak National Uprising Day (August 29), Constitution Day (September 1), Independence Day (October 28), and Day of the Struggle for Freedom and Democracy (November 17), which simultaneously commemorates Slovak demonstrations against the Nazis in 1939 as well as the demonstrations in 1989 that are said to have triggered the Velvet Revolution.

In late October, Slovakia hosts the Bratislava music festival, which attracts national and international performers. Many towns and villages host annual folk festivals in the late summer or fall, with plentiful singing, dancing, and drinking.

Most Slovaks also observe the major feast days and holidays of Roman Catholicism, such as Easter and Christmas. The Slovak celebration of Easter extends to the Monday after Easter Sunday as well. September 15, the Day of Our Lady of Sorrows, is an important holiday for Slovaks since the Virgin Mary is considered to be the patron saint of Slovakia. The largest of Slovak celebrations culminates around Christmas, over a period of three days. On Christmas Eve, Slovaks attend church ser-

vices. Christmas trees are decorated, gifts are exchanged, and there is a traditional Christmas Eve dinner called *vilija*, consisting of mushroom soup, fish, peas, prunes, and pastries. December 26 is the Feast of Saint Stephen and is called “Second Christmas Day” by Slovaks. Slovaks usually celebrate birthdays with their families, and name days, days dedicated to the saint for which one is named, with friends and co-workers.

## 7 RITES OF PASSAGE

Most Slovaks observe major life events, such as birth, marriage, and death, according to the religious traditions of the Roman Catholic Church.

## 8 INTERPERSONAL RELATIONS

Shaking hands is a standard form of greeting; men generally wait for women to extend their hands first. Upon parting, a man may hug a woman or kiss her on both cheeks. Standard salutations include *Dobrý den* (good day), *Velmi ma tesí* (pleased to meet you), and the more informal *Ahoj* (the equivalent of “hi”). *Dovidenia* means “good-bye,” and the more casual terms *Ciao* and *Servus* mean either “hello” or “good-bye.” In rural areas, some older residents still greet each other with *S Bohom* (“God be with you”).

When not among family or close friends, Slovak forms of address are very formal and courteous, including both *Pán* (Mr.) or *Pani* (Mrs.) and any professional title, such as doctor, professor, or engineer. As in many other languages, modes of expressing respect and courtesy are built into Slovak grammar. Slovak has a second, more formal case for the second person. For example, in addressing a close or familiar acquaintance, Slovaks use the word *ty* for “you.” When addressing someone unfamiliar, or to convey a more formal, respectful relationship, Slovaks use the word *vy* for “you.”

Slovaks enjoy entertaining at home. It is customary for guests to bring to their hosts a bottle of wine or some sort of alcohol. Upon entering a Slovak home, guests generally remove their shoes; their hosts often provide them with slippers. Fresh flowers are often given, and when they are presented, they are always unwrapped and in odd numbers, since it is the custom to bring even numbers of flowers to funerals. The gesture for wishing someone good luck (the equivalent of crossing one’s fingers in the United States) is to fold the thumb inward and close the other fingers around it.

## 9 LIVING CONDITIONS

Roughly 21% of Slovakia’s population lives below the poverty line. Life expectancy for Slovaks averages 75 years of age, and the rate of infant mortality is 7 deaths for every 1,000 live births. The adult prevalence rate of HIV/AIDS is less than 0.1%, and it is estimated that fewer than 200 people in Slovakia are HIV positive. There is virtually universal access to medical care and a high rate of immunization for infants in the first year of life. Slovakia’s health spas are known around the world and have many international visitors.

Most city dwellers live in modest-sized apartments built during the Communist era. Varied types of housing are found in rural Slovakia, ranging from two-room detached dwellings to two-story apartment buildings with up to six units. Indoor plumbing has been standard in rural areas for the past 40 years. Common building materials are cinder blocks and fired bricks. In the wake of the fall of Communism, Slovakia

experienced a serious housing shortage as housing units were recovered from state control. The privatization of state housing units resulted not only in the slowing of new construction, but also in the increase in the amount of owner-occupied housing. Both of these trends have affected the rental market, causing the creation of a rental black market and making housing unaffordable for many. Additionally, the shift of maintenance responsibility from public to private has caused repair and upkeep of lower income rental properties to be neglected. The Slovakian government is addressing these problems by building new rental properties. Now, approximately two million housing units exist in Slovakia, but it is estimated that over 150,000 units are still needed.

Most Slovak families own a car, but public transportation, including buses, trolleys, and trains, is widely used due to the high price of gasoline. There are rail links and highways between major cities. Because of the growth in cellular services and access to the internet, communication technology in Slovakia has expanded dramatically in recent years and is widely accessible.

## 10 FAMILY LIFE

The most common family unit in Slovakia is the nuclear family, although extended families can still be found in rural areas, where houses may have extra rooms to accommodate the family of a grown son or daughter. The average Slovak family has one to two children. Women receive paid maternity leave and a cash allowance when each child is born. Most women work outside the home (women account for 47% of the Slovak labor force.) Women and men have equal rights under the law, including property and inheritance rights.

## 11 CLOTHING

Slovaks wear modern Western-style clothing, including business attire for work, and jeans and T-shirts for casual wear. On special occasions, or during festivals or holidays, some Slovaks still wear traditional dress. For women, this includes puffed-sleeve blouses, vests, full skirts, aprons, boots, and a bonnet or headscarf depending on marital status. For men, this includes hats, shirts, vests, boots, and either form-fitting or flared pants. Such costumes are usually very colorfully embroidered. Traditionally, they were made of homespun cloth and sheepskin, but this is rarer today. Styles, colors, and accessories historically varied depending on region.

## 12 FOOD

Pork is the most common meat consumed in Slovakia, although beef, poultry, fish, and game, such as boar, rabbit, and venison, are also regularly eaten. Slovaks also make various types of spiced sausages, primarily from pork. The Slovak national dish is *bryndzové halušky*, dumplings made with potatoes, flour, water, eggs, and salt and served with processed sheep’s cheese, and occasionally, bits of pork. In some regions, *halušky* is also served with cabbage and onions. Other Slovak favorites include *Kapustnics*, or cabbage soup, and *rezen*, or breaded steak. Fresh fish and wild game are often served in Slovak homes, and fresh-baked bread and soup are dinnertime staples. Favorite desserts include *tortes*, frosted, multilayered cakes, and *koláč*, or rolls with a nut or poppy seed filling.

Pilsner beer and dry, white wine are both produced and regularly consumed in Slovakia. The vineyards of Slovakia are

A Detva bride. On special occasions, people in the hill country still wear traditional dress, including dark woolen suits and knitted hats for men and full skirts, aprons, blouses, and scarves for women. (Helen Cincebeaux)

primarily located in the southern part of the country, in the Male Karpaty region near Hungary. As in the Czech Republic, *slivovice* (plum brandy) is also very popular.

The traditional main meal of the day in Slovakia is lunch, but more Slovaks are increasingly making dinner their main meal.

### 13 EDUCATION

Slovakia has a literacy rate of over 99%. Schooling is compulsory for 10 years, from ages 6 through 16. As in the United States, students go to school for five days a week, Monday through Friday. There are many secondary schools in Slovakia that prepare children for a higher education, as well as a variety of vocational schools. Most schools are still owned by the state, although since the fall of Communism there has been an increase in church-run schools and other types of private schools. There are over 30 schools of higher education in Slovakia, several of which opened after the fall of Communism. The oldest Slovak university is Comenius University in Bratislava, founded in 1919. Despite pending plans to implement tuition fees, there is still no charge to attend a university. Admission,

however, is limited and highly competitive. The grading system in Slovakia uses a scale ranging from one to five, with one being the highest grade and five being the lowest.

Since the fall of Communism, public schools and universities have struggled to overcome a lack of adequate funding. Instructors are underpaid and a great deal of the teaching material is outdated. As a result, corruption has become widespread as educational administrators and instructors are more prone to turning to illegal bribes in exchange for giving students entrance to schools, better grades, and more. Additionally, the quality of teachers has diminished since schools cannot compensate better qualified professionals and experts.

Regardless, Slovakia's secondary education is ranked as thirtieth in the world, just behind the United States, which is ranked twenty-ninth.

### 14 CULTURAL HERITAGE

Folk music is one of the most important elements of Slovakian culture. Slovakian national music was greatly strengthened and popularized in the early 19th century, although the origins of traditional Slovakian music are located in early Christian liturgical music. The Slovaks' pride in their musical tradition is expressed in the saying *Kde Slovák, tam spev* ("Wherever there is a Slovak, there is a song"). Villages have amateur musical groups that perform at school graduations and harvest festivals. Characteristic Slovak folk instruments include the bagpipes (*gajdy*), pipes (*píst'ala*), the *fujara*, a large shepherd's flute held vertically in front of the body, and native instruments similar to the fiddle and dulcimer. One popular series of folk songs, *Janosik* songs, are based on the exploits of a well-known folk hero. A common theme in many Slovak folk songs is Slovak subjugation to other national groups, such as Hungarians and Turks. Immigrants from Romania, Germany, and Hungary have also brought varying music styles to Slovakia. More recently, contemporary composers have begun to incorporate Slovak folk melodies into their works. Slovaks also have a strong folk-dance tradition, with dances such as the *Kolo*, *Hajdúch*, *Verbunk*, *Czardas*, polka, waltz, a shepherd's dance called the *Odzemok*, and the *Chorodový*, a communal women's dance. Although popular music began to replace folk music after World War II, folk music remains an important element of Slovak culture and is celebrated, along with other folk arts, at a major folk festival every year in July.

Slovak literature began to experience great vibrancy in the early 19th century, when talented poets, such as Andrej Sladkovic and Jano Kral, produced some of the most original Slavic Romanticism. Such writing was heavily inspired by Slovak folk tales. Slovak literature came of age after World War II, but during the four decades of Communist rule after World War II, Slovak writing underwent a general decline.

### 15 WORK

Slovakia has more or less completed its transition from a centrally planned economy to a market economy. Like other Eastern European countries, Slovakia became highly industrialized during the Communist era, creating manufacturing jobs in steel, chemicals, glass, cement, and textiles. Since the end of the Communist era, the Slovakian economy has undergone a major shift in composition. In 1991, for example, 43% of the labor force was employed in heavy industry. In 2003, however, 56% of the labor force was employed in the service

*A woman in Bratislava, Slovakia, displays her needlework. (AP Images/Rudi Blaha)*

industry, with 29% in heavy industry, 9% in construction, and 6% in agriculture. Workers in Slovakia have benefited from the country's sustained, strong economic growth, which has occurred even during a more general European slowdown. In the midst of privatization, the rate of unemployment went as high as 19.2% (in 2001). By the beginning of 2008, it had dropped to 8%. Despite its generally successful transition to a market economy, however, Slovakia is still in need of greater investment in research and development in order to cultivate a modern knowledge-based economy and remain competitive with the rest of Europe and the world.

## **16 SPORTS**

Popular sports among Slovaks include soccer, tennis, and skiing, although Slovakia is known best around the world for ice hockey. Ice Hockey became popular in Slovakia in 1925 when the European Ice Hockey Championship was held in the High Tatras in 1925. This established the beginning of the Tatra Cup, which is now the second oldest tournament in Europe. In 2002, Slovakia won the world hockey championship.

## **17 ENTERTAINMENT AND RECREATION**

In their leisure time, Slovaks enjoy attending movies, local festivals, and cultural events and participating in outdoor activities including hiking, swimming, and camping. Slovakia also has over 1,000 mineral and hot springs. In rural villages, men meet after work at the local bar to drink, play cards, and socialize.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Folk arts and crafts, which include pottery, porcelain sculpting, woodcarving, metalworking, toy making, and glass painting, have a long and popular tradition in Slovakia, especially in rural areas. Many women knit, sew, embroider, and make lace. Popular patterns are handed down from generation to generation. Slovakia also possesses very rich folk architecture in the forms of wooden churches, brightly painted houses, and more.

## **19 SOCIAL PROBLEMS**

Despite the large improvements in the economy over the last several years, Slovakia still has the highest unemployment rate of any country in the European Union. Many Slovaks have

moved abroad in search of employment, and Slovakia's accession to the European Union has aided in such movement. This trend of emigration contributes to Slovakia's extremely low population growth rate of 0.14%. The fertility rate in Slovakia, 1.33 children per woman, is one of the lowest in the European Union. In the coming years, this may not only negatively impact Slovakia's economy, but as work force and age distributions of the population change, Slovakia's social security system, infrastructure, educational system, and other systems may become unsustainable. These trends comprise the greatest long-term social threat to Slovaks.

Two of the larger immediate social problems facing Slovaks are drugs and prostitution. Both drugs and humans are trafficked through Slovakia. Synthetic drugs are produced in Slovakia and distributed throughout Eastern and Central Europe. The drug ecstasy is also used in Slovakia.

## **20 GENDER ISSUES**

Women and men in Slovakia are roughly equal when it comes to literacy, education levels, employment, and civic and political rights. Some of the main social and economic problems of the post-Communist transition, however, have had a disproportionately negative impact on the female gender. Generally, the Communist period is thought by experts to have had a negative impact on the feminist movement. Under Communism, women and men in Czechoslovakia were officially declared equal by law, but this did not translate into practice beyond the most visible public spheres. The Communist government's version of equal rights was simply ensuring that women were employed at a comparable rate to men. They did little to address the other domestic and societal conditions, expectations, and stereotypes of women. Often, gaining employment outside the home actually worsened conditions for women, who were still largely expected to perform all of their domestic tasks, such as cooking, cleaning, and child-rearing, in addition to their work outside the home. Many experts argue that the Communist rhetoric of equality among men and women produced a false comfort among Slovaks, as among other peoples under Communism, that the gender imbalance had been solved. This sense diffused and undermined the feminist movement by making women's rights a non-issue in society.

The feminist movement in Slovakia does not have much strength and it is not a part of mainstream Slovak culture. Inequality, at least in societal expectations of women, still exists when it comes to reproductive issues, family life, work, political affairs, and public life. Slovak women themselves, however, do not consider their situation to be inappropriate or in need of being changed. Studies show that only 30% of women in Slovakia have positive or neutral views on the idea of feminism, while 24% have a negative view and 46% are not even familiar with the concept. Even more Slovak men are ignorant or possess a negative view of feminism. In both men and women, social demographics seem to affect awareness levels of feminist issues, but not attitudes. The more highly educated men in Slovakia are actually more negative toward the feminist movement, which poses problems for educated Slovak women attempting to pursue women's rights.

The post-Communist period has also taken its toll on certain groups of women in a very concrete way. High unemployment, the rising cost of living, and increased contact with larger markets since the fall of Communism have caused an

increase in prostitution activities of Slovak women, both in Slovakia and abroad. Within Slovakia, authorities have done little to regulate prostitution, which has been detrimental to both women practicing prostitution and inhabitants of areas where prostitution activities occur. Before the fall of Communism, prostitution was prohibited in the streets, making many of these problems new to Slovak society. The lack of regulation or restriction leaves women who practice prostitution with no rights or protection and has led to the increase in other problems connected to prostitution, such as violence and drug abuse. These problems penetrate broader portions of Slovak society because they occur in residential areas. Since no official laws exist to regulate prostitution, police are often not able to respond until other crimes surrounding the activity, such as pimping, drug distribution, and theft, are committed. Often, it is the female prostitutes who are punished by law enforcement rather than the male perpetrators. Official regulations have still yet to be put into place, leaving only non-governmental organizations to address the issue. Such organizations focus on health education, social and legal issues, the provision of contraceptives, and widespread preventative activities in an effort to alleviate the problem. Such organizations are few and lack sufficient state support for their activities. Additionally, due to the nature of prostitution, many of the women who need to access these services cannot since they are outside of the mainstream social system. Prostitution is highly stigmatized in Slovak society, making it even harder for these women to break away from their situations.

Prostitution is equally, if not more dangerous for Slovak women outside of Slovakia's borders. Since the fall of Communism, the illegal trafficking and prostitution of women from former Eastern Bloc countries in Western Europe has grown immensely. The European Commission estimates that over 2,000 Slovaks per year are trafficked as prostitutes to France, Spain, Italy, Greece, and Germany. Young Slovak women are most often told by traffickers that they will be employed in high-paying jobs as waitresses and au pairs in their new country of residence. Upon arrival, their personal identification and travel documents are stolen and they are forced to work as prostitutes on streets or in brothels against their will. Such women are not only limited by not knowing the local language, but are also beaten and threatened. These women become susceptible not only to heavy drug use, but to murder as well. Contrary to the call for regulation of prostitution at home, some experts believe that legalization and toleration of prostitution in Western Europe has only aided human traffickers in seeming more legitimate. Police and various non-governmental organizations are working to create a system for locating and retrieving victims, but due to widespread Slovak social attitudes toward prostitution, many of the victims who do make it back to Slovakia are ostracized from their communities.

Legitimate agencies that seek to employ young Slovak women abroad as au pairs do exist, but when Slovak women arrive in foreign countries, they are often treated not as au pairs on a cultural exchange but as live-in migrant domestic workers, making them vulnerable to exploitation. Both forms of exploitation are made possible by the unemployment rate in Slovakia and by the economic disparity between Slovakia and its richer western neighbors.

# SLOVENES

- ALTERNATE NAMES:** Slovenci; Slovenians [both forms, Slovene and Slovenian, are used as noun and adjective]
- LOCATION:** Slovenia and regions of Austria, Italy, and Hungary along their Slovenian borders
- POPULATION:** 2,003,358 million, of whom 83.1% are Slovenes (2007 census)
- LANGUAGE:** Slovenian; in nationally mixed areas, also Italian and Hungarian and others
- RELIGION:** Roman Catholic, Muslim, Orthodox, other Christian, other or unspecified, none

## 1 INTRODUCTION

Slovenes, a distinct South Slav people, originally located in the area northeast of the Carpathian Mountains, settled in the eastern Alpine region of Central Europe in the 6th and 7th centuries AD. Although they established a short-lived political entity, Karantania, in the 8th century, they obtained their own independent state only in 1991. For over 1,000 years, Slovenes lived under mostly German rule as part of the Holy Roman (962–1806), Austrian (1804–1867), and Austro-Hungarian (1867–1918) empires. During centuries of foreign rule, the Slovenes preserved their language and, in the last 200 years, formed a modern nation with a rich culture and aspirations for political independence.

In 1918, following the collapse of the Austro-Hungarian Empire, the Slovenes joined with other South Slavs to form the Kingdom of Serbs, Croats, and Slovenes (in 1929 renamed Yugoslavia, meaning "the land of South Slavs"), but one-third of Slovene ethnic territory remained outside its borders. Within this new state, the Slovenes acquired institutions crucial for national development, among them a university and the Slovene Academy of Sciences and Arts.

World War II (1941–1945) was a traumatic experience for the Slovenes. Their territory was divided among three occupying powers: Germany, Italy, and Hungary. Many Slovenes died during the wartime liberation struggle, but many more—thousands—were killed in a bloody civil war, fought during World War II. Victorious Communists massacred over 10,000 anti-Communists in the spring of 1945. The Communist takeover triggered massive emigration from Slovenia and left deep political divisions, which persist to this day. In federally organized Communist Yugoslavia (after 1945), Slovenia, as a constituent republic, acquired its own constitution, as well as cultural and some political autonomy. With the demise of Communism in Europe, Yugoslavia fell apart in June 1991, after two of its constituent republics, Croatia and Slovenia, proclaimed their independence.

Since then, Slovenia has been an independent state and a republic with a parliamentary democracy. Slovenia joined the North Atlantic Treaty Organization (NATO) and the European Union (EU) in 2004. In January 2008 Slovenia became the first of the ten 2004 EU newcomers to hold the EU's rotating presidency.

## 2 LOCATION AND HOMELAND

The Republic of Slovenia borders on four countries: Austria in the north, Hungary in the northeast, Italy in the west, and

Croatia in the east and south. It occupies a small (20,256 sq km or 7,821 sq mi, about the size of the US state of New Jersey) but geographically diverse area: the Alpine region in the west and north, the Subpannonian hilly terrain with large fertile basins in the northeast and east, the Dinaric Karst in the south and southeast and the fertile Slovene Littoral, with 46 km (29 mi) of Adriatic coast, in the southwest. Also, despite its small size, this eastern Alpine country controls some of Europe's major transit routes.

Slovenia's climate varies with its geographical makeup. The Alpine region has long, cold winters and short, cool summers; the Subpannonian area has a continental climate with cold winters, hot summers, and fluctuating daily temperatures; while a Mediterranean climate, with mild winters, is characteristic of the Slovene Littoral. Slovenia, half of its land covered with forests and enhanced by sufficient rainfall, is considered "green country on the sunny side of the Alps." Although mountains and karst areas are poorly suited for agriculture, they are beautiful, unique regions, which offer wonderful possibilities for tourism and sports. In fact, tourism is one of the most important branches of the Slovene economy.

Additionally, Slovenia can boast over 26 000 km of permanent and torrential water courses, about 6,500 karstic caves, thousands of springs, waterfalls and gorges, and its natural and artificial lakes. There are the karst-limestone regions with their reservoirs of subterranean water, as well as the remains of once formidable glaciers below the peaks of Triglav and Skuta. Triglav is the highest mountain in Slovenia. Its name means "three-heads." The mountain is 2,864 m high and is a true na-

tional symbol, featured on the national coat of arms and the flag.

Slovene archeological sites attest to several prehistoric and Roman settlements and to the strategic importance of the Slovene ethnic territory as a crossroads between northern and western Europe, and Europe's east and the south. The land originally settled by the Slovenes, south of today's Vienna, Austria, and east of Venice, Italy, was three times the size of the present Slovene ethnic territory. Not all Slovenes live within the boundaries of the Republic of Slovenia: Slovene minorities exist in neighboring Austria, Italy, and Hungary. Also, an estimated 2.5 million Slovene emigrants and their descendants live throughout the world, around 300,000 of them in the United States. Slovenes emigrated for various historic reasons. Poverty was the most prevalent reason before World War I, and fear of political persecution after World War II.

About 50% of Slovenes live in cities: in Ljubljana, the capital, with approximately 276,000 inhabitants; in Maribor, with 106,000 inhabitants; and in several smaller cities, each with under 50,000 inhabitants. Ljubljana is a unique city that maintains the friendliness of a small town, while possessing all the characteristics of a metropolis. It is considered to be a meeting point of the cultures of the east and the west, where the old interlaces in harmony with the new.

In the past, the Slovenes were mostly peasants and, before World War II, over 50% of Slovenes made their living from farming; in the 1990s, however, the number of peasant farmers had dwindled to 7%. After World War II, Slovenia rapidly industrialized, but did not become urbanized. Many Slovenes still live in the country while commuting to work in the cities. Preserving the countryside helps people to maintain close bonds with nature, Slovenian culture, customs, and habits. While being a very modern society, Slovenes place a great value in delicious home cooked meals, homemade wines and brandies, the traditional ceramic heating stove, and the captivating scent of new-mown hay. Both in the city and in the countryside people are hospitable and welcoming.

### 3 LANGUAGE

The language of Slovenes is Slovenian, which is the official language of the Republic of Slovenia. However, Hungarian and Italian are spoken in the border regions, and German fluency is common near the Austrian border. Bosnian, Croatian, and Serbian are spoken by a sizable (6% of the population) minority.

Slovenian is a South Slavic language, closely related to Croatian and similar to other Slavic languages, e.g., Czech. Similarly to many other Slavic languages, it uses the Latin alphabet. It is spoken by approximately 2 million people in the Slovene ethnic territory, and by emigrants around the world. Natural boundaries (mountains and rivers) and the proximity of other language groups (Croatian, German, Hungarian, Italian) influenced the development of Slovenian and its division into several distinct dialects. In the past, spoken Slovenian, particularly that of uneducated people, borrowed many words from German, such as *štumfi* (from the German *Strumpf*) for *nogavice* (stockings). At present, slang, especially of youth, and technical language of professional groups are heavily influenced by English. In teenagers' talk, the English words "full" and "cool" are staple expressions of emphasis, e.g., *To je ful dober!* (This is very good!). Another often-used English expression is "OK".

Slovenes are proud of their language, but at the same time they are aware of the need to learn foreign languages to be able to communicate with their neighbors and the rest of the world. Thus, the majority of Slovenes speak at least one foreign language. In elementary school, all children begin to learn a foreign language in the fifth grade; in secondary school, students often study two or even three languages. The most-frequently taught foreign language is English, followed by German. In the border areas, with Italian and Hungarian and other minorities, those respective languages are also taught.

People are most often named after Catholic saints (Ana, Andrej, Joxe, Marija, Matevx). Also popular are old Slavic names, such as Iztok (source) or Vesna (spring). Family names are derived from people's occupations, e.g., Kmet (farmer), or Kovaĉh (blacksmith); from locations where they live, e.g., Dolinar (one who lives in a valley), or Hribar (one who lives on a mountain); and from animals, e.g., Medved (bear), Petelin (rooster), or Volk (wolf).

Impressively, statistics indicate that over the centuries Slovenians accumulated 42,889 different first names (20,366 male names and 22,523 female names) and 88,157 different last names. Although some names are disappearing (such as Karol, Vilko, Radoslav, Hilda, Leopoldina, Fanika), other first and last names are being created or acquired from other countries.

Despite the extensive list of names to choose from, half of the population of Slovenia has one of the top 50 names. Two female and five male names are so popular that more than 20,000 people have one of these seven names. Thus, every eighth person in Slovenia (about 12% of the population) has one of the following names: Franc, Janez, Anton, Ivan, Joĝef, Marija, or Ana.

#### 4 FOLKLORE

Many Slovene folk traditions are associated with seasonal celebrations, dating to pre-Christian times. They were adopted, modified, and perpetuated by the Catholic Church. Slovene Carnival celebrations with parades, carnivals, and masquerade balls vary from region to region. Among them, *kurentovanje* in Ptuj is the most famous tourist attraction. The central figure is the *kurent*, whose fur clothing and unusual masks with horns, representing human and animal traits, evoke images of another planet. Always happy, the *kurent* is considered a harbinger of spring, fertility, and new life. Accompanied by a ceremonial plowman, he visits farms and wishes their owners a prosperous year. Adults and children enjoy the spring Carnival season, called *pust* (Mardi gras). The traditional pastries *krofi* and *flancati* (similar to doughnuts) are prepared. Costumed children, wearing masks, go from house to house, asking: "Do you have anything for Pusta, Hrusta?" People give them sweets and fruits. Adults attend masquerade balls. This tradition is similar to Halloween in the United States.

Slovene heroes are usually optimistic, wise, and cheerful. Stories about Kralj Matjax (King Mathias), Martin Krpan, and Miklova Zala, for example, are introduced to children early in their lives. The story about Kralj Matjax goes back to the difficult times of the bubonic plagues, Turkish invasions, and famine in the 16th and 17th centuries. People elected a good king who would protect them from danger and never die. However, he and his army are said to be sleeping under Mt. Peca. When needed, they will awaken and protect their people. Another popular hero is Martin Krpan, a common Slovene person from

a small village who is strong, wise, and cunning, who saved Vienna and the Austrian emperor from a Turkish ogre.

One of the most beautiful stories is of a Slovene woman, Miklova Zala, and also dates from the time of Turkish invasions. She epitomizes love and fidelity. Captured by the Turks, she was taken to Constantinople where she was sold to a pasha who wanted to marry her. Refusing to abandon her Christian beliefs and her husband, she succeeded in escaping. After long and challenging travels that lasted seven years, she was reunited with her husband. This story celebrates true love, the faith and beauty of Slovene women, love for homeland, courage, and strength.

#### 5 RELIGION

Slovenes are mostly Roman Catholic. In the 8th century AD, Slovene worshipers of Slavic gods were Christianized by Irish missionaries. Since then, the Catholic Church has played a major role in preserving and cultivating Slovene language and culture. Although 90% of Slovenes claim to be nominally Catholic, considerably fewer practice their religion (go to mass regularly and receive the sacraments). But Slovene culture is inseparable from Catholicism.

Small numbers of people belong to other religious groups. The Evangelical Protestant Church (Lutheran), established during the 16th-century Reformation movement, is the oldest. Of recent groups, some are non-Christian, such as Hare Rama Hare Krishna. In the last decade, there has been more interest, especially among young people, in various spiritual movements. As of 2008, 38 other religious communities, spiritual groups, societies and associations were registered in Slovenia.

#### 6 MAJOR HOLIDAYS

Religious holidays, such as Christmas, New Year's Day, Easter, Assumption Day (August 15) and All Saints Day (November 1) are recognized as national holidays. A few secular holidays are also observed. Since gaining independence in 1991, Slovenes celebrate Statehood Day (June 25), and Independence Day (December 26). Besides official celebrations with political speeches, cultural programs, fireworks, and receptions for diplomats, families and friends gather, light bonfires, picnic, and sing.

Since 1945, Preĝeren Day (February 8) has been celebrated as a Slovene cultural holiday honoring the great Romantic poet France Preĝeren. Cultural programs of all kinds (concerts, poetry readings, theater performances, and the presentation of the most prestigious national award for artists) take place in schools, cultural institutions, and the media.

Although the majority of Slovenes are Catholic, Reformation Day is also observed as a national holiday on October 31 to recognize the important role the Protestants played in establishing the identity of the Slovene nation. In 1550, they published the first book, *Cathechismus*, in the Slovene language, followed by other books, among them a translation of the Bible.

#### 7 RITES OF PASSAGE

Major life transitions are marked with religious ceremonies and celebrations appropriate to the Roman Catholic tradition followed by the majority of Slovenes. Such events as baptism, First Communion, and confirmation are considered important rites of passage in a child's life.

Slovenes wear traditional costumes of fur and bells during the Pust or Carnival parade. The carnival dates back to old Europe when people would celebrate spring and the end of winter's dark and cold. (Melissa Farlow/National Geographic/Getty Images)

## 8 INTERPERSONAL RELATIONS

When meeting, Slovenes exchange various greetings, depending on the time of day. Until approximately 10:00 am it is customary to use “*dobro jutro!*”; during the day, *dober dan* (good day); and after dark, *dober vecer* (good evening); to all of which the traditional reply is “*Bogda!*” (May God grant you). Slovenes, especially the young, often greet each other with “*zivijo!*” (long life). At parting, various expressions are used. The most common are “*nasvidenje!*” (so long), “*adijo!*” (goodbye) and, in the evening, *lahko noc* (good night). When Slovenes meet or part, they often shake hands.

In addressing a person, Slovenes use either the informal or the formal form. A friend or a close relative would be addressed with *ti* (informal for “you”) and the verb in corresponding form; an older person, a teacher, or a stranger would be addressed with *Vi* (formal for “you”). Teachers in school are never addressed by their first name but rather with *Gospod* (Mr.) and *Gospa* (Mrs.). For example one would refer to a teacher as *Gospod Kovac* (or *Mr. Smith*). Students in elementary schools are addressed informally with *ti*, while in high schools and universities they are addressed formally with *Vi*.

Slovenes are courteous visitors and when invited to dinner will always bring small gifts: flowers for the hostess, a bottle of wine for the host, or candy for the children. It is considered rude to refuse what is offered, but, usually, it is good manners to decline politely once or twice before taking it. *Hvala* (thanks) is the word used to express gratitude, to which *prosim* (please) is the polite response. *Prosim* is also used when a request is put forward, or when a listener did not hear or understand what was said.

Slovenes tend to appear reserved at first, but are very friendly on acquaintance. Slovenes, usually friendly and hospitable, are eager to help a foreigner with information. They are quick to invite him or her home to share a meal. Among themselves, they value friendship, spend time together, and help each other build houses, move, or bring in the harvest.

It is not unusual to see Slovenes express their emotions, especially affection, in public places. This is especially true of teenagers, who can be seen in the streets and parks holding hands and kissing. Many old courting and dating customs, once popular particularly in villages, have died out, but a few are still observed. Just before young people marry, they organize pre-wedding parties: the *deklišTina* (maiden party) is organized by a bride for her women friends, and the *fantovšTina* (bachelor party) by a groom for his men friends.

## 9 LIVING CONDITIONS

Statistics show that the quality of life in Slovenia is relatively good. Life expectancy for men is 72 years and for women 80 years. Mothers are entitled to one year's maternity leave so that they can stay with their babies and nurse them. Maternity leave could also be a “parental” leave, since half of it can be used by fathers.

With recent improvements in medicine, only 5 out of 1,000 newborn infants die. All children are vaccinated against the most common diseases and undergo regular medical check-ups. Infectious diseases have been practically eradicated. Most Slovenes have public health insurance and reasonable pension plans. Slovenes die primarily of cancer and heart diseases; the latter account for 50% of all deaths. Cigarette smoking is

less popular than in the past, however it remains a little below 30% of the population. Consequently, respiratory illnesses and problems associated with smoking and air pollution are common.

Public transportation (train and bus service) is well organized. Also, many families own a car. Young people can obtain a driving license when they turn 18. Owning a car in Slovenia is a status symbol. Hence, people spend a lot of money on cars. According to survey results from 2006, only 5% of households were not able to afford a car. Poor roads and inclement weather conditions contribute to fatal traffic accidents, which are commonplace.

Historically, there is a shortage of housing in cities; apartments are small and modest. Very few children have their own rooms and are bound to share them with other siblings, sometimes even with parents. However, many people living in cities have small cottages, called *vikendi*, in the countryside or resort areas where they spend their weekends.

Although statistics indicate longevity and the general good health of population, many Slovene families still face economic and financial constraints. Approximately 13% of households cannot afford decent meal every second day and 34% of households cannot afford a week of annual holiday away from home. At the same time every family owns at least one television. Computers are somewhat less common but over one million people possess mobile phones (2001 census).

## 10 FAMILY LIFE

The majority of young people get married in their 20s and establish a family with one or two children. Families with three or more children are rare. Because of the shortage and relatively high cost of housing, newlyweds often live with their parents for years before they are able to acquire their own home. Slovenes maintain close relations with their parents, siblings, and extended families. Even though Slovenes love their family, many marriages end in divorce, and most children are left with their mothers. In general, divorce is easily obtained.

According to the 2007 census, there were approximately 670,000 mothers in Slovenia. About 10% of women over 40 have never given birth. Throughout the years the role of mothers has changed significantly. If 50 years ago more than half of Slovenian women stayed home and took care of the family and household, today typical Slovenian mothers pursue professional careers. In fact, mothers in Slovenia are more active in their professional pursuits than mothers in other EU member states. At the same time employed mothers still perform the lion's share of the household chores. Recently, husbands began to share with their wives responsibility for housework and education of children. Yet credit for the family well-being is mainly due to Slovene women. A Slovene proverb says, "The wife supports three corners of the house."

Traditionally, women had their first child soon after getting married. However, today the average age of a woman at the first childbirth is 28 years. Women increasingly try to finish their education, get a good job, and purchase a place to live before they have a child. Thus, the tendency to have a first child after 30 is growing. Furthermore, more and more mothers give birth outside marriage. The share of children born to unmarried women has grown by significantly. The number of unmarried couples is growing too. If 50 years ago consensual unions were socially unacceptable, now they are commonplace, so that

as many as 38% of second children are born to unmarried parents (2006 census).

On weekends, especially on Sundays, and in the evenings, families spend their time together. There are no shopping malls, and only a very few stores are open on Sundays. Thus, families go to church, take trips, hike, ski, collect mushrooms, visit each other, and enjoy long conversations. Many families visit relatives in the countryside on weekends and help them with work in the fields, orchards, and vineyards. This is especially true at harvest time. An increasing number of families own pets: dogs, cats, or birds are the most common.

## 11 CLOTHING

Similar to other Europeans, Slovenes wear contemporary Western clothing. Young people prefer jeans and tee-shirts. Women like to dress up and especially favor Italian fashion, while men dress informally, even at the office: short-sleeved shirts in summer and woolen sweaters in winter. Recently it has become very popular to wear jewelry. Extreme body-piercing and tattooing are rare.

In the past, people wore hand-sewn garments. They were made from linen or wool and varied from region to region. Roughly, there were Alpine, Pannonian, and Mediterranean styles of clothing. However, regional differences in everyday attire disappeared in the late 19th century. At the same time, the Slovenes adopted the modified traditional costume of the Gorenjska region as their national costume. Since then, this traditional outfit was worn at public events and celebrations to emphasize national identity. Today, Slovenes wear the national costume only at folk festivals or traditional celebrations.

A woman's apparel consists of a long, dark brocade skirt, a white petticoat and underclothes, a bodice, a richly decorated headdress, colorful silk scarves, hand knit socks, and an ornate metal belt. A man's costume consists of a dark velvet vest, often embroidered, suede shorts worn over long white underwear, boots, a silk scarf, and a hat.

## 12 FOOD

Most of the Slovene land is not suited for agriculture, thus not enough food is produced at home. While there is sufficient production of poultry, dairy products, and potatoes (the staple food since the 19th century), Slovenes import many basic foods such as oil, wheat, sugar, and meat. Food is expensive, costing most Slovenes at least half of the family budget.

In the past, *mocnik*, a dish similar to porridge made from wheat, buckwheat, or corn flour, was the most popular staple food among farmers, eaten twice a day. Meat was available rarely, the major source of protein being legumes. Vegetables and fruits varied with the season; sauerkraut and dried fruits were the source of vitamin C during the long winters. With the rise in the standard of living and new technologies (refrigeration, quick transport), Slovenes began to change their eating habits: meat became an everyday food, and regional and seasonal differences were no longer as distinct.

Slovene cooking has three major influences: Alpine, Mediterranean, and Pannonian. There are 30 recognized regional cuisines, each for example, serving its own type of bread. Famous regional foods include Primorska's fish and seafood and Karst's *pršut* (cured ham). Slovenes everywhere enjoy bread and potatoes. Potatoes are served boiled, sautéed, deep-fried, or roasted, and are used in various dishes including dump-

lings, soups, and stews. Breakfast consists of coffee, tea, or hot chocolate, and rolls with butter and jam. *Zemlja*, a special kind of hard roll, is especially popular. Salami, cheese, and soft-boiled or fried eggs are also served for breakfast. Some people do not take breakfast and drink only strong coffee.

The main meal in the Slovenian diet is lunch. A typical Slovenian lunch begins with soup before moving on to the main course. The most popular Slovenian soup is *Goveja juha z rezanci*, a beef or chicken broth with noodles. Some other soups are *Grahova juha* (pea soup), *Gobova kremna juha* (creamed mushroom soup) and *Zelenjavna juha* (vegetable soup). The main course, accompanied by a side dish and salad, is followed by a dessert. Lunch is usually prepared by working mothers and is eaten in the mid-afternoon. Supper is a light meal with salads, yogurt, and leftovers from lunch.

One recent eating trend in Slovenia is the “slow food movement.” A typical “slow food” meal takes place in a restaurant or at a private home among a group of family members or close friends. There are usually eight or more courses, the emphasis being on local produce, old-style recipes and a relaxed pace, with a different wine to accompany each course.

Slovenes have many delicious traditional dishes that they cook for holidays. One of the most genuine festive Slovene foods is a rolled yeast cake, called *potica*, with sweet (walnuts, tarragon, raisins) or salty (cracklings) fillings. *Potica* is usually made for Christmas and Easter. Among traditional meat dishes, *kranjske klobase* (sausages, similar to Polish kielbasa) are well known, as are pork dishes (*koline*) in winter.

Many restaurants offer a wide range of traditional national dishes, as well as international dishes like pizza, pasta, and oriental dishes. The coast offers excellent seafood, including shellfish and the Adriatic bluefish. Although eating out is expensive, Slovene *gostilnas*, traditional taverns, serve as popular gathering places, particularly in the country. They offer homemade dishes and pastries. The typical Sunday lunch menu in a Slovene *gostilna* includes beef or chicken soup with homemade noodles, pork or veal roast, sautéed or roasted potatoes, salad, and *potica* or strudel for dessert. Young people like pizza and adore eating in a newly opened American McDonald’s.

Of alcoholic drinks beer and fruit brandies (e.g., *sadjevec*, *slivovka*—plum brandy) are served today, while in the past, *medica* (mead) was a common alcoholic drink. Above all, Slovenia is known for its great red and white wines. Winemaking has a long history in Slovenia. Its origins can be traced back to the 6th century BC. Popular nonalcoholic beverages are fruit juices and drinks made with fruit syrups (*malinovec*—with raspberry syrup), herbal teas, and, lately, Coca-Cola, especially among young people.

### 13 EDUCATION

The Slovene literacy rate is almost 100%. Compulsory eight-year elementary education has been a legal requirement since 1869. All school-age children (6-14 years old) attend elementary school. At age 14, students take a lower-level comprehensive exam (*mala matura*), whose results influence students’ further schooling. Some 90% of students who finish elementary school continue their education at the secondary level. Some go to four-year schools to prepare for higher studies, but many enter two- and three-year vocational schools. A school year lasts 190 days. Not all students graduate. Those who finish take the upper-level comprehensive exam (*velika matura*),

which enables them to enroll in the university. About 33% of them continue their studies, but only 9% graduate. Social studies, e.g., law, business, and economics, are more popular than natural sciences. There is no tuition in the public school system at any level for full-time students, but parents have to pay for the students’ textbooks and other supplies. Since 1991, the law allows home-schooling and private schools, which are few in number.

Education has long been the only channel of social promotion for Slovenes and is highly valued by parents, who expect their children to do well in school. Many students follow in their parents’ profession. School attendance and studying are the major responsibilities for most students, and almost no elementary or high school students work during the school year. They do have summer jobs, some out of need, and others just to earn pocket money.

The educational system in Slovenia is almost fully financed by the state budget. The Slovene school system has undergone a number of changes in recent years. In light of the reforms, children enter elementary school at the age of six. Beginning in 1999, the length of elementary education has been increased from eight to nine years. Thus primary or elementary school now consists of nine-year program, and is divided into three three-year periods.

Upon completion of their elementary education children are expected to pursue secondary education, either in vocational schools, technical schools, or in gimnazija. Gimnazija is a four-year general education program designed to prepare students for university. Children of foreign residents can also receive education at all levels. Approximately 84% of secondary school graduates pursue further studies. In fact, the profile of Slovenia’s population enrolled in higher education is improving. The number of students in vocational colleges and higher education institutions is increasing. In the academic year 2007/08, 115,445 students were enrolled in post-secondary vocational and higher education studies. This means that in the 2007/08 academic year 50% of all persons aged 19 to 23 were enrolled in post-secondary vocational and higher education institutions, while 10 years ago the share was below 30%. Large numbers of female students major in commerce, business administration, and accounting while the majority of men study mechanical engineering, electronics, computer science, and civil engineering. More than 85% of all university students are enrolled in the University of Ljubljana and the University of Maribor.

### 14 CULTURAL HERITAGE

Music has always been an important part of the Slovene culture. Vocal and instrumental music has ritual and entertainment functions. Folk songs, usually sung in three- or four-part harmony, are simple in form, lyrics, and music, and deal with love, patriotism, war, work traditions, changes of season, and religious and family holidays. In the past, folk singing was part of everyday life, closely associated with group work, e.g., harvesting or spinning. Today, it plays an important role in churches, in traditional celebrations, and at social gatherings. For centuries, Slovenes have spent their free time singing in choirs, and choral singing has been an important hobby. At present, there are hundreds of choirs established in schools, organizations, and churches, wherever Slovenes live. Choral singing is also alive in Slovene emigrant communities, for ex-

ample in Cleveland, Ohio. Choral performances include folk songs as well as works of Slovene classical and contemporary composers.

Instrumental music was traditionally performed on simple wind, string, and percussion instruments, made by local craftspeople employing materials at hand. The accordion, introduced in Slovenia in the late 19th century, quickly replaced more traditional instruments and became the most popular folk instrument of the 20th century. Today, the electric guitar is a popular instrument among young people. Music education is part of the elementary school curriculum.

Slovene history and culture are reflected in folk arts and literature. Many folk poems, fairy tales, short stories, proverbs, and riddles have been recorded and preserved for future generations. Old fairy tales (such as *The Golden Bird*), stories, and poems are still very popular among children and adults. Motifs in folk literature are often used by poets and writers as the inspiration for their literary work.

France Prešeren is considered Slovenia's most celebrated writer and poet. He is regarded to be a great leader of Slovenian culture, nationality and independence. His poetry modernized the Slovenian language. A portion of his poem "The Toast" is used as the national anthem. February 8, the day of Prešeren's death, is a national holiday celebrated by the entire country.

Slovenes have built hundreds of churches, wayside shrines, and towns with numerous art galleries, which speak of a rich and high-quality arts tradition throughout history. Although influenced by specific Slovene cultural characteristics, literature, music, visual arts, architecture, and theater have been part of Central European art movements, appearing approximately at the same time as anywhere else in that part of Europe. Slovene artists worked in the European art centers, and European masters came to Slovenia. The same is true today. Slovenes have had many important artists, some of whom they have honored by putting their likenesses on the new bank notes in 1992.

In short, modern Slovenia has a rich cultural life bustling with a myriad of theatres, cinemas, libraries, and educational facilities, and is well known abroad for its cultural exports.

## 15 WORK

Most employed people in Europe work a 40-hour week. Industrious Slovenes usually work much longer. Besides holding jobs in factories and offices, many moonlight, run their own businesses, and/or work on small family-owned farms. Under socialism, everybody had the right to work; hence, the state created jobs even if they were not needed. These policies were a double-edged blessing. While they provided some social security and minimal means for living, they also brought about economic conditions incompatible with a market economy, such as a lack of competition, inefficiency, and the high cost of goods. After 1990, several industrial plants were scaled down or closed, and thus unemployment became a serious social problem.

Post-independence economic reforms were implemented to mend unemployment and economic instability. Current data indicates that in December 2007 there were 864,361 employed persons, 43.3% of whom were women. The Employment Service of Slovenia reported 68,411 unemployed persons, 53.7% of whom were women. At the end of 2007 the unemployment rate was 7.3%: 8.9% for women and 6.1% for men.

## 16 SPORTS

Slovenes enjoy sports: hiking, mountain climbing, biking, swimming, rafting and rowing, tennis, horseback riding, fishing—the list goes on. In winter people ski and skate. Almost every child and adult owns a bike, and many ride it to school or the office every day. Skiing has a long history in Slovenia, and is probably the most popular sport. Skis were invented in Slovenia independently at the same time as in Scandinavia and were once a major means of transportation. Today, there are a few hundred thousand recreational skiers, from whose ranks competitive skiers are recruited. They compete internationally in all skiing disciplines: downhill, slalom, jumping, and cross-country, and have won medals at Winter Olympic Games.

Davo Karničar is one of the most renowned alpine skiers in Slovenia. In 2000 he became the first person to ski nonstop down Mount Everest. He has also skied Mont Blanc and Annapurna in the Himalayas. Another famous Slovenian athlete is a marathon swimmer Martin Strel. Strel's records include swimming the entire length of the Danube River in 2000, and swimming the length of the Mississippi River in 2002.

International athletic events held in Slovenia include World Cup downhill skiing in Kranjska Gora and Pohorje, World Cup ski jumping in Planica, and biathlon competitions in Pokljuka.

## 17 ENTERTAINMENT AND RECREATION

Many schools organize dances for their students on weekends. Proms (*maturitetni plesi*) are traditional in elementary and secondary schools and are organized for graduates every year in the spring. Adults dance on various occasions: weddings, traditional celebrations such as *Martinovanje* (Celebration of New Wine) in the fall, and masquerade balls (*pustovanje*—Mardi gras) in the Carnival season. The polka and waltz are very popular, but Slovenes dance all major known dances from the tango to the macarena.

Slovenes enjoy strolling, often in attractive old town centers, meeting people, chatting with them, and having a coffee or a drink in small coffee shops, or *kavarnas*. Trips on weekends to neighboring mountains are also very popular. Slovenes enjoy walking in the woods and picking mushrooms to prepare them as culinary specialties.

Movies, concerts, and theater performances are enjoyed by many people. In Slovenia, concerts are attended by more people than are soccer games. Young people enjoy listening to various jazz, rock, and techno groups. Although there are several local rock groups, young people listen mostly to popular American, English, and German groups. The Beatles, the Rolling Stones, and Bob Marley are known to every Slovene teenager. Television-viewing has increased in the last decade. Besides Slovene TV programs, Slovenes can also watch Italian, Austrian, English, and American TV shows, including news on CNN.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Folk arts were mostly associated with crafts and decorating peasants' or, later, workers' homes. Painters often decorated furniture (e.g., chests, bed headboards, and cribs). Painting on glass was popular in the 19th century. Talented but unschooled folk artists often portrayed religious motifs, motifs from popular folk stories, and events from everyday life. Geometric patterns were also popular.

Many traditional Slovene crafts are unique and deserve attention, among them pottery, woodenware, embroidery, and lace-making, and crafts related to candle-making, gingerbread pastries, glass-making, wrought iron, and clock-making, to name a few. As the conditions of life vary from region to region, so do the crafts. With the development of industrial production after World War II, many crafts almost died out. Some were kept alive, and others have been revived in the last few decades to preserve Slovene cultural traditions.

Pottery-making, among the oldest of traditional crafts, has developed in various Slovene regions. In some of them potters are still active today. Potters produce many useful objects: pots, baking and roasting dishes, jars, pitchers and goblets for wine and drinks, whistles, toys, musical instruments, and ceramic tiles for stoves. Beautifully shaped and decorated, they are still popular in Slovenia today. Woodenware (spoons, various kitchen utensils, toothpicks, and sieves) was produced in several centers, the best-known of which, the Ribnica valley, is still active. In the past, Ribnica artisans traveled throughout the Austro-Hungarian Empire, selling their handmade products.

## 19 SOCIAL PROBLEMS

Alcoholism is an old, persistent, and serious problem among Slovenes of all ages and both genders. It is disturbing that the consumption of alcohol increased by about 25% during the 2000s. Yearly, the average Slovene drinks 11 liters (3 gallons) of hard liquor and 60 liters (16 gallons) of wine. Drug abuse has also increased, especially among young people. The number of smokers has decreased for the past decade, but still a sizable 29% of the population smokes.

Except for the 50 years under Communist rule, unemployment has always been a problem for Slovenes. Usually it was solved by emigration. In the late 19th and 20th centuries, thousands of Slovenes emigrated to industrialized Europe and the United States. Economic emigration continued after World War II. Due to the world recession in the 1980s, many emigrants returned home. With the change in the economic and social systems in Slovenia in the early 1990s, unemployment began to rise, reaching 14% of Slovenes out of work in 1996. In 2008 unemployment had been reduced to 7%, but still remains a major social problem.

Although since the 1990s the standard of living improved, 12% of the population in Slovenia remains below the poverty threshold. The share for young people aged 16–24 amounts to 12.4%: 11.4% for men and 13.6% for women. The unemployment rate is the highest among young people aged 15 to 24.

## 20 GENDER ISSUES

Today the position of women in Slovenia is not ideal, but it is better than in some other European countries. The majority of young women choose to postpone getting married and having children, focusing instead on education and professional careers. The share of women in vocational colleges and higher education institutions is continually growing, amounting to 58.3% of tertiary students in 2008. Furthermore, in Slovenia the female employment rate is 61.8%, while in the EU it is 57.2%. In the past, prestigious universities clearly favored male applicants. Now this trend is changing. It is true that among doctoral candidates men still prevail, but probably not for long. Although men and women have equal opportunities for

education, certain disciplines are particularly popular among women, while others are reserved for men. Thus in 2006, 68.7% of student enrolled in the fields of social science, business, and law were women. Yet, the fields of natural science, mathematics, and computer technology are dominated by men, with women representing only 2.6% of graduates. Similarly, the fields of engineering, manufacturing, and construction are dominated by male students, while women represent the highest share of graduates (80%) in the fields of education, health care, and social work.

According to EU data, since 2000 women took 7.5 million new jobs out of the total of 12 million available. Since 2000 there has been a steady increase in female employment. Male employment increased as well but at a significantly lower rate.

At the same time, even though the majority of women have a university education and are often better educated than men, their employment rate is on average 10 percentage points lower than that of men. Women earn 15% less per hour than men do and it is quite challenging for them to achieve high positions in administration, management, and government. The share of women managers is growing very slowly; in 2008 they accounted only for 33% of managers. In sum, while the Slovenian constitution includes provisions for anti-discrimination laws, women and minorities regularly face inequality and bias. Though laws exist to protect women from harassment and violence, women are still subject to abuse due to the remnants of the patriarchal nature of Slovenian society.

**POPULATION:** 40 million

**LANGUAGE:** Castilian Spanish; Catalan; Galician; Basque

**RELIGION:** Roman Catholic

## <sup>1</sup> INTRODUCTION

Spain, the second-largest nation in Europe (after France) is a country of large geographical and cultural diversity, a land of contrasts and extremes. Its terrain includes Mediterranean beaches and snow-capped Pyrenees, dry plains and coastal rice paddies, volcanic islands and rolling hills. Its people have strong regional identities forged by this diverse geography and by the events of their history. After colonization by the Greeks and Romans and invasion by Germanic tribes, Spain was conquered by the Muslim Moors, who seized control in the 8th century AD and maintained it for nearly 800 years, introducing many cultural innovations. Isabel and Ferdinand, called the Catholic monarchs, conquered Granada, the last city held by the Moslems. They sponsored the discovery of America (1492) by Christopher Columbus. Spain became the greatest world power during Europe's Age of Discovery, reaping tremendous wealth for an empire that extended to virtually all areas of the globe.

After becoming a republic in 1931, the nation was torn apart by a Civil War (1936–1939), the end of which marked the beginning of General Francisco Franco's repressive 36-year regime, until his death in 1975. Since then, Spain has been a parliamentary monarchy under King Juan Carlos, joining the European Community (now European Union) in 1986. For administrative purposes, Spain is divided into seventeen Autonomous Regions (Autonomías), and two autonomous cities (Ceuta and Melilla) on the Northern Moroccan coast; each one of these regions is made of one or several provinces (Provincias). In 1992 Spain hosted the Olympic Games in Barcelona and the International Exposition in Seville.

## <sup>2</sup> LOCATION AND HOMELAND

Spain comprises approximately four-fifths of the Iberian peninsula (with Portugal accounting for the remainder). Its most outstanding geographic feature is its average elevation of 660 m (2,165 ft), the second-highest in Europe after Switzerland. In addition to its portion of the Iberian mainland, Spain also includes the Canary Islands in the Atlantic and the Balearic Islands in the Mediterranean. Altogether, its total area of 504,739 sq km (194,880 sq mi) is slightly less than the combined area of Utah and Nevada. Three-fifths of the Spanish mainland is a broad plateau, or tableland, called the Meseta, located in the center of the country. Spain's other topographical regions are the northern coastal belt, Andalucía in the south, the Mediterranean coastal belt, and Catalonia and the Ebro Valley in the northeast.

Spain has a population of 44,708,964 people (as of January 2006), with a much lower population density than most other European countries. Geographic barriers have helped preserve a keen sense of identity in all six of Spain's major ethnic and local groupings. The Castilians, who live in the central meseta, are the nation's ethnically dominant group, and Castil-

ian Spanish is Spain's national language. The other groups are the Galicians, who inhabit the northwest region of the country; the independent-minded Basques, their neighbors to the east; the Catalans, known for both commerce and in connection with artists such as Pablo Picasso and Salvador Dali; the Levante, known for its oranges and paella; and the southern region of Andalucía, famous for its flamenco music and Moorish architecture.

## <sup>3</sup> LANGUAGE

According to the 1978 Constitution, Castilian Spanish is the national language. It is spoken by a majority of Spaniards and used in the schools and courts. Castilian derives from Latin as well as the regional languages which include Catalan and Galician, which is similar to Portuguese. Basque is a pre-Roman language whose origin has not been clearly determined. Together with Castilian, Catalan, Galician, and Basque are co-official languages in these autonomous regions.

## <sup>4</sup> FOLKLORE

Spanish folkloric tradition is very rich and one finds elements with origins as diverse as Celtic, Roman, Germanic, Jewish and Moorish. Spain's ancient musical heritage is diversified with bagpipe music in Galicia and Asturias, *sardanas* in Catalonia, flamenco dancing accompanied by the guitar in Andalucía, or the lively Aragonese dance called the *jota*. Bullfighting is the most widely known Spanish tradition and some historians trace it to a cult of bull worship.

## <sup>5</sup> RELIGION

Historically, Spain has been one of Europe's most staunchly Catholic countries. Currently, about 76% of Spaniards are Roman Catholics and Catholicism is the country's established religion, although about 19% do not declare any religion. While observing baptism and other important Catholic rites many Spaniards do not participate regularly in religious services. Religious Spaniards, like the Catholics in other countries, believe strongly in intercession by the saints and especially by the Virgin Mary. *Cofradías*, Catholic lay societies devoted to particular saints, play an important role in religious life in many areas of the country. A 1967 law guarantees freedom of reli-

gion. The recent waves of immigration, especially during the 1990s, have led to an increasing number of Muslims—currently there are approximately one million Muslims living in Spain. Islam is today the second largest religion in Spain, after Roman Catholicism.

## 6 MAJOR HOLIDAYS

In addition to New Year's day and the major holidays of the Christian calendar, Spain's other national holidays include St. Joseph's Day (March 19), the Day of St. Peter and St. Paul (June 29), St. James's Day (July 25), and a National Day on October 12. Every city or town also celebrates its local saint's days with processions, dancing, and bullfights. Joseph, the patron saint of Valencia, is commemorated with fireworks and the burning of wood and cardboard figures of satirical character and monumental size called *fallas*. Bonfires are lit on the Night of Saint John's Day, following ancestral pagan traditions. Pamplona is known for its celebration of San Fermin, when bulls are turned loose in the streets. Barcelona's town fiesta, the Feast of La Merced, is marked by a week of celebrations that include fire-breathing dragons. Madrid's Festival of San Isidro involves three weeks of parties, processions, and bullfights. The celebrations of Holy Week in many cities and towns of Spain include floats with scenes of the Passion and Death of Christ, and likenesses of the Madonna, each one sponsored by a different religious society. Among the civilian holidays are the celebrations of Carnival, that begins a week before Lent; Fiesta del Trabajo, equivalent to Labor Day, on May 1; Hispanidad Day or Día de

la Raza on October 12; Constitution Day on December 6; and each autonomous community celebrates its own Autonomy Day at different dates.

## 7 RITES OF PASSAGE

Traditionally, besides baptism and marriage, the first Communion and military service were considered rites of passage for Spaniards. The first three of these events are the occasion, in most cases, for big and expensive social gatherings in which the family shows its generosity and economic status. At times, families dig into their savings or borrow money in order to pay for these status shows. Spain abolished compulsory military service in 2001. The armed forces are now all volunteer.

## 8 INTERPERSONAL RELATIONS

Since the 1960s there has been a steady improvement of the economy mainly due to industrial development and tourism, as well as an evolution in customs. Spaniards frequently travel abroad and have adopted customs from other cultures in the last 30 years or so. Although many people living in rural areas have moved to the city, the present generations have preserved the family house in the village and return there at the time of fiestas and for vacation and remain loyal to their community or pueblo. The economic prosperity enjoyed by Spain has allowed many people to also have a vacation home in the country or an apartment at the beach.

In the cities, office hours begin at 9:00 AM and traditionally include an extended afternoon lunch break beginning at 2:00 PM. Workers then return to their offices from 4:00 to 7:00 PM. The day typically ends with a walk (*paseo*) with friends or family and/or visits to neighborhood bars for a few drinks, appetizers (*tapas*) and conversation. Dinner is often eaten as late as 10:30 PM. In some locales, such as Barcelona, however, the traditional afternoon siesta is no longer the rule. Both blue and white collar workers have a paid month vacation which they usually spend by the sea, the mountains or travelling abroad. Travel to faraway or exotic places has become quite popular due to the affordable travel packages offered by travel agencies. Spaniards are considered to be friendly and outgoing. It is customary to shake hands and in a social setting women usually kiss their friends on both cheeks. Young groups are formed by co-workers, fellow students or people from the same town that go together to discotheques, organize parties and excursions, and date among themselves. The average citizen spends a great deal of time out of the house. There is an active street life; many people live downtown, frequent bars and restaurants, and go to bed late. Spaniards move from place to place less than Americans and, once they get a job, many aspire to return to their birthplace and settle there. Regional loyalties are usually strong and the new autonomous status of the old provinces has strengthened this feeling. It is not unusual to have lifelong friends known since kindergarten.

## 9 LIVING CONDITIONS

Spain today is a consumer society that relies on credit cards, loves to go shopping, and is interested in cars, gadgets and entertainment. Cars are commonplace and have become a problem in big cities (parking, pollution, congested traffic, car theft). The public transportation system in Spain is excellent and thus many people who work in cities have moved to towns in the periphery that are now part of suburbia. In the 1970s

*An elevated view of La Boqueria fish and vegetable market off Las Ramblas Boulevard in Barcelona, Spain. Las Ramblas is full of activity day and night. (AP Images/Denis Doyle)*

and 1980s there was a building boom and although rents and the price of apartments are high, there is no housing problem.

The average life expectancy in Spain is 78 years. There is a National Health Service and cities have both general practitioners and specialists in all medical fields. Madrid and Barcelona have modern subway systems. Today, Spain has an excellent system of highways. RENFE, Spain's national rail network, provides service between all major cities and is developing a service of ultrarapid trains, called AVE. The first of this kind was the Madrid-Sevilla line started for the 1992 World Expo, followed by the Madrid-Barcelona. Major ports include Barcelona, Tarragona, and Cartagena on the Mediterranean, Algeciras on the Strait of Gibraltar, and Cádiz, La Coruña, Santander, and Bilbao on the Atlantic.

#### **10 FAMILY LIFE**

Today's Spanish families are much smaller than in the past and usually have two children. The mother has most of the responsibility for rearing them, while a father's relationship with his children can be formal and remote. In general, when children reach adolescence, their relationship with their families diverges based on gender. A teenage male, while continuing to revere his mother, begins spending much of his time with other young men, while teenage daughters and their mothers grow closer than ever. Even after a daughter is grown and married, her mother continues to play a prominent role in her

life. Yet these traditional patterns are also changing and young men and women are as independent as their economy allows it. Today people live longer lives, have fewer children than before (actually the birth rate is one of the lowest in Europe), and fewer people live in their homes with extended family. Spanish people usually marry within their own social class. Only church marriages were recognized in Spain until 1968, when civil ceremonies were first allowed by law. Divorce has been legal since the 1980s.

#### **11 CLOTHING**

Both in town and in the country, Spaniards conform to the average European fashion standards, and boutiques and ready-to-wear shops can be found all over the country. Although many young people wear sports clothes and blue jeans, the average Spaniard pays more attention to personal appearance than his or her American counterpart. Businessmen wear a suit and tie, businesswomen dress fashionably in suits or dresses and high heels. The Spanish fashion industry has greatly developed and some firms, like Zara, Mango, and Camper, are known the world over. Children who attend some private schools wear school uniforms.

#### **12 FOOD**

Being a large country with different geographic and climatic areas, Spain also has a wide variety of regional dishes. As in

other Mediterranean countries, they make liberal use of olive oil, fresh vegetables, and garlic. Originally from the South, gazpacho is a cold soup made from tomatoes, peppers, cucumbers and onions. Galicia is known for its seafood and stews, Catalonia for its fish casseroles and for cured and smoked meats, such as *butifarra*, a type of sausage. The regional dish *paella*, which originated in Valencia, has become a national delicacy. It consists of a rice-and-saffron base and commonly it can include mostly seafood (*a la marinera*), or several kinds of meats (*mixta*). Spaniards love cured ham (*jamón serrano*), several kinds of sausage, including *chorizo* and *salchichón*, and cheese, especially the variety called *queso manchego*. Popular seafood includes squid, crab, shrimp, fresh sardines and tuna, salmon, trout and dried and salted codfish. Spanish wine and champagne (*cava*), sherry and brandy are excellent and are exported both to Europe and the Americas. There are several areas in the country where different varieties of wine are produced like la Rioja, la Mancha, Rivera del Duero, and several zones in Andalucía. Spanish-made beer is also very good. Both wine and beer are drunk together with *tapas* or at mealtimes. For breakfast Spaniards usually take coffee with sweet rolls, and sometimes hot chocolate with strips of dried dough called *churros*. Fruit juice and a bowl of cereal are becoming popular for breakfast among young people.

Lunch in Spain, eaten between about 2:00 and 4:00 PM is a leisurely meal comparable to dinner in the U.S. *Tapas*, appetizer-like snacks, are served in bars together with drinks, and are usually eaten before lunch and dinner. Popular *tapas* include seafood such as small fried fish, *boquerones* (pickled fish), *berberechos* (cockles), *calamares* (squid), olives and almonds, in addition to cheese, ham and sausage. A tortilla in Spain is an egg omelette and not, like in Mexico, a flat and thin piece of corn bread.

### 13 EDUCATION

School is free and compulsory from the ages of 6 to 16, with secondary education or vocational training available for students aged 14 to 16. Private schools, mostly run by the Roman Catholic church and subsidized by the government educate nearly one-third of Spain's children. The adult literacy rate is estimated at 98%. University education is general and students must sit for an entrance examination (*selectividad*) to enter the university system. Spain has 31 state-run universities and an increasing number of private ones. Students receive a diploma after three years of general study and a *Licenciatura* upon completing a program of specialized study lasting two or more years. Centralized public education is administered by the Ministry of Education.

### 14 CULTURAL HERITAGE

Spain enjoyed a Golden Age of literature in the 16th and 17th centuries. Widely regarded as the first great novel, *Don Quixote* by Miguel de Cervantes eventually became the most widely translated work other than the Bible. In modern times, poet and dramatist Federico Garcia Lorca won international acclaim. Several Spanish authors including playwright José Echegaray, poet Vicente Aleixandre and novelist Camilo José Cela have been recipients of the Nobel Prize. Musically, Spain gave the world the guitar, developed from a four-stringed instrument of the 12th-century Moors. Great Spanish composers have included Isaac Albéniz, Enrique Granados, Manuel

de Falla and Joaquín Rodrigo and virtuoso performers such as Pablo Casals and Andrés Segovia.

Spain is particularly known for its contribution to painting, which can be said to have begun with the prehistoric cave paintings at Altamira. El Greco and Diego Velázquez were among the artists of Spain's Golden Age, and the passionate works of Francisco Goya communicated an intensely personal vision at the end of the 18th and early 19th centuries. In the 20th century innovators in painting include Pablo Picasso, perhaps the single most powerful influence on 20th-century art, as well as Joan Miró, Salvador Dali, Antoni Tapies, Antonio Saura and others. Some of the best architects internationally are Spanish, such as Rafael Moneo, Ricardo Bofill, and Santiago Calatrava. Spanish films are at the avant-garde of the film industry. Movie director Pedro Almodovar is internationally known, as are Spanish actors Penélope Cruz and Javier Bardem.

### 15 WORK

In the past, agriculture, livestock, and mining were the mainstays of the Spanish economy. Under the regime of General Franco industrial expansion was emphasized, and the bulk of Spanish employment shifted to industry. More recently, the service sector has expanded greatly. Farmers may work on large estates or small farms. Typical crops in the north are potatoes, beans, corn and vegetables; in the central areas, wheat, soybeans, sunflowers, lentils, chickpeas, grapes and other fruits. In the Mediterranean area, vegetables, rice and fruits, especially citrus, are grown. The fishing industry is also a major employer: Spain's fishing fleet is the largest in the world. Seeking higher living standards, many people migrate from rural areas to the cities. Spain's economic prosperity attracts a growing work force (some workers enter the country illegally) coming from economically or politically unstable areas. The new immigrant workers come mainly from North- and Sub-Saharan Africa, Spanish America, and Eastern Europe. The majority work in agriculture and in construction.

Since the early 1970s Spain has developed a prosperous tourism industry. Since the 1970s Spain has been the second most visited country in the world after France. In 2007 almost 60 million foreign visitors arrived in Spain. Parallel to summer tourism the country offers cultural tours, international conventions, and sports meetings as well as cruises. There is ample hotel accommodation and a network of beautiful de-luxe government-sponsored hotels (*paradores*) located in historical buildings.

### 16 SPORTS

The most popular sport is soccer (called *fútbol*). League matches are played on Saturday and Sunday afternoons from September through May, with tournaments in the summer. Madrid has two teams in the top division, and Barcelona's team, known as Barsa, is world-famous. It forms the basis of a sporting club with over 100,000 members, one of the oldest such clubs in Europe. Membership passes from father to son, and some 80,000 members have permanent seats for matches in the Camp Nou stadium, the largest in Europe and the second largest in the world. The 1992 Olympics were hosted in Barcelona. Basketball and tennis are also gaining popularity as spectator sports. Spanish world class champions today are cyclist Miguel Induráin, winner of the Tour de France five times, golfer Steve

Ballesteros, tennis players Arancha Sánchez Vicario and Conchita Martínez, and motorcycle champions Sito Pons and Angel Nieto. In September 2007 Spain won Europe's Volleyball Championship in Moscow. Participant sports include hunting and fishing, sailing, *fútbol*, cycling, golf, horseback riding, and skiing.

### 17 ENTERTAINMENT AND RECREATION

The most characteristically Spanish form of entertainment is the bullfight (*fiesta brava*), whose history can be traced back to the Middle Ages. Popular throughout the country, this ritualized fiesta involves grace, courage, and spectacle. Bullfights take place in three stages, called *tercios*, or thirds. First comes the *tercio de capa*, when the matador tests the bull with his cape, becoming familiar with the animal. In the next part, the *tercio de varas*, the picadores and banderilleros weaken the bull with lances and brightly colored darts. Last comes the *tercio de muleta*, the final life-and-death confrontation between matador and bull. In an afternoon of bullfighting, six bulls are usually killed by three different matadors.

However, not all Spaniards today are fond of bullfighting. Many, especially the young, prefer to go to the beach in summer and to the countryside and the mountains for hikes and picnics. In the evenings, they go dancing or have a drink with friends. The mild Spanish climate has fostered an active night life, much of it outdoors in the streets, plazas, taverns, and restaurants. A dinner date may take place as late as 10:00 or 11:00 pm and be followed by a trip to a local club.

According to their cultural level, Spaniards go to concerts, to the theater, and to movies. People of all ages are fond of television, perhaps the main source of entertainment today.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Spanish handicrafts include lace and leather goods, gloves, basketry, tapestries, carpets, wrought iron, ceramics, and products of gold and silver. Each region has specialties, including leather in Cordoba, lace and carpets in Granada, pearls in the Balearic Islands, jewelry, swords and knives in Toledo and ceramics and pottery. The Spanish government has taken steps to assure that traditional crafts, or *artesanía*, survive against competition from mechanized industry. Spain is also known for its handmade musical instruments, especially guitars.

### 19 SOCIAL PROBLEMS

Terrorism by separatist groups, particularly the Basque ETA, has plagued Spain in recent years. On 11 March 2004 Spain suffered its most horrific terrorist attack: 191 people were killed and 1,400 were injured in bombings at Madrid's railway station; al Qaeda was responsible. A few days later, Prime Minister José María Aznar's Popular Party experienced a stinging defeat, and José Luis Rodríguez Zapatero of the Socialist Party became the new prime minister. After four decades of violence, responsible for more than 800 deaths and for terrorizing Spanish society with its bombings, ETA announced a permanent ceasefire on 24 March 2006; however, in June 2007, it renounced the ceasefire and vowed to begin a new offensive.

Another growing social problem is caused by illegal immigration (see **Section 15 Work**). Finally, like the rest of the developed countries, Spain has an illicit drug problem and a high rate of crime in the big cities.

### 20 GENDER ISSUES

Women are playing ever-increasingly important roles in Spanish society. Approximately 15% of Spain's armed forces are women. For the first time, Spain's prime minister José Luis Rodríguez Zapatero, upon being reelected in 2008, announced a 17-member cabinet that had more women than men. One of them was Spain's first female defense minister, Carme Chacón, who was also seven months pregnant when she was appointed. Many other women hold municipal and government posts as councilwoman, mayor, university professor, director general. Several Spanish women are ministers of the crown, manage businesses, and a large percentage go to the university.

Evidence of the secular nature of contemporary Spain can be seen in the widespread support for the legalization of same-sex marriage in Spain. In June 2005 a bill was passed to allow gay marriage, making Spain the third country in the European Union to allow same-sex couples to marry.

# SWEDES

**LOCATION:** Sweden

**POPULATION:** 9.2 million

**LANGUAGE:** Swedish; Sami; Finnish

**RELIGION:** Church of Sweden (Lutheran)

## 1 INTRODUCTION

The Kingdom of Sweden is part of the Scandinavian Peninsula in northwestern Europe. With an abundance of natural resources, it is a leading industrial nation, and its people enjoy one of the highest living standards in the world. The first written reference to Sweden is by the Roman historian Tacitus, who called the Swedes “mighty in ships and arms” in AD 98. Sweden represented a major European power during the 17th century, with its territories including Finland (1000–1805), parts of Germany, the Baltic States, and even an American colony. Christianity was introduced from the 9th through the 11th centuries. An age of territorial expansion during the 1500s and 1600s ended in defeat by Russia in 1709 and the loss of most overseas possessions by the early 19th century. Norway was united with Sweden from 1814 to 1905.

In the 20th century Sweden remained neutral in both world wars, serving as a haven for refugees in World War II. The country joined the United Nations in 1946, although it did not join the North Atlantic Treaty Alliance (NATO). In 1953 it joined with Denmark, Norway, and Iceland (and, later, Finland), to form the Nordic Council. Carl XVI Gustaf has been king since 1973, though his sphere of power is limited to only ceremonial practices today. In 1986 the nation was shaken by the assassination of Prime Minister Olof Palme, a crime that has never been satisfactorily solved. In 1991, Sweden applied for membership in the European Community, although many in the nation remained opposed to this move. However, Sweden became a member of the European Union in 1995.

## 2 LOCATION AND HOMELAND

Sweden is the largest country in Scandinavia and the fourth largest in Europe. With a total area of 449,966 sq km (173,732 sq mi), it is close in size to the state of California and is one of the more sparsely populated countries, with a mere 21 persons per sq km (55 persons per sq mi). It is bounded by Norway on the north and west, Denmark on the southeast, and the Gulf of Bothnia, the Baltic Sea, and Finland on the east. One-seventh of Sweden lies within the Arctic Circle, the “land of the midnight sun,” where the sun never really sets for three months during the summer, beginning with the Summer Solstice on June 20. The country has about 100,000 lakes and many rivers, and more than half its terrain is forested. Most of its 9.2 million people live in the south of the country.

The Swedes are a Scandinavian people descended from Germanic tribes who emigrated to the region in ancient times. Ethnic minorities include about 200,000–300,000 Swedish Finns living in the northeastern section of the country and approximately 35,000 Sami, a traditionally nomadic group of reindeer herders who live in northern portions of Sweden, Norway, Finland, and Russia. Since World War II, Sweden has also accepted immigrant workers from Greece, Germany, Turkey, Great Britain, Poland, Italy, and the former Yugoslavia, as

well as political refugees, mostly from the Middle East, Asia, and the Latin American countries of Chile and Argentina.

## 3 LANGUAGE

Swedish is a Germanic language closely related to Norwegian and Danish. There are also similarities between Swedish and English, and most Swedes speak English as a second language. The Sami have their own language, and there is also a large Finnish-speaking population in the country.

### EVERYDAY IDIOMS INCLUDE

Hello	Hej/ Hej då
Goodbye	Adjö
Yes/ No	Ja/ Nej
Please	Var Snäll Och or Varsagod
Thank you	Tack
Breakfast	Frukost
Lunch	Lunch
Dinner	Middag
One	Ett
Two	Två
Three	Tre
Four	Fyra
Five	Fem
Six	Sex
Seven	Sju
Eight	Atta
Nine	Nio
Ten	Tio

Popular boys' names which are distinctly Swedish are Anders, Hans, Gunnar, Ake, and Lars, while girls are commonly named Margareta, Karin, Birgitta, Kerstin, and Ingrid.

## 4 FOLKLORE

Rural dwellers have traditionally believed in the existence of a variety of supernatural beings. Every province of Sweden has its own customs and local lore. For example, there is a legend about the difference between the lush, fertile land of Skåne in the south and the neighboring northern province of Småland, which is rocky and barren. While God was making Skåne so beautiful, the devil supposedly sneaked past him and turned Småland into a harsh and desolate place. It was too late for God to change the land, but he was able to create its people, and he made them tough and resourceful enough to survive successfully in their difficult environment.

## 5 RELIGION

Until 2000, Sweden's state religion was Lutheranism, and about 76% of the population belongs to the Church of Sweden, the country's Lutheran church. In the past, all Swedes automatically became members of the church at birth but had the right to withdraw from it. Church membership until 2000 was only achieved through baptism, but then Sweden enacted reforms of church and state. Although most people mark major life-cycle events such as baptism, confirmation, marriage, and burial within the church, the majority do not attend services regularly. Of the 87% Lutheran population, only 2% of these Swedes attend church. Minority religions include Roman Catholicism, the Pentecostal church, the Mission Covenant Church of Sweden, and the Greek Orthodox Church. In addition, there is a solid concentration of Jews in Sweden, as well as a tremendous

growth in the Islamic population, which has spurred much racial tension.

## 6 MAJOR HOLIDAYS

Sweden's legal holidays are New Year's Day, Epiphany (January 6), Good Friday, Easter Monday, May Day (May 1), Ascension Day (May 31), Whit Monday, Midsummer (June 23), All Souls' Day (November 3), and Christmas. At midnight on New Year's Eve, ship horns and factory sirens usher in the New Year and, following a century-old tradition, Alfred Tennyson's poem, "Ring Out, Wild Bells," is read at an open-air museum in Stockholm and broadcast throughout the country. The feast of St. Knut on January 13 is the time when Christmas decorations are taken down. Shrove Tuesday, the last day before Lent begins, is traditionally observed by eating a bun filled with cream and marzipan. As Easter approaches, Swedes decorate twigs with colored feathers and place them in water to sprout new leaves in time for the holiday. Young boys and girls dress up as the Easter Hag and visit their neighbors, from whom they receive small gifts similar to the Halloween festivities observed in the United States.

Among the most important secular holidays, *Valborgsmassöafton*, observed on April 30, celebrates the coming of spring with bonfires and other festivities which are performed both publicly and privately. The Swedish flag is honored on June 6, a day on which all cities and towns fly flags and hold ceremonies in the flag's commemoration. Finally, the Summer Solstice is observed on June 21 and June 22 through the raising of the Maypole, around which celebrants dance, sing traditional songs, and eat.

## 7 RITES OF PASSAGE

Sweden is a modern, industrialized, Christian country. Hence, many of the rites of passage that young people undergo are religious rituals, such as baptism, first Communion, confirmation, and marriage. In addition, a student's progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

The most common Swedish greeting is *hej!*, to which the response is usually *hej, hej!* The usual farewell is *hej då!* A handshake with either a *hej* or the more formal *god dag* is used between businessmen and acquaintances. Greetings among family depends on how close the family is, and Swedes, in contrast to Americans, are much more reserved in their interpersonal relationships. Therefore, they are not very demonstrative in their gestures, and refrain from touching others when communicating, as it is considered poor manners.

A very common practice among Swedes, when they are invited to another's home, is to bring flowers which are of an odd number (usually a single flower, or three or five). When hosting a group of less than 12 guests, the Swedish host demonstrates his or her etiquette in the art of toasting, which is performed according to a rigid, complex set of rules. For example, the host will lift his glass close to the third button of his shirt as he separately acknowledges each guest with a glance and a nod of the head; the glass is then sipped and returned to the third button position.

## 9 LIVING CONDITIONS

Except for brick-and-clay farm houses in southern Sweden, most dwellings were traditionally built of wood. In the past, the style of rural dwellings varied by region, with five main types. Contemporary housing is basically similar throughout the country, and it features building materials and styles similar to those in the United States. Many empty country houses are now used as summer homes.

Sweden's extensive system of social insurance pays for medical and dental care. The nation's infant mortality rate—2.75 deaths for every 1,000 live births—is one of the lowest in the world. Maternity leave with 80% pay begins from 60 days before the expected birth of a child until 6 weeks after birth, and lasts until the child is 18 months old. This legitimate leave of absence is termed "parental leave," as it can be chosen by either mother or father. The average life expectancy in Sweden is 78.5 years for men and 83 years for women.

Sweden has over 96,000 km (60,000 mi) of highways and more than 11,200 km (7,000 mi) of nationalized railroads. In 1967 the country changed from the left-hand traffic common to most European countries to a right-hand system like the one in the United States. Shipping has always been important to Sweden; its three largest ports are Göteborg, Stockholm, and

*Sofia Lillemae (l) and Maja Hansson pick flowers in preparation for the annual Midsummer holidays in Hassleholm, Sweden. Swedes traditionally celebrate Midsummer with dancing and feasting. (AP Images/Pressens Bild/Patric Berg)*

Malmö. Sweden operates the Scandinavian Airlines System (SAS) jointly with Denmark and Norway.

## **10 FAMILY LIFE**

Most Swedish families have only one or two children. During the past 30 years, it has become so common for unmarried couples to live together that the people have coined a name for this arrangement: *sambo* (*sam* means together; *bo* means live). In 1988 legislation extended the legal rights of persons involved in such relationships, making them almost the legal equal of spouses. Nevertheless, *sambo* relationships often lead to marriage. Sweden's divorce rate has doubled since 1960. The older Swedish generation views the husband's role as that of the breadwinner, and still relegates the wife to domestic tasks within the home. However, as in the United States, the younger Swedish generation considers marriage more as a partnership with shared responsibilities extended to the children family members, since both spouses work. Swedish women are guaranteed equal rights under the law, and the vast majority work outside the home. Because Swedish women today feel an acute need to be in the work force, and excellent day care services are available, about 75% of mothers with preschoolers work. Four times as many women hold upper-level government positions than U.S. women, jobs which include parliament and the governing cabinet. Almost half of all working women have children under the age of 16.

## **11 CLOTHING**

Modern, Western-style clothing is worn in Sweden and, as in the United States, the Swedes' casual wear is typically slacks, shorts, and T-shirts. Likewise, suits are worn by both men and women in the typical place of business, and tuxedos and evening gowns appear at formal affairs. All clothing is costly in comparison to the standard prices of the United States. Swedish folk costumes, which were introduced as late as the 1890s as a means of glorifying the cultural richness of the nation, are worn for special festivals such as Midsummer's Eve, and consist of white blouses, vests, and long dark skirts (often worn with aprons) for women and white shirts, vests, dark knee-length breeches, and white hose for men. Only a small segment of the population even owns such a costume, and the costumes vary dramatically from region to region.

## **12 FOOD**

Swedes typically wake up to a breakfast of hard or soft ryebread smothered with butter and cheese, sandwich meat, or *filmjolk*, which is similar to yogurt, with a soup-like consistency. Because lunches interrupt the work day, they are light in Sweden. In contrast, dinners almost always abound in fish, sausage, and meat, though the latter is less often purchased because of its high cost. This main course is typically accompanied by potatoes and vegetables—the most common being peas, carrots, or salad. While the Swedish main meal was traditionally

earlier in the day as a result of the wife's confinement within the home, dinner is now largely extended to the hours of early evening.

The Swedes savor rich sauces in their food, which is heavily influenced by the French. The Swedish name for the open-faced sandwich meal universal throughout Scandinavia—*smörgåsbord*—is the one by which this buffet meal is known in the United States. In Sweden it commonly includes herring, smoked eel, roast beef, tongue, jellied fish, boiled potatoes, and cheese. Favorite hot dishes include meatballs (*köttbullar*) served with lingonberry jam (*lingonsylt*); *pitty panna*, fried meat, potatoes, and egg; and *Janssons frestelse* (“Jansson’s temptation”), a layered potato dish with onions and cream, topped with anchovies. The Swedes love fish, especially salmon, which is typically smoked, marinated, or cured with dill and salt. Fresh fruits and vegetables, including all kinds of berries, are also very popular. Favorite beverages include milk, *lättöl* (a type of beer with almost no alcohol), and strong coffee.

### 13 EDUCATION

Sweden has a literacy rate of virtually 100%. School is mandatory between the ages of 7 and 16. During the first nine years, students attend a “comprehensive school,” where they study a variety of subjects. Grades one through three are called the junior grades, four through six the middle grades, and seven through nine the senior grades. There is a three-week Christmas vacation and a summer vacation that extends from early June to late August. Free hot lunches are provided to all students. English is taught as a second language from the third grade on, and crafts such as woodworking and textile-making are also part of the curriculum. While immigrant children receive education in their own language a few hours each day, there are also special English classes for these students from countries such as Germany and Turkey.

Beginning in the seventh year, instruction varies based on students’ interests and abilities; about 30% choose the college-preparatory curriculum, while others opt for more vocationally-oriented training. Swedes maintain the Scandinavian tradition of giving ceremonial white hats to secondary school graduates. Sweden has a number of universities, including those in Stockholm, Linköping, Göteborg, Uppsala, Lund, Umeå, Växjö, Karlstad, Luleå, and Örebro.

### 14 CULTURAL HERITAGE

The arts receive strong support from the government in Sweden. The Swedish National Council for Cultural Affairs approves subsidies for theater, dance and musical groups, literature, public libraries, museums, and other cultural institutions. It also helps inaugurate new artistic activities and educate the public about the arts. County councils, under the authority of the national council, oversee regional activities. Performers in Sweden enjoy a level of job security unknown in most other countries, including the United States. They are hired by the year, drawing a regular salary and receiving pension, insurance, and vacation benefits. However, even the most successful Swedish performers do not receive the astronomical levels of pay accorded to “superstars” in some other countries, particularly the US.

Sweden’s best known writer was August Strindberg, who wrote novels, short stories, essays, and plays that influenced the course of modern drama. Selma Lagerlöf, the first Swede

to win the Nobel Prize, is known for both her novels and her children’s classic *The Wonderful Adventures of Nils*. Another world-famous Swedish children’s author is Astrid Lindgren, creator of the Pippi Longstocking books. In the visual arts, prominent Swedish names include the sculptor Carl Milles and the jewelry maker Sigurd Persson. The Swedish film industry has gained a worldwide audience for its films, notably those of its world-famous director Ingmar Bergman. Famous Swedish film stars include Ingrid Bergman and Max von Sydow. The creator of the Nobel prize itself was a Swede—Alfred Nobel, the inventor of dynamite.

### 15 WORK

Sweden has achieved an enviable standard of living under a mixed system of high-tech capitalism and extensive welfare benefits. Sweden’s labor force is divided almost equally between men and women. About 74% are employed in the service sector, 24% in industry, and 2% in agriculture. Unemployment in Sweden has been low compared to other European countries (under 4.5% in 2007). About 85% of the Swedish work force is unionized. The minimum age for employment is 16; persons under that age may be hired during school vacations for easy jobs that last five days or less.

Though Sweden has some of the highest taxes in the world, it generously pays a pension which is two-thirds of the worker’s pre-retirement salary. Swedish retirees enjoy other benefits, such as instant health insurance and price reductions on prescriptions.

In September 2003 Swedish voters turned down entry into the European Union’s euro system, concerned about the impact on the economy and sovereignty.

### 16 SPORTS

There are about 40,000 sports clubs throughout Sweden. The most popular sport is soccer (called  *fotboll*). Favorite winter sports include cross-country and downhill skiing and long-distance skating. Popular water sports include swimming, rowing, and sailing, and many Swedes also enjoy cycling. Major annual events for amateur athletes include the Vasa cross-country ski race, the Vättern Circuit two-day bicycle race, the Vansbro swim meet, and the Lidingö cross-country running race. In 1987, the Swedish tennis team won the Davis Cup for the fourth time. Outstanding Swedish athletes include alpine skier Ingemar Stenmark, tennis great Björn Borg, and golfer Annika Sörenstam.

### 17 ENTERTAINMENT AND RECREATION

Many of the Swedes’ leisure hours are devoted to outdoor activities that enable them to enjoy their country’s beautiful natural scenery. It is common to retreat to rural areas during weekends and vacations. The summer cottage by the lake is a common sight; altogether there are about 600,000 summer homes in Sweden, many in abandoned rural areas. The islands near Stockholm are especially popular sites for these retreats. In recent years, it has also become popular to take winter vacations in Mediterranean resort areas. Walking is a favorite pastime in Sweden, and marked walking paths can be found throughout the country. Sailing on Sweden’s rivers and lakes is also very popular.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Swedes are known for their high-quality handicrafts. Handmade utensils have been produced since the beginning of the 19th century; the primary textiles are wool and flax. Swedish crystal and glass—of which 90% is produced at the Orrefors factory—are famous worldwide and half of the country's production is exported, much of it to the United States. The Dalarna region is known for its distinctive wooden horses with their brightly painted designs. Folk influences are evident in modern Swedish ceramics, woodwork, textiles, furniture, silver, and other products.

## 19 SOCIAL PROBLEMS

Like several neighboring countries, Sweden has a high rate of alcoholism, and organizations devoted to helping people deal with this problem have around 6,000 local chapters altogether. Another—and possibly related—problem is absenteeism from work, which rose sharply in the late 1980s. One of out every four workers called in sick on any given day. There has also been some discontent with the high taxes necessary to fund Sweden's extensive network of social services.

A relatively new and sweeping social problem in Sweden is that of racism. A neo-Nazi group similar to the “skinheads” of the United States is the “VAM” (“Vit Ariskt Motstånd”—or, “White Aryan Resistance”), which in the 1990s experienced an increase in membership. In the 2000s the Svensk Hednisk Front (Swedish Heathen Front—SHF) is an emerging Nazi organization of increasing importance.

## 20 GENDER ISSUES

Gender equality issues in Sweden are dealt with at the Ministry for Integration and Gender Equality, where the Division for Gender Equality has among its tasks the processing of gender equality matters. Governmental policy is to ensure that “women and men shall have equal power to shape society and their own lives.” Women and men are to enjoy the same opportunities, rights, and obligations in all spheres of life. The government promotes equal pay between women and men, an equal distribution of unpaid care and household work, and an end to men's violence against women. Sweden has done much to accomplish these goals.

Sweden is considered to be one of the most liberal countries in Europe and indeed the world when it comes to laws pertaining to homosexuality. A 2006 European Union member poll showed 71% of Swedes support same-sex marriage, although as of early 2008 it was not legal in Sweden. However, civil unions are considered to be marriage according to Swedish law. Homosexuality was legalized in 1944. In 1987 a law against sex in gay saunas and prostitution was created to prohibit the spread of HIV, but this was repealed in 2004. Homosexuals are not banned from military service. The Swedish constitution bans discrimination on the grounds of sexual orientation.

# SWISS

**LOCATION:** Switzerland

**POPULATION:** About 7.5 million

**LANGUAGE:** Schwyzerdütsch (Swiss-German dialect), French, Italian, Romansh, English

**RELIGION:** Protestant; Roman Catholic

## 1 INTRODUCTION

Switzerland is located at a crossroads in Europe and is known for its stability, multiculturalism, neutrality, and prosperity. The country's central location in the heart of Europe and the right mix of features has helped to link Switzerland with the rest of Europe in many ways—culturally, economically and politically. Although a small country, it is the meeting point for three of Europe's major cultures—German, French and Italian. This, along with a unique history and political institutions, contributes to the belief that Switzerland is a special case (*Sonderfall*), incomparably different from other countries.

The area that is now Switzerland was inhabited as early as 40,000 BC as shown by archeological evidence. Various Celtic tribes—among them the Helvetii and Rhaetians—settled in the region around 1,000 BC. For almost 500 years—from 58 BC to AD 400—Switzerland was part of the Roman Empire. Starting in AD 260 a number of Germanic tribes—the Alemanii and the Burgundians being the most important—started to make their way onto the scene.

The development of modern Switzerland can be traced back to a confederation of several Alpine valley communities and a number of city-states in the Middle Ages. These original communities have given their names to the present cantons (provinces) of Switzerland of which there are 26 (20 full cantons and 6 half cantons). The official (Latin) name of the country—*Confoederatio Helvetica*—bears witness to its old confederate past and can be seen in the “CH” decal on cars in Switzerland. Swiss history is unique in Europe since the Swiss never had a monarchy. Instead, the different members of the confederation governed political affairs. Today, the Swiss political system is federal, with many powers left in the hands of the cantons.

Switzerland's present boundaries were fixed and its neutrality guaranteed in 1815 at the Congress of Vienna. In the 20th century, its neutral stance kept it out of both world wars and dictated its refusal to join the United Nations, although it houses such UN agencies as the International Labor Organization and the World Health Organization (as well as the International Red Cross).

The Swiss live in a democracy where the average citizen can have greater influence than in other countries. This is accomplished through two institutions—the referendum and the initiative. A referendum allows the Swiss electorate to vote on laws passed by parliament, constitutional amendments and important international treaties. An initiative lets Swiss citizens make suggestions for either constitutional amendments at the national level or regular laws at the local level. A truly fascinating example of direct democracy is also found in parts of Switzerland—the *Landsgemeinde* (People's Assembly) where the electorate gathers under the open sky on a Sunday in spring to pass laws and elect officials with a show of hands.

## 2 LOCATION AND HOMELAND

One of Europe's smallest countries in terms of both territory and population, Switzerland is roughly equal in size to the combined area of Massachusetts, Connecticut, and Rhode Island. It is also a place of contrasts—of plains, lakes, rivers and mountains. Still when one thinks of Switzerland, one thinks of mountains, since approximately 70% of the country is covered by them.

Switzerland's three natural geographic regions are: the Jura Mountains in the northwest, making up 10% of the Swiss landscape; the Alps—which cover three-fifths of the country—in the south; and the central plateau, or Mittelland, which comprises 30% of the country. This central plateau contains all larger towns and most major cities, the most highly developed agriculture area and three-fourths of the total population of Switzerland. This last condition leads to a very high population density since three-fourths of the population is forced to live in only one-third of the country's entire geographical space.

The Alps have inspired poets and artists across Europe. It was this attraction of the mountains for sport and nature enthusiasts which originated the modern tourism industry. Sometimes called “a nation of hotel keepers,” the Swiss welcome some 20 million international visitors annually, many of whom continue to be drawn to the Alps. The most famous of the Swiss Alps is the Matterhorn, rising 4,478 m (14,692 ft) above sea level. Two of Europe's principal rivers, the Rhine and the Rhone, have their sources in the Swiss Alps.

A unique feature of the Alpine climate is the *föhn*, a special Alpine wind. This occurs mainly in spring and autumn, when a depression north of the Alps draws air from south of the Alps. This air falls into the northern valleys as warm, dry and cloud-free wind. Its effects are many: average temperatures rise, fruit ripens faster, and a number of ailments occur in humans, such as migraine attacks, blood circulation problems, and mood swings.

Switzerland's population of almost 7.5 million people is very diverse, being composed of four major ethnic groups: German (65%), French (18%), Italian (10%), and Romansh (1%). There are also over a million foreigners, accounting for about 22% of the total population. The country is becoming increasingly urban, with significant internal migration from the mountains to the cities of the plateau. This is particularly intense in the five largest Swiss cities—Basel, Bern, Geneva, Lausanne, and Zurich—which combined account for one-third of the total Swiss population.

## 3 LANGUAGE

Switzerland has four national languages. In 2008 speakers of *Schwyzerdütsch*, a Swiss-German dialect, accounted for about two-thirds of all Switzerland's people. Another 20% spoke French, about 6.5%—mostly in the Ticino region—spoke Italian, and less than 1% spoke Romansh, a Rhaeto-Roman dialect that is found mostly in the Grison region. The remainder of the population consisted of foreigners who spoke the languages of their homelands, particularly Albanian, Portuguese, Spanish, and Serbo-Croatian. Most native Swiss are bi- or multi-lingual and many speak English. While *Schwyzerdütsch* is clearly distinct from ordinary German (which is used in formal contexts such as books and newspapers), the French and Italian spoken by the Swiss are basically similar to those languages as spoken in their home countries.

*Schwyzerdütsch* is itself not a single language, but a term used to describe the various German dialects spoken in Switzerland. In other words, the dialects spoken in Basel, Bern, and Zurich, while mutually intelligible, have their differences. In contrast, people in a couple of places in Switzerland speak a dialect that most other Swiss-German speakers have difficulty understanding. Likewise, Romansh consists of five major dialects. Attempts have been made to preserve Romansh, while other efforts to create a single Romansh language from the five dialects have met with resistance. The balance of languages in Switzerland is reflected in its political system, with each canton bearing the responsibility of language policy.

#### 4 FOLKLORE

The national hero of Swiss legend is William Tell, supposed to have lived in the early 1300s shortly after the Habsburgs came to dominate Switzerland. Forced to shoot an apple off his son's head as punishment for insubordination toward the Habsburg governor Gessler, Tell later escaped from his Austrian captors to slay the foreign tyrant. This legend, which inspired popular ballads during the 15th century, provided the subject for a drama by the German poet Friedrich Schiller in 1804 and has been made even more famous by the overture to Gioachino Rossini's opera *Guillaume Tell*. In 1970 Swiss author and social critic Max Frisch wrote an essay entitled, "William Tell for the School." In this essay Frisch questioned the truth of this legend and portrayed a less heroic Tell. Frisch's purpose was to force

the Swiss to reevaluate their past in the hope of helping them think more about the present.

The *Rütli Schwur* (Rutli Oath) is another powerful symbol in Swiss folklore. This oath refers to an agreement made on the Rutli meadow between several Swiss valley communities in the Middle Ages to create an alliance for common protection and defense. Popular opinion sees this oath as the founding of Swiss freedom and democracy—in other words, the founding of Switzerland itself. Historians question whether or not this event ever took place. Still, the story of the *Rütli Schwur* is a powerful illustration of the role that national myths can have. For example, during World War II when Switzerland was surrounded by Nazi Germany, the Swiss army commander, General Guisan, gathered his officers on the Rutli meadow as a symbol of Swiss determination to fight for their freedom. People today still remember this act by General Guisan as a sign of the special position of the Rutli legend in Switzerland.

The traditional folk beliefs of German-speaking Alpine dwellers invested natural forces such as avalanches, landslides, and storms with malevolent qualities. More important has been the key position that the mountains have played in shaping the beliefs the Swiss have about themselves. For a long time the Swiss saw themselves linked to the mountains, with special qualities that made them different from other people. The mountains were associated with simple living, self-reliance and innocence. An example of this is the story of Heidi, written by Swiss author Johanna Spyri. Heidi and her grandfather represent the simple and wholesome qualities the Swiss saw in themselves.

#### 5 RELIGION

At the 2000 Swiss Census, about 42% of the population was Roman Catholic and 35% Protestant. The predominantly German-speaking cantons are divided nearly equally between the two religious affiliations. Catholicism is the predominant religion of the French-speaking cantons and the Italian-speaking canton of Ticino is mostly Catholic as well. Religious tensions have historically been a source of unrest and even today Switzerland's religious division between Protestant and Catholic remains significant. This can be seen in all aspects of life. There are both Protestant and Catholic youth organizations, labor unions, and women's associations and the Swiss political parties have been shaped by the religious differences of the past.

In the history of Swiss Protestantism, two figures stand out—Huldrych Zwingli and Jean Calvin. Zwingli began the Reformation in Switzerland from his pulpit in Zurich's main cathedral. He helped spread the new faith throughout Switzerland and debated Martin Luther on a number of issues in a famous debate that almost turned violent. Calvin is responsible for bringing Geneva into the Protestant fold. Calvin formalized Protestant thought into a more systematic doctrine and governed Geneva with a strict moral code. Other parts of Switzerland maintained close ties with the Catholic Church, which can still be seen today in the Swiss Guards at the Vatican. They once protected the Pope but now serve as an honor guard with their colorful uniforms and shiny helmets.

#### 6 MAJOR HOLIDAYS

Switzerland's legal holidays are New Year's Day, Good Friday, Easter Monday, Ascension Day, Whitmonday, *Bundesfeier* (which resembles the American Fourth of July) on August 1,

and Christmas. The German-speaking Swiss mark the seasons and many religious days with festivals, which vary with each canton (province) and commune (locality). Altogether, over 100 different festivals—pagan, Christian, and patriotic—are celebrated in Switzerland. The most famous celebration is Basel's *Fastnacht*, or carnival, marking the final days before Lent (and similar to the Mardi Gras festivities held in New Orleans). For three days, masked and costumed revelers parade through streets filled with decorative floats to the strains of pipe-and-drum bands.

## 7 RITES OF PASSAGE

In Switzerland many rites of passage are similar to those found in the United States. These include religious rituals such as baptism and first communion and events in the family such as births, deaths, and marriages.

For men, one of the most important aspects of life in Switzerland is military service. The Swiss army is a militia army, which means there is no professional military force. Instead, all male citizens serve a compulsory period of military duty throughout their lives, keeping all of their equipment, including weapon and ammunition, at home. Until recently, conscientious objectors were subject to imprisonment. Nevertheless, military service is required of all Swiss males between the ages of 20 and 50. Military training is conducted regularly throughout one's lifetime until age 50. First is a four-month basic training program. Then between the ages of 21 and 32 there are eight refresher courses which are each three weeks long. Between the ages of 33 and 42, three additional training courses of two weeks each are required. Finally after age 42, two more weeks are necessary before the age of 50. This adds up to one full year of service. Swiss military duty is a rite of passage because serving in the army is seen as a sign of true citizenship. An individual is seen as a full citizen through defending the country. The Swiss army is also called a citizen army to reflect the ideal that the Swiss citizens protect and defend their rights and freedom themselves. This equation of military service with the values of citizenship has been challenged by both women and the younger generation. Women are not required to perform military service and many women criticize their exclusion from the army and the consequences this has for them in society. Many younger Swiss citizens are also questioning the need of mandatory military service for everyone—they see it no longer as a patriotic obligation but as a nuisance and inconvenience.

## 8 INTERPERSONAL RELATIONS

With its combination of ethnic, linguistic, and religious affiliations, Switzerland has historically fostered tolerance, politeness, independence, and reserve in its people. Relationships between the Swiss reflect these differences of language, religion and region. In a country with four languages, communication between people can lead to problems and a number of stereotypes exist between the various regions. An example of this is the tension between the French- and German-speaking parts of Switzerland, referred to as the *röstigraben*—or hash brown chasm. The German-speaking Swiss see themselves as hard working and efficient, while they see their French-speaking countrymen as easy-going, friendly, and open. The French-speaking Swiss see the German speakers as arrogant, pushy, and too serious. According to recent polls, the German speak-

ers tend to like the French speakers more than the other way around.

In a social setting between individuals, a handshake is normal between men and women unless you are familiar with the person. In this case, a triple-kiss on the cheeks—first one kiss on one cheek, then the next cheek and finally back to the first cheek—is appropriate between men and women and among women. Men continue to shake hands. Another feature of social interaction that may seem unfamiliar to many Americans is the use of a person's name and formal speech. In Switzerland it is customary to greet and say goodbye to a person using their name. This makes it important to pay attention when meeting people for the first time, since you will be expected to remember names. Formal speech refers to the use of special forms of addressing people in the languages spoken in Switzerland (e.g. in German: *Sie* versus *Du*; in French: *vous* versus *tu*). Formal speech is used in less intimate situations, such as in business settings.

## 9 LIVING CONDITIONS

The Swiss enjoy one of the highest per capita incomes in the world and a correspondingly impressive standard of living. The Swiss, especially those living in the Alpine or forest regions, have traditionally lived in wooden houses with shingled or tiled roofs and carved gables. Corners and roofs have often been reinforced with stone, and kitchens encased in stone or masonry to prevent fires. Fewer and fewer houses of this type are constructed. Even in remote rural areas, newer houses are commonly of brick or block. However, mountain chalets built by urbanites as vacation homes often imitate the older rustic styles. In general, most Swiss live in apartments while fewer live in houses that they own.

Switzerland's standards of health and medical care are excellent. Over 84% of men and women consider their health to be good or very good. In 2008 the average life expectancy was estimated at about 79 years for men and 84 years for women. A law providing medical insurance to most citizens has been in effect since 1911. The nation's pharmaceuticals industry is a world leader in the production of specialized pharmaceutical products.

Situated at the center of Europe, Switzerland is both a center for international air traffic and a crossroads for road and rail travel. The renowned Swiss efficiency is evident in the nation's excellent transportation network. Within each community, there are excellent bus and metro-train systems. The government-run Swiss Federal Railways is one of Europe's best rail systems, connecting all of the country's major cities. Cog railways, cable cars, and chairlifts transport people to popular resort towns and Alpine summits, including the Jungfrau near Interlaken. A network of expressways includes several tunnels through the Alps, such as the Great Saint Bernard and Saint Gotthard tunnels. Inland waterways are also an important means of transportation. The Rhine river is navigable to Basel, the only river port, by barge traffic.

Due to this extensive transportation system, many people can get around quite easily without an automobile—it takes only three to four hours to get from one end of the country to the other by train. Also in order to get a driver's license, an individual must be 18 years old and pass an expensive driver education course. Thus, many choose to rely on public transportation.

Switzerland, with its high standard of living, is a consumer society like many others. There is an increasing enthusiasm for American products in Switzerland. Items like Levi's jeans, Coca-Cola, pop music, and Marlboro cigarettes are popular. McDonald's and other American fast-food restaurants, like Subway and Pizza Hut, are becoming more widespread. Not only are American brands popular with Swiss consumers, but Swiss companies use the image of America and the American way of life to sell their own products. As a result, "American" theme restaurants are becoming more common, as is the use of English in advertising.

### 10 FAMILY LIFE

The traditional family household—a married couple with children—is still the predominant lifestyle among the Swiss. At the 2000 Swiss Census, about 63% of all households were family households, with about 48% of family households consisting of a married couple with children and another 24% consisting of a married couple without children.

Traditionally, the family structure has been male-dominated, with the husband working outside of the home and the wife taking care of the home and the children. However, more and more women are finding greater opportunities in the workforce and a greater number of men and women are choosing to remain single or to marry later in life. In 2000 approximately 35% of all households were single person households. The size of the average Swiss household dropped from 3.3 people in 1960 to 2.3 in 2000. The number of marriages has decreased from 7.6 for every 1,000 people in 1970 to 5.4 per 1,000 in 2005. It has also been estimated that about 53% of all the marriages that took place in 2005 will end in divorce. In general, the German-speaking Swiss tend to marry among themselves.

### 11 CLOTHING

Western-style clothing is the norm, although traditional costumes, many displaying the Swiss art of fine embroidery, can still be seen at local festivities and parades. Herdsmen in the Gruyère region wear a short blue jacket of cloth or canvas called a *bredzon* with sleeves gathered at the shoulders. On special occasions, women in this region wear silk aprons, long-sleeved jackets, and straw hats with crocheted ribbons hanging from the brim. Other traditional women's costumes include gold lace caps in St. Gallen and dresses with silver ornaments in Unterwalden. Traditional male dress common to many Alpine Swiss includes the leather shorts called *lederhosen*, often worn with sturdy leather boots.

### 12 FOOD

Swiss cuisine combines the culinary traditions of Germany, France, and Italy and varies from region to region. Throughout the land, however, cheese is king. The Swiss have been making cheese for at least 2,000 years and today produce hundreds of varieties (of which the hole-filled Emmentaler popularly dubbed "Swiss cheese" is only one). Switzerland's most characteristic national dish is fondue, melted Emmentaler or Gruyère cheese—or a combination of both—in which pieces of bread are dipped, using long forks. The cheese is often melted in white wine and commonly seasoned with garlic, lemon juice, pepper, and other ingredients. Also popular is another melted-cheese dish called *raclette*, traditionally made of cheese from the Valais region, although other varieties are also used. A

quarter or half a wheel of cheese is melted in front of an open fire and scraped off into onto the diners' plates using a special knife. The cheese is traditionally eaten with potatoes, pickled onions or other vegetables, and dark bread.

A popular dish in German-speaking regions is *rösti*, hash-browned potatoes mixed with herbs, bacon, or cheese. Typical dishes in the Italian-speaking Ticino region are a potato pasta called *gnocchi*; *risotto*, a rice dish; and *polenta*, which is made from cornmeal and is something like American grits. Gallic specialties such as steaks, organ meats, and wine-flavored meat stews are prevalent in French-speaking parts of the country. Besides cheese, the other principal food for which the Swiss are known is chocolate.

### 13 EDUCATION

Education at all levels is the responsibility of the cantons, so Switzerland actually has 26 different educational systems, with varying types of schools, curricula, length of study, and teachers' salaries. However, all require either eight or nine years of schooling beginning at age six or seven and track students into either academic or vocational programs in secondary school. At this point those students entering an academic track take a course of instruction to prepare them for university study. Other students in a vocational program continue to take classes while also entering into an apprenticeship—after which students receive certification in a specific trade and are ready to enter the work force. Post-secondary education is offered at nine cantonal universities and two federal institutes of technology at Zurich and Lausanne. In 2004 about 30% of all persons between the ages of 25 and 34 had obtained a higher education degree.

Swiss schools tend to be more oriented toward academics and less toward extra-curricular activities. Activities such as sports—like in the United States with football and basketball teams, pep rallies, homecoming, etc.—are found more in a private club setting rather than in the schools. Besides the cantonal schools mentioned above, there are many private boarding schools in Switzerland. Swiss boarding schools attract students from abroad and many of these schools have a well-known reputation.

### 14 CULTURAL HERITAGE

From 18th-century philosopher Jean-Jacques Rousseau to psychologist Carl Jung and child psychologist Jean Piaget in the 20th century, Switzerland's cultural achievements have been wide-ranging and profound. In addition to a number of native intellectual and artistic figures, Switzerland has made a unique contribution to world culture by providing a neutral haven for leading intellectuals from Voltaire to Lenin. Significant Swiss artistic personages include playwright Friedrich Dürrenmatt, novelists Gottfried Keller and Max Frisch, sculptors Alberto Giacometti and Jean Tinguely, architects Le Corbusier and Mario Botta, and painter Paul Klee. The International Committee of the Red Cross owes its founding to Swiss humanitarian Henri Dunant from Geneva, where today many other international organizations have their offices.

The number of foreign intellectuals and artists that have called Switzerland home at one time or another is many. Fleeing the communist regime of the former USSR, Alexander Solzhenitsyn first emigrated to Switzerland where, appropriately, he wrote a novel about Lenin. Other distinguished emi-

*A yodel club from Thun sings at the 24th federal yodeling festival in Frauenfeld, Switzerland. (AP Images/Walter Bieri)*

grés welcomed by the Swiss include authors Hermann Hesse, Thomas Mann, James Joyce, and Erich Maria Remarque, film star Charlie Chaplin, scientist Albert Einstein, philosopher Friedrich Nietzsche, and composer Richard Wagner.

## **15 WORK**

The percentage of Swiss people engaged in agriculture has declined sharply since the 19th century, when 60% were farmers. This figure had dropped to 22% by World War II and fell to about 4% in 2005. Almost 23% of Switzerland's labor force is employed in industries, particularly machinery, electronics, and metallurgical industries. The chemical, pharmaceutical, and textile industries are also major employers. In 2005 about 73% of the labor force was employed in services. One traditional type of labor for which the Swiss are famous is watchmaking, begun by French refugees in the 16th century. Mass production had begun by 1845, and today Switzerland produces over 70 million watches and watch parts annually. The quartz watch was developed by the Swiss in the 1960s, and the most recent advances in the industry include a watch that is responsive to the human voice. More than half of those employed work in the expanding service sector. In this area, tourism and banking are important providers of employment.

Switzerland and the Swiss economy benefit from a comparatively low level of strikes due to what are popularly called "industrial peace treaties"—special collective bargaining ar-

rangements—between labor and management. Employers and employees agree to cooperate with each other and strikes and lockouts are forbidden. The first of these no-strike agreements was signed in 1937 in the watch and metal industry and has been renewed over the years and copied in practically all other Swiss industries as well.

Many young Swiss spend a period of apprenticeship outside the country before entering the labor force. A unique Swiss practice is the *Welschlandjahr*, in which young Swiss from the German-speaking part spend time in the French-speaking part in order to learn French and become familiar with the way of life in this part of Switzerland.

## **16 SPORTS**

Both summer and winter sports are extremely popular among the Swiss. The country's Alpine peaks provide a setting for skiing, bobsledding, tobogganing, mountain walking, and climbing. After skiing, ice skating is Switzerland's favorite winter sport, and the team sport of curling is gaining increasing popularity. Summer activities include tennis, hiking, golf, cycling, fishing, and a variety of water sports.

Two popular sports are handball and soccer. Handball in Switzerland is played with two teams and a ball slightly smaller than a volleyball that is easily held in the hand. Each team attempts to score against the other team by trying to get the ball into a guarded goal smaller than a soccer goal but larger than

a hockey goal. The ball can be thrown directly into the goal or can be bounced in to get around the goalie. Soccer enjoys even greater popularity, especially as a spectator sport. In 1994 the Swiss National Team qualified for the World Cup Soccer Championship. This created a wave of enthusiasm and support across Switzerland.

### 17 ENTERTAINMENT AND RECREATION

Relaxing after hours is important for the Swiss, who have one of the longest work days in Europe—usually 8:00 am to 5:00 pm—and average between 2,000 and 2,300 hours of work per year. Much of their recreation is family oriented and they often entertain at home rather than going out. One of the most universal leisure-time activities is simply reading the newspaper, either at home or at a cafe, over a cup of coffee or glass of wine. Extremely popular is a card game—*Jass*—played with 36 cards and a variety of rules which vary from region to region. Concerts and the theater are also enjoyed by many Swiss. The youth scene is dominated by parties and music.

At their many festivals, the Swiss still enjoy traditional activities, including dancing and yodeling, and local sports such as the baseball-like *Hornussen*, or farmer's tennis, stone-putting (*Steinstossen*) where the object is to throw a stone weighing 80 kg (184 lbs) as far as possible, and Swiss wrestling (*Schwingen*) in which each wrestler wears a pair of canvas-like shorts over his pants and tries to throw his opponent to the ground by grabbing hold of these shorts.

Each region of Switzerland has its own festivals and special events. Some important ones include the *Tellspiel* at Interlaken and Altdorf where the heroic story of William Tell is reenacted for audiences; the world famous Montreux Jazz Festival which hosts jazz performers from around world; and the well-known and popular Locarno Open Air Film Festival. Across all of Switzerland, shooting dubs and tournaments are very popular, even among teenagers.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Switzerland's traditional decorative arts include weaving, embroidery, dressmaking (*Frauentracht*), wood carving, and painting. A unique form of Swiss folk art is *Senntumsmaler- ei*, or herd-painting, which originated among Alpine dairy farmers as far back as the early 18th century with carved and painted farm implements. Characteristic forms include *Fahreimebödeli*, wooden pails with decorated bases, *Sennenstreifen*, long boards or strips of paper picturing cattle drives to the high Alpine pastures (traditionally hung in the living room or above the door to the cowshed), and *Wächterbild*, large-scale paintings of cow herders traditionally found on window shutters. *Senntum-Tafelbilder*, small, brightly colored, stylized paintings of cattle drives and other pastoral scenes, were especially popular in Eastern Switzerland from the mid-19th to the mid-20th centuries and can be seen in the many Swiss folk museums today.

### 19 SOCIAL PROBLEMS

The influx of foreign, or "guest" workers (*Gastarbeiter*) from southern Europe and North Africa since World War II—who made up a quarter of the labor force in 2006—has produced a backlash and a fear of *Überfremdung* (over-foreignization). The Swiss have voted three times on the question of expelling much of the foreign work force, defeating such a measure all

three times, although immigration laws have been tightened. Many foreign workers also returned to their home countries in the 1970s due to recession. However, anti-immigrant feeling persists against some *Ausländer*s (foreigners), who are subject to discrimination and social isolation.

Drug use and alcoholism are the biggest challenges facing Swiss youth. Many view this as a rejection of society or as a sign of youth's inability to cope with social pressures. Therefore, there is a need, which is slowly being met, to provide youth with positive outlets—such as cultural centers, or movements to get the younger generation interested in social issues.

A very important area of consideration is the issue of European integration. Switzerland is not a member of the European Union and in December 1992 voted not to join the European Economic Area—a step towards joining the European Union. The vote was very close, 50.3% against membership and 49.7% in favor. This has sparked what many have referred to as an identity crisis within Switzerland. Since the majority of those in favor of integration with Europe lived in the French-speaking part, questions were raised over whether or not the division between French- and German-speaking Swiss—the *Röstigraben*—was widening. Fears over European integration focus on the consequences for Swiss neutrality, federalism, and democratic institutions. Many believe that these will be done away with membership in the EU. Still, a good portion of the Swiss populace favors greater links with Europe.

There are a range of other problems which, like other countries, Switzerland is now facing—air pollution from trucks and automobiles resulting in the government encouraging greater reliance on rail travel; unemployment and economic restructuring; and political reform in order to make government more efficient and responsive to the needs of people.

### 20 GENDER ISSUES

The status of Swiss women, who were only granted suffrage in 1971, is below that of women in most other European countries. By law they have traditionally needed their husbands' permission to get a job, open a bank account, or run for political office (although they were allowed to volunteer for military service). Husbands have also had the last word on such important matters as where a family would live and, in case of a disagreement, what they would name their children. In 1981 a constitutional amendment was passed giving women equal rights, especially in the areas of work, education, and family matters, and in 1985 a law mandating equal rights in marriage was passed by a slim majority of the voters (54.7%). In situations of divorce, women are more likely than men to end up as single parents relying on public assistance. This is a result of a divorce law dictating that the primary wage earner in a divorce must be left with finances sufficient enough to remain above the poverty level. Since the primary wage earner is generally a man, a divorced woman is not always entitled to spousal support or sufficient child support and is more likely to fall below the poverty level.

Swiss women in general must still overcome attitudes that their place is in the home or only in certain kinds of jobs—like salesclerk, office worker, waitress, teacher, or nurse. The difficulties Swiss women must confront include the belief that working women neglect their children, find self-fulfillment at the expense of the family, and steal jobs from men who have to support families. Thus, women in Switzerland continue to

meet the challenge of combining roles—in the workplace and at home.

# TATARS

**LOCATION:** Russia

**POPULATION:** 6.6 million

**LANGUAGE:** Tatar; Russian; Ukrainian

**RELIGIONS:** Islam (Sunni Muslims, majority); Christianity; Sufism; Old Believers; Protestantism; Judaism

## 1 INTRODUCTION

Of all the Turkic ethnic groups living within the former Soviet Union, the Tatars historically lived farther west than any other Turkic nationality. It is believed that the name *Tatar* came either from a term of contempt applied by the Chinese to the Mongols or from the Mongol term for “conquered.” Later, the name *Tatar* itself became synonymous with Mongol.

After the death of Atilla the Hun in the middle of the 5th century, the Great Hun Empire started disintegrating into several smaller Turkic kingdoms, out of which the Kingdom of Great Bulgaria emerged in the 7th century. This kingdom did not last long and split into two nations upon the death of its ruler, Kubrat Han. His youngest son, Asparuh Han, moved into present-day Bulgaria, allied with the Slavic people already there, and established the Bulgarian Kingdom in AD 681. The two older sons, Batbay and Kutrag, favored an alliance with the Khazar and Alan tribes and remained in the eastern part of the European Plains. By the 8th century, some of these people had moved to what is now Tatarstan and Bashkortistan, began to accustom themselves with other Turkic and Finno-Ugric peoples, and formed the Bulgar realm in the 9th and 10th centuries.

The Bulgars traded goods with the peoples of Central Asia and China and converted to Islam in 922. They established an urban culture and became skilled in agriculture and commerce. Bulgar society had potters, blacksmiths, coppersmiths, carpenters, stonemasons, jewelers, and tanners. However, in 1236 the Bulgars were conquered by the Mongolian ruler Batu, and they were made provincial subjects of the new Bulgar Khanate. Power struggles within the Bulgar Khanate prompted many people to move west to the more stable area of Kazan. As Mongolian control dissipated in the 1430s and 1440s, several Tatar states emerged, including the Kazan, Crimean, Kasym, Siberian, and Astrakhan Khanates. During the 15th and early 16th centuries, the Kazan Khanate became the most prominent, and its people became known as the Tatars (named for the Turkic tribes forced to fight in the vanguard of Genghis Khan's armies).

The Kazan Tatars were conquered by imperial Russian forces during the reign of Tsar Ivan IV in 1552, thus giving Russia control over the middle part of the Volga River. In 1556, Russian troops conquered the Astrakhan Tatars, thus securing control over all the Volga River and access to the Caspian Sea. To celebrate the victory of Russia over the Tatars, the tsar ordered the construction of St. Basil's Cathedral in what is now Red Square in Moscow. The Tatars became the first Muslim subjects of the Russian Empire. In 1593 Tsar Fedor ordered the destruction of all Kazan Tatar mosques. In 1708 the region was officially organized by the Russian Empire as the Kazan Province, and the construction of mosques was allowed in 1766.

During the late 19th and early 20th centuries, a renewal in Tatar national identity began. This cultural awakening included increased interest in religion, education, publishing, and political activity. When the Russian Empire collapsed in 1917, the Tatars were encouraged by the Bolsheviks to pursue their ethnic identity within a communist setting. The Tatars took advantage of the chaos and formed the Idil-Ural State in November 1917. This territory encompassed about 220,000 square kilometers (85,000 square miles), an area about as large as Utah, in what is now Tatarstan and Bashkortistan. The Soviet government, however, did not tolerate the independence movement and declared the formation of the Bashkir Autonomous Republic in 1919 and the Tatar Autonomous Soviet Socialist Republic in 1920. When the Soviet government annexed these regions, it redrew the boundaries to give neighboring Russian provinces preferential treatment. By altering those boundaries, about 75% of the Tatar population found itself living outside the borders of Tatarstan.

In the 1920s, members of the independent Tatar government and most of the educated Tatar population were eliminated through execution or exile. This policy against the Tatars continued to some extent until the early 1950s. Tatar culture was also affected until the 1970s through the policy of Russification, where the Russian language, alphabet, and culture were legally imposed on the Tatars and other ethnic groups. During the Soviet era, economic hardship and job preference given to Russians in industrial areas caused many Tatars to leave their homeland.

A distinct group of Tatars known as the Krym (Crimean Tatars) once inhabited a certain part of the Crimean peninsula (during the Soviet era, the region was called the Crimean Tatar Autonomous Soviet Socialist Republic and was located within Soviet Ukraine). The Crimean Tatars had occupied the peninsula for more than 1,000 years as a result of intermarriage and mixing with other peoples present. The independent Crimean Khanate was abolished in 1783 when the Crimea was annexed by the Russian empire. Afterward, the Crimean Tatars suffered from repressive policies that limited their control over political, economic, cultural, and religious affairs; violence was often used to enforce imperial policy. The Crimean Tatar population declined from around 2.5 million in 1783 to 130,000 in 1921 while its territory was thoroughly settled by colonists. In 1944–45, the Soviet government forced them to leave, because Crimean Tatars had been accused of supporting the Germans during World War II. As scapegoats, the Crimean Tatars were deported to various regions of Central Asia, Kazakhstan, the Urals, and Siberia. The deportation served as a type of genocide, because 194,000 (about 46% of all Crimean Tatars) died in the process due to violence, starvation, and destitution. Their property and lands were confiscated as well. In 1989 the Soviet government began a repatriation program that allowed for the return of some 50,000 persons per year. Since gaining independence in 1991, Ukraine has administered this program, and over 200,000 of the estimated 550,000 Crimean Tatar population have returned, but many have suffered from discrimination and poverty. The Crimea is officially an autonomous region within Ukraine, but the government is controlled by ethnic Russians. Many Tatars want more political power, but not necessarily autonomy.

After the breakup of the Soviet Union, many Tatars agitated for an independent Tatar nation-state. In August 1990, the Tatar parliament declared Tatarstan's sovereignty and in April 1991 declared that Tatar law had dominance over Russian law whenever the two were in conflict. Tatarstan functioned as an independent state until 1994, when the leaders of Tatarstan and Russia signed a treaty bringing Tatarstan into the Russian Federation. Since the rise to power of Vladimir Putin, Tatarstan has lost even more of its autonomy. That said, Tatars have maintained their linguistic and cultural rights within Tatarstan.

## 2 LOCATION AND HOMELAND

The Tatars are a very diverse group, both ethnically and geographically. The Tatars formed the second largest non-Slavic group (after the Uzbeks) in the former Soviet Union. There are more than 6.6 million Tatars, of whom about 26% live in Tatarstan, an ethnic homeland of the former Soviet Union that is located in present-day Russia. Tatarstan, with about 3.8 million inhabitants, is about the size of Ireland or Portugal and considered the most northern frontier between Muslim and Orthodox Christian cultures. The capital of Tatarstan is Kazan (sometimes referred to as “the port of five seas”), a city of more than a million people and the largest port on the Volga River. Tatarstan is a secular republic with political stability, official support for two languages, and a high percentage of mixed marriages.

After Russians and Ukrainians, the Tatars are the most populous ethnic group in the Russian Federation. About 15% of all Tatars live in Bashkiria, another ethnic homeland that

lies to the east of Tatarstan. There are also smaller Tatar populations in Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, Turkey, Uzbekistan, Romani and in the regions to the north and west of Tatarstan. Small Tatar communities are also scattered all across Russia. A unique group of Tatars are the Krym (also called the Crimean Tatars), with a population of around 550,000. The Krym are from the Crimean peninsula of present-day Ukraine. Along with the Russians, Armenians, Estonians, and Latvians, the Tatars were the most urbanized ethnic group of the former Soviet Union, especially among those who lived outside of Tatarstan.

There are numerous subgroups within the Tatar population. The Bukharlyk Tatars are descended from 15th- and 16th-century fur traders who lived in Central Asia and western Siberia. The Kasymov Tatars are descended from the refugees of the Kazan Khanate who settled in Riazan in the 15th century. Lithuanian Tatars (also called Polish or Belarusian Tatars) are the Polish-speaking Muslim descendants of the Nogai Horde warriors who helped the Lithuanians fight against the Teutonic Order. The Volga Tatars (also called the Kazan Tatars) are the largest of all the Tatar groups and are descended from Turkic-influenced Eastern Finns, and range from Scandinavian to Mongol in appearance. The Mishars are also Turkic-influenced Eastern Finns who are Finnish in appearance. The Teptiars are Volga Tatars who fled to the east after the Russian Empire took over the Kazan Khanate. The Kryashans are Volga Tatars who converted to Christianity during the 16th and 18th centuries.

Since the fall of the Soviet Union, over 200,000 Crimean Tatars have returned to Ukraine. In addition, thousands of Crimean Tatars have immigrated to Russia and the European Union in search of work.

### 3 LANGUAGE

Tatar is a Turkic language. Like other Turkish languages, it is agglutinative, meaning suffixes are added to the ends of words to form sentences. Tatar is closely related to Kazakh and Kyrgyz. It is a more distant relative of the Turkic languages spoken in Azerbaijan, Turkey, Turkmenistan and Uzbekistan. Tatar has three main dialects. Western Tatar is spoken by the small Tatar minority in Finland. Middle Tatar, by far the most widely spoken dialect of the language, is spoken in Russia and Ukraine. Finally, Siberian Tatar is spoken by the Tatar ethnic groups of Siberia. Tatar borrows a large number of words from Russian and incorporates some English words as well.

In 922, the Bulgars converted to Islam, and the old Turkic script was replaced by the Arabic alphabet. Tatar is now written using the Cyrillic alphabet.

A famous old Tatar saying is “*Kilächägem nurlı bulsın öchen, utkännärdän härchak ut alam,*” which means “To make my future bright, I reach for the fire of the past.” Another well-known Tatar proverb is “*Tuzga yazmaganni soıläme,*” which means, roughly, “If it’s not written on salt, it’s wrong to even mention it.” The proverb refers to the ancient method of keeping records on plaques made of wood and salt and commends the practicality of keeping written records.

### 4 FOLKLORE

There are many Tatar legends about how the new city of Kazan (which means “cauldron”) was built. The origin of the city’s name goes back to Tudai-Menghe, who ruled the city in the late 13th century. One of his servants was said to have dropped

a golden cauldron into the river, and the town was later founded nearby.

Another Tatar legend about Kazan tells of a rich man who was a beekeeper and would often take along his daughter to visit his hives in the woods near Jilan-Tau (“snake hill”). When the daughter got married, she lived in the old part of Kazan, where it took a long walk to get water. She complained about the poor planning of the town to Ali-Bei, the ruler of Kazan. She suggested that Jilan-Tau would be a better place for the city, because it was at the mouth of the Kazanka River. The khan ordered two nobles to take 100 warriors to the site and to then open his sealed orders. According to the orders, they were to cast lots and bury the loser alive in the ground on the spot where the new city was to be built. However, when the khan’s son lost, they buried a dog in his place. When the khan heard the news, he was happy for his son but said that it was an omen that the new city would one day be overtaken by the “unholy dogs”—a term referring to those of a different religion.

Waterfowl are an important symbol of life in Tatar culture. Ducks especially are significant because, according to ancient Bulgar mythology, the Earth was formed when a duck dove to the bottom of an ancient sea, brought up a piece of mud, and set it afloat on the water’s surface.

### 5 RELIGION

Most Tatars are Sunni Muslims, with the exception of the Kryashan Tatars, who are Christian. In Tatarstan, along with Islam and Orthodoxy there are some other religious communities such as Old Believers, Protestants, Seventh-Day Adventists, Lutherans, and Jews. Islam has played an important role in solidifying the Tatar culture, because the imperial Russian government repeatedly tried to limit the spread of Islam from the Tatars to other peoples. This approach, however, usually pushed Tatar Muslims closer to their faith, and there is generally a devout observance of rituals and ceremonies among Muslim Tatars. Sufism (Islamic mysticism) also has a long history with the Tatars and is appealing for many because of its emphasis on ascetics. While observance of some Islamic rituals was common, it was very uncommon for Tatars to have a deep knowledge of their faith or to practice all the tenets of Islam. For example, Islamic clergymen would often preside over Tatar weddings. After the clergyman would leave, family and friends would celebrate the wedding by drinking vodka (alcohol is forbidden to Muslims).

Islam has enjoyed a resurgence among Tatars since the fall of the Soviet Union. In 1990, there was only one mosque in Kazan. Now there are dozens. A number of *madrasas*, or religious schools, have also been established in order to educate Tatar Muslims about their faith.

### 6 MAJOR HOLIDAYS

Tatars typically observe some of the Soviet-era holidays and also Muslim holidays that, to a large degree, are the same as those elsewhere in the Muslim world. The Soviet celebrations include New Year’s Day (January 1), International Women’s Day (March 8), Labor Day (May 1), and Victory Day (May 9—commemorates the end of World War II). Since the Tatars are widely scattered across Russia and Central Asia, different communities may observe regional holidays as well. Many Tatars celebrate the new year holiday of Nowruz, which is celebrated throughout the Persian and Turkic world.

Russian singers of the Tatarstan capital Kazan perform during a celebration of the capital's 1,000 anniversary. Tens of thousands of Tatar, Russians, and others packed in Kazan to celebrate the millennial anniversary. (Maxim Marmur/AFP/Getty Images)

The Islamic holidays include *Milad al-Nabi* (the birth of the Prophet Muhammad), *Id al-Adha* (celebrating the ancient account of Abraham offering his son for sacrifice), and *Id al-Fitr* (celebrating the end of the Ramadan fast). The dates of these holidays are not fixed due to the rotating nature of the lunar calendar. Russian influence has led many Tatars to incorporate the drinking of alcohol into their traditional celebration. The Kryashan Tatars celebrate Christian holidays such as Easter and Christmas. These religious celebrations were observed in secret during the Soviet era but are now held in the open. As a result, the number of Tatars who celebrate Islamic and Christian holidays has increased considerably since the fall of the Soviet Union.

## 7 RITES OF PASSAGE

Circumcision and other rituals associated with birth, death, and marriage are practiced by many Tatars today.

Since the fall of the Soviet Union, the number of Tatars performing the Hajj—pilgrimage to Mecca—has increased greatly. Every Muslim is expected to make the pilgrimage to Mecca at least once during his or her lifetime.

## 8 INTERPERSONAL RELATIONS

For centuries, there was tension between ethnic Russians and Tatars. As a result, the Tatars suffered from discrimination, which affected how they came to interact with Russian society.

The Tatars of today typically live in small communities and often utilize a network of friends and business contacts from within the Tatar community.

In the early 1990s, the hundreds of thousands of Crimean Tatars who returned to Ukraine faced hostility from their Russian and Ukrainian neighbors. Over time, these tensions have eased considerably.

## 9 LIVING CONDITIONS

Health care is provided by the state, although not all Tatars have adequate access to it. The government of Tatarstan is in the process of moving to an insurance-based health care delivery system. The high rate of new HIV infections affects Tatars, just as it affects the other peoples of the Russian Federation.

Most Tatars live in the Soviet-style apartment blocks found throughout Russia. Tatars live relatively well, as Tatarstan is one of the most prosperous republics in the Russian Federation.

## 10 FAMILY LIFE

Urban Tatars often promote endogamy (marriage to other Tatars) out of the belief that it will help keep the Tatar identity from being assimilated. However, since the 1960s, intermarriage with Russians and other ethnic groups has become more common. Family size is usually larger than that of neighboring populations. Traditional Tatar households are comprised of three or more generations.

## 11 CLOTHING

Tatars, as one of the most urbanized minorities, wear European-style clothing, and occasionally, mostly in rural areas, include fragments of traditional clothing such as the headscarf for women and skullcaps for men. In 2003 Muslim Tatar women won the right to wear headscarves in their passport photographs.

## 12 FOOD

Lamb and rice play a prominent role in the traditional Tatar diet, as in those of many other central Asian peoples. The Tatars are known in particular for their wide array of pastries, especially their meat pies, which, besides beef or lamb and onions, may include ingredients such as hard-boiled eggs, rice, and raisins. Another traditional dish is *chebureki*, or deep-fried lamb dumplings. Following is the recipe for the basic Tatar meat pie called *peremech*.

### Peremech

Dough ingredients:

2 eggs  
 ½ cup sour cream  
 6 tablespoons of light cream or half-and-half  
 a pinch of salt  
 2½ cups flour

Filling ingredients:

1 pound slightly fatty boneless beef chuck  
 1 onion  
 1 clove garlic  
 1 teaspoon salt  
 vegetable oil for frying

Dough: Beat eggs, then add sour cream, light cream, sugar, salt, and flour. Knead until smooth and pliable. Wrap the dough in wax paper and chill overnight before making into pies.

Filling: Add salt and garlic to meat and grind together with onion in a meat grinder or food processor.

To make the pies: Take only a quarter of the dough out of the refrigerator at a time. Roll each quarter of dough into a 12-inch cord. Slice each cord into six pieces, rolling these smaller pieces between the palms of the hands to form balls, then flatten the balls slightly. On a surface dusted with flour, roll each into a 3½ to 4 inch round disk. Spread 1 tablespoon of the meat mixture on each disk, leaving a 1 inch border around the edge. Gather the dough upward all the way around each patty, forming a round, flat pastry and leave a hole about 1 inch across on top. As each pie is made, cover with a cloth to prevent uncooked dough from drying. Heat the pies in ½ inch of vegetable oil in a large skillet, a few at a time, with the hole side down. Cook for approximately 15 minutes, or until golden brown. Makes 24 pies.

## 13 EDUCATION

During the Soviet era, the prerequisite Russian language examination served to keep many Tatar youths out of institutions of higher learning.

Since the end of the Soviet period, Tatar-language education has increased in popularity. In 1998 there were 38 Tatar language schools in Kazan alone. Tatar-language schools differ from Russian-language schools in that the purpose of the Tatar schools is to inculcate students with a sense of Tatar national identity. Many of these schools actively seek to create a new Tatar intelligentsia.

## 14 CULTURAL HERITAGE

It is believed that Tatar prose dates back to the 12th century, but scholars disagree about its origin. Jakub ibn-Nogman, who wrote "The History of Bulgaria," lived in the first half of the 12th century. The scholar Burchan ibn-Bulgari wrote about rhetoric and medicine. The 13th-century poem by Kol-Gali called "A Tale about Yusuf" was well-known far from Bulgar lands and greatly influenced the development of Bulgarian and Tatar literature.

Professional Tatar theatre began in December 1906 with the premiere of Galiaskar Kamal's play, *Wretched Child*. Modern Tatar literature began around the same time period. The poet Gabdulla Tukay is credited with founding modern literary Tatar. During the early part of the Soviet era and immediately after World War II, Tatar literature was largely confined to praising communist ideology. Since the 1960s, however, Tatar literature has often emphasized the role of the artist in voicing the ideals of the Tatar people. Prominent modern Tatar writers include R. Faizullin, R. Gäray, R. Mingalimov, R. Kharisov, F. Shafigullin, M. Agliamov, and Zöl'fat. Famous Tatar artists include actress Chulphan Khamatova, ballet dancer Rudolf Nureyev, and composer Farit Yarullin.

## 15 WORK

Traditional occupations of the Tatars include agriculture, hunting, fishing, crafts, and trade. Under Soviet rule, many jobs were based on collectivized agriculture and industrialization. The Tatars have held an increasing number of white-collar and professional jobs since World War II.

Heavy industry makes up a large share of employment in Tatarstan. Many Tatars work in mining, automobile manufacturing, chemical production, and oil refining.

## 16 SPORTS

The Tatars enjoy many traditional and Western-style sports. Soccer became popular during the Soviet years and is perhaps the most widely played sport among young men. Horse racing is also very popular, as the horse has long been a prominent part of traditional Tatar culture.

A traditional form of wrestling known as *koresh* is still practiced by Tatars. *Koresh* wrestlers wrestle standing up and attempt to throw their opponent to the ground. The most points are awarded to wrestlers who can throw their opponents on their backs. Wrestlers who throw their opponents on their sides or buttocks receive fewer points. The recent Tatar national revival in Russia has led to greater interest in *Koresh*.

## 17 ENTERTAINMENT AND RECREATION

Tatars enjoy many of the same leisure activities as neighboring populations in the former Soviet Union, such as watching television and visiting with friends and neighbors. Prominent among the traditional entertainments in rural areas is the

week-long Festival of the Plow, or *Sabantui*, held in spring, which ends with a day of singing, dancing, and sporting events.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The ancestors of the modern Tatars were skilled in crafting jewelry of gold, silver, bronze, and copper. They also were known for making pottery with engraved ornaments, metal decorations, and bronze locks in the shape of animals.

The Tatars who have returned to the Crimean Peninsula are fueling a resurgence in traditional Tatar crafts. Traditional Tatar embroidery is now practiced in Ukraine. Traditional Tatar craftsmen use gold thread to embroider images of fruits and grains.

## 19 SOCIAL PROBLEMS

The Tatar suffered discrimination under the imperial Russian dominion as well as during the Soviet era. Massive deportations of Tatars fragmented the culture, and the loss of lives and property from those days still has an impact on contemporary Tatar society.

Problems with Crimean Tatars are much more complicated because of forced deportation from the Crimean peninsula. Now that almost half of the Crimean Tatars have returned from Central Asia, they are facing problems with employment, housing, and schooling.

Social problems that affect many communities in the Russian Federation affect the Tatars. Since the collapse of the Soviet Union, the number of sex workers and drug users in Russia has risen drastically. These dynamics have led to an increase in the number of HIV cases in Tatar communities. Although the Russian economy in the 2000s was growing at a fast pace, many Tatars still face poverty and unemployment.

## 20 GENDER ISSUES

Tatar women who live in the countries of the former Soviet Union have legal equality with men. However, Tatar women, like women in nearly every country around the world, still face disadvantages because of their gender. Women's participation in politics has decreased drastically since the fall of the Soviet Union. Wage discrimination is a particularly acute problem for Tatars in Russia; in 1998, women in Russia earned only 70% of what men earned, even though women tended to have higher levels of education. At the same time, gender discrimination may be less prevalent among Tartars than among ethnic Russians. A 2004 study found that 44% of Tatar men believed that women should work outside the home, while only 25% of ethnic Russians held the same opinion.

Until the 1980s, it had been common for homosexual Tatars, along with every other ethnic group of the Russian SFSR, to be sent to mental hospitals. Homosexuality was decriminalized in Russia in 1993. Leaders of the Tatar Muslim community are staunchly anti-gay, and there is little public acceptance of sexual minorities amongst ordinary Tatars.

# TUVANS

**ALTERNATE NAMES:** Tuvinians, Tyva; Uriangkhaïs; Urianghais; Tannu-Uriankhais; Soyots

**LOCATION:** Russia (southern Siberia), China (northern Xinjiang province), northwestern Mongolia

**POPULATION:** 243,442 (2002, in Russia), 70,000 in Mongolia, 2,400 in China

**LANGUAGES:** Tuvan; Russian, Mongol

**RELIGIONS:** Native religious practices; Tibetan Buddhism

## 1 INTRODUCTION

The Tuvans are a native people of southern Siberia mainly found in the Tuvan Republic (also known as Tuva) of the Russian Federation. Substantial Tuvan communities are also found in western Mongolia and in the Altai Mountain region of western China. The Tuvans' name for themselves is *Tyva*. They have also been referred to in ethnographic writings as the Uriangkhaïs, Urianghais, Tannu-Uriankhais, and Soyots. Archeological, linguistic, anthropological, and historical evidence indicates that the ancestors of the modern Tuvans were formed during the first millennium AD from a mixture of Turkic-, Mongol-, Ket-, and Samoyedic-speaking tribes. Most Tuvans have traditionally been nomads who raise cattle, horses, sheep, yaks, and goats, although some Tuvans in the mountainous forests of northern and eastern Tuva have customarily bred reindeer instead. Tuva was conquered by the Mongol armies of Chinggis Khan around AD 1207 and was subsequently administered by a series of Mongol rulers. In the 1750s, Tuva's Mongol rulers were defeated by the Manchu Qing dynasty that had conquered China during the previous century, and the area passed under Manchu rule until the fall of the Qing dynasty in 1911. The Russian Empire declared Tuva its protectorate in 1914 and allowed Russian settlers to move into Tuva, much to the dismay of the Tuvans, who occasionally attacked them. In 1921, Russia's new communist government proclaimed that the protectorate declared earlier by the Russian monarchy was illegal and that, henceforth, Tuva was to be independent. In reality, the "Tannu-Tuva People's Republic" that existed from 1921 to 1944 was a Soviet puppet state. During the 1930s, its government engaged in policies identical to those of the Soviet government—for example, religious persecution and the imprisonment and execution of suspected political opponents. At this time, steps were also taken toward the collectivization of animal husbandry. In 1944, the Soviet Union annexed Tuva; soon thereafter, thousands of Russian settlers arrived to work the land and construct factories and coal and gold mines. The Tuvans were forced into herding collectives similar to agricultural collective farms. Many Tuvans slaughtered their animals in protest and engaged in anti-Soviet uprisings.

## 2 LOCATION AND HOMELAND

The total Tuvan population is about 310,000, slightly more than 200,000 of whom dwell in the Russian Federation's Tuvan Republic. The geographical center of the Asian continent has been calculated to lie just outside the Tuvan capital Kyzyl, and this spot is marked by an obelisk. The Tuvan Republic borders on the Gorno-Altai Autonomous Region (Russian, *avtonomnaia oblast*) to the west, the Khakass Autonomous Region to

the northwest, Krasnoyarsk Territory (Russian *krai*) to the north, Irkutsk Region (Russian *oblast*) to the northeast, the Buriat Republic to the northeast, and Mongolia to the south and southeast. About 9,000 Tuvans live scattered throughout the rest of the former Soviet Union's territory. An additional 70,000 Tuvans dwell in the northwest of the Mongolian Republic, and 2,400 more are to be found in the People's Republic of China's Xinjiang Province. The Tuvans are divided into two distinct ethnographic groups. The first are the western Tuvans, or Tuvans proper, numbering about 305,000. The second is a much smaller group, the Tuja Tuvans (Tuvintsy-todzhintsy in Russia), who live in Tuva numbering 4,442 in 2002. In 2002 approximately 55% of Tuvans were rural dwellers, and 45% were urban.

Because more than 80% of the Republic of Tuva is covered by mountains (even the lowest points are 500 meters [1640.4 feet] above sea level), the most typical landforms are naturally alpine ones—mountain meadows and taiga forest—although valleys contain some steppe and semi-desert areas as well as a limited amount of arable farmland. The climate is dry and sharply continental: winters are long and very cold, with January temperatures sometimes dropping as low as  $-61^{\circ}\text{C}$  ( $-78^{\circ}\text{F}$ ). Summers are short and hot, with June temperatures reaching  $43^{\circ}\text{C}$  ( $109^{\circ}\text{F}$ ). Tuva is rich in wildlife, particularly bear, fox, mountain goat, snow leopard, wild reindeer, wolf, squirrel and antelope. Vegetation varies widely. Grasses and wormwood trees are common in the mountain meadows and steppe valleys inhabited by cattle-breeders. Larch, cedar, fir, and birch forests appear in the northern and eastern areas occupied by hunters and reindeer herders. Sparse grasses and shrubs are found in the semi-desert areas south of the Tannu-Ola mountain range.

## 3 LANGUAGE

The Tuvan language belongs to the Turkic family; its closest living relative is the language of the Tofalars (also called the "Karagas" or "Toba") who live to the north of Tuva. The four dialects of Tuvan are classified according to the parts of Tuva in which they are spoken: Central, Western, Northeastern, and Southeastern. The modern Tuvan literary language is based on the Central dialect. The Tuvan dialects differ from each other mainly in vocabulary and pronunciation, and the differences between them are not significant enough to prevent speakers of different dialects from understanding each other. Until the 20th century, the few Tuvans who could read and write did so in Classical Mongolian, a literary language that uses a flowing vertical script in which words are written from top to bottom in columns of text read from left to right. The use of Classical Mongolian, along with centuries of continual contacts between Tuvans and Mongols, has had a significant influence upon the development of the Tuvan language, especially its vocabulary. Many Tuvan words are identical to Mongolian words with the same meaning: for example, *mal* means "cattle" or "livestock," and *nom* means "book" in both Tuvan and Mongolian. *Chet-tirdim* means "thank you."

The Tuvan language did not have a written form until the late 1920s, when Soviet linguists created a Tuvan writing system based on the Latin alphabet. This alphabet was replaced by the Cyrillic (Russian) alphabet in 1941. Although the form of the Cyrillic alphabet used to write Tuvan includes several extra letters for Tuvan sounds that do not exist in Russian, many

Tuvan scholars feel that the present writing system is still inadequate for representing the sounds of spoken Tuvan and is in need of reform. Because Tuva was not formally annexed by the Soviet Union until 1944 and the Tuvans make up a larger percentage (70%) of their officially recognized homeland's population than any other native Siberian people, and they tend to live in compact groups separate from the local Russians, they have a higher degree of native-language retention than any other indigenous Siberian group. A full 99% of Tuvans speak Tuvan as their mother tongue, and only 1% speak Russian as their first language. Young and middle-aged Tuvans are also proficient in Russian, which is taught in all Tuvan schools.

Many Tuvan personal names are based on common Tuvan words that have a pleasant meaning. *Chechek* (female) means "flower," *Maadyr* (male) means "hero," and *Belek* (both sexes) means "gift." Suffixes are often added to such words to specify male or female names: the male ending *-ool* and the female ending *-kys* are added to words such as *chechen* ("eloquent"), *mergen* ("wise"), and *aldyn* ("golden") to produce the male names *Chechen-ool*, *Mergen-ool* and *Aldyn-ool* and the female names *Chechen-kys*, *Mergen-kys*, and *Aldyn-kys*. Because most Tuvans practice the Tibetan form of Buddhism, many Tibetan names have been adopted, including *Seren-Chimit* (male) and *Dolgarzhaa* (female).

A child might even be called by the Tibetan word for the day of the week on which he or she was born: *Baazang* ("Friday"), *Davaa* ("Monday"), and so on. Russian names such as *Nikolai* (male) and *Maria* (female) have also become common in the

last few decades. Family names are based on the surname of a male ancestor; for that reason, many surnames end in the suffix *-ool*.

#### 4 FOLKLORE

Although the Tuvan language was unwritten until this century (except for the scholarly transcriptions of linguists and ethnographers), the Tuvans have long possessed a rich heritage of oral literature. Tuvan folklore contains a variety of genres—fairytales, stories about animals, riddles, songs, folk sayings, and long epic tales about the battles and exploits of heroic warriors that are very similar to the epics of the Mongols. There are also myths about the origins of the constellations. For example, *Chedi khan* (The Seven Khans), a myth of the reindeer-breeding Tuvans, tells how the constellation Ursa Major was formed. According to the myth, Ursa Major's seven stars are actually seven khans. They were journeying separately through the Upper World where the spirits dwell when they happened to meet. The seven khans decided to have a meal together, but none of them knew how to cook. To this day, they are standing there deciding how to prepare the meal. Tuvan folklore was formerly passed down orally from generation to generation and recited by *toolchus* (bards). Scholars at the Tuvan Scientific Research Institute of Language, Literature and History (*Tyvanyn Dyl, Literatura, Bolgash Töögünün Ertem Shinchilel Institutudu*) in Kyzyl have worked together with the *toolchus* to collect and publish Tuvan folklore to ensure that it will be available to future generations of Tuvans.

#### 5 RELIGION

The ancient religion of the Tuvans is shamanism. According to Tuvan shamanism, mountains, forests, rivers, animals, and the sky all possess their own spirits that must be honored in order for man to survive and flourish. Most Tuvan shamans believe that the universe is divided into three worlds: the Upper, or Heavenly World (*Üsütüü-oran*), where the spirits of nature and various other deities dwell; the Lower, or Earthly World (*Ortaa-oran*), which is inhabited by humans; and the Subterranean, or Dark World (*Aldyy-oran*), which is inhabited by the spirits of the dead. (Some Tuvans believe that there are only two worlds—the Upper and Lower—and that the dwelling place of the dead is located at the edge of the Lower World.) The shaman, a tribal priest similar to the Native American "medicine man," is a man or woman who is adept at traveling between the worlds and communicating with spirits through rituals that involve dancing, chanting, and beating on a large, flat round drum called a *dünggür*. The shaman's prayers are believed to heal the sick and improve the luck of those who have lost cattle to disease or experienced other misfortunes. The shaman also foretells the future and presides at sacrifices (*ydyk-kylyr*) during which young bulls are killed in honor of holy mountains. The profession of shamanism is usually hereditary. Most shamans are therefore the sons and daughters of shamans, although men and women without shamans as ancestors may also become shamans if they feel that they have been chosen by the spirits.

The Tuvans' belief that animals have spirits that must be respected has led to the development of many taboos concerning hunting. For example, Tuvan hunters may not refer to certain animals directly by their usual Tuvan names, but must instead allude to them by a host of elaborate euphemisms. (This cus-

tom is shared by some other Siberian peoples—for example, the Buriats.) Thus, a bear is not spoken of using the ordinary Tuvan word for “bear” (*adyg*) during the hunt, but is instead referred to as *khaiyrakan* (“the sovereign”), *kara chüve* (“the black thing”), *choorganyg* (“the one who has a blanket [i.e., fur]”), *irei* (“grandfather”), or *daai* (“uncle”). The Tuvans consider trees with oddly twisted trunks or other unusual features to contain spirits; they call such trees “shaman-trees” (*kham-yiash*), and when passing by them, they leave bits of food, brightly colored ribbons, drops of milk, tea, or vodka, and strands of horsehair as offerings.

The Tibetan variety of Buddhism was brought to Tuva by Mongolian lamas (Buddhist monks or priests) during the 18th century and soon claimed many converts. Instead of abandoning shamanism, however, the Tuvans continued to practice it along with the new religion. Besides filling religious needs, the Buddhist monasteries (*khürees*) of Tuva served important cultural functions as well. They provided literacy in Mongolian and Tibetan and contained libraries of religious and secular works in these languages. During the 1930s, the Tuvan government, in imitation of its Soviet model, destroyed the monasteries and imprisoned or killed many Tuvan lamas and shamans. Tuvan religious practices emerged from underground in the 1980s when the Soviet leader Mikhail Gorbachev put an end to the Soviet government’s war on religion. Since then, several young Tuvans have gone to Mongolia’s Buddhist monasteries for religious training, and Tuvan Buddhists have made plans to rebuild some of the destroyed monasteries.

## 6 MAJOR HOLIDAYS

The most popular Tuvan holiday is *Shagaa*, the New Year’s Festival. Because the Tuvans formerly used the lunar calendar, *Shagaa* falls on a different day each year in the Gregorian calendar. Tuvans also celebrate the Western New Year’s Eve and New Year’s Day on 31 December and 1 January. In Tuva, the new year is welcomed by saying “*Chaa Chyl-bile*” (“happy new year”). *Shagaa* is celebrated by feasting, wrestling matches, archery contests, and horse racing. While under Soviet rule, Tuvans celebrated Soviet holidays such as May Day (1 May), the anniversary of the Soviet victory over Nazi Germany (9 May), International Women’s Day (8 March), and the anniversary of the Bolshevik seizure of power in 1917 (7 November). Most Tuvans undoubtedly stopped observing these Soviet holidays after the collapse of the communist regime.

## 7 RITES OF PASSAGE

In traditional society, childbirth took place at home and was assisted by a midwife. As soon as the infant emerged from the womb, the midwife washed it with strong tea in order to strengthen it. The afterbirth was wrapped up in the sheepskin upon which the mother had given birth and buried. The umbilical cord was tied with string; when it fell off, it too was buried. The practice of burying the afterbirth seems to have passed down from observance, although the umbilical cord is still buried.

A Tuvan child is given his or her first haircut at three years of age. This is an occasion for celebration by the child’s family and relatives, because he or she has now survived infancy. The parents take the boy or girl to the homes of relatives, who each cut off a small lock of hair and present the child with gifts. Before the Soviet ban on arranged marriages, girls underwent an additional rite of passage involving hair. Young girls’ hair was

kept short like that of small boys until they reached eight or nine years of age, at which time the hair was allowed to grow out. When a girl’s hair had grown long enough for it to be woven into a braid, she was considered old enough for her parents to choose a husband for her.

The oldest son held a privileged position in traditional Tuvan society. According to the Buddhist patriarchal social organization of the Tuvans, the oldest son was always given to the temple to become a lama (Buddhist monk). Also, the flocks (animal breeding was the basis of the economy) were not divided among surviving children, but always inherited entirely by the oldest son. Needless to say, this privileged group never worked, and this situation limited the society’s economic opportunities because a large number of potential workers remained idle. It was also hard on younger sons, who often resented their subordinate role in society. With Soviet support, these younger sons formed the core of a revolutionary organization that overthrew the power of the lamas in 1926.

In traditional Tuvan society, the dead were either buried in the ground or placed in a wooden casket that was then raised on poles or placed in a tree. Food and drink or items of everyday use were placed in the casket along with the corpse. Shamans were laid to rest with their drums. Sometimes, corpses were wrapped in cloth and laid on the ground to be devoured by vultures. This practice is similar to a traditional Tibetan method of disposing of the dead and was especially widespread among Buddhist Tuvans, although some Buddhist clergymen chose to be cremated instead. Tuvans now bury their dead in the ground in caskets or cremate them.

## 8 INTERPERSONAL RELATIONS

Over the centuries, the Tuvans have adopted the Tibetan and Mongolian practice of presenting respected guests with a *khadag*—a band of silk that is about one yard long and a little under a foot wide. When presenting the *khadag* to a guest, a Tuvan host lays the *khadag* across his or her outstretched arms, which are bent at the elbow. The guest also places his arms in this position, and the host transfers the *khadag* from his or her arms to those of the guest.

## 9 LIVING CONDITIONS

The most common traditional dwelling of the Tuvans is the *ög*, or yurt, which is covered with felt cloth stretched over a wooden frame. The frames of Tuvan *ögs* have customarily been imported from Mongolia. An iron stove in the center of the *ög* is used to cook food and provide warmth. A flap in the center of the roof is opened to allow light to enter, and an iron stovepipe removes smoke. The *ög* is well-suited for a nomadic way of life, because it can be quickly taken apart and reassembled when a family drives its herds from pasture to pasture. Tuvans of the mountainous northern Todzh region, who herd reindeer and hunt instead of raising livestock, have traditionally lived in *chadyrs*, conical tents similar to the teepees of some Native American peoples of the Great Plains. The wooden frame of the *chadyr* is covered with reindeer skins in the winter and birch-bark in the summer. In traditional Tuvan society, the homes of two or three related families that shared herding and hunting grounds were grouped into a small settlement called an *aal*. After Tuva’s annexation by the Soviet Union, *aals* were abolished and their members moved to large collective farms. Since the 1950s, traditional Tuvan dwellings have largely been replaced

by the one-story wooden houses common on Soviet collective farms. Tuvans in Kyzyl and other cities live in prefabricated concrete apartment buildings that are indistinguishable from those in urban areas of the former Soviet Union.

Tuvans have ridden horses and used them as pack animals for as long as there has been recorded information about them. Because of Russian influence, Tuvans have begun to use horses to pull carts and sleighs as well in recent decades. Reindeer-breeding Tuvans ride domesticated reindeers and use them to carry loads. Yaks and oxen are also occasionally ridden in the southern areas of Tuva where they are bred, although they are used for transport far less frequently than horses. Automobiles, bicycles, taxis, and buses are common in cities and towns, but Tuva's rugged mountainous terrain has severely limited road construction between cities. For the same reason, there are no railways in Tuva. There are still many rural areas that can be reached only by airplane, horse, or reindeer.

Herbal medicine and the incantations of shamans were the chief forms of medical treatment in traditional Tuvan society. Lamas trained in Tibetan medical practices at Buddhist monasteries also served as doctors before the anti-religious campaign of the 1930s. Western medicine first became available to Tuvans in the first decade of the 20th century when Russian doctors moved into Tuva to serve Russian farmers who had settled in the region. It has become much more common since Tuva's incorporation into the Soviet Union (a large modern hospital was constructed in Kyzyl during the first years of direct Soviet rule). The Soviet government provided medical care either free or at low cost, but it was not always available in remote areas, and most rural clinics provided only the most basic care. To these existing problems must be added the dire economic conditions in which post-Soviet medical facilities now find themselves.

## 10 FAMILY LIFE

For many centuries, related Tuvan families were grouped into clans (*sööks*) that shared hunting lands and helped each other in time of need. Members of a *söök* were forbidden to marry each other. Although the clan system's rules (such as the prohibition on marriage among members) have passed from observance during this century (and in some places even earlier), many Tuvans are still aware of their clan affiliation and feel a vague sort of kinship with other members of the same clan. The Tuvan language has also preserved elements of the clan system. The word *aky* means both one's own elder brother and the younger brother of one's father (uncle), and the word *ugba* refers to both one's own elder sister and the younger sister of one's father (aunt).

The small nuclear family consisting of a man and woman and their unmarried children has been typical among modern Tuvans throughout the 20th century. Wealthy Tuvans formerly had two or more wives, but polygamy was relatively rare and there have apparently been no cases of it since the 1920s. In traditional Tuvan society, marriages were arranged, with the average age of marriage 15 or 16 for girls and between 18 and 20 for boys (although marriages sometimes took place with one partner as young as 13). The legal age for marriage in Tuva is now 18, and marriages are no longer arranged.

## 11 CLOTHING

Tuvan traditional clothing is very similar to that worn by Khalkhas, Buriats, and other Mongolian-speaking peoples. The typical garment for men and women is the *ton*, an ankle-length robe fastened on the right side with buttons or hooks. Light cloth shirts and trousers are worn under the *ton*. Summer *tons* are made of calico, silk, velvet, thin felt, or deerskin. Those worn in winter are made either from sheepskin or from felt lined with the thick skins of reindeer slaughtered in the winter. Both sexes wear fur and cloth hats of various cuts and boots. Stiff boots with thick, multilayered soles, felt linings, and toes that curl upward are called *kadyg idiks*. High, soft boots made of thin leather, reindeer, or goatskin are called *chymchak idiks*. There is little difference between the traditional clothing of men, women, and children, although men usually wear a belt over their *tons* to hold pouches for tobacco, fire-lighting flints, and various small tools used in herding and hunting work. Underclothing for both sexes was formerly limited to undershirts and underpants made of cloth in the summer and leather in the winter, but these have been replaced by cloth shorts and undershirts for men and cloth bras and panties for women since the mid-20th century. Mass-produced items of Western outer clothing—cloth dresses, shirts, trousers and suits, and leather shoes—have also become common, especially in urban areas. Traditional clothing is still widely used in daily life in the countryside, however, and it is worn on holidays and other festive occasions by both rural and urban Tuvans.

## 12 FOOD

Many traditional dishes of the cattle-breeding Tuvans are made from milk and are identical to those of the Mongols. Curds (*arazhy*) are dried during the summer and eaten year-round. Sour milk (*khoitpak*) is either drunk, whipped into a sweet, creamy substance called *eezhegei*, or pressed into a sour, hard cheese (*kurut*). Mare's milk is fermented to make a drink called *khymys* (called *kumys* by other Turkic-speaking peoples) and distilled into *arak*, a vodka-like alcoholic beverage.

There are a number of taboos regarding the handling of milk. For instance, it is forbidden to spill milk on the ground. If one does inadvertently spill it, one must cover it with a sprinkling of soil. One may not take milk outside after dark. It is generally considered amiss to take milk away from one's household; if someone cannot avoid giving another person milk to take away, he must pour the first few drops into one of his own containers before giving away the remainder.

In addition to beef, the cattle-breeding Tuvans consume mutton, camel, yak, and goat meat. Boiling is the usual method of preparation. The traditional fare of reindeer-breeding Tuvans centers on reindeer meat and milk. Reindeer milk is drunk fresh and added to tea; it is also dried and stored in leather bags for later use, or else made into cheese. In the fall, reindeer meat and milk are frozen in the open air to be thawed and boiled during the long, bitter winters. Hunting is a common occupation for both cattle- and reindeer-breeding Tuvans, so the meat of wild reindeer, bear, and squirrel often graces Tuvan tables. Millet, barley, oats, and wheat are grown in the fertile river valleys. Common traditional dishes from these ingredients include millet soup, noodles, and pancakes. Russian influence has made fruit, vegetables, pork, bread, and various canned goods an integral part of the Tuvan diet in the last 50 years.

### 13 EDUCATION

Before the 20th century, the Tuvans' only educational institutions were Buddhist monasteries. The languages of the religious rituals students were made to memorize and the texts they used were Mongolian and Tibetan. Because these languages (especially Tibetan) are very different from Tuvan, some students memorized their lessons without understanding their content. During the 1920s, a few secular schools were founded by the Tuvan government. Buddhist monks, who were practically the only literate Tuvans, were employed as teachers, and textbooks and homework were written in Classical Mongolian. In the 1930s, the creation of a Tuvan written language and the return of young Tuvans who had studied to become teachers in the Soviet Union significantly aided the growth of education. Still, only half of Tuvan school-age children attended school until Tuva's annexation by the USSR in 1944, when funds from the Soviet government allowed the development of a modern educational system. All Tuvans now attend primary and secondary schools, and many go on to study at technical institutes, teachers' colleges, and universities in both Tuva and the rest of the Russian Federation.

### 14 CULTURAL HERITAGE

The aspect of the Tuvan cultural heritage best known outside Tuva is its music. Tuvan singers are famous for a special type of singing called *khöömei*, known in English as "overtone," "throat," or "harmonic" singing. A *khöömei* singer produces two tones at once: a low, droning tone that produces the melody and a higher "overtone" that has been compared to the sound of a flute. The "overtone" is produced by vibrations in the throat and mouth caused by the lower tone. *Khöömei* is a very difficult art that requires years of training to coordinate the muscles of the vocal cords, throat, soft palate, tongue, and lips. There are several styles of *khöömei* singing: *sygyt* has a whistling overtone, whereas *kargyraa* has a very deep lower tone and hoarse overtone and is similar to the harmonic chanting of Tibetan Buddhist monks. The *ezengileer* and *borbannadir* styles use overtones that have a pulsing rhythm similar to a galloping horse. *Khöömei* singers such as Kaigal-ool Khovalyg have performed in many countries, including the United States.

### 15 WORK

Tuvans have long been skilled metalworkers. The profession of blacksmith is a highly respected one, and in traditional society only the sons of blacksmiths could enter it. Tuvan blacksmiths produce items of everyday use, such as knives, ploughshares, arrowheads, locks, trivets, axes, nails, and even rifles from scrap iron. Another type of metalwork widespread among the Tuvans is casting. Copper, bronze, lead, and a silver-tin alloy called *khola* are poured into stone or clay molds to make bridles, stirrups, chains, chess pieces, and decorative plaques that were fastened to saddles. Mass-produced metal goods have become more common since the 1950s, but items custom-made by Tuvan metalworkers are still highly sought for their attractiveness and durability.

### 16 SPORTS

The Tuvans' favorite sports are horse racing, archery, and wrestling. Tuvan wrestling (*khüresh*) is very similar to Mon-

gol wrestling. The rules are the same, and Tuvan and Mongol wrestlers even wear the same type of uniform. The uniform of a Tuvan wrestler (*mögö*) consists of heavy, knee-high leather boots; a leather or silk "shirt" that covers only the shoulders, upper back, and arms; and leather or silk shorts similar in cut to men's briefs. During a traditional Tuvan wrestling match, the two competitors square off and grab each other by the shoulders. They grapple with each other in a standing position until one of them is forced to touch the ground (usually with his knee or elbow). The wrestler who forces the other to the ground is declared the winner.

### 17 ENTERTAINMENT AND RECREATION

Tuvans have enjoyed chess for centuries. Some scholars believe that chess was brought to Tuva by Chinese settlers after the Manchu conquest of Tuva. The chess pieces used by Tuvans have more or less the same functions as those in other cultures, but they have been modified to depict camels, kings and princes in traditional dress, and other themes from traditional Tuvan daily life. *Daaly*, a game similar to dominoes, is another favorite pastime.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Stone carving has long been practiced by Tuvan craftsmen. Pyrophyllite, a substance similar to soapstone, is carved into chess pieces and small sculptures. Common themes are wild and domesticated animals, Tuvans in traditional dress, and everyday activities such as hunting. Wild animals are often depicted in complicated poses that show them hunting or fighting each other.

### 19 SOCIAL PROBLEMS

Some of the most pressing issues facing modern Tuvans are ecological ones. The ecology of Tuva, like that of the other native Siberian peoples' homelands, has been damaged by Soviet economic projects that did not take into account their effects on the environment. Hydroelectric dams have flooded river valleys traditionally used for agriculture. The replacement of the small *aals* by collective farms has concentrated livestock into excessively large herds that overtax Tuva's grass and water resources. Gold, uranium, and coal mines have scarred the landscape and polluted Tuva's once-pristine air and water, and the absence of environmental safeguards at the open-pit asbestos mines dug since the 1970s has led to fears that cancer rates will soon rise sharply.

Ethnic conflicts between Tuvans and Russians have increased sharply since the relaxation of censorship in the 1980s. All Tuvans are now keenly aware that their annexation by the Soviet Union took place without their consent, and they blame the Russian-led Soviet government, the native political leaders whom they view as traitors, and the uninvited Russian settlers for the present damage to their homeland's environment and economy and the destruction of Tuvan religious and secular traditions. There have been interethnic fights and even murders. In 1990, three Russian fishermen were murdered at an isolated mountain lake, and many local residents suspect that Tuvans killed them for fishing at a place sacred to Tuvan shamanists. The result has been the flight of thousands of Russian colonists: between 1989 and 1992, the proportion of Russians and other non-Tuvans in Tuva's population dropped from 36% to 30%. Some Tuvan nationalists have advocated the forma-

tion of an independent Tuvan state. Although it is very unlikely that the government of the Russian Federation will allow Tuva to secede, Tuvan political leaders have managed to gain greater autonomy in economic matters and have succeeded in increasing the use of the Tuvan language in education and government.

## 20 GENDER ISSUES

Tuvan women and men now have equal legal rights, but this has not always been the case. A woman's role in the family was in some ways subordinate to that of men in traditional society. A woman was forbidden to speak the names of her father-in-law or mother-in-law and could not appear before them with her head or feet uncovered. She could not inherit property from her husband, as this was a privilege reserved for male family members. Still, a woman possessed that property (including the family dwelling) which she had brought to the marriage and to which neither her husband nor her in-laws had any right. Although men and women performed different economic tasks—men usually herded and hunted, while women milked the cattle or reindeer, cooked the family's meals, and cleaned house—a woman's work was highly valued, and her husband often sought her advice on matters affecting the running of the household. Tuvan gender roles changed considerably after Tuva's annexation into the Soviet Union, with the integration of the Tuvans into the Soviet economy and Soviet society, and with the increased educational opportunities from which many women were able to benefit.

# TYROLESE

**ALTERNATE NAMES:** Tyroleans

**LOCATION:** Tyrol (Tirol); western Austria and northern Italy

**POPULATION:** 1,708,000

**LANGUAGE:** German, Italian, Ladin (or Ladinian)

**RELIGION:** Roman Catholic

## 1 INTRODUCTION

Tyrol (or Tirol) is a name for a historical region in Western Central Europe, covering the area in the eastern Alps in western Austria and northern Italy. It includes the Austrian state (Bundesland) of Tyrol, which is divided into North Tyrol and East Tyrol; the Italian region known as Trentino–Alto Adige; and three communes in the Italian region of Veneto (Livinalongo del Col di Lana, Colle Santa Lucia, and Cortina d'Ampezzo). The name of the region derives from a family name linked to a castle near Meran (now Merano in Italy).

In prehistoric times (the late Bronze Age and the Iron Age), the most prominent cultures of the region were the Laugen-Melaun (Luco-Meluno) and the Urnfield, succeeded by the Fritzens-Sanzeno (also known as the Rhaetics). In 15 BC the region was conquered by the Romans and incorporated into the Roman Empire. From the 6th to the 9th century, the region was settled by the invading tribes of Bavarians, whose southernmost territory was the area of today's Bolzano (Bolzen) and the Longobards (who ruled in the area of today's Trentino). After it became part of the Frankish Empire and later the Holy Roman Empire, the region was considered to be of great strategic importance as a bridge between Italy and Bavaria. Tyrol became part of the Duchy of Bavaria in the Early Middle Ages. Its territory consisted predominantly of properties belonging to the bishops of Brixen (Bressanone) and Trento. In 1248 the scions of the Tyrol family, residing in a castle near Merano, acquired extensive lands from the bishop of Brixen. By 1271 the Tyrol family had effectively replaced the ecclesiastical power in the region. In 1342, Margaret Maultasch, heiress to the Tyrol, married the son of the Holy Roman Emperor, Louis IV. When she died childless in 1363, the Tyrol came under the rule of the Habsburgs, which lasted until 1918 (with the exception of the time period between 1805 and 1814, when Austria was forced to cede it to the Kingdom of Bavaria and later Italy). In the 16th century, Tyrol prospered largely because of its mines and the production of weapons. It adopted the Reformation movement, but it then reverted to Catholicism after a large peasant revolt of 1525 had been crushed. In 1867, Tyrol was declared the Crown Land of Cisleithania, the western half of Austria-Hungary. After World War I, and following the dissolution of the Austro-Hungarian Empire and the Treaty of Saint-Germain, northern Tyrol became part of the First Austrian Republic. Today, it is one of Austria's nine federal states, with Innsbruck as its capital. The state of Tirol is divided into eight districts (*bezirke*) and one statutory city (Innsbruck). The southern Tyrol region, in spite of the region's overwhelmingly German-speaking population, became part of Italy and was known, until 1947, under the name of Venetia Tridentina. In 1948 it was granted a special regional autonomy within the Republic of Italy. The provincial capitals in Trentino–Alto Adige alternate biennially as the site of the regional parliament.

In addition to denoting a historical region, the name of Tyrol is sometimes also used simply to refer to the Austrian federal state of Tirol.

## 2 LOCATION AND HOMELAND

The Austrian part of the historic region of Tyrol, known in Austria as Tirol, is bordered by Germany to the north, by the Austrian federal states of Salzburg and Carinthia (Kärnten) to the east, by Vorarlberg to the west, and by Italy to the south. Its area covers 12,647 sq km (4,883 sq mi). The region is entirely Alpine in character. The highest peak, the Wildspitze, is 3,744 m (12,382 ft) high. The largest rivers in North and East Tyrol, respectively, are the Inn River and the Drava (Drau).

The Italian part of the historic Tyrol is known as Trentino–Alto Adige (in Italian), Trentino–Südtirol (in German), or as Trentin–Adesc Aut and Trentin–Sudtiroi (in Ladinian). It is bounded by Austria (and its federal state of Tirol) to the north, by Switzerland (the canton of Graubünden) to the northwest, and by the Italian regions of Lombardy (Lombardia) and Veneto to the west and south, respectively. Its area covers 13,619 sq km (5,256 sq mi). The entire region is extremely mountainous, with most regions over 900 m (3,000 ft); the mountain peak called Palla Bianca (Weisskogel) reaches 3,738 m (12,264 ft). The main rivers in this region are the upper Adige (Etsch), the Isarco (Eisack), the Noce, and the Avisio, all of which are tributaries of the Adige River, flowing south through the cities of Bolzano and Trento to the Italian city of Verona in the Veneto region.

Winters in the Austrian part of Tyrol are cold and snowy, but summers are moderately warm, despite much precipitation. Average temperatures for December range from -4°C to 2°C (25°F–36°F), and average June temperatures range between 11°C and 24°C (52°F–75°F). The climate in the province of Bolzano is very similar to the climate in Austrian Tyrol and significantly colder than Trentino's climate.

## 3 LANGUAGE

Three languages have traditionally coexisted in Tyrol: German, Italian, and Ladin (or Ladinian), a Rhaeto-Romance language. While German prevails in North, Eastern, and West Tyrol, in South Tyrol the Italian and German languages have been spoken side-by-side since the Early Middle Ages. Ladin is spoken in the Dolomite Mountains of Italy between Trentino–Alto Adige (Südtirol) and Veneto. This regional language is related to the Swiss Romansh, Surselvan, and Friulan. It is officially recognized in Italy and has official rights in the region of Trentino–Alto Adige but not in the region of Veneto.

The agglomerations around the towns of Bolzano and Merano have always attracted speakers of all three language groups, but for a long time they lived side-by-side, with only a limited interest in multilingualism and communication beyond their linguistic community. In the feudal system, the ruling elites were not preoccupied with the languages spoken by their subjects; their own languages of communication were French and Latin. The predominantly rural way of life in the region did not promote contact between the language groups, especially in the case of German- and Ladin-speaking populations living in the alpine valleys. This linguistic situation changed at the beginning of the 19th century, when cultural and national movements equating language with national identity created an interest in the vernaculars. After World War I, when South

Tyrol became part of Italy, and following the rise of fascism in the peninsula, the use of the German dialects and of German was banned in South Tyrol. Many German-language speakers left Italy at that time, some returning only after World War II. The conditions for the peaceful coexistence of the Italian and the German language groups in the region were not promising at that time, and their mutual unease culminated in political clashes and even bomb attacks. In 1969 a set of laws was passed between the Italian and the Austrian governments that made possible the intensive program of protecting the German language in the region of Trentino–Alto Adige, where the German language prevails in the cities of Bolzano and Trento. The debate on the future of minorities in Europe, opened in the 1960s, gradually led to the implementation of a set of protective measures for the members of German- and Ladin-speaking minorities in the region. Moreover, interethnic relations improved significantly in the 1980s, during the years of the economic boom in the region. All this has led to an important degree of bilingualism, especially in the area of Bolzano. With the appearance of a new model of open, multilingual European identity, the privilege of bilingualism has been especially attractive to the young South Tyrolese.

#### 4 FOLKLORE

Some folklore and traditions among the Tyrolese vary by region, but there are traditions that all parts of the Tyrol share.

According to an old courtship tradition, for example, if a young woman presents a young man with a bottle of spirits, she intends to say that he has found favor with her and may visit her at home. If her parents look upon the young man with disfavor, she might lower the bottle at night from her bedroom window. In parts of Eastern Tyrol, invitations to a wedding are conveyed by a best man or “wedding-inviter,” about a fortnight before the event. He goes around the village inviting the people in each house; if he is offered food, it is taken to be an acceptance of the invitation; if he is denied food, the likelihood is that the invited will not attend the wedding. In the Unter Innthal, the bride is often stolen away by a few wedding guests after the ceremony and sometimes taken to the next village or to an inn where the group eats and drinks until the groom appears to pay the bill. In South Tyrol (Ampezzo), weddings usually take place about a fortnight after the betrothal. During this time, the bride is guarded by a chaperon known as “the growling bear” (*brontola*). In West Tyrol, the parents inspect each other’s houses shortly before the betrothal, in order to evaluate the property of the other family. Today, these customs are largely symbolic.

The traditional Christmas market takes place in most German-speaking towns in Tyrol every year, typically from the last Friday of November to December 23. Visitors can buy traditional food and mulled wine and walk along stands selling Christmas wares, inexpensive toys, and souvenirs.

The emblem of Tyrol is edelweiss (“noble white”), a simple flower that grows spontaneously only at high altitudes. Its image is often embroidered or pinned on clothing produced in Tyrol, as a symbol of regional pride.

#### 5 RELIGION

Tyrol is a region where Roman Catholicism, the dominant religion of the Habsburg Empire, prevails among all three language groups. Although in the early 16th century a large part

of Tyrol accepted the teachings of the Reformation, the region reverted to Catholicism following the crushing of the large peasant revolt in 1525. Roman Catholic churches can be found in even the smallest Tyrolese hamlets. Wooden outdoor sanctuaries adorned with images of the Virgin Mary, Jesus, or different saints are a common sight on Tyrolese roads.

The presence of Jews in Tyrol was documented as early as the beginning of the 14th century; in 1520 a decree was issued expelling all Jews from the region. Some returned, numbering by the end of the 18th century only eight families, living in Innsbruck and Bolzano. The center of Jewish life in today’s Tyrol is the city of Innsbruck.

#### 6 MAJOR HOLIDAYS

Most major holidays in Tyrol are based on the Catholic calendar. The feast day of St. Nicholas on December 6 is the traditional beginning of the Christmas season. Christmas and Easter, mark the high points of the Tyrolean year. In Tyrol, Christmas is celebrated on December 24, with a large family dinner. A midnight mass on December 24 is an age-old custom, followed in all parts of Tyrol. December 26 is celebrated in Tyrol as St. Stephen’s Day. New Year’s Day is celebrated. Epiphany (January 6), also known as Three King’s Day, is the day that closes the Christmas season.

Other holidays include All Saints’ Day on November 1, a religious holiday during which Tyrolese typically bring flowers to the graves of deceased family members. The time preceding Lent is marked in Tyrol by Carnival festivities. On Easter Monday, many Italian-speaking Tyrolese traditionally have a picnic in the countryside to celebrate the beginning of spring. *Festa della Liberazione* (April 25) marks the end of World War II in the Italian part of Tyrol. Another spring holiday is Labor Day on May 1, celebrating the international workers’ movement. Whit Monday, the day following Pentecost, is a Catholic holiday celebrated at the end of May or the beginning of June. In the Italian part of Tyrol, June 2 marks the day of the Italian Republic. A holiday marking the height of the summer vacation season is the feast of the Assumption of Mary on August 15, when many Tyrolese take time to relax with family and friends during a long weekend. In the Austrian parts of Tyrol, October 26 is celebrated as the Austrian National Day (marking Austria’s Declaration of Neutrality made in 1955).

In addition to these national holidays, towns and villages throughout Tyrol celebrate the feast day of their patron saint.

#### 7 RITES OF PASSAGE

Rites of passage in the traditionally Roman Catholic region of Tyrol have generally coincided with the rites of passage in the Catholic Church: baptism, first Holy Communion, and confirmation are some of the steps in the life of young Tyrolese that are celebrated by a gathering of a large extended family. In the rural areas of Tyrol, traditional marriages still form the basis of communal living; in the urban areas, marriages have often been replaced by cohabitation, although this is still a more common phenomenon in the Austrian part of Tyrol than it is in the Italian part. Another important rite of passage in the life of young Tyrolese is completing secondary school; passing the secondary-school leaving examination called *Matura* (or *Maturità*) is often a reason for a large celebration with family and friends, marking the entry of a young person into the adult world.

## 8 INTERPERSONAL RELATIONS

From the times of the Habsburgs, the Tyrolese inherited a respect for authority. This has included respect for the traditional family, based on the principles of the Roman Catholic faith. Large rural families were, in the past, an essential source of labor on the family's farmstead. While the trend of large families continues in the most isolated areas of Tyrol, families with more than two children have become rare in urban areas and among the population employed in economic sectors other than farming. In a relatively harsh climate, a sense of community and a feeling of solidarity among members are valued very highly and cherished across the generations. Considering that, in many areas of Tyrol, geographical mobility was traditionally low, it is not surprising that the feelings of neighborly common interest and friendship that have bound families to one another for decades, if not centuries, are still attributed great importance. Increased demographic mobility in more urban areas has weakened such attachments, but lasting friendships are still valued very highly in all of Tyrol.

Honesty and directness are highly valued in all personal relationships among the Tyrolese. In family life, older generations are typically shown great respect and afforded deferential treatment.

There are many interethnic marriages in Tyrol now, a phenomenon that was not always approved of in the past.

## 9 LIVING CONDITIONS

In the Italian part of Tyrol, the cities of Trento and Bolzano have enjoyed a reputation as being among the best cities in Italy in which to live. In the entire region of Tyrol, the absence of crime, the general neatness, the efficiency and reliability of public services, the high quality of education, and the pleasant pace of life, have all contributed to making the area very attractive, among both travelers and those looking for a permanent home.

Strict regulations protect the wildlife and vegetation in the region, and they seem to be very effective. Cleanliness of public and private spaces is a tradition and a norm in Tyrol, and recycling is both highly diversified and efficient. Both private gardens and public parks are maintained lovingly and carefully. Public transportation in the region is excellent, with trains and buses connecting cities with the many valleys of the region.

## 10 FAMILY LIFE

In rural areas of Tyrol, families tend to be more traditional, cultivating a division of labor that runs along gender lines. Fathers are still seen as heads of the family, and traditional marriages prevail, with a very low divorce rate. Childcare and housekeeping are typically women's duties, but the work on the farm is often shared between women and men. In urban areas, a different family model prevails, with single-parent families and cohabitations on the rise.

In keeping with an old tradition, the names that are recorded in the parish registers of births, deaths, and marriages by Tyrolean peasants often differ from the names by which these people are known in the community. The appellation given to the owner of a farmstead is often transferred from one owner to the next, so that whoever acquires the land, also acquires a nickname for the rest of his life.

## 11 CLOTHING

Although traditional Tyrolese clothing is still displayed at tourist venues and folk festivals, in daily life it is mostly a thing of the past. In urban areas, the Tyrolese are wearing clothing similar to many urban Western Europeans, incorporating traditional pieces of clothing such as *loden* coats, hats, and jackets for women, men, and children. *Lederhosen* (leather knickerbockers) are a traditional outfit for men; however, they are no longer seen in everyday life very often but remain a symbol of regional pride. *Dirndl*, a simplified version of the traditional Alpine dress for women, consisting of a colorful bodice, blouse, full skirt, and apron, can still be seen in Tyrolese cities, worn by young urban settlers as a wink to their local traditions. Showing pride in one's region and one's origins by wearing a *dirndl* at formal occasions has also been a favorite among the noble women in the Austrian part of Tyrol.

## 12 FOOD

Tyrolese food, similarly to other cuisines of cold mountainous areas in Europe, is high in calories derived from fat. *Crafun-cins da ula verde*, or *schlutzkrapfen* (also known as "lean Tyrolese ravioli") is a type of pasta filled with spinach, parsley, and onion, and eaten during Lent, when meatless dishes prevail. Another traditional meatless dish is *nioch da patac* (potato gnocchi), dumplings made with barley flour, potatoes, and eggs. *Speckknoedel* (bacon dumplings) and *spinatknoedel* (spinach dumplings) are an important part of local cuisine that started out as a way to use stale bread. They are a mixture of dried bread soaked in milk, chopped onion sauteed with bacon, parsley, and eggs, slowly cooked in boiling water, and served with a stew or in hot broth. Similarly prepared are *bales de furmenton* (buckwheat dumplings) and *bales da fuia* (liver dumplings). *Schüttelbrot* is a type of Tyrolese crispbread typically eaten with cheese, ham, or cold cuts, and a favorite in local ski resorts. The spices used in the dish vary, but it can consist of fennel seeds, caraway, fenugreek, coriander, dill, or anise, according to local or individual preferences. *Grosti* are deep-fried pastries that can be prepared savory or sweet and dusted with sugar. They are typically served at Carnival time. Sometimes they are prepared with mashed potatoes and served with sauerkraut in the winter or boiled vegetables in the summer.

Traditional Tyrolese soups include *panicia cun cern sfumida y bales* (barley soup with smoked pork and dumplings), *panicia da venderdi* ("Friday soup" made with dried beans), and *tiroler suppe* (Tyrolean split-pea soup with onion). *Golasc* is a Tyrolean-style goulash, a heavy beef stew spiced with marjoram, caraway, cloves, and paprika. The Tyrol *gröstl* is a traditional food containing potatoes and pieces of cut pork, onion, and butter browned in a pan, and spiced with marjoram, caraway, salt, pepper, and parsley. It is often served with fried eggs or beetroot salad. Another traditional meat dish is *herrengröstl*, or *herrengroschl* (sauteed veal ragout with crunchy potatoes, often served with a side dish of green salad). *Tiroler Leber* (calf liver Tyrolean style) is sliced and fried liver, served with fried chopped onions, capers, lemon, and heavy cream. Polenta is a cornmeal dish traditionally eaten in the rural areas of South Tyrol for breakfast, lunch and dinner; in today's restaurants it has become a side dish served with meat, fish or other dishes, but not as flavorful as the slowly-cooked traditional polenta. Tyrol is also rich in edible mushrooms, and its cuisine reflects that.

A gentleman wearing a Tyrolean hat in Vaduz, Liechtenstein.  
(© Jim Sugar/Corbis)

Some of the popular sweet dishes are: *crafons* (poppyseed doughnuts traditionally made in Val Gardena), *fanzieutes da leva* (another traditional fried doughnut), and *fanzieutes da meiles* (apple-fritters).

South Tyrol is a region renowned for its production of Cabernet Sauvignon and Pinot Grigio wines. The best known Tyrolean wine is *Kalterersee (Lago di Caldaro)*, which should be drunk no later than a couple of years after harvesting.

### **13 EDUCATION**

In the Austrian parts of the Tyrol, all public schools are subject to the educational laws and regulations governing education in the Republic of Austria. Austria has a free and public school system, with nine years of mandatory education. The Federal Ministry of Education funds all primary, secondary, and tertiary (higher) education. Primary and secondary educations are administered on the state level. Private primary and secondary schools (approximately 10% of all primary and secondary educational institutions) are mostly run by the Roman Catholic Church. *Gymnasium* is a secondary school that focuses on general education, as opposed to the specialized education students receive in vocational or professional secondary schools. The series of demanding final written and oral examinations in the last year of *Gymnasium* is called *matura*;

it gives students who successfully pass it access to university. Austria has no tradition of private universities, but this has been changing since 2001, with the law on accreditation of private universities (11 existed in Austria in 2008). Until recently, the only degree in the Austrian university system was a *magister* (a four- to five-year degree with a substantial thesis), but recently, in keeping with the Bologna process of educational reform, some universities have introduced a bachelor's degree. The University of Innsbruck was founded in 1669 and remains one of the best universities in Austria and in Europe. Innsbruck is also home to an important and prestigious Medical University, one of the three medical schools in Austria, and a world center for treatment of ski-injuries.

Educational institutions in South Tyrol are governed by general rules and regulations pertaining to the Italian educational system, with a significant bilingual component (German-Italian, especially in the area of Bolzano), and they are granted a considerably greater degree of regional autonomy than their counterparts in other regions of Italy. The Italian school system starts with primary (five years) and continues with secondary school (divided into two stages: middle school, lasting three years, and secondary school, lasting between three and five years). Any secondary school that lasts five years grants access to the final exam called *maturità*, which grants students who pass it access to university education. Most Italian universities, and the best, are public; they grant university degrees called *laurea* (after three years of study), or *laurea specialistica* (also known as *laurea magistrale*) after 5 years of study and a thesis. The University of Trento (founded in 1962) is considered to be among the very best in Italy (and consistently top ranked in science) and among the most open to international exchange of students and researchers and scientific collaboration. The Free University of Bolzano (founded in 1997) is a private university, and offers free, practice-oriented, multilingual education, oriented towards the local labor market.

### **14 CULTURAL HERITAGE**

The region of Tyrol has traditionally been a mediator between two great European literary traditions: the German-language and the Italian-language literature. An abundance of literature in Latin (clerical texts, inscriptions, letters, scientific writings, and a variety of texts used in daily life) has been found in Tyrol dating from the beginning of its existence as a political unit in the 13th century, until the late 17th century. The birth of literature in Italian and German has generally followed the gradual decline of writing in Latin and started to flourish in the 18th century.

Goswin von Marienburg (14th century), a Benedictine monk and a historian, is particularly known for his chronicles in Latin. Another important representative of the German-speaking group in Tyrol was 15th century theologian and philosopher Nicolaus de Cusa (1401–1464), the bishop of Brixen and one of the most renowned personalities of early Renaissance, a lover of literature from antiquity, and a promoter of religious tolerance. While de Cusa's writings were in Latin, his native German was in his time in Tyrol mostly a vehicle for the oral tradition, folktales, and legends. Aeneas Silvius Piccolomini (1405–1464), later Pope Pius II, was of central-Italian origin, but he spent a significant part of his life in Trento and northeastern Italy and is widely seen as one of the most important representatives of Humanism in Europe. Astronomer

Christoph Scheiner (1573 or 1575- 1650) was a Jesuit, physicist and astronomer famous for discovering sunspots. Jakob Balde (1604–1668), also a Jesuit, was a poet and author of many epic, satiric, dramatic, and lyric verses in Latin and, less famously, German. His contemporary Diego Tafuri de Lequile (1604–1673), Italian court chaplain at Innsbruck, wrote treatises in Italian and Latin, ranging from a noted study on the happy disposition of Austrians to the chronicle of Queen Christina of Sweden's visit to Innsbruck.

With the decline of writing in Latin in the 17th century, Tyrolese intellectuals began to show a more pronounced interest in the vernacular. Simon Pietro de Bartolomei (1709–1763), born near Trento, wrote with particular interest about the many dialects of all language groups of Tyrol and about their history. Karl von Güntherode (1740–1795) dedicated his life to the study of theology and metaphysics and wrote verses and satiric dramas. Yet, only the 18th century saw renewed cultural vitality in the region, for the first time since the advent of Humanism. In the mid-century, poet Bianca Laura Sailente and her husband Giuseppe Valeriano Vannetti found the *Accademia degli Agiati*, where Italian-speaking Tyrolese secular intellectuals and writers could gather, converse, and read their works. Sailente's and Vannetti's son, Clementino Vannetti (1754–1795), never attended university but spent his relatively short life writing and translating from Latin into Italian, writing essays, poems and satirical works, studying different national literatures of his time, and writing treatises on education and the regionalist sentiment in Trentino. Girolamo Tartarotti (1706–1761) from Rovereto, an important center of Italian-language culture in Tyrol, was another representative of the new Tyrolese literature in Italian, and composed works ranging from verses to essays on history and philosophy. Among German-speaking Tyrolese writers of the time, Ignaz Weitenauer (1709–1783) was a philologist and Orientalist, who also wrote lyric and dramatic works, and is widely considered to be one of the best Jesuit dramatists of the 18th century. He also wrote one of the first scientifically based manuals of German orthography. A poet associated with the Romantic movement and the movement for the unification of Italy is Giovanni Prati (1814–1884). In the last hundred years, Tyrolese literatures in Italian and Ladin have been marked by both regional and ethnic themes and the strong interest in the revival of the dialectal. Among the best known modern Tyrolese writers in German are: Anita Pichler (the first South Tyrolean postwar author to become known outside her country, and whose writings mark a formal breakthrough in Tyrolese literature), Helene Flöss, Sabine Gruber, Joseph Zoderer, Norbert Conrad Kaser (who was strongly influenced by Italian poetry, and wrote both in German and Italian), and Gerhard Kofler (also a bilingual writer of essays and poetry).

## 15 WORK

The estimated population in the Austrian part of Tyrol is 700,000, but its distribution is uneven, with the highest concentrations in the Inn and Drava river valleys and around the cities of Innsbruck, Schwaz and Kufstein. Most inhabitants of the rural areas are engaged in pasture farming, dairy farming, forestry, and cattle and livestock raising. Wheat and rye are grown in the Inn valley, while the city of Innsbruck is a traditional center of textile industry. The size of industries is relatively limited; goods include pharmaceutical and chemi-

cal production and electrical appliances. The population in the Italian part of Tyrol is estimated to be 1,008,000, with the highest concentration around the city of Trento, and in the area between the cities of Bolzano and Merano. Italian speakers constitute a majority with about 60% of the total population, German around 35%, and 5% speak Ladin.

The economy of the region is based on tourism (especially in winter and summer), excellent wine production, dairy products, timber, and fruit. Its industries are concentrated around the production of metals, chemicals, and paper. The region is also a major producer and exporter of hydroelectric power.

Tourism is a major source of employment and revenue in the region. Medical University in Innsbruck and the University of Trento are internationally renowned for their innovative scientific work and consistently attract a highly educated international workforce to the region.

The Tyrolese are renowned for being honest and loyal business partners and for cultivating high ethical standards in all professions; in international collaboration, they expect to find the same qualities in their counterparts from other countries.

## 16 SPORTS

Tyrol is known for some of the best ski slopes in the world. Famous ski resorts in the region are Cortina d'Ampezzo, Kitzbühel, Ischgl, Wilder Kaiser, and St. Anton (where the world's first ski school was founded). Skiing represents not only a popular pastime, but is also a significant source of income in the highly developed Tyrolese tourist industry. The skiing season at the famous five glaciers (Kauertaler, Pitztaler, Stubai, Hintertuxer and Sölden-Ötztal) starts as early as mid-October and is open-ended, with excellent powder-snow. More than 30 ski areas feature monoskiing facilities, ski lifts, and expert service, with a wide range of slopes for monoskiers and the disabled. Mountain guides and mountaineering instructors provide instruction in winter sports, such as snowshoe hiking, icefall climbing, glacier crossing, and ski mountaineering. Tyrol is renowned for its excellent and highly skilled ski guides. In the summertime, mountain trekking and climbing are the most popular sports, both among the Tyrolese and the tourists.

## 17 ENTERTAINMENT AND RECREATION

Alpinism and winter sports are a favorite pastime of both the Tyrolese and the visitors to the area. Tyrol's many mountain shelters are generally open from May/June to October. Visitors may obtain temporary hunting and fishing licenses. Mushroom-picking is allowed in some parts of Tyrol and not in others because fungi are considered to be an integral part of the Alpine biosphere and essential nourishment for the animals. Merano was a popular 19th century spa town, and today the town of Brixen is known for its weight-loss clinics, hydrotherapy, and fashionable health tourism.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The tradition of woodcarving is old in Tyrol, largely thanks to the abundance of forests in the region, and the need for the Tyrolese to while away the many long winter evenings, while talking and telling legends and tales to one another. The artwork produced includes statues of biblical figures and saints, toy animals, pretty household objects, ornaments for crèches, and picture frames. In some areas of the region, woodcarving has become a real industry, with carvings sold all over Europe.

## 19 SOCIAL PROBLEMS

Many social problems developing in other, highly urbanized areas of Europe and the world are almost absent in Tyrol. Overdevelopment in recent decades, along with the greatly increased traffic and large tourist population year-round are widely seen as the biggest threats to Tyrol today. The heavy traffic on the highway through the mountain pass of Brenner (Brennero) has been at the center of environmentalists' concerns. Many local families now own several cars, and commercial traffic between northern Europe and the Italian peninsula continues to increase. Environmentalists in Tyrol have lately gained strength, denouncing air and water pollution, projects that include more asphalt and concrete roads, as well as golf courses and other large sports installations.

The crime rate is very low in all parts of Tyrol, making it a very attractive residential area for people of all ages.

## 20 GENDER ISSUES

Laws and regulations pertaining to women's and gay rights differ in the parts of Tyrol belonging to Austria from those in the parts belonging to Italy.

In 1918, women were given the right to vote in the newly founded First Austrian Republic. The University of Vienna first started accepting women in 1900. In 1976 a law established the principle of equal rights and responsibilities for married men and women, and equal rights and responsibilities in caring for children. The Equal Treatment Law of 1979 made various forms of discrimination against women illegal, establishing the principle of equal pay, and making it possible for women to receive compensation if they have been victims of sexual harassment in the workplace. Another goal of this law was to increase the number of women employed in government agencies. In 1925 Italy granted limited, and in 1945, full voting rights to women. Strong Italian feminist movement of the 1970s and 1980s stressed the demand for the complete equality of women in the workplace and other areas of public life, mobilizing both women and men in the issues of equal pay, reproductive rights and violence against women. When it comes to university education, the number of women in Italy who attend university now exceeds the number of men. Women in northern Italy (e.g. Tyrol) have a higher rate of employment than women in southern Italian regions. In spite of these legislative improvements, traditional roles prevail in the homes of many rural Tyrolese, with men still considering the majority of household and child-rearing tasks to be "women's work." This situation is different in urban areas, where more progressive attitudes towards sharing household tasks are the norm.

Abortion in the Austrian part of Tyrol is available upon request up to 14–15 weeks of pregnancy. Beyond that time, and up to 24 weeks of pregnancy, the abortion is possible only if the mother can show that there is risk to her mental or physical health, or to the health of the fetus. In the Italian part of Tyrol, Italian abortion laws govern reproductive rights. There, abortion became legal in 1978, and is performed free-of-charge in public hospitals and private clinics authorized by public health authorities. Surrogacy and egg donation are banned in Austria. In 2003, Italy banned use of donor sperm, eggs, or surrogate mothers, and restricted assisted fertilization to heterosexual couples in long-term relationships.

Gay rights are slowly gaining strength in Austria, a country generally seen as moderate when dealing with gay rights. Ho-

mosexuality in Austria was legalized in 1971, and homosexuals are not excluded from military service. While the first parliamentary debates on the issue took place in the mid-1990s, at the federal level, anti-discrimination laws pertaining to sexual orientation were introduced in 2004, and there is now discussion in Austria to provide a possibility for gay couples to register their partnership. Austria recognizes the right of the person not to testify against their same-sex partner. In 2006 the first legal same-sex marriage came into being when a transsexual who became a female was allowed to switch gender while remaining married to his wife. 49% of Austrians support gay marriage. The gay scene is particularly strong in Innsbruck, with numerous gay-friendly cafés and clubs, while rural areas remain generally more conservative. In the Italian-speaking part of Tyrol, public support for gay rights remains somewhat more subdued (only 31% of all Italians support same-sex marriages). Since the late 19th century, there have been no laws against homosexual practices in Italy, although homosexuals were often persecuted by the Fascist regime and during World War II. Homosexuals are not excluded from serving in the Italian military forces. Since 2003, discrimination based on sexual orientation has been illegal, but same-sex couples still have no shared rights regarding property, inheritance or social benefits. Although many Italian regions have since 2005 passed resolutions in support of same-sex civil unions, Trentino–Alto Adige is not among them. The gay scene in Trento and Bolzano is relatively strong, while in the countryside more traditional attitudes prevail.

# UDMURTS

**ALTERNATE NAMES:** Votyaks (former)

**LOCATION:** Russia

**POPULATION:** 637,000 (2002)

**LANGUAGE:** Udmurt; Russian, Tatar

**RELIGIONS:** Eastern Orthodox Christianity; native Udmurt religion

## <sup>1</sup> INTRODUCTION

The Udmurts are a Finno-Ugric people inhabiting the Russian Federation. In many sources, especially those dating from before 1917, the Udmurts are commonly referred to as *Votyaks*. The traditional homeland of the Udmurts is bordered to the south and east by the Kama River, a major tributary of the Volga River, and to the west by the Vyatka river, a tributary of the Kama. It is unclear when the ancestors of the Udmurts migrated into this area, but it appears that the Udmurts preceded not only Turkic and Slavic groups in the area, but even other Finno-Ugric groups such as the Maris.

The Udmurts have never lived within their own state, and throughout history they have been the subjects of numerous empires and other states. It is likely that the Udmurts became the subjects of the Volga Bulgarians, a Turkic group who in the early 8th century formed the first state in the Volga region to appear in historical sources. Udmurts first appear in historical sources only in the 12th century, in a travel account of the Arab traveler Abu Hamid al-Gharnati. With the conquest of Volga Bulgaria by the Mongols in the 1230s, the Udmurts found themselves subjects of the Mongol empire, and later the Golden Horde. After the collapse of the Golden Horde in the early 15th century, the Middle Volga region came under the domination of the Kazan Khanate, a Tatar and Muslim state. It was during the late 14th and early 15th centuries that groups of northern Udmurts came under Russian rule, first under the rule of Vyatka, and later under Muscovite rule. It was only in 1552, after the Russian conquest of Kazan, that the entire Udmurt ethnic territory came under Russian domination, and the Udmurts have remained under Russian rule to the present day. After the Bolshevik Revolution of 1917, the Soviet authorities, in keeping with the policy of granting at least the appearance of cultural and territorial autonomy to the national minorities of the former Russian empire, created the Udmurt Autonomous Soviet Socialist Republic (UdASSR), which was subordinate to the Russian Soviet Federative Socialist Republic (RSFSR). With the collapse of the Soviet Union in 1991 and the emergence of the former RSFSR as the newly independent Russian Federation, the former Udmurt ASSR remains dependent upon Russia but was renamed the Republic of Udmurtia.

## <sup>2</sup> LOCATION AND HOMELAND

According to the Russian census of 2002, there were 647,000 Udmurts in the Russian Federation, of whom 460,500 inhabited the Republic of Udmurtia. Some 120,000 Udmurts inhabit the neighboring regions of Tatarstan, Bashkortostan, the Mari Republic, as well as the Russian *oblasts* of Kirov, Perm', and Sverdlovsk. In addition, smaller Udmurt communities are located in Siberia (Krasnoirsksk *krai*), Kazakhstan, Central Asia, and the Ukraine. In the Republic of Udmurtia, Udmurts actu-

ally form a minority, numbering about 30% of the population. Russians account for about 60% of the population, and Tatars for 7%.

The Republic of Udmurtia covers a territory of 42,100 square kilometers (16,250 square miles). Before World War II, most of Udmurtia was covered in evergreen and deciduous forests. As a result of severe deforestation that took place in the later Soviet period, Udmurtia's forests have greatly diminished, yet they still cover much of the republic. The average temperature in January is  $-15^{\circ}$  to  $-14^{\circ}\text{C}$  ( $0^{\circ}$  to  $2^{\circ}\text{F}$ ) and the average July temperature is  $17^{\circ}$  to  $18^{\circ}\text{C}$  ( $64^{\circ}$  to  $66^{\circ}\text{F}$ ). Udmurtia can be categorized as having a cool continental climate.

The capital of Udmurtia is the city of Izhevsk, with a population of around 700,000. Izhevsk was and continues to be a predominantly Russian city and an important center for the Russian armaments industry.

The Udmurts' traditional economy consists of cereal agriculture, supplemented by hunting, fishing, and gathering forest products. Cereal and other agriculture continue to be the mainstays of the economy in rural Udmurt communities, although manufacturing plays an important role in the overall economy of Udmurtia.

## <sup>3</sup> LANGUAGE

The Udmurt language belongs to the Permian subgroup of the Finno-Ugric language family. It is closely related to the Komi language spoken in the Russian Federation's Komi Republic and more distantly related to Finnish and Estonian. Udmurt is divided into northern, central, and southern dialect groupings, but all dialects are mutually comprehensible, with the exception of the so-called Besermian dialect spoken in northern Udmurtia by approximately 3,000 people as of 2002. This dialect, which some linguists consider a separate language, differs substantially from the other Udmurt dialects. The origins of the Besermians themselves, like their dialect, is also puzzling. They do not consider themselves Udmurts, and it appears that they are descended from Turkic Muslims who settled the region both before and after the Mongol conquests of the 13th century.

Most Udmurts are fluent in their native language, and nearly all are fluent in Russian as well, if not actually native speakers of Russian. Fluency in Tatar is also common in the Udmurt communities located in Tatarstan and Bashkortostan.

Udmurts typically have a first name, a patronymic (the father's first name), and a surname. Since the imposition of Christianity on the Udmurts in the 18th century, most Udmurts have Russian names such as *Ivan*, *Grigorii* and *Sergei*. However, especially among the southern Udmurts, who remain "unbaptized" to the present day, Muslim and Turkic surnames (such as *Gabdulla*, and *Mukhammed*) and given names are frequently encountered, as well as Udmurt "pagan" names.

## <sup>4</sup> FOLKLORE

The Udmurts have a rich folklore tradition consisting of heroic legends, folktales, and an especially rich body of songs. A significant part of Udmurt folklore consists of specifically religious genres such as incantations, spells, and prayers. Similarly, many Udmurt songs are associated with specific religious ceremonies as well as specific festivals and other events such as weddings and funerals.

Of particular interest is the cycle of legends surrounding the heroic figure Eshterek, who typically appears as an Udmurt hero who defends his people from the Tatars. An older layer of historical legends also describes the battles of Udmurt heroes against Mari invaders. Udmurt folklore has retained many mythological features, and many spirits and deities from Udmurt native religion appear in the folklore of both “unbaptized” and Christian Udmurts.

## 5 RELIGION

Today the majority of Udmurts professing religious belief are Eastern Orthodox Christians, although a significant minority of Udmurts, especially those inhabiting southern Udmurtia, Tatarstan, and Bashkortostan, have retained their formal adherence to native Udmurt religion and commonly refer to themselves as “unbaptized” Udmurts. Over the centuries Udmurt native religion has by no means remained static, and in fact has proven itself to be rather dynamic. Nevertheless, certain fundamental features can be identified as permanent features of Udmurt native religion. Udmurt native religion had and continues to have a communal orientation, and many of the ritual prayers and sacrifices are held in conjunction with the gathering of the village. Furthermore, Udmurt beliefs and rights are closely connected with both agriculture and the agricultural calendar and the veneration of the spirits of the community’s ancestors.

At the summit of the Udmurt pantheon is Inmar, the supreme god. Today, the Christian Udmurts use this term to refer

to the Christian God as well. Traditionally, Inmar is conceived of as inhabiting the sky. Inmar’s counterpart for the earth is Mu Kyldysyn. Similarly, there are a host of other spirits associated with numerous natural features and phenomena, such as wind, water, forests, and so forth.

Traditionally, Udmurt society itself was structured along religious lines. Udmurt society was divided into approximately 70 clans, and a clan was united not only by kinship but also by the veneration of tutelary spirits known as *vorshuds*. A *vorshud* was both a spirit and a shrine at which the members of the clan performed ceremonies and offered sacrifices.

## 6 MAJOR HOLIDAYS

Traditional Udmurt holidays were closely tied to the agricultural calendar and involved feasting, singing, and dancing, as well as prayers and offerings to the ancestors and other spirits. This characterization is equally valid for “unbaptized” Udmurts, and the Christianized ones, because the Eastern Orthodox holidays were themselves closely connected to the agricultural calendar; on that level, the transition from native to Christian holidays did not significantly alter their celebration by the Udmurts. Similarly, Udmurts in Bashkortostan and Tatarstan continue to celebrate the agricultural festivals of their Turkic and Muslim neighbors, such as the Tatar festival of *Sabantuy*. In Udmurtia, an especially important Udmurt festival is *Gerber*, the plow festival, which takes place in late June. Among “unbaptized” Udmurts, this festival, involves a sacrifice of a sheep to the field spirits, as well as feasting, dancing, and games, especially horse racing.

During the Soviet era, authorities discouraged the Udmurts’ traditional religious holidays, both Christian and native, and the observation of the sanctioned Soviet holidays became widespread among the Udmurts. Since the fall of the Soviet Union, Udmurts have continued to celebrate some of these holidays, especially New Year’s Day (January 1) and Victory Day (May 9).

## 7 RITES OF PASSAGE

Udmurt rites of passage and life-cycle rituals were closely bound with native religious beliefs. These rituals and rites continue to be widely observed among both Christian and “unbaptized” Udmurts. In villages, childbirth usually took place in the family’s bathhouse and was attended by a midwife. When the childbirth was successful for both mother and child, the midwife performed a prayer of thanks and gave the child a provisional name, which was changed as the child grew older. Udmurts typically used amulets to protect the child, which was believed especially prone to illnesses borne by harmful spirits.

The most elaborate of the Udmurt rites of passage is the wedding ceremony, which traditionally involved very complex rituals and extensive feasting and other festivities. Of all the native rites of passage, wedding rituals continue to be the most widely observed, especially in rural areas, although civil ceremonies of Soviet origin, especially in urban areas, are also widely observed. Traditional Udmurt wedding rituals varied considerably from region to region. Not only was there specific clothing and specific foods for the rituals, but also a rich repertoire of songs reserved specifically for weddings.

Udmurt burial rituals involved not only the burial of the deceased, but also a series of memorial feasts to ensure the secure transition of the deceased from the realm of the living to the

realm of the ancestral spirits. Among “unbaptized” Udmurts, and to a lesser degree among Orthodox Udmurts, the deceased was buried with grave goods, such as food, drink, household articles, and tools.

In addition to these major life-cycle rituals, another important rite of passage for males were ceremonies relating to military conscription. These ceremonies involved prayers for the health and safety of the young man about to be inducted into the Russian or Soviet army, and they obviously took on special significance in wartime.

## 8 INTERPERSONAL RELATIONS

Udmurt interpersonal relations, including greetings, body language, and gestures, do not substantially differ from those of Russian society as a whole. Both in traditional Udmurt society and in modern times, Udmurts place a strong emphasis on showing hospitality to guests, and between Udmurt guests and hosts there was even a repertoire of songs to be sung.

## 9 LIVING CONDITIONS

Traditional Udmurt society was both isolated and relatively impoverished, and during both the pre-Soviet and Soviet periods, Udmurt communities were periodically affected by famine and epidemics. Northern Udmurt were traditionally poor and continue to be so today as a result of the shorter growing season and poor soil of northern Udmurtia. In urban areas, especially in Izhevsk, living standards approximate those of Russian society in general. Very few Udmurts own their own automobiles, and salaries remain low. In rural areas, the standard of living is especially low, and consumer items are both expensive and often inaccessible.

In Udmurt villages, the inhabitants typically live in one- or two-room wooden houses and to a large degree depend on their gardens and family livestock for food. Nearly all villages have electric power, but almost no houses have indoor plumbing. As a rule, water is obtained from wells or streams.

Because very few Udmurts possess their own automobiles, they depend on public transportation. Larger cities are served by an extensive rail and bus system, but in rural areas bus service is very erratic, and many small or remote villages are not served by any sort of public transportation. In these cases, villagers hitch rides with passing trucks or cars, ride horses or horse-drawn wagons, or simply walk from one village to another. All travel in rural areas is exceedingly difficult in winter.

## 10 FAMILY LIFE

Before World War II, family size was large. Although infant mortality was very high, a woman could frequently have six or more children survive into childhood. In rural areas, child-rearing was to a large degree a communal matter, and children usually found themselves in a large extended family. Beginning in the later Soviet period continuing to the present day, the birth rate among Udmurts has been relatively low, averaging less than two children per family. In modern society, marriage and divorce involve simple civil procedures, and both are easily obtainable. First marriages occur around the age of 20, but there is also a high divorce rate.

Traditionally, and in many rural areas today religious rites, including sacrificial rites, remain an important element in both family cohesion and religious tradition. Families in rural

areas retain their own family shrines and ceremonies, which exist alongside larger communal and even regional shrines.

## 11 CLOTHING

Traditional Udmurt clothing was functional and designed for both agricultural work and harsh winters. Summer clothes were usually made of linen, but wool garments were also worn year-round. In winter, woolen garments, as well as reversed sheepskin coats were worn. Udmurt folk costumes were worn on festive and ceremonial occasions, and these varied considerably from region to region. Typically, the folk costumes of the northern Udmurts were mostly white in color, and featured intricate embroidery. The southern Udmurts wore more colorful clothing and, in terms of fabric and design, their clothing was influenced to a degree by Tatar folk dress. One interesting feature of Udmurt folk costumes was the use of silver coins, which were fastened together as chest ornaments and on headgear, to display the wealth of a woman's family. Elements of traditional clothing are still occasionally worn, especially by older women in rural areas, but the clothing of most Udmurts today differs in no way from that of Russian society as a whole.

## 12 FOOD

The main staples of the Udmurt diet were, and continue to be, cereals such as rye, oats, barley, and to a lesser extent, wheat, all of which were usually baked into bread. In addition, during the Soviet era, potatoes became an important feature of the Udmurt diet. Vegetables such as cabbage, carrots, and onions also played an important role in their diet. The most common types of meat are pork, chicken, mutton, and to a lesser extent, beef. Furthermore, the famous Russian dumpling dish, *pelmeni*, is said by Udmurts to be of Udmurt origin, coming from the Udmurt words *pel'* (ear) and *nian'* (bread). Among common beverages are tea, beer, vodka, and a home-made liquor called *kumyshka*, which is a necessary element in festive occasions.

Modern-day eating utensils differ in no way from those used in Russia as a whole. Traditional utensils were typically made of wood, and of special note were large spoons, or ladles, which were elaborately and artistically carved, and which were also used in religious libation rituals.

There are usually three meals a day, with the mid-day meal being the heaviest.

## 13 EDUCATION

Before the Soviet era, the only kind of education afforded Udmurts was what was offered in Russian Orthodox religious institutions; there was no formal educational apparatus for “unbaptized” Udmurts, although there is evidence that some Islamized Udmurts in the 19th century were studying in *madrasas* of Bukhara. As a result, illiteracy was widespread in Udmurt communities. During the Soviet period, literacy increased substantially, and Udmurts were granted access to Soviet education institutions. Instruction in the Udmurt language, however, was limited to primary schools. In the later Soviet period, Udmurt was dropped as a medium of instruction in Udmurtia itself, and it came to be taught only as a separate subject in an otherwise Russian curriculum; however, Udmurt was retained as a medium of instruction in the Udmurt villages of Tatarstan and Bashkortostan. Most Udmurts have the equivalent of a high school education. As Russian citizens Udmurts study in

the larger universities outside of the republic in Kazan, Ufa, St. Petersburg, and Moscow. More recently Udmurt scholars have been able to study in Finland and Estonia as well.

#### 14 CULTURAL HERITAGE

The richest element of the Udmurts' cultural heritage is their folk culture, which has an amazingly rich collection of music, songs, and other oral traditions. However, in keeping with Soviet nationality policies, after 1917 the Soviet government encouraged and funded the creation of a formal "cultural" apparatus, which included the creation of formal literature, including poetry, prose, and drama, as well as music and visual arts. Thus, in Izhevsk there is an Udmurt theater as well as substantial publishing in the Udmurt language.

#### 15 WORK

In rural areas, the vast majority of Udmurts are engaged in agricultural work, which tends to be organized along the collective system. These collectives are known by the Soviet term *kolkhoz*. However, because of the limited access to consumer goods, much energy is expended on private plots, where families grow their own potatoes, fruits, and vegetables. Much of the summer is spent preserving fruits, vegetables, and meat for the winter. Urban Udmurts commonly have smaller plots located in the suburbs or in nearby rural communities and likewise expend considerable energy growing and preparing food for the winter and spring.

#### 16 SPORTS

Traditionally, sports such as wrestling and horse racing took place during festivities. Today spectator sports such as soccer and hockey are popular among Udmurts.

#### 17 ENTERTAINMENT AND RECREATION

In rural areas, religious festivals and weddings not only fulfilled religious requirements, but they were also important sources of entertainment and recreation. Winter sports such as skating and cross-country skiing are popular recreational activities today, and in urban areas movies, theater, and concerts are also popular forms of entertainment.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Udmurts are especially renowned for their skill in woodworking and in weaving. Although most examples of woodworking and weaving are of a functional nature, the artistic level evident in many works remains very high.

#### 19 SOCIAL PROBLEMS

Many of the social problems that plague Russian society as a whole are especially severe in Udmurtia. One of the main social problems is alcoholism, which is endemic throughout Russia, but which is exacerbated in the rural areas of Udmurtia by poverty and the lack of recreational diversions. In addition, Udmurtia's suicide rate is one of the highest in the Russian Federation. Besides these social pathologies, the economic crisis following the collapse of the Soviet Union has affected Udmurts no less than the rest of Russian society, resulting in high unemployment and wages that are both low and erratically paid.

Another problem facing the Udmurts collectively is the issue of population decline; the population declined from 746,000 in 1989 to an estimate of 637,000 in 2002. While cultural assimilation is certainly a factor, it appears likely that collectively Udmurts are affected particularly severely by the same sorts of social and health problems causing population decline in the Russian population as a whole.

#### 20 GENDER ISSUES

The role of women in Udmurt society differs in certain ways from the role of women in the neighboring Russian and Tatar communities. Udmurt clans are matrilineal, and therefore some observers of Udmurt family life have suggested that this in some way elevates the status of women. In any case, in both rural and in urban settings, Udmurt women bear the double burden of both agricultural or wage work and child-rearing and domestic duties. In this respect, the position of Udmurt women is equivalent to that of women in Russian society as a whole.

The role of women in Udmurt society changed most drastically after World War II when a large proportion of Udmurt women were mobilized into the industrial workforce. At the same time, Udmurt women began to gain better access to educational opportunities.

# UKRAINIANS

**LOCATION:** Ukraine

**POPULATION:** Over 45 million [total population of country; 77.8% ethnic Ukrainians, 17.3% Russian, 0.6% Byelorussians, 4.3% others]

**LANGUAGE:** Ukrainian

**RELIGION:** Ukrainian Orthodox – Moscow Patriarchate, Ukrainian Orthodox—Kiev Patriarchate, Ukrainian Autocephalous Orthodox, Ukrainian Greek Catholic, Roman Catholic, Protestant, Jewish, Muslim, others

## <sup>1</sup> INTRODUCTION

Ukraine has had three periods of national statehood. The first period existed from the 9th to 14th centuries AD and was known as Kievan Rus', with its capital in Kiev. The second was the Cossack period, lasting from the middle of the 17th to the end of the 18th centuries. The third period began with the fall of tsarist Russia and the establishment of a sovereign Ukrainian state in the form of the Ukrainian National Republic on 22 January 1918; this state lasted only a few years before it was partitioned among Russia, Poland, Czechoslovakia, Hungary, and Romania. During the German occupation in June 1941, the Ukrainian people made an unsuccessful attempt to reclaim their sovereignty in Lviv, the capital of Western Ukraine. As a result of peace treaties signed at the end of World War II, all the Ukrainian territories were integrated into the multinational Soviet Union in the form of the Ukrainian Soviet Socialist Republic.

With the spread of Gorbachev's *perestroika* and *glasnost* policies across the Soviet Union in the 1980s, people in Ukraine and other republics began demanding more freedom and ultimately independence. In August 1991 Ukraine became independent; elected Leonid Kravchuk (a former Communist) as its president; and began implementing democratic, free enterprise policies as well as gradual economic reforms and nuclear disarmament. In 1994 Leonid D. Kuchma, former director of the world's largest rocket factory and prime minister under President Kravchuk was elected president. President Kuchma developed friendly political and economic relations with the West and enacted economic reforms to improve the country's growth prospects. On 29 June 1996, the Ukrainian Parliament approved the first Constitution of Ukraine, just a few weeks before the fifth anniversary of its independence.

Tensions between ethnic Ukrainian and Russian populations in Ukraine compounded by political pressures from Russia and the United States reached a peak during the campaign leading up to the 2004 presidential elections. Prime Minister Viktor Yanukovich, supported by Russia, and opposition leader and former Prime Minister Viktor Yushchenko, supported by the West, came out in a tie. The ensuing runoff election on November 21 designated Yanukovich as the winner. However, many Ukrainian citizens felt that this result was fraudulent. Hundreds of thousands of people took to the streets of Kiev and other cities to protest the election of Yanukovich and to express their support for Yushchenko. As a result of these demonstrations, now called the "Orange Revolution," a re-vote took place in which Yushchenko received a majority of votes and took presidential office on 23 January 2005.

Following his inauguration, the country's new president appointed Yulia Tymoshenko as his prime minister. One of the major figures in the Orange Revolution, Tymoshenko brought strong leadership into the heart of Ukrainian government. Opposed to some of the Yushchenko's reforms and incentives, Tymoshenko left the government. However she returned for the 2006 parliamentary elections. Although the Party of Regions won a plurality of the vote, President Viktor Yushchenko's Our Ukraine—People's Self Defense Bloc and former Prime Minister Yulia Tymoshenko's Bloc formed a coalition and established a government with Tymoshenko as the prime minister. Prime Minister Tymoshenko is considered a possible candidate for president of Ukraine in 2010.

Today Ukraine enjoys a wide range of active political parties and blocs, from leftist to center and center-right to ultra-nationalist. Occupying a strategic position at the crossroads between Europe and Asia and possessing rich farmlands, a highly trained labor force, and a good education system, Ukraine has the potential to become a major European economy.

## <sup>2</sup> LOCATION AND HOMELAND

Ukraine, commonly referred to as the "breadbasket of Europe," covers about 604,000 sq km (233,000 sq mi) of land in Eastern Europe. Territorially, Ukraine is the second-largest country in Europe after France. It is bordered by the Black Sea to the south; Moldova and Romania to the southwest; Hungary, Slovakia, and Poland to the west; Belarus to the north; and Russia to the north and northeast. Approximately 65% of the soil is *chornozem* (*chornozem* in Ukrainian simply means *fertile, black soil*). Traditionally an agricultural area, Ukraine grows wheat, maize, buckwheat, all kinds of vegetables, fruit, melons, and berries. Ukraine is also known for its plentiful mineral resources.

Almost the entire country of Ukraine is a vast flat plain, bounded by the Carpathian mountains in the southwest, the Black Sea and the Sea of Azov in the south, and the Crimean Mountains on the southern end of the Crimean Peninsula. The highest point in Ukraine is Mt. Hoverla in the Carpathians, with an elevation of 2,061 meters. The Dnieper is the main river that runs through Ukraine. One of the longest European rivers, the Dnieper is the republic's most important source of hydroelectric power.

In general, the country's climate is temperate continental, except for the southern Crimea, which has a sub-tropical climate. The typical Ukrainian winter is rather mild, with no severe frosts but with regular snowfalls everywhere except in the south. The average winter temperature reaches  $-20^{\circ}\text{C}$  in the north and  $-3^{\circ}\text{C}$  in the south. Summers tend to be hot and dry with occasional showers and thunderstorms.

Kiev, with over 2 million inhabitants, is the capital of Ukraine. It boasts numerous beautiful churches and is known as the Golden Domed City. The Monastery of the Caves (*Pecherska Lavra*) is one of the brightest of Kiev's gems. The Lavra was founded in 1051 and is now part museum and part functioning monastery. Its 40 buildings represent eight centuries of art and architecture. Other major cities in Ukraine include Zaporozhye, Dnepropetrovsk, Dnyeprodzerzhinsk, Odessa, Kharkiv, Lviv and Nikolayev. Crimea is an autonomous republic within Ukraine. It was annexed by Russia in 1783 and transferred to Ukraine in 1954.

### 3 LANGUAGE

Ukrainian is the official state language of Ukraine. Belonging to the East Slavic subgroup of the Slavic languages, Ukrainian employs its version of the Cyrillic alphabet with 33 characters. It shares some vocabulary with the languages of the neighboring Slavic nations, including Russia, Byelorussia and Poland. Ukrainian is the most ancient living Slavic language, as it is the most closely related to Old Slavonic, the common language of the ancestors of modern Slavs. It is also the language that was spoken in the medieval Kievan Rus' kingdom.

Ukrainian is the native language of nearly 40 million people, which makes it the second most widely spoken in the Slavic group of Indo-European languages. It is used particularly widely in central and western Ukraine. In cities such as Odessa and in eastern Ukraine, where there are large concentrations of ethnic Russians, both Ukrainian and Russian are widely spoken. In areas of eastern Ukraine located near the border with Russia, Russian often dominates.

Although during the Soviet regime the Ukrainian language underwent some Russification, there were no profound changes. Ukrainian is presently undergoing a revival and has become the language of choice for television shows, films, science, newspapers, computers, and the Internet in Ukraine.

At present, Ukrainian has nine distinct dialects: Volhynian, Podillya (Podole), Galician, Kiev-Poltava, Southern, two Carpathian dialects (Hursul and Boyko), and two Pokuttya (Bokovynian) dialects. Examples of everyday Ukrainian words include *dobryj den* (hello), *tak* (yes), *nee* (no), *bood laska*

(please), *dyakooyoo* (I thank you), *dyakooyemo* (we thank you) and *do pobachenya* (goodbye). Other useful expressions of everyday speech are: *vybachte* (excuse me), *pereproshuyu* (pardon me!), *neobkhd'no* (it is necessary), *skil'ky?* (how many/much?) and *pravyl'no* (right).

Among most commonly used exclamations (or *vyhuky*) by Ukrainians are the following:

*Os'!*—Here you are!

*Hey!*—Hey!

*Hayda'!*—Let's go! Come on!

*Oy! Oy-yoy!*—expression of surprise

*Okh!*—expression of being tired

*Harazd'!*—Okay! Deal!

### 4 FOLKLORE

Ukrainian culture is rich with beliefs and rituals stemming from pre-Christian times. Folk beliefs are primarily associated with major life events such as birth, marriage, and death and are also connected with nature (clouds, earth, fire, water, etc.). Through the centuries, these ritual and verbal customs have been incorporated into Christian rites.

Legends passed on from generation to generation include tales of the founding of the city of Kiev by the three brothers Kyi, Scheck, and Khoryv and their sister Lybed. A monument in their honor can be found in the capital city of Kiev. Other legends tell of the magical steppe plant called *yevshan zillia* that has the power of bringing lost souls back to their homeland. Children are often reminded of the mythical dragon-slayer Kyrylo Kozhumiaka, who was endowed with tremendous strength and ultimately freed the people of Kiev from the vicious grasp of a dragon. There is also the tale of Oleksa Dovbush. This Ukrainian Robin Hood lived in the Carpathian Mountains, stealing from the rich and giving to the poor. A number of different sites in the Carpathians are named after him.

Furthermore, Ukraine has a rich folk music tradition. Ukrainian folk songs reflect its people's spirit, philosophy, perspective on life, historical events, and regional diversity. Some of the songs were created thousands of years ago. These ancient songs are often dedicated to peasant rituals and agricultural cycles.

Moreover, Ukrainians can boast their own musical instruments, including the *bandura*, *tsympaly* (hammer dulcimer), and *trembita*. The *bandura*, a lutelike instrument with 50 or more strings, is Ukraine's national instrument. The origin of the *bandura* dates back to the 7th century AD, when it was used mainly to accompany epic ballads and folk dances. Beginning in the 15th century and lasting until the 18th century, *Kobzars* (traveling musicians) made the *bandura* into one of the most popular folk instruments. Wandering from village to village, *Kobzars* used the *bandura* to accompany their songs about Cossack (Ukrainian warrior) exploits. Over the centuries, the *bandura* acquired more and more strings and became a fully chromatic instrument with switches for changing tonalities. The *tsympaly* is a Ukrainian hammer dulcimer that originated in the Middle East. It was first brought to Ukraine during the Crusades by wandering Gypsy and Jewish musicians. The earliest mention of the Ukrainian term *tsympaly* dates back to the 17th century.

Another folk instrument called the *trembita* is the Ukrainian version of the alpine horn. It is typically made of spruce that has been split, with a central bore dug out and then glued together and bound with birch bark. Its length ranges from three meters (10 feet) to half a meter. Traditionally, the *trembita* was used to signal events such as the coming of visitors, enemies, or death in the mountain regions of Ukraine. Consequently, a system of elaborate signals was devised. Over time, the *trembita* was adapted to play Christmas carols.

Modern Ukrainian music has come a long way since the *Kobzars*, and Kolomiya rap and Polissia pop enjoy great popularity among Ukrainian youth. Nevertheless, Ukrainian music embedded in ancient traditions is still appreciated. There also has been a revival of Cossack songs and poetry.

In addition to oral folklore, Ukrainians have preserved various forms of folk dances and dancing games. Many dances originated in rural Cossack villages while some of them are rooted farther back in ancient cults. In one of the most popular folk dances called the *hopak*, male dancers compete against each other in performing acrobatic leaps. Although initially many of the folk dances were performed solely by males or females, today more often than not men and women perform these dances together. It is customary for dancers to wear colorful costumes. Folk dancing is performed for special occasions, such as weddings, festivals, and other functions. Folk dance ensembles can be found not just in Ukraine, but in Ukrainian communities throughout the world.

## 5 RELIGION

Because of the geographical proximity of Ukraine to the Black Sea and the Near East, Christianity was found in the present territory of Ukraine as early as the 1st century AD. The Primary Chronicles mention the missionary St. Andrew, who preached the gospel in Kievan Rus' and blessed the hills on which the Lavra Monastery was later built. In the 9th century, the missionary brothers Sts. Cyril and Methodius came from the West and spread Christianity throughout the region. However, Ukrainian Orthodox Christianity came from Byzantium due to the strong ties between Kievan Rus' and Greece. In 954 Olga, the grand princess of Kievan Rus', was baptized, becoming the first Christian ruler of the region. Because of her efforts in spreading Christianity, she was canonized after her death. Her grandson, Prince Vladimir, believing that the new faith would strengthen the state and increase its prestige among its Christian neighbors, adopted Christianity and converted all of his people to the Christian faith in 988. Thereafter, Christian writings and culture spread throughout Kievan Rus'. Vladimir established religious schools and built churches, where the liturgy was given in the Slavonic tongue.

Ukraine's years spent under a communist regime dealt a substantial blow to the Ukrainian Orthodox Church. In the 1930s, the Ukrainian church lost three metropolitans, over 30 archbishops and bishops, and many thousands of priests due to imprisonment and persecution. Finally, the Church was forcibly incorporated into the Russian Orthodox Church. The Ukrainian Catholic Church met a similar fate soon after its abolition by the Soviet government in 1946. There were mass arrests and assassinations, and many priests were exiled to Siberia. Although in 1974 a Council on Religious Affairs was created by the Soviets to abolish religious activity, underground Catholic churches continued to operate. The future cardinal of

the Vatican, Yosyf Slipyj, spent 18 years incarcerated in Siberia. Because of the intervention of U.S. President John F. Kennedy and Pope John XXIII, Cardinal Slipyj was allowed to emigrate to the West. He died in Rome in 1984.

Despite such hardships, the Ukrainian Orthodox Church survived communism. In 1988 Ukrainians throughout the world celebrated the 1,000-year anniversary of Ukrainian Christianity. Famous religious sites in Ukraine include the St. Sophia Cathedral in Kiev, built in 1037 by Prince Yaroslav the Wise; the Pecherska Lavra Monastery, an underground labyrinth of monastic caves in Kiev dating back to the 11th century; St. George's Cathedral in Lviv, a notable baroque monument; a 17th-century wooden church in Yaremcha (Lviv district), and the Pochaiv Lavra Monastery in the Volyn district of western Ukraine, one of the most revered holy sites in Ukraine.

At present the dominant religions in Ukraine are the Ukrainian Orthodox Church and the Ukrainian Greek Catholic Church (which practices Orthodox rites but recognizes the Roman Catholic Pope as head of the Church). The Ukrainian Orthodox Church is further divided between a Moscow Patriarchate and an independent Kiev Patriarchate.

## 6 MAJOR HOLIDAYS

The Ukrainians enjoy celebrating a number of holidays. Christmas, Easter, New Year's, and festival of Ivana Kupala are among the most favorite holidays. The most important holiday in the Ukrainian church is Easter, followed by Christmas. Easter Sunday does not have a set date but changes every year to fall on the first Sunday after the full moon that occurs on or right after the spring equinox. Both Christmas and Easter are celebrated in accordance with the Julian (old style) calendar, resulting in Christmas Day being celebrated on January 7. Some Ukrainian communities abroad, however, celebrate these holidays according to the newer Gregorian calendar.

Many of the Ukrainian holiday traditions can be traced back thousands of years. New Year's carols or *shchedrivky*, spring songs and dances (*vesnianky*, *hahilky*), the old pagan midsummer festival of Ivana Kupala, marriage rites with their ritualized dramas, and celebrations of birth involving godparents and christening linen all stem from pagan beliefs, symbols, and images. Even the Easter egg dyeing that has its roots in Ukraine is a thousand-year-old tradition that predates the arrival of Christianity in the country.

## 7 RITES OF PASSAGE

Traditional Ukrainian rites of passage mark significant life transitions or celebrate milestones in the lives of a group of people. Marriage is one of the most important events in one's life and symbolizes a transition from one social status to the next. Rooted in folk customs, Ukrainian wedding traditions are rich and elaborate. An important component of the marriage ceremony is the special nuptial service in the church. Bearing a child (especially the first one) is another event that marks a significant change in a family's life. There are special puerperal ceremonies that accompany the delivery of a child. Families in some parts of Ukraine consider the one-year anniversary of a child's birth to be a rite of passage. This ancient custom, called *postryshyny*, revolves around cutting the child's hair. Family members and friends gather together to celebrate the child's life. This custom is primarily preserved and practiced in the territory of Ukraine's central lands.

*Ukrainians attend a rally to mark the Day of Unity in Kiev, which is the day the Union of Ukrainian People's Republic and West-Ukrainian Republic happened in 1919. (Sergei Supinsky/AFP/Getty Images)*

Ukrainians also consider funerals to be important rites of passage. Funeral rites ensure not only the easy transition of the souls of deceased persons into the world of ancestors but also the protection of the living from the negative influences of dead spirits. These rituals include burial ceremonies and commemorative gatherings in honor of the deceased person.

One Ukrainian custom that celebrates young people's wish to find true love is the Ivan Kupalo festival. In pagan mythology, Kupalo was the god of love and fertility. In his honor, young men and women gather around streams and ponds, where they build fires and sing songs. Some of them jump over the fire and braid field flowers into wreaths that they send floating on the water. If the wreath floats, they will be lucky in love; if it sinks, they will be unhappy.

## **8 INTERPERSONAL RELATIONS**

Ukrainians are very warm and affectionate people. It is common to greet visitors with three kisses on the cheek. Hugging is another way Ukrainians greet one another, often followed by a hearty handshake. During the early 1990s a popular salutation among Ukrainians was "*Slava Ukraini*" (Glory to Ukraine). Toasting is also a popular custom among Ukrainians. Often in a group, one person will announce a toast, followed by the

words "*na zdorovia*" (to your health), or "*day Bozhe*" (glory to God).

Ukrainians often put their heart and soul into enjoying a hearty meal, a fine drink, and a good laugh. They love having company, often turning a simple visit into a large party, and even outsiders easily become part of the family. It is not unusual for friends at such gatherings to get into heated debates over politics and to openly express their feelings. Ukrainians are also known for their legendary hospitality. Ukrainian hosts will go out of their way to treat their guests to delicious and elaborate meals. When invited to a Ukrainian home, one must be prepared to stay for several courses. It is expected that the guest will at least try every dish offered. Refusing food is considered an insult to the host's generosity. It is common for guests to compliment food and the company. Often times parties, celebrations, and other informal gatherings involve singing. Even in mixed company there are a few songs that everyone knows how to sing.

## **9 LIVING CONDITIONS**

Health is a major issue being discussed in Ukraine since its independence. It was always very difficult for people in Ukraine and other former Soviet republics to get proper medical care.

Soviet-era hospitals lacked funding and equipment, and often even simple procedures like cataract surgeries were impossible, and basic medicines such as aspirin were not available. Doctors would take bribes from families desperate to help their loved ones in the hospital. Today, the health industry is undergoing scrutiny in Ukraine. With the help of Western physicians and pharmaceutical companies, Ukrainians are learning about advanced medicine and surgical procedures.

Another great concern for many people in Ukraine is environmental pollution. Fallout from the 1986 Chernobyl disaster in conjunction with continuous industrial pollution has had a damaging effect on air quality and drinking water. During the 1986 explosion at the Chernobyl nuclear power plant near Kiev, Ukraine and other Eastern European countries were saturated with radioactivity. Once known as the “breadbasket of Europe,” some of Ukraine’s regions are still radioactive and will remain so for decades. At the same time, an environmental movement known as “Green World” has made major progress in fighting pollution and has spread awareness of the problem of Chernobyl throughout Europe. Furthermore, in accordance with its agreement with the Group of 7 and European Commission in 1995, Ukraine permanently closed the Chernobyl plant in 2000. Also, in 2007 Western nations provided the Ukrainian government with funds for construction of a new shelter to be built around the closed plant.

In addition to challenges in the environmental arena, Ukraine since independence has faced major problems with its transportation system. The lack of diversified energy sources, due partly to Ukraine’s disagreements with Russia over oil, has caused numerous delays and inconveniences. Ukraine’s highways consist of about 146,000 km (91,000 mi) of paved road; however, many roads, especially in rural areas, are unpaved or in need of repairs. Only about a third of people in Ukraine own cars, in part because gasoline prices have skyrocketed. Buses and trolleys can be seen in cities but they are not very punctual. However, the subway systems in Kiev, Kharkiv and other major cities are relatively good, and major cities and industrial centers are well connected by railway. Ukraine’s major ports—Kerch, Kherson, Lviv, Odessa, Sevastopol, and Yalta—are also connected by water.

Approximately two-thirds of Ukraine’s population (68%) lives in cities, where high-rise apartments (“*Khrushchovki*”) built during the Soviet era are dominant. Many of these buildings are poorly constructed and overcrowded. About one-third of Ukraine’s population (32%) still lives in rural areas, where there are small villages and homesteads, and the primary occupation is farming. Here the standard of living is lower than in the cities, which is why Ukrainians from rural areas continue to leave their villages to go to the cities.

Ukraine’s annual economic growth rate in 2007 was 6.9%, and its real gross domestic product (GDP) growth amounted to 5.68%. Personal incomes are rising and the level of unemployment is lower than in many other European countries. Yet Ukraine’s economy remains burdened by excessive governmental regulation, corruption, lack of law enforcement, and mounting inflation. In 2006 the inflation rate was 9.08%; in 2007 it reached 12.8%; and in the first part of 2008 it has jumped to 21.9%. The Ukrainian government has taken measures against corruption, and small and medium enterprises have been largely privatized; however, key sectors such as energy and telecommunications remain under governmental con-

trol and require restructuring and partial privatization to be able to compete in world markets.

## 10 FAMILY LIFE

Matriarchy was dominant in prehistoric times in the territory of Ukraine, and women enjoyed full authority in historic times during the rule of Ukrainian princes and Cossacks. Over the centuries the position of women deteriorated, with women becoming inferior to men. However this trend is gradually changing.

Traditional Ukrainian families are large and familial ties are strong, although now most city families can only afford to support one or two children. It is common for family members to help each other so that people place great value in family networks. Young people generally respect their parents and grandparents and are expected to take care of the older folk in the family. Weddings are grand affairs in Ukrainian society, with many associated customs and beliefs. Even though many marriages in recent years suffered divorce, family remains the most important unit in Ukrainian society.

## 11 CLOTHING

Ukrainians generally wear Western-style clothing. Young Ukrainians enjoy following Western trends and fashions and especially like to wear clothing with popular labels like Nike, Levi’s, Guess, Reebok, Adidas, etc. However, on special occasions or holidays, many people dress in national costume.

The earliest known dress worn in the territory of Ukraine dates back to the Scythian and Sarmatian tribes, with men wearing cloth or fur trousers, jackets, and pointed caps. Women dressed in loose shirts, coats with armhole slits, and caps similar to a man’s cap but covered by wraps. As evidenced by archaeological finds, embroidery was used as a Scythian art as far back as the 5th century BC. Learning the art of embroidery from Scythians, Ukrainians made it into a fundamental element of folk costume.

Today, Ukrainian folk costumes come in many varieties depending on a region of Ukraine and could be roughly divided into five regional styles: that of the Middle Dnieper Region, originating in the Hetman period; Polisia; Podilia; central Galicia and Volhynia; and the Carpathian Mountains and Subcarpathia, including Pokutia, Bukovyna, Hutsul, Boiko, and Lemko. In addition to regional differences, costumes differ according to sex, with women’s dress more elaborate and colorful than men’s dress. Time of the year also influences the dress. Despite these differences each costume demonstrates a high degree of sophistication, elegance, and artistry.

## 12 FOOD

Ukrainian cuisine is varied and rich in taste and is an integral part of Ukrainian customs and religious rituals. The ritual breads baked for Christmas and Easter, weddings, and funerals have special meanings and uses. The Easter *paska* bread, wedding *korovai*, delicious *pyrohy* (baked pies with fillings) and *intricate holubtsi* (stuffed cabbage rolls) are all part of the Ukrainian cuisine. *Varenyky* (dumplings) is another quintessential Ukrainian food. They are considered a Ukrainian specialty and have many fillings such as potatoes, meat, cottage cheese, and berries.

Among everyday dishes are soups, stews, sausages, smoked meats, and rye bread. Meals made with beef, lamb, pork, poul-

try, and fish dishes are usually eaten with vegetables and salads. One of the most preferred Ukrainian soups is *borshch*. This red beet soup made with vegetable and meat is usually served for lunch. Ukrainians also eat large amounts of potatoes, cooked buckwheat (*kasha*), and varieties of rye and wheat bread. Dairy products, such as cream, cottage cheese, and eggs, have their prominent place in the Ukrainian diet as well.

The most popular meat is pork and its products, such as ham, sausage (*kovbasa*) and blood sausage (*kyshka*). *Salo*, salted pig's fat, is a traditional food and is used in Ukrainian cooking in a variety of ways. Other authentic Ukrainian dishes include herring a la Kiev and jellied veal roll.

Some popular drinks are tea, coffee, honey liqueur, *kvas*—a special sour drink, and vodka, or *horilka* in Ukrainian. Favorite desserts include pancakes, cakes and fruit dishes with blueberries, cherries, plums, and strawberries. More elaborate desserts that are typically prepared for festive occasions include torts (such as Kyivsky torte) and all sorts of sweet rolls. Ukraine is also known for its high quality honey.

Ukrainians abroad have preserved Ukrainian cooking as part of their cultural heritage. This is particularly true of their festive or ritual foods.

### 13 EDUCATION

Ukrainian children are required to attend school for 11 years, from about the age of 7 to the age of 15. After grade nine, students can continue a general academic program, or they can enroll in technical or trade schools to further their education. In Ukraine there are around 150 schools of higher education, including 9 universities. There are about 80 research institutes. The largest and most popular universities are the Kiev State University, Lviv State University, and Kharkiv State University. Ukrainian parental expectations are no different from those of parents in the West. Education was always considered a vital part of Ukrainian life, and children are encouraged to excel and achieve a higher education. Many young people in Ukraine enroll in medical universities, while other popular practices are law, engineering, and communications.

Education is free and universal; however, the public education system continues to suffer from chronic under-funding. Teachers are paid relatively low salaries. Children from poor families tend to drop out of school. Over 3% of school-aged children are not able to attend school for various reasons. Additionally, a lack of schooling remains a significant problem among the rural population.

### 14 CULTURAL HERITAGE

Ukrainian music is firmly rooted in the rich, mystical folklore of the country. Of the prominent composers or classical music, Mykola Lysenko (1842–1912) is regarded as the first to infuse the genre with a distinct national character. During the 1860s Lysenko collected an impressive assortment of Ukrainian folk songs, many of which he later arranged and published. His original classical compositions are instilled with Ukrainian folk themes and motives. Although Lysenko introduced a Ukrainian flavor in classical compositions, it is Borys Lyatoshynsky (1895–1968) who is considered to be the “father” of modern Ukrainian classical music. His works are strikingly original, conceptually profound, and technically sophisticated. A highly regarded professor at the Kiev and Moscow Conservatories, Lyatoshynsky taught some of the leading Ukrainian

composers of his time. His influence stimulated a progressivism in Ukrainian music, which culminated in the early 1960s with the “Kiev avant-garde,” a movement spearheaded by Valentin Silvestrov and Leonid Hrabovsky. Today, Ukraine is blessed with a sizable group of first-rate composers, including (along with Silvestrov and Hrabovsky) Volodymyr Huba, Ivan Karabyts, Oleh Kyva, Myroslav Skoryk, Yevhen Stankovych, and many others.

Ukrainian pop music also traces its origins to folk music. In particular, its folklore roots are evident in the predominantly strophic structure and propensity of minor mode in pop melodies. The most important Ukrainian pop composer of the late 1960s, 70s, and 80s was Volodymyr Ivasiuk (1949–1979), whose songs were characterized by impulsive rhythmic patterns, rapidly changing harmonies, and sweeping vocal lines tinged with Bukovinian folk motifs. Ivasiuk's compositions were recorded and performed by leading Ukrainian pop artists such as Sofia Rotaru, Kobza, and Smeritchka.

After the disintegration of the Soviet Union in 1991, Ukrainian pop songs became one of the primary vehicles of social consciousness and expression. Independence spawned a number of new pop genres in Ukraine, ranging from rap to jazz and beyond, many of them highly imitative of Western models. At present, the freeing of the Communist grip on the popular music industry has been something of a double-edged sword. What has been gained from the resulting freedom of expression has been offset by lower production standards, the disintegration of marketing mechanisms for recorded music, piracy, and rampant copyright violation.

Beside rich musical traditions, Ukrainians take pride in their literature. The earliest Ukrainian literature was composed in Church Slavonic and dates back to Kievan Rus' (11th–13th centuries). After the Mongol invasion in the 13th century, Ukrainian literature was in decline until the 16th century, when it experienced a revival. Ukrainian literature in the 19th century reflected the rapid development of national consciousness under Russian rule.

At the heart of modern Ukrainian literature lies Ivan Kotliarevsky. His creative *Eneida* (1798), a travesty of Virgil's *Aeneid*, transformed the *Aeneid*'s heroes into Ukrainian Cossacks. Following Kotliarevsky's lead, in 1830 the city of Kharkiv became the center of Ukrainian Romanticism. Meanwhile, western Ukraine gave birth to the “Ruthenian Triad” of Shashkevych, Holovatsky, and Vahylevych, who became the leading writers of Kiev Romanticism. Romanticism found its highest expression among the literary circle, the Writers' Brotherhood of Sts. Cyril and Methodius (1846).

Without a doubt, the most famous Ukrainian poet is Taras Shevchenko. A bard of Ukrainian literature, this 19th century poet portrayed in his works Ukraine's history and satirized Russia's oppression of Ukraine. Next to Shevchenko stands the greatest realist of the late 1800s, Ivan Franko. A poet and novelist whose naturalistic novels chronicled contemporary Galician society, Franko is particularly appreciated for his long narrative poem, “Moses,” that marks the height of his literary achievement. Lesia Ukrainka is a female poet and dramatist who made her unique imprint on Ukrainian literature of the late 19th century, with her poetic dramas and dialogues.

In the first three decades of the 20th century, Ukrainian literature experienced such literary movements as realism, symbolism, neoclassicism, and futurism. After the Russian

Revolution, during a short period of relative freedom, a host of talented writers became critical of Soviet policies, but in 1932 the Communist Party began enforcing socialist realism as the required literary style. During Stalin's great purges of 1933–38, many talented writers were imprisoned or executed, or fled into exile. The post-Stalinist period saw the emergence of a new generation that rejected socialist realism, but they were silenced in the 1970s by repressive measures from the Soviet government. With Ukraine's independence in 1991, many young talented writers have emerged, beginning a new chapter in the history of Ukrainian literature.

## 15 WORK

Ukraine is now in the process of transitioning to a market economy, a move that has been socially and politically difficult due to inflation, unemployment, and general economic uncertainty. Most of Ukraine's population is employed in the agricultural and metalwork industries, machine building, construction, chemical, food, and light industries.

Typically Ukrainians work 40 hours per week and enjoy at least 24 days of paid vacation per year. There are also 10 official holidays in Ukraine. That means that each employee has a minimum of 31 days of paid holidays per year. In accordance with the Labor Law, the minimum employment age is 17 years. Although a monthly wage minimum has increased, as of 2007 it was only \$90 (460 *hryvnia*). Evidently, the minimum wage does not provide a decent standard of living for a worker and his or her family. Consequently, many people have a second job or are engaged in some kind of entrepreneurial activity, such as small family business. This is where family networking and family support plays an important role.

The Constitution of Ukraine in conjunction with the Labor Law both preclude discrimination based on race, color of skin, political, religious and other beliefs, sex, ethnic and social origin, property status, place of residence or other characteristics. In practice, however, men do have more opportunities than women. Very few women in Ukraine hold top managerial positions in the government or private industry. Ukraine has only 8.7% female representation in parliament. Yet, Ukrainian women are present in politics and these women politicians are often extremely powerful—for example Prime Minister Yulia Tymoshenko, who currently heads her own parliamentary bloc.

Additionally, women are granted generous maternity leave. Women enjoy up to 70 calendar days of paid leave before childbirth and up to 56 calendar days after. The payment is provided by the Social Security Fund and is based on levels of income used for social security contribution purposes. To encourage families to have more children, additional paid leaves are granted to women who have two or more children under the age of 15 or a disabled or adopted child and to single parents. Workers who are engaged in part-time studies may also be considered for additional vacation leave.

## 16 SPORTS

Ukrainians play many sports, including soccer, volleyball, track and field, basketball, hockey, skating, and swimming. Soccer is undeniably the most popular sport in Ukraine, with the most popular team being Dynamo Kiev. It is common to see youngsters playing soccer and rugby in the streets of Ukraine. Impressively, the Ukrainian team was the first soccer team to

qualify for the 2006 World Cup Finals in Germany. In addition to soccer and rugby, many Ukrainians play cricket. Numerous cricket clubs include Kiev Cricket Club, Kharkiv Cricket Club, Crimea Cricket Club, Vinnytsya Cricket Club, Ternopil Cricket Club, Donetsk Cricket Club, and Luhansk Cricket Club.

Ukrainian athletes do very well in the summer and winter Olympic Games and have participated in the Olympic Games since the 1950s. Famous Ukrainian medalists include Larysa Latynina, the gymnast awarded a record 18 medals (nine gold), swimmer Yana Klochkova (two gold medals, 2000), and pole-vaulter Sergey Bubka (gold, 1988). At the 2004 summer Olympic Games in Athens, Ukrainian competitors won a total of 23 medals (nine gold medals, five silver, and nine bronze), finishing 12th in overall team standings. Ukrainian athletes also compete in the Winter Olympics. The 1994 Winter Olympics brought Ukraine two medals; in the 1998 Winter Games, Ukrainians won one medal, and in the 2006 Winter Olympics Ukrainian athletes took bronze medals in ice-dancing and the women's 7.5 kilometer biathlon sprint.

Recently, outdoor sports and activities such as diving, mountain climbing, mountain biking, swimming, trekking, and horse riding have become increasingly popular. Skiing is another sport enjoyed by many. Mountain skiing and snowboarding are rapidly gaining popularity among young people. The Carpathian Mountains are especially good for winter sports. Spectacular all year round, the Carpathians are particularly picturesque in winter, offering families and professional athletes a range of winter sports facilities. The Ukrainian government is supportive of professional winter sports and is bidding for Ukraine's popular Bukovel ski and snowboard resort to host the 2018 Winter Olympic Games.

Chess is another popular sport in Ukraine. The 2002 World Chess Championship tournament in Moscow started with 128 of the best chess players in the world and came down to a head-to-head eight-game match between two Ukrainians, Vasily Ivanchuk and Ruslan Ponomarev. Ponomarev (who at 14 had become the youngest grandmaster in history, although the record is now held by Bu Xiangzi of China) won the title in seven games, winning two games and drawing the other five. On his way to victory Ponomarev defeated a chess player from China, one from Bulgaria, one from the Netherlands, and three from Russia.

## 17 ENTERTAINMENT AND RECREATION

The liberating policies of *perestroika* and *glasnost* relieved previously existing constraints inspiring artists for creative expression. Since then the arts movement gained momentum. However, the new democratic government lacks funds to support the arts, and many well-known artists, performers, and composers are trying their luck in the West, where they continue to perform and gain prominence. Nevertheless, in spite of these difficulties, one can find numerous art exhibits, concerts, literary evenings, and plays being performed in most Ukrainian cities.

Kiev is the vibrant national and cultural capital of Ukraine and boasts the National Fine Arts Museum, Taras Shevchenko Museum, National Museum of Decorative Arts, and other galleries that host new and exciting exhibitions. The Shevchenko National Opera Company, Ivan Franko National Theater, and State Operetta add to the wealth of the Ukrainian cultural palette. Life in large cities and smaller towns bustles with opera

and ballet performances, philharmonic concerts, and other cultural events. Lviv's Ivan Franko Opera and Ballet Theater, Ukrainian Drama Theater, the Kharkiv Opera and Ballet Theatre, the Odessa State Academic Opera and Ballet Theatre, the Symphony Orchestra of the National Philharmonic Society of Ukraine, and scores of anthropological and history museums ensure that Ukrainian culture continues to flourish.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Ukrainian folk art is an integral part of Ukrainian culture, reflecting the spiritual and artistic values of Ukrainians. The art forms that were developed in ancient times still exist today, both in Ukraine and in Ukrainian communities around the world. Ukrainian folk art is primarily known for its ceramics, decorated Easter eggs (*pysanky*), embroidery, woodcarving, weaving, tapestry, carpeting, and leatherwork. *Pysanky*, or Ukrainian Easter eggs, date back to pre-Christian times, when they were believed to have magical powers. With Christianity the *pysanka* took on a spiritual, religious meaning, and the eggs began to be decorated with crosses, geometric designs, and miniature churches.

Over the centuries, Ukrainians have developed a unique pottery tradition. Pottery flourished in all regions of Ukraine, utilizing plant and animal designs and other patterns. The Hutsul region of the Carpathians is particularly known for its ceramics. In this region ceramic decoration took a variety of forms, including plates, pitchers, pots, and toys.

The art of embroidery (*vyshyvannia*) is yet another popular Ukrainian folk art and hobby. Through a variety of thread colors, complex stitches, and design intricacies, the Ukrainian *vyshyvka* is applied to all items of folk dress, as well as to pillows, aprons, towels, and other household articles. Many of the oldest *vyshyvkas* can be viewed in museums around Ukraine.

## **19 SOCIAL PROBLEMS**

As a newly independent country Ukraine faces a number of growing social problems including alcoholism, unemployment, prostitution, the spread of the AIDS epidemic, and negative population growth. A growing crime rate adds to Ukraine's woes, with 149,000 convicts serving their sentences in 2008.

Similarly to many European countries, Ukraine is challenged by a serious demographic crisis. As estimated in 2006, the population growth rate stood at  $-0.6\%$  and in 2008 had declined further to  $-0.651\%$ . Not only is the birth rate declining, but life expectancy at birth for the total population is only 68.06 years, with 62.24 years for men and 74.24 years for women (2008 est.). Each year since 1990 the United Nations has published a Human Development Index (HDI), which looks beyond GDP to a broader definition of well-being in a given country. In 2007 the HDI for Ukraine was 0.788, which gives the country a ranking of 76th out of 177 countries. To compare, Ukraine's ranking places it behind all of the European Union (EU) member-countries, including its closest neighbors (and former Soviet satellites), Hungary (36), Poland (37), Slovakia (42), Bulgaria (53), and Romania (60), which joined the EU in 2004 and 2007. Some of the factors that HDI takes into account include the fact that Ukraine has the lowest birthrate in Europe. With deaths currently almost twice the number of births, the population of 47.4 million people (as of 1 October 2004) is projected to decrease by up to 40% by 2050.

Deaths caused by HIV/AIDS are another grave problem confronting the Ukrainian population. The prevalence of HIV/AIDS infection has already crossed the 1% threshold and has surpassed levels across all countries of Europe and Central Asia as well as India and China. Sadly, the scale of the crisis is so extensive that the current budget of both domestic and international donor-supported programs is not sufficient to reverse the present trend. The Ukrainian government is well aware of the situation but is concentrating on economic transformation and has not allocated enough attention and funds to the socio-demographic sphere. As a result, the HIV/AIDS problem becomes increasingly daunting every day.

To exacerbate these social problems even further, a great number of Ukrainian women have recently fallen victim to international sex traders. A chain of "employment" and "marriage" agencies recruit young women and girls for work abroad in photo modeling or domestic service. "Marriage," "employment," and "visa" agencies capitalizing on the difficult economic situation in Ukraine promise their recruits secure employment, good working conditions, and reasonable benefits. Often women who struggle to find an adequate job in Ukraine are attracted to newspaper ads advertising jobs in foreign countries. However, once these women accept the jobs and arrive in the foreign countries, they are often forced to work in the local sex industry. The UN Office in Ukraine has been publishing these findings, attempting to draw the attention of the country's policy-makers and civil society to the issue. Since the publication of a recent National Human Development Report (NHDR), Ukrainian civil organizations have put forward several initiatives to alleviate this problem, which still remains largely unresolved.

## **20 GENDER ISSUES**

Today, Ukraine is a modern nation that strives for gender equity. Yet gender relations in Ukraine are complex. Historically, during the Soviet period, Ukrainian men and women enjoyed equal access to education and employment. Women were granted generous maternity leave and other child-related benefits and rights to early retirement and pension. For the most part, legislation treated women and men equally; however, protective labor legislation excluded women from "dangerous" but also highly paid positions with good benefits, and widespread conservatism pressured women to continue to bear primary responsibility for the family and housework. A number of women took high positions in government, but their representation in politics remained limited, with men clearly dominating in the higher echelons of power.

Although since 2000 there has been some improvement in gender issues, strongly entrenched stereotypes of men as leaders, managers, and primary breadwinners, and stereotypes of women as wives and mothers first, workers second, continue to limit actual gender equality in Ukrainian society. Women still face gender-based job discrimination in certain areas of employment. Some employers flatly refuse to hire younger women likely to become pregnant or women over 35. Loss of state support for child care, poor maternal health, limited political representation, gender-based violence, incidents of rape and a dramatic increase in prostitution and trafficking have also emerged as serious issues. According to the Bureau of Democracy, Human Rights, and Labor, spousal abuse is illegal but common. Based on 2006 data provided by Amnesty Interna-

tional 50% to 70% of all women have been subjected to physical violence or psychological abuse at home. To deal with this problem, the law requires the regional governments to operate shelters for victims of domestic violence and crisis centers in every major city, but in practice, they do not.

At the same time, male underemployment and unemployment have undermined men's traditional role, thereby affecting the structure of authority and relative bargaining power of men and women within the household. Greater opportunities in the areas of education and employment for females have prompted women to become more independent. There has been an increase in the numbers of female-headed households and number of women focusing on their careers. Also, recent labor laws establish the legal equality of men and women, including equal pay for equal work. A burgeoning civil society sector and the emergence of many organizations addressing gender issues (whose existence was formerly ignored or denied) provide a strong platform for addressing and promoting all aspects of gender equality.

# VLACHS

**LOCATION:** Romania, Moldova, Ukraine, Serbia, Greece, Albania, Macedonia, Bulgaria, Hungary

**POPULATION:** 23.5 million Romanians, 500,000 Aromanians, 20,000 Megleno-Romanians, 1,200 Istro-Romanians

**LANGUAGE:** Romanian and Romanian dialects (Aromanian, Megleno-Romanian, and Istro-Romanian)

**RELIGION:** Christianity (Eastern Orthodox, Roman Catholic)

## 1 INTRODUCTION

The history of the Vlachs is inexorably linked to the history of the Romanians, although some specialists think that they more generally represent the descendants of romanized Dacians, Thracians, and Illyrians. Throughout history, the term Vlach was used both to describe all people of Romanian origin, and particular groups scattered throughout the Central and Western Balkans. Nowadays it is used mainly to describe people of Romanian origin living outside Romania.

At the start of the 2nd century AD, the Roman emperor Trajan conquered and colonized Dacia (roughly the territory of present day Romania), expanding the Roman Empire territory to its largest size in history. The Roman legions that were sent there mingled with the local population, and by the time the Roman army retreated in 271 AD, the seeds of a new people were laid.

In the 11th century AD, the population living on the territory of present day Romania formed political units, which became principalities in the 13th century—Moldova and Wallachia. People from Wallachia, Moldova, and Transylvania have migrated and settled in different parts of the Balkans throughout the years, bringing their customs and language with them. The main Vlach groups outside Romania are the Aromanians, the Megleno-Romanians, and the Istro-Romanians.

There are only a few remnants of the Vlach populations today (an estimated 500,000), and their numbers are dwindling. The spread of universal education in even the most remote villages and the effects of modern civilization have often blended them together with the surrounding populations. Between the two World Wars, some Vlachs have migrated into Romania and they have been rapidly assimilated. Despite their relatively small numbers, Vlachs have played an important historic role in all of the Balkan states where they were found. Prominent Vlachs include Ioannis Kolettis (prime minister of Greece), Georgios Averoff (Greek magnate), Andrei Şaguna (Romanian Orthodox Metropolitan of Transylvania), and the Ghica family (Romanian prime ministers and *voivodes*).

The words Vlach and Romanian have been used interchangeably throughout history, and the principality of Wallachia was also known as *Țara Românească* (The Romanian Country). In Greek, the word Blachos means shepherd. More commonly, it is assumed that the word Vlach is derived, via the Slavic medium, from the Germanic. A similar root is used in Welsh and Walloon and it is used to denominate a stranger.

## 2 LOCATION AND HOMELAND

Vlachs are for the most part found in the Balkans, although small groups can be found further north, in countries like Austria, Hungary, Poland, Slovakia, and the Czech Republic.

Romanians and Moldovans constitute the largest Vlach populations, and they are concentrated in their respective countries. Aromanians and Megleno-Romanians can be found in Romania, Macedonia, northern Greece, Albania, Serbia, and Bulgaria. Istro-Romanians constitute a particular and fairly small group (around 1,200 people), concentrated in the northwestern part of Croatia.

In 1941, when Greece was under Nazi occupation, a group of Aromanian nationalists established, for a short time, an autonomous Vlach state under the control of Fascist Italy—The Principality of Pindus and Voivodship of Macedonia.

## 3 LANGUAGE

What distinguishes Vlachs living outside Romania today is not as much their culture, religion, or their consciousness of a separate identity. Their defining feature is the language they speak. One of the reasons why the Vlach language has survived this long is the remoteness of the areas where it is spoken, and the fact that it was often in competition with more than one language. All the Vlach languages are Latin-based, and could be considered as being Romanian dialects. The most distinct dialect (different in morphology and phonology from all other Romanian dialects) is spoken by the Megleno-Romanians.

Aromanians have a representative in the European Bureau for Lesser Spoken Languages, in Greece.

## 4 FOLKLORE

Many Vlachs that are now encountered through the Central and Western Balkans are the descendants of shepherds that migrated there in medieval times. As such, the folklores of all these disparate groups share pastoral influences. One of the most important folklore creations in Romania is the ballad *Miorița* (The Little Ewe). The ballad tells the story of three shepherds (one from Moldova, one from Wallachia, and one from Transylvania) that meet while attending to their flocks. The Moldovan shepherd finds from an enchanted ewe that the other two shepherds have connived to kill him and steal his flock. The shepherd accepts his fate, and tells the ewe that should he be slain, it should ask his killers to bury his body by the sheep's pen. Furthermore, the ewe is to tell the flock and his mother that he married a princess, and that the moment was marked by the falling of a star.

## 5 RELIGION

Many Vlachs are adherents of the Eastern Orthodox religion, usually the dominant religion in the area (e.g. Greek Orthodox). Istro-Romanians are Roman Catholic. Religious practices and customs are similar to those found among the dominant populations in the area.

A very small percentage of Vlachs are Muslims. They represent the Megleno-Romanians from Greece that have been living in Turkey since the exchange of populations in 1923.

## 6 MAJOR HOLIDAYS

Most Vlachs follow the major holidays of the country and region where they are located. Of significant importance are the religious holidays—especially Christmas and Easter. For a short time, at the start of the 20th century, the Aromanians were recognized as a separate nation (*millet*) by the Ottoman Empire. The day when the so-called Aromania Iradeo (or

Turkish Irade) was signed, 23 May 1905, is celebrated by Aromanians all over the world as their National Day. In Macedonia, it is considered an official holiday.

## 7 RITES OF PASSAGE

Major life events, like birth, marriage, and death, are marked and celebrated within the Christian tradition—Eastern Orthodox for most Vlachs, Roman Catholic for the Istro-Romanians. Children are taught from a young age to attend church, and they participate in the social life of the parish. Social events organized by individual, or groups of villages are often the preferred medium for young people to meet, date, and potentially marry. Marriage represents an important moment in a Vlach's life, and the union between two young people is usually done after receiving the parent's blessings. If a husband dies, the wife will wear black for a full year. Often widows wear black for the rest of their lives.

## 8 INTERPERSONAL RELATIONS

Since Vlachs have been for the most part migratory people, they have often been treated with resentment and distrust. In Greece, the term *Koutzovlachs* is used in a derogatory way to refer to people of a lower class. Vlachs however, are good-natured people, and in their respective countries they are nowadays respected as ardent patriots and supporters of national ideals. A traveler through Greece after the end of the Second World War describes Vlachs as being kind and “patriarchally hospitable.”

## 9 LIVING CONDITIONS

Living conditions vary depending on where the Vlach communities are located. In Romania, most of the Aromanians live in urban centers. As such, they enjoy the benefits and challenges of post-communist cities. Outside Romania, Vlachs live for the most part in rural communities. Traditionally, Aromanians and Megleno-Romanians respected a pastoral seasonal cycle (transhumance)—tending to their sheep herds in mountain villages in the summer, and leaving for the milder climates of the plains in the winter. As more and more young Vlachs get lured by the mirage of large cities, many small mountain villages are left to be tended to by older people, or are used solely for vacation purposes.

In Greece, the largest Vlach community, and the unofficial Vlach capital, is Metsovo—a town of around 4,500 located in northern Greece, in the mountains of Pindus. It is an important tourist destination and a popular ski resort.

## 10 FAMILY LIFE

Vlachs are family-oriented and the patriarchal system defines the family unit. Elderly are respected, and advice is sought from them in communal matters. Village life is more tranquil and sheltered from many of the ills that city life presupposes. The social life in the village revolves around major religious holidays, and families mark major moments (such as birth, marriage, and death) with complex ceremonies. In many ways, these moments have a deeper and more profound meaning than they do in cities.

## 11 CLOTHING

Traditionally, the clothing of Vlach shepherds was simple and comfortable. Clothing was designed to endure long migratory walks. The trousers and the shirt were for the most part white. Thick leather belts adorned the waist, and in the winter men would wear heavy sheepskin jackets. The garb worn by women was much more intricate and elaborate. Skirts and shirts were embroidered with lively patterns, and young women would wear complexly designed headgear. Older women usually wore simpler gear, and they covered their heads with a plain black scarf.

The Vlachs living in urban centers adopt urban attire, which is usually of Western influence. Even in remote villages, traditional clothing is rarely worn anymore. Shepherds continue to fabricate clothing out of sheep's skin, but they are more likely to be encountered wearing jeans and rubber boots, rather than white trousers and leather moccasins.

## 12 FOOD

Being for the most part shepherds, Vlachs rarely engaged in farming. They would trade wool, cheese, and leather for agricultural produce, but they would not grow them themselves. As such, the Vlach diet is fairly basic. Cheese and meat dishes are the staple in most Vlach villages. The liquid that is left over after producing cheese (*zăr*) is used to turn a Romanian staple—*mămăligă* (cornmeal mush), into a shepherd's delicacy—*balmoș*. Metsovo (Greece), the unofficial Vlach capital, is known for its cheeses and wines.

The art of cooking in Vlach villages was passed down from generation to generation, by word of mouth and by example. Nowadays, cooking in Vlach villages borrows a lot from the culinary art in their respective area.

### 13 EDUCATION

Vlach schools that taught in pupils in Aromanians were established through Albania and Macedonia as early as 1860, with the help of the Aromanian diaspora in Romania. In Greece, the attempts of Vlachs to upkeep their culture were viewed with distrust and were often met with resentment and anger. Even in modern times, Greece refused to recognize Vlachs as a distinct minority.

When Aromanians were recognized as a millet of the Ottoman Empire, in 1905, they were affirmed the rights to maintain their own schools and perform liturgies in the Aromanian language. Before schools were institutionalized, education took place in churches, which also maintained local culture and identity.

Following the fall of communism, there have been attempts made by the Romanian government to support Vlach communities throughout the Balkans. Thus, in the town of Divjaka, Albania, education in Romanian and Aromanian is offered at the kindergarten, primary, and secondary level. Financial help was also offered to the only Aromanian language church—Schimbarea la față' of Korçë. In Macedonia, pupils can study in Aromanian at the primary level, and several educational and cultural Vlach institutions are supported by the Romanian government.

### 14 CULTURAL HERITAGE

With the fall of communism throughout the Balkans, Aromanians grouped together and formed cultural and political societies, sparking the beginning of a national re-awakening. In Macedonia, Aromanians are recognized as an ethnic minority and are represented in the parliament. They enjoy the right to education in their own language, as well as ethnic, cultural, and religious rights. The Romanian government offers financial support to the Macedonian Vlach community, and it conditioned the recognition of Macedonia's independence on its granting of minority rights to the Vlachs. Several cultural societies and associations are present in Macedonia. Some of these include: the Union for Aromanian Culture from Macedonia, the Aromanian League of Macedonia, the International League of Aromanians, the Aromanian Community Manachia Brothers in Bitola, the Party of the Aromanians from Macedonia, and the Democratic Union of the Aromanians from Macedonia. The Macedonian government provides generous support for Aromanian cultural enterprises, such as the publication of magazines and books. Thus it is hoped that Aromanian culture, language, and history will be preserved.

Vlachs also have contributed greatly to the culture of the countries where they lived. Some of the most prominent writers in the Balkans are of Vlach origin. Constantin Noica is one of Romania's most prominent philosophers, and his works have been distributed worldwide. George Zalokostas is an important Greek writer. Mitrush Kuteli and Lasgush Poradeci are two Albanian poets. Jovan Sterija Popovic is a well-known Serbian novelist.

### 15 WORK

The term Vlach (*Blachos* or *Koutzovlachs*) is often used in a derogatory way in Greece, to refer to lower class people (shepherds in particular). As a consequence, most Vlach groups don't use this word when they refer to themselves. However, apart from shepherding, Vlachs have also established themselves as industrious craftsmen and merchants. Many of them have risen to positions of wealth and rank in their respective countries. George Averoff, Apostolos Arsakis, and George Stavrou are well-known 19th century Greek benefactors of Vlach origin. Gigi Becali is one of the most prominent business-men in Romania. Sotirios Bulgaris founded the Bulgari jewelry house. The Darvari and Dumba families are famous philanthropists and Austrian Imperial bankers.

### 16 SPORTS

Vlachs are not particularly known to be sports-minded people, even though numerous Vlachs have risen to prominence in several sports activities. Thus, Romania's best football player of all times, Gheorghe Hagi, is an Aromanian (or *Machedon*). Gigi Becali is a well known entrepreneur in Romania, and the owner of one of the largest Romanian football clubs—FC Steaua Bucharest. Before the Romanian revolution of 1989, he used to be a shepherd. His cousins, Victor and Ioan Becali, are prominent and prosperous football impresarios.

Joshko Milenkovski is a Macedonian volleyball champion and the manager of the Macedonian Volleyball team. Dominique Moceanu (born in Tampa, Florida) is a famous US gymnast, and a Macedonian Vlach by origin.

### 17 ENTERTAINMENT AND RECREATION

In rural areas, entertainment and recreation find an outlet in folk dances, amateur theatrical groups, music ensembles, and social gatherings. There are a number of Vlachs that have made a name for themselves in the entertainment business. Herbert von Karajan is a world famous conductor, and a Vlach from Kozani, Greece. Apostolos Kaldaras is a well-know Greek composer. Kaliopi Bukle is a popular singer in the Republic of Macedonia. In Romania, there is a large number of gifted and prominent Aromanian actors (Toma Caragiu, Alexandru Arșinel, Ion Caramitru, Sebastian Papaiani) and film makers (Dan Pița, Sergiu Nicolaescu).

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional folk art and crafts were for Vlachs both a method of survival and a way of adorning their household. Before modern civilization reached their villages, they used to make their own household articles (e.g. plates, spoons, furnaces, tables, and chairs) and weave their own clothes and wall decorations. Wood and other materials they happened to have at hand would be used for crafting decorative objects. Very few manufactured commodities were purchased directly. Their colorful and intricate designs were also used to lavish the interiors and exteriors of their churches, cemeteries, and social gathering spots.

### 19 SOCIAL PROBLEMS

In an area where regional and national pride and patriotism are very strong (often leading to state fragmentations along ethnic lines), the Vlachs have been content with their position

in the countries where they were located. Except for a short period during the First World War (when Romania pressed for a separate Vlach church), there have been no separatist movements pursued by the Vlach populations. A Vlach specialist considers them to be the perfect Balkan citizens, as they have never resorted to war, politics, violence, or dishonesty to preserve their culture.

## 20 GENDER ISSUES

Gender issues among the Vlach populations are congruent with the issues faced by the general population in the countries where they are located. The Vlachs living in remote villages across the Balkans still have a traditionalist view of gender relations, and homosexuality is usually scorned.

# WALLOONS

**LOCATION:** Belgium (southern region, called Wallonia)

**POPULATION:** 3.5 million

**LANGUAGE:** French

**RELIGION:** Roman Catholic; Muslim; Protestant; Jewish; Russian Orthodox; and Greek Orthodox

## 1 INTRODUCTION

The Walloons, who reside in Belgium's southern provinces, comprise the country's French-speaking population. Their language and history have given them a cultural identity distinct from that of the Flemings in the northern part of the country, whose language (Flemish) is similar to Dutch. While the Flemings are culturally closer to the Netherlands and Germany, the Walloons' cultural affinity is with France in particular and, in general, other countries in which Romance languages are spoken.

The historical forces dividing the two language groups date back to the 5th century AD, when the Franks, a Germanic people, invaded the territory of present-day Belgium, routing the Romans, who had ruled the region for 500 years after wresting it from its original Celtic inhabitants in 57 BC. The Franks were able to establish a stronger presence in the northern area, in which early forms of the Dutch language subsequently developed. Frankish settlements in the south were less extensive, allowing the Roman culture and Latin-based dialects already in existence to flourish. ("Walloon," a term that did not come into use until the 19th century, is derived from "Walha," the Frankish designation for the Romanized people of the south.)

Between the 9th and 12th centuries, both the northern and southern parts of the region fell under the control of feudal lords, and numerous duchies, principalities, and towns sprang up without any unifying center of power or culture, allowing the Germanic and Latin cultures of the two regions to continue developing along separate lines. In the east, Liège became a large and powerful prince-bishopric within the Holy Roman Empire. Eventually the power of the nobles was challenged by the burghers of the cities, especially those of the north, who had begun to play a vital role in European trade. There was a period of Burgundian rule in the 15th century, when French—the language of the court—first became associated with power and privilege. Beginning in the 16th century, the entire region came under the rule of a succession of foreign powers: Spain, the Austrian Habsburgs, the French under Napoleon, and, finally, the Netherlands. In spite of the Flemings' cultural and linguistic ties to Holland, they joined with the Walloons in revolting against Dutch rule, and Belgium gained its independence in 1830 as a constitutional monarchy.

Throughout the 19th century, the Walloons were the dominant group in Belgium both politically and economically, even though the Flemings accounted for a majority of the population. Independence did nothing to change the tradition of French as the language of government and culture, and the richer natural resources of the south brought the mines, mills, and factories of the Industrial Revolution to that region early, while Flanders remained a poorer, primarily agricultural area. Belgium suffered enormous losses in both world wars, but was most devastated during World War I. After World War

II, structural and social problems had a debilitating effect on Wallonia's industries. By the 1930s Flanders had gained sufficient political and economic clout to make Flemish its official language for education, legal proceedings, and government.

In the post-World War II period, Wallonia's traditional heavy industries (notably steelmaking) have continued to decline, and its coal mines have closed. In the 1960s, the Flemings and Walloons were given increased control over their respective regions, and in 1993 Belgium's constitution was amended, making Flanders and Wallonia autonomous regions within the federal state of the Belgian Kingdom, together with the nation's bilingual capital, Brussels, and another autonomous community composed of Belgium's German-speaking population. Belgium was locked in a political stalemate beginning in June 2007 when elections failed to produce a new government. The question arose as to whether or not Belgium should cease to exist as a country, and that the territory would be split into two—Flanders and Wallonia. The crisis was temporarily resolved in March 2008 when a new government was formed, and major reforms of state were planned.

## 2 LOCATION AND HOMETLAND

The Walloons live south of an east-west line running from Aachen to a point north of Lille that divides the country's Flemish- and French-speaking regions. With an area of 17,094 km (6,600 sq mi), Wallonia covers 55% of Belgium's territory and includes the provinces of southern Brabant, Hainaut, Namur, Liège, and Luxembourg. The region's terrain rises from the

Meuse valley to the wooded hills of the Ardennes, which reach their highest elevations at 694 m (2,277 ft). Its two major rivers are the Meuse and the Escaut. Wallonia has a population of 3.5 million, or some 175 people per sq km (450 people per sq mi), making it a densely populated area. There is a growing immigrant population from southern Europe and North Africa.

## 3 LANGUAGE

The language of Wallonia is French, as well as various regional dialects, whose main divisions are Eastern (Liège), Central (Namur), and Western (Charleroi, La Louvière, Nivelles). There are two additional dialects called Picard and Gaumais, although all dialects in Wallonia are commonly referred to collectively as "Walloon." Dialects are spoken mainly by rural and working-class Walloons, and more often with one's family than in more formal situations, such as at work. Immigrant workers have introduced a variety of new languages into Wallonia in recent decades.

Historically, French has been the most prestigious language in Belgium since the late medieval period of Burgundian rule, when it was spoken by aristocrats at court. It remained an elite language during the periods of Spanish, Austrian, and French rule from the 16th through 18th centuries, and maintained its privileged position with the Belgian bourgeoisie even after independence in the 19th century. It was the language of government, law, the church, and education. By comparison, the Dutch-based Flemish language of northern Belgium was associated with provincialism, poverty, and a lower level of education. This language division was dramatized by the inability of French-speaking Belgian officers in World War I to communicate with their Flemish-speaking troops. Although Flemish has gained increased respectability in this century as Flanders has become more powerful economically and politically, Flemings on the whole are still more familiar with French than Walloons are with Flemish.

## 4 FOLKLORE

Traditionally, the spirits of the departed were thought to return to earth on All Saints' Day (November 1), and families still visit the cemetery to clean the tombs of their deceased relatives on that date. Walloon folklore includes many tales involving the devil, remnants of the pre-Christian Druid religion of the region. Inhabitants of some rural villages still believe in the powers of folk healers, whose methods include *toucher*, healing by touch. There is a marionette in Belgium's traditional puppet theaters called *Woltje*, which means "little Walloon," and others who personify particular regions or cities. *Tchantchès*, who is identified with the city of Liège, wears patched trousers and a floppy hat with tassels.

## 5 RELIGION

While Catholicism is the traditional religion of Wallonia, as it is throughout Belgium, the Walloons are generally less religious than the Flemings to their north, a difference that has become even more pronounced in recent years, with parish churches closing due to lack of attendance. Even the elderly who keep statues of the Virgin Mary in their windows often are not regular churchgoers. However, southern Europeans who have emigrated to the region maintain stronger religious ties than do native Walloons. Immigrants from Turkey and North Africa make up a growing Islamic community that is

beginning to call for increased public recognition. Other religious minorities include Protestants, Jews, Russian Orthodox, and Greek Orthodox. Wallonia is the site of two popular pilgrimage shrines, at Beauraing and Banneaux, and Lourdes in southwestern France has traditionally drawn many pilgrims from the region.

## 6 MAJOR HOLIDAYS

The Walloons observe Belgium's public holidays (New Year's Day, Easter Monday, Labor Day (May 1), Independence Day (July 21), All Saints' Day (November 1), and Christmas. However, they also celebrate other dates on the Christian calendar as well as many folk holidays with origins in history and legend. Binche is notorious for its carnival festivities in the weeks before Lent. The best-known feature of the annual celebration is the dance of the Gilles, with over 1,000 people dressed in brightly colored, padded costumes throwing oranges at the spectators. Malmédy is also known for its carnival celebration, which actually continues into the Lent period, as do those in Fosses and Tilff.

## 7 RITES OF PASSAGE

The Walloons live in a modern, industrialized, Christian country. Although less religious than some of their fellow Belgians, most Walloon young people undergo religious rituals such as baptism and first Communion. In addition, a student's progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

Walloon manners are generally formal and polite, and conversations are marked by frequent exchanges of compliments and repeated handshaking. Relatives shake hands, hug, or kiss each other on the cheek, while friends usually hug. Men and women or two female friends—but never two men—might exchange kisses on the cheek, and women can sometimes be seen walking down the street arm-in-arm.

## 9 LIVING CONDITIONS

The majority of Walloons are city dwellers, and most live in multistory brick row houses with large kitchens and gardens. Walloon houses, like those of other Belgians, often include (or are attached to) an area used for a family business. Walloons enjoy Belgium's high level of modern medical care by private doctors and at state-run hospitals and clinics, and the vast majority have most of their medical expenses covered by national health insurance. Located in Wallonia, the Meuse River, one of Belgium's two major waterways, is part of a network of rivers and canals whose center is the port of Antwerp, on the Scheldt River (Escaut in French), which is linked to the North Sea. Antwerp is the second largest port of Europe (after Amsterdam). Historically the connection of the Walloon city of Charleroi with Brussels and Antwerp has formed one of Belgium's major transport links.

## 10 FAMILY LIFE

The main type of family in Wallonia is the modern nuclear family, although it is not uncommon for an elderly grandparent to join the household. Men and women generally marry when they are in their mid- to late twenties. Wallonia's divorce

rate is rising, and divorce and remarriage are considered socially acceptable.

## 11 CLOTHING

The Walloons, like all Belgians, wear modern Western-style clothing.

## 12 FOOD

While Walloon cuisine is derived from that of France, it tends to be spicier, richer, and higher in calories than modern-day French food. The most popular meats are pork and local Ardennes hams, a delicacy for which the region is famous. The main meal of the day, which is eaten at noon, might typically consist of a pork dish, potatoes, and salad with mayonnaise. Both breakfast and supper are light meals, which may include the popular regional cheese, *makèye*, served on slices of bread. Soup is a staple of the Walloon diet, as it is throughout Belgium, and it is often served as a first course for the mid-day and evening meals. Walloons drink a lot of coffee, and the common custom is to take a four o'clock coffee break called a *gôûter*, often consisting of coffee and a piece of pie. Like their Flemish neighbors to the north, the Walloons like and brew beer; even the monks, for instance, in Chimay and Orval abbeys, have their own breweries. Another popular drink is straight gin, called *pèkèt*.

Local specialties in Wallonia range from venison chops and stuffed goose forestière in Luxembourg province to simple fried eggs and bacon in the area around Verviers. A favorite dish in south Belgium, adjoining the French border, is ragout of lamb with chicory. Mussels and chips (tasty Belgian french fries) are as popular in Wallonia as they are throughout the country. In fact, when the French want to distance themselves from their Walloon neighbors across the border, they refer to them as *moules-frites* (the French term for mussels and chips).

## 13 EDUCATION

Education for all Belgians is compulsory from age 6 through 15, and the national literacy rate is 99%. At the secondary level, students choose between trade-oriented, business, and college-preparatory training. Wallonia has approximately 30 research centers and 300 research labs. Wallonia attracts researchers from all over the world with a high percentage of foreign researchers (15% to 20%) in Walloon universities and companies. It particularly welcomes researchers from Western and Eastern Europe.

## 14 CULTURAL HERITAGE

Among Belgium's early painters, the most renowned were the Flemish "Old Masters," including Van Eyck, Memling, and Rubens, although Walloons made contributions to the visual arts during all periods. In modern art, however, they came into their own with the work of surrealists René Magritte and Paul Delvaux. The best-known Walloon author is mystery writer Georges Simenon, creator of the police commissioner Maigret. There are many "French" writers who are, indeed, of Walloon origin, such as the famous poet Henri Michaux. Marguerite Yourcenar also had an international reputation; in 1980 she became the first woman elected to the Académie Française. Wallonia's most famous composer was César Franck, and the violin virtuoso Eugène Ysaye was famous for his perform-

*Walloons and Flemish marched against the possible separation of Belgium in late 2007. Belgium, which had no federal government since June of 2007, was in a state of political limbo as differing factions were unable to form a coalition government.*

*(Mark Renders/Getty Images)*

ing career and also as the founder of the Queen Elisabeth of Belgium Music Competition, one of the most prestigious international music contests. The saxophone was invented by a Belgian, Adolphe Sax, who was born in Dinant in 1814.

### 15 WORK

Due to Wallonia's coal reserves and access to river transportation, the region underwent industrialization early. With its steel, glass, and textiles industries, it became one of Europe's leading manufacturing centers in the 19th century. However, since World War II, its coal mines have closed and its traditional heavy industries have fallen into decline. At the same time, Flanders, historically a less developed agricultural area, has caught up economically, with booming international trade through the port city of Antwerp, new industries supported by foreign aid and private investment, and a burgeoning service sector. During the 1960s, Wallonia received 50% less government aid than Flanders, with its larger work force. The Walloons were also hit harder by Belgium's high unemployment of the late 1980s and early 1990s than their neighbor to the north, where more new jobs were available. In the 21st century, Wallonia's economic future lies in high technology, the region

encourages the development of a diversified fabric of small and medium-sized enterprises.

### 16 SPORTS

Walloons share in Belgium's national passion for soccer ("football"). Thousands of fiercely partisan fans turn out for games, and many also play the sport on local or regional teams. Another favorite national pastime that the Walloons share is bicycling, either as a relaxed form of recreation or in organized races. Pigeon racing, practiced throughout Belgium, is especially popular in Wallonia.

### 17 ENTERTAINMENT AND RECREATION

The Walloons enjoy typical leisure-time activities such as watching television and reading. Like many Belgians, they are avid gardeners, and maintain well-tended gardens. Other typical hobbies include playing cards, stamp collecting and model trains. Popular cultural pastimes include concerts and the theater. Residents of Wallonia's towns and villages enjoy gathering with friends after hours in neighborhood cafés and discussing work, politics, sports, and other topics. The Walloons also share the general Belgian love of festivals, and their calendars are filled with celebrations of all kinds, both religious and secular.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The talents of traditional artists can be seen in the elaborate costumes and giant figures used in festivals and processions, and also in the popular puppet and marionette theaters that have enjoyed a revival in recent years.

### 19 SOCIAL PROBLEMS

Wallonia was hit particularly hard by Belgium's high rate of unemployment in the 1990s, and some of its inhabitants find themselves forced to commute to jobs in Brussels or Flanders. The most lingering controversy for Walloons, as for all Belgians, has been the country's cultural, linguistic, and political division between its French- and Flemish-speaking populations. In spite of a 1993 constitution granting autonomy to both Flanders and Wallonia, separatist elements are still active on both sides. The divisiveness between the two cultural groups even threatened to divide the country in 2007 and 2008.

### 20 GENDER ISSUES

Women make up 51.3% of Wallonia's population. As of 2008 women had a lower employment rate (48.3%) than men (63.5%), but this figure was growing, whereas the male employment rate is tending to decrease slightly. Women won the right to vote in Belgium in 1919, and restrictions on the suffrage were dropped in 1948. Abortion was only legalized in Belgium in 1990. As of 2000, women made up 24% of the lower house of parliament, and 28.8% of the upper house. Approximately 55.7% of Belgian women hold a secondary degree, 53.1% hold a bachelor's degree, and 7.6% are in senior management. The government made a concerted effort in the 1990s to involve women in politics.

Belgium decriminalized homosexuality in 1843 and legalized same-sex marriages in 2003—it was only the second country to do so worldwide. Gay and lesbian couples have the

same rights as heterosexual ones, including inheritance and adoption.

# WELSH

**LOCATION:** United Kingdom (Wales)

**POPULATION:** 2.97 million (2006)

**LANGUAGE:** English; Welsh

**RELIGION:** Methodist; Anglican; Presbyterian; Roman Catholic; small numbers of Jews, Muslims, Hindus, and Sikhs

## <sup>1</sup> INTRODUCTION

Occupying the western portion of the island of Great Britain, Wales is one of the four countries of the United Kingdom (the others are England, Scotland, and Northern Ireland). Its people, of Celtic origin, form a distinctive group with their own language and cultural heritage. After a Roman occupation that lasted from about AD 100 to 400, Wales was divided into tribal kingdoms which were gradually converted to the Christian religion. The southern part of Wales was colonized by Normans during the 11th century, and the last independent principality—that of Gwynedd, which had united most of North and Central Wales—was conquered by Edward I of England in 1284. Edward’s oldest son was given the title Prince of Wales, and that title has been held by the oldest son of England’s reigning monarch ever since. The rebellion of Owain Glyn Dwr in the 14th century briefly created a Welsh state with both a parliament in Machynlleth and recognition from the Pope, but Glyn Dwr was vanquished after a ten-year struggle. In 1536, during the reign of Henry VII of England, whose House of Tudor had Welsh ancestry and Welsh support (at least initially), Wales was officially joined with England by the Act of Union.

With the development of coal and iron mining in the 18th and 19th centuries, South Wales became heavily industrialized and many people emigrated there from the north. During the same period, the Wesleyan religious revival drew many away from the established Anglican Church, contributing to the Welsh sense of ethnic identity. In the 20th century, Wales lost much of its population—some 20% in the 1920s alone—through emigration to England and other countries, fueled by the search for better job opportunities. (During the depression of the 1930s, unemployment in some areas reached nearly 40%.) In recent decades there has been a resurgence of Welsh nationalism. The nationalist party Plaid Cymru, founded in the 1920s, had its first member elected to Parliament in 1966. That period also saw the founding of the Welsh Language Society, which has advocated the increased use and official recognition of the Welsh language and organized support for other nationalist issues.

Plans for devolution in Scotland, Wales, and Northern Ireland have long been debated in the UK, and in 1997 a referendum was held in Wales approving the introduction of the National Assembly for Wales (NAW) by a very slim margin (50.3% to 49.7%). However, support for devolution has strengthened since 1997: in 2003 more than 65% of Welsh voters supported devolution. Among those supporters there has emerged a marked preference for a more powerful form of devolution—a Parliament as in Scotland, with legislative and taxation powers—rather than the type of Assembly introduced in Wales, which has only limited legislative powers. Most Welsh think their Assembly has made no great difference on matters

such as health, education, and the economy. Many Welsh believe that the UK government still has too much influence on the way Wales is run, while the NAW has too little influence and should have more.

In the 21st century Wales has shown a growth in population due in large measure to inward migration from England. Birth rates have increased in recent years, and in 2005/06 Wales experienced more births than deaths for the first time in around a decade. Population projections for Wales show a growing population, but also an increase in the number of dependents per person of working age.

## 2 LOCATION AND HOMELAND

Altogether, Wales covers an area of 20,766 sq km (8,018 sq mi), making it slightly smaller than the state of Massachusetts. It has farmland, mountains, valleys, and rivers of such scenic beauty that one-fifth of the country is classified as national parkland, yet it also has coal mining regions in which the air itself seems gray and drab.

Wales is divided into six main regions, each further divided into counties or shires. Gwynedd and Clwyd are located in the north, Powys and Dyfed in the center, and Glamorgan and Gwent in the south. The country's vegetation is mostly grasslands and forests. The rugged Cambrian mountains dominate the northern two-thirds of the country, while the terrain in the central and southern parts of the country forms plateaus and valleys. Mount Snowdon, in the northwest, is the country's highest point, at 1,085 m (3,560 ft). Of Wales's 2.97 million

people, 80% live in cities and 20% in the country. The most populous area is the south, an industrial region containing the cities of Swansea, Cardiff, and Newport.

## 3 LANGUAGE

Both English and Welsh are the official languages of Wales, although the use of Welsh has declined gradually over the past two centuries, while almost all Welsh people speak English. About 50% of the population spoke Welsh at the turn of the 20th century, compared with about 21% in 2001. Welsh is a Celtic language, closest to the Breton language that is spoken in a part of France. Since the 1960s there has been a movement to increase the use and recognition of Welsh, initially spearheaded by the Welsh Language Society. Welsh was recognized as an official language in 1966, and its use expanded in government forms and publications. Today the language is taught in the schools, and there are Welsh radio and television broadcasting facilities.

Welsh is known for its long words, double consonants, and scarce vowels, which often appear in unusual combinations that English speakers find quite difficult to pronounce. The Welsh language contains what is probably the longest place name in the world:

Llanfairpwllgwyngyllgogerychwyrndrobwllllantysiliogogoch,

a town name that means "Church of St. Mary in the Hollow by the White Aspen near the Rapid Whirlpool and Church of St. Tysilio by the Red Cave." (It is usually referred to as Llanfair P.G.) In 1992 the government introduced a Welsh Language Bill, which is designed to guarantee equal status for the Welsh and English languages in Wales.

### SAMPLE WORDS

llan	church
fach	small
fawr	big
blaen	head
craig	rock
cwm	valley
llyn	lake
mynydd	mountain
bach	little (one)

## 4 FOLKLORE

Welsh culture is steeped in myths and legends—even the country's national symbol, the dragon, is a mythical beast. Almost every mountain, river, and lake, as well as many farms and villages, are associated with some legend of *tylwyth teg* (fairies), magical properties or fearful beasts. The Welsh claim the legendary British hero King Arthur—who is said to be buried on the Isle of Afallon—as well as the magician Merlin and other characters who people the *Mabinogion*, the famous collection of medieval Welsh tales from which English authors from Sir Thomas Malory to Lord Tennyson took the material for their versions of the Arthurian legend. Another popular subject of Welsh legend is the prince Madog ab Owain (said to have discovered America in the 12th century). In the 16th and 18th centuries, the English actually used this legend as the basis for claims to territory in the New World.

## 5 RELIGION

The Methodism of evangelist John Wesley had a strong influence on the Welsh beginning in the 18th century, and many Welsh Christians today are Methodists (also called Nonconformists). In Wales, the Church of Wales is the leading church with about 80,900 members, followed by the Presbyterian/Reformed Churches (44,300), the Roman Catholic Church (39,500) and a few other trinitarian churches (85,600). The Welsh generally observe religious practices quite strictly, and few people work on Sundays. Wales also has small numbers of Jews, Muslims, Hindus, Sikhs and other religious minorities, concentrated mainly in the large cities of South Wales, such as Cardiff and Swansea.

## 6 MAJOR HOLIDAYS

Legal holidays in Wales include New Year's Day, St. David's Day (March 1), Good Friday, Easter Monday, a Spring Bank holiday (the last Monday in May or the first Monday in June), a Summer Bank Holiday (the last Monday in August or the first Monday in September), Christmas, and Boxing Day (December 26). St. David's Day, commemorating Wales's patron saint, is celebrated as a national holiday. Daffodils are sold everywhere, to be worn on the lapel or brought home to adorn houses throughout the country. Every January, the Festival of St Dwyhwn, the Welsh patron saint of lovers, takes place, but it is gradually being replaced by St Valentine's Day.

## 7 RITES OF PASSAGE

The Welsh live in a modern, industrialized, Christian country. Hence, many of the rites of passage that young people undergo are religious rituals, such as baptism, first Communion, confirmation, and marriage. In addition, a student's progress through the education system is marked by many families with graduation parties.

## 8 INTERPERSONAL RELATIONS

The Welsh are known for their warmth and hospitality. People are friendly with their neighbors and acquaintances always stop to chat, however briefly, when they encounter each other. Invitations to tea are readily extended and accepted.

## 9 LIVING CONDITIONS

Rural dwellers have traditionally lived in whitewashed stone cottages and farmhouses. In the past, many cottages consisted of only one or two rooms and a sleeping loft accessible by a ladder from the kitchen or an outside stairway. Another type of traditional dwelling was the longhouse, a single-story structure that housed the family at one end and livestock at the other. Today, many picturesque old cottages have been turned into vacation homes. Housing in the coalmining areas generally consists of row houses with slate roofs and stone walls and outside bathrooms, mostly built in the 19th century. Much of the older housing lacks amenities that people in the United States take for granted, such as central heating. As recently as the 1970s, it was common for people living in older housing to use coal-fired stoves for heat, with fireplaces or electric heaters used to heat rooms other than the kitchen. Many families renovate their older houses, adding rooms, porches, and modern conveniences. Semidetached houses shared by two families (similar to duplexes in the United States) are common.

Britain's comprehensive National Health Service has provided Wales with free, modern health care by physicians, surgeons, clinics, and hospitals since 1948. While there are roads linking southern Wales with London, Bristol, the West Midlands, and northwestern regions of England, many small villages in Wales itself lack an integrated transportation network, and unpaved roads are found in rural coal mining villages and agricultural areas, especially in remote mountain regions. The railroads generally run east-west, and some of the old-fashioned narrow gauge variety can still be found in more rural areas. Most major international airlines do not provide direct intercontinental service to Wales. However, Cardiff Wales Airport has regular flights to most major European cities and holiday destinations.

## 10 FAMILY LIFE

Family and kinship are extremely important in Wales. The Welsh dote on their children, and special occasions are spent with members of one's extended family. While the English tend to identify themselves by social class, Welsh loyalty is first and foremost to the family. When Welsh people meet, they often ask each other questions to find out if they have relatives in common. The Welsh traditionally married late and sustained lengthy courtships. In farming communities, adult sons generally remain at home working on their parents' farms until they marry, and a younger son usually inherits the farm.

Most families today have between one and three children. Welsh families spend a lot of time at home. Life in rural areas tends to be very insular, and a 32-km (20-mi) trip to a neighboring village is considered a major undertaking. On Sunday, many attend church, which is followed by Sunday dinner, the most important meal of the week. After dinner, men often meet their friends at a pub. In working class families, few women have traditionally been employed outside the home.

## 11 CLOTHING

For ordinary casual and formal occasions, the Welsh wear typical Western style clothing. However, at festivals one can still see women wearing their traditional national costumes, consisting of checked aprons worn over long dresses, white collars similar to those of the Puritans, and tall black hats (something like witches' hats but less pointy and with a wider brim) worn over white kerchiefs. On such occasions, men may wear striped vests over white shirts and knee-length breeches with high white socks.

## 12 FOOD

Traditional Welsh cuisine is unpretentious, down-to-earth farmhouse cooking using plain, everyday ingredients, such as Wales's national vegetable, the leek. Leeks are used in soups, stews, and in a popular dish known as Anglesey Eggs that also contains eggs, cheese, and potatoes. The well-known Welsh Rarebit is actually a genuine Welsh dish (although it has nothing to do with rabbit, as some mistakenly think). It consists of toast coated with a mixture of milk, eggs, cheese, and Worcestershire sauce—the original toasted cheese sandwich. Soups and stews are popular dishes, and the Welsh are known for the excellent quality of their lamb, fish, and seafood. One dish that some visitors prefer to avoid is *laverbread*, a type of seaweed, sold washed and boiled and traditionally prepared with oatmeal and bacon. The Welsh bake a variety of hearty desserts

including *bara brith*, a popular bread made with raisins and currants that have been soaked in tea overnight, and Welsh gingerbread (made without ginger!). The most important meal of the week is traditionally Sunday dinner, which may include a chicken or a rolled cut of meat called a joint of beef.

### 13 EDUCATION

Welsh education follows the same pattern as that in England, with schooling compulsory between the ages of 5 and 16. Students take an exam at age 11, after which they attend either middle schools that prepare them for admission to college, comprehensive schools that provide a general education, or technical schools, which offer vocational training. Accredited institutions of higher learning include Cardiff University; Aberystwyth University; Bangor University; Swansea University; University of Wales, Newport; North East Wales Institute of Higher Education; University of Wales Institute, Cardiff; University of Wales, Lampeter; Swansea Institute of Higher Education; Trinity College, Carmarthen; the Royal Welsh College of Music & Drama; and the University of Glamorgan.

### 14 CULTURAL HERITAGE

Welsh-language literature is among the oldest continuous literary traditions in Europe, with some of its earliest masterpieces (such as “Y Gododdin” by Aneirin, and the anonymous “Canu Llywarch Her”) dating from the sixth century AD. The patronage of medieval princes and later noblemen fostered the development of a unique and complex form of strict meter poetry, known as *cynghanedd*. The acknowledged master of Welsh poetry in the 16th century was Dafydd ap Gwylim, who left a great body of work. Welsh poets have gained recognition in the English-speaking world since the days of George Herbert, Thomas Vaughan, and Henry Vaughan in the 17th century. In the 20th century, W. H. Davies was known for his *Autobiography of a Super-Tramp*, Wilfred Owen for his poetry about the horrors of World War I, and R. S. Thomas for his uncompromising reflections upon Wales and the Welsh. Wales’s most illustrious modern poet was Dylan Thomas, author of the beloved “A Child’s Christmas in Wales,” the radio play “Under Milk Wood,” and many well-known poems.

The Welsh are often regarded by their neighbors in Britain and Ireland to be a very musical people, and there is a great deal of justification for this. The Welsh choral tradition includes celebrated male choirs, soloists such as Margaret Price, Geraint Evans, and Bryn Terfel, as well as pop vocalists like Tom Jones, Shirley Bassey, and Bonnie Tyler. Rock bands like the Alarm, the Manic Street Preachers, the Lostprophets, Funeral For A Friend, and Bullet For My Valentine also hail from Wales. Important cultural institutions include the Welsh Arts Council, the Welsh National Opera Company, and the National Museum of Wales. Several well-known actors are Welsh, probably the best-known being the late Richard Burton, and Sir Anthony Hopkins, who both were born in the South Welsh harbor town of Port Talbot.

### 15 WORK

In the century between the mid-1800s and the mid-1900s, coal mining and iron and steel production flourished in Wales. However, workers endured deprivation and harsh working conditions, and much of the wealth went to industrialists based outside the country. Other major Welsh industries included

textiles and slate quarrying. The Great Depression of the 1930s left a fifth of the population unemployed by 1932, resulting in mass emigration to England. After a temporary recovery during World War II, the traditional Welsh industries declined and were replaced by light industry, plastics, chemicals, and electronics. Many people are employed in service industries including construction and power production. Tourism is also a large service industry. Dairy, cattle, and sheep farming still thrive, and the Welsh still fish in their traditional craft—called *coracles*—constructed from willow and hazel branches covered with hide. Workers in Wales’s industries have a high level of unionization. Programs coordinated by the Welsh Development Agency in the late 1980s and the 1990s succeeded in attracting high levels of foreign investment in Wales. In proportion to its population, Wales gained the highest concentration of Japanese companies in Europe. The ageing of the population has affected the work force and the economy: from 1971–2006, Wales experienced a 30% increase in the number of people of retirement age. The number of people of pensionable age was expected to increase another 30% between 2006 and 2031. In 2031 (as in 2006) the UK country with the projected largest proportion of the population of pensionable age is Wales (24%).

### 16 SPORTS

Rugby is the most popular Welsh sport. Created at the exclusive English school whose name it bears, it was introduced to Wales about a century ago and quickly picked up by the working class as a national pastime. International matches, especially those against England, generate great national spirit and are accorded the same status as the World Series or the Super Bowl in the United States. Soccer (called football) and cricket are also widely played, and dog racing and pony racing are popular as well.

### 17 ENTERTAINMENT AND RECREATION

In their spare time, Welsh people enjoy movies and television. Wales has its own branch of the British Broadcasting Corporation (BBC), as well as other networks that produce high-quality programming. Many people participate in some type of music-making (choral singing is especially popular). Men commonly spend many of their leisure hours socializing in neighborhood pubs. Women’s circles with weekly meetings are widespread in rural Wales, as are young farmers’ clubs, and in Welsh-speaking areas the youth organization “*Urdd gobaith Cymru*” (“The Order of Hope of Wales”) organizes summer camps, recreational outings, musical and dramatic productions for the under-25s, and as a message of peace to world youth. Popular outdoor activities include hunting, fishing, mountain climbing, pony trekking, golf, swimming, rock climbing, and hang gliding.

On their one-to two-week annual vacation, Welsh families enjoy traveling to seaside resort towns in various parts of the United Kingdom; Cornwall is a particularly popular destination. Travel to seaside resorts and other areas of continental Europe have also become increasingly popular in recent times, with favorite destinations being Brittany, Spain, and Greece.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Such traditional crafts as blacksmithing, tanning, clog making, and copper-working had virtually disappeared by the

*Welsh girls show their support during the U18 Six Nations Festival game between England and Wales at Sixways Stadium, Worcester, England. (John Gichigi/Getty Images)*

1950s. Woodwork, metalwork and pottery remain strong, however, especially with the revived use of ancient Celtic design by many craftsmen. The old Welsh tradition of making love-spoons—intricately-carved wooden spoons bearing symbols of what a man desired of the relationship with the woman to whom he gave the spoon as a gift—also survives, although in a much-commercialized form.

The Welsh have a great tradition of choral singing that began with 18th-century Methodist hymns which entire congregations learned by heart. The Welsh musical and poetic traditions are preserved through a series of competitive folk festivals throughout the nation that culminate in the Royal National *Eisteddfod*, an annual contest for poets and musicians attended by tens of thousands of people every August. At the end of the nine-day event, awards are presented for free and metered verse in a ceremony based on ancient Druid traditions. The festival also includes folk dancing and all types of music, from brass bands to Welsh rock groups. Competitions also take place in the fields of literature, drama, theater, and the visual arts. Many see the *Eisteddfod*—whose events are conducted in Welsh with instantaneous English translation—as a major force for the preservation of Welsh cultural identity. The traditions of the *Eisteddfod* are also shaping the way Wales presents itself to the world. The International *Eisteddfod* at Llangollen—a five-day festival held each July—in-

vites competitors from all over the world to vie for prizes in traditional singing and dancing. Each year, the event attracts a huge diversity of participants, with vastly different styles such as dance troupes from India, throat singers from Tannu Tura, female choirs from Japan, instrumental soloists from Eastern Europe, and so on. Another aspect of this tradition is found in the Cardiff Singer of the Year, a competition that attracts some of the brightest young talent in the opera world, and whose prestige has launched a number of highly successful careers.

## **19 SOCIAL PROBLEMS**

Unemployment, especially in rural areas, accentuates concern about Wales's marginal position within the British economy. Until recently, Wales, like Scotland, had had a high level of emigration by people seeking better employment opportunities abroad. However, that trend is turning around. Some Welsh are concerned that an overemphasis on tourism promotes middleclass English interests while failing to improve the lot of the Welsh people themselves. While the movement to promote the preservation and everyday use of the Welsh language has been largely successful in gaining legal and public recognition of bilingualism and the equal status of the language in Wales, traditionalists are currently worried about the survival of rural communities in which the language thrives, and of the traditional values of the communities. Concern focuses espe-

cially upon the migration of English-speaking people from Welsh cities into the countryside, a tide which rose during the 1980s and 1990s. Furthermore, the influence exerted by the London-based mass media, whose broadcasts and circulations penetrate into rural Wales, has given reason to believe that the surreptitious adulteration of Welsh life by English influences is carried on by many means other than promoting English over Welsh. Conflicts of interest between monolingual English-speakers and bilingual Welsh-speakers are becoming important issues in many areas.

## 20 GENDER ISSUES

In 2006 females represented 51.3% of the population of Wales and males 48.7%. The fertility rate dropped from 2.40 births per woman in 1971 to 1.86 in 2006. In 1971, 93% of all births took place within marriage, while the figure in 2006 was 47%.

Gwenllian Morgan became Wales's first female mayor in 1910, in Brecon. Until 1918, only British males over the age of 21 were allowed to vote in elections, or to stand for election to Parliament. The leading Welsh suffragette was Margaret Haig Mackworth (née Thomas). She later became Lady Rhondda and was a successful business woman and journalist. Great Britain's Women's Freedom League was established in Swansea in 1909, and was formed as a non-violent campaigning body for women's votes. There was a large following for women's suffrage within Wales. The Cardiff branch of the National Women's Union of Suffrage Societies was the largest outside London. After years of campaigning and protesting, women over the age of 30 were granted the right to vote in 1918. In 1928 the voting age was brought into line with that for men—21.

In the 1960s and 1970s women's liberation groups in Wales campaigned for equal rights with men. Pressure from the women's movement saw the introduction of two new laws; the Equal Pay Act (1970) and the Sex Discrimination Act (1975). Welsh feminist writer Elaine Morgan's book, *The Descent Of Woman*, caused outrage when it was first published in 1972. Morgan questioned what she saw as the sexist angle of the theory of evolution. In the latter half of the 20th century, jobs traditionally seen as men's work (such as mining) were disappearing, while many jobs for women (especially in service industries) were being created. Nevertheless, even at the start of the 21st century full-time working women in Wales still earned on average 12% less per hour than their male counterparts.

Although homosexuality is increasingly being tolerated in Western societies, including the UK, many modern Welsh do not accept it. In 2008 a television documentary called *The Only Gay in the Village* looked at changing attitudes to homosexuality in Wales. It featured singer Ian "H" Watkins returning to his home area of Cwmparc to speak about his life growing up gay in the Welsh valleys, which he called "a complete nightmare." Nevertheless, there is a thriving gay community in Cardiff and other Welsh urban areas.

# GLOSSARY

- a capella:** singing without musical accompaniment.
- aboriginal:** the first inhabitants of a country. A species of animals or plants which originated within a given area.
- acupuncture:** ancient practice of treating disease or relieving pain by inserting needles into pressure points on the body. The Chinese are associated with this medical treatment.
- adobe:** a clay from which bricks are made for use in making houses.
- adult literacy:** the capacity of adults to read and write.
- agglutinative tongue:** a language in which the suffixes and prefixes to words retain a certain independence of one another and of the stem to which they are added. Turkish is an example of an agglutinative tongue.
- agrarian economy:** an economy where agriculture is the dominant form of economic activity.
- active volcano:** a large rock mass formed by the expulsion of molten rock, or lava, which periodically erupts.
- acute accent:** a mark (´) used to denote accentual stress of a single sound.
- agglutinative tongue:** a language in which the suffixes and prefixes to words retain a certain independence of one another and of the stem to which they are added. Turkish is an example of an agglutinative tongue.
- agrarian economy:** an economy where agriculture is the dominant form of economic activity.
- agrarian society:** a society where agriculture dominates the day-to-day activities of the population.
- All Saints' Day:** a Christian holiday on 1 November (a public holiday in many countries). Saints and martyrs who have no special festival are commemorated. In the Middle Ages, it was known as All Hallows' Day; the evening of the previous day, October 31, was called All Hallow Even, from which the secular holiday Halloween is derived.
- All Souls' Day:** a Christian holiday. This day, 2 November, is dedicated to prayer for the repose of the souls of the dead.
- allies:** groups or persons who are united in a common purpose. Typically used to describe nations that have joined together to fight a common enemy in war.
- Altaic language family:** a family of languages spoken by people in portions of northern and eastern Europe, and nearly the whole of northern and central Asia, together with some other regions, and divided into five branches, the Ugrian or Finno-Hungarian, Samoyed, Turkish, Mongolian, and Tungus.
- altiplano:** refers to the high plains of South American mountain ranges on the Pacific coast.
- Amerindian:** a contraction of the two words, American Indian. It describes native peoples of North, South, or Central America.
- Amerindian language group:** the language groups of the American Indians.
- Amish:** Anabaptist Protestants originally from Germany. Settled in Pennsylvania and the American Midwest.
- Anabaptist:** Christian sect that was founded in Switzerland during the 16th century. Rejected infant baptism as invalid.
- ancestor worship:** the worship of one's ancestors.
- Anglican:** pertaining to or connected with the Church of England.
- animism:** the belief that natural objects and phenomena have souls or innate spiritual powers.
- anthropologist:** one who studies the characteristics, customs, and development of mankind.
- anti-miscegenation laws:** prohibition of marriage or sexual relations between men and women of different races.
- anti-Semitism:** agitation, persecution, or discrimination (physical, emotional, economic, political, or otherwise) directed against the Jews.
- apartheid:** the past governmental policy in the Republic of South Africa of separating the races in society.
- appliqué:** a trimming made from one cloth and sewn onto another cloth.
- aquaculture:** the culture or "farming" of aquatic plants or animals.
- arable land:** land which can be cultivated by plowing, as distinguished from grassland, woodland, common pasture, and wasteland.
- archipelago:** any body of water having many islands, or the islands themselves collectively.
- arctic climate:** cold, frigid weather similar to that experienced at or near the North Pole.
- arid:** dry; without moisture; parched with heat.
- aristocracy:** a small minority that controls the government of a nation, typically on the basis of inherited wealth. Political power is restricted to its members. Also may be referred to any privileged elite of a country.
- artifacts:** objects or tools that date back to an ancient period of human history.
- Ash Wednesday:** a Christian holiday. The first day of Lent, observed 46 days before Easter, is so called from the practice of placing ashes on the forehead of the worshipper as a sign of penitence. In the Roman Catholic Church, these ashes are obtained from burning palm branches used in the previous year's Palm Sunday observation. (Palm Sunday commemorates the entry of Jesus into Jerusalem a week before Easter Sunday, and it begins Holy Week.) On Ash Wednesday, the ashes are placed on the forehead of the communicant during Mass. The recipient is told, "Remember that you are dust, and unto dust you shall return" or "Turn away from sin and be faithful to the Gospel."
- Ashura:** a Muslim holiday. This fast day was instituted by Muhammad as the equivalent of the Jewish Yom Kippur but later became voluntary when Ramadan replaced it as a holiday of penance. It also commemorates Noah's leaving the ark on Mt. Ararat after the waters of the Great Flood had subsided. In Iran, the martyrdom of Husayn, grandson of Muhammad, is commemorated with passion plays on this day.
- assembly:** in government, a body of legislators that meets together regularly.
- Assumption:** a Christian holiday. This holiday, observed on 15 August in many countries, celebrates the Roman Catholic

and Eastern Orthodox dogma that, following Mary's death, her body was taken into heaven and reunited with her soul.

**atheist:** a person who denies the existence of God, or of a supreme intelligent being.

**atherosclerosis:** a disease of the arteries. Characterized by blockages that prevent blood flow from the heart to the brain and other parts of the body.

**atoll:** a coral island, consisting of a strip or ring of coral surrounding a central lagoon. Such islands are common in the Pacific Ocean and are often very picturesque.

**aurora borealis:** the northern lights, consisting of bands of light across the night sky seen in northern geographical locations.

**Australoid:** pertains to the type of aborigines of Australia.

**Austronesian language:** a family of languages which includes Indonesian, Melanesian, Polynesian, and Micronesian sub-families.

## B

**Babushka:** a head scarf worn by women.

**Baltic States:** the three formerly communist countries of Estonia, Latvia, and Lithuania that border on the Baltic Sea.

**Bantu language group:** a name applied to the south African family of tongues. The most marked peculiarity of these languages is their prevailing use of prefixes instead of suffixes in derivation and inflection. Some employ clicks and clucks as alphabetic elements.

**baptism:** any ceremonial bathing intended as a sign of purification, dedication, etc. Baptisms are performed by immersion of the person in water, or by sprinkling the water on the person.

**Baptist:** a member of a Protestant denomination which practices adult baptism by immersion.

**barren land:** unproductive land, partly or entirely treeless.

**barter:** Trade in which merchandise is exchanged directly for other merchandise or services without use of money.

**bilingual:** able to speak two languages. Also used to describe anything that contains or is expressed in two languages, such as directions written in both English and Spanish.

**boat people:** a term used to describe individuals (refugees) who attempt to flee their country by boat.

**Bolshevik Revolution:** pertaining to the Russian revolution of 1917. Russian communists overthrew Tsar Nicholas II and ended the feudal Russian empire.

**borscht:** cold beet soup, topped with sour cream.

**Brahman:** a member of the sacred caste among the Hindus. There are many subdivisions of the caste, often remaining in isolation from one another.

**bratwurst:** seasoned fresh German sausage. Made from pork or veal.

**bride price:** the price paid to the family of the bride by the young man who seeks to marry her.

**bride wealth:** the money or property or livestock a bride brings to her marriage. *See dowry.*

**Buddhism:** the religious system common in India and eastern Asia. Founded by and based upon the teachings of Gautama Buddha, Buddhism asserts that suffering is an inescapable part of life. Deliverance can only be achieved through the practice of charity, temperance, justice, honesty, and truth.

**bureaucracy:** a system of government which is characterized by division into bureaus of administration with their own

divisional heads. Also refers to the institutional inflexibility and red tape of such a system.

**bush country:** a large area of land which is wild with low, bushlike vegetation.

**Byzantine Empire:** an empire centered in the city of Byzantium, now Istanbul in present-day Turkey.

## C

**Cajun:** name given to Canadians who emigrated to Louisiana from Acadia, the old name for Nova Scotia. Contraction of the name Accadian.

**Calvinist:** a follower of the theological system of John Calvin.

**Candlemas:** a Christian holiday. A national holiday on 2 February in Liechtenstein, this observation is now called the Presentation of the Lord, commemorating the presentation of the infant Jesus in the Temple at Jerusalem. Before a 1969 Vatican reform, it commemorated the Purification of Mary 40 days after giving birth to a male child in accordance with a Jewish practice of the time.

**capital punishment:** the ultimate act of punishment for a crime; the death penalty.

**capitalism:** an economic system in which goods and services and the means to produce and sell them are privately owned, and prices and wages are determined by market forces.

**cash crop:** a crop that is grown to be sold, rather than kept for private use.

**caste system:** one of the artificial divisions or social classes into which the Hindus are rigidly separated according to the religious law of Brahmanism. The privileges and disabilities of a caste are passed on to each succeeding generation.

**Caucasian:** the "white" race of human beings, as determined by genealogy and physical features.

**Caucasoid:** belonging to the racial group characterized by light skin pigmentation. Commonly called the "white race," although it can refer to peoples of darker skin color.

**celibate:** a person who voluntarily abstains from marriage. In some religious practices, the person will often take a vow of abstention from sexual intercourse as well.

**ensorship:** the practice of withholding certain items of news that may cast a country in an unfavorable light or give away secrets to the enemy.

**census:** an official counting of the inhabitants of a state or country with details of sex and age, family, occupation, possessions, etc.

**Central Powers:** in World War I, Germany and Austria-Hungary, and their allies, Turkey and Bulgaria.

**centrally planned economy:** an economic system in which all aspects are supervised and regulated by the government.

**cerebrovascular:** pertains to the brain and the blood vessels leading to and from the brain.

**chancellery:** the office of an embassy or consulate.

**chaperone:** an older married person, usually female, who supervises the activities of young, unmarried couples.

**chattel:** refers to the movable personal property of an individual or group. It cannot refer to real estate or buildings.

**cholera:** an acute infectious disease characterized by severe diarrhea, vomiting, and often, death.

**Christianity:** the religion founded by Jesus Christ.

**Christmas:** a Christian holiday. The annual commemoration of the nativity of Jesus is held on 25 December. A midnight Mass ushers in this joyous celebration in many Roman

- Catholic churches. The custom of distributing gifts to children on Christmas Eve derives from a Dutch custom originally observed on the evening before St. Nicholas' Day (6 December). The day after Christmas—often called Boxing Day, for the boxed gifts customarily given—is a public holiday in many countries.
- Church of England:** the national and established church in England. The Church of England claims continuity with the branch of the Catholic Church which existed in England before the Reformation. Under Henry VIII, the spiritual supremacy and jurisdiction of the Pope were abolished, and the sovereign was declared head of the church.
- chaplet:** a wreath or garland of flowers placed on a woman's head.
- cistern:** a natural or artificial receptacle or reservoir for holding water or other fluids.
- city-state:** an independent state consisting of a city and its surrounding territory.
- civil law:** the law developed by a nation or state for the conduct of daily life of its own people.
- civil rights:** the privileges of all individuals to be treated as equals under the laws of their country; specifically, the rights given by certain amendments to the U.S. Constitution.
- civil unrest:** the feeling of uneasiness due to an unstable political climate or actions taken as a result of it.
- civil war:** a war between groups of citizens of the same country who have different opinions or agendas. The Civil War of the United States was the conflict between the states of the North and South from 1861 to 1865.
- coca:** a shrub native to South America, the leaves of which produce alkaloids which are used in the production of cocaine.
- cohabitation:** living together as husband and wife without being legally married.
- cold war:** refers to conflict over ideological differences that is carried on by words and diplomatic actions, not by military action. The term is usually used to refer to the tension that existed between the United States and the USSR from the 1950s until the breakup of the USSR in 1991.
- collard greens:** a hearty, leafy green vegetable. Popular part of southern American and West Indian cuisine.
- collective farm:** a large farm formed from many small farms and supervised by the government; usually found in communist countries.
- collective farming:** the system of farming on a collective where all workers share in the income of the farm.
- colloquial:** belonging to the language of common or familiar conversation, or ordinary, everyday speech; often especially applied to common words and phrases which are not used in formal speech.
- colonial period:** in the United States, the period of time when the original thirteen colonies were being formed.
- colonist:** any member of a colony or one who helps settle a new colony.
- colony:** a group of people who settle in a new area far from their original country, but still under the jurisdiction of that country. Also refers to the newly settled area itself.
- commerce:** the trading of goods (buying and selling), especially on a large scale, between cities, states, and countries.
- commodity:** any items, such as goods or services, that are bought or sold, or agricultural products that are traded or marketed.
- common law:** a legal system based on custom and legal precedent. The basic system of law of the United States.
- common law spouse:** a husband or wife in a marriage that, although not legally formalized through a religious or state-sanctioned ceremony, is legally acknowledged based on the agreement of the two people to consider themselves married.
- communicable disease:** referring to infectious or contagious diseases.
- communion:** 1. The act of partaking of the sacrament of the Eucharist; the celebration of the Lord's Supper. 2. A body of Christians who have one common faith, but not necessarily ecclesiastical union; a religious denomination. 3. Union in religious worship, or in doctrine and discipline.
- communism:** a form of government whose system requires common ownership of property for the use of all citizens. All profits are to be equally distributed and prices on goods and services are usually set by the state. Also, communism refers directly to the official doctrine of the former USSR.
- compulsory education:** the mandatory requirement for children to attend school until they have reached a certain age or grade level.
- condolence:** expression of sympathy.
- Condoblé:** American name for the Yoruba pantheon of 401 gods and goddesses.
- Confucianism:** the ethical system taught by the Chinese philosopher Confucius. It was enlarged upon by his contemporary Mencius so that political systems would be tested with the same ethical standards. (See **Taoism**)
- constitution:** the written laws and basic rights of citizens of a country or members of an organized group.
- consumer goods:** items that are bought to satisfy personal needs or wants of individuals.
- Coptic Christians:** members of the Coptic Church of Egypt, formerly of Ethiopia.
- Corpus Christi:** a Christian holiday. This holiday in honor of the Eucharist is observed on the Thursday or Sunday after Trinity Sunday, which is the Sunday after Pentecost. In the Roman Catholic and Eastern Orthodox Churches, the Eucharist is a sacrament in which the consecrated bread and wine become the body and blood of Jesus Christ, a belief stemming from New Testament accounts of the Last Supper.
- corrugated steel:** galvanized metal with furrows that give added strength. This metal is often used as roofing materials on houses in tropical countries because of its strength.
- coup d'état:** a sudden, violent overthrow of a government or its leader.
- covert action:** secret, concealed activities carried out without public knowledge.
- cricket (sport):** a game played by two teams with a ball and bat, with two wickets being defended by a batsman.
- criminal law:** the branch of law that deals primarily with crimes and their punishments.
- crown colony:** a colony established by a commonwealth over which the monarch has some control, as in colonies established by the British Commonwealth.
- Crowning of Our Lady of Altigracia:** a Christian holiday in honor of Mary, this day is celebrated in the Dominican Republic on 15 August with a pilgrimage to her shrine. (Altigracia Day, 21 January, is also a holiday in the Dominican Republic.)

**Crusades:** military expeditions by European Christian armies in the 11th, 12th, and 13th centuries to win land controlled by the Muslims in the Middle East.

**cuisine:** a particular style of preparing food, especially when referring to the cooking of a particular country or ethnic group.

**cultivable land:** land that can be prepared for the production of crops.

**cursive script:** a style of writing in which the letters are joined together in a flowing manner.

**Cushitic language group:** a group of Hamitic languages which are spoken in Ethiopia and other areas of eastern Africa.

**cyclone:** any atmospheric movement, general or local, in which the wind blows spirally around and in towards a center. In the northern hemisphere, the cyclonic movement is usually counter-clockwise, and in the southern hemisphere, it is clockwise.

**Cyrillic alphabet:** an alphabet adopted by the Slavic people and invented by Cyril and Methodius in the 9th century as an alphabet that was easier for the copyist to write. The Russian alphabet is a slight modification of it.

## D

**Day of Our Lady of Mercy (Las Mercedes):** a Christian holiday in honor of Mary, this observance on 24 September is a holiday in the Dominican Republic.

**Day of Santa Rosa of Lima:** a Christian holiday. The feast day in honor of the first native-born saint of the New World, declared patron saint of South America by Pope Clement X in 1671, is 23 August, but in Peru, she is commemorated by a national holiday on 30 August.

**Day of St. Peter and St. Paul:** a Christian holiday. This observance, on 29 June, commemorates the martyrdom of the two apostles traditionally believed to have been executed in Rome on the same day (c. AD 67) during the persecution of Christians ordered by Emperor Nero.

**deforestation:** the removal of a forest ecosystem.

**deity:** a being with the attributes, nature, and essence of a god; a divinity.

**delta:** triangular-shaped deposits of soil formed at the mouths of large rivers.

**democracy:** a form of government in which the power lies in the hands of the people, who can govern directly, or indirectly by electing representatives.

**demography:** that department of anthropology which relates to vital and social statistics and their application to the comparative study of races and nations.

**desegregation:** the act of removing restrictions on people of a particular race that keep them separate from other groups, socially, economically, and, sometimes, physically.

**détente:** the official lessening of tension between countries in conflict.

**developed countries:** countries which have a high standard of living and a well-developed industrial base.

**diacritics:** as in diacritical marks, a dot, line, or other mark added or put adjacent to a letter or sign in order to give it a different sound or to indicate some particular accent, tone, stress, or emphasis. An example of diacritical marks would be those used in dictionaries to aid in pronunciation of words.

**dialect:** One of a number of related forms of speech regarded as descending from a common origin. The speech pattern of

a locality or social class as distinguished from the generally accepted literary language.

**dictatorship:** a form of government in which all the power is retained by an absolute leader or tyrant. There are no rights granted to the people to elect their own representatives.

**direct descendant:** the offspring in an unbroken line of ancestors.

**divine origin:** having originated directly, or by direct descendant, from a divine being.

**dogma:** a principle, maxim, or tenet held as being firmly established.

**domicile:** a place of residence of an individual or family; a place of habitual abode.

**dowry:** the sum of the property or money that a bride brings to her groom at their marriage.

**druid:** a member of a Celtic religion practiced in ancient Britain, Ireland, and France.

**Druze:** a member of a religious sect of Syria, living chiefly in the mountain regions of Lebanon.

**ducal:** Referring to a duke or a dukedom.

**dysentery:** painful inflammation of the large intestine.

## E

**Easter:** the chief Christian holiday is Easter, the annual celebration of the resurrection of Jesus Christ. Like Passover, the Jewish feast from which it is derived, the date of observation is linked to the phases of the moon. Since the Christian calendar is a solar one rather than a lunar one, the date of Easter changes from year to year. Easter is celebrated on the first Sunday after the first full moon following the spring equinox; in the Gregorian calendar, it can occur as early as 22 March or as late as 25 April. The Easter date determines the date of many other Roman Catholic holidays, such as Ash Wednesday, Ascension, and Pentecost.

**Easter Monday:** a Christian holiday. The day after Easter is a public holiday in many countries.

**empire:** a group of territories ruled by one sovereign, or supreme ruler.

**Epiphany of Our Lord:** a Christian holiday. Traditionally observed on 6 January but now observable on the Sunday falling between 2 January and 7 January, this feast commemorates the adoration of the Magi, who journeyed to the place of Jesus' birth. In the Orthodox churches, however, it is the feast celebrating Jesus' baptism.

**episcopal:** belonging to or vested in bishops or prelates; characteristic of or pertaining to a bishop or bishops.

**equestrian culture:** a culture that depends on horses for its livelihood. Mastery of the horse is an essential part of the culture's identity.

**escarpment:** a steep cliff formed from a geological fault or erosion.

**ethnographic:** referring to the division of anthropology which studies primitive cultures.

**ethnolinguistic group:** a classification of related languages based on common ethnic origin.

**exodus:** the departure or migration of a large body of people or animals from one country or region to another.

**extinction:** dying out of a species of animals or a culture of people.

## F

- fauna:** referring to species of animals found in a specific region.
- Feast of Our Lady of Angels:** a Christian holiday. This feast, on 2 August, is celebrated as a national holiday in Costa Rica in honor of the Virgin Mary. Pilgrimage is made to the basilica in Cartago, which houses a black stone statue of the Virgin.
- fetishism:** the practice of worshipping a material object which one believes has mysterious powers residing in it or is the representation of a deity to which worship may be paid and from which supernatural aid is expected.
- feudal society:** In medieval times, an economic and social structure in which persons could hold land given to them by a lord (nobleman) in return for service to that lord.
- Finno-Ugric language group:** a subfamily of languages spoken in northeastern Europe, including Finnish, Hungarian (Ugric, Magyar), Estonian, Lapp, and others.
- flora:** referring to native plant life in a specific region.
- folk religion:** a religion with origins and traditions among the common people of a nation or region; relevant to their particular lifestyle.
- folk tale:** an oral story that is passed from generation to generation. Folktales are cultural records of the history and progress of different ethnic groups.
- free-market economy:** an economic system that relies on the market, as opposed to government planners, to set the prices for wages and products.
- fundamentalist:** a person who holds religious beliefs based on the complete acceptance of the words of the Bible or other holy scripture as the truth. For instance, a fundamentalist would believe the story of creation exactly as it is told in the Bible and would reject the idea of evolution.

## G

- gastroenteritis:** inflammation of the stomach and small intestines.
- geometric pattern:** a design of circles, triangles, or lines on cloth.
- geriatrics:** the study and treatment of diseases of old age.
- Germanic language group:** a large branch of the Indo-European family of languages including German itself, the Scandinavian languages, Dutch, Yiddish, Modern English, Modern Scottish, Afrikaans and others. The group also includes extinct languages such as Gothic, Old High German, Old Saxon, Old English, Middle English and the like.
- glottal stop:** a sound formed in speech by a brief but complete closure of the glottis, the opening between the vocal cords. It is a typical sound in certain British dialects.
- godparent:** a male or female adult who is asked by the parents of a newborn child to assume responsibility for the care and rearing of the child in the event of the death of the parents. Godparents sometimes contribute school tuition, gifts on birthdays and holidays, as well as take an active part in the child's life.
- Good Friday:** a Christian holiday. The day after Holy Thursday, it is devoted to remembrance of the crucifixion of Jesus and is given to penance and prayer.
- Greek Catholic:** a person who is a member of an Orthodox Eastern Church.
- Greek Orthodox:** the official church of Greece, a self-governing branch of the Orthodox Eastern Church.

## H

- haiku:** a form of Japanese poetry, consisting of three lines. Each line has a specific measurement of syllables.
- Hanukkah:** a Jewish holiday. The Festival of Lights, corresponding roughly to the winter solstice, is celebrated over an eight-day period beginning on 25 Kislev, the third month. Also known as the Feast of Dedication and Feast of the Maccabees, Hanukkah commemorates the rededication of the Temple at Jerusalem in 164 BC. According to tradition, the one ritually pure container of olive oil, sufficient to illuminate the Temple for one day, miraculously burned for eight days, until new oil could be prepared. A feature of the Hanukkah celebration is the lighting in each Jewish home of an eight-branched candelabrum, the menorah. This festival, though not a public holiday in Israel, is widely observed with the lighting of giant menorahs in public places.
- harem:** in a Muslim household, refers to the women (wives, concubines, and servants in ancient times) who live there and also to the area of the home they live in.
- harmattan:** an intensely dry, dusty wind felt along the coast of Africa between Cape Verde and Cape Lopez. It prevails at intervals during the months of December, January, and February.
- Hinduism:** the religion professed by a large part of the inhabitants of India. It is a development of the ancient Brahmanism, influenced by Buddhist and other elements. Its forms are varied and numerous.
- Holi:** a Hindu holiday. A festival lasting 3 to 10 days, Holi closes the old year with processions and merriment. It terminates on the full moon of Phalguna, the last month, corresponding to February or March.
- Holocaust:** the mass slaughter of European civilians, the vast majority Jews, by the Nazis during World War II.
- Holy (Maundy) Thursday:** a Christian holiday. The Thursday preceding Easter commemorates the Last Supper, the betrayal of Jesus by Judas Iscariot, and the arrest and arraignment of Jesus. In Rome, the pope customarily performs a ceremony in remembrance of Jesus' washing of his apostles' feet (John 13:5–20).
- Holy Roman Empire:** a kingdom consisting of a loose union of German and Italian territories that existed from around the ninth century until 1806.
- Holy Saturday:** a Christian holiday. This day commemorates the time during which Jesus was buried and, like Good Friday, is given to solemn prayer.
- homeland:** a region or area set aside to be a state for a people of a particular national, cultural, or racial origin.
- homogeneous:** of the same kind or nature, often used in reference to a whole.
- homophonic:** music that has a single part with no harmonies.
- Horn of Africa:** the Horn of Africa comprises Djibouti, Eritrea, Ethiopia, Somalia, and Sudan.
- human rights issues:** any matters involving people's basic rights which are in question or thought to be abused.
- humanist:** a person who centers on human needs and values, and stresses dignity of the individual.
- hydrology:** the science of dealing with the earth's waters and their distribution above and below ground.

## I

**Id al-Adha:** a Muslim holiday. The Great Festival, or Sacrificial Feast, celebrates the end of the special pilgrimage season, or Hajj, to Mecca and Medina, an obligation for Muslims once in their lifetime if physically and economically feasible. The slaughter of animals pays tribute to Abraham's obedience to God in offering his son to the Lord for sacrifice; a portion of the meat is supposed to be donated to the poor. The feast begins on 10 Dhu'l-Hijja and continues to 13 Dhu'l-Hijja (14 Dhu'l-Hijja in a leap year). In Malaysia and Singapore, this festival is celebrated as Hari Raya Haji; in Indonesia, Lebaran Haji; in Turkey, Kurban Bayrami.

**Id al-Fitr:** a Muslim holiday. The Little Festival, or Breaking-Fast-Festival, which begins just after Ramadan, on 1 Shawwal, the 10th month, is the occasion for three or four days of feasting. In Malaysia and Singapore, this festival is called Hari Raya Puasa; in Turkey, Seker Bayrami.

**Iemanja:** Brazilian name for Yoruba river goddess, Yemoja. Represented as a mermaid.

**Immaculate Conception:** a Christian holiday. This day, 8 December, celebrates the Roman Catholic dogma asserting that Mary's conception, as the future mother of God, was uniquely free from original sin. In Paraguay, it is observed as the Day of Our Lady of Caacupé.

**incursion:** a sudden or brief invasion or raid.

**indigenous:** born or originating in a particular place or country; native to a particular region or area.

**indigent:** person without any means of economic support.

**indigo:** a blue dye that is extracted from plants.

**Indo-Aryan language group:** the group that includes the languages of India; within a branch of the Indo-European language family.

**Indo-European language family:** the large family of languages that includes those of India, much of Europe, and southwestern Asia.

**indulgence:** a Catholic blessing given for a person's soul after death.

**infant mortality:** infant deaths.

**infant mortality rate:** the number of deaths of children less than one year old per 1,000 live births in a given year.

**infanticide:** the act of murdering a baby.

**infidel:** one who is without faith, or unbelieving; particularly, one who rejects the distinctive doctrines of a particular religion, while perhaps remaining an adherent to another religion.

**inflective:** refers to a language in which differences in tone and pitch give meaning to words and indicate grammatical constructions.

**interferon:** a drug used in the treatment of cancer in Mexico.

**Inuit:** an indigenous people of northwestern Canada. They are sometimes mistakenly called Eskimos.

**Islam:** the religious system of Mohammed, practiced by Muslims and based on a belief in Allah as the supreme being and Mohammed as his prophet. The term also refers to those nations in which it is the primary religion.

**isthmus:** a narrow strip of land with connecting large bodies of water on either side.

## J

**Jehovah's Witness:** a member of a Christian sect that believes that the end of the world is near and that God should establish a theocracy on earth.

**Judaism:** the religious system of the Jews, based on the Old Testament as revealed to Moses and characterized by a belief in one God and adherence to the laws of scripture and rabbinic traditions.

**Judeo-Christian:** the dominant traditional religious makeup of the United States and other countries based on the worship of the Old and New Testaments of the Bible.

**Juneteenth:** an African American holiday that celebrates the freeing of slaves in America. It is thought to coincide with the surrender of the Confederacy to the Union armies.

**Junkanoo:** a holiday celebrated around December in the Caribbean and South America. It also has been observed in the United States in Alabama. The holiday has West African origins. Also known as John Canoe and Yancanu.

## K

**kale:** Another hearty, green leafy vegetable that is sometimes mixed with spinach and collard greens to vary the flavor of these vegetables.

**khan:** a title given Genghis Khan and his successors who ruled over Turkey and Mongolia in the Middle Ages.

**kielbasa:** seasoned Polish sausage. Made from beef or pork.

## L

**lagoon:** a shallow body of water connected to a larger body of water. It is sometimes separated from the larger body by reefs.

**lama:** a celebrated priest or ecclesiastic belonging to that variety of Buddhism known as Lamaism. The Dalai-Lama and the tesho- or bogdo-lama are regarded as supreme pontiffs.

**land reforms:** steps taken to create a fair distribution of farm land, especially by governmental action.

**latke:** potato pancake.

**Leeward Islands:** northern islands of the Lesser Antilles in the Caribbean that stretch from Puerto Rico southward.

**leprosy:** an infectious disease of the skin or nerves which can cause ulcers of the skin, loss of feeling, or loss of fingers and toes.

**life expectancy:** an individual's expected lifespan, calculated as an average.

**lingua franca:** Originally, a mixed language or jargon of Mediterranean ports, consisting of Italian mixed with Arabic, Turkish, Greek, French, and Spanish. Nowadays, the phrase is used to denote any hybrid tongue used similarly in other parts of the world; an international dialect.

**linguist:** a person skilled in the use of languages.

**linguistic group:** a group of related languages.

**literacy:** the ability to read and write.

**lox:** kosher smoked salmon.

**Lutheran:** of or pertaining to Martin Luther (1483–1546), the reformer, to the Evangelical Protestant Church of Germany which bears his name, or to the doctrines taught by Luther or held by the Evangelical Lutheran Church.

## M

**macron:** a horizontal mark placed over a vowel to indicate its pronunciation as long.

**maize:** another name (Spanish or British) for corn or the color of ripe corn.

- Malayo-Polynesian language group:** also referred to as the Austronesian language group, which includes the Indonesian, Polynesian, Melanesian, and Micronesian subfamilies.
- mangrove:** a kind of evergreen shrub growing along tropical coasts.
- marimba:** a type of xylophone found in Central and South America.
- massif:** a central mountain-mass or the dominant part of a range of mountains. A part of a range which appears, from the position of the depression by which it is more or less isolated, to form an independent whole.
- matriarchy:** a society in which women are recognized as the leaders of the family or tribe.
- matrifocal:** a society in which women are the focus of activity or attention.
- matrilineal (descent):** descending from, or tracing descent through, the maternal line.
- Mayan language family:** the languages of the Central American Indians, further divided into two subgroups: the Maya and the Huastek.
- Mecca (Mekkah):** a city in Saudi Arabia; a destination of pilgrims in the Islamic world.
- Mennonite:** a member of the Christian denomination which originated in Friesland, Holland in the early part of the 16th century and upholds the doctrine of which Menno Simons (1492–1559) was the chief exponent.
- mestizo:** the offspring of a person of mixed blood; especially, a person of mixed Spanish and American Indian parentage.
- metamorphosis:** referring to the shamanic practice of changing from a person to an animal.
- Methodist:** a member of the Christian denomination founded by John Wesley (1703–1791). The name was first applied to Wesley and his companions on account of their methodical habits in study and in religious life.
- millennium:** any one-thousand-year period, but also refers to a real or imagined period of peace and happiness.
- missionary:** a person sent by ecclesiastical authority to work to spread his religious faith in a community where his church has no self-supporting organization.
- Mohammed (or Muhammed or Mahomet):** an Arabian prophet, known as the “Prophet of Allah” who founded the religion of Islam in 622, and wrote The Koran, the scripture of Islam. Also commonly spelled Muhammed, especially by Islamic people.
- Mongol:** one of an Asiatic race chiefly resident in Mongolia, a region north of China proper and south of Siberia.
- Mongoloid:** having physical characteristics like those of the typical Mongols (Chinese, Japanese, Turks, Eskimos, etc.).
- monogamy:** the practice of marrying one spouse.
- monolingual:** speaking one language only.
- monsoon:** a wind occurring in the alternation of the trade-winds in India and the north Indian Ocean. They occur between April and October when the regular northeast trade-winds are reversed and, with occasional interruptions, the wind blows at almost a steady gale from the southwest. In some areas, as in China, the change of the monsoons is followed with storms and much rain.
- Moors:** one of the Arab tribes that conquered Spain in the 8th century.
- Mormon:** an adherent of the religious body the Church of Jesus Christ of Latter-day Saints founded in 1830 by Joseph Smith.
- Moslem:** a follower of Mohammed (spelled Muhammed by many Islamic people), in the religion of Islam.
- mosque:** a Mohammedan place of worship and the ecclesiastical organization with which it is connected.
- mother tongue:** a tongue or language to which other languages owe their origin. One’s native language.
- Motown:** nickname for Detroit. A contraction of Motor City Town.
- mujahideen or mujahedeen:** *see* **mujahidin**.
- mujahidin:** rebel fighters in Islamic countries, especially those supporting the cause of Islam.
- mulatto:** one who is the offspring of parents of whom one is white and the other is black.
- multicultural:** awareness of the effect and existence of more than one cultural viewpoint within one’s value system and world view.
- multilingual:** having the ability to speak several languages. Also used to describe anything that contains or is expressed in several languages, such as directions written in English, Spanish, and French.
- mummify:** ancient method used to preserve the dead. Associated with ancient Egyptian culture.
- Muslim:** same as Moslem.
- Muslim New Year:** a Muslim holiday. Although in some countries 1 Muharram, which is the first month of the Islamic year, is observed as a holiday, in other places the new year is observed on Sha’ban, the eighth month of the year. This practice apparently stems from pagan Arab times. Shab-i-Bharat, a national holiday in Bangladesh on this day, is held by many to be the occasion when God ordains all actions in the coming year.

## N

- native tongue:** one’s natural language. The language that is indigenous to an area.
- Nobel Laureate:** a person awarded a prize for lifetime achievement in literature, sciences, economics, or peace. Prize founded by Swedish industrialist Alfred Nobel, inventor of dynamite.
- nomad:** a wanderer; member of a tribe of people who have no fixed place or abode, but move about from place to place depending on the availability of food sources.
- novena:** a series of prayers in honor of a saint for a specific reason.

## O

- obsidian:** a black, shiny volcanic rock, resembling glass.
- official language:** the language in which the business of a country and its government is conducted.
- Ottoman Empire:** a Turkish empire founded by Osman I in about 1603, that variously controlled large areas of land around the Mediterranean, Black, and Caspian Seas until it was dissolved in 1918.
- outback region:** the rural interior region of the continent of Australia. It is sparsely populated, mainly by aboriginal peoples.
- overgrazing:** allowing animals to graze in an area to the point that the ground vegetation is damaged or destroyed.

## P

**pagan:** a person who worships more than one deity. Sometimes refers to non-Christians.

**pagoda:** in the Far East, a sacred tower, usually pyramidal in outline, richly carved, painted, or otherwise adorned, and of several stories. They can be, but are not always, connected to a temple.

**Paleoasiatic languages:** languages that date back to a prehistoric or unwritten era in linguistic history.

**parochial:** an institution supported by a church or parish.

**parody:** dance or song ridiculing a serious subject in a silly manner. Usually focuses on the person or people who dominate another cultural group.

**Parsi:** one of the descendants of those Persians who settled in India about the end of the seventh century in order to escape Mohammedan persecution, and who still retain their ancient religion. Also Parsee.

**Passover (Pesach):** a Jewish holiday. Pesach, lasting seven days in Israel and eight outside it, begins on 15 Nisan, at roughly the spring equinox, and recalls the exodus of the Hebrews from Egypt and their delivery from bondage. The chief festival of Judaism, Pesach begins with a ceremonial family meal, or seder, at which special foods (including unleavened bread, or matzoh) are eaten and the Passover story (Haggadah) is read.

**pastoralist:** a nomadic people who move with their herds of sheep or cattle, searching for pasture and water.

**patois:** a dialect peculiar to a district or locality, in use especially among the peasantry or uneducated classes; hence, a rustic, provincial, or barbarous form of speech.

**patriarchal system:** a social system in which the head of the family or tribe is the father or oldest male. Kinship is determined and traced through the male members of the tribe.

**patrilineal (descent):** Descending from, or tracing descent through, the paternal line.

**patrilocal:** a society in which men take the larger role in activities and receive greater attention.

**peccary:** a pig-like animal native to North and South America and the Caribbean Islands. Noted for its musky smell, sharp tusks, and gray color.

**pentatonic:** music consisting of a five tone scale.

**Pentecost Monday (Whitmonday):** a Christian holiday. This public holiday observed in many countries occurs the day after Pentecost (derived from the ancient Greek pentekostos, "fiftieth"), or Whitsunday, which commemorates the descent of the Holy Spirit upon Jesus' apostles on the seventh Sunday after Easter and is derived from the Jewish feast of Shavuot. It was an important occasion for baptism in the early church, and the name "Whitsunday" originated from the white robes worn by the newly baptized.

**Pentecostal:** having to do with Pentecost, a Christian holiday celebrated the seventh Sunday after Easter, marking the day that the Holy Spirit descended upon the Apostles.

**peyote:** the tops of the small spineless mescal cactus. Native to the southwestern United States and northern Mexico.

**phoneme:** slightly different sounds in a language that are heard as the same by a native speaker.

**pierogie:** a Polish dumpling made from pastry dough. It contains various fillings, such as meat and potatoes.

**pilgrimage:** a journey to a sacred place in order to perform some religious vow or duty, or to obtain some spiritual or miraculous benefit.

**polygamy:** the practice of having two or more spouses at the same time.

**polygyny:** the practice of having two or more wives and/or mistresses.

**polyphonic:** combining a number of harmonic sounds. Music that has more than one sound.

**polytheism:** belief and worship of many gods.

**post traumatic stress disorder:** psychological disorder that accompanies violent or tragic experiences. Known as shell-shock during World War I.

**Prayer Day:** a Christian holiday. This Danish public holiday is observed on the fourth Friday after Easter.

**Presbyterian:** of or pertaining to ecclesiastical government by elders or by presbyteries.

**Prophet Muhammed:** *see* Mohammed.

**proselytizing:** inducing or persuading someone to become the adherent of some religion, doctrine, sect, or party. To convert.

**Protestant:** a member or an adherent of one of those Christian bodies which descended from the Reformation of the sixteenth century. Originally applied to those who opposed or protested the Roman Catholic Church.

**province:** an administrative territory of a country.

**Purim:** a Jewish holiday. This holiday, celebrated on 14 Adar (Adar Sheni in a leap year), commemorates the delivery of the Jews from potential annihilation at the hands of Haman, viceroy of Persia, as described in the Book of Esther, which is read from a scroll (megillah). The day, though not a public holiday in Israel, is widely marked by charity, exchange of edible gifts, and feasting.

## R

**rabbi:** a Jewish religious leader; head of a congregation.

**racial integration:** to remove all restrictions and barriers preventing complete access to society to persons of all races.

**racially homogeneous:** composed of persons all of the same race.

**rain forest:** a tropical vegetation in the equatorial region of the world which consists of a dense growth of a wide variety of broadleaf evergreen trees and vines.

**Raksha Bandhan:** a Hindu holiday. During this festival, which usually falls in August, bracelets of colored thread and tinsel are tied by women to the wrists of their menfolk, thus binding the men to guard and protect them during the year. It is celebrated on the full moon of Sravana.

**Ramadan:** a Muslim holiday. The first day of Ramadan (the ninth month) is a public holiday in many countries, although the religious festival does not officially begin until the new moon is sighted from the Naval Observatory in Cairo, Egypt. The entire month commemorates the period in which the Prophet received divine revelation and is observed by a strict fast from sunrise to sundown. This observance is one of Islam's five main duties for believers.

**Rastafarian:** a member of a Jamaican cult begun in 1930 as a semi-religious, semi-political movement. Rastafarians are usually lower class men who are anti-white and advocate the return of blacks to Africa.

**refugee:** one who flees to a refuge, shelter or place of safety. One who in times of persecution or political commotion flees to a foreign country for safety.

**respiratory:** pertaining to the lungs and other breathing passages.

**Roman alphabet:** the alphabet of the ancient Romans from which the alphabets of most modern western European languages, including English, are derived.

**Roman Catholic Church:** the designation of the church of which the pope or bishop of Rome is the head, and which holds him, as the successor of St. Peter and heir of his spiritual authority, privileges, and gifts, as its supreme ruler, pastor, and teacher.

**Romance language:** the group of languages derived from Latin: French, Spanish, Italian, Portuguese and other related languages.

**Rosh Hashanah:** a Jewish holiday. The Jewish New Year is celebrated on 1 Tishri, the first month. In synagogues, the sounding of the shofar (ram's horn) heralds the new year. Rosh Hashanah begins the observance of the Ten Penitential Days, which culminate in Yom Kippur. Orthodox and Conservative Jews outside Israel celebrate 2 Tishri, the next day, as well.

**runic music:** music that is ancient, obscure, and mystical.

**Russian Orthodox:** the arm of the Orthodox Eastern Church which was the official church of czarist Russia.

## S

**Sacred Heart:** a Christian holiday. The Friday of the week after Corpus Christi is a holiday in Colombia. The object of devotion is the divine person of Jesus, whose heart is the symbol of his love for mankind.

**Samaritans:** a native or an inhabitant of Samaria; specifically, one of a race settled in the cities of Samaria by the king of Assyria after the removal of the Israelites from the country.

**samba:** a Brazilian dance and musical tradition based on two beats to the measure.

**sambo:** indicates a person of visible African ancestry. Familiar form of address for an uncle from the Foulah language of West Africa.

**Santer'a:** Christian religion with West African origins. It merges Christian saints with Yoruban deities.

**savanna:** a treeless or near treeless plain of a tropical or subtropical region dominated by drought-resistant grasses.

**schistosomiasis:** a tropical disease that is chronic and characterized by disorders of the liver, urinary bladder, lungs, or central nervous system.

**sect:** a religious denomination or group, often a dissenting one with extreme views.

**self-determination:** the desire of a culture to control its economic and social development.

**Semitic tongue:** an important family of languages distinguished by trilateral verbal roots and vowel inflections.

**Seventh-day Adventist:** one who believes in the second coming of Christ to establish a personal reign upon the earth. They observe the seventh day of the week as the Sabbath and believe in the existence of the spirit of prophecy among them.

**shaman:** holy man or woman said to have the power to heal diseases. Also thought to have magical powers.

**shamanism:** a religion centered on a belief in good and evil spirits that can be influenced only by shamans.

**Shavuot:** a Jewish holiday. This festival, on 6 Sivan, celebrates the presentation of the Ten Commandments to Moses on Mt.

Sinai and the offering of the first harvest fruits at the temple in Jerusalem. The precursor of the Christian Pentecost, Shavuot takes place on the 50th day after the first day of Passover.

**Shia Muslim:** member of one of two great sects of Islam. Shia Muslims believe that Ali and the Imams are the rightful successors of Mohammed (also commonly spelled Muhammed). They also believe that the last recognized Imam will return as a messiah. Also known as Shiites. (*Also see Sunni Muslim.*)

**Shiites:** *see Shia Muslim.*

**Shintoism:** the system of nature- and hero-worship which forms the indigenous religion of Japan.

**Shivarati (Mahashivarati):** a Hindu holiday. Dedicated to the god Shiva, this holiday is observed on the 13th day of the dark half of Magha, corresponding to January or February.

**Shrove Monday and Shrove Tuesday:** a Christian holiday. These two days occur just prior to the beginning of Lent (a term which derives from the Middle English *lente*, "spring"), the Christian season of penitence that ends with Easter Sunday. These are days of Carnival, public holidays of feasting, and merriment in many lands. Shrove Tuesday is also known as Mardi Gras.

**shunning:** Amish practice of not interacting in any way with a person who has been cast out by the church and the community.

**sierra:** a chain of hills or mountains.

**Sikh:** a member of a politico-religious community of India, founded as a sect around 1500 and based on the principles of monotheism and human brotherhood.

**Sino-Tibetan language family:** the family of languages spoken in Eastern Asia, including China, Thailand, Tibet, and Burma.

**slash-and-burn agriculture:** a hasty and sometimes temporary way of clearing land to make it available for agriculture by cutting down trees and burning them.

**slave trade:** the transportation of black Africans beginning in the 1700s to other countries to be sold as slaves-people owned as property and compelled to work for their owners at no pay.

**Slavic languages:** a major subgroup of the Indo-European language family. It is further subdivided into West Slavic (including Polish, Czech, Slovak and Sorbian), South Slavic (including Bulgarian, Serbo-Croatian, Slovene, and Old Church Slavonic), and East Slavic (including Russian, Ukrainian and Byelorussian).

**Society of Friends:** a religious sect founded about 1650 whose members shun military service and believe in plain dress, behavior and worship. Also referred to as the Quaker religion by those outside it.

**Solemnity of Mary, Mother of God:** a Christian holiday. Observed on 1 January, this celebration was, before a 1969 Vatican reform, the Feast of the Circumcision of Our Lord Jesus Christ.

**sorghum:** a type of tropical grass that is grown for grain, syrup, and livestock feed.

**St. Agatha's Day:** a Christian holiday. Celebrated on 5 February, it is the feast day of the patron saint of San Marino. St. Agatha is also the patron saint of nurses, firefighters, and jewelers.

**St. Dévôte Day:** a Christian holiday. Observed on 27 January in Monaco in honor of the principality's patron saint, this day

- celebrates her safe landing after a perilous voyage, thanks to a dove who directed her ship to the Monaco shore.
- St. James's Day:** a Christian holiday. Observed on 25 July, this day commemorates St. James the Greater, one of Jesus' 12 apostles. St. James is the patron saint of Spain.
- St. Joseph's Day:** a Christian holiday. The feast day in honor of Mary's husband is observed on 19 March as a public holiday in several countries.
- St. Patrick's Day:** a Christian holiday. This holiday, observed on 17 March, is celebrated in Ireland to honor its patron saint.
- St. Stephen's Day:** a Christian holiday. The feast day in honor of the first martyred Christian saint is 26 December, the day after Christmas. St. Stephen is the patron saint of Hungary.
- steppe:** a level tract of land more or less devoid of trees. It is a name given to certain parts of European and Asiatic Russia, of which the most characteristic feature is the absence of forests.
- stigmatize:** branding someone as a disgrace because of his or her behavior.
- straits:** a narrow passage of water connecting two bodies of water.
- stroganoff:** Russian beef stew. Sauce made from sour cream and wine.
- subcontinent:** a landmass of great size, but smaller than any of the continents; a large subdivision of a continent.
- subsistence farming:** farming that provides the minimum food goods necessary for the continuation of the farm family.
- Sudanic language group:** a related group of languages spoken in various areas of northern Africa, including Yoruba, Mandingo and Tshi.
- Sufi:** a Mohammedan mystic who believes (a) that God alone exists, and all visible and invisible beings are mere emanations from Him; (b) that, as God is the real author of all the acts of mankind, man is not a free agent, and there can be no real difference between good and evil; (c) that, as the soul existed before the body, and is confined within the latter as in a cage, death should be the chief object of desire, for only then does the soul return to the bosom of the divinity; and (d) that religions are matters of indifference, though some are more advantageous than others, and Sufism is the only true philosophy.
- Sukkot:** a Jewish holiday. This ancient Jewish harvest festival, which begins on 15 Tishri, recalls the period in which harvesters left their homes to dwell in the fields in sukkot, or booths—small outdoor shelters of boards, leaves, and branches—in order to facilitate gathering the crops before the seasonal rains began. In religious terms, it commemorates the 40 years of wandering in the desert by the ancient Hebrews after their exodus from Egypt. The 8th day of Sukkot (and the 22d day of Tishri) is Shmini Azeret/Simhat Torah, a joyous holiday in which the annual cycle of reading the Torah (the Five Books of Moses) is completed and begun anew. Outside of Israel, Simhat Torah and the beginning of a new reading cycle are celebrated on the next day, 23 Tishri.
- sultan:** a king of a Muslim state.
- Sunni Muslim:** Member of one of two major sects of the religion of Islam. Sunni Muslims adhere to strict orthodox traditions and believe that the four caliphs are the rightful successors to Mohammed, founder of Islam. (Mohammed is commonly spelled Muhammed, especially by Islamic people.) (*Also see Shia Muslim.*)
- surname:** a person's last name. Generally different from his or her first name.
- ## T
- taboo:** a system, practice, or act whereby persons, things, places, actions, or words are placed under ban, curse, or prohibition, or set apart as sacred or privileged in some specific manner.
- taiga:** a coniferous forest in the far northern areas of Canada, Alaska, and Eurasia.
- Taoism:** the doctrine of Lao-Tzu, an ancient Chinese philosopher (about 500 BC) as laid down by him in the Tao-te-ching.
- Thaipusam:** a Hindu holiday. A holiday in Malaysia, Thaipusam honors Subrimaya, son of Shiva and an important deity in southern India. The three-day festival is held in the month of Magha according to when Pusam, a section of the lunar zodiac, is on the ascendant.
- Tibeto-Burman language group:** a subgroup of the Sino-Tibetan language family which includes Tibetan and Burmese.
- Tishah b'Av:** a Jewish holiday. This holiday, which takes place on 9 Av, commemorates the destruction of the First Temple by the Babylonians (Chaldeans) in 586 BC and of the Second Temple by the Romans in AD 70. It is observed by fasting.
- toboggan:** a kind of sled without runners or a steering mechanism.
- topography:** an accurate drawing representing the surface of a region on maps and charts.
- toucan:** a brightly colored, fruit-eating bird of tropical America with a distinctive beak.
- trachoma:** contagious, viral infection of the cornea. Causes scarring in the eye.
- tribal society:** a society based on tribal consciousness and loyalties.
- tribal system:** a social community in which people are organized into groups or clans descended from common ancestors and sharing customs and languages.
- tsetse fly:** any of the several African insects which can transmit a variety of parasitic organisms through its bite. Some of these organisms can prove fatal to both human and animal victims.
- tundra:** a nearly level treeless area whose climate and vegetation are more characteristically arctic due to its northern position. Although the region attains seasonal temperatures warm enough to allow a thin layer of soil on the surface to unthaw enough to support the growth of various species of plants, the subsoil is permanently frozen.
- tutelary:** a god or spirit who acts a guardian that watches over a person or group of people.
- typhoon:** a violent hurricane occurring in the China Sea or Philippine region, principally between the months of July and October.
- ## U
- unemployment rate:** the overall unemployment rate is the percentage of the work force (both employed and unemployed) who claim to be unemployed. The natural unemployment rate is the lowest level at which unemployment in an economy can be maintained and still reflect a balance of the labor market and the product market.
- untouchables:** in 19th century India, members of the lowest caste in the caste system, a hereditary social class system.

They were considered unworthy to touch members of higher castes.

**urban center:** a city.

**USSR:** an abbreviation of Union of Soviet Socialist Republics.

## V

**veldt:** in South Africa, an unforested or thinly forested tract of land or region, a grassland.

**Vesak:** this last full moon day of Visakha highlights a three-day celebration of the birth, enlightenment, and death of the Buddha. It falls in April or May.

**voodoo:** a belief system which is based on sorcery and other primitive rites and the power of charms and fetishes, originating in Africa.

## W

**wadi(s):** the channel of a watercourse which is dry except in the rainy season. Also called wady.

**Windward Islands:** a southern group of islands stretching south to Trinidad. Part of the Lesser Antilles, but does not include Barbados.

## Y

**Yom Kippur:** a Jewish holiday. The Day of Atonement, spent in fasting, penitence, and prayer, is the most solemn day in Judaism. It takes place on 10 Tishri.

**yucca:** a plant native to Mexico, Central and South America, and the southwestern United States. Can grow to the 12 feet in height.

**yurt:** a framework tent of stretched felt or skins. Associated with Siberia and Mongolia.

## Z

**Zoroastrianism:** the system of religious doctrine taught by Zoroaster and his followers in the Avesta; the religion prevalent in Persia until its overthrow by the Muslims in the 7th century.
